Prefatory Note

The 1973 edition of the *Handbook of Labor Statistics* makes available in one volume the major series produced by the Bureau of Labor Statistics. In general, each table is complete historically, beginning with the earliest reliable and consistent data and running through calendar year 1972. Related series from other governmental agencies and foreign countries are included.

The data are grouped under economic subject matter headings and without regard to the surveys or other sources from which the information was developed. For example, the section on "Employment" covers data from several programs: "Current Population Survey," "Current Employment and Labor Turnover Statistics," "Farm Employment and Wage Rates," "Government Employment," "Apprentices in Training," and "Manpower Development and Training." Technical Notes describing major statistical programs and identifying the tables derived from each program precede the tables. More complete descriptions have been published in the *BLS Handbook of Methods for Surveys and Studies—BLS Bulletin 1711*.

The *Handbook of Labor Statistics* was compiled in the Office of Publications with the cooperation of the operating divisions of the Bureau of Labor Statistics and other government agencies. The materials were assembled by James A. McCall, under the direction of Tommy C. Ishee.

TABLES

Labor Force

1.	Employment Status of the Noninstitutional Population, by Sex, 1947–72	27
2.	Employment Status of the Civilian Noninstitutional Population for the United States, Metropolitan Areas, and Nonmetropolitan Areas, 1967–71	29
3.	Total Labor Force (Including Armed Forces) and Labor Force Participation Rates, by Sex and Age, 1947–72	30
4.	Civilian Labor Force, by Sex, Color, and Age, 1947–72	33
5.	Civilian Labor Force Participation Rates, by Marital Status, Age, and Sex, 1957–72	37
6.	Experienced Civilian Labor Force, by Occupation and Sex, 1954–72	39
7.	Persons Not in the Labor Force, by Sex, Color, and Age, 1947–72	40
8.	Reasons for Nonparticipation in the Labor Force, by Age, and Sex, 1968–72	44
9.	Reasons for Nonparticipation in the Labor Force, by Age, Color, and Sex, 1968–72	46
10.	Labor Force Status of the Civilian Noninstitutional Population, by School Enrollment, Sex, and Age, October 1947–72	48
11.	Labor Force Participation Rates for Civilian Noninstitutional Population, by School Enrollment, Sex, and Age, October 1947–72	51
12.	Educational Attainment of Civilian Labor Force, by Sex and Color, Selected Dates, 1952–72	52
13.	Median Years of School Completed by the Civilian Labor Force, by Sex and Age, Selected Dates, 1952–72	54

Labor Force—Continued

14. Labor Force Status and Labor Force Participation Rates of Married Women, Husband Present, by Presence and Age of Children, 1948–72 55
15. Civilian Labor Force, Labor Force Participation Rates, and Unemployment Rates, by Color, 1968–72 56

Employment

Characteristics:

16. Employment Status of Persons 16–19 Years Old and Adults, by Color, 1954–72 58
17. Employment Status of Persons 16–24 Years Old, 1947–72 60
18. Employment Status of Persons 16–21 Years Old, by Color, 1963–72 63
19. Employed Persons, by Occupational Group, Color, and Sex, 1958–72 64
20. Employed Persons, 16 Years Old and Over, by Major Occupational and Industry Groups, 1972 69
21. Full- and Part-Time Status of the Civilian Labor Force, by Age and Sex, 1963–72 70
22. Nonagricultural Workers on Full-Time Schedules or on Voluntary Part Time, by Selected Characteristics, 1957–72 72
23. Persons on Part Time for Economic Reasons, by Type of Industry, 1957–72 .. 73
24. Nonagricultural Workers on Part Time for Economic Reasons, by Sex and Age, 1957–72 74
25. Nonagricultural Workers on Part Time for Economic Reasons, by Usual Full-Time or Part-Time Status and Selected Characteristics, 1957–72 75
26. Employed Persons Not at Work, by Reason for Not Working, 1957–72 77
27. Employed Wage and Salary Workers Not at Work in Nonagricultural Industries, by Reason for Not Working and Pay Status, 1957–72 78
28. Employment Status of Family Head, Wife, and Other Family Members in Husband-Wife Families, Selected Dates, 1955–72 80
29. Employed Married Women, Husband Present, by Major Occupation Group, 1947–72 81
30. Employment Status of the Civilian Noninstitutional Population, by School Enrollment, Sex, and Age, October 1947–72 82
31. Occupational Distribution of Employed High School Graduates Not Enrolled in College and of School Dropouts as of October of Year of Graduation or Dropout, by Sex, 1959–72 85
32. Employment Status of High School Graduates Not Enrolled in College and of School Dropouts as of October of Year of Graduation or Dropout, by Sex, Marital Status of Women, and Color, 1959–72 86
33. Median Years of School Completed by the Employed Civilian Labor Force, by Sex, Occupational Group, and Color, Selected Years, 1948–72 88
34. Persons with Work Experience During the Year, by Extent of Employment and by Sex, 1950–71 91
35. Persons with Work Experience During the Year, by Industry Group and Class of Worker of Longest Job, 1955–71 92
36. Percent of Persons with Work Experience During the Year Who Worked Year-Round at Full-Time Jobs, by Industry Group and Class of Worker of Longest Job, 1950–71 93
37. Persons with Two Jobs or More, by Industry and Class of Worker of Primary and Secondary Job, Selected Dates, 1956–71 94

Industry:

38. Employees on Nonagricultural Payrolls, by Industry Division, 1919–72 95
39. Employees on Manufacturing Payrolls, by Major Industry Group, 1939–72 .. 96

Technical Notes

Current Population Survey

(NOTE: Covers tables 1-37, 50-52, and 60-73)

Collection and Coverage

Statistics on the employment status of the population; the personal, occupational, and other characteristics of the employed, the unemployed, and persons not in the labor force; and related data are compiled for the BLS by the Bureau of the Census in its Current Population Survey (CPS). A detailed description of this survey appears in "Concepts and Methods Used in Manpower Statistics from the Current Population Survey," BLS Report 313, available from BLS on request.

These monthly surveys of the population are conducted using a scientifically selected sample designed to represent the civilian noninstitutional population. Respondents are interviewed to obtain information about the employment status of each member of the household 16 years of age and over (separate statistics are also collected and published for 14 and 15 year olds). The inquiry relates to activity or status during the calendar week, Sunday through Saturday, which includes the 12th of the month. This is known as the survey week. Actual field interviewing is conducted in the following week.

Inmates of institutions, members of the Armed Forces, and persons under 14 years of age are not covered in the regular monthly enumerations and are excluded from the population and labor force statistics. Data on members of the Armed Forces, who are included as part of the categories "total noninstitutional population" and "total labor force," are obtained from the Department of Defense.

Concepts

Employed persons comprise: (a) all those who, during the survey week, worked at all as paid employees, in their own business or profession or on their own farm, or who worked 15 hours or more as unpaid workers in an enterprise operated by a family member; and (b) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, labor-management dispute, or personal reasons, whether or not they were paid by their employers for the time off, and whether or not they were seeking other jobs.

Each employed person is counted only once. Those who held more than one job are counted in the job at which they worked the greatest number of hours during the survey week.

Included in the total are employed citizens of foreign countries, temporarily in the United States, who are not living on the premises of an Embassy. Excluded are persons whose only activity consisted of work around the house (such as own home housework and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations.

Unemployed persons comprise all persons who did not work during the survey week, who made specific efforts to find a job within the past 4 weeks, and who were available for work during the survey week except for temporary illness. Also included as unemployed are those who did not work at all, were available for work, and (a) were waiting to be called back to a job from which they had been laid off; or (b) were waiting to report to a new wage or salary job within 30 days.

Unemployed persons by reasons for unemployment are divided into four major groups: (1) Job losers are persons whose employment ended involuntarily and who immediately began looking for work and persons on layoff. (2) Job leavers are persons who quit or otherwise terminated their employment voluntarily and immediately began looking for work. (3) Reentrants are persons who previously worked at a full-time job lasting 2 weeks or longer but who were out of the labor force prior to beginning to look for work. (4) New entrants are persons who never worked at a full-time job lasting 2 weeks or longer.

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

Duration of unemployment represents the length of time (through the end of the current survey week) during which persons classified as unemployed had been continuously looking for work. For persons on layoff, duration of unemployment represents the number of full weeks since the termination of their most recent employment. A period of 2 weeks or more during which a person was employed or ceased looking for work breaks the continuity of the present period of seeking work. Average duration is an arithmetic mean computed from a distribution by single weeks of unemployment.

The civilian labor force comprises the total of all civilians classified as employed or unemployed in accordance with the criteria described above. The "total labor force" includes members of the Armed Forces stationed either in the United States or abroad.

The unemployment rate represents the number unemployed as a percent of the civilian labor force. This measure can be computed also for groups within the labor force, classified by sex, age, marital status, color, etc.

"Persons not in the labor force" includes all civilians 16 years of age and over who are not classified as employed or unemployed. These persons are further classified as "engaged in own home housework," "in school," "unable to work" because of long-term physical or mental illness, and "other." The "other" group includes for the most part retired persons, those reported as too old to work, the voluntarily idle, and seasonal workers for whom the survey week fell in an "off" season and who were not reported as unemployed. Persons doing only incidental unpaid family work (less than 15 hours) are also classified as not in the labor force. In tables 8 and 9, data on persons not in the labor force are available in greater detail by reason for nonparticipation and may differ from the data in table 7.

Occupation, industry, and class of worker for the employed apply to the job held in the survey week. Persons with two jobs or more are classified in the job at which they worked the greatest number of hours during the survey week. The unemployed in these categories are classified according to their latest full-time civilian job lasting 2 weeks or more. The occupation and industry groups used in data derived from the CPS household interviews are defined as in the 1970 Census of Population. Information on the detailed categories included in these groups is available upon request. A comprehensive revision in the classification of occupational and industry data was carried out for the 1970 census. This revision reflected recognition of new categories and refined the existing categories and, as a result, brought about a "break in series" for many major occupational groups in the Current Population Survey, beginning in January 1971. Comparability of occupational employment data was further affected in December 1971, when a question about information on major activities or duties was added to the monthly CPS questionnaire in order to determine more precisely the occupational classification of individuals. As a result of this double "break in series" in 1971, meaningful comparisons of occupational employment levels cannot be made between 1971–72 with prior periods nor between these 2 years. The revisions in the occupational classification system as well as in the CPS questionnaire are believed to have had but a negligible effect on unemployment rates. For a further explanation of the changes, see "Revisions in Occupational Classifications for 1971" and "Revisions in the Current Population Survey" in the February 1971 and February 1972 issues, respectively, of *Employment and Earnings*.

The class-of-worker breakdown specifies "wage and salary workers," subdivided into private and government workers, "self-employed workers," and "unpaid family workers." Wage and salary workers receive wages, salaries, commissions, tips, or pay in kind from a private employer or from a governmental unit. Self-employed persons are those who work for profit or fees in their own business, profession, or trade, or operate a farm. Unpaid family workers are persons working without pay for 15 hours a week or more on a farm or in a business operated by a member of the household to whom they are related by blood or marriage.

Hours of work statistics relate to the actual number of hours worked during the survey week. For example, a person who normally works 40 hours a week but who was off on the Columbus Day holiday would be reported as working 32 hours even though he was paid for the holiday.

For persons working in more than one job, the figures relate to the number of hours worked in all

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

jobs during the week, and all the hours are credited to the major job.

Persons who worked 35 hours or more in the survey week are designated as working "full time;" persons who worked between 1 and 34 hours are designated as working "part time." Part-time workers are classified by their usual status at their present job (either full time or part time) and by their reason for working part time during the survey week (economic or other reasons). "Economic reasons" include slack work, material shortages, repairs to plant or equipment, start or termination of job during the week, and inability to find full-time work. "Other reasons" include labor disputes, bad weather, own illness, vacations, demands of home housework, school, no desire for full-time work, and full-time worker only during peak season. Persons on full-time schedules include, in addition to those working 35 hours or more, those who worked from 1 to 34 hours for noneconomic reasons but usually work full time.

The full-time labor force consists of persons working on full-time schedules, persons involuntarily working part time, and unemployed persons seeking full-time jobs. The part-time labor force consists of persons working part time voluntarily and unemployed persons seeking part-time work. Persons with a job but not at work during the survey week are classified according to whether they usually work full or part time.

The lower age limit for official statistics on employment, unemployment, and other manpower concepts was raised from 14 to 16 years of age in January 1967. Insofar as possible, the historical series have been revised to provide consistent labor force information based on the population age 16 and over. Where this has not been possible, data for the population age 14 and over have been provided, with two banks of data for the year 1966, containing both population groups.

In addition to changes on the lower age limit, improvements in the methods of measuring employment and unemployment were also introduced in January 1967. The changes in definitions and procedures adopted have increased the accuracy of the statistics and have clarified underlying concepts but have not substantially altered them. These changes have had no perceptible effect on the historical series for the estimates of total and civilian labor force; for total, agricultural, and nonagricultural employment; and for age-sex and occupational breakdowns. However, for some analytical purposes, the changes in definition and procedures have affected the comparability of data through 1966 and data for later years. Specifically, they have tended to: (1) increase the number of workers on part time, either voluntarily or for economic reasons, and reduce the number working 35 hours or more; (2) reduce the number of nonfarm self-employed persons and increase the number of wage and salary workers; (3) alter the distribution of unemployment by sex, reducing it for adult males and teenagers and raising it for adult females; (4) reduce the number of workers unemployed 15 weeks or longer; and (5) reduce the number of unemployed persons seeking full-time work. For more information on the changes introduced in January 1967, see "New Definitions for Employment and Unemployment," reprinted from the February 1967 *Employment and Earnings and Monthly Report on the Labor Force*, which is available from the BLS on request.

In addition to changes introduced in 1967 and the occupational reclassifications in 1971, there are four other periods of noncomparability in the labor force data: 1) Beginning in 1953, as a result of introducing data from the 1950 census into the estimation procedures, population levels were raised by about 600,000; labor force, total employment, and agricultural employment were increased by about 350,000, primarily affecting the figures for totals and males; other categories were relatively unaffected. 2) Beginning in 1960, the inclusion of Alaska and Hawaii resulted in an increase of about 500,000 in the population and about 300,000 in the labor force—four-fifths of this labor force increase was in nonagricultural employment; other labor force categories were not appreciably affected. 3) In 1962, the introduction of figures from the 1960 census reduced the population by about 50,000 and labor force and employment by about 200,000; unemployment totals were virtually unchanged. 4) Beginning in 1972, information from the 1970 census was introduced into the estimation procedures, increasing the civilian noninstitutional population about 800,000; labor force and employment totals were raised by a little more than 300,000; and unemployment levels and rates were essentially unchanged.

Current Employment, Job Vacancies and Labor Turnover Statistics Programs

(NOTE: Covers tables 38-44, 47-49, 53-55, 78-83, 97-103, 105, and 106)

Data from payroll records, submitted voluntarily by over 160,000 employers, provide (1) current information on wage and salary employment, hours, and earnings in nonagricultural establishments, and (2) job vacancies and labor turnover in manufacturing, by industry and geographic location. These statistical programs are conducted by the Bureau of Labor Statistics in cooperation with State agencies.

Collection

The two types of data collection documents used, Form BLS 790 (Monthly Report on Employment, Payroll, and Hours) and Form DL 1219 (Monthly Report on Job Openings and Labor Turnover) are of the "shuttle" type, with spaces for each month of the calendar year. The cooperating State agencies mail the reporting forms to the participating establishments each month, use the information to prepare State and area estimates, and then send the basic data to BLS in Washington for use in preparing national series.

BLS 790 provides for reporting of data on the number of full- and part-time workers on the payrolls of nonagricultural establishments for the pay period which includes the 12th of the month. For the same period in most industries, it also provides for reporting data on payroll and man-hours of production and related workers, or nonsupervisory workers. Form DL 1219 provides for the collection of information on the total number of accessions and separations by type, during the calendar month, and three job vacancy items as of the end of the month: current job vacancies which have remained unfilled for 30 days or more, and openings with future starting dates.

Concepts and Definitions

Employment data refer to persons on establishment payrolls who receive pay for any part of the reference pay period, and include workers on paid sick leave (when pay is received directly from the firm), on paid holiday or paid vacation, and those who work during a part of the pay period and are unemployed or on strike during the rest of the period. Proprietors, the self-employed, unpaid family workers, farm workers, and domestic workers in households are excluded. Government employment covers civilian employees only.

Hours and earnings data are derived from reports of payrolls and man-hours for production and related workers in manufacturing and mining, construction workers in contract construction, and nonsupervisory employees in the remaining nonfarm components.

The *payroll* figures relate to full- and part-time production, construction, or nonsupervisory workers who receive pay for any part of the reference period. They are reported before deductions of any kind, e.g., for old-age and unemployment insurance, group insurance, withholding tax, bonds, or union dues. Pay for overtime, holidays, vacations, and paid sick leave is also included.

Man-hours cover hours worked or paid for, during the pay period of reference for production, construction, or nonsupervisory workers. The man-hours include hours paid for holidays and vacations, and for sick leave.

Overtime hours cover premium overtime hours of production and related workers during the pay period. Overtime hours are those for which premiums are paid because the hours were in excess of the number of hours of either the straight-time workday or workweek.

Average hourly earnings are derived by dividing payrolls by man-hours. These averages are on a "gross" basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work, and changes in output of workers paid on an incentive plan. The earnings series do not measure the level of total labor costs on the part of the employer since the following are excluded: irregular bonuses, retroactive items, payment of various welfare benefits, payroll taxes paid by employers, and earnings for those employees not covered under the production-worker, construction-worker, or nonsupervisory-employee definition.

Average hourly earnings, excluding overtime in manufacturing are computed by dividing the total production-worker payroll for the industry group by the sum of total production-worker man-hours and one-half of total overtime man-hours, which is equivalent to payrolls divided by straight-time man-hours. This method assumes that overtime earnings are paid at one and one-half times the

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

straight-time rates; no adjustment is made for other types of premium payments.

Average weekly earnings are obtained by multiplying average weekly hours by average hourly earnings. Weekly earnings are affected not only by changes in gross average hourly earnings, but also by changes in the length of the workweek, part-time work, stoppages for varying causes, labor turnover, and absenteeism.

Spendable average earnings in current dollars are obtained by deducting estimated Federal social security and income taxes from gross weekly earnings. The amount of tax liability depends on the dependents supported by the worker and his marital status, as well as on the level of his gross income.

"Real" earnings are computed by dividing the current Consumer Price Index into earnings averages for the month to adjust the earnings for changes in purchasing power since the base period (1967).

Indexes of aggregate weekly man-hours statistics are prepared by dividing the current months aggregate by the monthly average for the 1967 period and multiplying that quotient by 100. The man-hour aggregates are the product of average weekly hours and production-worker employment.

Job vacancies are the stock of unfilled job openings as of the close of the last business day of the month. Openings for all kinds of positions, classifications and employment, full time, part time, permanent, temporary, and seasonal are included. Excluded are jobs to be filled by recall from layoff, transfer, promotion, demotion or return from paid or unpaid leave; job openings for which "new" workers were already hired and scheduled to start work later; and openings with future starting dates, which are requested as a separate item.

Job vacancies are defined as vacant jobs which are immediately available for filling, and for which the firm is actively trying to find or recruit workers from outside the firm.

The job vacancy rate is computed by dividing the number of job vacancies by the sum of employment plus vacancies, and multiplying that quotient by 100.

Labor turnover is the gross movement of wage and salary workers into and out of employed status with respect to individual establishments. This movement, relating to a calendar month, is divided into two broad types: Accessions (new hires and rehires) and Separations (quits, layoffs and other separations). Each type of turnover action is expressed as a rate per hundred employees. The data relate to all employees, whether full or part time, permanent or temporary, production or nonproduction workers.

