Producer Price Indexes is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights. (ISSN 0882-5270)

To order this periodical for 1 year, cite *Producer Price Indexes* (WPPI) and send your check for $34.00 ($42.50 foreign) or provide your VISA or Master card number and expiration date to Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15220-7954.

Subscribers will receive the next available subscription issue after their order is received. An acknowledgement card is sent to all customers directly after their subscription order is processed simply to let them know that they will receive the next available issue released for their subscription order.

Please wait at least 6 weeks before inquiring about your order. Then write to Subscription Service Section, U.S. Government Printing Office, Stop: SSOM, Washington DC 20402, telephone (202) 512-1806 or FAX (202) 512-2168.

Price Movements
May 1995

The Producer Price Index for Finished Goods was unchanged in May, after seasonal adjustment. This followed a 0.5-percent increase in April and no change in March. Prices received by domestic producers of intermediate goods inched up 0.2 percent after moving up 0.7 percent in the previous month. The Crude Goods Price Index turned down 0.8 percent after increasing 2.1 percent in April. (See table A.)

Among finished goods in May, declines for foods (0.6 percent) and energy goods (0.2 percent) were offset by increases for finished goods less foods and energy (0.3 percent). Prices for capital goods edged up 0.2 percent, partly reflecting higher prices for heavy motor trucks. In addition, prices also increased from April to May for consumer nondurables less foods, such as tobacco products. However, prices for consumer durables were virtually unchanged.

Before seasonal adjustment, the Producer Price Index for Finished Goods increased 0.3 percent in May to 128.0 (1982 =100). From May 1994 to May 1995, the Finished Goods Price Index rose 2.2 percent. During this same period, consumer food prices increased 1.0 percent, prices for finished energy goods advanced 5.5 percent, and prices for finished goods other than foods and energy were up 2.0 percent. Prices received by domestic producers of intermediate goods increased 6.9 percent during the 12 months ended in May 1995, and crude material prices moved up 0.5 percent over the same period.

Finished goods

Prices for finished consumer foods declined 0.6 percent in May, after moving down 0.2 percent in both April and March. In May, the steeper price decline was led by a 14.1-percent downturn in prices for fresh and dry vegetables; this index had climbed 17.8 percent in April. Prices also turned down markedly after rising in the previous month for finfish and shellfish, eggs for fresh use, and roasted coffee. Prices fell more than in the previous month for processed young chickens, dairy products, and for shortening and cooking oils. By contrast, price declines for beef and veal slowed from 7.6 percent in April to 1.1 percent in May. Price declines also slowed for pork. Prices for fresh fruits and melons turned up almost 30 percent in May after inching down 0.3 percent in April. Prices also turned up after falling a month earlier for processed fruits and vegetables, processed turkeys, soft drinks, pasta, and milled rice.

The Producer Price Index for finished energy goods moved down 0.2 percent in May, following a 2.3-percent advance in April. Increases for gasoline slowed from 7.7 percent in April to 2.0 percent in May. Prices for residential electric power declined 0.8 percent after showing no change

in April. Prices for residential natural gas fell more in May (2.1 percent) than a month earlier (0.3 percent). By contrast, prices for home heating oil increased 9.3 percent in May following a 0.5-percent rise in the previous month.

The index for consumer goods other than foods and energy moved up 0.4 percent in May, after increasing 0.3 percent in April. The largest price increases were for tobacco products (2.2 percent), sanitary papers (2.0 percent), and newspaper circulation (1.5 percent). Increases were also noted for floor coverings, alcoholic beverages, and girls' apparel. These increases slightly offset a 0.6-percent decline for tires and tubes and a 0.3-percent decrease for passenger cars, as well as much smaller declines for a variety of other consumer goods.

