

Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies,¹ and then making the scanned versions text-searchable.² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that some material may have been redacted from this document if that material was received on a confidential basis. Redacted material is indicated by occasional gaps in the text or by gray boxes around non-text content. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optical character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Prepared for the Federal Open Market Committee

By the staff Board of Governors of the Federal Reserve System

June 18, 1976

MONETARY AGGREGATES AND
MONEY MARKET CONDITIONS

Recent Developments

(1) Growth in M_1 slowed to a 6 per cent annual rate in May--following April's exceptionally rapid advance--and appears to be moderating somewhat further in June. Thus, for the May-June period, M_1 expansion is now projected at around a $5\frac{1}{2}$ per cent annual rate, just below the mid-point of the Committee's range. M_2 is projected to expand at around an $8\frac{1}{2}$ per cent rate during May and June, also well below its pace in April, but near the upper bound of the Committee's range. Growth in the time deposit component of M_2 has been somewhat greater than expected in recent weeks, despite a marked diminution of inflows to savings deposits, as market rates moved above the ceiling rate on passbook savings. Inflows of funds to nonbank thrift institutions were well maintained in May.

Growth in Monetary Aggregates
over May-June Period
(SAAR in per cent)

	<u>Ranges</u>	<u>Latest Estimates</u>
M_1	4 to $7\frac{1}{2}$	5.6
M_2	5 to 9	8.7

Memo:

Federal funds rate

<u>Avg. for statement</u> <u>week ending</u>	
May 19	5.28
26	5.50
June 2	5.54
9	5.44
16	5.47

(2) Following the May 18 FOMC meeting, the Desk promptly became somewhat less accommodative in the provision of reserves and sought a Federal funds rate around $5\frac{3}{8}$ per cent, a shade above the then prevailing $5\frac{1}{4}$ per cent and equal to the mid-point of the 5 to $5\frac{3}{4}$ per cent range newly adopted by the Committee. When incoming data during the latter part of May suggested that May-June growth in both M_1 and M_2 would be near the upper ends of the Committee's ranges, the Desk raised its funds rate objective to $5\frac{1}{2}$ per cent. Subsequent data tended to confirm this projection of M_2 growth, but indicated that M_1 growth might be weaker than earlier believed. Under the circumstances, the Desk has continued to seek a Federal funds rate averaging about $5\frac{1}{2}$ per cent.

(3) Nonborrowed reserves in the May-June period appear to be increasing at about a $3\frac{1}{2}$ per cent annual rate, on average, rather than decreasing slightly as the staff had thought would be consistent with the short-run ranges for the monetary aggregates adopted by the FOMC at its last meeting.^{1/} Since the banking system held more free reserves (excess reserves minus borrowings) than anticipated, this growth rate did not support more monetary expansion than expected. With Federal funds generally trading around the $5\frac{1}{2}$ per cent discount rate, member bank borrowing did nonetheless increase and averaged about \$125 million in the interval between Committee meetings, as compared with about \$50 million in the preceding two months.

^{1/} A discussion of the actual behavior of nonborrowed reserves in the weeks between meetings relative to the behavior that was expected to be consistent with the Committee's short-run targets for monetary growth may be found in Appendix A.

(4) Since the May FOMC meeting, private short-term interest rates have generally increased $1/4$ to $1/2$ of a percentage point, on balance, while Treasury bill rates have changed little. Most of the increase in private rates occurred in late May and early June, as the Federal funds rate rose. When the funds rate subsequently stabilized around the $5-1/2$ per cent level, and published data indicated a substantial slowdown of growth in M_1 , the upward movement of rates stopped. The spread between private short-term rates and Treasury bill rates widened, in part reflecting some firming in business demands for short-term credit while the Treasury continued to redeem maturing bills in its weekly auction. The volume of commercial paper increased modestly further in May. Business loans at banks also rose a little over this period, and banks--perhaps expecting a further increase in business loans and rising interest rates--have increased their outstanding CD's.

