

FEDERAL RESERVE BULLETIN

**ISSUED BY THE
FEDERAL RESERVE BOARD
AT WASHINGTON**

DECEMBER, 1918

**WASHINGTON
GOVERNMENT PRINTING OFFICE
1918**

FEDERAL RESERVE BOARD.

EX OFFICIO MEMBERS.

WILLIAM G. MCADOO,
Secretary of the Treasury, Chairman.
JOHN SKELTON WILLIAMS,
Comptroller of the Currency.

W. P. G. HARDING, *Governor.*
ALBERT STRAUSS, *Vice Governor.*
ADOLPH C. MILLER.
CHARLES S. HAMLIN.

J. A. BRODERICK, *Secretary.*
L. C. ADELSON } *Assistant Secretaries.*
W. T. CHAPMAN }
W. M. IMLAY, *Fiscal Agent.*
M. JACOBSON, *Statistician.*

M. C. ELLIOTT, *Counsel.*
H. PARKER WILLIS,
Director, Division of Analysis and Research.
F. I. KENT,
Director, Division of Foreign Exchange.

SUBSCRIPTION PRICE OF BULLETIN.

The Federal Reserve Bulletin is distributed without charge to member banks of the system and to the officers and directors of Federal Reserve Banks. In sending the Bulletin to others the Board feels that a subscription should be required. It has accordingly fixed a subscription price of \$2 per annum. Single copies will be sold at 20 cents. Foreign postage should be added when it will be required. Remittances should be made to the Federal Reserve Board. Member banks desiring to have the Bulletin supplied to their officers and directors may have it sent to not less than ten names at a subscription price of \$1 per annum.

No complete sets of the Bulletin for 1915, 1916, or 1917 are available.

TABLE OF CONTENTS.

	Page.
Review of the month.....	1163
Resignation of the Secretary of the Treasury.....	1174
Transit and audit conference.....	1175
Meeting of Federal Advisory Council.....	1175
Act providing for consolidation of national banks.....	1177
After the war: The gold standard and currency in Great Britain (report of Lord Cunliffe's committee).....	1178
New series of war savings stamps.....	1192
Status of trade acceptance movement, by J. H. Tregoe, secretary of the National Association of Credit Men....	1193
Banking committees on taxation.....	1194
Indexes of business conditions.....	1194
Consolidated statement of farm loan system.....	1195
Committee appointed to study conditions in gold-mining industry.....	1195
Branches of American institutions abroad.....	1196
State banks and trust companies admitted to the system during the month.....	1196
Charters issued to national banks during the month.....	1197
Commercial failures reported.....	1197
Banks granted authority to accept up to 100 per cent of capital and surplus.....	1198
Foreign exchange rates in belligerent, neutral, and silver countries.....	1198
Charts showing.....	1200-1202
Index of wholesale prices.....	1203
Reports of total bank transactions.....	1206
Discount and interest rates prevailing in various centers.....	1209
Lost and recovered Liberty bonds.....	1212
Informal rulings of the Board.....	1215
Informal rulings of the Division of Foreign Exchange.....	1217
Law department.....	1218
Business conditions throughout the Federal Reserve districts.....	1219
Gold settlement fund.....	1238
Operation of check clearing and collection system.....	1240
Discount operations of the Federal Reserve Banks.....	1241
Resources and liabilities of Federal Reserve Banks.....	1245
Federal Reserve note account of Federal Reserve Banks and agents.....	1247
Member bank condition statement.....	1249
Imports and exports of gold and silver.....	1252
Estimated stock of money in the United States.....	1253
Discount rates in effect.....	1254
Index to volume 4.....	1255

FEDERAL RESERVE BULLETIN

VOL. 4

DECEMBER 1, 1918.

No. 12

REVIEW OF THE MONTH.

The armistice arranged between the allied Governments and the United States, on the one hand, and the German Government on the other, announced on November 11, foreshadows the end of the most remarkable era in American finance, and the opening of another which will be replete with new and momentous problems demanding no less serious consideration than those of war.

Changes in the financial outlook for the Government were set forth by the Secretary of the Treasury in a statement to the Senate Finance Committee on November 14. Estimated revenue requirements for the year will be perhaps \$18,000,000,000. While there is thus a material reduction in requirements, it still remains true that the sums to be raised are such as two years ago, or even a year ago, would have been thought to call for the utmost effort on the part of the community. This makes it plain that, as pointed out in the last issue of the FEDERAL RESERVE BULLETIN, the present is no time for relaxation, either of our financial precautions or of the measures which must be regarded as vitally necessary to insure the conservation of our banking and credit resources for the purpose of meeting imperative national needs, for the defeat and collapse of Germany still leave the Nation with banking and financial problems of first importance. While the termination of the war has set definite limits to the requirements of public finance, the United States in common with the rest of the world is confronted with the important economic problems and needs growing out of "reconstruction."

Sales of certificates of indebtedness and bonds for the purpose of obtaining the funds which must be had by the Treasury in meeting

the contracts and other obligations already incurred in the prosecution of the war will be a continuing burden upon the banks of the country for many months to come. The banks will, at the same time, necessarily be called upon to lay the foundations for the financing of new trade growing out of the reestablishment of normal business and to assist in the resumption of developmental enterprises necessarily suspended during the continuance of the war.

Experience has shown the character of the problems which must be met in shifting to the peace basis. the financing of the war, and they are perhaps better understood to-day than at any time in the past.

The Board has emphasized the necessity of saving and conserving resources, the indispensable requirement that, so far as practicable, long-term securities shall be paid for, either outright or within the period of subscription, and has laid especial stress upon the call for the limitation of industry to those lines which may properly be called "essential." These admonitions will continue to have much the same force as in the past, so long as the Nation is engaged in completing its war financing and in facilitating the transition to the peace basis. This transition will not involve any wide departure from the principles already developed out of our war experience but rather a modification of the details of their application. The liquid capital of the country may for a long time to come be inadequate to meet the needs of the world, and some process of husbanding or rationing it must therefore be applied during the period of reconstruction, just as has been the case during the period of war. This system of distribution or rationing—to use a word already made familiar—can not be the same and can not employ the methods that have been found effective under a régime of

military necessity; yet the object to be gained—that of husbanding our resources and of distributing them in such a way as to promote the process of return to normal conditions—will be closely analogous to those which have been pursued during the war. Some of the steps which must be taken in the development of this policy have already been indicated by the War Industries Board and by other Government organizations which have shifted their system of rationing or control in such a way as to give preference to those industries which are considered essential to industrial restoration as against those which have thus far been deemed essential to success in war. To the private individual the process of shifting to the peace basis must mean much the same as the process of conserving resources during war. In both cases it is incumbent upon him to avoid undue waste, to limit his consumption to what is necessary to efficiency, and to devote his savings systematically and fully to the strengthening of the banking and investment position of the country. The erection of a strong foundation for the peace industry of the future demands the continued exercise of self-denial and foresight just as during the war.

That the transition of the world from a war to a peace basis must necessarily exert an important and direct influence upon banking is, of course, clearly obvious. Immediately the problem will be that of preventing credit from expanding too far and, so far as practicable, of reducing any excess that already exists. The economic history of the period immediately succeeding wars of the past has shown that in practically every instance there has been a tendency toward the use of bank funds for the purpose of promoting the development of industries and enterprises involving a considerable investment of capital. The Federal Reserve system is now in an exceptional position for influencing the distribution and use of banking credit upon an economic basis. Prior to the entry of the United States into the European war the volume of business at Federal Reserve Banks was too limited, while

the available or free resources of member banks were too large, to enable the Federal Reserve institutions to exert more than an incidental influence upon credit uses. The period of belligerency has changed these conditions, and the Federal Reserve Banks now stand as practically the holders of the entire reserve of the country—the directors of what is probably to be regarded as the one unexhausted reservoir of banking credit in the world. To them is thus assigned a function of surpassing importance—to maintain the liquid character of the assets held against the demand obligations of the banks, and, by regulation of discount rates, to regulate, as conditions permit, the uses and limits of credit. This function has almost of necessity been temporarily suspended during the continuance of the period of belligerency. So long as the United States is in the market as the greatest borrower and so long as its borrowings are intended for the maintenance of the national integrity, there can be no doubt that the policy to be adopted must be one which should subordinate all other considerations to that of success of national finance. With the return of peace the close of the period of urgent Government financing through the sale of long or short term obligations comes in sight, and the resumption of their function as a regulator of credit becomes a duty for Federal Reserve Banks.

Reduction of loans on war paper is doubtless a problem to be at once faced by the Federal Reserve Banks and their members. The reasons for such action from the standpoint of banking prudence are obvious. In former numbers of the BULLETIN the Board has, moreover, explained its view of the connection between these expanded loans and prices. Return to stability of prices, as well as of economic relationships generally, must go hand in hand with the reduction of the banks' holdings of such paper. It is to the public that we must look for effective aid in the accomplishment of this object. Direct absorption of the Government bonds now carried by the banks through extensive popular saving is

the only means by which real improvement can be effected. Such saving means the creation of new current wealth through continued activity in industry and its application to the process of reducing outstanding purchasing power in the shape of bank credit. As bank obligations are restored to a condition of normal liquidity and as commercial paper growing out of actual transactions takes the place of notes secured by bonds and certificates of indebtedness, which now make up so large a proportion of the assets of both Federal Reserve and member banks, prices will gradually work toward a normal and stable basis. The transition period will unquestionably involve new and large needs for credit and capital. It will require both the provision for natural growth of industry, for the furnishing of aid to businesses which are in process of transition from a war to a peace basis, and finally for the usual and permanent capital advances which are required in carrying their regular financing. The completion of the movement toward a stable banking basis does not necessarily imply a restoration of the older level of prices, since the equation of supply and demand throughout the world is now different from what it was before the war. Costs of production are fundamentally altered and conditions of consumption have been widely changed. We need not, therefore, necessarily look for a return to the older level of prices, and we certainly can not expect the restoration of that older level in the case of any given commodity, but the return to normal conditions in prices, so far as these have been affected by inflation, through the elimination of that inflation, is not only a reasonable but a necessary expectation.

Present conditions in the world are different from those which have existed after previous wars in that all leading countries are involved. On former occasions these conditions were more or less localized. In most countries to-day there exists a condition of banking and credit inflation, sometimes for one reason and in other cases for others. But whatever the

cause, the outward result and consequences have much similarity. The necessities of the war and the difficulties of obtaining supplies have resulted in a far-reaching alteration in the distribution of gold. Much of this gold has accumulated in the United States, but considerable portions of it have gone to the countries which remained neutral throughout the war—Spain, Holland, Switzerland, and Scandinavia. The question may be fairly raised whether the return of prices and bank credit to a normal level, can be expected without changes in the existing adjustment of the gold supply of the world. It is probable that the supplies of gold which are thus needed will not be as great in many cases as they were before the war, since it may be expected that the use of gold in current circulation will be far less than before. The movement of gold, therefore, from the countries which have acquired it to those which now need it will undoubtedly be gradual and is a matter of common concern to all of them. It is, indeed, quite possible that peace adjustments may be such as not to disturb in large degree the continued holding of considerable quantities of gold by the countries which now possess them, notwithstanding that they still continue to be used as a basis for banking in other nations.

But, as in time the gold supply of the world is gradually redistributed in accordance with the needs and requirements of circulation and banking reserves in the different countries, there will necessarily be alterations of the percentage relationship of the gold held to the demand obligations of the banks in the countries which are affected by such shifting of the metallic supply. These changes in reserve percentages need not, therefore, necessarily be regarded as indicative of any abnormal situation. Provided that the process of reducing war obligations is steadily and conservatively pursued, the supply of gold in reserves will take care of itself and the liquidity of the banks will be insured through the regulation of the volume and quality of their assets far more freely and promptly than through the

Conservation of reserves.

reduction or amassing of quantities of the reserve metal.

Coincident with the reduction of domestic war loans there may probably be expected to develop a direct demand upon our banking resources for accommodation designed to facilitate the movement of goods to other countries. Such accommodation has been extended in large measure ever since the opening of the European war—first, through the extension of loans to belligerent countries, privately placed with bankers in the United States, and later, when the United States itself became a belligerent, through the issue of Government bonds whose proceeds were advanced to foreign countries and were then used by them in payment of supplies purchased in the United States. It may be possible, as has already been intimated, that additional credits may from time to time have to be opened in favor of the allied nations, but from this time forward the bulk of our foreign financing will necessarily return to a peace basis and the services of our banks will lie in supplying the means for financing the movement of consumable goods to the foreign countries by which they are needed. That this prospect opens a large new field for American bankers is obvious. That it is a field which opens new opportunities for the application of the acceptance principle and in other ways calls for the skillful and intelligent use of their credit resources is equally clear. The connections which have been formed by Federal Reserve Banks with foreign central banking institutions should now be of material service in facilitating the development of trade and in applying to it those principles of general control which the experience of the world in the management of reserves and discount rates has demonstrated to be essential. These demands will necessarily be made, since they will represent the credits growing out of the immediate requirements of the world—requirements which can not be refused without impairing both our future prospects of foreign business and the progress toward readjustment to normal conditions of industry.

Aid to foreign countries.

They can not be wisely made by superimposing a new structure of banking credit upon the old one which has been developed in the process of financing governmental requirements. Progress toward the new basis will thus be a judicious apportioning of our resources between the necessities of new development and those of reduction of already outstanding commitments. It will require wisdom and self-restraint on the part of the bankers of the country to make this adjustment upon a feasible and effective basis.

In this connection the Board commends to the banking and business community of the United States the careful study of the report (elsewhere reprinted in full in this issue) of the committee appointed some months ago, under the chairmanship of Lord Cunliffe, then governor of the Bank of England, to investigate the question of currency and foreign exchanges after the war. The report of the committee takes the view that it will be imperative after the war that the conditions necessary to the maintenance of an effective gold standard be at once restored, and for this purpose recommends that the machinery which British experience has shown to be the only effective remedy for an adverse balance of trade and an undue growth of credit be once more brought into play. Otherwise there will be grave danger of a progressive credit expansion.

"Nothing can contribute more," says the committee, "to a speedy recovery from the effects of the war, and to the rehabilitation of the foreign exchanges than the reestablishment of the currency upon a sound basis." It believes that "the principle of the act of 1844, which has upon the whole been fully justified by experience, should be maintained; mainly, that there should be a fixed fiduciary issue beyond which, subject to emergency arrangements, notes should only be issued in exchange for gold."

A general survey of the position of the principal central banks of the world shows conclusively that the problems of the United States in bringing about a return to a normal

Position of banking system.

basis of credit are in no sense special or peculiar. In practically all countries there has been an enormous inflation of bank credits, and particularly of those credits that rest upon or are secured by Government bonds and certificates of indebtedness. This inflation has undoubtedly been greatest in the territory of the Central Powers, but it has also been very great in both France and England. The following tabulated statement shows in compact form some of the principal features of the condition to which reference is thus made:

[000 omitted.]

	Discounts and advances.		Government securities.	
	1914	1918	1914	1918
Central banks of allied powers:				
Bank of England.....	\$230,222	\$464,048	\$143,343	\$281,048
Bank of France.....	618,189	541,977	30,582	4,383,566
Russian State Bank...	400,205	¹ 1,120,867		¹ 8,507,363

Austro-Hungarian Bank.....	193,352	³ 1,267,253	12,156	³ 2,686,071

¹ Latest available data as of Oct. 29, 1917.² Advances to the Government are included with discounts and advances.³ Latest available data as of Dec. 7, 1917.

Differences between the various countries are thus differences not of character, but of degree, and the United States is peculiarly situated only in this—that inflation has not proceeded in the United States to anything like the same extent that is characteristic in many of the other countries, so that our problem of restoring a normal currency basis is to that extent easier; and in that its gold reserve is far larger than that of any other nation. It is therefore better able to maintain the convertibility of its demand obligations upon request. An added consideration is that there has never been any suspension of the parity of our currency and credit with gold. It is, however, true that as we proceed further in the direction of the restoration of normal conditions we find our relationship toward other countries subject to more and more extensive modifications. It

may therefore be open to some doubt whether any one of the principal commercial countries of the present date can succeed in making its way back to its former status unless it does so practically in combination with its principal neighbors. The problem of reestablishment of a normal level of prices and banking reserves is thus, in fact, an international rather than a local question and must be treated as such. The return by any one nation to a normal level of prices will give that nation an advantage in its export trade that will react powerfully on the price level in all other countries.

This state of affairs may make it advisable that Government control of banking and exchange shall in some degree be continued until the way is clear for a return to a policy of unrestricted exports of gold. The early development of a policy which will provide for steady progress toward the removal of these restrictions at the earliest possible date is therefore highly desirable.

The unique position of the Federal Reserve

Position of the system, standing, as it does, at Federal Reserve the head of American banking system.

organization, makes it worth while to note what the system has accomplished during the years since the opening of the European war, and particularly since the United States itself became a belligerent. Inasmuch as the organization of the new system was practically contemporaneous with the beginning of the war, its present totals practically represent a complete growth from nothing. It was, in fact, almost exactly four years ago that the banks on November 16, 1914, opened their doors for business. A better basis for comparison is therefore afforded by taking the figures representing the situation after a year had been afforded to the new system for the purpose of organization. In the following table are set forth salient facts regarding the growth of the Federal Reserve system, showing the condition of the Reserve Banks at the close of 1914, a year after opening for business, at approximately the date of our entering the war as a belligerent, and upon the

fourth anniversary of the system. A compact review is thus afforded of the bare facts regarding the increase in the scope and activity of the new banks.

[000 omitted.]

	Dec. 31, 1914.	Nov. 19, 1915.	Mar. 30, 1917.	Nov. 15, 1918.

Ratio of total reserves to net deposit and Federal Re- serve note liabilities com- bined.....	100.5	94.5	89.0	49.9

It would not be fair to state the figures relating to the actual operations of the Federal Reserve system without accompanying them with the salient facts relating to the character of the changes that have occurred in the operations of the banks. Reserve figures, for example, show growth, not only because of the increasing strength and inclusiveness of the system, but also because of the additional legislation adopted by Congress for the purpose of concentrating the reserves of the country more largely in the vaults of the Federal Reserve Banks. On the other hand, the issues of notes, as is well known, have been enlarged, not merely for the purpose of meeting the needs of trade but in order to render possible the withdrawal and concentration of gold certificates for the purpose of increasing the sums of reserve money available as a support to our banking credits. In the same way, the immense growth in the discounts of the banks should be studied in the light of the fact that on November 15 there were included in the resources of the Federal Reserve Banks not less than \$1,358,416,000 of war paper, or about 75.6 per cent of the entire discounts.

Even subject to due modification at the points thus enumerated, the **Strength of our resources.** balance sheet of the Federal Reserve system exhibits a

condition of enormous strength. It is a notable fact that the average reserve percentage for the banks as a whole has never fallen below 50, its extreme fluctuations, therefore, lying between 50 and 80 per cent. It is therefore capable not only of meeting large outstanding international obligations without difficulty, but also of accommodating the business community with very large additional discounts. It is in a position to finance, without embarrassment to itself, a large volume of active commercial paper representing the movement of consumable commodities to market, and can expect to supply the requirements of its member banks with the utmost ease so long as it adheres to the limitations and requirements laid down in the constituent act creating it. The immense requirements of war are such that they could easily impair the lending capacity of the Federal Reserve system, as they have that of other strong central banking systems, were they to be indefinitely continued. But the period of such drafts is now fortunately approaching its end, notwithstanding the probability, if not certainty, of further large issues of Government bonds during the current fiscal year ending June 30, 1919. The fact that the termination of this period is approaching does not, however, mean that a period of ease or lack of demand for capital has arrived. On the contrary, the indications of the situation are all to the effect that the needs of the community and of the world at large for productive resources are likely to increase rather than grow less, and that this increase may be expected to proceed rapidly in the near future. One effect of the war has been to produce shortages of materials of production in many different directions, a fact which implies that the reserve stock of such articles, always relatively small, as compared with total con-

sumption, has been allowed to become exhausted. To meet all current demands and thus to reestablish such reserve stocks will be a task calling for the increase of production in many lines, particularly as the current requirements of the European nations for material to be used in reconstructing their industrial systems will constitute an abnormal addition to regular needs. It must be expected, therefore, that the demands of the Nation and of the world for capital and for goods will continue to be more or less active for a good while to come. The fear of depression of trade expressed in many quarters need not be entertained with respect to trade as a whole, but depression may be expected only in those lines in which demand has been suddenly suspended or curtailed in the process of readjusting consumption and production. This demand for capital must, however, be met from the ordinary sources of saving and accumulation and not through the creation of banking credit. To rely upon bank loans as the source from which to draw the means for supporting industrial operations would raise the question whether instead of resorting to intensive saving, accompanied by reduction of prices, we had resolved to fall back upon inflation of bank liabilities and of the currency.

It is in pursuance of the principles thus set forth that the Board has endeavored during the past month to prevent some member banks from drawing too heavily upon the resources of the Federal Reserve institutions for purposes which, in its judgment, were in no wise essential to the welfare of the community. The attention of the Board has been in some instances called to the fact that member banks have applied for and obtained rediscounts which appear to be largely in excess of their natural needs or of the requirements of the community they serve, and has noted that such banks have used the proceeds of these rediscounts in purchasing paper in the open market or in lending to nonmember banks at a profit.

The proper commercial activities of member banks should in no wise be discouraged, and the Board has no desire to obstruct the very natural effort of bank officers to increase the normal profits and business of their institutions. It recognizes a duty, however, to caution the bankers who have rendered and are rendering such efficient service to the Government that profit making and business expansion must for some time to come be subordinated to the general welfare. Particularly does this caution apply to those cases in which rediscounting operations are sought for the purpose of developing resources from other sections primarily to increase the profits or the business of the banks in any given community. Rediscounting between Federal Reserve Banks has been an indispensable element in the process of financing the war and was made necessary both by the Government's operations and by the essential requirements of the various Federal Reserve districts. Such rediscounting, however, ought not to be undertaken merely for the benefit of member banks in a given district as a means of enabling them to go outside their natural field for the purpose of making profits. Having knowledge of the fact that abnormal demands upon banking resources may be expected for some time to come, directors of Federal Reserve Banks should exercise a reasonable prudence in extending accommodations to any member and should satisfy themselves by proper inquiry that the accommodation sought is intended for legitimate liquid requirements and has not been applied for merely to increase profits or expand the business of the borrowing banks. While the directors, with the approval of the Federal Reserve Board, might by advancing their discount rates curtail the credit extended to banks which seek rediscounts solely for the purpose of making a profit, such a course might work hardship upon other member banks which ask rediscounts for their own natural needs and might therefore result in an enforced and premature liquidation of legitimate requirements. The Board therefore believes that in this, as in other cases, prudence in bank lend-

ing and careful distribution of the supply of credit available is preferable to the application of an indiscriminate increase in rates of discount.

There is some ground for fearing that the conditions which have thus far resulted from loans obtained from banks upon the strength of Government obligations and granted by the various institutions because of their belief that such action was a patriotic assistance to the public Treasury, will be continued through the medium of loans granted by banks because of their belief that such action is urgently necessary in the interests of the community and its prosperity. A temptation to the extension of such loans based upon long-term securities of an industrial character will be furnished by the fact that decline in prices is always difficult to endure and is always opposed by many classes in the community who regard it as synonymous with lack of prosperity. The suggestion that some measure be taken to prevent the restoration of the older relationship existing between gold and prices is, in effect, one way of expressing the demand for a continued maintenance of inflation. Wages and prices having assumed new relations to one another upon a new basis of relationship to gold, any alteration in this relationship tends to disturb the existing adjustment and necessitates an effort to restore the older level of prices and wages. It is almost invariably true that such readjustment would inflict hardship upon some class in the community, due to the fact that wages and prices seldom, if ever, decline in similar proportions or in a manner precisely parallel in point of time. Where the decline in wages is more rapid than that of prices, the wage earner suffers correspondingly, and where prices fall off more rapidly than wages similar hardship is inflicted upon the producing element in the community. It is therefore a natural instinct to seek the maintenance of existing conditions as nearly as may be, or if any change be contemplated to ask that it be a continuation of an existing upward movement which each section of the community believes will afford to

it the possibility of advantage. This might be regarded as merely a clash of class interests were it not for the hazard to the general banking structure of the country, which is involved in the continued progress of inflation of bank credit, essential as this is to the maintenance of an upward trend in prices.

Reports immediately following the consummation of the fourth Liberty Federal Reserve loan on October 19 indicate substantial liquidation of war paper, primarily, of course, paper secured by Treasury certificates. Holdings of this class of paper on October 25 were 170.3 millions below corresponding figures for October 18, on the eve of the conclusion of the loan. On October 24 and November 7 two issues of Treasury certificates fell due, though it may be assumed that by far the larger portions of these issues had been previously received by the Federal Reserve Banks in payment for Liberty bonds subscribed. At all events, the amounts redeemed were not large enough to reduce appreciably the pressure for loans, caused by the heavy calls for funds on the part of the Government. It was only on November 22, following the redemption of the outstanding balance of the July 23 issue of Treasury certificates and of the 4 per cent tax certificates, that a downward trend in the movement of discount operations is noticed, resulting in declines from the corresponding November 15 figures of 78.2 millions of war paper on hand and of 10.3 millions of other discounted bills. This decline, however, affects not all the Federal Reserve Banks, some of them, notably the banks at Cleveland and Minneapolis, continuing to show large increases in the amounts of war paper held. Total holdings of war paper on November 22—1,280.3 millions—are 187.9 millions larger than on October 25, the Friday following the consummation of the most recent war loan, and 845.8 millions in excess of figures for June 28, the Friday following the issue of the first series of Treasury certificates under the fourth Liberty loan. On November 22 the proportion of war paper in the total discounts held by the Federal Reserve Banks is practically the same as on

October 18, viz, 75 per cent. For the New York bank this percentage is about 85 per cent while for the Boston bank an even higher percentage obtains.

But little change is shown in the total holdings of acceptances, though the proportion held by the New York bank shows an increase from less than 35 to about 47 per cent. Increases in the weekly holdings of United States short-term securities represent largely temporary Treasury certificates covering advances to the Government by the New York bank, and to a minor extent one-year 2 per cent certificates deposited with the Treasury to secure Federal Reserve Bank notes, the circulation of which increased by 24.8 millions. No appreciable increase in United States bonds on hand is shown, the Federal Reserve Banks holding in their own name but very small amounts of Liberty bonds, and these only for the temporary accommodation of their members, the bulk of their holdings being bonds deposited with the Treasury to secure circulation. As the result of the developments sketched the Federal Reserve Banks' total earning assets show an increase from 2,154.8 to 2,255.6 millions.

For the period under review the banks' gold reserves show an increase from 2,035.3 to 2,060.3 millions, and their net deposits an increase from 1,580.8 to 1,632.8 millions. Federal Reserve notes in actual circulation show an increase for the five weeks under review from 2,502.5 to 2,555.2 millions, or at the rate of slightly over 10.5 millions per week as against an average of 51.9 millions for the preceding four weeks. It is notable that the Federal Reserve note circulation on November 22 was 7.3 millions less than the week before. The ratio of cash reserves to aggregate net deposit and Federal Reserve note liabilities, which on October 25 declined to 49.6 per cent, has risen slightly and on November 22 stood at 50.5 per cent.

