FOREWORD

This set of *Local Area Personal Income*, which resumes the annual publication schedule, presents estimates for 1985 and 1986 for the first time and estimates for 1981–84 that are extensively revised and improved.

The estimates reflect the comprehensive revision of the national income and product accounts that was released in December 1985 and the most careful review of local area source data and estimating methods since the inception of the local area estimates.

The changes to the estimates of nonfarm proprietors' income are the result of a major reworking/overhaul incorporating both changes at the national level and the implementation of a more comprehensive and current statistical basis for the State and county distributions. Most other changes also result from the introduction of better source data as well as from the identification and correction of source data errors and anomalies. Although many of these changes are incremental, they are more numerous than in most previous comprehensive revisions; taken together with the nonfarm proprietors' income revision, they constitute a major improvement to the local area estimates.

DANIEL H. GARNICK
Associate Director for Regional Economics

July 1988

ACKNOWLEDGMENTS

The personal income estimates presented in this publication were produced by the Regional Economic Measurement Division, Bureau of Economic Analysis (BEA), under the direction of Linnea Hazen, Chief. The estimates were the result of a divisionwide effort.

Estimates of civilian labor income (wages and salaries and other labor income) were prepared by the Regional Wage Branch, under the supervision of Carol E. Evans, Chief. Major responsibilities were assigned to Sharon C. Carnevale, C. Brian Grove, and James M. Scott. Contributing staff members include E. Frances Bake, Patricia M. Coakley, Elizabeth P. Cologer, Eddie L. Key, Russell C. Lusher, Richard A. Lutyk, Lisa C. Ninomiya, Adrienne T. Pilot, Michael G. Pilot, William E. Reid, Jr., John A. Rusinko, Victor Sahadachny, John S. Turner, John A. Vanderwolf, and Jaime Zenzano.

Estimates of Federal military income, transfer payments, personal contributions for social insurance, and the residence adjustment were prepared by the Quarterly Income Branch, under the supervision of Robert L. Brown, Chief. Contributing staff members include Thelma E. Harding, John M. Reed, Albert Silverman, James P. Stehle, Isabelle B. Whiston, Ellen M. Wright, Daniel Zabronsky, and Marianne A. Ziver.

Estimates of dividends, interest, rent, and proprietors' income were prepared by the Proprietors' Income Branch under the supervision of Arthur L. Sensenig, former Chief. Major responsibilities were assigned to Charles A. Jolley and James M. Zavrel. Contributing staff members include Elaine M. Briccetti, Dean J. Fusco, Richard H. Grayson, and Toui C. Pomsouvan.

The assembly of public-use tabulations and data files and the preparation of the text and tables for this publication were performed by the Regional Economic Information System (REIS) Branch. Major responsibilities were assigned to Kathy A. Albetski, Wallace K. Bailey, Kenneth P. Berkman, and Gary V. Kennedy. Secretarial support was provided by Hilda G. Tolson. Contributing staff members include Eairla A. Hawkins, Louise T. Johnson, Susan J. Lease-Trevathan, Lela S. Lester, Jeffrey L. Newman, Michael J. Paris, Darlene C. Robinson, Elizabeth R. Self, and Mary C. Williams.

Publishing services and text editing were provided by Sybella W. G'Schwend and M. Gretchen Gibson under the supervision of Leland L. Scott, Chief, Publication Services Branch, Current Business Analysis Division.

Although the county income measures contained in this publication resulted from the effort, experience, and cooperation of BEA personnel, their foundation was the statistical work of other government agencies as well as private organizations. Particularly noteworthy for their contributions were the State employment security agencies, the various State agencies administering income maintenance programs, the Bureau of Labor Statistics, the Bureau of the Census, the National Agricultural Statistics Service, the Internal Revenue Service, the Social Security Administration, the Health Care Financing Administration, the Office of the Secretary of Defense, the Veterans' Administration, and the Association of American Railroads.

INTRODUCTION

This volume is part of a five-volume set published annually by the Regional Economic Measurement Division of the Bureau of Economic Analysis (BEA). The set presents BEA's estimates of total and per capita personal income for local areas for 1981–86, as well as additional detail on the sources of personal income by type and major industry. Thus, these volumes present much more than can be presented in the SURVEY OF CURRENT BUSINESS, in which BEA annually publishes 3 years of estimates of total and per capita personal income for local areas.

The estimates reflect the changes to personal income made in the 1985 comprehensive revision of the national income and product accounts (NIPA's) and extended to the State personal income series in August 1986. The estimates also reflect improvements made possible by the availability of new or more current data at the State and county levels. The revised series of local area personal income estimates extends back through 1969 and supersedes all previously published estimates for those years. The revised estimates for 1969–80 can be obtained as explained under "Data availability" on the next page.

The tables in these volumes are supplemented by maps and charts. The maps show the outlines of counties and metropolitan areas in each State. The charts show the distribution of total personal income (TPI) among the larger metropolitan areas of each State and the percent change in TPI from 1981 to 1986 for these areas. These volumes also present a detailed description of the source data and estimating methods used in making the 1981–86 estimates; specifically, the description reflects the improvements that were introduced as part of the comprehensive revision. This statement of methodology is intended to give the user a basis for evaluating the reliability of the estimates and the necessary information for determining their suitability for various applications.

Volume 1 of the set is a national volume presenting estimates for the United States as a whole, for the regions and States, and for metropolitan areas. The estimates of labor and proprietors' earnings are presented at the two-digit Standard Industrial Classification (SIC) level. In addition, volume 1 contains the methodology statement and tables that show the distribution and changes in total personal income for regions; its appendixes show the county definitions of metropolitan areas, describe the metropolitan area classification scheme, and present samples of tables available through the BEA Regional Economic Information System (REIS).

The other four volumes present estimates for one or more of the eight BEA regions: New England, Mideast, and Great Lakes in volume 2; Plains in volume 3; Southeast in volume 4; and Southwest, Rocky Mountain, Far West, Alaska, and Hawaii in volume 5. Each regional volume includes the methodology statement and estimates for the following: the United States; the region(s); and the States, the metropolitan statistical areas (MSA's), the primary metropolitan statistical areas (PMSA's), and the counties of the region(s). The earnings estimates in these volumes are at the SIC industry division level, but tables at the two-digit SIC level are available as explained on the next page. Estimates for consolidated metropolitan statistical areas (CMSA's) appear only in volume 1.

The estimates contained in these volumes are prepared for States and counties; estimates for all other geographic areas are made by aggregating either the State or county estimates in the appropriate combinations. This building block approach provides BEA with the flexibility necessary to meet the needs of the wide variety of users of local area estimates. It also permits estimates for areas whose boundaries change over time—such as metropolitan areas—to be presented on a consistent geographic definition for all years. Because estimates are made only for local areas that can be defined in terms of counties, the metropolitan areas for the New England States in BEA's local area personal income series are not the MSA's, CMSA's, and PMSA's—which are defined in terms of cities and towns—but rather are the alternative New England county metropolitan areas (NECMA's) developed by the Office of Management and Budget (OMB). (A more detailed description of the NECMA's is included in Appendix A of volume 1.)

Since the publication of the first regional estimates of income in 1939, substantial improvements have been made in the personal income estimates. To provide the reader with a perspective on the estimates presented in these volumes, a brief history of the State and local area personal income estimates is presented in this introduction. The introduction also indicates the major uses of the local area estimates and the schedules and formats in which they are made available. Finally, it describes the BEA User Group.

Historical development

BEA's work on regional income estimation began in the mid-1930's with the construction of a series of "State income payments" to individuals. State income payments were defined as the sum of (1) wages and salaries, (2) other labor income and relief, (3) entrepreneurial withdrawals, and (4) dividends, interest, and net rents and royalties. (The last component, in the aggregate, was referred to as "property income.") The estimates were produced as part of a broad effort to explain the processes and structure of the Nation's economy in the 1930's. During the 1940's and early 1950's, extensive work in locating data sources and revising methodology resulted in the production of a more comprehensive annual measure, State personal income. State personal income differs from State income payments in several important ways: (1) Personal income includes six major components in contrast to the four of income payments (other labor income and transfer payments replaced "other labor income and relief," and the component "personal contributions for social insurance" was added as an explicit deduction); (2) personal income includes greater component detail and a broader range of income-in-kind and imputed income items; and (3) personal income includes transfers by business.

During the 1960's, work on the development of quarterly estimates of State personal income was completed. The first set of State quarterly estimates as a continuous series was published in the December 1966 issue of the SURVEY.

BEA began work on local area estimates in the mid-1950's, but the estimates were confined to a relatively small number of counties in the mideastern and plains States. This work on local area measurement was expanded in the mid-1960's and resulted in a historical personal income series for selected years 1929–62 for metropolitan areas and for nonmetropolitan counties. Estimates for counties within metropolitan areas were developed in the early 1970's and published for the first time in the April 1975 SURVEY. BEA now prepares annual estimates of personal income and related estimates of employment for each of the metropolitan areas and almost all of the more than 3,100 counties and county equivalents in the United States. The exceptions are the smaller Virginia independent cities, generally those with fewer then 100,000 residents. The separate estimates for these cities have been discontinued because the geographic coding of the source data for these small areas has proved to be unreliable. Instead, these cities are now combined with adjacent counties in the BEA estimates.

Uses of county and metropolitan area estimates

The county and metropolitan area estimates are widely used in the public and private sectors to measure and track levels and types of incomes received by persons living or working in a county or metropolitan area. They provide a frame-work for the analysis of each local area's economy and serve as the basis for decision making in both the public and private sectors.

Personal income is also one of the measures used in evaluating the socioeconomic impact of public and private sector initiatives. For example, it is widely used in preparing environmental impact statements and resource management plans required by the National Environmental Policy Act of 1969 and the Federal Land Policy and Management Act of 1976.

Federal agencies use estimates of local area personal income as input into econometric models for projecting program needs and as a framework for economic analysis. In addition, the estimates are used in formulas for the allocation of Federal funds.

State governments make extensive use of the estimates. The estimates are used to measure the economic base of State planning areas and in econometric models developed for various planning purposes. They are also used to project tax revenues and future needs for public utilities or services.

University schools of business and economics, often working under contract for State and local governments, reproduce BEA personal income data in abstracts or similar reports. These publications are distributed to local government agencies, regional councils, private research groups, businesses, and individuals within the service region.

Businesses and labor organizations also use the estimates. For example, businesses use them to evaluate markets for new or established products and to determine areas for location, expansion, and contraction of their activities. Trade associations and labor organizations use them for product and labor market analyses.

Estimating schedules for the major regional series

Annual estimates of State personal income for a given year are subject to successive refinement. Preliminary estimates, based on the current State quarterly series, are published each April in the SURVEY, 4 months after the close of the reference year. These preliminary estimates are based in part on the Establishment Survey (the 790 program) of the Bureau of Labor Statistics (BLS), Department of Labor. The following August, more reliable annual estimates are published. These estimates are developed independently of the quarterly series and are prepared in greater component detail, primarily from Federal and State government administrative records. The annual estimates published in August are further refined to incorporate newly available information used to prepare the current local area estimates. These revised State estimates are published the following April, together with the consistent local area estimates. The annual estimates emerging from the three-step process described above are subject to still further revision for several succeeding years (the State estimates in April and August, and the local area estimates in April) as additional data become available. At that point, the estimates will only be changed to incorporate a comprehensive revision of the NIPA's—which takes place approximately every 5 years—or additional or more current State and local area data.

The comprehensive revision of the NIPA's described in the December 1985 SURVEY was extended to the State estimates, for 1969 and later years, in the next annual cycle of State estimates. The resulting comprehensive revision of the State annual estimates was published in the August 1986 SURVEY. The results of the comprehensive revision of State estimates for 1929–68 will be available this August.

The annual cycle of the local area estimates was suspended for 1 year to facilitate the preparation of the local area comprehensive revision. Thus, estimates for both 1985 and 1986 are now available for the first time.

Data availability

The personal income tables in this five-volume set, as well as other standard tabulations discussed below, are available from REIS. REIS is the term applied to the data files, computer programs, and staff established for the maintenance, management, and distribution of the regional data base. This system currently contains approximately 32 million separate estimates covering about 3,500 areas.

REIS includes an information retrieval service that provides a variety of standard and specialized analytic tabulations for counties and specified combinations of counties. A sample set of standard tabulations available through this system is included in Appendix B of volume 1. These tabulations are available in magnetic tape, microfiche, computer printout, and microcomputer diskette form; they are also available electronically on the Department of Commerce's Economic Bulletin Board. (The Bulletin Board is available by subscription from the National Technical Information Service.) The REIS data base currently includes the following data sets.

Quarterly State personal income.—Quarterly estimates of State personal income, seasonally adjusted at annual rates, are available approximately 4 months after the close of the reference quarter. The quarterly State personal income estimates provide a series for analyzing and tracking current economic developments in the 50 States and the District of Columbia. Summary-level quarterly estimates are published in the January, April, July, and October issues of the SURVEY. Estimates at the SIC industry division level beginning with the first quarter of 1969 are available from REIS.

Annual State personal income.—Annual estimates of State personal income are available twice a year; On a preliminary basis in April (4 months after the close of the reference year) and on a revised basis in August. The preliminary estimates of total and per capita personal income, derived from the current quarterly estimates, are published in the April issue of the SURVEY. The revised set of estimates, which is based on more complete data and is therefore more reliable, is presented in greater detail in the August issue of the SURVEY. Published estimates, as well as additional detail and years (beginning with 1929) that are not available in BEA publications, are available from REIS.

Annual State disposable personal income.—Annual estimates of total and per capita disposable personal income for States—a companion series to the annual State estimates of personal income—are published in the April and August issues of the SURVEY. The State disposable personal income series beginning with 1948 is available from REIS.

Annual State personal tax and nontax payments.—These estimates, which are deducted from total personal income to derive disposable personal income, are not available in BEA publications. Tabulations by level of government and type of tax or nontax payment, beginning with 1948, are available from REIS.

Annual county and metropolitan area personal income.—These estimates, which are published in these volumes, are available 16 months after the close of the reference year. Estimates of total wage and salary disbursements and of total wage and salary employment are available earlier, approximately 12 months after the close of the reference year. Estimates of total and per capita personal income are published in the April issue of the SURVEY. Published estimates, as well as additional detail and years (beginning with 1969) that are not available in BEA publications, are available from REIS.

Transfer payments.—The component estimates of transfer payments by State, county, and metropolitan area are not available in BEA publications. Estimates of transfer payments by type of program are available beginning with 1948 for States and with 1969 for counties and metropolitan areas.

Farm income and expenses.—The estimates of the gross receipts and expenses of farms, which underlie the farm proprietors' income estimates in the State and county personal income series, are not available in BEA publications. Estimates of farm gross receipts, expenses, and net income beginning with 1969 are available from REIS.

Full- and part-time employment for States and counties.—These estimates are a companion series to the annual personal income estimates. They are constructed from similar sources using analogous concepts and definitions. Estimates by two-digit SIC industry for States and by SIC industry division for counties and metropolitan areas beginning with 1969 are available from REIS.

BEA User Group

In addition to responding to specific data requests, REIS also makes its regional estimates available through the BEA User Group, members of which include State agencies, universities, and Census Bureau Primary State Data Centers. BEA provides its estimates of income and employment for all States and for the counties of the given State to these organizations with the understanding that they will make the estimates readily available. Distribution in this way encourages State universities and State agencies to use data that are comparable for all States and counties and consistent with national totals, thus enhancing the uniformity of analytic approaches taken in economic development programs and improving the recipients' ability to assess local area economic developments and to service their local clientele.

OVERVIEW

This section provides an overview of the sources and methods used to prepare the local area estimates. It highlights the relationships among the national, State, and local area estimates.

The personal income of an area is defined as the income received by, or on behalf of, all the residents of the area. It consists of the income received by persons from all sources, that is, from participation in production, from both government and business transfer payments, and from government interest. Personal income is measured as the sum of wage and salary disbursements, other labor income, proprietors' income, rental income of persons, personal dividend income, personal interest income, and transfer payments, less personal contributions for social insurance. Per capita personal income is measured as the personal income of the residents of an area divided by the resident population of the area.

In the national and regional economic accounts, persons are defined as individuals, nonprofit institutions serving individuals, private noninsured welfare funds, and private trust funds. The last three are referred to as "quasi-individuals."

