G.12.3

For immediate release
November 15, 1973

Industrial production rose 0.6 percent further in October following a slightly revised increase of 0.5 percent in September. The October index at 127.8 percent of the 1967 average was 7.2 percent above a year ago. Output gains in the month were widespread among consumer goods and business equipment while production of industrial materials changed little.

Auto assemblies rose 3 percent further and were at an annual rate of 9.4 million units. November car production is now scheduled at an annual rate of 9.8 million units. Output of some household goods and most nondurable consumer goods also rose in October and production of appliances, television sets, and furniture were maintained at an advanced level. Output of business equipment increased 1.6 percent further with continued advances in most lines; production of commercial aircraft, however, remained at a low rate.

Among materials, output of steel and other durable goods materials changed little but production of nondurable goods materials declined somewhat as output of the textile, paper, and chemical grouping, which had been operating at near-capacity rates, was off slightly.