In the following table are shown the changes between October 18 and November 22, 1918, in the total discounted and purchased bills

held by each of the Federal Reserve Banks, as well as changes between the two dates in the holdings of other classes of investments:

[000 omitted.]

Federal Reserve Bank.	Oct. 18.	Nov. 22.	Net increase.	Net decrease.
Boston.....	\$138,129	\$148,934	\$10,805	
New York.....	771,003	823,050	52,047	
Philadelphia.....	132,469	182,948	50,479	
Cleveland.....	140,038	164,607	24,569	
Richmond.....	74,044	90,012	15,968	
Atlanta.....	92,427	84,211		\$8,216
Chicago.....	290,046	219,441		70,605
St. Louis.....	86,767	80,477		6,290
Minneapolis.....	54,612	49,213		5,399
Kansas City.....	84,161	80,248		3,913
Dallas.....	58,367	49,305		9,062
San Francisco.....	136,629	105,773		30,856
Total.....	2,058,692	2,078,219	19,527	
United States long-term securities.....	28,205	29,134	929	
United States short-term securities.....	67,738	148,180	80,442	
Other earning assets.....	197	27		170
Total investments held.....	2,154,832	2,255,560	100,728	

Weekly reports from about 750 member banks in leading cities for the period of October 18 to November 15 indicate an increase of 360.4 millions in their aggregate holdings of United States bonds, other than circulation bonds, the total for the latter date—887.3 millions—being about 200 millions in excess of the largest total shown prior to the conclusion of the fourth war loan. For the central reserve city banks the increase in these bond holdings—composed mainly of Liberty bonds—is 156 millions, of which over 95 millions represents the increase at the Greater New York member banks. United States certificates on hand because of the large amounts delivered to the Federal Reserve Banks in payment for Liberty bonds subscribed show a reduction from 1,730 to 954 millions. For the banks in the central reserve cities a decrease of this item from 938.2 to 491.8 millions and for the Greater New York banks a decrease from 808.8 to 410.2 millions are noted. Loans secured by United States war obligations show the largest absolute and relative increase from 500.3 to 1,203.2 millions, the banks in the central reserve cities reporting an increase under this

head of 413.6 millions and the Greater New York banks alone an increase of 390.7 millions. Combined holdings of war securities and loans supported by such securities show a rise from 2,757.2 to 3,044.5 millions for all reporting banks and from 1,218.9 to 1,336.1 millions for the Greater New York banks alone. Meanwhile there has been an increase in other loans and investments from 10,508.9 to 10,605.0 millions, and a proportionate increase at the banks in Greater New York, with the result that the share of United States war securities and war paper combined in total loans and investments as reported has risen from 20.4 to 21.9 per cent for all reporting banks and from 23.9 to 25.4 per cent for the New York banks.

For the two weeks following the close of the loan the volume of Government deposits shows the large increase from 459.6 to 1,286.5 millions. Since November 1 there have been withdrawals on a large scale, though the November 15 total of 869.4 millions is still over 400 millions in excess of the total shown on October 18. Central reserve and New York City banks report a similar development. Net demand deposits, on the other hand, move in the opposite direction, the two weeks following the close of the loan witnessing a decrease from 9,796.3 to 9,354.5 millions, and the two weeks in November an increase back to 9,659.8 millions. Net demand deposits of the New York banks follow a similar course, declining from 4,222.2 on October 18 to 4,087 millions on November 1, and rising again to 4,199.1 millions on November 15. Total time deposits show a slight increase from 1,441.3 to 1,443.5 millions.

Aggregate reserve balances (with the Federal Reserve Banks) of all reporting banks declined during the four weeks from 1,213.5 to 1,183.9 millions, while cash in vault went up from 380.7 to 386.2 millions. Because of the large investments in Government securities and the still larger increase in the holdings of war paper, the ratio of deposits to investments, notwithstanding the considerable increase in Government deposits, shows a slight decline

from 78.9 to 78.7 per cent. For the banks in the central and other reserve cities slight rises of this ratio are noted. "Excess reserves" show considerable fluctuations from week to week, the high level of 232.2 millions being shown for October 25 and the lower level of 42.1 millions on November 15. For the central reserve city banks a similar development is noted, the high point—148.5 millions—being reached on October 25, the Friday following the close of the loan, and the low point—27.3 millions—on November 15.

During the month ending November 10 the net outward movement of gold imports was \$2,517,000, as compared with a net inward movement of \$284,000 for the month ending October 10. Gold imports for the month, amounting to \$1,479,000, came largely from Canada, Mexico, and Salvador, while gold exports, totaling \$3,996,000, were consigned chiefly to Chile and Mexico.

The gain in the country's stock of gold since August 1, 1914, was \$1,070,389,000, as may be seen from the following exhibit:

[900 omitted.]

	Imports.	Exports.	Excess of imports over exports.
Aug. 1 to Dec. 31, 1914.....	823,253	\$104,972	\$881,719
Jan. 1 to Dec. 31, 1915.....	451,955	31,426	420,529
Jan. 1 to Dec. 31, 1916.....	685,745	155,793	529,952
Jan. 1 to Dec. 31, 1917.....	553,713	372,171	181,542
Jan. 1 to Nov. 10, 1918.....	58,654	38,569	20,085
Total.....	1,773,320	702,931	1,070,389

¹ Excess of exports over imports.

Final figures compiled by the Treasury Department from the returns made by Federal Reserve Banks show that the success of the fourth Liberty loan has been even greater than had been expected or than was indicated in the preliminary announcement given in the last issue of the FEDERAL RESERVE BULLETIN. The approximate final figures for subscriptions for the fourth Liberty loan are now as follows:

District.	Quota.	Subscribed.	Per cent.
Boston.....	\$500,000,000	\$632,221,850	126.44
Richmond.....	250,000,000	352,688,200	141.07
Philadelphia.....	500,000,000	598,763,650	119.75
Cleveland.....	600,000,000	702,059,800	117.00
Dallas.....	126,000,000	145,944,450	115.82
Minneapolis.....	210,000,000	241,628,300	115.06
San Francisco.....	402,000,000	459,000,000	114.17
St. Louis.....	230,000,000	266,358,550	115.99
New York.....	1,800,000,000	2,041,778,600	113.59
Atlanta.....	192,000,000	217,885,200	113.48
Kansas City.....	230,000,000	264,619,450	115.05
Chicago.....	\$70,000,000	\$69,239,000	111.40
Total.....	6,000,000,000	6,954,875,200	
United States Treasury.....		33,820,850	
Total.....		6,988,696,050	116.48

The rehabilitation of European industries to be effected at a time when urgent necessity for renewed sales of securities still exists, suggests the probable effect of a double burden upon the banking resources of the community. Additional bond sales, unless preceded by an elimination of inflated conditions, by genuine and rigid restriction of credit must either prevent the banking mechanism of the country from functioning as it otherwise would in facilitating the reconstruction of European industry and at the same time assisting in the resumption of domestic development, so long arrested as a result of the war, or must be used as a basis for the furnishing of the needed funds through Government advances to the allied nations. Not all of the multifarious demands which are now being made upon the resources of the country can be complied with, but a choice must be made between those of a greater and those of a less degree of urgency. Such an adaptation of resources to the use to be made of them is unquestionably an essential element in the maintenance of banking soundness and liquidity.

The Secretary of the Treasury, in a letter addressed to the President under date of November 14 and published elsewhere in this issue of the BULLETIN, having presented his resignation, the Board has placed on record the following resolutions:

Whereas Hon. W. G. McAdoo, ex officio chairman of this Board, has tendered to the

President his resignation as Secretary of the Treasury and has announced his intention to return to private life;

Therefore be it resolved, That the Board desires to put on record this expression of its admiration of the able and brilliant statesmanship shown by the Secretary of the Treasury in the discharge of his official duties during a period when he was confronted by financial problems of greater variety and magnitude than have ever faced the finance minister of any government, and to testify to its deep appreciation of the splendid and inspiring example he has left to all who were privileged to have association with him, of self-sacrificing and untiring devotion to the public interest.

Be it further resolved, That the members of the Board desire to express their profound regret at the retirement of Mr. McAdoo and the termination of their official association with him, and to assure him that he carries with him the cordial good wishes of each and every member for his future welfare and continued success in whatever field he may enter.

The usual quarterly meeting of the Advisory Council with the Federal Reserve Board on Monday and Tuesday, November 18 and 19,

resulted in a full discussion of the business and banking situation of the country, with particular reference to the transition from war to peace activities. Eleven members of the council were present, and it was stated that reports from all sections of the country thus represented indicated that both bankers and business men view with equanimity and confidence the nation's ability to meet such problems as may confront it during the reconstruction period. The subject of after-war policies, both domestic and foreign, of the Federal Reserve system constituted one of the most important topics of discussion at the meeting, and it was the unanimous view of the members that the policy of the Federal Reserve Banks should be as liberal as consistent with safety, while there should unquestionably be a systematic effort, in common with other allied countries, to restore the free market for and movement of gold which existed before the war. Attention was called

**Resignation of
the Secretary of
the Treasury.**

to the importance of reestablishing a free gold market and of action on the part of Federal Reserve Banks, designed conservatively to control and regulate the movement of gold between countries. An interesting recommendation made by the council was to the effect that the net earnings of Federal Reserve Banks should be accumulated until the surplus funds of the banks shall amount to 100 per cent of the paid in capital stock of each such bank, after which total net earnings in excess of such dividends should be paid to the United States as a franchise tax.

Resignation of the Secretary of the Treasury.

The following correspondence between the President and the Secretary of the Treasury was made public in Washington on November 22:

NOVEMBER 14, 1918.

DEAR MR. PRESIDENT: Now that an armistice has been signed and peace is assured, I feel at liberty to apprise you of my desire to return, as soon as possible, to private life.

I have been conscious, for some time, of the necessity for this step, but, of course, I could not consider it while the country was at war.

For almost six years I have worked incessantly under the pressure of great responsibilities. Their exactions have drawn heavily on my strength. The inadequate compensation allowed by law to Cabinet officers (as you know, I receive no compensation as Director General of Railroads) and the very burdensome cost of living in Washington have so depleted my personal resources that I am obliged to reckon with the facts of the situation.

I do not wish to convey the impression that there is any actual impairment of my health, because such is not the fact. As a result of long overwork, I need a reasonable period of genuine rest to replenish my energy. But more than this, I must, for the sake of my family, get back to private life to retrieve my personal fortunes.

I can not secure the required rest nor the opportunity to look after my long neglected private affairs unless I am relieved of my present responsibilities.

I am anxious to have my retirement effected with the least possible inconvenience to yourself and to the public service, but it would, I think, be wise to accept my resignation now, as Secretary of the Treasury, to become effective upon the appointment and qualification of my successor, so that he may have the opportunity and advantage of participating promptly in the formulation of the policies that should govern the future work of the Treasury. I would suggest that my resignation as Director

General of Railroads become effective January 1, 1919, or upon the appointment of my successor.

I hope you will understand, my dear Mr. President, that I would permit nothing but the most imperious demands to force my withdrawal from public life. Always I shall cherish as the greatest honor of my career the opportunity you have so generously given me to serve the country under your leadership in these epochal times.

Affectionately, yours,

W. G. McADOO.

The PRESIDENT,
The White House.

NOVEMBER 21, 1918.

MY DEAR MR. SECRETARY: I was not unprepared for your letter of the 14th because you had more than once, of course, discussed with me the circumstances which have long made it a serious personal sacrifice for you to remain in office. I knew that only your high and exacting sense of duty had kept you here until the immediate tasks of the war should be over. But I am none the less distressed. I shall not allow our intimate personal relation to deprive me of the pleasure of saying that in my judgment the country has never had an abler, a more resourceful and yet prudent, a more uniformly efficient Secretary of the Treasury; and I say this remembering all the able, devoted, and distinguished men who preceded you. I have kept your letter a number of days in order to suggest, if I could, some other solution of your difficulty than the one you have now felt obliged to resort to. But I have not been able to think of any. I can not ask you to make further sacrifices, serious as the loss of the Government will be in your retirement. I accept your resignation, therefore, to take effect upon the appointment of a successor, because in justice to you I must.

I also, for the same reasons, accept your resignation as Director General of Railroads, to take effect, as you suggest, on the 1st of January next, or when your successor is appointed. The whole country admires, I am sure, as I do, the skill and executive capacity with which you have handled the great and complex problem of the unified administration of the railways under the stress of war uses, and will regret, as I do, to see you leave that post just as the crest of its difficulty is passed.

For the distinguished, disinterested, and altogether admirable service you have rendered the country in both posts, and especially for the way in which you have guided the Treasury through all the perplexities and problems of transitional financial conditions and of the financing of a war which has been without precedent alike in kind and in scope I thank you with a sense of gratitude that comes from the very bottom of my heart.

Gratefully and affectionately yours,

WOODROW WILSON.

HON. WILLIAM G. McADOO,
Secretary of the Treasury.

Transit and Audit Conferences.

At the suggestion of Governor Harding of the Federal Reserve Board the transit managers and auditors of the Federal Reserve Banks met at the Congress Hotel, Chicago, Ill., on November 11, 12, 13, and 14 for the purpose of considering matters relating to the clearing and collection system, also questions relating to transactions between Federal Reserve Banks, including their branches.

The meetings were attended by representatives from all the Federal Reserve Banks and from the Federal Reserve Board. The discussion at the transit conference, which was the sixth general meeting held by the transit managers since the inauguration of the Federal Reserve system, related mainly to the development and improvement in operation of the interdistrict clearing system. The principal topics covered were: (a) Operation of the clearing and collection system; (b) ways and means to bring about additions to the par list (items on about 19,000 member and non-member banks are now collectible at par through the Federal Reserve Bank); (c) so-called "float" carried by Federal Reserve Banks; (d) harmonizing interdistrict time schedules; (e) extension of facilities to member banks; and (f) operation of the gold settlement fund.

Discussion at the audit conference, the fourth since the inauguration of the system, related both to uniformity in accounting between Federal Reserve Banks and reports submitted by them to the Federal Reserve Board as well as to internal accounting methods.

The recommendations made by the two conferences, at which nearly one hundred separate questions were discussed, have been submitted to the Federal Reserve Banks and the Federal Reserve Board, and it is expected that, as a result of the conferences, there will be greater uniformity in handling interbank transactions and that many valuable improvements will be effected in internal accounting methods.

93190-16-3

Meeting of Advisory Council.

On November 19, there was held a session of the Federal Reserve Board and Federal Advisory Council in accordance with the requirements of the Federal Reserve act. This session is the last that will be held during this year. The following members of the Advisory Council were present: Mr. James B. Forgan, Chicago; Mr. L. L. Rue, Philadelphia; Mr. J. P. Morgan, New York; Mr. Daniel G. Wing, Boston; Mr. W. S. Rowe, Cincinnati; Mr. J. W. Norwood, Richmond; Mr. C. A. Lysterly, Chattanooga; Mr. F. O. Watts, St. Louis; Mr. John R. Mitchell, Minneapolis; Mr. E. P. Wilmot, Dallas; Mr. Herbert Fleishacker, San Francisco.

The session developed a full discussion of the business and banking situation of the country, with particular reference to the transition from war to peace activities. Reports from all sections of the country indicate that both bankers and business men view with equanimity and confidence the Nation's ability to meet whatever problems may confront it.

In addressing the meeting at the opening session Governor Harding reviewed the situation produced by the conclusion of the war, taking a retrospective view of what had been accomplished during the last few years, a paraphrase of which is in part as follows:

"When the banks were organized on November 16, 1914, the shock given to credit institutions and industries by reason of the outbreak of the European war had largely subsided. Through the measures taken, and particularly through the issue of the emergency currency provided by the Aldrich-Vreeland Act, as amended by the Federal Reserve act, and through the reduction of member-bank required reserves, the Federal Reserve Banks found themselves at the outset approaching a period of easy money. In 1915 and up to the early months of 1916, there was such a plethora of money that most of the Federal Reserve Banks were unable to make expenses, and the control contemplated over the banking situation by means of discount rates vested in the Board and the Federal Reserve Banks was nullified. Discount rates all over the country were abnormally low. As the Federal Reserve Banks were unable to get business under the prevailing low rates, they certainly would have gotten even less business at higher rates. Owing to the urgent demands of European belligerents for supplies and munitions of war for quick

delivery, and as the result of their policy of shipping gold into this country in payment of their obligations here, we experienced abnormally easy-money conditions, which created a good market for foreign-owned American securities. The result was that we gained something over a billion dollars in gold from January 1, 1915, to January 1, 1917. We saw a very large increase in the gold volume of bank credits is a result of our gold expansion.

"The only period when the Federal Reserve Board was able to exercise any effective control over the banking situation was during the last two or three months of 1916 and the first quarter of 1917. You will remember that during these months the Board discouraged the purchase of municipal warrants, advanced discount rates, and advised the Federal Reserve Banks to put their affairs in the most liquid shape possible, and that very material increases in reserves had been effected by the 1st of April, 1917. I believe you gentlemen will agree with me that the United States entered the war better prepared from a banking standpoint than in any other line of activity. After April 6, 1917, as you know, war necessities became paramount and imperative. It is not within the power of any group of banks or of any banking system to regulate the financial demands of war. War is a hard taskmaster; munitions and supplies must be had at all hazards and transported to the front without delay, and the only province of the banking community in this connection is to 'come across' with the capital necessary to procure the goods and man power required. The military organization makes its requisitions and all other activities must adjust themselves to the military demands. Now, we are approaching the time of general international readjustment and reconstruction, and while the war, as far as actual hostilities are concerned, is ended, it is not over in a financial sense and from a standpoint of permanent adjustment. These problems of readjustment must be met by the civil authorities of the various nations supported by their military and naval power.

"Indications are that we are coming back rapidly to a peace basis. A great many of the restrictions imposed by the War Industries Board and other branches of executive departments of the Government are fast being removed. For example, the domestic use of gold and silver for industrial purposes and in the arts has been freed of restrictions. I believe that the removal of restrictions against the use of gold and silver in the arts will have a very good effect because while it may result in the presentation of some Federal Reserve notes for redemption there will be afforded an opportunity to demonstrate that the Federal Reserve note is what it purports to be—redeemable in gold—and will show the people that there is no premium on gold in this country, which can be obtained by the presentation of Federal Reserve notes.

"The restrictions imposed upon the exportation of gold were made effective over a year ago (in September, 1917) by an Executive order of the President which put the whole matter in the hands of the Secretary of the Treasury,

who, in turn, gave to the Federal Reserve Board power to issue licenses in specific cases. The question arises as to when the Board should advise that these restrictions be modified or lifted entirely.

"The suggestion has been made that it would be wise policy for the Federal Reserve Banks to reduce their rates on bankers' acceptances against the exportation and importation of goods. Such a course would give the banks quickly available resources in the shape of prime investments and would enable us to meet foreign competition. There would be no reason then for anyone to hesitate as between drawing in dollars or in sterling or feel obliged to use sterling because of lower rates. In order to put the banks in a position to give these low rates it seems necessary to continue the existing rates on our internal transactions. There does not appear to be any reason why we should consider at this time any reduction of the discount rate on 90-day commercial paper or member banks' collateral notes.

"Upon the entrance of the United States into the war, the Federal Reserve Board, in line with its policy of supporting the Government to the utmost of its ability, established a differential rate on paper secured by Government obligations. The rate of interest on Treasury certificates and Government bonds was established by the Secretary of the Treasury after consultation with various interests all over the country, and in order to make it possible for banks to engage in these transactions without being penalized the Board felt that it would be helpful to establish a differential. The result has been that the invested resources of the Federal Reserve Banks are between 70 per cent and 80 per cent in paper secured by Government obligations and the balance in commercial obligations, with the further effect that the Federal Reserve notes outstanding are thus indirectly secured proportionately by Government obligations.

"It is evident that a reduction in the Federal Reserve Banks' rate on bankers' acceptances will have a tendency to restore the proper equilibrium in the banks' invested resources and give them an opportunity gradually to work off these obligations secured by Government issues.

"Whenever we establish a free gold market in this country we should be particularly careful to see that it is not one-sided and that it works both ways. Take the case of a bank which suspends business and then is reorganized within a brief period. It as a rule provides for the payment of old deposits over a period of months or years in installments. It then opens its doors for business; any new deposits coming in are subject to payment in cash on demand, old deposits being treated as time obligations until due under the terms of the agreement. It seems to me that whoever has authority in the matter should require, whenever we come to a free gold basis, some definite understanding whereby such gold operations will be engaged in as current business and upon a basis of reciprocity, so that whenever our trade balance should permit or require there should be no obstruction to our drawing

in gold because of the erection of artificial barriers on account of old war debts. Unless our free gold market is established upon that basis, a nation might withdraw gold and impound it as a reserve against its war debts instead of treating the gold transaction as one of current business."

The Advisory Council considered a number of important questions, among them the attitude properly to be adopted with reference to Federal Reserve notes. On this point the view was taken that "during the period of readjustment and reconstruction on which we are now entering sudden changes in financial conditions are likely to arise which will have to be met with practical banking judgment. It would seem to be undesirable to take any steps to check further growth in the volume of Federal Reserve notes issued. The expansion which has taken place recently incident to war financing and which will continue under additional Government financing and probably through the reconstruction period is made possible chiefly through the issue of Federal Reserve notes. Their issue and redemption respond to the requirements of trade. Natural and not artificial methods should control the situation."

As to the development of bankers' acceptances the view was taken that this was likely to be a matter of gradual growth to be brought about by a natural process of evolution.

With reference to the question of drafts drawn for the purpose of furnishing dollar exchange the Council took the view that the drawing of such drafts to create exchange from countries other than those already prescribed may later become necessary, but that the matter is one that can be best considered as conditions develop.

So far as relates to the extension of American banking facilities abroad the Council held that branch banking abroad may be considered to have developed quite satisfactorily, and that under peace conditions there will undoubtedly be a natural development which calls for no special steps. In line with the position already taken by the Board the Council held that the question of the reserves of foreign branches might to very good effect be left entirely to the discretion of the parent institution.

Regarding after-war policies, it was recommended that the Federal Reserve Banks act as liberally as is consistent with safety and that consideration of the status of the gold embargo be left in the hands of the present committee of the Federal Reserve Board. The reestablishment of a free gold market as soon as can conveniently and properly be done was recommended as part of the after-war reconstruction plan.

As an amendment to the Federal Reserve act the Advisory Council suggested the following changes:

SEC. 7. After all necessary expenses of a Federal Reserve Bank have been paid or provided for, the stockholders shall be entitled to receive an annual dividend of 6 per cent on the paid-in capital stock, which dividend shall be cumulative. After the aforesaid dividend claims have been fully met all the net earnings shall be paid into a surplus fund until it shall amount to 100 per cent of the paid-in capital stock of such bank, after which all the net earnings in excess of aforesaid dividend shall be paid to the United States as a franchise tax.

The Council further reported that—

"It is generally conceded that following the declaration of peace, this country will have an opportunity to develop its foreign trade to an extent impossible before the war. If we are to develop and maintain our export and import trade it should be financed by American banks and bankers, and it is therefore essential that the member banks be granted additional acceptance powers to properly take care of the increasing volume of dollar exchange and credits.

"We recommend that the Federal Reserve act be amended as soon as possible so as to allow member banks to accept on purely foreign transactions up to 200 per cent of their capital and surplus. This limit to include acceptances of foreign banks or bankers for the account of and under the guaranty of the member banks. This acceptance power to be in addition to that now provided by the act for domestic acceptances."

Consolidation of National Banks.

On November 7 the act to provide for the consolidation of national banking associations, which has been before Congress for some time

past, became law through the signature of the President. The text of the new measure is as follows:

[PUBLIC—No. 240—65TH CONGRESS.]

[H. R. 19205.]

An Act To provide for the consolidation of national banking associations.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any two or more national banking associations located within the same county, city, town, or village may, with the approval of the Comptroller of the Currency, consolidate into one association under the charter of either existing banks, on such terms and conditions as may be lawfully agreed upon by a majority of the board of directors of each association proposing to consolidate, and be ratified and confirmed by the affirmative vote of the shareholders of each such association owning at least two-thirds of its capital stock outstanding, at a meeting to be held on the call of the directors after publishing notice of the time, place, and object of the meeting for four consecutive weeks in some newspaper published in the place where the said association is located, and if no newspaper is published in the place, then in a paper published nearest thereto, and after sending such notice to each shareholder of record by registered mail at least ten days prior to said meeting: *Provided,* That the capital stock of such consolidated association shall not be less than that required under existing law for the organization of a national bank in the place in which it is located: *And provided further,* That when such consolidation shall have been effected and approved by the comptroller any shareholder of either of the associations so consolidated who has not voted for such consolidation may give notice to the directors of the association in which he is interested within twenty days from the date of the certificate of approval of the comptroller that he dissents from the plan of consolidation as adopted and approved, whereupon he shall be entitled to receive the value of the shares so held by him, to be ascertained by an appraisal made by a committee of three persons, one to be selected by the shareholder, one by the directors, and the third by the two so chosen; and in case the value so fixed shall not be satisfactory to the shareholder he may within five days after being notified of the appraisal appeal to the Comptroller of the Currency, who shall cause a reappraisal to be made, which shall be final and binding; and if said reappraisal shall exceed the value fixed by said committee the bank shall pay the expenses of the reappraisal; otherwise the appellant shall pay said expenses, and the value so ascertained and determined shall be deemed to be a debt due and be forthwith paid to said shareholder from said bank, and the share so paid shall be surrendered and after due notice sold at public auction within thirty days after the final appraisement provided for in this act.

SEC 2. That associations consolidating with another association under the provisions of this act shall not be required to deposit lawful money for their outstanding circulation, but their assets and liabilities shall be reported by the association with which they have consolidated. And all the rights, franchises, and interests of the said national bank so consolidated in and to every species of property, personal and mixed, and choses in action thereto belonging, shall be deemed to be transferred to and vested in such national bank into which it is con-

solidated without any deed or other transfer, and the said consolidated national bank shall hold and enjoy the same and all rights of property, franchises, and interests in the same manner and to the same extent as was held and enjoyed by the national bank so consolidated therewith.

Approved, November 7, 1918.

After the War: The Gold Standard and Currency in Great Britain.

Herewith is reprinted in full, as being of exceptional interest, the first interim report presented to the British Parliament of a committee appointed "to consider the various problems which will arise in connection with currency and the foreign exchanges during the period of reconstruction and report upon the steps required to bring about the restoration of normal conditions in due course, and to consider the working of the Bank Act, 1844, and the constitution and functions of the Bank of England, with a view of recommending any alterations which may appear to them to be necessary or desirable."

The membership of the committee consisted of:

Lord Cunliffe, governor of the Bank of England, chairman.

Sir Charles Addis, Hongkong & Shanghai Banking Corporation.

The Hon. Rupert Beckett, Beckett & Co.

Sir John Bradbury, secretary to the treasury.

G. C. Cassels, Bank of Montreal.

Gaspard Farrer, Baring & Co.

The Hon. Herbert Gibbs, Antony Gibbs & Sons.

W. H. N. Goschen, Chairman of the clearing bankers' committee.

Lord Inchcape, of Strathnaver.