Benchmark Adjustments

Periodically the industry employment series are adjusted to recent benchmarks (comprehensive counts of employment) to improve their accuracy. These adjustments may also affect the hours, earnings, and labor turnover series since employment levels are used as weights. Industry data for all national series in this edition of the *Handbook* have been adjusted to March 1971 benchmarks. Consequently, data from April 1971 forward are subject to revision at the time of the next benchmark adjustment. Data shown for the individual States are also subject to revision at the time the cooperating State agencies adjust their series to later benchmarks.

Uses of Data

The statistics from these surveys are used widely as timely indicators of changes in economic activity. The turnover rates are valuable for personnel and economic planning; employers frequently use these rates as a yardstick against which to measure the performance of their plants. Firms negotiating long-term supply or construction contracts often utilize series on average hourly earnings as an aid in arriving at an equitable agreement. Both labor and business use the series on hourly earnings and weekly hours in labor-management negotiations. The promptness with which the information is supplied makes it possible to incorporate the estimates in a number of other Federal statistical series, particularly in making current estimates of production, productivity, and national income. The data also are useful as a basis for projection of trends in manpower requirements. The newly available job vacancy data are expected to prove to be a valuable indicator of economic activity and a useful guide in manpower planning.

Comparability With Other Series

Total employment in nonagricultural establishments from the "payroll" survey is not directly comparable with the Bureau's estimates of nonagricultural employment obtained from the monthly

505-114 O - 74 -- 2

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

"household" survey (Current Population Survey). The household survey includes the self-employed, unpaid family workers, and private household workers and is basically a count of persons. The payroll series, in contrast, excludes these workers and is basically a count of jobs. Thus, the multiple jobholder, counted only once in the household survey, would be counted once for each job by the payroll survey. Employment estimates developed by quinquennial censuses may differ from payroll estimates due, primarily, to the reporting practices of multiproduct establishments, and administrative handling of central offices and auxiliary units.

For a more detailed description of these programs see Chapter 2, Employment, Hours, and Earnings, and Chapter 3, Job vacancies and Labor Turnover, of the *Handbook of Methods for Surveys and Studies*, BLS Bulletin 1711.

Wage and Salary Surveys

(NOTE: Covers tables 84, 88–96, 104, 107–112, and 160)

Industry wage surveys are undertaken in about 50 manufacturing and 20 nonmanufacturing industries on a recurring 3- to 5-year cycle; the majority of industries are surveyed at 5-year intervals. The studies provide information on straight-time earnings, as defined below, for selected production occupations peculiar to the particular industry. Data for some surveys are limited to areas of industry concentration; others include nationwide and regional data.

The studies include information on such establishment practices and related pay provisions as weekly work schedules; shift operations and differentials; the prevalence of paid holidays and vacations; health, insurance, and pension benefits; and other provisions important in the industry. To provide some insight into wage relationships, estimates are made of such employment characteristics as community and establishment size; labor-management agreement coverage, where the majority of workers in an establishment are covered by an agreement; the proportion of workers employed under incentive pay plans, if significant numbers are employed under such plans; and the extent to which single rates or ranges of rates are provided for individual job categories.

Area wage surveys are undertaken annually in selected metropolitan areas to provide information on straight-time earnings, as defined below, in occupations common to a variety of manufacturing and nonmanufacturing industries. Data also are provided on establishment practices and supplementary wage provisions. These studies are part of a program designed to permit projection of these data to represent all metropolitan areas in the United States. In fiscal year 1969–70, approximately 14,000 establishments employing about 10 million workers were included in the Bureau's sample of 85 areas. They were projected to represent 80,000 establishments employing about 22 million workers in all 229 Standard Metropolitan Statistical Areas in the United States, as established by the Bureau of the Budget through January 1968. The data are shown also for four broad regions—Northeast, South, North Central, and West.

Area survey data are obtained from representative establishments within six broad industry divisions: (1) Manufacturing; (2) transportation, communication, and other public utilities; (3) wholesale trade; (4) retail trade; (5) finance, insurance, and real estate; and (6) selected services. Excluded from the scope of the studies are the construction and extractive industries and government institutions. The latter exclusion has a significant effect on the public utilities industry division. Municipally operated utilities are excluded, but utilities are included in areas where they are operated privately.

The scope of the studies generally is limited, within each of the six major industry groupings, to establishments which employ 50 workers or more. Smaller establishments are omitted because employment in the occupations studied tends to be insufficient to warrant inclusion.

White-collar salaries are studied annually in a national survey of the level and distribution of straight-time earnings, as defined below, in selected professional, administrative, technical, and clerical occupations in private employment. The industry divisions covered are manufacturing; transportation, communication, electric, gas, and sanitary services; wholesale trade; retail trade; finance, insurance, and real estate; engineering and architectural services; and commercially operated

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

research, development, and testing laboratories. Information is provided for a wide range of work levels in accounting, legal services, purchasing, personnel management, engineering and chemistry, drafting, and clerical occupations. Beginning in 1965, the studies relate to establishments in nonmetropolitan counties in addition to those in metropolitan areas, to which the earlier surveys were limited. In the period 1961–65, establishments employing 250 workers or more were covered in all industries within scope of the survey. In 1966, the 250 establishment-size coverage was retained for manufacturing and retail trade, but lowered to 50 in finance, insurance, and real estate, and to 100 in all other industries studied. In 1972, the minimum established size in finance, insurance, and real estate was raised from 50 to 100 employees.

Indexes of Salary Trends for Selected Government Employees

Salary studies are conducted annually for Federal Classification Act employees, police patrolmen, and firefighters, and biennially for urban public classroom teachers.

Dating back to 1939, three measures of changes are shown on Federal classified employees' salaries: (1) Basic Salary Scales reflect only statutory changes in salaries; (2) Average Salary Rates show statutory changes and the effect of changes in the proportion of workers at each step within the salary ranges for individual grades; and (3) Average Salaries measure the effect of change not only in these two items but also in the proportion of workers in the various grades.

Indexes of maximum salary scales for firefighters and police patrolmen in cities of 100,000 inhabitants or more are measured both separately and combined, back to 1924. Data for this study are tabulated by the Bureau of Labor Statistics from information compiled by the International City Management Association, supplemented by annual surveys conducted by the Fraternal Order of Police and the International Association of Fire Fighters, and by direct inquiries by BLS.

For public classroom teachers, average salaries are shown by city and county size for cities of 100,000 population or more, and for counties of this size that were in Standard Metropolitan Statistical Areas and that had county-wide school districts. Indexes dating to 1925 are available. Data are obtained primarily from the National Education Association's biennial salary survey of public-school professional personnel.

Indexes for the current period are calculated by using a "chaining" method, whereby the index for the preceding period is adjusted by the percent change over the intervening interval.

For more detailed information on these studies, including regional data for teachers, firefighters and police patrolmen, see *Government Employees' Salary Trends*, reprinted from *Current Wage Developments* No. 296, September 1972.

Union wage scales and hours for selected journeymen, helper, and laborer classifications are studied annually in four highly unionized industries—building construction, local transit, local trucking, and printing. The number of cities surveyed has varied over the years from 39 to the present coverage of 68 cities with 100,000 population or more. All cities of 500,000 population or more, and most cities in the 250,000 to 500,000 group, are now included in the surveys.

The data relate to the basic (minimum) wage rates agreed upon through collective bargaining, exclusive of holiday, vacation, or other benefit payments, and to the maximum number of hours per week at straight-time rates. Rates in excess of the negotiated minimum, that may be paid for special qualifications or other reasons, are excluded from the studies.

The average hourly union wage rates provided by city in building construction and trucking since 1947, and in printing and local transit since 1949, are calculated by weighting each quotation for the year by the number of union members reported at that time as working or available for work. Unlike the index series, the averages do not measure the trend of union wage rates, but are designed to provide comparisons among trades and cities at a given time.

Distributions of employee earnings and hours are prepared periodically to provide information on the internal structure of wages and hours of all nonsupervisory employees in selected broad industry groups or specific industries, and in selected areas, usually on a cross-industry basis. The data relate to straight-time hourly earnings, as defined below, and weekly hours of work, including those leave hours (holidays, vacations, or sick leave) for which pay is received.

Straight-time earnings.—(Industry wage surveys, area wage surveys, white-collar salary surveys,

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

union wage scale surveys, earnings distribution surveys).

Unless otherwise indicated, the data relate to the regular day-shift wages or salaries paid per hour worked or standard workweek, exclusive of premium pay for overtime and for work on weekends, holidays, and late shifts. Incentive pay, production bonuses, and cost-of-living payments are included in earnings, but nonproduction bonuses (e.g., Christmas bonuses) are not. Straight-time earnings thus are reflected in the index measures and interarea pay comparisons.

Supplementary wage provisions.—(Industry wage surveys, area wage surveys, white-collar salary surveys).

Estimates of the prevalence of the selected provisions are derived by applying the particular provision to all plant and office workers of an establishment when the provision was applicable to a majority of those workers. The data, therefore, do not provide estimates of the percentage of workers affected by a particular provision, but rather the percentage that could be affected if specified qualifications, such as length of service, were met. *Paid vacations.*—The data are limited to basic plans and exclude such plans as vacation savings or those which offer "extended" or "sabbatical" benefits. *Holidays.*—Partial holidays are combined (8 half-holidays equal 4 days, etc.). *Health, insurance, and retirement plans.*—The data relate only to those plans not legally required and for which at least a part of the cost is borne by the employer.

Regions.—(Industry wage surveys, area wage surveys). Unless otherwise indicated, the regions are defined as follows:

Northeast—Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont; *South*—Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia; *North Central*—Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin; *West*—Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

General Wage and Benefit Changes

Statistics on general wage-rate changes in major collective bargaining situations (those covering 1,000 workers or more) date back to 1954. The series is confined to production and related workers in manufacturing and to nonsupervisory employees in nonmanufacturing. Government employees and farm workers are excluded. Data for recent years show in both cents-per-hour and percent terms: (1) First-year wage changes in contracts negotiated during the period under study; (2) annual rates of change in wages agreed upon for the duration of these contracts; and (3) changes effective during the period, regardless of when they were negotiated.

Estimates of "package" increases (wages and benefits combined) agreed upon in key collective bargaining settlements were started on a systematic basis in 1965. Coverage was limited to settlements affecting 10,000 workers or more; in 1966, this figure was lowered to 5,000. Measures now presented are: (1) First-year changes in contracts negotiated during the period, (2) annual rates of change in wages and benefits over the life of those contracts and (3) wage and benefit changes that become effective during the year.

In order to provide data for the nonunion and small union firms not reported on in the above programs, surveys have been conducted since 1959 covering union and nonunion manufacturing industry establishments regardless of size. These surveys, applying to production and related workers, provide information, separately for union and nonunion establishments, on first-year wage rate decisions and on general wage changes effective within each year. The data apply only to firms that make general wage rate changes, i.e., firms that change wages only on an individual worker basis are excluded.

Employer Expenditures for the Compensation of Employees

(NOTE: Covers tables 113-118)

The first studies of employer expenditures for employee compensation were undertaken in 1959, and related to manufacturing industries. The program now is designed to cover all employees in the total private nonfarm sector.

The studies relate to cash disbursements of

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

employers during a calendar year. The expenditures data are presented as a percent of compensation and in dollars per hour of work for all establishments and for establishments that actually had an expenditure during the survey year. The major elements of compensation in American industry are considered to be covered by the expenditure practices studied. The expenditures fall into several functional groups: pay for (1) working time; (2) leave time (except sick leave); expenditures for legally required and privately financed programs providing (3) retirement, (4) health and insurance, and (5) unemployment benefits; (6) and nonproduction bonuses; and savings and thrift plans. Data are presented for all employees, office employees, and nonoffice employees. Studies of the entire private nonfarm economy are conducted biennially and provide separate data for manufacturing and nonmanufacturing. Studies of specific industries are conducted in alternate years.

Productivity

(NOTE: Covers tables 85-87)

The measures of output per man-hour in the private economy refer to the ratio between constant-dollar gross national product (GNP) originating in the private sector of the economy or individual sectors, and the corresponding hours of all persons employed.

Two series of output per man-hour estimates have been developed. One series is based on labor force data from surveys of households, conducted by the Bureau of the Census for the Bureau of Labor Statistics. The other series is based primarily on BLS surveys of establishments.

The output measure (GNP) used in preparing both series represents the market value (in 1958 dollars) of final goods and services produced in the economy. It includes the purchases of goods and services by consumers, business establishments, foreign investors, and the various government agencies. The GNP data are prepared by the Bureau of Economic Analysis, U.S. Department of Commerce.

As mentioned above, two sets of estimates of labor input have been developed. The labor force series uses an hours worked concept, and excludes hours of persons employed but not at work due to vacations, illness, and other reasons. The establishment series is based on an hours paid concept and includes the hours of all persons on establishment payrolls in the private economy.

In developing both the labor force and establishment man-hour series, it was necessary to adjust and supplement the basic data. For the labor force series, two major adjustments were made as follows: General government hours were subtracted from total man-hours to make output and input measures consistent, and an adjustment was made to eliminate the effect of holidays which occur during the survey week; for the establishment series, data from the labor force reports and national income series were used to supplement the BLS payroll series data.

These measures relate output to man-hours and to employment. They do not reflect the specific contributions of labor, capital, or any other factors of production. Rather, they measure the combined effect of a number of interrelated influences, such as skills of workers, managerial skills, changes in technology, capital investment per worker, utilization of capital, layout and flow of materials, and labor-management relations.

The indexes of hourly compensation and unit labor costs in the private economy were developed from a man-hours estimate based on the establishment series, described in the previous section. Compensation includes wages and salaries, plus supplemental payments such as contributions of employers to social security and private health and pension funds. The "all persons" compensation data include an estimate for proprietors' salaries and contributions for supplementary benefits. Real compensation per man-hour was derived by adjusting the compensation data by the Consumer Price Index to reflect changes in purchasing power.

The indexes of unit labor costs were developed by dividing compensation per man-hour by output per man-hour. Nonlabor payments represent the difference between total compensation and the gross national product (in current dollars) originating in the private sector of the economy.

The implicit deflator reflects changes in all of the costs of production and distribution (unit labor costs plus unit nonlabor payments). The deflator is derived by dividing the current dollar estimate

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

of gross product originating by the constant dollar estimate.

Data on output per man-hour in selected industries contain industry indexes of output, man-hours, and output per man-hour for selected U.S. manufacturing and nonmanufacturing industries, covering the years 1939 and 1947 through 1971. The industries included here are not necessarily a representative cross section of U.S. industry, and their output per man-hour indexes, therefore, should not be combined to obtain an overall measure for the entire economy or any sector. Each index represents only the change in output per man-hour for the designated industry or combination of industries.

Output indexes are based primarily on the physical output of the products of the industry, combined with fixed period weights. Although unit man-hour weights are preferred and used whenever possible, it is often necessary to use substitute weights which are assumed proportional to unit man-hour weights. Unit value weights generally are substituted when unit man-hour weights are not available. Since the most comprehensive physical output data usually are available from the Censuses of manufactures and minerals, benchmark output indexes are derived from data for 2 consecutive censuses. For intercensal years, annual indexes are based on either physical output data or value of output adjusted for price change. The annual series subsequently are adjusted to the Census benchmark levels.

Indexes of man-hours are computed by dividing the aggregate man-hours for each year by the base period aggregate. Man-hours are treated as homogeneous and additive.

Output per man-hour indexes are obtained by dividing an output index by an index of aggregate man-hours.

Although the measures relate output to one input—labor time—they do not measure the specific contribution of labor or any other factor of production. Rather, they reflect the joint effect of a number of interrelated influences, such as changes in technology, capital investment per worker, and capacity utilization. Industry output per man-hour measures are limited to the extent that they do not account for quality change, and often do not reflect adequately changes in the degree of plant integration and specialization. In addition, there is not always strict comparability between output and labor input estimates. Finally, year-to-year changes in output per man-hour are irregular, and therefore, not necessarily indicative of basic changes in long-term trends. Conversely, long-term trends are not necessarily applicable to any one year or period in the future.

Consumer Prices

(NOTE: Covers tables 121–129)

The Consumer Price Index (CPI)[1] measures the average change in prices of all types of consumer goods and services purchased by urban wage-earners and clerical workers. The weights used in calculating the index, which remain fixed for relatively long periods, are based on studies of actual expenditures by wage earners and clerical workers. The quantities and qualities of the sample items in the "market basket" remain the same between consecutive pricing periods, so that the index measures only the effect of price change on the cost of living. The index does not measure changes in the total amount families spend for living; city indexes do not measure relative differences in prices or living costs between cities.

A study conducted during 1917–19 provided the weights used for 1913 to 1935. Since then, this index has undergone four major revisions, which involved bringing the "market basket" of goods and services up to date, revising the weights, and improving the outlet sample and methodology. The most recent revision, incorporated in a new series beginning in 1964, introduced weights relating to expenditures for the period 1960–61.

The list of items currently priced for the index includes approximately 400 goods and services. The items priced are described by detailed specifications to insure that, as far as possible, the same quality is priced each time, and that differences in reported prices are measures of price change only. Sales, excise, and real estate taxes are reflected wherever applicable.

Since January 1966, prices have been obtained in a sample of 56 areas, on a regular monthly or quarterly cycle. These include the urban portions of 37 Standard Metropolitan Statistical Areas (SMSA), the more extensive Standard Consoli-

[1] A detailed description of the CPI is contained in *The Consumer Price Index: History and Techniques* (BLS Bulletin 1517).

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

dated Areas for Chicago and New York, and 17 nonmetropolitan urban places. Price changes for the 56 areas are combined for the United States (the weights used for this aggregation are based on 1960 population of areas represented by each sample area). Area indexes are compiled for 23 of the 56 areas.

Notes on Tables

Tables 121–124—Indexes from 1800 through 1912 are estimates, based on price data from sources other than BLS. The purchasing power of the consumer dollar (1967=$1) for any given date is calculated as the reciprocal of the index for that date, expressed in dollars. It shows changes in the value of the 1967 dollar resulting from changes in prices of consumer goods and services. Purchasing power of the dollar with reference to other bases can be calculated by dividing the index for the desired base date by the index for the current date and expressing the result in dollars.

Table 125—The relative importance figures shown in this table are percentage distributions of the cost or value weights used in the index calculation. At the time of their introduction, after a major weight revision, the cost weights represent average expenditures for specific classes of goods and services by urban wage earners and clerical workers. However, in subsequent pricing periods, the value weights and the corresponding relative importance figures change as prices change differentially, i.e., the relative importance increases for an item or group having a greater than average price increase and decreases for one having a less than average price increase. Since the index measures only price change, the cost weights eventually become unrepresentative of actual expenditures and must be revised on the basis of new surveys of consumer expenditures.

Table 126—Indexes for individual foods are based on monthly prices obtained in all cities in the index sample.

Table 127—Annual average indexes for individual items other than food have been based on quarterly data from 1947 to 1968 and monthly data since January 1969. Since 1964, quarterly and monthly indexes for individual items other than food have been based on the latest available prices in all cities in the sample. For example, an index for December includes prices in all cities surveyed in December, as well as prices in those cities surveyed quarterly in October and November. From 1947 to 1963, quarterly indexes were based only on prices in the cities surveyed in March, June, September, and December.

Table 128—City indexes show only different rates of price change among cities. They do not show whether prices are higher in one city than in another.

