No. 8

Recent Course of Industrial Activity

In May and June there was a sharp increase in industrial activity, following a decline earlier in the year, and during the past two months output has again been near the peak level reached in the latter part of 1939. These movements are shown on the accompanying chart, which includes the Board's revised index of industrial production, published for the first time in this issue of the

Current business situation

BULLETIN. Income payments, which had declined less than production in the first four months of this year, have also advanced recently as a result of increases in employment. Distribution of commodities to domestic consumers has been largely sustained near the levels reached in the latter part of last year, and exports, though below the peak reached last winter, have continued in much larger volume than before the outbreak of war.

Wholesale prices of basic commodities have generally continued to decline in recent months, but prices of some products have remained near the advanced levels reached earlier. In the security markets prices of common stocks have shown little change following the rapid decline that occurred in May. Prices of Government securities and of corporate bonds have increased since the early part of June and have reached levels not far below those prevailing in the early part of the year. Volume of trading on the exchanges has been very small during the past two months.

The course of commodity and security prices, productive activity, employment, and income during the past year has been to a large extent influenced directly or indirectly by international developments. Current conditions are being greatly affected by prospects for defense preparations and realignment of many international trade relationships as well as by purchases in this country by belligerent nations.

At the outset of the war, a wave of buying, largely by domestic manufacturers and distributors stimulated activity, reversed a grad-

Sources: Income payments, exports and imports, Department of Commerce; industrial production, Board of Governors of the Federal Reserve System; common stock prices, Standard Statistics Company; basic commodity prices, Bureau of Labor Statistics' index converted to 1926 base. Latest figures shown: income payments, industrial production, exports and imports are for month of June, stock and commodity prices are for week ending July 27.

ual downward movement in prices, increased employment and income, and led to some expansion in consumer purchasing. Foreign demand for many industrial products like steel, copper, and airplanes increased sharply and exports of cotton were exceptionally large, but foreign buying of tobacco, fruits, and numerous other agricultural commodities was curtailed.

After the initial spurt in early autumn, buying of manufactured products, particularly of durable goods, declined somewhat, according to figures compiled by the Department of Commerce, but continued through the winter and spring generally at a higher level than in the first half of 1939. Shipments rose less sharply and also declined somewhat after November, but have remained some 15 or 20 per cent larger in value than in the corresponding months of last year. Production increased through the latter part of 1939, and there was a considerable accumulation of inventories, primarily of semi-finished products and raw materials. Notwithstanding some curtailment in output of semi-finished products in the early months of 1940, the total of manufacturers' inventories, according to Department of Commerce data, continued about 10 to 12 per cent larger in value than a year ago.

Prices of commodities receded last autumn and winter after the initial sharp advances. Foodstuff prices decreased under the influence of large domestic supplies and as it became evident that foreign demands would not be large in the near future. Many imported commodities, which had risen because of the fear of shortages in transport facilities as well as higher shipping costs, declined after the turn of the year as current needs were adequately supplied. Prices of domestic industrial materials also declined, but in general were supported by the high level of production maintained in many important consuming lines such as machinery and transportation equipment.

Sustained activity in these industries and continued uncertainties with regard to the availability of supplies were important factors preventing general liquidation of inventories during the spring. Another element in the picture subsequently was the growing recognition that a large defense program would be undertaken in this country. Adoption of such a program focused attention on the possibilities of bottlenecks in particular industries and was one factor stimulating a further increase in buying by industry in recent months. New orders have been in larger volume than shipments, with the result that the volume of unfilled orders, which had declined from early peak levels, has increased somewhat. Thus at the beginning of the second half of the year manufacturers held inventories larger than a year earlier but were also producing and shipping substantially more goods and had on hand much larger unfilled orders. Outlays for capital equipment were increasing partly to provide facilities for output of armaments and partly to anticipate increased demands for other types of goods.

Total non-agricultural employment has increased by about a million persons in the past year with more than half of the expansion occurring at manufacturing establishments and a considerable part of the remainder in the mining industry. In most other major groups of industries increases have been small. With a continued growth in population during this period, the decline in unemployment has probably been around half a million, and the number of persons out of work is still large.

Industrial output began to show a pronounced increase in May following a decline from the peak levels reached in the latter part of 1939. By June the Board's revised seasonally adjusted index had advanced to about 121 per cent of the 1935-1939 average, as compared with a low of 111 in April and a peak of 126 last December, and in July continued

**Industrial
production**

at approximately this level. The index as formerly compiled is estimated at 117 (1923-25 average = 100) for July, compared with 102 in April, and 128 last December. The smaller changes shown by the new index this year reflect sustained activity in a number of important industries not included in the old index. The new index and its principal components are shown for recent years on the accompanying chart. An explanation of the revisions made in the index and detailed tables are given elsewhere in this BULLETIN.