R. W. Jeans, Bank of Australasia.

A. C. Pigou, professor of political economy, Cambridge University.

G. F. Stewart, ex-governor of the Bank of Ireland.

William Wallace, Royal Bank of Scotland.

G. C. Upcott, of the treasury and ministry of reconstruction, secretary.

INTRODUCTION.

1. We have the honor to present herewith an interim report on certain of the matters referred to us in January last. In this report we attempt to indicate the broad lines on which we think the serious currency difficulties which will confront this country at the end of the war should be dealt with. The difficulties which will arise in connection with the foreign exchanges will be no less grave, but we do not think that any recommendations as to the emergency expedients which may have to be adopted in the period immediately following the conclusion of peace can usefully be made until the end of the war is clearly in sight and a more definite opinion can be formed as to the conditions which will then prevail. We propose also to deal in a later report with questions affecting the constitution and management of the Bank of England, and with the applicability of the recommendations contained in this report to Scotland and Ireland, in regard to which we have not yet taken evidence. We have therefore confined our inquiry for the present to the broad principles upon which the currency should be regulated. We have had the advantage of consultation with the Bank of England, and have taken oral evidence from various banking and financial experts, representatives of certain chambers of commerce and others who have particularly interested themselves in these matters. We have also had written evidence from certain other representatives of commerce and industry. Our conclusions upon the subjects dealt with in this report are unanimous, and we can not too strongly emphasize our opinion that the application, at the earliest possible date, of the main principles on which they are based is of vital necessity to the financial stability and well-being of the country. Nothing can contribute more to a speedy recovery from the effects of the war, and to the rehabilitation of the foreign exchanges, than the reestablishment of the currency upon a sound basis. Indeed, a sound system of currency will, as is shown in paragraphs 4 and 5, in itself secure equilibrium in those exchanges, and render unnecessary the continued resort to the emergency expedients to which we have referred. We should add that in our inquiry we have had in view the conditions which are likely to prevail during the 10 years immediately following the end of the war, and we think that the whole subject should be again reviewed not later than the end of that period.

THE CURRENCY SYSTEM BEFORE THE WAR.

2. Under the bank charter act of 1844, apart from the fiduciary issue of the Bank of England and the notes of Scottish and Irish banks of issue (which were not actually legal tender), the currency in circulation and in bank reserves consisted before the war entirely of gold and subsidiary coin or of notes representing gold. Gold was freely coined by the mint without any charge. There were no restrictions upon the import of gold. Sovereigns were freely given by the bank in exchange for notes at par value, and there were no obstacles to the export of gold. Apart from the presentation for minting of gold already in use in the arts (which under normal conditions did not take place) there was no means whereby the legal tender currency could be increased except the importation of gold from abroad to form the basis of an increase in the note issue of the Bank of England or to be presented to the mint for coinage, and no means whereby it could be diminished (apart from the normal demand for the arts, amounting to about £2,000,000 a year, which was only partly taken out of the currency supply) except the export of bullion or sovereigns.

3. Since the passing of the act of 1844 there has been a great development of the check system. The essence of that system is that purchasing power is largely in the form of bank deposits operated upon by check, legal tender money being required only for the purpose of the reserves held by the banks against those deposits and for actual public circulation in connection with the payment of wages and retail transactions. The provisions of the act of 1844 as applied to that system have operated both to correct unfavorable exchanges and to check undue expansions of credit.

4. When the exchanges were favorable, gold flowed freely into this country and an increase of legal tender money accompanied the development of trade. When the balance of trade was unfavorable and the exchanges were adverse, it became profitable to export gold. The would-be exporter bought his gold from the Bank of England and paid for it by a check on his account. The bank obtained the gold from the issue department in exchange for notes taken out of its banking reserve, with the result that its liabilities to depositors and its banking reserve were reduced by an equal amount, and the ratio of reserve to liabilities consequently fell. If the process was repeated

sufficiently often to reduce the ratio in a degree considered dangerous, the bank raised its rate of discount. The raising of the discount rate had the immediate effect of retaining money here which would otherwise have been remitted abroad and of attracting remittances from abroad to take advantage of the higher rate, thus checking the outflow of gold and even reversing the stream.

5. If the adverse condition of the exchanges was due not merely to seasonal fluctuations but to circumstances tending to create a permanently adverse trade balance, it is obvious that the procedure above described would not have been sufficient. It would have resulted in the creation of a volume of short-dated indebtedness to foreign countries which would have been in the end disastrous to our credit and the position of London as the financial center of the world. But the raising of the bank's discount rate and the steps taken to make it effective in the market necessarily led to a general rise of interest rates and a restriction of credit. New enterprises were therefore postponed and the demand for constructional materials and other capital goods was lessened. The consequent slackening of employment also diminished the demand for consumable goods, while holders of stocks of commodities carried largely with borrowed money, being confronted with an increase of interest charges, if not with actual difficulty in renewing loans, and with the prospect of falling prices, tended to press their goods on a weak market. The result was a decline in general prices in the home market which, by checking imports and stimulating exports, corrected the adverse trade balance which was the primary cause of the difficulty.

6. When apart from a foreign drain of gold, credit at home threatened to become unduly expanded, the old currency system tended to restrain the expansion and to prevent the consequent rise in domestic prices which ultimately causes such a drain. The expansion of credit, by forcing up prices, involves an increased demand for legal tender currency both from the banks in order to maintain their normal proportion of cash to liabilities and from the general public for the payment of wages and for retail transactions. In this case also the demand for such currency fell upon the reserve of the Bank of England, and the bank was thereupon obliged to raise its rate of discount in order to prevent the fall in the proportion of that reserve to its liabilities.

The same chain of consequences as we have just described followed and speculative trade activity was similarly restrained. There was therefore an automatic machinery by which the volume of purchasing power in this country was continuously adjusted to world prices of commodities in general. Domestic prices were automatically regulated so as to prevent excessive imports; and the creation of banking credit was so controlled that banking could be safely permitted a freedom from State interference which would not have been possible under a less rigid currency system.

7. Under these arrangements this country was provided with a complete and effective gold standard. The essence of such a standard is that notes must always stand at absolute parity with gold coins of equivalent face value, and that both notes and gold coins stand at absolute parity with gold bullion. When these conditions are fulfilled, the foreign exchange rates with all countries possessing an effective gold standard are maintained at or within the gold specie points.

CHANGES WHICH HAVE AFFECTED THE GOLD STANDARD DURING THE WAR.

8. It will be observed that the fall in a number of the foreign exchanges below the old export specie points which has taken place since the early part of 1915¹ is not by itself a proof that the gold standard has broken down or ceased to be effective. During the present war the depredations of enemy submarines, high freights, and the refusal of the Government to extend State insurance to gold cargoes have greatly increased the cost of sending gold abroad. The actual export specie point has, therefore, moved a long way from its old position. In view of our enormous demands for imports, coupled with the check on our exports due to the war, it was natural that our exchanges with neutrals should move toward the export specie point. Consequently, the fall in the export specie point would by itself account for a large fall in our exchange rates. Such a fall must have taken place in the circumstances, even though all the conditions of an effective gold standard had been fully maintained.

9. The course of the war has, however, brought influences into play in consequence of

¹ In the abnormal circumstances at the outbreak of war the neutral exchanges moved temporarily in our favor owing to the remittance home of liquid balances from foreign countries and the withdrawal of foreign credits.

which the gold standard has ceased to be effective. In view of the crisis which arose upon the outbreak of war it was considered necessary, not merely to authorize the suspension of the act of 1844, but also to empower the treasury to issue currency notes for £1 and for 10 shillings as legal tender throughout the United Kingdom. Under the powers given by the currency and bank notes act, 1914, the treasury undertook to issue such notes through the Bank of England to bankers, as and when required, up to a maximum limit not exceeding for any bank 20 per cent of its liabilities on current and deposit accounts. The amount of notes issued to each bank was to be treated as an advance bearing interest at the current bank rate.

10. It is not likely that the internal demand for legal tender currency which was anticipated at the beginning of August, 1914, would by itself have necessitated extensive recourse to these provisions. But the credits created by the Bank of England in favor of its depositors under the arrangements by which the bank undertook to discount approved bills of exchange and other measures taken about the same time for the protection of credit caused a large increase in the deposits of the bank. Further, the need of the Government for funds wherewith to finance the war in excess of the amounts raised by taxation and by loans from the public has made necessary the creation of credits in their favor with the Bank of England. Thus, the total amount of the bank's deposits increased from, approximately, £56,000,000 in July, 1914, to £273,000,000 on July 28, 1915, and, though a considerable reduction has since been effected, they now (August 15) stand as high as £171,870,000. The balances created by these operations passing by means of payments to contractors and others to the joint stock banks have formed the foundation of a great growth of their deposits which have also been swelled by the creation of credits in connection with the subscriptions to the various war loans.¹ Under the operation of these

¹ This process has had results of such far-reaching importance that it may be useful to set out in detail the manner in which it operates. Suppose, for example, that in a given week the Government require £10,000,000 over and above the receipts from taxation and loans from the public. They apply for an advance from the Bank of England, which by a book entry places the amount required to the credit of public deposits in the same way as any other banker credits the account of a customer when he grants him temporary accommodation. The amount is then paid out to contractors and other Government creditors, and passes, when the checks are cleared, to the credit of their bankers in the books of the Bank of England—in other words, is transferred from public to "other" deposits, the effect of the whole transaction thus being to increase by £10,000,000 the purchasing power in the hands of the public in the form of deposits in the joint-stock banks and the bankers' cash at the Bank of England by the same amount. The bankers' liabilities to depositors having thus increased by £10,000,000 and their cash

causes the total deposits of the banks of the United Kingdom (other than the Bank of England) increased from £1,070,681,000 on December 31, 1913, to £1,742,902,000 on December 31, 1917.

11. The greatly increased volume of bank deposits, representing a corresponding increase of purchasing power and, therefore, leading in conjunction with other causes to a great rise of prices, has brought about a corresponding demand for legal tender currency which could not have been satisfied under the stringent provisions of the act of 1844. Contractors are obliged to draw checks against their accounts in order to discharge their wages bill—itsself enhanced on account of the rise of prices. It is to provide this currency that the continually growing issues of currency notes have been made. The banks instead of obtaining notes by way of advance under the arrangements described in paragraph 9 were able to pay for them outright by the transfer of the amount from their balances at the Bank of England to the credit of the currency note account and the circulation of the notes continued to increase. The Government subsequently, by substituting their own securities for the cash balance so transferred to their credit, borrow that balance. In effect, the banks are in a position at will to convert their balances at the Bank of England enhanced in the manner indicated above into legal tender currency without causing notes to be drawn, as they would have been under the prewar system, from the banking reserve of the Bank of England, and compelling the bank to apply the normal safeguards against excessive expansion of credit. Fresh legal tender currency is thus continually being issued, not, as formerly, against gold, but against Government securities. Plainly, given the necessity for the creation of bank credits in favor of the Government for the purpose of financing war expenditure, these issues could not be avoided. If they had not been made, the banks would

reserves by an equal amount, their proportion of cash to liabilities (which was normally before the war something under 20 per cent) is improved with the result that they are in a position to make advances to their customers to an amount equal to four or five times the sum added to their cash reserves, or, in the absence of demand for such accommodation, to increase their investments by the difference between the cash received and the proportion they require to hold against the increase of their deposit liabilities. Since the outbreak of war it is the second procedure which has in the main been followed, the surplus cash having been used to subscribe for treasury bills and other Government securities. The money so subscribed has again been spent by the Government and returned in the manner above described to the bankers' cash balances, the process being repeated again and again until each £10,000,000 originally advanced by the Bank of England has created new deposits representing new purchasing power to several times that amount. Before the war these processes, if continued, compelled the Bank of England, as explained in paragraph 6, to raise its rate of discount, but, as indicated below, the unlimited issue of currency notes has now removed this check upon the continued expansion of credit.

have been unable to obtain legal tender with which to meet checks drawn for cash on their customers' accounts. The unlimited issue of currency notes in exchange for credits at the Bank of England is at once a consequence and an essential condition of the methods which the Government have found necessary to adopt in order to meet their war expenditure.

12. The effect of these causes upon the amount of legal-tender money (other than subsidiary coin) in bank reserves and in circulation in the United Kingdom are shown in the following paragraph.

13. The amounts on June 30, 1914, may be estimated as follows:

Fiduciary issue of the Bank of England.....	£18, 450, 000
Bank of England notes issued against gold coin or bullion.....	38, 476, 000
Estimated amount of gold coin held by banks (excluding gold coin held in the issue department of the Bank of England) and in public circulation.....	123, 000, 000
Grand total.....	179, 926, 000

The corresponding figures on July 10, 1918, as nearly as they can be estimated, were:

Fiduciary issue of the Bank of England.....	£18, 450, 000
Currency notes not covered by gold.....	230, 412, 000
Total fiduciary issues ¹	248, 862, 000
Bank of England notes issued against coin and bullion.....	65, 368, 000
Currency notes covered by gold.....	28, 500, 000
Estimated amount of gold coin held by banks (excluding gold coin held by issue department of Bank of England), say.....	40, 000, 000
Grand total.....	382, 730, 000

There is also a certain amount of gold coin still in the hands of the public which ought to be added to the last-mentioned figure, but the amount is unknown.

14. As Bank of England notes and currency notes are both payable at the Bank of England in gold coin on demand this large issue of new notes, associated, as it is, with abnormally high prices and unfavorable exchanges, must have led under normal conditions to a rapid depletion, threatening ultimately the complete exhaustion, of the bank's gold holdings. Consequently, unless the bank had been prepared to see all its gold drained away, the discount rate must have been raised to a much higher level, the creation of banking credit (including that

¹ The notes issued by Scottish and Irish banks which have been made legal tender during the war have not been included in the foregoing figures. Strictly the amount (about £5,000,000) by which these issues exceed the amount of gold and currency notes held by those banks should be added to the figures of the present fiduciary issues given above.

required by the Government) would have been checked, prices would have fallen, and a large portion of the surplus notes must have come back for cancellation. In this way an effective gold standard would have been maintained in spite of the heavy issue of notes. But during the war conditions have not been normal. The public are content to employ currency notes for internal purposes, and, notwithstanding adverse exchanges, war conditions interpose effective practical obstacles against the export of gold. Moreover, the legal prohibition of the melting of gold coin, and the fact that the importation of gold bullion is reserved to the Bank of England, and that dealings in it are limited have severed the link which formerly existed between the values of coin and of uncoined gold. It is not possible to judge to what extent legal tender currency may in fact be depreciated in terms of bullion. But it is practically certain that there has been some depreciation, and to this extent therefore the gold standard has ceased to be effective.

RESTORATION OF CONDITIONS NECESSARY TO THE MAINTENANCE OF THE GOLD STANDARD RECOMMENDED.

15. We shall not attempt now to lay down the precise measures that should be adopted to deal with the situation immediately after the war. These will depend upon a variety of conditions which can not be foreseen, in particular the general movements of world prices and the currency policy adopted by other countries. But it will be clear that the conditions necessary to the maintenance of an effective gold standard in this country no longer exist, and it is imperative that they should be restored without delay. After the war our gold holdings will no longer be protected by the submarine danger, and it will not be possible indefinitely to continue to support the exchanges with foreign countries by borrowing abroad. Unless the machinery which long experience has shown to be the only effective remedy for an adverse balance of trade and an undue growth of credit is once more brought into play, there will be very grave danger of a credit expansion in this country and a foreign drain of gold which might jeopardize the convertibility of our note issue and the international trade position of the country. The uncertainty of the monetary situation will handicap our industry, our position as an international financial center will suffer, and our general commercial status in

the eyes of the world will be lowered. We are glad to find that there was no difference of opinion among the witnesses who appeared before us as to the vital importance of these matters.

CESSATION OF GOVERNMENT BORROWINGS.

16. If a sound monetary position is to be reestablished and the gold standard to be effectively maintained, it is in our judgment essential that Government borrowings should cease at the earliest possible moment after the war. A large part of the credit expansion arises, as we have shown, from the fact that the expenditure of the Government during the war has exceeded the amounts which they have been able to raise by taxation or by loans from the actual savings of the people. They have been obliged, therefore, to obtain money through the creation of credits by the Bank of England and by the joint-stock banks, with the result that the growth of purchasing power has exceeded that of purchasable goods and services. As we have already shown, the continuous issue of uncovered currency notes is inevitable in such circumstances. This credit expansion (which is necessarily accompanied by an evergrowing foreign indebtedness) cannot continue after the war without seriously threatening our gold reserves and, indeed, our national solvency.

17. A primary condition of the restoration of a sound credit position is the repayment of a large portion of the enormous amount of Government securities now held by the banks. It is essential that as soon as possible the State should not only live within its income but should begin to reduce its indebtedness. We accordingly recommend that at the earliest possible moment an adequate sinking fund should be provided out of revenue, so that there may be a regular annual reduction of capital liabilities, more especially those which constitute the floating debt. We should remark that it is of the utmost importance that such repayment of debt should not be offset by fresh borrowings for capital expenditure. We are aware that immediately after the war there will be strong pressure for capital expenditure by the State in many forms for reconstruction purposes. But it is essential to the restoration of an effective gold standard that the money for such expenditure should not be provided by the creation of new credit, and that, in so far as such expenditure is undertaken at all, it should be undertaken with great caution.

The necessity of providing for our indispensable supplies of food and raw materials from abroad and for arrears of repairs to manufacturing plant and the transport system at home will limit the savings available for new capital expenditure for a considerable period. This caution is particularly applicable to far-reaching programs of housing and other development schemes.

The shortage of real capital must be made good by genuine savings. It can not be met by the creation of fresh purchasing power in the form of bank advances to the Government or to manufacturers under Government guarantee or otherwise, and any resort to such expedients can only aggravate the evil and retard, possibly for generations, the recovery of the country from the losses sustained during the war.

USE OF BANK OF ENGLAND DISCOUNT RATE.

18. Under an effective gold standard all export demands for gold must be freely met. A further essential condition of the restoration and maintenance of such a standard is therefore that some machinery shall exist to check foreign drains when they threaten to deplete the gold reserves. The recognized machinery for this purpose is the Bank of England discount rate. Whenever before the war the bank's reserves were being depleted, the rate of discount was raised. This, as we have already explained, by reacting upon the rates for money generally, acted as a check which operated in two ways. On the one hand, raised money rates tended directly to attract gold to this country or to keep gold here that might have left. On the other hand, by lessening the demands for loans for business purposes, they tended to check expenditure and so to lower prices in this country, with the result that imports were discouraged and exports encouraged, and the exchanges thereby turned in our favor. Unless this twofold check is kept in working order the whole currency system will be imperiled. To maintain the connection between a gold drain and a rise in the rate of discount is essential to the safety of the reserves. When the exchanges are adverse and gold is being drawn away, it is essential that the rate of discount in this country should be raised relatively to the rates ruling in other countries. Whether this will actually be necessary immediately after the war depends on whether prices in this country are then substantially higher than gold prices

throughout the world. It seems probable that at present they are on the whole higher, but if credit expansion elsewhere continues to be rapid, it is possible that this may eventually not be so.

CONTINUANCE OF DIFFERENTIAL RATES FOR
HOME AND FOREIGN MONEY NOT RECOM-
MENDED.

19. It has been argued before us that during the period of reconstruction and perhaps for many years afterwards it will be possible and desirable, even though the exchanges are adverse, to keep money for home industry substantially cheaper in this country than it is abroad and yet retain an effective gold standard by continuing the present practice of differentiating between home money and foreign money. It is held that relatively low rates should be offered for home money and charged on domestic loans, while gold is at the same time prevented from going abroad by the offer of high rates for foreign money. In our judgment, so soon as the present obstacles in the way of international intercourse are removed, any attempt to maintain this differentiation must break down, because it would be impracticable to prevent people from borrowing at the low home rate and contriving in one way or another to relend at the high foreign rate. This could only be prevented, if at all, by the maintenance of such stringent restrictions upon the freedom of investment after the war as would, in our opinion, be most detrimental to the financial and industrial recovery of this country. Even, however, if differentiation, as a post-war policy, were practicable, it would not, in our judgment, be desirable. For the low home rate, by fostering large loans and so keeping up prices would continue to encourage imports and discourage exports; so that, even though the high rate offered for foreign money prevented gold from being drawn abroad, it would only do this at the cost of piling up an ever-growing debt from Englishmen to foreigners. It would be necessary at the same time to continue to pay for our essential imports of raw materials by borrowing in the United States and elsewhere, instead of by increasing our exports, thus imposing further burdens of foreign debt. This process could not continue indefinitely, and must sooner or later lead to a collapse. We are, therefore, of opinion that the need for making money dear in the face of adverse exchanges cannot, and should not, be evaded by resort to differential rates.

LEGAL LIMITATION OF NOTE ISSUE NECESSARY.

20. The foregoing argument has a close connection with the general question of the legal control of the note issue. It has been urged in some quarters that in order to make possible the provision of a liberal supply of money at low rates during the period of reconstruction further new currency notes should be created, with the object of enabling banks to make large loans to industry without the risk of finding themselves short of cash to meet the requirements of the public for legal-tender money. It is plain that a policy of this kind is incompatible with the maintenance of an effective gold standard. If it is adopted there will be no check upon the outflow of gold. Adverse exchanges will not be corrected either directly or indirectly through a modification of the general level of commodity prices in this country. On the contrary, as the issue of extra notes stimulates the conditions which tend to produce an advance of prices, they will become steadily more and more adverse. Hence the processes making for the withdrawal of our gold will continue and no counteracting force will be set in motion. In the result the gold standard will be threatened with destruction through the loss of all our gold.

21. The device of making money cheap by the continued issue of new notes is thus altogether incompatible with the maintenance of a gold standard. Such a policy can only lead in the end to an inconvertible paper currency and a collapse of the foreign exchanges, with consequences to the whole commercial fabric of the country which we will not attempt to describe. This result may be postponed for a time by restrictions on the export of gold and by borrowing abroad. But the continuance of such a policy after the war can only render the remedial measures which would ultimately be inevitable more painful and protracted. No doubt it would be possible for the Bank of England, with the help of the joint stock banks, without any legal restriction on the note issue, to keep the rate of discount sufficiently high to check loans, keep down prices, and stop the demand for further notes. But it is very undesirable to place the whole responsibility upon the discretion of the banks, subject as they will be to very great pressure in a matter of this kind. If they know that they can get notes freely, the temptation to adopt a lax loan policy will be very great. In order, therefore, to ensure that this is not done, and the gold standard thereby endan-

gered, it is, in our judgment, imperative that the issue of fiduciary notes shall be, as soon as practicable, once more limited by law, and that the present arrangements under which deposits at the Bank of England may be exchanged for legal tender currency without affecting the reserve of the banking department shall be terminated at the earliest possible moment. Additional demands for legal tender currency otherwise than in exchange for gold should be met from the reserves of the Bank of England and not by the treasury, so that the necessary checks upon an undue issue may be brought regularly into play. Subject to the transitional arrangements as regards currency notes which we propose in paragraphs 43 to 46, and to any special arrangements in regard to Scotland and Ireland which we may have to propose when we come to deal with the questions affecting those parts of the United Kingdom, we recommend that the note issue (except as regards existing private issues) should be entirely in the hands of the Bank of England; the notes should be payable in gold in London only, and should be legal tender throughout the United Kingdom.

MACHINERY FOR THE CONTROL OF THE NOTE ISSUE.

22. So far we have addressed ourselves to the principles upon which the retention and maintenance of an effective gold standard depend. We have now to consider the particular machinery in regard to the control of the note issue by which the observance of these principles can most effectively be secured, and what modification (if any) may be desirable or permissible in the system in force before the war.

23. We would in the first place observe that, while the obligation to pay both Bank of England notes and currency notes in gold on demand should, in our judgment, be maintained, it is not necessary for the maintenance of an effective gold standard, nor do we think it desirable, that there should be an early resumption of the internal circulation of gold coin. For the present at any rate we think that it will be more economical that gold should be held in a central reserve as a backing for notes in circulation. We do not think that any legislation on this subject will be required. People have by now become fully accustomed to the use of notes, and it is probable that (except for the limited requirements of persons proposing to travel abroad) they will continue to circulate instead of gold coin much as they

do at present. Informal action on the part of the banks may be expected to accomplish all that is required. If necessary, however, the circulation of gold coin could be prevented by making the notes convertible at the discretion of the Bank of England either into such coin or into bar gold, though for our own part we should prefer to maintain the right of the noteholder to receive payment in gold coin and to trust to the informal steps suggested above to prevent gold from flowing into internal circulation.

24. Secondly, while it is a necessary condition of an effective gold standard that the import of gold should be free from all restrictions, it is not necessary to allow gold coin or bullion obtained otherwise than from the Bank of England to be exported. In view of the fact that it is convenient that the Bank of England should have cognizance of all gold exports, we think it desirable that the export of gold coin or bullion should be subject to the condition that such coin or bullion has been obtained from the bank for the purpose. Manufactured gold should be deemed to be bullion unless it is in the form of articles containing a prescribed fashion value (say, of 10 per cent). The bank should be under obligation to supply gold for export in exchange for its notes. These conditions will be sufficient to enable parity to be maintained between currency and bullion, since importers of gold will be free to sell it either in the market or to the Bank of England.

25. Thirdly, in view of the withdrawal of gold from circulation, it is, we think, desirable that the gold reserves of the country should be held by one central institution, and we recommend therefore that all banks should transfer any gold now held by them to the Bank of England, except such small amounts as they may require to keep for the convenience of travelers.

In our opinion, the prohibition against the melting of gold coin should for the present be maintained.

26. We have carefully considered various proposals that have been laid before us as regards the basis upon which the fiduciary note issue should in future be fixed. It has been urged that the raising of the discount rate by the Bank of England may be delayed too long to check effectively an undue expansion of credit, and that under the rigid restrictions of the act of 1844 a famine of legal tender money might ensue. Crises of this nature necessitating the suspension of the act arose in 1847, 1857, and 1866, and on the first two occasions

notes were actually issued by the bank in excess of the maximum authorized by law. On this ground mainly it has been urged that these rigid restrictions ought to be transformed into something more elastic. To this end the following principal proposals, either separately or in combination, have been put before us by various witnesses:

(1) That the banking and issue department of the Bank of England should be amalgamated.

(2) That the issue of additional notes, instead of being required to be covered pound for pound by gold, should be freely allowed, subject only to the condition that a prescribed percentage of the total issue should be so covered.

(3) That, while either an absolute figure for the maximum fiduciary issue or a maximum determined on a proportionate basis should be prescribed by law, provision should be made for increases beyond this maximum upon condition of a tax being paid by the bank to the Government.

These various suggestions we now proceed to discuss.

27. First, the main effect of the amalgamation of the two departments of the Bank of England would be to place deposits with the Bank of England in the same position as regards convertibility into gold as is now held by the note. It has been argued in favor of this change that greater security would be given to the deposits than under the present system. After careful consideration we are unable to recommend it. The deposits have at present the full security of the reserve in the banking department, and it is obvious that any such additional security would be at the direct expense of the security of the note. In our opinion it is desirable that the issue of currency shall be subject to strict legal regulation, but that the management of banking should be left as free as possible from State interference. We think that the amalgamation of the two departments would inevitably lead in the end to State control of the creation of banking credit generally, a contingency which we are convinced would greatly hamper the elasticity and efficiency with which the banks are able to meet the requirements of industry.