Table 129—Average retail food prices are published regularly for 94 items in *Estimated Retail Food Prices by Cities*. Since July 1967 this report has included prices for the United States and for 23 large metropolitan areas. Prices are collected primarily for use in measuring month-to-month changes in food prices as a component of the CPI and are not entirely suitable for calculating average prices. Variations in food expenditures such as brands, sizes, and qualities included in the index, cause differences in computed average prices that do not represent real price differentials. To meet the need for dollars and cents prices, procedures have been devised to calculate estimated prices. Briefly, the procedure provides for the annual calculation of benchmark prices for defined qualities using special editing, and adjusting these each month by the price changes reflected in the index.[2]

[2] For a more detailed description of the calculation procedure, see "Calculation of Average Retail Food Prices," *Monthly Labor Review*, January 1965.

Wholesale Prices

(NOTE: Covers tables 130–133)

Wholesale Price Indexes

The Wholesale Price Index (WPI) is designed to measure changes in prices of commodities sold in primary markets in the United States. "Wholesale," as used in the title of the index, refers to sales in large quantities, not to prices received by wholesalers, jobbers, or distributors.

The WPI universe consists of all commodities produced or imported for sale in commercial transactions in primary markets in the United States. Currently most actual price quotations are obtained on a sample of about 2,700 items from manufacturers or other producers.

Prices are usually f.o.b. production or central

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

marketing point, and net of applicable discounts. However, a few prices are reported by trade associations and organized exchanges, and some are taken from trade publications or obtained from other Government agencies which collect quotations as part of their regular work. Since the index is intended to measure "pure" price change, that is, not influenced by changes in quality, quantity, shipping terms, product mix, etc., commodities included in the index are defined by precise specifications which incorporate price determining characteristics of the commodities.

The WPI is calculated as a weighted average of price changes and has been shown on the reference base 1967 = 100 since January 1971. The weights represent the total net selling value of commodities produced and processed in this country (or imported for sale), and flowing into primary markets. The values are f.o.b. production point and are exclusive of excise taxes. The values of interplant transfers, military production, and goods sold to household consumers directly by producing establishments are excluded. Each commodity price series in the index is representative of a class of prices and is assigned its own weight (the shipment value of the commodity) plus the weights of other commodities not priced directly but whose prices are known or assumed to move similarly. The weighting structure is revised periodically when data from industrial censuses become available, generally at 5-year intervals. Beginning with the January 1967 data, the Wholesale Price Index weights are based on 1963 shipment values of commodities as reported in the industrial censuses.

The commodities in the WPI are classified by similarity of end-use or material composition rather than by industry of origin. In recent years, emphasis has been placed on development of more subdivisions within major groups and special combinations of indexes, such as by Stage of Processing and Durability of Product.

The Stage of Processing indexes are constructed by combining segments of the Bureau's regular comprehensive WPI, primarily in accordance with the amount of processing, manufacturing, or assembling to which commodities are subjected before they enter the market. The weights used in the regular WPI classification system are distributed in accordance with the relative importance of the output of each commodity which is consumed at various levels of processing.

The Durability of Product indexes were constructed to provide price indexes which could be used in conjunction with other important economic series, such as production or inventory data classified according to durability. The indexes are made by combining segments of the Bureau's regular comprehensive WPI and embrace all its components.

The Wholesale Price Index is used for many purposes, including market analysis, escalation of long-term purchase and sales contracts, and measurement of general price trends. Many users employ the group and individual commodity indexes rather than the All Commodities Index. The WPI is based on a purposive, judgment sample. Thus, the All Commodities Index can be assumed to be more reliable than component group indexes. Also, the reliability of the index has increased over time as the sample has expanded. In 1952, the sample of priced items doubled to about 1,850 items and since then has increased to about 2,700 items.

Industry-Sector Price Indexes

Industry-sector price indexes were inaugurated with the annual average indexes for 1957 through 1963. (See *Monthly Labor Review*, August 1965.) Indexes for selected industries and for their important product classes are currently published in *Wholesale Prices and Price Indexes.*

An industry price index is a composite index, derived from several price series combined to match the economic activity of a specified industry or sector. The indexes published here are industrial output price indexes; they measure average changes in prices of commodities produced by a particular industry as defined by the Standard Industrial Classification of the Bureau of the Budget.

Industry indexes are relevant to studies of economic growth, productivity, and other types of economic analysis where the emphasis is on industrial structure as distinct from market or commodity-use classifications. One of their important uses is to deflate value of shipments data in order to derive measures of output in constant dollars. They also are useful for comparing industry price movements with other industry-based statistics of employment, production, and productivity, and for projecting price changes in studies of given industries.

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

The 4-digit indexes are built up from indexes for the individual commodities made in an industry—including its secondary products. The product indexes, weighted by the total value of their shipments, regardless of industry of origin, are combined into 5-digit census product class indexes. (Data for product shipments by individual industries are not available.) The product class indexes are, in turn, combined into 4-digit industry indexes. At this step, the weights are value of shipments (by product class) originating within the particular industry.

Through 1966, the industry indexes are based on gross value of shipments in 1958 as reported in the Censuses of Manufactures and Mineral Industries. The values include interplant transfers, goods produced and consumed in the same establishment, and goods sold for export. Imported commodities are not included. Beginning with the January 1967 indexes, ISPI weights are based on data from the 1963 censuses. The weighting structure is revised whenever comprehensive data from the industrial censuses become available.

The selection of items to be priced is purposive rather than being based on probability techniques. The objective is to represent 50 percent or more of the value of commodities included in each 5-digit census product class by pricing one or more specifications of its most important products. An industry meets the minimum standards for publication if 90 percent, by value, of its component 5-digit product classes satisfy the criteria for product class sampling. The sampling criteria may be modified if price variability within product classes or industries varies significantly from the average.

Because the current price collection for the industry-sector program initially was designed around the WPI structure, the sample in most industries is not strong enough to permit publication of industry indexes. As of December 1966, only 52 industries were covered adequately. As of January 1972, 129 industries were covered. Further extension of industry coverage is proposed as resources permit.

Pending additional pricing of commodities, industry indexes will be limited by the coverage—commodity and class of customer—of the comprehensive Wholesale Price Index. It must be assumed that the WPI prices, which are generally at the primary market level, are similar to the market level of sales represented by the Census data used as weights. Since the data include values of interplant transfers and values of goods produced and consumed in the same industry, it is also necessary to assume that changes in those values are represented by price movements of goods in commercial markets.

Consumer Expenditures

(NOTE: Covers tables 134–135)

The 1960–61 information in this series is based on reports from a representative sample of all urban and rural families in the United States. Data were collected jointly by the Bureau of Labor Statistics (BLS) and the U.S. Department of Agriculture (USDA) as part of a nationwide Survey of Consumer Expenditures (CES). The survey was conducted in 2 years—in 1961, covering family expenditures and income in urban places in the calendar year 1960, and in 1962, providing data on urban, rural nonfarm, and rural farm families for 1961. The CES classification of families by place of residence (i.e., urban or rural) follows the definitions adopted for the 1960 Census of Population.

All data were collected by personal interviews, through the voluntary cooperation of families. The family, or consumer unit, referred to (1) a group of people usually living together who pooled their income and drew from a common fund for their major items of expense, or (4) a person either living alone or in a household whose income and expenditures were not pooled with others.

The sample, for the total urban and rural population, included 17,283 living quarter addresses which were assigned to interviewers. Usable schedules were obtained and tabulated for 13,748 families.

To describe the spending and saving of all families in the United States, data from the CES samples were combined to obtain regional and U.S. averages. This was accomplished by applying a system of weights, based on the 1960 Census of Population, to the sample data.

Information obtained from a sample survey as complex as the CES is subject to many types of errors: Sampling, recording, and processing errors, and errors due to the refusal or inability of some families to give the information requested. All data were reviewed, edited, and screened to mini-

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

mize processing errors. The BLS computed sampling errors and evaluated selected characteristics of nonrespondents.[1]

Particular care is required in using the averages for families at the extremes of the income scale. These averages are based on small numbers of families who may differ sharply in their spending patterns.

[1] For a general description of the survey methods, see Chapter 8, *BLS Handbook of Methods for Surveys and Studies* (BLS Bulletin 1711).

The averages and percentages in the accompanying tables are based on all families included in each class, whether or not they reported receipts or disbursements for a particular item. Averages were calculated by dividing the aggregate amount of income, expenditures, or savings by the total number of families in the class. Since all averages for a class are based on a common divisor, they are additive.

Family Budgets

(NOTE: Covers tables 136–149)

The budgets for both the 4-person family and the retired couple are estimates of the total costs of representative lists of goods and services based on the manner of living and consumer choices in the 1960's. They provide three levels of living described as lower, intermediate, and higher for each of the family types in urban areas of the United States.

The quantities of goods and services included in the budgets were derived from two kinds of data: (1) Nutritional and health standards determined by scientists and technicians; and (2) analytical studies of the data reported in surveys of consumer expenditures. Nutritional and health standards were used for food, housing, and medical care components. For other categories of consumption the analytical technique developed relied on the collective judgments of families as to the kinds and amounts of consumption required, rather than upon objective standards.

In the determination of budget costs, the levels of prices paid for items are as important as the quantities bought. Pricing descriptions of items were developed to control the levels of average prices used in each budget. For many of the items in the lower and higher budgets average price levels were estimated by a variety of techniques. For most items in the three budgets, cost is the product of quantity times price. However, for some items only an estimated cost was obtained, either by updating the original survey cost by change in the Consumer Price Index, or by calculating the ratio of costs of other items based on the ratio reflected in the basic survey. Taxes were calculated on the income earned by self-supporting families to maintain the specified levels of consumption.

The 1970 and 1971 estimates of consumption were derived by applying price changes from the previous year, reported in the Consumer Price Index to the cost of each main budget class of goods and services. This method of updating provides only an approximation of current budget costs, because the Consumer Price Index reflects spending patterns and prices paid for commodities and services purchased by wage earners and clerical workers generally without regard to their family type and level of living. Personal taxes were computed for the spring 1970 and autumn 1971 budgets from tax rates in effect for 1969 and 1971 respectively.

The intercity indexes based on the BLS budgets, within each level of living, reflect differences among areas in price levels, climatic or regional differences in the quantities and types of items required to provide the specified level, and differences in State and local taxes. Intercity indexes are comparative living cost indexes and not comparative price indexes. Differences in housing costs are based on average costs of occupied owned or rented dwellings. The differences in the cost of food reflect differences in price levels as well as differences in regional preference patterns in the choice of food.

Equivalent income or family equivalence scales are measures to determine the relative income required by families differing in composition to maintain the same level of living. The scale values may be applied to estimates of *the cost of goods and services* (*i.e., family consumption*) in the budgets for a 4-person family to estimate comparable costs for urban families of other sizes, ages, and types.

The scale in table 149 assumes that families spending the same proportion of income on food have attained equivalent levels of living. It was derived from special tabulations of average income after taxes and average food expenditures per family for specified categories of urban families

Federal Reserve Bank of St. Louis

cooperating in the Bureau's Survey of Consumer Expenditures, 1960–61.

For a complete report on family budgets see BLS Bulletin Series 1570.

Union Membership

(NOTE: Covers tables 150–153)

The Bureau's membership survey includes all affiliates of the AFL–CIO, all unaffiliated national unions, and all unaffiliated unions which are party to collective bargaining agreements with different employers in more than one State. The study excludes unions whose activities are confined to a single locality or to a single employer. In addition, the survey accounts for all unions of Federal Government employees that have received "exclusive recognition", as specified in Executive Order 10988.

Work Stoppages

(NOTE: Covers tables 154–159)

The work stoppage series covers all strikes and lockouts known by the Bureau and its cooperating agencies to continue for 1 full day or shift or longer, and to involve six workers or more. For purposes of the studies, a strike is defined as a temporary stoppage of work by a group of employees to express a grievance or enforce a demand. A lockout is defined as a temporary withholding of work by an employer (or group of employers) to enforce terms of employment upon a group of employees. Since 1922, no attempt has been made to distinguish between strikes and lockouts; both types are included in the term "work stoppage."

All stoppages, whether or not authorized by the union, legal or illegal, are counted. The series excludes, however, strikes of American seamen or other workers in foreign ports, and strikes of foreign crews in American ports. Also excluded are so-called slowdowns, in which employees continue to work but at deliberately reduced production speed. In addition, instances in which workers report an hour or two late each day as a protest gesture or leave work several hours before closing time to attend rallies or mass meetings are excluded.

Industrial Injuries

(NOTE: Covers table 163)

These data were compiled according to the national consensus standard. The current version of the standard is the *Standard Method of Recording and Measuring Work-Injury Experience*, 1967, approved by the American National Standards Institute. The injury rates shown in these tabulations include all classes of disabling work injuries. A disabling work injury is any injury occurring in the course of and arising out of employment, which results in death, permanent impairment, or temporary-total disability.

Injuries which require only first-aid or medical treatment are not included in the computation of injury rates. Absence from work for a part of a day for treatment is not considered "disabling." To be counted as "disabling," an injury must have either caused some permanent impairment or made the person unable to work at a regularly established job for at least 1 full day after the day of injury. Cases are counted, however, even if the inability to work existed only on a Saturday, Sunday, or some other nonwork day.

The *injury-frequency rate* is the number of disabling work injuries for each million employee hours worked.

The *injury-severity rate* is the number of days of disability resulting from disabling work injuries for each million employee-hours worked.

Weighting. Injury rates for the 2-and 3-digit industry groups were computed from the rates of component individual industries by applying weights based on estimated total employment in each industry. In some nonmanufacturing divisions, data were not available for all industries; therefore, the division averages were not computed. Both the sampling plan and patterns of response tend toward higher representation of large than of small establishments in the sample. Large establishments tend to have lower injury frequency and severity rates than smaller ones.

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

Therefore, the published rates are more likely to be minimums than maximums.

Classes of employees. The experience of all classes of employees (production, operating, and related workers; construction workers; sales, service, delivery, technical, professional, office, administrative, clerical, and all other personnel) was included in the computation of these injury rates. Self-employed persons, however, were not included.

Survey coverage (1970). These surveys included reports from more than 50,000 manufacturing establishments, employing about 49 percent of all employees in manufacturing. In the selected nonmanufacturing industries other than mining and Federal Government, data were received from over 102,000 reporting units, employing over 4,700,000 workers.

Foreign Labor Statistics

(NOTE: Covers tables 164–172)

The Bureau of Labor Statistics joins with other nations in developing statistical standards through such agencies as the United Nations, the International Labour Office (ILO), the Organization for Economic Cooperation and Development (OECD), and the Organization of American States (OAS). It also provides technical assistance, when requested, to countries that are establishing labor statistical programs and furnishes specialized training to officials and technicians from other countries. The Bureau collects and analyzes foreign labor statistics from a variety of sources, but it does not conduct surveys abroad or serve as a primary compiler of foreign data.

Tables 164–172 provide general statistics on manpower, labor cost, output per man-hour, earnings, price trends, and industrial disputes in selected countries. Most of the data originate from statistical offices of the various countries and, therefore, were intended to serve individual country needs. In many cases there are significant differences in definitions, concepts, and survey methods among countries, so that comparisons between countries can only be approximated. In a few cases, adjustments have been made to improve comparability. The data pertain only to the period after World War II, since foreign labor statistics for most areas were limited in earlier years.

Statistics on the labor force, employment, and unemployment abroad are obtained from periodic population censuses, household labor force surveys, employment surveys of industrial establishments, and occasional estimates based upon a variety of sources. The ILO receives such reports, makes some revisions, and publishes the results in its *Year Book of Labour Statistics*. The labor force data in table 164 are taken from the ILO *Year Book* and, in some cases, from country publications. Estimates of unemployment rates in western industrial countries, adjusted to United States definitions, were furnished by the Bureau to the President's Committee to Appraise Employment and Unemployment Statistics (Gordon Committee) and published in 1962. Subsequent articles have brought the original estimates up to date and introduced changes owing to revisions of basic data. The adjusted unemployment series begin with 1959 for most of the countries (table 165).

Table 166 provides indexes of output per man-hour, hourly compensation, and unit labor costs for all employees in 11 industrial countries. The compensation figures include wages and salaries plus additional labor costs such as contributions of employers to social security and private welfare plans. Unit labor cost indexes are shown in United States dollars as well as national currencies so that changes in unit labor costs can be related to international commercial competition.

Average hourly earnings of wage workers can be subject to serious misinterpretation when used for international comparisons of hourly labor cost or labor income. In many countries, wage supplements (special bonuses, social security contributions, and others) are provided more extensively than in the United States, and direct wages represent a much smaller proportion of the employer's total labor expenditure or the worker's total income from work. Also, because prices of goods and especially of services vary greatly among countries, it is not easy to tell what level of living a particular wage income will provide. This difficulty is all the greater since workers in different countries have very different preferences for many goods and services. Comparison of relative levels of earnings by direct conversion of earnings data

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

from national currencies into United States dollars using the official rates of exchange may be particularly misleading. These exchange rates reflect only relative currency parities in international transactions. Comparison of relative real earnings levels involves the adjustment of national earnings according to internal purchasing power parities.

The earnings data presented in table 167 and the earnings indexes presented in table 168 are the usually published figures for each country unadjusted for comparability. They do not represent the same items of labor cost in each country because of differences in the treatment of various pay supplements. Earnings generally refer to gross cash payments to wage earners before deductions for taxes and social security, and include overtime pay and shift differentials; regular bonuses and premiums; and cost-of-living allowances. Holiday, vacation, and sick leave pay; irregular bonuses; payments in kind; and other pay supplements are included by some countries, excluded by others. The earnings data are per paid hour for some countries, per hour worked for other countries. In addition, several technical difference exist in the methods of measuring earnings. Many surveys pertain only to urban industrial centers, or to plants above a certain size, or to certain classes of workers.

Trends in employee earnings are often examined in relation to consumer price trends to indicate changes in the purchasing power of earnings. Table 169 presents indexes of real hourly earnings of wage workers in manufacturing for 14 industrial countries. The indexes of real hourly earnings are computed by adjusting the indexes of nominal earnings by indexes of consumer prices. The real earnings data do not refer to changes in take-home or spendable earnings, because they have not been adjusted for changes in income tax and social security contribution rates, and they do not reflect changes in the average number of hours worked.

The consumer price indexes for the 14 industrial countries plus selected other countries are presented in table 170. Consumer price indexes measure the changes over time in the prices of a representative sample of consumer goods and services purchased by the whole population or by a particular population group, for example, urban middle-income wage and salary workers.

Indexes of wholesale prices are shown for nine industrial countries (table 171). The indexes for all commodities as well as for industrial commodities and for manufactured or finished commodities are presented. No adjustments have been made for the differences in relative importance of products priced in each country.

Statistics on industrial disputes (table 172) show the number of work stoppages and their severity rates for eight industrial countries for all years since 1955. "Work stoppages" usually refer to strikes and lockouts, although the exact definition differs from country to country. The number of stoppages and particularly the severity rates often show major change from one year to another.

Farm Employment and Wage Rates

(NOTE: Covers table 45)

Estimates of farm employment and wage rates are based on data obtained from mailed questionnaires sent to a sample of farmers. Estimates of annual farm employment are averages based on the number of persons reported as doing farm work during one survey week, the last full calendar week ending at least the day before the end of each month; wage rates are averages of data that are collected quarterly. Family workers include farm operators, doing one or more hours of farm work, and members of their families, doing 15 hours or more of unpaid farm work during the survey week. All persons doing farm work for pay during the week are counted as hired workers.

Estimates in the USDA's series on employment generally exceed those of other agencies which may exclude children under 16 years of age, farm workers meeting the employment requirements on two farms or more in the survey week, or persons whose major employment is nonagricultural. USDA's farm wage rate series is a composite of average rates compiled from reports submitted by individual farmers for their localities. Because of the general nature of the questionnaire, certain types of farms probably are overrepresented. Composite rate does not include piece rate workers.

