# REMARKS <br> OF <br> HON. JOHN G. OTIS, <br> OF KANSAS. <br> In the House of Representatives, 

Thursday, March 24, 1892.

The House having under consideration the bill (H. R. 4426) for the free coirage of gold and sllver, for the issue of coin notes, and for other farposes-

Mr. OTIS said:
Mr. SPEA:EER: I most heartily agree with the gentleman from Illinois, when he says this is the " most important bill yet brought before this Congress or that is likely to come before it this session." I only regret that so brief a space of time has been applied to its coasideration. I desice to send up to the Clerk's desk a bill (H. R. 7272 ) and simply ask that it be read for information, and I give notice that at the proper time I shall offer it as a substitute for the bill under consideration.
A bill fixing the unit of value and providing for a tree coinage of both gold and silver, and for other purposes.

## Be it enacted by the Senate and House of Representatives of the

U"nited States of America in Congress assembled:
That the dollar shall be the monetary unit of value in the United States of America. That the American dollar, with all of its multiples and fractional parts. shall under the seal or stamp of the United States be fashioned from metad or expressed upon paper in the following denominations, to wit: One and two cents to be formed of copper; five cents, of nickel; and all ten cents. twenty-five cents. fifty cents, and the one dollars to be formea of silver or paper; all tive dollars, ten dollars, and twenty dollars to be formed of gold or paper; and all two dollars, flfty dollars, one hundred dollars, five hundred dollars, and one thousind dollars to be formed of paper only.
That all the metallic money mentioned in this act shall be of form, weight, and quality such as now provided by law.
That all the maper money herein mentioned shall beabsolute upon its face, and not in the form of a promise, and otherwise fashtoned in such manner and with such design as the secretary of the Treasury may see fit to preseribe to suit the demands of business and to prevent any portion of said money from being counterteited.

That all money spectfed in this act shall be a full legal tender in any and all sums for any and all debts. public or private: Provided, That fractionai currency, whether metallic or paper, shall only be a legal tender in sums to the amount of ${ }^{2} 10$ in any one transaction.

That the fractional currency herein mentioned shall be provided by the Secretary of the Treasury in such volume as the demands of business require.
SEC. a. That the mints of the United States shall be open to the free and unlimited coinage of both gold ant sitver bullion to any person presenting the same in sums of not less thin $\% 10$, to be coined in such denominations as herein specined of not less than 81 . And it shall be the duty of the Secretary of the Treasury to provide the superintendents of all mints of the United

States with a suffelent volume of paper money to exchange for gold and sll ver bullion, at the option of the owner of said bullion, at the time the same is presented for coinage, at the rate of $\$ 1$ for every 25.8 grains standard gold or $412 \frac{1}{2}$ grains standard stlver: Provided, That in such case the gold and silver bullion so obtained shall become the absolute property of the United States and shall be coined into bars and bricks instead of money and exposed for sale at the Treasury and subtreasuries of the United States in such manner as tine Secretary of the Treasury may direct, at cost price of same.
SEC. 3. That the volume of paper money provided for in this act, other than fractional currency as specified in section 1. shall not exceed 25 per cent of the assessed valuation of the property of the United States, and shall be issued under the direction of the Secretary of the Treasury; and each series issued shall at the end of every ten years be called in and its place supplied with a new issue, and the old issue burned toashes under the direction of the Secretary of the Treasury of the United States.
SEC. 4. That from and after the passage of this act it shall not be lawful to issue or reissue gold or silver certificates, Treasury notes, or any other form of money obligation except the paper money as in this act specifled: Provided, That nothing herein shall be construed to change, modify, on alter the legal-tender character of such certiticates or notes now issued, otherwise than is specifled in section 5 of this act.
SEC. 5. That after the passage of this act the Secretary of the Treasury shall call in and cancel Treasury notes, national-bank notes, and every form and character of paper money now in circulation and issue in lieu thereof, paper money as specifed in section 1 of this act, giving reasonable notice to the holders thereof, and fixing a day in tine future beyond which such forms of paper money as are now in circulation will not be recelved by the Government, except in exchange is is provided in this act.
SEC. 6. That the act of July 14. 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon. and for other purposes," and all other laws and parts of laws inconsistent with this act are hereby repealed.
Sec. 7. That this act shall take effect and be in force from and after its passage.
Mr. Speaker, there are three separate, distinct money schools in this country to day, to wit, the monometallist, the bimetallist, and the industrialist. The first believes in a single gold standard. The second believes in a dual standard of both gold and silver. The industrialist believes that the currency of the nation should be based on all the wealth of the nation; that labor is the only true measure of value.