28. Secondly, the proposal to allow the issue of fiduciary notes without limit, subject only to a fixed percentage of the total issue being held in gold by the Bank of England (or the issue department of the Bank of England if

there is no amalgamation), appears to us objectionable for the following reasons. If, as happened in general in the German Reichsbank, other regulations keep the actual note issue much below the maximum fixed by this proportion, the proportion is not effective and produces no result. But, if the actual note issue is really controlled by the proportion, the arrangement is liable to bring about very violent disturbances. Suppose, for example, that the proportion of gold to notes is actually fixed at one-third and is operative. Then, if the withdrawal of gold for export reduces the proportion below the prescribed limit, it is necessary to withdraw notes in the ratio of three to one. Any approach to the conditions under which the restriction would become actually operative would thus be likely to cause even greater apprehension than the limitations of the act of 1844.

29. This consequence might no doubt be obviated for a time if the joint stock banks themselves kept large reserves of gold and were prepared in the event of the depletion of the bank of England reserve either by an external or by an internal drain to use them to make good the depletion and so dispense for the time being with the necessity for withdrawing notes from circulation. It is clear, however, that unless the same steps in regard to money rates and the restriction of credit were taken as would be necessary if the depletion were actually operative, this remedy would be merely a temporary palliative, since the causes which had occasioned the drain would continue to operate unchecked. If, on the other hand, as some have advocated, the banks were given in consideration for their assistance in such contingencies, in addition to the right to obtain notes for the gold brought in, the right to receive advances in further fiduciary notes, the result, so far as the right was exercised, would be to neutralize the effect which the gold brought in would otherwise have had in preserving or restoring the proportion of gold to circulation, while the Bank of England would be placed in the very dangerous position of being under an absolute obligation to create new credits at the very moment at which a policy of credit restriction had become essential.

Incidentally we would remark that the minimum percentages proposed by the London Chamber of Commerce, namely, 33 $\frac{1}{3}$ per cent of gold against the Bank of England note issue and 20 to 25 per cent against a separate issue of currency notes, would in our opinion be

wholly inadequate. The percentage of gold to the two issues, taken together, would actually be less than is now held. The Manchester Chamber of Commerce propose that the proportion of gold to notes should be 40 per cent, while Sir Edward Holden was of opinion that the bank should aim at that proportion of gold in respect to its total liabilities on account of the notes issued and deposits. For the reasons indicated above, however, we have come to the unanimous conclusion that there are substantial objections to basing the note issue of this country upon any proportionate holding of gold.

30. There remains, thirdly, the plan of fixing a maximum absolute limit to the fiduciary note issue, subject to the condition that this limit may be exceeded on the payment of a tax to the Government. It is obvious that, if such a tax is to act as a deterrent, it must be sufficiently high to secure that no profit should accrue to the bank as the result of the emergency issue. As this profit necessarily depends to a larger degree upon the rate of interest at which accommodation is given to the market, we do not think, in view of the great uncertainty as to the future course of interest rates, that it is practicable now to name any figure which could safely be adopted for such a tax. Unless it is fixed at a sufficiently penal rate to secure that the normal fiduciary issue is not exceeded except in circumstances of real emergency, and then only for a strictly limited period, the system may afford dangerous possibilities of excessive speculation and lend itself to the development of crises which more stringent safeguards might have averted altogether. This criticism has in fact been made of the German plan, and we are not clear how the arrangements recently adopted by the United States, which have not yet been tested by experience will actually operate. If it were decided to adopt any such method in this country, it would be necessary for safety to take a very high rate which might in fact prove to be unduly penal.

31. In view of the comparison with the systems prevailing in foreign countries which have been put forward by various witnesses, we would point out that these countries have not in practice maintained the absolutely free gold market which this country, by reason of the vital importance of its position in international finance, is bound to do. It has therefore been open to them to have recourse to devices to steady the rate of discount which, even if suc-

cessful for this purpose, it would be inexpedient and dangerous for us to attempt.

MAINTENANCE OF PRINCIPLE OF BANK CHARTER ACT 1844, RECOMMENDED.

32. Having regard to the foregoing considerations, we are of opinion that the principle of the act of 1844, which has upon the whole been fully justified by experience, should be maintained, namely, that there should be a fixed fiduciary issue beyond which, subject to emergency arrangements which we recommend below, notes should only be issued in exchange for gold. It is noteworthy that from 1866 till the outbreak of the present war no suspension of the act was ever necessary. We think that the stringent principles of the act have often had the effect of preventing dangerous developments and the fact that they have had to be temporarily suspended on certain rare and exceptional occasions (and those limited to the earlier years of the act's operation when experience of working the system was still immature) does not, in our opinion, invalidate this conclusion. We recommend, therefore, that the separation of the issue and banking departments of the Bank of England should be maintained and that the Weekly Return continue to be published in its present form.

MODIFICATION OF PROVISIONS OF ACT OF 1844 IN RESPECT OF ISSUE OF EMERGENCY CURRENCY RECOMMENDED.

33. This conclusion, however, has not prevented us from considering with care the possibility of so modifying the act of 1844 as to make provision for the issue of emergency currency in times of acute difficulty. It might, no doubt, be sufficient to leave matters as they were prior to 1914 and to risk the possibility of the law having to be broken, subject to indemnity from Parliament, but upon the whole we share the objections which have been expressed in many quarters to this procedure. We are, therefore, of opinion that the provisions of section 3 of the currency and bank notes act, 1914, under which the Bank of England may, with the consent of the treasury, temporarily issue notes in excess of the legal limit, should be continued in force. It should be provided by statute that Parliament should be informed forthwith of any action taken by the treasury under this provision by means of a treasury minute which should be laid before both houses. The statute should

also provide that any profits derived from the excess issue should be surrendered by the bank to the exchequer. It will, of course, be necessary that the bank rate should be raised to, and maintained at, a figure sufficiently high to secure the earliest possible retirement of the excess issue.

34. In connection with these emergency arrangements we have considered the question of the reserves which should be held by the joint-stock banks quite apart from their normal reserves of legal-tender money. As we do not contemplate a resumption of the internal circulation of gold, no useful purpose would be served by their accumulating gold which can be more effectively employed by the Bank of England in maintaining the exchanges and supporting the note issue. We have considered a proposal that they should be required to hold a certain proportion of their deposits in the form of treasury bills and other short-dated Government securities, which, in the event of a crisis, might be discounted with the Bank of England and form the basis of an issue of emergency currency, if required. While we think it expedient that such reserves should be held, we have come to the conclusion that it would not be desirable to attempt any legal regulation of the matter. Our attention has, however, been called to the fact that a committee of bankers have recommended that banks should in future be required to publish a monthly statement in the form of Appendix I to this report showing the average of their weekly balance sheets during the month. We entirely concur in this recommendation and we suggest that the statement of assets should be amplified by the addition after "money at call and at short notice" of a heading "Government securities maturing within 12 months." If this is done, we think that the consequent publicity will be amply sufficient to secure the object which we have in view.

AMOUNT OF FIDUCIARY NOTE ISSUE AND GOLD RESERVE.

35. Having come to the conclusion that the amount of the fiduciary issue should, subject to what was said in paragraph 33, be fixed by law at some definite amount, we have next to consider how large this fiduciary issue ought to be.

Assuming the restoration of an effective gold standard, and given the conventional standards of banking practice and the customs of the public as regards the use of currency, the amount of legal-tender currency (other than subsidiary

coin) which can be kept in circulation, including the currency holdings of the banks and the banking department of the Bank of England, will determine itself automatically, since, if the currency becomes redundant, the rate of discount will fall, and prices will rise; notes will be presented in exchange for gold for export and the volume of the currency will be reduced pro tanto. If, on the other hand, the supply of currency falls below current requirements, the rate of discount will rise, prices will fall, gold will be imported and new notes taken out in exchange for it.

36. Under the arrangements which we contemplate virtually the whole amount of the currency gold in the country will be held in a central reserve at the Bank of England; and the circulation, in the wide sense in which we are using the term, will consist (apart from the subsidiary currency, which we need not now consider) in part of fiduciary notes and, as regards the balance, of notes covered by that reserve. The total circulation being automatically determined, it will follow that the higher the amount fixed for the fiduciary issue the lower will be the amount of the covered issue and, consequently, of the central gold reserve and vice versa, while, if the fiduciary issue were fixed at a figure which proved to be higher than the total requirements of the country for legal-tender currency, the covered issue, and with it the central gold reserve, would disappear altogether. It is clear, therefore, that the amount of the fiduciary issue must be fixed at a figure low enough to make sure, not merely that there will always be some covered issue, but that there will always be a covered issue of sufficiently substantial amount to secure that the covering gold which constitutes the central reserve never falls so low as to give rise to apprehension as to the stability of the gold standard.

37. If the postwar requirements proved to be no larger than the prewar requirements (about £180,000,000, exclusive of subsidiary coin, as shown in paragraph 13), it is clear that the present fiduciary issue of £249,000,000 would have to be reduced by £69,000,000 before any gold could be retained in the central reserve at all. Even upon the supposition that the policy of substituting notes for all gold outside that reserve is completely successful, in order to have a central gold reserve of £100,000,000 the fiduciary issue would have to be reduced to £80,000,000 and, even so, we should have £60,000,000 less gold in the country than before the war.

38. The prewar requirements, however, had relation to the level of prewar world prices, the existing conventional standards in regard to banking reserves, and the habits of the people, both in regard to the amounts of money which they carried in their pockets and kept in their homes and to the use of credit instruments in place of cash. It is probable that after the war world prices will stand for many years, if not permanently, at a greatly enhanced level, and that the banks may well find it desirable to adopt a higher standard for their holdings of legal-tender money. Furthermore, any additional economy in the use of legal-tender money which may take place though the extended use of bankers' checks and other credit instruments may be more than offset by the fact that a larger share of the national income is likely to be enjoyed by the wage-earning classes who are the chief users of legal-tender money. All these causes will tend to increase the amount of legal-tender money which the country will, consistently with the maintenance of a gold standard, be able to retain in bank reserves and general circulation to a point much above the prewar figure, but the precise amount of the increase can only be determined by experience.

39. Until such experience has been gained it would, in our opinion, be dangerous to seek to lay down any precise figure for the fiduciary issue. The adoption of an unnecessarily low figure would result in the accumulation of a gold reserve of larger dimensions than is strictly necessary for the protection of the gold standard and the security of our national credit—a luxury which we shall be ill able to afford in the difficult times which are ahead—while the adoption of too high a figure would destroy the gold standard altogether.

40. It therefore seems desirable to approach the problem from the other end, and to attempt to fix tentatively the amount which we should like to see held in gold in the central reserve, leaving the ultimate dimensions of the fiduciary issue to be settled as the result of experience at the amount of fiduciary notes which can be kept in circulation—in banking reserves (including the banking reserve of the Bank of England), and in the pockets of the people—without causing the central gold reserve to fall appreciably below the amount so fixed.

41. The prewar gold reserves were about £38,500,000 in the Bank of England and an amount estimated at £123,000,000 in the banks and in the pockets of the people. If the actual circulation of gold coin ceases and the whole of

the gold is concentrated in the central institution, some economy is permissible in view of its increased mobility. On the other hand, the aggregate amount of currency required will undoubtedly be larger. We accordingly recommend that the amount to be aimed at in the first instance as the normal minimum amount of the central gold reserve should be £150,000,000, and that, until this amount has been reached and maintained concurrently with a satisfactory foreign-exchange position for a period of at least a year, the policy of reducing the uncovered note issue as and when opportunity offers should be consistently followed. In view of the economic conditions which are likely to follow the restoration of peace, it will be necessary to apply this policy with extreme caution and without undue rigidity. When the exchanges are working normally on the basis of a minimum reserve of £150,000,000 the position should again be reviewed in the light of the dimensions of the fiduciary issue as it then exists.

REDUCTION OF PRESENT CURRENCY NOTE ISSUE DURING INTERIM PERIOD.

42. If these arrangements are adopted, there will be an interim period beginning after the completion of demobilization during which it is probable that the present issue of currency notes will have to be gradually reduced until experience has shown what amount of fiduciary notes can be kept in circulation consistently with the maintenance of this reserve. It was suggested to us in evidence that, until that amount has been ascertained, steps should be taken as soon as possible after the war to reduce the uncovered issue at the rate of not less than 3 per cent per annum of the outstanding amount, and that, subject to arrangements for meeting a temporary emergency, the issue in any period of six months or one year should not be allowed to exceed the amount outstanding in the preceding similar period. We think that it would be highly desirable to aim at a steady and continuous reduction, but we are disposed to doubt whether it will be found to be practicable to work to any precise rule. We confine ourselves therefore to the general recommendation of policy indicated above. We entirely concur, however, in the suggestion that, when reductions have taken place, the actual maximum fiduciary circulation in any year should become the legal maximum for the following year, subject only to the emergency arrangements proposed in paragraph 33.

TRANSITIONAL ARRANGEMENTS PENDING REPLACEMENT OF CURRENCY NOTE ISSUE BY A BANK OF ENGLAND ISSUE.

43. It remains for us to consider how and when the present issue of currency notes is to be replaced by the Bank of England issue. There would be some awkwardness in transferring the issue to the Bank of England before the future dimensions of the fiduciary issue have been ascertained. We therefore recommend that during the transitional period the issue should remain a Government issue, but that such postwar expansion (if any) as may take place should be covered not by the investment of the proceeds of the new notes in Government securities, as at present, but by taking Bank of England notes from the bank and holding them in the currency note reserve, and that, as and when opportunity arises for providing cover for the existing fiduciary portion of the issue, the same procedure should be followed. The effect of this arrangement would be that the demands for new currency would operate in the normal way to reduce the reserve in the banking department at the Bank of England, which would have to be restored by raising money rates and encouraging gold imports.

44. We should thus in course of time have the currency note issue covered partly by the £28,500,000 of gold at present held and partly by Bank of England notes covered by gold in the issue department of the Bank of England; the balance, forming the fiduciary part of the issue properly so called, being covered by Government securities as at present. During the transition stage the greater part at any rate of the demand for gold for export will fall upon the Bank of England, since currency notes are not likely to be presented to any large extent for actual payment in gold, but will be paid in by the banks which collect them to the credit of their accounts with the Bank of England, the balances thereby created being used when necessary to draw gold from the Bank of England for export in the ordinary way. We accordingly think that it will be desirable that the Bank of England notes should likewise be substituted in the currency note reserve, either immediately after the war or from time to time by installments, for the £28,500,000 gold now held by that reserve, so that when the time is ripe for the final transfer the whole of the gold reserve may be in the hands of the bank.

45. When the fiduciary portion of the issue has been reduced to the amount which experience shows to be consistent with the maintenance of a gold reserve of £150,000,000 in the issue department of the bank, the outstanding currency notes should be retired and Bank of England notes of low denominations substituted, the Bank of England fiduciary issue being simultaneously increased by an amount equal to the then issue of currency notes covered by Government securities. As the Bank of England notes held in the currency note reserve and the gold against them would already appear in the bank return, the only effect on that return of the ultimate merger would be to add to the total Bank of England issue the amount of the fiduciary portion of the currency note issue as ultimately ascertained, and to add the same amount of Government securities to the securities in the issue department.

46. The settlement as between the treasury and the bank would take the form of the treasury handing over to the bank in exchange for a like amount of currency notes withdrawn by the bank from circulation the Bank of England notes held for the currency note account, and in respect of the remainder of the currency notes withdrawn Government securities. These securities should be either ways and means advances or treasury bills and other marketable securities, being part of the ordinary public debt, and should be taken at current market value. In so far as any of the assets of the currency-note redemption account at the time of transfer might not come within these categories, they should be retained by the treasury and other securities substituted. The Bank of England notes of small denomination would be issued by the bank in place of the currency notes withdrawn from circulation, partly in substitution for the Bank of England notes returned to them from the currency-note reserve (which would be already covered by gold in the issue department) and partly in respect of the bank's new fiduciary issue based on the transferred securities. The profits of the increased fiduciary issue would be payable by the bank to the exchequer.

SUMMARY OF CONCLUSIONS.

47. Our main conclusions may be briefly summarized as follows:

Before the war the country possessed a complete and effective gold standard. The provisions of the bank act, 1844, operated automat-

ically to correct unfavorable exchanges and to check undue expansions of credit. (Pars. 2 to 7.)

During the war the conditions necessary to the maintenance of that standard have ceased to exist. The main cause has been the growth of credit due to Government borrowing from the Bank of England and other banks for war needs. The unlimited issue of currency notes has been both an inevitable consequence and a necessary condition of this growth of credit. (Pars. 8 to 14.)

In our opinion it is imperative that after the war the conditions necessary to the maintenance of an effective gold standard should be restored without delay. Unless the machinery which long experience has shown to be the only effective remedy for an adverse balance of trade and an undue growth of credit is once more brought into play, there will be grave danger of a progressive credit expansion which will result in a foreign drain of gold, menacing the convertibility of our note issue and so jeopardizing the international trade position of the country. (Par. 15.)

The prerequisites for the restoration of an effective gold standard are:

(a) The cessation of Government borrowing as soon as possible after the war. We recommend that at the earliest possible moment an adequate sinking fund should be provided out of revenue, so that there may be a regular annual reduction of capital liabilities, more especially those which constitute the floating debt. (Pars. 16 and 17.)

(b) The recognized machinery—namely, the raising and making effective of the Bank of England discount rate—which before the war operated to check a foreign drain of gold and the speculative expansion of credit in this country, must be kept in working order. This necessity can not and should not be evaded by any attempt to continue differential rates for home and foreign money after the war. (Pars. 18 and 19.)

(c) The issue of fiduciary notes should, as soon as practicable, once more be limited by law, and the present arrangements under which deposits at the Bank of England may be exchanged for legal-tender currency without affecting the reserve of the banking department should be terminated at the earliest possible moment. Subject to transitional arrangements as regards currency notes and to any

special arrangements in regard to Scotland and Ireland which we may have to propose when we come to deal with the questions affecting those parts of the United Kingdom, we recommend that the note issue (except as regards existing private issues) should be entirely in the hands of the Bank of England. The notes should be payable in London only and should be legal tender throughout the United Kingdom. (Pars. 20 and 21.)

As regards the control of the note issue, we make the following observations:

(1) While the obligation to pay both Bank of England notes and currency notes in gold on demand should be maintained, it is not necessary or desirable that there should be any early resumption of the internal circulation of gold coin. (Par. 23.)

(2) While the import of gold should be free from all restrictions, it is convenient that the Bank of England should have cognizance of all gold exports, and we recommend that the export of gold coin or bullion should be subject to the condition that such coin and bullion has been obtained from the bank for the purpose. The bank should be under obligation to supply gold for export in exchange for its notes. (Par. 24.)

(3) In view of the withdrawal of gold from circulation, we recommend that the gold reserves of the country should be held by one central institution and that all banks should transfer any gold now held by them to the Bank of England (Par. 25.)

Having carefully considered the various proposals which have been placed before us as regards the basis of the fiduciary note issue (pars. 26 to 31), we recommend that the principle of the bank charter act, 1844, should be maintained, namely, that there should be a fixed fiduciary issue beyond which notes should only be issued in exchange for gold. The separation of the issue and banking departments of the Bank of England should be maintained, and the Weekly Return should continue to be published in its present form. (Par. 32.)

We recommend, however, that provision for an emergency be made by the continuance in force, subject to the stringent safeguards recommended in the body of the report, of section 3 of the currency and bank notes act, 1914, under which the Bank of England may, with the consent of the treasury, temporarily issue notes in excess of the legal limit. (Par. 33.)

We advocate the publication by the banks of a monthly statement in a prescribed form. (Par. 34.)

We have come to the conclusion that it is not practicable to fix any precise figure for the fiduciary note issue immediately after the war. (Pars. 35 to 39.)

We think it desirable, therefore, to fix the amount which should be aimed at as the central gold reserve, leaving the fiduciary issue to be settled ultimately at such amount as can be kept in circulation without causing the central gold reserve to fall below the amount so fixed. We recommend that the normal minimum of the central gold reserve to be aimed at should be, in the first instance, £150,000,000. Until this amount has been reached and maintained concurrently with a satisfactory foreign exchange position for at least a year, the policy of cautiously reducing the uncovered note issue should be followed. When reductions have been effected, the actual maximum fiduciary circulation in any year should become the legal maximum for the following year, subject only to the emergency arrangements previously recommended. When the exchanges are working normally on the basis of a minimum reserve of £150,000,000, the position should again be reviewed in the light of the dimensions of the fiduciary issue as it then exists. (Pars. 40 to 42.)

We do not recommend the transfer of the existing currency note issue to the Bank of England until the future dimensions of the fiduciary issue have been ascertained. During the transitional period the issue should remain a Government issue, but new notes should be issued, not against Government securities, but against Bank of England notes, and, furthermore, when opportunity arises for providing cover for existing uncovered notes, Bank of England notes should be used for this purpose also. Demands for new currency would then fall in the normal way on the banking department of the Bank of England. (Pars. 43 and 44.)

When the fiduciary portion of the issue has been reduced to an amount which experience shows to be consistent with the maintenance of a central gold reserve of £150,000,000, the outstanding currency notes should be retired and replaced by Bank of England notes of low denomination in accordance with the detailed procedure which we describe. (Pars. 45 and 46.)

New Series of War Savings Stamps.

The Secretary of the Treasury has determined upon the issuance of a new series of war-savings certificates and stamps to be placed on sale early in 1919 and to be known as the series of 1919. The new series will have a maturity date of January 1, 1924, and in practically all respects will be issued on the same terms and in the same manner as the present series of 1918.

A new \$5 war-saving stamp, blue in color, bearing the head of Benjamin Franklin, the apostle of saving and a former Postmaster General, is in preparation. The new stamp will be placed on sale early in 1919.

The same thrift stamps and thrift cards now in use will be continued in 1919 and will be exchangeable into new series of 1919 war-

savings stamps payable January 1, 1924, in the same way as the exchange has been made during this year into the series of 1918 war-savings stamps.

Status of the Trade Acceptance Movement.

Mr. J. H. Tregoe, secretary-treasurer of the National Association of Credit Men, who has been active in the movement for the development of the trade acceptance and its application in the financing of American business, has prepared the following statement for the **FEDERAL RESERVE BULLETIN** in which he sets forth the observations and conclusions of his organization which should, he believes, have careful consideration, especially as the National Association of Credit Men was the first organization to enter upon the task of introducing the use of the acceptance method of settlement between sellers and buyers.

Our first motive was to relate merchandise credits more intimately with bank credits, and to help business to get its affairs and methods in such shape that it could not be taken unawares by untoward happenings, and be subjected to disastrous money strain. We pointed out that this could be best assured to our merchants and manufacturers if they had in hand that class of instruments which are most readily available for rediscount at the Federal Reserve Banks. In other words, we pointed out that American business men had been given a banking system of great potential advantage to them, that the investment preferred above all others under the law creating the system, was true merchandise paper which only our merchants and manufacturers could create. We argued that for their own safety they should make their paper conform to the rules for the most readily eligible paper for purchase and discount at the Federal Reserve Banks.

We pointed out the advantage that business would get in the formation of an open market for true merchandise paper such as was most readily rediscountable at the Federal Reserve Banks and urged the folly of conducting one's financial arrangements on open book account and single name paper upon which open market transactions could not be built.

Incidentally, we found through the testimony of those of our member concerns who were quickest to see what the Federal Reserve act had given American business, that the trade acceptance in substitution for the open-book account is a great collection instrument, and that it tends to eliminate abuses which apparently are inherent in the open book account—abuses which are not only annoying but exceedingly burdensome, such as the neglect of terms of sale, unreasonable claims, reckless returns, etc.

This secondary reason for the adoption of the acceptance naturally became first in the mind of many business men as they saw in the acceptance a cure-all for costly abuses, and also a means of simplifying collections. The result was that they asked their customers for acceptances not that they might use them for financing their requirements at the bank, but purely for collection purposes, and perhaps these concerns, if they borrowed at all, continued to borrow on single name paper.

These concerns missed the first great point of the acceptance but we ask, should the Federal Reserve Banks for this reason lose interest in the acceptance or feel that they should not continue to give it a special position in the rediscount, or give it in other ways their support? In our opinion the Federal Reserve Banks should not change their original policy with reference to the acceptance. The fundamental potential advantage of the acceptance is present in full force as it originally was; true that advantage has not been as widely appreciated even by large business concerns as had been hoped, but through the acceptance, a betterment in our system of high value has taken place; from almost universal testimony we know that mercantile credits have through the trade acceptance, and the agitation for its adoption been greatly improved, are far more liquid and collection troubles have been appreciably lessened.

Through the trade acceptance, the open book account has been put through a severe test, and its shortcomings have been widely recognized and it is, we feel, but a question of time when we shall have a general substitution of the acceptance method for the open book account method.

In this progress, we as an association, exerting ourselves for better credit conditions in all phases, are deeply interested. We should think that the Federal Reserve Banks would be no less so, for whatever benefits credit conditions is vitally interesting to them and they should be as patient in treating errors and misunderstandings and even willful abuses which here and there have come up in the adoption of the acceptance method, as we are inclined to be and as they have been unfailingly in the past.

We feel that the Federal Reserve Banks should not lose their interest even if the trade acceptance were used exclusively as a collection instrument, immediately, and not as an instrument for discount, for the latter step is inevitable as the number of acceptances grows.

The great thing to remember, to our mind, is that the trade acceptance has stirred up more general interest in the whole subject of merchandise and bank credits than anything we have had in this generation. Through the trade acceptance a vast number of people have been put on notice of the existence of the Federal Reserve Banks as live business factors, with which they have a real connection, and the educational work in general has been splendid. That there have been some teachings that have mislead is not to be wondered at, but our observation is that the misunderstandings and the erroneous thinking have been coming steadily to the surface and are being corrected.

Banking Committees on Taxation.

The Commissioner of Internal Revenue has announced the formation of committees of banks in various places throughout the country for the purpose of dealing with questions of taxation. A statement on the subject issued on November 15 is as follows:

Following the lead of New York and Cleveland, committees of banking institutions on Federal taxation are expected to be organized in the principal cities of the country. The object of the committees is to promote co-operation among the institutions they represent in matters pertaining to Federal taxation, particularly in matters of administration. Unity of action will be sought in a way to benefit depositors of the banks concerned and taxpayers generally.

Local problems will be handled by the committees. Problems requiring official interpretation will be submitted directly to the office of the supervisor of business cooperation, Bureau of Internal Revenue, at Washington, where, it is promised, they will receive immediate attention.

Suggestions and recommendations from the committees relating to Federal taxation and methods of administration also will be received and considered.

Production Index.

In the FEDERAL RESERVE BULLETIN for July plans were outlined for the establishment of a series of indexes of business conditions. Certain of these have already made their appearance from time to time as they have been completed. It is now possible to make a definite statement regarding the data available concerning the physical volume of trade and the methods which will be employed in presenting these figures.