The declines in the early part of the year and the subsequent increases occurred for the most part in the iron and steel, textile, and paper industries, as is shown in the chart, and were most pronounced in branches producing semifinished manufactures. In industries manufacturing finished products, such as machinery and transportation equip-

ment, and at mines, activity continued throughout the first half of this year at close to the high levels reached in the last quarter of 1939.

In the first half of 1940 the total index of industrial production on the revised basis averaged 116, about 15 per cent higher than in the first half of last year. In industries producing metals and metal products activity was at a level more than a third higher than a year ago, but output of some other products, notably shoes, leather, and silk and wool textiles, was considerably smaller in the first half of 1940 than in the corresponding period of 1939. By July activity in most of these lines had risen substantially from the low levels reached earlier in the year, but was still somewhat less than last summer.

During the first half of this year activity at machinery plants was maintained at the levels reached at the beginning of the year and in the aircraft and shipbuilding industries activity increased further. The slight decline in output in the machinery and transportation equipment group shown in the chart reflected chiefly reductions at automobile factories. Output of automobiles had been large during the winter and, although retail sales were substantially higher than a year earlier, dealers' stocks of new automobiles were built up to high levels. These stocks were substantially reduced in June and July, when production was curtailed seasonally and retail sales were maintained at a high level. New orders for machinery declined somewhat after rising sharply last September and October, but since March orders have again advanced considerably. In recent months demand for railway equipment has also increased following a decline from the high level reached last autumn.

In the steel industry activity declined from a level of about 90 per cent of capacity during the fourth quarter of 1939 to 60 per cent in April. Subsequently output rose rapidly, and by the end of July, steel mill operations had

once again reached a rate of about 90 per cent, although usually there is a decline in the summer. The volume of new and unfilled orders for steel declined considerably in the early months of 1940, but in the spring, during a brief period of price reduction, orders were received in considerable volume. The intensification of active warfare in Europe in early May contributed to a further increase in orders from both domestic and foreign sources and, although output increased, unfilled orders rose. Currently it is reported that orders are still being received in substantial volume and that unfilled orders are large.

Domestic demand for steel has been general as most steel-consuming industries have been operating at high rates. There has also been a considerable volume of steel purchases from Canada and from European and South American countries. In May and June exports of steel amounted to about 10 per cent of steel-making capacity as compared with about 4 per cent a year ago. Direct steel requirements for the national defense program now under way have as yet been rather limited in amount; indirectly, however, this program has had an influence in stimulating orders by various steel-consuming industries.

In most industries producing other types of durable manufactures, such as lumber, furniture, and stone, clay and glass products, there were declines in activity during the early months of this year but the decreases were generally moderate. Plate glass production was reduced considerably, however, partly because in this industry demand is dependent mainly upon automobile manufacturers, who have been curtailing output in recent months, and partly because some of the large output in the latter part of 1939 was for stock. Deliveries of copper, tin, zinc and lead to fabricating industries also declined sharply in the early months of this year following an exceptionally large volume of such shipments last autumn. Recently, however, there have been some increases in most of

these industries and output generally continues at a considerably higher level than in the first half of 1939.

In the wool and silk textile industries activity declined rapidly during the first four months of this year. In the case of the silk industry, the decline reflected several factors, principally the exceptionally large stocks of hosiery that had been accumulated previously, the introduction of nylon hosiery, and the high price of raw silk, which was of particular importance in restricting output of silk fabrics. Mill takings of raw silk in May and June were at the lowest level reported since 1921.

In the wool industry the decrease in activity early this year was from an unusually high level last autumn and reflected the fact that buying of fall merchandise this spring was much smaller than usual. In June, however, a considerable amount of buying developed, representing increased Government orders in connection with the national defense program and purchasing by many manufacturers and dealers desiring to obtain adequate supplies now in the event that there might be delays in deliveries later. From April to June activity in the wool textile industry rose and the advance appears to have continued since then.

In the cotton textile industry activity was reduced considerably in the first quarter and showed little change in April and May. Toward the middle of June, however, there was a brief period in which new orders rose sharply, owing in large part to seasonal influences, and in June activity declined less than seasonally. In the rayon textile industry activity during the first half of this year has continued near the high levels reached last fall.

In the chemical industries activity rose substantially last autumn and has since been largely maintained at an advanced level, reflecting both increased demand in this country and the cutting off of foreign sup-

**Nondurable
manufactures**

plies in some instances. Output of rubber products and petroleum products likewise continued large during most of the first half of this year.