In May, the capital equipment index increased 0.2 percent after moving up 0.3 percent in April. Heavy motor truck prices advanced 1.1 percent in May. Prices also increased for civilian aircraft, metal cutting machine tools, truck trailers, and for pumps and compressors. By contrast, prices declined 2.4 percent for computers. Prices for light trucks were unchanged after falling 1.0 percent in April.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components increased 0.2 percent, seasonally adjusted, in May after rising 0.7 percent in April. With food and energy prices excluded, this index also rose 0.2 percent, the smallest increase in 13 months. Prices for nondurable manufacturing materials and energy goods rose less than in April. The construction index was unchanged after increasing a month earlier, and durable manufacturing material prices turned down after rising in the previous month. In contrast, the containers index rose more than in April, and prices for foods and feeds fell slightly less than in the previous month. (See table B.)

The increase in the index for nondurable manufacturing materials slowed to 0.6 percent in May from 2.5 percent a month earlier. The paper index rose 1.0 percent after increasing 4.3 percent in the previous month. Prices for miscellaneous basic organic chemicals, plastic resins and materials, and paperboard also rose less than in April. Indexes for basic inorganic chemicals, synthetic fibers, and woodpulp turned down after rising a month ago. The rise in the index for primary basic organic chemicals, however, accelerated to 2.9 percent from 1.5 percent in April.

The index for intermediate energy goods increased 0.6 percent after rising 1.5 percent a month earlier. The rise in the gasoline index slowed to 2.0 percent from 7.7 percent in the previous month. Prices for jet fuels also rose less than in April. The index for liquid asphalt turned down after rising sharply a month earlier, and utility natural gas prices fell more than in April. By contrast, the index for industrial electric power turned up 1.3 percent after falling 0.4 percent in the previous month. Prices for commercial electric power also rose after declining a month earlier.

The index for construction materials remained unchanged in May after rising in each of the last 12 months. The index for fabricated structural metal products turned down 0.1 percent after rising 0.7 percent in April. Prices for gypsum products, nonferrous wire and cable, and cement also turned down after increasing a month earlier. Indexes for concrete products and for asphalt felts and coatings rose less than in the previous month. Conversely, the index for plywood turned up 1.0 percent after falling 0.5 percent a month ago. Prices for millwork and for plumbing fixtures and brass fittings also rose after declining a month earlier.

The Producer Price Index for durable manufacturing materials decreased 0.2 percent after rising the same amount in the previous month The May decline was the first for this index since April 1994. The index for copper and brass mill shapes fell 4.9 percent after declining 0.5 percent a month earlier. Prices for aluminum and copper also fell more than in the previous month. The index for cement turned down after rising a month earlier, and flat glass prices rose less than in April. By contrast, the rise in the index for hot rolled steel sheet and strip accelerated to 0.6 percent from 0.1 percent a month earlier. Prices for cold rolled steel sheet and strip and plywood turned up after falling in the previous month.

The index for containers rose 1.4 percent in May after increasing 0.5 percent a month earlier. This acceleration was mainly the result of the paper boxes and containers index, which rose 2.4 percent after increasing 1.1 percent in April.

The index for intermediate foods and feeds fell 1.0 percent, slightly less than its decline in the prior month. Price decreases for prepared animal feeds, crude vegetable oils, natural and processed cheese, and bulk liquid milk products outweighed advances for flour, confectionery materials, refined sugar, liquid soft drink bases, and butter.

Crude goods

In May, the Producer Price Index for Crude Materials for Further Processing fell 0.8 percent, seasonally adjusted, following a 2.1-percent climb last month. Prices for crude foodstuffs and feedstuffs fell much more than in April. The index for basic industrial materials turned down in May, the first decline in 12 months. Price increases for crude energy materials slowed from April to May.

Following a 6.2-percent price jump last month, the index for crude energy materials slowed to a 1.4-percent increase in May. Price increases slowed for crude petroleum. Prices for natural gas to pipelines continued to rise rapidly. Coal prices turned down 2.3 percent, after rising in each of the last 2 months.

