FOREWORD

This is one of a group of four documents which relate to the budget for 1965. *The Budget of the United States Government, 1965*, is a compact volume in a page size similar to that of an ordinary book. It contains the Budget Message of the President, summary tables and statistical information, and various special analyses.

The Budget of the United States Government, 1965—Appendix contains the text of appropriation estimates proposed for the consideration of the Congress together with specific reference materials on the various appropriations and funds. The contents of this volume are further explained at the beginning of each of its four parts.

The Budget of the United States Government, 1965—The District of Columbia is a volume which relates specifically to the estimates for the municipal government of the District of Columbia.

In addition, a pamphlet type of publication, *The Federal Budget in Brief, 1965*, is available for those who wish a much more brief presentation than any of the three official volumes.

NOTE.—Unless otherwise indicated, all references to years in this volume are to fiscal years ending June 30. Financial tables in parts I, II, and IV are nearly always stated in thousands of dollars; details may not add to the totals because of rounding.

EXPLANATION OF ESTIMATES FOR FEDERAL FUNDS

Part I contains supporting details for Federal funds, including various types of tables and schedules, explanatory statements of the work to be performed and the money needed, and the text of the language proposed for enactment by Congress on each item of authorization. Material is also included on a few trust funds which require congressional action. This part is arranged in chapters reflecting the organization of the Government.

TYPES OF FEDERAL FUNDS

Federal (Government-owned) funds are of four types, as follows:

The *general* fund is credited with receipts which are not earmarked by law for a specific purpose, and is charged with expenditures that are payable from appropriations (except appropriations of earmarked receipts) and those payable from borrowing. Both in number of items and in amounts, most of the Government's business is transacted through the general fund.

Special funds are those which are established to account for receipts that are earmarked by law for a specific purpose. They exclude the funds which carry on a cycle of operations for which there is continuing authority to use the receipts (as described in the next paragraph). Some special funds are subject to annual appropriation by Congress. Others are automatically available under the laws which created the funds.

Public enterprise (*revolving*) funds are those which finance a cycle of operations, in which the expenditures generate receipts coming primarily from the public and available for continuing use. They include nearly all of the Government-owned corporations, the postal fund, and various unincorporated enterprises.

Intragovernmental revolving and management funds (including *consolidated working* funds) are those which are created to facilitate financing operations within and between Government agencies. They consist of two types—*intragovernmental revolving* funds which finance a cycle of operations, like public enterprise funds but with receipts primarily from within the Government; and *management* funds which permit the pooling of advance payments from two or more appropriations to carry out certain activities.

Other funds, for which the Government serves in a fiduciary capacity, are of two types—*trust* funds and *deposit* funds. They are explained at the beginning of part II.

FORM OF DETAILED MATERIAL

For each appropriation, this appendix includes certain detailed material, as follows: (1) appropriation language, if applicable; (2) a schedule of program and financing; (3) a narrative statement on program and performance; (4) a schedule of object classification. An exception occurs in the case of certain permanent appropriations and older appropriation accounts on which only a residual balance remains; such accounts of a bureau or independent agency are often combined into a single presentation instead of having separate schedules. Where the obligations fall in a single object class, the classification is identified in the program and financing schedule, rather than in a separate schedule.

For revolving funds, there are usually three additional schedules covering (5) a summary of sources and application of funds; (6) revenue, expense, and retained earnings; and (7) financial condition.

The basic schedules usually exclude supplemental estimates which it is expected will be transmitted to Congress later, for 1964 and 1965; these usually are covered by a separate, brief schedule of program and financing, without appropriation language. However, the 1964 column of the basic schedules include (and identify) certain supplemental estimates already pending before Congress, and supplementals required in a few accounts to meet costs of the Uniformed Services Pay Act of 1963.

The 1965 column includes, within the regular schedules, appropriations for recommended extension or renewal of expiring laws; however, money for new legislation is shown separately. Appropriation language is included for the former, not the latter.

APPROPRIATION LANGUAGE

The language proposed for inclusion in the 1965 appropriation acts is printed at the head of each item requiring action by Congress, except for those items which are not formally recommended at this time but will be proposed for separate transmittal. The language of the 1964 appropriation acts is used as a base. The text used in the 1964 appropriation acts is printed in roman type. Italic type indicates proposed new language. Brackets enclose material which it is proposed to omit, as in this example:

SALARIES AND EXPENSES

For necessary expenses of the Office of Business Economics, [$2,000,000] *$2,550,000. (5 U.S.C. 591, 596–597; 15 U.S.C. 171, 175; Department of Commerce Appropriation Act, 1964.)*

Following the language, and printed in italic within parentheses, are citations to relevant authorizing legislation and to the appropriation act from which the text is taken.

SCHEDULE OF PROGRAM AND FINANCING

This schedule consists of two parts. In the section for program by activities, costs or obligations are classified by purpose, program, or project for 1963, 1964, and 1965.

The financing section shows the appropriation provided and other means of financing the program, and the disposition of amounts not used during the year.

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Preparation of national income and product data	906	966	1,124
2. Analysis of business trends	498	489	548
3. Computation of the balance of international payments	450	455	626
4. Executive direction	145	210	252
Total program costs, funded	1,999	2,120	2,550
Change in selected resources [1]	−4		
Total obligations	1,995	2,120	2,550
Financing:			
Comparative transfers from other accounts	−130	−120	
Unobligated balance lapsing	10		
New obligational authority	**1,875**	**2,000**	**2,550**
New obligational authority:			
Appropriation	1,868	2,000	2,550
Transferred from General Administration (64 Stat. 1263)	7		
Appropriation (adjusted)	**1,875**	**2,000**	**2,550**

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $21 thousand (1963 adjustments, $8 thousand); 1963, $25 thousand; 1964, $25 thousand; 1965, $25 thousand.

Where the data are available in the accounting system, cost-type budgets are presented, as in the preceding example. Figures opposite the activity entries are the value of goods and services consumed in carrying out the program, in the case of operating costs; they are the value of assets acquired, in the case of capital outlays.

The relation of costs to obligations is summarized in an entry "Change in selected resources." For appropriation accounts, this entry is supported by a footnote identifying the amounts of the resources involved. For revolving funds, the items are identified on the statement of financial condition and the appended tabulation.

Obligations refer to orders placed, contracts awarded, loan agreements made, and services received during the year, regardless of the time of payment. Total obligations are always shown; activities are reflected on an obligation basis where cost data are not available.

Where programs are financed at a "preobligation" stage (such as the "program plan" for certain Defense items, and "commitments" for some loan programs) an extra three columns provide details on that basis.

NARRATIVE STATEMENT OF PROGRAM AND PERFORMANCE

The work planned and services proposed to be carried out are described briefly in a narrative statement for each appropriation or fund. Where practicable the narrative statement indicates the expected accomplishment in relation to the financial estimates, and gives some measures of program and performance.

SCHEDULE OF OBJECT CLASSIFICATION AND PERSONNEL SUMMARY

There is shown for each account a classification of obligations, costs, or accrued expenditures according to a uniform list of objects, as follows:

Object Classification (in thousands of dollars)

		1963 actual	1964 estimate	1965 estimate
11	Personnel compensation:			
	Permanent positions	1,520	1,731	1,950
	Positions other than permanent	19	19	
	Total personnel compensation	1,539	1,750	1,950
12	Personnel benefits	112	131	146
21	Travel and transportation of persons	8	10	15
23	Rent, communications, and utilities	25	18	30
24	Printing and reproduction	101	110	130
25	Other services	9	18	44
	Services of other agencies	169	63	190
26	Supplies and materials	10	10	15
31	Equipment	26	10	30
	Total costs	1,999	2,120	2,550
	Change in selected resources	−4		
	Total obligations	1,995	2,120	2,550

The object classes reflect the nature of the things or services purchased, regardless of the purpose or the nature of the program for which they are used.

The complete list of object classes is as follows:

10 PERSONAL SERVICES AND BENEFITS
- 11 Personnel compensation
- 12 Personnel benefits
- 13 Benefits for former personnel

20 CONTRACTUAL SERVICES AND SUPPLIES
- 21 Travel and transportation of persons
- 22 Transportation of things
- 23 Rent, communications, and utilities
- 24 Printing and reproduction
- 25 Other services
- 26 Supplies and materials

30 ACQUISITION OF CAPITAL ASSETS
- 31 Equipment
- 32 Lands and structures
- 33 Investments and loans

40 GRANTS AND FIXED CHARGES
- 41 Grants, subsidies, and contributions
- 42 Insurance claims and indemnities
- 43 Interest and dividends
- 44 Refunds

A personnel summary is appended to the object classification schedule, as illustrated:

Personnel Summary

Total number of permanent positions	212	217	238
Full-time equivalent of other positions	6	4	
Average number of all employees	195	205	221
Employees in permanent positions, end of year	212	217	238
Employees in other positions, end of year	1	2	0
Average GS grade	8.9	9.1	9.2
Average GS salary	$8,264	$8,728	$8,924

Permanent positions are those of a full-time nature which are of indefinite duration. Some are filled by persons with temporary appointments. Other positions include those of a temporary nature (a year or less), part-time jobs (less than a full workweek), and intermittent employment (occasional employees).

Average grades and salaries are computed arithmetically. Thus the average salary sometimes falls outside the salary range of the average grade.

STATEMENT OF SOURCES AND APPLICATION OF FUNDS

For all revolving funds, there is a summary statement of sources and application of funds. This statement shows total obligations adjusted to gross expenditures (on a cash basis), revenue and other receipts adjusted to applicable receipts (on a cash basis), and budget expenditures.

Summary of Sources and Application of Funds (in thousands of dollars)

Obligations (from program and financing)	4,186	4,803	5,175
Increase (−) or decrease in gross unpaid obligations	−58	46	−65
Gross expenditures	4,128	4,849	5,110
Revenues and other receipts (from program and financing)	4,315	4,664	5,031
Increase (−) in accounts receivable, net	−55	−50	−54
Applicable receipts	4,260	4,614	4,977
Budget expenditures	−132	235	133

STATEMENT OF REVENUE, EXPENSE, AND RETAINED EARNINGS

For revolving funds there is also presented a statement of revenue and expense, computed on an accrual basis, and the resulting net income or loss for the year. This statement is usually on a full accrual basis, including sums for depreciation, provision for losses on receivables, etc. Where a fund consists of several programs, revenue and expense may be identified for each, as here illustrated:

Revenue, Expense, and Retained Earnings (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Chartering program:			
Revenue	15	15	15
Expense	64	59	60
Net operating loss, chartering program	−49	−44	−45
Examination program:			
Revenue	3,373	3,633	3,900
Expense	3,228	3,674	4,010
Net operating income or loss, examination program	145	−41	−110
Supervision program:			
Revenue	927	1,016	1,116
Expense	892	1,064	1,100
Net operating income or loss, supervision program	35	−48	16
Nonoperating loss:			
Loss on equipment	−1		
Net income or loss, for the year	130	−133	−139
Analysis of retained earnings:			
Retained earnings, start of year	1,232	1,362	1,229
Retained earnings, end of year	1,362	1,229	1,090

The statement includes an analysis of the retained earnings or the cumulative deficit. This analysis shows any additions to earnings, other than net income for the year, any charges made against retained earnings, and the balance of profits kept in the enterprise as of the end of the year (whether as cash, inventories, or other assets).

STATEMENT OF FINANCIAL CONDITION

For each revolving fund there is presented a balance sheet of assets, liabilities, and equity of the Government at the close of the year, as in this example:

Financial Condition (in thousands of dollars)

	1962 actual	1963 actual	1964 estimate	1965 estimate
Assets:				
Treasury balance	1,164	1,296	1,061	928
Accounts receivable, net	516	571	621	675
Advances [1]	17	17	17	17
Fixed assets, net	133	132	138	143
Total assets	1,830	2,016	1,837	1,763
Liabilities:				
Current	596	653	607	672
Government equity.				
Non-interest-bearing capital:				
Donated assets	2	2	1	1
Donated property returned to surplus		−1		
End of year	2	1	1	1
Retained earnings	1,232	1,362	1,229	1,090
Total Government equity	1,234	1,363	1,230	1,091

The balance sheet excludes balances of appropriations and borrowing authorizations which have not yet been paid into the revolving fund. The section on equity of the Government is divided into three subsections as appropriate: (a) interest-bearing capital, (b) non-interest-bearing capital, and (c) retained earnings.

Because the balance sheet is on an accrual basis, it does not reflect the obligations incurred which have not yet matured into liabilities, nor does it reflect unfilled customer orders received and available as a basis for obligation in the case of intragovernmental revolving funds. Therefore, there is normally appended to the balance sheet an "Analysis of Government Equity" which shows obligations other than liabilities, the unobligated balance, unfilled customers' orders on hand (where relevant), and invested capital and earnings, as in the following example:

Analysis of Government Equity (in thousands of dollars)

Unpaid undelivered orders [1]	4	5	5	5
Unobligated balance	1,080	1,209	1,070	926
Invested capital and earnings	150	149	155	160
Total Government equity	1,234	1,363	1,230	1,091

[1] The changes in these items are reflected on the program and financing schedule.

TABLE ON UNEXPENDED BALANCES

A table at the end of each chapter shows the balances of budget authorizations carried forward at start and end of the past, current, and budget years. These balances are summarized in table 10 of the budget document.

Many budget authorizations are available for obligation for only 1 year, but some are available for longer periods of time or without time limit. In the case of those which are for a specific period of time, unobligated balances are written off at the end of that time, but obligated balances are carried forward to pay outstanding obligations.

In the case of salaries and wages, travel, and like items, the lag between obligations and expenditures is usually no more than a few weeks or a few months. In the case of construction, major procurement, certain research contracts and similar items, the lag between obligations and expenditures may be 1 or 2 years or even longer.

The unobligated balance for each account represents the difference between the unexpended balance and the net obligations outstanding. Net obligations outstanding represent the unpaid obligations (both those which have accrued into liabilities and those which are undelivered or unperformed) less the accounts receivable and intragovernmental orders for services or material which have been accepted but have not yet become receivables.

LEGISLATIVE BRANCH

SENATE

General and special funds:

COMPENSATION OF THE VICE PRESIDENT AND SENATORS, MILEAGE OF THE PRESIDENT OF THE SENATE AND SENATORS, AND EXPENSE ALLOWANCES OF THE VICE PRESIDENT AND LEADERS OF THE SENATE

COMPENSATION OF THE VICE PRESIDENT AND SENATORS

For compensation of the Vice President and Senators of the United States, $2,471,140. (*Legislative Branch Appropriation Act, 1964.*)

MILEAGE OF PRESIDENT OF THE SENATE AND OF SENATORS

For mileage of the President of the Senate and of Senators, $58,370. (*Legislative Branch Appropriation Act, 1964.*)

EXPENSE ALLOWANCES OF THE VICE PRESIDENT, AND MAJORITY AND MINORITY LEADERS

For expense allowance of the Vice President, $10,000; Majority Leader of the Senate, $2,000; and Minority Leader of the Senate, $2,000; in all, $14,000. (*Legislative Branch Appropriation Act, 1964.*)

SALARIES, OFFICERS AND EMPLOYEES

For compensation of officers, employees, clerks to Senators, and others as authorized by law, including agency contributions and longevity compensation as authorized, which shall be paid from this appropriation without regard to the below limitations, as follows:

OFFICE OF THE VICE PRESIDENT

For clerical assistance to the Vice President, at rates of compensation to be fixed by him in basic multiples of $5 per month, $136,710. (*Legislative Branch Appropriation Act, 1964.*)

CHAPLAIN

Chaplain of the Senate, $9,430. (*Legislative Branch Appropriation Act, 1964.*)

OFFICE OF THE SECRETARY

For office of the Secretary, [$897,885] *$917,595,* including $128,000 required for the purposes specified and authorized by section 74b of title 2, United States Code: [*Provided,* That effective July 1, 1963, the basic compensation of the printing clerk shall be $5,700 in lieu of $5,400.] *Provided, That effective July 1, 1964, the Secretary may employ an assistant at $2,460 basic per annum, an assistant messenger at $1,980 basic per annum, an assistant messenger at $1,740 basic per annum, and an assistant messenger at $1,500 basic per annum, in lieu of the positions authorized by Senate Resolution 419, agreed to January 28, 1931, Senate Resolution 372, agreed to December 18, 1930, Senate Resolution 340, agreed to December 3, 1930, and Senate Resolution 204, agreed to June 16, 1938, which Resolutions are hereby repealed.* (*Legislative Branch Appropriation Act, 1964.*)

COMMITTEE EMPLOYEES

For professional and clerical assistance to standing committees and the Select Committee on Small Business, $2,731,965. (*Legislative Branch Appropriation Act, 1964.*)

CONFERENCE COMMITTEES

For clerical assistance to the Conference of the Majority, at rates of compensation to be fixed by the chairman of said committee, $82,740.

For clerical assistance to the Conference of the Minority, at rates of compensation to be fixed by the chairman of said committee, $82,740. (*Legislative Branch Appropriation Act, 1964.*)

ADMINISTRATIVE AND CLERICAL ASSISTANTS TO SENATORS

For administrative and clerical assistants and messenger service for Senators, $13,609,650. (*Legislative Branch Appropriation Act, 1964.*)

OFFICE OF SERGEANT AT ARMS AND DOORKEEPER

For office of Sergeant at Arms and Doorkeeper, [$2,704,615: *Provided,* That effective July 1, 1963, the Sergeant at Arms may employ two additional assistant chief telephone operators at $2,580 basic per annum each in lieu of two telephone operators at $1,980 each, one additional messenger acting as assistant doorkeeper at $2,580 basic per annum in lieu of one messenger at $2,100, the basic per annum compensation of the administrative officer shall be $5,280 in lieu of $4,140, and the title of positions shall be changed as follows: wagonmaster to truck driver, assistant wagonmaster to assistant truck driver, two female attendants ladies' retiring room to two attendants, laborer in charge of private passage to skilled laborer.] *$2,751,915: Provided, That effective July 1, 1964, the Sergeant at Arms may employ a messenger at $1,800 basic per annum, two messengers at $1,740 basic per annum each, two laborers at $1,560 basic per annum each, and eight special employees at $1,000 basic per annum each, in lieu of the positions authorized by Senate Resolution 428, agreed to February 17, 1931, Senate Resolution 62, agreed to December 15, 1931, Senate Resolution 83, agreed to December 17, 1931, Senate Resolution 453, agreed to February 26, 1931, Senate Resolution 44, agreed to April 11, 1933, and Senate Resolution 212, agreed to February 15, 1954, which Resolutions are hereby repealed.* (*Legislative Branch Appropriation Act, 1964.*)

OFFICES OF THE SECRETARIES FOR THE MAJORITY AND THE MINORITY

For the offices of the Secretary for the Majority and the Secretary for the Minority, $135,195. (*Legislative Branch Appropriation Act, 1964.*)

OFFICES OF THE MAJORITY AND MINORITY WHIPS

For four clerical assistants, two for the Majority Whip and two for the Minority Whip, at rates of compensation to be fixed in basic multiples of $60 per annum by the respective Whips, $15,165 each; in all, $30,330. (*Legislative Branch Appropriation Act, 1964.*)

OFFICIAL REPORTERS OF DEBATES

For office of the Official Reporters of Debates, $231,555. (*Legislative Branch Appropriation Act, 1964.*)

OFFICE OF THE LEGISLATIVE COUNSEL OF THE SENATE

For salaries and expenses of the Office of the Legislative Counsel of the Senate, $247,260[: *Provided,* That effective July 1, 1963, one additional employee in the Office of the Legislative Counsel of the Senate may be designated as Senior Counsel, and the compensation of the additional employee so designated shall be equal to the gross per annum rate presently authorized for other employees so designated]. (*Legislative Branch Appropriation Act, 1964.*)

CONTINGENT EXPENSES OF THE SENATE

SENATE POLICY COMMITTEES

For salaries and expenses of the Majority Policy Committee and the Minority Policy Committee, $175,585 for each such committee; in all, $351,170. (*Legislative Branch Appropriation Act, 1964.*)

AUTOMOBILES AND MAINTENANCE

For purchase, exchange, driving, maintenance, and operation of four automobiles, one for the Vice President, one for the President Pro Tempore, one for the Majority Leader, and one for the Minority Leader, [$37,840.] *$39,840.* (*Legislative Branch Appropriation Act, 1964.*)

ADMINISTRATIVE PROVISION

Salaries or wages paid out of the items herein for the House of Representatives shall hereafter be computed at basic rates, plus increased and additional compensation, as authorized and provided by law. (*Legislative Branch Appropriation Act, 1964.*)

JOINT ITEMS

CONTINGENT EXPENSES OF THE HOUSE

Joint Committee on Internal Revenue Taxation

For salaries and expenses of the Joint Committee on Internal Revenue Taxation, $344,440. (*Legislative Branch Appropriation Act, 1964.*)

Joint Committee on Immigration and Nationality Policy

For salaries and expenses of the Joint Committee on Immigration and Nationality Policy, [$20,000] *$160,460.* (*Legislative Branch Appropriation Act, 1964.*)

Joint Committee on Defense Production

For all necessary expenses of the Joint Committee on Defense Production as authorized by the Defense Production Act of 1950, as amended, [$69,550] *$90,520.* (*Legislative Branch Appropriation Act, 1964.*)

For other joint items, as follows:

CAPITOL POLICE

GENERAL EXPENSES

For purchasing and supplying uniforms; the purchase, maintenance, and repair of police motor vehicles, including two-way police radio equipment; contingent expenses, including $25 per month for extra services performed for the Capitol Police Board by such member of the staff of the Sergeant at Arms of the Senate or the House, as may be designated by the Chairman of the Board; $36,700. (*Legislative Branch Appropriation Act, 1964.*)

CAPITOL POLICE BOARD

To enable the Capitol Police Board to provide additional protection for the Capitol Buildings and Grounds, including the Senate and House Office Buildings and the Capitol Power Plant, $144,000. Such sum shall be expended only for payment of salaries and other expenses of personnel detailed from the Metropolitan Police of the District of Columbia, and the Commissioners of the District of Columbia are authorized and directed to make such details upon the request of the Board. Personnel so detailed shall, during the period of such detail, serve under the direction and instructions of the Board and are authorized to exercise the same authority as members of such Metropolitan Police and members of the Capitol Police and to perform such other duties as may be assigned by the Board. Reimbursement for salaries and other expenses of such detail personnel shall be made to the government of the District of Columbia, and any sums so reimbursed shall be credited to the appropriation or appropriations from which such salaries and expenses are payable and shall be available for all the purposes thereof: *Provided,* That any person detailed under the authority of this paragraph or under similar authority in the Legislative Branch Appropriation Act, 1942, and the Second Deficiency Appropriation Act, 1940, from the Metropolitan Police of the District of Columbia shall be deemed a member of such Metropolitan Police during the period or periods of any such detail for all purposes of rank, pay, allowances, privileges, and benefits to the same extent as though such detail had not been made, and at the termination thereof any such person who was a member of such police on July 1, 1940, shall have a status with respect to rank, pay, allowances, privileges, and benefits which is not less than the status of such person in such police at the end of such detail: *Provided further,* That the Commissioners of the District of Columbia are directed to pay the captain and the lieutenant detailed under the authority of this paragraph the same salary as that paid the two lieutenants so detailed in fiscal year 1955 plus $625 and such increase in basic compensation as may be subsequently provided by law so long as these positions are held by the present incumbents and that the Commissioners of the District of Columbia are directed to pay the deputy chief detailed under the authority of this paragraph the same salary as that paid in fiscal year 1961 plus $1,025 and such increases in basic compensation as may be subsequently provided by law so long as this position is held by the present incumbent and that the Commissioners of the District of Columbia are directed to pay the uniformed lieutenant detailed under the authority of this paragraph and serving as acting captain a salary of the rank of captain and such increases in basic compensation as may be subsequently provided by law.

No part of any appropriation contained in this Act shall be paid as compensation to any person appointed after June 30, 1935, as an officer or member of the Capitol Police who does not meet the standards to be prescribed for such appointees by the Capitol Police Board: *Provided,* That the Capitol Police Board is hereby authorized to detail police from the House Office, Senate Office, and Capitol Buildings for police duty on the Capitol Grounds. (*Legislative Branch Appropriation Act, 1964.*)

EDUCATION OF PAGES

For education of congressional pages and pages of the Supreme Court, pursuant to section 243 of the Legislative Reorganization Act, 1946, [$77,025] *$79,925,* which amount shall be advanced and credited to the applicable appropriation of the District of Columbia, and the Board of Education of the District of Columbia is hereby authorized to employ such personnel for the education of pages as may be required and to pay compensation for such

New obligational authority (appropriation)	**10,141**	**9,726**	**10,790**

Personal services and incidental expenses for basic operations are financed from this appropriation.

1. *Acquisition of library materials.*—The Library's collections are developed in accordance with established acquisition policies: materials are procured by purchase, gift, exchange, copyright deposit, transfer and official deposit; and materials are selected for addition to the permanent collections. The objective for 1965 is: intensification of acquisitions activities and continued improvement in acquisitions procedures and in exchange relations with institutions in the more important areas of the world. The collections totaled 43,131,951 items as of June 30, 1963, and consisted of 12,752,792 books and pamphlets; 18,610,876 manuscript pieces and 11,768,283 maps, pieces of music, reels of microfilm, photographs, and other miscellaneous items. Of the items received, about one million are added to the permanent collections annually. Those received from various sources in 1963 and estimated for 1964 and 1965 are as follows (in thousands):

Description	*1963 actual*	*1964 estimate*	*1965 estimate*
Purchase	612	640	640
Deposit by virtue of law:			
Copyright	429	432	437
Other	701	720	724
Transfer from Federal agencies	1,844	1,900	1,950
Official donation from State and local agencies	112	120	125
Exchange	454	510	580
Gift from indvidual and unofficial sources	1,302	1,000	1,000
Public Law 480 foreign currency activities	34	45	75
Total	5,488	5,367	5,531

2. *Organization of the collections.*—Library materials are cataloged, classified, marked and arranged; Library of Congress catalogs and the main National Union Catalog (card catalog) are maintained; special collections are organized for use; and binding operations are controlled. The objectives for this activity in 1965 are the cataloging on a current basis of all important materials received during the year, the reduction of cataloging arrearages, and improved cataloging methods and procedures to assure the usefulness of the collections.

Selected performance data for 1963 and estimated for 1964 and 1965 (not including processing activities performed by the Reference Department and the Law Library) are as follows (in thousands):

Description	*1963 actual*	*1964 estimate*	*1965 estimate*
Volumes fully cataloged and added to the classified collections	135	160	200
Items otherwise organized for use (without full cataloging)	44	45	45
Cards filed in catalogs	1,618	1,700	1,850

LIBRARY OF CONGRESS—Continued

General and special funds—Continued

SALARIES AND EXPENSES—Continued

Library, reference and bibliographic assistance is rendered, and custody of the collections is maintained. The objective of this activity for 1965 is to improve circulation and reference services, and to organize more material for use. The workload in all major activities is expected to increase in 1964 and 1965 as follows (in thousands):

Description	*1963 actual*	*1964 estimate*	*1965 estimate*
Reader and reference services:			
Materials served	1,913	1,950	2,000
Units issued on loan	220	225	230
Reference inquiries answered in person	343	350	355
Reference requests by telephone	182	188	195
Reference letters	94	100	100
Law Library reader and reference services:			
Books and pamphlets served	238	275	300
Reference inquiries answered	59	60	62

4. *Maintenance and protective services.*—A staff of 197, including 82 part-time charwomen, preserves, cleans, and maintains the two Library buildings, collections, and grounds; operates telephone switchboards, elevators, check stands, and motor vehicles; procures and maintains furniture, office supplies, housekeeping materials, and miscellaneous equipment; assigns space; and operates the receiving and stock rooms. The guard force staff of 75 is necessary to prevent fire and theft, to maintain order, and to provide regular inspections of all areas in both buildings in which is assembled one of the greatest accumulations of national treasures in the world.

The Copyright Office is responsible for recording copyright claims, assignments, and renewals, for supplying copyright information to the public, for collecting and accounting for copyright fees, and for printing complete and indexed catalogs for each class of copyright entries. The Office is conducted for the most part on a self-sustaining basis. The amount requested is substantially counterbalanced by fees received for services rendered and the value of books and other library materials deposited in accordance with the Copyright Act and transferred to the Library of Congress. The income and costs for 1963 and estimates for 1964 and 1965 are as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Income:			
Fees applied	1,078	1,110	1,143
Estimated value of materials deposited	585	602	620
Total income	1,663	1,712	1,764
Costs:			
Salaries	1,476	1,586	1,631
Other costs	197	195	197
Total costs	1,673	1,781	1,828

The program and performance under each of the activities described are predicated on an estimated 280,973 copyright registrations during 1965, an estimated 272,790 during 1964, and an actual 264,845 during 1963.

1. *Receiving and accounting for applications, etc.*—Materials received by the Copyright Office are assembled and routed; accounts are maintained for all moneys received; records relating to the registration of copyrights are filed; and materials are deposited in accordance with the Copyright Act. Performance data for 1963 and estimates for 1964 and 1965 are as follows (in thousands):

	1963 actual	*1964 estimate*	*1965 estimate*
Registrations	265	273	281
Mail received and dispatched	564	581	598

2. *Examining copyright applications.*—All applications and deposits are examined before issuance of registration certificates or recording of documents to determine

Digitized for FRASER

Federal Reserve Bank of St. Louis

whether the provisions of the Copyright Act have been satisfied. Performance data are as follows (in thousands):

	1963 actual	1964 estimate	1965 estimate
Cases and documents examined	295	304	313
Registrations and recordation of documents	278	287	295
Letters written	36	37	38

3. *Indexing and cataloging materials received.*—The Register of Copyrights is required to print complete and indexed catalogs of all items registered. The catalog entries prepared by the Copyright Office are made available in part to the Library for its general operations. There were 264,845 registrations cataloged in 1963 and estimates for 1964 and 1965 are 272,790 and 280,973, respectively.

4. *Reference services.*—The Copyright Office makes available to the public, information concerning the provisions of the Copyright Act, including procedures, policies, and rulings; information concerning registrations is furnished on a fee basis. Obtaining compliance with registration requirements is also part of this activity. Performance data are as follows (in thousands):

	1963 actual	1964 estimate	1965 estimate
Titles searched	84	87	89
Letters and search reports written	22	23	23

5. *Printing the catalog of copyright entries and bulletins of decisions.*—Catalogs for each class of copyright entries and bulletins of copyright decisions are printed and made available to the public.

6. *General supervision and legal services.*—The work of the Copyright Office includes legal services relating to the status and improvement of copyright law in its foreign as well as domestic aspects. For the next several years, a major effort of the Copyright Office will be directed toward the preparation, introduction, and enactment of legislation revising the entire copyright statute.

1. *Research and analysis.*—The Legislative Reference Service assists Members and committees of Congress by preparing research reports, digests, translations, charts, and consultative services, and by supplying reference information and materials. The bulk of these services are furnished through six subject-matter divisions: American Law, Economics, Education and Public Welfare, Foreign Affairs, History and Government, and Natural Resources. Under specific authorization of the Legislative Reorganization Act of 1946, senior specialists are also available for high-level research and consultative services in the following fields: International economics, international relations, American government and public administration, conservation, American public law, labor, engineering and public works, agriculture, price economics, national defense, social welfare, and science and technology. In 1963, 105,152 Congressional inquiries were answered. The number answered in 1962 was 99,430. The number of inquiries in 1964 is estimated at 105,000; and in 1965, 110,000.

2. *Preparation of indexes and digests.*—The Digest of Public General Bills covers all public bills and resolutions. It is expected that there will be about the same number of bills to be digested during the second session of the Eighty-eighth Congress as were digested for the second session of the Eighty-seventh Congress.

3. *Reference files, bibliographies, and congressional reader services.*—Reference files, containing clippings, pamphlets and documents, are maintained as the basis for reply to a high percentage of inquires; researchers are supplied with bibliographic and reference tools; selective and comprehensive bibliographies are prepared for Members and committees of Congress; and reader services are provided by the Congressional Reading Room. During 1963, 110,939 reference file items were processed, 13,788 bibliographic citations prepared, 141,129 published items acquired and processed, and 4,037 readers served.

The card division sells copies of the Library's printed catalog cards and publications. It maintains a stock of over 112 million catalog cards representing approximately 4 million titles, and fills orders from over 14 thousand regular subscribers—mostly libraries—in the United States and abroad. In 1963, 107% of this appropriation was recovered in the form of receipts from card and publication sales. Receipts of $2,959,770 were deposited in miscellaneous receipts of the Treasury in 1963. The objectives for 1965 are: meeting the increased demand for catalog cards and maintaining a reasonable level of service and economy; and the continued development of the National Union Catalog as the country's major bibliographic and locational tool.

1. *Supplying cards for the Library of Congress.*—The number of cards supplied to the Library of Congress in 1963 was 5,543 thousand; estimated for 1964, 6,100 thousand; and for 1965, 6,700 thousand.

2. *Supplying cards for other libraries.*—The number of cards sold in 1963 was 46,022 thousand; estimated for 1964, 50 million; and for 1965, 55 million.

3. *Preparation, printing, and distribution of publications related to cataloging.*—These publications are an integral part of the cataloging activities of the Library of Congress and include the Classification Schedules, lists of Subject Headings, Rules for Descriptive Cataloging, Cataloging Service Bulletins, and similar publications.

4. *Preparation, printing, and distribution of the National Union Catalog.*—This catalog (a cumulative author list) is issued monthly and cumulated quarterly and annually. Subscribers also receive issues of Motion Pictures and Filmstrips (quarterlies with annual cumulation), and Music and Phonorecords (issued on a 6-month basis and annual cumulation). There were 1,220 paid subscriptions for all issues in calendar year 1962, and it is estimated that there will be 1,300 subscriptions for 1963 and 1,400 for 1964. Included under this activity is the National Library of Medicine Catalog.

5. *Preparation, printing, and distribution of the Subject Catalog.*—This catalog is issued in three quarterly volumes with an annual cumulation. There were 480 paid subscriptions for calendar year 1962. It is estimated that there will be 520 paid subscriptions in 1963 and about 550 in 1964.

Unobligated balance carried forward	28		
New obligational authority (appropriation)	**570**	**670**	**670**

This appropriation is used to acquire domestic and foreign trade publications, both current and noncurrent. The publications acquired by purchase constitute a very important part of the Library's acquisitions although they represent only a small portion of the material received annually. The objectives for 1965 are: to continue the program for procurement of important research materials to strengthen the Library's collections; to acquire selected important foreign newspapers and periodicals; to increase the acquisition of important materials from critical areas, particularly from Eastern Europe, Africa, and Asia; to increase the acquisition of materials in the fields of science and technology; to continue the purchase of selected current titles on microfilm as an economy measure in lieu of binding; and to continue the microfilming of deteriorating materials as a necessary preservative and space-saving measure.

New obligational authority (appropriation)	**110**	**110**	**110**

This appropriation constitutes the only means of acquiring law books published in the regular domestic trade (except for copyright deposits) and many foreign law books published in countries all over the world. The legal publications acquired by purchase constitute a most important part of the law library's acquisitions, although a substantial part of the annual receipts is received by means other than purchase. The special objectives for 1965 are: to improve the procurement of current foreign legal materials by placing purchase orders for certain necessary publications now received only irregularly through exchange or gift; to increase procurement of both current and noncurrent materials needed to strengthen the law library's already comprehensive coverage of critical areas in Eastern Europe, Asia, and Africa; to acquire photoduplicates of important research items, especially those from critical areas, which are no longer obtainable in the original; and to continue a program for the microfilming or acquiring of microreproductions of deteriorating legal materials as a necessary preservative and space-saving measure.

BOOKS FOR THE BLIND—Continued

SALARIES AND EXPENSES—continued

The Division for the Blind is responsible for administering a national program to provide reading material for the blind of the United States, U.S. territories and insular possessions. It has two closely related operations.

1. *Procurement and distribution.*—It provides books in embossed characters, and talking books with their associated reproducers. The books are distributed through 31 regional libraries which assume responsibility for their custody and circulation. The reproducers are distributed through 54 State agencies. The maintenance and procurement of these books are shown in the following table:

Description	*1963 actual*	*1964 estimate*	*1965 estimate*
Talking books purchased:			
(a) New titles and magazines	336	355	366
(b) Old titles rerecorded	24	45	45
Embossed books and magazines: Press braille titles	260	245	275
Talking book machines:			
Purchased	12,500	11,500	10,000
Repaired	15,000	15,000	15,000
Salvaged—scrapped	9,574	10,000	5,000

Objectives for 1965 are: (1) the sustained procurement of braille books with broader coverage (e.g., vocational and professional); (2) procurement of more titles and copies of talking books including magazines, together with a substantial increase in service of books on magnetic tape; (3) procurement of a sufficient number of machines to equip newly registered blind readers and to replace additional obsolete machines; and (4) continued activity in research, development, and testing of sound reproduction apparatus and packaging techniques.

2. *Cataloging, reference, circulating, and training services.*—Catalogs of talking and braille books are prepared and maintained, including a Union Catalog of Hand Copied Books in Braille which brings together a record of holdings of all libraries for the blind. The Division also maintains a unique collection (more than 30 thousand volumes) of books in braille not available elsewhere for loan in the United States. During the past 4-year period 1960–63 the number of readers throughout the country requiring catalogs from which to select reading matter has grown from 63,300 to 85,863 and circulation from 1,952,682 units (volumes, containers and reels) to 2,896,160. The number of readers and circulation are expected to continue to increase in 1964 and 1965. Inquiries are received concerning library and related services available to the blind. Individuals throughout the Nation who are interested in transcribing or proofreading braille are trained and those qualified are certified. During 1963, 676 individuals were certified, and it is anticipated that this level will continue during 1964 and 1965.

Public Law 85–147 (71 Stat. 368), approved August 16, 1957, authorizes an appropriation of $720 thousand to remain available until expended to arrange, index, and microfilm the Papers of the Presidents of the United States in the collections of the Library of Congress. The purpose is to preserve their contents and to make them more readily available for research. The program was started in 1959 with an appropriation of $107 thousand. The objectives for the seventh year will be to provide negative and positive service copy on microfilm of material arranged and indexed, and to continue publishing indexes by photo-offset in editions of 1,000 copies each.

Preservation of American Motion Pictures

For expenses necessary for the conversion of American motion pictures now in the custody of the Library from nitrate film to safety base film, $50,000. (*2 U.S.C. 131; Legislative Branch Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

Program by activities:			
Converting paper prints and nitrate film to safety base film (obligations)	61	50	50
Financing:			
New obligational authority (appropriation)	**61**	**50**	**50**

For 1963, $61 thousand was appropriated to enable the Librarian of Congress to provide for the conversion to safety base film of additional paper prints of early motion pictures now in the custody of the Library. With these funds, approximately 67 thousand 35-mm. feet, or the remainder of the paper prints were converted, and about 320 thousand 35-mm. feet of nitrate film was converted to safety base film.

It is anticipated that with the $50 thousand appropriated for 1964, some 500 thousand feet of 35-mm film can be preserved.

The $50 thousand requested for 1965 will allow for testing of deterioration rates of nitrate film by a new method, and preservation on a priority basis of badly deteriorating, often unique, motion pictures important to film history at approximately the same rate of preservation as 1964.

LIBRARY OF CONGRESS—Continued

General and special funds—Continued

COLLECTION AND DISTRIBUTION OF LIBRARY MATERIALS (SPECIAL FOREIGN CURRENCY PROGRAM)—Continued

United States. The program is being continued on a full year's basis in six countries in 1965: Burma, India, Indonesia, Israel, Pakistan, and the United Arab Republic. It is proposed to continue the program in 1965 on a slightly expanded basis in these countries. Also the initiation of similar programs in Poland and Yugoslavia is proposed. Of the total amount requested, $1,717 thousand will be used to purchase foreign currencies, while $143 thousand will provide U.S. dollar support.

1. *Acquisition of books and other library materials.*—Based upon the information received during the exploratory stage concerning materials available in the two additional countries and the requirements of other Federal agencies and certain research libraries in the United States, publications and other library materials will be purchased in multiple copies from eight countries and distributed to selected libraries and research centers in the United States, including the Library of Congress.

2. *Bibliographic listings.*—Accessions lists of materials acquired in the eight countries will be prepared and distributed to libraries and research centers in the United States to inform scholars of the range of books, serials, and other library materials available under this program. Cataloging information will also be provided.

3. *Operation of centers.*—Centers staffed with foreign nationals and a limited number of U.S. personnel will handle acquisition, listing, cataloging, and microfilming.

4. *Program support (U.S. dollars).*—U.S. dollars are required to pay certain expenses which cannot be paid by foreign currencies, such as salaries of U.S. personnel abroad, salaries of the coordinating staff of three persons at the Library of Congress, and travel in some instances.

ADMINISTRATIVE PROVISIONS

Appropriations in this Act available to the Library of Congress for salaries shall be available for expenses of investigating the loyalty of Library employees; special and temporary services (including employees engaged by the day or hour or in piecework); and services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a).

Not to exceed ten positions in the Library of Congress may be exempt from the provisions of appropriation Acts concerning the employment of aliens during the current fiscal year, but the Librarian shall not make any appointment to any such position until he has ascertained that he cannot secure for such appointments a person in any of the categories specified in such provisions who possesses the special qualifications for the particular position and also otherwise meets the general requirements for employment in the Library of Congress. (*Legislative Branch Appropriation Act, 1964.*)

ALLOCATIONS RECEIVED FROM OTHER ACCOUNTS

Note.— Obligations incurred under allocations from other accounts are included in the schedule of the parent appropriation as follows:
Health, Education, and Welfare, Public Health Service, "Operations, National Library of Medicine."
State, "Mutual Educational and Cultural Exchange Activities."

The Oliver Wendell Holmes Devise Fund was established by 69 Stat. 533 to (1) prepare a history of the Supreme Court of the United States, and, if deemed advisable, (2) finance an annual lecture or series of lectures, and (3) publish a memorial volume of Justice Holmes' writings. The principal and interest on the fund are available for these purposes. The current program is devoted primarily to the preparation of the history of the Supreme Court; annual lectures are also financed by this fund.

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $11 thousand; 1963, $25 thousand; 1964, $30 thousand; 1965, $20 thousand.

The work programs of the Office of the Superintendent of Documents are of a service nature, and hence there is no control over the volume of work which is required by law.

1. *Sales distribution.*—Government publications are purchased from the Public Printer to be placed on sale. Acquisition costs are paid from sales receipts; hence no appropriation is required for printing sales copies. By law, the sales price is set at cost of manufacture plus 50%. At the end of each year, excess receipts from sales not required for purchasing additional publications are turned in to the Treasury Department as miscellaneous receipts. For 1963, earnings from the sale of publications amounted to $5,732 thousand. It is estimated that earnings for 1964 will be $6,000 thousand and $6,200 thousand for 1965. These earnings more than cover the appropriation required to finance the sales program.

The sale of Government publications has been steadily increasing, and in the last 10 years the sales volume has more than doubled. The current public interest in the Government's publishing program points to a continuing increase in the volume of sales.

2. *Distribution for other agencies and Members of Congress.*—The Superintendent of Documents maintains mailing lists, including the list for the Congressional Record, and performs mailing operations upon request of any Government agency. Mailing services for Farmers' Bulletins, Soil Surveys, and other publications which are allocated to Members of Congress on a quota basis are also provided.

3. *Depository library distribution.*—Upon request, one copy of every Government publication is supplied to libraries which are designated depositories for Government publications.

4. *Cataloging and indexing.*—This activity covers the preparation and distribution of catalogs and indexes of all publications issued by the Federal Government, the principal series being the Monthly Catalog of the United States Government Publications and the Numerical List and Schedule of Volumes.

5. *Contingency fund.*—This fund to be used only with the approval of the Public Printer, and only to the extent necessary to provide for expenses (excluding permanent personal services) for workload increases not anticipated in the budget estimates and which cannot be provided for by normal budgetary adjustments.

SUMMARY OF WORKLOAD

[In thousands]

	1963 actual	*1964 estimate*	*1965 estimate*
Number of sales orders	3,389	3,500	3,600
Letters of inquiry	1,573	1,600	1,650
Amount of sales	$11,298	$11,700	$12,100
Number of publications sold	53,077	54,600	56,200
Publications distributed for other Government agencies	90,981	93,000	95,000

Summary of Sources and Application of Funds (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Obligations (from program and financing)	132,937	137,312	135,292
Increase (−) or decrease in gross unpaid obligations	−1,618	1,030	1,750
Gross expenditures	131,319	138,342	137,042
Revenues and other receipts (from program and financing)	136,923	140,627	141,356
Increase (−) or decrease in accounts receivable, net	1,335	−147	255
Applicable receipts	138,258	140,480	141,611
Budget expenditures	−6,939	−2,138	−4,569

The Government Printing Office executes orders for printing, binding, and blankbook work, placed by Congress and the various departments and independent establishments of the Federal Government, and furnishes on order, blank paper, inks, and similar supplies. Operations are subject to the authority of the Joint Committee on Printing (44 U.S.C.).

A separate appropriation has been established for authorized printing and binding for the Congress; for printing, binding, and distribution of the Federal Register; and printing and binding of Government publications authorized by law to be distributed without charge to the recipients (77 Stat. 816).

All work for Government agencies is done on a reimbursable basis and financed through the Government Printing Office revolving fund.

Receipts from sales of publications by the Superintendent of Documents are deposited to the revolving fund and cost of publications paid therefrom. All profits accruing from these transactions are transferred to the Treasury general fund (44 U.S.C. 63).

Revenue, Expense, and Retained Earnings (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Operating revenue and expense:

GENERAL PROVISIONS

SEC. 102. No part of the funds appropriated in this Act shall be used for the maintenance or care of private vehicles.

SEC. 103. Whenever any office or position not specifically established by the Legislative Pay Act of 1929 is appropriated for herein or whenever the rate of compensation or designation of any position appropriated for herein is different from that specifically established for such position by such Act, the rate of compensation and the designation of the position, or either, appropriated for or provided herein, shall be the permanent law with respect thereto: *Provided*, That the provisions herein for the various items of official expenses of Members, officers, and committees of the Senate and House, and clerk hire for Senators and Members shall be the permanent law with respect thereto: *Provided further*, That the provisions relating to positions and salaries thereof carried in House Resolutions [603 and 773 of the Eighty-seventh Congress and House Resolution 225] of the Eighty-eighth Congress shall be the permanent law with respect thereto: [*Provided further*, That the provisions of House Resolution 735 of the Eighty-seventh Congress shall be the permanent law with respect thereto.]

SEC. 104. No part of any amount appropriated in this Act shall be available to finance, under authority of section 4167(a) of title 39, United States Code, the mailing and delivering of mail matter sent through the mails after October 2, 1962, with a simplified form of address under the franking privilege by any Member or Member-elect of the United States Senate to postal patrons, including those patrons on rural or star routes; nor shall any part of any amount appropriated in this Act be so available with respect to the mailing and delivering of such mail matter so addressed by any Member or Member-elect of the House of Representatives beyond the district which such Member or Member-elect was elected to represent. (*Legislative Branch Appropriation Act, 1964.*)

The U.S. Court of Customs and Patent Appeals has exclusive jurisdiction in appeals from judgments of the U.S. Customs Court in all cases involving the construction of the law and facts respecting the classification of merchandise and the rate of duty imposed thereunder and all appealable questions as to the laws and regulations governing the collection of customs revenues. Its decisions are final unless taken to the Supreme Court in writs of certiorari.

The court also has exclusive jurisdiction of appeals from the Tariff Commission on questions of law only and in the matter of unfair practices in import trade, and appellate jurisdiction from decisions of the Patent Office in patent and trademark cases, except those involving equity.

CUSTOMS COURT

General and special funds:

SALARIES AND EXPENSES

For salaries of the chief judge and eight judges; salaries of the officers and employees of the court; services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); and necessary expenses of the court, including exchange of books, and traveling expenses, as may be approved by the court; [$989,000] *$1,043,500*: *Provided*, That traveling expenses of judges of the Customs Court shall be paid upon the written certificate of the judge. (*5 U.S.C. 835–842; 28 U.S.C. 251–255, 456, 604, 871–873, 961, 962; Judiciary Appropriation Act, 1964.*)

This item is not subject to the approval of the Judicial Conference.

The U.S. Customs Court has exclusive jurisdiction over civil actions arising under the tariff laws, the internal revenue laws relating to imported merchandise, the several customs simplification acts, the proclamations of the President issued under reciprocal trade agreements, and other proclamations imposing taxes or quotas on imported goods. The court also has appellate jurisdiction of cases litigating the value of imported merchandise. It tries cases without a jury, making findings of fact and applying the law.

COURT OF CLAIMS

General and special funds:

SALARIES AND EXPENSES

For salaries of the chief judge, four associate judges, and all other officers and employees of the court, and for other necessary expenses, including stenographic and other fees and charges necessary in the taking of testimony, and travel, [$1,100,000] *$1,176,500.* (*5 U.S.C. 835–842; 28 U.S.C. 171, 173, 456, 604, 791, 792, 794, 795, 961, 962; 41 U.S.C. 114(a); Judiciary Appropriation Act, 1964.*)

The Court of Claims has jurisdiction over all cases involving claims against the United States (except in pension suits) instituted upon constitutional grounds or under Federal law or regulations, all claims arising out of any contract with the Federal Government and its agencies, and claims for the refund of taxes. It also has general jurisdiction to hear and determine claims for damages other than tort actions, provided the claimants would have the right to sue in law or equity if the United States were not immune to such suits. It has jurisdiction in suits against the United States by contractors dissatisfied with the findings and decisions of contracting agencies under terminated war contracts, and jurisdiction concurrent with that of the courts of appeals to review district court decisions in cases involving tort actions. It has exclusive jurisdiction to review the decisions of the Indian Claims Commission on appeal from the Commission. It also has jurisdiction in special act cases referred to the court by the Congress.

The primary and appellate jurisdiction of the courts of the United States are vested in the 92 district courts and 11 courts of appeals. Provision for the salaries of the administrative and legal aides required to assist the judges in the conduct of hearings, trials, and other judicial functions and to man the component offices of the courts including the Federal Probation System, is made under this heading.

The estimate for 1965 provides for the appointment of 44 additional probation officers, 33 clerk-stenographers for the probation offices and 15 deputy clerks for the U.S. Courts of Appeal. Provision also has been made for within-grade salary advancements; the difference between the full-year and part-year cost of salary increases authorized by the Federal Salary Reform Act of 1962, effective January 6, 1964, and the difference between the full-year and part-year cost of the Judiciary Salary Plan.

Financing:			
Unobligated balance lapsing	100		
New obligational authority (appropriation)	**5,500**	**5,500**	**5,500**

This appropriation provides for the statutory fees and allowances of jurors, fees of jury commissioners, fees and related benefits of U.S. commissioners who serve primarily as committing magistrates, and compensation of voting referees appointed pursuant to the provisions of the Civil Rights Act of 1960.

The amount of service and the compensation of jurors depends largely on the number of jury trials requested by the parties to civil and criminal cases in the U.S. courts and to the administration of the jury system. The earnings of commissioners are directly related to the volume of cases presented by law enforcement officials.

Funds appropriated under this heading are for expenses of travel and subsistence incurred by judges and supporting personnel in attending sessions of court or transacting other official business; and for equipment, lawbooks, supplies, and other incidental expenses of operating the 11 courts of appeals and 92 district courts of the United States.

The estimate for 1965 will provide for expenses relating to requests for additional personnel under the heading, Salaries of supporting personnel, increases in charges for local switchboard telephone and teletypewriter services by the General Services Administration, and tenant alterations by the GSA on a reimbursable basis. Provision also has been made for increases in the volume and cost of printing and supplies, continuation material required to maintain court libraries, and the nonrecurring cost of equipment required for clerks' offices as a result of conversion to central disbursing by the administrative office.

The office, pursuant to section 604 of title 28, United States Code, under the supervision and direction of the Judicial Conference of the United States, is responsible for the administration of the U.S. courts, including the probation and bankruptcy systems. The principal functions consist of providing staffs and services for the courts; conducting a continuous study of the rules of practice and procedure in the Federal courts; examining the state of the dockets of the various courts; compiling and publishing statistical data concerning the business transacted by the courts; and administering the Judicial Survivors Annuity System under title 28, United States Code, section 376. The office also is responsible for the preparation and submission of the annual budget estimates as well as supplemental and deficiency estimates; the disbursement of and accounting for moneys appropriated for the operation of the courts; the audit and examination of accounts; the purchase and distribution of supplies and equipment; and for securing adequate space for occupancy by the courts and for such other matters as may be assigned by the Supreme Court and the Judicial Conference of the United States.

The estimate for 1965 includes the sum of $420 thousand for the purchase of automatic data processing equipment and related expenses incident to the commencement of a central disbursing program by the Administrative Office in 1965 at the direction and with the approval of the Judicial Conference of the United States. The cost of the program in the second and succeeding years is estimated to be $38 thousand.

Provision also has been made for within-grade salary advancements to be granted under the Classification Act of 1949, as amended; a reduction of lapse required to offset increases in salary granted under wage board schedules and the difference between the full-year and part-year cost of salary increases, effective January 6, 1964, under the Federal Salary Reform Act of 1962.

COURTS OF APPEALS, DISTRICT COURTS, AND OTHER JUDICIAL SERVICES—Continued

General and special funds—Continued

SALARIES OF REFEREES

(Special fund)

For salaries of referees as authorized by the Act of June 28, 1946, as amended (11 U.S.C. 68), not to exceed [$2,550,000] *$2,905,000*, to be derived from the Referees' salary and expense fund established in pursuance of said Act. (*Judiciary Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

New obligational authority (appropriation)	**2,552**	**2,550**	**2,905**

The district courts of the United States are constituted courts of bankruptcy, vested with original jurisdiction at law and in equity in proceedings brought under the bankruptcy statutes. This jurisdiction primarily is exercised through referees appointed by the several district courts. Their compensation and benefits are paid from this appropriation, which is derived from a special fund in the Treasury to which are deposited payments of fees and charges by parties to the proceedings. No appropriation from the general fund of the Treasury is required.

CASELOAD

	1962	*1963*
Pending, beginning of year	123,690	133,761
Filed during year	147,780	155,493
Closed during year	137,709	141,440
Pending, end of year	133,761	147,814

The estimate for 1965 provides for two additional full-time referees and a part-time referee, the conversion of two part-time referees to a full-time status and some salary adjustments approved by the Judicial Conference in March 1963. In addition, the sum of $235 thousand has been included for additional positions, changes in salaries, and arrangements for referees expected to be approved by the Judicial Conference in March 1964.

EXPENSES OF REFEREES

(Special fund)

For expenses of referees as authorized by the Act of June 28, 1946, as amended (11 U.S.C. 68, 102), not to exceed [$5,250,000] *$5,965,000*, to be derived from the Referees' salary and expense fund established in pursuance of said Act. (*Judiciary Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Clerk hire and miscellaneous expenses of referees (obligations)	4,853	5,250	5,965
Financing:			
Unobligated balance lapsing	44		
New obligational authority (appropriation)	**4,898**	**5,250**	**5,965**

Office and other expenses of referees, including compensation and benefits of clerical employees, are payable upon authorization of the Director of the Administrative Office of the U.S. Courts. Caseload data appear under the account for Salaries of referees. This appropriation is derived from a special fund in the Treasury to which are deposited payments of fees and charges by parties to the proceedings. No appropriation from the general fund of the Treasury is required.

The estimate for 1965 includes the sum of $289 thousand for the employment of additional clerks for referees on a temporary basis to cope with the rising caseload. Provision has been made for within-grade salary advancements; the difference between the full-year and part-year cost of salary increases authorized by the Federal Salary Reform Act of 1962, effective January 6, 1964; and the difference between the full-year and part-year cost of the Judiciary Salary Plan. Also, the estimate includes funds for furniture, equipment, and other expenses in relation to the appointment of additional referees and the conversion of part-time referees to a full-time status as requested under the heading, Salaries and referees. Funds have been included for furniture and furnishings required incident to the occupancy of new buildings, tenant alterations and other services to be performed by the General Services Administration on a reimbursable basis, and increases in the cost and volume of supplies and printing required by referees.

The Bureau assists the President in the discharge of his budgetary, management, and other executive responsibilities.

1. *Office of budget review.*—Budget instructions and procedures are developed, review of agency estimates is coordinated, and the budget document is prepared.

2. *Office of financial management.*—Direction is given to programs for improving accounting and financial management in the executive agencies, in collaboration with the General Accounting Office and the Treasury Department.

3. *Office of legislative reference.*—Proposed legislation and agency reports on pending legislation and enrolled bills are reviewed for the President.

4. *Office of management and organization.*—Programs and plans are developed for improved Government organization and procedures, and guidance is provided in the work of the Bureau to improve agency management and operations.

5. *Office of statistical standards.*—Proposed agency reporting plans and forms are reviewed, and the Government's statistical activities, coverage, and methods are coordinated and improved.

6. *Program divisions.*—Agency programs, budget requests, and management activities are examined, appropriations are apportioned, proposed changes in agency functions are studied, and agencies are assisted in the improvement of their administration. Responsibility for this work with respect to particular agencies is divided among five divisions: (a) commerce and finance, (b) international, (c) labor and welfare, (d) military, and (e) resources and civil works.

OFFICE OF EMERGENCY PLANNING

General and special funds:

SALARIES AND EXPENSES

For expenses necessary for the Office of Emergency Planning, including services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); reimbursement of the General Services Administration for security guard services; expenses of attendance of cooperating officials and individuals at meetings concerned with the work of the Office; [$4,695,000] *$5,700,000*: *Provided*, That not to exceed [$650,000] *$1,300,000* of the foregoing amount shall remain available until expended for studies and research to develop measures and plans for emergency preparedness and telecommunications. (*Independent Offices Appropriation Act, 1964.*)

Note.—Includes $1,300,000 for activities previously carried under "Research and development," Office of Emergency Planning. The amounts obligated in 1963 and 1964 are shown in the schedules as comparative transfers.

Program and Financing (in thousands of dollars)

New obligational authority (appropriation)	**5,240**	**4,695**	**5,700**

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $1,230 thousand (1963 adjustments, −$37 thousand); 1963, $469 thousand; 1964, $469 thousand; 1965, $469 thousand.

The Office of Emergency Planning serves as a staff office to advise and assist the President with respect to the nonmilitary defense programs of the United States. This includes the coordination of emergency preparedness activities of Federal agencies, the development of emergency preparedness programs not covered by the responsibilities of the regular departments and agencies, and the performance of other duties in the areas of stockpiling, telecommunications, Federal disaster relief, and imports affecting the national security.

1. *Emergency preparedness.*—This activity finances the development of emergency preparedness plans and programs at all levels of government. Plans and programs are developed to assure the continued operation and control of governmental authority and to mobilize the country's economic resources under emergency conditions.

(a) *Economic readiness.*—Plans and programs are developed to improve the ability of the U.S. economy to perform under emergency conditions—from international crisis to nuclear war. These include supply-requirement studies, stockpiling policies, standby controls, dispersal policies, investigations of imports affecting the national security, and developing Government-wide plans for the mobilization and management of resources in an emergency.

(b) *Government readiness.*—Plans and programs are developed to reduce the vulnerability of all levels of government to enemy attack and to insure the continued functioning of governmental leadership and control in an emergency. These include achieving a standby capability for emergency operations on the part of existing Government agencies; relocating essential governmental functions in an emergency; and the recruitment and training of qualified executive reservists who would be called to duty in an emergency.

(c) *Regional, State and local readiness.*—Eight regional offices of the Office of Emergency Planning work with State and local governments on emergency preparedness planning. They also coordinate Federal assistance under natural disasters and assist the Federal offices in the field in developing a capability to perform their functions in an emergency.

(d) *Policy, research and review.*—Basic plans and policies for the overall emergency preparedness program are developed, including the National Plan for Emergency Preparedness. Research in the emergency preparedness field is coordinated and direction is provided to the National Resource Evaluation Center. Office of Emergency Planning research contracts are administered. National preparedness objectives are developed and progress measured against these objectives.

2. *Telecommunications.*—This activity includes: (1) providing policy direction for the development and operation of the National Communications System; (2) assigning frequencies to Federal Government radio stations; (3) developing data on Federal Government frequency requirements; (4) reviewing the actual usage of Government frequencies; (5) providing assistance and advice to the Department of State on international telecommunications matters; (6) authorizing foreign governments to construct and operate radio stations at the seat of government under certain conditions; (7) coordinating telecommunications activities of the executive branch and formulating overall policies and standards therefor; (8) developing overall policies for the mobilization of the Nation's telecommunications resources in a national emergency; and (9) stimulating research in the telecommunications field.

3. *Administration and executive direction.*—The necessary staff support is provided to the Director of the Office of Emergency Planning and other Office of Emergency Planning offices under this activity. Services include general administration, public information and liaison, and legal assistance. Funds are also included to finance the housekeeping expenses of the Office of Emergency Planning in Washington. This activity also includes the salaries of the Director of the Office of Emergency Planning, the Deputy Director, two Assistant Directors and their immediate staff. The Director is a principal adviser to the President on nonmilitary defense. He serves as a member of the National Security Council and participates in meetings of the Cabinet by invitation of the President.

4. *Research and development.*—This activity finances technical studies of emergency preparedness problems which cut across the functional responsibilities of other Federal agencies. Contracts are made with universities and private organizations when it is not feasible or economical to hire a permanent Office of Emergency Planning staff.

This appropriation finances development of programs by State and local governments to manage their natural, industrial, and other resources in time of an emergency in the national interest as well as their own. These plans concern use of resources to meet immediate survival needs, and the role of the States and their political subdivisions as possessors of resources required for restoration and rehabilitation of the Nation as a whole. These funds are augmented by State and local funds and personnel.

[CIVIL DEFENSE AND DEFENSE MOBILIZATION] *EMERGENCY PREPAREDNESS* FUNCTIONS OF FEDERAL AGENCIES

For expenses necessary to [enable] *assist* other Federal agencies to perform civil defense and defense mobilization functions, including payments by the Department of Labor to State employment security agencies for the full cost of administration of defense manpower mobilization activities, [$4,190,000] *$6,500,000.* (*Independent Offices Appropriation Act, 1964.*)

Through a series of Executive orders the following agencies have been requested to prepare national emergency plans and develop preparedness programs under the general guidance and review of the Office of Emergency Planning, the President's principal staff agency for the nonmilitary defense program.

1. *Agriculture.*—The Department is responsible for mobilization and management of national food resources in an emergency. The 1965 program will concentrate on achieving readiness at the State and local level.

2. *Commerce.*—The Department develops long-range emergency preparedness programs for all forms of trans-

portation. It is also responsible for mobilization of production facilities in the event of emergency. Census data is developed for the use of the National Resource Evaluation Center.

3. *Health, Education, and Welfare.*—Responsibilities have been assigned to this Department to improve the Nation's civil defense readiness in areas of emergency health and welfare. Food and Drug personnel are trained in radiological, biological and chemical warfare. Measures are developed to insure safety of drugs in an emergency. Emergency welfare programs are developed and disseminated to State and local welfare agencies.

4. *Interior.*—The Department is responsible for preparedness programs covering electric power, petroleum and gas, solid fuels and minerals. These programs are carried on with the cooperation of private industry.

5. *Labor.*—The Department is responsible for insuring the availability of an adequate labor force to meet mobilization and civil defense requirements. A capability is also maintained for emergency wage and salary stabilization.

6. *Treasury.*—The Department develops national emergency plans relating to economic stabilization and emergency monetary programs.

7. *Federal Aviation Agency.*—The Agency works, under national transportation plans and programs, with the air transport industry to maintain the emergency preparedness of civil aviation and airports.

8. *Housing and Home Finance Agency.*—This Agency develops plans and programs for provision of emergency housing and related community facilities.

9. *Federal Communications Commission.*—As part of the program to mobilize the Nation's communications resources under emergency conditions, the Commission is responsible for development of plans and programs with respect to privately owned communications facilities and services. The major portion of the increased funds requested for 1965 will permit maintenance by the Commission of the emergency broadcast system.

10. *Interstate Commerce Commission.*—The Commission is assigned responsibility, as a part of the national emergency transportation program, for guidance to the domestic surface transportation industry on disaster preparedness. This covers railroads, motor carriers, and inland waterways.

Advances from other accounts	----------	180	180

The President's Committee on Equal Opportunity in Housing was established by Executive Order 11063, dated November 20, 1962, to advise the President with respect to the granting of Federal assistance for the provision, rehabilitation, or operation of housing and related facilities from which Americans are excluded because of their race, color, creed, or national origin.

The Committee is composed of the Secretary of the Treasury; the Secretary of Defense; the Attorney General; the Secretary of Agriculture; the Housing and Home Finance Administrator; the Administrator of Veterans Affairs; the Chairman of the Federal Home Loan Bank Board; a member of the staff of the Executive Office of the President assigned to the Committee by direction of the President, and public members appointed by the President.

The Committee is financed through contributions by the agencies subject to the Executive order.

GENERAL PROVISIONS

DEPARTMENTS, AGENCIES, AND CORPORATIONS

SEC. 501. Unless otherwise specifically provided, the maximum amount allowable during the current fiscal year in accordance with section 16 of the Act of August 2, 1946 (5 U.S.C. 78), for the purchase of any passenger motor vehicle (exclusive of buses and ambulances), is hereby fixed at $1,500 except station wagons for which the maximum shall be $1,950.

SEC. 502. Unless otherwise specified and during the current fiscal year, no part of any appropriation contained in this or any other Act shall be used to pay the compensation of any officer or employee of the Government of the United States (including any agency the majority of the stock of which is owned by the Government of the United States) whose post of duty is in continental United States unless such person (1) is a citizen of the United States, (2) is a person in the service of the United States on the date of enactment of this Act, who, being eligible for citizenship, had filed a declaration of intention to become a citizen of the United States prior to such date, (3) is a person who owes allegiance to the United States, or (4) is an alien from Poland or the Baltic countries lawfully admitted to the United States for permanent residence: *Provided*, That for the purpose of this section, an affidavit signed by any such person shall be considered prima facie evidence that the requirements of this section with respect to his status have been complied with: *Provided further*, That any person making a false affidavit shall be guilty of a felony, and, upon conviction, shall be fined not more than $4,000 or imprisoned for not more than one year, or both: *Provided further*, That the above penal clause shall be in addition to, and not in substitution for, any other provisions of existing law: *Provided further*, That any payment made to any officer or employee contrary to the provisions of this section shall be recoverable in action by the Federal Government. This section shall not apply to citizens of the Republic of the Philippines or to nationals of those countries allied with the United States in the current defense effort, or to temporary employment of translators, or to temporary employment in the field service (not to exceed sixty days) as a result of emergencies.

SEC. 503. Appropriations of the executive departments and independent establishments for the current fiscal year, available for expenses of travel or for the expenses of the activity concerned, are hereby made available for quarters allowances and cost-of-living allowances, in accordance with title II of the Act of September 6, 1960 (74 Stat. 793).

SEC. 504. No part of any appropriation for the current fiscal year contained in this or any other Act shall be paid to any person for the filling of any position for which he or she has been nominated after the Senate has voted not to approve the nomination of said person.

SEC. 505. No part of any appropriation contained in this or any other Act for the current fiscal year shall be used to pay in excess of $4 per volume for the current and future volumes of the United States Code, Annotated, and such volumes shall be purchased on condition and with the understanding that latest published cumulative annual pocket parts issued prior to the date of purchase shall be furnished free of charge, or in excess of $4.25 per volume for the current or future volumes of the Lifetime Federal Digest, or in excess of $6.50 per volume for the current or future volumes of the Modern Federal Practice Digest.

SEC. 506. Funds made available by this or any other Act for administrative expenses in the current fiscal year of the corporations and agencies subject to the Government Corporation Control Act, as amended (31 U.S.C. 841), shall be available, in addition to objects for which such funds are otherwise available, for rent in the District of Columbia; services in accordance with section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); and the objects specified under this head, all the provisions of which shall be applicable to the expenditure of such funds unless otherwise specified in the Act by which they are made available: *Provided*, That in the event any functions budgeted as administrative expenses are subsequently transferred to or paid from other funds, the limitations on administrative expenses shall be correspondingly reduced.

SEC. 507. Pursuant to section 1415 of the Act of July 15, 1952 (66 Stat. 662), foreign credits (including currencies) owed to or owned by the United States may be used by Federal agencies for any purpose for which appropriations are made for the current fiscal year (including the carrying out of Acts requiring or authorizing the use of such credits), only when reimbursement therefor is made to the Treasury from applicable appropriations of the agency concerned: *Provided*, That such credits received as exchange allowances or proceeds of sales of personal property may be used in whole or part payment for acquisition of similar items, to the extent and in the manner authorized by law, without reimbursement to the Treasury.

SEC. 508. During the current fiscal year, any foreign currencies held by the United States which have been or may be reserved or set aside for specified programs or activities of any agency may be carried on the books of the Treasury in unfunded accounts.

SEC. 509. No part of any appropriation contained in this or any other Act, or of the funds available for expenditure by any corporation or agency, shall be used for publicity or propaganda purposes designed to support or defeat legislation pending before Congress. (*Public Works Appropriation Act, 1964.*)

FUNDS APPROPRIATED TO THE PRESIDENT

DISASTER RELIEF

General and special funds:

DISASTER RELIEF

For expenses necessary to carry out the purposes of the Act of September 30, 1950, as amended (42 U.S.C. 1855–1855g), authorizing assistance to States and local governments in major disasters, $20,000,000, to remain available until expended: *Provided,* That not to exceed 3 per centum of the foregoing amount shall be available for administrative expenses. (*Independent Offices Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Administration	339	545	555
2. Aid to disaster areas	28,859	41,245	19,417
Total program costs, funded	29,198	41,790	19,972
Change in selected resources [1]	4,640		
Total obligations	33,838	41,790	19,972
Financing:

New obligational authority (appropriation)	**25,000**	**20,000**	**20,000**

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $9,897 thousand (1963 adjustments, −$6,992 thousand); 1963, $7,544 thousand; 1964, $7,544 thousand; 1965, $7,544 thousand.

1. *Administration.*—Funds are provided to administer and coordinate disaster relief assistance for the States. Simultaneously with the President's authorization of an allocation of funds to the Office of Emergency Planning for required disaster assistance, he authorizes an additional allocation to OEP for administrative purposes.

2. *Aid to disaster areas.*—Under Public Law 81–875, the Federal Government provides supplementary assistance to State and local governments in the event of a declared major disaster. Federal financial assistance is provided from the Disaster Relief appropriation, under which allocations may be made directly to a State, or to Federal agencies as reimbursement for expenditures in disaster relief work performed under this authority. Responsibility for administration of this program is delegated to OEP by Executive Order 10427.

The following table summarizes the allocations made during 1963 (in thousands of dollars):

ALLOCATIONS MADE, 1963

State	*Type of disaster*	*Date declared*	*Allocated*

Federal Reserve Bank of St. Louis

1. *Development grants.*—These grants are used in less developed countries to (1) provide the advisers, teachers, equipment and supplies required for the improvement of human resources, especially in administrative, educational, technical and professional skills; (2) assist in the control and eradication of major diseases and other menaces to health; (3) establish and improve institutions which further economic and social development; (4) assist in planning and surveys of development programs and projects; (5) establish or improve basic physical facilities such as communications and transport, in those relatively few countries where the economies are unable to carry the obligations entailed by development loans; (6) pay transportation charges on shipments of supplies by approved American nonprofit voluntary agencies; and (7) finance research concerning the problems of economic development.

2 and 3. *American schools and hospitals abroad.*—To further the well-rounded training of qualified leadership in developing countries, the United States has provided funds to American-sponsored schools and institutions abroad. The Congress has authorized such assistance under section 214 of the Foreign Assistance Act of 1961. In 1964, $19 million was appropriated of which not to exceed $2.2 million is available for direct dollar costs in connection with U.S.-founded or sponsored hospitals abroad and $4.7 million is available solely for payments in U.S.-owned excess foreign currencies. A total program of $12 million is proposed in 1965.

4. *Surveys of investment opportunities.*—This program encourages private enterprise to undertake surveys of investment opportunities in the less developed areas of the world. Up to 50% of the total cost of such surveys is paid by AID in the event that the concern sponsoring the survey does not proceed with an investment. If such payment is necessary, the survey becomes AID property for use in attracting other investors.

5. *International organizations and programs.*—Funds requested under this account are to cover voluntary contributions of the United States to international programs sponsored by an agency of the United Nations as well as regional organizations and special purpose international financial institutions.

Decreases in the amount anticipated to be required for these programs are the result of several factors, most importantly, (1) the major channel of U.S. support of economic assistance to the Congo has been shifted from the multilateral to the bilateral program; (2) several programs, including the NATO science and malaria eradication have been absorbed in the regular assessed programs of the respective organizations, and (3) contributions to regional organizations and to regional programs of international organizations in the fields of economic and technical assistance are included in the estimates for development grants and Alliance for Progress grants. The above decreases are offset by a scheduled increase in our contribution to the Indus Basin Development Fund and an increase in U.S. contributions to the United Nations Expanded Program of Technical Assistance and the Special Fund due to an increase in other member nations' contributions.

6. *Supporting assistance.*—In furtherance of U.S. national security and foreign policy objectives support is provided through this account to countries which need help in maintaining defensive forces or in attaining economic and political stability. Provision is usually made on a grant basis and, to the extent feasible, supporting assistance funds are used for purposes which also contribute to development. In several cases country situations have recently stabilized sufficiently to permit significant reductions in supporting assistance and increased concentration on development. Fifty-five percent of present supporting assistance requirements are in Korea and Vietnam, countries on the immediate periphery of the Sino-Soviet bloc.

7. *Contingencies.*—These funds are used to meet urgent requirements which cannot be foreseen at the time the budget is prepared. They are available not only to provide emergency assistance in disasters, but also to meet important international situations which create a need for immediate response in the U.S. national interest.

8. *Alliance for Progress.*—This account funds technical assistance grants to Latin America as part of the joint Alliance for Progress program. The United States also provides assistance under the Alliance through loans, Food for Peace, Peace Corps, Export-Import Bank, and private foundations and institutions.

9. *Social Progress Trust Fund.*—In accordance with an agreement of June 19, 1961, between the United States and the Inter-American Development Bank, the Bank administers a Social Progress Trust Fund, financed by the United States, from which loans and technical assistance grants are made to foster social progress in Latin American countries. An appropriation of $135 million was provided in 1964 to replenish the Fund and to finance activities of the OAS related to the Alliance for Progress. Funds are not advanced to the Bank until needed to meet disbursements from the Fund. Advances to and disbursements by the Fund are as follows (in thousands of dollars and dollar equivalents):

	1963 actual	*1964 estimate*	*1965 estimate*
Balance brought forward	2,153	1,304	1,304
Advances to the Fund	49,000	100,000	120,000
Collections: Income and loans	1,575	6,000	19,900
Total available for disbursement by the Fund	52,728	107,304	141,204
Loan disbursements	48,190	102,100	135,000
Grants and other disbursements	3,234	3,900	4,200
Balance carried forward	1,304	1,304	2,004

It is anticipated that in 1965, the activities of the Social Progress Trust Fund will be carried on through expanded arrangements to be proposed for the Inter-American Development Bank.

10. *Administrative expenses (AID).*—These funds are used by the Agency for International Development in Washington and overseas missions to administer economic programs.

11. *Administrative and other expenses (State).*—Administrative expense funds are requested for the Department of State for support of personnel involved in the administration of the foreign assistance program and of the Battle Act.

Loans.—A major portion of U.S. resources provided through foreign economic programs in less developed countries is in the form of loans. Data on loans made under the development loan activity, under the Alliance for Progress, and under the authority of the Agricultural Trade Development and Assistance Act are shown in separate schedules. A small portion of economic program funds available for grants are loaned each year rather than granted. These loans are made for economic devel-

Through 1961, a portion of the mutual security dollar appropriations was used to purchase surplus agricultural commodities which were then sold to friendly countries for their currencies. Sales of these commodities are now being made through the Food for Peace program. Local currencies accruing from the sales through 1961 under the mutual security program are deposited in a special account and are used for economic and military activities in furtherance of objectives of the U.S. foreign assistance program. These activities include the local costs of projects, budget support of the less-developed countries and procurement of supplies and equipment for third countries.

