U.S. DEPARTMENT OF LABOR
Robert B. Reich, *Secretary*

BUREAU OF LABOR STATISTICS
Office of Prices and Living Conditions
Kenneth V. Dalton, *Associate Commissioner*

The *CPI Detailed Report*—(ISSN 0161-7311) is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954. Subscription price per year: $26 domestic, $32.50 foreign. Single copy domestic, $7.00; foreign, $8.75. Prices are subject to change by the U.S. Government Printing Office.

Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or telephone (202) 512-2311. POSTMASTER: Send address changes to CPI Detailed Report, U.S. Government Printing Office, Washington, DC 20402.

For Technical information call the CPI Information and Analysis Office at (202) 606-7000, or write to Consumer Price Indexes, 2 Massachusetts Avenue, NE, Room 3615, Washington, DC 20212-0001.

CPI MAILGRAM provides selected U. S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $145 in contiguous U.S. and Hawaii; $160 in Alaska and Canada.

Information in this publication will be made available to sensory impaired individuals upon request. Voice phone: (202) 606-STAT; TDD phone: (202) 606-5897; TDD message referral phone: 1-800-326-2577

Material in this publication is in the public domain and, with appropriate credit, may be repoduced without permission. Second-class postage paid at Washington, DC and at additional mailing offices.

Price Movements
January 1993

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.5 percent before seasonal adjustment in January to a level of 142.6 (1982-84=100). For the 12-month period ended in January, the CPI-U increased 3.3 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 0.4 percent in January prior to seasonal adjustment. The January 1993 CPI-W level of 140.3 was 3.2 percent higher than the index in January 1992.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.5 percent in January. Each of the seven major expenditure groups rose more in January than in December. Energy costs, which declined in December, advanced 0.5 percent in January due to an increase in the index for motor fuels. Food prices, which rose 0.3 percent in December, increased 0.4 percent in January, largely as a result of a sharp jump in beef prices. Excluding food and energy, the CPI-U increased 0.5 percent, following a rise of 0.2 percent in December. This acceleration was primarily due to an upturn in the index for apparel and upkeep and larger increases in the indexes for shelter, airline fares, and tobacco and smoking products.

The food and beverage index increased 0.4 percent in January. The grocery store food index also rose 0.4 percent, the same as in December. The index for meats, poultry, fish, and eggs—which rose 0.2 percent in December—advanced 0.6 percent in January, largely as a result of a sharp increase in beef prices. The 1.7-percent advance was the largest increase in this component since January 1990, and accounted for over 45 percent of the January 1993 rise in the grocery store food index. Prices for pork, poultry, and fish and seafood rose 0.2, 0.7, and 1.2 percent, respectively. Partially offsetting these advances was a 4.5-percent decline in egg prices. The index for fruits and vegetables increased 0.8 percent as substantial price increases for fresh and processed vegetables more than offset declines in the indexes for fresh and processed fruits. The other three major grocery store food groups—cereal and bakery products, dairy products, and other food at home—registered small increases in January. The indexes for restaurant meals and alcoholic beverages rose 0.3 and 0.2 percent, respectively.

The housing component increased 0.3 percent in January, following a 0.1-percent rise in the preceding month. Shelter costs, which rose 0.2 percent in December, increased 0.4 percent in January, accounting for virtually all of the January housing advance. The other two major housing groups—household fuels and other utilities and

NOTE: Seasonal factors have been recalculated to reflect developments in 1992. For this reason, some of the seasonally adjusted figures shown above and elsewhere differ from those previously published.

household furnishings and operation—were up 0.1 percent and unchanged, respectively. Within shelter, homeowners' costs rose 0.5 percent and maintenance and repair costs, 0.3 percent, while renters' costs were unchanged. A 0.3-percent increase in residential rent was offset by a 0.8-percent decrease in other renters' costs. (The index for lodging while out of town increased 5.3 percent prior to seasonal adjustment, less than usual.) The index for household fuels declined 0.3 percent, while the index for other utilities and public services rose 0.5 percent. Declines in the indexes for fuel oil and natural gas—down 2.5 and 1.3 percent, respectively—more than offset a 0.4-percent rise in the index for electricity. Increases in charges for telephone services and cable television were largely responsible for the advance in the index for other utilities and public services.

