NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

The residual line is the difference between the first line and the sum of the most detailed lines. Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to the percent change in real gross domestic product are shown in table 8.2.

Summary National Income and Product Series, 1929-96

Tables 1-4 present revised historical summary series from the national income and product accounts (NIPA's). Table 1 presents current-dollar gross domestic product and its components. Tables 2A and 2B present real gross domestic product and its components, in chained dollars and in index

form, respectively. Table 3 presents NIPA price indexes, and table 4 presents national income and personal income. These estimates are updated quarterly and are available from STAT-USA's Economic Bulletin Board and Internet services; for information, call (202) 482-1986.