Differences between the national and regional estimates.—The definitions underlying the State and local area estimates of personal income are essentially the same as those underlying the personal income estimates in the NIPA's. The major difference is that the national estimates include the labor earnings of residents of the United States temporarily working abroad, whereas the State and local area estimates include only the income of persons residing in the 50 States and the District of Columbia. Specifically, the national personal income estimates include the income of Federal civilian and military personnel stationed abroad and of residents who are employed by U.S. firms and are on temporary foreign assignment. An "overseas" adjustment is made to exclude the labor earnings of these workers from the U.S. totals before the totals are used as controls for the State estimates.

One classification difference between the national and the State and local area estimates relates to border workers—that is, residents of the United States who work in adjacent countries (such as Canada) and foreigners who work in the United States but who reside elsewhere. At the national level, the wages and salaries of these workers, along with those of U.S. residents employed by international organizations and by foreign embassies and consulates located in the United States, are included in the measurement of "rest of the world." At the State and local area levels, however, only the latter portion of "rest of the world" is treated as a component of personal income. The border workers are treated as commuters, and their earnings flows are included in the residence adjustment procedure. Another classification difference between the national and and the State and local area series relates to the classification of income into farm and nonfarm categories. In the national estimates, farm income consists of farm earnings and agricultural net interest; in the State estimates, it is limited to farm earnings.

Temporary statistical differences between the national and regional series reflect the estimating schedules for the two series. The regional estimates frequently incorporate source data that were not available when the national estimates were prepared. In such cases, the national estimates are usually revised the following year to reflect the more current data.

Sources of data and methods of estimation.—Generally, there are two kinds of information used to measure the income of persons: Information generated at the point of disbursement of the income and information elicited from the recipient. The first kind, referred to as "administrative record data," is a byproduct of the administration of various Federal and State government programs. The second kind is survey and census data. The surveys and censuses are not conducted by BEA; instead BEA uses information collected by others to make its estimates of State and local area personal income.

The following are among the more important sources of the administrative record data used by BEA: The State unemployment insurance (UI) programs of the Employment and Training Administration (ETA), Department of Labor; the social insurance programs of the Social Security Administration (SSA) and the Health Care Financing Administration (HCFA), Department of Health and Human Services; the Federal tax program of the Internal Revenue Service (IRS), Department of the Treasury; the veterans benefit programs of the Veterans' Administration (VA); and the military payroll systems of the Department of Defense. The two most important censuses used are the censuses of agriculture and population. The information obtained from administrative records and censuses accounts for about 90 percent of personal income. Data of lesser quality, scope, and relevance are used for the remaining 10 percent.

When data are delayed and are not available in time to be incorporated into the current estimating cycle, interim estimates are prepared using the previous year's county distribution, extrapolated by a related series if available. The interim estimates are revised during the next estimating cycle to incorporate the delayed data.

Use of data that are not primarily designed for income measurement has several advantages and disadvantages. The estimates of local area personal income can be prepared on an annual basis, in considerable detail, at relatively low cost, and without increasing the reporting burden of businesses and households. However, because the data are not designed primarily for income measurement, they often do not precisely "match" the series being estimated and must be adjusted to compensate for differences in content (definition and coverage) and geographic detail. Alternatively, if BEA were to conduct surveys of income recipients, the information provided could be precisely tailored to subnational income estimation in terms of content and geographic detail. However, because the sample size required to obtain statistically reliable data for counties would be large, the cost of annual preparation of the estimates in comprehensive detail would be prohibitively high.

Controls and the allocation procedure.—The preparation of State and local area estimates of personal income is characterized by the systematic use of the allocation procedure. The State estimates are prepared by allocating the U.S. total, or "control," for each income item (estimated for the national personal income series) to the States. In a similar manner, the county estimates are prepared by allocating the State estimates. In some cases, national, State, and county estimates are constructed from the same basic source. For example, wages and salaries reported under the various State UI programs are used at all three levels. In these cases, the allocation is a nominal adjustment for statistical consistency. In other cases, data that are available at the national and State levels are not available at the county level, and allocators prepared from related, but indirect, data are used to reflect the geographic distribution of the income item among the counties. For example, at the national and State levels, direct data are available on payments to veterans under various government programs, but such data are not tabulated at the county level for many of these programs. Where the direct data are not available, county veteran population, an indirect measure, is used to allocate the State total to the counties.

The use of the State estimates as control totals in the allocation procedure imparts more reliability to the county estimates than could be achieved using county data alone; State-level data tend to be more detailed and complete than county-level data. The allocation of State control totals permits, if necessary, the use of a different county allocator for each State without impairing the interstate comparability of the estimates.

Place of measurement.—Personal income, by definition, is a measure of income received; therefore, estimates of State and local area personal income reflect the place of residence of the income recipients. The data underlying the estimates can be viewed as falling in three groups according to place of measurement. (1) The bulk of the data used for the estimates of wages and salaries, other labor income, and personal contributions for social insurance is reported by industry in the State and county in which the employing establishment is located. The estimates based on these data are subsequently adjusted to a place-of-residence basis for inclusion in the personal income measure. Military reserve pay and personal contributions for supplementary medical insurance and for veterans life insurance are estimated initially by place of residence and, therefore, do not need to be residence adjusted. (2) For nonfarm proprietors'

income and for personal contributions for social insurance by the self-employed, the data are reported by tax-filing address. The place of business of the proprietorship is assumed to be the same as the place of residence of the proprietor. (3) Rental income of persons, personal dividend income, personal interest income, and transfer payments are estimated from data that are reported where the income is received.

For some purposes, it might be appropriate to convert some of the place-of-residence components to a where-earned basis. For such purposes, "dividends, interest, and rent" could be added to labor income (on a where-earned basis) and proprietors' income to provide a rough approximation of income originating from current production. Because, by definition, transfer payments are not related to rendering current productive services, a where-earned basis would not be meaningful.

SOURCES AND METHODS FOR THE 1981–86 COUNTY PERSONAL INCOME ESTIMATES

Wage and Salary Disbursements

Wage and salary disbursements are defined as the monetary remuneration of employees, including the compensation of corporate officers; commissions, tips, and bonuses; and receipts in kind that represent income to the recipient. They are measured before deductions such as social security contributions and union dues. All disbursements in the current period are covered. Retroactive wages are counted when paid rather than when earned.[1]

In the private sector, the wage and salary component covers employees of all private nonfarm business establishments, private households, nonprofit organizations, and farms. In the government sector, it covers employees of all local, State, and Federal governments (both civilian and military), including government enterprises. It also covers U.S. residents who are employed by international organizations and by foreign embassies and consulates located in the United States.

The contributions made by employees under the various social insurance programs, although counted in wage and salary disbursements, are not part of the personal income total. They are excluded by means of the deduction made for personal contributions for social insurance.

Estimates of wage and salary disbursements (which account for almost 60 percent of total personal income at the national level) are more complete and reliable than those of any other type of income except for transfer payments. Because of their sizable weight in the total income flows, they impart a large measure of reliability to the estimates of aggregate income.

"Covered" wages and salaries

The bulk of the county data used to estimate wage and salary disbursements is obtained from the ES–202 tabulations of the administrative records of each State UI program prepared for BLS by the State employment security agencies (ESA's).[2] Under the UI program, every "covered" private firm or government agency is required to file quarterly contribution reports with the State ESA having jurisdiction. These quarterly ES–202 reports include the wages and salaries (including the value of meals and lodging furnished to employees without charge) disbursed by each employer for the reporting quarter as well as the number of full- and part-time workers employed in each of the 3 months of the quarter.[3] Firms and agencies usually submit separate reports for each "county reporting unit", i.e., for the sum of all the employer's establishments in a given county, separately for each industry. However, under some circumstances, an employer may group very small establishments in a single "statewide" report without county designation.

BEA obtains four-digit SIC tabulations of quarterly wages and monthly employment from BLS; these data, after editing and correcting, form the basis for approximately 96 percent of private wages and salaries and 93 percent of civilian government wages and salaries. (There are no ES–202 data for the military.) The ES–202 industry data have to be supplemented and modified in several ways to derive a complete measure of wages and salaries in covered industries for the county personal income estimates. A description of these adjustments is provided in the following sections.

1. While the timing of wages when paid is a clear conceptual feature of personal income measurement, the difference between wages earned and wages paid has been negligible in recent years.

2. ES–202 is the Federal report that summarizes the data from the quarterly contribution reports filed by employers under the various State UI programs. However, it is commonly used to refer to the program of compiling the wage and employment data.

3. State UI laws require employers to estimate (if applicable) the cash value of meals and lodging provided employees without charge as part payment for services performed. The estimated cash value is to be included with cash pay when reporting payrolls. (Employers are not required to distinguish between the two types of pay in their reports.) It is doubtful, however, that many employers comply with this requirement of including pay-in-kind.

Adjustment for statewide reporting.—Wages and salaries reported for statewide units are allocated to counties in proportion to the distribution of the wages and salaries reported by county; the allocations for each State are made separately for each private sector industry (generally at the two-digit SIC level) and for each of five civilian government components (Federal, State education, State noneducation, local education, and local noneducation).

Adjustment for industry nonclassification.—The ES–202 tabulations regularly show minor amounts of payroll that have not been assigned to an industry. Because the industrial classification scheme followed in the national, State, and county income estimates does not permit a nonclassified category, it was necessary to adopt the convention of allocating the nonclassified payrolls among the industry groups in proportion to industry-reported payrolls. This particular adjustment of the reported ES–202 industry data is usually quite small—about 0.2 percent on a national basis. Furthermore, no error is introduced into the aggregate State and county wage estimates, because the adjustment involves only an apportionment by industry of amounts reported for particular States and counties.

Adjustments for student employees.—Students employed by the institutions of higher education in which they are enrolled are generally not covered by UI. The State estimates of the wages of the noncovered student employees of private, State government, and local government institutions are based on the differences between the relevant ES–202 employment data and alternative employment data that include student employees. The alternative data are reported annually by the Census Bureau in *County Business Patterns* (*CBP*) for the private component and in unpublished tabulations of public employment data for the two government components. The State-level methodology cannot be replicated at the county level; county data are frequently suppressed (to prevent disclosures) at the necessary level of industrial detail in *CBP* and are not available in the public employment tabulations. Accordingly, the State estimates for each of the three components, inclusive of the estimates of student employee wages, are allocated to counties in proportion to the distribution of ES–202 wages for each component.

Adjustments to civilian government components.—Alternative source data are substituted for the ES–202 data when the latter series reflects excessively large proportions of payrolls not reported by county (for Federal civilian payrolls) or apparently reported in the wrong counties (for State government payrolls). In Minnesota, New York, and Wisconsin, the wages and salaries of the Postal Service are allocated to counties in proportion to the distribution of its employment, as reported by the Office of Personnel Management (OPM). In Hawaii prior to 1982 and in Virginia and Wisconsin for all years, the wages and salaries of the Department of Defense (DOD) are allocated to counties by OPM employment data. In Tennessee, the ES–202 data are the basis for the county estimates of the Tennessee Valley Authority; the estimates for all other agencies are based on the OPM data.

The education component of State government wages and salaries is based on ES–202 data for all States. However, in six States (Illinois, Michigan, New Jersey, Rhode Island, Tennessee, and Wisconsin) the geographic coding of the ES–202 data for the noneducation component appears to attribute too much payroll and employment to the counties of the State capitals. The county estimates for these States are based on place-of-work wage data derived from an unpublished tabulation of journey-to-work (JTW) data from the 1980 Census of Population. In Minnesota, the noneducation estimates prior to 1984, when improved ES–202 county reporting took effect, are based on the 1984 ES–202 data.

Adjustments for noncovered segments of UI-covered private industries.—The noncovered segments for which BEA presently makes adjustments include tips (taxicabs, eating and drinking places, hotels and other lodging places, personal services, and amusement and recreation services), commissions received by insurance solicitors and real estate agents, payrolls of electric railroads and railroad carrier affiliates, and the salaries of corporate officers in Washington State. Except for tips, these segments are exempted from UI coverage. Tips are

covered by the various UI laws. BEA assumes that this form of income payment is subject to considerable underreporting and therefore makes estimates of additional tips in industries where tipping is most customary.

Table A.—Relative Importance to Total Personal Income of Wage and Salary Disbursements, by Component, United States, 1986

	Millions of dollars	Percent of total personal income
Total personal income[1]	**3,528,589**	**100.00**
Wage and salary disbursements[2]	**2,085,171**	**59.09**
Farm	8,243	.23
Agricultural services, forestry, fisheries, and other[3]	9,391	.27
Mining	25,296	.72
Construction	110,295	3.13
Manufacturing	473,149	13.41
Nondurable goods	173,330	4.91
Food and kindred products	34,755	.98

Apparel and other textile products	14,484	.41
Paper and allied products	19,122	.54
Printing and publishing	32,678	.93
Chemicals and allied products	33,109	.94
Petroleum and coal products	6,253	.18
Tobacco manufactures	1,759	.05
Rubber and miscellaneous plastics products	17,014	.48
Leather and leather products	2,145	.06
Durable goods	299,819	8.50
Lumber and wood products	13,158	.37
Furniture and fixtures	8,799	.25
Primary metal industries	21,631	.61
Fabricated metal products	34,532	.98
Machinery, except electrical	57,385	1.63
Electric and electronic equipment	56,587	1.60
Transportation equipment excluding motor vehicles	36,845	1.04
Motor vehicles and equipment	29,874	.85
Stone, clay, and glass products	14,321	.41
Instruments and related products	19,530	.55
Miscellaneous manufacturing industries	7,157	.20
Transportation and public utilities	143,881	4.08
Railroad transportation	11,651	.33
Trucking and warehousing	30,834	.87
Water transportation	4,883	.14
Other transportation[4]	27,739	.79
Communication	39,022	1.11
Electric, gas, and sanitary services	29,752	.84
Wholesale trade	144,757	4.10
Retail trade	210,409	5.96
Finance, insurance, and real estate	156,954	4.45
Services	417,961	11.84
Hotels and other lodging places	18,154	.51
Personal services	13,538	.38
Private households	9,173	.26
Business services	88,932	2.52
Auto repair, services, and garages	13,157	.37
Miscellaneous repair services	6,458	.18
Amusement and recreation services	11,817	.33
Motion pictures	5,148	.15
Health services	130,628	3.70
Legal services	24,892	.71
Educational services	21,627	.61
Social services	15,152	.43
Museums, botanical,and zoological gardens	659	.02
Membership organizations	20,662	.59
Miscellaneous services	37,964	1.08
Government and government enterprises	384,835	10.91
Federal civilian	80,443	2.28
Military	40,628	1.15
State and local	263,764	7.48

Detail may not add to totals due to rounding.

1. Includes adjustment for border workers: Income of U.S. residents working across U.S.borders less income of foreign residents working in the United States.

2. Includes wages received by border workers employed in the United States.

3. Other includes wages and salaries of U.S. residents working for international organizations and for foreign embassies and consulates located in the United States.

4. Includes local and interurban passenger transit, transportation by air, pipelines (except natural gas), and transportation services.

A separate estimate for each of the noncovered segments is made at both the national and State levels (based on either direct data or indirect indicators). The estimate is added to the ES-202 payroll amount in the industry of the noncovered segment to produce the final estimate for the industry. County estimates are made by allocating the State total, inclusive of the adjustment, by the distribution of ES-202 payrolls for the appropriate industry. Independent estimates of the noncovered segments are not made for counties because of the lack of relevant data.

"Noncovered" wages and salaries

In addition to the small segments of UI-cove ed industries that are outside the scope of the State UI programs, a group of industries and major segments is referred to as "noncovered." In the private sector, farms, farm labor contractors, railroads, elementary and secondary schools with religious affiliation, religious membership organizations, private households, and "other" are treated as noncovered in making the county estimates of wages and salaries.[4] In the public sector, the military is noncovered. A description of the procedures used in making the county estimates of wages and salaries in the noncovered industries is provided in the following sections.

Farms.—BEA estimates of farm wages and salaries include cash pay and pay-in-kind of hired farm labor and salaries of officers of corporate farms. They do not include pay of contract farm labor, which is classified as part of agricultural services. County estimates of cash wages of hired farm labor are made by allocating State totals, estimated by the U.S. Department of Agriculture (USDA) and adjusted to the BEA definition, by county distributions from the 1978 and 1982 Censuses of Agriculture. In Arizona, California, New Hampshire, and Rhode Island, ES-202 wages are substituted for the census-based estimates in counties where the ES-202 amounts are higher. The estimates of the pay-in-kind of hired farm labor are based on the number of workers on farms who worked 150 days or more in a year, as reported in the censuses of agriculture. The estimates of the salaries of corporate officers are based on the amounts reported in the censuses of agriculture.