Production of paper and paper board was at peak levels in the last quarter of 1939 and a substantial volume of inventories accumulated. In the first quarter of this year activity declined sharply but since March there has been a considerable increase in output, due in part to the fact that European supplies of wood pulp and paper have been largely cut off from this country and from other countries. Currently activity is close to peak levels in many branches of the paper industry.

Mineral production shared in the general advance last autumn with increases reported for production of both metals and fuels and this year mining of most products has continued in large volume. In the petroleum industry, however, large stocks of refined products accumulated and recently output of crude petroleum has been reduced considerably, mainly in Texas fields. Coal production this spring and summer has been unusually large for the season, reflecting greater exports and the building up of stocks of coal at Upper Lake ports, as well as increased industrial consumption. Shipments of iron ore down the Lakes have been at near capacity levels in recent months, but the use of ore has been large and stocks at Lower Lake ports have remained small.

Exports of United States merchandise in June amounted to \$344,000,000, a rise of 8 per cent from the level of April and May. Exports were smaller in the second quarter than they had been in the first, owing to declines in agricultural exports and a sharp fall in shipments to occupied European countries. The declines in agricultural exports were partly offset in the total by increases in exports of industrial materials and products—especially those for war purposes. Exports of aircraft, explosives, and firearms and ammunition increased greatly toward the end of the quarter.

Much of the decline in agricultural exports since the first quarter of the year has been due to seasonal influences. Shipments of cotton declined from the high level of the previous two quarters, and exports of other agricultural products decreased somewhat, primarily because of the loss of Northern European markets and smaller food shipments to Great Britain.

Shipments of industrial products continued their upward movement but at a slower rate. While exports of industrial products to England, France, and Canada were considerably higher than in the first quarter, these increases were partly offset by sharp reductions in shipments to occupied territories in Europe. The principal increases in United States export trade in the second quarter were in firearms and ammunition, machine tools, coal, wood, and paper. Shipments of automobiles, copper, and textiles were considerably lower.

During the second quarter industrial exports were 40 per cent higher than in the corresponding period last year. The largest increases since 1939 have occurred in war materials, as is shown in the following table:

EXPORTS OF SELECTED INDUSTRIAL PRODUCTS
Amounts in millions of dollars

	April-June		Change	
	1940	1939	Amount	Per cent

Coal.....	29	12	+17	+146
Petroleum and products.....	89	99	-10	-10

April-June 1940 figures preliminary.

Exports of iron and steel, machine tools, and aircraft show the largest absolute gains but firearms and ammunition, coal, aluminum

and other metals show larger percentage increases. Exports of wood, paper, agricultural machinery, chemicals, and textiles also have been higher, reflecting primarily shipments to Latin America and other neutral countries unable to satisfy their requirements in Europe. Among leading exports, automobiles, parts, and accessories, and petroleum and products show the principal declines. The European areas now cut off by blockade were important markets for these products.

Imports for consumption showed little change in the second quarter of 1940 and were considerably below the advanced level reached at the end of 1939. The value of imports has been greater since the beginning of the year than in the corresponding period of the two previous years, but the increase has been much less than for exports and a large share of the advance has been due to higher prices of imported products. Imports in the second quarter were nearly 30 per cent below the second quarter of 1937 when large import demands due to a high rate of industrial activity were supplemented by unusually large importations of agricultural products to supplement drought-shortened crops in the United States.

Since the outbreak of war, imports of industrial raw materials and semi-manufactures have increased, while imports of crude and manufactured foodstuffs and of finished manufactures have either shown little change or have decreased somewhat. Purchases of rubber, wool, silk, ferro-alloys, tin, and other metals have been in larger volume than in the previous corresponding period.

The volume of construction work started in June was about the same as in May according to data of the F. W. Dodge Corporation for 37 Eastern States and of the San Francisco Federal Reserve Bank for 11 Western States. Public work increased from earlier low levels, owing partly to additional work at navy yards and air stations, while contracts for private work declined from the advanced level reached in

April and May by more than the usual seasonal amount. Preliminary figures for the first half of July show increases in both public and private construction. Contract figures for the second quarter and other recent periods are given in the accompanying table:

CONSTRUCTION CONTRACTS AWARDED IN 37 EASTERN STATES

[Monthly averages in millions of dollars]

	Total	Publicly financed	Privately financed			
			Total	Residential	Factories	All other

Source.—F. W. Dodge Corporation. The figures shown are not adjusted for seasonal variation.

