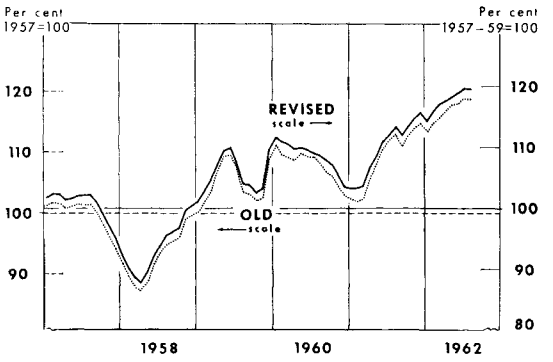
Industrial Production—1957-59 Base

The Federal Reserve index of industrial production has been shifted to a new comparison base, in line with the recommendations of the Bureau of the Budget. At the same time, a general revision in seasonal factors and interim adjustments in the levels of eight series have been introduced into the index since 1957. The principal changes in the index follow:

- The comparison base to be used beginning with the mid-November 1962 release of the index will be the average for the 3 years, 1957, 1958, and 1959. Shifting the base period from the single year, 1957, has raised the total index less than 1 per cent in each month back to 1919. Indexes for component series and groups were changed by varying amounts as a result of this shift, because of differences among component indexes in the relation of their output in 1957 to that in 1957-59.
- Seasonal adjustment factors have been revised for the period since 1957. The revisions substantially modify the cyclical patterns of some of the component indexes. But their effect on the total index is confined mainly to a slight raising of the first quarter and a slight lowering of the third quarter. The third quarter of this year is not so affected because most of the seasonal revisions were introduced in the July indexes.
- The annual levels of eight series in the apparel, food, and chemical groups have been revised since 1957 to take account of additional information now available. These eight of the 207 component series account for about 5 per cent of the total index. Because the changes were largely offsetting, the levels of the total index and its major divisions of market and industry groupings were not generally affected.

CYCLICAL PATTERN of total industrial production somewhat modified by seasonal revisions



NOTE.—Latest figures shown, August, preliminary.

SHIFT TO 1957-59 BASE

The shift of the industrial production index from a 1957 base to an average of the years 1957-59 conforms to the recommendation of the Bureau of the Budget establishing that period as the standard base period for Federal general-purpose indexes. It also conforms to the statement in *Industrial Production: 1959 Revision* that the Board's indexes would use the base period selected for other Federal index numbers.

The Bureau of the Budget recommended use of the new standard base period because it was desirable to update the reference

---

NOTE.—This revision was conducted by Edward A. Manookian with the assistance of James S. Nystrom, under the general direction of the Chief of the Business Conditions Section, Clayton Gehman. Paul W. Kuznets, Rose C. Cassedy, and other members of the Section also contributed to various phases of the revision. This article was prepared by Mr. Manookian.

periods for economic time series published on a 1947-49 base. The period chosen includes the most recent year covered by the economic censuses—1958. While the use of a single-year base simplifies the computation and analysis of an index, a multiple-year base is likely to be a more representative period for a variety of general-purpose indexes.

A major consideration in the choice of a comparison base period for a general-purpose index of production is the extent to which the period is typical of longer-run, broad relationships between output and final sales of goods, and between output in industries producing materials and those producing final products.

One test of these relationships is the indicated inventory changes in the base period. Over the long run in a growing economy, these relationships are such as to reflect a gradual growth in business holdings of manufactured materials and final products. Consequently, a comparison base period should not be an interval of inventory liquidation or of a rapid increase in inventories. In these respects, the year 1957 provided an adequate comparison base and the figures now available for the 1957-59 period show that it makes a satisfactory alternative base.

A conversion from one comparison base to another for the total index shifts the levels for all monthly figures proportionately; it does not alter relative changes from month to month or from year to year. Differences in relative changes can result from revisions in the weight period used, in the basic data and levels of component indexes, or in seasonal adjustment factors.

In the present revision the weight period and the basic annual levels of the total index are unchanged. Slight differences—seldom as much as 0.3 of 1 per cent—between the old and revised unadjusted monthly index, when compared on the same base, reflect: (1) the routine use of later data that have become available for various individual series; (2) the effects in certain months of the adjustment to revised annual levels for the eight series mentioned above; and (3) rounding differences. Practically all differences in the monthly movements of the total seasonally adjusted index and its major divisions have been due to revisions in seasonal adjustment factors.

1957-59 proportions. Value-added data for the year 1957 were the basis for the weights in both the old and revised indexes beginning in January 1953. With the change in the comparison base, 1957 value-added data were adjusted to 1957-59. For each series the 1957-59 value-added figure in 1957 prices was obtained by dividing 1957 value added by the ratio of production in 1957 to production in 1957-59.

The weight or proportion for any series is the adjusted value added for that series divided by the sum of the adjusted value added for all series. While the 1957-59 proportion for any series differs from the 1957 proportion, the effect of this difference is canceled by the ratio of output in 1957 to that in 1957-59. Hence there is no change in the total index for any month or year, as indicated in the table for carbon steel production.

IMPORTANCE OF CARBON STEEL IN TOTAL INDEX IN 1957

Line	Item	1957–59 base	1957 base
1	Base period proportions....	1.73	2.01
2	Annual average.....	116.70	100.00
3	Points in total index.....	2.02	2.01
4	Total index, annual average.	100.70	100.00
5	Per cent of total index.....	2.01	2.01

NOTE.—Line 3 = (1) multiplied by (2); Line 5 = (3) divided by (4).

Individual production indexes. From January 1947 through December 1961, each individual monthly index on the 1957 base

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

was converted to a 1957-59 base by dividing the 1957 based series by its average for 1957-59. Beginning with January 1962, the basic data underlying the 207 individual production series were calculated into indexes on a 1957-59 base.

Aggregate indexes. The total, and other aggregate indexes, from January 1953 on, were obtained by combining series on the new base using their 1957-59 proportions.

The conversion of aggregate indexes to the new base for the period from January 1947 through December 1952 required a different approach because of the use of weights based on 1947 value-added data before 1953 for both the old and revised series. The 1947 weighted aggregate indexes generally showed a moderately faster rate of growth than indexes combined with 1957 weights and in the 1959 revision were linked in January 1953 to corresponding 1957 weighted indexes. These linked indexes on the 1957 base were converted to the new reference period by a multiplying factor for each aggregate index. The factor was calculated by dividing the index for January 1953 on the 1957-59 base by the January 1953 index on the 1957 base.

REVISION OF SERIES

Preliminary evidence from the 1958 Census of Manufactures and the 1959 and 1960 Annual Surveys indicated the desirability of a revision in the levels of certain major series. A general overstatement in the production series for the apparel industries was found to be accompanied by an understatement in the series for some of the chemical and food industries. Altogether, eight series, which account for 5.4 per cent of the total index, were revised beginning with 1958. All the series revised are classified in nondurable manufactures in the industry grouping and in consumer goods in the market grouping. The revisions were largely offsetting in their effects on the levels of both these major divisions and of the total index.

A more accurate determination of the levels of these revised series, as well as the level of the other components of the index, will be provided by the 1954 to 1958 benchmarks based on the Census of Manufactures and by the compilation of other comprehensive data for the period since that time. The benchmark indexes are presently being calculated by the Bureau of the Census and the Federal Reserve. These benchmark calculations provide broader product coverage and better representation of quality changes from the detailed Census data than are available in current monthly or annual series.[1]

Apparel series. The production levels for the apparel group were found to be too high beginning in 1958. The difference widened in 1959, as shown in the chart, which uses the single-year 1957 base to show more clearly the revisions in levels. About two-thirds of the overstatement was in the series for shirts and work clothing and was due in part to the lack of monthly data on the slower growing items represented in this index. Some downward revisions were also made in the series for men's outercoats, women's suits and coats, miscellaneous cut and sewn garments, and miscellaneous fabricated textile products.

Consequently, the revised annual averages for apparel products show less growth in output since 1957 than the old index, and a small decline in output from 1957 to 1958 compared with a slight rise in the old

[1] For a discussion of some of the technical considerations involved in revising output measurements for autos and some other products in recent years, see the communications on "The Revised Index of Industrial Production," *American Economic Review*, June 1962, pages 496-522.