Farm labor contractors.—Contract farm labor (as distinct from hired farm labor) is classified as an agricultural service. Because most State UI programs do not cover, or only partially cover, this group of workers, BEA makes an independent estimate of wages of contract farm laborers and adds it to the ES-202 wages in agricultural services. The State and county estimates are based on the proportional distribution of expenditures for contract labor reported in the 1978 and 1982 Censuses of Agriculture. Different procedures are used for Arizona, California, and Florida because of complete or near-complete UI coverage of contract farm labor in those States. In Arizona and California, the ES-202 data are the basis for the estimates; in Florida, the ES-202 amount for a county is substituted for the census-based estimate when the former is higher.

Railroads.—The railroad industry is covered by its own unemployment insurance program, which is administered by the Railroad Retirement Board, rather than by State UI programs. Suitable data are not available from the Railroad Retirement Board for making county estimates of wages. The principal basis for the BEA county estimates of wages and salaries in the railroad industry is an employment series developed from biennial reports on employment in class I railroads prepared by the Association of American Railroads (AAR).[5] These reports include information on employment by railroad company for selected metropolitan area counties (accounting for approximately 75 percent of all railroad employment) and a residual "all other" for each State. Employment for the years between the AAR reports is approximated by straight-line interpolation, and the most recent data are used for the subsequent year or years. Railroad wages and salaries for the metropolitan counties and State residuals are estimated as the sum of the products of employment by company for each area and national average wages by company as reported by the Interstate Commerce Commission. (This is the same methodology used to estimate railroad wages and salaries at the State level.) The State residuals are allocated to counties by a 1979 distribution of railroad wages and salaries by county of work derived from 1980 census JTW data.

4. "Other" is the designation for "rest of the world" in the component classification used in the State and local area estimates. Although it reflects wages paid to U.S. residents by international organizations and by foreign embassies and consulates located in the United States, by convention it has been included with private nonfarm industries rather than with government.

5. Railroads are classified on the basis of a 3-year average of operating revenues. Class I railroads are those with revenue of $50 million or more.

Elementary and secondary schools with religious affiliation.—In many States, this segment is only partially covered by State UI programs. In about one-half of the States, coverage is complete enough to permit use of ES–202 data as a basis for the wage and salary estimates. In the other States, the county estimates are based on the best available series chosen from data on employment of private elementary and secondary schools published by State departments of education, employment data from the U.S. Department of Education's 1980–81 survey of private elementary and secondary schools, or relevant wage data from *CBP*.

Religious membership organizations.—UI coverage of this segment is inadequate, and alternative data at the county level are not available. Therefore, the State totals for the segment are allocated to counties in proportion to the distribution of civilian population.

Private households.—For this largely noncovered industry, the county estimates of cash pay are based on place-of-work private household wages from the 1980 census JTW data. The estimates of pay-in-kind are based on place-of-work employment data from the same source. This methodology is the same as used to prepare the State estimates.

"Other".—This term, as it appears in the industry detail of the State and local area income tables, refers to U.S. residents employed by international organizations and by foreign embassies and consulates located in the United States. It differs from "rest of the world" (the industry designation appearing in the national tables) in that "rest of the world" also includes international border workers, i.e., U.S. residents working across the border in Canada or Mexico and foreign residents working in the United States. In the State and local area estimates, border workers are reflected through the residence adjustment process.

The State and local area estimates of "other" are made by allocating the appropriate national total by an estimated geographic distribution of administrative expenditures of international and foreign organizations operating in the United States. This distribution was prepared for 1968 by the Balance of Payments Division, BEA. Because of the absence of related data, the reliability of the estimates for this subcomponent of wage and salary disbursements is low, even at the national level. However, the dollar amounts involved are so small that the effect on the reliability of the wage component, even at the county level, is negligible.

Military.—This category includes the cash pay and pay-in-kind of full-time military personnel and of the members of the military reserves. The county estimates of full-time cash pay are based on county payroll estimates by branch of service, prepared by DOD, and a county distribution of Coast Guard military personnel, prepared by the Department of Transportation. Independently derived national and State totals for each branch of service are distributed to counties on the basis of these series. In most cases where a military installation extends across county boundaries, the entire payroll is assigned to the county that contains the headquarters.

Pay-in-kind measures the value of the meals and clothing received by enlisted personnel.[6] The State estimates of pay-in-kind of full-time personnel are allocated to the counties by the geographic distribution of enlisted personnel for each branch of service, as reported by DOD, or by the Coast Guard personnel distribution.

Little information, direct or indirect, is available for estimating military reserve pay below the State level. State estimates of military reserve pay, inclusive of supplies and equipment received (pay-in-kind), are based on direct data supplied by DOD. The county distribution of military reserve pay is assumed to be in proportion to the distribution of the civilian resident population within each State.

Pay-in-kind

The wage and salary estimates for selected industries include the value of meals, clothing, and lodging received in kind that represents income to the employee (pay-in-kind), valued at the cost to the employer. Market value to the employee would be a preferable concept for some purposes, although it is more elusive and less subject to quantitative determination.

In the national economic accounts, the imputation of wages is depicted as though the pay-in-kind had taken the form of cash flows. For example, it is assumed that the employer, instead of furnishing employees with free meals, pays them corresponding amounts of cash wages and that the employees, in turn, use these wages to buy items previously purchased by the employer. Employees' wages and business sales to consumers (recorded in personal consumption expenditures) are raised by equivalent amounts. Omission of the imputation would understate the measures of personal income, personal consumption expenditures, and total output. It would also understate the real earnings of employees receiving meals relative to the earnings of those paid wholly on a cash basis.

The estimation of the imputation is rather imprecise and involves a number of difficult decisions that can be made only in a pragmatic fashion. For instance, the imputation is confined to meals, clothing, and lodging because other perquisites, such as medical and recreational services, have generally been less important and cannot be estimated satisfactorily from available data.

Pay-in-kind is relatively important in the military, farming, and private households; therefore, the description of how it is estimated is discussed in the relevant preceding sections.

Among fully covered industries, payment in the form of meals and lodging is still customary to some extent in eating and drinking places, hotels, and water transportation. Separate distributions of payments in cash and in kind for these industries are not available for States or counties. Although the value of meals and lodging received in kind is included in the payroll totals tabulated from the UI administrative records (to the extent that employers comply with the reporting requirements), it is not reported separately.

Among industries lacking complete UI coverage (in addition to farms, military, and private households), separate estimates of pay-in-kind are made by BEA for private hospitals, membership organizations, and private educational services. For private hospitals, the estimate reflects the pay-in-kind received by student nurses and interns and by members of religious orders working in hospitals but excluded from UI coverage. Pay-in-kind of private hospitals is estimated at the State and county levels in proportion to ES–202 employment because of the lack of direct data. For elementary and secondary schools with religious affiliation and for religious membership organizations, the estimates reflect pay-in-kind received by personnel who are members of religious orders. At the State level, the estimates are based on the geographic distributions of selected categories of Catholic clergy and members of religious orders, which are published annually in the *Official Catholic Directory* (for private education: full-time teaching priests, teaching brothers, teaching sisters, etc.; for membership organizations: resident pastors, diocesan priests, etc.). At the county level, however, the estimates are based on the distribution of employment (for elementary and secondary schools) or civilian population (for religious membership organizations), in the absence of more appropriate data.

Other Labor Income

Other labor income (OLI) consists primarily of employer contributions to private pension and private welfare funds, including privately administered workers' compensation funds. Other items included are directors' fees, compensation to prison inmates, and judicial fees.

Employer contributions to private pension and welfare funds, excluding workers' compensation funds.—These are payments made by employers on behalf of their employees to private funds for the provision of pensions, group health insurance, group life insurance, and supplemental unemployment insurance. For the private sector, no direct data for these contributions are available below the national level. The BEA national estimates for each two-digit SIC industry are allocated to States and counties in proportion to wages and salaries for the industry. This procedure incorporates the wide variation of contribution rates, relative to wages, among industries and therefore reflects appropriately the various mixes of industries among the States and counties. It does not reflect variations of contribution rates among States and counties for a given industry.

State governments make contributions to private pension funds only for education employees. Direct data are available for States (from the Teachers Insurance and Annuity Association/College Retirement Equities Fund), but not for counties. The county estimates are prepared by allocating the State estimates in proportion to State and local government education wages and

6. The clothing imputation is confined to "standard" issues; it does not include clothing and equipment designed for use on special duties or under unusual conditions.

salaries. Local government contributions to private pension funds consist of large, nonrecurring payments made by four jurisdictions in 1985; the payments were assigned to the appropriate counties.

In the absence of direct data below the national level, the State and county estimates of government contributions to private welfare funds on behalf of government employees are prepared by allocating the national estimate in proportion to ES-202 employment, separately for Federal, State, and local government.

Table B.—Relative Importance to Total Personal Income of Other Labor Income, by Component, United States, 1986

	Millions of dollars	Percent of total personal income
Total personal income	**3,528,589**	**100.00**
Other labor income	**200,966**	**5.70**
Employer contributions to private pension funds and private welfare funds	197,395	5.59
Private pension funds, group life insurance, group health insurance, and supplemental unemployment insurance	176,149	4.99
Privately administered workers' compensation	21,246	.60
All other[1]	3,571	.10

Detail may not add to totals due to rounding.

1. Consists of directors' fees, compensation of prisoners, and judicial fees.

Employer contributions to privately administered workers' compensation funds.—The task of estimating is more complex for this component than for contributions to private pension funds and other private welfare funds because premiums for compensation insurance are largely governed by an occupational risk factor. Variations among industries are related primarily to the proportion of hazardous occupations within each industry rather than to the level of wages or employment. State all-industry estimates of workers' compensation contributions, exclusive of court-awarded benefits, are based on State data from the National Council on Compensation Insurance (for premiums paid to private insurance carriers underwriting workers' compensation) and from SSA (for benefits paid by self-insured employers). The National Income and Wealth Division, BEA, prepares national estimates of contributions by two-digit SIC industry for the two types of payments combined. Preliminary State estimates of contributions by industry (based on the distribution of wages) are reconciled with the State all-industry estimates and with the national industry estimates.[7] The State estimates of employer contributions for workers' compensation are completed by the addition of estimates of court-awarded payments to railroad workers—based on injury data from the Federal Railroad Administration, Department of Transportation—and to maritime seamen—based on the State distribution of water transportation wages and salaries.[8]

In the absence of direct data at the county level, county estimates of total employer contributions by industry for privately administered workers' compensation funds are prepared by allocating the State estimates in proportion to wage and salary disbursements by industry.

Directors' fees.—Approximately three-fourths of all directors' fees occur in finance, insurance, and real estate. The State and county estimates are prepared by allocating the national estimates in proportion to wages and salaries for each two-digit SIC industry.

All other OLI.—State and county estimates for the remaining items of OLI (compensation to prison inmates and judicial fees) are prepared by allocating the national estimates in proportion to civilian population.

7. The reconciliation is made using a procedure in which elements of a two-dimensional matrix are alternately made to sum to geographic and industry control totals—through allocation—until the desired degree of balance is achieved. Usually one set of control totals is designated as fixed and governs the final distribution. In this case, the national industry totals are fixed.

8. In the case of self-insured workers' compensation plans and court-awarded compensation for injury, benefits and employer contributions are identical.

Proprietors' Income

Proprietors' income is the income, including income-in-kind, of sole proprietorships and partnerships and of tax-exempt cooperatives. The imputed net rental income of owner-occupants of farm dwellings in included. Dividends and monetary interest received by proprietors of nonfinancial business and rental incomes received by persons not primarily engaged in the real estate business are excluded; these incomes are included in dividends, net interest, and rental income of persons. Proprietors' income, which is treated in its entirety as received by individuals, is estimated in two parts—nonfarm and farm.

Table C.—Relative Importance to Total Personal Income of Proprietors' Income, by Component, United States, 1986

	Millions of dollars	Percent of total personal income
Total personal income	**3,528,589**	**100.00**
Proprietors' income[1]	**287,483**	**8.15**
Farm	34,913	.99
Nonfarm	252,570	7.16
Agricultural services, forestry, and fisheries	3,433	.10
Mining	7,673	.22
Construction	42,333	1.20
Manufacturing	4,626	.13
Transportation and public utilities	11,879	.34
Wholesale and retail trade	36,661	1.04
Finance, insurance, and real estate	9,246	.26
Services	136,719	3.87
Business services	62,289	1.77
Professional and social services	74,430	2.11

Detail may not add to totals due to rounding.

1. Shown with the inventory valuation and capital consumption adjustments.

Nationally, nonfarm proprietors' income is shown both with and without two adjustments: The inventory valuation adjustment (IVA) and the capital consumption adjustment (CCAdj). The measure with the IVA and CCAdj is the measure of current production. In the context of nonfarm proprietors' income, the IVA is needed because, under the accounting practices used by businesses to determine income as reported in the source data, inventories are often charged to cost of sales (withdrawn) at their acquisition cost rather than at replacement cost. In periods of changing prices, this practice results in capital gains (or losses) on inventoried goods. The IVA is an estimate of the capital gain, but with the opposite algebraic sign; that is, the IVA is the difference between the cost of inventory withdrawals as valued in determining income and the cost of withdrawals valued at replacement cost. Thus, adding the IVA to income removes the capital gain, as is appropriate for a measure of current production. Analogously, the CCAdj is the difference between depreciation as valued in determining income as reported in the source data and what is referred to as "economic" depreciation—depreciation on the basis of consistent accounting (uniform service lives and straight-line depreciation) and valued at replacement cost.[9] Neither adjustment is necessary for farm proprietors' income because the estimates for inventory change and depreciation are derived from sources that value these items at replacement cost, in a manner consistent with NIPA accounting.

The estimates of both farm and nonfarm proprietors' income include an adjustment for gains from loans defaults. A business loan default, as distinguished from the business losses that may have led to it, has no effect on national income as a whole. However, it is counted as a loss to the creditor and must therefore be offset by a gain attributed to the defaulting borrower.

9. For a more detailed discussion, see "The National Income and Product Accounts of the United States: Revised Estimates 1929–74," SURVEY OF CURRENT BUSINESS 56 (January 1976): Part I, and Allan H. Young, "New Estimates of Capital Consumption Allowances in the Benchmark Revision of GNP," SURVEY 55 (October 1975): 14.

Nonfarm proprietors' income

At both the State and county levels, the estimates of the income of nonfarm sole proprietorships and partnerships are based principally on data tabulated from their tax returns for tax years 1981–83. The data were drawn from IRS form 1065 (for partnerships) and Schedule C of form 1040 (for sole proprietorships). The data used for the estimates are tabulations of net profit less loss (NPLL) and of gross receipts, by two-digit SIC industry, from the two forms combined. The geographic coding of the data is by tax-filing address, thus reflecting predominantly the place of residence of the income recipients. In the absence of a place of work series, it is a BEA convention to present the State and county nonfarm proprietors' income estimates as if place of work and place of residence are identical.

The national estimates of nonfarm proprietors' income, which are also based on tax data, include several adjustments that cannot be replicated subnationally because the necessary source data are not available. These adjustments are the IVA, the CCAdj, the defaulters' gain adjustment, and an adjustment for income not reported on tax returns. The last, known as the "underground economy" adjustment, accounts for about one-half of total nonfarm proprietors' income in recent years. In the State and county methodologies, the underground economy adjustment is treated separately for some industries, but otherwise all four national adjustments are reflected implicitly through their inclusion in the national totals that are allocated to States and to counties.

The State methodology (described in the August 1986 SURVEY) and the county methodology are similar, but source data problems—which tend to be more acute for counties than for States—require that less direct source data be used more frequently for counties than for States. The NPLL data at the county level are highly volatile for many industries, indicating that they are unreliable. The gross receipts data for manufacturing industries also proved to be too volatile for reliability at the county level.

The 1981–83 State estimates for each of 14 nonmanufacturing industries (out of a total if 64 two-digit SIC industries), together accounting for more than 80 percent of total nonfarm proprietors' income, were allocated in two pieces. The State estimates exclusive of the underground economy adjustment were allocated to counties in proportion to the distribution of NPLL.[10] NPLL is not an appropriate basis for the regional distribution of the underground economy adjustment because NPLL is reduced by the tax evasion that, in large part, the adjustments reflect. Instead, gross receipts, a measure of the general level of activity of proprietors by industry and county, was used for the allocation of the adjustment. The State estimates of all of nonfarm proprietors' income in each of an additional 26 nonmanufacturing industries, together accounting for less than 15 percent of nonfarm proprietors' income, were also allocated to counties in proportion to the gross receipts series. The 1983 estimates for these 40 industries were extrapolated to 1984 by the relative change in the number of small firms by industry, as reported in *CBP*. The 1985–86 estimates are given the same county distributions as the 1984 estimates.