The index for crude foodstuffs and feedstuffs fell 3.0 percent, the third consecutive monthly decline. The May decrease resulted from lower prices for fresh and dried vegetables, soybeans, and unprocessed finfish, all of which rose in April. In addition, prices declined more in May than in April for both slaughter broilers and slaughter cattle. The index for slaughter hogs declined for the third straight month, though price decreases slowed to 4.0 percent in May from 7.8 percent in April. The index for corn rose 1.6 percent, compared with a sharp 5.3-percent gain in the preceding month. By contrast, prices for fresh fruits and melons turned up after 4 months of price decreases. Wheat price increases accelerated to 6.3 percent from 3.5 percent in April.

After rising 1.2 percent in the preceding month, the index for crude nonfood materials less energy turned down 0.3 percent in May. Softwood logs, bolts, and timber, copper base scrap, and phosphates registered price declines after moving up in April. Prices for raw cotton moved down 8.4 percent, following a 4.2-percent drop in April, and price increases for wastepaper slowed to 6.9 percent from 9.3 percent in April. However, prices turned up for construction sand and gravel and cattle hides after April price declines, while price decreases for aluminum base scrap slowed.

Net output price indexes for mining, manufacturing, and other industries

Mining. The Producer Price Index for the net output of total domestic mining industries increased 1.1 percent in May after increasing 3.7 percent in April. (Net output price indexes are not seasonally adjusted.) Price increases for the oil and gas extraction industry group index slowed from 4.5 percent in the previous month to 2.6 percent in May. The metal mining industry group index turned down 5.6 percent after increasing 3.1 percent in April. Prices for the bituminous coal and lignite mining industry group also turned down after rising a month earlier. Price declines slowed somewhat for the industry group for anthracite mining. The nonmetallic mineral products industry group showed little or no change for the third consecutive month.

Manufacturing. The Producer Price Index for total domestic manufacturing industries moved up 0.4 percent in May, after rising 0.6 percent in April. Prices for tobacco manufactures rose 2.4 percent after inching up 0.1 percent in the previous month. Price increases for the petroleum refining industry group slowed from 8.5 percent in April to 4.7 percent in May. Price increases also slowed for the industry groups for paper mill products, chemicals and allied products, rubber and plastic products, nonmetallic mineral products, and for printing and publishing. Prices continued to rise moderately for furniture and fixtures, while prices for the lumber and wood products industry group fell moderately for the second consecutive month.

Other. Among other industries, prices for waste paper collection increased over 7 percent for the second consecutive month. Prices turned up after falling a month earlier for scheduled air transportation, travel agencies, and electric power utilities. Prices rose more rapidly in May than in April for radio broadcasting, airports and airport services, deep sea foreign transportation of freight, and for refrigerated warehousing and storage.

By contrast, prices turned down after rising a month earlier for freight transportation arrangement, metal scrap collection, hotels and motels, building cleaning and maintenance services, psychiatric hospitals, and for truck rental and leasing. Price increases slowed for deep sea domestic transportation of freight, tugging and towing services, and cable and other pay television services. Prices fell more in May than in April for natural gas utilities, passenger car rental, and medical laboratories.

Age Distribution and Price Movements of Drugs in the 1994 PPI Prescription Drug Sample

Douglas Kanoza

Introduction

In recent years, increased attention has been paid to the Producer Price Index (PPI) for the pharmaceutical industry. Due to the constant introduction of new products within the pharmaceutical industry, one of the primary concerns expressed by researchers was that BLS did not ensure adequate representation of new drugs in the index over time. This under-representation of new drugs is believed to bias the index because drugs may exhibit different rates of price change during the early stages of their life-cycle than during the later stages.

In January of 1994, in response to these concerns, BLS introduced a new sample of prescription drugs for the PPI, using a different sampling method. In the new sample, products are selected from a database of pharmaceutical sales at the retail pharmacy level, with probability proportional to dollar value, without any prior restrictions on the number of drugs selected at any company. In previous samples, a sample of producers was selected first, then a fixed number of products at each manufacturer was chosen for repricing.

