BUREAU OF
ECONOMIC ANALYSIS

FOR RELEASE TUESDAY, NOVEMBER 8, 1977 BEA 77-82

Current Analysis: Robert B. Bretzfelder: 523-0948
Historical Data : Lowell D. Ashby: 523-0951

STATE PERSONAL INCOME: FOURTH QUARTER 1973 TO SECOND QUARTER 1977

Personal income increased in 48 States from the fourth quarter of 1973--the most recent national business cycle peak--to the second quarter of 1977--the most recent quarter for which State income estimates have been prepared. According to the Bureau of Economic Analysis of the U.S. Department of Commerce, Alaska (up 88-1/2 percent) and Wyoming (up 54-3/4 percent) had the largest rates of increase, while South Dakota (down 7 percent) and North Dakota (down 3 percent) registered the only declines.

Personal income nationally increased 37 percent from the fourth quarter of 1973 to the second quarter of 1977. Real income increased about 8-1/2 percent, as consumer prices--as measured by the implicit price deflator for personal consumption expenditures--increased more than 28 percent. In 42 States and the District of Columbia, the gain in current-dollar income exceeded the national increase in consumer prices by at least 2 percentage points. In Iowa, Minnesota, Delaware, and Kansas the rise in total income approximated the increase in prices, and in Montana and Nebraska the income gain in current dollars was well under the national advance in prices. In those States (except Delaware) where the increase in personal income about equaled or was below the increase in prices, and in North Dakota and South Dakota, where personal income declined, the weakness in income is directly traceable to sharp declines in farm income.

Since the fourth quarter of 1973, the geographic pattern of income growth has reflected the continuing shift of economic activity and population from the Northeast-Great Lakes manufacturing belt to the South and West.

Fast-growing States

The 13 States in which income increased most rapidly were in the West and South (table 3). The States (and the percent increase in income) were: Alaska (88-1/2 percent), Wyoming (54-3/4 percent), Nevada (50 percent), Kentucky (49 percent), Louisiana (48 percent), New Mexico (47-1/2 percent), Washington and West Virginia (46 percent), Utah (45-1/2 percent), Texas and Idaho (45-1/4 percent), and Oklahoma and Oregon (44 percent). The average income gain in these States exceeded the national average by more than 13 percentage points.

Most of these States had large gains in the major components of nonfarm wage and salary disbursements shown in table 3: manufacturing, construction, mining, private service-type industries, and State and local government. Wages and salaries in manufacturing and construction increased rapidly in each of these States, except Nevada, where construction payrolls were virtually unchanged. Within manufacturing, the larger gains were in nondurable goods, although unusual strength was also shown in durable goods.

Reflecting increased coal production and exploration for petroleum and natural gas, wages and salaries in mining, the fastest-growing major income component nationally, increased rapidly in nine States: Alaska, Wyoming, Oklahoma, Kentucky, New Mexico, Texas, West Virginia, Utah, and Louisiana. Wages and salaries in private service-type industries and in State and local government were strong in all fast-growing States.

Slow-growing States

The 13 slow-growing States had income changes that averaged 14 percentage points below the national average. Seven were major farm States in the Plains and adjacent regions. These seven States (and the percent change in income) were: South Dakota (down 7 percent, North Dakota (down 3 percent), Nebraska (up 18-3/4 percent), Montana (up 23 percent), Kansas (up 26-1/4 percent), Minnesota (up 27-3/4 percent), and Iowa (up 29-1/4 percent). Income changes in these States averaged more than 20 percentage points below the national increase.

Farm income--which declined 32 percent nationally--declined nearly 70 percent in these seven States, reflecting increases in production expenses and a decrease in wheat and livestock prices. The reduction in farm income adversely affected personal consumption and business expenditures in recent quarters; however, strong growth in manufacturing and, to a lesser extent, mining offset this effect and led tp gains in construction, private service-type industries, and State and local government. The gains in manufacturing payrolls were larger than the U.S. advance of 29-1/2 percent in each of these States, except South Dakota. Gains in mining were especially noteworthy in

North Dakota and Montana. As a result, nonfarm income in each of these seven States increased at rates near or well above the national average.

The other six slow-growing States were in the Northeast-Great Lakes manufacturing belt. These States (and the percent rise in income) were: Delaware (27-3/4 percent), New York (30-1/4 percent), Connecticut (31-3/4 percent), Massachusetts (32-1/2 percent), Missouri (33-1/2 percent), and Indiana (34 percent). Income gains in these States averaged more than 5 percentage points below the U.S. average.

In these six States, the average increase in manufacturing wages and salaries was 22 percent, compared with a national increase of 30 percent. Gains ranged from 7-1/2 percent in Delaware to slightly above the national average in Missouri. In most of these States, weakness was evident in both durable and nondurable goods manufacturing, but was more pronounced in nondurables. Wages and salaries in construction, private service-type industries, and State and local government also were weak. Declines of 19 percent or more in construction occurred in Connecticut, Massachusetts, and New York, in part reflecting the slow growth or decline in population. Only Missouri had a gain in construction that exceeded the national average.

Availability of State Detail Quarterly Data

Table 4 shows detailed quarterly State personal income data for Pennsylvania. These data are available for each State upon request to the Regional Economic Measurement Division, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C., 20230. In subsequent press releases, data for States other than Pennsylvania will be published.

Note:--The quarterly State personal income estimates do not yet reflect the comprehensive revisions of the State annual series that were published in the August 1977 Survey of Current Business, because of the time required to incorporate them. Revised quarterly estimates will be available in the April 1978 issue.

Total personal income consists of private and government wage and salary payments in cash and in kind, other labor income, farm and nonfarm proprietors' income, interest, net rents, dividends, and transfer payments, less personal contributions for social insurance. It is measured before the deduction of personal income and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

An article using these data appears in the October, 1977 Survey, published by the Bureau of Economic Analysis.

The Survey is available from most District Offices of the Department of Commerce and from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, at an annual subscription price of $19.00; single copy $1.60.