In the absence of reliable direct data, the State estimates for each of the 21 manufacturing industries were allocated to counties in proportion to wages and salaries for the industry. This methodology is admittedly weak; for example, it attributes too much income to counties with large manufacturing plants owned by corporations. However, the amount of proprietors' income in manufacturing is so small (in most years less than 2 percent of the all-industry total) that no significant error is imparted either to the county earnings total for an industry or to county total nonfarm proprietors' income.

For the three remaining industries, limited partners' income presents a special estimating problem. In these industries—crude petroleum and natural gas extraction, real estate, and holding and other investment companies—limited partnerships are often used as tax shelters. Limited partners' participation in partnerships is often purely financial; their participation more closely resembles that of stockholder-investors than that of working partners. Accordingly, the usual assumption about residence—that the county from which the partnership files its tax return is the same as the residence of the partners—is unsatisfactory. No direct data on the income of these partners by their place of residence are available. The State estimates of proprietors' income for these industries are allocated to counties in the same proportion as dividends received by individuals (based on all-industry dividends reported on IRS form 1040). This procedure is essentially the same as used to prepare the State estimates for these three industries. Collectively, the estimates of these industries, which account for only 2.2 percent of nonfarm proprietors' income for the Nation in 1986, have little effect on county total nonfarm proprietors' income. However, the State and county distribution imparted to these industries—independent of actual industrial activity—can have a substantial effect on the county earnings totals for these three industries.

The estimates of the net income of rural telephone and electric cooperatives are prepared separately from the remainder of their respective industries (communications, and electric, gas, and sanitary services). The county estimates are based on the net margins (i.e., profits) and the county distributions of the dwellings of customer-members of each cooperative, as reported by the Rural Electrification Administration, USDA. The net margin of each cooperative is allocated to counties by the distribution of its customer-members. The allocated amounts for the cooperatives are then summed to county totals by industry, which are used in turn to allocate the State estimates of net income to counties.

Farm proprietors' income

The estimation of farm proprietors' income starts with the computation of the realized net income of all farms, derived as farm gross receipts less production expenses. This measure is then modified to reflect current production through a change-in-inventory adjustment and to exclude the income of corporate farms and salaries paid to corporate officers. Tables showing the derivation of State and county farm proprietors' income in detail (see Appendix B of volume 1) are available from REIS.

The concepts underlying the BEA estimates of farm income are generally the same as those underlying the farm income estimates of the USDA. The major definitional difference between the two sets of estimates relates to corporate farms. The USDA totals include net income of corporate farms, whereas the BEA personal income series, which measures farm proprietors' net income, by definition excludes corporate farms. Also, BEA classifies the salaries of officers of corporate farms as part of farm wages and salaries; USDA treats the corporate officers' salaries as returns to corporate ownership and as part of the total return to farm operators.

Further differences between the two sets of estimates relate to depreciation and to loan defaults. BEA adjusts USDA depreciation from a declining-balance basis to a straight-line basis, consistent with BEA's estimates for other industries. The defaulters' gain adjustment (discussed in the prefatory statement of the proprietors' income section) is treated as an explicit deduction from production expenses (i.e., an offset to interest expense) in the BEA regional farm income estimates.

BEA estimates of total net farm income measure income from the current year's production. To arrive at this level, income is adjusted by the value of the net change during the year in farm inventories of livestock and crops held for sale. If farmers sell crops in the current year that were produced in prior years, cash receipts from marketing will overstate income from current production by the amount of sales from storage, the amount held in inventory will decline, and the value of the net change in inventories will be negative. Conversely, if farmers store more of current production than they sell from storage, cash receipts will understate income from current production, the amount held in inventory will rise, and the value of the net change in inventories will be positive. In either case, the inventory change adjustment yields a measure of farm income reflecting current production.

The methods used to estimate farm proprietors' income at the county level rely heavily on data obtained from the 1974, 1978, and 1982 Censuses of Agriculture and on selected annual county data prepared by the State offices affiliated with the National Agricultural Statistics Service (NASS), USDA. The NASS data are used, wherever possible, to interpolate and extrapolate the estimates to noncensus years. In addition, data from other sources within the USDA, such as the Agricultural Stabilization and Conservation Service, are used to prepare a fairly detailed income and expense statement covering all farms in each State and county (see Appendix B of volume 1).

Although a substantial amount of farm data is reported to the IRS, it is of limited use for local area income estimation primarily because the size of the IRS sample is inadequate. Several other serious obstacles limit the use of the IRS farm data. The diversity of accounting methods that underlie the tax reports

10. The 14 industries for which NPLL data are used are agricultural services, general building contractors, special trade contractors, motor freight and warehousing, wholesale trade, auto dealers, miscellaneous retailers, insurance agents, and six service industries (personal, business, auto repair, health, legal, and miscellaneous).

filed by proprietors of small farms makes it difficult to calculate net income on any uniform basis. Furthermore, the tax concepts of income and deductions are not comparable with the national economic accounting concepts. Finally, the IRS tabulations do not adequately cover the income of many farmers in the lower income brackets.

The census year estimates of farm proprietors' income are prepared from data collected in the censuses of agriculture and from the USDA State totals of income and expense items. County distributions of 46 components of gross income and inventory change and of 12 categories of production expenses are used to allocate the corresponding State series.

Gross income and inventory change include the following separately estimated items: (1) The cash receipts from farm marketing of crops and livestock (in component detail); (2) the income from other farm-related activities, including recreational services, forest products, and custom feeding services performed by farm operators; (3) the payments to farmers under several government payment programs; (4) the value of food and fuel produced and consumed on farms; (5) the gross rental value of farm dwellings; and (6) the value of the net change in the physical volume of farm inventories of crops and livestock.[11]

Cash receipts from marketing is the most important component of gross farm income. The USDA includes about 150 different commodities and generally has annual production, marketing, and price data available for preparing the estimates on a State basis. However, annual county estimates of cash receipts—usually for total crops and for total livestock—are currently available for only 20 States.[12] In the other States, the USDA State estimates of cash receipts from the marketing of individual commodities are summed into the 13 crop and 5 livestock groups for which value-of-sales data are reported by county in the censuses of agricultures. The aggregates for the census years are then allocated by the related census county distributions. Estimates for intercensal years are either based on supplemental county estimates of annual production of selected field crops and State season average prices available from the State NASS offices, or they are calculated by straight-line interpolation between the census years and adjusted to State USDA levels.

Estimates of income from other farm-related activities are prepared from corresponding information reported by county in the censuses of agriculture. Tabulations of total government payments to farmers by county are available from the Agricultural Stabilization and Conservation Service on an annual basis.

No direct information is available by county for estimating the imputed income items—value of home consumption and gross rental value of farm dwellings. The county estimates of home consumption are made using the distribution of the number of farms reported in the censuses of agriculture to allocate the State estimates to the counties. Gross rental value is estimated using the distribution of the census-reported value of farm land and buildings to allocate the State estimates.

The value of the change in inventories by county is estimated separately for livestock and for crops. For those States reporting the number of cattle, swine, and sheep on farms by county as of January 1, these data are incorporated into allocating series to distribute the State estimates of the change in livestock inventories. In the States where the livestock inventory data are unavailable, the county distribution of the number of livestock units on farms reported in the censuses of agriculture, or interpolations between the census observations, are used to allocate the annual State totals. This procedure is also used to prepare estimates of the value of the change in poultry inventories.

The value of the change in crop inventories is estimated by allocating the State totals by annual county crop production data from the NASS State offices, where available, or by census crop production data.

Production expenses for a number of items are estimated by county using direct allocators from the censuses of agriculture.[13] Many expense items—including taxes, interest less defaulters' gain, and depreciation—are combined and allocated based on the "other expenses" series reported in the 1974 Census of Agriculture but not available in the 1978 and 1982 censuses. A set of provisional estimates of the major components of "other expenses" was constructed for all three census years based on indirect allocators drawn from the censuses. For example, depreciation and short-term interest were allocated by the value of machinery and equipment, and taxes and mortgage interest were allocated by the value of land and buildings. The 1974 county distribution of other expenses was extended forward to 1978 and 1982 by the percentage changes in the county totals of the provisional estimates. The 1982 county distributions are used to allocate the State totals for each subsequent year.

Intrastate sales and purchases between farms are offsetting income and expense items when State estimates are aggregated; consequently the USDA excludes these transactions in its estimates of the cash receipts from marketing livestock and the expenses for livestock purchased. However, such transactions may not necessarily be intracounty transactions; therefore, BEA estimates such transactions and distributes them among counties by two different allocators. Income is allocated by cash receipts for livestock, and expenses are allocated by value of livestock purchased. Similarly, for net rent within each State, the county distribution of rent received is different from that of rent paid. Data for both are reported in the censuses agriculture.

By definition, farm proprietors' income includes only the net farm income accruing to proprietorships and partnerships. The foregoing procedure produces a measure of total net farm income; therefore, an adjustment is made to exclude the net farm income of corporate farms (including officers' salaries). The adjustment, made separately for each county where appropriate, is based on the proportional division of acreage between corporate and noncorporate farms reported for each county in the censuses of agriculture. The adjusted net farm income is modified so that the county estimates, when summed to State totals, equal the related independently derived State estimates.

Dividends, Interest, and Rent

Dividends are payments in cash or other assets, excluding stock, by corporations organized for profit to noncorporate stockholders who are U.S. residents. Interest is the monetary and imputed interest income of persons from all sources. Imputed interest represents the excess of income received by financial intermediaries from funds entrusted to them by persons over income disbursed by these intermediaries to persons. Part of imputed interest reflects the value of financial services rendered without charge to persons by depository institutions. The remainder is the property income held by life insurance companies and private noninsured pension funds on the account of persons; one example is the additions to policyholder reserves held by life insurance companies.

Table D.—Relative Importance to Total Personal Income of Personal Dividend Income, Personal Interest Income, and Rental Income of Persons, by Component, United States, 1986

	Millions of dollars	Percent of total personal income
Total personal income	**3,528,589**	**100.00**
Personal dividend income, personal interest income, and rental income of persons	**595,579**	**16.88**
Personal dividend income	81,214	2.30
Personal interest income	497,617	14.10
Monetary	313,718	8.89
Imputed	183,899	5.21
Rental income of persons[1]	16,748	.47
Monetary	32,588	.92
Imputed	−15,840	−.45

Detail may not add to totals due to rounding.
1. Shown with the capital consumption adjustment.

Rental income of persons (with CCAdj) is the monetary income of persons (except those primarily engaged in the real estate business) from the rental of real property (including mobile homes); the imputed net rental income of owner-occupants of nonfarm dwellings; and the royalties received by persons from patents, copyrights, and rights to natural resources. The CCAdj is discussed in the prefatory statement of the proprietors' income section.

11. Recreation services income is received for providing facilities for fishing, hunting, camping, etc.

12. The States for which county estimates of cash receipts are currently available are Alabama, Arizona, California, Colorado, Delaware, Hawaii, Illinois, Kansas, Kentucky, Missouri, Nebraska, New Mexico, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, Texas, Utah, and Wisconsin.

13. The following are the expense items: Purchases of feed, livestock and poultry, seed, fertilizer, agricultural chemicals and lime, and petroleum products; cash wages, perquisites, and contract labor expenses; machine hire and customwork; animal health costs; and all other expenses (mainly "overhead" items such as taxes, mortgage interest less defaulters' gain, electricity, telephone, and depreciation).

Dividends and interest

The State and county estimates of dividends and monetary interest, except for the interest from municipal bonds, are based on the IRS Individual Master File (IMF) tabulations of dividends and interest reported on individual income tax returns.[14] The estimates of interest paid by money market mutual funds, reported to IRS as dividends, are based on the IMF dividends distribution. For the selected years through 1985 for which IMF tabulations are available, the estimates of interest and dividends are based directly on them; for the intervening years, the estimates are prepared by straight-line interpolation between the IMF benchmarks. Estimates for the years following the latest IMF benchmark are based on the geographic distribution of that benchmark. The estimates of interest from municipal bonds are based on the State and county distributions of the number of high-income families and individuals from the 1980 Census of Population.

The State estimates of the imputed interest from private noninsured pension funds, as described in the August 1986 SURVEY, are based on estimated employer contributions to private pension funds by State of employee residence. The county estimates are prepared by allocating the State estimates in proportion to taxable monetary interest. Both the State and county estimates of all other imputed interest reflect the geographic distribution of taxable monetary interest.

Rent

Monetary rent.—The rental income component of personal income is a net measure of rent. State-level data for the net rental income of persons are available from IRS, but these data are subject to large sampling error for the smaller States and the sum of the States accounts for only 25 percent (or less) of the national BEA estimate of monetary rent. Although the IMF tabulations include only gross rent, they are prepared from the entire file of individual income tax returns and, therefore, are not subject to sampling error. The national estimates of monetary rent are allocated to States and counties in proportion to gross rent reported in the IMF county tabulations. The State and county estimates for the years between the IMF benchmarks are prepared by straight-line interpolation. The estimates for the years following the latest IMF benchmark are based on the State and county distribution from that benchmark.

Royalties.—The State estimates of royalties are based on the State distribution of royalties reported in the IRS publication series *Statistics of Income* (*SOI*). The *SOI*-reported amounts account for about two-thirds of the BEA national estimate of royalties. The difference between the *SOI*-reported amount and the national estimate is allocated to States in proportion to the number of returns with royalties reported for each State in the *SOI*. The estimated underreported amount is added to the *SOI*-reported amount to produce the final State estimate of royalties. Because data on the county distribution of royalties are not available, the State totals are allocated by the county estimates of monetary interest.

Imputed rent.—County estimates of nonfarm imputed net rent are prepared in two parts: Owner-occupied mobile homes and all other owner-occupied nonfarm dwellings. (Imputed rent for farm dwellings is classified with farm proprietors' income.)

State and county estimates of imputed rent for owner-occupied mobile homes are made by allocating the national total, inclusive of the CCAdj, for each year by the geographic distribution of the number of mobile homes and trailers reported in the 1980 Census of Housing. (The proportion of trailers to mobile homes is too small to affect the distribution.)

County estimates of imputed rent for all other owner-occupied dwellings are prepared by allocating State totals, inclusive of the CCAdj, by the estimated market value of owner-occupied, single-family nonfarm dwellings. The estimated market value was derived, separately for each county, as the product of the number of owner-occupied, single-family nonfarm dwellings and the related median value reported in the 1980 Census of Housing. The State-level methodology is a similar allocation of the national total, but it also reflects data for census regions from the biennial American Housing Survey, available most recently for 1985.

14. The State estimates of dividends and monetary interest are made separately for receipts by individuals, receipts by nonprofit institutions, and receipts by fiduciaries. The IMF data are used only for receipts by individuals. The county estimates are made for these items combined.

The State and county estimates of imputed rent reflect adjustments for the following natural disasters and other unique circumstances: (1) Hurricane damage in 19 States in 1985, (2) hurricane damage in Texas in 1983, (3) flood damage in Arkansas, Hawaii, Illinois, Louisiana, and Missouri in 1982, and (4) Proposition 13 in California in 1978–82.

Transfer Payments

Transfer payments are income payments to persons, generally in monetary form, for which they do not render current services. As a component of personal income, they are payments by government and business to individuals and nonprofit institutions. (Transfer payments from foreigners are netted against like transfer payments to foreigners and entered in the national accounts as a personal outlay.)

Table E.—Relative Importance to Total Personal Income of Transfer Payments, United States, 1986

	Millions of dollars	Percent of total personal income
Total personal income	**3,528,589**	**100.00**
Transfer payments	**518,848**	**14.70**
Government payments to individuals	486,853	13.80
Retirement and disability insurance benefit payments	279,062	7.91
Old-age, survivors, and disability insurance payments	193,622	5.49
Railroad retirement and disability payments	6,351	.18
Federal civilian employee retirement payments	24,356	.69
Military retirement payments	17,879	.51
State and local government employee retirement payments	28,808	.82
Workers' compensation payments (Federal and State)	5,164	.15
Other government disability insurance payments [1]	2,882	.08
Medical payments[2]	123,586	3.50
Income maintenance benefit payments	45,154	1.28
Supplemental security income (SSI) payments	12,078	.34
Aid to families with dependent children	16,246	.46
Food stamps	10,578	.30
Other income maintenance[3]	6,252	.18
Unemployment benefit payments	16,634	.47
State unemployment insurance compensation	15,961	.45
Unemployment compensation for Federal civilian employees	193	.01
Unemployment compensation for railroad employees	185	.01
Unemployment compensation for veterans	142	0
Other unemployment compensation[4]	153	0
Veterans benefit payments	16,617	.47
Veterans pensions and compensation	14,030	.40
Educational assistance to veterans, dependents, and survivors[5]	852	.02
Veterans life insurance benefit payments	1,698	.05
Other assistance to veterans[6]	37	0
Federal education and training assistance payments (other than for veterans)[7]	5,226	.15
Other government payments to individuals[8]	574	.02
Payments to nonprofit institutions	14,810	.42
Federal Government payments	3,572	.10
State and local government payments[9]	6,182	.18
Business payments	5,056	.14
Business payments to individuals[10]	17,185	.49

Detail may not add to totals due to rounding.