Federal Reserve Bank of St. Louis

Governmental Employment

(NOTE: Covers table 46)

Employment and payrolls. The Civil Service Commission collects employment and payroll data from all departments and agencies of the Federal Government but not from the District of Columbia Government. Employment figures represent the number of persons who occupied civilian positions on the last day of the calendar month shown and who are paid for personal services rendered for the Federal Government, regardless of the nature of appointment or method of payment. Intermittent workers are counted if they performed any service during the report month. Employment totals exclude persons serving without compensation, persons on leave without pay for scheduled periods longer than 30 days, persons in leave status after reduction-in-force, and persons hired informally "on the spot" without formal appointment procedures to cope with fire, flood, or other extreme emergencies.

Federal payrolls include all payments for personal services rendered during the calendar month and payments for accumulated annual leave of employees who separate from service. Since most Federal employees are paid on a biweekly basis, the calendar month earnings are estimated partially on the basis of the number of work days in each month where payroll periods overlap consecutive months. Monthly payroll totals fluctuate in amount because the number of work days in each month varies from 20 to 23 days. Holidays may be disregarded, since Federal employees are paid for the 9 national holidays on which they do not work.

Public employment and payroll data are primarily from Census Bureau reports based on mail canvassing of State and local governments. Local government data are estimates based on information from a sample of government units (i.e., county, municipal, township, school district, and special district). Data for State governments are based upon total coverage and are not subject to sampling variation.

Payroll amounts include all salaries, wages, and individual fee payments for the month specified, and employment numbers relate to all persons on governmental payrolls during a pay period of the month covered—including paid officials, temporary help, and (except where otherwise specified) part-time as well as full-time personnel. As in financial data, figures for individual governments cover major dependent agencies, institutions of higher education, as well as the central departments and agencies of the government.

Apprentices in Training

(NOTE: Covers table 56)

This series was developed jointly by the Bureau of Apprenticeship and Training (BAT), U.S. Department of Labor, and cooperating State Apprenticeship Agencies. These data are collected regularly by the BAT and State Apprenticeship Agencies and reported to the Office of Financial Management Information Systems. The BAT acts as the registration agency and maintains records for those 20 States which have not established agencies of their own. Summary reports are received directly from the remaining 32 cooperating State agencies, including the District of Columbia and Puerto Rico.

Manpower Development and Training

(NOTE: Covers tables 57–59)

Enrollment Opportunities and Federal Obligations for Work and Training Program

Data relating to enrollment opportunities and Federal obligations for Work and Training programs are derived from the following sources:

Manpower Development and Training Act—(1) Institutional training including Part-time and other—(a) Federal obligations—form MT–2 "Application for Institutional Training Projects under the Manpower Development and Training Act." (b) Enrollment opportunities—form MT–5 "MDTA Monthly Progress Report, Individual Training Projects." (2) On-the-Job Training—National Contracts—(a) Federal obligations—a copy of the contract negotiated between the sponsoring agency and the Manpower Administrator.

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

(b) Enrollment opportunities—form OJT–4 "OJT Progress and Compliance Report." (3) Jobs Optional Program—(a) Federal obligations—(1) a copy of the contract between the Regional Manpower Administrator and the State Agency or (2) Reports of State incurred obligations. (b) Enrollment opportunities—form MA 5–64 "Jobs Optional Monthly Summary Report."

Neighborhood Youth Corps, Operation Mainstream and Special Impact—Federal obligations and Enrollment opportunities are derived from forms BWP–1 "Sponsors Project Application" and BWP–2 "Sponsors Modification Transmittal."

Public Service Careers—Plans A, B, D, and E (STEP)—(a) *Federal obligations*—a copy of the contract negotiated between the Manpower Administrator and the sponsor. In case the sponsor is a governmental agency, the instrument is an interagency agreement. (b) *Enrollment opportunities—Plans A and B*—form MA 5–19 "Monthly Status Report;" *Plan D*—interagency agreement; *Plan E*—form MA 5–35 "Monthly Status Report."

Job Opportunities in the Business Sector—Information is obtained from the JOBS contract, "Entry Component Signatory Form—Option A."

Concentrated Employment Program—Information on Federal obligations is based on contracts between the project sponsors and the Regional Manpower Administrator. Enrollment Opportunities are not meaningful for the CEP program because the CEP approach utilizes a variety of program components—orientation, basic education, work experience, and other types of job training. An individual may be enrolled in one or in several components.

Work Incentive Program—Information was obtained from form BWP–131, "Work Incentive Program (WIN) Comprehensive Plan and Budget" from July 1968 through April 1969. Since May 1969, the information has been obtained from form MA–3100–13, "Work Incentive Program (WIN) Information Sheet."

Job Corps—Federal obligations and Enrollment opportunities—(a) Interagency agreements. (b) Contracts between private enterprise, non-profit organizations and (lesser institutions) State and local governmental units.

Public Employment Program—Information on Federal obligations and enrollment opportunities is submitted monthly on form MA 6–45 "Project Status/Financial Report," by the agent for each contract.

Trainees Enrolled in Work and Training Programs

Data relating to characteristics of trainees enrolled in work and training programs are derived as follows:

Manpower Development and Training Act—MDTA data were tabulated from information submitted on form MT–101, "Characteristics of Trainees under the MDTA and ARA," from the inception of the program through November 1968. Since December 1968, characteristic data have been tabulated from information submitted on form MA–101, "Applicant Information Record." This form is prepared by the local Employment Service offices for each individual who is referred to training. Only those persons who are enrolled in the program for at least 5 days are included in the tabulation.

JOBS—Optional Program (JOP) Characteristics for Job Optional trainees are tabulated from form MA 5–37 "Individual Information Record."

Neighborhood Youth Corps, Operation Mainstream and Public Service Careers—Data for these programs are tabulated from information submitted on form NYC–16, "The Neighborhood Youth Corps Enrollee Record." This form is completed by the project sponsor for each individual at the time he enrolls in a project.

Concentrated Employment Program—CEP data are tabulated from information submitted on form MA–101, "Applicant Information Record." This form is completed for each applicant who has met CEP eligibility requirement (including residence in the CEP target area) and has been assigned to a CEP employability development team.

Work Incentive Program—WIN data are tabulated from information submitted on form MA–101, "Applicant Information Record." This form is completed for each person who agrees to participate in the program, has met the eligibility requirements, and been assigned to a WIN development team.

Job Opportunities in the Business Sector—JOBS data are tabulated from (1) information submitted on form MA–111, "JOBS Hiring Card," and (2) MA–114, "JOBS Upgrading Card." These cards are completed at the time the employer hires an employee or upgrades training of an

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

employee already on the payroll under the JOBS program.

Job Corps—Characteristics are tabulated from OEO form–16 "Corps Data Sheet" submitted for each Job Corps trainee.

Public Employment Program—PEP characteristics data are tabulated from form MA 6–43, "Participant Information Record," completed by the agent for each enrollee.

Enrollment Completion and Post-Training Employment Under MDTA

Estimates of the number of trainees enrolled in training in fiscal years 1963–68 were based on the receipt of form MT–101, "Characteristics of Trainees under the MDTA and ARA." This form was prepared for each individual referred to training under MDTA. Only those persons who were enrolled in the program for at least 5 days were included in the estimates. Estimates of the number of trainees enrolled in training since fiscal year 1968 have been tabulated from information obtained from forms MT–5 "MDTA Monthly Progress Report—Institutional Training Projects," and OJT–4–MT–4, "OJT Progress and Compliance Report." The MT–5 form, covering training under the institutional training program (including part time and other training), is prepared at the end of each month for each occupation and project or numbered part of a subproject of a multioccupational project by the State Employment Service Offices. The OJT–4–MT–4 form, covering on-the-job training, is prepared monthly by the prime contractor. If subcontractors are involved, the contractor submits a consolidated report.

Jobs Optional Program—Data relating to individuals hired and terminated under the JOP program are reported on form MA 5–17 "JOBS Monthly Progress Report/Invoice."

Estimates of the number of individuals who completed their training in fiscal years 1963–68 were based on the receipt of form (MT–102) "Individual Trainee Termination of Training." This form was completed for each individual at the time his status as a trainee, enrollee, or recipient of service ended; he was transferred from a program or project; or shifted from one phase to another within a project. Since fiscal year 1968, estimates of the number of individuals who completed their training have been tabulated from information obtained from forms MT–5 and OJT–4–MT–4.

Estimates of the number of former enrollees who have successfully completed training and obtained employment were based on the receipt of form MT–103, "Post Training Report," from the inception of the program through October 1969. There were three followup reports; one at 3 months, the second at 6 months, and the final followup at 12 months after completion of training. Since November 1969, estimates of the number of enrollees who have successfully completed training and obtained employment have been based on the receipt of form MA–103, "Current Job Status Report." Forms are mailed to each enrollee who has successfully completed all phases of training services in the MDTA program. There are two followup reports, one at 3 months and the second at 6 months after completion of training.

Unemployment Insurance

(NOTE: Covers tables 74–77)

Unemployment insurance provides benefit payments to persons experiencing involuntary unemployment. The amount and length of payments are based on past earnings and eligibility criteria established under State or Federal unemployment insurance laws. The tables presented herein relate only to activity under the State unemployment insurance programs.

Currently, about three-fourths of the civilian labor force are covered by unemployment insurance laws. Almost four-fifths of all nonfarm wage and salary workers are covered. The Employment Security Amendments of 1970, extend coverage to an estimated 6.0 million additional workers effective January 1972. Coverage was extended to all private industry employers of one or more workers, to nonprofit institutions, educational, hospital and other charitable organizations which employed four persons or more on one or more days in each of 20 weeks during a calendar year, State hospitals and institutions of higher education, and citizens of the United States employed outside of the United States by an American employer.

Workers excluded from unemployment insur-

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

ance coverage include most farm workers, domestic service workers, employees of churches and employees of private elementary and secondary schools. Also excluded from coverage are many State and local government workers.

The amendments also provide for a Federal-State extended unemployment compensation program at prescribed State or national levels of insured unemployment, increased the net Federal unemployment tax rate, raised the limit on taxable wages, and provided for a number of other changes in detail.

Employment security information is supplied to the Bureau of Labor Statistics by State employment security agencies. The data are obtained from State and local office records and from interviews with unemployment insurance claimants in more than 2,000 local offices. A variety of unemployment insurance statistics are regularly published in the monthly *Unemployment Insurance Statistics* and in *Employment and Wages* published quarterly.

"Insured unemployment" is an administrative count of the number of weeks of unemployment claimed by persons seeking unemployment insurance benefits. The count for any week represents the number of weeks claimed at the local offices during the calendar week immediately following the week of unemployment. The insured unemployment rate for a week is derived by dividing the insured unemployment figure by the average monthly covered employment for a 12-month period roughly corresponding to the base period.

Statistics on personal and economic characteristics (age, sex, color, occupation, industry, and duration of current unemployment, by State) are derived from a sample survey taken in the week containing the 12th of the month of all persons claiming unemployment insurance benefits under the State programs. The sample is inflated to the universe count of State-insured unemployment. The size of the minimum required sample in each State is inversely related to the volume of State insured unemployment. It varies from 1 percent in States with large volumes, to a universe count in States with low volumes of insured unemployment. The sampling method was designed to obtain reliable data and to permit easy comparisons of data among the States. The use of a varying sampling ratio among the States makes it possible to hold constant the percent sampling variation expected, even though from State to State the cells might differ considerably in absolute size. At the national level the expected deviation from any percentage presented in the tables is extremely small.

Employee-Benefit Plans

(NOTE: Covers table 119)

An "employee-benefit plan" is any type of plan sponsored or initiated unilaterally or jointly by employers and employees and providing benefits that stem from the employment relationship and that are not underwritten or paid directly by government (Federal, State, or local).

Estimates of coverage, contributions, and benefits are based for the most part on reports by private insurance companies and other nongovernment agencies.

Contributions under insured pension plans are on a net basis, with dividends and refunds deducted. Those under noninsured plans are, for the most part, on a gross basis, and refunds appear as benefit payments. For pay-as-you-go (unfunded) plans, contributions have been assumed to equal benefit payments.

The number of beneficiaries under pension plans relates to those in receipt of periodic payments at the end of the year and thus excludes those receiving lump sums during the year. The retirement benefits under noninsured plans do include: (1) Refunds of employee contributions to individuals who withdraw from the plans before retirement and before accumulating vested deferred rights, (2) payments of the excess of employee contributions to survivors of pensioners who die before they receive in retirement benefits an amount equal to their contributions, and (3) lump-sum payments made under deferred profit-sharing plans. Because the source of the data from which the estimates have been developed does not permit distinction between these lump-sum benefits and the amounts representing monthly retirement benefits, precise data on average monthly or annual retirement benefit amounts cannot be derived.

Social Insurance

(NOTE: Covers table 120)

This table presents data related to the Federal program for old-age, survivors, disability, and health insurance (OASDHI) established by the Social Security Act. This program provides monthly cash benefits to retired or disabled insured workers and their dependents and to the survivors of insured workers. Within the specifications of the law, retirement benefits are payable to an aged insured worker; to his aged spouse or his spouse at any age caring for his child who is under age 18 or totally disabled; and to his child who is under age 18, totally disabled, or a full-time student under age 22. An aged worker becomes eligible for full benefits at age 65, although he may elect reduced benefits up to 3 years earlier; his spouse is under the same limitations. Under certain conditions, survivor benefits are payable to dependents of an insured worker, including his aged widow or his widow at any age caring for his child who is under age 18 or totally disabled; his child who is under age 18, totally disabled, or a full-time student under age 22; and his aged parents. Disability benefits are payable to an insured worker under age 65 with a prolonged disability that meets the definition in the act and to his dependents on the same basis as dependents of retired workers. A lump sum benefit is also payable on the death of an insured worker.

Since July 1966, health insurance is being provided under two coordinated plans for nearly all persons age 65 and over: A hospital insurance plan which covers hospital and related services and a voluntary supplementary medical insurance plan which covers physicians' services and related medical services. Beginning July 1973, the same health insurance is provided certain severely disabled persons.

Retirement, survivors, disability, and hospital insurance benefits are paid for by the contributions of workers, employers, and the self-employed on annual earnings up to a maximum taxable limit. Hospital benefits are financed out of Federal general revenues for persons 65 and over with specified amounts of social security coverage less than that required for cash benefit eligibility. The voluntary medical insurance plan is financed by premiums paid by eligible persons who choose to enroll in the plan, and by contributions by the Federal Government from general revenues. The money collected is deposited in Federal trust funds.

National Labor Relations Board, Jurisdiction and Cases

(NOTE: Covers table 161)

The following summary shows data limitations imposed by various legislative and rule changes affecting the NLRB jurisdiction.

LEGISLATIVE AND RULE CHANGES AFFECTING COMPARABILITY OF N.L.R.B. TIME-SERIES DATA

Type of case	National Labor Relations (Wagner) Act, effective July 5, 1935	Labor Management Relations (Taft-Hartley) Act, 1947, effective August 22, 1947	Labor Management Reporting and Disclosure (Landrum-Griffin) Act of 1959, effective November 13, 1959	Amendments to N.L.R.B. Rules and Regulations effective November 30, 1964
Unfair Labor Practice.	Charges alleging *employer* unfair labor practices.	Imposed for the first time an unfair labor practice counterpart on *Labor organizations*.	Outlawed "hot cargo" contract clauses by employers and/or unions and placed certain limitations on union picketing.	
Representation.	Petitions requesting Board action to determine whether employees wished to select a collective bargaining representative.	Authorized the filing of decertification petitions as well as broadened the area for employer-filed petitions for collective bargaining elections.		
Union-Shop Authorization.		Authorized the filing of petitions for Board-conducted polls to determine whether a contract be authorized requiring union membership as a condition of employment. This portion of act was abolished in October 1951.		
Union-Shop Deauthorization.		Authorized the filing of petitions for Board-conducted polls to determine whether a union's authority to enter into a union-shop contract should be rescinded.		
Amendment of Certification.				Authorized the filing of petitions for amendment of an existing certification.
Unit Clarification.				Authorized the filing of petitions seeking a determination as to whether a certain classification of employees should be included within a presently existing bargaining unit.

Wage and Hour Investigation Findings

(NOTE: Covers table 162)

Introduction

The data are tabulated from "Investigation Report" forms sent in for each establishment investigated by a WH Compliance Officer. The statistics therefore represent only findings obtained from investigated establishments and do not represent total underpayments due under the Fair Labor Standards Act, Government Contracts Acts, Age Discrimination in Employment Act, and title III (Restriction on Garnishment) of the Consumer Protection Act.

Establishments Investigated

Establishments are investigated because of complaints received from employees, unions, or other interested parties. In addition, each region schedules investigations in those industries where there is a strong likelihood that firms might be in violation of the acts.

Employees Underpaid

Underpaid employees are those found not paid the required minimum wage rate, employees found not paid full overtime compensation for all hours worked over the applicable overtime standard, employees found not paid equally because of sex, employees found discriminated against because of their age, and workers whose wages have been found to be illegally garnisheed in violation of the provisions of the acts. Also included are workers, such as handicapped workers, certified for special minimum wage rates who were found not paid in accordance with the certificates. Minors found illegally employed in violation of the acts are not shown.

Amount of Underpayments

In general the amount shown for all types of underpayments involves an investigation period of up to 2 years.

Illegally Withheld Wages That Employers Agreed to Pay

The amount of underpayments which the employers agreed to pay back to employees found underpaid may be all or only a part of the amount found due.

Gross National Product and National Income

(NOTE: Covers tables 173-175)

Gross National Product

Gross National Product (GNP) represents the total national output of goods and services at current market prices. It measures this output in terms of the expenditures by which these goods are acquired. These expenditures are the sum of four major items: (1) personal consumption expenditures, (2) gross private domestic investment, (3) net export of goods and services, and (4) government purchases of goods and services.

The GNP series measures the product of the factors of production—labor and property—supplied by residents of the Nation.

"Personal consumption expenditures" consists of the market value of purchases of goods and services by persons and nonprofit institutions and the value of food, clothing, housing, and financial services received by them as income in kind. It includes the rental value of owner-occupied houses but does not include purchases of dwellings, which are classified as capital goods.

"Gross private domestic investment" consists of the net acquisitions of fixed capital goods by private business and nonprofit institutions; including commissions arising in the sale and purchase of new and existing fixed assets, principally real estate; and the value of the change in the volume of inventories by business. It covers all private dwellings, including those acquired by persons for their own occupancy.

"Net exports of goods and services" measures the balance on goods and services, excluding transfers under military grants, as reported in the U.S. balance of payments statistics.

"Government purchases of goods and services" consists of the net purchases of goods and services by general government and of the gross investment of government enterprises. General government purchases comprises employee compensation and net purchases from business and from abroad. They exclude the acquisition of land, current outlays of government enterprises transfer payments, government interest, and subsidies, as well as transactions in financial claims.

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

Gross National Product in Constant Dollars

The GNP is also deflated and expressed in constant prices. The procedure in general is to divide components of the current dollar GNP by appropriate price indexes, utilizing as fine a product breakdown as possible, and then to sum the components to obtain the constant dollar GNP.

The price information is combined into indexes applicable to the various current dollar series. Weights for constructing the indexes approximating expenditures for the products represented by the price series, have been obtained from the detailed industrial censuses. Expenditure weights in some instances have been broken down between urban and rural. Quantity data also are utilized in lieu of price deflation in a number of instances, most notably in the case of government employment. The implicit deflators are computed by dividing the deflated estimates into the corresponding current dollar estimates.