(5) Bond yields continued to move higher in late May, but declined in June as short-term markets stabilized, and on balance were down a little over the intermeeting period. The bond markets have absorbed a substantial volume of new corporate and municipal issues in recent weeks. Treasury borrowing activity over the period was less heavy than had previously been projected by the Treasury--reflecting an unexpected shortfall in outlays--but was still on the large side for the period of the year. Although yields in the secondary mortgage market have moved in sympathy with bond market rates, rates in the primary market for home loans have continued to edge upward in the past few weeks. Net acquisitions of

mortgages by savings and loan associations remained at a relatively high level in April, and loan commitments increased to their highest level in 3 years.

(6) The table on the following page shows (in percentage annual rates of change) related monetary and financial flows over various time periods.

	Calendar Year	Past Twelve Months May '76 over May '75	Past Six Months May '76 over Nov. '75	Past Three Months May '76 over Feb. '75	Past Month May '76 over Apr. '76

Loans and investments of commercial banks <u>2/</u>	4.4	5.2	4.1	5.9	5.2
<u>Short-term Market Paper</u> (Monthly average change in billions)					
Large CD's	-.6	-1.4	-2.3	-2.4	-3.2
Nonbank commercial paper	-.2	--	0.4	0.3	.2

1/ Other than interbank and U.S. Government.

2/ Based on month-end figures. Includes loans sold to affiliates and branches.

NOTE: All items are based on averages of daily figures, except for data on total loans and investments of commercial banks, commercial paper, and thrift institutions--which are derived from either end-of-month or last Wednesday-of-month figures. Growth rates for reserve measures in this and subsequent tables are adjusted to remove the effect of discontinuities from breaks in the series when reserve requirements are changed.

Prospective developments

(7) Three alternative sets of short-run specifications for the monetary aggregates and the Federal funds rate are summarized below for Committee consideration. (More detailed data, as well as longer-run growth rates, are shown in the tables on pp. 6a and 6b, while reserve aggregates believed to be consistent with these specifications are presented in appendix Table I.)

	<u>Alt. A</u>	<u>Alt. B</u>	<u>Alt. C</u>
Ranges for June-July			
M_1	$4\frac{1}{2}$ - $8\frac{1}{2}$	4-8	$3\frac{1}{2}$ - $7\frac{1}{2}$
M_2	7-11	$6\frac{1}{2}$ - $10\frac{1}{2}$	$5\frac{1}{2}$ - $9\frac{1}{2}$
Federal funds rate (intermeeting range)	$4\frac{1}{2}$ - $5\frac{1}{2}$	5-6	$5\frac{1}{2}$ - $6\frac{1}{2}$

(8) If the Federal funds rate between now and the next meeting of the Committee remains around the recently prevailing $5\frac{1}{2}$ per cent--the mid-point of the alternative B range--the staff would expect that the annual rate of M_1 growth may be in a 4-8 per cent range over the June-July period. In light of the data already reported for the early part of the month, growth in June is expected to be around a 5 per cent annual rate. Such a growth rate may reflect, in part, continued adjustment by cash-holders to the April bulge in M_1 growth. Recently available deposit ownership survey figures suggest that much of the April increase was in balances of consumers, who may take a longer time than businesses and other holders to restore their balances to desired levels. The staff expects M_1 growth in July to be at a somewhat higher rate, in view of the projected rise in nominal GNP.

(9) Given the prevailing Federal funds rate, time deposits other than large money market CD's are expected to grow over the next two months at an annual rate around 10 per cent. With short-term market rates generally above the 5 per cent passbook rate, interest-sensitive holders, including businesses and state and local governments, may continue to reduce holdings of savings deposits. However, this may be offset by further expansion of ceiling-free time certificates of deposit, including large-denomination certificates issued by non-money market banks. Thus, for the June-July period, M_2 growth may be in a $6\frac{1}{2}$ - $10\frac{1}{2}$ per cent annual rate range under alternative B.