These figures indicate that contracts for private residential building in the first half of 1940 were about 7 per cent larger than a year ago in the 37 States covered by the F. W. Dodge Corporation figures. The rise reported in the far West was somewhat more marked. As the chart indicates, the principal increases

PRIVATE RESIDENTIAL BUILDING BY FEDERAL RESERVE DISTRICTS

Based on contracts awarded, except in San Francisco District, where building permit figures were used; data not adjusted for seasonal variation.

over a year ago were in the Chicago, Cleveland, Atlanta, and San Francisco districts. The one marked decline was in the New York district where apartment construction was much smaller than in 1939 when a large-scale rental project of the Metropolitan Life Insurance Company was being undertaken; house construction in the New York district was in about the same volume in the two periods.

Private contracts for factory construction and other non-residential work in the Dodge area have been running about one-fifth larger than last year but considerably below the level reached in the summer of 1937.

Contracts for public construction were at a relatively low level at the beginning of this year, following a period of enlarged expenditures on public works. The volume of such contracts, however, has since increased and rose considerably in June, owing in part to expansion in military construction, including contracts on a \$25,000,000 naval air station at Corpus Christi, Texas. In the first part of July, additional contracts aggregating \$90,000,000 were let by the Navy Department for construction work in navy yards and air bases at a number of points on both the Atlantic and Pacific coasts. The volume of contracts awarded for public housing was about the same in the first half of 1940 as a year earlier.

The general level of wholesale commodity prices, as measured by the Bureau of Labor Statistics' index, declined during June to 77 per cent of the 1926 average, which was the lowest level reached since the prewar period last August when the index was at 75. Early in July the index advanced about a point, reflecting chiefly seasonal increases in prices of livestock and products. At 78 the index was a point and a half below the highest level reached last autumn.

Prices of basic commodities, which as a group had shown little change from the middle of May to the early part of July, subse-

quently declined to a level approximately 7 per cent above the average in August, 1939. In the latter part of July prices of most of these commodities were considerably below the levels reached last autumn or this spring but in the case of certain commodities, principally corn, rubber, and zinc, price increases have been largely maintained, chiefly as a result of special circumstances restricting market supplies. The accompanying table shows prices of selected basic commodities for the prewar week of August 26, the highest prices since that date, and prices for the latest week:

WHOLESALE PRICES OF SELECTED BASIC COMMODITIES
Weekly averages

	Prewar Aug. 26, 1939	Highest since prewar	July 20, 1940	Per cent change prewar to July 20

Zinc.....cents per lb.....	4.75	6.50	6.25	+32
Steel scrap.....dollars per ton....	15.62	22.50	18.38	+18

After the middle of June prices of basic industrial materials showed some declines owing in part to the backing up of supplies of certain materials, such as copper and steel scrap, as a result of suspension of French and Italian orders. Domestic demand for such materials, however, has grown in recent months and late in July non-ferrous metal markets were firm. Prices of some other materials, such as rubber, tin and ferromanganese, have been strengthened by the

Federal program for accumulating stocks. Industrial materials as a group have continued to fluctuate within the general range prevailing since early spring, as shown in the chart on page 779, and are currently about 10 per cent above the level of last August. Prices of basic foodstuffs on the other hand are now close to the level of a year ago.

Prices of most finished industrial products have continued to show little change in recent months. Contract prices for some commodities, such as certain paper and chemical products, were increased for third quarter deliveries. Application of additional Federal excise taxes on July 1 brought minor advances in prices of a number of finished consumer goods. Prices of petroleum products have been declining and recently crude oil prices have been cut in some areas, under the influence of accumulation of stocks resulting from large domestic output and further curtailment of foreign demand.

Changes in business activity and in security markets in the past year have been reflected to a small extent in bank loans. After the outbreak of war last September the demand for commercial and industrial loans increased substantially, especially at banks in leading cities. This rise in business loans coincided with an increase in business activity and in inventories of manufacturers and distributors. During the early months of 1940 business loans at city banks showed little further change, but they have risen slightly since the end of May. At country banks, according to preliminary call report figures shown in the table, there was a marked increase in loans during the first half of this year. Data are not yet available as to types of loans, but some of this increase no doubt reflects seasonal agricultural credit demands.

Bank loans to brokers and dealers in securities, which had shown little change in general level during the previous year, declined sharply in May and June, following a fall in stock prices. On July 3 brokers loans

by New York City banks amounted to about \$260,000,000, which was the lowest level on record and about one-quarter of the level that had generally prevailed in 1936 and 1937. In July there was a small increase in these loans, reflecting principally borrowing by Government security dealers in connection with new Treasury financing.