Money is purely a creation of law and can be fashioned of any material whatever, and should be based not only upon gold and silver, but upon iron, lead, copper, coal, land, cotton, and wheat, and every conceivable value, and more than that, upon the faith and credit of a sovereign nation. Our money should be the national credit duly coined, "coined labor," so to speak. Between the metallic school and the industrial school there is bound to be an irrepressible conflict. Interest on money is the life of one system. Interest in all mankind is the life of the other. One is founded in selfishness, the other in broad philanthropy. One believes in usury, and the other believes usury is a sin. The one is ever striving to do the business of the country through the agency of private credit. The other is ever struggling to have the business of the country done through the agoney of public credit, coined into dollars. One is in the interest of capitalists, the other is in the interest of the common people.

One of the principal objects of the People's pasty in their monetary policy is tolower interest; in fact, to do away with usury altogether, and make the furnishing of money by the General Government at a low rate of interest, direct to the States, counties, and individuals a source of revenue, national, State, and
county. We hold that the greatest tax upon the Armerican people to-day is high interest; that the second highest tax is high transportation, telegraph, and telephone charges; and that the third great tax is the so-called
photective tariff policy.
Our support of this silver bill is along the line of an increase in currency. But we would not quarrel about the kind of money, if the volume can be made adequate and placed back where it was in 186f, over $\$ 50$ per capita. If our gold friends want gold, let them have it. If our silver friends want silver, let them have it. But we demand a money untainted with interest or usury. Labor is the true measure of all value, and the only true measure.

We demand an industrial currency that shall overthrow interest, for to our mind, in the language of another-
Interest is usury.
Usury is robbery.
Usury pays no taxes.
Usury posseses no soul.
Usury never works.
Usury produces nothing.
Usury consumes everything
Usury pays no doctor bills.
Usury never goes on the battlefteld.
Usury lives in Ine houses that labor builds.
Usury wears fine clothes that the laborer fashions.
Usury concentrates wealth.
Usury undermines free government.
Usury mocks at liberty.
Usury makes the rich richer
Usury makes the poor poores.
Usury mocks God, wrecks manhood, destroys womanhood, stifles childhood, ana robs humanity. It te the Upas tree that is poisoning the whole fabric of free American institutions. It is the giant of giant robbers, threatening every phase of our national lite and demanding ton on every dollar's worth of production. Let the uayodily thing be banished from our midst and labor be brought at once to the front.

## Herein lies the whole contention.

Mr. Speaker, we lay it down as a proposition that can not be successfully controverted, and one that the Eleventh Census corroborates, that high interest, high transportation, and high tariff have greatly impoverished one section of country while they have built up another; that banks, railroads, and manufacturers are controlling the distribution of wealth in this country to-day. Let facts be submitted to a candid, thinking people.
This table we desire to incorporate as a part of our remarks upon this occasion. These figures are all from Mr. Porter's census bulletins:

| \% Staters. | Area, square miles. | $\begin{gathered} \text { Poputia- } \\ \text { tonn, } \\ \text { l } 880 . \end{gathered}$ | $\begin{gathered} \text { Popula } \\ \text { tion, } \\ 1890 . \end{gathered}$ | Gain In popititation. | $\begin{gathered} \text { Assessed } \\ \text { Yalu1e, } \\ 1880 . \end{gathered}$ | $\begin{gathered} \text { Assessed } \\ \text { value, } \\ 1890 \text {. } \end{gathered}$ | Gain in wealth. | Pallpers in almashouses. | Convictsin peni-tentiaries. | Prisollers jails. | In- <br> fants <br> i in jut <br> venile re- <br> ; formas <br> tories. |