(10) In the near-term, if the money market remains stable, short- and long-term interest rates are likely to change little. Longer-term market interest rates could edge down further once the market has absorbed the very large volume of new corporate and municipal bond offerings scheduled for June. The Treasury has a very large third-quarter deficit to finance, but it is expected to end the current fiscal year with a large cash balance and will probably raise the bulk of the new cash it needs later this summer.

(11) Over the longer run, the outlook is still for upward pressures on interest rates, particularly short-term rates. Credit demands on banks and in short-term markets are expected to strengthen as the year progresses--with consequent upward pressure on CD and commercial paper rates. And by early winter the Treasury may have to finance itself

increasingly outside the banking system, even if some upward adjustment in Regulation Q ceiling rates has been made by then, as we assume. As may be seen from appendix Table II, under alternative B the staff would expect a Federal funds rate of around 8 per cent by early next year, given a growth rate in M_1 from QI '76 to QI '77 of $5\frac{1}{2}$ per cent.

(12) The specifications of alternative C include a tightening of the funds rate over the next few weeks to the mid-point of a $5\frac{1}{2}$ - $6\frac{1}{2}$ per cent range. This would clearly entail further upward adjustments in market rates, with the 3-month bill rate moving to the 6 per cent area and the 3-month commercial paper rate rising to perhaps around $6\frac{1}{2}$ - $6\frac{1}{2}$ per cent. However, such a near-term tightening of the money market would tend to moderate the need for restraint as the year progresses, as compared with alternative B. The funds rate under alternative C would be expected to peak at around $7\frac{1}{2}$ per cent by late this year, again assuming a $5\frac{1}{2}$ per cent growth rate in M_1 over the QI '76-QI '77 period,

(13) Growth in M_1 in the June-July period may be in a $3\frac{1}{2}$ - $7\frac{1}{2}$ per cent, annual rate, range under alternative C, only a little less than under alternative B. In the short run, member banks could be expected to offset the greater constraint on nonborrowed reserves that is specified under alternative C by increasing their borrowing through the discount window, as suggested in appendix Table I. Expansion of M_2 over the forthcoming 2-month period might be in a $5\frac{1}{2}$ - $9\frac{1}{2}$ per cent annual rate range, in part reflecting reduced inflows to time and savings deposits (other than money market CD's) as funds are increasingly diverted from such accounts to higher-yielding market instruments.

(14) Alternative A assumes an easing in the Federal funds rate to the mid-point of a $4\frac{1}{2}$ - $5\frac{1}{2}$ per cent range between now and the next Committee meeting. Such an easing would encourage more rapid money growth in the third and fourth quarter than under alternatives B and C. However, if the FOMC also wished to constrain longer-run M_1 growth to $5\frac{1}{2}$ per cent, alternative A would entail a more pronounced slowing in the rate of expansion of M_1 in early 1977 and a sharper rise in interest rates in late 1976 and early 1977 than would the other two alternatives.

Proposed directive

(15) Given below is a proposed operational paragraph for the directive if the Committee wishes to continue formulating its instructions in terms of desired growth in monetary aggregates over the months ahead. No alternatives are presented for this formulation, in the expectation that the reference to desired growth will be taken to apply to the longer-term targets and that at this meeting the Committee will not reconsider those targets.

"Monetary Aggregates" Proposal

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve bank reserve and money market conditions consistent with moderate growth in monetary aggregates over the period ahead.

(16) Should the Committee desire to place main emphasis on bank reserve and money market conditions, the language needed would depend on the specific conditions sought. Three alternative "money market" directives intended to correspond to the similarly lettered policy alternatives are given below.

Alternative "Money Market" Proposals

Alternative A

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve SOMEWHAT EASIER bank reserve and money market conditions consistent-with-moderate-growth-in-monetary-aggregates over the

period IMMEDIATELY ahead, PROVIDED THAT MONETARY AGGREGATES APPEAR TO BE GROWING AT ABOUT THE RATES CURRENTLY EXPECTED.

Alternative B

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve MAINTAIN PREVAILING bank reserve and money market conditions ~~consistent-with-moderate-growth-in-monetary-aggregates~~ over the period IMMEDIATELY ahead, PROVIDED THAT MONETARY AGGREGATES APPEAR TO BE GROWING AT ABOUT THE RATES CURRENTLY EXPECTED.

