BULLETIN OF THE
UNITED STATES BUREAU OF LABOR.

WHOLE NO. 105: PART II. WASHINGTON. AUGUST 23, 1912.

RETAIL PRICES, 1890 TO 1911.

PART II.

PREPARED UNDER THE DIRECTION OF FRED C. CROXTON.

Part I of this report presents a summary of the complete report and covers retail prices of the principal articles of food from 1890 to 1911, retail prices of coal, for household use, from 1907 to 1911, and net prices of gas, for household use, from 1907 to 1911.

Part II presents general tables showing actual prices of the principal articles of food, of coal, and of gas for the years 1907 to 1911.

EXPLANATION OF TABLES.

This report includes five general tables, as follows:

Table I.—Retail prices of the principal articles of food every second month, 1907 to 1910, and every month during 1911, by cities and by firms.

Table II.—Relative retail prices of the principal articles of food, 1890 to 1911, by geographical divisions.

Table III.—Retail prices of coal, for household use, on the 15th of January, April, July, and October, 1907 to 1911, by cities and by firms.

Table IV.—Relative retail prices of coal, for household use, 1907 to 1911, by cities.

Table V.—Net price, per 1,000 cubic feet, of gas, for household use, on the 15th of April, 1907 to 1911, by cities and by companies.

Table I.—Retail prices of the principal articles of food every second month, 1907 to 1910, and every month during 1911, by cities and by firms (pp. 11 to 350).—This table includes 39 of the most important industrial cities in the various sections of the United States. For each city prices are quoted for 16 principal articles of food. Price quotations were secured for each of the articles from several firms within each city on or about the 15th of January, March, May, July, September, and November, 1907 to 1910, inclusive, and on or about

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

the 15th of each month during 1911. This table shows these price quotations in detail and also averages for each of the five years. The average price for the year is a simple average found by adding together six quotations and dividing by six for each of the years 1907 to 1910, inclusive, when quotations were secured for every second month, and by adding together 12 quotations and dividing by 12 for the year 1911, when quotations were secured for every month.

The 39 cities are arranged in alphabetical order, and under the various cities the 16 articles follow a uniform order, beginning with fresh meats. The particular grade or description of each article is shown in connection with the price quotations. Great care was taken to secure prices throughout the five-year period for an article of as nearly uniform grade or quality as possible within each store, as changes in quality are of course reflected in prices.

Quotations were secured and are presented in this table from more firms in each city for the years 1910 and 1911 than for the years 1907 to 1909.

The price quotations were secured from the retail merchants by agents of the Bureau of Labor for the period from January, 1907, to the time of the agent's visit in the summer or autumn of 1911. At the same time that the price quotations for preceding dates were secured the agent arranged for the retail merchant to furnish quotations direct to the Bureau on the 15th of each succeeding month upon a form furnished by the Bureau. As these monthly price reports have been received by the Bureau the quotations have been carefully examined, and where questions have arisen the matter has been cleared up either by correspondence or by return visits of agents of the Bureau. The retail merchants assisted the agents in every possible way in tracing prices back through the earlier years of the period, and the hearty and prompt response to the request for monthly price reports has far surpassed any expectations.

In order to avoid identification, names of firms are not disclosed, but each firm has been given a number which enables one to follow the prices quoted throughout the period by any firm.

Table II.—Relative retail prices of the principal articles of food, 1890 to 1911, by geographical divisions (pp. 351 to 358).—This table shows for each of 15 principal articles of food the relative price for each year from 1890 to 1911, inclusive, and also for each month of 1911. No relative prices for leg of lamb (yearling) are included in this table, for, as explained in Part I, page 42, the age of the sheep (yearling) varies from approximately 9 to 18 months, and, with some firms, the age varies considerably with different seasons of the year.

As explained in Part I of this report, a relative price, or an index number, as it is technically called, of any article is the per cent which the price of that article at any certain date is of the price of the same

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

article at a date or a period which has been selected as the base or standard.