Both the actual figures and relative figures based upon these will be presented. The latter are of two kinds. Current figures will be ex-

pressed as percentages of the averages of figures for the same periods in each of the years 1911, 1912, and 1913. An average will be struck, for example, of the amount of grain received at the more important seaboard points during the months of October, 1911, October, 1912, and October, 1913, and the figure for October, 1918, expressed as a percentage of the average receipts during the earlier months. By the use of this method allowance will be made for seasonal variations in the amount of grain received. But it is desirable for certain purposes to show the actual seasonal variation as well. Hence current figures will also be expressed as percentages of the averages of figures for the entire three-year period. To employ the previous illustration, an average will also be struck of the amount of grain received monthly at the more important seaboard points during the years 1911, 1912, and 1913, and the grain receipts during October, 1918, expressed as a percentage thereof.

Objection may be raised to the above method on the ground that no allowance is made for growth—in technical language, that the secular trend is not eliminated. A comparison with conditions existing prior to the outbreak of the war is alone afforded. But reflection will show that this is really no defect at all. For the methods which have been developed for the elimination of the secular trend are all based upon the theory of normal growth, and require that when the disturbing factors cease to operate this normal growth shall again be resumed. Who, however, can maintain that the conditions of the past few years may not permanently have changed the direction of the curve which shows this normal trend? This brings to light the other objection to the attempt to eliminate the secular trend; the attempt is based upon past data only, and hence data which are incomplete and insufficient for the solution of the problem, especially at a time of great change. All that can be done at present is to contrast conditions now prevailing with those prevailing prior to the outbreak of the great war, and thus indicate in their totality the changes which have occurred.

The data which are available relative to the physical volume of trade are twofold, and may be termed, respectively, direct and indirect. The former relate to the actual output and movements of the commodity in question and take several forms. In the case of certain commodities, of which coal and coke as well as certain of the metals afford examples, figures of estimated total output are currently avail-

able. For certain other commodities, actual figures of total output are available, as for new tonnage and for manufactured tobacco. In other cases, figures of output for a selected portion of the industry may be obtained, as in the case of steel ingots, also of Connellsville coke. Movements of commodities at important markets also afford an important source of data. This is the case with grain, both at interior and seaboard markets, as well as with leaf tobacco, naval stores, and live stock. Again, coal-shipment figures, as is well known, are available, likewise figures of crude petroleum runs from wells, and of lumber shipments. In the case of commodities for which the supply of raw material is derived from abroad, figures of imports may be used. This is true with respect to rubber, tin, and silk. For certain of the textiles, additional figures of active and idle spindles and looms are available.

The indirect indices are less numerous, relating as they do to general activity rather than to activity in any particular branch of industry. Railroad operating statistics may be mentioned, likewise statistics of commerce on the Great Lakes as shown by the monthly reports for the Sault Ste. Marie Canal and figures of vessel entrances and clearances in foreign trade.

The above affords a general indication of the character of the data which will be presented. They will be secured in large part from the reports of various governmental agencies, though similar data for other commodities as well as data concerning movements at the various markets may be obtained from trade organizations, and to some extent from trade journals. Careful selection from among the data prepared by these various agencies has been made.

Consolidated Statement of Farm Loan System.

In accordance with the provision of the farm loan act, requiring that the Farm Loan Board "shall from time to time require examinations and reports of condition of all land banks established under the provisions of this act, and shall publish consolidated statements of the results thereof," the Farm Loan Board on November 25 made public the second consolidated statement of the condition of the 12 Federal land banks as of October 31, 1918.

The statement of condition shows that the banks have made loans to farmers to the amount of \$139,378,156. Their capital stock has increased from \$9,000,000 to \$15,975,220. They have issued farm loan bonds to the

amount of \$140,122,200. They hold among their assets United States Government bonds and Treasury certificates to the amount of \$14,850,000. Their excess of expenses and interest charges over earnings is \$211,609.09, which is a reduction of over \$200,000 since the previous semiannual statement, and amounts to less than 1½ per cent of their present capital. Three of the banks show an actual surplus. Before the close of the present month two banks will begin the repayment of the stock originally subscribed by the Government. The total payments by borrowers overdue on October 31 amounted to \$86,073, of which \$51,117 was less than 30 days overdue, and only \$10,730 was 90 days or more overdue.

Consolidated balance sheet of the 12 Federal land banks at close of business, Oct. 31, 1918.

Study of Gold Production Conditions.

Secretary McAdoo, on November 2, announced that he had invited the following gentlemen to serve on a committee to study present conditions in the gold-mining industry: Albert Strauss, vice governor, Federal Reserve Board; R. T. Baker, Director of the Mint; Gov. Emmet D. Boyle, of Nevada; Dr. Edwin F. Gay, of the War Trade Board; Pope Yeatman, of War Industries Board.

¹ Represents mortgage loans plus accrued interest less amortization payments.

The function of the committee appointed by the Secretary will be to study the problem carefully and thoroughly with a view to definitely ascertaining all the difficulties confronting gold production and submitting suggestions of sane and sound methods of relief.

Branches of American Institutions Abroad.

The following tabular statement showing the total number of branches of American banking institutions in foreign countries, classified by countries, is subjoined for convenient reference:

	England.	France.	Italy.	Russia.	Spain.	Argentina.	Bolivia.	Brazil.	Chile.	Colombia.	Ecuador.	Peru.	Uruguay.	Venezuela.	Canal Zone.	Cuba.	Dominican Republic.	Panama.	Porto Rico.	China.	Hongkong.	India.	Java.	Japan.	Philippines.	Straits Settlements.	United States.

State Banks and Trust Companies Admitted.

The following list shows the State banks and trust companies which have been admitted to membership in the Federal Reserve system during the month of November.

Eight hundred and ninety-five State institutions are now members of the system, having a total capital of \$340,227,943, total surplus of \$392,291,571, and total resources of \$6,881,140,822.

	Capital.	Surplus.	Total resources.
<i>District No. 1.</i>			
Menotomy Trust Co., Arlington, Mass.	\$125,000	\$25,000	\$1,070,397
<i>District No. 2.</i>			
Floral Park Bank, Floral Park, N. Y.	25,000	25,000	717,762

New National Bank Charters.

The Comptroller of the Currency reports the following increases and reductions in the number of national banks and the capital of national banks during the period from October 26, 1918, to November 29, 1918, inclusive:

	Banks.
New charters issued to.....	12
With capital of.....	\$450,000
Increase of capital approved for.....	11
With new capital of.....	2,302,100
Aggregate number of new charters and banks increasing capital.....	23
With aggregate of new capital authorized.....	2,752,100
Number of banks liquidating (other than those consolidating with other national banks).....	1
Capital of same banks.....	75,000
Number of banks reducing capital.....	0
Reduction of capital.....	0
Total number of banks going into liquidation or reducing capital (other than those consolidating with other national banks).....	1
Aggregate capital reduction.....	75,000

The foregoing statement shows the aggregate of increased capital for the period of the banks embraced in statement was..... \$2,752,100
Against this there was a reduction of capital owing to liquidation (other than for consolidation with other national banks) and reductions of capital of..... 75,000

Net increase..... 2,677,100

Commercial Failures Reported.

Numbering only 408 in the first three weeks of November, commercial failures in the United States, as reported to R. G. Dun & Co., disclose a 45 per cent reduction from the 737 insolvencies of the corresponding period of 1917. Moreover, the returns for October, the latest month for which complete statistics are available, show but 660 defaults for \$13,980,306, against 1,082 in October of last year, when, however, the liabilities were less than \$13,000,000. The October exhibit, numerically, is the best for any month back to October, 1899, and, in fact, so few business reverses have occurred in only three other months since the figures were first compiled in this form, namely, in August, July and May of 1899. Separated according to Federal Reserve districts, the October statement reveals an appreciably smaller number of failures than in October of 1917 in all of the 12 districts, except the tenth district, where a slight increase appears. The showing as to liabilities, however, is not so favorable, the amounts being larger in the second, fourth, eighth, tenth, eleventh, and twelfth districts, although only in the second and twelfth districts is the expansion especially marked.

Failures during October.

Districts.	Number.		Liabilities.	
	1918	1917	1918	1917
First.....	78	133	\$1,250,232	\$1,260,557
Second.....	115	219	4,295,328	3,067,784
Third.....	35	69	480,298	942,480
Fourth.....	50	70	1,464,848	903,909
Fifth.....	18	69	221,300	1,698,482
Sixth.....	36	64	381,858	699,113
Seventh.....	104	152	1,472,745	2,246,269
Eighth.....	30	65	631,661	453,481
Ninth.....	28	45	191,417	274,920
Tenth.....	39	35	325,617	181,995
Eleventh.....	30	52	410,202	392,822
Twelfth.....	97	109	2,854,800	690,200
Total.....	660	1,082	13,980,306	12,812,012

Acceptances to 100 Per Cent.

Since the issue of the November BULLETIN the following banks have been authorized to accept drafts and bills of exchange up to 100 per cent of their capital and surplus:

Merchants National Bank, Providence, R. I.
Central Union Trust Co., New York City.
Union Trust Co., Chicago, Ill.

FOREIGN EXCHANGE SITUATION.

Since midsummer of the present year the discount on the American dollar, as measured by the premiums on neutral currencies prevailing in the New York market, has shown a continuous decline. On the basis of maximum quotations for each month since July, the premium on the Dutch florin has declined to the end of November by 26 per cent, the high quotation for November being about 5 per cent above par. Swedish crowns show a decline for the same period of over 27 per cent, the high quotation for November being 29 cents, or 8.2 per cent above par. Danish crowns, which had never during the war period reached the same high premium as the Swedish currency, declined about 18 per cent, the highest rate for sight drafts on Copenhagen during November being 27 cents, or less than 1 per cent above mint par. Swiss francs, on which a maximum premium in excess of 32 per cent was quoted in the New York market during August, show a maximum premium of 5.3 per cent for November, a decline of over 27 per cent. An even larger decline is indicated for the Spanish peseta, the maximum premium for November being 7.25 per cent, as against 37.31 per cent for August. Chilean exchange followed a similar course, the high November valuation of the Chilean peso being 25.51 cents, compared with 33.07 cents for August. On the other hand, the November premium on the Argentine peso, which had been stabilized before, went up from about 5 to 7.2 per cent. Rates on Bombay and Shanghai, owing to the stabilized price of silver, show but little change, these quotations moving more or less in sympathy with the

average monthly price of silver, as may be seen by reference to the accompanying tables and diagrams.

As regards rates on financial markets in belligerent countries the effect of the successful termination of the war and the approach of peace is reflected primarily through an improvement in the exchange position of the French currency, the discount on the franc declining from 9.3 per cent for July to 3.9 per cent for November, and closely approaching the discount on British currency. Quotations of the pound sterling fluctuated within the very narrow limits of about one-third of 1 per cent, the high quotation for demand bills in November being 2.24 per cent below par. A similar course is followed by the Italian lira, quotations of which for the four months show but little variation from the officially "pegged" rate of 635 lire per \$100, equivalent to 15.75 cents per lira. Exchange on Yokohama likewise shows but little change, yen bills selling in New York at a premium of slightly less than 10 per cent. Until November but little change is shown in the exchange position of the Brazilian milreis. For the last month a distinct improvement is seen, the high rate for November—27 cents—being about 17 per cent below par, as against 24–25 per cent below par during the preceding months.

Advices from neutral European points indicate a rather erratic course of the German mark. Thus October quotations of the mark in the leading neutral markets were invariably higher than during September, as may be seen from the table on page 1162 of the November BULLETIN. During November a downward course sets in, the most recently available quotations of the mark in the principal European neutral places being as follows:

	Par of exchange.	Date of quotation.	Quotation.	Per cent of depreciation.
Amsterdam.....	59.26	Nov. 26	30.60	48.36
Switzerland.....	123.45	Nov. 27	59.00	52.21
Copenhagen.....	88.88	Nov. 26	50.75	42.90
Stockholm.....	88.88	Nov. 27	44.75	49.65
Christiania.....	88.88	...do....	47.44	46.62

FEDERAL RESERVE BULLETIN.

1901

WHOLESALE PRICES.

In continuation of figures shown in the November BULLETIN there are presented below monthly index numbers of wholesale prices for the period January to October, 1918, compared with like figures for October of previous years, also for July, 1914, the month immediately preceding the outbreak of the great war. The general index number is that of the United States Bureau of Labor Statistics. In addition, there are presented separate numbers for certain particular classes of commodities in accordance with plans announced in previous issues of the BULLETIN.

There are further changes to be noted in the list of commodities included in the calculation of the index numbers for September. Quotations for two commodities, namely, brick (common, run of kiln, salmon) and laundry starch had to be omitted. On the other hand, quotations for sulphur (brimstone, stick, crude, New York) and canned peas (western, No. 5 sieve), which had been dropped temporarily, have been secured for the months of September and October, and the commodities again included in the calculation of the index numbers for the latter month. Index numbers for October are provisional, due to the fact that certain of the data were not received in time to render them available for use in the calculations.

A decrease in prices between September and October is indicated in the table which follows. This is the first decrease during the present year. The general index number of the Bureau of Labor Statistics has fallen from 207 to 204, the decrease being due principally to the fall in the prices of raw materials, the index number of the latter group showing a decrease from 204 to 198. Within the group the index number for the forest products subgroup remains un-

changed at 143, slight increases in the prices of poplar and yellow pine siding being offset by a decrease in the price of Douglas fir. The index number for the mineral products subgroup shows an increase from 180 to 181, due to the rise in the price of iron ore and the slight increases in the prices of certain classes of pig iron, which were not offset by the slight decline in the prices of pig tin, spelter, and sulphur. Considerable decreases in the index numbers for both the farm products and animal products subgroups are noted, in the case of the former from 255 to 240, in the case of the latter from 219 to 209. The decrease for the former subgroup is due largely to the decline in the prices of cotton and of corn, though all the commodities included in the group show a decrease in price, with the exception of wheat and tobacco, which remained practically unchanged. The decrease shown for the animal products subgroup is due principally to the decline in the prices of live stock, especially hogs and cattle, though silk to a slight extent shares in the decline.

On the other hand, the index number for the group of producers' goods has increased from 203 to 205. Although linseed oil and certain of the chemicals decreased in price, the decrease was more than offset by the increases in the prices of other articles in the group, prominent among which were raw sugar, wood pulp, cement, bar iron, and cast iron pipe.

The index number for the group of consumers' goods also shows an increase, from 209 to 210. Considerable decreases in the prices of potatoes, various classes of meat, especially beef (New York quotation), corn meal, and a lesser decrease in the price of flour were outweighed by increases in the prices of other food-stuffs, notably eggs, dairy products, lemons and oranges, granulated sugar, rice, and coffee, as well as in the prices of hosiery and underwear.

Index numbers of wholesale prices in the United States for principal classes of commodities.

REPORT OF BANK TRANSACTIONS.

Below are given figures of debits to deposit accounts of clearing house banks in leading cities for the weekly periods ending Wednesday, November 6 to 27, in continuation of similar figures printed in previous numbers of the BULLETIN. The number of centers from which reports are regularly received has been well maintained, the most important accession during the month being Pittsburgh, Pa. Efforts are being continued to make the report as comprehensive as possible, so as to provide data fairly comparable, both as regards the number of centers covered by the statement and, what is just as important, the number of banks reporting at each center.

During the month there has been an almost steady increase in the totals of debits, both to individual and bank accounts. While a small proportion of their increase is due to the larger number of individual bank reports comprised in the totals of some reporting centers, by far the larger part of the increase shown is due undoubtedly to the increasing volume of business handled by the banks. Increases between November 13 and November 27 apparently reflect to some extent the large payments by check or draft on account of the November 21 installment of the fourth Liberty loan.

Figures of reporting clearing houses by Federal Reserve districts are as follows:

Weekly figures of clearing-house bank debits to deposit account.

[In thousands of dollars; i. e., 000 omitted.]

District.	Debits to individual account.				Debits to banks' and bankers' account.

DISCOUNT AND INTEREST RATES.

In the following tables are presented actual discount and interest rates prevailing in the various cities in which the several Federal Reserve Banks and their branches are located, during the 30-day periods ending September 14 and October 15, 1918. Quotations are given for prime commercial paper, both customers' and purchased in open market, inter-bank loans, bankers' acceptances, and paper secured by prime stock exchange or other current collateral. Separate rates are quoted for paper of longer and shorter maturities in the first-named and last-named classes. In addition, quotations are given for commodity paper secured by warehouse receipts and for cattle loans, as reported from centers in which such paper is current.

Quotations are also given of rates charged on ordinary loans to customers secured by Liberty bonds and certificates of indebtedness. Assistance to customers to enable them to purchase such Government obligations is generally extended at lower rates, either at the rate

borne by such obligations or at a rate slightly higher. The table also shows quotations in New York for demand paper secured by prime bankers' acceptances, a type of paper which has made its appearance in the New York market during the past several months. Quotations for new types of paper will be added from time to time as deemed of interest.

During the period under review, local conditions again appear to have exercised preponderating influence in causing increase in some rates and decline in others. While in certain centers there may appear to have been an upward trend in rates, as in the case of Minneapolis, in other centers the reverse appears to have been the case. However, customary rates in general, with few exceptions, remain unchanged, movements in rates being confined largely to fractional changes in high or low quotations. Rates charged on loans to individuals, secured by Liberty bonds and certificates of indebtedness on the whole are lower than on ordinary commercial loans, or on loans secured by other collateral.

Discount and interest rates prevailing in various centers.

DURING 30-DAY PERIOD ENDING OCT. 15, 1918.

FEDERAL RESERVE BULLETIN.

1211

Lost Liberty Bonds.

In the list given below is published the numbers of lost or stolen Liberty bonds that have been reported to the American Bankers Association within the last month. In the event that any of the bonds mentioned in the list should be presented or any information received relative to their recovery it would be appreciated if the data be reported to L. W. Gammon, manager Protective Department, American Bankers Association, 5 Nassau Street, New York City.

INFORMAL RULINGS OF THE BOARD.

Below are reproduced letters sent out from time to time over the signatures of the officers or members of the Federal Reserve Board which contain information believed to be of general interest to Federal Reserve Banks and member banks of the system:

Fiduciary powers of national banks, revision of regulation F, series of 1917.

(To Federal Reserve agents.)

A revision of Regulation F, series of 1917, which deals with trust powers of national banks is now in course of preparation. The recent amendment to section 11 (k) of the Federal Reserve Act makes certain State laws applicable to the trust operations of national banks. The laws of the several States dealing with this subject are not uniform.

From letters received it appears that counsel for the several Federal Reserve Banks are not agreed on the question of what powers may be granted to national banks where the State laws do not specifically enumerate the fiduciary powers that competing State corporations may exercise.

It is, of course, necessary that the policy adopted by the Federal Reserve Board should be uniform in the several districts, and at the request of its counsel the Board has deferred the adoption of a regulation superseding Regulation F, series of 1917, until he can communicate with counsel for the several Federal Reserve Banks.

In order, however, that the Federal Reserve Banks may be fully advised as to the method of procedure to be followed in handling the applications for trust powers, the Board has adopted the inclosed amendment to Article II of Regulation F, series of 1917.

NOVEMBER 22, 1918.

AMENDMENT TO REGULATION F, SERIES OF 1917.

Article II, Regulation F, series of 1917, which relates to applications for permission to exercise trust powers, has been amended by the Board to read as follows:

II. Applications.

(a) *Original application.*—A national bank which has not heretofore been granted a permit to exercise any trust powers desiring to exercise any or all of the powers authorized by section 11, subsection (k), of the Federal Reserve Act, as amended by the act of September 26, 1918, shall make application to the Federal Reserve Board on a form approved by said Board (Form No. 61a). Such application shall be forwarded by the applying bank to the chairman of the board of directors of the Federal Reserve Bank of its district, and shall thereupon be transmitted to the Federal Reserve Board for its action.

(b) *Supplementary applications.*—A national bank which has heretofore been granted permission to exercise any or all of the fiduciary powers enumerated in section 11 (k) as originally enacted, desiring to apply for permission to exercise additional powers, shall make application to the Federal Reserve Board on a form approved by said Board (Form No. 61b). Such application shall be forwarded to the Federal Reserve Board in the same manner as an original application.

(c) *Pending applications.*—A national bank, whose application for permission to exercise trust powers was filed before the passage of the act of September 26, 1918, if it desires to exercise the additional powers enumerated in section 11 (k), as amended, may withdraw such application and file a new application on Form 61a. If the original application is not withdrawn, the Board will act upon it as to the powers enumerated in such application, and the applying bank may later file a supplementary application for the additional powers desired on Form 61b.

(d) *Applications heretofore refused.*—A national bank whose application for permission to exercise trust powers has heretofore been refused must file a new application on Form 61a if it desires to exercise any of the powers enumerated in section 11 (k) as amended.

War tax on currency shipments.

(To Federal Reserve Banks.)

In connection with your absorption of the cost of shipping currency, there are quoted below inquiry received by the Board and response thereto:

"There is inclosed herewith a file on the subject of exemption of war tax on currency shipments to and from Federal Reserve Banks.

"We shall be very glad to have some advice as to whether we should pay full express rates on shipments or whether the Federal Reserve Bank will be construed as a department of the Government justified to sign the exemption certificate provided."

"Reference is made to your letter of November 18, regarding war tax on currency shipments to and from Federal Reserve Banks and file accompanying same.

"On page 931 of the FEDERAL RESERVE BULLETIN for December, 1917, there was published an opinion of the Commissioner of Internal Revenue that Federal Reserve Banks are not subject to tax upon charges for telephone, telegraph, and express service when such charges fall directly upon the Federal Reserve Bank."

NOVEMBER 21, 1918.

Election of class A and class B directors.

(To Federal Reserve agents.)

The Board has been asked whether, under section 4, as amended by act of September 26,

a chairman holding an election of directors may refuse to count the vote of a member bank unless within the time limit prescribed by him the bank has filed the necessary certificate authorizing one of its officers to cast its vote. The Board has ruled that a member bank is entitled to have its vote counted if the certificate in question is filed with the chairman at any time before the polls are closed.

NOVEMBER 19, 1918.

Maintenance by nonmember banks of clearing accounts with Federal Reserve Banks.

(To Federal Reserve Banks.)

The Board has had frequent inquiries as to the propriety of permitting nonmember banks which maintain accounts with Federal Reserve Banks for purposes of exchange or collection to make use of the expression "Clearing member of the Federal Reserve Bank."

It would be improper to permit this, for the reason that the banks are not members, nor is the term "clearing member" authorized by the act.

Any reference which may be made by a nonmember bank to its account with the Federal Reserve Bank should set forth the relation which actually exists, and if nonmember depositing banks wish to call attention to the fact that they have accounts with the Federal Reserve Banks for exchange and collection purposes, they may use this expression: "Nonmember depositor of the Federal Reserve Bank, through which checks on this bank are collectible."

This is a brief statement of fact and can not convey any misleading impression as to the bank's relation with the Federal Reserve Bank.

This is a formal ruling which supersedes all informal rulings previously made on this subject.

NOVEMBER 22, 1918.

Eligibility of Federal land bank bonds.

(To an individual.)

Receipt is acknowledged of your letter of November 1, in which you asked to be advised "if Federal Reserve Banks are permitted under the rules of the War Finance Corporation, to advance funds on Federal land bank bonds or joint stock land bank bonds, up to 100 per cent of their par value; or if not, up to what per cent such an advance may be made by the Federal Reserve Banks."

In reply you are advised that the War Finance Corporation has no jurisdiction over operations of Federal Reserve Banks, and it is not entirely clear to what rules of that corporation you refer in your letter. Your attention is directed, however, to section 27 of the farm loan act, approved July 17, 1916, which provides in part as follows:

Any Federal Reserve Bank may buy and sell farm loan bonds issued under this act to the same extent and subject to the same limitations placed upon the purchase and sale by said banks of State, county, district, and municipal bonds under subsection (b) of section 14 of the Federal Reserve Act, approved December 23, 1913.

Subsection (b) of section 14 of the Federal Reserve Act reads as follows:

Every Federal Reserve Bank shall have power:

(b) To buy and sell, at home or abroad, bonds and notes of the United States, and bills, notes, revenue bonds, and warrants with a maturity from date of purchase of not exceeding six months, issued in anticipation of the collection of taxes or in anticipation of the receipt of assured revenue by any State, county, district, political subdivision, or municipality in the continental United States, including irrigation, drainage, and reclamation districts, such purchases to be made in accordance with rules and regulations prescribed by the Federal Reserve Board.

As the bonds to which you specifically refer mature in 1938 they could hardly be treated as eligible for purchase by Federal Reserve Banks.

NOVEMBER 6, 1918.

Use of gold coin for Christmas presents.

The Board has been asked for an expression of its views as to the propriety of using gold coin for Christmas presents. About a year ago the Board issued a statement giving some reasons why, in its opinion, it was not desirable to use gold coin for such purposes. There are still some objections to the use of gold coin for gifts, for we are not yet through with war financing, and the problems which grow out of the war and reconstruction will be live ones for many years. There is a world-wide movement to discourage the use of gold coin as a circulating medium upon the ground that gold should be concentrated in the banks as reserve and used in the settlement of balances growing out of international transactions.

New bills can be obtained readily for use as presents, and Liberty bonds, war savings certificates, and United States thrift cards can be used in the same way to good advantage. We should continue to encourage habits of thrift and should frown upon extravagance and the wasteful employment of anything which can be diverted to a useful purpose.

NOVEMBER 26, 1918.

RULINGS OF THE DIVISION OF FOREIGN EXCHANGE.

Following are formal and informal rulings made by the Federal Reserve Board, Division of Foreign Exchange, under Executive order of January 26, 1918, and subsequent to the issuance of "Instructions to dealers" of January 26, 1918. The terms "person," "dealer," "correspondent," "customer," and such other terms as have a special meaning, are used in these rulings as prescribed in the Executive order above.

Censorship.

In view of the frequency of the omission of the word "dealer" on financial cables going out of the United States, and the delay to cables resulting therefrom, it has been thought well to reprint the following from "Instructions to dealers," issued under the Executive order of the President on January 26, 1918:

For the purpose of preventing unnecessary friction and delay to "dealers" in the carrying on of their foreign business, the Board has made arrangements for the expediting of the foreign mail of holders of registration certificates. The detail of this arrangement can not be outlined, but in order to obtain the quicker service and to conform with these regulations "dealers" must stamp their envelopes with the words "Foreign exchange, U. S. F. R. B. No. —." For the sake of uniformity and greater efficiency, stamps should be made as follows:

Foreign Exchange
U. S. F. R. B. No. —,

and should be placed upon the lower left-hand corner of the envelope in red ink. Each "dealer" should use the number of his registration certificate.

Particular attention is called to the fact that no one other than a "dealer" is authorized to use such stamp, and if attempted it will result in extended delays of such correspondence while its character is being particularly looked into. The foreign exchange censors will have complete lists of "dealers" holding registration certificates.