1. Includes temporary disability payments and black lung payments.
2. Consists of medicare payments, medical vendor payments, and CHAMPUS payments.
3. Includes general assistance, emergency assistance, foster home care payments, earned income tax credits, and energy assistance.
4. Consists of trade adjustment allowances payments and public service jobless benefit payments.
5. Includes veterans readjustment benefit payments and educational assistance to spouses and children of disabled or deceased veterans.
6. Includes payments to paraplegics, payments for autos and conveyances for disabled veterans, veterans aid, and veterans bonuses.
7. Includes Federal fellowship payments (National Science Foundation fellowships and traineeships, subsistence payments to State maritime academy cadets, and other Federal fellowships), interest payments on guaranteed student loans, higher education student assistance, and Job Corps payments.
8. Consists of Bureau of Indian Affairs payments, education exchange payments, compensation of survivors of public safety officers, compensation of victims of crime, Alaska Permanent Fund dividend payments, and other special payments to individuals.
9. Consists of State and local government payments for foster home care supervised by private agencies, State and local government educational assistance payments to nonprofit institutions, and other State and local government payments to nonprofit institutions.
10. Includes liability payments for personal injury, corporate gifts to nonprofit institutions, and consumer bad debts—i.e., defaults by consumers on debts owed to business.

Currently, transfer payments account for almost 15 percent of TPI. This component of the State and county personal income series reflects the sum of more than 50 separately estimated items. Tables showing State and county estimates of transfer payments by major program (see Appendix B of volume 1) are available from REIS. Approximately 75 percent of total transfer payments is estimated on the basis of payments data. The remainder, for the most part, is estimated on the basis of indirect indicators. Some of these indicators are drawn from the 1980 Census of Population.

This section is arranged to follow the order in table E. It explains briefly each separately estimated item of transfer payments and describes how it is estimated for the county personal income series.

Government payments to individuals

Retirement and disability insurance benefit payments:

Old-age, survivors, and disability insurance (OASDI) payments.—These payments, popularly known as social security, consist of the total cash benefits paid during the year, including monthly benefits paid to retired workers, dependents, and survivors and special payments to persons 72 years of age and over; lump sum payments to survivors; and disability payments to workers and their dependents. The State estimates of each OASDI segment are based on SSA tabulations of calendar year payments. The county estimates of total OASDI benefits are based on SSA tabulations of the amount of monthly benefits paid to those in current payment status as of December 31, by county of residence of the beneficiaries.

Railroad retirement and disability payments.—This item represents payments to retired and disabled railroad employees and their survivors under the provisions of the Railroad Retirement Act of 1937. The State and county estimates are based on tabulations of the benefits disbursed by the Railroad Retirement Board.

Federal civilian employee retirement and disability payments.—This component includes payments made to former Federal Government employees or survivors of employees covered by the civil service retirement and disability fund or by special contributory and noncontributory retirement systems (e.g., for the foreign service, Federal Reserve Board, and Tennessee Valley Authority). The national estimate for all systems combined is allocated to States and counties in proportion to one month's payments data provided each year by OPM. The data used for the county allocation are ZIP code tabulations, which are summed to counties by BEA.

Military retirement payments.—This component reflects the payments received by retired military personnel, including Coast Guard retirees, and by those receiving fleet reserve pay. Fleet reserve pay and military retirement pay are combined and estimated as one series at both the State and county levels. The national estimate is allocated to States and counties in proportion to one month's payment data provided each year by DOD. The data used for the county allocation are ZIP code tabulations, which are summed to counties by BEA.

State and local government employee retirement payments.—Retirement payments to former State and local government employees and their survivors, including lump sum payments and withdrawals, now represent a larger share of TPI than do the retirement payments to former Federal civilian employees and their survivors. In the absence of payments data, county estimates are made by allocating the State estimates by the county distributions of State and local government wage and salary disbursements, adjusted to a place-of-residence basis.

Workers' compensation payments.—Benefit payments from publicly administered workers' compensation insurance are from both the Federal and State levels of government. Federal Government employees are covered under the Federal Employees Compensation Act, administered by the Employment Standards Administration, Department of Labor. In the absence of payments data for local areas, State totals are allocated to counties in proportion to the BEA estimates of Federal civilian wages and salaries, adjusted to a place-of-residence basis.

Benefit payments made from State-administered workers' compensation funds to both public and private employees include payments made in States where workers' compensation insurance is exclusively State administered, in States where State-administered insurance for workers' compensation is competitive with private insurance, and in States having second injury funds. Second injury funds have been established by legislation in the various States to encourage employment of handicapped workers. The employer is assured responsibility only for disability that a worker incurs from present employment. The difference between the payment due for the full degree of impairment (reflecting the combined effects of injury sustained from previous employment and injury from present employment) and the amount due for the injury received in the course of present employment is paid out of the second injury fund.

Benefit payments disbursed from State workers' compensation funds are published in the Census Bureau's annual *State Government Finances*, on a State-of-work basis only. BEA adjusts these data to a place-of-residence basis for the allocation of the national estimates to States. In the absence of direct data for local areas, the State totals are allocated to the counties by the BEA county estimates of total wages and salaries, modified to exclude Federal payrolls and adjusted to a place-of-residence basis.

Other government disability insurance payments.—This category consists of temporary disability payments and black lung payments.

Temporary disability payments are weekly cash benefits, from State-administered programs, paid to workers who are unemployed because of nonoccupational illness or accident. Such programs are in effect in only four States: Rhode Island, California, New York, and New Jersey. County estimates of benefit payments are made by allocating the State totals to counties in proportion to the distribution of civilian population.

Black lung payments are the monthly cash payments (authorized by the Federal Mine Safety and Health Act of 1969) paid to coal miners who are totally disabled by black lung disease. Payments are also made to eligible dependents and survivors of miners whose deaths were caused by the disease. The county estimates for all States are based on annual SSA county tabulations of benefit payments for the month of June.

Medical payments:

Medicare payments.—These are Federal Government payments made through intermediaries for care provided to individuals under the provisions of the medicare program. County estimates of benefits received under the hospital insurance (HI) and supplementary medical insurance (SMI) provisions of medicare are based on the dollar amounts paid as reimbursement for hospital and medical expenses, as reported by HCFA. Because these data lag, the estimates for the most recent year reflect the previous year's distribution.

Medical vendor payments.—These are payments made through intermediaries for care provided to individuals under the provisions of the medicaid program and the general assistance medical programs of State and local governments. The estimates are based on payments data, where available, from the various State departments of social services. For States where no county data are available, the county estimates are based on the distribution of payments made under the aid to families with dependent children program.

CHAMPUS payments.—These are payments made under the Civilian Health and Medical Plan of the Uniformed Services (CHAMPUS) program for medical treatment at nonmilitary facilities of dependents of active duty military personnel and retired military personnel and their dependents. Payments data are not available below the State level; the county estimates are based on the distribution of military retirement payments.

Income maintenance benefit payments:

Supplemental security income (SSI) payments.—This component includes payments to the aged, blind, and disabled made by both the Federal and State governments under the provisions of Title XVI of the Social Security Act. The State estimates are made from unpublished SSA State tabulations of annual disbursements for the three categories of SSI benefits: Federal

basic benefits, Federal hold-harmless benefits, and State supplementation.[15] At the county level, the three categories are combined, and the estimates are based on payments data reported by SSA.

Aid to families with dependent children (AFDC).—This State-administered program receives Federal matching funds to provide payments to needy families. It remains independent of SSI. Estimates for all years are prepared from payments data provided by the various State departments of social services.

Food stamps.—These benefits are measured as the value of the food stamps issued to qualifying low-income households to supplement their power to purchase food. Eligibility is determined by local authorities' interpretation of Federal regulations; USDA pays 100 percent of the cost of the stamps and 50 percent of administrative expense. The estimates are based on USDA county tabulations of the value of the stamps distributed each month.

Other income maintenance payments.—These are payments for general assistance, emergency assistance, foster home care, earned income tax credits, and energy assistance.

General assistance is aid furnished by State or local governments to needy individuals or families who do not qualify for help under federally supported programs. The Federal Government does not participate in either funding or regulating this program. Estimates for all years are prepared from payments data available from the various State departments of social services.

Emergency assistance is a program extending assistance to families with at least one child not covered by AFDC. Each family is eligible only once every 12 months, and the coverage is for a maximum of 30 days. The program is optional for each State; currently, about one-half of the States have these programs. County payments data, available from the various State departments of social services, form the basis for the estimates in most of these States. For the other States, the State totals are allocated to the counties in proportion to the distribution of general assistance payments.

Foster home care payments are made by State and local governments to families caring for foster children. The State estimates are allocated to counties in proportion to civilian population.

Earned income tax credit, which may be claimed by low-income workers with minor children, is measured as a transfer payment component as the excess of the tax credit over the Federal income tax liability. Eligibility for the tax credit is determined by the size of the adjusted gross income or earned income and by certain household characteristics. The State estimates are derived from IRS tabulations of the amount of payments disbursed to residents of each State. Similar data are not available for local areas. County estimates are made by allocating the State estimates by county distributions derived from 1980 census data on earnings of families in poverty status.

Energy assistance payments provide both cash payments to needy individuals and families and vendor payments to suppliers to help defray the cost of home heating and other necessary home fuel consumption. The energy assistance programs are federally funded, but administered by the States. The county estimates are based on energy assistance payments as reported by the various State departments of social services or, for States not providing such reports, on the county distribution of SSI enrollment.

Unemployment benefit payments:

State unemployment insurance compensation.—These are the cash benefits, including special benefits authorized by Federal legislation for periods of high unemployment, from State-administered UI programs. (The State-administered Federal unemployment compensation programs for Federal civilian employees, veterans, and public service workers are treated separately because local area payments data for these programs are either reported separately by the State ESA's or are not available.) The provisions governing eligibility, timing, and amount of benefit payments vary among the States. No central standards for benefits were incorporated into the Federal-State system as they were for coverage and financing. State totals are allocated to counties by payments data supplied by the State ESA's. While most States report benefits directly by county, a few report by local district office. In the latter case, local district office data are distributed among the counties within the jurisdiction of the district office in proportion to the average number of unemployed persons during the current year, as estimated by BLS. When the State is unable to supply the county data in time to meet the publication deadline, a preliminary set of estimates is made and is revised the following year to incorporate the delayed county data. The preliminary county estimates are prepared by extrapolating the preceding year's estimates forward by the change in a BLS report on the number of persons unemployed during the year.

Unemployment compensation for Federal civilian employees.—The UI program for Federal employees is a Federal program administered by the State ESA's acting as agents of the U.S. Government. ESA's in all States supply State data on unemployment compensation paid to Federal employees, and ESA's in about one-half of the States now supply either county or local office data. Where county data are available, they are used to allocate State totals. Local district office data are distributed to the counties using the procedure outlined in the preceding section on State UI benefits. For the remaining States, BEA residence-adjusted estimates of Federal civilian payrolls are used as county allocators.

Unemployment compensation for railroad employees.—The railroad UI program is administered by the Railroad Retirement Board. Benefits are paid under a Federal formula applicable throughout the Nation to railroad workers unemployed due to sickness or lack of available work. The county estimates are made by allocating the State totals in proportion to the county distribution of railroad wages and salaries.

Unemployment compensation for veterans.—Data on benefit payments under this program are available from the ESA's in about one-half of the States. These data are incorporated into the estimates using procedures similar to those described for State UI payments. For States not providing this information, the State estimates are allocated to counties in proportion to total veteran population.[16]

Other unemployment compensation.—This category includes trade adjustment allowances and public service jobless benefits payments.

Trade adjustment allowances are payments to workers who have become unemployed because of the adverse effects of increased imports. State and county estimates are based on calendar year payments data, tabulated by "petition" (location of plant). The tabulations are supplied by the Department of Labor, which administers the program. Tabulations are residence adjusted by BEA to approximate a geographic distribution based on place of receipt.

Public service jobless benefits are unemployment benefits paid to persons ineligible under any other Federal or State unemployment compensation program because of their prior employment under federally sponsored public service employment programs. The State ESA's make the payments and are reimbursed by the Federal Government. The amount of benefits paid are available from ETA for States, but not for counties. The county estimates are made by allocating the State amounts to the counties in proportion to the distribution of the benefit payments under the State UI program.

15. Several safeguards for individuals were built into the system, including (1) a requirement that a State provide a supplementary payment to any individual who had a December 1973 payment higher than the amount he would have received under the basic Federal SSI program; and (2) a State option to provide benefits above the Federal basic SSI payments. Both State supplementation payments may be either federally or State administered. States accepting Federal administration are protected by a hold-harmless provision, which minimizes the financial burden of the supplementation payments. In general, the amount to be paid by the State is limited to the State's non-Federal share of selected public assistance expenditures in calendar year 1972 (with some adjustments); the difference is paid by the Federal Government.

16. The Veterans' Administration periodically issues reports on the number of veterans by place of residence and by period of service (broadly classified as World War I, World War II, the Korean war, etc.). BEA estimates the veteran population between the benchmark county distributions by straight-line interpolation.

Veterans benefit payments:

Veterans pension and compensation.—This item consists primarily of compensation to veterans for disability and payments to their survivors (including indemnity payments to survivors of veterans who were in the Armed Forces on or after June 27, 1950). Those eligible for benefits include veterans of all wars, as well as those who incurred service-connected disabilities in peacetime. Veterans with nonservice-connected disabilities who are permanently and totally disabled and meet specified income requirements are also eligible for benefits. The county estimates are prepared by allocating the State estimates by VA-reported calendar year payments data.

Educational assistance to veterans, dependents, and survivors.—Educational assistance to veterans, referred to as "veterans' readjustment benefits," are the educational allowances and subsistence payments made to veterans who served between January 31, 1955, and January 1, 1977. County estimates are made by allocating the State totals, which are based on VA payments data, in proportion to the distribution of veterans of the post-Korean war period, as reported by the VA.

In the absence of any direct or reliable indirect information at the county level, the State totals of educational assistance to spouses and children of disabled and deceased veterans, which are based on VA payments data, are allocated to counties in proportion to civilian population.

Veterans life insurance benefit payments.—These are the claims paid to beneficiaries and dividends paid to policyholders from the five veterans life insurance programs administered by the VA. County estimates of the combined payments of death benefits and dividends are based on the annual county distribution of total veteran population.

Other assistance to veterans.—County estimates of VA payments to paraplegics and payments to disabled veterans for automobiles and other conveyances are based on the distribution of veteran population. Payments made by State and local governments to veterans, in the forms of assistance to indigent veterans and of bonuses, are estimated by using the county distribution of veterans of the post-Korean war period to allocate the State totals, which are based on fiscal year data from the Census Bureau's annual *State Government Finances.*

Federal education and training assistance payments:

Federal fellowship payments.—This component reflects only the subsistence portion of fellowships, which is paid directly to the individual. A much larger portion is given by the Federal Government directly to the schools. The latter is classified either as transfer payments to nonprofit institutions or as government grants-in-aid, depending upon whether the school is privately or publicly administered.

Separate estimates are made for the National Science Foundation (NSF) grants to outstanding science students, for payments to State maritime academy cadets, and for all other Federal fellowships. Estimates of the NSF grants are prepared from annual NSF tabulations of the number of students receiving NSF fellowships by institution. The series for distributing the State estimates to counties are constructed by classifying the institutions by county and summing the number of recipients to county aggregates. The county estimates of the Federal Government subsistence payments to cadets attending the six State maritime academies authorized by the Maritime Academy Act of 1958 are made by assigning State estimates to the county in which each school is located. Because of the lack of direct data, the county estimates of all other Federal fellowships are based on the distribution of civilian population.