National Income

National Income is the aggregate of earnings by labor and property which arise in the current production of goods and services by the Nation's economy. It is the sum of five major items: (1) compensation of employees, (2) proprietors' income, (3) rental income of persons, (4) net interest, and (5) corporate profits and inventory valuation adjustment.

"Compensation of employees" is the sum of wages, salaries, and supplements to wages and salaries, such as employer contributions for social insurance.

"Proprietors' income" measures the monetary earnings and income in kind of sole proprietorships (including doctors, lawyers, and other self-employed), partnerships and producers' cooperatives, exclusive of capital gains or losses on inventory or other asset holdings. The supplementary income which individuals obtain from renting property does not appear here, but under rental income of persons.

"Rental income of persons" consists of (1) net money income from rental of real property, (2) imputed net rental value to homeowners of their homes, and (3) royalties received from patents, copyrights, and rights to natural resources.

"Net interest" measures the excess of interest payments of the domestic business system over its interest receipts, plus net interest received from abroad. In addition to monetary interest flows, net interest includes imputed interest arising in connection with the operations of financial intermediaries.

"Corporate profits" is the earnings of corporations organized for profit which accrue to residents of this Nation measured before Federal and State profit taxes, but without deduction of depletion charges and exclusive of capital gains and losses and intercorporate dividends.

"Corporate inventory valuation adjustment" measures the excess of the value of the change in the physical volume of corporate inventories (valued at average prices during the period) over the change in terms of book values. This adjustment is made to profits to remove the inventory profit or loss that occurs in business accounting when the book cost of inventories differs from the current replacement cost. Valuation in current prices of the cost of inventories used up puts sales and costs on a consistent basis and is necessary to derive measures of national output in current prices.

The national income is a useful measure of the flow of earnings from current output. By definition, it excludes capital gains and losses. The movements of this series correspond with movements in production. However, the value of the national income series lies more in the composition than in the total. It may mean little to know that national income (unadjusted for price changes) has gone up; but it may be very important to know the relative contribution of wages and profits to that increase.

Care must be taken not to interpret movements in the series as measuring something other thian they are intended to measure. For example, variations in wages and profits do not necessarly indicate changes in the welfare of workers or in the ability of corporations to provide new capital. For such purposes, these variations must be considered in the light of other factors, such as the cost of living and the cost of new plant and equipment. It should be recognized that many of the available data permit only fair approximations of the phenomena being measured, and therefore too great a reliance should not be placed on these statistics as instruments of precise measurement.

Consumer Income

(NOTE: Covers table 176)

Background

Since 1947, the Bureau of the Census has published annual statistics on consumer income of families and persons 14 years old and over, cross-classified by various social, demographic, and economic characteristics, such as farm-nonfarm residence, race, age, type and size of family, number of children, number of earners, employment status, source of income, occupation and industry groups, etc.

Data on consumer income are derived from the Current Population Survey conducted by the Bureau of the Census in March of each year.

Description of Survey

The March survey covers the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United States. Data on consumer income cover money income (exclusive of certain money receipts such as capital gains) prior to deductions for taxes, bonds, pensions, union dues, etc.

Prior to the March 1966 survey, income data were collected from approximately 25,000 representative households, or about 75 percent of the households included in the sample. In the March 1966 survey, data on income were collected from all households in the sample (approximately 35,000 households). Beginning with the March 1967 survey, the sample was enlarged to include about 50,000 households. Income data were collected from all households in the survey. The time period covered by the income statistics relates to the preceding calendar year, but the characteristics such as age, employment status, etc., and the composition of families refer to the time of enumeration. Persons in the following categories were not included in the income portion of the survey.

1. Members of the Armed Forces living in barracks on military reservations.
2. Inmates of penal and mental institutions and persons living in homes for the aged, infirm, and needy.
3. Persons less than 14 years old.

Definitions

Total money income.—This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

Family.—The term "family" refers to a group of two persons or more, related by blood, marriage, or adoption and residing together; all such persons are considered as members of the same family.

Race.—The population is divided into three groups on the basis of race: white, Negro, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except white and Negro. "Other races" are usually shown in combination with the Negro population.

Years of school completed.—Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was completed. The questions on educational attainment apply only to progress in graded public, private, and parochial elementary and high schools, colleges, universities, and professional schools, whether day schools or night schools.

Further definitions.—More extensive definitions of the terms, explanations of collection and processing procedures, and a statement on sampling variability may be found in *Current Population Reports,* Series P–60, No. 85, "Income in 1971 of Families and Persons in the United States."

Reliability of the Estimates

Since the estimates are based on a sample, they are subject to sampling variability. Particular care should be exercised in the interpretation of figures based on relatively small numbers of cases; such care should apply also to small differences between figures. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting.

1972	40.0	[3]	49.5	59.7	64.1	69.3	60.6	9.7

[1] Percent of civilian noninstitutional population in civilian labor force.
[2] Beginning with 1966 data revised to refer to persons 16 years of age and over and persons 16 to 17 years old (instead of 14 to 17) in accordance with change introduced in January 1967.
[3] Percent not shown where base is less than 35,000.
[4] Includes widowed, divorced, and married-spouse absent.

[1] Includes the employed, classified according to their current job, and the unemployed, classified according to their latest civilian job; excludes unemployed persons who never worked before.

[2] Beginning with 1966, data revised to refer to persons 16 years of age and over, in accordance with change introduced in January 1967.

NOTE: Beginning 1971, occupational data are not strictly comparable with statistics for earlier years as a result of changes in the occupational classification system for the 1970 Census of Population that were introduced into the Current Population Survey (CPS) in January 1971. Moreover, 1972 data are not completely comparable with 1971 because of the addition of a question to the CPS in December 1971 relating to major activities and duties. For further explanation, see the Technical note on the Current Population Survey.

[1] Not available.
[2] Percent of the civilian noninstitutional population in the civilian labor force.
[3] Percent not shown where base is less than 100,000.
[4] Data revised to refer to persons 16 years and over in accordance with the change in age limit and concepts introduced in 1967.
[5] Percent not shown where base is less than 75,000.

NOTE: Because the number of 14- to 15-year-olds who are not enrolled in school is very small, the sampling variability for this group is relatively high.

[1] Includes persons reporting no school years completed.
[2] See footnote 1, table 1.
[3] Data for persons whose educational attainment was not reported were distributed among the other categories.
[4] Beginning in 1972 data revised to refer to persons 16 years of age and over.
[5] Not available; data published as percent distribution only.
[6] Data by color not available for March 1957.

[1] Beginning with 1966 data revised to refer to persons 16 years of age and over and persons 16 to 17 years old (instead of 14 to 17) in accordance with change introduced in January 1967.

[2] Includes persons who worked 35 hours or more during the survey week and those who usually work full time but worked part time because of illness, bad weather, holidays, personal business, or other temporary noneconomic reasons.

[3] Includes mining and public administration.

[4] Includes persons who wanted only part-time work.

TABLE 23. Persons on Part Time for Economic Reasons,[1] by Type of Industry, 1957–72

[Thousands of persons 14 years of age and over for 1957–66; 16 years and over for 1966–72]

[1] The number of men in husband-wife families shown here is smaller than the number shown as married with spouse present in other tables because it excludes married couples living in households where a relative is the head.

[2] See footnote 1, table 1.

[3] Includes members of the Armed Forces living off post or with their families on post.

[4] This category may also include a wife or other member who is unemployed.

[1] Not available.
[2] Beginning 1957, data not strictly comparable with earlier years.
[3] Data revised to refer to persons 16 years and over in accordance with the changes in age limit and concepts introduced in 1967.
[4] Percent not shown where base is less than 100,000.

NOTE: Because the number of 14- to 15-year-olds who are not enrolled in school is very small, the sampling variability for this group is relatively high.

[1] Data for 1948 do not include persons 65 years old and over.

[2] Beginning in 1972 data revised to refer to persons 16 years of age and over.

[3] Median not shown where base is less than 100,000.

[4] Median not shown where base is less than 150,000.

[5] Median not shown where base is less than 75,000.

NOTE: Data by color not available prior to 1959.

[1] Time worked includes paid vacation and paid sick leave.

[2] Usually worked 35 hours a week or more.

[3] Not strictly comparable with earlier years because of the introduction of data from the 1950 Census into the estimation procedure. The number with work experience was raised about 120,000 between 1951 and 1952 and an additional 230,000 between 1952 and 1953.

[4] Data include Alaska and Hawaii beginning 1959 and are therefore not strictly comparable with earlier years. For 1959 this inclusion resulted in an increase of about 300,000 in the total who worked during the year, with about 150,000 in the group working 50 to 52 weeks at full-time jobs.

[5] Beginning with 1966 data revised to refer to persons 16 years of age and over, in accordance with change introduced in January 1967.

[1] The 1966 estimates are not strictly comparable with those of prior years because of earlier misclassification of some wage and salary workers as self-employed. The change in classification resulted in a shift of about 750,000 from nonfarm self-employment to wage and salary employment, affecting primarily the data for trade and service industries.

[2] Beginning with 1966 data revised to refer to persons 16 years of age and over, in accordance with change introduced in January 1967.

[3] Included with Finance, insurance, real estate, and service, beginning January 1958.

NOTE: Data include Alaska and Hawaii beginning 1959 and are therefore not strictly comparable to earlier years. For 1959 this inclusion resulted in an increase of about 300,000 in the total who worked during the year, with about 150,000 in the group working 50 to 52 weeks at full-time jobs.

[1] For purposes of this table, the SMA's definitions are those which were in effect in 1960.

[2] In 90 cases out of 100, on the average, unemployment data from a complete census would fall within the indicated ranges.

[3] The error ranges for these rates are approximately of the same magnitude as those shown for the 1972 rates.

[4] Not shown separately where the unemployment estimate is less than 5,000 or the labor force is less than 50,000.

SOURCE: Based on the Current Population Survey, a national sample survey of households conducted monthly by the Bureau of the Census for the Bureau of Labor Statistics.

[1] Pertains only to standard metropolitan statistical areas (SMSA's) with populations of 250,000 or more. The poverty neighborhood classification used is based on a ranking of census tracts according to 1960 data on income, education, skills, housing, and proportion of broken families. The poorest one-fifth of these tracts are considered poverty neighborhoods, and the remaining four-fifths are termed "other urban neighborhoods." The poverty area data do not represent the exact dimensions of poor people but are instead minimal estimates of the adverse conditions of residents in these specific neighborhoods.

[1] Computed by dividing the number of vacancies by the sum of employment plus vacancies and multiplying the quotient by 100.

[2] Long-term job vacancies are those vacancies that have remained unfilled for 30 days or more. The long-term job vacancy rate is computed by dividing the number of long-term vacancies by the sum of employment plus all job vacancies and multiplying that quotient by 100.

[3] Less than 0.05.

[4] Percentages are computed using unrounded rates.

[1] Quits include miscellaneous separations prior to 1940.

[2] Beginning January 1943 labor turnover rates refer to all employees; previously, to production workers only.

[3] Beginning January 1959 transfers between establishments of the same firm are included in total accessions and total separations, therefore rates for these items are not strictly comparable with prior data. Transfers comprise part of other accessions and other separations, the rates for which are not shown separately.

NOTE: Data include Alaska and Hawaii beginning 1959. Annual rates are averages of 12 monthly observations.

1971	278,431	78,535	42,071	40,891	274,004

[1] Includes voluntary quits, layoffs, discharges, out-of-State transfers, upgrading within certain trades, and suspensions for military services.

[2] Major revisions in reporting system effected this year.

[3] Differs from the number in training at the end of the previous year because of revisions in 1969 figures reported by most States.

[1] Enrollment opportunities are the number of positions authorized each fiscal year. The number shown by fiscal year includes only those newly authorized in that year, although actual enrollment opportunities from previous years, if not filled, may still be available.

[2] Program became operational in 1963.

[3] Beginning fiscal 1971, includes the JOBS-Optional Program (JOP) and the MDTA on-the-job (OJT) program which ended in fiscal 1970 except for national contracts. Also includes Construction Outreach.

[4] Beginning with fiscal year 1972, Institutional Training includes Part-time and other training.

[5] Less than $500,000.

[6] Program became operational in 1965.

[7] Data not available for Neighborhood Youth Corps Components prior to fiscal year 1967.

[8] Program became operational in 1967, includes the New Careers Program.

[9] Program became operational in 1968.

[10] Data not meaningful because an individual may be enrolled in one or more program components. See Technical Notes for a more detailed explanation.

[11] Job Opportunities in the Business Sector. Program became operational in 1969.

[12] Program became operational in 1969.

[1] Characteristics of enrollees in components of the Neighborhood Youth Corp programs are based on data covering the following time periods: In school component—September through May; Out of School—September through August of the following year; Summer—June through August.

[2] Includes the New Careers Program.

[3] Characteristics data not available separately prior to fiscal year 1968; these data are included in the In School program for prior years.

[4] Characteristics data not available prior to fical year 1968.

[5] Beginning in fiscal 1971, includes the JOBS-Optional Program (JOP) and the MDTA on-the-job (OJT) program which ended in fiscal 1970 except for national contracts. Also includes Apprenticeship Outreach.

[6] Enrollees in the Summer program are included in the In School program

[7] Data not available.

TABLE 59. Enrollment Opportunities and Post-Training Employment, 1963–71

[Covers enrollment opportunities under the Manpower Development and Training Act]

Item	In thousands								
	Total	Fiscal year							
		1963 [1]	1964	1965	1966	1967	1968	1969	1970	1971
Enrollment opportunities [2]	1,822.1	59.2	125.8	231.8	281.1	270.9	229.9	198.5	201.4	213.7
Enrollments (first-time) [3]	1,706.2	34.1	77.6	156.9	235.8	265.0	241.0	220.0	221.0	254.8
Completions [4]	1,123.1	20.1	51.3	96.3	155.7	192.6	164.2	160.0	147.0	135.9
Obtained employment (post-training) [5]	878.5	16.1	39.4	73.4	124.0	153.7	127.5	124.0	115.3	105.1

[1] Program became operational August 1962.
[2] Enrollment opportunities are the number of positions authorized each fiscal year. The number shown by fiscal year includes only those newly authorized in that year, although actual enrollment opportunities from previous years, if not filled, may still be available.
[3] Generally larger than the number of training or works opportunities programed because turnover or short-term training results in more than one individual in a given enrollment opportunity. Persons served by more than one program are counted only once.
[4] Completions do not include dropouts.
[5] Post-training employment includes persons employed at time of most recent followup.

[1] Unemployment rate calculated as a percent of civilian labor force.
[2] Insured unemployment under state programs—unemployment rate calculated as a percent of average covered employment. As is the case with other data presented in this table, data relate to the week containing the 12th of the month.
[3] Man-hours lost by the unemployed and persons on part time for economic reasons as a percent of potentially available labor force man-hours.

[1] Unemployment as a percent of the civilian labor force.

[2] Unemployment levels and rates for 1967 differ somewhat from those published elsewhere. The first half of 1967 was the initial period for which data in this series were available on a regular monthly basis, and the procedures used in the Current Population Survey require several months of continuous data before the necessary statistical techniques exert their full effect.

NOTE: Earlier data are available covering persons 14 years and over for the months June and December 1964, June and November 1965, and January and June 1966. These data may be obtained from the article, "Why the Unemployed Look for Work," *Monthly Labor Review*, January 1967.

[1] The base for the unemployment rate includes the employed, classified according to their current job, and the unemployed, classified according to their latest civilian job; excludes unemployed persons who never worked before.

[2] Percent not shown where base is less than 35,000.

[3] Less than 0.05 percent.

Note: See note on table 6 regarding comparability of occupational data for 1971–72 with earlier years.

[1] Data include Alaska and Hawaii beginning 1959 and are therefore not strictly comparable with earlier years. This inclusion resulted in an increase of about 50,000 in the total with unemployment in 1959.

[2] 1966 data revised to refer to persons 16 years of age and over, in accordance with change introduced in January 1967.

[3] Worked 50 weeks or more.

[4] Worked less than 50 weeks.

[5] Not available.

NOTE: Each continuous period of unemployment of at least 1 week's duration is considered one spell of unemployment. The number of weeks of unemployment during the year represents the total number of weeks accumulated in all spells of unemployment during which a person looked for work and did not work at all.

[1] Percent distribution of the occupation groups for 1957 is based on average of data for January, April, July, and October.

[2] Beginning with 1966, data revised to refer to persons 16 years of age and over in accordance with change introduced in January 1967.

NOTE: See note on table 6 regarding comparability of Occupational data for 1971–72 with earlier years.

[1] Includes Puerto Rico beginning in 1961, except sugarcane workers.
[2] Less than 0.05 percent.
[3] Length of current spell of insured unemployment.

NOTE: Because of rounding sums of individual items may not equal totals.

[1] Data relate to production workers in mining and manufacturing; to construction workers in contract construction; and to nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services.

[2] Prior data are as follows:

1909	51.0	1921	43.1	1925	44.5	1929	44.2
1914	49.4	1922	44.2	1926	45.0	1930	42.1
1919	46.3	1923	45.6	1927	45.0	1931	40.5
1920	47.4	1924	43.7	1928	44.4		

[3] Excludes data on nonoffice salesmen.

[4] Beginning 1947, includes data on eating and drinking places.

NOTE: Data include Alaska and Hawaii beginning 1959.

TABLE 84. Scheduled Weekly Hours (Day Shift)—Percent of Plant and Office Workers by Weekly Work Schedule, all Metropolitan Areas, by Industry Division, 1959–70

Weekly hours and year	All industries	Industry division					
		Manufacturing	Transportation, communication, and other public utilities	Wholesale trade	Retail trade	Finance, insurance, and real estate	Selected services
PLANT WORKERS							
Average scheduled weekly hours:							
1959–60	40.5	40.3	40.3	41.2	41.2	----	41.8
1961–62	40.4	40.1	40.3	41.0	41.0	----	41.5
1963–64	40.4	40.2	40.3	40.9	40.9	----	41.1
1965–66	40.5	40.4	40.3	40.9	40.6	----	40.9
1967–68	40.5	40.4	40.3	40.8	40.5	----	40.6
1969–70	40.3	40.4	40.2	40.6	40.2	----	40.5
Scheduled hours, 1969–70:							
Under 40 hours [1]	9	7	2	6	17	----	13
35 hours	3	3	(2)	1	3	----	4
37½ hours	4	3	1	4	9	----	4
40 hours	81	84	94	80	71	----	68
Over 40 hours [1]	10	9	4	13	12	----	19
44 hours	1	1	1	3	2	----	2
45 hours	2	3	1	3	2	----	1
48 hours	3	3	1	2	5	----	12
OFFICE WORKERS							
Average scheduled weekly hours:							
1959–60	39.0	39.4	39.2	39.3	39.6	37.9	38.6
1961–62	38.9	39.4	39.2	39.2	39.5	37.9	38.5
1963–64	38.9	39.3	39.1	39.1	39.4	37.9	38.5
1965–66	38.9	39.4	39.1	39.1	39.4	38.0	38.6
1967–68	38.9	39.4	39.1	39.1	39.3	38.0	38.5
1969–70	38.8	39.3	39.0	39.0	39.2	37.9	38.4
Scheduled hours, 1969–70:							
Under 40 hours [1]	38	23	28	31	27	63	48
35 hours	11	7	11	11	6	18	16
37½ hours	15	10	14	13	15	22	21
38¾ hours	4	3	(2)	3	1	7	2
40 hours	61	76	72	67	71	37	50
Over 40 hours	1	1	(2)	2	2	(2)	3

[1] Includes weekly schedules other than those presented separately.
[2] Less than 0.5 percent.

NOTE: Because of rounding, sums of items may not equal 100 percent.

[1] Output refers to gross national product in 1958 dollars. Employment includes self-employed and unpaid family workers as well as wage and salary workers.