MEMBER BANK LOANS AND INVESTMENTS,
JUNE 29, 1940

[Preliminary figures in millions of dollars]

	Amount re- ported June 29, 1940	Change since December 30, 1939				
		All mem- ber banks	Central reserve city banks		Re- serve city banks	Coun- try banks
			New York	Chi- cago		
Loans.....	13,951	-11	-282	+35	+30	+206
Investments:						
U. S. Govern- ment, direct & guaranteed.....	14,723	+395	+714	+55	-247	-127
States and local governments.....	2,887	+195	+55	+15	+90	+35
All other.....	2,878	-81	+2	-3	+13	-93
Total.....	34,440	+499	+490	+101	-113	+22

New York City banks have continued to add to their holdings of United States Government securities, while other member banks reduced their holdings somewhat in the first half of the year. The volume of State and local government obligations held has gradually increased at all classes of member banks during recent years. Since the end of 1936 member banks, particularly country banks, have been reducing their holdings of domestic corporate securities and this decline continued in the second quarter of this year.

As a net result of all these changes, total loans and investments of all member banks increased by \$500,000,000 in the first half of this year and by \$1,800,000,000 in the past 12 months. Member bank reserves showed increases of \$2,100,000,000 in the half year, and of \$3,800,000,000 in the 12-month period, reflecting corresponding growth in the country's monetary gold stock. Member bank deposits have consequently continued to rise to new high levels.

New Federal Reserve Index of Industrial Production

IN this issue of the BULLETIN the Board of Governors publishes a revised index of industrial production.¹ The purpose of the revision was to provide a broader and more accurate measure of current changes in the physical volume of industrial output. The new index covers the period from 1919 to date on a monthly basis and supersedes the Board's previous index, which was presented on a revised basis in 1927 and has not been revised materially since that time. New indexes for total industrial production and for major groups of industries are shown in the charts and tables accompanying this article and more detailed figures for groups and for individual industries and products are given in tables on pages 825 to 882 of this BULLETIN. Some of the major theoretical and practical problems involved in measuring the course of production will be discussed in an article in a later issue of the BULLETIN.

The scope of the new index, as of the old, is limited to the production of manufactures and minerals. Neither index covers production of other types of goods and services. Extensive modifications have been made, however, and the behavior of the new index, while broadly similar, is different in some important respects. The principal difference is that the new index shows much more growth in this country's industrial output than was shown by the former index. Many new series were developed to obtain coverage in important industries not previously represented, particularly the machinery, rayon textile, manufactured food, and chemical industries, all of which have grown rapidly in the past two decades. In addition, a number of individual series, such as those on production of lumber and paper, were replaced by new series or were extensively revised, and

adjustments to census or other benchmark data were made where data for individual industries or groups of industries were inaccurate as to general level.

Another important consequence of the revision is that the new index, being broader in scope and less weighted by primary products, shows less erratic short-term fluctuations.

In making comparisons over longer periods an important limitation of both the old and the revised indexes arises from the fact that there is no satisfactory method of allowing for the improvement in the quality of products. In many industries, particularly in those with highly fabricated products, increased quantity of output has been accompanied by great improvement in quality.

Methods used in compiling the new index are basically the same as those used in the former index, with a number of changes called for by the passage of time or adopted to simplify the procedure. The base period, in which the index numbers average 100, was shifted from the period 1923-1925 to the most recent complete five-year period, 1935-1939. Weights applied to the individual series for combining them into composite indexes were derived from Census data for the years 1937 and 1923. The 1937 weights were used in combining the series covering the past ten years while the 1923 weights were used for previous years.

New seasonal adjustment factors were computed for all series and allowances for changes in number of working days were compiled for the new series and revised for old series, when necessary.

All revisions were confined to the period from 1923 to date; for the years 1919-1922 figures of the old index were chained on to the new series.

Comparison of new figures with old

The new index and the old index have similar major cyclical movements, as is shown in Chart I. They differ principally with respect to long-term growth and to degree of fluctuation in some of the more erratic short-

¹ Revision of the Board's production index was conducted by Maxwell R. Conklin, under the general supervision of Woodlief Thomas, Assistant Director, and Frank R. Garfield, head of the section on domestic business conditions, of the Division of Research and Statistics. Mr. Conklin was primarily responsible for working out the methods used and supervising the actual work of compiling the new index and also for preparing this article. Others were responsible for or assisted in working up individual series where complex estimates or adjustments were necessary and made contributions also in other phases of the revision; these included John O. Bergelin, Ray R. Foster, Clayton Gehman, H. C. Barton, Jr., Katharyne Reil, and Michael Marsh. Mr. Barton was responsible for much of the work of deriving adjustments for seasonal variations.

term movements. The similarity shown as to current general level, is due largely to the fact that the old index happened to average 99 for the years 1935-1939, the base period selected as 100 for the new index. The revised index has shown much more growth over an extended period, rising from an average of 87 in the years 1923-1925 to 100 in the new base of 1935-1939. In 1937 the new index averaged 3 per cent above the 1929 level whereas the old index averaged 8 per cent below 1929. In June 1940 the new index was 121 per cent of the 1935-1939 average and, if calculated on a 1923-1925 base, would be 139, as compared with 114 for the old index.