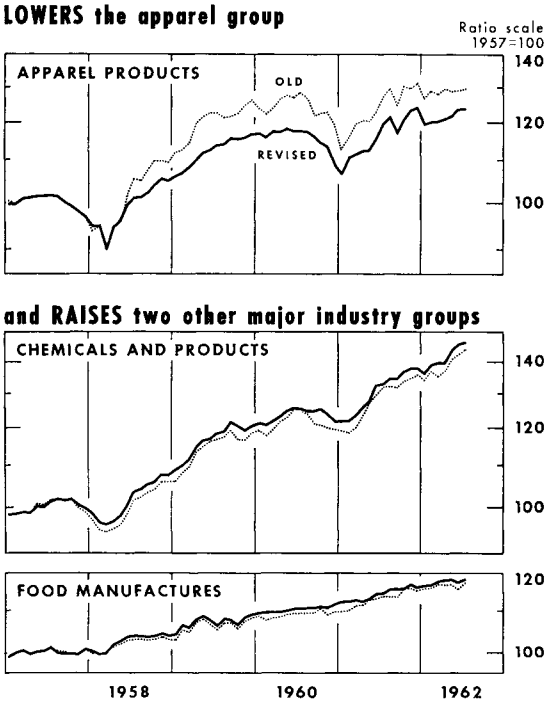
Federal Reserve Bank of St. Louis

apparel series. As shown in the chart, the decline in the annual average for 1958 is due to a downward revision in the second half of the year. The cyclical decline in early 1958 is the same in both indexes. For the period since mid-1959, differences

REVISIONS IN LEVELS of basic series LOWERS the apparel group



NOTE.—Latest figures shown, July.

shown in the monthly movements reflect mainly revisions in seasonal factors.

Chemical and food series. Some series in the chemical and food groups were found to be understated on the basis of the more comprehensive annual data available in the various sources listed in the *1959 Revision* publication. The three most important series were soap and related products, toiletries and miscellaneous chemicals, and canned and frozen foods. The levels of the last two series were raised about 7 or 8 per cent in recent years, while the soap series was raised about twice as much. Output indexes for these industries showed a faster rate of growth than the total index. Lack of monthly data for new products and, for series based on employment data, accelerated increases in productivity due to new techniques of processing contributed to an understatement of output.

The three series account for about 15 per cent of consumer staples in the market grouping. Their combined importance—2.8 per cent of the total index in 1957-59—is about the same as that of the revised apparel series, and the average of their upward revision was about the same as the downward revision in apparel.

REVISION OF SEASONALS

Patterns of seasonal fluctuation in output are continually changing and reflect shifts in supply and demand forces. For many industries and products the changes may develop gradually from year to year; for others they may come abruptly. Sometimes the changes are recognizable when they occur, such as the shifts in the period of the annual auto model changeover. But often the change in the seasonal pattern is not recognized until several years have elapsed. Also it is not always clear whether the indicated change represents an actual shift in the supply or demand situation affecting the seasonal pattern or is the result of statistical problems in the basic data.

The last general review of the seasonal adjustment factors was during the 1959 revision. Seasonal adjustment factors were developed at that time by using monthly data through 1957 for series with marked cyclical swings, and through 1958 for the remaining seasonally adjusted indexes. These factors have generally been used for the subsequent period. Each year, however, fairly large modifications have been introduced for auto assemblies and some related

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

series. Also, usually during each monthly calculation of the index, some revisions have been introduced for indexes that had begun to show evidence of repetitive residual seasonal movements in the seasonally adjusted figures. As a result of these modifications already introduced since the 1959 publication, the changes in seasonals developed in the current revision are smaller than would otherwise have been required.

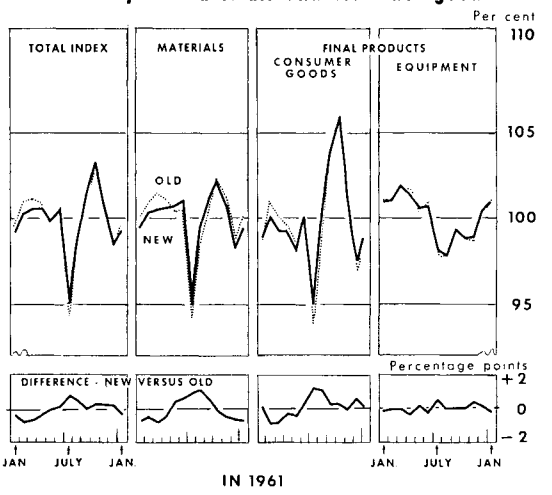
A periodic comprehensive review of seasonal factors for recent years is important to limit any general tendencies for residual seasonal movements to develop. Until this year an adequate, comprehensive review of the seasonal factors was complicated by the sharp upsurge in output in the first half of 1959 in anticipation of a steel strike, the impact of the 4-month steel strike on developments in that year and early 1960, and the production downturn and recovery from mid-1960 to mid-1961.

In the current review, revisions in seasonal adjustment factors generally have been introduced beginning in 1959, though in a few series some revisions were carried back to 1957 and 1958 as well. Factors developed by the Census Method II electronic computer program were reviewed and modified as described in *Industrial Production: 1959 Revision.*

Seasonal adjustment factors for all the individual component series in the index have just recently been calculated using Census program X-9, a modification of Method II. These calculations have been made independently of the present review and revision of the published seasonally adjusted groupings in the index. The results of these detailed calculations are under review and after further experimentation they may be the basis for publishing more of the individual series and subtotals on a seasonally adjusted basis.

Seasonal changes in the total index. The broad patterns of seasonal fluctuation indicated by the implied seasonal factors for the revised index and its major components are moderately changed by the introduction of the new adjustment factors, as can be seen in the chart.

REVISIONS IN SEASONAL FACTORS
were mainly in materials and consumer goods



These implied factors are obtained by dividing monthly indexes before seasonal adjustment by the corresponding indexes after seasonal adjustment. The implied seasonal factors for the total index as well as those for an aggregate of two or more seasonally adjusted series usually vary from year to year. Differences can occur even when the seasonal factors do not change. If both the relative levels of the component unadjusted indexes shift from year to year and the seasonal patterns of the component series differ, the implied factors will vary from one year to another.

Differences between the old and new implied factors for the total index, shown in the table, occur mainly in the first quarter, when in the latest full year—1961—the factor was lowered by 0.5 per cent, and in

Dec.	98.6		98.4	

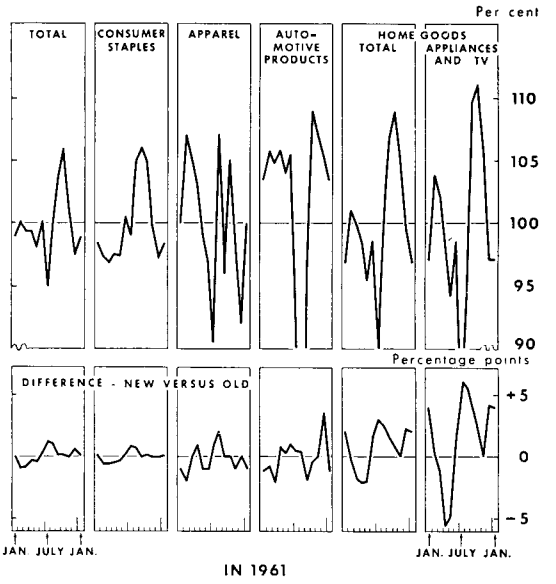
the third quarter, when it was raised by 0.5 per cent. Monthly differences between the factors range from 0.1 to 0.8 per cent, with the largest changes occurring in February, March, July, and August.

Work on the new seasonal factors developed in the current revision was largely completed by the time the July 1962 indexes were being compiled. In order to present these improved seasonals as promptly as possible, and to limit the subsequent revisions in recent months, the revised factors were introduced into the published figures beginning with the July data. If these changes had not been carried through, the level of the total index in July and August would have been somewhat higher.

Seasonal changes in component groupings. Seasonally adjusted indexes for both the industry and market groupings, 76 in all, were reviewed and revised in detail. Revisions in the implied seasonal factors for total manufacturing, as could be expected, closely parallel those for the total index. However, revisions in the factors for total durable manufactures were smaller than those for nondurable manufactures. This is due mainly to more continuous review and revisions of the seasonal adjustment factors for autos and related series, as well as of the other important metal producing and fabricating series.

In general, revisions made in the market groupings of the index for materials and consumer goods have moved in the same direction, with factors for the first half of the year being lowered and those for the second half raised, as shown in the chart. Because demands for materials are generated largely by developments in the consumer goods and construction industries, changes in seasonal fluctuations in those lines have influenced the pattern of output of materials. The factors for total equipment were changed little.

