## INDUSTRIAL PRODUCTION

G.12.3

For immediate release
February 15, 1977

Industrial production declined by an estimated 1.0 per cent in January, reflecting lost production due to extremely cold weather and natural gas shortages, especially in the latter half of the month. Since the basic information now available for the index is incomplete regarding these effects, the January estimate is considered more tentative than usual. Industrial production increased by 0.8 per cent in December and 1.0 per cent in November. At 131.5 per cent of the 1967 average, the January index was 4.6 per cent above a year ago and slightly below the fourth quarter average.

Products. Output of durable consumer goods declined sharply in January, reflecting the widespread weather-related cutbacks. Auto assemblies were reduced by 15 per cent to an annual rate of 8.5 million units from the exceptionally high December level, mainly because of weather effects but the reduction also reflected some production cutbacks to reduce inventories of smaller cars. Production of nondurable consumer goods was off only slightly, as some declines in goods output were about offset by increases in output of gas and electric utilities. Output of business equipment is estimated to have declined about a half per cent.

Materials. Curtailments in output of durable goods materials were widespread in January in response to fuel shortages. Production of nondurable goods materials was also reduced sharply, particularly textile, paper, and chemical materials. Increases in output of some energy materials, such as electricity and fuel oils, were offset by a sharp decline in coal production.