The more rapid growth shown by the new index is due to the addition of data for a number of expanding industries not adequately represented in the old index and to adjustments for growth in some series previously used. The widest difference is in the index for

non-durable manufactures, shown in Chart III, and reflects principally the inclusion for the first time of series for such rapidly growing industries as chemicals, rayon textiles, alcoholic beverages, dairy products, and certain other manufactured foods, and the improvement of data on pulp and paper. The index of durable manufactures, shown in the same chart, was also revised upward, though to a smaller extent, largely as a result of the inclusion of new series on machinery and furniture, and of special upward adjustments for nonferrous metal products and stone, clay and glass products to allow for the long-term movements of industries not directly represented in these groups. The revised index of minerals, shown in Chart II, differs only slightly from the old minerals index.

The major cyclical movements of the two indexes are broadly similar both in timing and in degree of change. Both indexes rose gradually in the 1920's, with pronounced re-

CHART I

INDUSTRIAL PRODUCTION
ADJUSTED FOR SEASONAL VARIATION

cessions in 1921 and 1924 and smaller fluctuations in other years, reached a peak in the summer of 1929, and then declined without important interruption to a low point in the middle of 1932. This decline was the same for both indexes, amounting to over 50 per cent. Both indexes rose, with major interruptions, from 1933 to early 1937, but in that year the new index reached a new high level of 121, compared with a 1929 peak of 114, while the old index remained below its 1929 peak. The 1937-38 recession and the recovery since were equally pronounced for both indexes.

The new index shows smaller short-term fluctuations and is generally somewhat smoother in month-to-month changes than the old. The peaks in the summer of 1933 and at the end of 1935 and 1939, for example, are less pronounced and the troughs in the autumn months of 1933 and 1934 and the early part of 1935, 1939, and 1940 are also less marked in the new index than in the old. These differences are due largely to an increase in the coverage of the more stable nondurable goods industries and to the inclusion in the new index of new series for the more advanced products of manufacture, such as machinery and furniture. The old index was largely composed of basic products the output of which fluctuates more widely than that for industry as a whole. Also, for some series, in which shipments or deliveries of materials are used to represent production in later stages of manufacture, a three-month moving average has been used; and in a few cases, such as shipbuilding and production of locomotives, estimates of the current volume of work have been substituted for more highly fluctuating series on the number of units completed. Another factor smoothing out month-to-month fluctuations in the index has been the revision of seasonal adjustments; this has been particularly important in eliminating or reducing the December peaks, shown in the old index during most recent years.

Composition of revised index

The new index is derived from 81 individual series distributed among 16 groups of manufacturing industries and two groups of mining industries. They are listed on pages 761 to 763. Some of the individual series are based on statistics of monthly out-

put of finished products while others, such as the series on consumption or shipments of materials, machinery hours active, or man hours worked, more or less directly represent productive activity of individual industries or groups of industries.

The extent of the change in composition of the new index as compared with the old is indicated in the following table in which the basic individual series in the revised index are classified as to whether they are new, materially revised, or substantially the same as in the old index.

SERIES INCLUDED IN REVISED INDEX OF INDUSTRIAL PRODUCTION

New series not in old index	Materially revised from series in old index	Substantially the same as series in old index
Machinery Aircraft Railroad cars Copper deliveries Lead shipments Zinc shipments Furniture Common brick Face brick Glass containers Rayon deliveries Manufactured dairy products (4 series) Other manufactured foods Alcoholic beverages (4 series) Chemicals Rubber consumption Gold	Locomotives Shipbuilding Copper smelting Lumber Silk deliveries Carpet wool consumption Apparel wool consumption Woolen yarn Worsted yarn Woolen and worsted cloth Wheat flour Cane sugar meltings Meatpacking (4 series) Pulp (4 series) Paper (5 series) Paper board containers Copper mining Lead	Pig iron Steel ingots Automobiles Tin deliveries Cement Polished plate glass Cotton consumption Leather tanning (3 series) Shoes Tobacco product (3 series) Newsprint Newsprint consumption Petroleum refining (4 series) Coke (2 series) Rubber tires Rubber tubes Bituminous coal Anthracite Crude petroleum Iron ore shipments Zinc Silver

All principal groups of industries in manufacturing and in mining are directly represented in the new index at some stage in the production process, whereas in the old index a number of important industries, notably those producing machinery and chemicals, were represented inadequately or not at all. In some cases, the increased coverage was obtained by including new production or shipments series that have become available in recent years; in others, estimates were made on the basis of hours of work or other data, with necessary special adjustments.

