

Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies,¹ and then making the scanned versions text-searchable.² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that some material may have been redacted from this document if that material was received on a confidential basis. Redacted material is indicated by occasional gaps in the text or by gray boxes around non-text content. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optical character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Prepared for the Federal Open Market Committee

By the staff Board of Governors of the Federal Reserve System

July 16, 1976

MONETARY AGGREGATES AND
MONEY MARKET CONDITIONS

Recent Developments

(1) M_1 declined at a 1.2 per cent annual rate in June. Although growth is expected to resume in July, expansion over the June-July period is now projected at only a $2\frac{1}{2}$ per cent annual rate, below the $3\frac{1}{2}$ per cent lower bound of the Committee's operating range. Growth in M_2 slowed to a $5\frac{1}{2}$ per cent annual rate in June, mainly because of the weakness in M_1 . However, expansion in the time and savings deposit component of M_2 also slowed somewhat; passbook savings declined and growth in small-denomination time deposits slackened, but there was a partially offsetting increase in large non-negotiable CD's. These shifts apparently were prompted by the higher interest rates generally available on market instruments and on bank CD's following the increases of May. However, growth in bank time and savings deposits (other than CD's) strengthened considerably in early July, and for the June-July period, M_2 is now projected to expand at a $7\frac{3}{4}$ per cent rate, close to the mid-point of the Committee's range. Deposit growth slowed in June at thrift institutions also.

Growth in Monetary Aggregates
over June-July Period
(SAAR in per cent)

	<u>Ranges</u>	<u>Latest Estimates</u>
M_1	$3\frac{1}{2}$ to $7\frac{1}{2}$	2.6
M_2	6 to 10	7.7

Memo:

Federal funds rate
(per cent per annum)

Avg. for statement week ending	
June 23	5.45
30	5.58
July 7	5.37
14	5.27

(2) In the week following the June 22 Committee meeting, incoming data suggested that over the June-July period M_1 and M_2 would expand at rates not far from--although slightly below--the mid-points of their respective ranges. Accordingly, the Desk aimed at reserve availability consistent with maintaining the then-prevailing Federal funds rate of 5-1/2 per cent. The projected growth rates in the aggregates were lowered in the two subsequent weeks, however, and the Desk became more accommodative in its reserve provision, seeking to move the Federal funds rate toward 5-3/8 per cent in the July 7 statement week and toward 5-1/4 per cent in the July 14 week. Data becoming available in the current statement week have tended to support the expectation of a low M_1 growth rate, but the projection for M_2 has been raised somewhat. Under the circumstances, the Desk is continuing to aim for an average funds rate around 5-1/4 per cent.

(3) Nonborrowed reserves appear to be increasing in the June-July period at about a 4-1/2 per cent annual rate, less than the rate the staff had thought would be consistent with the mid-points of the short-run ranges for the monetary aggregates adopted by the FOMC at its last meeting.^{1/} This shortfall is due entirely to the slower-than-expected growth in demand deposits, and therefore, in required reserves. The shortfall would have been even greater had not the average level of excess reserves in the period been raised substantially above projections by an unusually large buildup of excess reserves during the July 7 statement week.

^{1/} Appendix A contains a discussion of the actual behavior of nonborrowed reserves in the weeks between the June and July meetings relative to the behavior that was expected to be consistent with the Committee's short-run ranges for monetary growth. (As indicated, the comments in the text above apply to the 2-month June-July period.)

(4) Short-term interest rates have fallen 20 to 40 basis points since the June Committee meeting. Following a period of stability in late June, most rates began to move down near the end of the month, and they declined further in early July as market participants responded to the decline in the Federal funds rate. Business short-term credit demands expanded somewhat in June for the second successive month, but the rise was confined to the commercial paper market; businesses resumed their paydown of bank debt. The Treasury continued to run off bills in its weekly auctions in June and early July. However, with borrowing needs substantially greater in the third quarter than in the second quarter, the Treasury has gradually reduced the volume of bills redeemed weekly and it has announced that it will roll over all maturing issues in next Monday's bill auction.

(5) The declines in short-term rates in early June were accompanied by reductions in bond yields of about 5 to 15 basis points. Bond markets also were favorably influenced by the data that became available during the period on prices and economic activity and by the prospect of a greatly reduced calendar of new corporate and municipal bond issues in July and August. For home mortgages, interest rates in the primary market continued to edge higher until early July.

(6) The table on the following page shows (in terms of percentage annual rates of change) related monetary and financial flows over various time periods.