"Dealers" are prohibited from inclosing customers' mail in envelopes stamped for the foreign exchange censor except under the following circumstances: Where a "dealer" is engaged in some transaction which should be expedited in the interest of the United States, he may submit the facts to the Federal Reserve Bank of his district, and such bank, in its discretion, may make the following notation on the letter of the customer which the "dealer" desires to inclose: "For exchange censor. Approved, Federal Reserve Bank." This notation must be signed by an officer of the bank. Such notation may also be made by the Foreign Exchange Division of the Federal Reserve Board. To prevent misunderstandings, the attention of "dealers" is called to the fact that under these regulations it will be necessary for them to stamp all their mail whose destination is outside of the United States, as heretofore outlined, without regard to whether there is special need for expedition.

The same stamp must be used on cablegrams and must be placed on the lower left-hand corner of every cablegram filed for transmission.

All cablegrams must also bear as the last word of the signature the word "dealer." (Example: Cablegram to Foreign Bank, London, from Third Bank, Chicago, would read:

Foreign Bank, London.
Charge our account and pay John Jones, London,
one hundred pounds.
Third Bank, dealer.

Both the Postal Telegraph Co. and the Western Union Telegraph Co. have agreed to carry the word "dealer" as far as the cable censor at the local rate for one word from the point of sending to the station of censorship. The censor will delete the word "dealer" before the message is released. (The censor's office is not in position to assume the cost of carrying the word "dealer" if through oversight it should not be deleted, but very positive regulations have been issued by the chief cable censor and errors should not occur.)

No person other than a "dealer" is authorized to use either the stamp or the word "dealer" in the manner outlined, and any attempt to do so will be dealt with as the occasion warrants.

Purchase of securities abroad.

Until otherwise instructed, "dealers" in foreign exchange, as defined in the Executive order of the President of January 26, 1918, are prohibited from transferring funds to foreign countries for the purpose of purchasing securities, or making investments of any nature whatsoever, for their own account or that of other "persons," as defined in the Executive order referred to, except the building up of deposit accounts in connection with their regular foreign exchange business, without first obtaining the approval of the Division of Foreign Exchange of the Federal Reserve Board.

In connection with this order, attention is called to the fact that no "person" in the United States can, under the law, carry out any such transactions unless he is a "dealer" or, if the transactions in themselves do not require that he be a "dealer," that they be carried out through a regularly registered "dealer."

OCTOBER 28, 1918.

Credits covering goods in warehouse.

Until otherwise instructed, "dealers," as defined under the Executive order of the President of January 26, 1918, are hereby prohibited from issuing letters of credit or making transfers of funds, for the purpose of purchasing goods to be held in warehouse for future and indefinite shipment, without first obtaining the approval of the director of the Division of Foreign Exchange, Federal Reserve Board.

NOVEMBER 4, 1918.

LAW DEPARTMENT.

Uniform negotiable instruments law adopted in California.

In an informal ruling of the Board published on page 971 of the October (1918) BULLETIN, California was mentioned as one of the States in which the uniform negotiable instruments law had not been adopted. Since the publication of this ruling, the Board's attention has been called to the fact that this law was adopted in California by an act approved June 1, 1917 (California Statutes, 1917, p. 1533).

Stamp Tax on drafts in connection with shipments of goods to seaboard.

The Board's attention has been called to the fact that some difference of opinion exists as to the proper interpretation of the ruling of the Commissioner of Internal Revenue, published on page 614 of the July (1918) BULLETIN, in regard to the application of the stamp tax to drafts drawn in connection with shipments of goods to the seaboard for export.

To clear up any misunderstanding, the question was again referred by counsel of the Board to the Office of the Commissioner of Internal Revenue, and there is published below a copy of the counsel's letter and the reply thereto of the commissioner.

WASHINGTON, November 6, 1918.

SIR: In June we had some correspondence on the subject of revenue stamps on drafts drawn to finance sales of goods to the allied purchasing commission, and your office finally ruled as follows:

"It is accordingly held that the stamp tax imposed by subdivision 6 of Schedule A of title 8 of the act of October 3, 1917, does not attach to drafts on domestic banks in connection with the shipment of articles from the interior to the seaboard where such articles have been sold to the United States agent of a foreign purchaser for export under circumstances entitling the transportation within the United States to exemption from the transportation tax."

The Federal Reserve Banks and member banks were advised of this ruling through the FEDERAL RESERVE BULLETIN, but it appears that the interpretation placed upon it by banks in different parts of the country is not uniform. In some instances counsel have advised the banks that drafts drawn in connection with the sales to the allied purchasing commission are subject to the tax unless accompanied by shipping documents or other evidence showing that the period the draft is to run is more or less coincident with the time consumed in the shipment from the interior point to the place from which the exportation is to be made.

In other instances counsel have taken the position that if the drafts are drawn in connection with the actual sale to the allied purchasing commission, they are exempt from the stamp tax, whether or not the time the draft is to run is a longer period than would ordinarily be consumed in the domestic shipment of the goods. In order that the matter may be definitely determined, will you be good enough to let me know which of these is the correct interpretation of your ruling?

Respectfully,

M. C. ELLIOTT, Counsel.

OFFICE COMMISSIONER OF INTERNAL REVENUE,
Washington, November —, 1918.

SIR: Reference is made to your letter of November 6, 1918, relative to the method of determining whether a draft on a domestic bank is exempt from stamp tax within the ruling of the letter to you on June 19, on the ground of its connection with an export transaction.

The reason for holding such a draft exempt is, as stated in the letter of June 19, its direct connection with a process of exportation; it provides a financing method which permits the exportation to begin. This connection depends solely on the function of the draft and not at all on the length of time which the draft has to run. The letter of June 19, stating that even though the draft is to be paid before the ocean voyage begins the connection with the export transaction is not thereby affected necessarily holds that the length of life of the draft is immaterial on the question of exemption.

The ground of exemption is the function of the draft to finance an export transaction. Therefore the draft and attached papers should be examined to see that the draft represents all or part of the price of goods bought for export and placed in a course of export in one of the ways specified in article 31 of Regulations 42.

Respectfully,

DANIEL C. ROPER, Commissioner.

[Treasury Department. United States Internal Revenue. Regulations No. 42.]

ART. 31. Charges on property shipped for export and actually exported exempt from tax.—Amounts paid for the exportation of property in the course of exportation to foreign ports or places are held to be exempt from the tax imposed under section 500 of the act. Property may be deemed to be in the course of exportation when it moves under any of the following conditions:

- (a) Under a through export bill of lading.
- (b) Under a domestic bill of lading or receipt on which, at point of origin, "For export", is marked or the foreign consignee and destination are specified.
- (c) Under a through bill of lading or through live-stock contract to a place in Canada or Mexico.
- (d) Under a domestic bill of lading or receipt marked at point of origin, "For export", wherein the Food Administration Grain Corporation, Director of Overseas Transportation, British Admiralty, or any export representative of the United States or of a foreign Government, approved by the Commissioner of Internal Revenue, is named as consignee.

Provided, That in either case (a) or (b), the property so consigned be delivered to a vessel clearing to a foreign port or place, and a ship's receipt is taken therefor, or, in case (c) the property so consigned be delivered at a place in Canada or Mexico, or, in case (d), the property so consigned be delivered to such consignee.

If, when property is delivered to a carrier for transportation, it clearly appears that such goods are in the course of exportation as provided in clause (a), (b), (c), or (d), no tax shall be collected on the amounts of any otherwise taxable charges prepaid upon such property; but, unless such property is delivered in such manner as is specified in the proviso to such clauses, the total transportation charges on such property, from the point of origin to destination, are subject to the tax, and such tax must be collected as and when the transportation charges thereon are collected, if the transportation charges be billed collect, or, upon delivery of the consignment, if the transportation charges, or any of them, be prepaid.

SUMMARY OF BUSINESS CONDITIONS NOVEMBER 23, 1918.

District.	General business.	Crop condition.	Industries of the district.	Construction, building, and engineering.	Foreign trade.	Money rates.	Railroad, post office, and other receipts.	Labor conditions.
No. 1—Boston.....	Hesitating.....		Busy.....	Increase in value.....	Decrease.....	Firm.....	Post-office receipts mixed.	More plentiful.
No. 2—New York....	Volume decreasing, except retail sales; profits decreasing; collections good.	Good.....	Reduced activity; many orders cancelled.	Normal seasonal inactivity; outlook improved by removal of government restrictions.	Stimulated interest; some uncertainty.	Slightly lower.....	Increase.....	Very little shortage since armistice was signed.
No. 3—Philadelphia..	Very good.....	Good.....	Very busy.....	Building at low ebb, but prospects bright.		Continue firm.....	Increasing.....	No labor disturbance expected.
No. 4—Cleveland....	Satisfactory.....	do.....	Busy.....	Inactive.....		Tendency to increase.	Increase.....	Scarce.
No. 5—Richmond....	Resuming activity after effects of influenza.	Tobacco active at high prices; cotton held for 30 cents.	Limited only by supplies and labor.	Preparations being made to resume activity.	Inactive.....	Active demand, 6 per cent.	Railroad facilities improving; post office in full volume.	Thought to be improving.
No. 6—Atlanta.....	Satisfactory.....	Good.....	Continue active..	Very quiet.....	Quiet.....	Stationary.....	Stationary.....	Fair.
No. 7—Chicago.....	Good but reflecting conservatism.	Excellent.....	Active.....	Dull but showing improving tendency.		Firm at 6 per cent.	Post-office receipts decrease.	Scarce and restless.
No. 8—St. Louis....	Good.....	Winter wheat excellent.	Readjusting to peace basis.	Quiet.....		Firm.....	Increase in postal receipts.	Improving.
No. 9—Minneapolis..	do.....		Slowing down....	Slow.....		do.....	No change.....	Good.
No. 10—Kansas City..	Continues active..	Condition normal; outlook excellent.	Active.....	Dull but promising revival.	Heavy on meats...	Firm, 6 to 7 per cent.	Heavy.....	Recovering from influenza.
No. 11—Dallas.....	Satisfactory.....	Condition good; outlook promising.	do.....	Inactive.....	Increase in October.	No changes; firm at 6 to 8 per cent.	Railroad increased; post office 21.8 per cent increase in October.	Unsettled and unsatisfactory.
No. 12—San Francisco.	Volume large, collections good.	Good.....	do.....	Decreased; new projects under consideration.	Increasing.....	Firm and stationary.	Increasing.....	Full employment.

DECEMBER 1, 1918.

FEDERAL RESERVE BULLETIN.

1219

GENERAL BUSINESS CONDITIONS.

There is given on the preceding page a summary of business conditions in the United States by Federal Reserve districts. These reports are furnished by the Federal Reserve agents, who are the chairmen of the boards of directors for the Federal Reserve Banks of the several districts. Below are the detailed reports as of approximately November 23:

DISTRICT NO. 1.—BOSTON.

The capitulation of the central powers and the cessation of hostilities has so far overshadowed all other factors in the business situation as to make them wholly negligible.

In this district war industries had reached their height in late September, and efforts were being devoted almost entirely to the prosecution of the war. By the middle of October peace discussions were causing uncertainty and general hesitation and, and this month finds business face to face with the readjustment period.

Already there are reports of canceled war contracts and of labor being less freely employed, and labor leaders are on the defensive lest there be a return to prewar wages and hours.

Next in importance to labor is the question of high cost inventories and the task of those having a large stock carried at war prices to continue domestic business on a profitable basis while prices are becoming adjusted.

The money market remains inactive with no change in the level of rates, 6 per cent being quoted for practically all classes of accommodation. Banks have experienced some demand the last few days from customers who have delayed expenditures until the close of hostilities and are now either drawing down their balances or borrowing to carry out their purposes.

Cotton mills are well sold up for the balance of the year and buyers have little interest beyond small lots for immediate delivery. As a consequence, business in mill centers is extremely quiet. The labor situation is much better, and mills are beginning to have old employees return who have been engaged in munition plants and are now out of employment. Until manufacturers can ascertain what part of their machinery is to be available for civilian orders of an entirely different character

they have little interest in the market for raw material, and purchases are unusually small.

The release of wool for civilian needs is the principal feature of that market. However, manufacturers are not anxious to make large purchases until they are more certain of future price levels. The wool trade will be in a good position in case of a decline in the market, as the entire supply is owned by the Government, which is taking the clip being received from the West. Manufacturers have so far had no war orders canceled, upon which work had commenced, although the Government will permit of cancellation at the option of the mill. It is estimated that present contracts will carry them until well toward the end of the year.

As a result of the armistice, price restrictions on shoes have been removed, although the restriction on colors will remain until June 1, 1919. The retail shoe dealers are, in consequence, somewhat uncertain as to whether or not they should stock up heavily for the spring trade. Manufacturers, however, have had few cancellations of spring orders. The Italian Government is in the market for a large number of civilian shoes, and it is expected that orders from other foreign countries will follow.

In the dry-goods trade conditions remain unchanged. There are many inquiries as to the future course of prices, and some hesitation, but practically no orders are being canceled. Dry-goods merchants turn their inventories over several times a year, and even in a falling market should be able to liquidate without serious loss.

Boston clearing-house figures compare as follows:

	Nov. 16, 1918.	Oct. 11, 1918.	Nov. 17, 1917
Loans and discounts.....	\$569,900,000	\$521,285,000	\$501,874,000
Demand deposits.....	506,633,000	450,092,000	448,815,000
Time deposits.....	13,515,000	14,685,000	26,560,000
Due to banks.....	116,028,000	120,528,000	153,431,000
Exchanges.....	318,703,051	246,191,936	374,002,763

¹ 5 days.

Building and engineering operations in New England from January 1 to November 14, 1918, amounted to \$139,206,000, as compared with \$189,058,000 for the corresponding period of 1917.

The receipts of the Boston post office for October, 1918, show an increase of \$138,786.80,

or about 17 per cent more than October, 1917. For the first 15 days of November, 1918, receipts were about 19 per cent or \$100,752.48, less than for the corresponding period of last year.

DISTRICT NO. 2—NEW YORK.

Attention in this district is centered on the problem of readjusting business to a peace basis, different lines reacting in different manners to the change in conditions since the armistice was signed. In general, the volume of business continued above normal until about November 10, and then contracted with gradually increasing rapidity during the next fortnight. Sales by retailers, which were somewhat restricted at the beginning of the period under report because of the influenza epidemic and the spirit of war economy, showed a decided gain toward the end of November. On the other hand, sales of manufacturers, jobbers, and retailers decreased considerably after the armistice was signed, especially in those lines where it was felt that new conditions would cause a fall in prices, the tendency being to buy only for immediate requirements. Supply of materials is generally satisfactory. The general rise in prices was checked somewhat but there was no widespread decline. Profits, as for some time past, are reported as decreasing, due to high wages, the shortage and inefficiency of labor, and in some lines to large overhead expenses as compared with the volume of business done. The tendency to shorten credits continues, and collections are, on the whole, good.

Labor.—Since the signing of the armistice the labor shortage has almost disappeared, except for a very slight scarcity in the unskilled class and of certain kinds of clerical workers. Many firms report that former employees are reporting back for their old employment and that others are applying for work. There is little unemployment, however, except that just at present some workers, who have been employed away from their homes in war plants, are returning to seek permanent positions. The New York State Department of Labor reports that the record August pay roll in the State was surpassed by that of September by 5 per cent, but that October showed a falling off of about 4 per cent from the September aggregate. The decline, both in number of workers and in aggregate wages, was felt in all of the eleven industry groups reported on, being heaviest in the paper and textile trades.

The decrease was due primarily to the recent influenza epidemic.

Agriculture.—Crops were generally satisfactory. Apples, hay, oats, and onions were very good; other products fair, except grapes, which fell 40 per cent below normal.

Foodstuffs.—Trading in coffee on the produce exchange has been suspended since November 1, except for liquidation of certain contracts. Prices are firm and show little change. There was no noticeable change in sugar, and the recent increase in allowance to consumers has had little effect on the demand. The demand for most canned goods, except tomatoes, is strong, but the supply is very light. In general, buying by retailers has become more conservative.

Building.—Building, other than Government construction, continues to be inactive. With the lifting of the limitation on the production of building material and on construction work, however, the outlook is for increased activity. There is a fair amount of uncompleted work to be finished, but the real effect of the raising of this limitation, it is expected, will not be felt until next spring.

Railroads.—The average daily loading of cars of export freight at New York during October was 44.5 per cent higher than during September, due to the rapidly increasing volume of freight for the United States Government. A comparative statement of traffic handled at New York for 23 days ending October 14 shows an increase of 19.4 per cent in the tonnage as against a decrease of 9 per cent in the number of cars used to carry that increased tonnage.

Foreign trade.—The signing of the armistice was a decided stimulant to interest in foreign trade, offset, however, to some extent by limited shipping facilities and by continued political disturbances in some of the foreign countries. There is considerable agitation just now for improvement in port and terminal facilities at New York City.

Textiles.—The cotton market has been irregular throughout the period under report. Short sales are now forbidden by Government order. With wool, the domestic supply is small and the price is fixed. There was no release of wool for civilian purposes until just at the end of the period. In woollen goods, speculators have cut their prices 15 per cent to 25 per cent, and in cotton goods quotations are down 1 to 3 cents a yard. Silk prices are rather firm.

Coal.—At New York City the supply of bituminous coal is ample, but there is a shortage in anthracite of domestic sizes. Outside the city the fuel supply is reported as satisfactory.

Paper.—The demand in the paper industry has been outrunning the supply, but with the announcement of the signing of the armistice a slight hesitancy in placing orders was apparent.

Banking.—Clearings at New York for the 10 months ending November 1 show a gain of 7.3 per cent over the same period in 1917. They increased slightly after November 14. Loans of New York City banks increased during October somewhat faster than did their demand deposits, including Government deposits. Outside New York City, banks in general report that their deposits have increased both in amount and in the number of accounts.

Securities.—The stock exchange has been fairly active, with attention directed more and more toward those stocks which would presumably benefit by peace. Stock prices were irregular during November, the general list rising during the first week, but falling during the the next fortnight to a level slightly below that of the beginning of the month. Bond prices continued their upward trend through the first week and then showed little net change during the next two weeks. Liberty bonds are fairly active, with no marked changes in quotations.

DISTRICT NO. 3—PHILADELPHIA.

A more normal situation has resulted from the waning of the influenza epidemic. Retail trade has improved, and merchants express the belief that the buying during the balance of the year will more than make up the loss caused by the epidemic.

In wholesale lines, however, conservatism is manifest, many buyers displaying a disposition to hold back orders until more definite knowledge is available concerning the trend of prices, deliveries, etc. At the same time, inquiries continue fairly numerous, and though purchases are mainly in small lots to cover immediate requirements, the volume of business in the aggregate is very encouraging. Manufacturers continue busy, practically all the leading mills and factories operating to capacity and most of them still complaining of the scarcity of help.

While there is a strongly defined tendency to mark time trying to sketch out the probable breadth of the readjustment on account of the

ending of the war, the consensus of opinion is that the period of readjustment will be relatively short, to be followed by an era of industrial activity in which the world will be reconstructed.

Overtime and Sunday work has been abolished in war and shipbuilding industries, but it is believed that the campaign for construction of ships in the yards already built will be carried steadily forward for some time.

The foreign commerce of the district, which has been choked up by the war, is expected to revive and create a new demand for labor. In addition, manufacturers expect a tremendous domestic demand for a great variety of articles which our people have had to dispense with because of the war. Municipal expenditures for needed improvements, held in abeyance during the war, are also under way. Another method of providing needed work will be railroad improvements and extensions.

The situation as regards supplies of fuel reflects considerable improvement, no undue scarcity being apparent, despite the loss in output occasioned by the recent epidemic. The shipments of anthracite for the month of October, as furnished to the Anthracite Bureau of Information, amounted to 6,286,366 tons, as compared with 7,110,950 tons for October last year and 6,234,395 tons for the month of September this year.

Railroad freight car movements continue heavy. The loaded car movement over the Pennsylvania Railroad at Lewistown Junction during October totaled 105,589 cars, as compared with 108,481 in September and 94,557 in October, 1917. Eastbound shipments of bituminous coal increased 40.5 per cent over October of last year; miscellaneous westbound decreased 24.1 per cent. During the first 14 days of November the number of loaded freight cars passing the junction was 46,027, as compared with 41,389 during the same period of last year.

While total pig-iron production in October surpassed that of September, the daily rate was smaller; the output per day in October, because of the restraint imposed by the influenza epidemic, fell to 112,482 tons from the high record of 113,942 tons in September, and the number of active furnaces on November 1 was unchanged at 365. Yet the aggregate production of 3,486,941 tons in October has only been exceeded by the 3,508,849 tons of October, 1916. There are indications that a considerable volume of iron and steel business may soon be placed. Stove manufacturers and

others who have been working under restrictions are already looking forward to a period of greater freedom and are inquiring as to whether they can obtain material without priority orders. It is confidently expected that as soon as the policies dictated at Washington will permit, the placing of orders by "nonessential" users will be started. There is every prospect that eventually there will be a period of steady, orderly demand.

There has been a downward tendency in cotton-yarn prices while the Government is adjusting contracts. The Government controls the wool situation, owning practically all the wool in the United States. Some is now being released for civilian use.

Mills manufacturing book and high-grade printing papers are running on about a 75 per cent basis, due chiefly to labor shortage and a scarcity of wood pulp. The domestic consumption is not more than 40 per cent of normal, but the excess in production is readily absorbed by the demand for export. As the deficiency in the wood pulp can not be overcome before next summer, the output of fine printing papers during the first six months of 1919 may be far below normal. The only possible relief appears to be in the hope that the Scandinavian countries have during the war accumulated a large tonnage of pulp, which with the release of ships will flow to this country.

Sentiment among builders is particularly optimistic, as they look for a pronounced increase in activity with the removal of Government restrictions and the probably better supply of labor that is expected to follow a curtailment of Government construction. There has not yet been much change in lumber, but shipments continue to improve and prospects are regarded as brighter. Building at present is at the lowest ebb for a decade, the figures for October being as follows:

	Number of permits.		Values.	
	October, 1918.	October, 1917.	October, 1918.	October, 1917.
Allentown.....	13	40	\$34,685	\$77,725
Altoona.....	40	22	10,160	7,651
Atlantic City.....	61	110	18,453	124,113
Harrisburg.....	16	26	7,150	146,160
Lancaster.....	8	20	3,730	8,800
Philadelphia.....	333	552	843,520	2,030,475
Reading.....	13	32	1,775	24,125
Scranton.....	12	35	10,420	236,905
Wilkes-Barre.....	49	45	13,233	41,851
Williamsport.....	4	9	400	60,872
York.....	33	31	7,580	42,450

The money market has remained firm during the past month, the prevailing rate for paper being 6 per cent, with the banks buying very little.

Loans and discounts to member banks by the Federal Reserve Bank during the month of October amounted to \$215,323,196, of which 89 per cent represented notes secured by Liberty bonds or certificates of indebtedness. Bankers' acceptances purchased amounted to \$30,976,703. Total discount and investment operations for the first 10 months of the year amounted to \$1,146,822,763.

DISTRICT NO. 4—CLEVELAND.

This district, by reason of its large part in the manufacture of war materials and its prominence in the production of basic steel and iron, is consequently affected possibly more than others by the signing of the armistice, and adjustments will be correspondingly severe. Anticipated changes, together with peace celebration and the epidemic of influenza, have decreased production. However, there is little pessimism about the ultimate future, and it is believed that in view of the dammed-up domestic demand and probable export requirements, necessary readjustments can be accomplished without undue strain to the business fabric.

Manufacturing.—Manufacturers are concerned with the adjustments which peace will finally impose. Cancellation of Government orders, of course, is expected and has caused some uneasiness and speculation as to future prices and conditions. Up to the present time but little slackening on this account has been noticed.

Plate mills are running as full as conditions will permit. Mills engaged in producing cotton ties report that orders have been filled and operations suspended for the season. Inquiries for pig iron are few. The tonnage moving is chiefly of the steel-making grade.

Up to the middle of November the iron and steel trade generally has been satisfactory, and while some inquiry has been made as to terms upon which cancellation of orders might be made, yet this is to be expected and is not causing any uneasiness. It is believed that conditions in these lines will right themselves very quickly.

Many industries outside of those devoted to war goods report large orders on their books not subject to cancellation, and considerable new small business is being offered.

There are many indications of a return to their respective fields of industries which have

been held in check by reason of the suspension of the law of supply and demand and through Government control.

Clay products.—Manufacturers of building brick and tile report a scarcity of orders. Other ceramic industries are reported quite active. Little change is noted by window glass manufacturers.

Fuel.—The demand for coke shows some slackening, due to the belief that peace will bring lower prices. The epidemic of influenza has been most severe in the coal and coke regions and has caused a very marked decrease in the output. This condition prevails generally throughout all the coal fields.

In places in the Kentucky fields production is reported to have been cut at least 60 per cent for a period of about three weeks.

Agriculture.—Crops for this district have been harvested for the year and with very few exceptions it has been an exceptionally satisfactory year to the farmer, both on account of the yield and the price obtained for his products. All sections report a large acreage sown in wheat, and its condition is all that could be expected at this time.

In the northeastern section the apple and grape crops have been very good, although the potato crop is reported to be only 80 per cent of normal.

Corn husking is practically finished, and this crop is very much more satisfactory this year, both in yield and in condition, the late fall allowing for proper maturing.

Generally it is believed that there has been an increase in the number of live stock over a year ago. There have been no epidemics or disease, and hogs have been practically free from cholera.

The tobacco crop is a very large one. It is said to weigh heavier than usual this year, and this, together with the increased acreage, will make a very large tonnage. It is probable that the moving of this crop will tax the banks in the affected localities to the extent of their credit powers.

Agriculture in this district has kept step with the country at large in its "speed-up" program made necessary by reason of the war.

The Governor of Ohio has named Thanksgiving week as a time to be set apart for celebration of the culmination food production program and big patriotic mass meetings will be held at each county seat on Saturday of that week.

Labor.—The prevalence of influenza has had a very marked effect upon the labor supply,

particularly in steel and coal centers. Generally throughout the district it has tended to lessen production. Aside from this, the labor situation remains practically as heretofore—a very strong demand, and shortages in localities.

The cancellation of calls in the selective service has tended to relieve a heretofore expected shortage on this account. It is thought that the return of the men from the camps and from foreign service will gradually relieve the strong demand. The changes likely to take place in the industrial field tend to unsettle labor. Improvement in supply of skilled labor in some lines is noted.

Collections.—In a number of instances there is reported a falling off in collections during the past few weeks and in some cases it is reported that pressure is necessary. These reports, however, are sporadic and a number of large concerns report that collections continue to be exceptionally good and that they expect little difficulty along this line by reason of the adjustments which will be made.

Transportation.—No complaints are registered this month of hardships occasioned by lack of proper transportation facilities, and in consequence it is believed that the situation is better in hand than has been the case since last fall.

Rolling stock and rails have been taxed to their utmost during the past year and are believed to be in great need of repairs, and unless these have prompt attention transportation companies will be greatly handicapped in the future.

Mercantile lines.—Wholesale and jobbing houses report some hesitation in buying and also state that business is not quite up to the standard of the past few months, due in part to the prevalence of influenza. The last few days are said to have shown improvement in nearly all lines. However, speculation as to the effect the ending of the war will have on present values tends to retard the placing of orders.

Altogether the jobbing and wholesale business may be said to be in a satisfactory condition.