SEASONAL FACTORS for all major groups of consumer goods affected by revisions



NOTE.—Apparel includes knit goods and shoes; appliances and TV includes radio sets.

The size of revisions in the seasonal adjustment factors for the components of consumer goods varied, as shown in the chart. The implied factors for the consumer staples group, which accounts for 60 per cent of total consumer goods, changed the least. The maximum change was slightly more than half a percentage point in 4 months—February, March, July, and August. In contrast, some of the seasonal adjustment fac-

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

tors for household appliances and television and radio sets, two of the component subtotals of home goods, were revised between 5 and 6 percentage points.

A large seasonal swing during the year and a marked change in seasonal pattern characterize the output of appliances and the output of television and radio sets. Both the seasonal pattern and change in the pattern are often difficult to determine, in part because of the sensitivity of output to change in demand and the difficulty of distinguishing periods of new model changeover. This difficulty reflects mainly diverse industry practices and the variety of products manufactured in these industries.

The revisions in seasonal factors for materials were primarily in output series for materials used in manufacturing consumer durable goods and apparel and in the production indexes for construction materials. Output of the latter in recent years has tended to be lower in the winter months and higher in the summer, reflecting greater seasonality as manufacturing capacity has become more ample. This is strikingly illustrated by the cement industry, where the seasonal swing in output from low to high has almost doubled in recent years, largely as a result of the expansion in cement plant capacity.

Guide to Tabular Presentation

Abbreviations

I. F.	Implied factor obtained by dividing the indexes without seasonal adjustment by corresponding indexes with seasonal adjustment.
n.e.c.	Not elsewhere classified
n.e.r.	Not elsewhere represented
N. S. A.	Not seasonally adjusted
S. A.	Seasonally adjusted
S. A. F.	Seasonal adjustment factor

Market Classification Codes

Consumer Goods:

Ca	Automotive products
Ch	Home goods
Cc	Apparel, including knit goods and shoes
Cs	Consumer staples

Equipment (Business and Defense):

Ebi	Industrial equipment
Ebc	Commercial equipment
Ebp	Freight and passenger equipment
Ebf	Farm equipment
Ed	Defense equipment

Materials:

Mcd	Consumer durable
Me	Equipment
Mc	Construction
Mm	Metal materials, n.e.c.
Mco	Containers
Mbs	General business supplies
Mf	Business fuel and power
Mnd	Textile, paper, chemical, and other nondurable, n.e.c.

Notes to Column Headings on Pages S–4—S–19

Series: Those in parentheses are included in published combined indexes but are not published separately.

1957-59 proportion: Proportions of total index in 1957-59, shown rounded. These proportions are assigned to series in calculating combined indexes beginning with Jan. 1953 on the 1957-59 comparison base.

Working days: Per week. The letter **m** designates manhour series (based on Bureau of Labor Statistics data unless otherwise noted) for which no working day adjustment is required; **u**—utility series, for which working day adjustment is combined with seasonal adjustment.

S.I.C. classification: Industry code numbers, as listed in the 1957 edition of the Bureau of the Budget Standard Industrial Classification Manual.

Market Listing of Series

Series	1957–59 proportion
TOTAL INDEX	**100.00**
Final Products, Total	*47.35*
Consumer goods	32.31
Equipment, including defense	15.04
Materials	52.65
Consumer Goods	**32.31**
Automotive Products	***3.21***
Autos	*1.82*
Auto parts and allied products	*1.39*
Auto radios	.09
Replacement storage batteries	.08
(Repair parts)	.69
(Trailers, boats, and cycles)	.25
(Auto trailers)	.10
(Boat trailers)	.11
(Motorcycles and bicycles)	.04
(Replacement auto tires)	.29
Home Goods and Apparel	***10.00***
Home goods	*4.59*
Appliances, TV, and radios	1.81
Appliances	1.33
Kitchen appliances	.52
Cooking stoves	.17
Electric ranges and ovens	.06
Gas ranges and ovens	.11
Refrigeration appliances	.27
Refrigerators	.20
Home freezers	.07
(Dishwashers, etc.)	.08
Laundry & misc. appliances	.67
Laundry appliances	.13
Washing machines	.10
Clothes driers	.03
Misc. appliances	.54
Electric housewares	.38
Vacuum cleaners	.06
Water heaters	.10
(Electric)	.02
(Gas)	.08
(Room air conditioners)	.14
TV and home radios	.47
Table television sets	.15
Console television sets	.18
Home radios	.14
Furniture and rugs	1.26
Household furniture	1.02
Rugs and other floor coverings	.23
(Woven carpets)	.11

Apparel and staples	24.51

Source and description of these series are shown in the Industry Listing of Series on pages S-4—S-19. An alphabetical listing of production index tables for all series, with page references, appears on pages S-159—S-160.

The proportions for individual series listed for the subgroups may not add to the published totals because of rounding. Series in parentheses are included in published combined indexes but are not published separately.

INDUSTRY LISTING OF SERIES, INCLUDING SOURCE AND DESCRIPTION OF BASIC DATA

Series	1957–59 proportion	Working days	Classification		Source and description	
			S.I.C.	Market		
TOTAL INDEX	**100.00**					
Manufacturing—Total	*86.45*					
Durable	48.07					
Nondurable	38.38					
Mining	8.23					
Utilities	5.32					
Durable Manufactures—Total	**48.07**					
Primary and fabricated metals	***12.32***					
Primary metals	*6.95*		33			
Iron and steel	5.45					
Blast furnaces & steel works	2.85		3312pt,13			
Pig iron	.47	7		Mm	American Iron and Steel Inst., blast furnace production of pig iron, ferro-manganese, and spiegel, in tons.	
Steel ingots	2.02					
Carbon steel	1.73	7		Mm	AISI, production of carbon steel ingots and steel for castings, in tons.	
Alloy steel	.29	7		Mm	AISI, production of alloy (other than stainless) and stainless steel ingots and steel for castings, in tons.	
(Electric ferroalloys)	.11			Mm	Represented by "pig iron" and "steel ingots."	
Coke	.19	7		Mf	Bur. of Mines, production of slot-type oven and beehive oven coke, in tons.	
(Coke by-products)	.06			Mnd	Represented monthly by "coke." Annual indexes based on Bur. of Mines data for principal by-products.	
Iron and steel products	2.60					
Steel mill products	1.48		3312pt, 15–17		Five new series, formerly represented by ingot production. Based on AISI data for mill shipments of steel products, classified as follows:	
					Monthly series	*Annual series (AISI codes)*
Consumer durable steel	.28	5½		Mcd	Automotive, appliances, utensils, and cutlery	300, 330–60pt, 720–90, 830
Equipment steel	.34	5½		Me	Forgings, railroad cars, locomotives and street railways, shipbuilding, aircraft, oil and gas drilling, mining, agricultural, machinery, ordnance, and other equipment	070, 330–60pt
Construction steel	.28	5½		Mc	Construction, contractors' products, railroad rails, trackwork	170–290, 320, 370
Can and closure steel	.11	5½		Mco	Cans and closures	870–90
Misc. steel	.47	5½		Mm	All other market classifications, including warehouses and exports	010–60, 080, 110–60, 910–60, 980, 990, shipments of nonreporting companies