	Calendar Year	Past Twelve Months	Past Six Months	Past Three Months	Past Month
	1975	June '76 over June '75	June '76 over Dec. '75	June '76 over Mar. '75	June '76 over May '76
Nonborrowed reserves	1.3	-.2	-1.2	3.1	6.6
Total reserves	-.4	-.4	-1.2	3.9	7.0
Monetary Base	5.8	6.3	6.7	8.8	6.9
<u>Concepts of Money</u>					
M ₁ (currency plus demand deposits) <u>1/</u>	4.1	4.1	5.6	6.7	-1.2
M ₂ (M ₁ plus time deposits at commercial banks other than large CD's)	8.5	9.0	10.8	9.8	5.2
M ₃ (M ₂ plus deposits at thrift institutions)	11.3	11.4	12.0	11.0	7.5
M ₄ (M ₂ plus CD's)	6.4	6.1	6.3	7.6	8.5
M ₅ (M ₃ plus CD's)	9.7	9.3	9.0	9.5	9.4
<u>Bank Credit</u>					
Total member bank deposits (bank credit proxy adj.)	3.9	3.1	3.1	4.9	16.3
Loans and investments of commercial banks <u>2/</u>	4.4	4.7	4.9	4.3	2.1
<u>Short-term Market Paper</u> (Monthly average change in billions)					
Large CD's	-.6	-1.1	-2.1	-.9	2.4
Nonbank commercial paper	-.2	.1	.5	.6	.8

1/ Other than interbank and U.S. Government.

2/ Based on month-end figures. Includes loans sold to affiliates and branches.

NOTE: All items are based on averages of daily figures, except for data on total loans and investments of commercial banks, commercial paper, and thrift institutions--which are derived from either end-of-month or last Wednesday-of-month figures. Growth rates for reserve measures in this and subsequent tables are adjusted to remove the effect of discontinuities from breaks in the series when reserve requirements are changed.

Prospective developments

(7) Shown below for the Committee's consideration are three alternative sets of longer-run growth ranges for the monetary aggregates, together with the current ranges for the QI '76 to QI '77 period adopted by the Committee in April. The alternatives pertain to the one-year period from QII '76 to QII '77. More detailed figures, including quarterly average levels and growth rates based on mid-point paths, are shown in the tables on pages 5a and 5b. Projected patterns for the Federal funds rate are shown for the three alternatives in Appendix table II.

	<u>Alt. A</u>	<u>Alt. B</u>	<u>Alt. C</u>	<u>Current</u>
M ₁	5½ to 8	4½ to 7	3½ to 6	4½ to 7
M ₂	9 to 11½	7½ to 10	6½ to 9	7½ to 10
M ₃	9½ to 12½	8 to 11	7 to 10	9 to 12
Credit Proxy	5½ to 8½	5 to 8	4½ to 7½	6 to 9

(8) Of the three alternatives, B encompasses the current range for M₁, which is centered on a 5½ per cent growth rate. The current 7½ to 10 per cent range for M₂ appears to be generally consistent with that M₁ range. However, on the basis of recent experience, it appears that the pattern of gradually rising short-term interest rates anticipated under B would lead to a slowing of inflows to thrift institutions more consistent with an 8 to 11 per cent range for M₃. In connection with the M₃ range, it might be noted that the Committee did not reduce the upper bound at its April meeting when it lowered the upper limits for M₁ and M₂.

(9) Alternatives A and C call for longer-run M_1 ranges one percentage point higher and lower, respectively, than that shown under alternative B. Alternative C would compensate for the second-quarter overshoot in M_1 , in that M_1 would be expected to reach roughly the same level in the first quarter of 1977 as that implied by a $5\frac{1}{2}$ per cent growth rate measured from the first quarter of 1976. To reach this level, M_1 would have to expand at about a $4\frac{3}{4}$ per cent annual rate over the three quarters ending with the first quarter of 1977.

(10) Short-run operating ranges corresponding generally to the longer-run alternatives are summarized below.