In the retail lines there was a decided falling off for a time, but buying is now gathering impetus, and with the lifting of the quarantines and the coming of seasonable weather it is thought it will show an improved condition.

Money and investments.—The demand for money is increasingly firm and there is a tendency to higher rates. Bankers say that concerns whose business has been held in

abeyance through Government control and other reasons are now looking forward to means for financing their affairs when the restrictions have been lifted. It is believed, however, that care is being exercised and discrimination used until Government financing has secured its requirements.

Building.—The building in process of construction is confined altogether to that for industrial purposes and for the housing of workmen, which is absolutely needed. The outlook for this industry, however, is good and undoubtedly as soon as restrictions have been lifted there will be general activity. However, until the bans have been removed this industry will probably be less active than heretofore on account of the cessation of the demand for essential building.

DISTRICT NO. 5—RICHMOND.

The foremost event in this district during the past month was its subscription to fourth Liberty loan bonds of \$352,400,000, the allotment being \$280,000,000. This gave the fifth district a percentage of 125.95, which was excelled only by the Boston district.

Out of approximately \$352,400,000 of fourth Liberty loan bonds subscribed for in this district, \$178,700,000 were paid for in full on October 24, and upon the remaining \$173,700,000 the initial payment of 10 per cent was made.

In making these payments, \$96,000,000 was paid by credit in war loan deposit accounts. Several calls have been made upon these deposits, leaving approximately \$24,000,000 yet unpaid, but the final call will require the payment of this balance November 21.

On November 21 the second payment of 20 per cent on \$173,700,000 of installment subscriptions was due. The actual payments will, of course, exceed the amount due, as some subscribers will exercise the privilege of paying subscriptions in full on a regular installment date. Payments will undoubtedly be made to a large extent by credit in war loan deposit accounts.

The subsidence of the prevalent influenza permitted the reopening of churches, schools, and other places of gathering. The united war work campaign has been brought to a successful conclusion. Richmond has exceeded its allotment of \$416,000, and generally satisfactory returns are anticipated from the entire district.

Trade has been spotted and below normal during the influenza period, but on the whole

prosperous and on a sound basis, both for manufacturers, jobbers, and buyers. Dun's last available monthly report of failures shows 27 in the fifth district, with a total of \$245,000 of liabilities, as against 56 failures, with a total of \$715,000 of liabilities, during September, 1917. Stocks of goods are rather below normal and buyers are cautious at present prices. Collections have been restricted by the influenza, which compelled the closing of the tobacco markets from October 10 to November 2, and by the slump of 5 cents per pound in cotton. The reopening of the tobacco markets has promoted the return to normal conditions and relieved the stagnation to a material extent. The average price of tobacco for the season, to November 1, was 34 cents against 30 cents for the same period last year. The reopening of these markets resulted in a strong demand for currency and the Federal Reserve Bank shipped Federal Reserve notes to the amount of \$7,500,000 in six days.

The production of cotton has been increased by the very open fall weather. The price of spot month contracts in New York on October 14 was 31.45 cents per pound and on November 14, 26.35 cents, a decline of 5.10 cents per pound. Since spot prices in the South fell below 30 cents, farmers have sold very little. Many are storing the staple and, where necessary, are borrowing sufficient amounts to liquidate current obligations. Merchants are getting in hand, or in storage, cotton to protect obligations due them. There is a persistent refusal to sell below 30 cents and many express a determination to hold off for higher prices. This refusal to sell at higher prices when they had the opportunity should be an object lesson. Cotton is urgently needed abroad and foreign shipments would appear to be the only relief from the present embarrassing situation.

Manufacturing continues active with the prevailing restriction of supplies and labor. The effects of the influenza are passing and mills are resuming more normal operations. New business, however, is reported less active.

The coal trade is in better condition than for some months past and no serious shortage of fuel is anticipated. The weather in the district has been unusually open, which has served to reduce fuel consumption.

The large volume of business moving is reflected in an increase of 54 per cent in clearing-house returns. Deposits in member banks have remained fairly satisfactory, but the condition in the tobacco markets referred to has caused some shrinkage. Money is in

strong demand at 6 per cent, and this is reflected in increased demands for rediscounts at the Federal Reserve Banks, both for deposit and installment payments on subscriptions for fourth Liberty loan bonds. The volume of the Federal Reserve Bank loans has approximated \$100,000,000, over 65 per cent of which appears to be on account of bond transactions.

The readjustment period confronting us presents to this district, as well as the whole country, vital questions of interest. As Government demands relax, the tendency will be to release, first, labor; second, material; and third, credit. These much needed essentials can be devoted to peace industries, and will facilitate their return to supplying the enormous reconstruction demands of the world. The trade awaiting the industries of the district promises a continued and more stable prosperity. Restrictions on building and other essential construction are being removed and labor is being affected by the decline in Government activities. All Sunday and extra-time work has been discontinued at the Norfolk Navy Yard and other Government plants and large manufacturers working on Government contracts are following suit. One large corporation which has ceased taking on new employees is allowing its force to be gradually reduced by the natural turnover of employees, and during five days 700 employees have found employment elsewhere and left. As Government requirements for material relax, supplies for private work will be more readily obtainable. As present Government obligations are met and new ones are restricted, national demands on credit will also relax, and we will gradually return to normal conditions. There is a general feeling throughout the district that as soon as the readjustment steps are successfully accomplished, we may reasonably expect good business.

DISTRICT NO. 6—ATLANTA.

The recent decline in cotton has had a depressing effect on business in general, and while it has created somewhat temporary pessimism, the leaders of agricultural, industrial, and commercial enterprises are not inclined to underestimate the Nation's strength and power to recuperate; and a gradual readjustment of business and the proposed plan of demobilization of the Army give hope for a bright future.

The cessation of hostilities, coming as it does just previous to the holiday trade, it is believed will have a better effect on business

conditions than had the war come to a practical end early in the year.

It is an indisputable fact that the present crop has cost more to produce than any crop of cotton ever grown in the district and the growers feel that they must obtain close to 35 cents per pound if they are to realize a profit. This applies to short staple cotton. The long staple cotton situation is reported rather demoralized; the factors are reluctant to furnish advances, and producers are holding, refusing to sell except at fair prices.

The farmers are being morally supported in their holding movement and will probably continue to receive sufficient financial assistance to enable them to hold the bulk of their cotton off the market until higher prices are established.

Business men think that the era of high prices is here to stay for some years because of the fact there is hardly a surplus in any particular line. The sudden termination of the war has caused a let-up in business conditions and there is little tendency to place orders ahead at this time, owing to the unsettled condition of the markets and the uncertainty of the time of withdrawal of Government restrictions. The general consensus of opinion is that we should continue to conserve our resources and restrict credits generally, with the exception that more opportunity be given to those who are undertaking to produce food. During the war little, if any, construction has been carried on. This applies especially to farm buildings, and it is hoped that there will be a loosening up of credit along this line and also of funds to purchase labor-saving machinery for farmers.

While the banks show a general willingness to carry cotton, there is no large borrowing by the producer for the reason that a large majority sold sufficient cotton early in the season at a fair price to liquidate existing indebtedness, and the forced economy and restricted credit due to Government regulation have left farmers in a relatively better position to carry their surplus crop than heretofore. They are also better supplied with cattle and hogs.

The opinion is general that the Government restrictions and regulations should be lifted gradually. The sudden withdrawal of such restrictions would no doubt cause a quick decline in prices; whereas a gradual change will enable business to adjust itself to new conditions.

Banks are heavy holders of Liberty bonds and certificates of indebtedness of their own

investment, and collateral to notes of customers and the sudden withdrawal of restricted credits under Government regulation would cause a sudden and heavy demand for loans, with the accompanying tendency that easy money would tempt many to venture into hazardous investments and expand unwisely. This apprehension of sudden changes in values and prices has surrounded business with an atmosphere of caution.

The plan proposed by the Government in connection with the demobilization of the Army has met with approval, as a too rapid demobilization would have a rather demoralizing effect on labor and business in general. Labor conditions are viewed with extreme uncertainty. Wages paid and rules practiced with reference to compensation and extra time during the war have somewhat demoralized both skilled and unskilled labor for normal conditions, and if the Army is demobilized gradually it will tend to restore activity in lines of industry at wages satisfactory to the manufacturer with corresponding lessening in prices of the necessities of life.

With the prevailing uncertainty and high price of labor and raw materials, manufacturers are inclined to play a waiting game until the situation clarifies, and are not stocking up with manufactured products. Mills are not making contracts for future deliveries except in very small quantities, in view of these changing conditions. The manufacturer is inclined to believe that he will more severely feel the withdrawal of Government regulations and demands for materials and this will, for a time, disrupt lumber, cotton, and mineral products in our section, as these trade organizations during the war have largely surrendered the civilian trade for preferential Government orders and have not had time or opportunity to determine any set policy. While there is a general air of optimism, there appears to be no definite idea as to what the future may bring.

While collections are reported to be equally as good as at this time last year, a considerable portion of these collections is represented in cotton now being held by merchants, and present prices are forcing the merchants to hold the product until they can realize investment represented.

With the contemplated increase in ocean tonnage during the next six months, operators are optimistic as to the demands for naval stores, especially rosin, as such a demand would come at a time when it would be impossible to

increase the production, as the present crop is about gathered. There will be no new production until late in the spring of 1919. This would leave rosin and turpentine in a very strong position with tendencies for upward prices.

The brick and building industry have been seriously handicapped during the war. Brick stocks are now low, and, with little or no stock being accumulated before spring, when the season opens, this indicates higher prices, and the tendency to hold stocks has tightened.

The lumber trade is inclined to be pessimistic, at least as to the next 8 or 10 months, largely on account of the ban placed on shipments of lumber and the lessening of Government demands, and no great improvement is looked for until matters adjust themselves to more normal conditions. The lumber millmen are complaining that shortage and insufficient labor, poor car facilities, and Government restrictions are reducing the output. The cost of manufacturing lumber has been exceedingly expensive. The output is about 30 per cent less, while the cost in conducting the mills shows an increase of about 25 per cent. Considerable decrease in orders is reported, and it is believed that Government requirements will not be in sufficient volume to keep the mills fully employed.

The mercantile business, while reported fair, is not very good, owing to the influenza epidemic, which prevented many traders from visiting stores, and resulted in a considerable curtailment of sales. Business, however, is increasing, and a large holiday trade is anticipated.

There is submitted herewith data showing the loss of live stock in States in this district, due to killing on railways' right of way.

Georgia.....	\$300,000
Florida.....	\$350,000- 375,000
Alabama.....	150,000- 160,000
Mississippi.....	275,000- 300,000
Louisiana.....	300,000

The amount shown represents the value of the animals killed during 1917. Of course, the increased prices in meat and leather would now make the prices much higher. Investigation shows that the great majority of the animals killed were immature—that is, young stock—and within a few months would have been of greater value, both from a food as well as a financial standpoint. The State councils of defense have inaugurated campaigns looking to reduction of killing of live stock, appealing to officials of railroads, employees, and the general public

to exercise all diligence to obviate this big waste.

In the Alabama coal fields the influenza epidemic was disastrous to the coal operators in October. About 30 coal mines were forced to shut down. The output for September, 1918, was 1,544,769 tons; for October, 1918, 1,425,219 tons—a loss in October, as compared with September, of 119,550 tons. More mines are now in operation and an increased output is shown. Railroad service is reported improved. It is also claimed that within the next 10 to 15 days all of the mines in this district will be opening and that conditions will soon become normal.

The pipe plants (except the soil pipe people) are practically out of business at the present time, except for filling munition orders for the Government. They have no open trade and can have none so long as the transportation facilities and Government restrictions are in force. The soil pipe plants have had a fair but limited business in filling orders for the Government.

The pig iron plants report an increased output; orders for the Government are large, and the demand from foreign Governments is enormous. The production of pig iron in the State of Alabama is all that could be desired. The output in September, 1918, was 207,444 tons, and in October, 1918, 208,470 tons.

The steel mills are kept busy and are making good showings as to output, with orders enough to keep them employed, and are not handicapped in making deliveries. The structural buildings, in course of erection, were somewhat retarded during the influenza epidemic, but conditions are becoming normal and good progress is now being made in all lines of this industry.

The citrus crop of Florida is reported good and though only about 70 per cent normal, shows an increase of about 50 per cent over last year. Weather conditions have been favorable and the crop is being marketed about three weeks earlier than last year. The present crop is estimated at 5,550,000 boxes of oranges and 2,900,000 boxes of grapefruit. First grade oranges are now selling at \$4 and \$4.50 f. o. b., with an occasional sale at higher prices.

DISTRICT NO. 7—CHICAGO.

Business continues active and crop conditions are unusually favorable, two developments which ordinarily would be regarded as a

sufficient incentive for the making of plans on a broad scale for the coming year. There is, however, discernible in the business world a distinct tendency to relax from the high tension of war-time production. So far this has not manifested itself in the volume of business but rather in the industrial morale. The climax of the war, so far as the productive forces at home are concerned, apparently passed with the signing of the armistice with Germany.

The relaxation of tension in our business and industrial forces is still manifesting itself in business sentiment, although it is too early to note the effect on output. It is to be expected that as the treaty making progresses the pressure on the war industries will relax, but the consensus of opinion among bankers and captains of industry is that the more gradually this shifting to peace pursuits can be accomplished, the more orderly will be the general readjustment. There is a disposition on the part of all to cooperate with a view of bringing this about.

GOVERNMENT CONTROL AS A SAFEGUARD.

Bankers especially—and they are supported by many practical business men in this—are urging the continuation of governmental control over the raw material supplies and the exercise of priority shipment regulations during the period of readjustment as a means of averting any sudden reaction in the business world. It is the endeavor of all to avoid a scramble or undue haste on the part of manufacturers who have been engaged on war contracts to return to their prewar business, as this might result in a far-reaching unsettlement which might be exceedingly injurious to general business at this time and seriously affect the future business situation.

The advices from business men of this district indicate a well-grounded belief that the same attitude of business in meeting and solving the war problems must continue to manifest itself in the post-war period, at least until the country has been readjusted to a peace basis. This attitude is stimulating business confidence.

PLANNING CAUTIOUSLY FOR THE FUTURE.

Business men are looking ahead. An indication of this is found in plans being developed for a resumption of public improvement work to tide over the readjustment period and avert unemployment. The activity of a Chicago com-

mission studying labor conditions illustrates this, as that body has asked the approval of Washington of a plan calling for the expenditure, as soon as the treasury war financing has been cared for, of upwards of \$500,000,000.

These improvements include the resumption of the work on Chicago railway terminals; the Michigan Avenue and Chicago plan program involving a governmental expenditure for harbor improvement; a \$100,000,000 traction extension improvement in addition to the construction of a \$40,000,000 transportation subway, and the building of a new gas plant and other municipal betterments. In addition to these expenditures is one contemplated by the Illinois Highway Commission aggregating \$60,000,000 for hard surfacing of roads in the State. The bond issue was recently approved by the voters and now awaits a favorable investment market.

These expenditures of upward of \$500,000,000 are expected to cover a period of five years and necessarily will depend upon the attitude of the Treasury Department, as they involve bond issues. The proceeds from these expenditures, if approved, will, to a very large extent, be distributed as wages. These improvements were planned prior to the war but were halted by the pressure of Government financing and other war requirements.

CANCELLATIONS RELIEVING ABNORMAL PRESSURE.

At this moment there are few, if any, signs of an actual let-down in war production. Such cancellations of war contracts as have taken place have operated simply to relieve the pressure elsewhere in essential productions and have served as an equalizing factor rather than a disturbing one. The banking situation is sound and the reserve position affords assurance of the ability of the financial machinery to care for essential business needs.

Necessarily, banking conditions continue to reflect Government financing. Money rates are firm at 6 per cent, but the credit situation appears to be in an unusually liquid condition and collections are reported good throughout the district with a general expectation on the part of business concerns that they will continue so the remainder of the year. The requirements of the Treasury, however, are still pressing and the absorption of certificates of indebtedness by the banks continues.

GRAIN PRODUCTION FORTIFIES THE WEST.

One feature that strengthens the position of the Middle West is the bountiful crops, together with the high prices for farm products. Industry in the West generally has not been fully employed in the manufacture of war material to the exclusion of other production, owing to the fact that the East was filled up on war orders earlier. Some industries were able to continue their ordinary lines to some degree while working on Government contracts until the war requirements exceeded the eastern capacity, hence the reversion to normal production will involve a less radical change here than in the East. Furthermore, there has been only a very restricted amount of new plant construction for war purposes in this section, which further strengthens the situation. It is generally believed by bankers and others that after a short period, which will enable business men to get their bearings under the new conditions, there will develop a very large volume of general business from sources which have been unable to buy during the war period.

EFFECT OF GOVERNMENT RELAXATION IS DISCERNIBLE.

The building industry, which has been exceedingly dull for months, except in instances of war construction, is beginning to reflect the effect of the removal of restrictions on buildings costing \$10,000 or less. Modification of the food regulations is stimulating business among the distributors of produce. Elimination of flour substitutes is finding its reflection in an increased flour business. The increased allowance of sugar to consumers, it is estimated by wholesale grocers, will result in at least a 50 per cent increase in the sugar business. The coffee situation, however, is unsatisfactory and there is a serious shortage in the available supply.

The sudden termination of hostilities in Europe, together with the reversal of the position of the War Industries Board in the matter of releasing wool for civilian use, has led to some uncertainty as to probable average prices for the next year's business, and this has contributed to considerable hesitation in making commitments, so that practically nothing has been done for the 1919 supply. Unseasonably warm weather also has resulted in the curtailment of business in woollens.

AGRICULTURAL PROSPECTS ARE EXCELLENT.

Speaking generally, however, the advices over the seventh Federal Reserve district indicate a promising outlook from an agricultural point of view. Seed has gone into the ground under the most favorable circumstances; pasture is excellent, and there is a good crop of clover and an increased acreage of wheat and rye in most sections, due to favorable weather for fall farm work.

Live stock continues to move freely. The October receipts at Chicago were the largest of any month during the last 9 or 10 years. Prices are good, although those for hogs and sheep have reacted some from the highest level.

Receipts of live stock at Chicago for the four weeks ended November 19, 1918, compared with the corresponding period of 1917, as follows:

	Cattle.	Calves.	Hogs.	Sheep.
1918.....	395,132	40,584	802,228	554,538
1917.....	353,293	47,510	546,101	365,916
Increase.....	41,839	¹ 6,926	256,127	188,622

¹ Decrease.

UNCERTAINTY CONTRIBUTES TO CONSERVATISM.

There is in evidence throughout the district a manifestation of caution on the part of business men in making commitments until it can be determined just what the future holds in store. This is regarded as a favorable development, because this conservatism is operating to keep stocks of merchandise down and credits liquid and is a check on unnecessary borrowings at banks.

Clearings in Chicago for the first 18 days of November were \$1,236,332,213, being \$21,128,960, or 1.73 per cent greater than for the corresponding 17 days in October, 1917. Clearings reported by 23 cities in the district outside of Chicago amounted to \$341,784,200 for the first 15 days of November, 1918, as compared with \$314,371,700 for the first 15 days of November, 1917. Deposits in 12 central reserve city member banks in Chicago were \$917,600,000 at the close of business November 18, 1918, and loans were \$632,100,000. Deposits show an increase of approximately \$20,600,000 over those of October 17 last, and loans approximately \$10,100,000. Chicago post-office current receipts are running 11 per cent below those of a year ago.

DISTRICT NO. 8—ST. LOUIS.

Since the ending of hostilities on November 11, the attention of business men has been directed toward restoring their enterprises to a peace basis. Manufacturers, who have been engaged mainly on war contracts, are rearranging their plants to take on their former work or new work. Other producers whose output has been restricted on account of the war are preparing for increased activity with the lifting of restrictions.

It is believed that the resumption of normal demands and the production of commodities which heretofore have been designated as non-essentials will offset the gradual curtailment of war contracts. In fact, business men, as a rule, have no serious misgivings about the ensuing period of readjustment. They are moving cautiously, but are looking to the future in confidence.

The influenza epidemic is on the decline in this district, and the bans placed on business to combat it, in most instances, have been lifted. Department stores, theaters, etc., are now operating as usual, and schools, churches, lodges, etc., are again open. This has materially helped the retail trade. It is also being stimulated by Christmas shopping, which is being done early this year in response to the requests of merchants. Reports indicate a good demand for all kinds of seasonable merchandise. Collections throughout the district are reported to be good, except in some of the southern portions of the district where cotton has been slow in moving.

There has been little change in banking situation in this district since last report. The deposits in the banks have been well maintained, and there has been a good demand for money. The bank rate to customers continues firm at 6 per cent in the larger cities and somewhat higher in the country districts.

There has been some revival in the commercial paper market, though it is still considerably below normal. Brokers report a fair demand from country banks, but very little demand from the large city institutions. The commercial paper rate is still 6 per cent for all names and maturities.

Agricultural conditions in this district are favorable. The winter wheat is reported almost without exception as "the most promising ever seen." The weather since planting has been ideal for its development, and it is making bountiful pasturage. Reports indicate

that the acreage planted is considerably in excess of the acreage last year.

Latest reports indicate that the corn crop in the seven States included in this district will yield 1,010,734,000 bushels. This is 247,952,000 bushels less than the estimate for last year, but 37,158,000 bushels more than the average for the previous five years. In Illinois and Indiana the quality of this year's corn is considerably better than the quality of the corn in those States last year, but taking the district as a whole the quality of the corn is 2.5 per cent below the quality of last year. In the drouth-stricken districts, the corn is reported to be chaffy and light, while in other sections heavy fall rains have caused it to decay. More corn has been cut for silage purposes than last year.

The tobacco crop in Kentucky and Tennessee was estimated on November 1 to yield 451,188,000 pounds. This is 57,222,000 pounds less than the estimate for last year, but 28,855,000 pounds more than the estimate of October 1 and 24,491,000 pounds more than the average for the previous five years. The quality of the tobacco in the two States named is estimated to be about 4 per cent below the quality last year.

The prosperity of the farmer is reflected in the Government's report for November 1, which shows that the price index of all crops on that date was 3.1 per cent higher than a year ago, and 97.3 per cent higher than the average for the preceding five years.

The report of the St. Louis National Stock Yards for October shows substantial increases in the receipts of hogs and sheep, in comparison with the corresponding month last year, but decreases in the receipts of cattle, horses, and mules. In the shipments of live stock, decreases are shown in all excepting sheep, in which there was a slight increase over October of last year. In comparison with September of this year, the report shows decreases in the receipts of all kinds of live stock, excepting hogs, in which there was a decided increase.

Postal receipts during October in St. Louis, Louisville, Memphis, and Little Rock all show substantial increases in comparison with the same month last year. The reports for October also show increases over September of this year, excepting that of Memphis, which shows a slight decrease.

Reports for October from leading cities in this district show perceptible decreases in the number of building permits issued and the estimated cost of construction, in comparison

with the corresponding month last year. In comparison with September of this year, little change is noted. Since the signing of the armistice renewed interest in real estate, building, etc., has been manifested, and with the lifting of restrictions, increased activity in this line is anticipated.

An improvement in the labor situation is expected with the release of men from the Army. Many concerns are eagerly awaiting the return of experienced employees, while others are desirous of obtaining additional help. There is a good demand for both skilled and unskilled workmen in this district, and little difficulty is anticipated in furnishing employment to those who return. Reports indicate that there are practically no labor disturbances in this district.

DISTRICT NO. 9—MINNEAPOLIS.

In view of the very critical seed corn situation that existed at the beginning of the 1918 planting season, the very good reports concerning supplies of seed for 1919 are being received with especial satisfaction. There is considerable complaint in the corn-growing sections of the district regarding the results from corn grown from seed brought in from eastern localities and points farther south. In eastern and southern Wisconsin and in south central and southern Minnesota considerable corn from such seed has shown an unsatisfactory result, again demonstrating the necessity of obtaining seed corn supplies locally in order to make sure that the crop will develop properly and mature before frost. Owing to the very favorable fall weather, there is a very large amount of excellent seed corn in western and northern Wisconsin and through all of Minnesota and the two Dakotas.

Montana's corn crop, estimated at 2,100,000 bushels has been largely used for silage and fodder, and approximately half of the yield has been harvested as ear corn. In Wisconsin, Minnesota, and the two Dakotas the production per acre is considerably better than the average, and in addition to the high percentage of matured corn, which has cured in excellent shape, the quality is very good. Wisconsin and Minnesota have cut an unusual amount of corn for silage. The proportion of the Wisconsin crop used for that purpose is being estimated as high as 52 per cent.

Reliable estimates indicate that Montana has maintained its rank of second among the flax-producing States of the country, with a production in excess of 3,000,000 bushels this

year. The quality is better than that of the last crop. Figures for the two Dakotas are not available but promise to show better flax production than was anticipated in the early fall.

The embargo on grain shipments to terminals has had a serious effect upon the movement of the wheat crop and held back a large quantity of good grain which is ready to seek a market. The terminal situation is gradually improving, both at Minneapolis and Duluth, with the promise that within a short time a largely increased movement will occur. Marketing conditions have had the effect of slowing down the liquidation process at country points, yet the financial strength in the agricultural portions of the district is so great that the discounts at the Federal Reserve Bank, which reached \$97,000,000 at the peak of the load in October, were reduced within 40 days to less than \$30,000,000. This liquidation was paralleled by a corresponding heavy reduction in the loans of the larger banks at commercial centers to the country institutions. A better movement of wheat will rapidly wipe out the remaining obligations of the country banks to their correspondents, and the reserve institution, leaving them with substantially increased deposits and in a very excellent position to meet spring demands.

Two factors of very considerable importance may already be relied upon to further the planting and harvesting of large crops next year. Government price fixing as to wheat will undoubtedly prevent any shrinkage in the 1918 acreage, and the influence of very profitable returns from the current crop will undoubtedly bring about some further increase in spring planting. The seed outlook is very favorable and it is unlikely that there will be any shortage of either fine or coarse grains. The only unsatisfactory item is clover which, when hulled, showed a light and unsatisfactory yield in the localities where clover seed is produced.

General rains during the month following the period of dry weather have been of considerable assistance in facilitating fall plowing, but moisture is still an important factor in crop prospects for next year and heavy winter snows will be needed throughout practically all of the grain-growing sections of the district if the ground is to be in proper shape for spring planting.

The last six or seven months show considerable deficiency as compared with the average rainfall, and the fall rains that have so far occurred have not been sufficient to create normal subsoil conditions.

The approach of the reconstruction period has created a general discussion of after-the-war conditions. New labor problems will undoubtedly be created, and there is much conjecture as to the course that will be pursued by the Government in reference to encouraging a return to pre-war activities, particularly the field of public improvements and building trades.

Throughout the district there are large numbers of public enterprises, involving a great amount of city and county work, which has been deferred until a more favorable time. Building has been practically at a standstill both in the larger centers and in the country. These two elements may be depended upon to afford considerable opportunity for employment both for returned soldiers and for employees who are likely to be released from active service on account of changes in the industrial field.

Banking and business conditions remain much the same as during the previous month, with a favorable outlook for the early fall and winter.

DISTRICT NO. 10—KANSAS CITY.