This article presents information on the age distribution of drugs in the current PPI sample, and on the December 1993 to December 1994 rate of price change by age group as reported to the PPI. To this end, the current sample of 522 prescription drugs is stratified by the age groups used.[1]

PPI sampling methods for the pharmaceuticals industry, 1981-94

1981—stage one. At the first stage, a sample of 150 manufacturers was drawn from the universe of producers, with probability of selection proportional to employment. Producers were asked for an average of four price quotes, with a maximum of eight. At the manufacturer level, products were selected with probability proportional to value of shipments.

1987—stage two. To improve publishability of detailed indexes and the spread of quotes across product lines, while decreasing the number of manufacturers sampled, the 1981 method was modified. At the first stage, 82 manufacturers were selected from the universe of producers, and the average number of price quotes per manufacturer was increased to 8, with the maximum set at 16 quotes. A special procedure was developed that forced the selection of one quote from each therapeutic class where the sampled company produced drugs. A specific product within the therapeutic class was then selected using normal sampling procedures based upon probability proportional to value of shipments.

1994—stage three. A third-party database of pharmaceutical sales at the retail pharmacy level was obtained, which included the manufacturer, product form, product strength, and pharmacy acquisition cost for all drugs sold through calendar year 1992. The database covered 77 million prescriptions from 30,000 pharmacies, projected to a national sales figure of over $25 billion. The sampling universe was stratified into 34 separate therapeutic classes. Products were selected from each stratum in two stages with probability proportional to pharmacy acquisition cost.

In the first stage, the product was selected, and at the second stage, the specific dosage form and strength were selected. No prior restrictions on the number of quotes per company were applied. Specific product presentation and transaction variables were selected at the establishment in the third stage, with probability proportional to dollar value. The final sample consisted of 965 products from 124 manufacturers, of which 522 products from 92 manufacturers were productive as of December 1994, for an average of just under 6 prescription quotes per manufacturer.

Because the number of quotes per manufacturer was not restricted, many companies are supplying the PPI with more than 20 quotes, and some in excess of 30. The obvious advantage to the 1994 sampling method is that a drug's chance of selection depends only on its market share relative to other drugs of its class, rather than its proportion of the manufacturer's sales. As a result, the current sample is more representative at the therapeutic class level, and likely achieved an age-group distribution closer to the industry average.

Distribution of drugs by age group in the 1994 PPI sample of prescription pharmaceuticals

In the tables below, individual product weights were taken directly from the PPI calculation system, as were their respective price changes from December 1993 to December 1994. No updates were made for late response; the price changes used were those reported as of December 1994. To determine the age of individual products, approval dates for some items were collected on the industry checklist completed by PPI field economists; dates for the remainder were obtained from the Food and Drug Administration. The ap-

proval date used in this article is the approval date for the specific drug product, not the approval date for the active ingredient.

The figures in the first three columns of table 1 represent the relative weight of each age group as a percentage of the entire current PPI sample of prescription pharmaceuticals. The first column shows the age distribution of the products as of January 1, 1993, when the sample was drawn. The second represents the age distribution as of January 1, 1994, when the new sample was introduced, and the third column represents the age distribution as of January 1, 1995. There are still products in the sample less than 2 years old due to substitution of next generation products within the sample. Of particular note is the 63-percent decline in sample weight in the less-than-2-year-old age group between sampling (1993) and introduction (1994), resulting from the time lag associated with collection and preparation of the new sample. The figures in the final column show the annual revenue shares by age group in 1989 for the four largest pharmaceutical manufacturers, covering 24 percent of domestic industry shipments, as reported in Berndt, Grilliches, and Rosett (1993). Comparable age group distributions for 1981 and 1987, and for the sample universe, are not available.