[2] Information available only for establishment series.

[3] Average annual percent change based on the linear least squares trend of the logarithms of the index numbers.

[1] Wages and salaries of employees plus employer's contributions for social insurance and private benefit plans. Also includes an estimate of wages, salaries and supplemental payments for the self-employed.

[2] Index for employees not shown separately because it is identical with figures shown.

[3] Average annual percent change based on the linear least squares trend of the logarithms of the index numbers.

[4] Total payments in current dollars per unit of output (GNP Deflator).

[5] Compensation for all persons per unit of output.

[6] These data were basic measures used to develop the indexes of output per man-hour, hourly compensation, unit labor costs and unit nonlabor payments.

SOURCE: Current and constant dollar gross product and employee compensation data from the Office of Business Economics, U.S. Department of Commerce, Man-hours, compensation of all persons, and real compensation per man-hour data from the Bureau of Labor Statistics, U.S. Department of Labor.

Footnotes for Table 87

[1] The figures shown in parentheses are subject to a wider margin of error than are other measures because of the method for estimating non-production worker man-hours.
[2] Preliminary.
[3] Average annual percent change based on the linear least squares trend of the logarithms of the index numbers.
[4] Not available.
[5] Less than .05 percent.
[6] Indexes for 1953 are not shown since Census data for that year may not be fully comparable with data for other years, possibly due to sampling error.
[7] Man-hour data not available. Output per man-hour represents output per employee; man-hours represent number of employees.
[8] Production workers represent nonsupervisory workers.

SOURCE: *Iron, copper, and coal mining*—Output based on data from the Bureau of Mines, U.S. Department of the Interior, and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Canning and preserving—Output based on data from National Canners Association, U.S. Department of the Interior, U.S. Department of Agriculture, and U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Flour and other grain mill products—Output based on data from the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Sugar—Output based on data from the U.S. Department of Agriculture, and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Candy and other confectionery products—Output based on data from the Bureau of Competitive Assessment and Business Policy and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Malt liquors—Output based on data from the Internal Revenue Service, U.S. Department of the Treasury, and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Bottled and canned soft drinks—Output based on Sales Survey of the Soft Drink Industry, National Soft Drink Association, and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of Labor Statistics, U.S. Department of Labor.

Tobacco products—Output based on data from the Internal Revenue Service, U.S. Department of the Treasury, Bureau of the Census, U.S. Department of Commerce, and Consumer and Marketing Services, U.S. Department of Agriculture. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce and the Bureau of Labor Statistics, U.S. Department of Labor.

Hosiery—Output based on data from the National Association of Hosiery Manufacturers, Inc., and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Paper, paperboard, and pulp mills—Output based on data from the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Corrugated and solid fiber boxes—Output based on data from the Fibre Box Association and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of Labor Statistics, U.S. Department of Labor and the Bureau of the Census, U.S. Department of Commerce.

Manmade fibers—Output based on data from the Textile Economics Bureau nc. Employment and hours based on data from the Bureau of the Census U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Petroleum refining—Output based on data from the Bureau of Mines, U.S. Department of the Interior, and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Tires and inner tubes—Output based on data from the Rubber Manfacturers Association and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Footwear—Output based on data from the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Glass containers—Output based on data from the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Cement, hydraulic—Output based on data from the Bureau of Mines, U.S. Department of the Interior. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Bakery products, Concrete products, Gray Iron Foundries, Metal cans, Radio and TV receiving sets, and Major household appliances—Output based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Steel—Output based on data from the American Iron and Steel Institute and the Bureau of Mines, U.S. Department of the Interior. Employment, and hours based on data from the Bureau of Labor Statistics, U.S. Department of Labor.

Primary copper, lead, and zinc—Output based on data from the Bureau of Mines, U.S. Department of the Interior, and the Bureau of the Census, U.S. Department of Commerce. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Primary aluminum—Output based on data from the Bureau of the Census, U.S. Department of Commerce and the Bureau of Mines, U.S. Department of the Interior. Employment and hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Aluminum rolling and drawing—Output based on data from the Bureau of the Census, U.S. Department of Commerce. Employment and man-hours based on data from the Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor.

Motor vehicles and equipment—Output based on data from company records, Automobile Manufacturers Association, Automobile Invoice Service Company, Automobile Pricing Publications, Inc., National Automobile Dealers Used Car Guide Company, Powers and Co., Inc. (*Ward's Automotive Yearbooks*), Bureau of the Census, U.S. Department of Commerce, and the Bureau of Labor Statistics, U.S. Department of Labor. Employment and hours based on data from the Bureau of Labor Statistics, U.S. Department of Labor, and company records.

Railroads—Based on data from the Interstate Commerce Commission.

Air transportation—Output and employment based on Civil Aeronautics Board data.

Petroleum Pipelines—Output based on data from the Interstate Commerce Commission. Employment and hours based on data from the Bureau of Labor Statistics, U.S. Department of Labor.

Gas and electric utilities—Output based on data from the American Gas Association, Federal Power Commission, Rural Electrification Administration of U.S. Department of Agriculture, and the Bureau of Labor Statistics, U.S. Department of Labor. Employment and hours based on data from the Bureau of Labor Statistics, U.S. Department of Labor.

1972	25.6	6.0	26.0	6.4	23.0	5.2	23.0	5.4	30.4	7.2	40.1	7.6

[1] Defined as those involving 1,000 workers or more.
[2] Estimated.
[3] Not available.
[4] In 1966, data were expanded to include additional nonmanufacturing industries—construction; finance, insurance, real estate; and the service industries.

NOTE: Adjustments include no wage changes, decreases in wages, and increases in wages; increases include only those situations where wages were raised.

[1] In computing the data used in the wage comparisons, aggregates for all industries combined and for manufacturing and nonmanufacturing separately for each area were compiled by multiplying the average weekly salary for selected office jobs and the average straight-time hourly earnings for selected skilled maintenance and unskilled plant jobs by the all-industry employment in the job in all Standard Metropolitan Areas combined. For purposes of this comparison, aggregates for each job and industry group are expressed as percentages of like groups in all metropolitan areas combined, adjusted for differences in survey timing.

[2] Estimates relate to February 1967.
[3] Limited to the New York portion of the SMSA.
[4] Earnings information not collected for plant occupations.
[5] Estimates relate to March 1969.
[6] Estimates relate to April 1970.
[7] Estimates relate to March 1971.
[8] Estimates relate to April 1971.

NOTE: Dashes indicate data do not meet publication criteria.

[1] Union scales are the minimum wage scales (excluding holiday and vacation payments made directly to the worker each pay period) or maximum schedule of hours agreed upon through collective bargaining between trade unions and employers. Rates in excess of the negotiated minimum, which may be paid for special qualifications or other reasons, are not included.

[2] No index of weekly hours computed for this industry.

[3] October 1.

[4] January 2.

[5] Includes lithographic crafts as will all subsequent indexes.

NOTE: Dashes indicate data not available.

[1] Union scales are the minimum wage scales (excluding holiday and vacation payments made directly to the worker each pay period) or maximum schedule of hours agreed upon through collective bargaining between trade unions and employers. Rates in excess of the negotiated minimum which may be paid for special qualifications or other reasons, are not included.

[2] Lithography (offset) workers are included in the index beginning in 1968.

[1] Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.

[2] Data for the periods shown as January 1951–60 cover various months, generally winter, of the year.

[3] Machinery survey was not conducted in 1967; base period limited to 2 years.

[4] The all-area average for the years 1945 through 1953 was made up of the areas shown and Providence, Syracuse, Atlanta, Chattanooga, Tulsa, Cincinnati, Indianapolis, and Seattle-Tacoma.

[5] Data for the 1954 and earlier years were not sufficiently comparable with information for subsequent years to show here, but these data were included in the total for all areas studied.

[6] Except that data for Philadelphia relate to April 1971.

NOTE: Dashes indicate no data or data that do not meet publication criteria.

[1] The scales represent the minimum wage rates (excluding holiday and vacation payments regularly made or credited to the worker each pay period) agreed upon through collective bargaining between employers and trade unions.

[2] The early studies included cities of less than 100,000 population. Since 1953, only cities of 100,000 population or more are represented.

[3] The averages in the book and job tabulation include rates for the semiskilled—bindery women and press assistants and feeders—as well as the highly skilled journeymen, composing room and pressroom workers, and others. The number of semiskilled workers organized in a city may have influence on the average for the city.

[4] The averages shown for drivers and helpers are based on all scales reported for these workers. Helpers were not reported for all truck classifications, and these averages do not reflect or indicate the scale differential between drivers and helpers in a particular city.

[5] The data relate to October 1.

[3] Excludes data on nonoffice salesmen.

[4] Beginning 1947, includes data on eating and drinking places.

[5] 11-month average.

[6] Prior to January 1956, data were based on the application of adjustment factors to gross average hourly earnings. (For a detailed description see the *Monthly Labor Review*, May 1950, pp. 537–540; reprint available, serial No. R 2020.)

NOTE: Data include Alaska and Hawaii beginning 1959.

[1] Derived by assuming that overtime hours are paid at the rate of time and one-half.

[2] 11-month average.

[3] Prior to January 1956, data were based on the application of adjustment factors to gross average hourly earnings. For a detailed description see the *Monthly Labor Review*, May 1950, pp. 537–540; reprint available, serial No. R 2020.

[4] Data are not available for the printing and publishing group, as average overtime rates are significantly above time and one-half. Inclusion of data for the group in the nondurable goods total has little effect.

[1] Data relate to production workers in mining and manufacturing; to construction workers in contract construction; and to nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services.

[2] Excludes data on nonoffice salesmen.

[3] Beginning 1947, includes data on eating and drinking places.

NOTE: Data include Alaska and Hawaii beginning 1959.

[1] In *1972*, the survey covered establishments located in both metropolitan and nonmetropolitan areas, with a minimum of 250 employees in manufacturing and retail trade, and 100 in all other industries studied. The coverage of earlier surveys differed as follows: *1964 and earlier surveys*—Limited to establishments located in metropolitan areas, with 250 employees or more. *1965*—Establishments in nonmetropolitan areas were added to the survey coverage. *1966*—The minimum establishment size was lowered from 250 to 100 employees in transportation, communications, and public utilities; wholesale trade; and services; to 50 employees in finance, insurance, and real estate; and remained unchanged at 250 in manufacturing and retail trade.

[2] Revised definition introduced in 1962; data for 1961 not comparable.

[3] Revised definition introduced in 1969. Data for previous years not comparable because of changes in the number and definitions of work levels.

[4] Insufficient data obtained to warrant presentation of average salaries.

[5] Job added in 1962.

[6] Revised definition introduced in 1965; data for previous years not comparable.

NOTE: Within each occupation, the work levels surveyed, usually designated by Roman numerals with class I assigned to the lowest level, are defined in terms of duties and responsibilities. Specific job factors determining classification, however, varied from occupation to occupation. From 1961 to 1966, the average month of reference for draftsmen was February and, for all other occupations, March. From 1967 to 1971, the average month of reference was June for all occupations. Beginning in 1972, a March average reference period applied. For additional data see BLS annual bulletin *National Survey of Professional, Administrative, Technical, and Clerical Pay.*

Footnotes for Table 107

[1] Earnings of office clerical workers and industrial nurses relate to regular straight-time salaries that are paid for standard workweeks. Earnings of skilled maintenance and unskilled plant workers relate to hourly earnings excluding premium pay for overtime and work on weekends, holidays, and late shifts.

[2] Relates to calendar year. In the 1967–70 editions of this *Handbook*, years referred to fiscal years beginning 6 months prior to the calendar year. For surveys conducted at other than 12-month intervals, the indexes were computed by converting increases to an annual rate. Thus, these indexes may differ from those published in Area Wage Survey bulletins where indexes are computed on increases for the actual time-span.

[3] Includes bookkeeping-machine operators, class B; clerks, accounting, class A and B; clerks, file, class A, B, and C; clerks, order; clerks, payroll; Comptometer operators; keypunch operators, class A and B; office boys and girls; secretaries; stenographers, general; stenographers, senior; switchboard operators, class A and B; tabulating-machine operators, class B; and typists, class A and B.

[4] Data do not meet publication criteria.

[5] Area not surveyed in this calendar year.

[6] Includes carpenters; electricians; machinists; mechanics; mechanics, automotive; painters; pipefitters; and tool and die makers.

[7] Includes janitors, porters, and cleaners; and laborers, material handling.

[1] Earnings of office clerical workers and industrial nurses relate to regular straight-time salaries that are paid for standard workweeks. Earnings of maintenance and toolroom, and custodial and material movement workers relate to hourly earnings, excluding premium pay for overtime and work on weekends, holidays, and late shifts. The information is available individually for 89 Standard Metropolitan Statistical Areas and 1 nonmetropolitan area. Data for similar studies, somewhat more limited in scope, are also available for approximately 77 other areas.

[2] Revised definition introduced in 1962; data for 1961 not comparable.

[1] Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.

[2] The survey covered establishments employing 100 workers or more and classified in industry 2911 (petroleum refineries primarily engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, lubricants, and other products from crude petroleum, and its fractionation products either through straight distillation of crude oil, redistillation of unfinished petroleum derivatives, cracking, or other processes) as defined in the 1967 edition of *The Standard Industrial Classification Manual*, U.S. Office of Management and Budget.

[3] The petroleum refining industry was selected to illustrate the type of data which are available in the Bureau's Industry Wage Survey program. A number of other studies, however, provide separate data for centers of industry concentration, as well as nationwide and regional tabulations. The following industries have been surveyed under this program since 1960: Manufacturing—Basic iron and steel; candy and other confectionery products; cigar manufacturing; cigarette manufacturing; cotton and man-made fiber textiles; fabricated structual steel; fertilizer manufacturing; flour and other grain mill products; fluid milk industry; footwear; hosiery; industrial chemicals; iron and steel foundries; leather tanning and finishing; machinery manufacturing; meat products; men's and boys' separate trousers; men's and boys' shirts (except work shirts) and nightwear; men's and boys' suits and coats; miscellaneous plastics products; motor vehicles and motor vehicle parts; nonferrous foundries; paints and varnishes; paperboard containers and boxes; petroleum refining; pressed or blown glass and glassware; pulp, paper, and paperboard mills; southern sawmills and planing mills; structural clay products; synthetic fibers; synthetic textiles; textile dyeing and finishing; west coast sawmilling; women's and misses' coats and suits; women's and misses' dresses; wood household furniture, except upholstered; wool textiles; and work clothing. Nonmanufacturing—Auto dealer repair shops; banking; bituminous coal mining; communications; contract cleaning services; crude petroleum and natural gas production; eating and drinking places; educational institutions; electric and gas utilities; hospitals; hotels and motels; laundry and cleaning services; life insurance; motion picture theaters; nursing homes and related facilities; and scheduled airlines.

[4] Includes data for regions in addition to those shown separately.

[5] All or vitually all workers were men.

[6] Standard Metropolitan Statistical Areas as defined by the U.S. Office of Management and Budget through January 1968.

NOTE: Leaders indicate no data reported or data that do not meet publication criteria.

TABLE 110. Indexes of Salaries [1] of Federal Classified Employees in the United States Covered by the General Schedule, 1939–71 [2]

[October 1967=100]

Date	Basic salary scales [1]	Average salary rates [1]	Average salaries [1]
August 1939	36.8	34.5	25.4
June 30, 1945	36.9	[3] 34.5	(4)
July 1, 1946	48.6	45.2	34.5
July 1, 1947	48.6	46.0	36.5
July 15, 1948	53.7	51.5	40.7
July 1, 1949	53.7	51.7	41.2
July 1, 1950	55.8	54.5	44.3
July 8, 1951	61.3	59.1	47.6
July 1, 1952	61.3	59.2	48.6
July 1, 1953	61.3	59.8	49.8
July 1, 1954	61.3	60.3	50.8
July 1, 1955 [2]	66.0	65.0	55.4
July 1, 1956	66.0	64.9	56.0
July 1, 1957	66.0	65.0	57.2
July 1, 1958	72.7	72.2	65.0
July 1, 1959	72.7	72.2	66.2
July 1, 1960 [2 5]	78.2	77.4	72.4
July 1, 1961	78.2	77.3	73.3
July 1, 1962	78.2	77.2	74.2
July 1, 1963	82.6	81.6	80.2
July 1, 1964 [5]	89.8	89.3	89.5
July 1, 1965	89.8	89.8	90.7
July 1, 1966 [5]	95.7	95.8	95.7
October 1, 1967 [5]	100.0	100.0	100.0
July 1, 1968 [5]	104.9	104.9	106.5
July 1, 1969 [5]	114.4	114.9	120.0
July 1, 1970	121.3	122.3	130.0
July 1, 1971	128.6	130.0	139.2

[1] Basic salary scales reflect only statutory changes in salaries. Average salary rates show statutory changes and the effect of changes in the proportion of workers at each step within the salary ranges for individual grades. Average salaries measure the effect of these two types of change, as well as change in the proportion of workers in the various grades.

[2] Indexes cover workers now under the General Schedule. Before 1955, they included not only workers under the General Schedule but those covered by the Crafts, Protective, and Custodial Schedule. (As of July 1, 1955, about one-third of the approximately 100,000 employees under the Crafts, Protective, and Custodial Schedule were transferred to the General Schedule. The remaining two-thirds were transferred to wage board classifications, along with approximately 2,500 workers formerly under the General Schedule.) Before 1955, there were only minor differences between the indexes for all workers and for those under the General Schedule.

Beginning with 1960, data include employees in Alaska and Hawaii. The inclusion of these employees did not affect basic salary scales; average salary rates and average salaries were affected by negligible amounts.

[3] Estimated by assuming the same distribution of employees among grades and steps within grades in 1945 as in 1939. Since little or no increase occurred in average salary rates because of in-grade increases during this period, the change in basic salary scales was assumed to be almost the same as in average salary rates.

[4] Not available.

[5] Indexes include increases effective the first pay period beginning in the month.

1963	85	86	86	86	85	84
1965	90	89	91	90	90	90
1967 [2]	100	100	100	100	100	100
1969	114	111	115	113	115	116
1971	131	127	131	129	133	133

[1] Not available.

[2] Beginning with 1967, counties that had county-wide school boards and populations of 100,000 or more (and were located in SMSA's) were included in the data. Previously, only cities with populations of 100,000 or more were represented by the data.

NOTE: In computing average salaries and increases, all teachers in each system were classified according to the average salary in that system. Changes in average salaries exclude the effects of period-to-period changes in the proportions of teachers among city-size groups.

[1] Less than 0.05 percent, or $0.005.

[2] Includes other health benefit programs, principally State temporary disability insurance, not presented separately.

[3] Includes all direct payments to workers. They consist of pay for working time, pay for vacations, holidays, sick leave, and civic and personal leave; severance pay; and nonproduction bonuses.

[4] Includes all employer expenditures for compensation other than for wages and salaries. They consist of expenditures for retirement programs (including direct pay to pensioners under pay-as-you-go private pension plans); expenditures for health benefit programs (except sick leave); expenditures for unemployment benefit programs (except severance pay); payments to vacation and holiday funds; and payments to savings and thrift plans.

[5] Nonoffice workers in manufacturing are equivalent to production workers.

NOTE: Because of rounding, sums of individual items may not equal totals.

[1] Plans whose benefits flow from the employment relationship and are not underwritten or paid directly by government (Federal, State, or local). Excludes workmen's compensation required by statute and employer's liability insurance. Data for government employees covered by plans underwritten by private agencies are included in the series. Specifically included are plans providing government employees with group life insurance, accidental death and dismemberment insurance, and hospital surgical, regular medical, and major medical expense insurance. Retirement and sick leave plans in which the government in its capacity as employer pays benefits directly to its employees are excluded.