The high tide of business in the tenth Federal Reserve district shows a continued upward sweep, in spite of slight and temporary checks which may be attributed to special factors, such as the influenza epidemic, elections, the financing of the fourth Liberty loan, and the cessation of hostilities. As a whole, the situation is viewed with optimism and upon the broad assumption that America's task of equipping and provisioning a large part of the world has only begun.

Financial.—Demand for loans remains strong and rates firm. Government financing is, and will continue to be throughout the coming year or longer, a strong factor. It is of the utmost importance that bankers do not overlook this fact. The demobilization of the Army will take both time and money. This country will be called upon to share to some extent with the allies in enforcing final peace terms. The ship-building program is to be continued. The Government has enormous outstanding war obligations with various industries which must be carried through or adjusted with due consideration.

The transition from a war to a peace basis will be gradual and the conservation of credit, as well as continued thrift on the part of the people, are vitally essential, not only to this Nation but to the reconstruction of the devastated countries in Europe.

Bank clearings reported by the 15 clearing house cities in the district show October transactions amounting to \$1,631,517,258, as compared with a total of \$1,397,108,541 for October of last year, and for the 10 months' period of 1918 the total clearings were \$14,165,498,000, as compared with \$10,166,133,000 for the corresponding 10 months in 1917.

Agriculture.—Abundant moisture and favorable temperatures have made ideal conditions for fall farming operations. Wheat was never in better condition for winter, and it is believed a summary would show 100 per cent, or normal, as an average for the district. The fine start is a big factor on the side of a successful harvest next summer, though rigors of winter and other harmful influences are yet to be reckoned with. Many farmers are grazing down early planted wheat and putting weight on cattle. There is apparently no fear that the end of the war will lessen the demand for breadstuffs, and there is an increased acreage of winter wheat estimated at 17 per cent for the district.

Restrictions imposed by the Grain Control Committee are limiting the movement to market requirements. Receipts of wheat are 40 per cent less than before the embargo was established, but 25 per cent larger than a year ago. Receipts of corn are 45 per cent heavier and oats about 60 per cent lighter than at this time last year.

Domestic flour trade shows little life and sales to the Government by millers of this district unimportant, causing a slowing down of milling operations to below 70 per cent of capacity, with an output slightly below that of last year at this time.

Live stock.—Meat animals to the number of 2,991,574 came to the six markets of this district in October. Of these 991,435 were cattle, 730,674 were hogs, and 1,269,465 were sheep. Compared with October, 1917, there was an increase of 3,778 cattle and 230,669 hogs and a decrease of 102,334 sheep.

Prime fed and weighty steers are scarce and prices range from \$3.25 to \$4.50 higher than a year ago. Other classes fluctuate in price but are generally higher than at this time last year. A feature of the markets has been the heavy purchases of cattle for feeders.

A move to stabilize the hog market was the fixing of a minimum November price of \$17.50 per 100 pounds, Chicago basis, for packers' droves, based on agreed prices for pork products under Government contracts for meat. The plan imposes an obligation of participating

packers to buy no hogs at less than the minimum price, the Food Administration furnishing an outlet for the products and farmers cooperating to maintain a steady run of hogs at the markets.

Packers increased slaughtering in October by purchasing 7 per cent more cattle, 42 per cent more hogs, and 45 per cent more sheep than they purchased in October, 1917.

Petroleum.—With withdrawals from storage of 2,250,000 barrels a month, production in Kansas and Oklahoma falling off, and no prospect of making good the increasing deficit, there is little hope of increasing petroleum production during the coming year to 100 per cent efficiency. The end of the war is welcomed, but with reconstruction work and an enlarged shipping program, there is no assurance of any less demand for petroleum products.

Daily average production of oil this month for Kansas and Oklahoma is about 16 per cent below the record for corresponding weeks last year. Wyoming fields are producing much more than in 1917, but the increase there is not sufficient to offset the slump in other fields.

Field operations indicate a total of 1,106 completed wells and 42,813 barrels initial daily production in October. With the exception of a big well here and there the completions have been what formerly were regarded as inconsequential. However, there is no let-up in the search for oil, as the number of drilling wells indicates. The oil men are completing all the wells the labor and material situation will permit. A stage of development has been reached where neglected "in-between" spots are being prospected and deeper sands are sought in old and well-settled districts.

Mining.—The immediate future of gold and silver mining is not encouraging. With a 2,000-man shortage, and loss due to influenza, it does not seem possible to operate the mines this winter at much above 60 per cent normal production.

Shipments of zinc blend ores in October were 30,370 tons, at an average of \$54.70 per ton. Calamite ore shipments were 1,921 tons, averaging \$38.62 per ton. Lead ores shipped during the month were 5,467 tons, averaging \$100 per ton. Stocks on hand November 1 were 19,650 tons of zinc ores as against 32,925 tons on the same date last year; while stocks of lead ores November 1 were 450 tons as against 7,485 tons November 1, last. Practically the entire lead ore output is purchased weekly, rains which prevented loading being the only reason for any surplus stocks.

A feature of the month was the fixing of a ratio between prices of prime western spelter and the price to be paid for Joplin second-grade ores. The new buying schedule was considered an equitable division of profit and loss between smelter and miner. Following the taking effect of the new schedule, however, the zinc ore industry was thrown into confusion by the smelters reducing purchases approximately 4,000 tons for the week ending November 16, causing an accumulation of 18,000 tons of zinc concentrates. Producers decided at once to curtail production by shutting down operations until the surplus is absorbed.

With many handicaps, little progress toward increasing production of coal is reported. *Construction.*—Building operations continue inactive, but the prospect of an early release of labor and materials by the slowing down of Government work and the return of the soldiers from Europe offers encouragement for a resumption of activities in all lines of construction. While lumber manufacturers are hopeful of enlarging production, retail dealers are anticipating a rapid improvement in their trade on account of the demands for materials for long neglected farm improvements and housing improvements in cities. Release of steel and cement is also expected to cause a resumption of municipal construction and highway building although the impression prevails that this class of work will be slow returning to normal because of the necessity of carrying out the ship and harbor program which is limiting the supply of these materials for other than Government work. Building permits in the cities of this district in October were confined to repairs and bare necessities involving little money and offering no comparison with former records.

Labor.—Added to the labor shortage October and the first half of November saw serious complications resulting from a general epidemic of Spanish influenza among all classes of workers throughout the district. No branch of industry escaped. The mines were especially disorganized, many men being incapacitated from one to two weeks. In many cases it was difficult to maintain operations. Factories and large industrial plants were affected in the same way and in the same proportion. Men, on returning to their work proved unequal to their former tasks.

There has been no appreciable improvement in the labor shortage, although the situation is no more acute during November, due to the rescinding of orders calling draftees during the

epidemic, followed by a virtual abandonment of the draft with the cessation of hostilities. Labor bureaus report applications for men far in excess of the number of men registering and but a small per cent of places filled.

Mercantile.—Business continues very active except in building materials and tools. In other lines a promising increase continued through October and November to date, with an upward trend. Especially marked is the increase in textiles and furnishing goods. Dealers say that men subject to draft, not knowing with certainty the day they would be called, had postponed the purchase of clothing, but cooler weather resulted in last-minute purchases of wearing apparel regardless of when, if at all, they might be called. A stimulating influence to trade in women's wear, household supplies, and holiday goods has resulted from increased earnings of women, large numbers having taken the places of men now in the service and becoming wage earners for the first time. Increased earnings of heads of families also have contributed to the volume of this trade. Precautionary health measures, due to the epidemic, cut down sales to some extent, but only temporarily postponed the buying. Drugs were very active. The grocery trade continues heavy, especially in those things which can be put away for winter use.

DISTRICT NO. 11—DALLAS.

The successful termination of the war has created optimism everywhere, but at the same time the close of hostilities brings us face to face with a period of readjustment and presents for solution problems which, at the present, will be almost as difficult as when the district changed from peace to a war basis early in 1917.

More seasonable fall weather and fine rains over practically every section of the district has greatly improved the business outlook since our October letter. In the larger cities, especially, conditions are much improved. Retail trade after a rather dull period in October, is again normal. Manufacturing is active; collections are slow.

Wholesalers of dry goods report very little buying among the country trade at the present time on account of warm weather in October and the dull business occasioned by the influenza epidemic. Wholesalers and jobbers also advise that the sudden termination of the war, and the many adjustments in their line which will be necessary as the result, has caused a condition of uncertainty and unsettlement, and

they are "marking time" pending developments. They have large stocks of high-priced goods on hand, and until market conditions become more settled and some definite basis can be formed as to future prices, buying will necessarily be curtailed and restricted to actual requirements. Some have already canceled orders for future delivery. The buying season for spring and fall of 1919 will soon be here, but on account of the conditions mentioned above there is little activity. Large mail-order houses report a temporary lull in business and attribute it to the expectation of greatly reduced prices of merchandise.

The wholesale grocery trade has been very active in the past few weeks. This activity, however, is attributable mainly to delivery of stocks purchased in the spring and summer. There is a very strong tendency on the part of the retailer to withhold purchases and to buy in limited quantities, in anticipation of a drop in prices with the end of the war. Wholesalers are encouraging this practice in an effort to prevent hoarding, but report that there is probably little basis for expecting any material decline in grocery prices in the near future, as with the extraordinary demand for food which it now develops will be greatly increased for the devastated European countries, it is not thought there will be any substantial decline, but rather an increase. Collections in the trade are reported as unusually good.

Very heavy and general rains averaging from 2 to 6 inches in many localities have fallen within the past 30 days, with lighter rains earlier in the fall, have as a rule insured excellent range conditions in the West and give promise of a good wheat crop in the Northwest where a very heavy acreage has been planted, and agricultural and live stock conditions are much improved as the result.

The fall crop of sweet potatoes, peanuts, and similar commodities is also being marketed at this time. Our correspondents report that there will be an unusually heavy increase in the acreage planted in wheat, and that the crop looks especially fine at this time. The new crop of ribbon cane sirup is now being marketed at the highest prices known. The crop is large and the grade excellent. Outside of the active preparation for next season's crops and marketing of commodities produced this year, farming conditions remain the same as previously reported. At the present time the crop prospects are excellent, but it should be borne in mind that future weather conditions will determine the yields.

Since the war is over there is a cheerful feeling in the building trade, with both manufacturers of materials and construction firms. It is expected that operations will rapidly be restored to normal with the lifting of Government restrictions on ordinary construction work. Building projects which have been held up during the war will, to a large extent, be released under the recent orders of the Council of Defense which eliminate priority permits for structures costing up to \$10,000, and require State authority only on contracts from \$10,000 to \$25,000. Space is in great demand for both dwellings and commercial purposes and the building trade reports that indications point to an immediate renewal of operations, the extent of which will be dependent on the ready supply of material and labor. Pending the restoration of various plants to peace-time industry the reserve stock of building materials will prove no more than adequate to the increasing demand. Manufacturers of lumber are slow to predict what the immediate future holds for them. The immediate effect is that a large part of Government orders are being canceled and held up, and, as one manufacturer reports, "the mills are entirely up in the air as to what the results will be." The stock of lumber on hand at mills is low and badly broken, and with the present labor shortage and other factors there is no immediate prospect for early replenishing. The cancellation of building restrictions will have the effect of creating a sufficient demand to use such lumber as may be available for several months to come, or until such time as our allies and the European countries come into the market for the enormous amount of lumber they will unquestionably need in the reconstruction period to come.

The banking situation is fully as active as 30 days ago. There continues an unprecedented demand for funds. Interest rates are firm, and range between 6 and 8 per cent for customer's paper. The rediscount operations of this bank show a decrease of some \$13,000,000 between October 15 and November 15. This decrease is in member banks' collateral notes. During the same period member banks, rediscounts increased \$1,700,000. There is practically no change in the amount of member banks' reserves. Some liquidation has taken place within the past 30 days, but the seasonable period of payments has not yet developed and will not, unless there is a more rapid movement of cotton. Banks in the interior are greatly extended by reason of heavy advances on cot-

ton purchased on a high market, and with practically no movement these institutions are finding it very difficult to maintain the required reserves and balances with correspondents. On account of the uncertainty of the market and the inevitable loss which would be sustained by cotton buyers, there seems to be no relief in sight. Now that the war is over it is hoped that shipping facilities will be provided and the cotton situation eased up considerably. At present the outlook is not very encouraging.

With the fine rains in the west and southwestern sections of the district, and the excellent crop prospects, member banks in those communities are having an unusual demand for funds from their farmer customers for feed, seed for crop preparations, and funds for cattle purchases. These banks will unquestionably find it necessary to seek outside assistance until their communities are again self-sustaining.

Clearings at Austin, Dallas, Fort Worth, Galveston, and Houston, the only cities reporting, show an increase of 1.3 per cent over the same month of 1917.

The final subscriptions to the fourth Liberty loan were over \$145,000,000, of which \$66,500,000 was paid in full.

Exports from the Galveston district in September aggregate \$26,410,000, an increase of 40.7 per cent over the same month of 1917, when the value of such exports was \$18,765,000.

Post-office receipts at the principal cities of the district show an increase of 21.8 per cent over the same month of 1917.

DISTRICT NO. 12—SAN FRANCISCO.

There has been full employment for labor, and industrial production to meet Government demands has continued its activity. Agricultural pursuits have followed a regular and satisfactory course. The late crops—rice, potatoes, and beans—were harvested without serious loss. The seeding of winter wheat, with enlarged acreage, is unusually well advanced, on account of early rains in September, particularly in the Pacific Northwest. Delay in moving commandeered stocks has prolonged warehouse congestion and retarded liquidation. Mercantile collections in general have been good. The epidemic of influenza, subsiding in San Francisco under compulsory wearing of gauze masks from a maximum of 2,304 new cases on October 25 to 75 on November 13, has interfered with distribution in the retail trade and wholesale stocks are reported as increasing. While the termination of the war greatly changes the aspect of trade and industry, and injects uncertainty as to the con-

ditions in the near future of business in general, yet it seems reasonable to expect that the shift from war activities to those of peace will occasion less disturbance in this district than in others, because its products are such that an uninterrupted demand for them will continue.

Interest rates in the industrial and agricultural centers remain firm at 6 and 7 per cent, respectively.

Bank clearings for 18 principal cities of the district in October amounted to \$1,316,659,000, an increase of \$260,673,000, or 24.7 per cent, over the same month in 1917, and \$242,874,000, or 22.6 per cent, over September, 1918. From October 3 to October 30 total checks paid by clearing house banks in 17 principal cities of the district amounted to \$2,494,858,000, of which \$1,472,483,000 were debits to accounts of individuals, firms, or corporations, and \$1,022,375,000 were debits to accounts of banks and bankers.

Building permits for the 18 principal cities totaled \$3,114,000. Compared with October, 1917, this was a decrease of \$1,217,000, or 28.1 per cent. As compared with September, 1918, however, the decrease was \$1,982,000, or 38.8 per cent, Tacoma alone among the reserve cities showing an increase of 10 per cent.

During the first 9 months of 1918 there were 828 commercial failures, with liabilities of \$9,906,607, in California, Oregon, and Washington, a decrease of 37 per cent in liabilities when compared with the same period in 1917, which showed 1,223 failures, with \$15,714,808 liabilities. The decrease from the 1916 period, with 1,378 failures and \$12,213,917 liabilities, was 19 per cent. For the United States there was a decrease of 12.5 per cent in liabilities from the figures of 1917 and 20 per cent from those of 1916.

The 1918 sugar crop of Hawaii totaled 561,000 tons, as compared with 636,000 tons in 1917. The last 5,000 tons of the season were manufactured in November. Practically all of the output has already been shipped to continental United States, more than 100,000 tons being shipped in August. The grinding season for the 1919 crop, estimated at 600,000 tons, has commenced.

Government estimates of the sugar-beet crop in the various States of the district are as follows:

State.	Oct. 1.	December, 1917.	Condition (Oct. 1).	Condition (Nov. 1).
	<i>Tons.</i>	<i>Tons.</i>		
California.....	1,102,000	1,331,000	90	86
Utah.....	1,094,000	762,000	94	101
Idaho.....	347,000	312,000	91	96

Washington will probably produce 60,000 tons this year, the present condition of the crop being estimated at only 62. Prices for beets having a 15 per cent sugar content have ranged from \$10 per ton in Utah and Idaho to \$8.50 and \$9.25 in California.

According to forecasts the California orange crop for the year 1918-19 will total 14,322,000 boxes, distributed by districts as follows: Northern California, 138,600; central California, 1,339,800; and southern California, 12,843,600. The 1917-18 crop was only 7,093,270 boxes, while that of 1916-17 reached 19,374,873 boxes. The condition of the crop on November 1 was 71, compared with 50 for 1917 and 85 on a 10-year average. The fruit is running to large sizes. Valencias of the season just ended sold as high as \$12 and \$14 per box. Navels of the new crop ready for shipment before January 1 are expected to sell from \$7 to \$9 per box, f. o. b.

The lemon crop improved from a condition estimated at 86 on October 1 to 88 on November 1, the 10-year average being 86. The new crop, according to a résumé of estimates, may reach 4,000,000 boxes, almost a million in excess of the bumper crop of two years ago.

The potato crop of the district this year is 20 per cent less than last year. For the United States there is also a decrease of 11.8 per cent, the total production of the Nation being 389,912,000 bushels as against 442,536,000 in 1917. The following are the district totals by States:

	1918	1917
	<i>Bushels.</i>	<i>Bushels.</i>
California.....	12,555,000	15,225,000
Washington.....	8,580,000	9,875,000
Oregon.....	5,500,000	8,100,000
Idaho.....	5,180,000	6,084,000
Utah.....	3,600,000	4,347,000
Nevada.....	1,753,000	3,105,000
Arizona.....	425,000	425,000
Total.....	37,593,000	47,161,000

In California, Idaho, and Washington only 89, 70, and 66 per cent, respectively, of the crops are grown for the market, the remainder being consumed on the producers' farms. Between 30,000 and 40,000 bushels of certified seed potatoes have been raised in the Willamette Valley, Oreg., this year for shipment to California. The sweet-potato crop in California is estimated at 1,020,000 bushels, an increase of 18,000 bushels over last year.

California raisin and bean crops have suffered from unfavorable weather conditions

during September and October. November reports place the season's total of raisins at 135,000 tons, with an average yield of 1,800 pounds per acre. The crop in 1917 was 163,000 tons.

The bean crop has suffered more in quality than in quantity. The November estimate forecasts a total of 6,258,000 bushels of beans toher than limas. The October estimate of limas was 2,610,000 bushels, which brings the total production up to 8,868,000 bushels, as compared with 8,091,000 bushels in 1917.

In the Salt River Valley, Ariz., the long staple cotton crop grown this year on 75,000 acres is estimated at approximately 35,000 bales. The condition in September was 96, but later reports place it at 93. Last year the production on 39,000 acres was 15,000 bales. In the Imperial Valley the crop will total 70,000 bales, produced as follows: Short staple and Durango from 80,000 acres in Mexico and 60,000 in California, and Egyptian (Pima) from 3,000 acres in California. The Mexican crop is marketed in Calexico, Cal.

The salmon pack on the Pacific coast of the United States for the season has been estimated at 8,300,000 cases, classified as follows: Pink, 3,000,000; Alaska red and sockeye, 2,600,000; chum, 1,500,000; king, 700,000; medium red or Coho, 500,000. British Columbia will probably produce 1,000,000 cases, bringing the total up to 9,300,000 cases, as compared with 10,124,894 in 1917. The Government has commandeered 60 per cent of the chum, 65 per cent of the pink, 80 per cent of the Alaska red, and 100 per cent of the sockeye varieties.

The total production of crude petroluem in California during September was 8,274,710 barrels, a decrease of 438,150 barrels as compared with August. From September 1 to October 1 stored stocks increased 70,929 barrels.

During the four-week period ending November 2, an average of 122 lumber mills in the Pacific Northwest reported a total production of 284,389,447 feet, which was 24,157,553 feet, or 7.83 per cent below normal. The first week's production was 3.85 per cent below normal, the second 4.01, the third 10.01, and the fourth 13.08. The general situation reported last month has not improved, and the congestion due to accumulating side-cut lumber has not been relieved.

GOLD SETTLEMENT FUND.

The following review and accompanying tables cover the two months' period from September 20 to November 21, 1918. Hereafter data concerning the operations of the gold settlement fund will be published quarterly.

Due to large payments at interior centers on account of the heavy crop movements at this season of the year and the large fiscal operations of the Government involving large movements of funds from New York to the interior and concentration largely at New York City of funds received in payment for subscriptions to the fourth Liberty loan, the average weekly volume of transactions through the gold settlement fund for the period under review have been the largest of any similar period since the inception of the fund. Combined clearings and transfers for the nine-week period aggregated \$10,256,341,000, averaging \$1,139,593,000 per week against a like average of \$928,448,250 for the preceding four-week period.

The movement of funds to interior centers in connection with crop payments is reflected clearly by the large net credit balances in the daily settlements shown by the reserve banks located in the leading agricultural sections. The Chicago, Minneapolis, and Kansas City Reserve Banks show particularly favorable balances

Heavy demands on the banks in the New York reserve district are reflected by the net debit of \$360,766,000 in the daily settlements of the New York Federal Reserve Bank. On the other hand, the net movement of funds to the New York bank through transfers from other Federal Reserve Banks, principally transfers of Government funds for the credit of the United States Treasurer, amounts to \$348,348,000, resulting in a net movement of funds away from New York through transfers and settlements of only \$12,418,000.

Changes in the ownership of gold in the banks' fund through transfers and settlements during the nine-week period amounted to 1.38 per cent of the total obligations settled, as against 2.45 per cent for the preceding four-week period. Net changes in the ownership of gold since the commencement of the operation of the fund on May 20, 1915, to November 21, 1918, amount to 0.88 per cent of the total

obligations settled during that period. The largest gain in gold through transfers and settlements, \$90,514,000, was reported by the Federal Reserve Bank of Chicago, while Philadelphia reported the largest decrease, \$72,780,000.

Net deposits of gold in the banks' fund amounted to \$19,757,000, while net withdrawals of gold by Federal Reserve agents aggregated \$21,000,000, representing principally payments to the Treasurer for credit in the gold redemption fund against Federal Reserve notes. The resulting net loss of gold in the combined funds was \$1,243,000. On November 21 the total standing to the credit of both the Federal Reserve Banks and agents was \$1,311,917,000, of which the banks' settlement fund constituted \$442,362,000 and the agents' fund \$869,555,000, as against \$465,787,000 and \$847,373,000 before settlement on September 20.

Below are given figures showing the operations of the fund between September 20 and November 21, 1918, both inclusive:

Amounts of clearings and transfers through the gold settlement fund by Federal Reserve Banks from Sept. 20, 1918, to Nov. 21, 1918, both inclusive.

DISCOUNT OPERATIONS OF THE FEDERAL RESERVE BANKS.

During the month of October discount operations of the Federal Reserve Banks reached a grand total of \$5,903,962,877, compared with \$4,685,139,187 the month before, \$3,002,889,591 for the month of May, marking the close of the third Liberty loan, and \$3,206,486,871 for November, 1917, when the second Liberty loan was brought to a close. Of the total bills discounted during the month under review the share of war paper, i. e., member banks' notes and customers' paper secured by United States war obligations, was nearly 90 per cent, compared with over 87 per cent the month before and about 85 per cent in May of the present year. About 63 per cent of the total discounts for the month and 66 per cent of the war paper discounted during the month are shown for the New York bank, Chicago following with over 9 per cent of the month's total discounts and over 8 per cent of the war paper discounted during the month.

Discounts of member banks' notes secured by eligible paper totaled \$53,202,467, compared with \$35,178,979 the month before, Boston, Minneapolis, and Kansas City reporting considerable increases in the discounts of this class of paper. Trade acceptances discounted during the month aggregated \$24,135,683, compared with \$21,202,288 during September. Of the larger total, \$19,516,886, as against \$13,337,303 in September, represented transactions in the domestic trade, and \$4,618,797, as against \$7,865,585 in September, transactions in the foreign trade. New York reports about one-third of all the discounted trade acceptances and 87 per cent of the discounted foreign trade acceptances. Discounts of domestic trade acceptances are more evenly distributed, eight banks reporting over one million each of these transactions. The above totals are exclusive of \$4,762,619 of foreign trade acceptances and \$2,616,489 of domestic trade acceptances bought during the month in the open market largely, by the New York, Cleveland, and San Francisco banks.

Over 94 per cent of the paper discounted during the month was 15-day paper, i. e., maturing within 15 days from date of discount with the Federal Reserve Bank. For the New York bank this percentage, because of the relatively larger volume of collateral notes handled, runs as high as 97.4 per cent. Discounts of six-month paper, which the month before had declined to \$5,704,756, show a total of \$11,931,131 for October.

Average maturities of the paper discounted, except at the Minneapolis and San Francisco

banks, were higher than in September. The average maturity of all paper discounted was 11.17 days, as against 10.38 the month before. For all discounts the calculated average rate was 4.21 per cent, compared with 4.24 per cent in September, though at a number of banks, because of the relatively larger amount of war paper handled, longer average maturities go together with lower average rates.

On the last Friday of the month the banks held a total of \$1,546,164,000 of discounted paper, as against \$1,713,430,000 on the last Friday in September. Of the total discounts on hand the share of war paper was 70.9 per cent, compared with 71.2 per cent about the end of September and 62.8 per cent on the corresponding date in May of the present year. At the New York bank this share was nearly 82 per cent, even larger percentages obtaining at the Boston and Philadelphia banks. Discounted trade acceptances totaled \$20,273,000, compared with \$19,254,000 about a month before. Of the larger total, \$2,602,909, as against \$3,737,523, were foreign trade acceptances, all held by the New York bank. Agricultural paper on hand totaled \$27,966,000, compared with \$35,440,000 on the last Friday in September, while live-stock paper holdings aggregated \$36,891,000, of which over one-half was reported by the Kansas City bank.

During the month there were 74 accessions to membership, the number of member banks being 8,617 at the close of October. Nearly 42 per cent of this number, or 3,610 members, as against 3,464 in September, discounted with their Federal Reserve Banks during the month under review.

In the following exhibit are given the number of member banks at the end of September and October; also the number of banks discounting during the two months:

Federal Reserve district.	Number of member banks in district.		Number of member banks accommodated.

¹ Rate of 3 to 4½ per cent for 1-day discounts in connection with the loan operations of the Government. Rates for discounted bankers' acceptances maturing within 15 days, 4 per cent; within 16 to 60 days, 4½ per cent; and within 61 to 90 days, 4½ per cent.

² Rate of 4 per cent on paper secured by fourth Liberty loan bonds where paper rediscounted has been taken by discounting member banks at rate not exceeding interest rate on bonds.

³ Rate for trade acceptances maturing within 15 days, 4½ per cent.

NOTE 1.—Acceptances purchased in open market, minimum rate 4 per cent.

NOTE 2.—Rates for commodity paper have been merged with those for commercial paper of corresponding maturities.

NOTE 3.—In case the 60-day trade acceptance rate is higher than the 15-day discount rate, trade acceptances maturing within 15 days will be taken at the lower rate.

NOTE 4.—Whenever application is made by member banks for renewal of 15-day paper, the Federal Reserve Banks may charge a rate not exceeding that for 90-day paper of the same class.