Pursuant to authorization in section 252 of the Foreign Assistance Act of 1961, as amended, the Congress has appropriated $614.3 million to date to be used for development loans, to remain available until expended.

In 1961, the Alliance for Progress was formed to launch a hemispheric effort, in which the United States joined as partner, to stimulate and accelerate the development of the Americas through programs of social and economic reform. In support of this effort, the United States makes loans to finance the development activities necessary to achieve self-sustained growth. The nations of Latin America have subscribed to the Charter of Punta del Este and are pledged to seek reforms and institute self-help measures contributing to the development effort. U.S. assistance is supplemented by assistance from other nations, international organizations, and our own private investors, foundations, and educational institutions.

To sustain this effort, Alliance for Progress appropriations of $550 million are proposed for 1965, $100 million more than 1964. Of this amount, $465 million shown in this schedule will be available for loans. The remainder, $85 million, is for development grants and appears under Grants and other programs.

Revenue, Expense, and Retained Earnings (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Revenue	1,425	2,300	5,000
Expense [1]	85	100	100
Net operating income for year	1,340	2,200	4,900
Retained earnings, start of year	270	1,610	3,810
Retained earnings, end of year	1,610	3,810	8,710

[1] For pro rata share of expenses of Office of Inspector General, Foreign Assistance. Other administrative expenses for Alliance for Progress—revolving fund are to be financed by the regular appropriation for administrative expenses of the Agency for International Development.

Under the Foreign Assistance Act of 1961, a 5-year long-range program for development loans of $7.2 billion was authorized to be administered by the new Agency for International Development. This program replaces the Development Loan Fund which was abolished November 3, 1961. $687.3 million was appropriated for 1964 and $925 million is proposed for 1965.

Development loans are repayable in U.S. dollars. Under the provisions of the Foreign Assistance Act of 1963, interest charged on all loans with the exception of those covered by special provisions relative to the use of the facilities of the International Development Association and those funds already committed to be loaned, will be at a rate of interest of not less than 2% per annum commencing not later than 10 years following the date on which the funds are initially made available under the loan. During the 10-year period the rate of interest shall not be lower than ¾% per annum.

Development loans are made to promote the economic development of less-developed countries and areas, with emphasis upon existing long-range plans and programs designed to develop their economic resources and to increase their productive capacities. Before a loan is made, the Agency for International Development must take into account (1) whether financing could be obtained in whole or in part from other free world sources on reasonable terms, including private sources within the United States, (2) the economic and technical soundness of the activity to be financed, including the capacity of the recipient country to repay the loan at a reasonable rate of interest, (3) whether the activity gives reasonable promise of contributing to the development of economic resources or to the increase of productive capacities, (4) the consistency of the activity with, and its relationship to, other development activities being undertaken or planned, and its contribution to realizable long-range objectives, (5) the extent to which the recipient country is demonstrating its determination to take effective self-help measures, and (6) possible effects upon the economy of the United States. Development loans will not be made unless there is a finding of a reasonable prospect of repayment. Additional loan criteria and standards are established by an interagency Development Loan Committee chaired by the Administrator of the Agency for International Development.

The program proposed for 1965 reflects the growing need for development assistance as a result of (1) an increase in effective development planning in many countries, (2) the increasing ability of countries previously receiving aid grants to utilize dollar repayable loans for long-term economic development purposes, and (3) an enlarged capacity among expanding economies to utilize new development capital.

The Development Loan Fund was established as a corporation by the Mutual Security Act of 1958 to extend loans, credits, and guarantees to American or foreign individuals, businesses, financial institutions, or foreign governments in order to provide capital for projects and programs contributing to the economic growth of less developed free countries.

Under the Foreign Assistance Act of 1961, the Development Loan Fund corporation was abolished and its functions were transferred, effective November 3, 1961, to the new Agency for International Development. As of that date, the fund had approved 217 loans and allocations and 3 guarantees for development assistance in 50 countries amounting to $2,008.5 million. Of this total, 203 loans and guarantee agreements had been signed totaling $1,887.3 million of which $632.9 million was actually disbursed, leaving $1,254.8 million undisbursed loan and guarantee agreements still outstanding. In addition, the fund had $120.8 million unobligated

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

funds outstanding to provide for approved but unsigned loans. The agreements were in such fields as power, irrigation, transportation, and industry which contribute to basic economic development. Approximately 24% of all loans were repayable in dollars and 76% in foreign currencies. A total of $2,000 million was appropriated to the fund, in addition to which receipts from operations totaling approximately $15.5 million was available, including $5.8 million realized from foreign currency receipts sold to the U.S. Treasury for dollars.

Subsequent to November 3, 1961, the fund has remained open for the purpose of liquidating outstanding obligations and approved but unsigned loans. As of June 30, 1963, the undisbursed loan agreements amounted to $638.1 million. It is estimated that this balance will be decreased to $338.3 million in 1964 and to $22.2 million in 1965.

Loan repayments and interest earned totaled $89.6 million in 1963, and are scheduled to total $103.1 million in 1964 and $118.5 million in 1965.

The investment guarantee program encourages and facilitates participation by U.S. businesses in developing the economies of the underdeveloped countries. There are three statutory types of investment guarantees. First, there are the specific risk guarantees which insure a U.S. investor against loss from inconvertibility of the local currency, from expropriation or confiscation, or from war, revolution or insurrection. Second, there are the extended risk guarantees through which up to 75% of an investment may be insured against loss from any causes other than the investor's own misconduct or normally insurable risks, such as fire and theft. Third, there is an extended risk guarantee available only for selected self-liquidating pilot housing projects in Latin America.

Guarantees are available for investment in those countries whose governments have agreed with the Government of the United States to institute the investment guarantee program, and where there are suitable arrangements to protect the interests of the United States Government in connection with assets or claims acquired as a result of having provided relief under a guarantee. Substantial progress has been made in reaching these agreements with countries that had previously not participated, particularly in Latin America. Guarantees are available in 57 of the developing countries.

All guarantees are backed by the full faith and credit of the United States. As of June 30, 1963, total reserves available for all authorized investment guarantees was $268,586 thousand. That amount is expected to suffice to handle any claims that might reasonably be anticipated to mature before a supplemental appropriation could be obtained from the Congress to restore the liquidity of the program.

The current status and requested increase in statutory authorizations for specific risk, extended risk, and Latin American housing programs are indicated below.

(a) *Specific risks.*—The Foreign Assistance Act of 1963 has authorized an increase in maximum allowable outstanding guarantees against inconvertibility, expropriation, war, revolution and insurrection from $1.2 billion to $2.5 billion. No further increase for 1965 is considered necessary at this time.

(b) *Extended risk.*—For general projects, an increase of $120 million is requested to allow a total of $300 million in extended risk guarantee authority. (The present ceiling is $180 million.)

(c) *Extended risk.*—For Latin American housing projects, an increase of $100 million is requested to allow a total of $250 million in outstanding housing guarantees. (The present ceiling is $150 million.)

Operating costs and administration.—As of June 30, 1963, claims totaling $667.5 thousand have been paid out of that portion of the reserves representing accumulated fee income. It is estimated that $610 million in new guarantees will be issued in the year 1964 and $725 million in 1965. It is estimated that during 1965 general extended risk guarantees outstanding will increase to $140 million and extended risk guarantees for Latin American housing to $186.3 million. Administrative expenses are paid from funds appropriated for the general administrative expenses of the Agency for International Development.

[1] Balances of selected resources are identified on the statement of financial condition.

In addition to established programs in the Agency for International Development for acquisition and utilization of excess personal property, section 608 of the Foreign Assistance Act of 1961 created a revolving fund to provide for more effective use by the Agency for International Development of U.S. Government-owned domestic and fore gn excess property in foreign assistance programs by authorizing such property to be acquired and rehabilitated in advance of specifically known requirements for country programs. This includes many types of excess property such as tractors, construction and roadbuilding equipment, machinery, and machine tools, the general needs for which can be anticipated with a high degree of certainty. Costs include accessorial charges only, i.e., transportation, rehabilitation, storage, packing, crating, and handling, paid initially from a revolving fund established for the purpose in 1962 and subsequently charged to the recipient government or program. Proceeds from these charges are deposited to the credit of the revolving fund. The law limits the value of domestic excess property which may be held at any one time to $15 million in total original acquisition value. There is no legal limit with respect to the value of foreign excess property which may be held at any one time. No addition to the revolving fund is proposed.

Three major marshaling sites have been established at Schenectady, N.Y., Memphis, Tenn., and Lathrop, Calif. In Europe, the Agency for International Development is obtaining rehabilitation services under an existing U.S. Air Force contract with private commercial firms; in the Far East, a marshaling site of the U.S. Army has been established in Japan.

Continued program expansion is forecast in 1965 as demands for excess property mount and procedures for rehabilitation and storage of this property become fully operational. The 1965 program totals $27 million. The net operating loss in the fund reflects expenditures for transportation, rehabilitation, and storage of property which at the end of the fiscal year have not been offset by reimbursement following disposition of the property. Program operations are summarized as follows (in thousands of dollars):

	1963	*1964*	*1965*
Domestic program:			
Transfer value of inventory, nonreimbursable:

GENERAL PROVISIONS

[SEC. 101. None of the funds herein appropriated (other than funds appropriated under the authorization for "International organizations and programs") shall be used to finance the construction of any new flood control, reclamation, or other water or related land resource project or program which has not met the standards and criteria used in determining the feasibility of flood control, reclamation and other water and related land resource programs and projects proposed for construction within the United States of America as per memorandum of the President dated May 15, 1962.]

[SEC. 102. Obligations made from funds herein appropriated for engineering and architectural fees and services to any individual or group of engineering and architectural firms on any one project in excess of $25,000 shall be reported to the Committees on Appropriations of the Senate and House of Representatives at least twice annually.]

[SEC. 103. Except for the appropriations entitled "Contingency fund" and "Development loans", not more than 20 per centum of any appropriation item made available by this title shall be obligated and/or reserved during the last month of availability.]

[SEC. 104. None of the funds herein appropriated nor any of the counterpart funds generated as a result of assistance hereunder or any prior Act shall be used to pay pensions, annuities, retirement pay or adjusted service compensation for any persons heretofore or hereafter serving in the armed forces of any recipient country.]

[SEC. 105. The Congress hereby reiterates its opposition to the seating in the United Nations of the Communist China regime as the representative of China, and it is hereby declared to be the continuing sense of the Congress that the Communist regime in China has not demonstrated its willingness to fulfill the obligations contained in the Charter of the United Nations and should not be recognized to represent China in the United Nations. In the event of the seating of representatives of the Chinese Communist regime in the Security Council or General Assembly of the United Nations the President is requested to inform the Congress insofar as is compatible with the requirements of national security, of the implications of this action upon the foreign policy of the United States and our foreign relationships, including that created by membership in the United Nations, together with any recommendations which he may have with respect to the matter.]

[SEC. 106. It is the sense of Congress that any attempt by foreign nations to create distinctions because of their race or religion among American citizens in the granting of personal or commercial access or any other rights otherwise available to United States citizens generally is repugnant to our principles; and in all negotiations between the United States and any foreign state arising as a result of funds appropriated under this title these principles shall be applied as the President may determine.]

[SEC. 107. (a) No assistance shall be furnished under the Foreign Assistance Act of 1961, as amended, to any country which sells, furnishes, or permits any ships under its registry to carry to Cuba, so long as it is governed by the Castro regime, in addition to those items contained on the list maintained by the Administrator pursuant to title I of the Mutual Defense Assistance Control Act of 1951, as amended, any arms, ammunition, implements of war, atomic energy materials, or any other articles, materials, or supplies of primary strategic significance used in the production of arms, ammunition, and implements of war or of strategic significance to the conduct of war, including petroleum products.]

[(b) No economic assistance shall be furnished under the Foreign Assistance Act of 1961, as amended, to any country which sells, furnishes, or permits any ships under its registry to carry items of economic assistance to Cuba, so long as it is governed by the Castro regime, unless the President determines that the withholding of such assistance would be contrary to the national interest and reports such determination to the Foreign Relations and Appropriations Committees of the Senate and the Foreign Affairs and Appropriations Committees of the House of Representatives. Reports made pursuant to this subsection shall be published in the Federal Register within seven days of submission to the committees and shall contain a statement by the President of the reasons for such determination.]

[SEC. 108. Any obligation made from funds provided in this title for procurement outsde the United States of any commodity in bulk and in excess of $100,000 shall be reported to the Committees on Appropriations of the Senate and the House of Representatives at least twice annually: *Provided,* That each such report shall state the reasons for which the President determined, pursuant to criteria set forth in section 604(a) of the Foreign Assistance Act of 1961, as amended, that foreign procurement will not adversely affect the economy of the United States.]

[SEC. 109. (a) No assistance shall be furnished to any nation, whose government is based upon that theory of government known as communism under the Foreign Assistance Act of 1961, as amended, for any arms, ammunition, implements of war, atomic energy materials, or any articles, materials, or supplies, such as petroleum, transportation materials of strategic value, and items of primary strategic significance used in the production of arms, ammunition, and implements of war, contained on the list maintained by the Administrator pursuant to title I of the Mutual Defense Assistance Control Act of 1951, as amended.]

[(b) No economic assistance shall be furnished to any nation whose government is based upon that theory of government known as communism under the Foreign Assistance Act of 1961, as amended (except section 214(b), unless the President determines that the withholding of such assistance would be contrary to the national interest and reports such determination to the Foreign Affairs and Appropriations Committees of the House of Representatives and Foreign Relations and Appropriations Committees of the Senate. Reports made pursuant to this subsection shall be published in the Federal Register within seven days of submission to the committees and shall contain a statement by the President of the reasons for such determination.]

[SEC. 110. None of the funds appropriated or made available pursuant to this Act for carrying out the Foreign Assistance Act of 1961, as amended, may be used for making payments on any contract for procurement to which the United States is a party entered into after the date of enactment of this Act which does not contain a provision authorizing the termination of such contract for the convenience of the United States.]

[SEC. 111. None of the funds appropriated or made available under this Act for carrying out the Foreign Assistance Act of 1961, as amended, may be used to make payments with respect to any contract for the performance of services outside the United States by United States citizens where such citizens have not been investigated for loyalty and security in the same manner and to the same extent as would apply if they were regularly employed by the United States.]

[SEC. 112. None of the funds appropriated or made available under this Act for carrying out the Foreign Assistance Act of 1961, as amended, may be used to make payments with respect to any capital project financed by loans or grants from the United States where the United States has not directly approved the terms of the contracts and the firms to provide engineering, procurement, and construction services on such projects.]

[SEC. 113. Of the funds appropriated or made available pursuant to this Act not more than $6,000,000 may be used during the fiscal year ending June 30, 1964, in carrying out section 241 of the Foreign Assistance Act of 1961, as amended.]

[SEC. 114. None of the funds appropriated or made available pursuant to this Act for carrying out the Foreign Assistance Act of 1961, as amended, may be used to pay in whole or in part any assessments, arrearages or dues of any member of the United Nations.]

SEC. [115.] *101.* Foreign currencies not to exceed $200,000, made available for loans pursuant to section 104(e) of the Agricultural Trade Development and Assistance Act of 1954, as amended, shall be available during the current fiscal year for expenses incurred incident to such loans.

[SEC. 116. None of the administrative expense or other funds herein appropriated shall be available in connection with the use of receipts of United States dollars, derived from loan repayments and interest collections, in the Development Loan Fund and Alliance for Progress revolving funds.]

SEC. [117] *102.* Receipts of United States dollars in the Development Loan Fund and Alliance for Progress revolving funds, derived from loan repayments and interest collections, may hereafter, when so specified in appropriation Acts, be used for the purposes for which such revolving funds are available.

[SEC. 118. None of the funds made available by this Act for carrying out the Foreign Assistance Act of 1961, as amended, may be obligated on or after April 30, 1964, for financing, in whole or in part, the direct costs of any contract for the construction of facilities and installations in any underdeveloped country, unless the President shall, on or before such date, have promulgated regulations designed to assure, to the maximum extent consistent with the national interest and the avoidance of excessive costs to the United States, that none of the funds made available by this Act and thereafter obligated shall be used to finance the direct costs under such contracts for construction work performed by persons other than qualified nationals of the recipient country or qualified citizens of the United States: *Provided, however,* That the President may waive the application of this amendment if it is important to the national interest.] (*Foreign Aid and Related Agencies Appropriation Act, 1964.*)

EMERGENCY FUND FOR THE PRESIDENT

General and special funds:

EMERGENCY FUND FOR THE PRESIDENT

For expenses necessary to enable the President, through such officers or agencies of the Government as he may designate, and without regard to such provisions of law regarding the expenditure of Government funds or the compensation and employment of persons in the Government service as he may specify, to provide in his discretion for emergencies affecting the national interest, security, or defense which may arise at home or abroad during the current fiscal year, $1,000,000: *Provided,* That no part of this appropriation shall be available for allocation to finance a function or project for which function or project a budget estimate of appropriation was transmitted pursuant to law during the Eighty-eighth Congress *or the first session of the Eighty-ninth Congress,* and such appropriation denied after consideration thereof by the Senate or House of Representatives or by the Committee on Appropriations of either body. (*Executive Office Appropriation Act, 1964.*)

Obligations in excess of availability	85,783		
Unobligated balance		−65,692	−109,086
Financing applied to program	86,406		1,588

Note.—Accrued interest to Treasury for General Services Administration, Department of Agriculture, and Department of Interior, totaling $76.7 million in 1964 and $68.0 million in 1965, is excluded from operating costs. Legislation is being proposed to waive the requirement for payment of interest to Treasury for activities carried on by these agencies.

[1] Balances of selected resources are identified on the statement of financial condition.

Summary of Sources and Application of Funds (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Obligations (from program and financing)	86,406		1,588
Increase (−) or decrease in gross unpaid obligations	−52,510	277,488	5,504
Adjustment for recovery of prior year obligations (−)		−109,056	
Gross expenditures	33,896	168,432	7,092
Revenues and other receipts (from program and financing)	89,418	42,420	44,982
Increase (−) or decrease in accounts receivable, net	1,548	73	−45
Applicable receipts	90,966	42,493	44,937
Budget expenditures	−57,069	125,939	−37,845

Under the Defense Production Act of 1950, as amended, designated agencies are authorized with Presidential approval to incur obligations and make expenditures to secure expanded production of critical materials in furtherance of the defense effort. The program is conducted primarily through a revolving fund financed by borrowings from the Treasury. The amount borrowed may not exceed $2.1 billion outstanding at any one time, but the act permits contingent liabilities to be considered as obligations only to the extent of the probable ultimate net costs to the United States, rather than in the full amount of the gross commitments outstanding. To the extent that money must be expended to fulfill commitments even though the expenditures are considered to be ultimately recoverable (through repayment of loans and sale of inventories, for example), portions of the borrowing authority are used for working capital on a current basis. Due to the imminent exhaustion of this borrowing authority, a direct appropriation of $108 million was enacted in 1959 to cover partially the losses incurred, providing cumulative financing authority of $2,208 million.

Allocations of borrowing authority by the Office of Emergency Planning and net borrowing from the U.S. Treasury as of June 30, 1963, were as follows (in thousands of dollars):

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

Authorized agency	*Borrowing authority allocated*	*Borrowings outstanding*	*Net available for borrowing*
General Services Administration [1]	1,854,000	1,803,700	50,300
Treasury Department	27,100	21,150	5,950
Department of Agriculture	79,606	66,055	13,551
Department of Interior	35,800	32,130	3,670
Export-Import Bank of Washington	0	0	0
Office of Emergency Planning—reserve	103,494	0	103,494
Total	2,100,000	1,923,035	176,965

[1] In addition an appropriation of $108 million was applied to General Services Administration borrowings, thus providing financing of $1,962 million to that agency.

Expenditures are limited to programs certified as essential to the national defense by the Office of Emergency Planning.

As one of the inducements for expanding production most of the contracts provide a guaranteed market for the production from expanded facilities. Significant amounts of materials have been delivered to the Defense Production Act inventory under these contracts. Investment in inventory of $1,500 million on June 30, 1962 and 1963 is expected to decrease to $1,423 million by June 30, 1965.

Progress has been made in disposing of Defense Production Act materials primarily by sales to other Government agencies and industry and steps are being taken to increase and accelerate the disposal program for these materials wherever this can be accomplished without undue effects on the market.

Legislation is being proposed which would waive further payments of interest on notes under the nonlending portion of the program. This would avoid a deficit in the revolving fund which would occur if interest payments are made in 1965.

General Services Administration.—The program for expansion of productive capacity has included the purchase and resale of metals, minerals and machine tools, and research and pilot plant operations to develop new materials and new techniques for utilizing low-grade domestic ores.

The bulk of the expansion program has been completed, with the major problems now being custody, maintenance, and eventual disposition of the materials and facilities. The exercise of option rights by contractors has been examined with a view to reducing deliveries to the Government as far as possible within the terms of the contracts whenever basic stockpiling objectives have been attained. Between July 1, 1957, and June 30, 1963, a reduction of $351.3 million in gross commitments was attained through renegotiation of contracts.

A summary of transactions involving strategic minerals and metals (including work-in-process inventory) under this fund follows (in millions of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Opening inventory	1,500	1,500	1,467
Deliveries during year	21	10	4
Total available	1,521	1,510	1,471
Less cost of goods sold:			
Sales receipts	15	35	38
Loss on sales	5	5	5
Cost of goods sold	20	40	43
Less transfer for upgrading	1	3	5
Closing inventory	1,500	1,467	1,423

As of June 30, 1963, a total of $7,566.0 million in gross value of contracts has been entered into by the General Services Administration under Defense Production Act authority. Of this amount a total of $7,367.9 million has been completed as measured by procurement, expiration of contractors' options on guaranteed production, completion of facilities, completed research, etc. The balance of $198.1 million includes a total of $118.8 million of commodity contracts, of which probable deliveries are estimated at $14.2 million.

Department of Agriculture.—The purchase, management, and resale of agricultural commodities, except forest products, were carried out by the Commodity Credit Corporation, which was reimbursed from an allocation to the Secretary of Agriculture from this fund. The program was completed by 1961, but interest expense still accumulates on the loss incurred.

Department of the Interior.—Department of the Interior operations to expand defense production under this fund were limited to the encouragement of exploration for strategic and critical mineral commodities. The operations were administered by the Defense Minerals Exploration Administration until September 11, 1958, when the Office of Minerals Exploration was established. The latter office uses appropriated funds to administer the older contracts under which royalty obligations remain, as well as to conduct a similar exploration assistance program.

Contingent obligations of the contractors for royalties on the 293 contracts still in force amount to $10,911 thousand. Royalties received totaled $4,587 thousand on a cumulative basis at the end of 1963 and are estimated at $250 thousand for 1964 and $225 thousand for 1965. Losses realized on 866 closed contracts totaled $7,847 thousand on June 30, 1963.

Treasury Department.—The function of making and administering loans to private business enterprises was assigned to the Secretary of the Treasury.

No new loans were authorized during 1963. It is anticipated that there will be no additional loans authorized during 1964 and 1965.

Loans outstanding are estimated for 1964 and 1965 as follows (in thousands of dollars):

Outstanding June 30, 1963	53,040
Repayments, 1964	3,995
Outstanding June 30, 1964	49,045
Repayments, 1965	4,183
Outstanding June 30, 1965	44,862

Export-Import Bank of Washington.—The bank was responsible for making and administering loans, where the expansion, development, or production was in foreign countries. The program has been completely liquidated.

INTERNATIONAL FINANCIAL INSTITUTIONS—Continued

General and special funds—Continued

INVESTMENT IN INTER-AMERICAN DEVELOPMENT BANK—Continued

technical assistance and by encouraging private investment in development projects.

The original United States subscription falls into three categories. The first is a subscription of $150 million for paid-in shares of capital stock, payable in three installments. The first installment of $30 million was paid in June 1960; the second and third installments of $60 million each were paid in October 1961 and October 1962, respectively. The second category is $200 million of callable capital stock which can be called only to meet obligations of the Bank on securities which it has issued in the private financial market or on loans which it has guaranteed. The third category is a subscription quota of $100 million in the Fund for Special Operations of the Bank; $50 million was paid in June 1960, and $50 million was paid in October 1961.

Authorizing legislation now pending will provide for increased participation by the United States in the Inter-American Development Bank and will authorize: (a) an appropriation, without fiscal year limitation, of $412 million for payment of the increased United States subscription to the callable capital stock of the Bank; and (b) an appropriation of $50 million for payment of the increased United States subscription to the Fund for Special Operations of the Bank. The increase in the callable capital stock is to be subscribed in two equal installments of $206 million on or before December 31, 1964 and December 31, 1965. The additional payment to the Fund for Special Operations is to be made on or before March 31, 1964.

As of November 30, 1963, the Bank had approved 107 loans in 19 countries totaling $451.4 million. Of this total, loans from the Bank's ordinary capital resources aggregated $333.4 million, in 73 loans to 16 countries, while 34 loans were made from the Fund for Special Operations, to 15 countries, totaling $118 million.

INVESTMENT IN INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Financing:			
Unobligated balance brought forward (authorization to expend from public debt receipts)	−5,715,000	−5,715,000	−5,715,000
Unobligated balance carried forward (authorization to expend from public debt receipts)	5,715,000	5,715,000	5,715,000

The Bretton Woods Agreements Act of July 31, 1945, authorized the acceptance of membership in the International Bank for Reconstruction and Development and the subscription of $3,175 million to its capital stock. On June 17, 1959 (73 Stat. 80), the Bretton Woods Agreements Act was amended to increase the U.S. subscription to callable capital stock by $3,175 million, in connection with the approximate doubling of the Bank's authorized capital to a level of $21 billion. The Bank's authorized capital was further increased to $22 billion effective December 31, 1963; at that date $21.1 billion was actually subscribed. The United States will not subscribe to any portion of the recent increase.

The United States paid $635 million of the original subscription in cash and non-interest-bearing nonnegotiable notes. The remaining balance of obligational authority ($5,715 million) will not be called unless required to meet the Bank's obligations. Calls on unpaid subscriptions must be a uniform percentage of the amounts subscribed by each member country.

By the end of December 1963, the Bank had made net loans totaling $7.5 billion in 70 member countries and territories.

SUBSCRIPTION TO THE INTERNATIONAL DEVELOPMENT ASSOCIATION

For payment of the [fourth] *fifth* installment of the subscription of the United States to the International Development Association, $61,656,000, to remain available until expended. (*74 Stat. 293; Foreign Aid and Related Agencies Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Investment in International Development Association (costs—obligations) (object class 33)	61,656	61,656	61,656
Financing:			
New obligational authority (appropriation)	**61,656**	**61,656**	**61,656**

Public Law 86–565 (74 Stat. 293), approved June 30, 1960, authorized membership of the United States in the International Development Association and authorized $320.3 million to be appropriated for subscription to the Association.

The International Development Association is an international organization affiliated with the International Bank to provide development financing with long-term maturities at a nominal service charge for its less developed member countries. Most of its initial resources are being provided by countries other than the United States. While the U.S. subscription is $320 million, the contributions of the other economically stronger member countries total about $422 million. Total subscriptions, including those of the less developed countries, are $985 million.

Subscriptions are to be paid by the members in five annual installments. The first installment of $73,667 thousand on the U.S. subscription was paid in 1961; the second, third, and fourth installments of $61,656 thousand each were paid in 1962, 1963, and 1964. The installment planned for 1965 will complete payment of the initial U.S. subscription.

As of December 31, 1963, the Association had made credit commitments totaling $577 million in 20 countries and territories.

Federal Reserve Bank of St. Louis

The United States has adhered to a 10-nation, $6 billion arrangement providing, under specified conditions, for loans by the participants to the International Monetary Fund when needed to forestall or cope with an impairment of the international monetary system. In 1962, $2 billion was appropriated to meet the requirements of U.S. adherence to the agreement. The United States now is in a position to lend up to $2 billion to the Fund, but would not be expected to do so in the absence of a substantial improvement in its balance-of-payments position.

PEACE CORPS

General and special funds:

PEACE CORPS

For expenses necessary to enable the President to carry out the provisions of the Peace Corps Act (75 Stat. 612), as amended, including purchase of not to exceed five passenger motor vehicles for use outside the United States, [$92,100,000, together with the unobligated balance of the appropriation under this head for the fiscal year 1963,] *$115,000,000*, of which not to exceed [$19,900,000] *$20,900,000* shall be available for administration and program support costs. (*Foreign Aid and Related Agencies Appropriation Act, 1964; additional authorizing legislation to be proposed.*)

Reappropriation		**3,864**	

The purposes of the Peace Corps are to provide trained Americans to interested countries in need of middle-level manpower and to promote understanding between the people of the United States and the people served.

Peace Corps volunteers engage in a variety of activities at the request of host countries. Maximum association with the people of the host country is insured by planning the placement of volunteers in small groups throughout a region or country, and by the fact that in most cases they work for a host country institution. Prior to overseas assignment, each volunteer is given intensive training designed, among other things, to develop required skills, to provide a knowledge of the country to which he will be sent, to develop his language abilities and to assure physical fitness for service overseas. During this period of training, all prospective volunteers are carefully examined and evaluated through continuing observation to ensure that those selected for overseas assignment are suited for Peace Corps service. Since training facilities and prospective volunteers are available mostly during the summer months, Peace Corps planning and budgeting are based on a "program year" which runs from the beginning of September through the end of the following August.

1. *Volunteer and projects costs.*—This activity includes all costs directly associated with Peace Corps volunteers in the carrying out of approved programs. In 1965 volunteer strength will increase from 10,500 to 14,000. The planned assignment of these volunteers is as follows:

	Aug. 31, 1963	*Aug. 31, 1964*	*Aug. 31, 1965*
Latin America	2,466	4,250	5,900
Africa	2,208	3,300	4,250
Near East and South Asia	783	1,365	1,700
Far East	1,177	1,585	2,150
Total	[1] 6,634	10,500	14,000

[1] Includes trainees.

The proposed increase of 3,500 volunteers reflects requests from countries for greater participation by the Peace Corps. These requests for assistance continue to mount and it has not been possible to respond affirmatively to all of them. Peace Corps programing criteria limit projects to those which are consistent with the purposes of the Peace Corps Act and which can be manned by anticipated available volunteers.

The largest increase in volunteer strength is planned for Latin America. This area is expected to have 5,900 volunteers by August 31, 1965. Requests from Latin America continue for large numbers of middle-level workers in agriculture, and rural and urban community development, and the assignment of Peace Corps volunteers to universities of this region is growing rapidly.

In Africa, it is planned to have 4,250 volunteers by the end of the program year—950 over the previous year's level. The program emphasis will be largely in education but more volunteers are being requested in other fields, such as agriculture and health.

The Peace Corps' programs in the Near and Far East will continue to grow in order to meet the continuing demand for teaching, community development, and agriculture projects.

2. *Administration and program support.*—This activity provides for all Peace Corps expenses other than those directly related to volunteer and project costs. It includes the amounts incident to the operation of the Washington office as well as the overseas costs of program supervision and management.

The ratio of administration and program support costs to total funding requirements continues to decline. For 1963, 1964, and 1965, the rates are 28%, 21%, and 18%, respectively.

Federal Reserve Bank of St. Louis

These funds enable the President to relieve unemployment and spur economic expansion in eligible areas of high unemployment or low income. This is accomplished by accelerating both Federal assistance to local public works and Federal public works projects. The program is carried out by the Federal agencies responsible for the several portions of the program and is coordinated by the Secretary of Commerce with the assistance of the Area Redevelopment Administration.

1. *State and local projects.*—Grants are made to eligible State and local governments for public works, primarily water and sewage systems, waste treatment works, hospital additions, and related health facilities. Grants are made for 50% of the project costs, although areas of most severe unemployment are eligible for grants up to 75%. The local recipients are required to increase local expenditures for public works by at least the amount of the local contribution.

2. *Direct Federal projects.*—Public works projects which are the direct responsibility of Federal agencies are accelerated in eligible areas. Such projects cover a wide variety of activity including improvement of facilities, small flood control and erosion projects, forest and other conservation work, and recreation facilities, etc.

3. *Administration.*—Funds are provided for those administrative expenses which cannot be absorbed by the agencies responsible for the larger programs and by the coordinating agency. Funds are requested for 1965 to provide for unforeseen contingencies and for administrative expenses.

SPECIAL FOREIGN CURRENCY PROGRAMS—Continued

General and special fund—Continued

TRANSLATION OF PUBLICATIONS AND SCIENTIFIC COOPERATION—Continued

This program is being administered by the National Science Foundation under Salaries and expenses and by the Department of Agriculture under Salaries and expenses, Agricultural Research Service (special foreign currency program), as indicated by the above comparative transfers.

TRANSITIONAL GRANTS TO ALASKA

General and special fund:

[TRANSITIONAL GRANTS TO ALASKA]

[For grants to the State of Alaska to assist in accomplishing an orderly transition from territorial status to statehood and to facilitate the assumption of responsibilities hitherto performed in Alaska by the Federal Government, and for expenses of providing Federal services or facilities in Alaska for an interim period, as authorized by law (73 Stat. 151), $3,000,000.] (*Department of the Interior and Related Agencies Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

Program by activities:			
1. Grants to Alaska	2,470	2,344	
2. Operation and maintenance of intermediate airports	530	656	
Total obligations	3,000	3,000	
Financing:			
New obligational authority (appropriation)	**3,000**	**3,000**	

Section 44 of the Alaska Omnibus Act (73 Stat. 151) authorizes grants to the State of Alaska for a 5-year period ending June 30, 1964, to facilitate assumption by the State of responsibilities hitherto performed in Alaska by the Federal Government.

These funds are to enable the President (a) to make grants to the State to assist in financing functions transferred from the Federal Government, and (b) to finance continued Federal operations for an interim period when the State requests a delay in transfer of functions. In June 1959, the State requested that the Federal Government continue operation of 17 intermediate airports, and allocations were made to the Federal Aviation Agency for this purpose.

GENERAL PROVISIONS

SEC. 601. No part of any appropriation contained in this Act shall be used for publicity or propaganda purposes within the United States not heretofore authorized by the Congress.

[SEC. 602. None of the funds herein appropriated shall be used for expenses of the Inspector General, Foreign Assistance, after the expiration of the thirty-five day period which begins on the date the General Accounting Office or any committee of the Congress, or any duly authorized subcommittee thereof, charged with considering foreign assistance legislation, appropriations, or expenditures, has delivered to the office of the Inspector General, Foreign Assistance, a written request that it be furnished any document, paper, communication, audit, review, finding, recommendation, report, or other material in the custody or control of the Inspector General, Foreign Assistance, relating to any review, inspection, or audit arranged for, directed, or conducted by him, unless and until there has been furnished to the General Accounting Office or to such committee or subcommittee, as the case may be, (A) the document, paper, communication, audit, review, finding, recommendation, report, or other material so requested or (B) a certification by the President, personally, that he has forbidden the furnishing thereof pursuant to such request and his reason for so doing.]

[SEC. 603. Appropriations and other funds made available in acts making appropriations for the fiscal year ending June 30, 1964, shall be reserved and withheld from obligation through the apportionment procedure prescribed by law (31 U.S.C. 665) to the maximum extent possible, as determined by the Director of the Bureau of the Budget, on account of savings arising from enactment of any such acts after the beginning of such fiscal year. Nothing herein shall be construed to limit existing authority of law for reserving appropriations.]

[SEC. 604. No part of any appropriation contained in this Act shall be used to conduct or assist in conducting any program (including but not limited to the payment of salaries, administrative expenses, and the conduct of research activities) related directly or indirectly to the establishment of a national service corps or similar domestic peace corps type of program.] (*Foreign Aid and Related Agencies Appropriation Act, 1964.*)

DEPARTMENT OF AGRICULTURE

AGRICULTURAL RESEARCH SERVICE

General and special funds:

SALARIES AND EXPENSES

For expenses necessary to perform agricultural research relating to production, utilization, nutrition and consumer use, to control and eradicate pests and plant and animal diseases, and to perform related inspection, quarantine and regulatory work, and meat inspection: *Provided,* That appropriations hereunder shall be available for field employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), and not to exceed $75,000 shall be available for employment under section 15 of the Act of August 2, 1946 (5 U.S.C. 55a): *Provided further,* That appropriations hereunder shall be available for the operation and maintenance of aircraft and the purchase of not to exceed two for replacement only: *Provided further,* That appropriations hereunder shall be available pursuant to title 5, United States Code, section 565a, for the construction, alteration, and repair of buildings and improvements, but unless otherwise provided, the cost of constructing any one building (except headhouses connecting greenhouses) shall not exceed $20,000, except for [three] *five* buildings to be constructed or improved at a cost not to exceed $45,000 each, and the cost of altering any one building during the fiscal year shall not exceed $7,500 or 7.5 per centum of the cost of the building, whichever is greater: *Provided further,* That the limitations on alterations contained in this Act shall not apply to a total of $100,000 for facilities at Beltsville, Maryland:

Research: For research and demonstrations on the production and utilization of agricultural products; home economics or nutrition and consumer use of agricultural and associated products; and related research and services; and for acquisition of land by donation, exchange, or purchase at a nominal cost not to exceed $100, [$91,496,700: *Provided,* That, in addition, not to exceed $15,000,000 may be transferred from the Commodity Credit Corporation to this appropriation, in accordance with the Act of June 29, 1948 (5 U.S.C. 714b), for utilization research and development, cost of production research, and other related research designed to reduce surplus commodities held or to be held by the Commodity Credit Corporation, including $10,000,000 for the planning, construction, alteration and equipping of research facilities, which amount shall remain available until expended: *Provided further,* That hereafter the Administrator of the Agricultural Research Service may enter into agreements with and receive funds from any State, other political subdivision, organization, or individual for the purpose of conducting cooperative research projects with such cooperators] *$98,615,000, of which $2,394,300 shall remain available until expended for construction, alteration, and improvement of facilities, without regard to limitations contained in the above preamble: Provided* [*further*], That the limitations contained herein shall not apply to replacement of buildings needed to carry out the Act of April 24, 1948 (21 U.S.C. 113(a))[: *Provided further,* That the Secretary of Agriculture is authorized to acquire approximately two-tenths of an acre of land at Pasadena, California];

Plant and animal disease and pest control: For operations and measures, not otherwise provided for, to control and eradicate pests and plant and animal diseases and for carrying out assigned inspection, quarantine, and regulatory activities, as authorized by law, including expenses pursuant to the Act of February 28, 1947, as amended (21 U.S.C. 114b–c), [$64,449,000] *$65,955,000,* of which $1,500,000 shall be apportioned for use pursuant to section 3679 of the Revised Statutes, as amended, for the control of outbreaks of insects and plant diseases to the extent necessary to meet emergency conditions: *Provided,* That no funds shall be used to formulate or administer a brucellosis eradication program for the current fiscal year that does not require minimum matching by any State of at least 40 per centum: *Provided further,* That no funds shall be available for carrying out the screwworm eradication program that does not require minimum matching by State or local sources of at least 50 per centum of the expenses of production, irradiation, and release of the screwworm flies: *Provided further,* That, in addition, in emergencies which threaten the livestock or poultry industries of the country, the Secretary may transfer from other appropriations or funds available to the agencies or corporations of the Department such sums as he may deem necessary, to be available only in such emergencies for the arrest and eradication of foot-and-mouth disease, rinderpest, contagious pleuropneumonia, or other contagious or infectious diseases of animals, or European fowl pest and similar diseases in poultry, and for expenses in accordance with the Act of February 28, 1947, as amended, and any unexpended balances of funds transferred under this head in the next preceding fiscal year shall be merged with such transferred amounts;

Meat inspection: For carrying out the provisions of laws relating to Federal inspection of meat, and meat-food products, and the applicable provisions of the laws relating to process or renovated butter, [$27,931,000] *$30,837,000;*

Special fund: To provide for additional labor to be employed under contracts and cooperative agreements to strengthen the work at research installations in the field, not more than $1,000,000 of the amount appropriated under this head for the previous fiscal year may be used by the Administrator of the Agricultural Research Service in departmental research programs in the current fiscal year, the amount so used to be transferred to and merged with the appropriation otherwise available under "Salaries and expenses, Research". (*5 U.S.C. 511–512, 524, 541c–541e, 563–564, 565a, 576, 2131; 7 U.S.C. 135–135k, 145–148a, 148c–164a, 166–167, 281–283, 391, 394–396, 401–404, 421–422a, 424–425, 427, 427i, 428a, 429–431, 433–434, 436–437, 450, 851–855, 1292, 1651–1656, 1704, 1901–1906; 10 U.S.C. 2306; 15 U.S.C. 69e; 16 U.S.C. 581–581a, 581f, 590a–590b, 590f, 590k; 18 U.S.C. 287, 1114; 19 U.S.C. 1201, 1306; 20 U.S.C. 191–194; 21 U.S.C. 71–91, 94–96, 98, 101–105, 111–114c, 114e–131, 134–134h, 151–158, 342a, 346–346a; 26 U.S.C. 4817, 7235c; 31 U.S.C. 725a; 42 U.S.C. 1476b–1476d, 1483, 1891–1893; 45 U.S.C. 71–74; 46 U.S.C. 466a–466b; 48 U.S.C. 1409m–1409o; 49 U.S.C. 1474(a), 1509; 46 Stat. 67; Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

Note.—Excludes $158 thousand for activities transferred in the estimates to the following appropriations:
"Salaries and expenses," Office of the Inspector General, $154 thousand.
"Salaries and expenses," Office of Management Services, $4 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

Total selected resources	9,404	−163	14,179	15,055	14,553

The Service conducts basic and applied research relating to the production and utilization of agricultural products, research on nutrition and consumer use, and carries out those control and regulatory programs of the Department which involve enforcement of plant and animal quarantines, meat inspection, the control of diseases and insect pests of animals and plants, and related work.

1. *Research*—(a) *Farm research.*—Improved breeding, feeding, and management practices are developed for farm livestock, poultry, and domestic fur animals. Practical methods are sought for control of diseases and parasites affecting them.

Investigations are conducted to improve varieties of food, feed, fiber and other plants, and to develop new crops; to improve crop-production practices, including methods to control plant diseases and nematodes; and to improve chemical, biological, and other methods for control of harmful pests affecting farm production.

Research is conducted to improve fertilizers, soil management, irrigation, and conservation practices; to study hydrologic problems of agricultural watersheds; to determine the relation of soils to plants, animals, and human nutrition; and to apply engineering principles to improve efficiency and reduce costs of agricultural production.

Continuous review is maintained to emphasize work which will meet the problems of agricultural surpluses. The research is aimed at the profitable production of an adequate supply of food, feed, fiber, and other agricultural products of desired quality at minimum costs. Increased attention has been given to the production of agricultural products having industrial uses. The proportion of farm research funds going into basic research has steadily increased, and is currently estimated at 38% of the total funds for research. This basic research undergirds the other research efforts.

The 1965 estimates include increases for staffing new and expanded laboratories and watershed research centers; research to avoid or minimize hazards associated with the control of agricultural pests and the use of agricultural chemicals; and foot-and-mouth and other exotic diseases of livestock. These are partially offset by eliminating several small field stations.

(b) *Utilization research and development.*—Chemical, physical, and biological research is conducted to develop increased industrial uses of farm products, and new and improved foods, feeds, and fabrics; and to develop improved methods for processing agricultural commodities.

(c) *Nutrition and consumer use research.*—Studies are made of nutrition, consumer use and food economics, and clothing and housing. An increase for research on food science is included in the 1965 estimates.

(d) *Construction of facilities.*—In 1963, $2,780 thousand was provided for construction and improvements at six locations which are expected to be completed in 1965. The 1965 estimates include increases for facilities for sugarbeet, pasture and range research at Fort Collins, Colo., and for construction and improvements to support activities, principally research, at Beltsville, Md.

(e) *Contingencies.*—Beginning in 1962, $1 million is available to meet urgent research needs that develop unexpectedly during the year, when such needs cannot be met by redirection of resources from other projects.

2. *Plant and animal disease and pest control*—(a) *Plant disease and pest control.*—Provision is made (1) through port-of-entry inspection to exclude from this country destructive insects, plant diseases, and nematodes that cause great damage to agricultural crops in other parts of the world; (2) to cooperate with States in eradicating or preventing spread of crop pests that become established in this country; and (3) to assist States in suppressing incipient and emergency outbreaks of crop pests when and where they occur. Increases proposed in 1965 are for strengthening plant quarantine protection necessary at ports-of-entry because of increased travel and shipping; offset by a decrease in the imported fire-ant control program.

The volume of workload is indicated in the following table (in thousands):

	1961 actual	*1962 actual*	*1963 actual*
Inspections at ports of entry:			
Airplanes	130	137	146
Vessels	57	60	60
Vehicles from Mexico	24,250	24,753	25,962
Baggage, pieces of	22,637	23,514	27,934
Interceptions of unauthorized plant material	324	385	395

(b) *Animal disease and pest control.*—Programs are conducted to exclude communicable diseases of foreign origin from this country; to prevent the spread of diseases through interstate shipments of livestock or distribution of impure or impotent veterinary biologics; to control and eradicate livestock diseases; and to maintain, through a marketing agreement with manufacturers and handlers, adequate supplies of hog cholera virus and serum for protection of swine. The estimates for 1965 propose increases for more adequate animal inspection and quarantine at ports to reduce the hazard of introduction of foreign animal diseases; expansion of the hog cholera program and activities relating to veterinary biologics under the Virus Serum Toxin Act, offset by decreases in scabies eradication and screwworm inspection activities to prevent reinfestations in the Southeast.

The volume of protective activities is indicated by selected examples in the following table (in thousands):

Other vaccines (doses)	4,471,761	4,288,335	4,702,684
Total bacterins (doses)	131,484	169,568	203,356
Diagnostic agents (doses)	48,185	65,239	56,550
Other serums (doses)	7,715	7,265	8,640

(c) *Pesticides regulation.*—This activity is concerned with administration of the Federal Insecticide, Fungicide, and Rodenticide Act, and related provisions of the Federal Food, Drug, and Cosmetic Act. The 1965 estimates propose an increase for handling increased registration and enforcement activities.

3. *Meat inspection.*—Federal meat inspection is required for all meat in interstate commerce and is conducted to assure a clean and wholesome meat supply for human consumption, free from adulteration, and truthfully labeled. The work includes inspection of animals, carcasses and meat, and meat-food products at various stages of handling and processing. Measures are enforced to insure informative labeling, and meats imported or exported are inspected. The estimates for 1965 include a proposed increase for additional inspection staff to service the expanding needs for Federal meat inspection, and for reclassification of meat inspectors.

The volume of inspections and examinations is indicated by examples given in the following table:

	1961 actual	*1962 actual*	*1963 actual*
Number of establishments covered	1,451	1,511	1,590
Cities in which plants are located	599	623	672
Inspection of live animals	104,329,407	107,108,967	109,391,017
Post mortem inspections	104,324,593	107,104,052	109,385,402
Animals and carcasses condemned	285,161	283,969	265,829
Inspection of processed meat and meat-food products (million pounds)	18,461	18,806	19,050

A supplemental for 1964 is anticipated for separate transmittal. Legislation will be proposed to place meat inspection on a self-supporting basis resulting in a reduction of $30,837 thousand for 1965.

AGRICULTURAL RESEARCH SERVICE—Continued

General and special funds—Continued

Proposed for separate transmittal—Continued

SALARIES AND EXPENSES—Continued

Late in August 1963 the Civil Service Commission released meat inspector classification standards which will raise the grade level classification of approximately 1,470 positions in the Meat Inspection Division. The tentative supplemental estimate of $90 thousand represents the mandatory cost of reclassification for the last quarter of the year. The annual cost of all reclassification in 1965 is estimated at an additional $771 thousand.

Program and Financing (in thousands of dollars)

Program by activities:			
Meat inspection (costs—obligations)			−30,837
Financing:			
New obligational authority (proposed supplemental appropriation)			**−30,837**

Under proposed legislation, 1965.—A reduction of $30,837 thousand is anticipated for 1965 under legislation being proposed to amend the Meat Inspection Act, as amended, to place this service on a self-supporting basis. In addition, the legislation would propose a funding mechanism for reimbursement by meatpacking plants for inspection services rendered.

SALARIES AND EXPENSES (SPECIAL FOREIGN CURRENCY PROGRAM)

For [purchase of] *payments in* foreign currencies which accrue under title I of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704), for market development research authorized by section 104(a) and for agricultural and forestry research and other functions related thereto authorized by section 104(k) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(a)(k)), to remain available until expended, [$1,250,000] *$5,000,000*: *Provided*, That this appropriation shall be available, in addition to other appropriations for these purposes, for [the purchase of] *payments in* the foregoing currencies: *Provided further*, That funds appropriated herein shall be used [to purchase] *for payments in* such foreign currencies as the Department determines are needed and can be used most effectively to carry out the purposes of this paragraph, and such foreign currencies shall, pursuant to the provisions of section 104(a), be set aside for sale to the Department before foreign currencies which accrue under said title I are made available for other United States uses: *Provided further*, That not to exceed $25,000 of this appropriation shall be available for [purchase of] *payments in* foreign currencies for expenses of employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), as amended by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a). (*Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

SALARIES AND EXPENSES (SPECIAL FOREIGN CURRENCY PROGRAM)

New obligational authority (appropriation)	**5,265**	**1,250**	**5,000**

[1] Includes capital outlay as follows: 1963, $12 thousand; 1964, $22 thousand; 1965, $17 thousand.

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $12,268 thousand; 1963, $15,401 thousand; 1964, $26,037 thousand; 1965, $25,237 thousand.

Foreign currencies, generated by the sale of surplus agricultural commodities under title I of the Agricultural Trade Development and Assistance Act of 1954, are used by the Department for market development research under section 104(a) and for agricultural and forestry research under section 104(k) of the act. Work is carried on through agreements, in both basic and applied fields, by research institutions and organizations in foreign countries. This research serves to develop new foreign markets and to expand existing markets for agricultural commodities, including cotton, dairy products, fats and oils, grain, feed, livestock and meat, poultry, fruits and vegetables, and tobacco. It also provides for supplementary research on farm, forest, marketing, utilization, agricultural economics, and human nutrition problems, and for translations of foreign language scientific publications. The appropriation proposed for 1965 will be used to purchase only those currencies determined to be excess to the normal requirements of the United States. Total estimated cost in U.S. dollars (charged to regular appropriations) for the initiation and supervision of projects in 1965 is $321 thousand.

AGRICULTURAL RESEARCH SERVICE—Continued

General and special funds—Continued

ESTABLISHMENT OF AN ENTOMOLOGY RESEARCH LABORATORY—Con.

(Permanent, indefinite, special fund)—Continued

The 1961 appropriation for Salaries and expenses, research, Agricultural Research Service, authorized the sale of the Department's Entomology Research Laboratory at Orlando, Fla., and application of the proceeds of sale to the construction of a new laboratory. An additional $500 thousand was provided by the Supplemental Appropriation Act, 1961, under the appropriation Construction of facilities for the remainder of the total estimated cost of $900 thousand for the new facilities. The Orlando property was sold in 1961 for $400 thousand, which was applied toward the construction of the new laboratory. The laboratory was occupied June 9, 1963.

ALLOCATIONS AND ALLOTMENTS RECEIVED FROM OTHER ACCOUNTS

Note.—Obligations incurred under allocations and allotments from other accounts are included in the schedules of the parent appropriations, as follows:
Office of Emergency Planning, "Emergency preparedness functions of Federal agencies."
Funds appropriated to the President:
"Agency for International Development."
"Public works acceleration."
"Translation of publications and scientific cooperation."
United States educational exchange program, "United States dollars advanced from foreign governments."

Intragovernmental funds:

Appropriation (adjusted)	**38,262**	**41,633**	**42,460**

[1] Includes capital outlay as follows: 1963, $9 thousand; 1964, $3 thousand; 1965, $10 thousand.

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $0; 1963, $68 thousand; 1964, $68 thousand; 1965, $68 thousand.

The Service administers funds for payments and grants for the support of research in agriculture, the rural home, rural life, and forestry. This administration involves supervision of the funds, close advisory relations with the State experiment stations, assistance to the State stations and other institutions in planning and coordination of cooperative research, and assistance to Federal agencies in planning cooperation with the States.

1. *Payments to agricultural experiment stations—(a) Agricultural research under the Hatch Act.*—Grants under the Hatch Act are allocated to agricultural experiment stations of the land-grant colleges in the 50 States and Puerto Rico for agricultural research, including investigations and experiments to promote a permanent and efficient agricultural industry and improvements in the rural home and rural life. The States are contributing $3.63 for each dollar paid by the Federal Government. An increase of $1,500 thousand is proposed to strengthen the cooperative program at the agricultural experiment stations.

(*b*) *Marketing research under the Agricultural Marketing Act.*—Payments to the States are authorized under Sec. 204(b) of the Agricultural Marketing Act of 1946. The act requires that the Federal funds disbursed to States be matched project for project from non-Federal sources for marketing research. No funds are proposed for this program in 1965.

2. *Grants for cooperative forestry research.*—These grants are allocated to land-grant colleges or agricultural experiment stations in the 50 States and Puerto Rico and other State-supported colleges and universities offering graduate training in the sciences basic to forestry and having a forestry school. The act requires that the Federal funds paid to each institution be matched by funds from non-Federal sources for forestry research.

3. *Federal administration.*—A coordinating and review staff is maintained to examine research projects and assist State institutions and Federal agencies.

4. *Penalty mail.*—Funds to cover the cost of penalty mailings for State experiment station directors are provided under this appropriation.

The planned distribution of these payments to State agricultural experiment stations and other eligible institutions under the above mentioned programs is as follows (in thousands of dollars):

Hatch Act statutory formula	31,509
Hatch Act (Regional research fund)	8,352
Grants for cooperative forestry research	1,000

Total selected resources	257	−63	277	169	134

The primary function of the nationwide system of cooperative extension work is out-of-school applied education in agriculture, home economics, and related subjects. This educational work takes research results, technological advancements, and situation and program facts of the Department of Agriculture, the State agricultural colleges and experiment stations, and incorporates them into a national educational program for action. Its objective is to provide farm people and others with information and assistance upon which they may make social and economic adjustments necessary for an efficient agricultural industry and improved rural homes and rural life.

1. *Payments to States and Puerto Rico.*—Funds appropriated under the Smith-Lever Act for payments to States and Puerto Rico are distributed primarily on the basis of farm and rural population and to a limited degree on the basis of special problems and needs. Funds appropriated under the Agricultural Marketing Act for educational work in marketing are distributed to the States and Puerto Rico on a matching basis under approved projects and on the basis of contracts. Funds are used primarily for the employment of State and county extension workers who work with rural families, marketing concerns, and others by providing advice and assistance in the application of improved methods involved in production, marketing, and family living. They assist local leadership to determine extension programs of work. Work with youth is accomplished largely through 4–H clubs. Funds also provide for Federal program support. Extension agents are paid from Federal, State, and county sources.

2. *Retirement and employees' compensation costs for extension agents.*—The increase proposed is required to meet these costs for cooperative extension agents. The mandatory retirement contribution is authorized under Public Law 854, approved July 31, 1956. The employer's contribution to the Federal retirement fund, to match contributions of these agents, is provided by this Federal appropriation. The increase of $6,259 provides an amount equal to the benefits received by the cooperative agents to be paid to the Employees' Compensation Fund, as required by Public Law 86–767.

3. *Penalty mail.*—Funds to cover the cost of penalty mailings for State extension directors and cooperative extension agents in the States are provided under this appropriation.

4. *Federal Extension Service.*—The Federal Extension Service provides leadership, counsel, and assistance to the States and Puerto Rico in developing extension programs, improved teaching methods, efficient use of available resources, evaluation of programs, inservice training for

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $71 thousand (1963 adjustments, −$1 thousand); 1963, $1 thousand; 1964, $1 thousand; 1965, $1 thousand.

The Farmer Cooperative Service provides research, advisory, and educational assistance to farmers' marketing, purchasing, and service cooperatives. Attention is directed to problems of organization, financing, policies, management, membership, marketing, purchasing, transportation, warehousing, costs, and efficiency. Much of this work is carried on in cooperation with land-grant colleges, the Extension Service, and other Federal and State agencies.

SOIL CONSERVATION SERVICE

The Soil Conservation Service is responsible for various soil and water conservation activities of the Department of Agriculture, including five action programs for which separate appropriations are made, reimbursements from other agencies for technical services performed, trust funds, and miscellaneous accounts involving cooperative agreements with local organizations. The primary purpose of these program operations is to help farmers, ranchers, and other landowners in making needed land use adjustments; to conserve soil, water, and plant resources; to reduce the hazards of floods, sedimentation and related damages; and to assist in establishing a permanent and economically sound agriculture. These activities are conducted in cooperation with Federal and State agencies, locally managed soil conservation districts, and other sponsoring organizations.

The Service provides professional leadership in soil, water, and plant conservation and works directly with locally managed soil conservation districts and sponsors of

SOIL CONSERVATION SERVICE—Continued

watershed projects on local programs and cooperative work plans which are of benefit to rural and urban people in their areas.

The Service also furnishes technical services for the Agricultural Conservation program; the soil and water conservation loans made by the Farmers Home Administration; the State and county Rural Areas Development committees; and other agencies or local groups having soil and water conservation problems. These interrelated program activities are primarily for the conservation, protection, and improvement of land and water resources for the beneficial uses of all the people.

General and special funds:

CONSERVATION OPERATIONS

For necessary expenses for carrying out the provisions of the Act of April 27, 1935 (16 U.S.C. 590a–590f), including preparation of conservation plans and establishment of measures to conserve soil and water (including farm irrigation and land drainage and such special measures as may be necessary to prevent floods and the siltation of reservoirs); operation of conservation nurseries; classification and mapping of soils; dissemination of information; purchase and erection or alteration of permanent buildings; and operation and maintenance of aircraft, [$98,339,000] *$98,750,000*: *Provided*, That the cost of any permanent building purchased, erected, or as improved, exclusive of the cost of constructing a water supply or sanitary system and connecting the same to any such building and with the exception of buildings acquired in conjunction with land being purchased for other purposes, shall not exceed $2,500, except for one building to be constructed at a cost not to exceed $25,000 and eight buildings to be constructed or improved at a cost not to exceed $15,000 per building and except that alterations or improvements to other existing permanent buildings costing $2,500 or more may be made in any fiscal year in an amount not to exceed $500 per building: *Provided further*, That no part of this appropriation shall be available for the construction of any such building on land not owned by the Government: *Provided further*, That no part of this appropriation may be expended for soil and water conservation operations under the Act of April 27, 1935 (16 U.S.C. 590a–590f), in demonstration projects: *Provided further*, That this appropriation shall be available for field employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), and not to exceed $5,000 shall be available for employment under section 15 of the Act of August 2, 1946 (5 U.S.C. 55a): *Provided further*, That qualified local engineers may be temporarily employed at per diem rates to perform the technical planning work of the service. *(5 U.S.C. 511–512, 565a; 7 U.S.C. 1387, 1807; 16 U.S.C. 590q–1; Department of Agriculture and Related Agencies Appropriation Act, 1964.)*

Note.—Excludes $117 thousand for activities transferred in the estimates to the following appropriations:
"Salaries and expenses," Office of the Inspector General, $114 thousand.
"Salaries and expenses," Office of Management Services, $3 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

Program and Financing (in thousands of dollars)

Federal Reserve Bank of St. Louis

districts for use in applying planned conservation practices; (f) water supply forecasts developed from snow surveys in Western States which are useful in making efficient seasonal use of water; (g) the selection and testing of plant materials to determine their suitability for erosion control purposes; (h) technical assistance to Agricultural Conservation Program participants in establishing specified conservation practices; (i) technical assistance to participants in other programs involving land use adjustments and resource improvements; (j) technical assistance in planning and applying the soil and water conservation practices for which loans are made by the Farmers Home Administration; (k) consultation and assistance to local rural areas development committees; and (l) program planning and consultation in urban fringe areas.

Combinations of needed soil and water conservation practices are planned together and in relation to each other so as to have a well balanced program in each district and for each farm. Both vegetative and structural practices are used in accordance with the conservation needs of the land and decisions of the cooperating farmer or rancher. The Soil Conservation Service technician explains the soil conditions, develops land use and treatment alternatives with each cooperator, helps him evaluate the costs and returns of conservation farming, and furnishes assistance in applying the needed treatments. These conservation programs provide immediate and long-term benefits to the land where installed and to the public generally. Modern soil and water conservation practices are essential to continued efficient use of the fixed land base of the country for agricultural purposes as the future needs of the Nation may require.

Watershed Protection

For expenses necessary to conduct surveys, investigations, and research and to carry out preventive measures, including, but not limited to, engineering operations, methods of cultivation, the growing of vegetation, and changes in use of land, in accordance with the Watershed Protection and Flood Prevention Act, approved August 4, 1954, as amended (16 U.S.C. 1001–1009), and the provisions of the Act of April 27, 1935 (16 U.S.C. 590a–f), to remain available until expended, [$63,607,000] *$65,848,000*, with which shall be merged the unexpended balances of funds heretofore appropriated or transferred to the Department for watershed protection purposes: *Provided*, That this appropriation shall be available for field employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), and not to exceed $100,000 shall be available for employment under section 15 of the Act of August 2, 1946 (5 U.S.C. 55a): *Provided further*, That not to exceed [$3,000,000] *$5,000,000*, together with the unobligated balance of funds previously appropriated for loans and related expense, shall be available for such purposes. *(5 U.S.C. 511–512; Department of Agriculture and Related Agencies Appropriation Act, 1964.)*

Note.—Excludes $92 thousand for activities transferred in the estimates to the following appropriations:
"Salaries and expenses," Office of the Inspector General, $57 thousand.
"Salaries and expenses," Office of Management Services, $35 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

The Department cooperates with the States and other agencies in planning and installing works of improvement in small watersheds to reduce damage from floodwater, sediment, and erosion and for the conservation, development, utilization, and disposal of water. It provides loans to local organizations to help them finance their share of the costs of certain works of improvement. The Department also cooperates with other agencies in making surveys and investigations of watersheds of rivers and other waterways as the basis for the development of coordinated programs.

1. *Small watershed project investigations and planning.*—Surveys are made by the Department of proposed small watershed projects, and work plans are prepared in cooperation with the local sponsors. These plans outline the soil and water management problems in the watershed, the steps that have been or are authorized to be taken to alleviate these problems, the proposed works of improvement to be installed, the estimated benefits and costs, cost-sharing and operation and maintenance arrangements, and other facts necessary to justify Federal participation in project development.

2. *Watershed works of improvement.*—The Department provides technical and financial assistance to local organizations to install the watershed works of improvement for watershed protection, flood prevention, agricultural water management, recreation, and fish and wildlife development features specified in the work plans.

(a) *Pilot demonstration watersheds.*—Sixty-two pilot watersheds were started in 1954 in cooperation with local sponsors under authority of the Act of April 27, 1935 (16 U.S.C. 590a–590f) to demonstrate and evaluate the effectiveness of works of improvement installed in small watersheds for watershed protection and flood prevention. As of June 30, 1963, work had been discontinued in 8 projects and completed as planned in 45 except for project evaluation studies which will be underway until 1970 in some of these. The following table shows the current status of the pilot watershed projects. Obligations for project evaluation studies are not reflected in the table subsequent to 1959 as these costs were determined not properly chargeable to projects. Obligations for such studies amounted to $134 thousand in 1963 and are estimated at $108 thousand in 1964 and $100 thousand in 1965.

[Dollars in thousands]

Explanation	*1963 actual*		*1964 estimate*		*1965 estimate*	
	Number	*Amount*	*Number*	*Amount*	*Number*	*Amount*
Uncompleted projects at beginning of year and estimated completion cost	10	4,375	9	3,170	5	1,391
Status of projects and amounts obligated:						
1. Projects completed during the year	1	1	4	506	2	75
2. Continuing prior year projects	9	1,204	5	1,273	3	823
Total	10	[1] 1,205	9	1,779	5	898
3. Uncompleted projects at end of year:						
(a) Obligations to date [2]	9	16,061	5	14,080	3	8,306
(b) Estimated completion cost	9	3,170	5	1,391	3	493
4. Projects completed (cumulative) and total cost [2]	45	24,255	49	28,015	51	34,687
5. Projects discontinued (cumulative) and total cost	8	330	8	330	8	330

[1] Includes $2 thousand comparative transfers to other accounts.
[2] Includes $1,264,860 for project evaluation studies charged to project costs prior to 1960.

(b) *Public Law 566 watersheds.*—After local sponsoring organizations have developed watershed work plans with the Department's assistance, or with State or local resources, and the projects have been approved as suitable for Federal participation (projects involving an estimated Federal contribution in excess of $250 thousand for construction or any single structure having a capacity in excess of 2,500 acre-feet require congressional approval), technical services and cost-sharing assistance are provided for specified works of improvement. On non-Federal lands local sponsoring organizations must contract for construction work, operate and maintain the projects, and in the case of multiple-purpose structures, bear a share of construction costs. In addition, local organizations must acquire water rights and furnish land, easements, and rights-of-way for all structural measures except that the Federal Government may pay up to one-half the cost of land, easements, and rights-of-way allocated to public fish and wildlife and recreational developments. Federal agencies do this work on Federal lands which they administer with appropriate contributions being made by the local people who receive benefits.

Advance engineering and technical assistance is furnished to all approved projects before they are advanced to the construction stage. During the advance engineering and technical assistance stage, surveys and investigations are made and detailed designs, specifications, and engineering cost estimates are prepared for construction of structural works; areas are delineated where easements are required and technical assistance is furnished for accelerating planning and application of land treatment measures if provided for in the watershed work plan.

The project construction stage begins with execution of the first project agreement for construction of works of improvement. Under a project agreement the local sponsoring organization agrees to construct a segment of the project which may consist of an individual or an interrelated group of structures. The agreement obligates the Department to furnish its share of the construction cost. Payments are made to the local contracting organization in accordance with the project agreement as the work progresses. Engineering and other services are provided for the preparation of contracts and inspection

Federal Reserve Bank of St. Louis

of construction. Technical assistance in planning and installing land treatment measures is continued as called for in the watershed work plan.

The following tabulation shows the status of Public Law 566 projects and amounts obligated or estimated to be obligated. The table does not reflect minor obligations for project evaluation studies ($74 thousand cumulatively as of June 30, 1963), or for balances remaining in the undistributed equipment account ($493 thousand cumulatively as of June 30, 1963).

[Dollars in thousands]

6. Total obligations (cumulative)	----	164,187	----	215,633	----	267,945

[1] Includes $25 thousand comparative transfers to other accounts.

The 1964 program contemplates initiation of construction in about 36 watershed projects, involving 1964 estimated obligations of $8.2 million and total Federal cost of $44.9 million. The 1965 estimate provides for starting about 36 projects with 1965 obligations of $8.4 million and total Federal cost of $36 million.

3. *Loans and related expense.*—Loans are made to local organizations to finance the local share of the cost of installing planned works of improvement in approved watershed projects. Repayment with interest is required within 50 years after the principal benefits of improvements first become available. Of the 1965 estimate for watershed protection, not to exceed $5 million is to be available for such purpose together with unobligated balance of loan funds carried over from prior years.

4. *River basin program development and coordination.*—Section 6 of Public Law 566, 83d Congress, as amended, authorizes the Department to cooperate with other Federal, State, and local agencies in making surveys and investigations of the watersheds of rivers and other waterways as a basis for the development of coordinated water and related land resources programs. The Department is currently participating in cooperative surveys and investigations in river basins with the Corps of Engineers and other interested Federal and State agencies. The Department is represented on the Inter-Agency Committee on Water Resources which was established to coordinate water and related land resource activities of Federal departments and agencies. The Department also maintains representation on various river basin interagency committees, which serve as points of contact and coordination between representatives of this Department and of other Federal departments and agencies and the States in these basin areas, to keep all concerned mutually informed of the activities of the member agencies and to facilitate matters of interagency coordination. The Department in 1963 maintained such representation on committees in the Arkansas-White-Red, Columbia, Missouri, Northeast, and Pacific Southwest areas.

This Department and the Departments of the Army, the Interior, and Health, Education, and Welfare have jointly considered river basin surveys and investigations currently needed to attain the goal proposed by the Senate Select Committee on National Water Resources and recommended by the President for surveying the river basins of the Nation. Based on this joint consideration, this estimate includes $2.4 million for conducting these interagency comprehensive surveys during fiscal 1965. In addition, $1.5 million is included to continue the other cooperative river basin surveys begun in prior years at about the 1964 level.

FLOOD PREVENTION

For expenses necessary, in accordance with the Flood Control Act, approved June 22, 1936 (33 U.S.C. 701–709, 16 U.S.C. 1006a), as amended and supplemented, and in accordance with the provisions of laws relating to the activities of the Department, to perform works of improvement, including funds for field employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), and not to exceed $100,000 for employment under section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), to remain available until expended; [$25,465,000] *$22,656,000*, with which shall be merged the unexpended balances of funds heretofore appropriated or transferred to the Department for flood prevention purposes: *Provided*, That no part of such funds shall be used for the purchase of lands in the Yazoo and Little Tallahatchie watersheds without specific approval of the county board of supervisors of the county in which such lands are situated: *Provided further*, That not to exceed [$1,000,000] *$200,000*, together with the unobligated balance of funds previously appropriated for loans and related expense, shall be available for such purposes. (*5 U.S.C. 511–512; Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

Note.—Excludes $11 thousand for activities transferred in the estimates to the following appropriations: "Salaries and expenses," Office of the Inspector General, $8 thousand; "Salaries and expenses," Office of Management Services, $3 thousand.

The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

[1] Includes capital outlay as follows: 1963, $1,294 thousand; 1964, $1,300 thousand; 1965, $1,300 thousand.

[2] Selected resources as of June 30 are as follows:

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Unpaid undelivered orders	12,833	8,026	9,287	9,193
Advances	14	19	19	19
Total selected resources	12,847	8,045	9,306	9,212

1. *Installation of works of improvement.*—The Department cooperates with soil conservation districts and other local organizations in planning and installing works of improvement for flood prevention and for furthering the conservation, development, utilization, and disposal of water in the 11 watersheds authorized by the flood control act of 1944. The Federal Government shares in the cost of works of improvement for flood prevention, agricultural water management, recreation, and fish and wildlife development features.

The Department furnishes additional technical and in certain instances financial assistance to landowners to accelerate planning and installation of land treatment measures for runoff retardation, sediment control, and water management. Local sponsoring organizations must furnish all land, easements and rights-of-way, water rights, and the entire cost of works of improvement for non-agricultural water management measures, except those for fish and wildlife development and recreation, and operate and maintain all completed works of improvement.

2. *Loans and related expense.*—Loans are made to local organizations to help finance their share of the costs of planned works of improvement. Repayment with interest is required within 50 years after the principal benefits of

improvements first become available. Of the 1965 estimate for flood prevention, not to exceed $200 thousand is to be available for such purpose, together with any unobligated balances of loan funds carried over from prior years. It is estimated that about $2.7 million is available for this purpose during 1964, a significant portion of which will not be required during that year.

Great Plains Conservation Program

For necessary expenses to carry into effect a program of conservation in the Great Plains area, pursuant to section 16(b) of the Soil Conservation and Domestic Allotment Act, as added by the Act of August 7, 1956 (16 U.S.C. 590p), [$13,622,000] *$14,744,000,* to remain available until expended. (*5 U.S.C. 511–512; Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

Note.—Excludes $5 thousand for activities transferred in the estimates to "Salaries and expenses," Office of the Inspector General.

The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

Appropriation (adjusted)	**12,354**	**13,617**	**14,744**

[1] Includes capital outlay as follows: 1963, $108 thousand; 1964, $110 thousand; 1965, $125 thousand.

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $17,261 thousand; 1963, $19,564 thousand; 1964, $21,705 thousand; 1965, $23,756 thousand.

This program provides cost-sharing assistance and technical services to participating farmers and ranchers in the development and installation of long-term conservation plans for their land. It is a voluntary program which supplements other conservation programs of the Department in designated counties of the 10 Great Plains States. Cost-sharing contracts with each individual landowner extend over a period of 3 to 10 years and include a plan of operations for the entire farm or ranch. A time schedule for installing the cost-share practices is also included as a part of each contract, the primary purpose of which is to achieve the needed land use adjustments, conservation treatments, and economic stability for each farm or ranch unit.

The maximum cost-share rate offered in any contract does not exceed 80% of the average cost of installing each eligible practice within the designated county, but the amount is less for some practices. Participants often

SOIL CONSERVATION SERVICE—Continued

General and special funds—Continued

GREAT PLAINS CONSERVATION PROGRAM—Continued

install practices in excess of the amounts on which cost shares are obligated, and apply other needed management-type practices on which no cost shares are paid. Federal cost-sharing is further limited to $2,500 for the constructing, enlarging, or deepening of any dam, pit, or pond for irrigation water; and to not more than $2,500 for irrigation practices in any one contract, or one-fourth of the total Federal obligation, whichever is the larger.

Federal cost-sharing is limited to $25 thousand for any one contract. The total cost-sharing payments that may be paid to producers are limited to $25 million for any one program year and $150 million in cost-share obligations for the total program. Under present legislation the final date for entering into such contracts will expire December 31, 1971.

Each participant who signs a Great Plains program contract is responsible for installing his plan of operations as scheduled, and the Department is committed to furnish the necessary technical help when needed for design, layout, and other assistance with any or all practices included in the plan. Cooperating farmers and ranchers are encouraged to use other available sources of assistance under local, State, and Federal programs.

Federal Reserve Bank of St. Louis

The Department cooperates with other Federal agencies, States, and local units of government in developing and carrying out project plans for resource development on private lands, and will share in the cost of installing planned works of improvement when justified as a public need. The Department will also provide loans to local sponsoring organizations and individuals to help them finance their share of the cost on certain improvements.

Technical assistance will be provided within each approved project area to help cooperating individuals to plan and install land treatments, for which no cost-shares are paid from this appropriation; to assist local organizations and groups with the design, construction, and installation of new facilities; and for the preparation of overall work plans as a basis for resource development, and economic improvement.

The work under this program will consist of planning, designing and installing practices and measures, the primary purpose of which is to develop or improve the economic use of natural resources. This may include recreational facilities and income-producing enterprises where needed within approved project areas. Investigations, surveys and planning are prerequisite to the operating phases of this program. Financial contributions and other assistance will be used to help install planned measures which provide substantial public benefit. Loans will also be made where needed to aid local public agencies and project sponsors in financing works of improvement as specified in approved work plans.

Water Conservation and Utilization Projects

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Financing:			
Unobligated balance brought forward	−127	−127	−127
Unobligated balance carried forward	127	127	127
New obligational authority			

The Service has been developing irrigation farming units for sale on the Eden Valley project in Wyoming where the Bureau of Reclamation has constructed the water storage facility and the principal canals. Land development for irrigation and settlement has been completed in accordance with the project plan prepared cooperatively with the Bureau of Reclamation. The farms developed in the project have been sold with the exception of four. One of these has been transferred to the State of Wyoming as a demonstration farm. The other three tracts are expected to be transferred to the Department of Interior during the 1964 fiscal year. The Eden Valley project office has been closed. A soil conservation district has been organized and staffed to furnish technical assistance in soil and water conservation to the project settlers. Sufficient funds are available from prior-year appropriations to protect the interests of the Government and to provide a reserve in case of need for adjustments in remaining unpaid obligations. No new appropriations will be required.

Allotments and Allocations Received From Other Accounts

Note.—Obligations incurred under allocations from other accounts are included in—Funds appropriated to the President: "Agency for International Development," and "Public works acceleration."

Agricultural economics research in the Department is administered by the Economic Research Service. The results of the research program are relied upon by (a) producers, dealers, importers, and exporters as aids in planning the most profitable adjustments in their operations, (b) Government agencies in formulating and administering agricultural programs, and (c) Congress in considering agricultural legislation.

Digitized for FRASER

Federal Reserve Bank of St. Louis

1. *Farm economics.*—Research is conducted to measure, appraise, and analyze on a continuing basis, economic changes that occur in farming and in the use of rural resources and to indicate needed adjustments.

Research on the economics of farm production includes the economics of organization and management of farms; adjustments in production to prospective demands, and changing technologies; appraisals of costs and returns on farms representative of important types, sizes, and locations, and the appraisal of costs of producing important commodities; development of measures of farm output and productivity; problems of farm size and capital requirements; financing of farm enterprises; taxation, insurance of land values; and appraisal of alternative agricultural production policies and programs.