	<u>Alt. A</u>	<u>Alt. B</u>	<u>Alt. C</u>
Ranges for July-August ^{1/}			
M_1	5 to 9	$4\frac{1}{2}$ to $8\frac{1}{2}$	4 to 8
M_2	9 to 13	8 to 12	$7\frac{1}{2}$ to $11\frac{1}{2}$
Federal funds rate (intermeeting period)	$4\frac{1}{4}$ to $5\frac{1}{4}$	$4\frac{3}{4}$ to $5\frac{3}{4}$	$5\frac{1}{4}$ to $6\frac{1}{4}$

(11) Alternative B assumes a Federal funds rate range over the next four weeks centered on $5\frac{1}{4}$ per cent, the Desk's most recent objective; alternatives A and C assume some easing and some tightening, respectively. Under all three alternatives, growth in M_1 is expected to pick up appreciably in the July-August period, on the assumption that various factors which appear to have depressed M_1 balances in June--despite rising nominal GNP--will no longer be operating. These factors include the lagged

^{1/} Reserve aggregates thought to be consistent with these ranges are shown in Appendix table I.

adjustment of money balances to desired levels following the April surge, the unusually heavy use by corporations of demand deposit balances to make tax payments in June, and an unexpected and probably temporary slowing in currency growth. Also, a draw-down in the first half of July of the Treasury's unusually high end-of-June cash balance may add, at least temporarily, to private demand balances.

(12) Under alternative B, the annual rate of growth of M_1 in the July-August period is expected to be in a $4\frac{1}{2}$ to $8\frac{1}{2}$ range. (On average from the second to the third quarter, M_1 is expected to grow at only a $4\frac{1}{2}$ per cent annual rate for arithmetic reasons--specifically, because the second quarter average is high relative to the June level.) Given the projection for nominal GNP, if growth in M_1 over the QII '76-QII '77 period is to be constrained to $5\frac{1}{2}$ per cent--the mid-point of the alternative B longer-run growth range--it is likely that short-term interest rates would have to begin moving up later in the summer. Under this alternative, the funds rate is expected to reach 7 per cent in early 1977 and to rise marginally further in the spring.

(13) If the funds rate remains around $5\frac{1}{2}$ per cent over the next four weeks, short-term interest rates are unlikely to change significantly. Inflows of time and savings deposits other than negotiable CD's at banks can be expected to be higher than in June as a result of the declines in interest rates since mid-year. Over the July-August period, M_2 might expand at an annual rate in an 8 to 12 per cent range. As the year progresses, however, rising market rates would probably slow net inflows of

time and savings deposits somewhat. The alternative B projection assumes an upward adjustment in Regulation Q ceilings in early 1977.

(14) Alternative C contemplates a modest tightening of the money market over the next few weeks, with the Federal funds rate moving to the 5-3/4 per cent mid-point of the funds rate range. Subsequently, interest rates undoubtedly would have to rise appreciably further if M_1 growth over the QII '76 to QII '77 period is to be constrained to the 4-3/4 per cent mid-point of the longer-run range. By the spring of 1977, the funds rate might be around 3-1/4 per cent. Under these circumstances, inflows of funds into small-denomination deposits at banks and thrift institutions in the first half of 1977 would be depressed by the greater relative attractiveness of rates on market instruments, even though under this alternative Regulation Q ceilings are assumed to be relaxed in the fourth quarter of 1976.

(15) Alternative A contemplates more rapid growth in the monetary aggregates over QII '76-QII '77--including a 6-3/4 per cent growth rate for M_1 --and some near-term easing of money market conditions, with the funds rate range centering on 4-3/4 per cent. With economic expansion continuing, however, it would be expected that interest rates would have to begin rising in early fall, with the funds rate reaching 5-3/4 per cent by early 1977 and 6-1/2 per cent in the spring. Under these conditions, inflows of interest-bearing deposits would probably accelerate for a time and M_2 and M_3 would remain quite strong into early winter--before slowing as rates on market securities become more attractive.

(16) Over the July-August period, corporate and municipal bond offerings are expected to recede more than seasonally from their recent high levels. The Treasury is expected to take advantage of this reduced forward calendar to continue its debt-lengthening operations. During the third quarter the Treasury is expected to raise in the neighborhood of \$14 billion of new money, and it appears that about one-half of this amount will be raised in the forthcoming intermeeting period. In addition, the Treasury will also have to refund \$4.6 billion of publicly held debt maturing on August 15.

(17) Increases in bond yields over the balance of the year are expected to be relatively small. Business and other credit demands on banks can be expected to strengthen somewhat over the second half as inventory and fixed capital expenditures increase and long-term borrowing slows. Under alternative B, and especially under C, banks would be likely to reduce their acquisitions of Treasury securities and to borrow in CD and Eurodollar markets. Under alternative A, inflows of other deposits should reduce the need for banks to rely on such sources of funds over the balance of the year.