Interest payments on guaranteed student loans.—These are the payments made by the Federal Government to commercial lending institutions on behalf of individuals who receive low-interest deferred-payment loans from these institutions for payment of expenses of higher education. The State estimates are based on Department of Education data on the number of persons enrolled in institutions of higher education. The county estimates reflect the distribution of civilian population.

Higher education student assistance.—These Federal payments, called Pell grants, provide support for the education and training of persons with low incomes. Estimates of payments made under the program are based on tabulations of annual county payments, by location of institution, prepared by the Department of Education.

Job Corps payments.—These are the monthly payments for living expenses of economically disadvantaged persons between the ages of 16 and 21 enrolled in designated vocational and educational training programs. Also included are adjustment allowances issued to trainees upon the successful completion of their training. The State estimates are based on ETA calendar year tabulations of the amount of allowances and allotments disbursed to Job Corps enrollees. The county estimates reflect the distribution of civilian population.

Other government payments to individuals:

Alaska Native Claims Settlement Act payments.—The act provides for "the fair and just settlement of all claims by Natives and Native groups in Alaska based on aboriginal land claims." Settlement was made through the granting of landrights to groups of Natives and through money payments to resident and nonresident Natives.

The benefits included in transfer payments were the cash payments disbursed to individuals from 1973 through 1981. The Alaska State totals were distributed among the boroughs and census areas on the basis of the Alaska Native population reported in the 1970 Census of Population. Estimates of the total amount distributed to eligible Natives not residing in Alaska are based on information provided by the Seattle Office of the Thirteenth Regional Corporation.[17] This aggregate was distributed among the other 49 States and the District of Columbia by the number of persons enrolled under the act, by State of residence, as of March 1979. Because of the lack of sub-State information about the location of residence of these individuals, the county estimates were made by allocating the State totals to the 10 most populous counties within each State in proportion to civilian population.

Compensation of survivors of public safety officers.—These are benefits from a Federal program that compensates survivors of State and local government employees, such as police officers and firefighters, killed in the line of duty. The benefit payment is a lump sum of $50,000 for each claim. Tabulations of the number of claims by city and State are available from the Department of Justice. The tabulations are used to allocate the national totals to States and counties.

Compensation of victims of crime.—These payments derive from various State programs. Currently about three-fourths of the States have instituted such programs, and the number is increasing. The State estimates are based on total compensation paid either to crime victims or to vendors on the behalf of crime victims, as reported by the State agencies administering the programs. The county estimates are based on the distribution of civilian population.

Alaska Permanent Fund dividend payments.—These are disbursements of dividends and interest to residents of Alaska from the Alaska Permanent Fund. The fund, which is derived from oil revenues, pays a portion of its net investment income to every Alaskan resident. The State estimate is based on actual amounts paid, supplied by the State. The borough and census area estimates are based on the distribution of civilian population.

Other miscellaneous assistance payments.—These include benefits from the education exchange program and from selected programs of the Bureau of Indian Affairs, Department of the Interior. In the absence of any direct or reliable indirect data, estimates are made in proportion to total civilian population and Indian population distributions, respectively.

17. The Alaska Native Claims Settlement Act established regional corporations through which benefit payments were to be disbursed to eligible individuals. The Thirteenth Regional Corporation services Alaska Natives residing outside Alaska.

Payments to nonprofit institutions

These are payments, other than for work under research and development contracts, made by Federal, State, and local governments, as well as payments by business (corporate gifts to nonprofit institutions). The State and local government portion includes payments for foster home care supervised by private agencies. No data for estimating payments to nonprofit institutions at the county level are available; the State estimates are allocated to counties in proportion to civilian population.

Business payments to individuals

In addition to corporate gifts to nonprofit institutions, business transfer payments include liability payments for personal injury made by business to individuals other than employees, consumer bad debts (that is, defaults by consumers on debts owed to business), cash prizes, and unrecovered thefts from business of cash and capital assets.

The availability of data for estimating these items at all three levels (national, State, and county) is extremely limited. The national estimates are of varying quality, and the validity of the estimates below the national level is questionable. However, except for liability payments and consumer bad debts, the amounts involved are so small that their effect on the reliability of the transfer payments component, as a whole, is negligible.

The State and county estimates of business transfer payments to individuals, except for consumer bad debts, are based on the geographic distribution of civilian population. State estimates of consumer bad debts are made for retail trade, selected services, commercial banks, and all other. County estimates are made only for total consumer bad debts because of the limited availability of county data. The county estimates are based on the geographic distribution of retail sales reported in the 1982 Census of Retail Trade.

Personal Contributions for Social Insurance

Contributions made by individuals under the various social insurance programs are excluded from personal income by treating them as explicit deductions. Payments by employees and the self-employed (farm and nonfarm) are included in this component. Also included are the contributions that are sometimes made by employers on behalf of their employees (i.e., those customarily paid by the employee but, under special arrangement, paid by the employer). These contributions, although viewed as part of total earnings of employees, are not actually received by them in the current period. In the national economic accounts, they are recorded as receipts of social insurance funds in the government sector.

The employee portion covers contributions for OASDI, HI, State UI, railroad retirement insurance, temporary disability insurance, and public employee (Federal, State, and local) retirement systems. Contributions by the self-employed are included in OASDI and HI. Also included in personal contributions are premium payments for SMI and veterans life insurance. Government life insurance for veterans is classified as social insurance because the insurance program operates through a fund administered by the Federal Government. In contrast, the government life insurance program for Federal civilian employees operates through private insurance carriers and is included in personal income as a component of OLI (employer contributions to private welfare funds).

For self-employed individuals, contributions are paid annually along with their Federal income taxes. For employees, contributions to most social insurance programs are collected in a manner similar to individual income taxes, as applied to wages and salaries, in that both the income taxes and the contributions are withheld at the source of disbursement under the laws of the Federal Government and of some State and local governments. However, such taxes, unlike contributions, are counted as part of personal income—as though they were first received by the employee and then paid to the government. This treatment of taxes is in line with the overall definition of personal income as a before-tax measure. Admittedly, the difference in treatment accorded withheld taxes and social insurance contributions is arguable.

In general, the State totals are allocated to counties by the appropriate payroll or proprietors' income series. The following are exceptions to this general procedure: SMI payments, allocated by HCFA tabulations of the number of persons enrolled in the program; contributions for veterans life insurance, allocated by veterans population; and contributions made to State UI and temporary disability programs applicable in only a few States, allocated by civilian population.

Table F.—Relative Importance to Total Personal Income of Personal Contributions for Social Insurance, by Component, United States, 1986*

	Millions of dollars	Percent of total personal income
Total personal income[1]	**3,528,589**	**100.00**
Less: Personal contributions for social insurance	**158,932**	**4.50**
Contributions to old-age, survivors, disability, and hospital insurance	134,977	3.83
Employee contributions	123,190	3.49
Self-employed contributions	11,787	.33
Supplementary medical insurance contributions	5,687	.16
Federal civilian employee retirement contributions	4,596	.13
Railroad employee retirement contributions	1,098	.03
State and local government employee retirement contributions	10,152	.29
Veterans life insurance contributions	808	.02
State unemployment insurance and temporary disability contributions	1,614	.05

Detail may not add to totals due to rounding.

*Although personal contributions for social insurance are deducted in the derivation of personal income, the dollar amounts and the percentages in this table are shown as absolute values to give an indication of the size of the personal contributions components.

1. This total is as shown in tables A–E; that is, total personal income is shown as the sum of the personal income components in those tables less personal contributions for social insurance.

Residence Adjustment

Personal income is a "place-of-residence" measure of income. At the national level, place of residence is an issue only in the case of border workers (mainly those living in the United States and working in Canada or Mexico and vice versa).[18] At the State and county levels, the issue of place of residence is more significant.[19] Persons commuting between States are a major factor where metropolitan areas extend across State boundaries—for example, in Washington, DC–Maryland–Virginia and New York–New Jersey–Connecticut. Persons commuting between counties are a major factor in every multicounty metropolitan area and in many nonmetropolitan areas.

BEA's concept of residence as it relates to personal income refers to the location where the income to be measured is received, rather than to "usual," "permanent," or "legal" residence. It differs from the Census Bureau's concept mainly in the treatment of migrant, seasonal, and short-term workers. The decennial census counts many of these workers at their usual place of residence (rather than where they are on April 1 when the census is taken). BEA attempts to assign the wages of these workers to the area in which they reside while performing the work.[20] Similarly, BEA assigns the income of military personnel to the county in which they reside while on military assignment, not to the county in which they consider themselves to be permanent or legal residents. Thus, in the State and local area personal income series, the income of military personnel on foreign assignment is excluded because their residence is outside of the territorial limits of the United States.

Three of the six major components of personal income are recorded, or are treated as recorded, on a place-of-residence (where-received) basis. They are transfer payments; personal dividend income, personal interest income, and rental income of persons; and proprietors' income. Nonfarm proprietors' income is treated as income recorded on a place-of-residence basis because the source data for almost all of this part of proprietors' income are reported to the IRS by tax-filing address, which is usually the filer's place of residence. The place of residence of a farm proprietor is considered to be identical to the place of work.

18. As described in the Overview, U.S. residents working abroad for U.S. firms or for the U.S. Government are included in the national measure of personal income, but they are excluded from State and local area personal income.

19. The meaning of "resident" in the context of measuring personal income refers not only to individuals but also to quasi-individuals. For the purpose of the State and local personal income estimates, the "residence" of a nonprofit institution serving individuals, a private noninsured welfare fund, or a private trust fund is considered to be identical to that of its beneficiaries because the income received by these entities is received on behalf of individuals.

20. Exceptions to this rule are out-of-State workers in Alaska and selected groups of border workers.

The remaining three major components—wages and salaries, OLI, and personal contributions for social insurance—are, with minor exceptions, estimated from data that are reported by place of work (point of disbursement). (The exceptions are wage and salary disbursements and OLI of religious membership organizations, military reserve pay, personal contributions for veterans life insurance and for SMI, and contributions by the self-employed for OASDI and HI.) Accordingly, adjustments are made to convert the place-of-work components to a place-of-residence basis. The sum of these components is referred to as "income subject to adjustment" (ISA).

The residence adjustment estimates for 1981 and later years are founded on those for 1980. The initial 1980 estimates were derived as the total inflows of commuters' earnings minus the total outflows. Each gross flow of earnings from a county of work to a county of residence was derived as the product of 1980 ISA in the county of work multiplied by a residence adjustment factor. The residence adjustment factors were derived from the 1980 Census of Population JTW data on the number of workers and their 1979 average earnings by industry in each intercounty commuting flow. Each adjustment factor was calculated as the wages of the given group of intercounty commuters divided by the wages of all persons in the same industry classification employed in the same county of work.[21]

The initial 1980 estimates for clusters of counties identified as being closely related by commuting (mostly multicounty metropolitan areas) were modified to incorporate the 1979 wage and salary distribution from the 1980 Census of Population.[22] This modification was made to preclude residence adjustment errors in the numerous cases where the census commuting data and the source data for the BEA wage estimates are inconsistently coded by place of work (for example, when the ES-202 data attribute too much of the wages of a multiestablishment firm to the county of the center city or when a military base extending across a county boundary is attributed to different counties in the DOD payroll and the census commuting data). The initial 1980 BEA place-of-residence wage and salary estimates were summed to a total for each cluster. The BEA cluster totals were than redistributed among their constituent counties in the same proportion as their reported 1979 census wages and salaries. Modifications were also made for selected noncluster counties when large, offsetting differences between the initial 1980 BEA estimates and the census data occurred in adjacent counties. In all, 1,287 counties were affected by these procedures.

The estimates for 1981 and later years reflect both the 1980 estimates and procedures for estimating the effects of changes in commuting patterns. Under these procedures, a direct annual measure of wages and salaries by county of residence, based on wages and salaries reported to IRS on form 1040, is used systematically along with the BEA place-of-work earnings estimates and the 1980 gross flow estimates described above.[23] A relative change ratio is calculated for each county for each year after 1980. This ratio is the percentage change in county all-industry ISA from 1980 to the specified year divided by the percentage change in the IRS-based place-of-residence wage and salary series for the county. Initial estimates of total outflows from each county, based on the 1980 estimates and on the relative changes in ISA, are multiplied by the relative change ratio. Initial estimates of total inflows to each county, based on the 1980 estimates and on the relative changes in the IRS-based wage series, are divided by the ratio. Outflows are subtracted from inflows to yield net residence adjustment (final for the non-cluster counties). As a last step, cluster totals of place-of-residence ISA are derived and then redistributed to the constituent counties based on 1980 place-of-residence ISA and the percentage change in the IRS-based wage series. The net residence adjustment for each cluster county is calculated as place-of-residence ISA minus place-of-work ISA.

21. Adjustment factors and gross flows were calculated separately for a number of ISA components. Wages and salaries and OLI were classified separately by SIC industry division for the private sector and by level of government (with Federal civilian separate from the military) for the public sector. Personal contributions for social insurance were classified into the sum of nonmilitary OASDI and HI, railroad retirement, and State UI and temporary disability; military OASDI and HI; Federal civilian retirement; and State and local government retirement. Residence adjustment factors for the corresponding groups were calculated from the JTW data. However, for intercounty commuting flows with few workers in all industries, a single all-industry adjustment factor was used for all ISA components.

22. The 1979 census wage and salary distribution reflects the residential distribution of the income recipients as of April 1, 1980, regardless of where they were living when they received the wages and salaries.

23. Tabulations of wages and salaries reported to IRS, classified geographically by tax-filing address, are available to BEA with a 1-year lag. This series is extrapolated to the most current year by the relative changes in the BEA national estimates of total wages and salaries and in the Census Bureau county population estimates.

TECHNICAL NOTES

Industry classification.—The industry detail in which the estimates of earnings are presented is in accordance with the SIC system established by OMB. The estimates for the years 1975 forward are based on the 1972 SIC, and the estimates for prior years are based on the 1967 SIC.

Per capita personal income.—This measure of income is the TPI of the residents of a given area divided by the resident population of the area. In computing per capita personal income for the counties, BEA uses Bureau of the Census county population totals as of July 1, which are available for 1979 and for 1981–86. BEA estimated midyear 1980 population based on the 1980 census and on unpublished data on refugee population from the Bureau of the Census.

Per capita personal income serves as an indicator of the quality of consumer markets and of the economic well-being of the residents of an area. This measure, however, can vary widely from county to county and should be used with caution for several reasons.

In many instances, an unusually high or low per capita income is the temporary result of unusual conditions, such as a bumper crop, a major construction project (e.g., a defense facility, nuclear plant, or dam), or a catastrophe (e.g., a tornado or drought). In some cases, a high per capita income is not representative of the standard of living in an area. For example, a construction project may attract a large number of highly paid workers who are included in the population but who send a substantial portion of their wages to dependents living in other areas. Conversely, a county with a large institutional population (e.g., residents of a college or a prison) may show an unusually low per capita income, which is not necessarily indicative of the economic well-being of the noninstitutional population.

Moreover, population is measured at midyear, whereas income is measured as a flow over the year; therefore, a significant change in population during the year, particularly around midyear, can cause a distortion in the per capita figures.

In counties where farm income predominates, additional considerations should be taken into account. Farm proprietors' income, as measured for personal income, reflects returns from current production; it does not measure current cash flows. Sales out of inventories, although included in current gross farm income, are excluded from net farm income because they represent income from a previous year's production. Additions to inventories are included in net farm income at current market prices; therefore, farmers' attempts at regulating their cash flows by adjusting inventories are not reflected in BEA's farm proprietors' income estimates. However, this regulation of cash flows by farmers, by extending their earnings cycle, helps them to survive losses or lowered income for 2 or 3 years. In counties that are characterized by a small population and a high level of dependence upon farming, the per capita income will react more sharply to the vagaries in weather, world market demand, and changing government policies related to agriculture than in counties where the sources of income are more diversified.

Comparison of personal income with other income measures.—Adjusted gross income and taxable income are IRS measures of income that appear on individual tax returns. The IRS income measures differ from BEA's personal income in a number of ways. Personal income includes transfer payments and imputed income, whereas the IRS measures exclude all imputed income and most transfer payments. Personal income includes the income of quasi-individuals as well as individuals, whereas the IRS measures include only the income of individuals who file individual income tax returns. Personal income excludes realized capital gains, whereas capital gains are both reportable and taxable on income tax returns.[24]

Money income is prepared by the Bureau of the Census. Money income differs from personal income in that money income is measured before deduction of personal contributions for social insurance and does not include imputed income, lump sum payments, income received by quasi-individuals, certain in-kind transfer payments—such as medicaid, medicare, and food stamps—and employer contributions to private welfare and pension funds. It does include (and personal income excludes) income from private pensions and annuities and from interpersonal transfers, such as child support. Money income is prepared decennially on the basis of a sample survey conducted by the Bureau of the Census as part of the census of population. Postcensal estimates are made biennially using IRS data and components of State personal income, adjusted to a money income concept, to extrapolate the estimate from the most recent census.