Resource development economics is concerned with the management of the Nation's land and water resources and particularly the changing rural economy and institutional structure. It includes economic development; improvement of income opportunities in depressed areas; rural renewal; analysis of river basin and watershed programs, land tenure, and resource organization and policy.

2. *Marketing economics.*—This activity covers economic aspects of marketing farm products, including the nature of farmers' bargaining power; potentials for new products and new uses; market structure, costs and margins; the economic effects of school lunch, special milk, food stamp, and direct food distribution programs.

3. *Domestic and foreign economic analysis.*—Domestic economic analysis is concerned with identifying, measuring, and analyzing: (1) the factors affecting demand, supply, and price of agricultural commodities; (2) relationships between the agricultural sector and the national economy; (3) farm income and the income of the farm population; (4) demand and consumption of farm products; (5) long-term projections of economic growth and farm products demand; (6) farm population, manpower and levels of living; and (7) historical developments in the policies, programs, and organization of the Department.

Foreign economic analysis includes trade studies and investigation of supply-demand relations. The trade and market studies focus on the problems of developing foreign markets and the effect of these developments on agricultural production. Research is carried on in more than 100 countries, focusing on the forces affecting supply, demand, and trade in farm products, and their impact on U.S. agricultural exports.

Transferred to—			
"Operating expenses, Public Buildings Service," General Services Administration (76 Stat. 728 and 77 Stat. 436)	−7	−19	
"Salaries and expenses," general administration (76 Stat. 1212)	−6		
Appropriation (adjusted)	**10,012**	**11,272**	**11,431**

[1] Includes capital outlay as follows: 1963, $101 thousand; 1964, $262 thousand; 1965, $193 thousand.
[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $317 thousand; (1963 adjustments, −$31 thousand); 1963, $355 thousand; 1964, $355 thousand; 1965, $355 thousand.

The Service administers programs relating to crop and livestock estimates and statistical research and service. The statistical and economic data developed on food and agriculture are essential to farmers, processors, and handlers in making production and marketing decisions, and to legislators, administrators and others concerned with developing and administering agricultural programs. The basic facts provided by this service are also essential to economic analyses and other agricultural research programs.

1. *Crop and livestock estimates.*—This service provides the official estimates on this Nation's agriculture, including acreage, yield, and production of crops, stocks, and value of farm commodities, numbers and inventory value of livestock items, and prices paid and received by farmers. These data are basic to computation of parity prices. Data on approximately 150 crop and livestock products are covered in some 700 reports issued each year. The activity is conducted through 43 State offices serving 50 States, most of which are operated as joint State and Federal services. Cooperative arrangements with State agencies provide a considerable volume of additional data which would not be collected or made available from Federal funds. During 1963 cooperating States expended an estimated $1.6 million of their own funds on these associated State programs. A comparison of activity data for 1962 and 1963, including work performed under cooperative arrangements is as follows:

	1962 actual	*1963 actual*
Separate mailings of inquiry forms, average per field office	372	378
Total questionnaires handled:		
Number distributed	9,650,000	9,750,000
Number of returns tabulated	3,100,000	3,100,000
Number of objective survey contacts (measurements and interviews)	103,000	136,000
Number of official reports issued, all offices	9,600	9,800
Copies of reports distributed	13,700,000	14,200,000
Publications distributed	3,520,000	3,475,000
Special requests for information answered by field offices	65,300	67,200

The increase for 1965 would be used to place the long-range program to improve the crop and livestock estimating service in operation in additional States.

2. *Statistical research and service.*—This work includes review of all statistical forms, survey plans, and reporting and recordkeeping requirements originating in the Department and requiring Bureau of the Budget approval; liaison for coordination of statistics within the Department and with other statistical agencies; development of new and improved methods and techniques, and providing technical consulting services to other agencies of the Department; research on and development of sampling, forecasting, and other basic statistical techniques and methods to improve the crop and livestock estimates of the Department; use of and consultation on automatic data processing to develop and adopt this medium for improving the accuracy and timeliness of crop and livestock estimates; and conduct of special surveys relating to the marketing of agricultural products. A comparison of activity data for 1962 and 1963 is as follows:

	1962 actual	*1963 actual*
Statistical forms-reports (Federal Reports Act): Departmental clearance and review for submission to Bureau of the Budget	593	645
Improvement of crop and livestock estimating methods:		
Number of research projects	12	13
Special surveys: Number of research projects	15	15

AGRICULTURAL MARKETING SERVICE

General and special funds:

MARKETING RESEARCH AND SERVICE

For expenses necessary to carry on research and service to improve and develop marketing and distribution relating to agriculture as authorized by the Agricultural Marketing Act of 1946 (7 U.S.C. 1621–1627) and other laws, including the administration of marketing regulatory acts connected therewith; research and development, including related cost and efficiency evaluations, and services relating to agricultural marketing and distribution, for carrying out regulatory acts connected therewith, and for administration and coordination of payments to States; and this appropriation shall be available for field employment pursuant to section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), and not to exceed $25,000 shall be available for employment at rates not to exceed $75 per diem under section 15 of the Act of August 2, 1946 (5 U.S.C. 55a) in carrying out section 201(a) to 201(d), inclusive, of title II of the Agricultural Adjustment Act of 1938 (7 U.S.C. 1291) and section 203(j) of the Agricultural Marketing Act of 1946, [$42,498,975] *$43,975,000*: *Provided*, That appropriations hereunder shall be available pursuant to 5 U.S.C. 565a for the construction, alteration, and repair of buildings and improvements, but unless otherwise provided, the cost of erecting any one building during the fiscal year shall not exceed $20,000, except for one building to be constructed at a cost not to exceed $45,000, and the cost of altering any one building during the fiscal year shall not exceed $7,500 or 7.5 per centum of the cost of the building, whichever is greater. (*5 U.S.C. 511–512, 541a, 556b, 563–564, 575; 7 U.S.C. 51–65, 71–87, 91–99, 181–229, 241–273, 414a, 415b, 415e, 423, 440, 471–476, 501–508, 511–511q, 516, 581–589, 591–599, 1551–1610; 15 U.S.C. 251–257i; 21 U.S.C. 94a, 451–469; 26 U.S.C. 4851–4854, 4861–4865, 4871–4877, 6001, 6804, 7233, 7263, 7492–7493, 7701; 31 U.S.C. 725d; Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

Note.—Excludes $242 thousand for activities transferred in the estimates to:
"Salaries and expenses," Office of Inspector General $236 thousand.
"Salaries and expenses," Office of Management Services $6 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

[1] Includes capital outlay as follows: 1963, $664 thousand; 1964, $491 thousand; 1965, $370 thousand.

[2] Selected resources as of June 30 are as follows:

	1962	1963 adjustments	1963	1964	1965
Unpaid undelivered orders	995	−98	1,115	1,115	1,115
Advances	26	----	20	20	20
Total selected resources	1,021	−98	1,135	1,135	1,135

[3] Includes capital outlay as follows: 1963, $11 thousand; 1964, $7 thousand; 1965, $7 thousand.

Domestic agricultural marketing and distribution functions of the Department are concentrated primarily in the Agricultural Marketing Service. The marketing job is increasing in complexity as the market structure is subjected to near revolutionary changes such as concentration in food retailing, trend toward direct buying, decentralization of processing, growth of interregional competition, and growing trend toward vertical integration and contract farming.

1. *Marketing research.*—This work is directed toward developing practical answers to problems encountered in moving products from the farm to the consumer. In cooperation with public and private agencies and trade groups, efforts are made to develop objective methods to determine quality, reduce losses from waste and spoilage, and improve efficiency in the physical handling of farm products as they move through marketing channels. The work includes research at each stage of marketing, such as assembly points, terminal or central markets, and retail markets.

The net decrease for 1965 includes funds for stepping up research to control insects in marketing channels without harmful residues, eliminates research on market facility planning and wholesaling and retailing operations, and reduces research at a number of locations on other physical handling of farm products in marketing channels.

	1961 actual	1962 actual	1963 actual
Individual research projects:			
Active at end of year	290	258	235
Completed during year	54	86	66
Initiated during year	79	57	72
Contracts for marketing research by private firms or other non-Federal agencies:			
Number negotiated during year	18	13	14
Number in effect, end of year	32	38	28

2. *Market news service.*—This service provides current information on supply, movement, and prices at specific markets for practically all agricultural commodities. This day-to-day market information enables American farmers to determine where and when to sell and at what price. The information is collected and disseminated at year-round and seasonal offices maintained in more than 130 cities and towns, often with local and other support and cooperation, generally from State departments of agriculture.

The proposed increase for 1965 would be used for further modernization of the leased teletype system and to meet the cost of increased teletype rates. This increase is partially offset by a decrease in Federal contributions to certain services to conform with the long-range market news financing plan.

MARKET NEWS SERVICE

Federal Reserve Bank of St. Louis

3a. *Poultry inspection.*—Inspection of poultry for wholesomeness is provided pursuant to the Poultry Products Inspection Act of 1957. All poultry moving in interstate or foreign commerce is required to be inspected both before and after slaughter. Birds found to be unfit for human consumption are condemned and removed from channels of trade.

POULTRY INSPECTION ACTIVITIES

	1963 actual	*1964 estimate*	*1965 estimate*
Inspected production (mil. lbs.)	9,936	10,643	11,264
Plants under inspection June 30	966	1,056	1,056
Cities in which plants are located June 30	610	659	659
Evisceration lines under inspection June 30	1,367	1,402	1,430

The increase for 1965 provides for (1) inspection of the expected increased volume of poultry production and (2) the cost of the reclassification of poultry inspector positions. A supplemental appropriation for 1964 is proposed for separate transmittal.

3b. *Other inspection, grading, classing, and standardization.*—Nationally uniform standards of quality of agricultural products are established and applied to specific lots of produce to promote confidence between buyers and sellers; reduce hazards in marketing due to misunderstandings and disputes arising from the use of nonstandard descriptions; encourage better preparation of uniform quality products for market; and furnish consumers with more definite information on the quality of products they buy. The standards are applied by or under the supervision of Federal employees at the request of any interested party, and generally for a fee. Approximately 74% of the total cost of this work was offset by fees and other revenue in 1963, which are shown principally under Agricultural Marketing Service trust funds in part II of the Budget Appendix. Legislation will be proposed to place poultry inspection and certain other activities on a self-supporting basis resulting in a reduction of $18,635 thousand for the fiscal year 1965.

4. *Regulatory activities.*—These include the administration of regulatory laws such as Packers and Stockyards, Standard Container, U.S. Warehouse, and Federal Seed Acts, to assure fair play in the marketplace; to protect producers and handlers of agricultural commodities from financial loss due to careless or fraudulent marketing practices; and to preserve free and open competition in the marketing of farm products. Assistance is also provided to farmers and others in obtaining and maintaining equitable and reasonable transportation rates and services on farm products and supplies.

	1963 actual	*1964 estimate*	*1965 estimate*
Packers and Stockyards Act:

AGRICULTURAL MARKETING SERVICE—Con.

General and special funds—Continued

Proposed for separate transmittal:

MARKETING RESEARCH AND SERVICE

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Poultry inspection (costs—obligations)	----------	173	---------
Financing:			
New obligational authority (proposed supplemental appropriation)	----------	173	---------

Under existing legislation, 1964.—A proposed supplemental appropriation in the amount of $173 thousand for reclassification of nonveterinarian poultry inspector positions.

Late in August 1963, the Civil Service Commission released poultry classification standards which will raise the grade level classification of approximately 1,500 positions in the Poultry Inspection Service. The tentative supplemental estimate of $173 thousand represents the cost of the reclassification for the last quarter of the year. The annual cost in 1965 is estimated at $665 thousand.

Proposed for separate transmittal:

MARKETING RESEARCH AND SERVICE

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
3. Inspection, grading, classing, and standardization:			
(a) Poultry inspection	----------	----------	−16,622
(b) All other	----------	----------	−1,975
4. Regulatory activities	----------	----------	−38
Total obligations	----------	----------	−18,635
Financing:			
New obligational authority (proposed supplemental appropriation)	----------	----------	**−18,635**

Under proposed legislation, 1965.—A reduction of $18,635 thousand is anticipated for 1965 under legislation being proposed as follows: (1) Amend the Poultry Products Inspection Act to place the service on a self-supporting basis; (2) amend the U.S. Grain Standards Act by placing the service on a voluntary basis with recovery of full costs of the special benefit services; and (3) eliminate the regulatory provisions of the Naval Stores Act and repeal the Tobacco Seed and Plant Exportation Act, the Wool Standards Act, and two Standard Container Acts. In addition, the legislation would propose a funding mechanism for reimbursement by users for inspection services rendered.

PAYMENTS TO STATES AND POSSESSIONS

For payments to departments of agriculture, bureaus and departments of markets, and similar agencies for marketing activities under section 204(b) of the Agricultural Marketing Act of 1946 (7 U.S.C. 1623(b)), [$1,500,000] *$1,425,000. (Department of Agriculture and Related Agencies Appropriation Act, 1964.)*

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Payment for marketing service work (sec. 204(b) of the Agricultural Marketing Act of 1946) (costs—obligations) (object class 41)	1,425	1,500	1,425
Financing:			
New obligational authority (appropriation)	**1,425**	**1,500**	**1,425**

Payments are made on a matching fund basis to State marketing agencies for carrying out specifically approved marketing service programs designed to bring about improved marketing. Under this activity, marketing specialists work with farmers, marketing firms, and agencies in solving marketing problems and in putting to use marketing research results.

This program covers such projects as methods of maintaining and improving the quality of products; ways of reducing marketing costs; expanding outlets for surplus products; the collection and dissemination of special State and local market information and statistics; and improving the organizational structure of the marketing system. Through this cooperative approach, the Federal Government's leadership and money are coupled with State resources and experience to aid in the solution of the most urgent local and area marketing problems.

In 1964, 42 States are conducting about 125 projects. For 1965, the program is projected at the 1963 level.

SPECIAL MILK PROGRAM

For necessary expenses to carry out the Special Milk Program, as authorized by the Act of August 8, 1961 (7 U.S.C. 1446, note), [$100,000,000] *$99,831,000, to be derived by transfer from funds available under section 32 of the Act of August 24, 1935 (7 U.S.C. 612c). (Department of Agriculture and Related Agencies Appropriation Act, 1964.)*

Note.—Excludes $166 thousand for activities transferred in the estimates to the following appropriations:
"Salaries and expenses," Office of the Inspector General, $162 thousand.
"Salaries and expenses," Office of Management Services, $4 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

[1] Includes capital outlay as follows: 1963, $6 thousand; 1964, $4 thousand; and 1965, $4 thousand.
[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $0; 1963, $3 thousand; 1964, $3 thousand; 1965, $3 thousand.

This program is designed to increase the consumption of fluid milk by children in nonprofit schools of high school grade and under, child-care centers, summer camps and similar nonprofit institutions.

From its inception in 1955 through 1962, the program was financed through advances from Commodity Credit Corporation funds. The Agricultural Act of 1961 changed the financing to a direct appropriation beginning July 1, 1962.

1. *Cash payments to States.*—Funds are advanced to State agencies to reimburse eligible participants for a part of the cost of the fluid milk consumed. An initial reserve is established at the beginning of the fiscal year for each State based on the total amount of reimbursement payments made during the preceding fiscal year adjusted for average growth. In especially needy schools, reimbursement payments may be made for the full cost of this milk for children who are unable to pay.

In 1963 about 2.8 billion half-pints of fluid milk were consumed by children—over six times the quantity in 1955, the first year of operation of the program. This represents over 2.5% of the total nonfarm consumption of fluid milk in the United States. Milk consumed under this program is expected to continue to increase at about 6% in 1964. The budget contemplates some reduction in 1965 in the maximum reimbursement rates for milk served and as a result, growth in the program in that year is projected at 4%.

Program activities from 1962 through 1965 are as follows:

	1962 actual	*1963 preliminary*	*1964 estimate*	*1965 estimate*
Outlets participating	88,188	90,486	92,000	94,000
Half-pints of milk reimbursed (million)	2,631.0	2,788.1	2,955.4	3,070.0
Average reimbursement rate per half-pint	3.38¢	3.37¢	3.36¢	3.23¢

2. *Operating expenses.*—Administrative and technical assistance is furnished to State agencies, participating schools, and child-care institutions. Policies, procedures, and standards are developed for administering the program and determining eligibility. The program is administered directly in 8,068 outlets where no State agency has assumed the responsibility for its administration or is prohibited by law from disbursing funds to such participants.

AGRICULTURAL MARKETING SERVICE—Con.

General and special funds—Continued

SCHOOL LUNCH PROGRAM—Continued

Program and Financing (in thousands of dollars)—**Continued**

	1963 actual	1964 estimate	1965 estimate
New obligational authority:			
Appropriation	125,000	137,000	147,610
Transferred from "Removal of surplus agricultural commodities" (76 Stat. 1208)	45,000	45,000	45,000
Transfer to "Salaries and expenses, general administration" (76 Stat. 1212)	−7		
Appropriation (adjusted):			
Current	**124,993**	**137,000**	**147,610**
Permanent	**45,000**	**45,000**	**45,000**

[1] Includes capital outlay as follows: 1963, $15 thousand; 1964, $16 thousand; 1965, $16 thousand.

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $7 thousand; 1963, $25 thousand; 1964, $25 thousand; 1965, $25 thousand.

1. *Food assistance*, in the form of both funds and food, is provided to the States and possessions in serving lunches to school children. Each State's portion of the funds available was determined by a statutory formula through fiscal year 1962. The formula took into account the number of school-age children in the State and the relationship between the per capita income of the State and the average United States per capita income. The amendment to the Act, effective July 1, 1962, changed the formula to include participation in place of school-age population. A new provision is also included in the amendment for providing special cash assistance to needy schools in serving free or reduced price lunches.

The increase for 1965 would provide for normal growth in the program, and for initiating a program of special assistance to needy schools.

The program is operated under an agreement entered into by the State educational agency and the Department of Agriculture. Schools make application to the State agency and if accepted are reimbursed for a part of the food cost of each meal served. In 1963, the States contributed to this program over $947 million, most of which came from payments by children. This was far in excess of the statutory matching requirement of $3 for each Federal dollar of cash payment.

This appropriation is also used to purchase food for distribution to the schools to help meet the nutritional requirements of the lunches. Transfers are made to this appropriation from the fund Removal of surplus agricultural commodities for the purchase and distribution of agricultural commodities and other foods. Further, commodities acquired under price support and surplus removal programs, and assistance through the special milk program are available to the schools. The volume of surplus commodities distributed to schools, however, depends upon market conditions.

The program during the peak month in 1963 provided lunches to over 33% of the approximately 45.2 million school children in the country. The number of lunches served increased approximately 5.65% over 1962. Participation in the program in December 1962 reached 15 million children in 66,715 schools and an appreciable increase is expected in 1964 and 1965.

During 1963 about $826 million worth of agricultural commodities and other foods were used in the program. About 22% of this amount represented commodities contributed under section 6 of the School Lunch Act and the Federal surplus removal and price support programs. Over 78% of the food used in the program was purchased by the schools through local suppliers.

Participation in the program from 1962 through 1965 is as follows:

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Number of schools (month of peak participation)	65,965	67,728	69,500	71,300
Number of school children (peak thousands)	14,184	14,957	15,760	16,600
Number of meals served (millions)	2,428	2,555	2,722	2,886

Financing of the program in the last 4 years was as follows (in millions of dollars):

	1960	*1961*	*1962*	*1963*
State and local contributions (total, including payments by children)	775.8	824.7	887.8	947.5
Federal appropriation (National School Lunch Act):				
(a) Cash payments	93.7	93.6	98.7	108.6
(b) Commodity distribution (sec. 6)	61.1	61.1	69.1	58.9
Surplus commodity distribution	70.9	71.6	113.0	121.0
Special milk program	78.0	81.5	86.1	90.8
Federal contributions	303.7	307.8	366.9	379.3
Total, all contributions	1,079.5	1,132.5	1,254.7	1,326.8

2. *Operating expenses* consist of overall administration of the program including policy formulation and administrative reviews; administrative and technical assistance to State agencies and participating schools; and administering the program directly in over 3,000 private schools where the State educational agency is prohibited by law from disbursing funds.

Perishable Agricultural Commodities Act Fund

(Permanent, indefinite, special fund)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Licensing dealers and handling complaints:			
Direct costs	774	890	905
Reimbursable costs	6		
Total program costs, funded [1]	780	890	905
Change in selected resources [2]	−1		
Total obligations	779	890	905
Financing:			
Comparative transfer to other accounts	2	2	
Unobligated balance brought forward	−174	−145	−85
Advances from "Marketing research and service" (7 U.S.C. 499s)	−6		
Unobligated balance carried forward	145	85	73
New obligational authority (appropriation)	**746**	**832**	**893**

[1] Includes capital outlay as follows: 1963, $2 thousand; 1964, $5 thousand; 1965, $5 thousand.
[2] Selected resources as of June 30 are as follows: 1962, $1 thousand; 1963, $0; 1964, $0; 1965, $0

License fees are deposited in this special fund and are used to meet costs of administering the Perishable Agricultural Commodities, and the Produce Agency Acts (7 U.S.C. 491–497, 499a–499s). Public Law 87–725, enacted October 1, 1962, authorizes an increase in fees from $25 to a maximum of $50. Effective January 1, 1963, the fee was increased to $36.

These acts are intended to assure equitable treatment to farmers and others in the marketing of fresh and frozen fruits and vegetables. Commission merchants, dealers, and brokers handling these products in interstate and foreign commerce are licensed. Complaints of violations are investigated and violations dealt with by (a) informal agreements between the two parties, (b) formal decisions involving payments of reparation awards, and (c) suspension or revocation of license and/or publication of the facts. Approximately 23,000 licenses were in effect on June 30, 1963, and a decrease of 1,000 is expected in 1964 as a result of the additional exemptions authorized by the amendment approved October 1, 1962. The number of complaints received is expected to continue to average around 2,250.

Removal of Surplus Agricultural Commodities (Section 32)

(Permanent, indefinite)

No funds available under section 32 of the Act of August 24, 1935 (7 U.S.C. 612c) shall be used for any purpose other than commodity program expenses as authorized therein, and other related operating expenses, except for (1) transfers to the Department of the Interior as authorized by the Fish and Wildlife Act of August 8, 1956, (2) transfers otherwise provided in this Act, (3) not more than [$4,754,000] *$2,924,000* for formulation and administration of marketing agreements and orders pursuant to the Agricultural Marketing Agreement Act of 1937, as amended, and the Agricultural Act of 1961, *and* (4) not more than [$45,000,000] *$51,125,000* for expenses for the Pilot Food Stamp Program[, and (5) not more than $16,000,000 for transfer to the Commodity Credit Corporation to be used to increase domestic consumption of any farm commodity or farm commodities determined by the Secretary of Agriculture to be in surplus supply, and hereafter such sums (not in excess of $25,000,000 in any one year) as may be approved by the Congress shall be available for such purpose, such authorization not to restrict authority in existing law, of which amount $11,000,000 shall remain available until expended for construction and equipping of research facilities determined to be needed as a result of a special survey]. (*Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

Note.—Excludes $1,390 thousand for activities transferred in the estimates to the following appropriations:
"Salaries and expenses," Office of the Inspector General, $1,355 thousand.
"Salaries and expenses," Office of Management Services, $35 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

Appropriation (adjusted)	**264,859**	**315,901**	**224,852**

[1] Includes capital outlay as follows: 1963, $48 thousand; 1964, $50 thousand; 1965, $40 thousand.

[2] Selected resources as of June 30 are as follows:

	1962	*1963 adjustments*	*1963*	*1964*	*1965*
Stores	17,716	-----	26,729	26,729	26,729
Unpaid undelivered orders	18,080	−789	9,477	9,477	9,477
Total selected resources	35,796	−789	36,206	36,206	36,206

Under section 32 of the act of August 24, 1935, as amended (7 U.S.C. 612c), an amount equal to 30% of customs receipts during each calendar year (except for an amount equal to 30% of such receipts collected on fishery products transferred to the Department of Interior to encourage the distribution of fishery products), and unused balances up to $300 million are available for expanding domestic and foreign market outlets for farm commodities. As provided in recent appropriation acts, transfers have been made from this fund to the school lunch program for the purchase and distribution of agricultural commodities and other foods pursuant to section 6 of the National School Lunch Act. Section 32 funds are also authorized for the administration of marketing agreements and orders. The basic legislation provides that funds devoted to any one commodity or product thereof must not exceed 25% of funds available. It also provides that the funds must be devoted principally to perishable agricultural commodities other than those receiving price support under title II of the Agricultural Act of 1949, as amended. It has been determined that this provision can be legally satisfied by setting aside or reserving the principal portion of section 32 funds for the use of perishable nonbasic agricultural commodities when the occasion arises warranting their use for such purpose.

1. *Commodity program payments* are of four types: (a) *Direct purchases* are donated to the school lunch program, charitable institutions serving needy persons, and persons certified by welfare agencies as eligible for relief; (b) *Diversion payments* enable processors to purchase surplus commodities on the domestic market, divert them to by-products and new uses, and sell them at prices comparable to competing products, thus creating new markets for surplus commodities; (c) *Export payments* enable exporter to purchase surplus commodities on the domestic market and sell them on the world market at competitive world prices; (d) *Production payments*, none of which were made in 1963, help to reestablish farmers' purchasing power. During the past 2 years assistance under these programs was given to the following commodity groups (in millions of dollars).

Obligations	*1962*	*1963*
Dairy products	.9	----
Eggs and poultry	31.2	24.4
Fruits	1.5	3.7
Grains	1.6	.2
Livestock	82.0	58.9
Peanut butter	7.9	3.0
Tobacco	1.5	3.0
Vegetables	16.7	2.7
Miscellaneous	.1	.3
Total	143.4	96.2

The use of section 32 program funds is contingent upon economic conditions. The estimates for both 1964 and 1965 reflect full use of available funds except for the $300 million carryover. Within the total each year, provision will be made for the foreseeable needs for perishables and other activities financed with section 32 funds. Some purchases may be made of commodities which would otherwise be donated by the Commodity Credit Corporation under section 416 of the Agricultural Act of 1949.

Distribution of the total in advance would be highly tentative since the type of program to be used is dependent upon a determination at the time of the kind of action which will best meet the particular need which had developed. If troublesome surpluses not now foreseen should develop, steps will be taken to use additional available funds for their removal or diversion as conditions might warrant.

2. *Food stamp program* aims to encourage increased domestic use of agricultural food commodities among low-income families through issuance of food coupons which may be used in retail stores for the purchase of commercial-brand foods. Currently, 43 pilot programs are in operation in 22 States and an additional two counties in the State of Washington are scheduled to enter the program in the immediate future. The budget assumes that in 1965 the pilot program will continue to be carried on at slightly above the currently authorized level with financing from section 32 funds. Legislation is pending to authorize the program on a permanent basis with financing through a direct appropriation.

3. *Surplus removal operating expenses* occur mainly in connection with purchasing, exporting, and diverting surplus commodities and in distributing section 32 and Commodity Credit Corporation commodities to eligible domestic outlets. Distribution in 1963, including that under section 6 of the National School Lunch Act, which is financed from school lunch funds, is summarized below (in millions):

	Number of recipients (peak month)	*Value of commodities distributed*	*Pounds of commodities distributed*
By recipients:			
School children	16.9	$179.9	775.0
Needy persons	7.0	204.4	1,246.0
Persons in charitable institutions	1.4	29.0	165.2
Total		413.3	2,186.2
By program:			
Section 32		95.8	329.3
Donation by Commodity Credit Corporation under section 416		258.6	1,570.0
Section 6, National School Lunch Act		58.9	286.9
Total		413.3	2,186.2

Federal Reserve Bank of St. Louis

Supervisory assistance is furnished local and State groups to encourage the preservation of abundant commodities for year-round use. In cooperation with the food trade, press and radio, greater consumption of abundant foods is encouraged. In 1963 the monthly plentiful foods list contained an average of 8 foods, and 7 national and 30 area, State, and local drives were conducted. A reduction in these activities is anticipated in fiscal 1965.

4. *Marketing agreements and orders* are put into effect upon request of producers or handlers after hearings and investigations, and approval by producers (and handlers in case of marketing agreements). They help to stabilize prices and benefit producers and consumers by establishing and maintaining orderly marketing conditions. Administration at the local level is financed by assessments upon handlers. On June 30, 1963, there were 83 orders in effect for milk and 45 covering tree fruits, tree nuts, and vegetables. Agreement and order programs pursuant to the Agricultural Act of 1961 are being financed under this project. Increased funds for administration of the fruit, tree nut, vegetable, and milk agreement and order programs are more than offset by the estimated decrease in activities under the Agricultural Act of 1961.

FOREIGN AGRICULTURAL SERVICE

General and special funds:

SALARIES AND EXPENSES

For necessary expenses for the Foreign Agricultural Service, including carrying out title VI of the Agricultural Act of 1954 (7 U.S.C. 1761–1768), market development activities abroad, and for enabling the Secretary to coordinate and integrate activities of the Department in connection with foreign agricultural work, including not to exceed $35,000 for representation allowances and for expenses pursuant to section 8 of the Act approved August 3, 1956 (7 U.S.C. 1766), [$18,699,500] *$20,561,000: Provided,* That not less than $255,000 of the funds contained in this appropriation shall be available to obtain statistics and related facts on foreign production and full and complete information on methods used by other countries to move farm commodities in world trade on a competitive basis: *Provided further,* That, in addition, not to exceed $3,117,000 of the funds appropriated by section 32 of the Act of August 24, 1935, as amended (7 U.S.C. 612c), shall be merged with this appropriation and shall be available for all expenses of the Foreign Agricultural Service. *(5 U.S.C. 511–512; Department of Agriculture and Related Agencies Appropriation Act, 1964.)*

Note.—Excludes $112 thousand for activities transferred in the estimates to the following appropriations:
"Salaries and expenses," Office of the Inspector General, $110 thousand.
"Salaries and expenses," Office of Management Services, $2 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

The primary function of the Foreign Agricultural Service is to help American agriculture in maintaining and expanding foreign markets for its products.

The agency performs two principal kinds of service functions: (a) It maintains a worldwide agricultural intelligence and reporting service, to assist U.S. agricultural industry in its export operations. This is done through a continuous program of analyzing and reporting foreign agricultural production, markets, and policies; (b) it helps to develop foreign markets for U.S. farm products through administration of special export programs and through helping to secure international trade conditions that are favorable toward our products.

1. *International trade.*—The Service directs and coordinates Department participation in the formulation of trade programs and agreements to stabilize and expand world trade in American agricultural products, and to reduce restrictive tariff and trade practices against import of American agricultural commodities. Of special importance at this time is the relationships with the European Common Market and intensive efforts are being made to maintain access to the Market for U.S. agricultural commodities. This requires comprehensive analysis of the developing situation in the Common Market countries and related trade areas and appropriate representation to officials of the European Economic Community. Recommendations for the departmental positions on trade agreements and international commodity agreements are formulated. Continuous review is made of the trade regulations of signatories to the General Agreement on Tariffs and Trade as these regulations affect the movement of American farm products in international trade. The Service administers a program of import controls in accordance with section 22 of the Agricultural Adjustment Act of 1935, as amended.

2. *Agricultural attachés.*—Agricultural attachés located in 61 posts assist in the development of markets abroad for U.S. agricultural commodities. A comprehensive schedule of foreign agricultural market and trade reporting is maintained to meet the needs of the American agricultural industry.

3. *Export programs.*—Maintenance and expansion of foreign markets for surplus agricultural products are promoted by (a) developing agreements with foreign

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

countries for sales of U.S. agricultural commodities under Public Law 480, and following up on the shipments of those commodities; and (b) directing and financing the operation of market development projects for agricultural products. Market development projects are, in most cases, carried out in cooperation with commodity trade groups under cooperative agreements. These projects carried out in foreign countries expand markets for U.S. agricultural commodities.

4. *Commodity programs.*—Information on foreign market requirements for specific commodities is obtained, analyzed, and made available to farm and trade groups. Market programs are developed for use by producers, exporters, and Government officials to maintain and expand the market abroad for U.S. farm products. Assistance is rendered to domestic trade representatives in negotiations with foreign government officials, importers, and consumers and bringing together American exporters and foreign importers under conditions favorable to trade.

5. *Barter and stockpiling.*—The Service, in cooperation with other Government agencies, conducts a barter program designed to utilize surplus agricultural commodities, in lieu of dollars, in acquiring from other countries, goods, materials and equipment required by other Government agencies and for the national and supplemental stockpiles. This work is financed from other funds transferred from Administrative expenses, Commodity Credit Corporation.

6. *General sales management.*—The Service conducts a general sales management program to develop sales, and pricing policies and programs for sales for export including sales for credit. The program also now includes price and quality review. Foreign data such as prices and stocks and rail, truck, barge and ocean freight rates and other market information is collected and recorded for use in program development. Information concerning prices and other sales terms, sales programs and commodity availabilities is furnished to U.S. exporters, foreign importers and foreign government officials. This work is financed with funds transferred from Administrative expenses, Commodity Credit Corporation.

Market development projects.—Foreign currencies generated by the sale of surplus agricultural commodities under title I of the Agricultural Trade Development and Assistance Act of 1954, as amended, as well as foreign currencies acquired by the United States from other sources, are used by the Foreign Agricultural Service to develop new foreign markets and expand existing markets for U.S. agricultural commodities, including cotton, dairy products, fats and oils, grain, feed, livestock and meat, poultry, fruits and vegetables, and tobacco.

The type of market development projects being carried out include sales promotion campaigns, trade fairs and exhibits, nutrition demonstrations, and market analyses.

INTERNATIONAL AGRICULTURAL DEVELOPMENT SERVICE

The Service administers the Department's responsibilities in the agricultural phases of the foreign economic assistance programs. This includes direction of the Department's activities under agreement with AID, particularly in agricultural assistance and training programs for foreign areas. It maintains relationships with international and U.S. organizations, including the land-grant

Transferred to "Operating expenses, Public Buildings Service," General Services Administration (76 Stat. 728)	−1		
Appropriation (adjusted)	**1,060**	**1,095**	**1,119**

[1] Includes capital outlay as follows: 1963, $5 thousand; 1964, $1 thousand; 1965, $2 thousand.
[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $4 thousand; 1963, $3 thousand; 1964, $3 thousand; 1965, $3 thousand.

The major objectives of the Commodity Exchange Authority are to maintain fair and competitive pricing in the commodity futures markets by preventing manipulation and other abusive trading practices. Enforcement of the Commodity Exchange Act requires supervision over futures trading in 19 commodities on 17 exchanges currently designated as contract markets. Transactions on contract markets were estimated at 10.7 million in 1963, compared with 9.9 million in the 1962 fiscal year. The average of month-end open contracts in all commodities was approximately 147,000 in 1963, second highest in a 25-year period, reflecting the long-term rising trend in the utilization of futures markets.

1. *Licensing and auditing of brokerage houses.*—This consists of (a) prevention of the misuse of customers' funds by the analysis of financial statements of futures commission merchants and the periodic audits of their books and records; and (b) annual registration of futures commission merchants and floor brokers.

AUDITS AND REGISTRATIONS

	1963 actual	1964 estimate	1965 estimate
Audit of customers' segregated funds	529	560	560
Accounts examined	32,285	38,000	38,000
Financial statements examined	490	500	500
Futures commission merchants registered	431	440	440
Floor brokers registered	775	775	775

2. *Supervision of futures trading.*—This embraces (a) examination and analysis of reports and other market data, the making of market position surveys, and publication of reports on market situations; (b) establishment, review, and enforcement of speculative limits; and (c) cooperative activities with control committees of contract markets. In 1963, position surveys covered 3,531 traders.

REPORTS TABULATED AND ANALYZED

	1963 actual	1964 estimate	1965 estimate
Daily trading volume and open contracts	198,641	200,000	200,000
Daily and weekly reports on large traders	355,034	400,000	400,000
Delivery notices	59,442	65,000	65,000

3. *Investigations.*—Apparent or alleged violations of the law and regulations are investigated, and trade practice surveys are made to discover violations. The Authority also prepares and presents evidence of violations in administrative hearings and judicial proceedings. Exchange rules and regulations are reviewed to insure that legal requirements are met.

This is an appropriation account to cover expenses of programs administered by, and functions assigned to, the Agricultural Stabilization and Conservation Service. The funds in this account, which include transfers from the Commodity Credit Corporation and miscellaneous advances from other sources, are available for operating expenses at the National, Commodity office, State, and county levels.

The Commodity offices and the data processing center in Kansas City play an important role in administering price support programs and the field operations stemming from producer loan and purchase agreements, inventory management and merchandising activities.

The ASC State committees, appointed pursuant to the provisions of section 8(b) of the Soil Conservation and Domestic Allotment Act, as amended, are in general administrative charge of all programs carried out in their respective States. Within the framework of national policy, the State committees determine policies to be followed and direct the adaptation of the national programs to the State.

The ASC county committees are responsible for the local administration of programs and functions dealing directly with farmers. The elected county committee is in charge of the county office.

The programs and activities carried out by the Agricultural Stabilization and Conservation Service include: acreage allotments and marketing quotas; agricultural conservation program; conservation reserve program; special programs for feed grains and wheat; Sugar Act program; cropland conversion program; storage, wool, and price support programs.

1. *Formulation and appraisal.*—The supply adjustment, conservation, and price support programs and the management and merchandising of commodities acquired under the price support program have a tremendous impact on the national and, to a lesser extent, the international economy. This activity provides for constant review of the effectiveness of these programs and the analysis of data to formulate even more effective programs.

2. *Operation of supply adjustment, conservation, and price support programs.*—Includes (a) development of program regulations and procedures, (b) holding meetings with employees and producers to discuss new programs or changes in programs, (c) collecting and compiling basic data for individual farms, (d) establishing individual farm allotments, (e) establishing proportionate shares for sugar farms, when necessary, (f) notifying producers of allotments, proportionate shares, productivity indexes, and

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

payment rates, (g) determining farm marketing allocations, (h) handling appeals, (i) determining county normal yields, (j) conducting referendums and certifying results, (k) checking compliance and use of diverted acres, including spot checking, (l) developing pooling agreements under which several farmers in a community unite to solve a common conservation problem which cannot be solved by individual action, (m) issuing marketing cards so that production from the allotted acreage of crops can be marketed without penalty, (n) processing producer requests for conservation cost sharing and (o) processing commodity loan documents and issuing sight drafts.

3. *Inventory management and merchandising.*—Includes (a) overall management of CCC-owned commodities including inspection of commercial storage facilities and stored commodities, (b) selling commodities, (c) donating CCC-owned commodities, and (d) accounting for loans and commodities. The value of the commodities is currently estimated at about $5 billion.

To illustrate the volume of work, there are set forth below items of work for some of the major programs which were performed in fiscal year 1963. It is assumed that work will be at about the same level in fiscal year 1964 except for the wheat stabilization program which was disapproved by producers in a referendum.

ACREAGE ALLOTMENT AND MARKETING QUOTA PROGRAM

	Number of allotments	*Allotted acreage*	*Counties in program*
Tobacco	570,153	1,195,704	935
Peanuts	105,823	1,612,129	508

Number of farm-stored loans	530,714
Number of reinspections of farm-stored commodities	1,345,825
Number of loans and purchase agreements under which CCC acquired the commodity	610,347
Number of repayments	254,072

SUGAR ACT PROGRAM

Estimated number of farms	42,491
Number of counties	289
Estimated planted acreage	2,199,753

GRAIN STORAGE STRUCTURES PROGRAM

Number of storage structure sites	3,865
Number of storage structures (bins)	236,195

NATIONAL WOOL ACT PAYMENT PROGRAM

Number of applications for payment	443,465
Number of assignments	8,129

Since the 1964 budget was prepared, legislation has been enacted to authorize a 1964 and 1965 feed grain program. A supplemental estimate of $15,200 thousand is proposed for later transmittal in 1964 in order to provide for expenses of the 1964 feed grain program. Feed grain program expenses for fiscal year 1965 are provided for in these estimates.

AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE—Continued

General and special funds—Continued

Proposed for separate transmittal:

EXPENSES, AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Operation of supply adjustment, conservation, and price support programs (costs—obligations)	----------	15,200	---------
Financing:			
New obligational authority (proposed supplemental appropriation)	----------	**15,200**	---------

Under existing legislation, 1964.—A proposed supplemental appropriation of $15,200 thousand is anticipated to provide for administration of the 1964 feed grain program pursuant to the provisions of the Feed Grain Act of 1963. This program will reduce surplus stocks of feed grains and reduce costs to the taxpayers. Reducing burdensome stocks will result in decreased carrying costs to the Federal Government for storage, handling, and transportation.

SUGAR ACT PROGRAM

For necessary expenses to carry into effect the provisions of the Sugar Act of 1948 (7 U.S.C. 1101–1161), [$78,000,000] *$87, 500, 000,* to remain available until June 30 of the next succeeding fiscal year. (*7 U.S.C. 281; Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Payments to sugar producers:			
(a) Continental beet area	44,461	45,772	49,618
(b) Continental cane area	11,479	11,443	12,539
(c) Offshore cane area	21,702	20,785	25,343
Total program costs, funded—obligations (object class 41)	77,642	78,000	87,500
Financing:			
Comparative transfer to other accounts	8	----------	---------
New obligational authority (appropriation)	**77,650**	**78,000**	**87,500**

Total U.S. requirements and quotas are determined to provide consumers with adequate supplies of sugar at reasonable prices, to protect the domestic sugar industry, and to promote the export trade of the United States. The quota for each domestic area is allotted to individual sellers when necessary to achieve orderly marketing, and restrictive farm acreage allotments are established for producers when necessary to avoid surpluses.

Payments, which supplement the income of domestic producers of cane and beets, require compliance with specified conditions of employment, production and price. Payments are also made for abandonment of planted acreage and crop deficiencies on harvested acreage due to natural calamities.

The increase of $9.5 million as proposed for 1965 is due principally to increased conditional payments to sugar producers. The appropriation requested anticipates that actual payment requirements for 1965 will be less than those indicated by the November 1963 crop report. If the estimated production materializes, it may be necessary to consider requesting additional funds in order to avoid serious program difficulties. A supplemental appropriation for 1964 is anticipated for separate transmittal.

Estimated production by areas is shown in the following table:

THOUSANDS OF SHORT TONS, RAW VALUE

Area	*1962 crop year*	*1963 crop year*	*1964 crop year*
Continental beet area	2,598	3,100	3,100
Continental cane area	853	1,175	1,175
Hawaii	1,120	1,100	1,100
Puerto Rico	990	1,100	1,100
Virgin Islands	11	16	15
Total	5,572	6,491	6,490

Proposed for separate transmittal:

SUGAR ACT PROGRAM

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Payments to sugar producers:			
(a) Continental beet area	----------	2,804	---------
(b) Continental cane area	----------	3,596	---------
Total program costs, funded—obligations	----------	6,400	---------
Financing:			
New obligational authority (proposed supplemental appropriation)	----------	**6,400**	---------

Under existing legislation, 1964.—The proposed supplemental appropriation is to provide additional funds for making conditional payments to eligible sugar producers, due to production in excess of previous estimates.

AGRICULTURAL CONSERVATION PROGRAM

For necessary expenses to carry into effect the program authorized in sections 7 to 15, 16(a), and 17 of the Soil Conservation and Domestic Allotment Act, approved February 29, 1936, as amended (16 U.S.C. 590g–590(o), 590p(a), and 590q), including not to exceed $6,000 for the preparation and display of exhibits, including such displays at State, interstate, and international fairs within the United States, [$215,000,000] *$225,000,000,* to remain available until December 31 of the next succeeding fiscal year for compliance with the programs of soil-building and soil- and water-conserving practices authorized under this head in the Department of Agriculture and Related Agencies Appropriation Acts, [1962] *1963* and [1963] *1964,* carried out during the period July 1, [1961] *1962,* to December 31, [1963] *1964,* inclusive: *Provided,* That none of the funds herein appropriated shall be used to pay the salaries or expenses of any regional information employees or any State information employees, but this shall not preclude the answering of inquiries or supplying of information at the county level to individual farmers: *Provided further,* That no portion of the funds for the [1964] *1965* program may be utilized to provide financial or technical assistance for drainage on wetlands now designated as Wetland Types 3 (III), 4 (IV), and 5 (V) in United States Depart-

1. Cost-sharing assistance to farmers	50,000	50,000	50,000
Total program costs, funded—obligations (object class 41)	262,006	265,000	275,000
Financing:			
Comparative transfer to other accounts	894		
Advances and reimbursements from Commodity Credit Corporation (loan)	−50,000	−50,000	−50,000
New obligational authority (appropriation)	**212,900**	**215,000**	**225,000**

This program is designed to encourage conservation by sharing with farmers and ranchers the cost of carrying out approved soil-building and soil- and water-conserving practices, including related wildlife-conserving practices, which farmers generally would not perform to the needed extent with their own resources. The rate of cost-sharing which may be given in the form of conservation materials and services or a payment after completion of the practice, averages approximately 50% of the cost.

Conservation measures for which cost-sharing is offered include those which are primarily for (1) establishment of permanent protective cover, (2) improvement and protection of established vegetative cover, (3) conservation and disposal of water, (4) establishment of temporary vegetative cover, (5) temporary protection of soil from wind and water erosion, and (6) benefits to wildlife.

Under the 1962 program, new or additional practices were established on 1,186,709 farms and ranches, consisting of 174 million acres of cropland and 415 million acres of farmland. The following practices, along with others, were installed under the 1962 program:

[In thousands]

Constructing water storage reservoirs	structures	49
Constructing terraces	acres	694
Establishing stripcropping systems	acres	377
Establishing permanent sod waterways	acres	42
Establishing enduring vegetative cover	acres	3,900
Controlling competitive shrubs on range or pasture	acres	2,000
Water supply and management on existing cropland and pasture through:		
Better irrigated land practices	farms	25
Better drainage practices	farms	60
Planting trees and shrubs	acres	285
Improving stands of forest trees	acres	213

Funds are distributed among the States on the basis of conservation needs. They are, in turn, distributed by the agricultural stabilization and conservation State committees to counties, and the agricultural stabilization and conservation county committees make commitments of conservation practice cost-sharing to eligible farmers and ranchers.

Loans from Commodity Credit Corporation are used to make advance payments to vendors for conservation materials and services furnished to farmers and ranchers prior to the time funds are appropriated each year. Repayment is made from balances of prior appropriations or from new funds appropriated.

The status of the loan account is (in thousands of dollars):

AMOUNTS REPAID OR ESTIMATED TO BE REPAID ON COMMODITY CREDIT CORPORATION LOANS

	1963 actual	*1964 estimate*	*1965 estimate*	*Total*
Balance of 1962 loan	42,100	------	------	42,100
1963 loan	------	50,000	------	50,000
1964 loan	------	------	50,000	50,000
Total	42,100	50,000	50,000	142,100
Interest	(471)	(433)	(433)	(1,337)

A level of $120 million for the 1965 program is proposed excluding administrative expenses. Payments for the 1965 program will be made from the 1966 appropriation.

Unfunded balance carried forward	−11,350		
Appropriation to liquidate contract authorization	**2,000**	**11,350**	**10,000**

This program provides for long-range agreements with farm and ranch owners and operators to make changes in their cropping systems and land-uses to (1) change permanently to better productive use cropland that is not well suited for crop use, and (2) temporarily shift to better productive use land that is suitable for crop use but not currently needed for crops.

The agreements provide for payments, the furnishing of materials and services, and other assistance to farmers in consideration of their obligations to change the land-use and to install and maintain conservation practices. Agreements are limited to a maximum of 10 years. Those providing for tree cover may not provide for annual payments for more than 5 years. Present legislation limits the assistance to farmers to $10 million for any calendar year.

The program also provides for extension of expiring contracts under the conservation reserve program, but limits assistance to farmers for this purpose to calendar year 1963 and to not more than $15 million.

Legislation is pending before the Congress with respect to programs carried out under section 16(e) of the Soil Conservation and Domestic Allotment Act for 1964 and subsequent years.

Proposed for separate transmittal:

CROPLAND CONVERSION PROGRAM (LIQUIDATION OF CONTRACT AUTHORIZATION)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate

Appropriation to liquidate contract authorization:			
Under existing legislation		**10,000**	
Under proposed legislation		**33,000**	**47,000**

Under existing legislation, 1964.—The proposed supplemental appropriation of $10 million is to initiate cost-sharing and technical assistance to producers under long-term agreements to conserve and develop soil, water, forest, wildlife, and recreation resources.

Under proposed legislation, 1964.—Legislation has been proposed to the Congress to increase the $10 million limitation to $50 million on programs carried out under section 16 (e)(7) of the Soil Conservation and Domestic Allotment Act for 1964 and subsequent years. A supplemental appropriation of $33 million will be required to carry out the proposed additional legislative authorization for the 1964 program.

Under proposed legislation, 1965.—A supplemental appropriation of $47 million is anticipated to carry out the proposed additional legislative authorizations for the 1964 and 1965 programs.

CONSERVATION RESERVE PROGRAM

For necessary expenses to carry out a conservation reserve program as authorized by subtitles B and C of the Soil Bank Act (7 U.S.C. 1831–1837, 1802–1814, and 1816), and to carry out liquidation activities for the acreage reserve program, to remain available until expended, [$294,000,000] *$198,000,000*, with which may be merged the unexpended balances of funds heretofore appropriated for soil bank programs: *Provided*, That no part of these funds shall be paid on any contract which is illegal under the law

Unobligated balance carried forward	124		
New obligational authority (appropriation)	**304,000**	**294,000**	**198,000**

[1] Includes capital outlay as follows: 1963, $43 thousand.
[2] Selected resources as of June 30 are as follows:

	1962	*1963*	*1964*	*1965*
Advances	49	6	----	----
Unpaid undelivered orders	51	3	----	----
Total selected resources	100	9	----	----

This program, initiated in 1956, has as its objectives (1) the adjustment of total crop acreage more nearly in line with demand by withdrawing cropland from production, and (2) establishment and maintenance of sound conservation practices on the land withdrawn. The Secretary was authorized, through calendar year 1960, to enter into 3- to 15-year contracts with producers. In return for removing designated cropland from production and for establishing necessary conservation practices, the producer receives an annual rental payment each year of the contract period, and cost-sharing assistance for the establishment of the required practices. The total annual rental payments to a producer are limited to $5 thousand.

Participation in the program is summarized below:

Number of contracts, 1963 program	251,572
Number of acres, 1963 program	24,255,748
Payments made in program year 1962, estimated	$305,954,391
Estimated payments to be made in program year 1963	$293,676,921

Emergency Conservation Measures

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Emergency cost-sharing assistance to farmers (costs—obligations) (object class 41)	6,754	3,861	
Financing:			
Unobligated balance brought forward	−9,188	−3,861	
Recovery of prior year obligations	−1,427		
Unobligated balance carried forward	3,861		
New obligational authority			

Cost-sharing assistance (up to 80% of the cost of carrying out approved practices) is offered to assist and encourage farmers to rehabilitate farm lands damaged by natural disasters.

Legislation provides that assistance will be made available only when, as a result of wind erosion, floods, hurricanes, or other natural disasters, new conservation problems are created which (1) if not treated, will impair or endanger the land, (2) materially affect the productive capacity of the land, (3) represent damage which is unusual in character and, except for wind erosion, is not the type which would recur frequently in the same area, and (4) will be so costly to rehabilitate that Federal assistance is or will be required to return the land to productive agricultural use.

Funds for emergency cost-sharing assistance are distributed among States on the basis of needs for restoration of damaged lands.

Allocations Received From Other Accounts

Note.—Obligations incurred under allotments and allocations from other accounts are included in the schedules of the parent appropriations as follows:
"Great Plains conservation program," Soil Conservation Service.
"Revolving fund, Defense Production Act," Funds appropriated to the President.
"Agency for International Development," Funds appropriated to the President.
"Civil defense and defense mobilization functions of Federal agencies," Office of Emergency Planning.

FOREIGN ASSISTANCE PROGRAMS

A number of statutes provide for the facilities of the Commodity Credit Corporation to be used in carrying out programs for the exportation of surplus agricultural commodities thereunder and authorize appropriations to be made to cover costs incurred in connection with such programs. Advances are made to the Corporation for estimated costs to be incurred. If the amounts appropriated prove to be inadequate, the Commodity Credit Corporation finances authorized costs in excess of the appropriations pending reimbursement from future appropriations. On the other hand, any amounts advanced to the Corporation which are not used will reduce subsequent appropriation requests for these programs.

Activities are currently being carried out under these programs pursuant to the following specific authorizations:

Public Law 480, 83d Congress: Sale of surplus agricultural commodities for foreign currencies (title I); Commodities disposed of for emergency famine relief to friendly peoples (title II); Long-term supply contracts (title IV).

International Wheat Agreement Act.

Bartered materials for supplemental stockpile (Agricultural Act of 1956, title II).

General and special funds:

Public Law 480

For expenses during fiscal year [1964] *1965*, not otherwise recoverable, and unrecovered prior years' costs, including interest thereon, under the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1701–1709, 1721–1724, 1731–1736), to remain available until expended, as follows: (1) Sale of surplus agricultural commodities for foreign currencies pursuant to title I of said Act, [$1,452,000,000] *$1,893,000,000*; (2) commodities disposed of for emergency famine relief to friendly peoples pursuant to title II of said Act, [$215,451,000] *$264,000,000*; and (3) long-term supply contracts pursuant to title IV of said Act, [$52,515,000] *$58,000,000*. (*7 U.S.C. 1431, 1431b, 1431d, 1697, 1731–1733, 1735–1736; 33 U.S.C. 701b note; Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

FOREIGN ASSISTANCE PROGRAMS—Continued

General and special funds—Continued

PUBLIC LAW 480—Continued

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Sale of surplus agricultural commodities for foreign currencies	1,588,804	1,452,000	1,893,000
2. Commodities disposed of for emergency famine relief to friendly peoples	250,000	215,451	264,000
3. Long-term supply contracts	46,000	42,500	68,015
Total program costs, funded—obligations (object class 41)	1,884,804	1,709,951	2,225,015
Financing:			
Unobligated balance brought forward	−6,000		−10,015
Unobligated balance carried forward		10,015	
New obligational authority (appropriation)	**1,878,804**	**1,719,966**	**2,215,000**

1. *Sale of surplus agricultural commodities for foreign currencies.*—Under the Agricultural Trade Development and Assistance Act, Public Law 480, as amended (7 U.S.C. 1701–1709), surplus agricultural commodities are sold for foreign currencies. These currencies may then be used within certain limitations by the U.S. Government for agricultural market development, purchase of strategic materials, military equipment, facilities, and services for the common defense, payment of U.S. obligations, military housing, and other specified purposes.

If regular appropriations are available for any unrestricted purpose for which foreign currencies are used, the agency must buy the currency for dollars which are credited to the Commodity Credit Corporation. The estimates reflect the application in 1964 and 1965 of such proceeds from sales of foreign currencies to the reduction of unrecovered prior years' costs. The estimates also reflect the application of dollar repayments of foreign currency loans made under section 104 of the Agricultural Trade Development and Assistance Act to the reduction of unrecovered prior years' costs.

Section 509 of Public Law 86–500, approved June 8, 1960 (74 Stat. 186), provides that at least 75% of the total cost of any family housing project or community facility hereafter constructed or acquired in any foreign country (with certain specific exceptions) by any military department shall be paid for from foreign currencies acquired by the Corporation under title I. The Department of Defense reimburses the Corporation for foreign currencies used for military family housing. Pursuant to section 2681(b) of title 10 U.S.C. as amended, the estimates reflect payment to the Corporation of not to exceed $6 million annually until liquidation for amounts due under Public Law 480 and the French housing barter transaction discussed under Commodity Credit Corporation. It is estimated that $4 million will be applied against Public Law 480 amounts due.

Through June 30, 1963, a total of 358 agreements or supplements to agreements, had been signed with 46 countries for commodities representing an export market value of $9,343.1 million including ocean transportation of $1,021 million. The major commodities included were wheat, cotton, and fats and oils which together amounted to 74% of the total market value of the agreements. Through that date commodities with an export market value of about $6,671.9 million had been shipped. The total dollar equivalent of foreign currencies deposited in the Treasury through June 30, 1963, amounted to $6,978.7 million.

Appropriations are authorized to cover costs in carrying out this program. Through December 31, 1961, a total of $11.25 billion was so authorized.

Public Law 87–128, approved August 8, 1961, provides a limitation of $4.5 billion for a 3-year period January 1, 1962, through December 31, 1964, and a proviso that agreements shall not be entered into during any calendar year of such period which call for appropriations to reimburse Commodity Credit Corporation in amounts in excess of $2.5 billion. The estimates reflect proposed legislation to extend this program beyond the current expiration date.

The following reflects the composition of the appropriations for 1963, 1964, and 1965 (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Expenses of shipments:			
Commodity Credit Corporation stocks	421,805	586,216	187,450
Private stocks and ocean transportation	1,299,332	1,192,945	1,086,550
Total expenses of shipments	1,721,137	1,779,161	1,274,000
Interest expense on unrecovered balance	18,234	15,439	7,000
Total expenses	1,739,371	1,794,600	1,281,000
Net proceeds from sales of currencies, rental receipts and loan repayments	−213,841	−1,330	
Total current year's costs recoverable from appropriations	1,525,530	1,793,270	1,281,000
Unrecovered prior year costs paid from 1963 appropriation:			
1961	179,703		
1962	154,301		
Unrecovered 1963 costs financed by CCC until subsequent appropriation	−270,730		
Unrecovered 1963 costs paid from 1964 appropriation		270,730	
Unrecovered 1964 costs financed by CCC until subsequent appropriation		−612,000	
Unrecovered 1964 costs to be paid from 1965 appropriation			612,000
Appropriation or estimate	1,588,804	1,452,000	1,893,000

The following table reflects the costs incurred by fiscal years (in thousands of dollars):

	Program expenditures	*Interest*	*Total*
1955	129,165	355	129,520
1956	616,964	7,263	624,227
1957	1,361,973	34,400	1,396,373
1958	1,089,008	55,710	1,144,718
1959	1,089,071	24,183	1,113,254

2. *Commodities disposed of for emergency famine relief to friendly peoples.*—Under title II of the Agricultural Trade Development and Assistance Act of 1954, Public Law 480, as amended (7 U.S.C. 1703, 1721–1724), the Commodity Credit Corporation makes its surplus stocks of agricultural commodities available to the President for famine relief and other assistance to friendly nations and friendly peoples in meeting famine or other relief requirements and pays ocean freight charges for the shipment of such commodities as well as for the shipment of commodities donated under section 416 of the Agricultural Act of 1949, as amended (7 U.S.C. 1431).

Appropriations are authorized for costs incurred in carrying out the program. Through December 31, 1959, a total of $800 million was authorized. From January 1, 1960, $300 million per calendar year is authorized through December 31, 1961, plus unused balances of the previous authorization, making a total of $1.4 billion.

Public Law 87–128, approved August 8, 1961, amended section 203 of title II with a proviso that programs of assistance shall not be undertaken during any calendar year beginning January 1, 1961, and ending December 31, 1964, which call for appropriations of more than $300 million to reimburse Commodity Credit Corporation for all costs incurred in connection with such programs, including Commodity Credit Corporation's investment in commodities made available, plus any unused preceding year's authorization. The estimates reflect proposed legislation to extend this program beyond current expiration date.

The following reflects the composition of the appropriations for 1963, 1964, and 1965 (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Expenses of shipments:			
Commodity Credit Corporation stocks	153,657	164,610	168,040
Ocean transportation:			
On above commodities	23,913	31,178	30,941
On 416 donations	38,023	50,043	44,566
Total, ocean transportation	61,936	81,221	75,507
Total expenses of shipments	215,593	245,831	243,547
Interest expense on unrecovered balance	-------	29	-------
Total expenses—current year's costs recoverable from appropriations	215,593	245,860	243,547
Unrecovered 1962 costs paid from 1963 appropriation	24,451	-------	-------
1963 appropriation available for 1964 costs	9,956	-------	-------
1964 costs paid from 1963 appropriation	-------	−9,956	-------
Unrecovered 1964 costs financed by CCC until subsequent appropriation	-------	−20,453	-------
Unrecovered 1964 costs to be paid from 1965 appropriation	-------	-------	20,453
Appropriation or estimate	250,000	215,451	264,000

The following reflects the costs incurred in carrying out this program by fiscal years (in thousands of dollars):

	Program expenditures	*Interest*	*Total*
1955	86,623	273	86,896
1956	91,277	2,308	93,585
1957	120,430	4,461	124,891
1958	116,001	5,445	121,446
1959	95,511	2,417	97,928
1960	93,161	2,339	95,500
1961	196,109	2,456	198,565
1962	241,939	------	241,939
1963	215,593	------	215,593
1964 (estimate)	245,831	29	245,860
1965 (estimate)	243,547	------	243,547
Cumulative totals	1,746,022	19,728	1,765,750

3. *Long-term supply contracts.*—Under title IV of the Agricultural Trade Development and Assistance Act (7 U.S.C. Supp. 1, 1731–1736), the President, in order to stimulate and increase sales for dollars, is authorized to make agreements with friendly nations, including financial institutions, or with the private trade under which the United States would deliver surplus agricultural commodities over periods of up to 10 years and accept payment in dollars with interest over periods of up to 20 years. Appropriations are authorized to cover costs not recoverable by repayments from the foreign governments or private trade.

Through June 30, 1963, a total of 20 agreements and amendments had been signed with 14 countries for commodities representing an export market value of $144.9 million, including ocean transportation of $11.3 million. The major commodities included were wheat, cotton, rice, and oils and oilseeds which together amounted to 76% of the total market value of the agreements.

The following reflects the composition of the appropriations for 1963, 1964, and 1965 (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Expenses of shipments:			
Commodity Credit Corporation stocks	9,444	99,932	112,855
Private stocks and ocean transportation	69,784	123,108	182,304
Total expenses of shipments	79,228	223,040	295,159
Interest expense on unrecovered balance	1,133	7,197	15,903
Repayments from foreign governments including interest (paid to CCC)	−138	−4,932	−14,047
Total expenses	80,223	225,305	297,015
Change in amounts due from foreign governments to be recovered in subsequent years (financed by CCC)	−61,007	−158,616	−229,000
Total current year's costs recoverable from appropriations	19,216	66,689	68,015
1962 costs paid in fiscal year 1963	2,595	---------	---------

FOREIGN ASSISTANCE PROGRAMS—Continued

General and special funds—Continued

INTERNATIONAL WHEAT AGREEMENT—Continued

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
International Wheat Agreement (costs—obligations) (object class 41)	81,218	86,218	31,838
Financing:			
New obligational authority (appropriation)	**81,218**	**86,218**	**31,838**

The International Wheat Agreement Act, as amended (7 U.S.C. 1641–1642), which was renewed for a period of 3 years effective August 1, 1962, operates to provide an assured market for wheat to exporting countries at stable and equitable prices. The maximum and minimum prices in the 1962 agreement are $2.02½ and $1.62½ per bushel, respectively, for the basic grade of wheat, No. 1, Manitoba Northern, at Fort William/Port Arthur, Canada, in terms of Canadian currency at the parity for the Canadian dollar determined for the purposes of the International Monetary Fund as at March 1949. The total quantity subject to the rights and obligations of the agreement in the 1962–63 crop year represented about 34% of world trade in wheat, yet the total trade inside and outside the agreement participated in by members of the agreement amounted to over 90% of world trade.

Appropriations are authorized to cover the costs of this program. Funds were previously budgeted for costs occasioned by reason of the U.S. domestic market price of wheat being higher than the competitive world price. It is estimated that, due to the disapproval by wheat producers of marketing quotas for the 1964 crop year, the domestic market price will fall below the competitive world price in fiscal year 1965 and no subsidy payment will be required. The appropriation requested is primarily for unrecovered prior year's costs.

The Commodity Credit Corporation may make available wheat or wheat flour to carry out the provisions of the agreement, including the payment-in-kind to the exporter for the difference between the prevailing sales price of wheat under the agreement and the domestic market price. If required, a cash payment for this differential is made for flour.

The following reflects the composition of the appropriations for 1963, 1964, and 1965 (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Expenses of shipments:			
Commodity Credit Corporation stocks	62,817	84,000	------

(Permanent, indefinite)

Public enterprise funds:

Note.—Expenditures from the following fund for 1964 are subject to the first paragraph of title III of the Department of Agriculture and Related Agencies Appropriation Act, 1964. For 1965 this paragraph is shown in the Department of Agriculture chapter, p. 142 preceding Federal Crop Insurance Corporation fund.

COMMODITY CREDIT CORPORATION FUND

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
PRICE SUPPORT, EXPORT, SUPPLY, AND RELATED PROGRAMS AND SPECIAL MILK			
Program by activities:			
Operating costs, funded:			
1. Price support, export, supply and related programs:			
(a) Cost of commodities sold	2,062,288	2,883,663	2,226,743
(b) Cost of commodities donated	554,657	532,231	519,302
(c) Storage, transportation and other costs not included above	614,300	550,615	442,750
(d) Export payments	177,956	308,940	92,260
(e) Price support payments	----------	493,000	374,000
(f) Land retirement payments:			
(1) Feed grains	677,263	618,400	635,000
(2) Wheat	268,624	126,500	22,000
Subtotal	4,355,088	5,513,349	4,312,055
(g) Decrease in provision for losses on commodities for sale	−9,188	−222,556	−79,167
Subtotal, price support, export, supply, and related programs	4,345,900	5,290,793	4,232,888
(h) Undistributed expense:			
(1) Administrative expense subject to limitation	37,804	38,516	34,828
(2) Reimbursable administrative expenses	1,129	1,938	1,930
(3) Nonadministrative expense	52,415	16,537	18,533
(4) Interest:			
(A) Treasury	378,373	268,307	257,457
(B) Other	43,995	36,671	50,124
(5) Increase in provision for losses on accounts receivable	2,914	563	580
Total undistributed expense	516,630	362,532	363,452
Total operating costs, funded	4,862,530	5,653,325	4,596,340
Capital outlay:			
1. Price support, export, supply and related programs:			
(a) Direct loans	572,507	524,091	436,224
(b) Guaranteed loans purchased	2,564,730	2,214,025	1,750,618
(c) Purchases of storage equipment	195	500	500
(d) Purchases of administrative equipment	2,497	288	338
Total capital outlay	3,139,929	2,738,904	2,187,680
Total program costs, funded	8,002,459	8,392,229	6,784,020
Change in selected resources [1]	172,141	−740,200	−251,061
Total price support, export, supply, and related programs and special milk (obligations)	8,174,600	7,652,029	6,532,959
SPECIAL ACTIVITIES (see schedule)			
Operating costs funded:			
1. Commodities transferred from price support program	747,463	1,021,181	549,430
2. Other operating costs:			
(a) Interest on balance recoverable	22,584	24,541	23,808
(b) Other program and operating costs	1,487,483	1,450,293	1,398,173

[1] Statutory obligations against borrowing authority include only borrowings from Treasury and obligations to purchase notes, certificates or other obligations evidencing loans held by banks and accrued interest on such obligations. Other obligations, contingent liabilities and commitments do not become charges against the statutory borrowing authority until they result in borrowings from Treasury or in notes, certificates, or other obligations evidencing loans held by banks and accrued interest on such obligations.

Under its corporate charter (15 U.S.C. 714–714p), and specific statutes where applicable, the Commodity Credit Corporation engages in buying, selling, lending, and other activities with respect to agricultural commodities, their products, food, feeds, and fibers, for the purpose of stabilizing, supporting, and protecting farm income and prices; assisting in the maintenance of balanced and adequate supplies of such commodities; and facilitating their orderly distribution. The Corporation also makes available materials and facilities required in connection with the production and marketing of such commodities.

The Corporation has an authorized capital stock of $100 million held by the United States and authority to borrow up to $14.5 billion.

Programs.—The budget is based on (1) price support, export, supply, and related programs, and (2) special activities.

Obligations and expenditures for these programs include primarily loans, purchases, purchase agreements, carrying charges, incentive and other payments, operating and interest expenses, and advances and current obligations incident to special activities as authorized by specific legislation.

Budget assumptions.—The following general assumptions form the basis for the Corporation's 1964 and 1965 budget estimates: (a) Employment, production, and national income will rise moderately both in 1964 and 1965 from the present level; (b) on the average, the general level of prices will be the same as or increase slightly over the present level; (c) developments in international relations will not be such as to affect Government civilian programs generally (except as affected by continued inter-

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

national tensions); (d) generally exports of agricultural commodities, except wheat, in 1965 will be at about current levels; (e) yields for the 1964 crops generally are based on recent averages adjusted for trend; and (f) acreage allotments and marketing quotas will be in effect for the 1964 crops of peanuts, rice, cotton, and certain kinds of tobacco. Marketing quotas for wheat for 1964 were disapproved by producers. However, it is assumed that marketing quotas will be in effect for the 1965 crop of wheat.

Compliance with provisions of the Food and Agriculture Act of 1962 and the Feed Grain Act of 1963 should result in substantial acreage reductions in feed grains and wheat. The estimates for the 1964 feed grain program assume diverted acreage based on probable signups by cooperators. However, the full impact of this program cannot be accurately predicted until the final returns of actual participation are received.

It is also assumed that legislation will be enacted to improve the cotton and dairy programs. Legislation now pending before the Congress would make cotton available at lower prices to domestic users while still providing income support to cotton producers. Several legislative proposals also are before the Congress which would improve the dairy program. Enactment of cotton and dairy legislation along these lines would reduce 1965 net budget expenditures by $230 million.

In considering these estimates, it should be recognized that it is difficult to estimate requirements for the year ending June 30, 1965. They are dependent upon weather conditions and all other factors affecting volume of production of crops not yet planted in this country and abroad, economic conditions generally, food needs in this country and abroad, availability of dollar exchange, and other complex and unpredictable factors.

PRICE SUPPORT, EXPORT, SUPPLY, AND RELATED PROGRAMS

Price support.—Price-support operations are carried out under the Corporation's charter powers (15 U.S.C. 714) and in conformity with the Agricultural Act of 1949, as amended (7 U.S.C. 1421), and other applicable legislation including the Food and Agriculture Act of 1962, Public Law 87–703, and the Feed Grain Act of 1963, Public Law 88–26. Under the Agricultural Act of 1949, as amended, price support is mandatory for the basic commodities—corn, cotton, wheat, rice, peanuts, and tobacco—and specific nonbasic commodities; namely, tung nuts, honey, milk, butterfat, and the products of milk and butterfat, barley, oats, rye, and grain sorghums. Price support for wool and mohair is mandatory under the National Wool Act of 1954, as amended (7 U.S.C. 1781–1787), through the marketing year ending March 31, 1966. Price support for other nonbasic agricultural commodities is discretionary except that whenever the price of either cottonseed or soybeans is supported, the price of the other must be supported at such level as the Secretary determines will cause them to compete on equal terms on the market. This program may also include operations to remove and dispose of or aid in the removal or disposition of surplus agricultural commodities for the purpose of stabilizing prices at levels not in excess of permissible price-support levels.

Price support is made available through loans, payments, purchase agreements, purchases, and other operations, and, in the case of wool and mohair, through incentive payments based on marketings. Producers' commodities serve as collateral for price-support loans. With limited exceptions, price-support loans are nonrecourse and the Corporation looks only to the pledged or mortgaged collateral for satisfaction of the loan. Purchase agreements generally are available during the same period that loans are available. By signing a purchase agreement, a producer receives an option to sell to the Corporation any quantity of the commodity he may elect within the maximum specified in the agreement. Direct purchases are made from producers and processors depending on the commodities involved. Under section 308 of the Agricultural Trade Development and Assistance Act of 1954, as amended, such purchases of animal fats and edible oils and products thereof are authorized as will tend to maintain the support level for cottonseed and soybeans without requiring the acquisition of such commodities under the usual loan and purchase agreements of the price-support program. Under section 416 of the Agricultural Act of 1949, as amended, commodities in private stocks or acquired through price-support operations are made available for donation in order to prevent the waste thereof before such commodities can be disposed of in normal domestic channels without impairment of the price-support program or sold abroad at competitive world prices. The incentive payment program for wool and mohair is described under Special activities.

In all its price support operations, the Corporation utilizes normal trade facilities to the maximum extent practicable. In its lending activities the Corporation uses local banks, cooperatives, and other financial institutions. Commercial storage facilities are used to a great extent in the storage of loan collateral and of stocks acquired by the Corporation.

Disposition of commodities acquired by the Corporation in its price-support operations is made in compliance with sections 202, 407, and 416 of the Agricultural Act of 1949, as amended, and other applicable legislation, such as the Agricultural Trade Development and Assistance Act of 1954, Public Law 480, 83d Congress, as amended (7 U.S.C. 1691), title II of the Agricultural Act of 1956, as amended, the Agricultural Act of 1961, the act of August 19, 1958, in the case of cornmeal and wheat flour, Public Law 86–299 (7 U.S.C. 1427 note) along with Public Law 87–127, with respect to sale of livestock feed in emergency areas, the Food and Agriculture Act of 1962, and the Feed Grain Act of 1963.

Price-support commodities in Commodity Credit Corporation inventory which are disposed of through the commodity export program, redemption of payment-in-kind certificates, and special activities such as sales for foreign currencies, are, for accounting purposes, credited to the price-support program.

DATA ON PRICE-SUPPORT PROGRAM

COMMODITY CREDIT CORPORATION—Continued

Public enterprise funds—Continued

COMMODITY CREDIT CORPORATION FUND—Continued

than in barters for stockpiling purposes, such commodities and products may be those held in private trade channels as well as those acquired by the Corporation in its price-support operations. This program is carried out under the authority contained in the Corporation's charter, particularly sections 5(d) and 5(f), and in accordance with specific statutes where applicable, such as sections 407 and 416 of the Agricultural Act of 1949, as amended, the International Wheat Agreement Act of 1949, as amended (7 U.S.C. 1641), the Agricultural Trade Development and Assistance Act of 1954, as amended, title I of the Agricultural Act of 1954, title II of the Agricultural Act of 1956, as amended, and section 9 of the act of September 6, 1958. In general, transactions involving foreign currencies are conducted pursuant to the Agricultural Trade Development and Assistance Act of 1954, as amended. However, other such transactions may be conducted under the charter authority.

The operations described below are illustrative of those being conducted under this program during 1964. With respect to barter based on recommendations of the Executive Stockpile Committee, approved by the President on September 20, 1962, the emphasis has been shifted from acquisition of strategic and critical materials for the supplemental stockpile to its use in various types of offshore procurement of materials and services needed by the Department of Defense, the Agency for International Development, and other agencies. Commodity Credit Corporation is reimbursed for such offshore procurement by the recipient agencies.

To the extent that appropriations are not provided in advance, obligations under the International Wheat Agreement, and titles I, II, and IV of the Agricultural Trade Development and Assistance Act of 1954, as amended, are paid by the Corporation subject to reimbursement from appropriations authorized for such purpose. These programs are further described under Special activities and Foreign assistance programs.

In addition to the exports under the International Wheat Agreement, Corporation-owned wheat is available for export under barter programs of the Corporation at competitive world prices and under the Corporation's export credit sales program. It is also made available to exporters, in payment of the price differential between the prevailing world export sales price and the domestic market price on exports of free-market wheat outside the International Wheat Agreement and under this agreement. Cash payments are made on all exports of wheat flour either under the International Wheat Agreement or outside the agreement. Wheat and flour payments outside the agreement are made on exports to countries not participating in the agreement. Export payments on wheat and wheat flour are not anticipated in 1965, as it is estimated that the domestic market price will fall below the competitive world price because of disapproval by producers of marketing quotas for 1964.

In order to encourage movement of cotton, corn, barley, grain sorghums, oats, rye, rice, nonfat dry milk, and milkfat from free-market supplies into export channels, export payments are made in the form of these commodities from the Corporation's stocks. Export payments on rice will be made in cash, or certificates will be redeemed in Commodity Credit Corporation-owned rice and feed grains. Cotton held in the Corporation's inventory is also sold for export on a competitive price basis.

The Corporation conducts a cotton products export program designed to protect the competitive position of the domestic cotton industry in relation to sales of cotton products manufactured abroad from American cotton purchased at export prices. Equalization payments, based on the raw cotton content in the products exported, are made to exporters on cotton products of upland cotton grown and wholly processed in the United States.