Disparities between the four company figures and those derived from the current PPI sample may exist because the four manufacturers in Berndt, Grilliches, and Rosett (1993) were, at the time, among the largest in the industry. These companies earned their positions, at least in part, by constant introduction of new drugs. Therefore, one might expect a greater proportion of their sales dollars to be concentrated in the younger age groups. (In a later paper by Berndt and Greenberg (1993), the number of companies was expanded to 17, but similar age group distributions were not calculated because age data were not supplied for all products.)

The most obvious explanation for the disparities in age distribution in the PPI sample and the Berndt, Grilliches, and Rosett study arises from the different time periods covered by each. It is unlikely that drugs less than 2 years old account for a constant share of producer's sales of all prescription drugs. Rather, that share is likely to fluctuate based upon the sales success of the products introduced.

Price movements by age group in the 1994 PPI sample

Weighted average price movements by age class were calculted, in table 2, by multiplying each item's December 1993-94 price change by its sample weight, summing by age group, and dividing by the original weight of the age group. Product ages as of January 1994 were used for the analysis.

Table 1. Age distribution as a percentage of total weight of drugs in the current PPI sample and the 1993 Berndt, Grilliches, and Rosett study

2 to 4 years	1.1
4 to 6 years	.8
7 to 9 years	3.2

NOTE: The total figure reported above does not match the 2.6-percent annual change published in the December 1994 issue of Producer Price Indexes for SIC 28341, Pharmaceutical preparations, prescription, because of sample attrition and the addition of new items over the course of 1994. There may also be some differences due to rounding.

As expected because of the results in Berndt, Grilliches, and Rosett (1993), drugs in the youngest age groups have significantly different price movements than older drugs. Drugs less than 2 years old as of January 1, 1994, fell nearly 25 percent over the year, while those 2 to 4 and 4 to 6 years old increased at a slower rate than the industry average. Note in table 3 that while the price of drugs less than 2 years old showed significant downward movement over the year, this group had the greatest variance of all age groups. The lower rates of price change for the younger groups seen in tables 2 and 3 may be explained by a marketing strategy of introducing a product at a higher price level, with subsequent downward movements as products compete for market share.

Within the group of drugs less than 2 years old, brand name drugs experienced an aggregate price increase of 1.4 percent over the first year of the sample, while generic drugs fell on average 41.5 percent. For the purposes of this analysis, a brand name drug was defined as the first version of that active ingredient to receive FDA approval, and all later entrants were defined as generics. There are 23 drugs less than 2 years old in the current sample, 12 of which are brand name drugs, 11 are generics. Because the number of drugs used to calculate these figures is so small, the results should be viewed as inconclusive.

What is interesting in table 2 is the clear delineation between drugs 6 years old or less, and those older than 6 years. In the aggregate, drugs in the first three age groups declined 2.8 percent in the first year of the sample, while those in the oldest three age groups increased 4.2 percent over the same period. A possible explanation for the sharp break is that drugs in the older age groups represent time-tested and well established

therapies, while the younger drugs are still trying to establish a position in the market. More generally, it seems probable that price increases early in a drug's life-cycle would have more of an adverse effect on market share than they would after a drug has established itself.

Regardless of the interpretation of the cause of the differences in age-group price movements above, it appears from this study that a drug's price behavior can vary significantly over its life cycle. Also, it appears that failure to compensate for sample aging could, in time, lead to upward bias in the PPI.

The future

The sample weight of drugs less than 2 years old declined 63 percent in the year between the drawing (1993) of the sample and its introduction into the index, (1994) and continued to decline to virtually zero in one year of pricing. (1995 (see table 1.) To minimize the potential bias to the index from disproportionate representation by age group, BLS will introduce an entirely new sample of pharmaceuticals every 5 years, and continually supplement them with a selection of newly approved drugs throughout the life of the sample. Drugs eligible for selection in the supplemental sample will be those approved by the FDA since the date the last full sample was drawn. The first supplement is scheduled for introduction in 1996.

