PREFACE.

The following pages contain tables based on special reports obtained for the National Monetary Commission by the Comptroller of the Currency and the state bank supervisors from 22,491 banks of the United States, including national, state, savings, and private banks, and loan and trust companies.

These special reports were designed to exhibit the exact condition of the banks as shown by their books at the close of business April 28, 1909, and they present in detail every item of resources and liabilities pertinent to the subject under investigation together with the number of depositors, rates of interest paid upon the various classes of deposits, and the minimum amount upon which interest is allowed.

The number of banks and banking firms in the United States is estimated at 25,000. Of this number reports were obtained from all but about 2,500, the omissions being chiefly of concerns whose business is confined to brokerage and exchange. The nonreporting institutions were located as follows: 243 in the New England States, 1,015 in the Eastern States, 251 in the Southern States, 891 in the Middle Western States, 60 in the Western States, and 51 in the Pacific States.

Owing to the difference in laws of the several States, information relating to banks operating outside of the national system, as heretofore furnished the Comptroller of the Currency by state bank supervisors, was necessarily for varying dates and of great diversity in form and detail. For the first time in our banking history it has been possible, as a result of this inquiry, to present data prepared from a report of condition uniform in character and date from all classes of institutions engaged in banking throughout the country.

The information submitted has been compiled by States and reserve cities for each class of banks separately, followed by a consolidated statement showing the condition of all reporting banks.

A supplemental inquiry relating to the character of deposits, number of depositors, etc., has been arranged in like manner by classes of banks for each State and reserve city.

The capital stock of the 22,491 reporting banks of all classes amounts to $1,800,036,368, and the resources aggregate $21,095,054,420.72. Banks to the number of 18,245 submitted supplementary statements, showing deposits aggregating $13,595,599,850.66 to the credit of 25,645,604 depositors (deposit accounts), including $5,678,735,379.65 savings and time deposits, with 14,894,696 depositors.

[a] It is evident from the returns that the direction as to what constitutes "Savings deposits" appended to the request for reports was not carefully considered by the bank officials in all instances, as certificates of deposit, both time and demand, appear to have been included in savings deposits.

[b] While the number of savings and other depositors in each and all classes of banks is stated and believed to be approximately correct, it should be borne in mind that doubtless in many instances the same individual may have a checking and a savings deposit account in the same or different banks and in the report he may have been treated as two or more depositors. It is probable, however, that such duplications may be offset to a great extent by the number of depositors in banks from which returns were not received.

[a] It is evident from the returns that the direction as to what constitutes "Savings deposits" appended to the request for reports was not carefully considered by the bank officials in all instances, as certificates of deposit, both time and demand, appear to have been included in savings deposits.

[b] While the number of savings and other depositors in each and all classes of banks is stated and believed to be approximately correct, it should be borne in mind that doubtless in many instances the same individual may have a checking and a savings deposit account in the same or different banks and in the report he may have been treated as two or more depositors. It is probable, however, that such duplications may be offset to a great extent by the number of depositors in banks from which returns were not received.

NOTE.—It is evident from the returns that the direction as to what constitutes "savings deposits" appended to the request for reports was not carefully considered by the bank officials in all instances, as certificates of deposit, both time and demand, appear to have been included in savings deposits.

While the number of savings and other depositors in each and all classes of banks is stated and believed to be approximately correct, it should be borne in mind that doubtless in many instances the same individual may have a checking and a savings deposit account in the same or different banks, and in the report he may have been treated as two or more depositors. It is probable, however, that such duplications may be offset to a great extent by the number of depositors in banks from which returns were not received.

Interest paid on accounts, other than savings, appears to be in most instances on time deposits or on certificates of deposit.