The Corporation also purchases wheat and other products from processors or processes its own stocks of such commodities for foreign and domestic distribution. In certain cases, payments for such products or processing costs are made in payment-in-kind export certificates.

Also, the Corporation furnishes agricultural commodities and products for distribution or exhibition at international trade fairs to aid in the development of foreign markets for such commodities. Other programs are carried out to develop foreign markets pursuant to section 5(f) of the Corporation's charter.

Storage facilities.—This program is carried out under the authority contained in the Corporation's charter, particularly sections 4(h), 4(m), and 5 (a) and (b). The Corporation may (a) purchase and maintain (in storage deficient areas) granaries and equipment for care and storage of grain owned or controlled by the Corporation; (b) make loans for the construction, purchase or expansion of farm-storage facilities; (c) provide storage-use guarantees to encourage the construction of commercial storage facilities; and (d) undertake other operations necessary to provide storage adequate to carry out the Corporation's programs.

Supply and foreign purchase.—This program is carried out under the authority contained in the Corporation's charter, particularly sections 5 (b) and (c) thereof. The Corporation procures foods, agricultural commodities, their products, and related materials to supply the requirements of Government agencies, foreign governments, and relief and rehabilitation agencies, and to meet domestic requirements. Foods, agricultural commodities and their products are procured or aid is given in their procurement to facilitate distribution or to meet anticipated requirements during periods of short supply. The Corporation may also, through purchases, loans, sales or other means, make available materials and facilities required in connection with the production and marketing of agricultural commodities.

Operations involving procurement for other Government agencies are conducted in accordance with section 4 of the act of July 16, 1943 (15 U.S.C. 713a–9), which requires that the Corporation be fully reimbursed for services performed, losses sustained, operating costs incurred, or commodities purchased or delivered to or on behalf of any other Government agency from the appropriate funds of such agency. Operations not subject to section 4 of the act may involve losses if such are necessary to the accomplishment of the objectives of the particular operation.

The main activities now carried on are procurement for other Government agencies of specialized commodities not in the Corporation's price-support inventory.

Feed grains.—Under section 16 (c), (d), (g), and (h) of the Soil Conservation and Domestic Allotment Act, as amended, the Secretary of Agriculture utilizes Commodity Credit Corporation funds, facilities, and stocks of feed grains in redeeming or marketing payment-in-kind certificates issued to producers who divert acreage from the production of 1961 crops of corn and grain sorghums and

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

1962, 1963, 1964, and 1965 crops of corn, grain sorghums, and barley under this program.

Wheat stabilization.—Under section 124 of the Agricultural Act of 1961, Public Law 87–128, approved August 8, 1961, and section 307 of the Food and Agriculture Act of 1962 and section 339(b) of the Agricultural Adjustment Act of 1938, as added by the Food and Agriculture Act of 1962, the Commodity Credit Corporation is authorized to utilize its capital funds and other assets for the purpose of making payments to producers who divert acreage from the production of 1962, 1963, 1964, and 1965 crops of wheat under this program. Payments are made by issuance of Commodity Credit Corporation sight drafts which may be cashed or used for the acquisition of wheat from Commodity Credit Corporation stocks. Since producers disapproved marketing quotas for the 1964 crop, the wheat stabilization program is inoperative for that crop. However, it is assumed that marketing quotas will be in effect for the 1965 crop.

Loan operations.—The following table reflects the loan operations of the corporation applicable to the preceding programs (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Loans outstanding, gross, beginning of year:			
Commodity Credit Corporation	1,353,091	1,767,703	1,730,065

Undistributed expenses.—There are a number of expenses which are not allocated to a specific program. These include interest on (a) the capital stock of the Corporation, (b) borrowings from the Treasury, and (c) other obligations evidencing loans made by lending agencies; administrative expenses; and other miscellaneous costs, including expenses of the Agricultural Stabilization and Conservation County Committees and Federal Reserve banks in connection with the Corporation's programs.

COMMODITY CREDIT CORPORATION—Continued

Public enterprise funds—Continued

COMMODITY CREDIT CORPORATION FUND—Continued

Administrative expenses are for the operating staff, including the services of employees of the Agricultural Stabilization and Conservation Service engaged in the Corporation's activities, services performed by other agencies of the Department, costs of audit, and payments to the General Services Administration for space in the District of Columbia and rent of field office space. Estimates for 1965 include a limitation of $37.6 million for costs of administration including a reserve of not less than 7 percent for contingencies. The requested authorization excludes administrative expenses in connection with the supply and foreign purchase program, the wool and mohair program under the National Wool Act of 1954, the International Wheat Agreement, and the sale of long-staple cotton transferred from the national stockpile, since it is contemplated that full reimbursement will be received for these expenses. Such reimbursement will be obtained and used in 1965 in the same manner as in previous years.

Expenses in connection with the acquisition, operation, maintenance, improvement, or disposition of property which the Corporation owns or in which it has an interest have been treated as program rather than administrative expenses. Such expenses include inspection, classing and grading work performed on a fee basis by Federal employees or Federal or State licensed inspectors and work performed on a contract basis by Agricultural Stabilization and Conservation County Committees. Capital funds of the Corporation are transferred to the consolidated appropriation, Expenses, Agricultural Stabilization and Conservation Service as indicated under that appropriation item for operating expenses relating to the Corporation's programs. Also, expenses of other Federal agencies whose services are utilized in the handling of Commodity Credit Corporation property are treated as program expenses. These include the fleet storage operation of the Maritime Administration conducted intermittently since 1949 and the services of the General Services Administration in connection with the strategic, critical, and other materials acquired by the Corporation. It is contemplated that removal of all grain presently stored in the fleet will be completed during the fiscal year 1964.

SPECIAL ACTIVITIES

These activities are carried out under authority of section 5(g) of the Corporation's charter and specific statutory authorizations or directives with respect thereto which are currently in effect or which may subsequently be enacted. A summary of current activities will be found on p. 140.

The Corporation receives appropriations or reimbursement for costs of these activities as described under each.

Activities currently being carried out are as follows: (See Foreign assistance programs for details of items (1)—(5).)

(1) *Sale of surplus agricultural commodities for foreign currencies.*

(2) *Commodities disposed of for emergency famine relief to friendly peoples.*

(3) *Long-term supply contracts.*

(4) *International Wheat Agreement.*

(5) *Bartered materials for supplemental stockpile.*

(6) *Military housing (barter and exchange).*—During 1957 a contract was completed for the disposition of Commodity Credit Corporation-owned commodities valued at $50 million for the construction of military housing in France with foreign currencies obtained from this transaction. Pursuant to section 2681(b) of title 10 U.S.C. as amended, the estimates reflect payment to the Corporation of not to exceed $6 million annually until liquidation for amounts due under Public Law 480 and the French housing barter transaction. It is estimated that $2 million will be applied against the amounts due under the barter program.

(7) *National Wool Act.*—Under the provisions of the National Wool Act of 1954, as amended, incentive payments are being used to encourage the annual domestic production of approximately 300 million pounds of shorn wool. Support of prices of wool and mohair is mandatory. Incentive payments are made to eligible producers on a percentage basis, reflecting the amount required to bring the national average received by all producers up to the announced incentive level. The incentive level cannot exceed 110% of parity. In a referendum conducted in September 1962, wool and lamb producers voted to continue the deduction from their incentive payment of an amount not to exceed 1 cent per pound of wool and 5 cents per hundredweight of unshorn lambs marketed. These funds financed promotional advertising, and related market-development activities by the American Sheep Producers' Council, Inc., under an agreement with the Secretary of Agriculture. In order to simplify program and financing operations, the marketing year under this program was placed on a calendar year basis on January 1, 1964.

COST OF THE NATIONAL WOOL ACT

[Dollars in thousands]

	Fiscal year 1963	Fiscal year 1964		Fiscal year 1965
	1961 marketing year (actual)	1962 marketing year (estimate)	1963 marketing year (estimate)	1964 marketing year (estimate)

estimated payments compared with this limitation are as follows (in thousands of dollars):

	1963 actual	1964 estimate	1965 estimate
70% of customs receipts on wool and wool manufactures cumulative from January 1, 1953, to end of preceding calendar year (estimate)	592,846	673,346	753,846
Cumulative incentive payments on 2d preceding marketing year (fiscal years)	381,002	454,493	505,964
Balance of limitation available for payments on succeeding marketing years	211,844	218,853	247,882

Funds of the Commodity Credit Corporation are used to carry on the wool incentive program. A permanent appropriation is provided to reimburse the Corporation, but the yearly amount is limited to 70% of all duties collected on wool and wool manufactures during the preceding calendar year.

Estimated costs and reimbursements to Commodity Credit Corporation during 1963, 1964 and 1965 are indicated in the following table (in thousands of dollars):

	1963 actual	1964 estimate	1965 estimate
Due at beginning of year	110,745	104,745	93,858
Costs for year:			
Program	60,153	77,443	53,633
Interest	3,012	1,849	905
Total	63,165	79,292	54,538
Total due	173,910	184,037	148,396
Reimbursement to Commodity Credit Corporation	69,165	90,179	80,500
Due Commodity Credit Corporation at end of year	104,745	93,858	67,896
Less balance due Commodity Credit Corporation recoverable from subsequent years' customs receipts	14,566	13,358	-------
Appropriation 1964, 1965, and 1966	90,179	80,500	67,896

(8) *Grain for migratory waterfowl feed.*—The Commodity Credit Corporation is directed to make available to the Secretary of the Interior (7 U.S.C. 442–445), such grain acquired through price-support operations and certified by the Commodity Credit Corporation to be available for such purposes or in such condition as to be undesirable for human consumption, as the Secretary of the Interior shall requisition. This appropriation item is now included under that Department.

(9) *Surplus grain for game birds.*—The Secretary of the Interior (Public Law 87–152 approved August 17, 1961 (75 Stat. 389)), is authorized to requisition Commodity Credit Corporation grain for feeding starving migratory birds. Any State, under Public Law 87–152 cited above, upon the finding of the Secretary of the Interior that resident game birds and other resident wildlife are threatened with starvation, may also requisition grain from Corporation stocks. Appropriations will be requested in a later Budget to reimburse the Corporation for this activity.

(10) *Grading and classing activities.*—The Commodity Credit Corporation is authorized to make advances to the Agricultural Marketing Service for classing and grading of agricultural commodities without charge to producers (7 U.S.C. 414a). Such advances used for classing cotton and grading tobacco not placed under price-support loan are financed by appropriations. This appropriation item is now included under the Agricultural Marketing Service.

(11) *Soil bank program.*—Pursuant to section 120 of the Agricultural Act of 1956 (7 U.S.C. 1808) the Secretary of Agriculture utilizes the facilities of the Corporation for making payments to farmers under this program. (See Agricultural Stabilization and Conservation Service.)

(12) *Cropland conversion, agricultural conservation and emergency conservation measures programs.*—Pursuant to section 101 of the Food and Agriculture Act of 1962, approved September 27, 1962, Public Law 87–703, the Secretary is authorized to utilize the services, facilities, and authorities of the Commodity Credit Corporation for the purpose of making disbursements to producers under programs formulated pursuant to sections 8 and 16(e) of the Soil Conservation and Domestic Allotment Act, as amended.

(13) *Transfer of long-staple cotton from national stockpile for sale by Commodity Credit Corporation.*—The act of July 10, 1957 (71 Stat. 290), authorized the transfer of 50 thousand bales of domestically grown extra long-staple cotton from the national stockpile to the Corporation for sale. Approximately 219,000 bales of extra long-staple cotton, both American-Egyptian and foreign grown, remaining in the stockpile were also made available to Commodity Credit Corporation for disposition pursuant to Public Law 87–548, approved July 25, 1962. Proceeds less costs incurred, including administrative expenses, are covered into the Treasury as miscellaneous receipts.

(14) *Loans to Secretary of Agriculture for conservation purposes.*—Under section 391(c) of the Agricultural Adjustment Act of 1938, as amended (7 U.S.C. 1391), the Corporation advances funds to the Secretary in amounts not to exceed $50 million annually to purchase conservation materials and services. Repayments of the loans plus interest are made as soon as practicable in the succeeding fiscal year from funds appropriated for the agricultural conservation program.

Financing.—The programs of the Commodity Credit Corporation are financed by capital stock, borrowings, guarantees to purchase notes or other obligations evidencing loans made by lending agencies, issuance of certificates of interest in loans held by the Corporation, appropriations to reimburse Commodity Credit Corporation for net realized losses, appropriations to reimburse the Corporation for costs of special activities, advances and reimbursements from Foreign Assistance Programs appropriations, and receipts from operations.

Borrowing authority.—The Corporation has an authorized capital stock of $100 million held by the United States and authority to borrow up to $14.5 billion.

Funds are borrowed from Treasury and may also be borrowed from private lending agencies. In connection with loan guarantees, the Corporation reserves a sufficient amount of its borrowing authority to purchase at any time all notes and other obligations evidencing loans made by lending agencies or certificates of interest issued in connection with the financing of price-support operations. All bonds, notes, debentures, and similar obligations issued by the Corporation are subject to approval by the Secretary of the Treasury as required by the act of March 8, 1938 (15 U.S.C. 713a–4).

Interest on borrowings from the Treasury (and on capital stock) is paid in accordance with a policy of the Treasury that the rate shall be based upon the average interest rate on all outstanding marketable obligations

COMMODITY CREDIT CORPORATION—Continued

Public enterprise funds—Continued

COMMODITY CREDIT CORPORATION FUND—Continued

(of comparable maturity date) of the United States as of the preceding month. Interest is also paid on certificates of interest and lending agency obligations for the period the agencies have their funds invested.

On the basis of the budgetary assumptions heretofore described, including proposed legislation, the consequent estimated program requirements currently indicate no need for an increase in borrowing authority. Since there are so many uncontrollable factors affecting the programs of the Corporation involving crops which have not even been planted, it must be recognized that estimates of the use of borrowing authority are highly tentative. Should program developments occur which would indicate a need for funds in excess of those contained in these estimates, or if proposals for farm legislation and interest relief are not enacted, additional new obligational authority would be requested.

POSITION WITH RESPECT TO BORROWING AUTHORITY AS OF JUNE 30

(In millions of dollars)

	1963 actual	*1964 estimate*	*1965 estimate*
Statutory borrowing authority	14,500	14,500	14,500
Deduct borrowings from Treasury	13,604	13,083	12,490
Obligations to purchase loans or certificates held by lending agencies (guaranteed by Commodity Credit Corporation)	834	905	1,062
Accrued interest on above certificates	15	16	17
Total statutory borrowing authority	14,453	14,004	13,569
Net statutory borrowing authority available	47	496	931

Note.—This table does not reflect the following charges: accounts payable, accrued liabilities, and obligations outstanding other than obligations to purchase notes and certificates held by banks and accrued interest on such certificates. These do not become charges against the statutory borrowing authority until they result in borrowings from Treasury, loans or certificates held by banks and accrued interest on such certificates.

Reimbursement for net realized losses.—Pursuant to Public Law 87–155 (75 Stat. 391), annual appropriations are authorized for each fiscal year commencing with fiscal year ending June 30, 1961, to reimburse the Commodity Credit Corporation for net realized losses sustained as reflected in its accounts and shown in its report of financial condition as of the close of each fiscal year.

The realized losses reflected in the accounts of the Corporation and in its report of financial condition as of June 30, 1963, were $2,654.9 million. Approval of the proposal for interest-free borrowings on past years' realized losses (explained below) and proposed farm legislation will enable the Corporation to request a 1965 appropriation of only $1,724 million. This would provide funds to liquidate prior year commitments and contract authorizations. It would also leave a desirable operating margin so necessary to assure flexibility of operations in view of the tremendous volume of transactions handled by the Corporation.

A change in appropriation language is being proposed which will have the effect of terminating at the close of each fiscal year, beginning with the fiscal year 1964, interest on borrowings from the Treasury in an amount equivalent to the realized losses sustained by the Corporation (1) during the fiscal year 1964 and succeeding fiscal years, and (2) in prior fiscal years, for which the Corporation has not been reimbursed by appropriation. Interest would continue to be charged on borrowings for losses sustained during a particular fiscal year but not after the end of that fiscal year. This would limit interest expenses to borrowings for current operations and would avoid increasing future appropriation requests by interest charges resulting solely from deferral of reimbursement to the Corporation for realized costs and losses applicable to past operations.

The net realized losses of the Corporation have previously been reimbursed as follows (in thousands of dollars):

PRICE SUPPORT, EXPORT, SUPPLY, AND RELATED PROGRAMS AND SPECIAL MILK

Price support payment commitments		493,000	374,000	357,000
Feed grain program commitments	550,300	282,400	420,000	298,000
Wheat stabilization program commitments	262,900	126,000		53,000
Total obligations other than liabilities, price support, export, supply, and related programs and special milk	2,003,855	1,933,728	1,889,634	1,887,034
Special activities (recoverable obligations):				
Letters of commitment—title I	250,921	241,335	250,000	80,000
Letters of commitment—title IV	16,456	16,703	49,000	50,000
Approved declarations of sales for export	5,345	13,039	17,700	
Total obligations other than liabilities, special activities	272,722	271,077	316,700	130,000
Total obligations other than liabilities	2,276,577	2,204,805	2,206,334	2,017,034
Unfunded obligated balance (contract authority) [2]	−661,353	−1,401,866	−1,086,799	−486,867
Invested capital	4,307,391	5,014,320	4,265,675	3,637,851
Subtotal	5,922,615	5,817,259	5,385,210	5,168,018
Less undrawn authorizations	−1,510,000	−896,000	−1,417,000	−2,010,000
Total Government equity	4,412,615	4,921,259	3,968,210	3,158,018

Note.—In addition to obligations other than liabilities the Corporation does not reflect in its accounts claims by the Corporation on which adequate proof has not been established.

[1] The changes in these items are reflected on the program and financing schedule.

[2] Statutory obligations against borrowing authority include only borrowings from Treasury and obligations to purchase notes, certificates or other obligations evidencing loans held by banks and accrued interest on such obligations. Other obligations, contingent liabilities, and commitments do not become charges against the statutory borrowing authority until they result in borrowings from Treasury or in notes, certificates or other obligations evidencing loans held by banks and accrued interest on such obligations.

Net budget expenditures:													
1963									2,022,350				
1964									2,344,602				
1965									1,755,324				

[1] Includes interest on balance recoverable as follows (thousands): 1963, $22,584; 1964, $24,541; 1965, $23,808.

[2] Consists of the following items: (1) Public Law 480, title I, Sale of surplus agricultural commodities for foreign currencies—amounts to be recovered from Government agencies; (2) reimbursement for costs of National Wool Act—amounts of liability for accrued payments due producers which will be paid in the succeeding fiscal year; (3) transfer of long-staple cotton from national stockpile for sale by Commodity Credit Corporation—amount available for payment of additional costs or for deposit in the Treasury as miscellaneous receipts; (4) loans for agricultural conservation purposes—amount due from Secretary of Agriculture for advance purchase of conservation materials and services. In addition to the unpaid obligations, the following commitments relating to these programs were outstanding at the end of each year as indicated (in thousands of dollars):

	June 30, 1962	June 30, 1963	June 30, 1964	June 30, 1965
Letters of commitment:				
Public Law 480, title I	250,921	241,335	250,000	80,000
Public Law 480, title IV	16,456	16,703	49,000	50,000
International Wheat Agreement, approved declarations of sales for export	5,345	13,039	17,700	
Total commitments	272,722	271,077	316,700	130,000
Change in selected resources		−1,645	45,623	−186,700

[3] Amounts due from foreign governments—1963, $80,384 thousand; 1964, $239,000 thousand; and 1965, $468,000 thousand.

[4] The estimated appropriation of $80.5 million for 1965 to reimburse the Corporation represents an amount equal to 70% of the preceding calendar year's customs receipts on wool and wool products to which reimbursement is limited in each fiscal year. The amounts due will be reimbursed from subsequent years' customs receipts.

[5] Amounts in parentheses are contained in "cropland conversion," program under Agricultural Stabilization and Conservation Service.

LIMITATION ON ADMINISTRATIVE EXPENSES

Nothing in this Act shall be so construed as to prevent the Commodity Credit Corporation from carrying out any activity or any program authorized by law: *Provided*, That not to exceed [$41,650,000] *$37,650,000* shall be available for administrative expenses of the Corporation: *Provided further*, That $1,000,000 of this authorization shall be available only to expand and strengthen the sales program of the Corporation pursuant to authority contained in the Corporation's charter: *Provided further*, That not less than 7 per centum of this authorization shall be placed in reserve to be apportioned pursuant to section 3679 of the Revised Statutes, as amended, for use only in such amounts and at such times as may become necessary to carry out program operations: *Provided further*, That all necessary expenses (including legal and special services performed on a contract or fee basis, but not including other personal services) in connection with the acquisition, operation, maintenance, improvement, or disposition of any real or personal property belonging to the Corporation or in which it has an interest, including expenses of collections of pledged collateral, shall be considered as nonadministrative expenses for the purposes hereof. *(7 U.S.C. 442–445, 608c, 624, 1010–1011, 1282, 1301, 1301 note, 1331 note, 1332 note, 1333 note, 1334, 1334 note, 1335 note–1337 note, 1340, 1340 note, 1371 note, 1379a–1379j, prec. 1380a, 1385, 1385 note, 1391c, 1421–1431, 1431b, 1431d, 1432, 1441, 1441 note, 1442–1445, 1445a, 1446–1449, 1641, 1691–1697, 1701–1709, 1721–1724, 1731–1736, 1741–1747,*

Purpose and financial organization.—The Federal Crop Insurance Corporation, a wholly owned Government Corporation, was created on February 16, 1938 (7 U.S.C. 1501–1519), to carry out the provisions of the Federal Crop Insurance Act. The purpose of this act is to promote the national welfare by improving the economic stability of agriculture through a sound system of crop insurance and providing the means for the research and experience helpful in devising and establishing such insurance. The Corporation provides all-risk insurance protection to farmers against loss from unavoidable causes. Since 1948, the crop insurance program has been conducted on a limited basis in selected counties and on selected crops to obtain adequate actuarial data for the expansion of the program to a national basis. Based on past experience, the Corporation began with the 1962 crop year, to expand the crop insurance program at a more rapid rate to additional counties and commodities.

Capital stock of $100 million is authorized to be subscribed by the United States. As of June 30, 1963, the Secretary of the Treasury held receipts for $40 million of the authorized stock, leaving $60 million unissued.

Funds from the issuance of capital stock provide working capital for the Corporation. Receipts which are for deposit to this fund come mainly from premiums for insurance protection afforded farmers on their investment in the production of insured crops. The principal payments from this fund are for indemnities to insured farmers who suffer crop losses arising from causes against which crop insurance provides protection, the direct cost of adjusting losses, and part of the operating and administrative expenses. The annual appropriation for the major portion of the operating and administrative expenses of the Corporation is presented earlier in the budget.

Budget program.—For the 1964 crop year (fiscal year 1965) the crop insurance program will be extended to 100 new counties, and insurance will be offered on 2 additional commodities. The following table indicates the scope of the insurance program planned for 1963, 1964, and 1965. Amounts in the 1963 column are actual and pertain to the 1962 crop year. The 1964 column pertains to the 1963 crop year and reflects the current favorable growing conditions for the 1963 insured crops. Indemnities shown in the 1965 column are estimated at 74% of the estimated premium, and are based upon the 5-year average from 1958 through the 1962 crop year.

FEDERAL CROP INSURANCE CORPORATION—Continued

Public enterprise funds—Continued

FEDERAL CROP INSURANCE CORPORATION FUND—Continued

	1963 fiscal year (1962 crop year) actual	*1964 fiscal year (1963 crop year) estimate*	*1965 fiscal year (1964 crop year) estimate*
Number of States	38	38	38
Number of counties	996	1,096	1,196
Estimated insurance outstanding (in thousands), beginning of fiscal year	$356,553	$498,765	$566,000
Insured acreage (thousands)	10,402	13,167	14,872
Number of crops insured	364,175	418,077	465,000
Premiums (in thousands)	$21,867	$30,545	$34,500
Indemnities (in thousands)	$23,967	$24,845	$25,530
Loss ratio	1.10	0.81	0.74

Financing.—Capital of $40 million and the $1.4 million surplus for the period 1948–62, will provide adequate operating funds for 1965, unless heavy unforeseen losses should occur on the 1963 crop between now and the time of harvest. Therefore, no additional capital is being requested for program operations.

Operating results and financial condition.—Current estimates for crop year 1963, fiscal year 1964, indicate a favorable loss ratio for the sixth year, out of the past 7 years. Premiums of $30.5 million are estimated to exceed indemnities by $5.7 million. Indemnities will exceed premiums for only three commodities, barley, peaches, and raisins. For the crop years 1948 through 1962, premium income of $284.4 million exceeded indemnity costs of $270.6 million by $13.8 million. Premium income exceeded indemnity costs in 8 years of the 15-year period.

As of June 30, 1963, the Corporation's surplus was $1.4 million. The favorable loss experience which occurred the past 5 out of 6 years is responsible for the current favorable financial condition of the Corporation.

The following table summarizes the insurance operations by commodities for 1963, 1964, and 1965.

RURAL ELECTRIFICATION ADMINISTRATION

General and special funds:

To carry into effect the provisions of the Rural Electrification Act of 1936, as amended (7 U.S.C. 901–924), as follows:

LOAN AUTHORIZATIONS

For loans in accordance with said Act, and for carrying out the provisions of section 7 thereof, to be borrowed from the Secretary of the Treasury in accordance with the provisions of section 3(a) of said Act, as follows: Rural electrification program, [$425,000,000] *$365,000,000,* of which [$150,000,000] *$65,000,000* shall be placed in reserve to be borrowed under the same terms and conditions to the extent that such amount is required during the current fiscal year under the then existing conditions for the expeditious and orderly development of the rural electrification [program] *and telephone programs*; and rural telephone program, [$70,000,000] *$63,000,000*. (*Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Rural electrification	245,754	287,500	295,000
2. Rural telephone	85,902	89,500	88,000
Total program costs, funded	331,656	377,000	383,000
Change in selected resources [1]	95,623	13,000	2,000
Total obligations (object class 33)	427,279	390,000	385,000
Financing:			
Unobligated balance brought forward (authorization to expend from public debt receipts)	−65,887	−49,509	−25,509
Recovery of prior obligations	−5,900	−21,000	
Unobligated balance carried forward (authorization to expend from public debt receipts)	49,509	25,509	3,509
Unobligated balance lapsing (authorization to expend from public debt receipts)	75,000	150,000	65,000
New obligational authority (authorization to expend from public debt receipts)	**480,000**	**495,000**	**428,000**

[1] Selected resources as of June 30 are as follows: Undisbursed loan obligations, 1962, $923,110 thousand; (1963 adjustments −$5,900 thousand); 1963, $1,012,832 thousand; (1964 adjustments −$21,000 thousand); 1964, $1,004,832 thousand; 1965, $1,006,832 thousand.

The Administration conducts two capital investment programs: (a) the rural electrification program to provide electric service to farms and other rural establishments; and (b) the rural telephone program to furnish and improve telephone service in rural areas. Funds for making repayable loans are borrowed from the Secretary of the Treasury.

1. *Rural electrification.*—This capital investment program is financed through loans which bear 2% interest and must be repaid within a period not to exceed 35 years. Loans are also made for shorter periods at 2% interest to electrification borrowers to be reloaned to their consumers for the purpose of financing the wiring of premises and the acquisition and installation of electrical and plumbing appliances and equipment, including machinery.

RURAL ELECTRIFICATION ADMINISTRATION—Continued

General and special funds—Continued

LOAN AUTHORIZATIONS—Continued

2. *Rural telephone.*—This capital investment program is financed through loans which are made for the purpose of financing the improvement, expansion, construction, acquisition, and operation of the telephone lines and facilities or systems to furnish and improve telephone service in rural areas. The loans bear 2% interest and must be repaid within a period not to exceed 35 years.

In 1950, when the telephone program started, the Census of Agriculture showed 38.2% of all farms with telephone service, fewer in both number and percentage than in 1920. Approximately 76% of the farms now have telephone service. Cumulative Rural Electrification Administration loans through June 30, 1963, will eventually provide initial or improved service to an estimated 1,860 thousand rural subscribers.

Proposed for separate transmittal:

LOAN AUTHORIZATIONS

Legislation is proposed to establish in 1964 a Rural Electrification Administration loan account which will reflect the net cost of the loan programs by showing it as the excess of the aggregate of the loans to be made over the current receipts on loans previously made. The account will be budgeted on a net expenditure basis. Net loan receipts are estimated to be $169 million in 1964 and $178 million in 1965, adjusting new obligational authority in 1965 as follows (in thousands of dollars):

Currently requested	428,000
Proposed revised estimate	81,000
Reduction in new obligational authority	347,000

Salaries and Expenses

For administrative expenses, including not to exceed $500 for financial and credit reports, funds for employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), and not to exceed $150,000 for employment under section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), [$11,247,000] *$11,518,000. (5 U.S.C. 511–512; 7 U.S.C. 901–924; Department of Agriculture and Related Agencies Appropriation Act, 1964.)*

Note.—Excludes $98 thousand for activities transferred in the estimates to the following appropriations:
"Salaries and expenses," Office of the Inspector General, $96 thousand.
"Salaries and expenses," Office of Management Services, $2 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:

Appropriation (adjusted)	**10,440**	**11,247**	**11,518**

[1] Includes capital outlay as follows: June 30, 1963, $55 thousand; 1964, $55 thousand; 1965, $58 thousand.
[2] Selected resources as of June 30, are as follows: Unpaid undelivered orders, 1962, $34 thousand (1963 adjustments, −$8 thousand); 1963, $42 thousand; 1964, $42 thousand; 1965, $42 thousand.

The Administration assists electrification borrowers and potential borrowers to negotiate for adequate supplies of power on reasonable terms, and makes loans for the extension and improvement of electric and telephone services in rural areas. Business management and technical help is furnished borrowers where needed to protect the Government's loan security and to assure that construction and operation of their systems conform to approved standards and will provide continuous and reliable service.

Appropriation		**25,000**	

[1] Selected resources as of June 30, are as follows: Unpaid undelivered orders, 1962, $2,918 thousand (1963 adjustments, −$625 thousand); 1963, $5,491 thousand; 1964, $1,636 thousand; 1965, $936 thousand.

Rural housing direct loans are authorized by title V of the Housing Act of 1949, as amended, to be made to farm and non-farmowners of real estate in rural areas, to long-term farm leaseholders, and to senior citizens who are or will be owners of land in rural areas. Loans are made only to persons unable to obtain housing credit from other sources upon reasonable terms and conditions. Direct loans to individuals are repayable in not more than 33 years and bear interest at 4%. Direct loans to nonprofit associations are made for rental housing for senior citizens. Grants are made for minor building repair. In addition to the direct loans and grants, insured loans are made to provide housing for domestic farm labor, and to provide rental housing for senior citizens in rural areas.

1. *Rural housing grants and loans.*—Direct farm enlargement and development loans, along with building loans, are made to farmowners on potentially adequate farms who need to develop their farms so as to increase their income sufficiently to repay the loans. Grants are made to farmowners, to owners of other real estate and long-term farm leaseholders in rural areas for such items as repairing roofs, providing sanitary facilities, providing an adequate sanitary water supply, and supplying screens. In some cases, a combination building loan and grant is made. A building loan or grant or a combination loan and grant may not exceed $1 thousand.

2. *Loans to the elderly.*—Direct building loans are made to senior citizens for the same purposes as building loans described below, provided they own land or can buy a small tract in a rural area with loan funds.

3. *Building loans.*—Direct building loans are made to farmowners and to owners of other real estate in rural areas to construct, improve, alter, repair, or replace dwellings and essential farm-service buildings.

Rental housing loans for senior citizens.—Direct rental housing loans for senior citizens made to nonprofit corporations or consumer cooperatives at 3⅝% interest are repayable in not more than 50 years.

Insured housing loans.—Insured loans are made through the Agricultural Credit Insurance Fund utilizing funds furnished by private investors. Annual payments of principal and interest to lenders are fully guaranteed. The Government retains at least one-half of 1% of the interest as an insurance premium.

A. *Farm labor housing loans.*—Insured farm labor housing loans are made to farmowners or to organizations to provide modest living and related facilities for domestic farm labor. These loans are repayable in not more than 33 years and bear interest not in excess of 5%. The law provides that lenders can receive up to 4½% of the 5% interest paid by the borrower. The current return to the lenders is established at 4¼%.

B. *Rental housing loans for senior citizens.*—Insured loans to provide moderate-cost rental housing and related facilities for senior citizens are made to individuals, corporations, associations, trusts or partnerships. These loans are repayable in the number of years best suited to the individual case with interest at 5¾% to the borrower. The Government retains at least one-half of 1% of the interest as an insurance premium. No loan may exceed $100 thousand.

Authority to make insured loans for rental housing for the elderly will expire on June 30, 1964, but extension of this program is being proposed.

Under proposed legislation, 1965.—Supplemental funds of $3 million for salaries and expenses will be needed to make and service loans and for additional activity related to proposed legislation which would authorize the Secretary to insure rural housing loans made by private lenders. The proposed legislation will permit an annual insured rural housing loan program of about $350 million.

Rural Renewal

For necessary expenses, including administrative expenses, in carrying out rural renewal activities under section 32(e) of title III of the Bankhead-Jones Farm Tenant Act, as amended, [$1,200,000] *$2,190,000, to remain available until expended.* (*7 U.S.C. 1010–1011; Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Loans for rural renewal and demonstration projects	----------	950	1,840
2. Technical assistance and operating expense	----------	250	350
Total program costs, funded—obligations	----------	1,200	2,190
Financing:			
New obligational authority (appropriation)	----------	**1,200**	**2,190**

This program was authorized by section 102 of the Food and Agriculture Act of 1962. Loans will be made to local public agencies or groups for rural renewal development projects which are specifically related to conservation and land utilization. Each project will be an important component of the overall rural renewal plan previously developed to rebuild the economy of the designated area. To be eligible for designation as a rural renewal area, the locality must be one of chronic underemployment on farms and unemployment in the surrounding communities. The area must also be one in which agriculture or forestry contribute substantially to the economy. The 1965 request is to provide for program operation in not to exceed six pilot project areas.

Program operations include selection and designation of rural renewal areas, technical assistance to local public bodies or officials, or organizations in the preparation of an economic development plan, and counsel to local agencies and groups for meeting legal requirements necessary for borrowing funds. The borrowing agency will be designated by the State legislature or Governor to receive rural renewal loan funds and will be vested with authority under State and local laws to borrow funds, buy and sell property, raise revenue, meet financial obligations and transact other necessary business functions.

Rural renewal loans are repayable in not more than 30 years with repayment of principal and interest deferred up to 5 years, if necessary. Loans bear interest at the average rate paid by the U.S. Treasury on obligations of similar maturity. The rate for fiscal year 1964 is 3.046%. Loans in excess of $250 thousand will require approval of the Agriculture and Forestry Committees of the Congress.

Program administration.—The Farmers Home Administration has been assigned primary responsibility for the coordination, direction and supervision of the rural renewal program. The principal administrative expenses are related to technical assistance, coordination of project plans and loan programs by the Farmers Home Administration. These expenses are estimated at $223 thousand in 1964 and $323 thousand in 1965. Administrative expenses allotted to the Economic Research Service will be $27 thousand for 1964 and $27 thousand for 1965.

Program and Financing (in thousands of dollars)—**Continued**

	1963 actual	1964 estimate	1965 estimate
Financing:			
New obligational authority (proposed supplemental appropriation)			**100,000**
Revenue and other receipts: Sales of loans			160,000
Unobligated balance carried forward			−60,000
Financing applied to program			200,000

Under proposed legislation, 1965.—Proposed legislation would amend title V of the Housing Act of 1949 to provide for a program of insured rural housing loans. Included in the legislation would be authority for the Federal National Mortgage Association to include these loans in its secondary market operations. A $350 million level of insured housing loans is anticipated if the insured loan program becomes operative early in 1965. Families in the lower income levels would require an estimated $300 million annually, and an estimated $50 million annually would be needed for other applicants. In addition to the $200 million in loans made from the proposed new fund for later sale, it is expected that approximately $150 million in loans from private sources will be insured annually. The Rural Housing Insurance Fund would be used to insure the farm labor housing and rental housing for the elderly loans presently insured through the Agricultural Credit Insurance Fund. Authority to insure rental housing for the elderly loans through the Agricultural Credit Insurance Fund will expire on June 30, 1964, but extension of this program is being proposed. All of these loans would be made and serviced by the Farmers Home Administration.

Direct Loan Account

Direct loans and advances under subtitles A and B, and advances under section 335(a) for which funds are not otherwise available, of the Consolidated Farmers Home Administration Act of 1961 (7 U.S.C. 1921), as amended, may be made from funds available in the Farmers Home Administration direct loan account as follows: real estate loans, [$60,000,000] *$25,000,000*; and operating loans, $300,000,000[, of which $50,000,000 shall be placed in reserve to be used only to the extent required during current fiscal year under the then existing conditions for the expeditious and orderly conduct of the loan program]. [1] Balances of selected resources are identified on the statement of financial condition.

Direct loan account.—This account was established on October 16, 1961, pursuant to section 338(c) of the Consolidated Farmers Home Administration Act of 1961. Real estate and operating loans are made under the authorities of subtitle A and B of the act to farmers and ranchers and to associations unable to obtain credit from other sources at reasonable rates. Loans made under these and similar prior authorities are reported and accounted for in this account. In 1964, the total available for loans, including a $50 million reserve for operating loans, is $360 million. In 1965, it is proposed to carry out the estimated loan program of $325 million through utilization of receipts to the Direct Loan Account representing collections on loans outstanding. No new borrowing authorization is estimated for 1965.

In addition to the direct loans, farm ownership and soil and water conservation loans advanced by private lenders will be insured within the annual statutory insurance authority of $200 million for these purposes. Contingent liabilities for these insured loans are reflected in the Agricultural Credit Insurance Fund schedules.

1. *Real estate loans*—a. *Farm ownership loans.*—Direct and insured loans are made to farmers and ranchers for acquiring, enlarging, or improving farms, including farm buildings; for financing land and water development, use and conservation including recreational uses and facilities; for forestry development; for refinancing existing indebtedness; and for loan closing costs. Loans are confined to farms which are not larger than family farms. A loan cannot exceed $60 thousand in any case. In addition, the

DIRECT LOAN ACCOUNT—Continued

indebtedness against a farm or other security, including the amount of the loan, cannot exceed $60 thousand or the normal value of the farm and any additional security.

FARM OWNERSHIP LOANS

[Dollars in thousands]

	1963 actual		1964 estimate		1965 estimate	
	Number	Amount	Number	Amount	Number	Amount
Number of applications	37,467	-------	35,000	-------	35,000	-------
Direct loans	2,476	$33,403	2,570	$45,000	675	$10,000
Insured loans	11,931	188,353	9,230	155,000	9,230	155,000

b. *Soil and water conservation loans.*—Direct and insured loans are made to farmers and ranchers and to associations for the effective development and utilization of water supplies and for the improvement of farmland by soil and water conserving facilities and practices. Loans to associations also are made for shifts in land use including the development of recreational facilities. There is no limitation on the size of farms that may be improved with loans to individual farmers. For loans to individuals, a loan cannot exceed $60 thousand in any case; in addition the indebtedness against a farm or other security, including the amount of the loan, cannot exceed $60 thousand or the normal value of the farm and any additional security. For loans to associations, the unpaid principal indebtedness is limited to $500 thousand in the case of a direct loan and $1 million in the case of an insured loan.

SOIL AND WATER CONSERVATION LOANS

[Dollars in thousands]

	1963 actual		1964 estimate		1965 estimate	
	Number	Amount	Number	Amount	Number	Amount
Number of applications	2,595	------	5,000	------	5,000	------
Direct loans:						
To individuals	363	$1,000	500	$2,500	500	$2,500
To associations	100	8,993	104	12,500	104	12,500
Insured loans:						
To individuals	541	3,656	1,000	5,000	1,000	5,000
To associations	69	7,991	338	40,000	338	40,000

Farm ownership and soil and water conservation loans are repayable in not more than 40 years and bear interest not in excess of 5%. Insured loans are made through the Agricultural Credit Insurance fund with funds advanced by private lenders. Annual payments of principal and interest to lenders are fully guaranteed. The law provides that lenders can receive up to 4½% interest of the 5% paid by the borrower. The maximum return to lenders is currently established at 4¼%. The Government retains at least one-half of 1% of the interest as an insurance premium. The Administration services these insured loans, makes collections, and pays the lender.

2. *Operating loans.*—Direct loans are made to farmers and ranchers for paying costs incident to reorganizing a farming system for more profitable operations; for a variety of essential farm operating expenses such as the purchase of livestock, farm equipment, feed, seed, fertilizer and farm supplies; for financing land and water development, use and conservation including recreational uses and facilities; for refinancing indebtedness; for other farm and home needs; and for loan closing costs. Loans are confined to operators of not-larger-than-family farms. The outstanding principal loan balance for operating loans is limited to $35 thousand. Loans bear interest at 5% and may be made for periods up to 7 years, but may be renewed for not more than 5 additional years. Loans are secured by crop and chattel liens and, when necessary, by real estate mortgages.

[1] Balances of selected resources are identified on the statement of financial condition.

This fund is authorized by subtitle C of the Consolidated Farmers Home Administration Act of 1961, to finance emergency loans in areas where agricultural credit is not readily available because of natural disasters. Loans are generally confined to areas designated as emergency areas. Loans may be made outside of such areas to eligible applicants who have suffered severe production losses not general to the area. Loans also may be made to previously indebted borrowers to permit orderly repayment of such indebtedness.

Loans—(a) *Emergency loans.*—Emergency loans are made at 3% interest to eligible farmers, ranchers, or oyster planters and to domestic corporations or partnerships engaged primarily in farming, ranching, or oyster planting. Loans are made for any authorized purposes for which operating, farm ownership, or soil and water conservation loans may be made by the Farmers Home Administration.

(b) *Other loans.*—Where necessary to protect the Government's investment, obligations are incurred in connection with outstanding loans to provide for payment of such costs as taxes and insurance. Such advances are charged to the borrowers' accounts.

Administrative expenses.—The principal administrative expenses are related to the loan programs of the Farmers Home Administration. These expenses are estimated at $4.2 million in 1964 and $4.3 million in 1965. Administrative expenses for the Office of the General Counsel are estimated at $20 thousand in fiscal year 1964 and $22 thousand in 1965.

Financing the program.—No new budgetary authorization is required for 1965. A net loss of $4.2 million is estimated on an accrual basis. Expenditures are estimated to exceed receipts by $5.9 million on a cash basis due primarily to excess loans made over receipts during the year. During 1965, the program will be wholly financed by receipts from operations.

Operating results and financial condition.—Revenue for 1965, consisting principally of interest on loans, is estimated at $2.7 million, compared to expenses of $6.9 million, resulting in an estimated loss of $4.2 million. A net loss of $4.3 million is estimated for 1964, and a net loss of $4.3 million resulted in 1963.

Loans receivable, after allowance for losses, are expected to amount to $85 million on June 30, 1965, as compared to $83.7 million on June 30, 1964, and $74.8 million on June 30, 1963.

The Government investment at June 30, 1965, is expected to be $107.4 million consisting of $205.8 million appropriated and donated, less a deficit of $98.4 million.

Budget expenditures	13,549	5,063	5,744

This fund is used to insure farm ownership loans, soil and water conservation loans, farm labor housing loans and loans for rental housing for senior citizens, as authorized by subtitle A of the Consolidated Farmers Home Administration Act of 1961, and sections 514 and 515(b) of title V of the Housing Act of 1949. The insurance endorsement on each insured loan includes an agreement by the Government to purchase the loan after a specified initial period of not less than 3 years, at the holder's option. The initial fund of $1 million is supplemented by loan insurance charges collected from insured loan borrowers and by borrowing from the Secretary of the Treasury. A portion of such loan insurance charges equal to at least one-half of 1% of the outstanding principal obligations must be deposited to the fund to cover losses. The remainder of such charges may be used for administrative expenses. Loans other than farm labor housing loans may be made directly from the fund from available receipts or borrowings from the Treasury for the purpose of acquiring blocks of loans if there is reasonable assurance that the loans can be sold to investors without undue delay. With respect to loans made from this fund, not more than $25 million for farm ownership and soil and water conservation loans and not more than $10 million for loans for rental housing for senior citizens may be held in the fund at any one time. Interest paid the Secretary of the Treasury on borrowings is based on the current average market yield of outstanding marketable obligations of the United States having maturities comparable to the notes issued for borrowings from the Treasury for operation of the fund.

Budget program.—Capital outlay is estimated at $206.1 million in 1965, an increase of $26.0 million over 1964 and an increase of $20.4 million over 1963. Included in capital outlay is $127.1 million in 1964 and $120 million in 1965 for making loans from the fund which will later be sold on an insured basis. The increase in 1964 and 1965 in sale of loans from the fund is expected to result from the relatively favorable market for insured loans. Insured loans outstanding which are contingent liabilities against the insurance fund are expected to increase from $474.3 million on June 30, 1963, to approximately $653 million at June 30, 1964, and to $805 million by June 30, 1965.

Financing.—Net borrowings from the Treasury in 1965 are estimated at $6.7 million and in 1964 at $3.9 million.

Operating results and retained earnings.—Total revenue, consisting principally of loan insurance charges is estimated at $7.3 million in 1965, an increase of about $2.1 million from 1964.

Outstanding loans receivable of $60.8 million are estimated at June 30, 1965. Retained earnings, available to cover future losses, are estimated to be $16.8 million at the end of 1965. These earnings, when added to the initial $1 million appropriation and estimated borrowings of $48.4 million from the Treasury, represent a $66.2 million Government investment.

Extension of legislative authority, 1965.—The authority provided in section 515(b) of title V of the Housing Act of 1949 to insured loans for moderate-cost rental housing and related facilities for senior citizens expires on June 30, 1964. It is proposed to extend this authority to permit the making of such insured loans during 1965. The level of this program in fiscal year 1965 is estimated at $5 million.

This account has been established pursuant to the Senior Citizens Housing Act of 1962. Loans are made under the authority of section 515(a) of title V of the Housing Act of 1949, as amended, to private nonprofit corporations and consumer cooperatives to provide modest cost rental housing and related facilities for elderly persons of low or moderate income in rural areas.

These direct loans, made from the revolving fund, are repayable in not more than 50 years and bear interest comparable to housing loans for the elderly in urban areas (currently 3⅝%). Administrative expenses for this program are included under the appropriation item, Salaries and expenses, Farmers Home Administration.

[1] Includes capital outlay as follows: 1963, $43 thousand; 1964, $43 thousand; 1965, $43 thousand.
[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $0; 1963, $45 thousand; 1964, $45 thousand; 1965, $45 thousand.

The Office of the Inspector General was established on June 25, 1962, is responsible for overall policy, liaison, and coordination of audit and investigative work in the Department. On December 21, 1962, the internal audit staffs were transferred to this Office from Agricultural Marketing Service, Agricultural Research Service, Agricultural Stabilization and Conservation Service, Foreign Agricultural Service, Federal Crop Insurance Corporation, Extension Service, Farmers Home Administration, Forest Service, Rural Electrification Administration, and Soil Conservation Service.

This Office assures that existing laws, policies, and programs are effectively complied with, and insures corrective action where necessary. It coordinates internal audit and investigative activities of the Department with various investigative agencies of the executive and legislative branches of the Government.

Costs of conducting audits and investigations in 1963 and 1964 are financed from funds of the respective agencies. The 1965 budget proposes a direct appropriation for the Office of the Inspector General.

OFFICE OF THE GENERAL COUNSEL—Continued

General and special funds—Continued

SALARIES AND EXPENSES—Continued

The Office serves as legal counsel for the Secretary of Agriculture and performs all legal work for the Department. It represents the Department in administrative proceedings for the promulgation of rules and regulations having the force and effect of law and in quasi-judicial hearings held in connection with the administration of Department programs. The Office also represents the Secretary in proceedings before the Interstate Commerce Commission dealing with rates and practices relating to the transportation of agricultural commodities and in appeals to the courts from the decisions of the Commission. It examines titles to lands to be acquired by the Department or accepted as security for loans, and disposes of claims arising out of the Department activities.

The Office has responsibility for the information work of the entire Department. Its major objective is to report to farmers, agricultural, and closely related groups, and to the public the Department's research, action, regulatory, and other programs, using all information media. This work is carried on in close cooperation with the land-grant institutions and with private industries which serve agriculture. Workload depends upon Department program demands, direct requests, and legislative requirements.

1. *Publications review and distribution.*—The Department's printed publications are reviewed, published, and distributed. Processed publications are reviewed. Publications include farmers' bulletins, leaflets, periodicals, scientific, research, and marketing publications, and agricultural statistics.

2. *Review and distribution of current agricultural information.*—The Department's widespread activities require extensive preparation of information material for press, radio, and television use, as well as for specific agricultural outlets and the general public. Over 4,000 periodic crop, price, and market reports and press releases are issued annually. Digests, newsletters, special articles, and other editorial services are made available to press associations, farm and general publications, trade publications, daily newspapers, and encyclopedic annuals. Radio is used to reach farmers locally through single stations, and to broadcast nationally through the major networks. Films, television packages, and other services are prepared for the use of land-grant institutions, television farm broadcasters and TV networks. Information campaigns involving activities of cross-agency interest are developed using all media. The Yearbook of Agriculture is published by the Office and distributed by the Members of Congress.

3. *Review, preparation, and distribution of visual agricultural information.*—Motion pictures for the Department and nonprofit organizations associated with agriculture, produced on a reimbursable basis under the Department's working capital fund, are distributed through nearly 70 cooperating State film libraries. Still photographs, illustrations, graphics, and exhibits are similarly produced for use in explaining and reporting on Department programs. News and general-type photographs of Department programs and activities are available to news media from a centralized library.

The National Agricultural Library, cooperating jointly with the two other national libraries—the Library of Congress and the National Library of Medicine—provides coverage and servicing of worldwide publications in the agricultural, chemical, and biological sciences. It serves the research, extension, regulatory, and other programs of the Department and State agricultural agencies. It contains approximately 1,212,000 volumes, probably the most extensive agricultural collection in existence. Since the Library's primary purpose is to provide for research needs, substantive publications in the animal sciences, plant sciences, agricultural chemistry, agricultural engineering, soils, forestry, agricultural products, home economics, world sociology, agricultural economics, and agricultural statistics are acquired and preserved. Pub-

lications are regularly acquired from more than 50 countries on subjects ranging from apiculture to zootomy. In addition, printed information of agricultural societies, organizations, cooperatives, and general material in the field of agriculture are collected and made available for use.

Information contained in the agricultural literature is disseminated through bibliographies, loans, photocopies and reference services to agricultural colleges and universities, research institutions, Government agencies, agricultural associations, industry, individual scientists, farmers, and the general public in every part of the world.

During 1963, 13,162 volumes and 230,307 separate issues of periodicals were added to the collection by purchase, gift, and exchange. An additional 7,096 volumes of previously unbound material were also added during the year. During the same period 261,256 loans of books and periodicals were made and 99,842 reference questions answered.

Library Facilities

For [the preparation of plans, specifications, and drawings] *construction of facilities* for the National Agricultural Library [, $450,000], to remain available until expended, *$7,000,000, with which shall be merged the unexpended balance of funds heretofore appropriated under this head. (5 U.S.C. 565a; Department of Agriculture and Related Agencies Appropriation Act, 1964.)*

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Plans and specifications		450	
2. Construction of facilities			335
Total program costs, funded		450	335
Change in selected resources [1]			6,165
Total obligations		450	6,500
Financing:			
Unobligated balance carried forward			500
New obligational authority (appropriation)		450	7,000

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1964, $0, 1965, $6,165 thousand.

Present facilities are adequate to house less than half of the 1,212,000 volumes in the National Agricultural Library collection. New library facilities will enable the National Agricultural Library to properly preserve its collection and provide complete efficient services to the Nation's scientists. The proposed increase would be used to construct new and adequate library facilities at Beltsville, Md.

Funds for the preparation of plans, specifications and drawings for the new facilities were provided in 1964.

GENERAL ADMINISTRATION

General and special funds:

SALARIES AND EXPENSES

For necessary expenses of the Office of the Secretary of Agriculture and for general administration of the Department of Agriculture, including expenses of the National Agricultural Advisory Commission; repairs and alterations; and other miscellaneous supplies and expenses not otherwise provided for and necessary for the practical and efficient work of the Department of Agriculture, [$3,750,000] *$3,372,000*: *Provided*, That this appropriation shall be reimbursed from applicable appropriations for travel expenses incident to the holding of hearings as required by the Administrative Procedures Act (5 U.S.C. 1001): *Provided further*, That not to exceed $2,500 of this amount shall be available for official reception and representation expenses, not otherwise provided for, as determined by the Secretary. (*5 U.S.C. 511–517; secs. 511–512—establishing the Department of Agriculture, which was implemented by the Act of July 24, 1919 (5 U.S.C. 563–564), apply to all appropriation items of the Department which are not based upon specific legislative authority either incorporated in the language of the item or cited immediately thereunder; 5 U.S.C. 520a, 542–1, 543b, 1001, 2131; Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

Note.—Excludes $527 thousand for activities transferred in the estimates to the following appropriations:
"Salaries and expenses," Office of the Inspector General, $427 thousand.
"Salaries and expenses," Office of Management Services, $100 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

[1] Includes capital outlay as follows: 1963, $82 thousand; 1964, $20 thousand; 1965, $20 thousand.
[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $25 thousand (1963 adjustments, $8 thousand); 1963, $38 thousand; 1964, $38 thousand, 1965, $38 thousand.

General administration covers the overall planning coordination, and administration of the Department's programs. Also included are certain services on a departmentwide basis. Increases are provided in the budget to strengthen the staff of the Office of the Secretary.

2. *Budgetary and financial administration.*—This covers departmental budgetary and financial management; policies and procedures are promulgated, and programs and legislative proposals are evaluated for budgetary, financial, and related implications.

3. *General operations.*—These embrace departmental policies and procedure for real and personal property, and supply and records management activities. Departmentwide central services of post office, telephone, telegraph, reproduction, and supply are furnished.

4. *Management appraisal and systems development.*—This covers the coordination and direction of the development of new and improved management techniques, acquisition and utilization of data processing equipment, development of methods of measuring the effectiveness of program operations, and the application of operations research techniques to the administrative, program, and scientific activities of the Department.

5. *Personnel administration.*—Departmental policies and procedures are promulgated for the personnel management program. The operational phases of this program have been substantially delegated to the agencies. A systematic review is conducted to insure unification thereof and to measure its effectiveness in serving the agencies' personnel management requirements.

6. *Regulatory hearings and decisions.*—The hearing examiners hold hearings in connection with the prescribing of new regulations and orders and on disciplinary complaints filed by the Department or on petitions filed by private parties asking relief from some action of the Department. Final administrative decisions in regulatory proceedings are rendered by the judicial officer. Agriculture Decisions is published monthly.

7. *National Agricultural Advisory Commission.*—Provision is made for the payment of necessary expenses incident to periodic meetings of the National Agricultural Advisory Commission.

FOREST SERVICE

The Service carries on three primary functions: (a) Protection, development, and use of about 186 million acres of land in national forests and national grasslands in the United States and Puerto Rico; (b) forestry research for all public and private forest lands and related ranges to improve protection from fire, insects, and diseases; to increase production of timber, forage, water, and other products; to improve methods for developing and managing recreation resources; to develop better utilization and marketing of forest products; and to maintain a current inventory of forest resources through a nationwide forest survey; and (c) cooperation with States and private forest landowners to obtain better fire protection on approximately 450 million acres of forest land and nonforest watersheds, and better forest practices on about 358 million acres of privately owned commercial timberlands, to encourage reforestation and stimulate development and management of State, county, and community forests. These primary functions include construction and maintenance of roads and trails, control of forest pests, protection against floods, land acquisition and exchange, and a number of cooperative projects.

General and special funds:

FOREST PROTECTION AND UTILIZATION

For expenses necessary for forest protection and utilization, as follows:

Forest land management: For necessary expenses of the Forest Service, not otherwise provided for, including the administration, improvement, development, and management of lands under Forest Service administration, fighting and preventing forest fires on or threatening such lands and for liquidation of obligations incurred in the preceding fiscal year for such purposes, control of white pine blister rust and other forest diseases and insects on Federal and non-Federal lands; [$147,312,000] *$150,419,000*, of which $5,000,000 for fighting and preventing forest fires and $1,910,000 for insect and disease control shall be apportioned for use, pursuant to section 3679 of the Revised Statutes, as amended, to the extent necessary under the then existing conditions: *Provided*, That not more than [$962,000] *$500,000* may be used for acquisition of land under the Act of March 1, 1911, as amended (16 U.S.C. 513–519): *Provided further*, That funds appropriated for "Cooperative range improvements", pursuant to section 12 of the Act of April 24, 1950 (16 U.S.C. 580h), may be advanced to this appropriation.

Forest research: For forest research at forest and range experiment stations, the Forest Products Laboratory, or elsewhere, as authorized by law; [$25,893,000] *$29,944,000*.

State and private forestry cooperation: For cooperation with States in forest-fire prevention and suppression, in forest tree planting on non-Federal public and private lands, and in forest management and processing, and for advising timberland owners, associations, wood-using industries, and others in the application of forest management principles and processing of forest products, as authorized by law; [$15,943,000] *$16,955,000*. (*5 U.S.C. 511–512, 524, 565a; 7 U.S.C. 428a, 1010–1012, 1621–1627; 16 U.S.C. 207c, 471–583i, 594–1—594–5, 594a, 1004–1005; 30 U.S.C. 601–604, 611–615; 31 U.S.C. 534; 43 U.S.C. 1181h–1181j; 36 Stat. 557; Department of the Interior and Related Agencies Appropriation Act, 1964.*)

Note.—Excludes $421 thousand for activities transferred in the estimates to the following appropriations:
"Salaries and expenses," Office of the Inspector General, $410 thousand.
"Salaries and espenses," Office of Management Services, $11 thousand.
The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Forest land management:			
(a) National forest protection and management	124,698	130,706	134,917
(b) Fighting forest fires	18,588	3,600	5,000
(c) Insect and disease control	11,224	12,452	10,852
(d) Acquisition of lands	485	912	500
Total, forest land management	154,995	147,670	151,269
2. Forest research:			
(a) Forest and range management	10,892	11,300	11,459
(b) Forest protection	5,059	5,514	5,856
(c) Forest products and engineering	4,793	5,182	5,369
(d) Forest resource economics	3,214	3,202	3,410
(e) Forest research construction	3,401	489	2,600
Total, forest research	27,359	25,687	28,694
3. State and private forestry cooperation:			
(a) Forest fire control	12,417	12,494	12,758
(b) Forest tree planting	285	300	300
(c) Forest management and processing	2,740	2,513	3,018
(d) General forestry assistance	550	610	1,099
Total, State and private forestry cooperation	15,992	15,917	17,175
Total program costs for year's program	198,345	189,274	197,138
4. Repayment to "Cooperative work, Forest Service" of prior year's advance for fighting forest fires		1,400	
Total program costs, funded [1]	198,345	190,674	197,138
Change in selected resources [2]	−465	346	1,100

1. *Forest land management*—(a) *National forest protection and management.*—The 154 national forests and 18 units of national grasslands are managed under multiple use and sustained yield principles. The natural resources of outdoor recreation, range, timber, watershed, and wildlife are utilized in a planned combination that will best meet the needs of the Nation without impairing productivity of the land. These management and utilization principles were recognized in the Multiple Use-Sustained Yield Act of June 12, 1960 (Public Law 86–517, 74 Stat. 215). Work programs and budget estimates are related to the development program for the national forests, a plan to meet the increasing demands for specific national forest resource needs through 1972 and for long-term objectives to the year 2000. Increases are provided in the budget to further attainment of these program objectives. Construction funds of $15.5 million in 1964 and $15 million in 1965 are budgeted, compared with $17.1 million used in 1963, for construction or rehabilitation of campground and picnic facilities and other recreation improvements, the construction of dwellings or barracks for employee housing, fire lookouts, service and storage buildings, communication facilities, and other improvements. Funds appropriated under Cooperative range improvements are merged with this appropriation for obligational purposes.

MAIN WORKLOAD FACTORS

Description	1963 actual	1964 estimate	1965 estimate
Area administered and protected:			
(a) National forest lands (acres)	182,238,263	182,310,000	182,425,000
(b) National grasslands (acres)	3,803,377	3,803,500	3,804,000
(c) Land utilization projects (acres)	161,543	161,600	162,000
Timber managed and protected (billion board feet)	1,130	1,130	1,130
Timber sales (number)	66,700	70,000	75,000
Timber harvested (billion board feet)	10.0	11.0	11.2
Grazing use permits (prior calendar year)	41,467	41,400	41,400
Estimated number of livestock on national forest ranges (including calves and lambs)	6,000,000	6,000,000	6,000,000
Special use permits, excluding recreation (number)	39,175	40,000	41,000
Recreation special use permits (number)	22,609	23,000	23,500
Estimated number of visitors to national forests (prior calendar year)	112,762,200	125,000,000	140,000,000
Tree planting and seeding (acres)	103,000	120,000	160,000
Timber stand improvement (acres treated)	226,000	235,000	245,000
Range reseeding and removal of competing vegetation (acres)	180,000	182,000	186,000
Receipts (thousands of dollars):			
Timber sales	117,387	121,000	123,200
Grazing	3,386	3,500	3,600
Land uses	3,738	4,000	4,300
National grasslands	1,713	1,750	1,800
Total receipts	126,224	130,250	132,900

(b) *Fighting forest fires.*—This provides for employment of additional manpower and other facilities for forest fire emergencies which cannot be met by the fire control organization provided under national forest protection and management. Costs above the amounts estimated for the current and budget years are authorized to be met from advances from other Forest Service appropriations (repayments of such advances were made in 1964 to Cooperative work, Forest Service). In addition, a supplemental appropriation for 1964 is anticipated for separate transmittal.

	Calendar year		
	1962 actual	1963 estimate	1964 estimate
Forest fires controlled (number)	11,494	11,500	11,000
Area burned (acres)	85,457	100,000	200,000

(c) *Insect and disease control.*—Activities to suppress and control destructive insects and diseases that threaten timber areas include two types of work carried on jointly by Federal, State, and private agencies: (1) Surveys on forest lands to detect and evaluate infestations of forest insects and infections of tree diseases and determination of protective measures to be taken, and (2) control operations to suppress or eradicate forest insects and diseases, including white pine blister rust.

(d) *Acquisition of lands.*—Lands are purchased to protect the watersheds of navigable streams and to increase the production of timber with the approval of the National Forest Reservation Commission.

2. *Forest research.*—Research is conducted at 10 regional forest experiment stations, the Forest Products Laboratory, and elsewhere.

(a) *Forest and range management.*—This research provides private and public land managers and owners with a sound basis for management of timber, forage, and watershed lands. Studies are conducted to maintain a sustained yield of products at the lowest possible costs; increase forage for domestic livestock and improve habitat for wildlife without damage to soil, watershed, or other values; assure maximum regular flow of usable water, and reduce floods and sedimentation; and improve methods for developing and managing recreation resources.

(b) *Forest protection.*—Research is conducted to develop sound measures for the protection of forests from damage by fire, insects, and diseases. Forest fire research provides improved methods of predicting fire danger, and preparing for and combating fire by combinations of ground and aerial methods. Insect and disease research develops direct controls, silvicultural measures, and biological agents to combat forest pests.

(c) *Forest products and engineering.*—Studies are conducted to develop new and improved forest products, reduction and utilization of waste, and use of low-quality wood and less desirable species. They include studies to reduce costs of logging and wood utilization, and to develop basic knowledge of wood and disseminate this to forest owners, manufacturers, fabricators, and consumers. Research is also conducted to advance the mechanization and efficiency of forestry operations, and to develop and evaluate machines and similar equipment for such operations as logging, planting, timberstand improvement, and protection of forests.

(d) *Forest resource economics.*—These investigations are conducted to inventory and appraise the condition of forest lands, volume and quality of standing timber, ownership of timber resources, annual growth and depletion, and the potential need for timber products. Studies of the economics of forest crop production and of marketing of forest products are also included.

MAIN WORKLOAD FACTORS

[Acres in millions]

	1963 actual	1964 estimate	1965 estimate
Initial surveys (annual)	22	23	22
Initial surveys (cumulative since 1930)	664	687	709
To be surveyed (total)[1]	115	92	70
Resurveys (annual)	22	24	26

FOREST SERVICE—Continued

General and special funds—Continued

FOREST PROTECTION AND UTILIZATION—Continued

3. *State and private forestry cooperation.*—This program, carried on in cooperation with the States, encourages private timber management. Privately owned forest lands comprise three-fourths of the Nation's commercial forest area and produce about 85% of all timber cut.

(a) *Forest fire control.*—Assistance is furnished 49 States in preventing and suppressing forest fires on private and State-owned lands by financial aid, training, procurement of equipment, and a nationwide fire prevention campaign. About 94% of the 450 million acres of non-Federal ownership is now partially covered. During 1962 the acreage burned on protected areas was 0.38% as against an estimated 8.9% on unprotected lands. Of the total expenditures under this program, 80% is contributed by States and counties, 2% by private owners, and 18% by the Federal Government.

(b) *Forest tree planting.*—To encourage woodland owners to reforest unproductive portions of their holdings, and farmers to plant wind barriers around their fields and farmsteads—a total of more than 70 million acres altogether—the States provide planting stock at reasonable prices. The Federal Government shares the cost of producing the stock with the State and private landowners.

(c) *Forest management and processing.*—In cooperation with State foresters, 590 projects in 2,399 counties are operated to aid small woodland owners in applying good management to their timber holdings. In 1963 these projects served some 101,800 owners and 5.7 million acres.

(d) *General forestry assistance.*—Technical forest management assistance is provided to State, community, private, and other Federal agencies, forest industries, colleges, and landowners.

Cooperative Range Improvements

(Special fund)

For artificial revegetation, construction, and maintenance of range improvements, control of rodents, and eradication of poisonous and noxious plants on national forests in accordance with section 12 of the Act of April 24, 1950 (16 U.S.C. 580h), to be derived from grazing fees as authorized by said section, $700,000, to remain available until expended. (*Department of the Interior and Related Agencies Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Advanced to Forest protection and utilization (costs—obligations) (object class 25)	700	700	700
Financing:			
New obligational authority (appropriation)	**700**	**700**	**700**

Part of the grazing fees from the national forests, when appropriated, are used to protect or improve the productivity of the range, mainly by construction and maintenance of fences, stock watering facilities, bridges, corrals, and driveways. These funds are advanced to and merged with the appropriation Forest protection and utilization, subappropriation Forest land management.

Forest Roads and Trails (Liquidation of Contract Authorization)

For expenses necessary for carrying out the provisions of title 23, United States Code, sections 203 and 205, relating to the construction and maintenance of forest development roads and trails, [$63,200,000] *$72,300,000,* to remain available until expended, for liquidation of obligations incurred pursuant to authority contained in title 23, United States Code, section 203: *Provided,* That funds available under the Act of March 4, 1913 (16 U.S.C. 501), shall be merged with and made a part of this appropriation: *Provided further,* That not less than the amount made available under the provisions of the Act of March 4, 1913, shall be expended under the provisions of such Act. (*5 U.S.C. 565a; 23 U.S.C. 125; Department of the Interior and Related Agencies Appropriation Act, 1964.*)

Appropriation to liquidate contract authorization	**44,500**	**63,200**	**72,300**

Roads and trails are essential to protection and management of national forests and utilization of their resources. The system consists of approximately 186,067 miles of earth- or gravel-surfaced roads and 105,626 miles of supplemental trails.

The Federal Highway Act of 1962 provides authorizations of $70 million for 1964, and $85 million for 1965. These authorizations are available for obligation a year in advance of the year for which authorized. The 1964 appropriation provided for utilization of $65 million of the $70 million 1964 authorization. This budget provides for utilization of $72.5 million of the $85 million 1965 authorization. At this level, the 1965 program will involve the construction and reconstruction of about 1,900 miles of multipurpose roads, of which about 1,100 miles are primarily for access to harvest national forest timber. This compares with 1,151 miles built in 1963 and 1,408 miles being built in 1964.

Of the amounts received annually from national forest activities, 10% is available under the permanent appropriation Roads and trails for States, for construction and maintenance within the State from which such proceeds are derived. Such amounts are merged with this appropriation for obligational purposes.

ACQUISITION OF LANDS FOR NATIONAL FORESTS

SUPERIOR NATIONAL FOREST

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Acquisition of lands for Superior National Forest (program costs, funded) [1]	786	1,935	
Change in selected resources [2]	545	−793	
Total obligations	1,330	1,142	
Financing:			
Unobligated balance brought forward	−472	−1,142	
Unobligated balance carried forward	1,142		
New obligational authority (appropriation)	**2,000**		

[1] Includes capital outlay as follows: 1963, $727 thousand; 1964, $1,899 thousand.
[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $249 thousand; 1963, $793 thousand; 1964, $0.

As of June 30, 1963, approximately 44,000 acres of land have been acquired to preserve the wilderness conditions of part of the Superior National Forest in Minnesota. The authorization for the purchase of land within this forest was increased to $4.5 million by Public Law 87-351, approved October 4, 1961. The 1963 appropriation completed the authorization for acquisition of the remaining tracts.

SPECIAL ACTS

(Special fund)

For acquisition of land to facilitate the control of soil erosion and flood damage originating within the exterior boundaries of the following national forests, in accordance with the provisions of the following Acts, authorizing annual appropriations of forest receipts for such purposes, and in not to exceed the following amounts from such receipts, Cache National Forest, Utah, Act of May 11, 1938 (52 Stat. 347), as amended, $10,000; Uinta and Wasatch National Forests, Utah, Act of August 26, 1935 (49 Stat. 866), as amended, $20,000; Toiyabe National Forest, Nevada, Act of June 25, 1938 (52 Stat. 1205), as amended, $8,000; Angeles National Forest, California, Act of June 11, 1940 (54 Stat. 299), $8,000; Cleveland National Forest in San Diego County, California, Act of June 11, 1940 (54 Stat. 297–298), $8,000; San Bernardino and Cleveland National Forests in Riverside County, California, Act of June 15, 1938 (52 Stat. 699), $8,000; Sequoia National Forest, California, Act of June 17, 1940 (54 Stat. 402), $8,000; in all, $70,000: *Provided*, That no part of this appropriation shall be used for acquisition of any land which is not within the boundaries of the national forests and/or for the acquisition of any land without the approval of the local government concerned. (*Department of the Interior and Related Agencies Appropriation Act, 1964.*)

ADMINISTRATIVE PROVISIONS, FOREST SERVICE

Appropriations available to the Forest Service for the current fiscal year shall be available for: (a) purchase of not to exceed one hundred and [thirty-six] *fifty-five* passenger motor vehicles of which one hundred and [twenty-six] *fourteen* shall be for replacement only, and hire of such vehicles; operation and maintenance of aircraft and the purchase of not to exceed [five of which three shall be] *six* for replacement only; (b) employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (5 U.S.C. 574), as amended by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), in an amount not to exceed $25,000; (c) uniforms, or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131); (d) purchase, erection, and alteration of buildings and other public improvements (5 U.S.C. 565a); (e) expenses of the National Forest Reservation Commission as authorized by section 14 of the Act of March 1, 1911 (16 U.S.C. 514); and (f) acquisition of land and interests therein for sites for administrative purposes [and acquisition of such outstanding interests in lands administered by the Forest Service in the northeast Georgia land utilization project], pursuant to the Act of August 3, 1956 (7 U.S.C. 428a).

Except to provide materials required in or incident to research or experimental work where no suitable domestic product is available, no part of the funds appropriated to the Forest Service shall be expended in the purchase of twine manufactured from commodities or materials produced outside of the United States.

Funds appropriated under this Act shall not be used for acquisition of forest lands under the provisions of the Act approved March 1, 1911, as amended (16 U.S.C. 513–519, 521), where such land is not within the boundaries of an established national forest or purchase unit nor shall these lands be acquired without approval of the local government concerned. (*Department of the Interior and Related Agencies Appropriation Act, 1964.*)

"Payments to States, national forests fund"	27,235	29,994	31,100
Appropriation	**27,879**	**30,808**	**31,918**

[1] Includes capital outlay in 1963 of $1 thousand.
[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $0; 1963, $1 thousand; 1964, $1 thousand; 1965, $1 thousand.

1. *Forest fire prevention.*—Fees for the use of the character "Smokey Bear" by private enterprises are collected under regulations promulgated by the Secretary and are available for furthering the nationwide forest fire prevention campaign (18 U.S.C. 711).

2. *Restoration of forest lands and improvements.*—Funds received from settlement of claims involving damage to lands or improvements and from forfeiture of deposits and bonds by permittees and timber purchasers are used for the restoration made necessary by the action which led to the settlement or forfeiture (16 U.S.C. 579c).

3. *Payment to Minnesota.*—At the close of each fiscal year the State of Minnesota is paid 0.75% of the appraised value of certain Superior National Forest lands in the counties of Cook, Lake, and St. Louis for distribution to these counties (16 U.S.C. 577g).

4. *Payments to counties, national grasslands.*—Of the revenues received from the use of national grasslands, 25% is paid to the counties in which such land is situated for school and road purposes (7 U.S.C. 1012).

5. *Payments to school funds, Arizona and New Mexico.*—The States of Arizona and New Mexico are paid a share of the national forest receipts for school purposes (36 Stat. 562, 573).

6. *Payments to States, national forests fund.*—With minor exceptions, 25% of the money received from the national forests is paid to the States for public schools and roads of the county in which such forests are situated (16 U.S.C. 500).

Decrease in accounts receivable, net	779		
Applicable receipts	26,093	27,447	28,303
Budget expenditures	−17	−902	−303

[1] Balances of selected resources are identified on the statement of financial condition.

This fund finances on a reimbursable basis various services such as repairing and replacing equipment, including aircraft, stocking and issuing supplies, operation of subsistence camps, operation of photographic and reproduction facilities, and tree nurseries in support of programs of the Forest Service (16 U.S.C. 579b, as amended). These service operations serve programs of fire protection, timber utilization, construction and maintenance of roads and other improvements, reforestation, grazing, watershed, forest and forest products research, and kindred conservation activities of the Forest Service, including cooperative assistance with other Federal agencies, States, counties, and individuals engaged in the same objectives.

Operating results and financial condition.—Government investment in the fund as of June 30, 1963, including donated assets and retained earnings for 1963, is $28,574 thousand. By the end of 1965 the investment is anticipated to be $35,349 thousand, an increase of $6,775 thousand which represents estimated earnings and donations during 1964 and 1965.

Receipts, nonoperating income, and retained earnings include an estimated $2,809 thousand as of June 30, 1965, identified as Income provision for increased cost of equipment replacements, to be used only for financing the increased cost of equipment replacement, i.e., the difference between the cost of the replacement unit and the cost at time of acquisition of the unit being replaced. This increased cost is due to inflation and model improvement, and must be financed if the fleet strength is to be maintained and not depleted through the gradual attrition of price increases for replacements. The earnings for the provision for increased cost of replacements are derived from a factor which is included for this purpose in rental rates charged to program appropriations for equipment use and credited to the working capital fund.

Retained earnings as of June 30, 1965, will total an estimated $8,019 thousand which will consist of $2,426 thousand gain on sale of equipment, $2,784 thousand profit from operations, and $2,809 thousand for provision for increased cost of replacement of equipment. Retained earnings have been applied toward increased cost of equipment replacements, purchase of fleet additions, and to furnish adequate working capital.

Revenue, Expense, and Retained Earnings (in thousands of dollars)

GENERAL PROVISIONS

SEC. 601. Within the unit limit of cost fixed by law, appropriations and authorizations made for the Department under this Act shall be available for the purchase, in addition to those specifically provided for, of not to exceed [five hundred and fifteen] *four hundred and ninety-two* passenger motor vehicles, of which four hundred and [ninety-eight] *fifty-two* shall be for replacement only, and for the hire of such vehicles.

SEC. 602. Provisions of law prohibiting or restricting the employment of aliens shall not apply to employment under the appropriation for the Foreign Agricultural Service.

SEC. 603. Funds available to the Department of Agriculture shall be available for uniforms or allowances therefor as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131).