Where necessary, series are adjusted for differences in number of working days in the various months, and all series are converted into relatives in terms of the average for the 1935-1939 base period as 100. These relatives are in turn adjusted for seasonal variation.

The relatives for the individual series are then combined into composite index numbers for industries, for groups of industries, and for industrial production as a whole. Two sets of such indexes are computed—one set without seasonal adjustment and another set adjusted for seasonal variation.

Revision and development of individual series

All in all, a large part of the total amount of work in the revision was done on individual series, including the development of new series where monthly data on production were not available and the revision of statistics where available data were unsatisfactory.

The development of production estimates by compiling series on man-hours worked and adjusting these series for changes in output per man-hour was a major task. The lack of comparable physical production units for measuring current changes in the output

of many industries was an important reason for adopting this alternative method as the basis for production estimates. This procedure made it possible to include in the index a direct representation for such important industries as machinery, furniture, chemicals, baking, and canning, which previously had not been represented in most monthly production indexes, and also to obtain a better measure of monthly output for the locomotive, railroad car, and shipbuilding industries than could be obtained from other current statistics on these industries.

The adjustment of man-hours data for changes in output per man-hour was made by relating biennial estimates of production to estimated man-hours figures for corresponding years. Monthly estimates of productivity were interpolated from these relationships. In the absence of reliable information concerning short-term changes in output per man-hour it was assumed that productivity

CHART II
PRODUCTION OF MANUFACTURES AND MINERALS
ADJUSTED FOR SEASONAL VARIATION, 1935 = 100

showed only gradual shifts. Biennial production indexes compiled from Census data by Solomon Fabricant of the National Bureau of Economic Research, as yet unpublished, were used in making some of the estimates of productivity. Other census data and, in a few instances, general measures of productivity for 59 manufacturing industries compiled by the National Research Project on Reemployment Opportunities and Recent Changes in Industrial Techniques were also used for adjusting man-hour data.

An allowance similar to that made for output per man-hour was made in the series representing production of woolen yarn, worsted yarn, and woolen and worsted cloth. For these series the underlying figures relate to active spindle hours and active loom hours and an adjustment was desirable to allow for long-term changes in the efficiency of the looms and spindles in use.

Many of the series available on a monthly

basis for past years have not been comparable from one period to another. Wide shifts have occurred in the proportion of the industry covered by current reports; the classification of the various products has been changed from time to time; and there have been some periods when the reporting of figures was discontinued altogether. Various types of corrections and estimates were made to remedy these defects, including in some instances adjustment of the series to comprehensive Census or other benchmark data.

Where reasonably accurate annual figures were available, it was possible to adjust the available monthly or weekly statistics to the level shown by the annual data. The revised series on production of lumber and paper and pulp, and the new series on face and common brick production were compiled partly by making such adjustments. In these series the first step was to obtain a monthly series as nearly comparable as possible by over-

CHART III
PRODUCTION OF MANUFACTURES
ADJUSTED FOR SEASONAL VARIATION, 1935-1939 = 100

AUGUST 1940

757

lapping different sets of data and where necessary making estimates for gaps in the series. Annual totals for these monthly series were then related to the annual figures reported by the Bureau of the Census and the monthly figures were raised to the level shown by the Census for each year, making gradual adjustments so that abrupt shifts were not introduced into the monthly data.

New series added to the index, other than those representing brick production and those based on man-hours data, include copper deliveries, zinc shipments, lead shipments, rubber consumption, production of glass containers, rayon deliveries, production of beer, whiskey, other distilled spirits, rectified spirits, ice cream, butter, cheese, canned and dried milk, and gold. In addition several series which had previously been included in the index were extensively revised or were replaced by newly derived series considered more representative of output in the industry concerned. These include silk deliveries, wool consumption, cane sugar meltings, and production of flour, pork and lard, beef, veal, lamb and mutton, copper, and lead.

In many cases comparable data for the entire period were not available for either the new or the old series, and it was necessary to splice two or more sets of monthly figures to obtain the series finally used. For some series where publication of monthly statistics was begun after 1923 and in a few other instances, for example in mine and smelter production of copper and in copper deliveries, there were gaps in the available monthly data. In such cases estimates were made for intervening periods, using such annual production data and related monthly information as was obtainable. While these estimates are generally not considered entirely reliable as measures of output in the particular industry, the group indexes, which were derived only in part from such estimates, may be considered as reasonably accurate.