Transportation costs rose 0.6 percent in January, following a 0.1-percent rise in December. About two-thirds of the acceleration was accounted for by an upturn in the index for motor fuels. The index for gasoline increased 1.5 percent in January after declining 0.5 percent in December. (Prior to seasonal adjustment, gasoline prices declined 1.6 percent in January.) Automobile purchase costs also turned up in January, reflecting a sharp increase in automobile finance charges. In January, the new car index rose 0.2 percent, while automobile finance charges advanced 1.5 percent. The latter increase follows a 22-month period in which these charges fell 20.7 percent. The used car index was unchanged in January, following substantial increases throughout most of 1992. The index for public transportation rose 2.1 percent in January, largely as a result of a 3.0-percent increase in airline fares. After declining throughout most of the past 2 years, airline fares have increased 16.8 percent since September 1992.

The index for apparel and upkeep, which fell 0.3 percent in December as a result of earlier than usual price reductions, turned up in January, increasing 0.8 percent. (Prior to seasonal adjustment, the index for apparel and upkeep declined 1.3 percent.) In addition, jewelry prices, which fell 4.5 percent in the preceding 2-month period, jumped 7.1 percent in January.

The medical care component rose 0.6 percent in January to a level 6.6 percent above a year ago. The index for medical care commodities—prescription drugs, nonprescription drugs, and medical care supplies—increased 0.4 percent. The index for medical care services advanced 0.7 percent, with the cost of professional services and hospital and related services up 0.4 and 0.7 percent, respectively.

Entertainment costs rose 0.3 percent in January, following increases of 0.1 percent in each of the preceding 2 months. Higher prices for reading materials and pet expenses accounted for over two-thirds of the January advance in this group.

The index for other goods and services advanced 0.8 percent in January after increasing 0.6 percent in December. Nearly all of the January advance was accounted for by increases in the indexes for tobacco and smoking products and for tuition and other school fees.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.4 percent in January.

Response Rates for the Consumer Price Indexes, 1992

This article and the accompanying tables update articles previously published on response rates in the *CPI Detailed Report* for March 1991 and January 1992.

In an effort to measure the outcome of data collection for the CPI, BLS calculates response rates. Response rates measure the proportion of completed surveys to those issued and help measure the accuracy of the CPI. Failure of a data unit to respond at either the data collection stage or estimation stage represents a loss of statistical information which dilutes the accuracy of the sample. BLS publishes response rates annually to assist the data user in judging the accuracy of CPI data.

BLS calculates response rates for the CPI-U at the data collection phase for initiation and pricing, and at the data estimation phase for pricing. The response rate at the data collection phase is the number of responding sample units divided by the number of eligible sample units. A sample unit is eligible if it belongs to the defined target population and if it should provide information for one or more items. The response rate at estimation is defined as the number of sample units used in estimation divided by the number of eligible sample units.

Response rates for 1992 are presented in tables R-1 through R-17. Table R-1 shows response rates for all data included in the CPI for All Urban Consumers, U.S. city average by major group, for all of 1992. Tables R-2 through R-16 show rates for current data collection in selected areas for which indexes are published monthly and bimonthly. Table R-17 shows the response rates for initiation for those areas which underwent sample rotation in 1992.

The response rates in tables R-1 through R-16 are separated into commodities and services, and the shelter portion of housing. Commodities and services are further broken down into outlets and quotes. An "outlet" is a generic term that designates the place where prices are collected. A "quote" is a specific item to be priced from a specific outlet. There may be from 1 to more than 50 quotes priced in each outlet.