BEA and the Bureau of the Census prepare per capita estimates of personal and money income, respectively. In addition to the differences in income definitions already mentioned, substantial differences between the per capita measures may also arise from differences in the method of computation. For example, the Census Bureau computes 1985 per capita money income by dividing 1985 total money income by April 1986 total population, whereas BEA derives its 1985 per capita personal income by dividing 1985 total personal income by July 1985 total population.[25]

Electronic edit procedures.—In making the county personal income estimates, BEA uses several million administrative records annually. Although these records are usually encoded and processed by the agency administering the program that generates the data (thereby reducing the cost to BEA in terms of time and labor), there are still possibilities for error in the data. Because it is not possible to verify each individual record or accept the various administrative record files at their face value, BEA has developed several computerized edit routines to locate major errors in the source materials, either directly or through examination of preliminary estimates based on the sources. At some stages of the estimating process, the data are arrayed in tables and printouts that give the analyst a frame of reference for judging the quality of the data. At other stages, the data are screened by computer to flag for further review items that exceed specified edit parameters. For example, the "average wage check" is used to screen the ES-202 data underlying the wage and salary and the companion employment series. This routine flags the county wage and employment data for an SIC industry division when the year-to-year change in the implicit average wage deviates excessively from the corresponding change for the industry division at the national level.

When an important anomaly is discovered in the data and cannot be traced to an explicit error in BEA's data processing and estimating procedures, a question may be raised with the agency that supplied the source data. Alternatively, a substitute estimate is prepared from another data source.

Interpolation and extrapolation.—In the context of the State and local area personal income estimates, interpolation and extrapolation are procedures by which State and county distributions for individual components for a given year are extended to other years. Their use reflects the fact that, in many instances, statistical information for States and counties on a particular type of income flow is better for some years (benchmarks) than for others. Interpolation is a procedure for deriving estimates between benchmarks; extrapolation is a procedure for deriving estimates beyond benchmarks.

"Straight-line interpolation" is the simplest, but least satisfactory, procedure. It is based on the premise that any change between benchmark years has occurred in the same magnitude in each interim year. It might be used, for

24. A more detailed discussion is presented in Thae S. Park, "Relationship Between Personal Income and Adjusted Gross Income: Revised Estimates, 1947–83," SURVEY 66 (May 1986): 34–40. More current estimates appear in NIPA table 8.14 in later July SURVEY issues.

25. The Census Bureau uses this method because in the decennial census the income question relates to the previous year's income: In April 1980, the Census Bureau asked how much income was received in calendar year 1979. For consistency, this time relationship is maintained in the years between the decennial censuses.

example, when county distributions of wages and salaries disbursed in a certain industry are available for years 1 and 4, but are not available for years 2 and 3. The change in the data for each county is spread evenly to the interim years 2 and 3.

Wages and salaries in thousands of dollars

	Year 1 (benchmark)	Year 2 (interpolation)	Year 3 (interpolation)	Year 4 (benchmark)
County A	28	34	40	46
County B	34	43	53	62
County C	74	81	87	94

The interpolated figures are then adjusted to State totals by allocation (not shown).

A more satisfactory interpolation can be illustrated by assuming the availability of employment data for the same industry in all 4 years. The first step is to compute average wages for years 1 and 4.

Employment and average wages

	Year 1		Year 4	
	Employment	Average wages in dollars	Employment	Average wages
County A	4	7,000	4	11,500
County B	6	5,667	10	6,200
County C	11	6,727	10	9,400

Next, average wages for years 2 and 3 are derived by straight-line interpolation.

Average wages in dollars

	Year 1 (benchmark)	Year 2 (interpolation)	Year 3 (interpolation)	Year 4 (benchmark)
County A	7,000	8,500	10,000	11,500
County B	5,667	5,845	6,022	6,200
County C	6,727	7,618	8,509	9,400

Then the interpolated average wages for years 2 and 3 are multiplied by the employment data for those years to yield first approximations of wages.

Employment and wage approximations

	Year 2		Year 3	
	Employment	Wages in thousands of dollars	Employment	Wages in thousands of dollars
County A	5	43	4	40
County B	7	41	9	54
County C	10	76	9	77

Finally, the first approximations are adjusted to State totals by allocation (not shown).

Extrapolation can be illustrated by assuming that, for the example above, employment data are also available for year 5. Year 4 average wages are multiplied by year 5 employment to yield first approximations of year 5 wages.

Wage approximations

	Year 4	Year 5	
	Average wages in dollars	Employment	Wages in thousands of dollars
County A	11,500	5	58
County B	6,200	12	74
County C	9,400	9	85

The first approximations are then adjusted to the State totals by allocation (not shown).

Disclosure avoidance.—BEA's heavy reliance on the administrative record files of other government agencies makes it particularly important that BEA be aware of, and observe, the legal requirements—established to safeguard the privacy of persons and firms—relating to disclosure of confidential information. BEA, like other statistical agencies, must balance its responsibility to avoid disclosure with its responsibility to release as much useful information as possible. This balancing has led to a policy of limiting release of estimates to the two-digit SIC level for regions, States, and local areas, although more detailed source data are available to BEA.

As described in the section on wage and salary disbursements, BEA's estimates by county and by industry are made using the wage and salary data contained in the ES-202 files. BEA receives county ES-202 data files from the State ESA's, through BLS, at the four-digit SIC level. These aggregations by county contain information covering one or more firms in an industry classification.[26] The ES-202 files have legal restrictions prohibiting the disclosure of confidential information. Three basic techniques for disclosure avoidance are available: Suppression, rolling up, and disturbing.[27] BEA uses a combination of all three techniques.

After completing its estimates of wage and salary disbursements by two-digit SIC industry, BEA examines the files to identify potential disclosures. Two types of direct disclosures must be identified. The first, termed "reporting-unit disclosure," occurs when a given cell contains fewer than a prescribed number of firms. The second, termed "dominant-firm disclosure," occurs when—regardless of the number of firms contained in the cell—a single firm accounts for some predetermined, significant percentage of the total, thus dominating the cell. For the first type, the ES-202 files that BEA receives contain reporting-unit information that permits determination of the number of firms in each cell. For the second type, cells at the four-digit SIC level containing dominant-firm disclosures are identified by the State ESA's using the individual employers' records. The ESA's also provide ES-202 tabulations stratified by size of firm for the first quarter of each year. From this information, BEA identifies the two-digit SIC cells for which a single firm might account for more than the allowable percentage of the cell wage total.

The items identified as disclosures, either by reporting-unit or dominant-firm criteria, are referred to as "primary wage and salary disclosures." To prevent direct release of this confidential information, BEA's disclosure-avoidance procedures for regions, States, and counties utilize a combination of two techniques: Systematic rolling up and dominant-cell suppression. The first is systematically to "roll up" wages and salaries, other labor income, and proprietors' income to the sum of the three—total earnings by industry and county. The second is to test the primary wage disclosure file against the total earnings file by county to see whether wages account for a predetermined significant portion of earnings such that the primary wage disclosure results in an earnings disclosure. Where earnings are not sufficiently large to mask or cover the primary wage disclosure, a suppression indicator appears on the earnings file. This combination of techniques—combining a systematic roll up of three types of payments to earnings and a dominant-cell suppression test of wages as a specified percentage of earnings—yields the final primary earnings disclosure file, which indicates the cell suppressions necessary to prevent direct disclosure of two-digit SIC information for counties.

Two additional types of cell suppressions—secondary and complementary suppressions—are necessary to prevent the derivation (indirect disclosure) of primary disclosure cells. Secondary suppressions are additional industry cells that are suppressed to prevent indirect disclosure of the primary (two-digit SIC) disclosure cells through subtraction from higher level industry totals. Complementary suppressions are additional geographic units for the same industry that are suppressed to prevent indirect disclosure through higher level geographic totals. These suppressions are determined by testing a multidimensional matrix consisting of industry and county cells for each State and region. Computer programs

26. Other examples of administrative record files used for State and local area income estimation that contain information about individuals are those from the SSA and from the VA. These files are summarized to aggregate totals by program and county, and each county record or cell contains enough individuals to preclude the identification of any single person.

27. Suppression involves the deletion of a value and its replacement with a symbol—usually (D)—to indicate that it is being withheld. Rolling up involves the combination of the cell containing sensitive information with another cell. This may be done systematically through the combination of entire sets of estimates to create a single set in which each cell contains the sum of the corresponding cells in the input sets. Disturbing involves altering a number enough to prevent exact disclosure but not enough to impair the usefulness of the information.

impose a set of rules and priorities in order to select additional cells for suppressions until the entire multidimensional matrix of suppressions is balanced so that indirect disclosure is impossible from any direction in the matrix.

The selection process maximizes the amount of information that can be released at higher industrial and geographic levels at the expense of the more detailed industrial and geographic information. For example, if possible, the secondary selection process will suppress additional two-digit industries rather than the higher level industry division total. Likewise, if possible, additional counties will be suppressed rather than the State totals. Discretionary decisions are superimposed on the outcome of this process in some cases—such as those required to preserve regional or national totals.

A variant of the "disturbing" technique, along with systematic rolling up and dominant-cell suppression, is used to prevent disclosures stemming from the aggregations of counties to metropolitan areas. Under this approach, the metropolitan area total for each industry represents one of three situations. Where there are no county suppressions, the actual metropolitan area total is shown. Where the dollar amount of county suppressions is small relative to the sum of all the metropolitan area's counties, a partial metropolitan area total is shown, marked with an "*" indicator flag; in these situations, the amount shown constitutes the major portion of the actual total. In effect, the metropolitan area total is "disturbed" through the omission of the suppressed county amount(s). Where the dollar amount of the county suppressions is large enough to impair the usefulness of the partial total, the entire amount is suppressed, and a "(D)" is shown.

LIST OF ABBREVIATIONS

AAR ..... Association of American Railroads

AFDC ..... Aid to families with dependent children

BEA ..... Bureau of Economic Analysis (of the Department of Commerce)

BLS ..... Bureau of Labor Statistics (of the Department of Labor)

CBP ..... *County Business Patterns* (published by the Bureau of the Census)

CCAdj ..... Capital consumption adjustment

CHAMPUS ..... Civilian Health and Medical Plan of the Uniformed Services

CMSA ..... Consolidated metropolitan statistical area

DOD ..... Department of Defense

ESA ..... Employment security agency (of a State government)

ES-202 ..... Refers to the tabulations of payroll data drawn from the administrative records of the State and Federal civilian UI programs and summarized on the Department of Labor ES-202 report.

ETA ..... Employment and Training Administration (of the Department of Labor)

HCFA ..... Health Care Financing Administration (of the Department of Health and Human Services)

HI ..... Hospital insurance (part of medicare)

IMF ..... Individual Master File (maintained by the IRS)

IRS ..... Internal Revenue Service (of the Department of the Treasury)

ISA ..... Income subject to (residence) adjustment

IVA ..... Inventory valuation adjustment

JTW ..... Journey to work. Refers to intercounty commuting data from the 1980 Census of Population and in particular to an unpublished tabulation of those data, including information about workers' industry of employment and their average earnings.

MSA ..... Metropolitan statistical area

NASS ..... National Agricultural Statistics Service (of USDA)

NECMA ..... New England county metropolitan area

NIPA('s) ..... National income and product account(s)

NPLL ..... Net profit less loss (a statistic drawn from IRS tabulations of nonfarm proprietors' tax returns)

NSF ..... National Science Foundation

OASDI ..... Old-age, survivors, and disability insurance (the programs popularly known as social security)

OLI ..... Other labor income

OMB ..... Office of Management and Budget

OPM ..... Office of Personnel Management

PMSA ..... Primary metropolitan statistical area

REIS ..... Regional Economic Information System (of BEA)

SIC ..... Standard Industrial Classification

SMI ..... Supplementary medical insurance (part of medicare)

SOI ..... *Statistics of Income* (published by IRS)

SSA ..... Social Security Administration (of the Department of Health and Human Services)

SSI ..... Supplemental security income

TPI ..... Total personal income

UI ..... Unemployment insurance. The abbreviation is used to refer both to the UI benefit programs and to the system of employer taxation from which the benefits are paid and which is the origin of the ES-202 data.

USDA ..... United States Department of Agriculture

VA ..... Veterans' Administration

GLOSSARY

Adjustment for residence.—This adjustment is made to wages and salaries, other labor income, and personal contributions for social insurance (with minor exceptions) to place them on a where-received basis. The adjustment is necessary because these components of personal income are estimated from data that are reported by point of disbursement (place of work). See also **Residence, place of** and **Resident**.

Allocation.—The estimates of State and county personal income are characterized by the systematic use of the allocation procedure in their preparation. The State estimates are made by allocating the U.S. total for each component of personal income (estimated for the national personal income series) to the States in proportion to each State's share of a related economic series (called an allocating series). The State estimates are allocated to counties in the same way.

Annual rate.—Annual rates are the result of putting values for a quarter (or other periods, usually shorter than a year) at their annual equivalent; that is, they are the values that would be registered if the rate of activity were maintained for a full year. Expression of the State quarterly estimates at annual rates makes it easier to compare values for quarters and years.

Capital consumption adjustment (CCAdj).—This adjustment is the difference between depreciation as valued in determining income as reported in the source data and depreciation on the basis of consistent accounting (uniform service lives and straight-line depreciation) and valued at replacement cost. For example, if a proprietor claimed depreciation of $1.1 million on his tax return, and the replacement cost of the capital used up—calculated with straight-line depreciation and the specified service life—was $1.3 million, the CCAdj would be —$0.2 million. Among the components of personal income, this adjustment is made to nonfarm proprietors' income and to rental income of persons.

Corporate business.—See **Legal form of organization**.

County.—See **Geographic units**.

Disclosure avoidance.—In the context of the regional personal income estimates, disclosure avoidance is a general term used to describe the procedures used to prevent the publication or release of confidential information. Because BEA uses administrative records of other agencies, it is required to follow these procedures to comply with legislation established to safeguard the privacy of persons and firms. See the **Technical Notes**.

Disposable personal income.—Disposable personal income is personal income less personal tax and nontax payments. It is the income available to persons for spending or saving.

Earnings.—This income measure is the sum of wage and salary disbursements, other labor income, and proprietors' income. It is often used in regional economic analysis to serve as a proxy for income generated from participation in current production. The measure "net earnings" is earnings less personal contributions for social insurance. These contributions are included in earnings by type and industry, but they are not included in personal income; therefore, they are subtracted from earnings in the computation of personal income as the sum of earnings, plus dividends, interest, and rent, plus transfer payments.

Extrapolation.—See the **Technical Notes**.

Fiduciary.—A fiduciary is an individual or a legal entity that serves as the administrator or trustee of an estate or a trust. Fiduciaries file IRS form 1041 to report the income they receive on behalf of the estate of a deceased individual or on behalf of the beneficiary of a trust.

Geographic units.—BEA's State estimates include all States and the District of Columbia. Territories of the United States are not included in the estimates. The State estimates for the continental United States are often aggregated into eight BEA regions: New England, Mideast, Great Lakes, Plains, Southeast, Southwest, Rocky Mountain, and Far West. (Alaska and Hawaii are not included in regions.) The regional classifications, which were developed in the mid-1950's, are based on the homogeneity of the States with respect to income characteristics, industrial composition of the employed labor force, and noneconomic characteristics, such as demographic, social, and cultural factors. The Census Bureau publishes data by region using four Census regions composed of nine Census divisions. To enable the reader to compare BEA estimates with Census data, BEA often publishes its State estimates aggregated to Census divisions. For examples, see the sample tables in Appendix B of volume 1.

BEA's local area estimates include, with a few exceptions, all counties (and county equivalents) and all county-based metropolitan areas recognized for statistical purposes by OMB. The exceptions—which are combined with adjacent counties—are Kalawao County, HI; the Montana portion of Yellowstone National Park; Menominee County, WI; and the smaller independent cities of Virginia. Special tabulations can be prepared for any area that can be defined in terms of counties. County equivalents include Alaska boroughs and census areas, the District of Columbia (which is also treated as a State), Louisiana parishes, and the independent cities of Maryland, Missouri, Nevada, and Virginia. See **Appendix A** in volume 1 for a description of the metropolitan area classification scheme and a list of the metropolitan areas and their constituent counties.