SEC. 604. No part of the funds appropriated by this Act shall be used for the payment of any officer or employee of the Department who, as such officer or employee, or on behalf of the Department or any division, commission, or bureau thereof, issues, or causes to be issued, any prediction, oral or written, or forecast, except as to damage threatened or caused by insects and pests, with respect to future prices of cotton or the trend of same.

SEC. 605. Except to provide materials required in or incident to research or experimental work where no suitable domestic product is available, no part of the funds appropriated by this Act shall be expended in the purchase of twine manufactured from commodities or materials produced outside of the United States.

SEC. 606. Not less than $1,500,000 of the appropriations of the Department for research and service work authorized by the Acts of August 14, 1946, July 28, 1954, and September 6, 1958 (7 U.S.C. 427, 1621–1629; 42 U.S.C. 1891–1893), shall be available for contracting in accordance with said Acts.

[SEC. 607. No part of the funds appropriated by this Act shall be used to conduct or assist in conducting any program (including but not limited to the payment of salaries, administrative expenses, and the conduct of research activities) related directly or indirectly to the establishment of a national service corps or similar domestic peace corps type of program.] (*Department of Agriculture and Related Agencies Appropriation Act, 1964.*)

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $139 thousand (1963 adjustments, $6 thousand); 1963, $51 thousand; 1964, $51 thousand; 1965, $51 thousand.

1. *Executive direction of the Department.*—Provides for the formulation of Government policy on matters affecting programs and functions assigned to the Department.

2. *Departmental staff services.*—Staff assistance and supervision in the general management and administration of the Department are provided in audit, budget, emergency preparedness, information, legal, management, publications, security, and transportation matters.

3. *Administrative services.*—Departmentwide direction is provided in property, space, records, general administrative services, safety, motor vehicles, and library activities. General administrative services are provided for the Office of the Secretary and for some of the smaller offices of the Department.

4. *Great Lakes pilotage administration.*—Provides for the administration of a pilotage service in conjunction with the Department of State, the Coast Guard, and Canadian counterparts as prescribed in the Great Lakes Pilotage Act of 1960.

A final report was submitted on March 15, 1963 on the Federal participation in the Century 21 International Exposition, Seattle, Wash, held from April 21 to October 21, 1962. The Federal Pavilion consisted of 5 individual buildings, 3 theaters, and a junior science laboratory. Total attendance at the Pavilion was 6,748,000. At the close of the Fair all buildings and contents were licensed to the Pacific Science Center Foundation under the provisions of existing law.

WEST VIRGINIA CENTENNIAL CELEBRATION

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Financing:			
Unobligated balance brought forward	5	5	
Unobligated balance carried forward	−5		
Unobligated balance lapsing		−5	
New obligational authority			

Reports have been issued on the studies of Federal participation in this program.

Public enterprise funds:

AVIATION WAR RISK INSURANCE REVOLVING FUND

The Secretary of Commerce is hereby authorized to make such expenditures, within the limits of funds available pursuant to section 1306 of the Act of August 23, 1958 (49 U.S.C 1536), and in accordance with section 104 of the Government Corporation Control Act, as amended (31 U.S.C. 849), as may be necessary in carrying out the programs set forth in the budget for the current fiscal year for aviation war risk insurance activities under said Act. (*Department of Commerce Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Administrative expenses (costs—obligations)	2	2	3
Financing:			
Revenue and other receipts: Binder fees	15	25	10
Unobligated balance brought forward	16	29	52
Unobligated balance carried forward	−29	−52	−59
Financing applied to program	2	2	3

Summary of Sources and Application of Funds (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Obligations (from program and financing): Gross expenditures	2	2	3
Revenues and other receipts (from program and financing): Applicable receipts	15	25	10
Budget expenditures	−13	−23	−7

The fund provides premium aviation war risk insurance in the event of an outbreak of war; binders are issued to cover aircraft, persons, and property and will become war risk insurance automatically on the outbreak of war. It also provides nonpremium aviation war risk insurance in wartime and in situations short of war; policies covering aircraft, persons, and property which become active insurance upon issuance are available to certain civil air carriers in connection with Government contract operations. Administrative costs are out of fee receipts (49 U.S.C. 1531, as amended, 75 Stat. 210).

Revenue, Expense, and Retained Earnings (in thousands of dollars)

WORKING CAPITAL FUND—Continued

Summary of Sources and Application of Funds (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Obligations (from program and financing)	2,669	2,987	3,150
Increase (−) in gross unpaid obligations	−67		
Gross expenditures	2,601	2,987	3,150
Revenues and other receipts (from program and financing)	2,690	2,987	3,150
Increase (−) in accounts receivable, net	−38		
Applicable receipts	2,652	2,987	3,150
Budget expenditures	−51		

This fund finances central communications services, duplicating, health services, relocation expenses, accounting services and other common departmental services which can be operated better on a centralized basis (5 U.S.C. 607). Services are provided essentially at cost. Earnings which may accrue are paid to the Treasury periodically. Capital includes an appropriation of $100 thousand.

ECONOMIC DEVELOPMENT

AREA REDEVELOPMENT ADMINISTRATION

General and special funds:

OPERATIONS

For necessary expenses, not otherwise provided for, of the Area Redevelopment Administration, including not to exceed [$4,500,000] *$7,500,000* for technical assistance, as authorized by section 11 of the Area Redevelopment Act (75 Stat. 47), [and hire of passenger motor vehicles, $13,500,000] *$17,500,000*. (*75 Stat. 47; Department of Commerce Appropriation Act, 1964.*) (*Authorizing legislation pending for $3,000,000.*)

Note.—Excludes $40 thousand for activity transferred in the estimate to "Salaries and expenses," Office of Business Economics. The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Operations	8,081	8,940	10,000
2. Technical assistance	3,152	4,500	7,500

Appropriation (adjusted)	**12,371**	**13,480**	**17,500**

[1] Includes capital outlay as follows: 1963, $93 thousand; 1964, $10 thousand; 1965, $10 thousand.

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders; 1962, $2,179 thousand (1963 adjustments, $36 thousand); 1963, $3,023 thousand; 1964, $3,023 thousand; 1965, $3,023 thousand.

1. *Operations.*—Organizational and educational leadership is provided for the stimulation of local initiative. Locally prepared economic development programs are reviewed and project proposals for assistance to carry out such programs are evaluated and approved. Redevelopment guidance is provided in the form of surveys, technical data, procurement information and consultation on special community problems. Increasing emphasis will be placed on service and assistance to redevelopment areas at the local level.

2. *Technical assistance.*—Communities are aided in preparing economic development plans by providing basic information on natural resources, manpower, and the uses to which these can be put to establish stable and diversified local economies. Investigations are also made of State and regional economic development opportunities and of new or improved uses of resources in specific areas. An increase contingent upon authorizing legislation is requested to provide additional technical assistance to local communities.

Authorizing legislation pending	----------	----------	**35,000**

Grants are made to States and their political subdivisions, Indian tribes, and private or public nonprofit associations representing a development area, to assist in the construction or improvement of public facilities, when the public facility project will improve opportunities for the location or expansion of industrial plants and facilities providing more than temporary alleviation of unemployment or underemployment. Grants are only awarded when the area has an approved overall economic development program, the grant is necessary in order for the project to be undertaken, and the entity requesting the grant is contributing in proportion to its ability. Workload estimates are shown under the heading Public facility loans in the Area redevelopment fund. A supplemental appropriation for 1964 is anticipated for separate transmittal.

Proposed for separate transmittal:

GRANTS FOR PUBLIC FACILITIES

Summary of Sources and Application of Funds (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Obligations (from program and financing)	90,422	132,000	175,000
Increase (−) in gross unpaid obligations	−64,981	−54,000	−60,500
Gross expenditures	25,441	78,000	114,500
Revenues and other receipts (from program and financing)	622	3,870	11,341
Increase (−) in interest receivable, net	−126	−470	−841
Applicable receipts	496	3,400	10,500
Budget expenditures	24,945	74,600	104,000

The Area Redevelopment Act provides for long-term loans at low interest rates to aid in the construction or expansion of commercial or industrial facilities and of related public facilities for the purpose of alleviating unemployment and underemployment within designated areas. Interest rates on commercial facilities are set by law and will be 4% for 1964 for industrial and commercial loans. Interest rates on public facility loans will be 3⅝% in 1964. No change is anticipated for 1965. Industrial and commercial loans may run for 25 years and public facility loans up to 40 years. Loans may be made to States, localities, and public or private nonprofit organizations representing redevelopment areas when (a) the area is designated as a redevelopment area; (b) the project is consistent with an approved overall economic development program; (c) the project will provide more than temporary alleviation of unemployment or underemployment; (d) assistance will not be given to establishments that in relocating would cause unemployment in the originating area; (e) financial assistance is not otherwise available from private lenders or Federal agencies on reasonable terms; and (f) applicants have been approved by a State and local agency directly concerned with problems of economic development in the area.

The act authorized outstanding loans of not to exceed $100 million each for (a) industrial or commercial projects in urban areas of substantial and persistent unemployment designated within specific criteria, (b) industrial or commercial projects in nonurban areas which are among the highest in number and percentages of low income families and where substantial underemployment exists; and (c) public facilities necessary for improving the opportunities for employment. The budget program estimates reflect a proposed increase in these statutory limitations to $250 million for each of the first two categories and $150 million for public facility loans.

Budget program.—Net reservations for industrial and commercial loans are estimated during the current and budget years at $103.2 million and $149 million, and for public facilities loans at $33 million and $36 million. The following table shows the relationship of net reservations, after allowance for cancellation of reservations, to programed authorizations (in millions of dollars):

	Cumulative reservations June 30, 1963	*Estimated net 1964 reservations*	*Estimated net 1965 reservations*	*Cumulative net reservations*	*Programed authorization*
Industrial and commercial loans:					
Urban	68.9	41.1	67.0	177.0	250.0
Nonurban	111.9	62.1	82.0	256.0	250.0
Public facility loans	48.2	33.0	36.0	117.2	150.0
Total	229.0	136.2	185.0	550.2	650.0

Fund reservations are made on approval of applications filed to determine eligibility and feasibility of the project. Reservations are converted into loan approvals after filing a full loan application and review by the Small Business Administration for commercial loans or the Housing and Home Finance Agency for public facility loans.

Principal workload stages are as follows:

	1964 estimate			*1965 estimate*		
	Urban	*Nonurban*	*Public facilities* [1]	*Urban*	*Nonurban*	*Public facilities* [1]
Preliminary applications:						
Received	205	331	111	256	331	220
Withdrawn or rejected	60	97	29	82	100	67
Reservations issued (preliminary)	142	240	103	174	250	143
Reservations and approvals outstanding, beginning of year	60	113	27	44	150	73
Full applications:						
Withdrawn or rejected	62	85	21	60	86	53
Loans approved	96	118	36	116	134	111
Loans obligated	96	118	36	115	132	110
Reservations and approvals outstanding, close of year	44	150	73	43	182	53

[1] All public facility applications are considered as single applications, and no distinction is made as to grant applications as against loan applications.

The relationship between reservations and obligations is set forth in the following table (in millions of dollars):

	Industrial and commercial loans		*Public facility loans*
	Urban	*Nonurban*	
1963 program:

Financing.—The program was financed by a direct appropriation of $115.1 million in 1963 and $132 million in 1964. Appropriation of $170 million is requested for 1965.

Operating results.—During the initial stages of the program, revenues are expected to lag behind expenses. The deficit results primarily from the allowance for losses, which is established at the rate of 6.24% for commercial and industrial loans, and 3% for public facility loans.

Total selected resources	−853	−226	−1,052	−154	−1,206	−1,206

The Census Bureau is the largest general-purpose statistical agency of the Federal Government. A supplemental appropriation for 1964 is pending before Congress. Principal programs carried out under the appropriation "Salaries and expenses" are:

1. *Retail, wholesale, and service trade statistics.*—Estimates are prepared weekly for total retail trade and for a number of kind-of-business groups. Monthly estimates of retail sales are prepared for the United States by kind of business, by regions, for some larger States, and for general merchandise-apparel-appliances-furniture (GAF) sales for the largest metropolitan areas. In addition, estimates are prepared for service trade receipts, retail inventory and accounts receivable trends, and sales and inventories of merchant wholesalers. An annual survey provides more detailed information on retail trade. In 1964, the weekly retail sales estimates will be improved. In 1965 a monthly survey will be initiated to provide physical and dollar volume estimates for retail inventories of large consumer durable goods items, and the retail area sample design will be improved to provide more accurate data.

2. *Manufacturing and industrial statistics.*—Periodic surveys are made of production, shipments, orders, and materials consumed for important industries and products. Data on manufacturers' sales, orders, and inventories for total manufacturing and for about 17 industry breakdowns and 2 subgroups are provided monthly. An annual survey of manufactures produces data on the number, size, industrial classification, and location of manufacturing establishments and on measures of factory operations such as employment, shipments, inventories, etc. In 1964, data are being developed to provide new measures of industrial activity and the forces changing the location, structure, and growth of industry.

3. *Transportation statistics.*—Methods are developed and tested for undertaking periodic surveys in transportation areas as directed by statutory requirements. In 1964, work will begin toward establishing a catalog of available transportation data.

4. *Agriculture statistics.*—Information is compiled on cotton ginned at 11 dates during the ginning season and statistical services are provided on results from the census of agriculture and related operations.

5. *Foreign trade and shipping statistics.*—Monthly, quarterly, and annual reports are published on the kind, quantity, shipping weight, dollar value of imports and exports, and mode of shipping. In 1965, work will be accelerated on the revision of the export commodity classifications to conform with the standard industrial classification, and the standard international trade classifications.

6. *Population statistics.*—This activity includes current estimates of the number of households, the farm population, school enrollment, personal income, population mobility, and other characteristics of the population, as well as consumer buying intentions. It also provides annual estimates of the population of the United States and of each of the States, and projections of future population. In 1964, work will begin on improving estimates of population for States and metropolitan areas. In 1965, work to improve and expand population estimates for local areas will be undertaken through the use of administrative records obtained from other Federal and non-Federal agencies.

7. *Construction and housing statistics.*—Monthly reports are published for housing starts, residential construction authorized by building permits, and the volume of construction activity. Annual reports are provided on expenditures for residential alterations and repairs. In 1964, the monthly survey on housing starts will be improved, and a program of technical assistance to local areas for housing vacancy surveys will be initiated. In 1965, the monthly survey of construction value put-in-place will be improved.

8. *State and local government statistics.*—Reports are published annually providing national estimates of total governmental finances, employment, and payrolls, and comparative statistics for State governments and larger cities. National estimates of revenues and expenditures are provided quarterly.

9. *Statistical abstract and special reports.*—Seasonally adjusted business cycle indicators are published monthly. *The Statistical Abstract,* issued annually, summarizes government and private statistics on the industrial, social, political, and economic activities of the United States. Historical and other general reports are published periodically. A program of company statistics is also under development. In 1964, the county business report, showing for each county in the United States the number and kind of business establishments and their employment and payrolls, will be placed on an annual basis.

10. *Research and development.*—Research is conducted on statistical survey methods and techniques, and ques-

This request provides funds to conclude the evaluation of the mailing-list technique of taking a population and housing census. A test census using these techniques will be undertaken in one or more metropolitan areas. We will also explore problems in connection with census taking in hard-to-enumerate areas, questionnaire design under self-enumeration conditions, and geographic mapping and identification coding.

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $572 thousand (1963 adjustments, $17 thousand); 1963, $306 thousand; 1964, $306 thousand; 1965, $306 thousand.

The Business and Defense Services Administration provides advisory and analytical services to the business community and Government. Industrial and commercial data are analyzed and appraised and basic, special, and periodic reports are published for use by industry, business and Government. The results of commodity data analyses are used in foreign trade promotion, as well as domestic market expansion. Dissemination is made of market facts and analyses dealing with the structure, problems and trends in marketing to Government, industry and business. Industrial capabilities to meet the requirements for industrial production in a national emergency and needs for national growth are measured and assistance is provided to industry in military procurement programs.

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $25 thousand; 1963, $8 thousand; 1964, $8 thousand; 1965, $8 thousand.

Field office operations are currently conducted in 39 locations, principal industrial and commercial centers of the United States. In addition, three new field offices to be located in Baltimore, Charleston (W. Va.), and Des Moines were authorized in 1964. These offices serve as local outlets for the information and services of the Department. These offices also gather information on local and regional trends for the use of the Department of Commerce and other agencies. In 1965 funds are requested to enlarge the export expansion program field staffs of existing field offices.

Promotion of international commerce.—To stimulate and expand the foreign commerce of the United States in order to strengthen the U.S. economy and reduce the deficit in our balance of payments. Specialists in foreign trade provide information and service to U.S. firms engaged in international commerce. They analyze economic and business conditions of foreign countries, international marketing problems, commercial laws and government regulations affecting business and related fields vital to the expansion of foreign trade. Trade centers, commercial trade fairs, business information centers, sample product display centers, and mobile trade fairs are used as techniques overseas to further the promotion of U.S. exports.

Export controls are necessary to protect the domestic economy from excessive drain of scarce commodities, to safeguard the national security by regulating exports of strategic commodities, and to implement U.S. foreign policy. Since some countries continue to constitute a threat to the security and welfare of the United States, these controls must be continued. The Bureau of Customs is responsible for the policing of shipments at points of export.

New obligational authority (appropriation)	**25**	**100**	**350**

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $0; 1963, $5 thousand; 1964, $5 thousand; 1965, $5 thousand.

The Office of Trade Adjustment was established June 7, 1963, pursuant to the Trade Expansion Act of 1962, as a primary organization unit in the Department of Commerce. This Office has the principal responsibility for the administration of the adjustment assistance program to import-injured firms. The types and amounts of adjustment assistance—technical assistance, financial assistance or tax assistance—necessary to enable eligible firms to overcome the injury caused by imports will vary according to need.

Technical assistance rendered by this Office, by other Government agencies or, if required, by non-Federal sources will assist eligible firms in the development and execution of sound adjustment proposals.

TRADE ADJUSTMENT LOANS AND LOAN GUARANTEES

To enable the Secretary of Commerce to provide loans and other financial assistance to eligible firms, as authorized by Chapter 2 of Title III of the Trade Expansion Act of 1962 (76 Stat. 886), $500,000, to remain available until expended.

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Capital outlay: Loans (costs—obligations) (object class 33)			500
Financing:			
New obligational authority (appropriation)			**500**

Financial assistance in the form of loans, loan guarantees and agreements for deferred participation in loans may be required for the successful adjustment of import-injured firms. Agencies with existing lending programs will administer the required financial assistance. To the extent that these agencies are unable or unwilling to provide such assistance, the Department of Commerce will be required to furnish the necessary funds.

UNITED STATES TRAVEL SERVICE

General and special funds:

SALARIES AND EXPENSES

For necessary expenses to carry out the provisions of the International Travel Act of 1961 (75 Stat. 129), including employment of aliens by contract for service abroad; rental of space, for periods not exceeding five years, and expenses of alteration, repair or improvement; advance of funds under contracts abroad; payment of tort claims, in the manner authorized in the first paragraph of section 2672 of title 28 of the United States Code, when such claims arise in foreign countries; and not to exceed [$4,000] *$15,000* for representation expenses abroad; [$2,600,000] *$3,950,000*. (*Department of Commerce Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

Appropriation (adjusted)	**3,331**	**2,600**	**3,950**

[1] Includes capital outlay as follows: 1963, $73 thousand; 1964, $10 thousand; 1965, $26 thousand.

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $609 thousand (1963 adjustments, $44 thousand); 1963, $1,146 thousand; 1964, $1,146 thousand; 1965, $1,146 thousand.

The U.S. Travel Service was established June 29, 1961, to carry out a program to stimulate and encourage travel to the United States by residents of foreign countries. Nine oversea offices have been established to implement this program. In the 2 years since the establishment of this Service the joint Government-industry, VISIT U.S.A., campaign has seen a 49% increase in oversea visitors to the United States. Additional funds are requested to increase the promotional program for increased effectiveness.

The Coast and Geodetic Survey makes oceanographic, geodetic and magnetic surveys and investigations to obtain a better understanding of the static and dynamic properties of the ocean, and to provide cartographic data for the processing, compilation, production, and distribution of aeronautical, nautical and special purpose charts, geodetic control data and other related publications; collects, analyzes and disseminates seismological and geomagnetic data; conducts basic and applied research and development in fields within the competence of the bureau. The scope of the operations is worldwide.

Increases in 1965 are primarily to support an expanded bureau role in oceanography including operation of two new surveying vessels for part of the year, the improvement of ship base and laboratory facilities, increased requirements for geodetic and geophysical surveys and observations, operation of the worldwide seismological program, increased requirements for production of navigational charts, and for an expansion of the research and development program in the fields of oceanography, geomagnetism, seismology, geodesy, photogrammetry, and cartography.

Supplemental estimates will be transmitted to meet increased pay costs of uniformed personnel and of certain lithographic and printing employees.

Direct program—1. *Oceanography.*—Oceanographic operations of many types, including hydrographic surveys, marine gravity and magnetic surveys, oceanographic surveys of physical and chemical properties, circulatory and tidal surveys, together with the processing, analysis, and publication of the resulting data for commerce, engineering, resource-development, navigation, and basic and applied research.

	1963 actual	*1964 estimate*	*1965 estimate*
Square nautical miles surveyed	407,646	417,760	450,300
Lineal miles of hydrography	105,430	121,000	126,200

2. *Physical sciences.*—Geodetic, geophysical, photogrammetric, and cartographic data are provided for charting and scientific purposes and for defense needs. Surveys are made in the United States and its possessions to determine the horizontal and vertical positions of a network of control points which are permanently marked on the ground for topographic, geologic, and other types of mapping, for planning large-scale engineering, and for scientific and defense needs. The positions and descriptions of these points are published and distributed to Federal, State, and local agencies and the general public.

SURVEYS ACCOMPLISHED AND PROPOSED

	1963 actual	*1964 estimate*	*1965 estimate*
Horizontal control:			
Area control (square miles)	30,306	39,000	56,835
Offshore surveys (square miles)	2,400	1,000	
Marked stations established	907	930	1,220
Vertical control:			
Area control-new leveling (linear miles)	2,125	2,165	2,150
Area control-releveling (linear miles)	2,183	1,850	1,850
Base net leveling (linear miles)		510	1,200

Earthquakes are located and investigated to determine their severity and to obtain engineering data for the design of earthquake-resistant structures and information concerning ground movements.

The bureau operates 12 seismograph stations and collaborates with 15 others in universities, Government agencies, and other institutions; operates a worldwide network of 125 standardized seismograph stations being completed in 1965; cooperates with 275 domestic and foreign seismograph stations to determine the location of distant earthquakes, field-investigates an average of 15 severe earthquakes annually; operates 73 strong-motion stations in Western United States and 7 in Latin America. In 1963, the seismic sea wave warning program, a network of seismograph and tide stations, furnished data for an alert and warning of a tsunami, generated by an earthquake near Adak, Alaska.

3. *Navigational chart production.*—Nautical and aeronautical charts and related information are compiled and reproduced from field-survey data, and distributed to civil and military users for safe navigation of ships and aircraft.

Miscellaneous receipts returned to the Treasury from the sale of charts and related publications were $974 thousand in 1963 and are estimated to be $1,100 thousand during 1964 and $1,200 thousand in 1965.

The bureau's ship construction program for fiscal year 1965 provides for design, construction, equipment, and initial outfitting of one class I (modified) oceanographic survey ship—to be delivered about April 1967.

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

Funds appropriated for 1962 and 1963 provided for the construction of two class I semiautomated oceanographic ships. The funds requested herein provide for the construction of the bureau's first fully automated oceanographic ship, which will have characteristics that fall about halfway between the class I oceanographic survey ship (OSS) and class II hydrographic ship, but will have the capability of conducting the same type oceanographic surveys as the class I (OSS). These ships will participate in the oceanwide survey program designed to provide more accurate maps depicting the bottom topography, the gravitational and magnetic fields throughout the ocean areas, the ocean currents, and seasonal and average water temperatures and densities.

CONSTRUCTION AND EQUIPMENT

For expenses necessary for construction and equipment of magnetic, seismological, and other facilities as authorized by the Act of August 6, 1947 (33 U.S.C. 883i), $600,000, to remain available until expended.

Program and Financing (in thousands of dollars)

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $50 thousand; 1963, $37 thousand; 1964, $0; 1965, $59 thousand.

This appropriation will finance design, construction, and equipment of a magnetic and seismological facility to be constructed in the Pacific Northwest area of the United States and for architectural and engineering fees relative to an additional facility to be constructed in the future in the southeastern portion of the United States.

Funds previously made available by an allocation from the Public Works Acceleration appropriation are being utilized for construction of a magnetic and seismological observatory in Cayey Municipia, Puerto Rico. The observatory is being constructed on Federal property and will be completed about May 1, 1964.

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $1,500 thousand (1963 adjustments, −$114 thousand); 1963, $533 thousand; 1964, $533 thousand; 1965, $533 thousand.

[2] Reimbursements from non-Federal sources are derived from State and local governments and private industry.

Reimbursable program.—Special hydrographic, airport and geodetic surveys, geomagnetic and seismographic observations are undertaken, and the resulting data processed for use by other Federal agencies. Nautical, aeronautical and airport obstruction charts of the United States and its possessions are provided to user agencies when required. Reimbursements from non-Federal sources are primarily for special purpose geodetic and hydrographic surveys.

Federal Reserve Bank of St. Louis

The Office administers laws governing the granting of patents for invention and the registration of trademarks.

In 1963 a comprehensive reorganization of the patent examining corps was completed, providing the base for better manpower utilization and improved examining operations. The 1965 estimate provides for continued emphasis on the basic examining functions and on the research and development program. It includes provision for undertaking automation of the system of supplying patent copies, and modest staff increases to deal with increasing and uncontrollable workloads.

Receipts from fees were $8.4 million in 1963, and are estimated to be $9 million in 1964 and $9.3 million in 1965 under existing legislation. Pending legislation would increase fees to eventually recover approximately 75% of the cost of Patent Office operations.

1. *Examination and adjudication of patent applications.*—Applications are examined to determine the patentability of claimed inventions; and quasi-judicial functions are performed in appeal or interference proceedings within the Office. Specifications and drawings of successful applications are printed and the issuance of patents is regularly published.

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Patents:				
New applications received	85,265	85,046	87,000	89,000
Applications disposed of	89,051	75,922	87,000	89,000
Patents granted	51,343	54,287	60,000	60,000
Applications pending, end of year	197,397	209,131	209,000	209,000
Design patents:				
New applications received	4,964	4,841	5,000	5,000
Applications disposed of	4,299	4,857	5,000	5,000
Design patents granted	2,336	2,411	3,000	3,000
Applications pending, end of year	6,100	6,446	6,000	6,000

2. *Examination and adjudication of trademark applications.*—Applications are examined to determine the registrability of trademarks, and quasi-judicial functions are performed in appeal or adversary proceedings within the Office. Specifications and drawings of successful applications are printed and the issuance of registrations is regularly published.

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Trademark registrations:				
New applications received	24,866	24,224	25,000	26,000
Applications disposed of	20,363	23,498	25,000	27,000

Unobligated balance lapsing	356	----------	---------
New obligational authority (appropriation)	**28,165**	**28,700**	**35,000**

[1] Includes capital outlay as follows: 1963, $13 thousand; 1964, $0; 1965, $0.
[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $860 thousand (1963 adjustments, −$49 thousand); 1963, $971 thousand; 1964, $971 thousand; 1965, $1,171 thousand.

The proposed increase will strengthen the Bureau's in-house research programs and contract operations, principally in connection with the development of the National Standard Reference Data System. Program expansion is also planned for the general support and engineering measurements and standards activities. The Bureau's programs of basic and applied research, development of instruments and methods of measurement, and general technical services are classified under four major activities with nine subactivities.

1. *Standards missions*—(a) *Basic measurements and standards.*—This includes research, development, analysis, or specifications relating to existing or new standards for physical measurement; precise standard methods of measurement of physical quantities; and precise values of fundamental physical constants suitable for tying measurement systems together. (b) *Standard reference data.*—This includes programs arising as a result of the Bureau's responsibility for developing the National Standard Reference Data System and other programs concerned with standard reference data. Work is directed toward obtaining systematically evaluated numerical data in the physical sciences needed by scientists and engineers. These data are the numbers that describe the properties of nature, the strengths of high temperature materials, the masses of atoms, the rates of chemical reactions, the wavelengths of light in emission spectra, and many others. Programs involve analysis of needs, acquisition of data, conduct of research, processing, and compilation for dissemination of the data. (c) *Engineering measurements and standards.*—This includes research leading to technical information or measurement methodologies which will provide the basis for collaboration with recognized standardizing bodies in the development of codes, specifications, standards of practice and methods of testing technological devices, industrial products, and services. Expansion is planned to develop criteria for the performance and evaluation of industrial products and services. (d) *Standard reference materials.*—This includes analysis, research, and development of methodology leading to the production of special materials for the calibration of measuring systems, or for coordinated research on properties of materials. No program expansion is planned for this subactivity.

2. *Special central missions*—(a) *Radio propagation.*—This includes research on radio propagation characteristics, techniques, and systems; studies of the upper atmosphere; the collection and dissemination of physical and technical data on ionospheric and solar phenomena; the preparation of radio propagation predictions; and the issuance of warnings of solar and ionospheric disturbances. No program expansion is planned for this subactivity. (b) *Data processing.*—This includes the investigation of equipment, components, systems, and techniques suitable for the data processing and information handling activities of the Government and the rendering of assistance in their application to the operations of Government agencies. (c) *Advisory services.*—This includes services connected with the various technical programs in the other subactivities and covers dissemination of information to the general public, provision of consultative and advisory services and furnishing of specific technical information. No program expansion is planned for this subactivity.

3. *General support missions*—(a) *General research.*—This includes research conducted in order to keep up with developments in various technical fields and to maintain general scientific competence needed for effective accomplishment of the overall mission. Expansion will be directed to investigation of the processes of technical information flow and work with private industry to remove barriers to innovation in the industrial sector of the economy. (b) *Internal technical services.*—This includes programs of two general types: project-related capital equipment; and internal technical services, such as analytical, instrumentation, and mathematical services and operation of the linear accelerator (LINAC) and nuclear reactor. Expansion will be for the training of new scientists preparatory to operation of the nuclear research reactor and for the operation of the high energy accelerator.

4. *Additional capital for Working capital fund.*—This comprises all transfers of funds to the working capital fund for the purchase of scientific equipment.

RESEARCH AND TECHNICAL SERVICES (SPECIAL FOREIGN CURRENCY PROGRAM)

For [purchase of] *payments in* foreign currencies which the Treasury Department determines to be excess to the normal requirements of the United States, for necessary expenses of the National Bureau of Standards, as authorized by law, $500,000, to remain available until expended: *Provided,* That this appropriation shall be available, in addition to other appropriations to the Bureau, for [the purchase of] *payments in* the foregoing currencies. *(7 U.S.C. 1701, 1704; 15 U.S.C. 271–278e; 5 U.S.C. 596a; Department of Commerce Appropriation Act, 1964.)*

Financing:			
Unobligated balance brought forward	−600	−390	−10
Unobligated balance carried forward	390	10	10
New obligational authority (appropriation)	**500**	**500**	**500**

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $386 thousand; 1963, $744 thousand; 1964, $1,104 thousand; 1965, $817 thousand.

National Bureau of Standards responsibilities for basic and applied research, improvement of standards, and dissemination of information on properties of materials measurement techniques, and radio propagation are of sufficient breadth to permit utilization of research capabilities in other countries. The foreign currency program supplements the Bureau's existing program, allows an acceleration of research effort in selected areas, and permits economies to the Bureau's regular appropriations over the long term.

The 1965 program, authorized by section 104(k) of the Agricultural Trade Development and Assistance Act of 1954, represents no increase in the size of the program. Foreign currencies determined by the Treasury Department to be excess to normal requirements of the United States will be used in non-Soviet bloc countries where scientific talent is available. A cost of $20 thousand, U.S. dollars, charged to the appropriation for Research and technical services, will be required for the administration and technical supervision of the program.

PLANT AND FACILITIES

For expenses incurred, as authorized by section 1 of the Act of September 2, 1958 (15 U.S.C. 278c–278e), in the acquisition, construction, improvement, alteration, or emergency repair of buildings, grounds, and other facilities, including an addition to a [radio warning service building, a field site building, an ionospheric radar research facility, and an observatory facility] *radiation physics laboratory, an isotope separator facility, and a standard frequency broadcasting station*; and procurement and installation of special research equipment and facilities, therefor; [$3,000,000] *$3,900,000*, to remain available until expended. (*15 U.S.C. 271–278e; 40 U.S.C. 14a; 5 U.S.C. 596a; Department of Commerce Appropriation Act, 1964.*)

New obligational authority (appropriation)	**2,000**	**3,000**	**3,900**			

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $360 thousand; 1963, $6,435 thousand; 1964, $4,565 thousand; 1965, $622 thousand.

This will provide for construction and improvements to the plant and facilities of the National Bureau of Standards and procurement of major special facilities. The Bureau's laboratories and administrative offices occupy 86 buildings on a 68-acre tract in Washington, D.C. The Bureau also has a large laboratory on a 217-acre site at Boulder, Colo., and several small radio field stations, some of which are outside the continental limits. In addition, the Bureau has a new site near Gaithersburg, Md., on which facilities are being built to replace those in Washington, D.C.

Capital outlay—1. *Improvements and modifications.*—The budget includes $150 thousand for minor capital improvements of a general nature required for the Bureau's laboratories and field stations. Other minor improvements, when of a special, project-related character, are charged to the appropriation for Research and technical

services. Noncapital alterations are charged to the operating costs of this appropriation.

2. *General construction.*—The budget includes $1,515 thousand for construction of a neutron physics laboratory. Anticipated costs in 1965 include $970 thousand for additions to the Boulder laboratories financed in prior years as well as $814 thousand associated with the budget year project.

3. *Special facilities.*—This activity includes the acquisition of large equipment items and any building construction and land acquisition associated with them. The budget includes $500 thousand for the installation of an isotope separator facility, $300 thousand for the construction of a beam handling system addition to the linear accelerator, $215 thousand for the purchase of a data-logging computer facility, $250 thousand for the procurement of a magnetic core memory addition to the Pilot data processor, and $970 thousand for the replacement of a standard frequency and time interval broadcasting station. Anticipated costs in 1965 include $3,453 thousand for the construction of a nuclear research reactor and $1,547 thousand for other special facilities, all financed in prior years, and $2,075 thousand for the budget year projects.

Operating costs—1. *Improvements and modifications.*—Noncapitalized maintenance and repair projects are charged to operating costs. No new programs are anticipated in 1965.

New obligational authority (appropriation)			**30,000**	**7,713**	**7,000**				

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $31,490 thousand; 1963, $17,463 thousand; 1964, $28,081 thousand; 1965, $13,280 thousand.

This appropriation finances the construction, equipping, and occupancy of new laboratory, administrative, and service buildings now being constructed on a site near Gaithersburg, Md., to house the activities of the National Bureau of Standards now conducted in Washington, D.C. The new facilities are replacements for present facilities and do not provide for new programs, although they will house certain equipment for radiation physics research and large force measurements not heretofore available.

The first increment of the construction program was provided in the 1961 budget. In the ensuing 3 years additional major increments of the program provided for the construction of seven general purpose laboratory buildings, administration, shops, and warehousing buildings

Digitized for FRASER

Federal Reserve Bank of St. Louis

and completion of site development, utilities, and equipment. The 1965 budget provides for the final increment of the program, including construction of several special-purpose laboratory buildings and completion of moving and occupancy.

1. *Design and engineering.*—Detailed planning and preparation of architectural designs and engineering drawings are completed except for the special-purpose facilities. Estimated costs for 1965 cover principally preparation of invitations to bid, bid analysis, and awarding of construction contracts, and construction supervision.

2. *Site acquisition.*—Court action in the condemnation proceedings for the Gaithersburg site has been completed. No further costs are estimated under this activity after 1964.

3. *Construction.*—This activity includes the construction of laboratories and other buildings, including mechanical and electrical equipment, special laboratory services, site development, and utilities. Costs estimated for 1965 reflect continued activity on the items included in the second and third construction increments as well as initial activities under new contracts for special-purpose laboratory buildings.

4. *Equipment.*—Estimated costs for major scientific facilities are primarily for the large force measurement equipment financed in prior years. These facilities will be donated to the Bureau's Working capital fund and no depreciation charged against their use.

The 1964 budget completed the financing of equipment for the new facilities. The smaller items will be purchased through investment of the working capital and the cost will be recovered by depreciation charges made during the expected useful life of the respective items. Payment of $9,250 thousand from the Construction of facilities appropriation to the Working capital fund to provide the necessary capital has been authorized.

5. *Moving and occupancy.*—This activity includes the costs of moving and installing scientific apparatus as well as certain furnishings for offices, library, cafeteria, and other areas. Estimated costs for 1965 are for moving and occupancy costs associated with the radiation physics, administration, shops, and service buildings. The proposed appropriation will finance the balance of the cost of furnishings.

Summary of Sources and Application of Funds (in thousands of dollars)—**Continued**

	1963 actual	1964 estimate	1965 estimate
Revenues and other receipts (from program and financing)	51,067	64,462	71,933
Increase (—) in accounts receivable, net	—201	—245	—50
Applicable receipts	50,865	64,217	71,883
Budget expenditures	—3,516	—407	—783

The fund finances from Advances and reimbursements all operations of the National Bureau of Standards except major construction projects. The principal of the fund, as of June 30, 1963, consisted of $5 million in appropriations, $5.4 million in capital provided by appropriations of the Bureau, and $77.6 million in net donated assets. The Government investment is estimated to grow through donation of cash and other assets financed by National Bureau of Standards' appropriations to $168 million by June 30, 1965.

Operating costs—1. *Technical program.*—Research and technical services are conducted by the National Bureau of Standards on the request of other Government agencies and the public, as well as in support of the Bureau's own research program. The total research and development program conducted on contract with other agencies is expected to decline as the Bureau's own appropriation increases, although in certain of the Bureau's divisions the demands of the missile and space programs are expected to result in increases in other agency programs. The provision of mathematical computation services to other agencies and the provision of calibration services to the public and other agencies are also expected to increase.

2. *Plant improvement and special equipment.*—This activity includes the costs of the Working capital fund which are reimbursed from the Bureau's capital outlay appropriations. The plant improvements and special equipment procured are donated to the fund upon completion and carried as assets of the fund at cost.

Capital outlay.—Working capital of the fund is invested in equipment which is subject to depreciation charges. In 1965 the equipment requirements of the expanded Bureau research program will require an augmentation of working capital, which will be accomplished through payments to the fund for additional capital from the National Bureau of Standards' appropriation for Research and technical services. Some of the equipment for the new laboratories of the Bureau will be purchased as investments of the fund, the additional capital being provided by payments from the appropriation for Construction of facilities. All other equipment and facilities financed by Bureau appropriations are shown as donated assets of the fund.

Operating results.—Retained earnings at the end of each year are transferred to Treasury the year following.

WEATHER BUREAU

General and special funds:

SALARIES AND EXPENSES

For expenses necessary for the Weather Bureau, including maintenance and operation of aircraft; purchase of upper air supplies for delivery through December 31, of the next fiscal year; and not to exceed $10,000 for maintenance of a printing office in the city of Washington, as authorized by law; [$64,527,100] *$68,800,000.* (*15 U.S.C. 311–313, 325–328; 72 Stat. 783; Department of Commerce Appropriation Act, 1964.*)

Note.—Includes $200 thousand for activities previously carried under "Operations and Maintenance, Air Force." The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Weather measurements and forecasts	52,346	55,413	59,001
2. River and flood forecasts and warnings	1,885	1,885	1,951
3. Climatology	2,787	2,936	2,971
4. Administration	4,321	4,480	4,813
Total program costs, funded [1]	61,339	64,714	68,736

New obligational authority:			
Appropriation	60,735	64,527	68,800
Transferred to "Operating expenses, Public Buildings Service," General Services Administration (76 Stat. 728 and 77 Stat. 436)	−38	−29	
Appropriation (adjusted)	**60,697**	**64,498**	**68,800**

[1] Includes capital outlay as follows: 1963, $1,039 thousand; 1964, $900 thousand; 1965, $1,000 thousand.
[2] Selected resources as of June 30 are as follows:

	1962	*1963 adjustments*	*1963*	*1964*	*1965*
Stores	2,123		2,372	2,372	2,412
Unpaid undelivered orders	3,822	−101	3,652	3,672	3,696
Total selected resources	5,945	−101	6,024	6,044	6,108

The Weather Bureau measures, records, reports, forecasts, and distributes information on weather conditions and river stages for the benefit of U.S. commerce, industry, agriculture, and the general public.

1. *Weather measurements and forecasts.*—Regularly scheduled forecasts are issued for U.S. territory and waters with special emphasis on severe storms. Special forecast and advisory services are provided for international and domestic aviation; fire-weather forecasts are furnished to assist in conservation of timber resources; and fruit-frost forecasts and warnings are prepared for areas where such crops form a major economic interest. Surface and upper air weather measurements are taken at several hundred locations to serve forecasting requirements. Current weather information is disseminated widely for the benefit of aviation and other interests.

Expansion of the Bureau's observation and service facilities is designed to keep pace with more exacting air-traffic control requirements as well as to advance general weather services. The 1965 estimate provides for (1) the transfer of funding responsibility for operation of a weather station on Marcus Island from the U.S. Air Force, (2) operation and maintenance of new instrumental equipment, and (3) improvements in the weather measurements and forecasts program.

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

2. *River and flood forecasts and warnings.*—The hydrologic service furnishes flood warnings and public forecasts of river height and flow on the country's principal rivers and their tributaries. The 1965 estimate provides for expansion of the hydrologic computer program.

3. *Climatology.*—The climatological service seeks to determine and record the various types of climate, to explain the causes of these climates, their variation, trends, geographical locations, and the effect climate has on the economy of the Nation, and to communicate this intelligence in such a manner as to insure the fullest realization of its potential benefits. The increase for 1965 provides for (1) the systematization of records recall, security, and processing; and (2) the processing and summarization of marine weather records.

4. *Administration.*—This activity provides executive direction and administrative support to the Salaries and expenses, Research and development, Special foreign currency, Establishment of meteorological facilities, and Meteorological satellite operations appropriations. The increase in 1965 is required to implement improved systems and procedures, thereby increasing productivity and effectiveness, and eliminating existing deficiencies.

[1] Includes capital outlay as follows: 1963, $1,911 thousand; 1964, $200 thousand; 1965, $300 thousand.

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $1,431 thousand (1963 adjustments, −$202 thousand); 1963, $2,149 thousand; 1964, $2,513 thousand; 1965, $2,513 thousand.

Research is conducted to increase fundamental knowledge of the science of meteorology and to improve the accuracy and timeliness of weather forecasts; the development program is concerned with new instrumentation and procedures, including their test and evaluation.

1. *Meteorological*—(a) *Hurricane, tornado, and other severe storms.*—Investigations as to why and where these storms will form, when they will intensify, how they will move, and whether they can be modified to improve warnings and investigate future possibilities for modification of severe weather events. (b) *Satellite.*—Conduct of basic and applied research to explore new concepts of atmospheric dynamics which may be revealed through data newly acquired from meteorological satellites, together with exploratory studies of instrumentation suitable for satellite use. (c) *Atmospheric processes, forecasting, and observing techniques.*—Basic and applied research and development dealing with the atmosphere, its circulation and constitution, together with studies of the physics of clouds and precipitation, short and long-range weather forecasting techniques, development of instruments, and of the weather observation, forecasting, and dissemination system.

The increases in 1965 include equipping of a radar laboratory and expansion of meteorological satellite contract research, general circulation research, stratospheric research, air-sea interaction research, rocketsonde research, system analysis and design program, aviation weather research and development, and research in support of the world weather system.

2. *Hydrologic.*—Efforts are concerned with improving techniques for forecasting stream-flow and river heights and with the utilization of weather radar to permit issuance of flash flood warnings. The increase for 1965 provides for increased hydrologic investigation.

3. *Climatic.*—Methods of analysis and presentation of climatic information are developed for application to operational and planning aspects of business, industry, commerce, and agriculture. Increases in 1965 are for climatic research contracts.

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1963, $0; 1964, $180 thousand; 1965, $355 thousand.

The special foreign currency program will utilize foreign currencies which are excess to the normal requirements of the United States in order to supplement present Bureau research and development and to encourage greater cooperation in international meteorology and allied sciences. The surplus currencies requested in 1965 will be used for (1) a study of the uses of satellite data in numerical weather prediction, (2) improvement of upper air observations in Pakistan, (3) meteorological instrumental development, and (4) a variety of research investigations dealing with the climatology and hydrologic cycle of arid regions.

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $3,226 thousand (1963 adjustments, $184 thousand); 1963, $2,487 thousand, 1964, $3,510 thousand; 1965, $4,966 thousand.

The accuracy of weather measurements, forecasts, and warnings is being improved by the procurement and installation of new instrumental equipment and by the modernization of existing facilities. The 1965 estimate is to carry forward the modernization program begun in 1956 to make possible a more accurate weather forecasting and warning system.

The cost of operating and maintaining equipment installed under this appropriation is covered by the appropriation Salaries and expenses, Weather Bureau.

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

1. *Upper-air observational facilities.*—Consists of ground installations to continuously track radio transmitters carried to altitudes of 100,000 feet by sounding balloons. It also includes miniaturized equipment for use on shipboard to obtain measurements of high altitude weather conditions over the oceans.

2. *Weather surveillance radar.*—Provides a continuous picture of changing weather conditions up to 250 miles from the stations, facilitating the preparation of forecasts and increasing the advance-warning time.

3. *Surface observational facilities.*—Consists of instruments that measure, record and transmit cloud height, visibility, temperature, humidity, wind direction and velocity, precipitation and river stage data for use in weather and hydrologic forecasting and controlling air traffic.

4. *Communications and data processing equipment.*—Consists of storage and retransmission equipment for use on facsimile circuits so that weather analyses, including satellite cloud data, may be relayed to Weather Bureau offices; and ADP equipment to compile weather data for optimum use in forecasting, and processing and archiving these data for climatological use.

5. *Construction of facilities.*—Covers construction of office and housing units at places where these facilities are not available from any other source and construction of office space at airports where rent-free space is no longer available.

6. *Engineering and technical support.*—Provides staff for planning, site surveys, actual installation and initial calibration of equipment.

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $42,798 thousand (1963 adjustments, $3,312 thousand); 1963, $48,166 thousand (1964 adjustments, −$27,167 thousand); 1964, $40,609 thousand; 1965, $36,929 thousand.

The Weather Bureau is responsible for the establishment and operation of a national system for continuously observing worldwide meteorological conditions by space satellites; for processing, analysis, and archiving of the data thus obtained; for the dissemination of the data for use in weather forecasting and service activities.

1. *Spacecraft and launching.*—This activity includes the procurement of spacecraft and launch vehicles, and the launching of the spacecraft.

2. *Command and data acquisition.*—This activity includes the establishment and operation of ground facilities for command of the spacecraft and acquisition of observational data, and the transmission of the data to the National Weather Satellite Center at Suitland, Md.

3. *Data processing, analysis, and archiving.*—The National Weather Satellite Center converts the satellite data into forms suitable for use in current weather forecasting and meteorological services, and processes it for archival use to meet research and climatological needs. Processed data are disseminated to the domestic and international users.

4. *Technical management.*—This activity provides technical support for the meteorological satellite program.

On July 19, 1963, Public Law 88–67 repealed the Inland Waterways Corporation Act, and directed the Secretary of Commerce to pay into the Treasury, as miscellaneous receipts, all future receipts and all remaining funds of the Corporation.

During fiscal year 1964, all known liabilities have been paid, and the contingent liability for one suit remaining in the courts will become payable, if plaintiff should be successful, out of funds appropriated as required to pay judgments.

The corporate fund balance has been returned to the Treasury, and future collections will be deposited as miscellaneous receipts.

3. Deduct recapture of excess profits	3,108	4,000	4,500
Net obligations (object class 41)	188,315	200,000	200,000
Financing:			
Unobligated balance lapsing	11,685		
New obligational authority (contract authorization—permanent indefinite)	**200,000**	**200,000**	**200,000**

This appropriation provides for payment of subsidies to ship operators in order to maintain a United States flag merchant marine in support of U.S. foreign commerce and capable of serving as a naval auxiliary in time of national emergency. To be eligible for subsidy, an operator must provide regular berth services on an essential trade route, show that Government aid is necessary to place the operation on a parity with its foreign competition, and employ vessels constructed in the United States and manned by U.S. citizens. The operations for which subsidy support is projected are detailed in the following table:

	Subsidized operators	*Maximum voyages under contract*	*Voyages undertaken*	*Vessels employed*	*Estimated obligation (thousands)*
Past years:					
Calendar years 1947–1960	--	------	19,718	---	$1,199,778
Calendar year 1961	15	1,984	1,660	302	170,404
Calendar year 1962 (6 months)	15	[1] 2,081	866	316	92,018
Fiscal year 1963	15	2,081	1,811	316	188,315
Budget estimate existing contracts:					
Fiscal year 1964	15	2,081	1,920	316	200,000
Fiscal year 1965	15	2,081	1,941	316	200,000

[1] Annual.

The budget estimate reflects contract authority for conduct of 1,941 voyages under approved contracts during 1965.

During calendar year 1962 the 15 subsidized operators incurred business expenses totalling $812.8 million in the operation of 316 ships. The items of expense for which subsidies are paid and amount thereof prior to recapture are detailed in the following table for calendar year 1962 voyages (in millions of dollars):

	Wages	*Subsistence*	*Maintenance and repair*	*Insurance*	*Other vessel operating expense*
Total expense	219.5	12.7	30.0	31.1	112.1
Subsidy accrual	158.7	3.4	10.5	14.3	-----
Average subsidy rate	72.3	26.5	35.1	46.0	-----
Percent of each item to total	84.9	1.8	5.6	7.7	-----

Passenger and freight services.—During calendar year 1962, 31 passenger or passenger/cargo ships and 285 cargo ships were engaged in subsidized voyages over routes detailed in the following table:

	From ports on—			
	Atlantic	*Gulf*	*Pacific*	*Great Lakes*
To: Northern Europe	52	15	--	2
Mediterranean	25	8	--	2
Indian Ocean	8	--	8	--
Far East	9	15	40	--
Australia and Oceania	6	--	5	--
South America	29	12	14	--
Africa	25	12	--	--
Caribbean	7	4	--	--
Round-the-World	18	--	--	--

Recapture of excess profits.—All contracts for operating subsidy provide that 50% of the net profits earned from the contractors' subsidized operations and services incident thereto which over a 10-year period exceed 10% of capital necessarily employed shall be withheld from payments made by the Government. This recapture is effected annually based upon cumulative profits earned since the beginning of the recapture period. The estimate for the current and budget years, shown in the program and financing schedule, assumes that the past year profit experience of each operator will be continued.

Status of unfunded contract authorization.—The computation and approval of final subsidy rates and audit of annual accountings will make it possible to make payments of 100% of subsidy payable on account of operations prior to December 31, 1960. The $107.5 million unpaid subsidy, as of June 30, 1965, represents a backlog consisting largely of amounts withheld pending final rate and audit determinations for operations subsequent to calendar year 1960, plus estimated amounts earned in the final quarter of 1965 for which bills will not be presented or paid during the year and the increase required to meet wage increases resulting from the 1961 negotiations between labor and management.

The amount of unpaid subsidy was greatly reduced by the authority granted in Public Law 87–243 increasing payments based on estimates from 75% to 90%.

Status of Unfunded Contract Authorization (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Unfunded balance brought forward	146,125	114,040	97,540

1. *Transportation systems analyses.*—Conduct of transportation systems analysis to provide a sound basis for relating trade requirements to specific ship types and to ports and terminals, and to measure expected return of research efforts in development of new techniques, facilities, and equipment.

2. *Mechanized ship development.*—Concentrated effort leading to an orderly transition from conventional to mechanized ship operation through engineering and design, and the fabrication and testing of components and integrated automated systems for ship application.

3. *Advanced ship design and development.*—Continued work on advanced ship design, model testing, and supporting research in the fields of hydrodynamics, oceanography, structures, and cargo handling.

4. *Labor and management problems.*—Studies of labor and management problems arising from increased mechanization of ship operations and cargo handling.

5. *Vessel supporting services.*—Servicing and maintaining the N.S. *Savannah*, and supporting functions related to its operation.

6. *Experimental ship operations.*—Operation of the *Savannah* is funded through the Vessel operations revolving fund.

SALARIES AND EXPENSES

For expenses necessary for carrying into effect the Merchant Marine Act, 1936, and other laws administered by the Maritime Administration, [$15,500,000,] *$15,750,000* within limitations as follows:

Administrative expenses, including not to exceed $1,125 for entertainment of officials of other countries when specifically authorized by the Maritime Administrator, and not to exceed $1,250 for representation allowances, [$8,854,000] *$9,850,000*;

Maintenance of shipyard facilities and operation of warehouses, [$696,000] *$500,000*;

Reserve fleet expenses, [$5,950,000] *$5,400,000*. (*Department of Commerce Appropriation Act, 1964.*)

Note.—Estimate for 1965 includes $26 thousand transferred from Maritime training appropriation. The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

1. *Administrative expenses.*—Shown herein are the expenses of administering most of the functions of the Maritime Administration, including operating-differential subsidy contracts, continuing ship replacement activities, ship operations and chartering, auditing, property management, and State Marine Schools liaison. Administrative expenses in connection with the U.S. Merchant Marine Academy, general agency ship operation, research and development, and new ship construction are provided in other funds.

2. *Shipyard and warehouse expenses.*—One Government-owned reserve shipyard will be maintained in a partial state of readiness for defense purposes. Provision is made for four warehouses to store materials and equipment for vessel operations, repair and outfitting of reserve fleet ships, and reserve shipyards.

3. *Reserve fleet expenses.*—Provision is made for the preservation and security of 987 merchant vessels maintained for national defense purposes and limited preservation of 400 Liberty ships as a commercial shipping reserve.

MARITIME TRAINING

For training cadets as officers of the Merchant Marine at the Merchant Marine Academy at Kings Point, New York; not to exceed $2,500 for contingencies for the Superintendent, United States Merchant Marine Academy, to be expended in his discretion; and uniform and textbook allowances for cadet midshipmen, at an average yearly cost of not to exceed $300 per cadet; [$3,495,000] *$4,484,000, of which $750,000 shall remain available until expended for construction of a library building: Provided,* That, except as herein provided for uniform and textbook allowances, this appropriation shall not be used for compensation or allowances for cadets: *Provided further,* That reimbursement may be made to this appropriation for expenses in support of activities financed from the appropriations for "Research and development" and "Ship construction". (*Department of Commerce Appropriation Act, 1964.*)

Note.—Estimate for 1965 excludes $26 thousand transferred to "Salaries and expenses" appropriation. The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

This program provides for the training of officers at the Merchant Marine Academy at Kings Point, N.Y., for service in the maritime industry. A 4-year course of training is provided, including 1 year of sea duty, designed to qualify graduates for licenses as merchant marine officers. The Academy provides subsistence, quarters, tuition, uniform and textbook allowances and medical care for the cadets. A cadet training liaison staff in Washington, D.C., provides staff assistance to the Maritime Administrator on training matters and assists in the selection and appointment of cadets.

GENERAL PROVISIONS—MARITIME ADMINISTRATION

No additional vessel shall be allocated under charter, nor shall any vessel be continued under charter by reason of any extension of chartering authority beyond June 30, 1949, unless the charterer shall agree that the Maritime Administration shall have no obligation upon redelivery to accept or pay for consumable stores, bunkers, and slopchest items, except with respect to such minimum amounts of bunkers as the Maritime Administration considers advisable to be retained on the vessel and that prior to such redelivery all consumable stores, slopchest items, and bunkers over and above such minimums shall be removed from the vessel by the charterer at his own expense.

Notwithstanding any other provision of this Act, the Maritime Administration is authorized to furnish utilities and services and make necessary repairs in connection with any lease, contract, or occupancy involving Government property under control of the Maritime Administration, and payments received by the Maritime Administration for utilities, services, and repairs so furnished or made shall be credited to the appropriation charged with the cost thereof: *Provided*, That rental payments under any such lease, contract, or occupancy on account of items other than such utilities, services, or repairs shall be covered into the Treasury as miscellaneous receipts.

No obligations shall be incurred during the current fiscal year from the construction fund established by the Merchant Marine Act, 1936, or otherwise, in excess of the appropriations and limitations contained in this Act, or in any prior appropriation Act, and all receipts which otherwise would be deposited to the credit of said fund shall be covered into the Treasury as miscellaneous receipts. (*Department of Commerce Appropriation Act, 1964.*)

[1] Balance of selected resources are identified in the statement of financial condition.

Under the Merchant Marine Act, 1936, the Maritime Administration received authority to insure construction loans and mortgages with aggregate outstanding balances of up to $1 billion, on certain types of cargo- and passenger-carrying vessels.

Budget program.—The fund reflects the sale in 1964 of the SS *Titan* and the SS *Goldstream* for an estimated $10 million and $2 million, respectively, involving a total of $9 million in mortgages payable over a period of 15 years. A loss of $3,425 thousand is estimated to be incurred incident to the sale of these vessels, which is the difference between the book value at time of sale of $15,425 thousand and the sales price of $12 million. The SS *New Yorker* has been time chartered. The excess proceeds are to be used to pay all debt service obligations to the Maritime Administration. No additional mortgage defaults are reflected in the estimate for 1964 and 1965.

Financing.—The redemption of defaulted loans or mortgages is financed from insurance premiums and fees, together with such amounts as may be made available by borrowings from the Treasury Department, pursuant to Public Law 85–520 (72 Stat. 358). During 1963 and 1964, Treasury loans totaling $11.1 million were made to purchase the defaulted mortgages guaranteed by the Maritime Administration on the SS *Titan*, SS *Goldstream* and SS *New Yorker*.

Operating results and financial condition.—As of June 1963, balances outstanding plus commitments for additional ship mortgages total $431 million. The outstanding balances for loans and mortgages at the end of 1964 and 1965 are projected at $504 and $578 million, respectively. During 1964 an advance of $266 thousand was made to a mortgagor with depleted working capital to meet a semiannual mortgage installment. No additional funds are programed for advances in 1965. Earnings,

resulting from premium and interest receipts, are retained to meet possible additional requirements for advances to mortgagors. The fund in 1964 reflects (a) repayment of $5,100 thousand of borrowings from Treasury, and (b) liquidation of liability to the general fund of $1,833 thousand in 1964 and $303 thousand in 1965.

[1] Balances of selected resources are identified on the statement of financial condition.

This fund, created in 1951, finances direct operation and charter of cargo vessels for transport of military and national interest cargo. It is also used for the operation of Government-owned experimental vessels (70 Stat. 531).

Budget program—1. *Vessel operations expense.*—Cargo vessels are operated by private operators as agents of the Maritime Administration to carry shipments for the Military Sea Transportation Service.

2. *Charter operations.*—As of June 30, 1963, there were three Government-owned vessels under charter to private operators.

3. *Experimental ship operations.*—The 1965 estimate provides for the costs associated with operation and the maintenance of the NS *Savannah* through June 30, 1965. Included are crew salaries and training expenses, subsistence, maintenance and repair of the vessel, maintaining and operating the nuclear propulsion plant, insurance, port expense, service and husbanding contracts, agent's compensation, procurement of spare parts, etc., through June 30, 1965. AEC will continue to fund a portion of NS *Savannah* costs through the first quarter of 1965, at which time the ship will be operated solely for the account of the Maritime Administration. In 1965 the ship will make domestic and foreign voyages.

Financing.—Operations are financed from revenue.

Operating results and financial condition—1. *Vessel operations.*—Rates charged the Military Sea Transportation Service cover full costs arising under general agency agreement for ship operations. During 1962 the fund was charged with a loss as a result of inventory adjustments resulting from the sales of surplus warehouse stock.

2. *Charter operations.*—A net income of $71 thousand will result over the 3-year period after meeting $195 thousand in costs for inventory purchases.

3. *Experimental ship operations*—NS *Savannah.*—The full costs of the NS *Savannah* program are charged to the fund; however, costs for maintaining and operating the nuclear propulsion plant and related costs, including service contracts, test and trials, associated crew salaries, etc., and procurement of spare parts, $2,377 thousand in 1963, $2,100 thousand in 1964, and $800 thousand in 1965, are reimbursed to the fund from AEC. Operating cost will also be offset by revenue from passenger and commercial cargo estimated at $400 thousand in 1965. The fund will also be reimbursed for losses incurred in operation of the *Savannah* from the appropriation Research and development estimated at $1,890 thousand for 1964 and $4,950 thousand for 1965. The net loss of $386 thousand in 1963 for experimental ship operations is the result of the fund absorbing certain prior year *Savannah* costs and costs incident to the maintenance and operation of the servicing vessel, *Atomic Servant.*

[1] Balances of selected resources are identified on the statement of financial condition.

This fund provides war risk insurance in the event that commercial insurance is not available at reasonable terms and conditions (46 U.S.C. 1281, 1283). Commercial war risk insurance policies are at present subject to an automatic termination clause upon the outbreak of war, (whether there be a declaration of war or not) between any of the following countries: United States of America, United Kingdom (or any other member of the British Commonwealth), France, the Union of Soviet Socialist Republics, the People's Republic of China, and exclude any claim for loss, damage or expense arising out of any prior hostile act or acts by any of the said countries resulting in such outbreak of war and occurring within a period of 90 days preceding such outbreak of war.

As of June 30, 1963, interim binders for war risk hull, protection and indemnity, and Second Seamen's insurance which become effective upon the outbreak of war, had been issued covering approximately $13 billion of insurance. War risk insurance was also in effect on six American vessels under construction in shipyards in the United States, covering the prelaunching period, totaling approximately $40 million of insurance.

Budget program.—At the request of the Secretary of the Navy, Second Seamen's war risk insurance is provided without premium, as authorized under section 1205 of title XII of the Merchant Marine Act of 1936, on tankers operated for the account of the Military Sea Transportation Service. On June 30, 1963, a total of 20 tankers were covered under this program. All losses on such insurance paid through this fund are reimbursed to the fund by the Secretary of the Navy. Expenses of the fund therefore consist only of fees paid to underwriting agents and for contract appraisal costs.

Financing.—Transfer of $10 million is authorized from the Vessel operations revolving fund if necessary as an emergency measure (65 Stat. 746). To date no transfers have been made and none are anticipated in 1964 or 1965. In addition, revenue is provided by fees paid for the insurance of interim binders and premiums paid on builder's risk insurance.

Operating results.—The Government's investment consists entirely of retained earnings totalling $3.2 million on June 30, 1963. Retention of these earnings is necessary for this program to get underway immediately upon the outbreak of a national emergency.

[1] Reimbursements from non-Federal sources include payments for repairs, services, and utilities furnished lessees of Maritime-controlled property, donations to the Merchant Marine Academy at Kings Point, N.Y. (50 U.S.C. 1154), proceeds from turn-in of personal property (40 U.S.C. 481(c)), provision of statistical services (15 U.S.C. 189(a), 192), refund of terminal leave payments (5 U.S.C. 61b), and jury fees (5 U.S.C. 30p).

The Maritime Administration will receive reimbursements from the Department of Agriculture for storage of grain in reserve fleet vessels (through 1964) and for participation in the surplus dairy products program; Department of State for maintenance of a record of ship characteristics of vessels belonging to NATO nations; Department of Defense for work in connection with preservation and maintenance of surplus merchant-type Navy vessels; the Agency for International Development for the training of foreign nationals in the broad field of maritime activities; the Atomic Energy Commission for its share of the administrative cost relating to testing and operation of the NS *Savannah;* and the Department of Commerce for administrative expenses incurred in connection with construction of vessels for account of the Coast and Geodetic Survey.

Reimbursements are made to the appropriation for Salaries and expenses from the appropriations for Ship construction and Research and development to cover administrative expenses incurred in connection therewith.

BUREAU OF PUBLIC ROADS

General and special funds:

LIMITATION ON GENERAL ADMINISTRATIVE EXPENSES

(Trust fund)

Necessary expenses of administration and research (not to exceed [$43,800,000] *$48,750,000*), including maintenance of a National Register of Revoked Motor Vehicle Operators' Licenses, as authorized by law (74 Stat. 526), and purchase of [fifty] *twenty-five* passenger motor vehicles of which [forty-four] *sixteen* shall be for replacement only, shall be paid, in accordance with law, from appropriations made available by this Act to the Bureau of Public Roads and from advances and reimbursements received by the Bureau of Public Roads.

Of the total amount available from appropriations of the Bureau of Public Roads for general administrative and research expenses pursuant to the provisions of title 23, United States Code, section 104(a), $100,000 shall be available for carrying out the provisions of title 23, United States Code, section 309. (*23 U.S.C. 303, 307, 313; Department of Commerce Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $615 thousand; 1963, $1,007 thousand; 1964, $1,007 thousand; 1965, $1,007 thousand.

Expenses for administration of the Federal-aid highway programs and for carrying on highway research are met by deductions from Federal-aid authorizations. Administrative services for other programs of the Bureau of Public Roads and for road construction programs of other Federal agencies are initially financed from this activity, and reimbursements of their pro rata share of administrative costs are collected periodically from these programs.

1. *Engineering and administration.*—Provides for direction and management of field operations and development of policies and procedures to implement highway legislation. The field operations are organized in 10 regions with division offices in each of the States, the District of Columbia, and Puerto Rico. These offices are responsible for administering the Federal-aid highway programs within the States; assisting in developing adequate State programs for highway planning, research, engineering, construction, and maintenance; and carrying out direct Federal highway projects. Increases provide additional staff to permit more adequate field review of State highway department construction and right-of-way operations.

2. *Audits and investigations.*—Provides for the audit of State claims; comprehensive review and evaluation of all activities and programs of the Bureau and the States; and investigation of alleged irregularity, fraud, land speculation, collusion, impropriety of action, or any other violation of or noncompliance with law, rules, and regulations. Additional investigators and auditors are provided.

3. *Highway planning.*—Provides for systematic current and long-range planning, broad programing of highway development, and supervision of State planning accomplished with 1½% grant funds. This activity will be strengthened in 1965.

4. *Highway research and development.*—Provides for direct and contract research and development projects. Supervision is exercised in coordinating research carried out with 1½% grant funds provided the States. Contract research funds are substantially increased.

5. *Highway safety.*—Provides leadership and support for highway safety activities designed to assist in reducing the large human and economic loss to the Nation through highway accidents. Support of the National Driver Register Service, the President's Committee on Traffic Safety, and the Interdepartmental Highway Safety Board is provided under this activity.

6. *Training programs.*—Provides for recruitment, assignment to training courses, and the placement within the organization of college graduates.

Transfer from "Highway trust fund" to liquidate contract authorization	**3,249,200**	**3,249,150**	**3,650,000**

Grants are made to States for construction and improvement of Federal-aid highways. Authorizations are provided in the Federal-Aid Highway Act of 1956 and subsequent highway legislation to cover 90% of the costs of completing the 41,000-mile National System of Interstate and Defense Highways and to match State funds on a 50–50 basis for the primary, secondary, and urban programs. The Federal share of the cost is increased in those States with large areas of public domain. Payments to the States are made out of transfers from the Highway trust fund into which are deposited certain percentages of tax receipts on motor fuel, tires and tubes, tread rubber, trucks, buses, trailers, and truck use.

The Federal-Aid Highway Act of 1961 authorized additional appropriations for the Interstate program which, based upon the latest estimated cost to complete the system, will insure the orderly prosecution of the program and completion by 1972 as was intended by the Congress in enacting the 1956 Highway Act. The 1961 Act also provided increased revenues to finance these increased authorizations. The Federal-Aid Highway Act of 1962 provided $975 million for 1965 and legislation will be proposed to provide the same amount for each of the years 1966 and 1967 to continue the Federal-aid primary, secondary, and urban programs. These authorizations are available for use in the year prior to the year for which authorized.

As of October 1, 1963, more than 15,400 miles of the 41,000-mile Interstate System were open to traffic. Approximately 71% (10,933 miles) was built or improved under the Federal-aid Interstate program, most of it under the 90% Federal, 10% State matching program launched in 1956. Toll roads, bridges, and tunnels incorporated in the system totaled 2,293 miles. In addition to the sections open to traffic, 5,449 miles were under construction with Interstate funds, and engineering and right-of-way acquisition was in progress on another 11,151 miles. Thus, some form of work was underway or completed on 32,026 miles of the 41,000-mile system—about 78% of the total system mileage.

Construction projects involving 160,162 miles in the regular Federal-aid program (primary, secondary, and urban) have been completed since July 1, 1956, at a total cost of $10.91 billion, and contracts involving 24,260 miles at a cost of $3.27 billion were authorized or underway on October 1, 1963. In addition, $774 million of engineering and right-of-way acquisition work had been completed and $631 million was underway.

Actual and estimated progress of Federal-aid programs is summarized in the following table:

1. *Construction.*—Main highways within or adjacent to the national forests are constructed and improved. Projects are jointly selected by the States, the Forest Service, and the Bureau of Public Roads on the basis of their contribution to meeting traffic requirements within the national forests. Authorizations are apportioned by States on the basis of a formula which uses as factors the national forest area and value in each State. Contract authorizations of $33 million are available for 1963 and 1964. An additional $33 million authorization will be requested to continue this program in 1965.

The 1965 estimate of $33 million finances the balance of the 1963 authorization which was provided by the Federal Highway Act of 1960 and $29.1 million of the 1964 authorization provided by the Federal-Aid Highway Act of 1962.

Actual and estimated progress of the program is summarized in the following table (dollars in thousands):

Fiscal year	*Annual authorization* [1]	*Miles completed*	*Unobligated balance, end of year*	*Obligations for projects*	*Expenditures*
1959	$33,000	429	$38,490	$32,250	$27,798
1960	33,000	481	43,733	26,879	27,812
1961	33,000	469	43,478	31,949	30,900
1962	33,000	404	33,994	41,100	29,955
1963	33,000	471	36,602	28,926	38,794
1964	33,000	550	37,000	32,850	34,144
1965	[2] 33,000	410	37,000	31,493	33,000

[1] Each fiscal year authorization becomes available for obligation not later than January 1 in the preceding fiscal year.

[2] Under proposed legislation.

2. *Administration.*—In addition to administration this covers the costs of engineering supervision of the program.

1. *Construction.*—Highways are constructed and improved through public lands in those States with large areas of such lands. Funds for this program are available a year in advance of the year for which authorized. Contract authorizations totaling $24 million are available during 1963 and 1964. An additional $3 million will be requested to continue this program in 1965.

The 1965 appropriation estimate finances the balance of the 1963 authorization and $5.7 million of the 1964 authorization, both of which were provided by the Federal-Aid Highway Act of 1962.

Status of Unfunded Contract Authorization (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Unfunded balance brought forward		12,000	6,000
Contract authorization	12,000		
Unfunded balance carried forward	−12,000	−6,000	−6,000
Appropriation to liquidate contract authorization		**6,000**	

The 1,555-mile Central American section of the Inter-American Highway is being constructed in cooperation with the Republics of Guatemala, El Salvador, Honduras, Nicaragua, Costa Rica, and Panama. These republics pay one-third of the cost of highways through their countries and have assumed responsibility for future maintenance.

The Federal-Aid Highway Act of 1962 (76 Stat. 1146) authorized an additional appropriation of $32 million, including $12 million in contract authority, to complete the highway to acceptable standards. The 1964 appropriation provided additional obligational authority of $9 million. The available $21 million, together with the $4 million being requested for 1965, will provide $25 million of the total $32 million authorization. The remaining $7 million will be required in 1966.

The following table reflects the amount of work, by countries, that will be obligated in the 3 years (in thousands of dollars):

	Fiscal years			
	1964	*1965*	*1966*	*Total*
Guatemala	2,207	6,489		8,696

Total amount available	3,763,627	4,230,926	4,238,926
Transfers and balances: Transferred to—			
"Federal-aid highways (trust fund)"	3,016,578	3,549,700	3,648,923
"Improvement of the Pentagon road network (trust fund)"	123	1,300	1,077
Balance carried forward:			
Cash	69,183	70,000	70,000
U.S. securities (par)	677,743	609,926	518,926
Total transfers and balances	3,763,627	4,230,926	4,238,926

The Highway Revenue Act of 1956 (70 Stat. 374) provides for the transfer from the general fund of sums equal to certain percentages of taxes received on gasoline, diesel fuel, trucks, buses, tires, etc. The Secretary of the Treasury estimates the amounts to be so transferred. In turn, annual appropriations are authorized from this trust fund to meet expenditures for Federal-aid highways. Amounts in the fund not currently required are invested in U.S. securities, and interest thereon is added to the fund.

In order to provide revenues which will permit completion of the Interstate System by 1972 and continue the Federal-aid primary, secondary and urban highway programs at authorized levels anticipated during that period, the Federal-Aid Highway Act of 1961 increased the rates on certain taxes deposited into the Highway trust fund and extended the fund to September 30, 1972.

Legislation has been proposed to retain aviation and motorboat gas tax revenue in the general fund instead of continuing to transfer it to the Highway trust fund.

The status of the fund is as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*

DEPARTMENT OF DEFENSE—MILITARY

MILITARY PERSONNEL

ACTIVE FORCES

The following narrative statement covers the active duty appropriations for the Army, Navy, Marine Corps and Air Force.

1. *Pay and allowances of officers.*—This provides for the pay and allowances of officers of the military service on active duty.

2. *Pay and allowances of enlisted personnel.*—This provides for the pay and allowances of enlisted persons of the military service on active duty, payments for initial issues and replacement clothing under the monetary clothing allowance system.

3. *Pay and allowances of cadets and midshipmen.*—This provides for the pay and allowances of cadets and midshipmen at the three service academies, and aviation cadets.

Legislation will be proposed to provide for an increase in the basic pay of military personnel, effective October 1, 1964. Estimates for the purpose are anticipated for separate transmittal.

The numbers of active duty military personnel provided for are shown in the following table:

YEAR-END NUMBER

	1963 actual	*1964 estimate*	*1965 estimate*
Defense total	2,697,689	2,686,821	2,680,721
Officers	333,372	337,233	337,378
Enlisted	2,354,272	2,339,087	2,332,855
Academy cadets and midshipmen	8,619	9,303	9,481
Aviation cadets	1,426	1,198	1,007
Army	975,155	971,527	973,999
Officers	107,769	111,726	112,010
Enlisted	865,540	857,401	859,451
Military Academy cadets	1,846	2,400	2,538
Navy	664,207	669,992	677,896
Officers	75,411	76,446	77,348
Enlisted	584,044	588,876	595,898
Naval Academy midshipmen	4,113	4,048	3,983
Aviation cadets	639	622	667
Marine Corps	189,683	190,000	190,060
Officers	16,737	16,831	17,340
Enlisted	172,541	172,781	172,380
Aviation cadets	405	388	340
Air Force	868,644	855,302	838,766
Officers	133,455	132,230	130,680
Enlisted	732,147	720,029	705,126
Air Force Academy cadets	2,660	2,855	2,960
Aviation cadets	382	188	---

AVERAGE NUMBER

	1963 actual	*1964 estimate*	*1965 estimate*
Defense total	2,700,872	2,684,630	2,686,814
Officers	333,267	335,569	339,056
Enlisted	2,357,321	2,338,804	2,337,635
Academy cadets and midshipmen	8,808	8,894	9,109
Aviation cadets	1,476	1,363	1,014

AVERAGE NUMBER—Continued

Air Force	872,222	865,089	848,278
Officers	133,853	133,253	131,956
Enlisted	735,588	728,985	713,577
Air Force Academy cadets	2,441	2,503	2,686
Aviation cadets	340	348	59

Additional amounts will be proposed for supplemental appropriations for 1964 to support the numbers of military personnel in the above table. Supplemental appropriations for 1964 are also anticipated for separate transmittal to provide funds for the additional costs resulting from the enactment of legislation effective October 1, 1963, increasing the pay and allowances of certain military personnel.

Selected enlisted personnel in critical skill areas and a limited number possessing special proficiency in other military skills are provided additional pay. The numbers and rates provided for are shown in the following table:

YEAR-END NUMBER

4. *Subsistence of enlisted personnel.*—This provides for the purchase of food supplies for issue as rations to enlisted personnel, including emergency and operational rations. In addition, it provides for a cash allowance paid to enlisted personnel who are given permission to mess separately or who are stationed at places where rations in kind are not available.