INDUSTRY LISTING OF SERIES, INCLUDING SOURCE AND DESCRIPTION OF BASIC DATA—Continued

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Primary metals—Cont.					*Monthly series* / *Annual series (AISI codes)*
Ferrous castings & forgings.	1.12				
Iron and steel castings....	.91	5	332	Mm	Bur. of the Census, shipments (for sale and own use) of gray and malleable iron castings and steel castings, in tons.
Steel forgings.....	.21	5	3391	Mm	Census, shipments for sale, in tons.
Nonferrous metals and products.	1.50				
Nonferrous metals.....	.53				
Primary nonferrous metals..	.45		333		
Aluminum.....	.26	7	3334	Mm	Bur. of Mines, production of primary aluminum, in tons.
Copper smelting.....	.06	7	3331pt	Mm	Copper Inst., U. S. mine or smelter production and custom intake, in tons.
Copper refining.....	.04	7	3331pt	Mm	Copper Inst., U. S. production of refined copper, in tons.
Lead.....	.02	7	3332	Mm	Amer. Bur. of Metal Statistics, production by primary refineries of primary and secondary lead, in tons.
Magnesium.....	.02	7	3339pt	Mm	New monthly series based on Bur. of Mines, commercial production of primary magnesium, in tons.
Zinc.....	.05	7	3333	Mm	Amer. Zinc Inst., total smelter production of slab zinc, in tons, minus Bur. of Mines data on secondary production at secondary smelters.
Secondary nonferrous metals.	.08	6	334	Mm	Bur. of Mines, total secondary smelter production of secondary aluminum, copper, lead, tin, zinc, and their alloys, in tons.
Nonferrous shapes & castings.	.97				
Aluminum mill shapes.....	.29	6	3352	Mm	Census, producers' net shipments of aluminum mill products, in lbs.
Copper mill shapes.....	.37	5½	3351,7pt	Mm	Copper Inst., total refined copper consumption by U. S. fabricators, in tons.
Nonferrous castings.....	.31	5	336	Mm	Census, shipments for sale and own use, in lbs.
Fabricated metal products.....	*5.37*		34		
Structural metal parts.....	2.86	m	3429,31, 32;344, 8;3642	Mc	Monthly series based on manhours for fabricated structural metal products; hardware n.e.c.; sanitary ware and plumbers' supplies; lighting fixtures; and fabricated wire products. Annual index based on Census production data for plumbing fixtures and on value data, deflated, for entire group of industries.
Stampings, tools, and misc. metal products.	1.87				
(Hand tools & misc. metal products.)	1.00	m	3423pt, 25;345; 3491,2, 3,6,7,9	Me	Monthly series based on manhours for hand tool and misc. fabricated metal products. Annual index based on Commerce production and shipments data for collapsible tubes and metal barrels; Census value data, deflated; and Bureau of Labor Statistics manhour data.
(Metal stampings).....	.87	m	346,7	Mcd	Monthly series based on manhours for metal stampings, coatings, and engraving. Annual index based on Census value data, deflated, and BLS manhour data.

INDUSTRY LISTING OF SERIES, INCLUDING SOURCE AND DESCRIPTION OF BASIC DATA—Continued

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Fabricated metal products—Cont.					
Metal cans	.40	5	341	Mco	Census, factory shipments for sale and own use, measured by tons of steel consumed in the manufacture of containers.
(Cutlery)	.08	m	3421,23pt	Ch	Monthly series based on manhours for cutlery and edge tools. Annual index based on Census value data, deflated, and manhour data.
Home furnaces	.16	5	3433	Ch	Census, production, derived by Federal Reserve from reported factory shipments and inventories of warm air furnaces, oil burners, and domestic heating stoves, weighted combination. Annual index based on 25 series for products included monthly and related products.
Machinery and related products	*27.98*				
Machinery	*14.80*				
Nonelectrical machinery	*8.43*		35		
Nonelectrical equipment	5.51				
Farm equipment	.61		352		
Farm machinery	.35	m		Ebf	New monthly series based on manhours for farm machinery, except tractors. Annual index based on Census production data for nontractor portion of previous "farm machinery" series.
Farm tractors	.26	5		Ebf	New monthly series based on manhours through 1952, Census production of wheel-type tractors, in units, quarterly for 1953–54, and Census production monthly since 1954. Annual index through 1955 based on portions of the Census production data used in previous "farm machinery" annual index with FR adjustment to benchmark; since 1955, on Census value data deflated, for wheel tractors, garden tractors, and parts.
Metalworking and tractors	.88				
Metalworking machinery	.69	m	3541,2,8	Ebi	Monthly series based on manhours. New annual index based on Census value data, deflated. Former title was "machine tools and presses."
Tracklaying tractors	.19	5	3531pt	Ebi	New monthly series based on manhours through 1952, Census production of tracklaying tractors, in units, quarterly for 1953–54; and Census production monthly since 1954. Annual index through 1955 based on portions of the Census production data used in previous "farm machinery" annual index, with FR adjustment to benchmark; since 1955, on Census value data, deflated, for tracklaying tractors and parts.
Misc. nonelectrical equipment	4.02				Formerly "other industrial and commercial machinery"; now broken down into three series for equipment plus "nonelectrical machinery parts."
(General heavy industry)	2.06	m	3511; 353 excl. 3531pt; 3561,4, 7,9	Ebi	Monthly series based on manhours, and annual index on Census value data, deflated, for steam engines and turbines, construction and mining machinery, and general industry finished equipment.
(Special-industry machinery)	1.22	m	355	Ebi	Monthly series based on manhours, and annual index on Census value data, deflated, for special-industry machinery.
(Office & service equipment)	.74	m	357; 358 excl. 3585pt	Ebc	Monthly series based on manhours for office, computing, and accounting machines and commercial laundry equipment. Annual index based on Census value data, deflated, for these industries plus service station equipment, vending machines, commercial refrigeration equipment, and misc. service industry equipment.

INDUSTRY LISTING OF SERIES, INCLUDING SOURCE AND DESCRIPTION OF BASIC DATA—Continued

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Nonelectrical machinery—Cont.					
(Nonelectrical machinery parts)..	2.78	m	3519,44, 45,62,65, 66;359; 3494,8	Me	Monthly series based on manhours for internal combustion engines, machine tool parts, power transmission equipment, and misc. machinery parts. New annual index based on Census value data, deflated, for these and allied industries.
(Room air conditioners).....	.14	5	3585pt	Ch	New monthly series beginning with January 1959 based on Natl. Electrical Manufacturers Assn. data for shipments and inventories of air conditioners and dehumidifiers, in units. For 1957–58, FR monthly estimates based mainly on quarterly shipments. Before 1957, represented by "refrigeration appliances." Annual index based on Census and *Electrical Merchandising* data for shipments, in units.
Electrical machinery.....	*6.37*		36		
Electrical equipment and parts...	4.54				
(Electrical equipment).....	2.67				Formerly "electrical apparatus and parts"; now broken down into two equipment series, and "miscellaneous electrical machinery parts."
(Transformers and control apparatus).	1.51	m	3612,13, 19,22,29	Ebi	Monthly series based on manhours for transformers and electrical control apparatus. Annual index based on Census value data, deflated, for these and related industries.
(Telephone and misc.).....	1.16	m	3611;366; 3693, 99pt	Ebc	Monthly series based on manhours for electrical measuring instruments, telephone and other communication equipment, and x-ray equipment. Annual index based on Census value data, deflated, for these industries plus commercial radio and TV equipment.
(Electrical machinery parts)...	1.87				
(Electronic tubes).....	.34	5	3671–3	Mcd	New monthly series beginning with January 1957 based on Electronic Industries Assn. data for shipments and inventories of picture tubes and receiving tubes, weighted. Before 1957, represented by "television and radio sets." Revised annual index beginning with 1947 based on same data as new monthly series plus Census value of shipments, deflated, for other products of industry and value of inventories data for entire industry.
(Misc. electrical machinery parts).	1.53	m	3621,23, 24,41, 43,44, 79,92,94; 3357pt	Me	Monthly series based on manhours, and annual index on Census value data, deflated, for motors and generators, wiring devices, insulated wire, light bulbs, and allied industries.
Television and radio sets.....	.56		3651		
Television sets.....	.33				
Table television sets.....	.15	5		Ch	EIA, production of table and portable TV sets, in units. Original data are 4- and 5-week totals.
Console television sets.....	.18	5		Ch	EIA, production of console and phonograph combination TV sets, in units. Original data are 4- and 5-week totals.
Radio sets.....	.23				
Home radios.....	.14	5		Ch	EIA, production of table, clock, and portable radios, in units. Original data are 4- and 5-week totals.
Auto radios.....	.09	5		Ca	EIA, production of auto radios, in units. Original data are 4- and 5-week totals.