Proposed directive

(18) Presented below are four alternative formulations for the operational paragraph of the directive. The first three are couched in terms of desired growth in monetary aggregates over the months ahead and are intended to correspond to the similarly lettered policy alternatives discussed in the preceding section. The fourth alternative is proposed in the event that the Committee wishes to formulate its instructions in terms of money market conditions and to maintain the conditions now prevailing.

Alternative "Monetary Aggregates" Proposals

Alternative A

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve bank reserve and money market conditions consistent with moderate SUBSTANTIAL growth in monetary aggregates over the period ahead.

Alternative B

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve bank reserve and money market conditions consistent with moderate growth in monetary aggregates over the period ahead.

Alternative C

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve bank reserve and money market conditions consistent with ~~moderate~~ MODEST growth in monetary aggregates over the period ahead.

"Money Market" Proposal

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to achieve MAINTAIN PREVAILING bank reserve and money market conditions ~~consistent-with-moderate-growth-in-monetary~~ aggregates over the period IMMEDIATELY ahead, PROVIDED THAT MONETARY AGGREGATES APPEAR TO BE GROWING AT ABOUT THE RATES CURRENTLY EXPECTED.

Appendix A

Comparison of Actual and Targeted Reserves

The table below compares the actual average level of reserves for the four-week period ending July 21 with the "targeted" level that had been thought consistent with the mid-points of the short-run ranges for the monetary aggregates adopted at the last FOMC meeting.

	<u>Actual</u> ^{1/}	<u>Targeted</u>	<u>Differences</u>
1. (2+3) Nonborrowed reserves	34,428	34,339	89
2. Required reserves	34,208	34,268	-60
3. (4-5) Free reserves	220	71	149
4. Excess reserves	356	239	117
5. Member bank borrowing	136	168	-32
6. (1+5) Total Reserves	34,564	34,506	58
7. Currency	80,505	80,759	-254
8. (6+7) Monetary base	115,069	115,265	-196

As can be seen from the table, even though required reserves were \$60 million lower than anticipated during the intermeeting period, non-borrowed reserves were about \$90 million higher than "targeted." Banks held more excess reserves and borrowed less than had been thought consistent with the ranges specified for the monetary aggregates. Required reserves were below expectations because of weakness in deposits subject to reserves, which was only partly offset by a slightly lower multiplier between lagged deposits and current required reserves.

^{1/} Includes week of July 21, which is partly estimated.

Despite the strength in nonborrowed reserves, total reserves were only slightly larger than anticipated because of the shortfall in member bank borrowings. The monetary base, however, was well below "target" because the growth in currency in circulation was much smaller than expected.

Achievement of the nonborrowed reserve "target" during the period would have resulted in a higher Federal funds rate, possibly near the upper end of the $5\frac{1}{4}$ to $5\frac{3}{4}$ per cent range adopted by the FOMC. On the other hand, if the Desk had attempted to achieve the "targeted" monetary base, the Federal funds rate would have been much lower than actually prevailed.

Appendix Table I

Reserve Measures Consistent With Short-run Alternatives
(seasonally adjusted)

NOTE: Government security dealer trading positions are on a commitment basis. Trading positions, which exclude Treasury securities financed by repurchase agreements maturing in 16 days or more, are indicators of dealer holdings available for sale over the near-term. Underwriting syndicate positions consist of issues still in syndicate, excluding trading positions. The basic reserve deficit is excess reserves less borrowing at Federal Reserve less net Federal funds purchases. Weekly data are daily averages for statement weeks, except for corporate and municipal issues in syndicate which are Friday figures.

*STRICTLY CONFIDENTIAL

**Monthly averages for excess reserves and borrowings are weighted averages of statement week figures.

NOTE: Weekly data for columns 1 to 4 are statement week averages of daily data. Columns 5 and 6 are 1-day Wednesday quotes (prior to 1976, figures shown are for 60-89 day and 90-119 day ranges, respectively). For columns 7 and 10, the weekly date is the mid-point of the calendar week over which data are averaged. Columns 8 and 9 are 1-day quotes for Friday and Thursday, respectively, following the end of the statement week. Column 11 gives FNMA auction data for the Monday preceding the end of the statement week. Column 12 is a 1-day quote for the Monday preceding the end of the statement week. The FNMA auction yield is the average yield in bi-weekly auction for short-term forward commitments for Government underwritten mortgages. GNMA yields are average net yields to investors on mortgage-backed securities for immediate delivery, assuming prepayment in 12 years on pools of 30-year FHA/VA mortgages carrying the coupon rate 50 basis points below the current FHA/VA ceiling.