[2] Group and wholesale life insurance coverage based on data from Institute of Life Insurance and Health Insurance Association of America, *Group Insurance Coverages in the United States*, annual issues, and *Tally*, October 1972, modified to exclude group plans not related to employment. Also excludes Servicemen's Group Life Insurance issued to cover members in the Armed Forces. Self-insured death benefit plan coverage based on data for various trade union, mutual benefit association, and company administered plans.

[3] Data from the Institute of Life Insurance. (Also, see footnotes 2 and 13).

[4] Data from "Private Health Insurance in 1971: Health Care Services, Enrollment, and Finances" February 1973, and from sources cited in footnote 2. In estimating number of employees covered and contributions to and benefits paid under plans other than group insurance and union and company plans, it was assumed that the proportion of subscribers in employed groups increased gradually from 75 percent in 1950–60 to 83 percent in 1971. Data for hospitalization, surgical, and regular medical coverage adjusted to include employees and their dependents covered by group comprehensive major-medical expense insurance.

[5] Includes private hospital plans written in compliance with State temporary disability insurance law in California.

[6] Represents coverage under group supplementary and comprehensive major-medical insurance underwritten by commercial insurance companies.

[7] Includes private plans written in compliance with State temporary disability insurance laws in California, New Jersey, and New York. Data from Health Insurance Council and from the Institute of Life Insurance (see footnote 2), adjusted to exclude credit accident and health insurance. Data for 1950 modified slightly to adjust for effect of State temporary disability insurance laws on formal paid sick leave and other self-insured plan coverage. Beginning in 1966, group accident and sickness insurance coverage has been adjusted to exclude those with long-term benefit policies, which usually do not provide short term benefits. This coverage is now shown separately.

[8] Based on trade union and industry reports and "Financing Supplemental Unemployment Benefit Plans," *Monthly Labor Review*, November 1969. Excludes dismissal wage and separation allowances, except when financed by supplemental unemployment benefit funds covering temporary and permanent layoffs.

[9] Estimated by the Social Security Administration. Includes pay-as-you-go and deferred profit-sharing plans, plans of nonprofit organizations, union pension plans, and railroad plans supplementing the Federal railroad retirement program. Excludes pension plans for Federal, State, and local government employees as well as plans for the self-employed. Coverage data exclude annuitants.

[10] Coverage of private and public employees related to average number of private and government full-time and part-time civilian employees (table 6.3 in *Survey of Current Business*, July, various years) and the *National Income and Product Accounts of the United States, 1929–1965 Statistical Tables* (*Supplement to the Survey of Current Business*), 1966.

[11] Coverage of private employees related to wage and salary employed labor force in private industry (from table 6.3 in source listed in footnote 10).

[12] Excludes dividends in group insurance.

[13] Group and wholesale life insurance premiums based on data from Institute of Life Insurance and Health Insurance Association of America, *Group Insurance Coverages in the United States*, annual issues, and *Tally*, October 1972, modified to exclude group plans not related to employment, and excludes premiums for the Servicemen's Group Life Insurance plan which went into effect in late 1965. Self-insured death benefits costs based on data for various trade union, mutual benefit associations, and company administered plans.

[14] Unpublished data from the Health Insurance Association of America. Represents premiums for group supplementary and comprehensive major-medical insurance underwritten by commercial insurance carriers.

[15] Data from "Cash Benefits For Short-Term Sickness, 1948–71," *Social Security Bulletin*, January 1973. Includes private plans written in compliance with State temporary disability insurance laws in California, New Jersey, and New York, shown separately in next line. Includes contributions and benefits under long-term disability plans, not available separately.

[16] Unpublished data from the Health Insurance Association of America. Represents benefits paid under group supplementary and comprehensive major-medical insurance underwritten by commercial insurance carriers.

[1] Benefit payment actually being made at a specified time with no deductions or with deductions amounting to less than a month's benefit, i.e., the benefits actually being received.

[2] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[3] July 1957–October 1960, disabled workers aged 50–64; thereafter, disabled workers under age 65.

[4] Beginning 1950, includes wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[5] Beginning 1957, includes disabled persons aged 18 and over whose disability began before age 18 and, beginning September 1965, entitled full-time students aged 18–21.

[6] Beginning 1950, includes surviving divorced mothers with entitled children in their care.

[7] Beginning September 1965, includes widows aged 60–61 and surviving divorced wives aged 60 and over and, beginning March 1968, disabled widows and widowers aged 50 and over.

[8] Represents benefits for persons aged 72 and over who are not insured under the regular or transitional provisions of the Social Security Act.

[9] Data for 1950, 1965, 1968, and 1972 represent awards made under amendments effective in those years.

TABLE 125. Relative Importance of Major Groups of the Consumer Price Index, U.S. City Average, at Dates of Major Weight Revisions

Group	1935–39	January 1950	December 1952	December 1963
All items	100.0	100.0	[1] 100.0	100.0
Food	35.4	33.3	29.6	22.4
Housing	[2] 33.7	25.1	[1] 32.5	33.2
Apparel and upkeep	[3] 11.0	[3] 12.8	9.2	[4] 10.6
Transportation	8.2	11.4	11.3	13.9
Health and recreation	11.7	17.4	17.4	19.5
Medical care	4.0	5.2	5.1	5.7
Personal care	2.4	2.4	2.0	2.8
Reading and recreation	2.9	5.8	5.3	5.9
Other goods and services	2.4	4.0	5.0	5.1

[1] Including home purchase, previously excluded from index coverage.
[2] Including radios, transferred to reading and recreation as of January 1950.
[3] Including laundry and dry cleaning, transferred to Housing as of December 1952.
[4] Including dry cleaning and one-half the weight of laundry service included in housing in December 1952.

TABLE 133. Industry-Sector Price Indexes for the Output of Selected Industries, 1957–72

NOTE: 1971 and 1972 Industry-Sector Price Indexes will be comprehensively revised to include additional data received after initial publication. Major revisions are published as soon as possible following receipt of new data; minor revisions are not published immediately but are accumulated throughout each calendar year for later release. Revised 1971 indexes will be published in late 1973; revised 1972 indexes in 1974.

[1967=100 unless otherwise indicated]

TABLE 134. Average Annual Expenditures, Income, and Savings, All U.S. Urban Families in 1950 Compared With 1960–61

Item	Average per family				Percent change, 1950 to 1960–61	Percent of expenditures for current consumption	
	1950 [1]	1960	1961	1960–61 [2]		1950	1960–61
Expenditures for current consumption [3]	$3,808	$5,368	$5,381	$5,390	41.5	100.0	100.0
Food	1,130	1,312	1,306	1,311	16.0	29.7	24.3
Tobacco	68	96	93	95	39.7	1.8	1.8
Alcoholic beverages	65	94	87	90	38.5	1.7	1.7
Housing, total	1,035	1,584	1,585	1,588	53.4	27.2	29.5
Shelter, fuel, light, refrigeration, and water	596	983	997	992	66.4	15.6	18.4
Household operations	178	320	317	319	79.2	4.7	5.9
Housefurnishings and equipment	261	281	271	277	6.1	6.9	5.1
Clothing, materials, services	437	550	563	558	27.7	11.5	10.4
Personal care	85	153	156	155	82.4	2.2	2.9
Medical care	197	345	362	355	80.2	5.2	6.6
Recreation	168	215	218	217	29.2	4.4	4.0
Reading and education	58	111	109	109	87.9	1.5	2.0
Automobile purchase and operation	443	696	690	700	58.0	11.6	13.0
Other transportation	67	94	92	93	38.8	1.8	1.7
Other expenditures	55	118	120	119	116.4	1.4	2.2
Gifts and contributions	165	302	298	303	83.6		
Personal insurance	177	324	323	324	83.1		
Money income before taxes	4,237	6,595	6,756	6,691	57.9		
Money income after taxes	3,910	5,829	5,957	5,906	51.0		
Other money receipts	49	73	93	82	67.3		
Net change in assets and liabilities [4]	−74	152	219	177			
Account balancing difference [5]	−117	−244	−171	−207			
Number of families in sample	12,489	4,463	4,879	[2] 9,476			
Estimated number of families (in thousands)	31,539	40,131	40,131	40,131			
Average family size	3.0	3.1	3.1	3.1			
Percent nonwhite families	10	12	13	12			
Percent homeowners	48	52	54	53			
Percent auto owners	59	72	73	73			

[1] From the Survey of Consumer Expenditures in 1950. See *Study of Consumer Expenditures, Incomes and Savings, Statistical Tables, Urban U.S.—1950*, (University of Pennsylvania, 1956–57), Vol. XVIII.

[2] Includes families surveyed for 1959 in Anchorage, Alaska. Data for Alaska were not included in the columns for 1960 and 1961.

[3] The classification of items in the 2 surveys is not strictly comparable.

[4] The algebraic sum of increases and decreases in assets and liabilities. Net increases in assets or decreases in liabilities represent a net saving (+) during the year. Net decreases in assets or increases in liabilities represent a deficit (−) or net dissaving.

[5] A statistical measure of the net reporting discrepancy of the receipts and disbursements accounts. In this table, the balancing difference is obtained by subtracting current consumption expenditures, gifts and contributions, personal insurance, and the net change in assets and liabilities from the sum of money income after taxes and other money receipts. If reported receipts are less than disbursements (including savings or dissavings), the balancing difference is negative (−).

SOURCE: For 1960–61 and 1961 and 1960 see *Survey of Consumer Expenditures, 1960–61: Consumer Expenditures, Urban United States, 1960–61* (BLS Report No. 237–38, 1964)

TABLE 135. Average Annual Income and Expenditures of Families (Two Persons or More) of City Wage and Clerical Workers' Six Selected Periods Since 1888–91

Item	1888–91 survey	1901 survey	1917–19 survey	1934–36 survey	1950 survey	1960–61 survey
Number of families covered	2,562	11,156	12,096	14,469	5,994	[1] 19,455
Average family size (persons)	3.9	4.0	4.9	3.6	3.3	3.6
Average money income before taxes (in current dollars)	$573	$651	$1,505	$1,518	$4,299	$6,763
	In dollars of 1950 purchasing power [2]					
Money income after personal taxes	$1,793	$1,914	$2,408	$2,659	$4,005	$4,877
Average outlays						
Current outlays for goods and services (total)	1,671	1,817	2,163	2,564	4,076	4,604
Food and drink	797	952	854	1,030	1,335	1,297
Clothing			343	309	473	541
Shelter (current expense)			252	356	448	539
Fuel, light, refrigeration and water			126	158	153	207
Housefurnishings and equipment			109	119	281	297
Household operation				80	167	225
Automobile purchase and operation				150	457	635
Other transportation				57	81	50
Medical care				88	213	243
Personal care			479	55	93	130
Recreation				67	191	194
Reading				27	36	34
Education				11	19	42
Tobacco				46	80	88
Miscellaneous goods and services				11	49	82

[1] Estimated number of families, in thousands, represented by sample.

[2] The cost of living index developed by Paul Douglas American Economic Review, Supplement, March 1926, p. 22) was used to convert the 1888–91 and 1901 expenditures into 1950 dollars. The Consumer Price Index of the Bureau of Labor Statistics was used for the surveys of 1917–19, 1934–36, and 1950, and 1960–61.

SOURCE: For 1888–91, 1901, and 1917–19, see *How American Buying Habits Change* (U.S. Department of Labor, 1959), p. 49. Data for 1934–36 and 1950 are from "Standards and Levels of Living of City-Worker Families", *Monthly Labor Review*, September 1956, p. 1018. Averages for 1960–61 have been compiled from unpublished tabulations from the Bureau's survey of consumer expenditures, 1960–61: data relate to wage and clerical workers' families of 2 persons or more in urban places of 2,500 and over.

[1] The family consists of an employed husband, age 38, a wife not employed outside the home, an 8-year-old girl, and 13-year-old boy.

[2] Housing includes shelter, household operations, and housefurnishings. All families with the lower budget are assumed to be renters.

[3] Average budgets for automobile owners and nonowners are weighted by the following proportions of families: Boston, Chicago, New York, and Philadelphia, 50 percent for both automobile owners and nonowners; all other metropolitan areas, 65 percent for automibile owners, 35 percent for onowners; nonmetropolitan areas, 100 percent for automobile owners.

[4] In total medical care, average budgets for medical insurance were weighted by the following proportions: 30 percent for families paying full cost of insurance; 26 percent for families paying half cost; 44 percent for families covered by noncontributory insurance plans (paid by employer).

[5] Includes allowances for gifts and contributions, life insurance, and occupational expenses.

[6] As defined in 1960-61. For a detailed description of current and previous geographical boundaries, see the 1967 edition of *Standard Metropolitan Statistical Areas*, prepared by the Office of Management and Budget.

[7] Places with populations of 2,500 to 50,000.

[1] The family consists of an employed husband, age 38, a wife not employed outside the home, an 8-year-old girl, and a 13-year-old boy.

[2] Housing includes shelter, household operations, and housefurnishings. Average budgets for shelter are weighted by the following proportions: 25 percent for rental costs, 75 percent for homeowner costs.

[3] Average budgets for automobile owners and nonowners are weighted by the following proportions: Boston, Chicago, New York, and Philadelphia, 80 percent for owners, 20 percent for nonowners; Baltimore, Cleveland, Detroit, Los Angeles, Pittsburgh, San Francisco, St. Louis, and Washington, with 1.4 million of population or more in 1960, 95 percent for automobile owners, and 5 percent for nonowners; all other areas, 100 percent for automobile owners.

[4] In total medical care, average budgets for medical insurance were weighted by the following proportions: 30 percent for families paying full cost of insurance; 26 percent for families paying half costs; 44 percent for families covered by noncontributory insurance plans (paid by employer).

[5] Includes allowances for gifts and contributions, life insurance, and occupational expenses.

[6] As defined in 1960–61. For a detailed description of current and previous geographical boundaries, see the 1967 edition of *Standard Metropolitan Statistical Areas*, prepared by the Office of Management and Budget.

[7] Places with populations of 2,500 to 50,000.

[1] The family consists of an employed husband, age 38, a wife not employed outside the home, an 8-year-old girl, and a 13-year-old boy.

[2] Housing includes shelter, household operations, and housefurnishings. All families with the lower budget are assumed to be renters.

[3] Average budgets for automobile owners and nonowners are weighted by the following proportions of families: Boston, Chicago, New York, and Philadelphia, 50 percent for both automobile owners and nonowners, all other metropolitan areas, 65 percent for automobile owners, 35 percent for nonowners; nonmetropolitan areas, 100 percent for automobile owners.

[4] In total medical care, average budgets for medical insurance were weighted by the following proportions: 30 percent for families paying full cost of insurance; 26 percent for families paying half cost; 44 percent for families covered by noncontributory insurance plans (paid by employer).

[5] As defined in 1960-61. For a detailed description see the 1967 edition of the *Standard Metropolitan Statistical Areas*, prepared by the Office of Management and Budget.

[6] Places with population of 2,500 to 50,000.

[1] The family consists of an employed husband, age 38, a wife not employed outside the home, an 8-year-old girl, and a 13-year-old boy.

[2] Housing includes shelter, household operations, and housefurnishings. Average budgets for shelter are weighted by the following proportions: 25 percent for rental costs, 75 percent for homeowner costs.

[3] Average budgets for automobile owners and nonowners were weighted by the following proportions: Boston, Chicago, New York, and Philadelphia, 80 percent for owners, 20 percent for nonowners; Baltimore, Cleveland, Detroit, Los Angeles, Pittsburgh, San Francisco, St. Louis, and Washington, with 1.4 million of population or more in 1960, 95 percent for automobile owners, and 5 percent for nonowners; all other areas, 100 percent for automobile owners.

[4] In total medical care, average budgets for medical insurance were weighted by the following proportions: 30 percent for families paying full cost of insurance; 26 percent for families paying half cost; 44 percent for families covered by noncontributory insurance plans (paid by employer).

[5] As defined in 1960-61. For a detailed description see the 1967 edition of the *Standard Metropolitan Statistical Areas*, prepared by the Office of Management and Budget.

[6] Places with populations of 2,500 to 50,000.

[1] A husband age 65 or over and his wife.

[2] Housing includes shelter, household operation and housefurnishings. Average budgets for shelter are weighted by the following proportions: 40 percent for rental costs, 60 percent for homeowner costs.

[3] Average budgets for automobile owners and nonowners were weighted by the following proportions of families: Boston, Chicago, New York, Philadelphia, 100 percent for nonowners; all other metropolitan areas, 45 percent for car owners, 55 percent for nonowners; nonmetropolitan areas, 55 percent for car owners, 45 percent for nonowners.

[4] Includes allowances for gifts and contributions.

[5] For a detailed description see the 1967 edition of "Standard Metropolitan Statistical Areas," prepared by the Office of Management and Budget.

[6] Places with populations of 2,500 to 50,000.

[1] A husband age 65 or over and his wife.

[2] Housing includes shelter, household operation, and housefurnishings. Average budgets for shelter are weighted by the following proportions: 40 percent for rental costs, 60 percent for homeowner costs.

[3] Average budgets for automoblie owners and nonowners were weighted by the following proportions of families: Boston, Chicago, New York, Philadelphia, 100 percent for nonowners; all other metropolitan areas, 45 percent for car owners, 55 percent for nonowners; nonmetropolitan areas, 55 percent for car owners, 45 percent for nonowners.

[4] Includes allowances for gifts and contributions.

[5] For a detailed description see the 1967 edition of "Standard Metropolitan Statistical Areas," prepared by the Office of Management and Budget.

[6] Places with population of 2,500 to 50,000.

[1] A husband age 65 or over and his wife.

[2] Housing includes shelter, household operation, housefurnishings, and lodging out-of-home city. Average budgets for shelter are weighted by the following proportions: 30 percent for rental costs, 70 percent for homeowner costs.

[3] Average budgets for automobile owners and nonowners were weighted by the following proportions of families: Boston, Chicago, New York, Philadelphia, 75 percent for car owners, 25 percent for nonowners; all other metropolitan and nonmetropolitan areas, 100 percent for car owners.

[4] Includes allowances for gifts and contributions and life insurance.

[5] For detailed description see the 1967 edition of "Standard Metropolitan Statistical Areas," prepared by the Office of Management and Budget.

[6] Places with populations of 2,500 to 50,000.

[1] Excludes gifts and contributions, life insurance, occupational expenses, social security and disability payments, and personal taxes.

[2] Estimated by applying the scale values in table 149 to the consumption costs for a 4-person family in tables 136, 137 and 138.

[3] Total budgets for family consumption for the 4-person family at specified levels of living, as shown in tables 136, 137, and 138.

TABLE 149. Revised Equivalence Scale[1] for Urban Families of Different Size, Age, and Composition

[4-person family—husband, age 35–54, wife, 2 children, older 6 to 15=100]

Size and type of family	Age of head			
	Under 35	35–54	55–64	65 or over
One person	35	36	32	28
Two persons:				
Husband and wife	49	60	59	51
One parent and child	40	57	60	58
Three persons:				
Husband, wife, child under 6	62	69	----	----
Husband, wife, child 6–15	62	82	88	81
Husband, wife, child 16–17	----	[2]91	88	----
Husband, wife, child 18 or over	----	82	85	77
One parent, 2 children	67	76	82	75
Four persons:				
Husband, wife, 2 children (older under 6)	72	80	----	----
Husband, wife, 2 children (older 6–15)	77	100	105	95
Husband, wife, 2 children (older 16–17)	----	113	125	----
Husband, wife, 2 children (older 18 or over)	----	96	110	89
One parent, 3 children	88	96	----	----
Five persons:				
Husband, wife, 3 children (oldest under 6)	87	97	----	----
Husband, wife, 3 children (oldest 6–15)	96	116	120	----
Husband, wife, 3 children (oldest 16–17)	----	128	138	----
Husband, wife, 3 children (oldest 18 or over)	----	119	124	----
One parent, 4 children	108	117	----	----
Six persons or more:				
Husband, wife, 4 children or more (oldest under 6)	101	----	----	----
Husband, wife, 4 children or more (oldest 6–15)	110	132	140	----
Husband, wife, 4 children or more (oldest 16–17)	----	146	----	----
Husband, wife, 4 children or more (oldest 18 or over)	----	149	----	----
One parent, 5 children or more	125	137	----	----

[1] The scale values shown here are percentages to be applied to the total cost of consumption of the base family (4 persons—husband, age 35–54, wife, 2 children, older 6–15 years) to estimate the annual costs of goods and services required to provide the same level of living for urban families of different size, age, and composition. The values may also be applied to after-tax income, i.e., family income after deduction of income and other personal taxes.