INDUSTRY LISTING OF SERIES, INCLUDING SOURCE AND DESCRIPTION OF BASIC DATA—Continued

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Electrical machinery—Cont.					
(Household appliances)	1.19		363		
Kitchen appliances	.52				
Cooking stoves	.17		3631		
Electric ranges and ovens	.06	5		Ch	Production derived by FR from NEMA data for factory shipments and inventories of free-standing ranges and built-in ovens, in units.
Gas ranges and ovens	.11	5		Ch	Monthly series based on production, derived by FR from Census and Gas Appliance Manufacturers Assn. data for factory shipments and inventories of free-standing gas ranges and built-in oven broilers, in units. Annual index based on Census production data, in units, for types of products included monthly and for other nonelectric cooking equipment.
Refrigeration appliances	.27		3632		
Refrigerators	.20	5		Ch	Monthly series based on production, derived by FR from NEMA data for reported factory shipments and inventories of household refrigerators, in units. Annual index based on breakdowns of monthly data by size class.
Home freezers	.07	5		Ch	Monthly series based on production, derived by FR from NEMA data on shipments and inventories of home and farm freezers, in units. New annual index based on breakdown of monthly data by size class.
(Dishwashers, etc.)	.08	5	3636,9pt	Ch	New monthly series beginning with January 1957 based on NEMA factory shipments and inventory data for dishwashers and food waste disposers. Before 1957, represented by total of laundry and refrigeration appliances and vacuum cleaners. Annual index also includes value data, deflated, for sewing machines. Former title was "miscellaneous nonelectrical appliances."
Laundry & misc. appliances	.67				
Laundry appliances	.13		3633		
Washing machines	.10	5		Ch	Production, derived by FR from American Home Laundry Manufacturers' Assn. data for reported factory shipments and inventories, in units. Before 1951, monthly inventory changes estimated by FR.
Clothes driers	.03	5		Ch	Ditto. Includes representation for ironers.
Misc. appliances	.54				
Electric housewares	.38	m	3634,52, 99pt	Ch	New monthly series based on manhours for small electrical appliances and misc. electrical products. New annual index based on *Electrical Merchandising* data for small appliances and Census quantity and value data, deflated, for phonograph records and misc. products, adjusted by FR to benchmark. Former title "miscellaneous electrical appliances."
Vacuum cleaners	.06	5	3635	Ch	Vacuum Cleaner Manufacturers' Assn., shipments of standard type vacuum cleaners, in units.
Water heaters	.10		3639pt		
(Electric)	.02	5		Ch	Production, derived by FR from NEMA data for reported factory shipments and inventories of electric storage water heaters, in units.
(Gas)	.08	5		Ch	Production, derived by FR from Gas Appliance Manufacturers Assn. and Census data for reported factory shipments and inventories of gas-fired automatic storage water heaters, in units.
Replacement storage batteries	.08	5	3691	Ca	New series based on Assn. of American Battery Manufacturers, factory shipments of automotive replacement batteries, in units.

INDUSTRY LISTING OF SERIES, INCLUDING SOURCE AND DESCRIPTION OF BASIC DATA—Continued

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Transportation equipment	*10.19*		37		
Motor vehicles and parts	4.68		371		
Autos	1.82	5	3711pt,12	Ca	Monthly series based on *Ward's Automotive Reports*, production, in units. New annual index based on *Ward's* and other data for (a) passenger car production by make and model; (b) production of certain items of equipment, including automatic transmission, overdrive, power steering, and power brakes; and (c) production of body styles, including station wagons, convertibles, and hardtops. See description in 1954 Census, *Indexes of Production*, pp. 33–34. Annual index reviewed by comparison with Census value of shipments data, deflated, for passenger cars.
Trucks and buses	.38		3711pt, 13,15		
Light trucks	.13	5		Ebp	Automobile Manufacturers Assn., factory sales, trucks of 10,000 lbs. or less gross vehicle weight, in units.
Medium trucks	.03	5		Ebp	AMA, factory sales, trucks of 10,001–16,000 lbs. gross vehicle weight, in units.
Heavy trucks	.13	5		Ebp	AMA, factory sales, trucks more than 16,000 lbs. gross vehicle weight, in units.
Truck trailers	.08	5		Ebp	Census, production, in units.
(Motor coaches)	.01	5		Ebp	New series beginning with January 1957 based on AMA, factory shipments data, in units. Formerly represented by "trucks."
Motor vehicle parts	2.48		3714		This series broken down into two series.
(Original equipment parts)	1.79	m		Mcd	Monthly series based on BLS manhours beginning with January 1951; prior to that time, on manhours data from Auto Parts Manufacturers Assn. Annual index based on auto and truck output, including new annual index for autos.
(Repair parts)	.69			Ca	New monthly series and annual index, formerly used in FR consumer durable goods index; based mainly on Internal Revenue Service excise tax data and Auto Parts Manufacturers' Assn. sales data, deflated.
(Trailers, boats, and cycles)	.25				
(Auto trailers)	.10	m	3791	Ca	New monthly series based on manhours. Annual index based on Mobile Home Manufacturers' Assn. data for number of trailers shipped to dealers.
(Boat building)	.11	m	3732	Ca	Monthly series based on manhours. Annual index based on Census value data, deflated.
(Motorcycles and bicycles)	.04	m	3751,99	Ca	Monthly series based on manhours. Annual index based on production and shipments data for motorcycles, bicycles, and farm wagons.
Aircraft and other equipment	5.26				
Aircraft and parts	4.44		372		
(Aircraft)	2.49		3721		
(Commercial aircraft)	.57	m			
(Military aircraft)	1.92	m		Ebp Ed	Monthly series based on manhours. New annual indexes after 1953, based mainly on Census data for value of work done, deflated. Breakdown into military and commercial since 1953, based on Census and Defense Dept. quarterly data for shipments and order backlog of commercial and military aircraft and missiles, interpolated monthly by FR.
(Aircraft parts)	1.95	m	3722,3,9	Me	Monthly series based on manhours. Changes in output per manhour estimated by FR.

Transportation equipment—Cont.					
(Private shipyards)	.57	m	3731	Ebp	Monthly series based on manhours. Annual index based on "work done" for individual large vessels, estimated from dates of keel laying and completion and tonnage data; number of small vessels completed; and employment in repair work. Data from shipping periodicals and Defense Dept.
Railroad equipment	.25		374		
Locomotives	.12	m	3741	Ebp	Monthly series based on manhours. New annual index based on Census value data, deflated, with FR adjustment to benchmark.
Railroad cars	.13	5	3742	Ebp	Monthly series based on American Railway Car Inst., deliveries of railroad cars, in units. Annual index based on breakdown, by type, of railroad car production.
Instruments and related products	*1.71*		38		
(Measuring and surgical instruments).	.45	m	382;3841	Ebi	Monthly series based on manhours. New annual index based on Census value data, deflated, for mechanical measuring instruments and surgical and medical instruments.
(Misc. instruments & supplies)	1.02	m	381,3,6; 3842,3	Mbs	Monthly series based on manhours. New annual index based on Census value data, deflated, for engineering instruments, surgical and dental supplies, optical instruments, and photographic equipment.
(Clocks & ophthalmic goods)	.24				
(Ophthalmic goods)	.13	m	385	Ch	Monthly series based on manhours. Changes in output per manhour estimated by FR.
(Clocks and watches)	.11	m	387	Ch	Monthly series based on manhours. Annual index based on Census value data, deflated.
(Ordnance and accessories)	*1.28*				
(Privately operated ordnance plants).	.81	m	19	Ed	Monthly series based on manhours. New annual index based on Census manhours for ordnance and Defense Dept. expenditures, deflated, for selected military goods.
(Army & Navy ordnance plants).	.12				
(Army manufacturing arsenals).	.10			Ed	Dept. of the Army, end-of-quarter data for civilian employment in manufacturing arsenals operated by the Dept., with output per employee estimated by FR.
(Navy ordnance plants)	.02	m		Ed	Dept. of the Navy, end-of-month data for civilian employment in selected Naval ordnance plants and quarterly manhour totals for civilian production workers for all Naval ordnance manufacturing plants, with output per manhour estimated by FR.
(Navy shipyards)	.35	m		Ed	Dept. of the Navy, end-of-month civilian employment and quarterly manhour totals for civilian production workers in naval shipyards; output per manhour estimated by FR.
Clay, glass, and lumber	*4.72*				
Clay, glass, and stone products	*2.99*		32		
Glass and pottery products	1.01				
Flat glass and containers	.86				
Flat and other glass	.46	m	321,3; 3229pt	Mc	Monthly series based on manhours for flat glass, products made of purchased glass, and pressed and blown glassware n.e.c. Annual index based on Census value data, deflated.
(Vitreous and porcelain fixtures).	.10	m	3261,4	Mc	Monthly series based on manhours. Annual index based on Census production, value, and manhour data.
Glass containers	.30	7	3221	Mco	Census, production, all types, in units.