*Four States-Illinots, South Carolina, Maryland. and Nevada-show a decrease in assessed value. In Ininots the derreace isstartliug being more than 59,000000 Of this Mr, Porter siys: "The State board of equaltzation declares that in ikso the assessed valno was 50 per cent and in 1890 only 25 per cent of the true value: bence the reduction. The writer isdtrposed tochatenge this statement. for the fonow under the samo law. Third, The rural popnation has decreased, a very good index of decreasing rural values. Fourth. The State board of equalization, belonging to the party of plander, seeting the rain vicious legishatom has wrought to that great State, have a strong fincentive to shicid their party ind charge the canse of that State's shane to some other than the real agency. Interested witnesses are never entirely reliable. The anthor is disposed to think the peerless State of Illinois has suffered all that the figures imply.
tNevada shows at decrease in population as well as in assessed value. The popuation has fallen from 68,260 in 1880 to 45.761 in 1890, this Indicating the tinal depopulating of the State thit nover shoud have been a State. Yet, as it requires a considerable number of old party patrots to conduct the State and county olfices and to represent the State in Congress, there is no danger of the race becoming ex-
tine in Novada for some days at least. net in Nevada for some days at least.

Mr. Speaker, we hope that our statistical friend from New England will examine this table very carefully. It is compiled by one of our ablest statisticians and students of political economy, Mr. S. S. King, of Kansas City, Kans., and we have carefully compared it with the census bulletins, and it can be relied upon as correct.

In this table the States of the Union are thrown into groups, embracing what is called:

1. Nine wealth States.
2. Twenty-one produce States.
3. One stock range State.
4. Three lumber States.
5. And the balance of the States and Territories are classed as the gold and silver district.

The table shows:

1. The area in square miles of each State and Territory.
2. Population in 1880.
3. Population in 1890.
4. Gain in population during the decade.
5. Assessed valuation in 1880.
6. Assessed valuation in 1890.
7. Gain in wealth during the decade.
8. Paupers in almshouses in 1890.
9. Convicts in penitentiaries in 1890.
10. Prisoners in jails in 1890.
11. Infants in juvenile reformatories in 1890.

From these figures we deduct the following facts, and make the following comparisons:

TWENTY-ONE PRODUCE STATES
contain 56 per cent of the entire population of the Union, and about 32 per cent of the wealth; they contain nearly six times the area as the North Atlantic or wealth States, of New England, New York, New Jersey, and Pennsylvania; and twice the population. And now what has been the relative gain in wealth as shown oy the assessed valuation during the last decade, taking the Eleventh Census for our guide:'
Why, Mr. Chairman, taking these twe nty-one agricultural States of Kansas, Nebraska, Iowa, Illinois, Missouri, Arkansas, Louisiana, Mississippi, Alabama, Tennessee, Kentucky, Indiana, Ohio, West Virginia, Maryland, Delaware, Virginia, North Carolina, South Carolina, Georgia, and Florida, a vast empire of itself, with unbounded natural resources: this vast farming territory is outstripped in wealth accumulation, nearly two to one, by a little neck of land that you could cut off from the rest of the Union by drawing a straight line from Ditroit to Washington City; these six New England States, with New York; Now Jersey, and Pennsylvania, have increased in wealth from 1880 to 1890 , amounting to $\$ 3,054,762,722$, while the gain during the same time for the twenty-one agricultural States amounts only to $\$ 1,698,195,657$, or nearly double for the nine over the twenty-one. Will some high-protective Republican or some silver-fighting Democrat please inform us how this condition of things comes about? The farmer, the planter, ask why is it?