In table R-1, it is important to note the relatively low percentages of quotes reported collected and used in estimation for apparel and upkeep. Low rates for these items can be partially attributed to the design of the apparel sample. Because seasonal apparel items commonly are in stores only during certain times of the year, most of the apparel sample is doubled, with each half of the sample designated for pricing during part of the year. Thus, at any particular time of the year a large number of apparel quotes, although eligible, are designated out of season and prices are not collected.

The shelter section in tables R-1 through R-16 includes categories for owners, renters, and those for whom the tenure status is unknown. A unit qualifies as an owner or renter unit if its tenure status is known either by previous knowledge or is collected in the current interview period. The response rates at the data collection phase for shelter are separated into three categories. If useable information is obtained, the unit is designated *data reported.* If the assigned unit is located but is unoccupied, the unit is designated *found vacant.* In instances where the unit is eligible but no data are available (for example, refusals or no one at home) the unit is designated *other.* The number of owner units eligible for data collection in 1992 was lower than in previous years since BLS changed from annual pricing of owner units to biannual pricing in July, 1992.

Data for initiation (table R-17) are for those areas which underwent sample rotation in 1992. Approximately one-fifth of the pricing areas, called primary sampling units, are rotated each year. The response rate data for initiation reflect the rate of success in attempting to price the new designated sample for the first time. These data are unique in that the outlets and quotes are only counted once, as opposed to the repeated (monthly or bimonthly) pricing that is reflected in tables R-1 through R-16.

For additional information on response rates, write to the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Room 3615, 2 Massachusetts Avenue NE., Washington, DC 20212-0001, or call James Longacre at (202) 606-6974.

Intervention Analysis in Seasonal Adjustment

Seasonal adjustment is the process by which the typical seasonal movement of prices for goods or services in a Consumer Price Index series is quantified and factored out of the series. This process permits analysis of nonseasonal price movements. Most CPI series use the X-11-ARIMA program developed by Statistics Canada to calculate factors for seasonal adjustment of both historical and current series. Some CPI series are adjusted using intervention analysis in conjunction with either X-11-ARIMA seasonal adjustment or *state space model-based seasonal adjustment*. For more information on *state space model-based seasonal adjustment*, please see "Intervention Analysis in Seasonal Adjustment" in the January 1992 issue of the *CPI Detailed Report*.

Intervention analysis is a technique used to produce better seasonal adjustment. The technique allows nonseasonal economic phenomena such as shifts in level to be factored out of the indexes before adjustment. A shift in level is a change (or shift) in the price level of a CPI series occurring over 1 or several months caused by events such as a sales tax increase or oil embargo. The result is an adjustment based on a representation of the series with the seasonal pattern emphasized. Intervention analysis also allows for seasonal shifts to be accounted for, resulting in a better seasonal adjustment in the periods before and after the shift occurred.

When intervention analysis is used in conjunction with X-11-ARIMA seasonal adjustment, the interventions are modeled before the seasonal adjustment is done. Prior-adjustment factors from the intervention analysis are calculated and applied using the prior-adjustment option of X-11-ARIMA. For a more comprehensive discussion of intervention analysis, please see "Improvements in CPI Procedures" in the March 1990 issue of the *CPI Detailed Report*.

In January 1993, the series listed below were adjusted using intervention analysis before X-11-ARIMA processing. Most of these series were examined over an 8-year period, 1985-92. The motor vehicle series (*), however, were examined over a 6-year period, 1987-92.

Alcoholic beverages
Alcoholic beverages at home
Beer and ale at home
Fuel oil
Fuel oil and other household fuel commodities
Women's coats and jackets
Women's dresses
Women's separates and sportswear
Women's underwear, nightwear, hosiery, and accessories
Women's suits
Girls' apparel
New vehicles *
New cars *
Subcompact new cars *
Compact new cars *
Intermediate new cars *
Full-size new cars *
New trucks *
Motor fuel and motor oil
Motor fuel
Gasoline, all types
Leaded regular gasoline
Unleaded regular gasoline
Unleaded premium gasoline
Tobacco and smoking products

For each series that was adjusted using intervention analysis prior to X-11-ARIMA processing, a complete list of level shifts is provided in the table below, along with the identified causes for each shift. Outliers, or extreme values for a particular month, are also included in the list.