Clay, glass, and stone products—Cont.					
Home glassware and pottery	.15				
(Household glassware)	.07	7	3229pt	Ch	American Glassware Assn., production of tumblers, in units.
(Household pottery)	.08	m	3262,3,9	Ch	Monthly series based on manhours. Annual index based on Census value and manhour data and Bur. of Mines data on clay shipments.
Cement	.40	7	324	Mc	Bur. of Mines, production of finished portland cement, in bbls.
Structural clay products	.29		325		
Brick	.10	7	3251pt	Mc	Census, production of common and face unglazed brick, in units.
(Hollow tile)	.02		3251pt	Mc	Represented by "brick," with adjustment to annual index based on Census production data for structural tile and hollow facing tile.
Clay firebrick, pipe, and tile	.17	m	3253,5,9	Mc	Monthly series based on manhours. Annual index based on Census production data for floor and wall tile, drain tile, sewer pipe, and clay refractories.
Concrete and plaster products	.68	m	327	Mc	Monthly series based on manhours. Annual index based on Bur. of Mines data for factory shipments of gypsum products and lime and on Census value data, deflated, for concrete products.
Misc. stone and earth manufactures.	.61	m	328,9	Mc	Monthly series based on manhours. Annual index based on production, factory shipments, apparent consumption, or value data from various sources, for abrasive products, asbestos products, gaskets, sand-lime products, graphite, nonclay refractories, exfoliated vermiculite, and sheet mica products.
Lumber and products	*1.73*		24		
Logging and lumber	1.18				
(Logging)	.27	m	241	Mc	Monthly series based on manhours. Annual index based on Census data for lumber cut and for domestic pulpwood receipts at pulp mills.
Lumber	.91	5	242	Mc	Natl. Lumber Manufacturers Assn., total lumber production, in bd. ft.
Lumber products	.55				
Millwork and plywood	.43				
Millwork	.26	5	2431	Mc	Fir Door Inst., production of Douglas fir doors, and Natl. Woodwork Manufacturers Assn., production of Ponderosa pine and hardwood doors and open sash and exterior frames; weighted combination.
Softwood plywood	.12	6	2432pt	Mc	Dept. of Commerce, production, in sq. ft., derived from Douglas Fir Plywood Assn. data.
(Hardwood plywood)	.05		2432pt	Mc	Represented by "softwood plywood," with adjustment to annual index based on Census factory shipments data.
Wood containers	.12	m	244	Mco	Monthly series based on manhours. Annual index based on Dept. of Commerce production, shipments, and materials data for wooden boxes, cooperage, and baskets.
Furniture and miscellaneous	*3.05*				
Furniture and fixtures	*1.54*		25		
Household furniture	1.02	m	251	Ch	Monthly series based on manhours. Annual index based on Census value data, deflated.
Fixtures and office furniture	.52	m	252–9	Ebc	Ditto.

INDUSTRY LISTING OF SERIES, INCLUDING SOURCE AND DESCRIPTION OF BASIC DATA—Continued

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Misc. manufactures	*1.51*		39		"Miscellaneous manufactures" broken down into three series.
(Misc. consumer nondurable goods).	.64	m	3941–3; 396; 3981,83, 84,87, 92, 95,99pt	Cc	Monthly series based on manhours. New annual index based on Census value data, deflated, for costume jewelry, notions, games and toys, dolls, children's vehicles, and other consumer nondurable industries.
(Misc. consumer durable goods)	.41	m	391,3; 3949	Ch	Monthly series based on manhours. Annual index based on Census value data, deflated, and Census manhour data for jewelry (precious metal), musical instruments, sporting goods, and other industries.
(Misc. business supplies)	.46	m	395;3988, 93,99pt	Mbs	Monthly series based on manhours. Annual index based on Census value data, deflated, and Census manhour data for pens and pencils, morticians' goods, advertising signs, and other business supplies. Plastics products shifted to "rubber and plastics products" group.
Nondurable Manufactures—Total	**38.38**				
Textile, apparel, and leather products	***7.60***				
Textile mill products	*2.90*		22		
Yarns and fabrics	1.96				
Cotton and man-made fabrics	1.67				
Cotton yarns and fabrics	.94	5	2211,41, 81pt,84, 96pt	Mnd	Monthly series based on Census, total cotton consumption, in running bales. Original data are 4- and 5-week totals. New annual index based on Census value data, deflated, for thread mills, cotton broadwoven mills, and narrow fabric mills, and Census data for cotton consumption.
Man-made fabrics	.44	5	2221,81pt, 82,96pt	Mnd	New monthly series based on Textile Economics Bur. Inc., monthly rayon and acetate shipments, Census data for staple fiber imports, and monthly production of noncellulosic fibers estimated by FR from TEB quarterly data; in lbs; 2-month moving average. New annual index based on Census value data, deflated, for man-made fiber broadwoven fabric mills and yarn throwing mills and Census data for rayon and acetate consumed by fabric mills and man-made fiber tire cord production.
(Fabric finishing)	.29	5	226	Mnd	Natl. Assn. of Finishers of Textile Fabrics, woven fabrics finished (except wool), in linear yds. Original data are 4- and 5-week totals.
Wool textiles	.29				
(Wool tops)	.02		2297	Mnd	Represented by "wool apparel yarns."
(Wool apparel yarns)	.07	5	2283	Mnd	Census, fibers consumed in wool (except carpet) yarn manufacture, plus tops and noils combed, in lbs. Original data are 4- and 5-week totals.
Wool fabrics	.20		223	Mnd	New monthly series beginning with January 1959 based on Census quarterly production data for wool fabrics in linear yds., interpolated by FR. Before 1959, based on Natl. Assn. of Wool Manufacturers, woven cloths finished, adjusted to quarterly Census data.
Knit goods	.71		225		
Hosiery	.29				
Full fashioned hosiery	.11	5	2251	Cc	Natl. Assn. of Hosiery Manufacturers, production, in pairs.
Seamless hosiery	.18	5	2252	Cc	Ditto.
Knit garments	.42	m	2253–9	Cc	Monthly series based on manhours. Annual index based on Census production data for knit outerwear, underwear, and cloth, produced for sale.

Textile mill products—Cont.					
Rugs and other floor coverings	.23				
(Woven carpets)	.11	5	2271	Ch	American Carpet Inst., production of woven carpets, in sq. yds.
Tufted and hard-surface floor coverings.	.12	m	2272,9; 3982	Ch	Monthly series based on manhours. New annual index based on Census production data for tufted rugs and Census value data deflated for other rugs and hard-surface floor coverings.
Apparel products	*3.59*		23		
Outerwear	2.20				
Men's outerwear	1.10		231,2		
Men's suits and coats	.35		231		
Men's suits	.25	5		Cc	Census, number of garments cut. Original data are 4- and 5-week totals.
Men's outercoats	.05	5		Cc	Ditto.
(Separate coats and boys' wear).	.05			Cc	Represented monthly by "men's suits and coats," with adjustment to annual index based on Census data for coats and boys' suits cut.
Shirts and work clothing	.72	5	232	Cc	Census, number of men's shirts, separate trousers, work pants, and overalls cut, weighted combination. Original data are 4- and 5-week totals. Annual index also includes data for underwear, pajamas, and boys' furnishings.
(Military garments, n.e.c.)	.03			Cc	FR estimates, based on Defense Dept. annual data for receipts of military garments, n.e.r. in group.
Women's outerwear	1.10		233		
Women's suits and coats	.49	5	2331,7	Cc	Census, women's suits, coats, blouses, and skirts, weighted combination, number cut beginning with 1953; before 1953, monthly label sales, adjusted to quarterly and annual Census data.
Dresses	.61	5	2335	Cc	Census, number of garments cut, weighted combination, beginning with 1953; before 1953, monthly interpolation of quarterly and annual data for garments cut.
Misc. apparel and related manufactures	1.39		234–9		
(Misc. cut and sewn garments).	.91	m	234–8	Cc	Monthly index based on manhours. Annual index based on Census data for women's and children's undergarments and children's outerwear cut and sewn, plus a series, based on BLS manhour data, for total of millinery, fur goods, and misc. apparel, adjusted for changes in output per reported manhour in other apparel industries.
(Misc. fabricated textiles)	.48	m	239	Ch	Monthly index based on manhours. Annual index based on manhour data for total of housefurnishings, canvas bags, trimmings, embroideries, etc., adjusted for changes in output per reported manhour in other apparel industries.
Leather and products	*1.11*		31		
Leather	.16		311		
Cattlehide leather	.10	5		Mnd	Tanners' Council of America, production, in number of equivalent hides.
Skin leather	.06	5		Mnd	Tanners' Council of America, production of calf and whole kip, goat and kid, and sheep and lamb skins, in units.
Shoes and slippers	.68	5	314	Cc	Census, production, in pairs. Annual index includes detailed breakdown by types.
(Misc. leather products)	.27	m	312,3, 5–9	Cc	Monthly series based on manhours. New annual index based on Census value data, deflated, for gloves, handbags, luggage, industrial belting, and other products.