The base selected for this compilation of retail prices is the average price for the 10-year period, 1890 to 1899. This base period is the same as was used in the preceding Bulletins on retail prices and wages and hours of labor and in the several presentations of wholesale prices in the Bulletins of this Bureau. The average for the 10-year period is used as the base for the reason that an average price for a number of years more nearly represents average or normal conditions than does the price for a single year, because of unusual conditions that may prevail in any one year.

The value of the relative price is that it enables the reader to follow more readily the course of prices of a single article, and when these relative prices are combined to follow the course of prices of groups of articles. The relative price also permits the continuation of a price series when, for any reason, quotations from one firm are discontinued and quotations from another firm for a different quality or brand of article are secured instead, which article, though differing somewhat from the one formerly quoted, equally well represents the trend of the general market.

Several steps were necessary in order to arrive at the relative prices for an article for a geographical division or for the United States, as follows: For the period from 1890 to 1903, during which time there were no changes in firms furnishing quotations of prices, (1) A relative price for each of the 14 years was computed for each schedule or statement of prices from a firm by calculating the per cent which the average price for each year was of the average price for the 10-year period from 1890 to 1899, this period from 1890 to 1899 having been selected as the base, or 100. (2) After the relative prices were computed for all of the firms quoting prices for an article, the relatives were added and the sum divided by the number of firms, which produced the relative prices for the city. (3) The relative prices for all of the cities within a geographical division were added and the sum divided by the number of cities included, which produced the relative prices for the geographical division. (4) The relative prices for all of the cities included in the study were added and the sum divided by the number of cities, which produced the relative prices for the United States.

The many changes in firms furnishing prices, and also the changes in grades and brands of articles, made additional steps advisable in computing the relative prices for the period since 1903, and the method used for 1904, for instance, was as follows: (1) For all firms added in connection with the 1904 work, prices were also secured for the preceding year. (2) For each schedule or statement of prices the per cent which the average price for 1904 was of the average price for

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

1903 was computed. This produced the relative price in 1904 with the preceding year as the base, or 100. (3) After these percentages were computed for all of the firms quoting prices for an article, they were added and the sum divided by the number of firms, which produced the percentages for the city, or the relative prices for the city (with the preceding year as the base, or 100). (4) The percentages for all of the cities within a geographical division were added and the sum divided by the number of cities included, which produced the percentages for the geographical division or the relative prices for the geographical division (with the preceding year as the base, or 100). (5) The relative prices for all of the cities included in the study were added and the sum divided by the number of cities which produced the percentages for the United States or the relative prices for the United States (with the preceding year as the base or 100). (6) After these percentages for a geographical division were computed, the relative prices on the 1890 to 1899 base were found by applying the percentage to the relative price (with the 10-year period, 1890 to 1899, as the base) for the previous year. Thus, if the 1904 price of wheat flour was 115.87 per cent of the 1903 price in the North Atlantic division and the 1903 relative price on the 1890 to 1899 base was 102.1, the price for 1904 on the 1890 to 1899 base would be 115.87 per cent of 102.1, or 118.3. (7) After the percentages for the United States were computed the relative prices on the 1890 to 1899 base were computed in the same manner as for a geographical division.

In computing relative prices for the months of 1911 the actual prices for each month were compared with the average price for 1910.

The relative prices shown in this table differ to some extent from those shown in Bulletin No. 77 for the reason that fewer cities are included. It was not possible for the Bureau at the present time to include the original number of cities, but the cities included are represented by a larger number of price quotations than were formerly shown.

The 39 cities for which prices were secured have been grouped into five geographical divisions as follows:

North Atlantic division:
- Boston, Mass.
- Buffalo, N. Y.
- Fall River, Mass.
- Manchester, N. H.
- Newark, N. J.
- New Haven, Conn.
- New York, N. Y.
- Philadelphia, Pa.
- Pittsburgh, Pa.
- Providence, R. I.
- Scranton, Pa.