[2] Revised.

State and local	19	948	4.6	16	933	5.9	3	15	.3

[1] These columns are nonadditive; many unions have membership in more than one industrial classification.

[2] Number of members computed by applying reported percentage figures to total membership, including membership outside continental United States. Total membership, moreover, may include retired and unemployed workers.

[3] Less than 0.05 percent.

[4] Includes railroads, air, bus, truck and water transportation, and allied services.

[5] Includes hotels, laundries and other personal services, repair services, motion pictures, amusement and related services, hospitals, educational instituions, and nonprofit membership organizations.

NOTE: Because of rounding, sums of individual items may not equal totals.

Other	15	11	.1	9	9	6	2

[1] Based on reports from national and international unions that were asked to report their average dues-paying membership for the period indicated. Members of Federal labor unions and local industrial unions directly affiliated with the AFL–CIO are not accounted for in these estimates. Also excluded are members of unaffiliated unions not interstate in scope. Membership figures for areas outside the United States were compiled primarily from union reports to the Bureau. For unions which did not report Canadian membership, data were secured from *Labour Organizations in Canada*, various editions (Ottawa, Canada, Department of Labour, Economics and Research Branch).

[2] Less than 0.05 percent.

[3] Less than 500 members.

NOTE: Because of rounding, sums of individual items may not equal totals.

1970	20,751	1,371	19,381	85,903	22.6	70,644	27 4

[1] Includes a relatively small number of trade union members in areas outside the United States. This figure was 105,000 in 1964.

[2] Midpoint of range 14,000,000 to 16,000,000.

[3] Midpoint of range 16,500,000 to 17,000,000.

[1] The number of stoppages and workers relate to those stoppages beginning in the year; average duration, not computed until 1927, relates to stoppages ending in the year. Man-days of idleness, also not obtained until 1927, includes all stoppages in effect.

[2] The number of workers involved in some strikes which occurred between 1916 and 1926 is not known. However, the missing information is for the smaller disputes and it is believed that the total given is fairly accurate.

In these tables, workers are counted more than once if they were involved in more than 1 stoppage during the year.

[3] Figures are simple averages; each stoppage is given equal weight regardless of its size.

[4] No information.

[5] The figures for idleness as a percent of estimated working time were revised to reflect a more comprehensive base of working time by the inclusion of agricultural and government employment.

[1] Includes disputes between unions of different affiliation, such as those between AFL-CIO affiliates and independent organizations.
[2] Includes disputes between unions, usually of the same affiliation or 2 locals of the same union, over representation of workers.
[3] Includes disputes within a union over the administration of union affairs or regulations.
[4] Less than 0.05 percent.
[5] Fewer than 100 workers.

NOTE: Because of rounding, sums of individual items may not equal totals.

Footnotes to table 158

[1] The all-industries estimates were revised in 1968 to reflect a more comprehensive base of working time by the inclusion of agricultural and government employment. Data for 1956–67 have been recalculated to include this new base.

[2] Stoppages extending into 2 industry groups or more have been counted in each industry affected; workers involved and man-days idle were allocated to the respective groups.

[3] Less than 0.005 percent.

[4] Excludes government and agriculture.

[5] Not available.

[6] Municipally operated utilities are included in transportation communication, and other public utilities.

[7] For statistical purposes, the stoppages reported have been deemed to fall within the Bureau's definition at a work stoppage. The decision does not constitute a legal determination that a work stoppage has taken place in violation of any law or public policy.

[8] Man-days of employment in the primary metal industries group during the steel strike have been computed on the basis of average employment throughout the affected months, rather than on the usual basis of employment in the pay period ending nearest the 15th of each month. In July, employment in primary metals was 1,266,000 in the pay period ending the 15th, and was presumed to be 778,000 during the second half of the month. In November, employment was 1,196,000 in the pay period ending nearest the 15th, and was presumed to hold at this level in the last 3 weeks of the month, but was reduced by 476,000 in the first week of the month, during which time the steel strike was in progress.

If the percentage of time lost were calculated on the basis of ratio of time lost to time worked plus time lost, the percentages would have been 12.12 in primary metal industries and 1.33 in the manufacturing group.

NOTE: Because of rounding, sums of individual items may not equal totals.

[1] Stoppages extending across State lines have been counted separately in each State affected; workers involved and man-days idle were allocated among the States.

[2] Not available.

[3] Less than 0.005 percent.

NOTE: Because of rounding, sums of individual items may not equal totals.

[1] Includes the Contract Work Hours and Safety Standards Act, Davis-Bacon and related acts, Service Contract Act, except Public Contracts Act which is included in FLSA.

[2] Includes a few cases for which data do not relate to the same year in which the underpayment disclosures were reported.

[3] Employees in investigated establishments during most recent workweek of period covered by investigation who were covered by, and not exempt from, the minimum wage provisions of any of the acts.

[4] The figure shown is an unduplicated count of employees found underpaid.

[5] Includes disclosures under the Fair Labor Standards and Public Contracts Acts.

[6] Equal Pay Act of 1963, amending Fair Labor Standards Act, became effective June 11, 1964.

[7] The Age Discrimination in Employment Act became effective June 12, 1968.

[8] Includes employees underpaid under the overtime provision only.

[9] Not available.

[10] Excludes 5,314 establishments investigated and 13,965 employees found underpaid $991,706 in fiscal year 1971; 14,042 establishments and 36,232 employees found underpaid $2,905,533 in fiscal year 1972 in which compliance was achieved by conciliation rather than formal investigation. Also excluded are 53 establishments investigated and 56 employees who were found to have been illegally discharged in violation of Section 304 of Title III (Wage Garnishment) of the Consumer Protection Act. (The garnishment section of the Act became effective July 1, 1970). These employees were found owed $49,311 in back wages. In fiscal year 1972 there were 43 establishments investigated and 48 employees illegally discharged who were found owed $33,016 in back wages.

[1] See technical note for definitions of terms and survey methods.
[2] Industry group totals (2- and 3-digit code numbers) are weighted (see technical notes) and include data for industries not shown separately.
[3] *Standard Industrial Classification Manual*, 1957 Edition for years 1958–67, with modifications of the 1963 supplement for years 1964–67, 1967 Edition for years 1968–69. The letter "P" in the code number indicates that the industry group is only a part of the total industry as defined.
[4] Compiled by the Bureau of Mines, U.S. Department of the Interior.
[5] Industry classifications not strictly comparable to the *Standard Industrial Classification Manual*.
[6] Except for anthracite and oil and natural gas, data for 1969 are preliminary and subject to change.
[7] Compiled by the Bureau of Employees' Compensation, U.S. Department of Labor. Military personnel not included.
[8] Data for 1960 and 1961 are available from the Bureau of Mines, U.S. Department of the Interior, but are not directly comparable to those for 1962 and following years.
N.e.c. = Not elsewhere classified.

[1] Midyear estimates.
[2] Either experienced labor force or employed persons as percent of the total labor force. Data taken from population censuses usually relate to the experienced labor force; data taken from other sources, to employed persons.
[3] Includes forestry, hunting and fishing unless otherwise noted.
[4] Code: A—population census
B—labor force sample survey
C—official estimate
[5] Population census.
[6] Excludes military personnel in barracks and 274,668 nationals abroad of whom 229,020 are in the labor force. Labor force excludes about 1,200,000 females mainly occupied in agriculture.
[7] Labor force excludes 99,445 persons 14 years of age.
[8] Indian jungle population (estimated at 150,000 persons in 1956) excluded. Agriculture includes mining and quarrying. Manufacturing includes construction in 1950 and 1960 and public utilities in 1950. Construction accounted for 3.5 percent of the labor force in 1960.
[9] Labor force excludes the Armed Forces (106,000 persons in 1966) and populations of the Yukon and Northwest Territories.
[10] Indian jungle population (128,000 persons) and the population of certain areas where the census was not carried out (191,500 persons) excluded.
[11] Percentages exclude 73,000 persons unemployed for 13 weeks or more.
[12] Indian jungle population (estimated at 100,800 persons) and an estimated underenumeration of 412,800 persons excluded.
[13] Alaska and Hawaii excluded in 1950. Agriculture excludes forestry and fishing. Manufacturing data are from an establishment survey and include wage and salary workers only.
[14] Indian jungle population (56,700 persons in 1950 and 31,800 persons in 1961) excluded.
[15] Armed Forces excluded.
[16] Kashmir-Jammu, the Jullundur area, and the tribal areas of Assam excluded. Labor force figures exclude family workers (37,937,200 persons).
[17] Parts of the North East Frontier Agency excluded (total population, 297,853 persons). Labor force figures exclude unemployed persons.
[18] Labor force excludes unsettled population (about 244,100 persons).
[19] Labor force excludes unemployed.
[20] Military personnel in barracks excluded.
[21] Armed Forces and persons living in certain frontier regions excluded.
[22] Armed Forces excluded.
[23] Agriculture excludes hunting and fishing in 1951.
[24] Agriculture excludes hunting and fishing; manufacturing includes mining and quarrying and electricity for 1956 and 1965.
[25] Agriculture excludes fishing.
[26] Military conscripts excluded. 1971 population data is not comparable with those for previous years.
[27] Military conscripts and unemployed excluded; permanent residents of institutions (300,000 persons) included. Percent engaged in manufacturing is not entirely comparable with 1960 and later data.
[28] Agriculture excludes sea fishing; manufacturing includes mining and quarrying, electricity and gas production, and sea fishing.
[29] Labor force excludes military conscripts and relates to continental Portugal only. 1970 population data is not comparable with those for previous years.
[30] Agriculture excludes forestry, hunting, and fishing; manufacturing includes mining and quarrying, forestry, and fishing, but excludes printing and publishing.
[31] Wage and salary workers exclude paid family workers. Manufacturing includes stone quarrying.
[32] Manufacturing includes mining and quarrying and public utilities. Labor force data are for persons 14 years old and above 1950 through 1969. Beginning in 1970 data refer to persons 16–74 years old.
[33] Manufacturing includes construction, transportation, and communications.
[34] Northern Ireland excluded. Wage and salary workers exclude the Armed Forces and unemployed.
[35] Agriculture and manufacturing include wage and salary workers only. 1971 population data is not comparable with those for previous years.
[36] Residents of institutions included. For 1961, agriculture excludes hunting and fishing.
[37] Full-blooded aborigines excluded.

NOTE: In so far as possible, the population estimates include national Armed Forces and diplomatic personnel and their dependents stationed outside the territory, and exclude alien Armed Forces, enemy prisoners of war, and alien diplomatic personnel and their dependants stationed inside the country.

The labor force data refer to the total of employed persons (including self-employed persons, wage and salary workers, and unpaid family workers) and unemployed persons, to the extent data are available. However, the figures are often not comparable because of differences between countries in the definitions used and methods of collection, e.g., differences in the minimum age for inclusion in the labor force; the extent to which family workers are included; the extent to which unemployed persons are included (particularly inexperienced new entrants into the labor force, who are frequently excluded from census data); and whether the count of persons in the labor force is based on usual employment status or actual status as of a particular day or other brief time period. The count of workers in agriculture is especially affected by the extent to which family workers are included and whether the count is based on usual or actual status. For similar reasons, the data for individual countries may not be comparable from one period to another, especially when the data are based on different sources, such as a census and a labor force survey.

[1] Published and adjusted data for the United States, Australia, and Canada are identical.

[2] Published figures for Italy, Japan, Sweden, and Germany include military personnel.

[3] Not available.

[4] Preliminary estimates based on incomplete data.

[5] Published figures for the United States, Australia, Canada, Italy, Japan, and Sweden refer to unemployment as recorded by sample labor force surveys; for France, to annual estimates of unemployment; and for Great Britain and Germany, to the registered unemployed.

[6] Adjusted figures: as a percent of the civilian labor force. Published figures; for France, unemployment as a percent of the civilian labor force; for Italy, Japan, and Sweden, unemployment as a percent of the civilian labor force plus career military personnel; for Great Britain and Germany, registered unemployed as a percent of employed wage and salary workers plus the unemployed. With the exception of France, which does not publish an unemployment rate, these are the usually published unemployment rates for each country. Published rates shown for Great Britain and Germany cannot be computed from the data contained in this table.

NOTE: Data for the United States relate to the population 16 years of age and over. Published data for Canada, France, Italy, Sweden, and Germany relate to the population 14 years of age and over; for Sweden, to the population age 16 to 74; and for Australia, Great Britain and Japan, to the population 15 years of age and over. The adjusted statistics, insofar as possible, have been adapted to the age at which compulsory schooling ends in each country. Therefore, adjusted statistics for France and Sweden relate to the population 16 years of age and over; and for Germany, to the population 15 years of age and over. The age limits of adjusted statistics for Great Britain, Italy, and Japan coincide with the age limits of the published statistics. Statistics for Sweden remain at the lower age limit of 16, but have been adjusted to include persons 75 years of age and over. Although schooling is usually required until age 15 or 16 in Canada, the Canadian data remain at the 14-year-old age limit because sufficient data are not available for adjustment purposes.

SOURCE: National sources and statistical publications of the International Labour Office, the Organization for Economic Cooperation and Development, and the Statistical Office of the European Communities. Some data are based partly on estimates.

[1] Unless otherwise indicated, average hourly earnings refer to gross cash remuneration per paid hour, before deductions for taxes and social security contributions, including overtime pay and shift differentials, regular bonuses and premiums, pay for time not worked, and cost-of-living adjustments, but excluding bonuses not paid regularly each pay period. Family allowances paid by the employer and the value of payment in kind are excluded by some countries, included by others.

[2] Hours paid for the United States, Canada, Germany, and Switzerland; hours worked for Austria, Belgium, Italy, Japan, Sweden, and the United Kingdom; and normally scheduled hours adjusted for overtime and for time lost because of technical reasons or production cutbacks for France and the Netherlands.

[3] Including mining and quarrying. Earnings are monthly earnings, including irregular bonuses.

[4] Not available.

[5] October only.

[6] 1961.

[7] Preliminary.

[8] Earnings are per hour worked and exclude pay for time not worked.

[9] Including construction, transportation, trade, and some services. October only.

[10] Excluding the Saar in 1955 and including West Berlin beginning 1965r Workers absent from work more than 3 days due to sickness, accident, o personal reasons are excluded from the earnings data.

[11] Earnings are per hour worked and include irregular bonuses.

[12] Excluding pay for time not worked and irregular bonuses. In 1970 average hourly earnings excluding pay for time not worked and irregular bonuses were 606 Lira.

[13] Regular workers in establishments employing 30 regular workers or more. Earnings are per hour worked and include biannual bonuses.

[14] Including mining and quarrying and construction. October only.

[15] Including mining and quarrying. Earnings are per hour worked and include irregular bonuses.

[16] Excluding pay for time not worked and irregular bonuses. In 1969 average hourly earnings excluding pay for time not worked and irregular bonuses were 10.62 Krona.

[17] Adult workers only. October each year.

[18] Full-time adult workers only. October each year. Earnings are per hour worked and include irregular bonuses.

NOTE: M=Men; W=Women.

[1] Average hourly earnings generally refer to gross cash remuneration before deductions for taxes and social security contributions and include overtime pay, shift differentials, regular bonuses and premiums, and cost-of-living adjustments. Pay for time not worked, bonuses not paid regularly each pay period, and other supplementary benefits are included by some countries, excluded by others. Earnings are per paid hour for some countries, per hour worked for other countries. The data refer to wage workers of both sexes without distinction as to age in manufacturing industry. Exceptions are indicated by footnotes.

[2] Minimum earnings. Unskilled workers.

[3] Not available.

[4] Monthly earnings. Including mining and quarrying.

[5] Preliminary.

[6] Monthly earnings. Including salaried employees.

[7] Adult workers only. Data refer to establishments that are members of the Danish Employers Confederation. It is considered that the establishments samples do not entirely represent the general manufacturing wage structure in the country.

[8] Including construction, transportation, trade, and some services prior to 1964.

[9] Including West Berlin beginning 1964. Workers absent more than 3 days due to sickness, accident, or personal reasons are excluded.

[10] Regular workers in establishments employing 30 regular workers or more.

[11] Monthly earnings.

[12] Adult male workers only. Including mining and quarrying.

[13] Including salaried employees.

[14] Including mining and quarrying.

[15] Adult male workers only.

[16] Daily earnings. Adult workers only.

[17] Daily earnings. Including salaried employees.

[18] Full-time workers only.

[1] Average hourly earnings adjusted for changes in purchasing power since the base period.

[2] Monthly earnings. Including mining and quarrying.

[3] Preliminary.

[4] Consumer price adjustment excluding rent.

[5] Adult workers only. Data refer to establishments only that are members of the Danish Employers Confederation. Consumer price adjustment excluding rent prior to 1964.

[6] Not available.

[7] Including construction, transportation, trade and some services prior to 1964. Consumer price adjustment refers to Paris only prior to 1962.

[8] Including West Berlin beginning 1962 for prices and 1964 for earnings.

[9] Regular workers in establishments employing 30 regular workers or more.

[10] Adult male workers only. Including mining and quarrying.

[11] Including mining and quarrying.

[12] Adult male workers only.

[13] Full-time workers only.

[1] Workers are counted more than once if they were involved in more than 1 stoppage during the year.

[2] Per thousand persons with paid hours in nonagricultural industries. Days lost include all stoppages in effect.

[3] The number of stoppages and workers relate to those stoppages beginning in the year. Excludes disputes involving fewer than 6 workers and those lasting less than 1 full day or shift.

[4] Excludes disputes in which the time lost is less than 10 man-days. Excludes workers indirectly affected.

[5] May and June, the period of the national strike, excluded.

[6] Excludes the Saar for 1955–56 and includes West Berlin beginning 1961. Excludes disputes lasting less than 1 day, except those involving a loss of more than 100 working days.

[7] Not available.

[8] Excludes political strikes and workers indirectly affected.

[9] Based on unofficial estimates of the number of paid workers in nonagricultural industries.

[10] Excludes workers indirectly affected and disputes lasting less than 4 hours.

[11] Less than 0.5 days.

[12] Excludes disputes (a) not connected with terms of employment or conditions of labor, and (b) involving fewer than 10 workers or lasting less than 1 day, unless a loss of more than 100 working days is involved.

Mean income	$8,362	$6,311	$8,692	$7,790	$9,536	$12,999	$10,755	$15,234	(x)

[1] Data for 1963–66 are for all families with heads 14 years old and over. Beginning in 1967 data are restricted to families with heads 25 years old and over.

Note on reliability of the data.—These figures are estimates derived from sample surveys of households and, therefore, are subject to sampling variability. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting.

SOURCE: Current Population Survey, Bureau of the Census.

NOTE:—Zero or less than 0.05 percent.
X Not Applicable.
B Base less than 200,000.
C Base less than 75,000.
< Denotes "less than."