Obtaining Producer Price Index Information Via the Internet

Producer price indexes and news releases are available on the Internet. Internet users can access the Bureau's LABSTAT public database by using Anonymous FTP (File Transfer Protocol). The login address is "stats.bls.gov," and the login is "anonymous." Please give your Internet address as the password. To download news releases, use the pub/news.release/ppi.txt directory. For commodity price indexes, use the pub/time.series/wp directory. For industry price indexes, use the pub/time.series/pc directory. A four-page PPI Internet guide is available to assist users. For a copy of the guide, contact the Section of Index Analysis and Public Information at (202)-606-7705.

Internet users with access to World Wide Web browsers can link to the introductory version of the BLS home page as an alternative to Anonymous FTP. The address is "http://stats.bls.gov." Click on the BLS Data (LABSTAT) icon to view the menu for news releases or data series. The Bureau's Web service is still in development. A more user-friendly version of the BLS home page is scheduled for release in the fall of 1995, and full implementation is planned for early 1996.

[1] Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. The first-published and final December relative importances initially appear, respectively, in the release tables containing January and May data.

[2] The indexes for January 1995 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision four months after original publication.

[3] Includes crude petroleum.

[4] Excludes crude petroleum.

[5] Percent of total finished goods.

[6] Percent of total intermediate materials.

[7] Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

[8] Percent of total crude materials.

[1] Indexes in this table are derived from the net-output-weighted industry price indexes shown in table 5. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly-titled indexes which are derived from traditional commodity groupings shown in table 6.

[2] The indexes for May 1995 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication. Data are not seasonally adjusted.

[1] These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities index.

[2] The indexes for January 1995 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

All commodities except farm products: 02 through 15

All foods: 011, 017, and 02 less 0261, 0262, and 029

Processed foods: 02 less 0261, 0262, and 029

Industrial commodities less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 0327, 03370104, 034, 03810169, 03810272, 03810274, 03810298, 03820135, 03820303, 03830324, 03830325 and 1231

Hosiery: 03810169, 03810171, 03810272, 03810273, 03810363, and 03810365

Underwear and nightwear: 03810174, 03810175, 03810176, 03810177, 03810178, 03810274, 03810275, 03810276, 03810277, 03810368, and 03810369

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635, and 0636

Synthetic paint resins: 06220132, 066207, and 06620903

Volatile paint liquids: 06140141, 06140202, 06140341, 06140356, 06220306, 06220308, 06220309, and 06220311

Lumber and plywood: 081 and 083

Iron ore pellets, all areas: 10110201, 10110202, and 10110301

Steel mill products, including fabricated wire products: 1017 and 1088

Finished steel mill products, excluding fabricated wire products: 1017 less 101701 and 101702

Finished steel mill products, including fabricated wire products: 1017 and 1088 less 101701 and 101702

Stainless steel mill products: 10170293, 10170351, 10170359, 10170453, 10170454, 10170461, 10170551, 10170661, 10170662, 10170663, 10170664, 10170669, 10170751, 10170755, 10170852, and 10170853

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 10-3 through 10-8

Copper and copper products: 10210201, 10220107, 10220123, 10220162, 102301, 10240301, 10240302, 10240304, 10240305, 102502, 10260314, 10260317, 10260325, 10280301, 10280302, and 10280303

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 115, 116, 118, and 119

Agricultural machinery, including tractors: 1111 and 1112 less 11115211 and 111251

Metalworking machinery: 113A, 1132, 113304, 1137, and 1138

Total tractors: 1111 and 1128 less 11115211, 112802, and 112803

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 11115211 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 11115211