5. *Permanent change of station travel.*—This provides for permanent change of station travel for individuals and groups of military personnel and their dependents, including dislocation and separation travel allowances, storage of household goods in commercial facilities, and transportation of personal property. Payment for services furnished by the Military Sea Transportation Service and Military Air Transport Service for transportation to and from overseas of military personnel, their dependents, household goods, and automobiles is also included.

6. *Other military personnel costs.*—This provides for expenses of apprehension of deserters and escaped military prisoners, payment of interest on money deposited by enlisted personnel, and payment of death gratuities to beneficiaries of military personnel.

General and special funds:

MILITARY PERSONNEL, ARMY

For pay, allowances, individual clothing, subsistence, interest on deposits, gratuities, permanent change of station travel (including all expenses thereof for organizational movements), expenses of temporary duty travel between permanent duty stations, for members of the Army on active duty (except those undergoing reserve training); [$3,785,000,000] *$4,231,000,000,* and, in addition [$100,000,000] *$75,000,000* which shall be derived by transfer from the Army stock fund and the Defense stock fund[, and $50,000,000 which shall be derived by transfer from the Army industrial fund]. Under existing legislation, 1964.—Additional funds are required to provide for the costs of continuing on active duty until June 30, 1964, the approved programed military personnel strength of the Air Force.

RESERVE FORCES

The following narrative statement covers the appropriations for the Reserve components of the Army, Navy, Marine Corps, and Air Force.

1. *Reserve and National Guard personnel.*—This program provides funds for training members of the Ready Reserve required for early mobilization needs of the Active Forces. Most of the paid Reserve components personnel perform 48 or 24 drills and attend 2 weeks of active duty for training each year. Other personnel not requiring as intensive training receive only a period of active duty for training (usually 2 weeks) during the year. Active duty for basic training is provided for personnel enlisting in a Reserve component who have not previously received military training. Service schools and special tours of active duty training provide additional training for limited numbers of the Ready Reserve.

The Army Reserve and the Army National Guard programed end strengths are as follows:

	1964 estimate	*1965 estimate*
Army Reserve	300,000	300,000
Army National Guard	400,000	400,000
Total	700,000	700,000

These personnel strengths have been authorized and programed, subject to the following provisions:

1. All units maintain at least 90% Military Occupational Specialty qualified personnel.

2. The Reserve components will apply the same recruiting standards as the Active Army.

3. No units will be permitted to exceed the authorized strength except those specifically authorized excess strengths to accommodate reservists on drill pay status who have been displaced by the realinement of the Army's reserve forces.

It is estimated that under these provisions it will be possible to obtain the participation of the following numbers of Reserve component personnel in paid drill training by the ends of 1964 and 1965 within the programed personnel strengths of 700,000.

	1964 estimate	*1965 estimate*
Army Reserve	264,000	285,000
Army National Guard	376,000	395,000
Total	640,000	680,000

The numbers of Reserve component personnel estimated to participate in the paid training programs are summarized in the following table:

YEAR-END NUMBER

	1963 actual	*1964 estimate*	*1965 estimate*
Defense total	964,361	1,050,407	1,065,389

Total	124,026	195,526	142,185	124,713

2. *Reserve officer candidates.*—The Reserve Officers' Training Corps program provides training for reserve officer candidates who have enrolled in the course while attending a collegiate institution at which an ROTC unit has been established. The curriculum includes instruction in military and academic subjects together with a summer active duty training period with the Active Forces. College graduates who satisfactorily complete the 4-year program are commissioned and are either

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

ordered to active duty for a minimum period of 2 years or to a 3- to 6-month period of active duty training.

The Navy also provides training for candidates for commissions as Regular officers who are selected on a nationwide competitive basis, appointed as midshipmen and required to complete a 4-year military training program while attending at Government expense one of the 53 collegiate institutions at which Naval ROTC units have been established. Successful candidates, commissioned in the Regular Navy or Marine Corps, become career officers who are required to serve at least 4 years on active duty.

Students attending other colleges or universities may also enroll in a Naval or Marine Corps officer candidate program, attend prescribed summer military training programs, and receive a commission after graduation. They are then required to serve at least 3 years on active duty.

In addition, the Army and Air Force provide 2 years of basic military training for college students who elect, or are required by the college, to enroll in the course for the first 2 years but who are not required to be candidates for officer commissions. The Army also provides training for students who elect to enroll at 294 high schools in a junior program.

Average annual enrollments in these programs are summarized below:

Financing:			
Unobligated balance lapsing	10,925		
New obligational authority	**1,025,700**	**1,209,000**	**1,399,000**
New obligational authority:			
Appropriation	1,029,000	1,143,000	1,399,000
Transferred to "Claims, Defense" (77 Stat. 23)	−3,300		
Appropriation (adjusted)	**1,025,700**	**1,143,000**	**1,399,000**
Proposed supplemental due to Uniformed Services Pay Act of 1963		**66,000**	

This estimate includes funds for the pay of all military personnel on the retired lists of the Department of Defense. The estimate represents the consolidated requirements of the military departments for (a) payments to retired officers and enlisted personnel of the Army, Navy, Marine Corps, and Air Force; (b) the retainer pay of regular enlisted personnel of the Fleet Reserve of the Navy and Fleet Marine Corps Reserve; and (c) survivors' benefits. The substantial gains to the retired rolls can be directly attributed to the greater number of individuals attaining eligibility for retirement after 20 or more years of active military service. The following tabulation shows the average number of personnel on the rolls during 1963 compared with the estimated numbers for 1964 and 1965.

AVERAGE NUMBER

Type of retirement	*1963 actual*	*1964 estimate*	*1965 estimate*
1. Nondisability	202,967	241,687	281,271
2. Temporary disability	15,448	15,158	15,201
3. Permanent disability	78,548	82,988	87,343
4. Fleet reserve	58,392	68,609	77,663
5. Survivors' benefits	3,475	4,004	4,596
Total	358,830	412,446	466,074

An additional amount will be proposed for a supplemental appropriation for 1964 to support the numbers of retired personnel in the above table. A supplemental appropriation for 1964 is also anticipated for separate transmittal to provide funds for the additional costs resulting from the enactment of legislation in 1964 increasing the pay of retired personnel.

Under the provisions of the retired serviceman's family protection plan, retired service personnel who elect to receive reduced amounts of retired pay are able to provide for monthly payments to be continued to their survivors. The reductions are determined on a basis designed to establish an actuarially sound system. Current appropriations provide only for the net payments to be made each year, and the liability for future payments of survivor benefits is unfunded. Administrative expenses of this family protection plan are provided as operation and maintenance costs of the military services. The accumulated difference between reductions in retired pay and actual payments of survivor benefits is indicated in the following table (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Accumulated deductions, net, start of year	42,259	51,408	62,541
Plus: Current deductions during the year	13,141	15,979	18,402
Less: Payment of survivors' benefits	3,992	4,846	5,723
Accumulated deductions, net, end of year	51,408	62,541	75,220

OPERATION AND MAINTENANCE—Continued

General and special funds—Continued

OPERATION AND MAINTENANCE, ARMY—Continued

This appropriation provides for the operations and other activities of the Active Army, with a beginning strength of 971,527 and end strength of 973,999 for 1965, for training support of the Army Reserve, and for those unified and specified command headquarters assigned to the Army. This includes the direct support of the Army forces deployed within the United States and overseas; the maintenance and operation of facilities used for the recruiting, training, administration, and logistical support of these forces; and the maintenance of a mobilization base for the expansion of Army forces in the event of emergencies or war. The Active Army Forces include units assigned to the unified and specified commands in Europe, the Pacific, the United States, and the Caribbean, air defense units in the United States, other combat forces, and the substantial support and training forces associated with combat units.

The 1965 estimates emphasize increased Army readiness for all types of warfare. This budget includes expanded testing and evaluation of experimental air assault concepts and provides for strategic mobility exercises. Expansion of unit training through field and local exercises is planned. Emphasis will be placed on combat developments and troop tests of new equipment and tactics.

In addition to direct support and training of the operating forces, funds are required for the logistics system, material maintenance, medical support and expenses of the departmental and other major headquarters.

This appropriation also provides for the expenses of administration and training of the Army Reserve Forces and for initial active duty training of Army Reserve and National Guard personnel at basic training centers, Army schools and with Army units.

1. *Operating forces.*—This program provides for the training and support of Army combat and combat support forces. Included are costs for the operation and maintenance of the installations where these units are stationed, and the operation and maintenance of the weapons, aircraft, vehicles and other equipment assigned to these units. During 1965 the Army and the other Services plan to conduct a joint evaluation of an air assault division and other air mobile units. Provision is made for joint strategic mobility exercises to maintain and demonstrate the quick reaction capability of combat and combat support forces in meeting worldwide emergencies. Continued support will be given the Army's special warfare units for counterinsurgency training and operations throughout the world.

2. *Training activities.*—This program provides for individual training of officers and enlisted men. Two broad categories of school training are included, career training and training in special skills. The majority of individual training is conducted through Army service schools and colleges which conduct resident courses of instruction for Army personnel, reserve forces trainees, personnel from other services, and foreign military personnel. The schools also prepare and administer extension courses, other nonresident training, and prepare Army training texts and publications.

In addition this program finances the U.S. Military Academy at West Point, career training at civilian institutions, and joint training activities of the Industrial College of the Armed Forces, the National War College, and the Defense Language Institute.

3. *Central supply activities.*—This program finances all of the logistics functions involving requirements computation, procurement, storage and distribution of supplies and equipment for the combat forces of the Army. It also finances the maintenance of 50 idle and partially idle industrial plants which are essential to mobilization requirements, particularly for ammunition. The self-supporting function of excess, salvage and scrap property disposal is also contained in this activity.

Requirements computations for both peacetime and mobilization purposes are performed at 13 inventory control points in the United States and 10 overseas. Central procurement includes contract execution, contract administration, acceptance inspection and specification management. It is estimated that about $5 billion of major end items, secondary repair parts and supplies will be purchased through these offices in 1965. Distribution involves both the 41 depots and activities in the United States and the 50 depots and activities overseas which receive, preserve, store and ship the Army's inventory. Funds for transporting supplies, equipment and mail are included within the distribution function. Selected major workload data for depots in the United States and overseas are shown in the following table (in thousands):

	1963 actual	*1964 estimate*	*1965 estimate*
Short tons received	2,644	2,535	2,775
Short tons shipped	2,780	2,631	2,719
Short tons in storage [1]	8,881	8,773	8,829

[1] Excludes strategic and critical materials which are General Services Administration owned.

4. *Major overhaul and maintenance of materiel.*—This program provides depot-level maintenance and maintenance assistance services on a worldwide basis, both with in-house resources and under contract with commercial enterprises, in order to maintain the Army's equipment in combat-ready condition. These services are also provided on a reimbursable basis to other United States forces and other nations under the Military Assistance and Cooperative Logistics programs.

Activities in this program include the analysis of equipment failures, the provision of maintenance publications and technical advice to the troops using the equipment, the purchase and installation of modification kits, and the major overhaul of end items and secondary repair parts. The 1965 work program provides for an increased effort toward the overhaul of combat vehicles and aircraft in view of the increased requirements in these areas due to the age, densities, and usage of these fleets as well as increased complexities of individual items of equipment.

5. *Medical activities.*—This activity covers the cost of medical care of Army active duty and Reserve personnel, the dependents of active duty personnel and, on a space-available basis, retired personnel and their families. It includes the operation and maintenance of Army hospitals and certain other medical facilities, the costs of medical training for Army personnel, and operation of the Surgeon General's office. It cost the Army $21.3 million in 1963 for care of dependents of its military personnel in civilian hospitals and these costs are estimated at $22.3 million in 1964, and $22.5 million in 1965.

Federal Reserve Bank of St. Louis

Selected major workload items are shown in the following table:

	1963 actual	1964 estimate	1965 estimate
Army hospitals	75	74	73
Patients (average daily load):			
In Army hospitals:			
Active duty Army	6,783	6,523	6,523
Dependents of uniformed services	3,528	3,547	3,647
Others	1,914	1,885	1,879
In non-Army facilities:			
Active duty Army	1,112	1,112	1,112
Dependents:			
In Federal hospitals	648	660	669
In civilian hospitals	1,148	1,146	1,115
Others	387	395	405

6. *Armywide activities.*—This program provides for command and direction of Army programs at major headquarters. It also provides for support of certain joint headquarters, and for other activities such as recruiting, education of dependents overseas, communications, intelligence activities, mapping and geodesy, finance and audit services, and joint projects.

Specific examples of the foregoing activities would include: the headquarters in Washington, D.C. and major field commands; operation of Armed Forces examining and induction stations; the administration of dependent schools overseas; operation of worldwide high frequency multichannel radio systems, ionospheric and tropospheric scatter systems and other systems in support of Defense communications responsibilities assigned to the Army; the collection of intelligence to include technical and scientific information on weapons, equipment, electronics, and other scientific resources; preparation of maps for the armed services; the provision of finance and audit services for the Army; and participation in international activities.

7. *Army Reserve and ROTC.*—This activity provides operation, maintenance, training and administration of the Army Reserve and ROTC. Within an Army Reserve organization of approximately 4,000 company-size units, paid drill strength for 1965 will be an average of 276,000 and an end strength of 285,000. In addition, this activity will support an average estimated enrollment of 225,000 Reserve officer candidates at educational institutions conducting Army ROTC training, and approximately 16,400 senior students for a 42-day period of summer camp training.

Appropriation (adjusted)	**2,825,758**	**2,908,955**	**3,159,000**

[1] Reimbursements from non-Federal sources are principally from sales of surplus U.S. Government property, sales of goods and services to individuals including laundry services, subsistence of hospital patients, surcharge on commissary sales and unofficial telephone service, and mutual security sales to foreign governments (5 U.S.C. 61(b), 616; 10 U.S.C. 1071–1085; 2481; 2667; 6011; 22 U.S.C. 1816; 40 U.S.C. 481(c); 70 Stat. 1105; 74 Stat. 351; 75 Stat. 377; 76 Stat. 329).

Maintaining the current combat readiness of naval forces is the primary objective of this appropriation. These include carrier striking forces, submarine forces, antisubmarine forces, amphibious forces, and antiair warfare forces, whose major mission is to protect the sealanes vital to the free world's survival and to project rapidly American power to danger spots around the world. The inherent flexibility and mobility of naval forces provides a rapid and measured response to aggression or potential aggression with force appropriate to the threat. Most of these forces are assigned to unified and specified commands. The headquarters expenses of certain of these commands: Atlantic and Pacific Commands and the Military Assistance Command, Vietnam, are funded in this appropriation. The day-to-day operating and maintenance costs of the naval shore establishment, which provide supply, repair, training, and other support services to the naval operating forces, are also financed from this appropriation.

The number of fleet ships is greater in 1965 than in 1964, and their complexity continues to increase. Expanded and improved training programs provide the additional trained personnel necessary to operate and maintain the more sophisticated weapons systems. Growing needs in oceanography, communications, intelligence, and data maintenance must be provided for in order to attain and maintain the desired capability of the operating forces.

Combat readiness will be maintained through continued fleet training exercises. This budget provides 2.2 million steaming hours for active fleet ships and 3.7 million flying hours for naval aircraft. Funds are also included for the operation of 63 nuclear-powered ships of which 32 are Polaris submarines. The number of Polaris submarines operating by the end of the year is an increase by one-third over the previous year. In response to the loss of the U.S.S. *Thresher* in April 1963, an overall submarine safety program has been initiated to insure that submarines are provided maximum resistance to damage and the best ability to recover from damage when incurred.

Supply, communications, medical, construction battalion, and public works functions support the operations described above. The Navywide supply system will process 22 million separate supply actions in 1965 and will manage 1.2 million stock items. As executive agent for the Defense Department, the Navy will provide logistic support to the U.S. program for Antarctica. This support will include operation and maintenance of ships, aircraft, and facilities at a cost of $19.9 million.[1]

1. *General expenses, Navy personnel.*—Modern naval operations dictate the recruiting and training of highly adaptable and capable personnel. The program includes training for approximately 135,000 recruits; technical, scientific, and professional training and education for a total of approximately 435,000 officers and enlisted men; Reserve training for approximately 126,000 reservists annually; and support for about 10,800 NROTC midshipmen in civilian colleges. In addition, the Naval Academy will prepare 3,900 midshipmen for officer careers.

	1963 actual	*1964 estimate*	*1965 estimate*
Average training load	74,502	78,053	82,335
Officers and enlisted training	60,062	63,294	67,683
Basic training	21,315	21,416	23,556
Service schools:			
Officers	4,840	5,313	5,853
Enlisted	32,533	35,160	36,851
Civilian institutions	1,374	1,405	1,423
Naval Academy	3,973	3,949	3,885
Naval Reserve Officer Training Corps	10,467	10,810	10,767
Navy schools, number	146	144	144
Reserve training activities, number	450	451	451

[1] Direct charges to this appropriation, $12.8 million; $5.6 million in military personnel, Navy, and $1.5 million in other procurement, Navy.

Federal Reserve Bank of St. Louis

2. *Weapons and facilities.*—Naval and Marine Corps flight operations supporting the military missions of the Navy include combat operating forces, such as carrier air groups, Marine air wings, land-based patrol squadrons, and supporting units. Extensive flight training is programed to provide the skilled crews to perform these complex missions. In 1965 the total of Regular and Reserve flight operations is lower than in 1964, due primarily to the reduced number of operating aircraft. The increasing number of missile-firing ships in the fleet results in increased funds for missile system support, including Polaris, while the costs of operating and maintaining higher performance aircraft continue to rise as greater numbers are added each year. The shore establishment supporting these weapons systems includes air stations, ammunition depots, and ordnance plants.

	1963 actual	*1964 estimate*	*1965 estimate*
Average operating aircraft:			
Regular	6,560	6,502	6,433
Reserves	829	812	812
Flying hours:			
Regular (in millions)	3.169	3.337	3.319
Reserves (in millions)	.360	.407	.407
Aircraft reworks	4,073	4,167	4,239
Pilots completing training	1,701	1,700	1,700
Tons of ammunition received, stored, and issued (in millions)	1.216	1.210	1.213

3. *Ships and facilities.*—This activity provides for operating and maintaining the ships in the Navy's attack, amphibious assault, antisubmarine, antiair warfare and Polaris submarine forces, continually deployed in the major trouble spots of the world to assist in carrying out national policy. Cost increases in 1965 are primarily due to support of more complex ships and equipments, more extensive overhaul of deep diving submarines, and increased procurement of replacement nuclear fuel cells.

	1963 actual	*1964 estimate*	*1965 estimate*
Ships (end of year)	857	873	883
Polaris submarines (included above)	12	22	32
Steaming hours (millions)	2.172	2.155	2.221
Ship overhauls (regular)	269	239	233
Fleet rehabilitations and modernization program (number of ships modernized)	10	15	8
Naval Reserve training ships (end year)	87	85	82

4. *Medical care.*—Medical care and hospitalization of Navy and Marine Corps personnel and their dependents is provided by operating naval hospitals, dispensaries, dental clinics, and other specialized medical facilities. Measures of the level of operations are shown below:

	1963 actual	*1964 estimate*	*1965 estimate*
Navy hospitals	25	25	25
Patients (average daily load)	12,742	12,836	13,028
In Naval hospitals:			
Active duty	6,632	6,587	6,637
Dependents	1,758	1,765	1,855
Other	1,233	1,263	1,313
In other hospitals:			
Active duty	1,026	1,080	1,089
Dependents:			
In Federal hospitals	599	616	636
In non-Federal hospitals	1,301	1,310	1,267
Other	193	213	231

5. *Civil engineering.*—Civil engineering includes the maintenance of real property and the operation of utilities at all Navy shore activities, planning, engineering and design services, and technical administration of transportation services. Most of this work is accomplished by public works departments at major installations. In 7 naval complexes, public works centers have been established to provide centralized services common to the several facilities. The 12 construction battalions (Seabees) plus 2 headquarters staffs are also supported under this activity. These units are maintained in readiness to support the operating forces and also operate and maintain stations from which Antarctic operations are conducted.

	1963 actual	*1964 estimate*	*1965 estimate*
Number of Seabee battalions	12	12	12
Number of active duty Seabees	7,318	7,318	7,318
Number of major shore activities	287	281	281

6. *Servicewide supply.*—The workload of this activity is directly responsive to fleet, air, and shore station operations, including major procurement actions. This activity encompasses the logistical support of major active forces both continental and overseas, at shipyards and at 15 major supply depots and centers. Planning and programing for this support, including procurement and requirements determinations, is accomplished by inventory control points of which the Aviation Supply Office in Philadelphia is the largest. Transportation costs of intra-Navy movement of material directed by these inventory control points, including shipment by Military Sea Transportation Service, are also funded by this activity.

A summary of workload data for this activity follows:

	1963 actual	*1964 estimate*	*1965 estimate*
Supply outlets	35	35	35
Inventory control points	11	10	10
Supply actions (in thousands)	21,215	21,559	22,144
Tons received and shipped (in thousands)	12,785	12,989	13,349
Tons in store (average number) in thousands)	7,335	6,843	6,793
Allowance parts lists preparation and revisions—Line items (in thousands)	2,481	2,547	2,680

7. *Servicewide operations.*—Facilities and programs under the management of the Chief of Naval Operations, including his headquarters staff, are the principal activities financed under this activity. Included are unified command headquarters, naval stations, naval district headquarters, the naval communication system, the naval security group, the oceanographic office, the naval observatory, naval intelligence, and programing services for command and control systems. Also under this activity are the operations of the offices of the Secretary of the Navy, the Judge Advocate General of the Navy, and the Chief of Naval Research. Increases are provided for modernization and expansion of ashore communications in support of the defense communications system, data processing for the national military command system and Navy operational control centers, intelligence and security, and oceanography.

	1963 actual	*1964 estimate*	*1965 estimate*
District and command headquarters	15	15	15
Naval stations	12	12	12
Major communication installations	26	26	27

8. *Naval petroleum and oil shale reserves.*—This activity provides for operation, conservation, maintenance, testing, and protection of Naval Petroleum Reserve No. 1 (Elk Hills Field) in California; supervision of oil and gas leases on Navy's lands in Naval Petroleum Reserve No. 2 (Buena Vista Hills Field) in California; drilling and production of offset wells on Naval Petroleum Reserve No. 3 (Teapot Dome Field) in Wyoming; management of renewable natural resources in the Naval Oil Shale Reserves;

[1] Reimbursements from non-Federal sources are principally from sales of surplus U.S. Government property and sales of goods and services to individuals, including laundry services and unofficial telephone service (10 U.S.C. 2481 and 7581; 70 Stat. 1105).

The principal effort of the Marine Corps is to train and maintain the Fleet Marine Forces in a high state of combat readiness for service with the fleet in amphibious operations or for such duties as the President may direct. The Fleet Marine Forces, composed of three reinforced Marine

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

division-aircraft wing teams and related support units, are assigned to the Atlantic and Pacific Fleets, which are naval components of unified commands. In 1965, the deployment of these forces will remain substantially unchanged.

This appropriation principally supports the ground elements of the Fleet Marine Forces. The operations of the three Marine aircraft wings are financed primarily by the Operation and maintenance, Navy appropriation. Other units supported by this appropriation include Marine detachments aboard naval vessels, landing force training units, Marine Reserve ground forces, and the security forces that guard naval bases, U.S. embassies and certain classified facilities. The major installations supported by this appropriation are:

	1963 actual	*1964 estimate*	*1965 estimate*
Operational and training bases	7	7	7
Supply activities	3	3	3

1. *Training and operations.*—Operational deployments of Fleet Marine Force units with the Atlantic and Pacific Fleets will continue in 1965 at the present tempo of activity. Fleet Marine Force training objectives stress the vertical envelopment doctrine in amphibious operations through major exercises by combined air and ground units. To support training objectives, the Marine Corps recruits and trains military personnel and operates four major combat-unit support bases, two recruit training depots and one base devoted to professional schools training.

Significant workload data for this activity are:

	1963 actual	*1964 estimate*	*1965 estimate*
Fleet Marine Forces (average number of military personnel)	111,711	108,434	112,072
Security forces (average number of military personnel)	11,887	11,742	10,235
Major field training exercises	6	9	10
Recruit training (average load)	6,125	9,110	8,270

2. *Depot supply system.*—This activity includes the overhaul and preservation of major equipment and materiel and the receipt, issue and storage of materiel to support combat forces. Major equipment repair is programed on the basis of balancing items repaired with new procurements to meet a maximum materiel readiness requirement within fund resources available. Programing and planning for logistic support is accomplished at Headquarters, Marine Corps, with the technical assistance of the Marine Corps supply activity, Philadelphia. Storage and issue functions are accomplished primarily at two major supply centers. In 1965, the Marine Corps will continue the program of overhaul and modernization of amphibious landing vehicles commenced in 1962.

3. *Transportation of things.*—This activity provides funds for the movement of Marine Corps supplies within the continental United States and overseas, including stevedoring and port handling charges.

4. *Marine Corps Reserve training.*—The objective of this program is to provide a strong Reserve organization capable of rapid assimilation, as the 4th Marine Division/Wing Team, into the operating forces when needed. This activity finances the annual field training of Reserve units, maintenance and operation of Reserve training centers, and Marine Corps-furnished supplies and equipment for ground and aviation units.

5. *Cataloging.*—This activity provides support for Federal stock numbering in accordance with the requirements of the Federal catalog system, cataloging, and publication and distribution of materiel lists.

6. *Departmental administration.*—The staff agencies of the headquarters, Marine Corps, which provide for the administration of the missions, functions, and worldwide operations of the Marine Corps are funded in this activity. Included in the funding are the pay of civilian employees, costs of electronic data processing, printing and reproduction, and other expenses incident to the operation of staff offices of the Commandant.

Appropriation (adjusted)	**4,355,819**	**4,336,887**	**4,606,000**

[1] Reimbursements from non-Federal sources are principally sales of surplus U.S. Government property and sales to individuals and foreign governments of goods and services, including subsistence of hospital patients, surcharges on commissary sales, and unofficial telephone services (10 U.S.C. 9621, 9625, 9626, 9627; 22 U.S.C. 2315, 2316).

This appropriation finances the daily operating expenses required for Air Force combat and support forces. It provides the financial resources to transform the military personnel, facilities, and equipment financed by other appropriations into combat ready strategic, tactical, and defense forces. Inherent in maintaining military superiority are significant changes in the composition of the forces with parallel changes occurring in the support forces. This appropriation also includes expenses for the headquarters of those unified and specified commands for which the Air Force is assigned budgetary responsibility. These include Strategic Air Command, North American Air Defense Command, and United States Strike Command.

The principal changes in the strategic force structure in 1965 are the increased numbers of Minuteman intercontinental ballistic missile squadrons which will become operational, and the continuing phase-out of the B–47 medium bombers. The B–52 force, a large portion of which is equipped with the Hound Dog air-to-ground missile, will remain at the size it reached initially in 1963. It is planned also to continue "low-level" and airborne alert indoctrination training in the strategic bomber force.

The active air defense fighter-interceptor forces in the United States remain basically unchanged from 1964. One-third of these units are now being maintained on instant alert, requiring a 75-hour workweek for combat crews, and a dispersal program is being implemented. By end of 1965 the early-model BOMARC A missiles will be inactivated. The SAGE System will continue at the current level approved for 1964. Improvements in the air defense area are being accomplished with the introduction of the Back-up Interceptor Control System (BUIC) starting in 1965.

The capability of the tactical forces will continue to improve in 1965, principally as a result of a nearly fivefold increase in the number of squadrons equipped with the all-purpose F–4C fighter aircraft, resulting in the replacement of the obsolete F–84 aircraft.

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

In addition to force structure changes, other program considerations will influence the activities financed by this appropriation. Increased emphasis has been placed on the use of newly developed electronics equipment in such areas as command and control techniques and capabilities, communications, warning, weather, and intelligence. These and other similar activities require contracting for many specialized services beyond the capability of Air Force personnel.

Some of the principal items included in this appropriation are the operational, training and logistical installations, which support the forces, manpower, and equipment used in fulfillment of the Air Force mission. By the end of 1965 the number of major installations supported in this appropriation will decrease to 205.

The estimates for 1964 and 1965 include $146.5 million and $200 million, respectively, for material previously financed in various procurement appropriations.

1. *Aircraft fuel and oil.*—This program provides for aviation fuel and oil to support the operation of all Air Force and Air Force Reserve aircraft except those assigned to research and development activities, the Air National Guard, and that portion of the airlift service of the Military Air Transport Service which is financed by the Air Force industrial fund. There are several significant changes in the composition of the aircraft inventory and activity rates which result in an overall decrease in flying hours and costs from 1964 to 1965. The F–105, F/RF–4C, KC–135, C–130, T–37 and T–38 aircraft will have increased usage, but this is more than offset by the flying hour decreases for the B–47, KC–97, F–84, KB–50 and various noncombat aircraft.

The following table compares the principal program elements supported by these funds:

	1963 actual	*1964 estimate*	*1965 estimate*
Total active aircraft, end of year:			
Regular Air Force	12,335	11,684	11,253
Air Force Reserve	735	723	744
Aircraft flying hours:			
Regular Air Force	5,061,656	5,211,215	5,143,314
Air Force Reserve	180,384	210,465	210,849

These flying hours provide for the training of strategic, tactical, and defense units and the flying training of individuals for subsequent assignment to flying units.

2. *Logistical support.*—This activity finances the operation of the Air Force depot system, including the costs related to procurement, storage, distribution, and maintenance of Air Force materiel. During the last few years the composition of the Air Force has changed with greater emphasis on missiles, sophistication of the warning network, and higher performance planes in the aircraft inventory. These have all resulted in additional logistic support requirements. In 1964 the need for greater operational flexibility to handle "brush fire" type situations has also affected the workload in this program. Of particular concern is the range of items requiring logistic support, because several types of aircraft which were considered obsolete, such as the B–26, are now high priority aircraft.

The following table, showing key workload indices in the logistic support program, reflects the transfer of the centralized management of certain common-user type items to the Defense Supply Agency.

	1963 actual	*1964 estimate*	*1965 estimate*
Inventory control points	10	10	10
Number of prime stocked items	1,886,800	1,676,800	1,616,800
Tons received and shipped (U.S. depots)	1,751,300	1,579,600	1,520,000

3. *Training support.*—This provides for the basic, technical, professional and flying training of airmen, cadets, and officers as contrasted with the training of combat units financed under Operational support. Such training is conducted primarily at various Air Force training centers, although educational facilities of civilian institutions are also used. Operating costs of the Air Force Reserve program are also included.

An increase in basic military and technical training loads in 1965 is related to a greater number of enlistees necessary to replace personnel whose terms of enlistment are expiring. The undergraduate pilot training load increase is based on the requirements of the future aircraft force structure and the need to replace pilots initially trained in World War II, who will be retiring or otherwise phasing out of the active pilot inventory.

Major elements of the Air Force training program are tabulated below:

	1963 actual	*1964 estimate*	*1965 estimate*
Basic military training (average training load)	15,075	13,620	13,919
Basic technical training (average training load)	32,389	29,326	30,142
Advanced technical training (average training load)	5,763	5,039	5,006
Factory training (average training load)	960	560	562
Meteorology training (average training load)	------	241	280
Undergraduate flying training (average training load):			
Pilot training	2,206	2,282	2,536
Navigator training	1,102	1,196	1,105
Other flying training (average training load)	1,125	1,134	1,100
Air University (average load)	2,844	3,072	3,079
Civilian institutions (input)	1,605	1,200	1,200
Air Force Reserve Officer Training Corps graduates	3,590	3,694	4,635
Air Force Academy (average cadet load)	2,441	2,503	2,686

4. *Operational support.*—Facilities are operated and maintained to support the Strategic, Air Defense, Tactical, and Transport/Troop Carrier missions of the Air Force, including the following special programs:

- Missile programs
- Distant Early Warning (DEW) Line
- Ballistic Missile Early Warning System (BMEWS)
- Space Detection and Tracking (SPACETRACK) System
- Continental Air Defense Integration North (CADIN)
- Rotations, Air Operations, and Maneuvers
- Airlift for Joint Army Airborne Training and Mobility Exercises; Medical Air Evacuation and Special Air Missions (Airlift Services, Industrial Fund)
- Semi-Automatic Ground Environment/Back-Up Interceptor Control (SAGE/BUIC) Systems

In addition, the estimates include separately identifiable funds for the Alaska Communications System which, augmented by the use of part of the facilities of the BMEWS and White Alice military systems, provides telegraph and long-distance telephone service in Alaska to civilians as well as to the Department of Defense and other Government activities.

OPERATION AND MAINTENANCE—Continued

General and special funds—Continued

OPERATION AND MAINTENANCE, AIR FORCE—Continued

The operational support area reflects adjustments in programs, forces, personnel, and weapon systems as well as changes in base and installation utilization. The following table shows comparative numbers of major installations supported under this program.

Type	*1963 actual*	*1964 estimate*	*1965 estimate*
Strategic	59	54	50
Air Defense	31	28	28
Tactical	62	60	58
Other	22	20	20
Total	174	162	156

These funds primarily support the Air Force operational commands and provide for on-the-line maintenance of aircraft and weapons, maintenance and operation of installations, missile sites, airfields and allied facilities, as well as other expenses necessary to assure and maintain operational readiness of the combat forces. The higher funding level in 1965 is largely due to an expanded program of joint exercises and field tests to improve that readiness.

5. *Medical support.*—This activity covers medical care of Air Force personnel, active and retired, and their families, and includes the operation and maintenance of hospitals and other medical-treatment facilities. It cost the Air Force $23.6 million in 1963 for the care of dependents of military personnel in civilian hospitals and these costs are estimated at $22.9 million in 1964 and $23.7 million in 1965.

Selected major workload items are shown in the following table:

	1963 actual	*1964 estimate*	*1965 estimate*
Hospitals	123	123	122
Patients (average daily load):			
In Air Force hospitals:			
Active duty	4,674	4,659	4,537
Dependents	3,555	3,534	3,621
Other	547	650	742
In other hospitals:			
Active duty	805	795	804
Dependents:			
In Federal hospitals	778	763	783
In non-Federal hospitals	1,190	1,122	1,137
Other	112	112	121

6. *Servicewide support.*—This program provides for the operation of Air Force and major command headquarters, air attaché and mission offices, intelligence and security activities, and the leasing of commercial communication systems and networks. The estimate includes full year costs in 1965 of new communications improvements which were initiated in 1964.

7. *Contingencies.*—These are extraordinary expenses approved and certified by the Secretary of the Air Force.

Appropriation (adjusted)	**356,077**	**477,654**	**516,986**

[1] Reimbursements from non-Federal sources are principally from sales of surplus U.S. Government property to finance expenses in connection therewith (annual appropriation act); sale of goods and services to individuals, including laundry services and surcharges on commissary sales (10 U.S.C. 2205, 10 U.S.C. 2210 and annual appropriation act); charges for unofficial telephone service (10 U.S.C. 2481) and revenues from private carriers for use of Department of Defense owned rail cars (10 U.S.C. 2667).

This appropriation finances the immediate Office of the Secretary of Defense, the Joint Chiefs of Staff, and agencies of the Department of Defense which operate directly under the control of the Secretary of Defense.

1. *Supply operations.*—This activity covers the Defense Supply Agency, which provides common supply and service support to military activities in the continental United States. The agency manages inventories for eight material categories: fuel, food, clothing, medical, general, industrial, construction and electronics supplies. This involves management of $2.1 billion in inventory. The Agency also manages the Department of Defense-owned idle industrial plant equipment inventory, valued at $1 billion, to secure greater utilization of this equipment. The Agency performs central procurement of $3.3 billion per year, including preparation of specifications, contracting and contract administration, inspection, standardization, and industrial support measures for current production and for mobilization.

Other agency functions include the operation of a distribution system for the receipt, storage and issue of items in the eight material categories. The Agency operates eight supply depots, and the Defense Logistics Services Center, including the Surplus Bidders Control Office, the Surplus Sales Offices, and the Traffic Management Service.

The Agency is also responsible for the administration and supervision of the Department of Defense coordinated procurement programs, the Federal catalog program, the defense materiel utilization program and the defense surplus property disposal program.

Obligations increase in 1964 primarily because of the inclusion of depot distribution costs and costs for the management of industrial production equipment under this appropriation; these items were financed by the military services in 1963. This is offset in part by the termination of the automotive supply activity and the transfer of management responsibility for paint and hand tools to the General Services Administration in 1964. Obligations decline in 1965 because the latter reductions are reflected on a full-year basis.

2. *Field operations.*—This program activity includes the funds required for the support of the Armed Forces Information and Education activities of the Department of Defense; the Defense Communications Agency; the Defense Atomic Support Agency; the Defense Intelligence Agency and classified activities.

3. *Interdepartmental activities.*—Provision is made for the Department of Defense participation in and support of various interdepartmental activities, including the President's Committee on Equal Employment Opportunity, the Interdepartmental Committee on Nutrition for National Defense, the President's Council on Physical Fitness and several classified activities.

4. *Management.*—This covers the civilian salaries and other necessary expenses of the Office of the Secretary of Defense and the Joint Chiefs of Staff Organization. Costs for the Office of the Secretary of Defense will continue at substantially the same level in 1965 as in 1964. The Joint Chiefs of Staff Organization reflects an increase in 1965 to strengthen operational control of the unified and special commands and for special studies involving a number of classified high priority projects.

Appropriation (adjusted)	**174,379**	**180,790**	**188,000**

[1] Reimbursements from non-Federal sources are derived from commercial carriers for loss of property damaged in transit (31 U.S.C. 489a).

This appropriation provides for the support of Army National Guard activities. It provides for employment of 184 civilians in the National Guard Bureau, and 17,417 Army National Guard technicians employed by the States in the administration of the units, maintenance and repair of equipment, and the operation of State and Federal field training camps.

The 1965 program also includes support of 13½ Nike-Hercules missile battalions in the air defense program, 3 more than in 1964. All battalions will be performing active on-site Hercules missions by the end of the year. The operating expenses of these battalions include the costs of 5,067 State technicians who are members of the Army National Guard assigned to these units and who maintain Nike missile sites in a state of operational readiness which will permit their immediate use in the event of an emergency.

New obligational authority (appropriation)	**622**	**528**	**484**

The National Board for the Promotion of Rifle Practice, in conjunction with the Office of Director of Civilian Marksmanship, continues to promote civilian interest in small arms marksmanship. Assistance is provided to approximately 5,500 clubs and schools with a total membership of approximately 382,000 enrolled with the Director of Civilian Marksmanship, by the loan of rifles and the issue of targets, trophies, medals, and badges for marksmanship.

The Board plans and supervises local, regional, and State rifle and pistol matches in addition to the National Rifle and Pistol Matches held annually at Camp Perry, Ohio.

Funds are provided to partially defray the travel expenses of State civilian shooting teams to the national matches. Funds are included for payment to the State of Ohio for the lease of Camp Perry as the permanent site of the national matches.

The program is augmented by the free issue of ammunition, from existing stocks or purchased with funds provided under other appropriations, to members of rifle clubs and to competitors at national, regional and State competitions as follows (in thousands of dollars):

The U.S. Court of Military Appeals serves as the court of last resort for all of the more serious court-martial convictions of military personnel. The number of cases docketed in 1963 totaled 834, with approximately the same number of cases anticipated in 1964 and 1965. The court released 109 opinions in 1963 and expects to publish a similar number during 1964 and 1965.

In compliance with the Uniform Code of Military Justice, the court is maintaining a current docket with the review completed, as of November 1, 1963, in 17,413 cases out of 17,510 cases filed since the court's establishment in 1951—leaving a balance of 97 under review.

ALLOCATIONS RECEIVED BY DEPARTMENT OF DEFENSE FROM OTHER ACCOUNTS

Note.—Obligations incurred under allocations from other accounts are shown in the schedules of the parent appropriations, as follows:
Funds appropriated to the President:
"Agency for International Development."
"Military assistance."
Treasury:
Coast Guard, "Acquisition, construction, and improvements."
Bureau of Customs, "Refunds, transfers, and expenses of operation, Puerto Rico."
Atomic Energy Commission:
"Operating expenses."
"Plant and capital equipment."
Federal Aviation Agency: "Operations."
United States Information Agency: "Acquisition and construction of radio facilities."

PROCUREMENT

The procurement appropriations of the Department of Defense finance the acquisition of capital equipment, such as aircraft, missiles, ships, combat vehicles, weapons, munitions, and communications; major items for support of the capital equipment when it is in use; the industrial facilities necessary to produce that equipment; and major modification of equipment in inventory where modernization can be achieved without buying new equipment. The capital equipment financed by these appropriations is principally procured from private contractors or produced in Government arsenals, shipyards, and plants.

The equipment inventories necessary to support the strategic and conventional warfare missions of the armed services will continue to be augmented and modernized. The 1965 procurement program of the Department of Defense continues production of new equipment and weapons in support of basic military missions. The growing military capability to meet successfully worldwide and limited war threats is supported by continuing programs to increase the mobility and firepower of ground forces, strengthen the close support capabilities of the tactical air forces, modernize airlift forces, and augment the capabilities of antisubmarine warfare forces. The nuclear deterrent force will continue to be improved with the procurement of additional intercontinental ballistic missiles. Direct budget programs are estimated as follows (in millions of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Aircraft	6,425	6,137	6,319
Missiles	3,857	3,865	2,988
Ships	2,635	2,123	1,974
Other	3,943	4,325	3,608
Total	16,860	16,450	14,889

General and special funds:

PROCUREMENT OF EQUIPMENT AND MISSILES, ARMY

For expenses necessary for the procurement, manufacture, and modification of missiles, armament, ammunition, equipment, vehicles, vessels, and aircraft for the Army and the Reserve Officers' Training Corps; purchase of not to exceed [five] *three* thousand [seven] *five* hundred and [ninety-four] *seventy-four* passenger motor vehicles for replacement only [(including three medium sedans at not to exceed $3,000 each)]; expenses which in the discretion of the Secretary of the Army are necessary in providing facilities for production of equipment and supplies for national defense purposes, including construction, and the furnishing of Government-owned facilities and equipment at privately owned plants; and ammunition for military salutes at institutions to which issue of weapons for salutes is authorized; [$2,931,094,000] *$1,779,000,000,* to remain available until expended. (*5 U.S.C. 78; 10 U.S.C. 2353, 3012, 4386, 4531, 4532, 4683; Department of Defense Appropriation Act, 1964.*)

[1] Reimbursements from non-Federal sources are principally the dollar value of Mutual Security Military Sales to friendly foreign nations (5 U.S.C. 172d–1).

This appropriation provides major items of combat and support equipment for approved Army forces in performing their assigned mission to meet successfully both atomic and conventional war requirements. It also provides the procurement of selected components of major items, as well as production engineering, tooling, and facilities in support of current procurement.

In 1965, the Army's direct budget plan totals $2,081 million, as compared to $2,891 million and $2,624 million for 1964 and 1963 respectively. As in previous years this plan will be financed from new appropriations, unobligated balances of previous appropriations and budget plans, and anticipated reimbursements.

The 1965 program is specifically directed toward filling combat essential equipment allowances for the reorganized Army division (ROAD) active and reserve Army force, and providing equipment, supplies and munitions adequate for sustained combat operations. Modernization of older inventories is continued thereby providing in-

PROCUREMENT—Continued

General and special funds—Continued

PROCUREMENT OF EQUIPMENT AND MISSILES, ARMY—Continued

creased capabilities attainable through the introduction of improved weapons, equipment, and munitions.

1. *Aircraft.*—Airborne elements within the ROAD organized Army force conduct battlefield assault maneuvers, and the 1965 program contains necessary aircraft which are essential to the combat operation of field forces. To meet the Army's need for battlefield observation, troop movement, medical evacuation and rapid logistical support for combat engaged forces the 1965 program provides additional quantities of Iroquois and Chinook helicopters thus continuing to emphasize aerial mobility.

2. *Aircraft spares and repair parts.*—Included are high cost components critical to the operation of Army aircraft. The 1965 program continues to provide for initial provisioning, peacetime replacement and war reserve inventories, which are not carried in the Army stock fund.

3. *Missiles.*—This activity includes both surface-to-air and surface-to-surface missiles. In the former category, procurement in 1965 of Redeye missiles will provide front-line combat units with an effective defense against low and medium altitude enemy aircraft. Modification improvements to the Nike Hercules and Hawk air-defense systems planned for 1965 will provide for a more effective defense within CONUS and theaters of operation.

The surface-to-surface missile program for 1965 contains initial procurement of Shillelagh missiles to further improve the armor defeating capability of Army combat elements. Continued procurement of SS–11 antitank missiles for employment on Army helicopters is planned for 1965. The Lance missile system, to provide long-range surface-to-surface fire in support of Army operations, is programed for initial procurement in 1965. Pershing missiles and improved Honest John rockets are planned for continued procurement.

The 1965 program includes the initial procurement of multipurpose test equipment to provide for simplicity in maintenance procedures and reduced maintenance costs.

4. *Missile spares and repair parts.*—This covers both initial provisioning and replenishment repair parts.

5. *Weapons and combat vehicles.*—This activity covers all weapons expending conventional ammunition whether fired by crews, individuals, or armored vehicles. The 1965 program will provide materiel to replace training consumption, wear out, and obsolescence, and permits a quantitative and qualitative improvement to the PEMA inventory. Enhanced capabilities will be achieved with the introduction of the General Sheridan armored reconnaissance vehicle, the self-propelled 81-mm. mortar, and the combat engineer vehicle to be procured in 1965. Forward defense against high performance aircraft will be improved with the initial procurement in 1965 of a mobile air defense system. Continued procurement of M–60 medium tanks, light recovery vehicles, armored personnel carriers, and the 155-mm. and 8-inch self-propelled artillery weapons, will provide increased firepower, range, and mobility for combat forces.

6. *Tactical and support vehicles.*—These are the unarmored wheeled vehicles which provide surface mobility to the field forces and the worldwide logistical system. The 1965 program continues the procurement of ¼ ton, ¾ ton, 2½ ton, 5 ton trucks, and trailers.

7. *Communications and electronics equipment.*—This activity provides reliable, rugged, and mobile communication equipment to achieve command control over dispersed forces and weapons systems. The 1965 program continues procurement of modern FM series vehicular and manpacked communication sets, and improved terrain surveillance and reconnaissance ground equipment to provide fast and accurate data to combat forces. Deployed air-defense coordination and direction systems will be kept modern through selective modification which enables air-defense units to operate effectively under adverse conditions. Strategic electronic systems and cryptographic equipment and devices are provided to enable commanders to respond quickly over secure circuits.

8. *Other support equipment.*—This covers the logistical equipment essential to the mobility and maintenance of Army combat forces in the field. The 1965 program continues procurement of amphibious lighters which are designed for rapid over the beach movement of supplies; rolling liquid transporters employed in moving petroleum products from sea and air terminals to consumption points; mobile assault bridges and ramps, crane shovels, tractors, materials handling equipment, and other items essential to the balanced support of the combat forces.

9. *Ammunition.*—This activity provides for the procurement of conventional ammunition to improve the capability of combat engaged forces and to support the peacetime training program. The 1965 program provides for the initial procurement of ammunition for the General Sheridan and the combat engineer vehicles. Procurement will continue for the 7.62-mm. NATO standard round, ammunition for the M–60 tank and field artillery weapons, chemical and antipersonnel ammunition, fuzes and other explosives.

10. *Production-base support.*—This activity provides industrial facilities needed for production of end items and components, for production enginering, and for pilot lines required for new industrial production. It also provides for the initial layaway of Government-owned plants and equipment at the time production is completed and where it has been established that the facilities will be required in the event of mobilization.

PROCUREMENT—Continued

General and special funds—Continued

PROCUREMENT OF AIRCRAFT AND MISSILES, NAVY—Con.

This appropriation provides for the procurement of new aircraft, missiles, and supporting equipment for the Navy and Marine Corps. In addition, it provides for necessary safety-of-flight and operational modification to inservice aircraft as well as the procurement of drones and major flight and maintenance simulators. The funds requested in 1965 provide for a procurement program of 584 aircraft compared with 604 aircraft for the 1964 program.

1. *Combat aircraft.*—This activity provides for the continued modernization of the combat aircraft forces. The 1965 program provides for procurement of an advanced tactical fighter, additional carrier-based attack aircraft, carrier and land-based antisubmarine aircraft, and carrier-based early warning and intercept control aircraft. Antisubmarine helicopters and helicopters to support the Marine vertical assault mission are also included.

2. *Airlift aircraft.*—The Navy does not plan procurement of new airlift aircraft in 1965.

3. *Trainer aircraft.*—Provision is made in this activity for procurement of increased numbers of a basic jet trainer to provide future jet pilots with fundamentals of jet flying including formation tactics, navigation and instrument training, air-to-air gunnery, and carrier qualification.

4. *Other aircraft.*—Initial procurement of an aircraft for delivery of aeronautical material between shore bases and carriers at sea is included in the 1965 program for this activity.

5. *Modification of aircraft.*—This activity provides the costs of modifying inservice aircraft for increased capability or necessary flight safety changes.

6. *Aircraft spares and repair parts.*—This activity provides for the procurement of all naval aircraft spares and repair parts including both initial outfitting requirements and replenishment support.

7. *Aircraft support equipment and facilities.*—This activity provides for aircraft industrial facilities, component improvement, and miscellaneous production costs.

8. *Ballistic missiles.*—This activity provides for procurement of the Polaris fleet ballistic missile and related support equipment.

9. *Other missiles.*—This activity provides for the procurement of missiles other than the fleet ballistic missile. The 1965 missile program includes procurement of air-to-air Sparrow and Sidewinder missiles and the air-to-surface Shrike, Bullpup, and Bullpup training missile. Procurement of the ship-launched, surface-to-air missiles—Talos, Tartar, and Terrier—is also being continued, in phase with the related ship program. A submarine-launched, antisubmarine missile completes the 1965 missile procurement list. Also funded in this activity are aerial targets, used for training and the testing of weapon systems, and a drone antisubmarine helicopter.

10. *Modification of missiles.*—This activity provides for the modification of missiles in inventory to include improvements determined to be necessary during the test and fleet training programs.

11. *Missile spares and repair parts.*—The amounts provided in 1965 are for spares and repair parts for the missiles, aerial targets, and missile support equipment included in the 1965 procurement program.

12. *Missile support equipment and facilities.*—This activity includes funds for missile industrial facilities, primarily the replacement of machine tools used for production, and for support of the navigational satellite program.

[1] Reimbursements from non-Federal services are derived principally from deductions from carriers on account of loss of or damage to material in transit (31 U.S.C. 489(a)).

This appropriation provides for the construction of ships and the conversion of existing ships, including all installed machinery, propulsion equipment, electronic and electrical equipment, guns, torpedo and missile launching systems and communications systems. It also provides for the procurement of long-lead-time items for ships which are to be authorized in the 1966 program.

This increment of the Navy's long-range shipbuilding plan continues a modernization and replacement program designed to provide the fleets with modern balanced forces which can respond effectively to a wide variety of challenges in supporting our national policies.

In this budget, as in previous years, the program represents the full cost to complete all ships including costs associated with changes in ship characteristics and design which can be expected to affect costs during the long building period.

1. *Polaris ships.*—The 1965 program provides for the construction of one tender and conversion of one cargo ship to support Polaris submarines.

2. *Other warships.*—Six nuclear-powered attack submarines will be added to the Navy's undersea strength. This construction is part of the overall program for the replacement of conventionally powered submarines with nuclear-powered ones.

3. *Amphibious ships.*—In the proposed 1965 program considerable emphasis is given to improvement of our amphibious capacity. The program includes one amphibious force flagship, two amphibious transports, one amphibious assault ship, and our attack cargo ships. Also included are one vehicle cargo ship, one tank landing ship and one dock landing ship. In addition, one submarine conversion will add a transport submarine to our amphibious forces.

4. *Mine warfare and patrol ships.*—The antisubmarine warfare capabilities of the fleet will be strengthened by the construction of 16 escort ships. In addition, the 1965 program includes six motor gunboats to improve the Navy's counterinsurgency warfare capability.

5. *Auxiliaries and craft.*—Current fleet requirements demand modern support ships of increased effectiveness to provide food, fuel, and ammunition. Construction of support ships in the 1965 program includes: two tenders (one submarine tender in addition to the one mentioned in support of Polaris submarines, and one destroyer tender), two ammunition ships, two combat store ships,

one fast combat support ship and two replenishment fleet tankers. The 1965 program also provides for the construction of two surveying ships and two oceanographic research ships and a number of small landing and service craft. Conversions programed for 1965 include five fleet oilers. Construction and conversion of these support ships represents an important factor in maintaining naval forces around the world.

[1] Reimbursements from non-Federal sources are derived principally from deductions from carriers on account of loss of or damage to materials in transit (31 U.S C. 489(a)) and proceeds from the sale of personal property being replaced (40 U.S.C. 481(c)).

This appropriation provides for the procurement of Navy equipment and weapons not otherwise provided in appropriations for aircraft and missile procurement and ship construction. Large portions of the program are devoted to procurement of equipment to modernize the fleet units assigned to general purpose forces and to provide larger inventories of weapons for these forces. Programs to provide general support items such as communications equipment and training devices vital to effective operation of all naval forces will be continued in 1965, and the growing strategic force of Polaris submarines will receive additional capability by the procurement of improved equipment to be installed in submarines built earlier. Throughout the programs in this appropriation, emphasis will be placed on enhancing our antisubmarine capability by the procurement of improved weapons, detection devices, and other equipment.

1. *Ships support equipment.*—This activity finances electronic and other ship and marine equipment programed for general purpose naval forces and for general support. Primary effort is placed on procurement of antisubmarine warfare and communications afloat equipment which will increase the operating capability of deployed forces and assist in detecting and tracking enemy submarines. Procurement of a variety of equipments is continued providing unified, fleet, and tactical commanders with modern communications and information display equipment for more timely and efficient direction of the forces under their command. The 1965 program for such command equipment will include the Navy tactical data system designed to provide commanders with ready intelligence and control for defense against air attack.

2. *Weapons and support equipment.*—This activity finances the procurement of ammunition, ordnance equipment, ground electronics, aircraft support equipment and other support equipment for naval forces. Approximately 40% of the 1965 program under this activity is associated with the procurement of weapons and equipment for antisubmarine forces. A substantial increase over the 1964 antisubmarine program is planned in 1965. Major emphasis will be placed on the procurement of submarine and air-launched torpedoes, submarine detection devices, and mines. Procurement of the Asroc weapon and equipment for modernizing weapons launching and fire control systems is also planned in 1965. In addition to weapons for antisubmarine forces, this activity provides for the procurement of ammunition, bombs, and ordnance equipment for general purpose forces. A major portion of the funds programed in 1965 for general ordnance will be utilized for the procurement of additional quantities of the newer types of aerial bombs. Ground electronics equipment for communication with or control of aircraft and for the support of the Navy's astronautics program is also procured under this activity. In 1965, electronics equipment will be procured to begin instrumentation of the Atlantic Fleet Weapons Range and the Underwater Tactical Range, Pacific. A wide variety of equipment is procured under this activity for the support of aircraft operations, including catapults, arresting gear, landing aids, specialized ground equipment, training equipment, and general purpose shop, handling, and test equipment. A substantial reduction from the 1964 program cost has been made in 1965 for aircraft support equipment. This reduction results from completion in 1964 of major procurements associated with a system to enable Marine air wings to conduct operations from quickly constructed airfields in forward areas.

3. *Command support equipment.*—Newly developed communication and cryptographic equipment to be installed in naval command and control centers will be procured, modernization of the naval communication system to meet defense communication system standards will be continued, and improved electronic devices to be used in intelligence functions will be obtained.

4. *Civil engineering support equipment.*—Construction, weight handling and transportation equipment, almost all of which is programed for use by Navy general purposes forces, is financed in this activity.

5. *Supply support equipment.*—This activity provides for the centralized procurement of material handling equipment. Included in the 1965 program are such items as warehouse tractors, cranes, and forklift trucks common to supply operations and required for rapid movement of supplies.

6. *Personnel support equipment.*—Training aids and other training equipment are procured in this activity for use in schools and other naval activities to train

This appropriation provides the Marine Corps with weapons, ammunition, and related equipment most of which are programed for use by Marine general purpose forces such as Marine divisions, Marine aircraft wings, and tank and amphibious tractor battalions. These equipments provide the military hardware for support for seizure and defense of advanced naval bases, limited war landing operations, and general land warfare using a variety of tactics such as amphibious and vertical envelopment movements.

This 1965 program continues to improve firepower and mobility with rapid communication and display of information for use by field commanders. Tank and artillery ammunition and Redeye missiles will provide increased fire and staying power against ground and low-level aircraft targets. The dispersal of forces and speed of weapons and weapon carriers is met in the 1965 program by increased emphasis on a variety of modern electronic equipments for communications, intelligence, and control such as those providing usable and timely information for detection and control for defense against air attack.

Also financed in this appropriation are equipments for general support of the Marine Corps including administrative and logistic vehicles, engineer and materials handling equipment and automatic data processing equipment.

PROCUREMENT—Continued

General and special funds—Continued

AIRCRAFT PROCUREMENT, AIR FORCE—Continued

This appropriation provides for the procurement of aircraft, spares, components, industrial production facilities, supporting aerospace ground equipment and modification of inservice aircraft. Management of the overall aircraft programs is facilitated by bringing together in a single appropriation all funds for the prime aircraft weapon systems and related specialized ground handling and test equipment. The funds requested provide for a procurement program of 889 new aircraft in 1965 as compared with 840 in 1964.

1. *Combat aircraft.*—This activity provides for the procurement of aircraft to continue modernization of the combat forces through improved capability and flexibility. The procurement of aircraft in this activity for 1965 is for the tactical forces. Procurement of the advanced tactical fighter, first procured in 1962, is being continued in 1965 as well as its reconnaissance version. In addition, a procurement program is being initiated for a new two-place, variable sweep-wing fighter/bomber. This highly effective weapon system will be capable of accomplishing the close support, interdiction or air superiority tasks required by the tactical forces.

2. *Airlift aircraft.*—This activity provides for the continued modernization of the airlift forces providing increased mobility and capability. The all jet transport included in this estimate provides for quicker reaction time and a substantial increase in range and payload.

3. *Trainer aircraft.*—Continued procurement of jet training aircraft to provide for training requirements for high performance supersonic combat aircraft is provided for in this activity. In addition, provision is made for the initial procurement of a training aircraft which will be utilized in pilot transition from reciprocating to jet flying.

4. *Other aircraft.*—This activity provides for procurement of airplanes and helicopters to be utilized in support roles such as reconnaissance, missile base support and rescue operations for the combat forces.

5. *Modification of inservice aircraft.*—This activity provides for modifications of inservice aircraft necessary for safety-of-flight and changes incorporating technical improvements keeping the force abreast of the latest state-of-the-art.

6. *Spares and repair parts.*—In previous years, spares and repair parts were spread through several budget activities in this appropriation. This activity now provides for the procurement of all spares and repair parts required to support the aircraft being procured, the aircraft in the inventory, the modification and modernization program, and the related support equipment.

7. *Other support.*—This activity provides for industrial facilities, component improvements, common aerospace ground support equipment and other charges.

[1] Reimbursements from non-Federal sources are principally the dollar value of Mutual Security Military Sales to friendly foreign nations (5 U.S.C. 172d–1).

This appropriation provides for procurement of missiles, guided air rockets, missile propellants, and drones, launching and ground support equipment, installation and check-out of equipment prior to activation of operational squadrons, and expansion of industrial facilities.

1. *Ballistic missiles.*—This activity provides funds for intercontinental ballistic missile systems required for operational squadrons and training. The 1965 estimate continues the procurement and installation and check-out of the Minuteman intercontinental ballistic missile program. The estimates for Atlas and Titan provide missiles for operational testing.

2. *Other missiles.*—This activity provides for continued procurement of the Shrike antiradiation missile (radar buster), the Sparrow III B air-to-air missile, the Bullpup air-to-ground missile, a dummy warhead Bullpup trainer, and resumes procurement of the GAR–8 (Sidewinder) air-to-air missile.

3. *Modification of inservice missiles.*—The principal amounts required in 1965 are for updating of the operational Atlas, Titan and Minuteman ballistic missiles to incorporate changes determined in the testing program. Lesser amounts are required for other operational missiles involving safety of flight and inservice revealed deficiencies.

4. *Spares support.*—The amounts contained in 1965 provide for initial replenishment and modification spares support for all guided missiles used by the Air Force.

5. *Other support.*—Funds are provided in this activity for minor facility expansion, nonrecurring maintenance, preparation for shipment of tools and equipment, and machine tool modernization for industrial facilities under Air Force cognizance, missile propellants and for other classified projects.

Object Classification (in thousands of dollars)

[1] Reimbursements from non-Federal sources are principally the dollar value of Mutual Security Military Sales to friendly foreign nations (5 U.S.C. 172d–1).

1. *Munitions and associated equipment.*—The 1965 estimate provides for a variety of military munitions to further increase the capability of the Air Force to meet air defense and tactical force requirements for both conventional and nuclear war. Procurements of conventional bombs, including the new antipersonnel bomb, initiated in the 1961 program, and the new antitank bomb, initiated in the 1964 program, continue in 1965. Other items planned for continued procurement in 1965 include: air-to-air rocket motors, atomic ordnance components (except fissionable materials), 20-mm. cartridges, targets, biological/chemical warfare items and miscellaneous munitions components including supplies and materials.

2. *Vehicular equipment.*—The 1965 estimate provides for orderly replacement procurements for the vehicle fleet; for continued procurements of new fire trucks (initiated in 1963) and increased procurements for special purpose vehicle programs; substantial completion of procurement of materials handling equipment to provide support for the mechanized air cargo handling (463–L) system; for continued procurements of supplies and materials and modifications of equipment in support of year-round operation of the vehicular fleet.

3. *Electronics and telecommunications equipment.*—The 1965 estimate provides for (1) continued support of the intelligence warning, air weapons support and control

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

systems including electromagnetic intelligence, intelligence data handling, ballistic missile early warning, air traffic control and landing, weather observation and forecast, and the semiautomatic backup system for the Continental U.S. Aircraft Control and Warning System; (2) increased support of the Air Weapons Control System and the worldwide Defense Communications System; and (3) continued support of other systems and programs including procurements of communications and installation of cable for operational ballistic missile sites, cryptographic equipment for support of the USAF intelligence mission, supplies and materials, and end item modifications. The declining trend in program requirements in 1965 is the result of substantial completion of significant segments of various weapons support systems as well as a cautious approach toward embarkation upon production and acquisition of newer and more sophisticated systems which have, thus far, not demonstrated benefits commensurate with the additional costs.

4. *Other base maintenance and support equipment.*—The 1965 estimate provides for procurement at minimum levels required to support the operational units and bases, worldwide. Items planned for continued procurement in 1965 at about the 1964 program level include: common test and calibration equipment; personal, safety and rescue equipment; photographic equipment including photo processing shelters and tactical reconnaissance interpretation cells to assure support of the Air Force reconnaissance mission; maintenance and repair shop equipment; continuation of the aircraft arresting barrier program; auxiliary power units; related supplies and materials; and equipment modifications.

[1] Reimbursements from non-Federal sources are derived principally from cash sales to foreign governments of aircraft, missiles, components, and spares and repair parts (22 U.S.C. 2315).

RESEARCH, DEVELOPMENT, TEST, AND EVALUATION

The purpose of the programs funded in this title is to expand and improve the scientific and technological capabilities available to the Department of Defense in order to provide for continued and rapid development of advanced weapons systems and related equipment and techniques. In pursuit of this objective a spectrum of investigative and engineering activities is performed including scientific research, exploratory development, design and fabrication of experimental weapons and equipment, and testing of these items to determine their military utility. This work is performed in Government laboratories, in universities, by industrial contractors, and by non-profit organizations.

Appropriations in this title support the research, development, test, and evaluation activities of Army, Navy, Air Force, and Defense Agencies, such as Advanced Research Projects Agency, Defense Atomic Support Agency, and Defense Communications Agency. Research and development related to civil defense responsibilities of the Department of Defense is carried in the separate title, Civil Defense, in this chapter.

In recent years, a major portion of Defense funding for research and development has been devoted to the simultaneous development of many large strategic weapons systems, such as Atlas, Titan, Minuteman, and Polaris. By 1965, however, the development, test, and evaluation phases of most of these programs either will be essentially completed or will be in the final and less expensive stages, permitting a decrease in funding for this category of effort. Since the increase in 1965 funding for development of the newer major systems does not offset this decrease, a reduction in total obligations for research, development, test, and evaluation is permitted for the first time in a number of years. However, within this somewhat smaller total, an increase in 1965 is provided for research and development related to tactical and limited warfare weapons, and to improvements in military materiel, techniques, components, and subsystems. Resources devoted to military space programs will continue at a high level in 1965.

The budget plans and estimated obligations under the appropriations in this title for Army, Navy, Air Force, Defense Agencies, and Emergency Fund are summarized below (in thousands of dollars):

1. *Military sciences.*—This activity includes basic research in the life, physical, mathematical, and social sciences to add to the store of fundamental scientific knowledge, and applied scientific research of importance for military purposes leading to the development of new materials, components, and techniques. Among the many and widely varied scientific fields to be investigated under this activity in 1965 are nuclear weapons effects, nuclear test detection techniques, physical properties of materials, performance of rocket fuels, thermoelectric materials, chemical and biological agents, meteorology, radio astronomy, oceanography, and advanced radar and sonar techniques.

The research and development programs of the Advanced Research Projects Agency and the other Defense Agencies, including the readiness program for nuclear weapons effects testing, are funded in this activity. The principal support for such organizations as the Naval Research Laboratory, the Rand Corporation, the Research Analysis Corporation, and the Institute for Defense Analyses is also provided here. In addition to the amounts in this activity, basic and applied research performed by industrial contractors is supported by certain allowances made in some procurement contracts funded in the procurement appropriations.

2. *Aircraft and related equipment.*—This activity funds research, development, test, and evaluation related to airframes, engines, and other installed equipment. The 1965 program continues development of a new F–111 high-performance multipurpose fighter aircraft and experimental vertical takeoff and landing aircraft. These aircraft are intended to meet the needs of all military services. Navy will continue work on an improved light attack aircraft. In addition, the program includes work on other aircraft to improve the mobility and reconnaissance capabilities of the ground forces. Development of the mach 3 B–70 bomber test aircraft will continue as will the development of reconnaissance-strike components for possible application to various types of aircraft. Design studies will be initiated on advanced airlift and strategic attack aircraft. Research and test centers funded under this activity include the Naval Air Test Center.

3. *Missiles and related equipment.*—This activity provides for research, development, test, and evaluation of missiles of all types. The development of the advanced design Nike-X system represents a major and high priority effort in the field of defense against ballistic missiles. In addition, an extensive research effort on other ballistic missile defense techniques continues to be funded by the Advanced Research Projects Agency within the activity "Military sciences," above. In the strategic field, development will continue on improved versions of the operational Minuteman and Polaris ballistic missiles. Development efforts on a new mobile medium-range ballistic missile system will be expanded. Other significant missile development projects include the initiation of a new Navy ship-to-air missile system, as well as continuation of the Lance division support missile for land combat. In addition to funding participation by industry in the missile research and development program, this activity is the principal source of funds for the operation of Government facilities like the Atlantic, Pacific, and White Sands Missile Ranges, the Naval Ordnance Test Station, and the research and development programs at Army's Redstone Arsenal.

4. *Military astronautics and related equipment.*—This activity provides for programs directed toward the improvement of space technology for military purposes, and the investigation and development of specific military applications of space vehicles. During 1965, work will continue on the navigation satellite, on military communications satellites, on improvements in satellite tracking, identification, and interception capability, and on experimental nuclear test detection satellites, the latter funded under the Military sciences activity. In 1965 development of a manned orbiting laboratory (MOL) will be initiated to conduct experiments in a near earth orbit. The MOL system will utilize a modified Gemini vehicle, originally developed by the National Aeronautics and Space Administration. Development effort will continue on the Titan III, an improved multipurpose space booster system utilizing both solid and storable liquid propellants. Also, increased funds are provided for research on re-entry vehicles and lifting bodies. Supporting research and development in such areas as bioastronautics, secondary power sources, guidance systems, materials research, improved propellants, and engine components will continue.

5. *Ships, small craft, and related equipment.*—This activity provides for design of new type ships and development of shipboard equipment. Funds are included in the regular shipbuilding appropriation for the actual construction of these new ships and ships employed in the development of new components and techniques. Funds in this activity will provide in 1965 for the development of advanced propulsion systems, hydrofoils, communications, sonar, radar, and catapults and arresting gear. Increased effort related to antisubmarine warfare to counter modern nuclear submarines is provided, including continued development of an advanced destroyer designed especially for this purpose. A significant part of the research and development effort of the Naval Electronics Laboratory and David Taylor Model Basin is funded under this activity.

6. *Ordnance, combat vehicles, and related equipment.*—The Army's 1965 program includes improved artillery, combat vehicles, mortars, antitank weapons, tank arma-

Digitized for FRASER

Federal Reserve Bank of St. Louis

RESEARCH, DEVELOPMENT, TEST, AND EVALUATION—Continued

ment, and small arms. Funds are included for the United States' share of the joint development of a new battle tank in cooperation with the Federal Republic of Germany. The program continues development and evaluation of vehicles and weapons with emphasis on requirements for limited or unconventional warfare in remote areas. The 1965 Navy program continues to emphasize antisubmarine weapons and includes torpedoes, mines, depth charges, bombs, rockets, and other types of ammunition. Development of landing and amphibious vehicles for the Marine Corps are also provided in this activity. The principal support for the Naval Ordnance Laboratory and for research and development activities at several Army arsenals is also funded here.

7. *Other equipment.*—This activity provides for research, development, test, and evaluation of equipment not separately provided under other activities. Examples of the types of equipment developed for the three services are as follows: chemical, biological, and radiological agent detection and protection; combat surveillance; tactical and strategic communications; mapping and geodetic systems; amphibious warfare support equipment; photographic equipment; aircraft control and warning; missile detection; and other electronic systems. Much of the support for the research and development effort at the Lincoln Laboratories is provided under this activity.

8. *Programwide management and support.*—For the Army and the Navy this activity provides for those costs of operation, management, and maintenance of research, development, and test facilities which are not distributed directly to other budget activities, and for certain costs of central administration. This activity provides for the costs of operation, management, and maintenance of all Air Force managed research, development, test, and evaluation installations except the Atlantic Missile Range included in activity 3 and the Satellite Tracking and Control Facility included in activity 4.

9. *Emergency fund.*—The emergency fund enables the Secretary of Defense to exploit new scientific developments and technological breakthroughs and to provide for other unforeseen contingencies in the research, development, test, and evaluation programs.

General and special funds:

RESEARCH, DEVELOPMENT, TEST, AND EVALUATION, ARMY

For expenses necessary for basic and applied scientific research, development, test, and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, as authorized by law; [$1,386,141,000] *$1,397,000,000*, to remain available until expended. (*10 U.S.C. 2353, 4503; Department of Defense Appropriation Act, 1964; authorizing legislation to be proposed.*)

MILITARY CONSTRUCTION

The direct military construction programs for the Armed Forces, both Regular and Reserve, shown in the individual schedules of this title are summarized in the following table (in thousands of dollars):

MILITARY CONSTRUCTION PROGRAM

	1963 actual	*1964 estimate*	*1965 estimate*
Regular Forces	1,176,450	893,996	1,092,000
Reserve Forces	46,330	44,200	37,700
Interservice activities	68,115	46,000	39,700
Total	1,290,895	984,196	1,169,400

Most of the appropriations required for the military construction accounts are dependent on the enactment of authorizing legislation. The details of this legislation have been completed and are being submitted to the Congress for early consideration.

1. *Major construction.*—This category provides for acquisition of land for and construction of military projects in the United States and overseas as authorized in currently effective military construction acts and the new authorization referred to above. These authorizations include construction projects as defined in Department of Defense Directive 7040.2 where the estimated cost of such construction exceeds $25 thousand per project. Under this category the major program elements proposed for 1965 are as follows:

Strategic retaliatory forces.—Facilities are to be constructed for one additiona' hardened Minuteman squadron

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

in an improved configuration with related support facilities. Funds are also included for increased survivability by improvements to facilities for the previously authorized Minuteman squadrons and for improvements to the Titan sites. Construction for the Polaris missile system will provide projects which will contribute to the operational readiness of the system and the proficiency of its crews. The program includes facilities to insure safe and continued operation of the manned bomber force.

Continental air and missile defense forces.—Structures to provide site relocations, additions and improvements for the Nike-Hercules air defense missile system are proposed, including further work to provide this system with protection against radiation fallout. Funds are provided for the construction of facilities to maintain the operational capability of interceptor aircraft and include operational, training, maintenance, personnel, and other facilities. Facilities to extend and improve the coastal detection, classification and tracking of submarines are provided.

General purpose forces.—The Army elements of this grouping include construction of airfield runways, parking aprons and hangars, tactical equipment maintenance shops and hardstands, troop housing complexes with associated structures at the Army major unit training stations in the United States and in several overseas areas. Acquisition of land for training of divisional forces at two of the United States stations is provided. Construction is provided for operational and personnel support facilities at air stations and waterfront installations in the United States and overseas for naval and marine air squadrons, naval fleet units, and marine ground forces. The Air Force portion of this program provides for construction at bases in the United States and overseas for the tactical forces and includes operational, training, maintenance, supply and personnel facilities. Some of these facilities will support the F–4 aircraft entering the inventory in this time period as well as the capability for special air warfare operations.

Sealift and airlift forces.—Additional operational and maintenance facilities will be provided to increase the effectiveness of the transport aircraft assigned to the Tactical Air Command and the Military Air Transport Command.

Reserve Forces.—The facilities required for the training of the Reserve Forces include: armories and training centers, nonarmory facilities such as maintenance shops and warehouses; and aviation facilities such as airfield pavements, maintenance shops, and training buildings.

Research and development.—A major portion of the research construction effort by the Army will be devoted to facilities for development of the Nike-X missile system. Other significant Army projects provide for a missile system calibration facility at Redstone Arsenal, Alabama; a clinical research building at Edgewood Arsenal, Maryland; and land acquisition at the White Sands Missile Range, New Mexico. The significant Navy projects include a general purpose laboratory at the Naval Research Laboratory, Washington, D.C.; a structural mechanics laboratory at Carderock, Maryland; and a further increment of the Atlantic Underseas Test and Evaluation Center in the British West Indies. Air Force construction includes an equipment quality and repair laboratory at Patrick Air Force Base, Florida; an electronic science laboratory, as well as an optical collimation laboratory at Wright-Patterson Air Force Base, Ohio; a toxic fuels propulsion facility at Edwards Air Force Base, California; and facilities for continued improvement of both the Atlantic and Pacific missile ranges.

General support.—Projects in this grouping cover operational and training facilities, communication facilities, maintenance and production facilities, supply facilities, hospital and medical facilities, administrative facilities, troop housing and community facilities, and utilities and ground improvements. These projects though important to the effective functioning of the armed services, are not related directly to any one particular force, or weapon system, and, in fact, serve as common support for any number of forces or systems. In addition to the above requirements of the military services, this grouping covers the construction needs of the following Defense agencies: Defense Atomic Support Agency, Defense Communications Agency, Defense Intelligence Agency, Defense Supply Agency, National Security Agency, and the Advanced Research Projects Agency.

2. *Minor construction.*—Provision is made for construction of permanent and temporary projects that are not otherwise authorized by law but which are determined to be urgently required and do not exceed $200 thousand per project for the Regular Forces, and $50 thousand per project for the Reserve Forces. Provision is made in the applicable operation and maintenance appropriations for construction projects as defined in Department of Defense Directive 7040.2 where the estimated cost of such construction is $25 thousand or less per project.

3. *Planning.*—This provides for necessary planning of military construction projects, including design, standards, criteria, studies, appraisals, and other related activities.

4. *Supporting activities.*—Provision is made for activities such as the defense access road program and minor land acquisitions.

Loran stations.—These funds are advanced to the Coast Guard for construction of loran stations in areas essential to the defense of the United States. Loran transmitting stations permit safe and effective operation of ships, submarines, and aircraft of the military services in all kinds of weather by an electronic system of navigation which provides continuous navigational positions by means of intersecting lines of position.