Government enterprise.—See **Legal form of organization**.

Imputation.—In the context of the national and regional economic accounts, the term "imputation" is usually used to refer to the value of a nonmarket good or service that is added to the value of marketed goods and services in measures of production and income. The four main imputations of this type included in personal income are wages and salaries in kind (food, lodging, and standard clothing issued to the military), the net rental value of owner-occupied dwellings, food and fuel produced and consumed on farms, and the value of services furnished without payment by financial intermediaries except life insurance carriers and private noninsured pension funds. Imputations amount to about 2 percent of personal income at the national level and are made to obtain a better view of total output and its distribution. In addition, the term "imputation" is used to refer to the accounting entries made to include the saving of certain kinds of financial intermediaries (life insurance carriers and private noninsured pension funds) in personal income.

Interpolation.—See the **Technical Notes**.

Inventory valuation adjustment (IVA).—In the context of nonfarm proprietors' income, this adjustment is the difference between the cost of inventory withdrawals as valued in determining income as reported in the source data (often acquisition cost) and the cost of withdrawals valued at replacement cost, which is the valuation used in the NIPA's. (If the sign of the IVA—which is usually negative—is reversed, this adjustment is recognizable as what is often called "inventory profit.") For example, if an item withdrawn from inventory cost $5,000 when it was acquired and would cost $6,000 to replace at the time it was withdrawn, the IVA would be —$1,000. Among the components of personal income, an IVA is needed only for nonfarm proprietors' income; the farm component of proprietors' income is derived from sources that measure farm inventories at replacement cost.

Legal form of organization.—In the context of the national and regional economic accounts, businesses are classified into legal forms of organization. Corporate businesses consist of all entities required to file Federal corporate tax returns, including mutual financial institutions and cooperatives subject to Federal income tax, private noninsured pension funds, nonprofit organizations that primarily serve business, Federal Reserve banks, and federally sponsored credit agencies. Government enterprises are government agencies that usually cover more than one-half their operating costs by the sale of goods and services to the public. Interest paid and interest received are excluded from costs and sales, respectively, in classifying the agencies. Partnerships are entities required to file IRS form 1065 (U.S. Partnership Return of Income). Sole proprietorships are entities that would be required to file IRS Schedule C (Profit or Loss from Business or Profession) or Schedule F (Farm Income and Expenses) on form 1040 if the proprietor met the filing requirements; farm housing is also regarded as a sole proprietorship. Other private businesses are all entities that would be required to report rent and royalty income on Schedule E (Supplemental Income Schedule) of form 1040 if the individual met the filing requirements, tax-exempt cooperatives, owner-occupied nonfarm housing, and buildings and equipment owned and used by nonprofit institutions (i.e., nonprofit organizations primarily serving individuals).

Metropolitan area.—See **Geographic units.**

Other labor income.—This component of personal income consists of employer contributions to privately administered pension and welfare funds and of a few small items, including directors' fees, compensation of prison inmates, and judicial fees.

Other private business.—See **Legal form of organization.**

Partnership.—See **Legal form of organization.**

Per capita personal income.—This income measure is the total personal income of the residents of a given area divided by the resident population of the area. Per capita personal income is often used as an indicator of the quality of consumer markets and of the economic well-being of the residents of an area. However, this measure should be used with caution for several reasons. See the **Technical Notes** for a detailed discussion of the limitations of the per capita personal income measure and for a discussion of the differences between this measure and the Census Bureau's estimates of per capita money income.

Personal contributions for social insurance.—These contributions, which are subtracted from income to derive personal income, consist of payments by employees, the self-employed, and other individuals who participate in the following programs: Federal old-age, survivors, disability, and hospital insurance; supplementary medical insurance; State unemployment insurance; railroad retirement; government employee retirement; veterans life insurance; and temporary disability insurance.

Personal dividend income.—This component of personal income measures the dividends received by persons from all sources. Dividends are payments in cash or in other assets, excluding stock, by corporations organized for profit to noncorporate stockholders who are U.S. residents. For the State and local area estimates, this component is shown combined with personal interest income and rental income of persons.

Personal income.—Personal income is the income received by persons from all sources, that is, from participation in production, from both government and business transfer payments, and from government interest. Personal income is the sum of wage and salary disbursements, other labor income, proprietors' income, rental income of persons, personal dividend income, personal interest income, and transfer payments, less personal contributions for social insurance. See also **Persons, Wages and salaries, Other labor income, Proprietors' income, Rental income of persons, Personal dividend income, Personal interest income, Transfer payments,** and **Personal contributions for social insurance.**

Personal interest income.—This component of personal income is the interest income of persons from all sources. In addition to monetary interest flows, personal interest income includes flows of interest-in-kind (imputed interest). For the State and local area estimates, it is shown combined with personal dividend income and rental income of persons.

Persons.—In the national and regional economic accounts, persons are defined as individuals, nonprofit institutions serving individuals, private noninsured welfare funds, and private trust funds. The last three are referred to as "quasi-individuals" and make up only a small part of the total number of persons.

These quasi-individuals are nonprofit in character and are distinguishable from business enterprises in that they are organizations that either function to serve individuals directly or are established on their behalf. Nonprofit institutions include religious organizations, social and athletic clubs, labor organizations, and other private nonprofit agencies that furnish services to individuals. Private noninsured welfare funds include funds providing group health insurance, group life insurance, workers' compensation, and supplemental unemployment benefits. Examples of private trust funds are a decedent's estate, a trust fund for minors, and a public official's blind trust.

Personal tax and nontax payments.—These are tax payments by persons that are not chargeable to business expense and certain other personal payments to government agencies (except government enterprises) that are treated like taxes. Personal taxes include taxes on income, including capital gains; on transfers of estates and gifts; and on personal property. (Real property taxes, as opposed to personal property taxes, are subtracted as an expense in estimating the business income components of personal income.) Nontaxes include tuitions and fees paid to schools and hospitals operated by government; fees, fines, and forfeitures; and donations. Personal contributions for social insurance are not included.

Proprietors' income with inventory valuation and capital consumption adjustments.—This component is the monetary income and income-in-kind of sole proprietorships and partnerships and of tax-exempt cooperatives. Dividends and monetary interest received by proprietors of nonfinancial businesses and rental income received by persons who are not primarily engaged in the real estate business are excluded; these incomes are included in dividends, net interest, and rental income of persons, respectively. See also **Inventory valuation adjustment** and **Capital consumption adjustment.**

Quasi-individuals.—See **Persons.**

Region.—See **Geographic units.**

Rental income of persons with capital consumption adjustment.—This component of personal income is the monetary income of persons from the rental of real property (excluding the income of persons primarily engaged in the real estate business), the imputed net rental income of owner-occupants of nonfarm dwellings, and the royalties received by persons from patents, copyrights, and rights to natural resources. For the State and local area estimates, it is shown combined with personal dividend income and personal interest income. See also **Capital consumption adjustment.**

Residence, place of.—Income is recorded either by place of work (where earned) or by place of residence (where received). By definition, personal income is a measure of income where received, and the State and local area estimates of total personal income reflect the residence of the recipient See also **Adjustment for residence** and **Resident.**

Resident.—In the context of measuring personal income, resident refers not only to individuals but also to quasi-individuals. (See also **Persons.**) Individuals actually residing in a county are counted as residents. This general statement is supported by several conventions. Military personnel are considered residents of the county in which they are stationed (or of an adjacent county if they commute daily), even though they may consider themselves permanent residents of another State. Civilian employees and proprietors are also counted as residents of the county in which they live and work or from which they commute to work, even though they may consider themselves permanent residents of another county. Wages that workers earn during short temporary assignments away from their usual places of work are assigned to their usual places of residence. Similarly, tourists or others in such a temporary status are not counted as residents. Seasonal migrant workers are considered residents of the area in which their work is performed; that is, wages are assigned to the county where a worker lives while earning the wages. Persons located abroad and foreign citizens employed by international organizations and by foreign embassies and consulates in the United States are not counted as residents of any county, and their income is excluded from personal income.

The concept of residence as it relates to personal income refers to the location where the income to be measured is received rather than to usual, permanent, or legal residence. This treatment differs from that of the Census Bureau, which counts many seasonal and short-term workers at their usual place of residence, even if they are living and working elsewhere at the time the information is gathered.

The income received by quasi-individuals is received on behalf of individuals; it is, therefore, measured in the county of residence of the beneficiaries.

Seasonal adjustment.—This kind of adjustment is a statistical procedure performed on the State quarterly estimates to remove the variations caused by factors such as weather, holidays, and tax payment dates that normally occur at about the same time and in about the same magnitude each year. After seasonal adjustment, cyclical and other short-term changes in economic activity stand out more clearly. The seasonal adjustments—made using methods such as the widely used Census Bureau X-11 ratio-to-moving-average method—reflect historical experience. The years on which this experience is based are continually moved forward, and new seasonal adjustments are introduced annually and at the time of comprehensive revisions.

Sole proprietorship.—See **Legal form of organization.**

Standard Industrial Classification (SIC).—This system is used in the classification of establishments by the type of activity in which they are engaged. For this purpose, an establishment is defined as an economic unit, generally at a single physical location, where business is conducted or where services or industrial operations are performed. The SIC is designed to cover all economic activity, public as well as private. Its structure consists of the following: Divisions (e.g., manufacturing); major groups, or two-digit levels (e.g., food and kindred products); three-digit levels (e.g., meat products); and four-digit levels (e.g., meat packing plants). Each establishment is assigned an industry code on the basis of its primary activity. The SIC, which is revised from time to time to reflect the changing industrial structure of the economy, is published by the Office of Management and Budget in the *Standard Industrial Classification Manual.*

State. See **Geographic units.**

Transfer payments.—This component of personal income measures payments to persons for which they do not render current services. Generally, they are paid in monetary form; major exceptions are food stamps and medical vendor payments. Transfer payments include payments by government and business to individuals and to nonprofit institutions serving individuals. Government transfer payments to nonprofit institutions exclude payments for work under research and development contracts.

Wages and salaries.—This income measure consists of the monetary remunerations of employees, including the compensation of corporate officers; commissions, tips, and bonuses; and receipts in kind that represent income to the recipients. In national income, it is counted as accruals (when earned), but in personal income, it is counted as disbursements (when paid).

Work, place of.—See **Residence, place of**.

FOOTNOTES

(L) Less than $50,000.

(D) Not shown to avoid disclosure of confidential information; estimates are included in total.

* The estimate shown here constitutes the major portion of the true estimate.

1. Farm income consists of proprietors' net income, the wages of hired farm labor, the pay-in-kind of hired farm labor, and the salaries of officers of corporate farms.

2. Midyear population estimates of the Bureau of the Census. Estimates for 1981–86 reflect revisions available as of March 1988.

3. Personal contributions for social insurance are included in earnings by type and industry but excluded from personal income.

4. U.S. adjustment for residence consists of adjustments for border workers: Income of U.S. residents commuting outside U.S. borders to work less income of foreign residents commuting inside U.S. borders to work plus certain Carribean seasonal workers.

5. Includes the capital consumption adjustment for rental income of persons.

6. Includes the inventory valuation and capital consumption adjustments.

7. "Other" consists of the wages and salaries of U.S. residents employed by international organizations and by foreign embassies and consulates located in the United States.

8. Includes local, interurban, and highway passenger transit, transportation by air, pipelines (except natural gas), and transportation services.

9. Includes security and commodity brokers and services; insurance carriers, agents, brokers, and services; real estate; holding and other investment companies; and combinations of the above.

10. Far West Region totals do not include Alaska and Hawaii.

11. Cibola, NM, was separated from Valencia in June 1981, but in these estimates Valencia includes Cibola through the end of 1981.

12. Estimates reflect Alaska Census Areas as defined in the 1980 decennial census.

13. La Paz County, AZ, was separated from Yuma County on January 1, 1983.

Don't Be Outnumbered!

If you need Census Bureau statistics to survive in business or to shore up your research, *Census and You* may just be your lifeline.

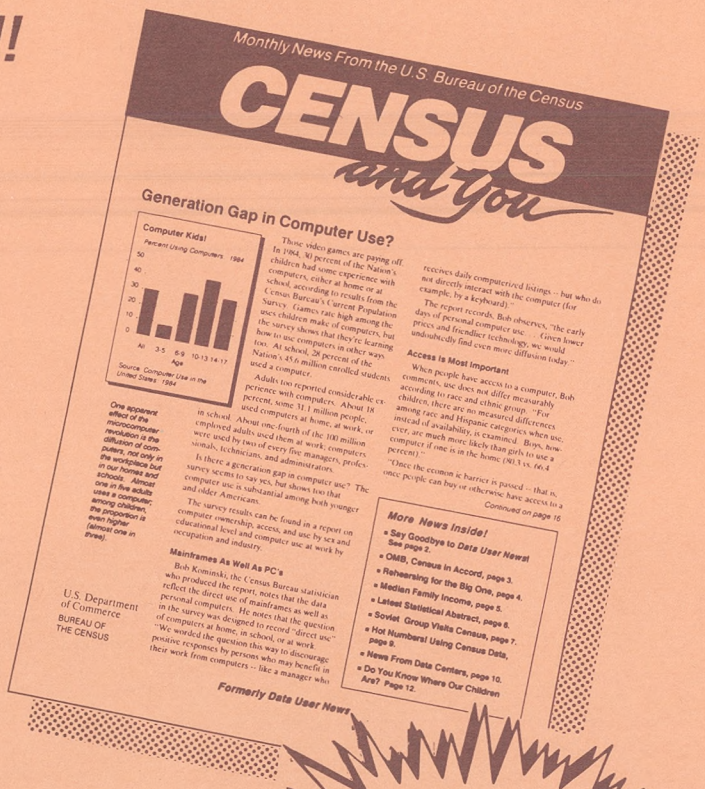
We are the Census Bureau's monthly newsletter and we can help you simplify your data search.

You may know us also as *Data User News*. But we've changed our name and our format to make life easier for our readers.

As *Census and You*, we give you the inside scoop on –

- Plans for the 1990 census. Don't let the Nation's biggest data base pass you by!
- State, county, and city statistics from our many economic programs.
- Population and income estimates for your community.
- Online data – just a phone call away!
- Data bases for the micro whiz or for the traditionalist who wants the facts in print.
- Local information sources – where to turn for help on the local scene.
- Choosing and using the data. We tell you how the data made some other user's day.

A yearly subscription costs just $12 – an inexpensive way to spot the trends early before they become clichés.



Monthly News From the U.S. Bureau of the Census

CENSUS and You

Generation Gap in Computer Use?

Computer Kids!

Percent Using Computers, 1984

Source: Computer Use in the United States: 1984

Those video games are paying off. In 1984, 30 percent of the Nation's children had some experience with computers, either at home or at school, according to results from the Census Bureau's Current Population Survey. Games rate high among the uses children make of computers, but the survey shows that they're learning how to use computers in other ways, too. At school, 28 percent of the Nation's 45.6 million enrolled students used a computer.

Adults too reported considerable experience with computers. About 18 percent, some 31.1 million people, used computers at home, at work, or in school. About one-fourth of the 100 million employed adults used them at work; computers were used by two of every five managers, professionals, technicians, and administrators.

Is there a generation gap in computer use? The survey seems to say yes, but shows too that computer use is substantial among both younger and older Americans.

The survey results can be found in a report on computer ownership, access, and use by sex and educational level and computer use at work by occupation and industry.

Mainframes As Well As PC's

Bob Kominski, the Census Bureau statistician who produced the report, notes that the data reflect the direct use of mainframes as well as personal computers. He notes that the question in the survey was designed to record "direct use" of computers at home, in school, or at work. "We worded the question this way to discourage positive responses by persons who may benefit in their work from computers -- like a manager who receives daily computerized listings -- but who do not directly interact with the computer (for example, by a keyboard)."

The report records, Bob observes, "the early days of personal computer use. Given lower prices and friendlier technology, we would undoubtedly find even more diffusion today."

Access is Most Important

When people have access to a computer, Bob comments, use does not differ measurably according to race and ethnic group. "For children, there are no measured differences among race and Hispanic categories when use, instead of availability, is examined. Boys, however, are much more likely than girls to use a computer if one is in the home (80.1 vs. 66.4 percent)."

"Once the economic barrier is passed -- that is, once people can buy or otherwise have access to a

Continued on page 16

One apparent effect of the microcomputer revolution is the diffusion of computers, not only in the workplace but in our homes and schools. Almost one in five adults uses a computer; among children, the proportion is even higher (almost one in three).