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

Construction materials: 062101, 0721, 081101, 081102, 081103, 081105, 081203, 081204, 082, 083, 08490105, 086, 092, 101502, 101703, 101704, 10170611, 10170627, 10250161, 10250254, 10260307, 104101, 105, 106, 1071, 10730101, 10730102, 10730103, 10730109, 10730145, 10730146, 10730156, 10730164, 10730165, 107404, 10740501, 10740781, 10740786, 10740789, 10740791, 10740793, 10740795, 107409, 10810246, 10830222, 10830223, 10830301, 10830321, 10830323, 10830325, 10830329, 10830361, 10880211, 10880213, 10880961, 10890566, 1142, 1147, 11490205, 11710106, 11710109, 11710112, 11710113, 11710114, 11710117, 11710121, 11710123, 11710135, 11710138, 11710141, 11710264, 11710266, 11710267, 11710272, 11710274, 11710282, 11710291, 11710294, 11710296, 123101, 1232, 13110413, 131105, 13110712, 132, 133, 134, 136, 137, 1392, 1393, 1394, and 139501

[1] Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1997 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy, excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as comprehensive measures of changes in construction costs. See note on page 190 of the July 1986 issue of *Producer Price Indexes*.

[1] Indexes in this table are derived from the product indexes in table 5. These indexes are composed of the goods used by the industries in each of the industry stage of process output indexes as shown by the 1977 input/output relationships. These material inputs include only domestic material input and do not includes any imported materials which may be used.

[2] The indexes for January 1995 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Brief Explanation of Producer Price Indexes

Producer Price Indexes (PPI) measure average changes in prices received by domestic producers of commodities in all stages of processing. Most of the information used in calculating the indexes is obtained through the systematic sampling of nearly every industry in the manufacturing and mining sectors of the economy. The PPI program also includes some information from other sectors—agriculture, fishing, forestry, services, and gas and electricity. Because producer price indexes are designed to measure only the change in prices received for the output of domestic industries, imports are not included. The sample currently contains about 3,200 commodities and 80,000 quotations per month.

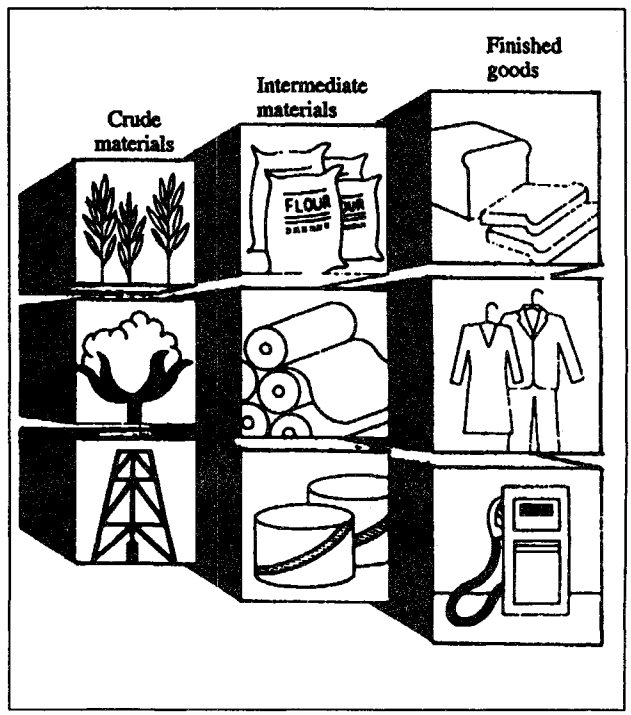
There are three primary systems of indexes within the PPI program: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure (table 1) organizes products by class of buyer and degree of fabrication. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products (table 5). The commodity structure (table 6) organizes products by similarity of end-use or material composition.

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, and nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.



Producer Price Indexes for the net output of industries and their products are grouped according to the Standard Industrial Classification (SIC) and the Census product code extension of the SIC. Industry price indexes are compatible with other economic time series organized by SIC codes, such as data on employment, wages, and productivity. Table 4 lists indexes for the net output of major mining and manufacturing industry groups at the 2-digit level. Table 5 includes data for SIC industries and industry groups (2-, 3-, and 4-digit levels); indexes for Census product classes (5- and 6-digit levels), products (7-digit level), and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue.