Alternative C

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve SOMEWHAT FIRMER bank reserve and money market conditions ~~consistent-with-moderate-growth-in-monetary-aggregates~~ over the period IMMEDIATELY ahead, PROVIDED THAT MONETARY AGGREGATES APPEAR TO BE GROWING AT ABOUT THE RATES CURRENTLY EXPECTED.

Appendix A

Comparison of Actual and "Targeted" Reserves

The table below compares the actual average level of reserves for the 5 week period ending June 23 with the "targeted" level that had been thought consistent with the mid-points of the short-run ranges for the monetary aggregates adopted at the last FOMC meeting.

		<u>Actual</u> ^{1/}	<u>"Targeted"</u>	<u>Difference</u>
1 (2+3)	<u>Nonborrowed reserves</u>	34,023	33,948	75
2	Required reserves	33,952	34,061	-109
3 (4-5)	Free reserves	71	-113	184
4	Excess reserves	194	162	32
5	Member bank borrowing	123	275	-152
6 (1+5)	<u>Total reserves</u>	34,146	34,223	-77
7	Currency	80,298	80,460	-162
8 (6+7)	<u>Monetary base</u>	114,444	114,683	-239

^{1/} Includes week of June 23, which is partly estimated.

As can be seen from the table, nonborrowed reserves during the intermeeting period were \$75 million higher than "targeted." Relative to expectations, these reserves were employed to support more free reserves in the banking system (line 3) rather than more required reserves (line 2). Member banks held somewhat more excess reserves than anticipated and did not borrow as much as had been thought consistent with the "targeted" reserves and monetary aggregates. At the same time, required reserves were

about \$110 million weaker than expected in the five week period, owing to weaker than anticipated demand deposits at member banks as well as a slightly higher multiplier relationship between lagged deposits at member banks and current required reserves (given changes in the mix of deposits).

With borrowing falling considerably short of "target," total reserves were smaller than anticipated during the intermeeting period. The monetary base was even further below "target," as currency in circulation turned out to be substantially smaller than expected.

Achievement of the nonborrowed "target" during the period by the Desk would have resulted in a higher Federal funds rate, perhaps around the upper end of the 5-5½ per cent range adopted by the FOMC. On the other hand, if the Desk had attempted to reach "targeted" levels of total reserves or the monetary base, the funds rate would have been lower than actually prevailed--and much lower in the case of the monetary base.

NOTE: Government security dealer trading positions are on a commitment basis. Trading positions, which exclude Treasury securities financed by repurchase agreements maturing in 16 days or more, are indicators of dealer holdings available for sale over the near-term. Underwriting syndicate positions consist of issues still in syndicate, excluding trading positions. The basic reserve deficit is excess reserves less borrowing at Federal Reserve less net Federal funds purchases. Weekly data are daily averages for statement weeks, except for corporate and municipal issues in syndicate which are Friday figures.

*STRICTLY CONFIDENTIAL

**Monthly averages for excess reserves and borrowings are weighted averages of statement week figures.

NOTE: Weekly data for columns 1 to 4 are statement week averages of daily data. Columns 5 and 6 are 1-day Wednesday quotes (prior to 1976, figures shown are for 60-89 day and 90-119 day ranges, respectively). For columns 7 and 10, the weekly date is the mid-point of the calendar week over which data are averaged. Columns 8 and 9 are 1-day quotes for Friday and Thursday, respectively, following the end of the statement week. Column 11 gives FNMA auction data for the Monday preceding the end of the statement week. Column 12 is a 1-day quote for the Monday preceding the end of the statement week. The FNMA auction yield is the average yield in bi-weekly auction for short-term forward commitments for Government underwritten mortgages. GNMA yields are average net yields to investors on mortgage-backed securities for immediate delivery, assuming prepayment in 12 years on pools of 30-year FHA/VA mortgages carrying the coupon rate 50 basis points below the current FHA/VA ceiling.