Paper and printing	*8.17*				
Paper and products	*3.43*		26		
Pulp and paper	1.71				
Wood pulp	.18	7	261	Mnd	Census, production, in tons.
Paper and board	1.53		262,3,6		
Paper	.88		262		
Printing paper	.26	6½		Mnd	Census, production of groundwood, book, and machine-coated paper, in tons.
Fine paper	.17	6		Mnd	Census, production, in tons.
Coarse paper	.20	6½		Mbs	Ditto.
Misc. paper	.25	6½		Mnd	Census, production of paper n.e.r. in group, in tons.
Paperboard	.52	6½	263	Mco	Census, production of paperboard and wet machine board, in tons.
Building paper and board	.13	7	266	Mc	Census, production, in tons.
Converted paper products	1.72		264–5		
Shipping containers	.42	5½	2653	Mco	Fibre Box Assn., factory shipments of corrugated and solid fibre shipping containers, in sq. ft. Weekly data prorated to calendar month totals.
(Boxes, etc.)	.72		2641,43, 51,52, 55	Mco	Represented monthly by "shipping containers." Annual index based on Census data for production of stock for folding and setup boxes; fiber cans, tubes, and drums; bags and sacks; and coated, waxed, and gummed paper.
Sanitary paper products	.13	6½	2649pt	Cs	Census, production of sanitary tissue stock, in tons.
(Food containers, etc.)	.45		2642,44, 49pt,54	Mco	Represented monthly by "sanitary paper products," with adjustment to annual index based on Census data for production of stock for food containers, envelopes, wallpaper, and laminated wallboard.
Printing and publishing	*4.74*		27		
Newspapers	1.53		271		Former "newsprint consumption" series broken down into two components.
(Newspaper circulation)	.42			Cs	Census data for annual dollar receipts, and *Editor and Publisher* data on paid circulation, smoothly interpolated by FR.
(Newspaper advertising)	1.11	7½		Mbs	Derived by subtracting circulation series from total newsprint consumption index based on American Newspaper Publishers Assn. data. In calculating daily averages, Sundays counted as equivalent to 1½ weekdays.
Job printing and periodicals	3.21		272–9		
Job printing	2.16	m	274–9	Mbs	Monthly series based on manhours. Annual index based on Census value data, deflated.
Periodicals and books	1.05	m	272,3	Cs	Ditto.
Chemical, petroleum, and rubber products	*11.54*				
Chemicals and products	*7.58*		28		
Industrial chemicals	3.84				
Inorganic chemicals	1.14				
Basic inorganic chemicals	.72	7	2812, 19pt	Mnd	Monthly series based on Census, production of sulfuric acid, soda ash, synthetic anhydrous ammonia, and 7 other inorganic chemicals, weighted combination. Annual index includes production data for 68 chemicals and value data, deflated, for all other output.
(Atomic energy manufacturing).	.42		2819pt	Ed, Mnd	Atomic Energy Comm., production contractor employment, with adjustment for output per employee estimated by FR. For market classification, total weight split between defense equipment and nondurable materials.

Chemicals and products—Cont.					
Organic chemicals	2.70				
Basic organic chemicals	1.45	m	2814,15, 18,92	Mnd	Monthly series based on manhours. New annual index based on Tariff Comm., Census, and Internal Revenue Service quantity and value data, for coal tar crudes, explosives, ethyl alcohol, and other products. Former title was "miscellaneous organic chemicals."
Synthetic materials	1.25		282		
Plastics materials	.60	7	2821	Mnd	Monthly series based on Tariff Comm., production of plastics and resins materials, in lbs. New annual index based on Tariff Comm. and Census quantity and value data, deflated.
Synthetic rubber	.14	7	2822	Mnd	Census, production, in tons.
Man-made fibers	.51	7	2823,4	Mnd	Textile Economics Bur., Inc., monthly production of rayon and acetate, plus production of non-cellulosic fibers estimated by FR from TEB quarterly data, in lbs.
Chemical products	3.74				
Drugs, soap, and toiletries	2.97				
Soap and related products	.66	5	2841–3	Cs	Monthly index based on Census, factory consumption of fats and oils in soap manufacture, in lbs. New annual index based on Census production data for glycerin and value data, deflated, for soap, other detergents, and related products, adjusted by FR to benchmark.
(Drugs and medicines)	1.27	m	283	Cs	Monthly series based on manhours. New annual index based on Census value data, deflated, adjusted by FR to benchmark.
(Toiletries and misc. chemicals).	1.04	m	2813,44, 61,73, 79,91, 93–99	Cs	Monthly series based on manhours, for gum and wood chemicals and misc. chemicals subgroups. Annual index based on Census manhour data for total of toilet preparations, insecticides, and other chemical products, with adjustment for output per manhour estimated by FR; and on production data from various sources for softwood distillation products, glue and gelatin, carbon black, compressed and liquefied gases, and evaporated salt.
Paints	.60	5	2816;285	Mc	New monthly and annual index beginning with January 1953 based on Census production data, in gallons. Prior to 1953, monthly index based on manhours and annual index based on Census value data, deflated, and Census and Bur. of Mines production and shipments data.
Fertilizer	.17	m	2871,2	Mbs	Monthly series based on manhours. New annual index based on Census production data for normal and concentrated superphosphates and on Dept. of Agriculture consumption data and Census export data for mixed fertilizer, adjusted by FR to benchmark.
Petroleum products	*1.97*		29		
Automotive gasoline	.87	7	291pt	Cs	Bur. of Mines, production, in bbls.
Distillate fuel oil	.33	7	291pt	Cs	Ditto.
Residual fuel oil	.10	7	291pt	Mf	Ditto.
Aviation fuel	.14	7	291pt	Mf	New index beginning with January 1953, based on Bur. of Mines production data for aviation gasoline and jet fuel, in bbls., weighted combination. Before 1953, based on aviation gasoline alone.
Kerosene	.05	7	291pt	Mf	Bur. of Mines, production, in bbls.
Lubricating oil	.15	7	291pt; 2992	Mbs	Ditto.

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Petroleum products—Cont.					
Asphalt, waxes, etc.	.15	7	291pt	Mc	New index beginning with January 1957, based on Bur. of Mines data for production of asphalt, waxes, liquefied refinery gases, road oil, and petroleum coke, in bbls. Prior to 1957, represented monthly by petroleum refining, with FR adjustment to annual index based on Bur. of Mines production data.
(Paving mixtures)	.08		2951,99	Mc	Represented monthly by "asphalt, waxes, etc.," with FR adjustment to annual index based on Bur. of Mines factory shipments data for paving mixtures and production data for fuel briquets and packaged fuel.
(Asphalt roofing and siding)	.10	5	2952	Mc	Census, factory shipments of asphalt roofing and siding and insulated brick siding, in sales squares.
Rubber and plastics products	*1.99*		30		
Tires and tubes	.67		301		
Auto tires	43				This series broken down into two components.
(Replacement tires)	.29	5½		Ca	Rubber Manufacturers' Assn., FR estimate based on shipments and inventory of passenger tires, in units.
(Original equipment tires)	.14	5½		Mcd	Ditto.
Truck and bus tires	.24	5½		Me	RMA, production, in units.
Misc. rubber and plastics	1.32		302–7		
Misc. rubber products	.80	5	302–6	Mbs	Monthly series based on Census data for total rubber consumption, less FR estimates of rubber consumed in tire and tube manufacturing. New annual index based on Census value data, deflated, for rubber hose, belting, sponge rubber, and misc. products; Dept. of Commerce production data for reclaimed rubber; and RMA production data for rubber footwear.
(Misc. plastics products)	.52	m	307	Mnd	New monthly series based on manhours. Annual index based on Census value data, deflated. Formerly part of "miscellaneous business supplies" series in "miscellaneous manufactures" group.
Foods, beverages, and tobacco	***11.07***				
Foods and beverages	*10.25*		20		
Food manufactures	8.64				
Meat products	1.52		201		
Beef	.46	5½		Cs	Dept. of Agriculture, total commercial production, in lbs.
Pork	.78	5½		Cs	Ditto.
Misc. meats	.28	5½		Cs	New index beginning with January 1957 based on Dept. of Agriculture commercial production data for veal, lamb, mutton, lard, and poultry, weighted combination. Prior to 1957, represented monthly by beef and pork, with FR adjustment to annual index based on Dept. of Agriculture data.
Dairy products	1.56		202		
(Fluid milk)	1 12		2026pt	Cs	New index, based on Dept. of Agriculture annual data for nonfarm consumption of fluid milk excluding that used for factory products or retailed by farmers, smoothly interpolated by FR. Formerly classified in wholesale trade.
Butter	.07	5½	2021	Cs	Dept. of Agriculture, production, in lbs.
(Natural cheese)	.04	7	2022	Cs	Ditto.
(Cottage cheese)	.02	7	2026pt	Cs	New index beginning with January 1957 based on Dept. of Agriculture production data, in lbs. Prior to 1957, represented monthly by "natural cheese," with FR adjustment to annual Dept. of Agriculture data.