General and special funds:

MILITARY CONSTRUCTION, ARMY

For acquisition, construction, installation, and equipment of temporary or permanent public works, military installations, and facilities for the Army as currently authorized in military public works or military construction Acts, *and* in sections 2673 and 2675 of title 10, United States Code, *$408,000,000,* to remain available until expended[, $200,646,000]. (*Military Construction Appropriation Act, 1964; authorizing legislation to be proposed.*)

[CONSTRUCTION, ALASKA COMMUNICATION SYSTEM, ARMY]

[The appropriation available to the Department of the Army for "Construction, Alaska Communication System, Department of the Army" shall not be available for obligation after June 30, 1963.] (*Military Construction Appropriation Act, 1964.*)

FAMILY HOUSING

The Department of Defense Family Housing Management Account was established as of July 1, 1962, under authority (76 Stat. 237) provided in the Military Construction Act of 1962. All expenses of the military family housing program are financed from this account. In its first year of operation, the account was funded by the transfer of $590.3 million provided for the support of family housing activities in 15 Defense appropriations for 1963. In addition, $101.4 million of unobligated balances available for the support of family housing activities in the June 30, 1962, balances of the Military construction appropriations and the Wherry housing revolving fund was transferred to the housing management account.

Pursuant to the Military Construction Authorization Act, 1964 (77 Stat. 327), a total of $637.4 million was appropriated in the Military Construction Appropriation Act, 1964, under the title Family housing, Defense.

For 1965, authority is being requested in the military construction authorization legislation for the appropriation of $711 million; $238.6 million of which is for construction and related projects, and $472.4 million for the operation and maintenance of family housing and related facilities, for leasing of family housing, for payments required on the indebtedness assumed to acquire Capehart and Wherry housing and to build surplus commodity housing in foreign countries, and for authorized payments of Servicemen's Mortgage Insurance premiums.

General and special funds:

FAMILY HOUSING, DEFENSE

For expenses of family housing for the Army, Navy, Marine Corps, Air Force, and Defense Agencies, for construction, including acquisition, replacement, addition, expansion, extension and alteration, and for operation, maintenance, and debt payment, including leasing, minor construction, principal and interest charges and insurance premiums, as authorized by law, [$637,406,000] *$711,000,000*, to be obligated and expended in the Family Housing Management Account established pursuant to section 501(a) of Public Law 87–554, in not to exceed the following amounts:

For the Army:
Construction, [$34,681,000] *$52,728,000;*
Operation, maintenance, [$134,154,000] *$124,710,000;*
Debt payment, [$49,242,000] *$48,618,000.*
For the Navy and Marine Corps:
Construction, [$68,248,000] *$96,219,000;*
Operation, maintenance, [$63,621,000] *$65,331,000;*
Debt payment, [$30,323,000] *$32,408,000.*
For the Air Force:
Construction, [$61,027,000] *$88,635,000;*
Operation, maintenance, [$105,682,000] *$108,058,000;*
Debt payment, [$87,832,000] *$90,801,000.*
For Defense Agencies:
Construction, [$50,000] *$981,000;*
Operation, maintenance, [$2,546,000] *$2,511,000.*

Provided, That the [unobligated balances in the Family Housing Management Account as of June 30, 1963, shall remain available herein] *unexpended balances of amounts heretofore provided under this head for construction, and the amounts appropriated herein for that purpose, shall remain available until expended.* (*Military Construction Appropriation Act, 1964; authorizing legislation to be proposed.*)

[1] Advances and reimbursements from non-Federal sources are derived principally from collections of rentals from occupants of certain military housing units (69 Stat. 652 and 70 Stat. 1105).

1. *Construction*—(a) *Construction of new housing.*—In addition to the construction of new family housing units and associated facilities, this includes planning, related land acquisition and site preparation, and the initial outfitting of housing with fixtures and other equipments which are integral components thereof, including major appliances. Facilities associated with family housing units include roads, driveways, walks, and utility systems which primarily serve the family housing units, and community facilities which are integral to a housing area and are provided for use by the residents. Family housing requirements have increased substantially in recent years due to the increasing marital rate among career military personnel. In each of the years 1963 and 1964, funds were appropriated for construction of 7,500 units of new family housing. For 1965, a total of 12,500 units is proposed to be funded as the third increment of a 62,100-unit construction program planned to overcome housing shortages which are not expected to be met by privately owned rental units or other housing sources.

(b) *Acquisition of Wherry housing.*—With the acquisition of 2,441 units in 1963 and the planned acquisition of 5,752 units in 1964, the Wherry housing acquisition program is expected to be completed in 1964 with a total of 80,749 units acquired; accordingly, no funds for immediate acquisition costs are required in 1965. Payments required on mortgages assumed in acquiring Wherry housing are included in the Debt payment budget subactivity described below.

(c) *Construction improvements.*—Projects to correct deficiencies in existing public quarters and related facilities, to bring inadequate public quarters up to public quarters

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

standards when it is economically feasible to do so, and to rehabilitate acquired Wherry housing are funded under this subactivity. The projects range from those involving general rehabilitation down to small deficiency corrections costing $50 per unit. In 1965 it is planned to accomplish numerous improvements at a total cost of $12.2 million.

(d) *Planning.*—Provision is made in this subactivity only for those planning costs incurred for projects which do not go forward to completion because of subsequent program changes. The 1965 requirement for this purpose is estimated at $1 million. Advance planning and design costs incurred in connection with the projects which go forward to completion are provided, as applicable, in the budget subactivities for construction of new housing and construction improvements.

(e) *Rental guarantee payments.*—Payments are made to private sponsors of family housing projects built in foreign countries for rental to Defense personnel when the rentals received by the sponsors fall below the guaranteed level specified in authorized (66 Stat. 622) occupancy contracts. In 1965, such payments are estimated at $1.4 million of which the major portion is required for the payment due in 1965 on the units vacated in Morocco. The balance is required for payment to sponsors of such housing in France where the 95% guaranteed occupancy level may not be met at certain installations.

(f) *Other expenses.*—This consists of miscellaneous expenses which cannot logically be included in the foregoing subactivities. No funds are required in 1964 or 1965.

2. *Operation, maintenance, and debt payment*—(a) *Operation.*—Provision is made for the expense of operating military family housing and related facilities, including utilities and other direct supporting services. The numbers of family housing units to be operated, including leased units are:

	1963 actual	*1964 estimate*	*1965 estimate*
Average number of units	365,326	370,083	374,425
Number of units at year-end	365,260	372,003	377,162

Provision is made also, within limited allowances, for the initial outfitting of public quarters with furniture and other personal property and for the maintenance and replacement of such furnishings. Operating expenses for 1965 are estimated at $167 million. The expense of leasing housing (including operation and maintenance) for assignment as public quarters in both the United States and in foreign countries is estimated at $14.5 million in 1965 for 6,439 units.

(b) *Maintenance of real property.*—Provision is made for the expense of maintaining and repairing family housing and related facilities including roads, walks, driveways, utilities systems and grounds care and to maintain, repair and replace fixtures and other equipment (including major appliances) which are integral components of a family housing unit. The numbers of units to be maintained are as shown in the preceding table. Provision is made also for the expense of minor alterations to family housing units, the cost of which does not exceed the limitations established to distinguish improvements which are funded under the Construction budget activity. Maintenance expenses for 1965 are estimated at $126.7 million.

(c) *Debt payment.*—Payments are made to mortgagees in accordance with the amortization and interest schedules of the mortgages assumed upon acquisition of Capehart and Wherry housing. Payments are made to the Commodity Credit Corporation for the foreign currencies, obtained from the sale of surplus commodities to foreign countries, which have been used to construct quarters for Defense personnel in foreign countries. In addition, provision is made for the expenses of the Capehart mortgagor corporations which were established to incur the mortgage indebtedness. The total amount of the payments required in 1965 is estimated at $161.2 million, categorized as follows (in millions of dollars):

	Principal	*Interest*	*Other expense*	*Total*
Capehart housing	49.9	69.1	0.2	119.2
Wherry housing	15.5	20.5	---	36.0
Surplus commodity housing	6.0	----	---	6.0

(d) *Mortgage insurance premiums.*—Premium payments are required on mortgage insurance provided by the Federal Housing Administration: (1) through the Armed Services Housing Mortgage Insurance Fund on mortgages assumed by Defense to acquire Capehart and Wherry housing; and (2) on mortgages assumed by active military personnel for housing purchased under the provisions of section 124, Public Law 83–560. The premiums on Capehart housing in 1965 are estimated at $3.9 million; on Wherry housing at $2.5 million; and on servicemen-owned housing at $5 million for a total of $11.4 million.

Supplementary Personal Services Data

Since the bulk of the personal services funded from the Family housing, Defense appropriation is on a reimbursable part-time basis, they are not reflected in the foregoing personnel summary. The following supplementary schedule is provided to indicate the man-year equivalent of all the personal services supported by this appropriation and the compensation paid therefor. The full-time positions paid directly from this appropriation are listed in the schedule of personnel compensation provided for this appropriation. The positions partially supported by reimbursement from this appropriation are listed in the

MILITARY FAMILY HOUSING INDEBTEDNESS

The following informational schedule shows the Department's program for the incurrence and retirement of indebtedness, and its year-end debt position, in connection with its acquisitions of Capehart, Wherry, and surplus commodity housing. Also shown, as of the year's end, are the cumulative number of housing units acquired and a statement of the contingent liability assumed for construction or acquisition projects underway.

STATEMENT OF FAMILY HOUSING INDEBTEDNESS

[In thousands of dollars]

	1963 actual	1964 estimate	1965 estimate
1. Total debt incurred:			
(a) Start of year:			
Capehart housing	1,598,115	1,767,490	1,828,420
Wherry housing	535,670	553,007	586,155

RENTAL GUARANTEE FAMILY HOUSING PROGRAM

The following informational schedule shows the use made by Defense of its authority (66 Stat. 622, which expired June 30, 1963) to guarantee rental payments to private sponsors of housing built in foreign countries for rental to Defense personnel. Rental guarantees may not

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

exceed 95% of the scheduled rentals the sponsor would receive from full occupancy of his housing by Defense personnel. The guarantees are treated as a contingent liability, the total amount of which is progressively reduced as the guaranteed rental levels are met by rentals collected from the occupants or by payments made to the sponsors to honor the guarantee agreements. At the end of 1963, guarantee agreements were in effect on 2,644 units in France and 700 units in Morocco. In 1964 guarantees will expire on 300 of the units in France, and in 1965 on the remaining 2,344 units. Guarantee payments in 1964 and 1965 are higher than the 1963 level due to the vacating of the 700 units in Morocco which results from closing down the U.S. Air Force installations there in 1964. The requisite funding is provided in the budget subactivity Rental guarantee payments.

The Military Construction Authorization Act, 1964, authorizes (77 Stat. 326) Defense to enter into new rental guarantee agreements in 1964 and 1965 for not more than 5,000 units. No such agreement may guarantee payment of more than 97% of the anticipated rentals, nor may any guarantee extend for a period exceeding 10 years, nor may the average rental on any project exceed $150 per unit per month including the cost of operation and maintenance. The following schedule does not reflect any contingent liabilities arising from the new rental guarantee program since it is not expected that any housing built under the new agreements will be available for beneficial occupancy during 1964 or 1965.

STATEMENT OF RENTAL GUARANTEE HOUSING CONTINGENT LIABILITY

[In thousands of dollars]

Appropriation (adjusted)	**72,845**	**70,312**	**92,400**

This appropriation provides for the day-to-day operations and activities of the Office of Civil Defense in carrying out the civil defense functions assigned to the Secretary of Defense by Executive Order No. 10952. The major program costs for development and execution of a nationwide fallout shelter program are included under the Shelter, construction and research and development account.

1. *Warning and detection.*—This program provides for studies and surveys on a nationwide indoor warning system to alert the population of attack or impending natural disaster emergencies; an outdoor warning system for the Washington, D.C., metropolitan area; fallout protection for warning points under National Warning System; the procurement of instruments for detection, evaluation and dissemination of radiological fallout hazard data during an emergency; and the warehousing and maintenance of radiological instruments and stockpile engineering equipment. In 1965 the engineering surveys and studies of electric power systems for transmission of instantaneous warning signals into homes, offices, and factories served by these systems will be completed. Radiological detection and monitoring equipment will be procured for monitoring stations, training sets and aerial detection. Extension of current legislative authority is proposed to continue granting these instruments to States and localities. The existing outdoor warning system for the Washington, D.C., metropolitan area will continue to be maintained and improved.

2. *Emergency operations.*—This program provides for the development of a high degree of readiness for civil defense emergency operations. This includes (a) protection of radio facilities disseminating emergency instructions and public information; (b) a damage assessment capability for preattack and postattack planning; (c) an education and training program stressing community and individual protective measures, shelter analysis, and protective construction; and (d) development of general and technical materials for use by public infor-

CIVIL DEFENSE—Continued

General and special funds—Continued

OPERATION AND MAINTENANCE, CIVIL DEFENSE—Continued

mation media, principally at the local level. Training for shelter management and radiological monitoring will be further expanded in 1965 to increase the effectiveness of community shelter areas marked in prior years.

3. *Financial assistance to States.*—This activity provides financial assistance to States for procurement of survival supplies, equipment and training; construction of protected emergency operating centers for State and local governments; and personnel and administrative expenses necessary to maintain civil defense capability at all governmental levels. Legislation is proposed extending current authority to make financial grants for personnel and administrative expenses. Continuation and expansion of this assistance in 1965 is essential to enable the States and cities to perform the necessary planning and operations to utilize the shelter space available to them.

4. *Management.*—In addition to administrative expenses, this provides for reimbursement for the services of other elements of the Department of Defense in administering the civil defense program.

Add obligations of prior year budget plan		16,115	1,290
Total obligations	36,886	56,100	255,715

1. *Shelters.*—The 1965 program provides for incorporation of fallout protection in existing Federal, State, and local government structures; for incorporation of shelter features in new construction, or modifications to existing facilities, of nonprofit institutions or instrumentalities; and for construction of protected regional centers for Federal emergency operations in the field. New legislative authority is proposed for these activities similar to H.R. 8200 currently before the Congress. The program also provides for continued survey, marking, and provisioning of public fallout shelters.

2. *Research and development.*—Research studies are made to improve the civil defense program. These include studies stressing increased protective capability of shelters, improved shelter management procedures, economy of hardware, improved effectiveness of shelter support systems, and defining requirements for recuperative action in the immediate postattack environment.

MILITARY ASSISTANCE

General and special funds:

MILITARY ASSISTANCE, DEFENSE

For expenses of military assistance, military credit sales, and related activities, as authorized by legislation enacted during the second session of the Eighty-eighth Congress, including administrative expenses, and hire and purchase of passenger motor vehicles for replacement only for use outside the United States $1,000,000,000, to remain available until expended: Provided, That during the current fiscal year there may be merged with this appropriation such amounts of the unobligated balances of appropriations previously granted for military assistance remaining available on June 30, 1964, or becoming available during the current fiscal year, as the Secretary of Defense may determine to be necessary for the accomplishment of programs for which this appropriation is made: Provided further, That the (a) obligated balances, and (b) such amounts of unobligated balances of appropriations previously granted for military assistance remaining available on June 30, 1964, or becoming available during the current fiscal year, as the Secretary of Defense may determine to be necessary for the accomplishment of prior year programs for military assistance, shall remain available until expended. Provided further, That none of the funds contained in this paragraph shall be available for the purchase of new automotive vehicles outside of the United States. (Authorizing legislation to be proposed.)

For completion of prior year budget plans						25,000
New obligational authority (appropriation)			**1,000,000**			**1,000,000**

The 1965 program will be financed from this appropriation, whereas prior year programs have been financed from the Military assistance appropriation made to the President. Unobligated balances under the Military assistance appropriation not required to complete the financing of 1964 and prior year programs may be transferred to the 1965 Military assistance, Defense appropriation to finance 1965 programs. The Military assistance, Defense appropriation is a major element of the U.S. national security program and will help the development and maintenance of modern military forces in other countries.

Military assistance is now greatly reduced from the programs of earlier years. The total in 1965 will be less than that requested for 1964. Major countries in Europe are not receiving new commitments for grant assistance and some of the other countries are increasing their own expenditures on forces thus resulting in a major reduction in U.S. assistance.

Some countries will receive grant aid under this program. Others will buy their military equipment on cash or credit terms. The combined military forces of these countries are numerically much greater than the U.S. Armed Forces, and provide free-world defensive capa-

Federal Reserve Bank of St. Louis

bility, depth in reserves and flexibility. Many of these countries have joined in regional defense pacts, such as the North Atlantic Treaty Organization or in bilateral defense arrangements with the United States.

Most of the military equipment and supplies which the United States provides under these programs are produced in the United States.

The kind of materiel supplied by the United States varies with objectives in each area and the requirements and capabilities of the individual countries. Whenever possible, materiel already on hand but excess to the needs of U.S. Forces is supplied at no charge to the Military assistance, Defense appropriation except for the cost of rehabilitation and transportation.

This appropriation will finance the following requirements:

1. *Aircraft.*—Provision of more advanced aircraft to selected countries on a limited basis and the replacement of obsolete planes are planned in 1965.

2. *Missiles.*—The 1965 program provides for maintenance of certain of the ballistic and other guided missiles previously furnished.

3. *Ships.*—New construction of patrol, minesweeping and other type vessels is included in the 1965 program, together with the reactivation and rehabilitation of ships of the U.S. mothball fleet to meet other naval requirements of our allies. The latter can only be met under authority of ship loan legislation.

4. *Combat vehicles.*—Included are tanks and armored personnel carriers. The 1965 program also provides limited replacement of wornout equipment.

5. *Tactical and support vehicles.*—The 1965 program emphasizes replacement of wornout vehicles.

6. *Weapons.*—The 1965 program is primarily for the maintenance of existing forces.

7. *Ammunition.*—Most of the ammunition to be supplied in 1965 will be used for training allied troops.

8. *Electronics and communications equipment.*—The 1965 program includes replacement of wornout or obsolete equipment and limited modernization.

9. *Other support equipment.*—The 1965 program includes materiel handling, photographic, chemical, construction and other equipment needed for maintaining forces.

10. *Supplies.*—The 1965 program includes petroleum products, textiles, medical, automotive, electronic and general supplies although in a reduced amount compared with previous years.

11. *Supply operations.*—The 1965 program includes the cost of packing, handling, storing and transporting materiel financed by the prior military assistance appropriations as well as materiel financed by the Military assistance, Defense appropriation. Such costs vary according to the types, volume and destination of goods delivered.

12. *Maintenance of equipment.*—The 1965 program includes contract technicians and contract services and repair and rehabilitation costs for both MAP-owned equipment and materiel excess to the U.S. Services requirements.

13. *Training.*—Training programs for free-world countries are required to insure effective use of the new weapons and equipment supplied through the military assistance program, teach basic skills to forces of less developed nations and create favorable attitudes toward the United States and its policies.

14. *Construction.*—Included are the U.S. share of constructing military and logistical facilities under the jointly financed NATO infrastructure program, the contract costs, architect-engineering services, and related overhead items for construction for use of forces of foreign countries.

15. *Special activities.*—These include U.S. support for programs of coordinated weapons production in Europe and the U.S. share of costs incurred under the terms of international agreements for the support of international military headquarters such as NATO, SEATO, and CENTO.

16. *Administration.*—The administrative expenses of the program incurred by U.S. military assistance advisory groups, the unified commands, and the departments are included.

17. *Military assistance credit sales.*—Included are the costs of purchase of military equipment and supplies in the United States for sale to countries other than those whose purchases are ordinarily financed by commercial sources or by the Export-Import Bank. Authority is also proposed to guarantee exporters doing business in the United States against risks of loss arising in connection with export of defense articles and services to friendly countries. Purchasers of material supplied under military assistance credit sales procedures execute sales agreements, the duration of which range from 120 days to 10 years depending upon the nature of the transaction.

[MILITARY ASSISTANCE]

[Military assistance: For expenses authorized by section 504(a) of the Foreign Assistance Act of 1961, as amended, including administrative expenses authorized by section 636(g)(1) of such Act, which shall not exceed $24,000,000 for the current fiscal year, and purchase of passenger motor vehicles for replacement only for use outside the United States: *Provided*, That none of the funds contained in this paragraph shall be available for the purchase of new automotive vehicles outside of the United States, $1,000,000,000.] (*Foreign Aid and Related Agencies Appropriation Act, 1964.*)

The military assistance program for 1964 and prior years will be completed under this appropriation. Obligations for the 1965 program will be made under the new Military assistance, Defense appropriation. This new appropriation in the Department of Defense will emphasize the role of military assistance as a major element of the national defense effort.

As existing programs are completed, any unobligated balances not required to finance 1964 and prior-year programs will be transferred to the Military assistance, Defense appropriation to finance 1965 and subsequent year programs.

REVOLVING AND MANAGEMENT FUNDS

Public enterprise funds:

Defense Production Guarantees

Guarantees are given on loans made by public and private financing institutions by the Army, Navy, and Air Force to facilitate performance of defense production contracts. When necessary, loans may be purchased by the Government. Administrative expenses are financed from guarantee fees and interest on loans receivable. Funds in excess of guaranteed loan program requirements may be transferred to miscellaneous receipts of the Treasury. Net earnings are retained to purchase loans when required under guarantee commitments and to cover possible future losses (50 U.S.C. app. 2091).

[1] Balances of selected resources are identified on the statement of financial condition.

This fund finances the central procurement of civil defense materials toward which contributions to the States are authorized on a matching fund basis. The fund is reimbursed for purchases from Office of Civil Defense appropriations and from funds provided by the States (65 Stat. 61).

It is anticipated that the increased participation by the States and local governments in civil defense experienced during 1962 and 1963 will be further expanded in the ensuing years. As a result of the expanded program greater emphasis is being directed toward the establishment of emergency operating centers at all levels of government. Hence, this estimate reflects a substantial increase in obligational requirements, since the civil defense procurement fund will be utilized for the central procurement of equipment and supplies necessary to equip these centers.

REVOLVING AND MANAGEMENT FUNDS—Con.

Intragovernmental funds—Continued

ARMY STOCK FUND—Continued

This fund finances inventories of consumable supplies, repair parts and minor items of equipment at Army depots in the United States and overseas and at stations in the Continental United States (10 U.S.C. 2208). Material is purchased and held at these locations for resale and for mobilization reserve.

All centrally controlled secondary items of material, repair parts and minor equipment will be financed in 1965 through the stock fund except for items coded for repair at depot level only, insurance type items and those closely related to safety of personnel.

Supply and financial operations of the fund are centrally directed and controlled by the Department of the Army. In the financial statements, the over 500,000 items under the fund are classified into 16 categories which are managed through the Army Materiel Command, the Surgeon General, the Continental Army Command and the U.S. Army, Pacific. Major changes in the coverage of the fund for 1963 were: (a) Extension of the fund to cover certain aircraft parts, missile parts, and rocket parts; (b) inclusion of subsistence and clothing inventories in Korea and Okinawa under the fund, and (c) removal from the fund of high cost reparable and other selected items, which are now financed under the appropriation Procurement of equipment and missiles, Army. In 1964, the fund is extended to cover inventories at all stations under the Continental Army Command; coverage for most categories of material had previously been limited to the Third Army area. In 1965, selected items coded for repair at depot level only, insurance type items and items essential to the safety of personnel will be removed from the fund and financed thereafter from the appropriation Procurement of equipment and missiles, Army. For 1963 and 1964, wholesale inventories of certain items are transferred from this fund to the Defense stock fund, managed by the Defense Supply Agency. The effect of these changes is summarized by category as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Clothing and equipage	13,039	−52,406	--------

Continental Army Command supplies	1,751	172,498	--------
Pacific area supplies	---------	147,405	44,466
Inventory received from or donated to other accounts	−18,659	59,350	−53,590
Stock withdrawal credits established	---------	−9,600	--------
Charges against capital due to loss on disposal of inventory surplus at time of capitalization	−18,513	--------	--------
Increase or decrease in undelivered purchases to be paid from other accounts	20,266	−5,316	−14,950
Net change in capitalized inventory	−16,907	44,434	−68,540

The increase of $44.4 million for 1964 results primarily from inclusion of inventories at additional stations in the Continental United States. The decrease of $68.5 million for 1965 reflects the transfer of the selected items mentioned above to the procurement appropriation.

Budget program.—The increase in obligations for 1964 and 1965 results primarily from the extension of the command channel stock fund in the Pacific area and in stations in the Continental United States. Continued emphasis is being placed on maximum utilization of long-supply stocks and on conservative procurement of material in relation to sales requirements. Obligations for peacetime operating stocks were 94% of sales in 1963 and are projected at 96% and 95% of sales in 1964 and 1965, respectively. The program reflects procurement for augmentation of mobilization reserve stocks of $65 million in 1963 and of $35 million per year in 1964 and 1965. The program provides for year-end inventories as follows (in millions of dollars):

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Clothing and equipage:				
Operating and other stocks	37.6	36.4	10.7	9.3

	1962 actual	1963 actual	1964 estimate	1965 estimate
Pacific area supplies:				
Operating and other stocks	-------	-------	44.2	60.6
Mobilization reserve stocks	-------	-------	58.0	67.9
Long supply	-------	-------	4.0	5.0
Summary:				
Operating and other stocks	859.1	852.6	727.9	697.5
Mobilization reserve stocks	654.5	610.1	727.9	781.9
Long supply	808.3	701.7	395.4	242.8
Total inventories	2,321.9	2,164.3	1,851.3	1,722.2

Total inventory is estimated to decline by $600 million for the 3-year period from the beginning of 1963 to the end of 1965. Of this, $32 million will be the net result of decapitalizations discussed above. The remaining $568 million reduction is the net of $359 million in sale of stocks without replacement and $409 million in disposals, donations and adjustments, partially offset by receipt of $200 million in mobilization reserve assets from procurement.

Costs exceeded obligations by $106 million in 1963, and are forecast to exceed obligations by $329 million in 1964 and $126 million in 1965, a total of $561 million for the 3 years, because inventory is being sold or disposed of at a faster rate than it is being ordered. The $561 million is the net of the $568 million inventory decrease from operations mentioned above, less $7 million in changes in unpaid undelivered orders and advances.

Financing the budget program.—Funds for financing the budget program are derived from sales to authorized customers. Sales are forecast to increase by $332 million from 1963 to 1965, related to the changes in the extension of the fund described above. Collections exceeded expenditures by $71 million in 1963 and are forecast to exceed expenditures by $76 million in 1964 and $44 million in 1965, reflecting the sale of existing inventory without replacement in kind.

A transfer of $25 million to Military personnel, Army, is proposed for 1965, in keeping with the practice of transferring unneeded balances from this fund to offset the need for new obligational authority.

Operating results and financial condition.—The net loss was $71 million in 1963, and is forecast at $265 million in 1964 and $47 million in 1965, due to losses on disposal or donation of stocks in long supply.

Government equity at the end of 1965 is estimated at $2,053 million, consisting of $9,728.4 million in inventory and other assets capitalized, less $3,245.9 million in net cash withdrawals or transfers from the fund and $4,429.4 million operating loss due primarily to disposal of stocks which were excess at the time of capitalization or determined to be excess as a result of purification of stocks.

Federal Reserve Bank of St. Louis

This fund, initially established in 1893, finances the procurement and maintenance of inventories of common-use material and supplies for resale and mobilization reserve (10 U.S.C. 2208). It includes items in all levels of shore-based inventories and in inventories of fleet issue ships and service force vessels afloat.

Reductions in inventories capitalized under the fund in 1963 and 1964 are due principally to transfers to the Defense Supply Agency. In 1964 and 1965, certain items will be transferred to Navy procurement appropriations for financing. These include insurance items, items essential to the safety of personnel, and certain high cost reparable items. The net effect of these changes by category is as follows (in thousands of dollars):

CHANGES IN CAPITALIZED INVENTORIES

	1963 actual	*1964 estimate*	*1965 estimate*
Retail special and resale clothing	396	−5,540	---
Photographic material	---	−387	---

Net change in capitalized inventory	−66,339	−294,356	−147,123

Budget program.—The $64 million decrease in obligations from 1964 to 1965 reflects further extensions of the Defense Supply Agency and item realinement between general appropriations and the Navy Stock Fund in accordance with the Department of Defense revised stock fund criteria. The budget program provides for year-end inventories as follows (in millions of dollars):

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Retail special and resale clothing:

Total inventories	1,530.6	1,454.1	1,058.6	860.6

Total inventory is estimated to decrease by $670 million from the beginning of 1963 to the end of 1965, the result of $507.8 million in decapitalization, covered above, and $162.2 million in other changes. The $162.2 million is the net of $206.7 million in disposals and $44.5 million in upward price and inventory adjustments. Sale or disposal of long-supply stocks and decapitalization associated with item realinement to general appropriations and additional transfers to the Defense Supply Agency account for most of this decrease. For the 3 years presented here, costs exceed obligations by $197.8 million because inventory is being sold and disposed of at a faster rate than it is being ordered. The $197.8 million includes $162.2 million change in inventory mentioned above, and a $39 million reduction in unpaid, undelivered orders, less changes in advances and other items of $3.4 million.

Financing the budget program.—Funds for financing the budget program are derived from sales to authorized customers. Expenditures exceeded collections by $67 million in 1963, and are estimated to be equal in 1964. Collections are estimated to exceed expenditures by $60 million in 1965.

Department of Defense stock funds are authorized to incur obligations in anticipation of future year business (10 U.S.C. 2210(b)). Pursuant to this authority, contract authorization in the amount of $160.3 million was available at the start of 1963. This is necessary because the lead time on material to be procured is greater than the time required to fill and collect for customer orders. As indicated in the statements, the current assets available and requested for 1964 and 1965 will provide adequate resources for fund operations. The contract authorization of $160 million available at the start of 1963 is reduced to $77 million at the end of 1965, because sales (customer orders) are forecast to exceed obligations through the 3 years shown.

Operating results and financial condition.—An operating loss of $118 million is estimated for 1964, to result in losses on disposal of material in long supply. A gain of $9 million is estimated for 1965.

Government equity at June 30, 1965, is estimated at $964.9 million consisting of $303.8 million in appropriation and cash transfers, $1,567.5 million from capitalization of inventory and other assets, less $906.4 million deficit.

Summary of Sources and Application of Funds (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Obligations (from program and financing)	135,428	132,654	120,146
Increase (−) or decrease in gross unpaid obligations	1,436	2,759	−55
Gross expenditures	136,864	135,413	120,090
Revenue and other receipts (from program and financing)	124,525	132,113	131,090
Increase (−) or decrease in accounts receivable and deferred charges	−437	1,300	-----
Applicable receipts	124,088	133,413	131,090
Budget expenditures	12,776	2,000	−11,000

Status of Unfunded Contract Authorization (in thousands of dollars)

Unfunded balance brought forward	8,319	9,207	8,938
Contract authorization	889	-----	-----
Administrative cancellation of unfunded balance	-----	−269	−4,446
Unfunded balance carried forward	−9,207	−8,938	−4,492
Appropriation to liquidate contract authorization	-----	-----	-----

This fund finances the procurement and maintenance of inventory for resale and mobilization reserve (10 U.S.C. 2208). All inventories except for individual clothing are in the United States.

Budget program.—In 1963 and 1964, selected items are transferred to the Defense Supply Agency for management. The changes in capitalized inventory are summarized as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Ordnance-tank-automotive	−19,285	−12,132	−2,860
Engineer supplies and construction material	−4,336	−1,372	−2,070
Communication—electronic	−7,918	−8,455	−910
General material	−5,814	−3,306	−4,595
Clothing and textiles	−1,202	−1,000	−1,000
Fuel	1,462	−1,239	−60
Subsistence—commissary	287	-----	-----
Inventory received from or donated to other accounts	−36,806	−27,504	−11,495
Decrease in undelivered purchases to be paid from other accounts	−209	−260	−155
Net change in capitalized inventories	−37,015	−27,764	−11,650

Of the $76.4 million to be decapitalized in the 3 years shown, $56 million will be transferred to the Defense Supply Agency and $20.4 million will be transferred to the Marine Corps procurement appropriation.

Obligations are estimated to decrease by $15.3 million from 1963 to 1965, while sales are forecast to increase. This will require greater application of existing inventories toward meeting sales requirements. The budget program provides for year-end inventories as follows (in millions of dollars):

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Ordnance-tank-automotive:				
Operating stocks	27.9	34.1	26.6	20.8

Mobilization reserve stocks	-----	.2	.2	.2
Long supply	-----	1.5	.3	.3
Subsistence—Commissary: Operating stocks	5.4	4.9	5.6	5.7
Summary:				
Operating stocks	82.9	96.1	73.0	52.6
Mobilization reserve stocks	62.2	34.6	40.7	41.9
Long supply	106.4	105.3	60.0	43.9
Total inventories	251.5	236.0	173.7	138.4

Inventories are forecast to decrease by $113.1 million from the beginning of 1963 to the end of 1965, consisting of $75.8 million in decapitalizations covered above and $37.3 million in other reductions, largely disposal losses. Because inventory is being sold or disposed of at a faster rate than it is being ordered, costs also exceed obligations for the 3 years by $37.3 million.

Financing the budget program.—Funds for financing the budget program are derived from sales to authorized customers. Sales in 1965 are estimated to increase by $6.6 million over 1963, largely involving clothing, subsistence, and new items added to the supply system. In 1963, expenditures exceeded collections by $13 million, and they are forecast to exceed collections by $2 million for 1964. For 1965, it is estimated that collections will exceed expenditures by $11 million.

Department of Defense stock funds are authorized to incur obligations in anticipation of future year business (10 U.S.C. 2210(b)). Pursuant to this authority, contract authorization of $9.2 million was available at the start of 1964. This is necessary because the production leadtime on material required to be procured is greater than the time required to fill and collect for customer orders. This

REVOLVING AND MANAGEMENT FUNDS—Con.

Intragovernmental funds—Continued

MARINE CORPS STOCK FUND—Continued

authorization is reduced in 1964 and 1965 because sales are forecast to exceed obligations in those years.

Operating results and financial condition.—An operating gain of $11.5 million was realized for 1963, but losses of $36.7 million and $12.7 million are forecast for 1964 and 1965, respectively, largely due to large forecast disposals of surplus property in those years. Government equity at June 30, 1965, is estimated at $167.4 million, consisting of $505.9 million in net capitalized inventory since the inception of the fund, less $114 million in net cash withdrawals from the fund and $224.5 million deficit.

Increase (−) or decrease in accounts receivable	−16,691	16,209	800
Applicable receipts	1,310,466	1,346,710	1,355,900
Budget expenditures	21,954	−22,000	−4,200

This fund, established July 1, 1950, finances for 1965 the procurement of approximately 9,000 items for resale and maintenance of operating and war readiness stocks (10 U.S.C. 2208). These items are stocked and sold at approximately 1,000 outlets worldwide. The scope of operations decreases during this period due to the transfer of general supply items to the Defense Supply Agency and to other Air Force appropriations for financing. The effect of these changes in capitalized inventory is as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Clothing	−11		--
Aviation fuels	−1,371		--
General supplies	−52,967	−2,366	--
Net change in capitalized inventory	−54,349	−2,366	--

Budget program.—Obligations decrease $27 million in 1964, reflecting lower inventory on-hand and on-order requirements. In 1965, however, obligations will increase $33 million due to higher sales of food items. The budget program provides for year-end inventories as follows (in millions of dollars):

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Clothing:				
Operating and other stocks	14.5	13.0	11.2	11.2
Long supply	1.1	.5	.4	.4
Aviation fuels:				
Operating and other stocks	82.5	101.6	96.8	97.3
Mobilization reserve stocks	99.8	91.5	88.5	86.5
Subsistence—commissary:				
Operating and other stocks	48.2	51.2	51.2	51.2
Mobilization reserve stocks	3.7	2.5	1.5	1.4
Air Force Academy cadet store: Operating and other stocks	.4	.5	.5	.6
General supplies:				
Operating and other stocks	11.9	.1	-----	-----
Long supply	36.1	-----	-----	-----
Summary:				
Operating and other stocks	157.6	166.4	159.7	160.4
Mobilization reserve stocks	103.5	94.0	89.9	87.8
Long supply	37.2	.5	.4	.4
Total inventories	298.2	260.8	250.1	248.6

The decrease of $11 million in 1964 is primarily in fuels, reflecting both operating and war readiness reductions. Additional fuels reductions result in a further $1 million reduction in 1965.

Costs and obligations are nearly equal over the 3-year period because much of the inventory decrease is achieved through decapitalization.

Financing the budget program.—Funds for financing the budget program are derived from sales to authorized customers. The sales program increases $4 million in 1964 and $25 million in 1965, as indicated above. Transfers of $47.3 million in 1963 and $25 million in 1964 to Military personnel, Air Force, are reflected in accordance with the appropriation acts, and a transfer of $35 million is proposed for 1965. Collections will exceed payments in 1964 and 1965 due to inventory reductions and mechanization of fuels billing procedures.

Operating results and financial condition.—Operations are basically on a break-even basis for 1963 through 1965. The deficit of $186 million estimated at June 30, 1965, is largely attributable to downward revisions of prices of stocks initially capitalized and losses sustained in disposal of excess and surplus stocks in the past. Government investment is estimated at $405.3 million at June 30, 1965, consisting of $557.4 million in net capitalized inventory and $34 million in net appropriations to the fund less a deficit of $186 million.

This fund, established January 1, 1962, finances the procurement and maintenance of wholesale inventories of common use material and supplies, including mobilization reserves (10 U.S.C. 2208). Wholesale inventories are maintained at selected storage points in the continental United States for resale to military service retail stock funds and to consuming appropriations.

Capitalization by material category is as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Clothing and textiles	−303	4,200	-------
Medical and dental material	91	600	-------
Subsistence	-------	3,600	-------

Industrial supplies	188,882	18,200	-------
Petroleum products	12,937	31,600	-------
Construction supplies	113,740	42,300	-------
Automotive supplies	94,772	−44,662	-------
Electronics	467,726	113,700	-------
Net change in capitalized inventory	880,567	129,238	-------

Budget program.—Obligations are estimated at $1,667 million in 1964 and $1,628 million in 1965. Obligations increased by $290 million from 1963 to 1964, the result of a $161 million increase in sales, a lesser availability of stock for sales without replacement, and the inclusion of $35 million for augmentation of mobilization reserves in 1964. The decrease in obligations of $39 million from 1964 to 1965 reflects the transfer of supply responsibility for paint and handtools to GSA, and lower inventory investment requirements under integrated supply management and improved financial management. Total obligations include procurement for augmentation of mobilization reserves of $35 million per year in 1964 and 1965.

This program reflects a drawdown of peacetime on hand and on order stocks in 1964 of $167 million, the difference between $1,632 million in obligations for peacetime stock and $1,799 million in sales. The 1965 program reflects a drawdown of peacetime on hand and on order stocks of $179 million with $1,593 million in obligations to support sales of $1,772 million. The drawdown for 1963 was $261.6 million. The drawdown is smaller in 1964 and 1965 due to the lesser availability of stock for sale without replacement.

The budget program provides for year-end inventories as follows (in millions of dollars):

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Clothing and textiles:				
Operating and other stocks	391.1	378.2	306.3	238.0

Mobilization reserve stocks	-------	1.6	2.1	2.1
Long supply	-------	258.5	317.4	301.6
Summary:				
Operating and other stocks	678.9	967.3	874.3	767.8
Mobilization reserve stocks	569.4	517.1	544.5	584.5
Long supply	498.2	927.7	912.1	786.8
Total inventories	1,746.6	2,412.2	2,331.0	2,139.2

During 1963, inventories increased by $665.6 million, the net of $880.6 million in capitalizations less $145.1 million in sales without replacement and $69.9 million in other reductions. For 1964 and 1965, inventories are forecast to decrease by $273 million, the net of $129.2 million in capitalization and $402.2 million in reductions. The reductions include sales in excess of purchases of $284.3 million, disposals of $103.4 million, and $14.5 million in donations, losses and adjustments.

From the end of 1962 to the end of 1965, total inventories are forecast to increase by $393 million. Peacetime stocks will increase by $89 million, mobilization reserve assets by $15 million and long supply by $289 million. The large increase in long supply results primarily from capitalizations of over $1 billion during this period. As experience is gained with the items involved, they will be sold without replacement or disposed of if they are no longer needed.

Costs exceed obligations by $348.4 million in 1964 and 1965, because inventory is being sold or disposed of at a much faster rate than it is being ordered. The $348.4 million is the net of the $402.2 million inventory drawdown from operations mentioned above, offset by a build-up of $53.8 million in unpaid undelivered orders associated

REVOLVING AND MANAGEMENT FUNDS—Con.

Intragovernmental funds—Continued

DEFENSE STOCK FUND—Continued

with new activities added to the fund and greater sales volumes.

Financing the budget program.—Funds for financing the budget program are derived from sales to authorized customers. Sales in 1964 and 1965 are estimated at $1,799 million and $1,772 million respectively. Cash receipts will exceed disbursements by an estimated $170 million in 1964 and $150 million in 1965. Department of Defense stock funds are authorized to incur obligations in anticipation of future year business (10 U.S.C. 2210(b)). Pursuant to this authority, contract authorization in the amount of $156 million was available at the start of 1963. Because of sales and receipt of customer orders in excess of obligations, $154 million of this authorization lapsed in 1963 and it is estimated that the balance will lapse in 1964.

Transfers of $50 million to military personnel, Army, $50 million to military personnel, Navy, and $40 million to military personnel, Air Force, are proposed for 1965, in accordance with the practice of transferring unneeded balances from this account to offset the need for new obligational authority in military personnel accounts.

Operating results and financial condition.—The statements indicate net losses of $47 million in 1963, $31 million in 1964, and $42 million in 1965, resulting largely from disposal and donation of excess and surplus inventories. These losses are expected to be reduced in future years as the amount of surplus material in the supply system is reduced, and as the pricing of items in the system is adjusted. Although generation of excess stocks is inevitable in supply operations, every effort is being made to minimize disposal losses and to provide for the recovery of such losses as do occur through appropriate charges to customer accounts, in order to protect the integrity of the capital of the fund.

Government equity at June 30, 1965, is estimated at $2,334 million, consisting of net capitalized inventory of $2,760 million, less net working capital of $282 million transferred out and a net operating deficit of $144 million.

Budget expenditures	−389,847	−72,887	49,000

This fund finances on a reimbursable basis, 25 industrial and commercial type activities located at 22 installations (10 U.S.C. 2208). All of these activities are under the direction of the Army Materiel Command except the Army Pictorial Center, an activity under the Chief Signal Officer.

Munitions command.—This command is responsible for the integrated commodity management of nuclear and nonnuclear ammunition, rocket and missile warhead sections, chemical, biological and radiological materiel, propellants and explosives, pyrotechnics, fire control devices and propellant actuated devices. The principal missions of its industrial facilities are: research, development, engineering, pilot manufacturing, testing and evaluation of materials, components and prototypes. Program increases are anticipated in 1964 and 1965. Most of the increase in 1965 is in materials, supplies, and parts to be used at the Rocky Mountain Arsenal.

Missile command.—This command is responsible for weapon systems management, including research, development, procurement, production, supply and maintenance involved in the fielding of complete missile systems. Its industrial facilities are utilized in the research, development and production of atomic artillery shells, radar platforms, and rocket and missile components. Program costs are expected to increase about 11% in 1964, mainly in salaries and wages at Redstone Arsenal. Program costs are expected to increase about 2% in 1965 over 1964.

Weapons command.—This command is responsible for integrated commodity management of weapons and combat vehicles, including research, design, development, pilot manufacturing and maintenance engineering. Its industrial facilities are utilized in the development and production of artillery, mortars, recoilless rifles, gun carriages, recoil mechanisms, rocket launchers, and a variety of small arms and accessories. The planned program for 1964 approximates the 1963 program. A slight increase over 1964 is planned for 1965 mainly in contractual services.

Transportation terminal activities.—The principal mission of these activities is to plan, regulate, and control the export and import movement of cargo and personnel through Army terminals on the Atlantic, Pacific, and gulf coasts. In addition, this program includes the cost of auxiliary port services and support of tenants and satellites. The small increase in costs forecast in 1964 is due mainly to an increase in cargo workload, an increase in programed major maintenance, and a full year of increases in stevedore contracts at the Atlantic and gulf coast terminals. This increase is partially offset by a decrease in programed passenger workload. The decrease in 1965

Digitized for FRASER

Federal Reserve Bank of St. Louis

REVOLVING AND MANAGEMENT FUNDS—Con.

Intragovernmental funds—Continued

ARMY INDUSTRIAL FUND—Continued

from 1964 is due mainly to a decrease in cargo workload. Estimated workload is as follows (in thousands):

	1963 actual	*1964 estimate*	*1965 estimate*
Cargo in measurement tons	8,923	8,927	8,756
Passengers transshipped	654	640	640

Depot manufacturing and maintenance activities.—Activities under this program are units of multiple mission installations. Included in this program are two quartermaster shops, two engineer shops, a signal shop, and a transportation shop. These shops rebuild and restore unserviceable equipment. The program increases in 1964 and 1965 over 1963 are mainly in costs at the Lexington Army Depot.

Proving grounds and laboratories.—These activities include a proving ground engaged primarily in research, test and evaluation of ordnance weapons, materials and equipment, a proving ground for testing and evaluating chemical agents, and a laboratory specializing in work on fuzes. The substantial increase in program forecasts for 1964 and 1965 is mainly at the Aberdeen Proving Ground attributable to an increase in cost of contractual services, cost of activating the airfield there, increases in MAP work, and direct charges for nonindustrially funded activities.

Army pictorial center.—This installation produces, procures, processes, distributes and evaluates motion pictures, foreign language rescorings, filmstrips, recordings, and television programs for use in military training, research, orientation, and education. Program decreases are planned for 1964 and 1965.

Financing the budget program.—This program is financed from customer orders. Since June 1, 1963, reimbursement for the cost of work and services ordered from an Army industrial fund activity has been made upon acceptance of the order. Under this method of financing, customers of the fund prepay the estimated costs of their orders rather than reimbursing the fund after the costs have been incurred. Final adjustments in financing are made when the orders are completed. The estimates of orders to be received in 1964 and 1965 are derived from the current unworked orders on hand, program guidance from major customers, and managerial experience. New orders in 1964 are estimated to be about the same as those received in 1963. New orders in 1965 are estimated at $4 million less than 1963. The balance of unworked and unbilled customers orders is expected to be reduced from $440 million in 1963 to $399 million in 1964 and to $345 million in 1965.

Operating results and financial condition.—The following table indicates 1963 net revenue and expense by activity (in thousands of dollars):

	Revenue	*Expense*	*Gain or loss*
Munitions command	288,361	287,803	558
Missile command	142,138	141,973	165
Weapons command	147,901	147,514	387
Transportation terminal activities	105,729	105,529	200
Depot manufacturing and maintenance activities	27,417	27,540	−123
Proving grounds and laboratories	95,712	95,648	64
Pictorial center	10,823	10,892	−69
Total	818,081	816,899	1,182

The net gain of $1.2 million, primarily in the Munitions and Weapons Commands, reflects an operating variance resulting principally from the use of standard costs and the pricing of customer billings at predetermined rates. Revenue and expense are projected to break even in 1964 and 1965, with the objective of avoiding either augmentation or overcharging of customer appropriations.

Collections exceeded expenditures by $389.8 million in 1963, and are forecast to exceed expenditures by $72.9 million in 1964. In 1965 expenditures are forecast to exceed collections by $49 million.

In 1964, $50 million of appropriated capital will be transferred to Military personnel, Army (75 Stat. 365). The Government equity at the end of 1965 is estimated at $72.1 million, composed of $56.3 million in reappropriations and $14.5 million in capitalized assets, less an accumulated operating gain of $1.3 million. This investment is required for the financing of activities currently under the fund, with no reserve for contingencies or future expansion of the fund to other activities.

Unbilled balance of customer orders	147,396	157,195	50,455
Increase (−) or decrease in prepayments from customers	750,816	−61,448	−65,264
Applicable receipts	2,912,072	2,107,380	2,020,117
Budget expenditures	−812,293	−9,684	63,787

This fund finances 67 industrial and commercial type activities on a reimbursable basis (5 U.S.C. 172d).

Budget program.—The cost of goods and services produced by activities operated under the Navy Industrial Fund is expected to increase in 1964 as compared with 1963 by $2.8 million or 0.1%. This increase results primarily from full year operations in 1964 of the additional aircraft maintenance facilities added to the program in 1963, and the new public works center at San Diego added on July 1, 1963. The influence of the new activities more than offsets the planned decline in the shipyard program. Total program costs in 1965 are expected to approximate 1963 levels.

Printing.—There are 30 printing plants included in this program. These plants provide printing services in the Washington area and throughout the defense field establishment. The increase in the printing program workload is general throughout the plants, and involves primarily the production of technical manuals previously procured from commercial sources.

Ordnance.—With the sale of the Naval Ordnance Plant at York, Pa., to a private concern, this program will include seven major activities engaged in the production of missile launchers, torpedoes, avionics equipment, guns and mounts, propellants, and other items of ordnance and ammunition. The level of the ordnance program at other activities remains relatively stable in 1965.

Shipyards.—The shipyard program includes 11 shipyards and 1 ship repair facility engaged in the construction, overhaul, repair, and alteration of active and reserve fleet vessels. The ship repair facility at San Diego, Calif., will be closed in January 1965, as announced by the Secretary of Defense on December 12, 1963. Shipyard workload and employment have been continually decreasing since 1962. In 1964 the decline in shipyard costs involves a decrease in the overhaul and repair workload of $45.2 million and the transfer of some non-industrial functions to other activitities. In 1965 the reduction in shipyard costs stems from a sharp decline, of $105.1 million, in ship construction and conversion work, partially offset by increases of $61.6 million in maintenance and modernization work and $6.4 million in other work.

Military Sea Transportation Service.—This organization provides ocean transportation of dry cargo, passenger, and petroleum products, and provides the ocean platforms for scientific and other special projects. The estimates include the costs of operating Government-owned ships and the procurement of commercial augmentation. The reduction in 1964 transportation costs stems primarily from a decrease in the petroleum lift. In 1965 the petroleum lift and the total transportation costs are expected to return to 1963 levels. A summary of workload and costs is provided in the following table (dollars in thousands):

	1963 actual	*1964 estimate*	*1965 estimate*
Cargo ships:			
Measurement tons (cargo)	12,402,936	13,250,437	11,927,428
Per diem ship-days	4,625	3,445	3,991
Cost	$263,657	$263,628	$265,937
Passenger ships:			
Cabin passengers	124,010	126,813	129,152
Troop passengers	238,274	290,076	282,697
Total passengers	362,284	416,889	411,849
Per diem ship-days	699	376	33
Cost	$55,930	$57,306	$55,184
Petroleum ships:			
Long tons (petroleum)	16,873,145	15,480,300	17,221,000
Per diem ship-days	1,122	939	939
Cost	$96,935	$89,189	$94,423
Project ships and miscellaneous:			
Ship operating days	6,627	9,084	10,220
Cost	$27,428	$26,280	$29,960
Total costs	$443,950	$436,403	$445,504

Marine clothing and equipment.—Effective on 1 August 1962, the management of this factory was transferred to the Department of Defense Industrial Fund, together with unexpended funds in the amount of $921 thousand.

Research.—This program includes the Naval Research Laboratory and the David Taylor Model Basin, both in the Washington, D.C., area, and the Naval Ordnance Laboratory, Corona, Calif. These activities provide a Navy research capability in the physical sciences, the shapes and forms of naval vessels, other ship design problems, and guided missile fuzes. The workload assigned to each of these activities is planned to be up slightly in 1964 over 1963 and then relatively stable.

Base services.—With the addition of the public works center at San Diego, Calif., this program includes seven activities engaged in providing utility, maintenance, custodial, and transportation services for customers in their geographic areas. The increase in the workload for this program is directly related to the addition of this activity.

Aircraft maintenance.—During 1963 this program increased from three to seven activities. These activities overhaul and repair aircraft and missiles, and manufacture and repair aircraft parts and assemblies. The substantial increase in 1964 is due to full-year operation of the activities added to the Navy Industrial Fund program during 1963. The workload for 1965 is planned to increase by 4% over the 1964 level.

Financing the budget program.—This program is financed by orders citing the customers' appropriations. Costs are financed initially by the working capital of the fund,

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

which is augmented by the customers' prepayment of large orders, and subsequently billed to the customers' appropriations upon receipt of the prepayment or upon completion of the work. The orders placed with the shipyards reflect the assignment of 35% of the Navy ship repair, alteration, and conversion work to private shipyards, and have been decreasing during the last several years. The orders placed with activities new to the industrial fund program during the last several years have substantially offset the decline in shipyard orders, and, for the total program, the customer orders have been relatively stable at about the $2 billion level.

Operating results and financial condition.—The following table shows 1963 net revenue and expense by activity (in thousands of dollars):

	Revenue	*Expense*	*Gain or loss*
Printing	17,470	17,059	411
Ordnance	212,640	212,339	301
Shipyards	1,068,703	1,070,870	−2,167
Military Sea Transportation Service	445,496	443,950	1,546
Marine clothing and equipment	112	200	−88
Research	97,494	97,348	146
Base services	69,704	69,164	540
Aircraft maintenance	242,614	244,226	−1,612
Total	2,154,233	2,155,156	−923

Retained earnings decreased $2.9 million in 1963, the net result of a $0.9 million operating loss and terminal leave payments of $3.1 million at the Naval Weapons Plant, Washington, D.C., being partially offset by prior year adjustments of $1.1 million.

During 1963 cash collections exceed expenditures by $812 million as a result of the new prepayment procedures. Under the new procedures customer orders, with the exception of orders for transportation and printing, costing in excess of $25 thousand are prepaid upon acceptance of the order by the Navy Industrial Fund activity. These procedures were implemented on May 31, 1963 and were applied to the large volume of orders on the books at that time as well as to orders received in June 1963.

Government investment at June 30, 1964 and 1965 is expected to be $167.3 million, representing $190.4 million in reappropriations and $22.5 million in retained earnings offset, in part, by $45.6 million representing the excess of liabilities assumed over assets capitalized.

Revenue, Expense, and Retained Earnings (in thousands of dollars)

Federal Reserve Bank of St. Louis

This fund finances industrial and commercial type activities on a reimbursable basis (5 U.S.C. 172d).

Budget program—Printing and duplicating service.—There are 10 plants financed under this program. These plants provide area support to the Air Force and other military services on a reimbursable basis. Production in 1963 was 2.5 billion printing units and is estimated at 2.5 billion in 1964 and 2.6 billion for 1965. The increased production is due to inclusion of an additional printing plant in 1964 and the transfer of production responsibility for on-the-job training to Air University.

Laundry and dry cleaning service.—There were 42 plants operating under this fund on June 30, 1963. One plant will be added during 1964, with no further changes projected for 1965. Total production in 1965 is estimated at 108 million pieces of laundry and dry cleaning as compared with 107.8 million for 1964 and 104.8 million in 1962.

Military Air Transport Service.—The Airlift Service portion of the Military Air Transport Service was included under this fund on July 1, 1958. The size of MATS and the extent and nature of its operations are keyed to Joint Chiefs of Staff approved military wartime airlift requirements. These requirements are either hard core or civil eligible. Because of their nature or the nature of the mission to be supported, the critical or hard core requirements must move in military operated aircraft. The civil eligible requirements can move in either military or civil operated aircraft.

To have the capability to surge to meet wartime airlift requirements, the military airlift aircraft must be exercised appropriately during peacetime. The peacetime airlift capability so produced is used in the interest of economy in meeting peacetime airlift needs of the Department of Defense. Military aircraft are used to provide air evacuation of patients; special air missions; training of airborne troops; and, as aug nented by commercial aircraft, common-user airlift of passengers, cargo, and mail. Airlift service resources and workload are as follows:

	1963 actual	*1964 estimate*	*1965 estimate*
Operating aircraft, end year:			
Common-user	504	496	476
Other	49	50	50
Total	553	546	526

[In millions of ton-miles]

	1963 actual	*1964 estimate*	*1965 estimate*
Airlift accomplished:			
Cargo	667.0	720.4	672.3
Passenger	460.6	445.5	435.4
Special assignment airlift	922.1	1,262.5	1,343.8
Common carriage mail	100.6	101.0	101.5
Total	2,150.3	2,529.4	2,553.0

Financing the budget program.—This program is financed by customer orders for services. These orders constitute valid obligations of the ordering appropriations and authorize activities financed through the fund to provide services requested. Costs are charged initially to the working capital of the fund and are billed to customers on the basis of established tariff rates for services provided.

Operating results and financial condition.—For 1963 expenses exceeded revenues by $2.3 million, mainly as a result of the operation of the MATS airlift service. Retained earnings increased an additional $0.4 million in 1963 as a result of adjustments of prior year revenues and expenses. Revenue is expected to increase over the 1963 level in both 1964 and 1965 due to anticipated increases in requirements for airlift service.

Collections exceeded expenditures by $4.2 million in 1963 due to an increase in the level of operations over the previous year. It is estimated that collections will exceed expenditures by $7.4 million in 1964 and $0.8 million in 1965.

Employee annual leave accruals, included in the statement as a current liability, were $2.1 million at June 30, 1963. Government investment is estimated at $74.6 million at June 30, 1965, consisting of $71 million in reappropriations and transfers and $4.4 million in retained earnings less $0.8 million representing the excess of liabilities assumed over assets capitalized.

Federal Reserve Bank of St. Louis

Operations began under this fund in May 1962 (10 U.S.C. 2208). Two activities previously financed from the Army and Navy industrial funds, engaged in manufacture and alteration of clothing and textile items, were transferred to the Defense Supply Agency, and are now operated as a single activity. The activity produces items required on short notice, in small lots, or to special measurement, or under other conditions which make procurement from commercial sources impractical or undesirable. The factory also serves as a pilot production plant to test design specifications and production methods, and provides a part of the production base for industrial mobilization.

Financing the budget program.—This program is financed from customer orders, of which nearly 95% are from the Defense Stock Fund. Annual sales are estimated at $9.9 million and $9.0 million, respectively, in 1964 and 1965. This is a reduction of about $4 million from the previous production rates of the two separate factories. This reduction combined with savings through consolidation of the former Army and Marine Corps factories results in a total reduction of about 1,000 people from the peak reached in 1963 and $4 million in operating costs from levels previously planned.

Operating results and financial condition.—Government investment of nearly $3 million results from the transfer of Treasury balances from the Army and Navy industrial funds and certain other Army and Navy assets, less liabilities assumed, and less $17 thousand deficit.

This fund was created to simplify operations which are financed by two or more appropriations (5 U.S.C. 172e). The corpus of the fund consists of $1 million. Activities presently financed through the fund are as follows:

1. *Defense telephone service, Washington, D.C.*, finances the operations of the telephone service of the Department of Defense in Washington.

2. *Transportation services* provide for the payment centrally of transportation charges for Government bills of lading, transportation requests, meal tickets, and other charges incident to transportation costs incurred by the Army.

3. *Construction activity, Europe*, finances certain administrative and overhead expenses in the Department of Defense construction programs in Western Europe.

This fund was created to facilitate the financing of operations supported by two or more appropriations (5 U.S.C. 172e). The principal activity financed through the fund is the Polaris ballistic missile program. Reimbursable orders for the Polaris program are issued to the fund from Navy appropriations for Procurement, Operation and maintenance, and Research, development, test, and evaluation. Other operations financed are transportation of supplies, materials, and equipment of the Navy; the material inspection service; incentive award payments; departmental telephone and maintenance services and the Armed Services Board of Contract Appeals.

This fund represents advances received for goods or services furnished foreign governments and private parties (31 U.S.C. 643). Private individuals and organizations requesting goods or services are required to advance amounts to cover the estimated value to this fund. These advances are then used to reimburse the Operation and Maintenance, Navy, appropriation for the value of goods provided or services rendered. Examples include (a) utilities, repairs, and maintenance furnished to morale, welfare, and recreation activities; (b) utilities furnished to tenants of Navy housing projects; and (c) utilities, sale of material, equipment rental, and other services for contractors and other private parties, primarily in overseas locations. Advances received from foreign governments are principally for sales of material and miscellaneous services.

This fund was established in 1956 (70 Stat. 1112) to finance the acquisition and initial improvement of Wherry Act housing as authorized by section 404 of the Housing Amendments of 1955 (69 Stat. 652), as amended. The Military Construction Act of 1962 (76 Stat. 237) established the Defense family housing management account,

Digitized for FRASER

Federal Reserve Bank of St. Louis

repealed the authority underlying the Wherry housing fund, and directed the transfer of the unexpended balances of the fund into the new housing management account. The transfer was effected as of the beginning of 1963, and all subsequent activities formerly financed under the Wherry fund are now financed under the new management account, Family housing, Defense.

GENERAL PROVISIONS

SEC. 501. During the current fiscal year, the Secretary of Defense and the Secretaries of the Army, Navy, and Air Force, respectively, if they should deem it advantageous to the national defense, and if in their opinions the existing facilities of the Department of Defense are inadequate, are authorized to procure services in accordance with section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), under regulations prescribed by the Secretary of Defense, and to pay in connection therewith travel expenses of individuals, including actual transportation and per diem in lieu of subsistence while traveling from their homes or places of business to official duty station and return as may be authorized by law: *Provided,* That such contracts may be renewed annually.

SEC. 502. During the current fiscal year, provisions of law prohibiting the payment of compensation to, or employment of, any person not a citizen of the United States shall not apply to personnel of the Department of Defense.

SEC. 503. Appropriations contained in this Act shall be available for insurance of official motor vehicles in foreign countries, when required by laws of such countries; payments in advance of expenses determined by the investigating officer to be necessary and in accord with local custom for conducting investigations in foreign countries incident to matters relating to the activities of the department concerned; reimbursement of General Services Administration for security guard services for protection of confidential files; reimbursement of the Federal Bureau of Investigation for expenses in connection with investigation of defense contractor personnel; and all necessary expenses, at the seat of government of the United States of America or elsewhere, in connection with communication and other services and supplies as may be necessary to carry out the purposes of this Act: *Provided,* That no appropriation contained in this Act, and no funds available from prior appropriations to component departments and agencies of the Department of Defense, shall be used to pay tuition or to make other payments to educational institutions in connection with the instruction or training of file clerks, stenographers, and typists receiving, or prospective file clerks, stenographers, and typists who will receive compensation at a rate below the minimum rate of pay for positions allocated to grade GS–5 under the Classification Act of 1949, as amended.

SEC. 504. Any appropriation available to the Army, Navy, or the Air Force may, under such regulations as the Secretary concerned may prescribe, be used for expenses incident to the maintenance, pay, and allowances of prisoners of war, other persons in Army, Navy, or Air Force custody whose status is determined by the Secretary concerned to be similar to prisoners of war, and persons detained in such custody pursuant to Presidential proclamation.

SEC. 505. Appropriations available to the Department of Defense for the current fiscal year for maintenance or construction shall be available for acquisition of land as authorized by section 2672 of title 10, United States Code.

SEC. 506. Appropriations for the Department of Defense for the current fiscal year shall be available, (a) except as authorized by the Act of September 30, 1950 (20 U.S.C. 236–244), for primary and secondary schooling for minor dependents of military and civilian personnel of the Department of Defense residing on military or naval installations or stationed in foreign countries, as authorized for the Navy by section 7204 of title 10, United States Code, in amounts not exceeding an average of [$285] *$295* per student, when the Secretary of the Department concerned finds that schools, if any, available in the locality, are unable to provide adequately for the education of such dependents; (b) for expenses in connection with administration of occupied areas; (c) for payment of rewards as authorized for the Navy by section 7209(a) of title 10, United States Code, for information leading to the discovery of missing naval property or the recovery thereof; (d) for payment of deficiency judgments and interests thereon arising out of condemnation proceedings; (e) for *leasing of buildings and facilities including* payment of rentals for special purpose space at the seat of government and, in *the conduct of field exercises and maneuvers or, in* administering the provisions of 43 U.S.C. 315q, rentals may be paid in advance*; (f) payments under contracts for maintenance of tools and facilities for twelve months beginning at any time during the fiscal year.*

SEC. 507. Appropriations for the Department of Defense for the current fiscal year shall be available for: (a) donations of not to exceed $25 to each prisoner upon each release from confinement in military or contract prison and to each person discharged for fraudulent enlistment; (b) authorized issues of articles to prisoners, applicants for enlistment and persons in military custody; (c) subsistence of selective service registrants called for induction, applicants for enlistment, prisoners, civilian employees as authorized by law, and supernumeraries when necessitated by emergent military circumstances; (d) reimbursement for subsistence of enlisted personnel while sick in hospitals; (e) expenses of prisoners confined in nonmilitary facilities; (f) military courts, boards, and commissions; (g) utility services for buildings erected at private cost, as authorized by law, and buildings on military reservations authorized by regulations to be used for welfare and recreational purposes; (h) exchange fees, and losses in the accounts of disbursing officers or agents in accordance with law; (i) expenses of Latin-American cooperation as authorized for the Navy by law (10 U.S.C. 7208); and (j) expenses of apprehension and delivery of deserters, prisoners, and members absent without leave, including payment of rewards of not to exceed $25 in any one case: *Provided,* That section 212 of the Act of June 30, 1932 (5 U.S.C. 59a), shall not apply to retired military personnel on duty at the United States Soldiers' Home.

SEC. 508. Insofar as practicable, the Secretary of Defense shall assist American small business to participate equitably in the furnishing of commodities and services financed with funds appropriated under this Act by making available or causing to be made available to suppliers in the United States, and particularly to small independent enterprises, information, as far in advance as possible, with respect to purchases proposed to be financed with funds appropriated under this Act, and by making available or causing to be made available to purchasing and contracting agencies of the Department of Defense information as to commodities and services produced and furnished by small independent enterprises in the United States, and by otherwise helping to give small business an opportunity to participate in the furnishing of commodities and services financed with funds appropriated by this Act.

SEC. 509. No appropriation contained in this Act shall be available for expenses of operation of messes (other than organized messes the operating expenses of which are financed principally from nonappropriated funds) at which meals are sold to officers or civilians except under regulations approved by the Secretary of Defense, which shall (except under unusual or extraordinary circumstances) establish rates for such meals sufficient to provide reimbursement of operating expenses and food costs to the appropriations concerned: *Provided,* That officers and civilians in a travel status receiving a per diem allowance in lieu of subsistence shall be charged at the rate of not less than $2.50 per day: *Provided further,* That for the purposes of this section payments for meals at the rates established hereunder may be made in cash or by deductions from the pay of civilian employees: *Provided further,* That members of organized nonprofit youth groups sponsored at either the national or local level, when extended the privilege of visiting a military installation and permitted to eat in the general mess by the commanding officer of the installation, shall pay the commuted ration cost of such meal or meals.

SEC. 510. No part of any appropriation contained in this Act shall be available until expended unless expressly so provided elsewhere in this or some other appropriation Act.

SEC. 511. Appropriations of the Department of Defense available for operation and maintenance, may be reimbursed during the current fiscal year for all expenses involved in the preparation for disposal and for the disposal of military supplies, equipment, and materiel, and for all expenses of production of lumber or timber products pursuant to section 2665 of title 10, United States Code, from amounts received as proceeds from the sale of any such property: *Provided,* That a report of receipts and disbursements under this limitation shall be made quarterly to the Committees on Appropriations of the Congress: *Provided further,* That no funds available to agencies of the Department of Defense shall be used for the operation, acquisition, or construction of new facilities or equipment for new facilities in the continental limits of the United States for metal scrap baling or shearing or for melting or sweating aluminum scrap unless the Secretary of Defense or an Assistant Secretary of Defense designated by him determines, with respect to each facility involved, that the operation of such facility is in the national interest.

SEC. 512. (a) During the current fiscal year, the President may exempt appropriations, funds, and contract authorizations, available for military functions under the Department of Defense, from the provisions of subsection (c) of section 3679 of the Revised Statutes, as amended, whenever he deems such action to be necessary in the interests of national defense.

(b) Upon determination by the President that such action is necessary, the Secretary of Defense is authorized to provide for the cost of an airborne alert as an excepted expense in accordance with the provisions of Revised Statutes 3732 (41 U.S.C. 11).

(c) Upon determination by the President that it is necessary to increase the number of military personnel on active duty beyond the number for which funds are provided in this Act, the Secretary of Defense is authorized to provide for the cost of such increased military personnel, as an excepted expense in accordance with the provisions of Revised Statutes 3732 (41 U.S.C. 11).

SEC. 513. No appropriation contained in this Act shall be available in connection with the operation of commissary stores of the agencies of the Department of Defense for the cost of purchase

Federal Reserve Bank of St. Louis

(including commercial transportation in the United States to the place of sale but excluding all transportation outside the United States) and maintenance of operating equipment and supplies, and for the actual or estimated cost of utilities as may be furnished by the Government and of shrinkage, spoilage, and pilferage of merchandise under the control of such commissiary stores, except as authorized under regulations promulgated by the Secretaries of the military departments concerned, with the approval of the Secretary of Defense, which regulations shall provide for reimbursement therefor to the appropriations concerned and, notwithstanding any other provision of law, shall provide for the adjustment of the sales prices in such commissary stores to the extent necessary to furnish sufficient gross revenue from sales of commissary stores to make such reimbursement: *Provided*, That under such regulations as may be issued pursuant to this section all utilities may be furnished without cost to the commissary stores outside the continental United States and in Alaska: *Provided further*, That no appropriation contained in this Act shall be available in connection with the operation of commissary stores within the continental United States unless the Secretary of Defense has certified that items normally procured from commissary stores are not otherwise available at a reasonable distance and a reasonable price in satisfactory quality and quantity to the military and civilian employees of the Department of Defense.

SEC. 514. Notwithstanding any other provision of law, Executive order, or regulation, no part of the appropriations in this Act shall be available for any expenses of operating aircraft under the jurisdiction of the Armed Forces for the purpose of proficiency flying except in accordance with the regulations issued by the Secretaries of the Departments concerned and approved by the Secretary of Defense which shall establish proficiency standards and maximum and minimum flying hours for this purpose: *Provided*, That without regard to any provision of law or Executive order prescribing minimum flight requirements, such regulations may provide for the payment of flight pay at the rates prescribed in section 301 of title 37, United States Code, to certain members of the Armed Forces otherwise entitled to receive flight pay during the current fiscal year (1) who have held aeronautical ratings or designations for not less than fifteen years, or (2) whose particular assignment outside the United States or in Alaska makes it impractical to participate in regular aerial flights.

SEC. 515. No part of any appropriation contained in this Act shall be available for expense of transportation, packing, crating, temporary storage, drayage, and unpacking of household goods and personal effects in excess of eleven thousand pounds net in any one shipment[: *Provided*, That the limitations imposed herein shall not be applicable in the case of members transferred to or serving in stations outside the continental United States or in Alaska under orders relieving them from a duty station within the United States prior to July 10, 1952, and who are returned to the United States under orders relieving them from a duty station beyond the United States or in Alaska on or after July 1, 1953].

SEC. 516. Vessels under the jurisdiction of the Department of Commerce, the Department of the Army, the Department of the Air Force, or the Department of the Navy may be transferred or otherwise made available without reimbursement to any such agencies upon the request of the head of one agency and the approval of the agency having jurisdiction of the vessels concerned.

SEC. 517. None of the funds provided in this Act shall be available for training in any legal profession nor for the payment of tuition for training in such profession: *Provided*, That this limitation shall not apply to the off-duty training of military personnel as prescribed by section 521 of this Act.

SEC. 518. Not more than 20 per centum of the appropriations in this Act which are limited for obligation during the current fiscal year shall be obligated during the last two months of the fiscal year: *Provided*, That this section shall not apply to obligations for support of active duty training of civilian components or summer camp training of the Reserve Officers' Training Corps.

SEC. 519. During the current fiscal year the agencies of the Department of Defense may accept the use of real property from foreign countries for the United States in accordance with mutual defense agreements or occupational arrangements and may accept services furnished by foreign countries as reciprocal international courtesies or as services customarily made available without charge; and such agencies may use the same for the support of the United States forces in such areas without specific appropriation therefor.

In addition to the foregoing, agencies of the Department of Defense may accept real property, services, and commodities from foreign countries for the use of the United States in accordance with mutual defense agreements or occupational arrangements and such agencies may use the same for the support of the United States forces in such areas, without specific appropriation therefor: *Provided*, That within thirty days after the end of each quarter the Secretary of Defense shall render to the Committees on Appropriations of the Senate and the House of Representatives and to the Bureau of the Budget a full report of such property, supplies, and commodities received during such quarter.

SEC. 520. During the current fiscal year, appropriations available to the Department of Defense for research and development may be used for the purposes of section 2353 of title 10, United States Code, and for purposes related to research and development for which expenditures are specifically authorized in other appropriations of the service concerned.

SEC. 521. No appropriation contained in this Act shall be available for the payment of more than 75 per centum of charges of educational institutions for tuition or expenses for off-duty training of military personnel, nor for the payment of any part of tuition or expenses for such training for commissioned personnel who do not agree to remain on active duty for two years after completion of such training.

SEC. 522. No part of the funds appropriated herein shall be expended for the support of any formally enrolled student in basic courses of the senior division, Reserve Officers' Training Corps, who has not executed a certificate of loyalty or loyalty oath in such form as shall be prescribed by the Secretary of Defense.

SEC. 523. No part of any appropriation contained in this Act shall be available for the procurement of any article of food, clothing, cotton, woven silk and woven silk blends, spun silk yarn for cartridge cloth, or wool (whether in the form of fiber or yarn or contained in fabrics, materials, or manufactured articles) not grown, reprocessed, reused, or produced in the United States or its possessions, except to the extent that the Secretary of the Department concerned shall determine that a satisfactory quality and sufficient quantity of any articles of food or clothing or any form of cotton, woven silk and woven silk blends, spun silk yarn for cartridge cloth, or wool grown, reprocessed, reused, or produced in the United States or its possessions cannot be procured as and when needed at United States market prices and except procurements outside the United States in support of combat operations, procurements by vessels in foreign waters and emergency procurements or procurements of perishable foods by establishments located outside the United States for the personnel attached thereto: *Provided*, That nothing herein shall preclude the procurement of foods manufactured or processed in the United States or its possessions: *Provided further*, That no funds herein appropriated shall be used for the payment of a price differential on contracts hereafter made for the purpose of relieving economic dislocations: *Provided further*, That none of the funds appropriated in this Act shall be used except that, so far as practicable, all contracts shall be awarded on a formally advertised competitive bid basis to the lowest responsible bidder.

SEC. 524. None of the funds appropriated in this Act shall be used for the construction, replacement, or reactivation of any bakery, laundry, or dry-cleaning facility in the United States, its Territories or possessions, as to which the Secretary of Defense does not certify in writing, giving his reasons therefor, that the services to be furnished by such facilities are not obtainable from commercial sources at reasonable rates.

SEC. 525. During the current fiscal year, appropriations of the Department of Defense shall be available for reimbursement to the Post Office Department for payment of costs of commercial air transportation of military mail between the United States and foreign countries.

SEC. 526. Appropriations contained in this Act shall be available for the purchase of household furnishings and automobiles from military and civilian personnel on duty outside the continental United States, for the purpose of resale at cost to incoming personnel, and for providing furnishings, without charge, in other than public quarters occupied by military or civilian personnel of the Department of Defense on duty outside the continental United States or in Alaska, upon a determination, under regulations approved by the Secretary of Defense, that such action is advantageous to the Government.

SEC. 527. During the current fiscal year appropriations available to the Department of Defense for pay of civilian employees shall be available for uniforms, or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131).

Sec. 528. During the current fiscal year, the Secretary of Defense shall, upon requisition of the National Board for the Promotion of Rifle Practice, and without reimbursement, transfer from agencies of the Department of Defense to the Board ammunition from stock or which has been procured for the purpose in such amounts as he may determine.

Such appropriations of the Department of Defense available for obligation during the current fiscal year as may be designated by the Secretary of Defense shall be available for the travel expenses of military and naval personnel, including the reserve components, and members of the Reserve Officers' Training Corps attending regional, national, or international rifle matches.

GENERAL PROVISIONS—Continued

SEC. 529. Funds provided in this Act for congressional liaison activities of the Department of the Army, the Department of the Navy, the Department of the Air Force, and the Office of the Secretary of Defense shall not exceed $950,000: *Provided,* That this amount shall be available for apportionment to the Department of the Army, the Department of the Navy, the Department of the Air Force, and the Office of the Secretary of Defense as determined by the Secretary of Defense.