For further information, write to the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, 2 Massachusetts Avenue, NE., Room 3615, Washington, DC 20212-0001, or call Claire McAnaw at (202) 606-6968

Series adjusted prior to X-11-ARIMA seasonal adjustment

Series	Level shift period(s)	Event	Outliers
Alcoholic beverages	9/85-10/85	Federal excise tax increase on distilled spirits	1/91
	12/90-2/91	Federal excise tax increase on alcoholic beverages	
Alcoholic beverages at home	9/85-10/85	Federal excise tax increase on distilled spirits	1/91
	12/90-2/91	Federal excise tax increase on alcoholic beverages	
Beer and ale at home	12/90-2/91	Federal excise tax increase on alcoholic beverages	3/92
Fuel oil and other household fuel commodities	1/86-4/86	Increased supply from OPEC	1/90
	7/90-10/90	Shortage and anticipated shortage in oil supply due to Iraqi invasion of Kuwait	
	11/90-5/91	Recovery from price shock due to Iraqi invasion of Kuwait	
Fuel oil	12/85-7/86	Increased supply from OPEC	1/86, 1/90
	7/90-10/90	Shortage and anticipated shortage in oil supply due to Iraqi invasion of Kuwait	
	11/90-5/91	Recovery from price shock due to Iraqi invasion of Kuwait	
Women's coats	8/85-9/85	Higher than usual introductory prices	2/87, 7/87
	12/85-1/86	Slack demand, excessive inventories	
	8/87-9/87	Higher than usual introductory prices	
Women's dresses	3/86 (negative seasonal shift) and 3/90 (positive seasonal shift)	The CPI changed its procedures to allow substitutions to occur earlier in the selling season than in previous years. Retailers' better control over inventories, which tends to limit price-cutting at the end of each season, exacerbated the shifts caused by the procedural change.	2/88, 7/88, 2/89, 8/89, 2/90, 1/92, 3/92, 4/92
	3/87 (positive level shift)	Introduction of new index procedures	

See footnote at end of table.

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:
M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Regions defined as the four Census regions. See map in technical notes.

[3] Indexes on a December 1986=100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:
M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Regions defined as the four Census regions. See map in technical notes.

[3] Indexes on a December 1986=100 base.

\- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 57,000 housing units and approximately 19,000 retail establishments—department stores, supermarkets, hospitals, gasoline stations and other types of stores and services establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuel, and and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Some data, such as used car prices, are obtained from secondary sources.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of country, for cross-classifications of regions and population-size classes, and for 29 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, 1982-84, which equals 100.0. An increase of 7 percent, for example, is shown as 107.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $100 in 1982-84 to $107.

For further details see *BLS Handbook of Methods,* BLS Bulletin 2414, September 1992 and The *Consumer Price Index: 1987 Revision,* BLS Report 736, January 1987.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	112.5
Less previous index	108.5
Equals index point change	4.0
Percent Change	
Index point difference	4.0
Divided by the previous index	108.5
Equals	0.037
Results multiplied by one hundred	0.037 x 100
Equals percent change	3.7

Energy Prices

Price are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census region cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for exmaple, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average price are available, the designation NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices arer collected monthly by BLS representatives in the urban area priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for diffferent consumpation amount, but may also be calculated from different types of residential rate schedules. *The average price per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas for 500 kilowatt hours of electricity (table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Termal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU's (U.S. Department of Energy).
1 kwh = 3,412 BTU'S (Edison Electric Institute).
1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped however, that regional average prices will help satisfy the need for local area data. It should be noted that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commoditiates are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, as estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from the BLS regional offices or from the Washington office upon request.