INDUSTRY LISTING OF SERIES, INCLUDING SOURCE AND DESCRIPTION OF BASIC DATA—Continued

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Food and beverages—Cont.					
Concentrated milk	.08	7	2023	Cs	Dept. of Agriculture, production of evaporated, condensed, and dry milk, in lbs.
Frozen desserts	.23	5½	2024	Cs	New index beginning with January 1957 based on Dept. of Agriculture production data for ice cream, sherbet, ice milk, and allied products, in gals. Prior to 1957, based on ice cream and sherbet only.
Canned and frozen foods	1.06	m	203	Cs	Monthly series based on manhours. New annual index based on Census value data, deflated, for frozen foods, canned soups, jams, and jellies, and on quantity data from various sources for canned fruits, vegetables, fish, and other products.
Grain mill products	.86				
Wheat flour	.28	5	2041,5	Cs	Census, production, in sacks.
Cereals and feeds	.58	m	2042–4	Cs	Monthly series based on manhours. Annual index based on Dept. of Agriculture data for rice milled and for grains utilized in cereal preparations; and American Feed Manufacturers' production data for prepared feeds for livestock and poultry.
Bakery products	1.49	m	205	Cs	Monthly series based on manhours. New annual index based on Census value data, deflated, for the bread, biscuit, and cracker industry.
Confectionery	.43	5	207	Cs	Census, factory sales of confectionery and chocolate products, in lbs.
Sugar	.23		206		
(Raw cane)	.02		2061	Cs	Represented monthly by "sugar" with FR adjustment to annual index based on Dept. of Agriculture production data.
Cane sugar	.11	5	2062	Cs	Dept. of Agriculture, production, in tons.
Beet sugar	.10	7	2063	Cs	Ditto.
Misc. food preparations	1.28	m	2046,87, 96–99	Cs	Monthly series based on manhours. New annual index based on production data from various sources for margarine, shortening, coffee roasting, peanut butter, and other products and on Census value data, deflated, for flavorings, frozen prepared foods, potato chips, vinegar, tea, etc.
Vegetable and animal oils	.21				
Vegetable oils	.14	7	2091–3	Mnd	Census, factory production of crude cottonseed, soybean, and linseed oils, in lbs.
Grease and tallow	.07	6	2094,5	Mnd	Census, production of inedible tallow and grease other than wool grease, in lbs.
Beverages	1.61				
Bottled soft drinks	.48	5½	2086	Cs	American Bottlers of Carbonated Beverages, factory sales, in cases. Current year, FR estimates, not published separately.
Alcoholic beverages	1.13				
Beer and ale	.78	5½	2082,3	Cs	Internal Revenue Service, production of beer, in bbls.
Liquor distilling	.08	5	2085pt	Cs	IRS, production of distilled spirits, excluding brandy and alcohol, in tax gals.
Liquor bottling	.20	5	2085pt	Cs	IRS, distilled spirits bottled, in wine gals.
(Wines and brandy)	.07	5	2084	Cs	New index beginning with January 1957 based on IRS data for withdrawals of still wines, sparkling wines, and brandy, in wine gals. Prior to 1957, represented by "alcoholic beverages" with FR adjustment to annual index based on IRS data.

INDUSTRY LISTING OF SERIES, INCLUDING SOURCE AND DESCRIPTION OF BASIC DATA—Continued

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Tobacco products	*.82*		21		
Cigarettes	.61	5	211	Cs	Monthly series based on IRS data for number of cigarettes produced, with FR adjustment to benchmark based on separate series for king-size, filter-tip, and regular cigarettes.
Cigars	.12	5	212	Cs	IRS, number of cigars produced.
(Misc. tobacco manufactures)	.09	5	213,4	Cs	New index beginning with January 1957 based on IRS data for production of chewing and smoking tobacco and snuff. Prior to 1957, represented by cigarettes and cigars, with FR adjustment to annual index based on IRS data.
Mining	**8.23**				
Coal, oil, and gas	***6.80***				
Coal	*1.16*				
Anthracite	.11	5	11	Mf	Bur. of Mines, production of Pennsylvania anthracite, in tons.
Bituminous coal	1.05	5	12	Mf	Bur. of Mines, production of bituminous coal and lignite, in tons.
Crude oil and natural gas	*5.64*		13		
Oil and gas extraction	4.91				
Crude oil	4.25	7	131pt	Mf	Bur. of Mines, production, in bbls.
Gas and gas liquids	.66				
Natural gas	.33	7	131pt	Mf	Bur. of Mines, marketed production, in cu. ft.
Natural gas liquids	.33	7	132	Mf	Bur. of Mines, production of natural gasoline, liquefied petroleum gas, and allied products, in gals.
Oil and gas drilling	.73	7	1381	Ebi	*Oil and Gas Journal*, footage of wells completed, 2-month moving avg. Beginning with January 1958, based on prorated weekly data.
Metal, stone, and earth minerals	***1.43***				
Metal mining	*.61*		10		
Iron ore	.19	6½	101	Mm	Bur. of Mines, production of usable iron ore, excluding manganiferous, in tons.
Nonferrous metal mining	.42				
Copper mining	.17	6	102	Mm	Bur. of Mines, production of recoverable copper, in tons.
Lead mining	.02	6	103pt	Mm	Bur. of Mines, production of recoverable lead, in tons.
Zinc mining	.02	6	103pt	Mm	Bur. of Mines, production of recoverable zinc, in tons.
(Misc. nonferrous metals)	.21	m	104–6, 109	Mm	New monthly series beginning with January 1959 based on manhours. Prior to 1959, represented by "nonferrous metal mining." Annual index based on Bur. of Mines production or shipments data for gold, silver, bauxite, manganese, molybdenum, tungsten, titanium, and antimony ores, and, beginning with 1956, on Atomic Energy Comm. data for uranium production.
Stone and earth minerals	*.82*	m	14	Mc	Monthly series based on manhours. Annual index based on Bur. of Mines production or shipments data for stone, sand, gravel, clay, sulphur, gypsum, and misc. nonmetallic minerals.

Series	1957–59 proportion	Working days	Classification		Source and description
			S.I.C.	Market	
Utilities	**5.32**				Utility index published as a separate measure since October 1956.
Electricity	***4.04***		491;4931; 9149pt; 9349pt		Four monthly and annual indexes (described below) based on Federal Power Comm. data for sales in kilowatt-hours.
					Type of customer:
Residential electricity	1.72	u		Cs	Urban residential and rural.
Nonresidential electricity	2.32				
General industrial	1.03	u		Mf	Large light and power users (mainly manufacturing and mining establishments), except Atomic Energy Comm.
(Atomic energy)	.08	7		Mf	AEC manufacturing establishments.
Commercial and other	1.21	u		Mf	Small nonresidential light and power users (mainly commercial establishments), street lighting and other public authorities (except AEC), and railways.
Gas	***1.28***		492;4932		Three monthly and annual indexes (described below) based on American Gas Assn. annual and quarterly data on sales by type of customer, and monthly data on total sales, in therms.
					Type of customer:
(Residential gas)	.74	u		Cs	Residential.
(Nonresidential gas)	.54				
(Industrial)	.35	u		Mf	Manufacturing and mining establishments and electric utilities.
(Commercial and other)	.19	u		Mf	Commercial and professional establishments, public authorities, and establishments n.e.c.

NOTE.—The seasonal factors shown for coal mining in July and August and those for processed foods in August and September are used in preliminary calculations only. To allow for year-to-year variations in the timing of summer vacations in coal mining and of seasonal peaks in food processing, June and July are normally treated as one month in calculating the final seasonally adjusted indexes for coal mining and August and September as one month for processed foods. In each instance the sum of the unadjusted indexes for the two months is divided by the sum of the two seasonal factors, and the result is used as the seasonally adjusted index for both months. Where work stoppages or other special factors have affected output in one of the two months, such as coal output in July 1959, the months are not averaged and the final seasonally adjusted indexes are based on the individual monthly factors.

Seasonally adjusted monthly gas indexes are derived from smoothline interpolations between the seasonally adjusted quarterly indexes.