These are stubborn facts that can not be successfully contro188
verted. Take another example drawn from this same table. Place upon one side the little State of Massachusetts, and upon the o her side we place four great Western States and five great Southern States, and stand the aine up beside the one, and what is the result, the Eleventh Census being our standard of measurement? To our mind it is simply astonishing. Here are the figures: One has 8,315 square miles of territory; the nine have an area of 486,040 square miles. Out of these nine States you can carve fifty-eight States as large as Massachusetts and have a large farm left. In 1880 the population of Massachus3tts was $1,483,08 \overline{\text { j }}$, while the population of the nine States mentioned was $13,409,16 \overline{7}$, thus standing in the ratio of 1 to 7 in population. At the same period the assessed valuation of Massachusetts was $\$ 1,584,756,802$, while the nine States was $\$ 2,792,919,155$, or in about the ratio of 1 to 2.
In the ten years from 1880 to 1890 the nine States increased their assessed value $\$ 5 \overline{5} 9,441,974$, whilst the one little State gained $\$ 569,377,8 \div 4$, surpassing the nine great States by nearly $\$ 10,000,-$ 000. Will some gold-standard bank president, some watəredstock railroad magnate, or some infantile woolen manufacturer rise and explain the situation, and fully convince us that in order to be a happy and prosperous people we Western and Southern farmers must pay high interest on money, a good round dividend on watered railroad and other stocks, and take the tariff off of raw wool, but be sure and keep it on all the manufactured fabrics? The Ways and Means Committee, when they reported the wool bill, musthave thought all the representatives of agriculture were rustic " mutton heads."
But let us draw another picture from this census table. It is a wonderful prolific little table. We have found that nine agricultural States could not keep pace with little Massachusetts. Let us add three more to this list of nins-take Kansas, with her corn, wheat, and cattle; Kentucky, with her tobacco and whisky; Florida. with her oranges and pineapples. Now we will stand these twelve States up alongside the old Keystone State Pennsylvania, and note how they will compara.

By the census of 1880 they stand thus:

|  | Pennsylvania. | TwelveStates. | Ratio. |
| :---: | :---: | :---: | :---: |
| Land (square miles) | 45,915 | 667, 100 | 1 to 14 |
| Labor (population) | 4, 38: 891 | 18,3\%3, 441 | 1 to 4 |
| Capital (assessed valuation) | 81, 683, 459,016 | 83, 335, 313, 124 | 1 to 2 |

And yet the gain in ten years of these twalva States was only $\$ 897,184,160$, while Pennsylvania piled up a gain of $\$ 909,382,016$. Who says that the manufacturing interest is still a little puny infant and must still be rocked in the cradle of protection?

One more example from this table will suffice our purpose at present. Let us add three more agricultural States to our list of twelve, making fifteen States that we want to place alongside the State of Now York. We will add Tennessee, Virginia, and West Virginia. Now, bear in mind we have eight great grain 188
and stock growing States, and seven great cotton and sugar producing States, and we are uniting them to compete with the Empire State of New York.

The figures stand thus:

During ten years last past the census shows a gain for the fifteen agricultural States of only $\$ 1,117,188,213$, whilst New York alone has gained the sum of $\$ 1,123,385,932$, or one State has $\$ 6,000,000$ more than fifteen States.

Will some Wall-street Republican or some Wall-strect Dəmocrat rise and explain? It makes no difference which; for the gentleman from New York [ $\mathrm{Mr}^{2}$. Ray] a few days ago informed us that both Democrats and Republicans in his section were a unit upon protection and (what he pleased to term) "honest (?) money." How long do these representatives of Wall street imagine the Western and Southern farmers are going to rest quiet beneath such gross injustice? How long shall the contents of our cribs and granaries, of our fields and our warehouses, be emptied into the coffers of banks, railroads, and weal thy manufucturers?

Mr. Speaker, our People's party leaders aro sometimes called wild fanatics. But if gentlemen will carefully examine the facts and study the situation they will see we are advocating measures the mest beneficent and far-reaching, having for their ultimate object the attainment of that general prosperity which we all so much desire and ought to labor to accomplish.