South Atlantic division:
- Atlanta, Ga.
- Baltimore, Md.
- Charleston, S. C.
- Jacksonville, Fla.
- Richmond, Va.
- Washington, D. C.

North Central division:
- Chicago, Ill.
- Cincinnati, Ohio.
- Cleveland, Ohio.
- Detroit, Mich.

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

North Central division—Concluded.
- Indianapolis, Ind.
- Kansas City, Mo.
- Milwaukee, Wis.
- Minneapolis, Minn.
- Omaha, Nebr.
- St. Louis, Mo.

South Central division.
- Birmingham, Ala.
- Dallas, Tex.
- Little Rock, Ark.

South Central division—Concluded.
- Louisville, Ky.
- Memphis, Tenn.
- New Orleans, La.

Western division:
- Denver, Colo.
- Los Angeles, Cal.
- Portland, Oreg.
- Salt Lake City, Utah.
- San Francisco, Cal.
- Seattle, Wash.

Table III.—Retail prices of coal, for household use, on the 15th of January, April, July, and October, 1907 to 1911, by cities and by firms (pp. 359 to 449).—This table shows prices of Pennsylvania anthracite coal, stove size; Pennsylvania anthracite coal, chestnut size; and bituminous coal in all the cities for which retail prices of food are shown, with the exception of Atlanta, Ga., Charleston, S. C., Portland, Oreg., and Scranton, Pa. In some cities practically no bituminous coal is used for household purposes, and in others practically no Pennsylvania anthracite coal is used. In a few cities Colorado coal is quoted and in one or two cities Welsh and other varieties of coal are quoted.

Prices are quoted for coal in ton lots, in half-ton lots, and in bushel lots, or in 100-pound lots when sold in small quantities. In connection with prices the number of pounds per ton, half ton, and bushel is also shown. In addition to the price quotations for each quarter, a yearly average has been computed by dividing the sum of the four quarterly quotations by four. The prices quoted are for coal delivered to consumers, but do not include charges for storing ton and half-ton lots in cellar or coal bin where an extra handling is necessary, except where noted in connection with the price quotation.

The price quotations were furnished by coal dealers in each city, who kindly responded to a request from the Bureau for this information. In order to avoid identification firm names are not disclosed, but each firm has been given a number, which enables one to follow the prices quoted throughout the period by any firm.

No prices for coal have been included in previous reports on retail prices issued by the Bureau of Labor.

Table IV.—Relative retail prices of coal, for household use, 1907 to 1911, by cities (p. 450).—This table shows for ton lots of Pennsylvania anthracite stove coal, of Pennsylvania anthracite chestnut coal, and of bituminous coal the relative price each year from 1907 to 1911. The relative prices were computed using the average price for the year 1907 as the base, or 100.

Table V.—Net price, per 1,000 cubic feet, of gas, for household use, on the 15th of April, 1907 to 1911, by cities and by companies (pp. 451 and 452).—This table shows net prices of manufactured gas, and also of natural gas where used, in all the cities for which retail prices of food are shown, with the exception of Dallas, Tex. The prices are quoted on the 15th of April of each year and are for gas for household use as distinguished from use by manufacturing plants and industrial establishments. The prices are the same for gas for illuminating, cooking, and heating purposes, except as noted in the table.

The data were furnished by the gas companies, who kindly responded to the Bureau's request for this information.

No prices for gas have been included in previous reports on retail prices issued by the Bureau of Labor.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[2] No quotation.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] Quotations from this weekly are taken because no record of selling price per pound for the years 1907 to 1911 was preserved by any of the firms visited. The firms stated, however, that the prices published in the Commercial Bulletin correctly represented the prices at which they sold sugar.

[2] No quotation.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[2] Quotation discontinued.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative," prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.

[1] The prices are for the article generally known to the trade as "yearling." The age of the sheep ("yearling") varies from approximately 9 to 18 months. Owing to the fact that, in some firms, the age varies considerably with different seasons of the year, no "relative" prices are computed for this article in this report.