SEC. 530. Of the funds made available by this Act for the services of the Military Air Transport Service, $80,000,000 shall be available only for procurement of commercial air transportation service from carriers participating in the civil reserve air fleet program; and the Secretary of Defense shall utilize the services of such carriers which qualify as small businesses to the fullest extent found practicable: *Provided,* That the Secretary of Defense shall specify in such procurement, performance characteristics for aircraft to be used based upon modern aircraft operated by the civil air fleet.

SEC. 531. Not to exceed $11,800,000 of the funds made available in this Act for the purpose shall be available for the hire of motor vehicles: *Provided,* That the Secretary of Defense, under circumstances where the immediate movement of persons is imperative, may, if he deems it to be in the national interest, hire motor vehicles for such purpose without regard to this limitation.

SEC. 532. Not less than $7,500,000 of the funds made available in this Act for travel expenses in connection with temporary duty and permanent change of station of civilian and military personnel of the Department of Defense shall be available only for the procurement of commercial passenger sea transportation service on American-flag vessels.

SEC. 533. During the current fiscal year, appropriations available to the Department of Defense for operation may be used for civilian clothing, not to exceed $40 in cost for enlisted personnel: (1) discharged for misconduct, unfitness, unsuitability, or otherwise than honorably; (2) sentenced by a civil court to confinement in a civil prison or interned or discharged as an alien enemy; (3) discharged prior to completion of recruit training under honorable conditions for dependency, hardship, minority, disability, or for the convenience of the Government.

SEC. 534. No part of the funds appropriated herein shall be available for paying the costs of advertising by any defense contractor except advertising for which payment is made from profits, and such advertising shall not be considered a part of any defense contract cost. The prohibition contained in this section shall not apply with respect to advertising conducted by any such contractor, in compliance with regulations which shall be promulgated by the Secretary of Defense, solely for (1) the recruitment by that contractor of personnel required for the performance by the contractor of obligations arising under a defense contract, (2) the procurement of scarce items required by the contractor for the performance of a defense contract, or (3) the disposal of scrap or surplus materials acquired by the contractor in the performance of a defense contract.

SEC. 535. Funds appropriated in this Act for maintenance and repair of facilities and installations shall not be available for acquisition of new facilities, or alteration, expansion, extension, or addition of existing facilities, as defined in Department of Defense Directive 7040.2, dated January 18, 1961, in excess of $25,000: *Provided,* That the Secretary of Defense may amend or change the said directive during the current fiscal year, consistent with the purpose of this section.

SEC. 536. During the current fiscal year, the Secretary of Defense may, if he deems it vital to the security of the United States and in the national interest to further improve the readiness of the Armed Forces, including the reserve components, transfer under the authority and terms of the Emergency Fund an additional $200,000,000: *Provided,* That the transfer authority made available under the terms of the Emergency Fund appropriation contained in this Act is hereby broadened to meet the requirements of this section: *Provided further,* That the Secretary of Defense shall notify the Appropriations Committees of the Congress promptly of all transfers made pursuant to this authority.

SEC. 537. None of the funds appropriated in this Act may be used to make payments under contracts for any program, project, or activity in a foreign country unless the Secretary of Defense or his designee, after consultation with the Secretary of the Treasury or his designee, certifies to the Congress that the use, by purchase from the Treasury, of currencies of such country acquired pursuant to law is not feasible for the purpose, stating the reason therefor.

[SEC. 538. None of the funds provided herein shall be used to pay any recipient of a grant for the conduct of a research project an amount for indirect expenses in connection with such project in excess of 20 per centum of the direct costs.]

SEC. [539.] *538.* Of the funds made available in this Act for repair, alteration, and conversion of naval vessels, at least 35 per centum shall be available for such repair, alteration, and conversion in privately owned shipyards: *Provided,* That if determined by the Secretary of Defense to be inconsistent with the public interest based on urgency of requirement to have such vessels repaired, altered, or converted as required above, such work may be done in Navy or private shipyards as he may direct.

[SEC. 540. No part of the funds appropriated by this Act shall be used to conduct or assist in conducting any program (including but not limited to the payment of salaries, administrative expenses, and the conduct of research activities) related directly or indirectly to the establishment of a national service corps or similar domestic peace corps type of program.]

SEC. 539. During the current fiscal year, the Secretary of Defense may, with the approval of the Bureau of the Budget, transfer between stock funds of the Department of Defense established pursuant to 10 U.S.C. 2208 such amounts as he may determine to be necessary for operating requirements of the stock fund to which transferred.

GENERAL PROVISIONS—MILITARY CONSTRUCTION

SEC. 101. Funds appropriated to the military departments for construction in prior years are hereby made available for construction authorized for each such department by the authorizations enacted into law during the [first] *second* session of the Eighty-eighth Congress.

SEC. 102. None of the funds appropriated in this Act shall be expended for payments under a cost-plus-a-fixed-fee contract for work, where cost estimates exceed $25,000, to be performed within the United States, except Alaska, without the specific approval in writing of the Secretary of Defense setting forth the reasons therefor.

SEC. 103. None of the funds appropriated in this Act shall be expended for additional costs involved in expediting construction unless the Secretary of Defense certifies such costs to be necessary to protect the national interest and establishes a reasonable completion date for each project, taking into consideration the urgency of the requirement, the type and location of the project, the climatic and seasonal conditions affecting the construction and the application of economical construction practices.

SEC. 104. None of the funds appropriated in this Act shall be used for the construction, replacement, or reactivation of any bakery, laundry, or drycleaning facility in the United States, its Territories or possessions, as to which the Secretary of Defense does not certify, in writing, giving his reasons therefor, that the services to be furnished by such facilities are not obtainable from commercial sources at reasonable rates.

SEC. 105. Funds appropriated to the military departments for construction are hereby made available for hire of passenger motor vehicles.

SEC. 106. Funds appropriated to the military departments for construction may be used for advances to the Bureau of Public Roads, Department of Commerce, for the purposes of section 210 of title 23, United States Code, when projects authorized therein are certified as important to the national defense by the Secretary of Defense.

SEC. 107. None of the funds appropriated in this Act may be used to begin construction of new bases for which specific appropriations have not been made.

SEC. 108. During the current fiscal year, appropriations available for construction of family quarters for personnel shall not be obligated for such construction at a cost per family unit in excess of [$22,000] *$26,000* on housing units for generals or equivalent; $19,800 on housing units for colonels or equivalent; $17,600 on housing units for majors and lieutenant colonels, or equivalent; $15,400 on housing units for second lieutenants, lieutenants, captains, and warrant officers, or equivalent; or $13,200 on housing units for enlisted personnel, except that when such units are constructed outside the continental United States or in Alaska, the average cost per unit of all such units shall not exceed $32,000 and in no event shall the individual cost exceed $40,000.

[SEC. 109. No part of the funds contained in this Act shall be used to incur obligations for the planning, design, or construction of facilities for an Air Force Academy the total cost of which will be in excess of $141,523,000, except for construction pursuant to section 2674 of title 10, United States Code, as amended.]

SEC. [110.] *109.* No part of the funds provided in this Act shall be used for purchase of land or land easements in excess of 100 per centum of the value as determined by the Corps of Engineers or the Bureau of Yards and Docks, except: (a) where there is a determination of value by a Federal court, (b) purchases negotiated by the Attorney General or his designee, and (c) where the estimated value is less than $25,000.

Federal Reserve Bank of St. Louis

SEC. [111.] *110.* None of the funds appropriated in this Act may be used to make payments under contracts for any project in a foreign country unless the Secretary of Defense or his designee, after consultation with the Secretary of the Treasury or his designee, certifies to the Congress that the use, by purchase from the Treasury, of currencies of such country acquired pursuant to law is not feasible for the purpose, stating the reason therefor.

GENERAL PROVISIONS—CIVIL DEFENSE

Appropriations contained in this Act for carrying out civil defense activities shall not be available in excess of the limitations on appropriations contained in Section 408 of the Federal Civil Defense Act, as amended (50 U.S.C. App. 2260).

No part of any appropriation in this Act shall be available for the construction of warehouses or for the lease of warehouse space in any building which is to be constructed specifically for civil defense activities.

[No part of any appropriation contained in this Act, or of the funds available for expenditure by any corporation or agency included in this Act, shall be used for construction of fallout shelters.]

GENERAL PROVISIONS—MILITARY ASSISTANCE

Funds appropriated for military assistance and related activities shall be subject to the general provisions of the Department of Defense Appropriation Act for the current fiscal year.

DEPARTMENT OF DEFENSE—CIVIL

DEPARTMENT OF THE ARMY

Cemeterial Expenses

General and special funds:

SALARIES AND EXPENSES

For necessary cemeterial expenses as authorized by law, including maintenance, operation, and improvement of national cemeteries, and purchase of headstones and markers for unmarked graves; purchase of two passenger motor vehicles [for replacement only]; maintenance of that portion of Congressional Cemetery to which the United States has title, Confederate burial places under the jurisdiction of the Department of the Army, and graves used by the Army in commercial cemeteries; [$10,800,000] *$13,295,000*: *Provided,* That this appropriation shall not be used to repair more than a single approach road to any national cemetery: *Provided further,* That this appropriation shall not be obligated for construction of a superintendent's lodge or family quarters at a cost per unit in excess of $17,000, but such limitation may be increased by such additional amounts as may be required to provide office space, public comfort rooms, or space for the storage of Government property within the same structure: *Provided further,* That reimbursement shall be made to the applicable military appropriation for the pay and allowances of any military personnel performing services primarily for the purposes of this appropriation. (*24 U.S.C. 271, 273–276, 278–279, 279a–b, 282, 288, 290; Public Works Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Operation and maintenance	5,418	5,785	6,338
2. Construction	739	435	1,952
3. Headstone procurement	3,304	3,641	4,015
4. Administration	855	939	990
Total obligations	10,316	10,800	13,295
Financing:			
Advances and reimbursements from non-Federal sources [1]	−6		
Unobligated balance lapsing	23		
New obligational authority (appropriation)	**10,333**	**10,800**	**13,295**

[1] Reimbursements from non-Federal sources are derived from payments by commercial carriers for headstones damaged in shipment (31 U.S.C. 489a).

This appropriation provides funds for the operation and maintenance of the national cemetery system and for the procurement and supply of headstones and markers for graves of eligible persons buried in national and private cemeteries. The workload and program requirements increase substantially each year.

1. *Operation and maintenance.*—The national cemetery system consists of 118 activities located in 33 States, Puerto Rico, and the District of Columbia. Included are 85 national cemeteries and 33 miscellaneous burial plots and monument sites. A total of 39,463 interments were made in 1963; 42,200 are estimated for 1964 and 45,150 projected for 1965. There will be 2,269 developed acres to be maintained in 1965. Funds are required for 815 man-years of cemetery labor, for contractual services for maintenance of cemetery installations and for necessary operating supplies and equipment.

2. *Construction.*—Provision is made for 14 projects, including 9 gravesite development projects necessary to provide dispersed burial areas and to preclude closing of cemeteries to new interments. An amount is also included for engineering investigations and preparation of plans for future requirements.

3. *Headstone procurement.*—The basis of the 1965 program is a 5.2% increase in normal applications.

	1963 actual	*1964 estimate*	*1965 estimate*
Applications from prior year	11,750	18,719	20,805
New applications	141,262	147,936	155,550
Total applications	153,012	166,655	176,355
Applications carried to next year	−18,719	−20,805	−15,515
Total procurement	134,293	145,850	160,840

4. *Administration.*—Provision is made for 137 man-years required for processing applications and placing orders for headstones and markers; determining eligibility for interment; management of the national cemetery system; and administrative support.

DEPARTMENT OF THE ARMY—Continued

CORPS OF ENGINEERS—CIVIL

The civil works program of the Corps of Engineers consists of a number of related activities for the control and development for beneficial use of water resources in the United States, Puerto Rico, and the Virgin Islands.

The total appropriation requested is $1,152 million, an increase of $55 million over the 1964 estimate and an increase of $106 million over 1963.

General and special funds:

The following appropriations shall be expended under the direction of the Secretary of the Army and the supervision of the Chief of Engineers for authorized civil functions of the Department of the Army pertaining to rivers and harbors, flood control, beach erosion, and related purposes:

GENERAL INVESTIGATIONS

For expenses necessary for the collection and study of basic information pertaining to river and harbor, flood control, shore protection, and related projects, and when authorized by law, surveys and studies of projects prior to authorization for construction, [$19,115,000] *$19,760,000*, to remain available until expended: *Provided*, That $210,000 of this appropriation shall be transferred to the United States Fish and Wildlife Service for studies, investigations, and reports thereon as required by the Fish and Wildlife Coordination Act of 1958 (72 Stat. 563–565) to provide that wildlife conservation shall receive equal consideration and be coordinated with other features of water-resource development programs of the Department of the Army. (*33 U.S.C. 426–426c, 540, 541, 701; Public Works Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Surveys:			
(a) Navigation studies	2,012	2,300	2,475
(b) Flood control studies	5,485	5,860	6,300
(c) Beach erosion studies	176	490	480
(d) Comprehensive basin studies	2,262	3,000	4,600
(e) Special studies:			
(1) Arkansas-Red River pollution	248	130	125
(2) Arkansas River pumped storage	----------	50	---------
(3) Coordination studies with other agencies	219	350	300
(4) Great Lakes water levels	51	87	---------
(5) Great Lakes harbors survey	19	16	---------
(6) Great Lakes-Hudson River Waterway, N.Y.	85	210	250
(7) Hudson River siltation study	2	80	---------
(8) Hurricane studies	808	700	100
(9) Jersey Meadows, N.Y. and N.J.	134	125	160
(10) Lake Erie-Ohio River Canal	272	250	40
(11) Lake Erie-Lake Ontario Waterway, N.Y.	197	18	---------
(12) Rampart Canyon, Alaska	416	200	---------
(13) San Francisco Bay area survey	256	97	---------
(14) Texas coast hurricane study	----------	180	270
2. Collection and study of basic data:			
(a) Stream gaging	250	280	280
(b) Precipitation studies	380	480	480
(c) Fish and wildlife studies	94	215	210
(d) International waters studies	85	82	84
(e) Flood plain studies	627	790	925
3. Research and development:			
(a) Beach erosion development studies	299	865	870
(b) Hydrologic studies	161	190	190
(c) Engineering studies	1,210	1,650	1,550
(d) Mississippi basin model:			
(1) Construction	476	700	79
(2) Maintenance	----------	----------	150
(3) Mississippi River model studies	200	210	210
(e) Nuclear explosives studies for civil construction	448	1,191	1,080

	1962	*1963*	*1964*	*1965*
Stores	38	33	-----	-----
Unpaid undelivered orders	946	1,465	1,469	1,476
Advances	1	1	-----	-----
Total selected resources	985	1,499	1,469	1,476

1. *Surveys.*—Navigation and flood control studies are made to determine the need and economic justification for proposed water and related land resource developments. Beach erosion control studies are undertaken to determine the need for shore protection and remedial measures at specific localities. Funds are provided in 1965 for 61 navigation, 131 flood control, and 16 beach erosion studies, of which 5 navigation and 15 flood control surveys will be initiated.

Comprehensive river basin studies provide for broad consideration of water and related land resources needs of river basins. They are coordinated with the related river basin planning efforts of the Departments of the Interior, Agriculture, and Health, Education, and Welfare. Nineteen studies will be carried forward in the following basins:

1. Big Black River, Miss.
2. Big Muddy River, Ill.
3. Connecticut River basin, Conn., Mass., N.H. and Vt.
4. Genesee River, N.Y. and Pa.
5. Grand River basin, Mich.
6. Kanawha, W. Va., Va., and N.C.
7. Missouri River basin.
8. Ohio River basin review.
9. Pascagoula River, Miss.
10. Pearl River, Miss.
11. Puget Sound Area, Wash.
12. Red River below Denison Dam, La., Ark., Okla., and Tex.
13. Sabine River, Tex.
14. St. John River, Maine.
15. Susquehanna River basin, N.Y., Pa., and Md.
16. Upper Mississippi River basin.
17. Wabash River, Ind. and Ill.
18. White River basin, Ark. and Mo.
19. Willamette River basin, Oreg.

Special studies are made to resolve unique or especially complex water resources problems. The Arkansas-Red River pollution study will be completed with funds provided in 1965.

Surveys are made in coordination with Federal, State, and local agencies and interests, and give appropriate consideration to present and future requirements for all beneficial uses of water and related land resources, including navigation, flood control, water supply, irrigation, water quality control, power, recreation, and fish and wildlife conservation.

2. *Collection and study of basic data.*—Funds are transferred to the Geological Survey for installation, operation, and maintenance of stream gaging stations; to the Weather Bureau for hydrometeorological studies and pre-

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

cipitation stations; and to the Fish and Wildlife Service for preauthorization studies of the effects of proposed projects upon fish and wildlife. The Corps of Engineers participates on a number of engineering and control boards that study and control international streams mutually affecting the United States and Canada. Information on floods, potential flood damages, and general criteria for guidance in the use of flood plain areas is made available to States and local governmental agencies upon their request.

3. *Research and development.*—General beach erosion development studies deal with physical phenomena, techniques, basic principles, and remedial or control measures related to shore protection and improvement. The results of these studies are disseminated to interested Federal, State, and local agencies and individuals.

Hydrologic studies include investigations of storms, rainfall, streamflow, sedimentation, and other phenomena to provide basic data used in the design, construction, and operation of water control structures.

Civil works investigations are made to improve procedures for analysis of hydrologic and engineering data, refine design methods, develop better materials and practices for the construction and maintenance of hydraulic structures, and improve procedures used in formulating plans for water resources development.

Studies will be carried out on completed portions of the Mississippi River basin model to improve operation of the reservoir system in the basin and to study potential flood levels on the lower river.

Nuclear explosives studies for civil construction are carried out as part of a joint research program with the Atomic Energy Commission, with the ultimate objective of developing an engineering capability to use nuclear explosives in construction of public works projects. The Corps of Engineers has primary responsibility for chemical explosive experiments and development of engineering, construction, and cost data.

CONSTRUCTION, GENERAL

For the prosecution of river and harbor, flood control, shore protection, and related projects authorized by law; and detailed studies, and plans and specifications, of projects (including those for development with participation or under consideration for participation by States, local governments, or private groups) authorized or made eligible for selection by law (but such studies shall not constitute a commitment of the Government to construction); [$827,146,500] *$880,143,000*, to remain available until expended: *Provided*, That no part of this appropriation shall be used for projects not authorized by law or which are authorized by law limiting the amount to be appropriated therefor, except as may be within the limits of the amount now or hereafter authorized to be appropriated: *Provided further*, That $500,000 of this appropriation shall be transferred to the United States Fish and Wildlife Service for studies, investigations, and reports thereon as required by the Fish and Wildlife Coordination Act of 1958 (72 Stat. 563–565) to provide that wildlife conservation shall receive equal consideration and be coordinated with other features of water-resource development programs of the Department of the Army. (*16 U.S.C. 661–666, 756; 33 U.S.C. 511–523, 540, 701; 55 Stat. 638; 66 Stat. 635, 732; Public Works Appropriation Act, 1964.*)

Unobligated balance carried forward			40,924	24,681			
New obligational authority (appropriation)			**792,870**	**827,146**	**880,143**		

The requested appropriation of $880 million represents an increase of $53 million compared with the amount appropriated for 1964, and an increase of $87 million compared with 1963. About 71% of the requested appropriation will be applied to 52 major projects in amounts of $5 million or more each.

1. *Advance engineering and design.*—Design studies establish project features and cost estimates required for preparation of contract plans. The funds requested will bring designs and plans for a number of high priority projects to the stage where they will be ready for construction, and will permit continuation or initiation of planning on other needed projects.

2. *Navigation projects.*—This activity includes construction of locks, dams, and canals, and improvement of channels and harbors by dredging and by construction of breakwaters, jetties, and dikes. Provision is also made for the construction of small navigation projects not specifically authorized by Congress.

With the funds requested, work will be continued in 1965 on 55 channel and harbor projects, of which 15 will be completed, and on 15 lock, dam, and canal projects, of which 2 will be completed. Construction will be initiated on 11 channel and harbor and lock and dam projects or project modifications as follows:

CHANNEL AND HARBOR PROJECTS

1. Pensacola Harbor, Fla.
2. Tampa Harbor, Ybor Channel, Fla.
3. Chelsea River, Boston Harbor, Mass.
4. Oswego Harbor, N.Y.
5. Coos and Millicoma Rivers, Oreg.[1]
6. Galveston Harbor—40 and 42 ft. outer bar and jetty channel, Tex.
7. Milwaukee Harbor, Wis.

LOCK AND DAM PROJECTS

1. Claiborne lock and dam, Ala.
2. Ozark lock and dam, Ark.
3. Webbers Falls lock and dam, Okla.
4. Uniontown lock and dam, Ind. and Ky.

[1] To be completed with funds recommended for 1965.

3. *Alteration of bridges over navigable waters.*—Obstructive bridges over navigable waterways are altered under arrangements that provide for apportionment of the costs of alteration between the United States and the bridge owners. The funds requested will finance the Federal share of the cost of two continuing projects, of which one will be completed in 1965.

4. *Beach erosion control projects.*—The Federal Government assists in the construction of works for the restoration and protection against erosion by waves and currents of the shores of the United States and possessions. Existing law provides for Federal payment of 50% of the cost of beach erosion control works for the protection of non-Federal publicly owned or publicly used shores, and up to 70% of the cost of protection of State and other publicly owned shore parks and conservation areas that meet certain criteria. Provision is also made for small beach erosion control projects not requiring specific congressional authorization.

Construction will be completed on a phase of one beach erosion project and reimbursements will be made to compensate local interests on six projects, of which two will be for initial reimbursement in 1965. These two projects are:

BEACH EROSION CONTROL PROJECTS

1. Point Mugu to San Pedro breakwater, Cabrillo Beach, Calif.
2. Virginia Beach, Va.

5. *Flood control projects.*—This activity includes local protection projects and reservoirs for flood control and other purposes such as water supply but without power installations. Local protection projects consist of channel improvements, levees, and floodwalls. Provision is made for snagging and clearing work on navigable streams and tributaries when such work is necessary in the interest of flood control; and for the construction of small flood control projects not specifically authorized by Congress.

DEPARTMENT OF THE ARMY—Continued

CORPS OF ENGINEERS—CIVIL—Continued

General and special funds—Continued

CONSTRUCTION, GENERAL—continued

With the funds requested, work will be continued on 69 local protection projects, 15 of which will be completed, and on 46 reservoir projects, 10 of which will be completed in 1965. Thirteen new local protection projects and eight new reservoir projects will be initiated as follows:

LOCAL PROTECTION PROJECTS

1. New Athens, Ill.
2. Des Moines, Iowa
3. Indian Creek, Iowa
4. Lawrence, Kans.
5. Cumberland, Ky.[1]
6. Westfield, Mass.
7. Norfolk, Nebr.
8. Carolina Beach, N.C.
9. John Day River, Oreg.[1]
10. Latrobe, Pa.
11. Fort Worth Floodway, Clear Fork extension, Texas
12. Freeport and vicinity—hurricane and flood protection, Texas
13. Buckhannon, W. Va.

RESERVOIR PROJECTS

1. Alameda Creek, Del Valle Reservoir, Calif.
2. Colebrook River Reservoir, Conn.
3. Hop Brook Reservoir, Conn.
4. Rend Lake Reservoir, Ill.
5. Cave Run Reservoir, Ky.
6. Okatibbee Reservoir, Miss.
7. Big Darby Creek Reservoir, Ohio
8. East Lynn Reservoir, W. Va.

[1] To be completed with funds recommended for 1965.

6. *Multiple-purpose projects, including power.*—With the funds requested, work will be continued on multiple-purpose projects with power installations, one of which will be completed in 1965.

7. *Recreation on completed projects.*—Additional public use facilities will be provided at completed projects to accommodate a rapidly increasing number of visitors.

8. *Small authorized projects.*—The Federal Government constructs or assists in the construction of authorized channel and harbor, shore protection, and flood control projects, each of which has a total estimated Federal cost of $400 thousand or less.

9. *Coordination Act studies (Fish and Wildlife Service).*—This program provides for detailed studies and reports by the Fish and Wildlife Service to determine the effects on fish and wildlife resources of water-control projects of the Corps of Engineers.

10. *Rehabilitation.*—Rehabilitation work is undertaken on existing projects or parts of projects that have deteriorated to the extent that their usefulness has been impaired. Repair of breakwaters, revetments, and piers will be carried out on 23 navigation projects and protective revetment emplaced on 1 flood control reservoir project in 1965 under major rehabilitation. Minor rehabilitation, where the total cost of each item is $400 thousand or less, will be accomplished on four projects.

[In thousands of dollars]

OPERATION AND MAINTENANCE, GENERAL

For expenses necessary for the preservation, operation, maintenance, and care of existing river and harbor, flood control, and related works, including such sums as may be necessary for the maintenance of harbor channels provided by a State, municipality or other public agency, outside of harbor lines, and serving essential needs of general commerce and navigation; financing the United States share of the cost of operation and maintenance of the remedial works in the Niagara River; activities of the California Debris Commission; administration of laws pertaining to preservation of navigable waters; surveys and charting of northern and northwestern lakes and connecting waters; clearing and straightening channels; *and* removal of obstructions to navigation; [and emergency flood control and shore protection activities; $154,000,000] *$158,676,000,* to remain available until expended. (*16 U.S.C. 661–666, 756; 33 U.S.C. 1, 414, 415, 441–451, 540, 603a, 661, 701, 705; 66 Stat. 596; 72 Stat. 301, 302; Public Works Appropriation Act, 1964.*)

Note—Excludes $4,150 thousand for activities transferred in the estimates to "Flood control, hurricane and shore protection emergencies." The amounts obligated in 1963 and 1964 are shown in the schedule as comparative transfers.

DEPARTMENT OF THE ARMY—Continued

CORPS OF ENGINEERS—CIVIL—Continued

General and special funds—Continued

OPERATION AND MAINTENANCE, GENERAL—continued

This appropriation finances operation and maintenance of existing projects and other related activities.

1. *Navigation projects.*—In 1965 operation and maintenance will be carried out on 214 channel and harbor projects and 30 locks, dams, and canals.

2. *Flood control projects.*—In 1965, 148 flood control reservoirs and 17 local flood protection projects will be operated and maintained. Other completed flood control projects will be inspected to determine the adequacy of maintenance by local interests.

3. *Multiple-purpose projects including power.*—By the end of 1965, 47 multiple-purpose projects with an installed capacity of 9,104,400 kilowatts will be operated and maintained.

4. *Protection of navigation.*—Under laws for the protection and preservation of navigable waters, regulations are established and permits are granted for activities and structures affecting navigable waters.

5. *Niagara remedial works.*—Costs of operating and maintaining works to preserve and enhance the scenic beauty of Niagara Falls are divided equally between the United States and Canada.

A supplemental appropriation for 1964 is anticipated for separate transmittal.

The Corps of Engineers—Civil is responsible for the flood control program for the lower Mississippi Valley from Cape Girardeau, Mo., to the Gulf of Mexico, including the main alluvial stream, the basins of the St. Francis and White, lower Arkansas, Yazoo, Tensas, and Atchafalaya Rivers, and Bayou Lafourche, and the alluvial lands around Lake Pontchartrain. The adopted plan calls for raising and strengthening about 1,600 miles of existing levees along the main river, for enlarging or constructing some 1,700 miles of levees on tributaries and in side basins, for channel improvement by bank stabilization and by dredging a navigation channel 12 feet deep and 300 feet wide from Baton Rouge, La., to Cairo, Ill., and for five flood-detention reservoirs on minor tributaries.

1. *General investigations.*—One flood control study will be completed and two studies initiated. Basic data subsequently used in planning and designing projects are collected.

3. *Construction.*—The estimated total cost of flood control and related improvements in the lower Mississippi River and its alluvial valley is estimated at $1,891 million, of which $1,318 million has been appropriated through 1964. The funds requested will be applied to continuation of 12 features.

4. *Maintenance.*—Provision is made for operation and maintenance of major features of the project.

The following tabulation sets forth the program for each activity:

[In thousands of dollars]

The United States was host for the 20th meeting of the International Association of Navigation Congresses held in Baltimore, Md., in September 1961. This appropriation provided for expenses of the meeting including publication and distribution of papers and proceedings. Final costs will be liquidated in 1964.

ADMINISTRATIVE PROVISIONS

Appropriations in this title shall be available for expenses of attendance by military personnel at meetings in the [manners] *manner* authorized by section 19(b) of the Act of July 7, 1958 (72 Stat. 336), uniforms, or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131), and for printing, either during a recess or session of Congress, of survey reports authorized by law, and such survey reports as may be printed during a recess of Congress shall be printed, with illustrations, as documents of the next succeeding session of Congress; and during the current fiscal year the revolving fund, Corps of Engineers, shall be available for purchase (not to exceed one hundred and [eighty-three] *eighty-five, of which one hundred and sixty-seven shall be* for replacement only) and hire of passenger motor vehicles. (*Public Works Appropriation Act, 1964.*)

ALLOCATIONS RECEIVED FROM OTHER ACCOUNTS

Note.—Obligations incurred under allocations from other accounts are shown in the schedules of the parent appropriation, as follows:

Funds appropriated to the President:
- "Disaster relief."
- "Public works acceleration."

United States Soldiers' Home, "Limitation on operation and maintenance and capital outlay."

Health, Education, and Welfare, Public Health Service, "Foreign quarantine activities."

Interior:
- Bureau of Indian Affairs, "Construction."
- Bureau of Reclamation, "Construction and rehabilitation."
- Bureau of Sport Fisheries and Wildlife, "Construction."

State:
- International Boundary and Water Commission, "Construction."
- "Passamaquoddy tidal power survey."
- "United States dollars advanced from foreign governments, United States educational exchange program."

Veterans' Administration, "Construction of hospital and domiciliary facilities."

Commerce: "Federal-aid highways" (trust fund).

	1963 actual	1964 estimate	1965 estimate
Revenues and other receipts (from program and financing)	279,213	292,619	300,600
Increase (−) or decrease in accounts receivable, net	−1,893	1,938	600
Applicable receipts	277,320	294,557	301,200
Budget expenditures	2,552	−2,500	−3,500

The fund provides for the acquisition, operation, and maintenance of floating and land-based plant and equipment used in civil works functions; for temporary financing of services finally chargeable to civil works appropriations and for the furnishing of facilities and services for the military functions of the Department of the Army and other governmental agencies and private persons (67 Stat. 199).

Budget program—Operating costs.—Operating costs are expected to remain at about the same level in 1964 and 1965.

Capital outlay.—Land and structures includes replacement costs of buildings, facilities, and related land. Dredges and other floating plant includes replacement and improvement costs for dredges and dredging equipment and other vessels such as tugs, tenders, and towboats. Land-based equipment includes replacement and improvement costs of transportation equipment, construction equipment, and fixed land equipment such as shop tools, and fixed power driven equipment.

Outlay for dredges in 1964 includes: $1.5 million for conversion of dredge *Goethals* to direct pump-out (including the mating barge); $600 thousand for modification of two surplus Navy vessels to provide sidecasting dredging capability; $80 thousand for design of hopper dredge *McFarland* to replace dredge *Mackenzie;* and $20 thousand for design costs of a shallow draft dredge. Included in 1965 are: $500 thousand for completion of conversion of dredge *Goethals;* $4.5 million for initial construction costs of dredge *McFarland;* and $50 thousand for continuation of design for the shallow draft dredge.

Financing.—Costs of operations are financed from reimbursement or advances from the appropriations or individuals who utilize the services or facilities, at rates to cover all operating costs. Since inception of the revolving fund in 1953 capital outlay has been financed from earnings derived from recovery of depreciation expense and from sales of obsolete and wornout equipment. During this period, costs of capital outlay has exceeded revenue by $13 million, thereby reducing working capital of the fund. Income in 1964 and 1965 includes a provision for increased cost of equipment replacements. Earnings derived from depreciation recover only original cost of wornout and obsolete items, hence are inadequate to provide for present or future replacement costs. A factor to cover this inadequacy is included in charges to projects on which the equipment is used and is credited to revolving fund income.

Operating results and financial condition.—Revenue and nonoperating income were $930 thousand less than expenses in 1963, thereby reducing retained earnings to a deficit of $289 thousand. Unreserved retained earnings are expected to amount to about $600 thousand at the end of 1964 and remain at this level in 1965.

Earnings to be realized from additional charges, commencing January 1, 1964, to meet the increased cost of

REVOLVING FUND—CORPS OF ENGINEERS—CIVIL—continued

plant replacement are estimated at $5 million in 1964 and $10 million in 1965. The use of this income is shown in the following table (in thousands of dollars):

	1964 estimate	*1965 estimate*
Annual additional earnings realized	5,000	10,000
Unapplied earnings from prior years	-------	800
Applied to plant replacement	−4,200	−6,700
Reserved for future application	800	4,100

The initial capital of the fund was provided by assumption of the assets, liabilities, and obligations of the plant accounts, as carried on the records of the Corps of Engineers—Civil on June 30, 1953, and by an appropriation from the general fund of $100. Capital of the fund amounted to $121.2 million at June 30, 1963, and is limited to $140 million (67 Stat. 199). In 1963 capital of the fund was increased by $811 thousand because of a net transfer of assets from other agencies or appropriations without reimbursement. Capital will be increased in 1964 in the amount of $127 thousand because of adjustments to liability for annual leave of employees.

Consolidated summary of personnel.—The revolving fund is used to initially finance all payrolls of the Corps of Engineers—Civil.

The table which follows shows the distribution of personnel and salary costs to appropriations of the Corps of Engineers and to other accounts. Direct obligations cover services of employees working full time at project sites. Indirect obligations cover personnel charges for services provided through the revolving fund.

Unobligated balance lapsing	73		
Limitation	**6,272**	**6,622**	**6,888**

The United States Soldiers' Home provides medical and domiciliary care and other authorized benefits for the relief and support of certain old, invalid, or disabled soldiers of the Regular Army and airmen of the Air Force. Funds for operation and maintenance of the Home are appropriated from the Soldiers' Home Permanent Fund (trust fund) and not from the general funds of the Treasury.

1. *Medical care.*—A hospital operated as part of the Home cares for the daily average patient loads shown below. In addition, certain members will receive specialized care at other hospitals.

	1963 actual	*1964 estimate*	*1965 estimate*
Patients in Home hospital	346	368	394
Patients in other hospitals	54	55	55

2. *Domiciliary care.*—The daily average number of members receiving domiciliary care is shown below.

	1963 actual	*1964 estimate*	*1965 estimate*
Members present	1,631	1,798	1,991

3. *Administration and central services.*—Included in this activity are service functions such as administration, supply, utility services, maintenance, transportation, and laundry.

4. *Permanent improvements.*—No increase in limitation is requested for 1965.

A supplemental increase in the 1964 limitation to cover wage board costs is anticipated for separate transmittal.

RYUKYU ISLANDS, ARMY

General and special funds:

ADMINISTRATION

For expenses, not otherwise provided for, necessary to meet the responsibilities and obligations of the United States in connection with the government of the Ryukyu Islands, as authorized by the Act of July 12, 1960 (74 Stat. 461), as amended (76 Stat. 742); services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), of individuals not to exceed ten in number; not to exceed $4,000 for contingencies for the High Commissioner, to be expended in his discretion; hire of passenger motor vehicles and aircraft; purchase of [six] *four* passenger motor vehicles, [of which four shall be] for replacement only; and construction, repair, and maintenance of buildings, utilities, facilities, and appurtenances; [$10,000,000] *$14,441,000*, of which not to exceed [$2,300,000] *$2,441,000* shall be available for administrative and information expenses, and [$2,000,000] *$4,000,000* shall be available for transfer to the Ryukyu Domestic Water Corporation for construction of a portion of the integrated island water system: *Provided*, That expenditures from this appropriation may be made outside continental United States when necessary to carry out its purposes, without regard to sections 355 and 3648, Revised Statutes, as amended, section 4774(d) of title 10, United States Code, civil service or classification laws, or provisions of law prohibiting payment of any person not a citizen of the United States: *Provided further*, That funds appropriated hereunder may be used, insofar as practicable, and under such rules and regulations as may be prescribed by the Secretary of the Army to pay ocean transportation charges from United States ports, including territorial ports, to ports in the Ryukyus for the movement of supplies donated to, or purchased by, United States voluntary nonprofit relief agencies registered with and recommended by the Advisory Committee on Voluntary Foreign Aid or of relief packages consigned to individuals residing in such areas: *Provided further*, That the President may transfer to any other department or agency any function or functions provided for under this appropriation, and there shall be transferred to any such department or agency, without reimbursement and without regard to the appropriation from which procured, such property as the Director of the Bureau of the Budget shall determine to relate primarily to any function or functions so transferred. (*Foreign Aid and Related Agencies Appropriation Act, 1964.*)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
1. Administration	2,002	2,140	2,441
2. Aid to Ryukyuan economy	6,943	7,860	12,000
Total obligations	8,945	10,000	14,441
Financing:			
Advances and reimbursements from other accounts	−1		
Unobligated balance lapsing	10		
New obligational authority (appropriation)	**8,954**	**10,000**	**14,441**

This appropriation supports the objective of the act of July 12, 1960, as amended, to provide for the promotion of economic and social development in the Ryukyu Islands, and finances the administration of these islands by the United States, which exercises jurisdiction pursuant to the Treaty of Peace with Japan. Executive Order 10713 of June 5, 1957, as amended, establishes under the Secretary of Defense a Civil Administration of the Ryukyu Islands to execute the administrative, legislative, and jurisdictional powers reposed in the United States. To protect the security of the United States and of the free world, the United States will continue responsibility for the administration of the Ryukyu Islands as long as conditions of threat and tension in the Far East require the maintenance of military bases in these islands.

Aid to Ryukyuan economy.—Provision is made for observation and study of democratic procedures by Ryukyuan leaders through visits to the United States; advanced study by Ryukyuan students in the United States; vocational and technical training of Ryukyuans in other Far East areas; and technical assistance and education.

Grants are made to supplement revenues of the local government in meeting costs of extraordinary public safety and public health services for the benefit of U.S. Forces and as contributions toward the costs of government projects. Grants were $6.6 million in 1963; $5.3 million in 1964; and $6.9 million is proposed in 1965. Provision is also made for the transfer to the Ryukyu Domestic Water Corporation of $2 million in 1964, and $4 million in 1965 for expansion and development of the integrated water system.

Additional economic aid is furnished by the United States through other programs. In 1963 approximately 31,800,000 pounds of surplus foodstuffs were furnished through voluntary relief organizations. 36,100,000 pounds of relief foodstuffs are expected to be furnished in 1964, and an additional 37,500,000 pounds in 1965.

In 1963, the United States (Department of Agriculture) entered into a sales contract agreement with the Ryukyuan Government through the Ryukyu Development Loan Corporation on behalf of the High Commissioner, for a 3-year program involving surplus commodities, under the authority of title IV, Public Law 480. The value of commodities amounted to $0.9 million in 1963 and is estimated at $6.2 million in 1964 and $7.4 million in 1965. The proceeds of commodity sales will be used to extend loans to develop and expand the Ryukyuan livestock and poultry production, processing and distribution industry, and other agricultural development programs as may be mutually agreed upon. The agreement provides that repayment to the United States for commodities furnished will be made over a 19-year period with interest at three-fourths of 1% per annum.

$800 thousand were also made available in 1963 from the Agency for International Development to assist a program of Ryukyuan emigration to South America.

In addition to this appropriation and other United States aid programs, the General Fund of the Civil Administration is available for economic aid and social development in the Ryukyus. It receives income from business-type instrumentalities and from investments in financial and public utility organizations. A statement of financial condition and a statement of cash receipts and expenditures of the general fund follow (in thousands of dollars):

Total expenditures	10,100	10,584	10,503
Net increase or decrease in cash balance	−609	−493	−1,001

Income from operations is derived primarily from the net earnings of the development loan, electric power and water corporations, from the purchase and resale of petroleum products, and from receipts of interest, dividend and rent. Since 1962, that portion of the markup on petroleum sales distributed to the Government of the Ryukyu Islands (previously covered directly into the Government of the Ryukyu Islands Treasury) has been included in the General Fund program both as a receipt and expenditure. Receipts from liquidation of investments include the transfer of cash which is surplus to the working capital requirements of the petroleum distribution fund, and proceeds from disposal of some equipment used in the petroleum business and dissolution of the Okinawa Housing Corporation. Other receipts include primarily the proceeds of fines and forfeitures levied by the Civil Administration court.

The earnings of the development loan, electric power and water corporations are reinvested within the respective corporations each year. To advance the development on Okinawa of water sources and supply, a series of improvements and construction projects and evaluation and exploitation of water sources has been planned by the water corporation. Design and exploration work was begun in 1963 and construction is expected to begin in 1964 and continue through 1968. The source of financing some of these projects will be the General Fund. Plans provide for increasing the investment in the water corporation by transfer of appropriated funds of $2 and $4 million in 1964 and 1965, respectively, and General Fund contributions of $2.5 and $3 million for the same respective periods. To meet a serious power shortage which has developed in the interim period preceding completion of construction of the new powerplant being constructed under a separate loan appropriation, auxiliary diesel units have been procured at a cost of approximately $2.5 million made available from the 1963 program of the General Fund of the Civil Administration. Funds will be invested also in facilities of the petroleum operations. In each year funds are programed as grants to municipalities. A cash balance will be retained in the fund to meet emergency requirements.

The Government of the Ryukyu Islands was created by the U.S. Civil Administration on April 1, 1952, and its continuation was confirmed by Executive Order 10713, as amended. In addition to local revenue derived primarily from income and excise taxes, this Government receives grants from the United States to cover expenses related to extraordinary services it provides for U.S. Forces and for assistance in development of public facilities and services. It also receives technical and financial assistance from the Government of Japan. The Government of the Ryukyu Islands has not been authorized by the United States to incur deficits in its governmental fiscal operations or to borrow for any purpose, and it must, therefore, maintain a minimum working balance in its treasury. A statement of its accounts follows (in thousands of dollars):

CONSTRUCTION OF POWER SYSTEMS, RYUKYU ISLANDS

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Financing:			
Unobligated balance brought forward	−4,000	−7,500	−7,500
Recovery of prior year obligations	−3,500		
Unobligated balance carried forward	7,500	7,500	7,500
New obligational authority			

The appropriation is being used as a loan to the Ryukyu Electric Power Corporation to assist in the construction of the Kin powerplant at a cost of $15.2 million. Of this, $4.7 million is being provided from earnings of the Corporation and $10.5 million through a loan from this appropriation. The unobligated balance reflects savings from reduced construction cost estimates.

The plant will consist of four 20,000-kilowatt generating units and ancillary facilities. The first unit is expected to begin power generation in the fall of 1964 and the plant will be completed in 1965.

CONSTRUCTION OF WATER SYSTEM, RYUKYU ISLANDS

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Financing:			
Unobligated balance brought forward	−123		
Unobligated balance lapsing	123		
New obligational authority			

The construction of a dam, pumping station, and pipeline for Naha City was completed in 1962. The unobligated balance has been returned to the U.S. Treasury.

THE PANAMA CANAL

CANAL ZONE GOVERNMENT

General and special funds:

OPERATING EXPENSES

For operating expenses necessary for the Canal Zone Government, including operation of the Postal Service of the Canal Zone; hire of passenger motor vehicles; uniforms or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131); expenses incident to conducting hearings on the Isthmus; expenses of special training of employees of the Canal Zone Government as authorized by law (5 U.S.C. 2301 et seq.); contingencies of the Governor; residence for the Governor; medical aid and support of the insane and of lepers and aid and support of indigent persons legally within the Canal Zone, including expenses of their deportation when practicable; *maintaining and altering facilities of other Government agencies in the Canal Zone for Canal Zone Government use;* and payments of not to exceed $50 in any one case to persons within the Government service who shall furnish blood for transfusions, [$25,725,000] *$28,774,000. (2 C.Z. Code, Sec. 31; 31 U.S.C. 11; Public Works Appropriation Act, 1964.)*

tion of hospitals and clinics. All operating expenses, including depreciation and other nonfund expense, are recovered and paid into the Treasury as miscellaneous receipts. Such recoveries are derived from revenue from individuals and agencies served and from the Panama Canal Company as follows (in thousands of dollars):

	1963 actual	1964 estimate	1965 estimate
Repayments to Treasury (including depreciation):			
Revenue:			
Hospitals and clinics	4,207	4,779	5,422
Education	3,234	4,284	5,134
Postal service	1,087	1,135	1,280
Fire protection	445	481	511
All others	525	531	551
Total revenue	9,498	11,210	12,898
Net remaining costs reimbursable by Panama Canal Company	14,980	15,820	17,270
Total repayable to Treasury	24,478	27,030	30,168

1. *Civil functions*—(a) *Customs and immigration.*—This provides for the activities usually incident to such functions (except that no collection of custom duties is involved) and in addition includes special activities relating to transiting vessels and the execution of certain treaty obligations to the Republic of Panama.

(b) *Postal service.*—The postal system serves the entire Canal Zone and operates under policies and regulations generally similar to those of the U.S. Post Office Department, including money order and postal savings services.

WORKLOAD (in thousands)

	1963 actual	1964 estimate	1965 estimate
Airmail dispatched (pounds)	251	265	275
Airmail received (pounds)	558	590	620
Surface mail dispatched (pounds)	397	400	405
Surface mail received (pounds)	3,075	3,100	3,200

(c) *Police protection.*—This includes the usual police functions of preservation of the peace and enforcement of the law in the Canal Zone (not including military reservations), operation of prisons, and police guards for certain facilities.

(d) *Fire protection.*—All firefighting facilities in the Canal Zone except those required for aircraft crash fires and fires aboard naval vessels and ammunition depots are consolidated under the Canal Zone Government.

(e) *Judicial system.*—This includes the operation of two magistrate courts and the expenses of the district court (exclusive of salaries) which serves as both a State and Federal court.

(f) *Education.*—This provides for the operation of schools, kindergarten through college, for the dependents of Canal Zone residents, the dependents of U.S. citizen government employees residing in the Republic of Panama, and, on a space available basis, certain other residents of the Republic of Panama. There are two school systems; one for U.S. citizens, the other, which is conducted in the Spanish language, for Panamanians and other non-U.S. citizens. There are also specialized facilities for handicapped children.

ENROLLMENT DATA

	1963 actual	1964 estimate	1965 estimate
U.S. citizen schools	9,377	10,851	11,435
Latin-American schools	3,846	3,691	3,610
Total number of students	13,223	14,542	15,045

(g) *Public areas and facilities.*—This includes the cleaning, lighting, and maintenance of streets and highways; maintenance of sewers; and care of public areas within the Canal Zone, not including military reservations. Also included are the operation and maintenance of recreational facilities.

(h) *Library.*—This provides for the operation of public library facilities for residents of the Canal Zone and technical reference services for Government agencies.

(i) *Internal security.*—This provides for loyalty investigations and related intelligence services for the Government and the Company.

(j) *Other civil affairs.*—This includes licensing, civil defense activities, and supervision of the civil functions program.

2. *Health and sanitation*—(a) *Hospitals and clinics.*—Two general medical and surgical hospitals, with outpatient clinics, are maintained and operated to furnish medical care to eligible civilian and military personnel. A neuropsychiatric and domiciliary hospital and a leprosarium also are operated and maintained.

AVERAGE NUMBER OF INPATIENTS PER DAY (EXCLUDING NEWBORNS)

	1963 actual	1964 estimate	1965 estimate
General hospitals	359.0	360	380
Corozal hospital (neuropsychiatric and domiciliary)	208.3	225	225
Palo Seco Leprosarium	108.6	109	109
Total number of inpatients per day	675.9	694	714

(b) *Other public health services.*—This provides for community-wide public health services, sanitation and quarantine work in the Canal Zone and for ships calling at its ports and transiting the Canal; inspection of food processing establishments; and facilities for animal care and quarantine.

3. *General Government expenses*—(a) *Office of the Governor.*—This provides for the executive direction of all Canal Zone Government activities and includes the expenses of the office of the Governor and his residence, the office of the Executive Secretary, and provision for certain contingencies.

(b) *Other general government expenses.*—This includes the Canal Zone Government's share of the cost of general and administrative expenses provided by the Panama Canal Company which the Canal Zone Government is without staff or facilities to perform or furnish; expenses of recruitment and repatriation, employees' home leave travel costs, aid to indigents, a social work program, and other general charges.

Unfunded adjustments to total operating costs.—This includes depreciation expense on facilities and equipment acquired under the capital outlay appropriation. Other

[1] Selected resources as of June 30, are as follows: Unpaid undelivered orders, 1962, $1,095 thousand; 1963, $4 thousand; 1964, $0.

A $750 thousand supplemental appropriation enacted in 1958 and an appropriation of $19,250 thousand enacted in 1959 provided $20 million for constructing a high-level bridge across the Panama Canal at Balboa, Canal Zone, as authorized and directed by the Act of July 23, 1956 (ch. 665, 70 Stat. 596). The bridge was inaugurated October 12, 1962, thereby fulfilling the United States commitment to the Republic of Panama under the terms of point 4 of the General Relations Agreement between the United States and Panama of May 18, 1942 (Executive Agreement Series 452), and of item 5 of the Memorandum of Understandings Reached, signed January 25, 1955.

Public enterprise funds:

CORPORATION

The Panama Canal Company is hereby authorized to make such expenditures within the limits of funds and borrowing authority available to it and in accordance with law, and to make such contracts and commitments without regard to fiscal year limitations as provided by section 104 of the Government Corporation Control Act, as amended (31 U.S.C. 849), as may be necessary in carrying out the programs set forth in the budget for the current fiscal year for such corporation, *including maintaining and improving facilities of other Government agencies in the Canal Zone for Panama Canal Company use*, except as hereinafter provided:

[No real property or rights to the use of real property, or activity shall be disposed of or transferred by license, lease, or otherwise except to another agency of the United States Government unless specifically approved by the appropriate legislative committees of the House and Senate.] (*Public Works Appropriation Act, 1964.*)

The Panama Canal Company is a wholly owned Government corporation chartered by the Act of June 29, 1948 (62 Stat. 1076), as amended by the Act of September 26, 1950 (64 Stat. 1041), for the primary purpose of maintaining and operating the interoceanic canal at the Isthmus of Panama. In furtherance of that mission, and in consideration of the international agreements under which the canal enterprise is operated, the Company conducts necessary supporting operations.

The administration of the Company is integrated with that of the Canal Zone Government, an independent agency financed by appropriations. The Governor of the Canal Zone is ex officio president of the Company. The Company is expected to be self-sustaining and is required to reimburse the U.S. Treasury for the net cost of the Canal Zone Government, the cost of interest on the net

THE PANAMA CANAL—Continued

PANAMA CANAL COMPANY—Continued

Public enterprise funds—Continued

PANAMA CANAL COMPANY FUND—continued

direct investment of the United States in the Company, and for annuity payments made by the United States to the Republic of Panama pursuant only to the Treaty of 1903 as amended in 1936.

Budget program—1. *Transit operations.*—Operation and maintenance of the canal proper is the primary mission of the Company, and it is toward the successful accomplishment of that task that the transit operations are directed. Current and projected operating results, including income from tolls, are reviewed and evaluated at least annually by the Company's Board of Directors.

The services performed by this activity and the funded cost of each are shown in the following table (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Maintenance of channels and harbors	4,081	4,544	4,305
Navigation service and control	10,278	10,582	11,373
Locks operations	9,949	9,168	9,985
General canal expense	2,088	1,380	1,266
Net funded costs	26,396	25,674	26,929

Major variations in the foregoing cost estimates reflect provision for an overhaul of the Miraflores Locks in 1963 and Pedro Miguel Locks in 1965, discontinuance of the Thatcher Ferry operation upon completion of the Thatcher Ferry Bridge in mid-1963, a reduction in channel maintenance expenditures in 1965 and the increasing outlay required to handle the expected rise in canal traffic volume in 1964 and 1965 as shown by the following workload data (dollars in thousands):

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Selected data on canal operations:				
Commercial vessel transits:				
Number of ships (over 300 net Panama Canal tons)	11,419	11,017	11,618	11,887
Ships berthed	5,871	6,325	6,395	6,440
Tolls and toll credits at current rates	$58,347	$57,855	$60,800	$62,600
Other transit revenue	$4,796	$5,613	$5,828	$6,115

Capital outlay costs, funded, which will amount to $5,068 thousand in 1965, include $1 million for continuing the Canal capacity program, and $2,775 thousand for continuing the replacement of locks towing locomotives and cranes. Also included is $500 thousand primarily for processing, additional hauling, and depositing cut-widening spoil as a base for the proposed $11 million dam across the Trinidad arm of Gatun Lake.

2. *Supporting services.*—These auxiliary activities of the Company, individually described below, provide services and materials essential to the accomplishment of the transit operations program.

(a) *Maritime services.*—This program provides for the operation of vessel repair and harbor terminal facilities. Funded costs, which are directly related to customer demand for services, and to Company floating plant overhaul schedules, are as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Vessel repair	3,912	3,327	3,837
Harbor terminals	6,810	7,472	7,864
Total funded costs	10,722	10,799	11,701
Less intra-agency recoveries	3,428	2,753	3,533
Net funded costs	7,294	8,046	8,168

Capital outlay costs, funded, for 1965 amount to $443 thousand for equipment, pier lighting, and pipeline valves.

(b) *Employee services.*—As shown below, these include housing and marketing operations serving eligible employees against whom charges are made to reimburse the Company. Funded cost estimates, which reflect increasing sales by the marketing operation, are as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
U.S. community housing	1,379	1,484	1,466
Latin-American community housing	688	788	854
Marketing operations	21,044	22,497	24,105
Total funded costs	23,111	24,769	26,425
Less intra-agency recoveries	1,131	1,189	1,211
Net funded costs	21,980	23,580	25,214

Capital outlay costs, funded, for 1965 are estimated at $1,210 thousand and include $437 thousand for continuation of a low cost housing replacement program, $220 thousand for modernizing existing quarters structures, and $183 thousand for equipment.

(c) *Transportation and utilities services.*—The various types of service, including a new central air conditioning service which went into operation in 1963, and the funded costs of each, are as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Railroad	1,753	1,775	1,829
Motor transportation	2,304	2,495	2,625
Water transportation	2,877	2,951	3,061
Power system	2,334	2,532	2,588
Communications system	663	664	684
Water system	1,255	1,378	1,402
Central air conditioning service	------	108	121
Total funded costs	11,186	11,903	12,310
Less intra-agency recoveries	7,310	7,926	8,351
Net funded costs	3,876	3,977	3,959

Capital outlay costs, funded, total $3,500 thousand for 1965 including $2,000 thousand toward a $5,250 thousand steam-turbine generator for the power system, $426 thousand for motor vehicles, and $325 thousand for replacing railroad rolling stock.

(d) *Other supporting services.*—These activities chiefly consist of the Company's construction, maintenance and supply functions. Funded costs, which reflect the varying demand for the services performed herein, are as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Tivoli guest house	698	680	631
Printing plant	483	608	613
Grounds maintenance	1,273	1,440	1,703
Engineering and maintenance services	9,991	9,383	9,694
Supply operations	6,561	6,541	6,464
Total funded costs	19,006	18,652	19,105
Less intra-agency recoveries	16,309	16,258	17,483
Net funded costs	2,697	2,394	1,622

Capital outlay costs, funded, for 1965 are estimated at $337 thousand for the replacement and addition of equipment.

3. *General corporate expense.*—This includes payments to the Treasury for the net cost of Canal Zone Government and interest, general and administrative expenses under statutory limitation, and other general charges. The scope of general and administrative expenses under

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

statutory limitation includes virtually all general charges other than interest on the investment of the United States, the net cost of the Canal Zone Government, and annuity payments to non-U.S. citizens formerly employed by the Company. A small supplementary assistance program for these aged and disabled persons is also included. Funded costs are as follows (in thousands of dollars):

	1963 actual	*1964 estimate*	*1965 estimate*
Net cost of Canal Zone Government	14,980	15,820	17,270
Interest expense	10,077	10,951	11,181
Other general corporate expense	10,733	11,517	12,709
Total general corporate expense, funded	35,790	38,288	41,160

Financing.—The Company is authorized to obtain appropriations for its capital needs and to cover losses sustained in the conduct of its activities. In addition, under Public Law 86–200 (73 Stat. 428), approved August 25, 1959, the Company may borrow, with interest, from the Treasury amounts not exceeding a total of $10 million outstanding at any time. The latter authorization, along with available resources and anticipated revenues and receipts will enable the Company to fund its program through 1965 without recourse to appropriations. The unobligated balance was $2,067 thousand on June 30, 1963, and is estimated at $1,690 thousand on June 30, 1965.

Operating results and financial condition.—There will be an increase in retained earnings in 1964 estimated at $3,486 thousand and a further increase in 1965 estimated at $2,898 thousand wholly representing net operating income for those years. The Government's equity will be reduced by $190 thousand in 1964 and $238 thousand in 1965 as a result of expenditures made by the Company for maintenance and operation of the Thatcher Ferry Bridge. In accordance with Public Law 753 (84th Cong., 2d sess.), such expenditures are treated as extraordinary expenses, not related to the operations of the Panama Canal Company, incurred through a directive based on national policy and as such may be applied as an offset against the interest-bearing investment.

Total Government equity	459,751	461,981	465,278	467,938

Note.—Contingent and other liabilities: The Company has outstanding, at all times, contingent and continuing liabilities in indeterminable amounts arising principally from monthly relief payments payable to retired alien employees; benefits payable under provisions of the Federal Employees Compensation Act; commitments for construction work, supplies and services; and pending suits and claims.

The annuity payments to be made to retired alien employees in fiscal year 1964 are estimated at $1.7 million. Commitments under uncompleted construction contracts and unfilled purchase orders amounted to $10.7 million at June 30, 1963. The maximum liability which could result from outstanding claims and lawsuits is estimated to be $0.3 million.

GENERAL PROVISIONS—THE PANAMA CANAL

The Governor of the Canal Zone is authorized to employ services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), in an amount not exceeding $30,000: *Provided*, That the rates for individuals shall not exceed $100 per diem. (*Public Works Appropriation Act, 1964.*)

MISCELLANEOUS ACCOUNTS

General and special funds:

PAYMENTS TO CLAIMANTS, DISASTER AT TEXAS CITY, TEX., ARMY

(Permanent, indefinite, general fund)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Financing:			
Unobligated balance brought forward	−4	−4	
Unobligated balance carried forward	4		
Unobligated balance lapsing		4	
New obligational authority			

This fund was authorized by the act of August 12, 1955, as amended, by Public Law 86–381, approved September 25, 1959, for the payment of death, personal injury, and property losses resulting from the disaster at Texas City, Tex., on April 16 and 18, 1947. All claims have been adjudicated.

WILDLIFE CONSERVATION, ETC., MILITARY RESERVATIONS, ARMY

(Permanent, indefinite, special fund)

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Conservation of game (obligations)	6	85	95
Financing:			
Unobligated balance brought forward		−27	−22
Unobligated balance carried forward	27	22	17
New obligational authority (appropriation)	**32**	**80**	**90**

Proceeds from the sale of fish and game permits on Army installations are used to carry out a program of planning, development, maintenance and coordination of wildlife, fish and game conservation, and rehabilitation on military reservations. This program is carried out through cooperative plans agreed upon by the Secretary of Defense, the Secretary of the Interior, and the appropriate agency of the State in which the reservation is located.

Appropriation (adjusted)	**29,062**	**35,687**	**39,500**

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $2,181 thousand (1963 adjustments, −$91 thousand); 1963, $1,741 thousand; 1964, $1,741 thousand; 1965, $1,741 thousand.

The laws enforced hereunder are designed to protect consumers against adulterated and misbranded foods, drugs, cosmetics, therapeutic devices, and household products containing hazardous substances.

The 1965 estimate provides for an increase of 12% in the number of man-years available to carry out the responsibilities for consumer protection vested in the Food and Drug Administration. This continues the program of increasing and strengthening the agency's resources to cope with increased responsibilities due to industrial, economic, technological and population growth. The 1965 increase specifically provides for additional resources to implement the Drug Amendments of 1962. Other major increases are to provide additional resources and competences for medical and other scientific activities of the agency.

1. *Field inspections, investigations, and laboratory analyses.*—Inspections of domestic plants, examinations of interstate and import shipments and special investigations are planned according to the relative incidence and seriousness of probable violations. About 100,000 establishments (manufacturing plants, warehouses, shippers) dealing in foods, drugs, devices, or cosmetics are subject to inspection. Retail establishments dealing in products received in interstate commerce are also subject to the prohibition against adulteration or misbranding. Samples are collected during inspections, and investigations and laboratory analyses are conducted to detect and identify adulteration.

2. *Research and methodology.*—Research is conducted to evaluate the components of foods, drugs, devices, cosmetics, and household products suspected of containing hazardous substances, and to appraise their efficacy, toxicity, and acute and long-range effects. Research is also performed to develop analytical methods for use in field analysis of inspectional samples and to develop food standards and pesticide, food additive, and color additive tolerances.

3. *Compliance, consultation, and education.*—Voluntary compliance with the law is promoted wherever possible, but legal action is taken when necessary. Legal proceedings include citations, seizures of illegal products, injunctions, and criminal prosecutions through the courts. Standards for foods, tolerances for poisonous substances in foods, and other regulations are promulgated. A program of consumer education is conducted. Liaison is maintained with, and assistance is given to, State and local food and drug agencies.

4. *Medical evaluation.*—Applications for new drugs to be marketed, or for modification of previously approved drugs, are evaluated and approved. The medical aspects of research and enforcement activities are coordinated. Labels for drugs and household products containing hazardous substances are evaluated for honesty of claims, sufficiency of information.

Workload is reflected in the following summary data:

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Number of establishments inspected	21,703	29,270	31,100	32,000
Number of inspections	24,259	32,763	34,400	35,000
Number of other inspections made (pesticides, hazardous substances, etc.)	9,528	10,603	12,800	13,000
Wharf examinations	9,668	9,983	14,000	16,000
Samples collected for examination, domestic and import	62,712	103,166	110,000	114,000
Laboratory analyses and other examinations, field and headquarters laboratories	59,380	97,107	102,000	106,000

New obligational authority (appropriation)				**4,466**	**11,025**				

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $1,470 thousand (1963 adjustment, $16 thousand); 1963, $1,279 thousand; 1964, $3,076 thousand; 1965, $6,101 thousand.

This appropriation consolidates all activities related to the planning, construction, and equipping of buildings and facilities for the Food and Drug Administration.

Since 1957, the Food and Drug Administration has been engaged in a program to improve and enlarge its field facilities. Improvements have been provided for 11 of the 18 FDA district offices of which all but 1 have been done through the leasing of privately owned facilities. The remaining 7 districts will be provided through direct Federal construction.

FDA has also had a program to provide additional space and facilities at headquarters. A new headquarters laboratory building (Federal office building No. 8) is now under construction and nearing completion. A special pharmacological animal laboratory is under construction at Beltsville, Md. In 1964 planning will be completed for the first major laboratory to be located on the Beltsville site. A special dog whelping facility will also be constructed at Beltsville to provide necessary dog colonies for the pharmacological-animal laboratory.

Steps taken to provide interim laboratory space until permanent facilities become available include the renovation of building 197 at the Navy Yard in Washington and the retention of present laboratory space at Boston, New York, and Baltimore when operations at these locations are transferred to new facilities to be completed in 1964. Selected headquarters laboratory operations will be transferred to these locations as the space becomes available.

The program proposed for 1965 calls for:

Digitized for FRASER
https://fraser.stlouisfed.org
Federal Reserve Bank of St. Louis

1. Preparation of a master-development plan for the site at Beltsville, Md., on which current and future headquarters facilities will be constructed.

2. Construction of a laboratory facility at Beltsville, Md., to augment the new laboratory building (Federal office building No. 8) now under construction. Planning for this building will be completed in 1964.

3. Site acquisitions and construction of district laboratory-office buildings at Chicago, Ill.; Denver, Colo.; and Philadelphia, Pa.

4. Planning and site acquisitions for district laboratory-office buildings at St. Louis, Mo., and San Francisco, Calif.

5. Equipping of facilities to be completed in 1964 at the following locations: New Orleans, La.; New York, N.Y.; and Seattle, Wash.

Public enterprise funds:

[REVOLVING FUND FOR CERTIFICATION AND OTHER SERVICES]

[For the establishment of a revolving fund for certification and other services, there is hereby appropriated the aggregate of fees (including advance deposits to cover such fees) paid during the fiscal year 1964, and each succeeding fiscal year, for services in connection with the listing, certification, or inspection of certain products and the establishment of tolerances for pesticides, in accordance with sections 406, 408, 506, 507, 702A, and 706 of the Federal Food, Drug, and Cosmetic Act, as amended (21 U.S.C. 346a, 356, 357, 372a, and 376), and the unexpended balance of such fees (or advance deposits) heretofore appropriated shall be credited to such revolving fund. This fund shall be available without fiscal year limitation for salaries and expenses necessary to carry out the Secretary's responsibilities in connection with such listings, certifications, inspections, or establishment of tolerances, including the conduct of scientific research, development of methods of analysis, purchase of chemicals, fixtures, furniture, and scientific equipment and apparatus; expenses of advisory committees; refund of advance deposits for which no services have been rendered: *Provided*, That any supplies, furniture, fixtures, and equipment on hand or on order on June 30, 1963, and purchased or ordered under appropriations for "Salaries and Expenses, Certification, Inspection, and Other Services," shall be used to capitalize the revolving fund.] (*Departments of Labor, and Health, Education, and Welfare Appropriation Act, 1964.*)

Summary of Sources and Application of Funds (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Obligations (from program and financing)		2,774	3,120
Unpaid obligations assumed at inception of fund		287	
Increase (−) in gross unpaid obligations		−555	−30
Gross expenditures		2,506	3,090
Revenues and other receipts (from program and financing): Applicable receipts		2,546	2,584
Budget expenditures		−40	506

The Food and Drug Administration certifies batches of antibiotics, insulin, and color additives for use in foods, drugs, or cosmetics. FDA also establishes tolerances for residues of pesticide chemicals in or on raw agricultural products, and establishes tolerances for color additives in foods, drugs, and cosmetics. These services are financed wholly by fees paid by the affected industries.

The 1964 budget authorized the conversion of this account from an indefinite special fund to a self-sustaining revolving fund. Therefore, the 1965 budget for this account is presented on a revolving fund basis.

Workload data are as follows:

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Batches of antibiotics tested	16,605	17,708	24,000	24,000
Batches of insulin tested	362	398	350	350
Batches of color additives tested	5,835	5,812	6,800	6,800
Pesticide tolerances:				
Pesticides involved	35	37	40	40
Tolerances established	202	182	200	200

Unobligated balance lapsing	25		
New obligational authority (appropriation)	**34,716**	**34,756**	**183,296**

Under the George-Barden Act, grants are made to the States, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the District of Columbia for training students and teachers in agriculture, home economics, trades and industry, distributive occupations, practical nursing, and the fishing trades.

The Vocational Education Act of 1963 provides for major expansion and improvement of the existing Federal-State vocational education programs under the George-Barden Act, emphasizing training for gainful employment as semiskilled or skilled workers and for business and office occupations. It authorizes grants for research and other programs designed to meet special vocational education needs of youths, particularly those in economically depressed communities who have academic, socioeconomic, or other handicaps that prevent them from succeeding in the regular vocational education programs. Beginning in 1965, the act provides for a work-study program to assist students enrolled in vocational education classes who are in need of financial assistance in order to continue their education, and a program of grants for construction and operation of residential vocational schools, intended to attack problems of school dropouts and youth unemployment. A supplemental appropriation for 1964 is anticipated for separate transmittal.

Additional grants for vocational education are provided through a permanent appropriation, and grants to support the training of highly skilled technicians are included under Defense educational activities.

Proposed for separate transmittal:

Financing:			
New obligational authority (appropriation)	**11,950**	**11,950**	**11,950**

This annual appropriation supports college instruction in agriculture, the mechanic arts, and related fields, in the 68 land-grant colleges. Each State and Puerto Rico receives a minimum of $150 thousand and the balance is distributed in proportion to population. Additional grants of $50 thousand per State are provided through a permanent appropriation.

Grants for Library Services

For grants to the States, pursuant to the Act of June 19, 1956, as amended (20 U.S.C. 351–358), $7,500,000. (*Department of Health, Education, and Welfare Appropriation Act, 1964.*)

Unobligated balance lapsing	15,951	217	
New obligational authority (appropriation)	**282,322**	**104,466**	**359,450**

Payments are made to assist in the maintenance and operation of schools in areas where enrollments are affected by Federal activities. Such payments are made principally to school districts; however, where such districts cannot assume responsibility for educating federally connected children, payments are made to other Federal agencies for the provision of such education under Federal auspices. Also, under certain circumstances, the Commissioner of Education may make arrangements for the provision of free public education for children of members of the Armed Forces on active duty, not residing on Federal property. A supplemental appropriation is anticipated for separate transmittal in 1964.

Payments will be made in 1965 to about 4,300 eligible school districts and Federal agencies on account of the attendance of approximately 2.1 million federally connected children in all States, Puerto Rico, Virgin Islands, Guam, and Wake Island. This compares to over 4,200

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1962, $9,239 thousand (1963 adjustments, −$4 thousand); 1963, $6,700 thousand; 1964, $6,700 thousand; 1965, $6,700 thousand.

Payments are made to assist in construction of schools in areas where enrollments are affected by Federal activities. From 1951 through 1964, $1,212 million has been appropriated for this program, aiding in the construction of an estimated 62,000 classrooms to house about 1.8 million pupils in the 50 States, Puerto Rico, Guam, and Wake Island.

The estimate for 1965 will allow funds to pay all approvable construction projects of local educational agencies in federally affected areas and assist in providing approximately 2,700 classrooms for about 80,000 pupils. A supplemental appropriation for 1964 is anticipated for separate transmittal.

1. *Assistance to local educational agencies.*—Grants are made to local districts for school construction, principally on behalf of increased numbers of children residing on Federal property or residing with a parent employed on Federal property.

2. *Assistance for school construction on Federal properties.*—Where the local educational agency is unable to provide school facilities for increased numbers of children living on Federal property, the Commissioner of Education is authorized to arrange for the construction of schools. Under certain circumstances, the Commissioner may also arrange to provide school facilities on a tem-

ASSISTANCE FOR SCHOOL CONSTRUCTION

Program and Financing (in thousands of dollars)

	1963 actual	1964 estimate	1965 estimate
Program by activities:			
Assistance to local educational agencies (costs—obligations)		36,606	
Financing:			
New obligational authority (proposed supplemental appropriation)		**36,606**	

Under existing legislation, 1964.—Portions of the law providing construction grants on behalf of children whose parents are employed on Federal property but who reside on private taxable property, which had expired June 30, 1963, were extended by part C of Public Law 88–210, approved December 18, 1963. The supplemental will provide for meeting the full estimated requirements under the extended authorization.

DEFENSE EDUCATIONAL ACTIVITIES

For grants, loans, and payments under the National Defense Education Act of 1958 (72 Stat. 1580–1605), [$219,620,000] *$287,890,000*, of which [$90,900,000] *$136,000,000* shall be for capital contributions to student loan funds and loans for non-Federal capital contributions to student loan funds, of which not to exceed [$900,000] *$1,000,000* shall be for such loans for non-Federal capital contributions; [$47,750,000] *$66,600,000* shall be for grants to States and loans to nonprofit private schools for science, mathematics, or modern language equipment and minor remodeling of facilities and for grants to States for supervisory and other services: *Provided*, That allotments under sections 302(a) and 305 for acquisition of equipment and minor remodeling shall be made on the basis of [$47,520,000] *$61,600,000* for grants to States and shall be made on the basis of [$6,480,000] *$8,400,000* for loans to private, nonprofit schools, and allotments under section 302(b) for supervisory and other services shall be made on the basis of [$3,750,000] *$5,000,000*; $15,000,000 shall be for grants to States for area vocational education programs; and [$15,000,000] *$17,500,000* shall be for grants to States for testing, guidance, and counseling: *Provided*, That no part of this appropriation shall be available for the purchase of science, mathematics, and modern language teaching equipment, or equipment suitable for use for teaching in such fields of education, which can be identified as originating in or having been exported from a Communist country, unless such equipment is unavailable from any other source: *Provided further*, That no part of this appropriation shall be available for graduate fellowships awarded initially under the provisions of the Act after the date of enactment of the Department of Health, Education, and Welfare Appropriation Act, 1962, which are not found by the Commissioner of Education to be consistent with the purpose of the Act as stated in section 101 thereof.

Loans and payments under the National Defense Education Act, next succeeding fiscal year: For making, after March 31 of the current fiscal year, loans and payments under title II of the National Defense Education Act, for the first quarter of the next succeeding fiscal year such sums as may be necessary, the obligations incurred and the expenditures made thereunder to be charged to the appropriation for the same purpose for that fiscal year: *Provided*, That the payments made pursuant to this paragraph shall not exceed the amount paid for the same purposes for the first quarter of the current fiscal year. (*Department of Health, Education, and Welfare Appropriation Act, 1964.*)

OFFICE OF EDUCATION—Continued

General and special funds—Continued

DEFENSE EDUCATIONAL ACTIVITIES—Continued

Grants and payments are made to States and possessions, educational institutions, and individuals. A supplemental appropriation is anticipated for separate transmittal in 1964.

1. *Student loans.*—Funds are allotted among the States for payments to institutions of higher education to provide capital contributions to student loan funds. These payments must be matched at the rate of $1 from institutional sources for each 9 Federal dollars. In addition, loans are made to institutions which are unable to provide matching funds.

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Number of institutions participating	1,468	1,526	1,547	1,560
Number of students receiving loans	187,000	217,000	283,000	314,000

2. *Science, mathematics, and foreign language instruction.*—Grants are made to States on a matching basis for acquisition of equipment and minor remodeling of laboratory or other space. Loans are made to nonprofit private schools for similar uses, and matching grants are made to States for supervision and administration of the program.

3. *National defense fellowships.*—Grants are made to institutions of higher education for expansion of graduate programs, and include both fellowship stipends for individuals and cost-of-education allowances for participating institutions. A primary objective is to promote better geographic distribution of graduate facilities throughout the Nation. In selection of fellows, preference is given to persons interested in college teaching.

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Number of fellowships supported	4,041	4,025	4,383	4,383
Number of graduate programs	810	935	975	1,000

4. *Guidance, counseling, and testing.*—Grants are made to States on a matching basis to assist in establishing and maintaining programs of testing, guidance, and counseling. Contracts are made with institutions of higher education for operation of institutes for improved training of counseling personnel, including provision for stipends to public school personnel in attendance.

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Number of students in schools with guidance counseling programs (thousands)	9,200	10,600	12,000	14,000
Number of tests administered (thousands)	7,631	8,129	9,300	10,225
Number of institute participants	2,567	2,268	1,920	1,770

5. *Advanced training in foreign areas and languages.*—Contracts are made with institutions of higher education for Federal payment of up to one-half the cost of operation of language and area study centers and full costs of institutes for advanced training of modern foreign language teachers. Stipends are paid to persons in attendance. Contracts are made for research and studies relevant to foreign language instruction.

	1962 actual	*1963 actual*	*1964 estimate*	*1965 estimate*
Number of language and area study centers	53	55	55	55
Number of individuals receiving stipends for language and area studies	1,086	1,035	1,140	1,140
Number of language institute participants	4,487	4,440	4,520	4,520
Research projects initiated	50	45	50	50

6. *Educational media research.*—Research and demonstrations, financed by grants and contracts, are conducted in the use of new media for educational purposes. It is estimated that 75 projects will be initiated in 1965, in comparison with 70 in 1962, 63 in 1963, and 75 in 1964.

7. *Grants to States for area vocational programs.*—Grants are made on a matching basis to States to provide for establishing technical and subprofessional training programs. It is estimated that 260,000 students will participate in these programs in 1965, compared with 148,000 in 1962, 179,000 in 1963, and 216,000 in 1964.

8. *Grants to States for statistical services.*—Grants are made on a matching basis to assist the States in improving educational statistics. Total payments to any State may not exceed $50 thousand annually.