Indexes may be represented by one to three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establish-

ments classified in the industry for products made primarily, but not always exclusively, within the industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, some industries also may have secondary product indexes that show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, e.g., resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Some product indexes published in table 5 correspond to 8-digit commodity indexes in table 6. In these cases, movement of the latter indexes are calculated on the basis of movements of their counterparts in table 5. Although most such indexes continue to be published in table 6 on a base period of 1982=100 or some later base, corresponding indexes in table 5 are published on a base of the month of their introduction.

Producer price indexes are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices are normally reported by mail questionnaire for the Tuesday of the week containing the 13th.

Price data are provided on a voluntary and confidential basis; no one but sworn BLS employees are allowed access to individual company price reports. The Bureau publishes price indexes instead of unit dollar prices. All producer price indexes are routinely subject to revision once, 4 months after original publication, to reflect the availability of late reports and corrections by respondents.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments in one industry to establishments classified in another industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes such as the all commodities index are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Weights for most traditional commodity groupings of the PPI, as well as all indexes (such as stage-of-processing indexes) calculated from traditional commodity groupings currently reflect 1987 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1987 through December 1991, PPI weights were derived from 1982 shipment values. Many industry indexes which are based on the SIC system, continue to be calculated with 1987 net output weights.

Effective with publication of January 1988 data, many important PPI series (including all stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100, to coincide with the reference year of shipment weights. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The new reference base is not used for indexes with a base later than December 1981, nor for indexes for the net output of industries and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 16, "Producer Prices," in BLS Handbook of Methods (1992), Bulletin 2414 and Reprints are available from the Bureau of Labor Statistics on request (202-606-7705).

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than as changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The computation of index point and percent changes is shown in the box.

Index point change	
Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5
Index percent change	
Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Results multiplied by 100	0.034x100
Equals percent change	3.4

Percent changes for 3-month and 6-month period can be expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the rate for a 12-month period.

Each index measures price changes from a reference period which equals 100.0 (1982 or some later mont). An in-

crease of 5.5 percent from the reference period in the Finished Goods Price Index for example, is shown as 105.5. This change can also be expressed in dollars as follows: "Prices received by domestic producers of a systematic sample of finished goods have risen from $100 in 1982 to $105.50 today." Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods today are 10 percent lower than they were in 1982.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

Seasonally adjusted data are preferred for analyzing general price trends in the economy because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends.

Unadjusted data are of primary interest to users who need information which can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists; and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchasing agreements or real estate leases. (See Escalation and Producer Price Indexes: A Guide for Contracting Parties, BLS Report 807, 1991 edition, available on request from BLS.)

Seasonal factors used in computing seasonally adjusted indexes are derived from the X-11 Seasonal Adjustment Method. Annual updates replace the most recent 5 years of seasonal data, e.g., data from January 1987 through December 1991 were recalculated at the beginning of 1992. Indexes for most broad commodity groupings and 8-digit individual commodities in table 6, as well as industry and Census product indexes in tables 4 and 5, do not undergo the seasonal adjustment process and, therefore, are pubished only as unadjusted data.

Some indexes are adjusted directly, i.e., independently of the seasonal movements of other more detailed series comprising the category in question. This is the case for all indexes in table 6 which are adjusted, as well as for certain basic stage-of-processing categories in table 1. Seasonal movements for most stage-of-processing indexes are derived indirectly by the aggregate method, which combines movements of the basic stage-of-proceessing categories with those of a wide variety of food and certain other subproduct class (6-digit level) series.

Direct seasonal adjustment produces a more complete elimination of seasonal movements than the aggregative method does. However, the direct seasonal adjustment process does not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonally adjusted data can also become problematic when previously stable and predictable timing patterns of pricing behavior abruptly change. If the new timing pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will be chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.