Adjustment of Shelter Indexes for Aging Effects

Beginning with January 1988 CPI, the Bureau of Labor Statistics adjust the monthly CPI shelter indexes for the change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the

Federal Reserve Bank of St. Louis

chosen method is operationally feasible.[1] The adjustment affect CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

The quality of housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing unit.[2]

The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect.

The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship betweeen a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

In most cases, seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1987 through 1991 were replaced at the end of 1991. The seasonal movement of all items and 47 other aggregations is derived by combining the seasonal movement of 60 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 60 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years, but the seasonally adjusted indexes will be used before that period.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called intervention analysis in conjunction with X-11-ARIMA for some CPI series. Intervention analysis allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are removed from the data prior to calculation of seasonal factors in X-11-ARIMA.

For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For some women's apparel indexes and the girls' apparel index, the procedure was used to offset the effects of changes in pricing methodology; and for new cars, new trucks, and new vehicles, this procedure was used to offset the effects of changes in marketing strategies and the introduction of new models. For the tobacco and smoking products index, this procedure was used to offset the effects of increases in excise taxes and wholesale tobacco prices. For some alcoholic beverage series, intervention was used to offset the effects of excise tax increases.

An alternative to the intervention-adjusted X-11-ARIMA procedure is the state space model-based seasonal adjustment method. This method adjusts simultaneously for interventions and seasonal effects, rather than sequentially as in the X-11-ARIMA methodology, using structural statistical models with explanatory variables. The state space structural model-based method of seasonal adjustment was introduced in 1992 for the adjustment of January 1991-December 1991 indexes for three women's apparel series: Dresses, Separates and sportswear, and Suits.

A description of intervention analysis, as well as a list of events treated as interventions and seasonal factors for

[1] A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and *Journal of Business and Economic Statistics,* Vol. 6, No. 3, July 1988, pp. 359-71 and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects, " BLS Working Paper No. 160, April 1986, and *Journal of Urban Economics,* Vol. 23, March 1988, 162-78. These papers are available from the BLS on request.

these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212-0001 or by calling Claire McAnaw on (202) 606-6968.

CPI on Electronic Bulletin Board

A limited amount of CPI information is currently available via the Department of Labor's electronic bulletin board system (BBS). The data is accessable for downloading free of charge at virtually anytime to any person who has a personal computer with a modem and communications software. The phone number for the BBS is **1-800 597-1221 or (202) 219-4784** for those in the Washington area.

Included on the *Labor News* BBS are all items indexes for the CPI-U and CPI-W for both the U.S. city average and the Washington, D.C. area from 1980 to the present. Also included on the BBS are average prices for the U.S. from 1990 to the present for natural gas, electricity, fuel oil, and gasoline (all types, unleaded regular, and unleaded premium). More indexes or average prices may be added in the future.

The BBS is set to use the most common personal computer parameters. Users should set their communication software to the following:

BAUD RATE:	300-2400 bps
DATA BITS:	8
STOP BITS:	1
PARITY:	NONE
FULL DUPLEX	
TERMINAL TYPE:	ANSI, VT100, or ANSI-BBS

The *Labor News* BBS is divided into different sections, or "Libraries," with the one containing CPI information being CPIINFO.

"Labor News" is a menu-driven BBS. Users can select among choices presented on the screen to access the information desired. Typing a "?" will bring up a "Help" screen for on-line assistance. It is also possible to download a users manual for the BBS.

Please note that the BBS shuts down for maintenance every day from 3:00 A.M. to 3:15 A.M. (Eastern time), and Mondays from 7:30 A.M. to 8:00 A.M.

The system operator of the *Labor News* BBS, Don Berry, may be reached at (202) 219-7343. The system operator of the CPI Library, Joe Chelena, may be reached at (202) 606-6982 or via E-mail through the BBS under the name JOEC.