In two industrial groups, nonferrous metals and products and stone, clay and glass products, composites of available monthly series showed a considerably downward bias relative to indexes for the groups as a whole as shown by biennial production data from the Census of Manufactures. In compiling the total indexes for these two groups, therefore, an upward adjustment was made, so that the general level of each group index approximates that indicated by Census data, while

the monthly movement within each group reflects changes in the specific series included.

At a later date a detailed account of the problems encountered and the methods used in deriving each of the individual series and of combining these series into group indexes will be made available for distribution to those interested.

Working day allowances

All the series for individual industries previously included in the Federal Reserve index were reexamined with respect to working day practices, which had been changed in many industries as hours of work were reduced during the depression and at the time of the NRA codes. As a result numerous revisions were made in working day allowances and daily averages. For series included in the index for the first time, working day allowances were similarly computed where required. The new series derived from man-hour figures were based on data mainly for a single week in the middle of each month and daily average allowances were not needed. The allowances currently used are shown in a table on page 770.

Adjustment for seasonal variation

Seasonal adjustment factors for all individual series have been newly computed from 1923 to date.² Seasonal patterns for all lines of production have changed from time to time, and the factors used for seasonal adjustment have been modified accordingly. Seasonal adjustment factors for 1940 are shown by individual series on page 771. The pattern of seasonal variation in the new composite unadjusted index is substantially different from that in the old index, chiefly as a result of the inclusion of new series, particularly those for manufactured foods. One result, as the following table indicates, is that a larger proportion of the year's production is shown in the latter half of the year and a smaller proportion in the first half.

For series included in both the old and the new indexes the seasonal factors are in some cases considerably different, particularly in recent years. In a number of series, for example, seasonal factors formerly used for December were found to be too low and the higher factors now used contribute toward

² The ratio to freehand curve method was used in making seasonal adjustments. This method, which was discussed briefly on page 836 of the BULLETIN for October 1938, has frequently been used by the Board in recent years and is similar to the ratio-to-moving average method used in earlier years.

making the new seasonally adjusted index for that month lower than the old index in relation to other months in the autumn and winter.

SEASONAL VARIATION IN 1939 IN INDEX OF TOTAL INDUSTRIAL PRODUCTION *

Month	New index	Old index
January.....	96.2	98.1
February.....	98.1	100.5
March.....	99.6	102.0
April.....	100.8	102.6
May.....	101.3	102.7

July.....	98.4	96.0
August.....	98.8	96.3
September.....	103.0	100.6
October.....	103.7	102.7
November.....	101.7	100.1
December.....	98.3	93.6

* Derived by dividing monthly indexes without seasonal adjustment by corresponding seasonally adjusted indexes.

Combination of data for individual series into composite indexes

In compiling the composite index of industrial production and the composite indexes of manufactures, mining, and other groups, the importance of the individual series was measured by the value added by manufacture shown in the Census of Manufactures and by the value of minerals shown in the Minerals Yearbook. Factors representing the percentage of total industrial production contributed by each of the individual series in the 1935-1939 base period were derived from these data. Two sets of such factors were compiled—one based on 1937 Census figures and used for the period since 1929, and the other based on 1923 figures and used for the years from 1923 through 1929. The relatives for individual series are multiplied by the corresponding percentage factors. The sum of the products thus derived for each month is the index of industrial production and the product for each series is the number of points contributed to the total index by that series. The index for each group is obtained by dividing the sum of the products for the series within the group by the total of the percentage factors for the series in that group.

Composite indexes for the year 1929 were computed with both sets of percentage factors—one derived from 1923 relationships and the other from 1937 relationships. The group indexes with 1923 weights were chained to the indexes with 1937 weights for extending these series back of 1929 on a 1935-1939 base.

Marked shifts have occurred in the contribution made by individual industries and groups of industries to total industrial production since the middle 1920's. These shifts reflect differences among industries both as to changes in the physical volume of production and as to changes in the value added by manufacture or value of minerals per unit of output. Petroleum and chemicals in recent years have constituted a larger part of the total index of industrial production chiefly because of a growth in the volume of these products, while lumber and coal have become a smaller part of the total index than in the 1920's chiefly because output of these products has declined. In textiles, value added per unit of output has declined considerably, so that this group of industries now accounts for a smaller part of total industrial production than in the middle 1920's, although textile output has increased more than total industrial production. In steel, on the other hand, value added per unit has increased, and the steel industry in recent years has accounted for a larger part of the total, although the growth in steel production has been somewhat less than that in total industrial output.

Classification and grouping of industries

Classification of manufactured products among major groups of related industries is made on the same basis as that used in the Census of Manufactures for 1937, except that alcoholic beverages, included in the Census with foods, and tobacco manufactures, included in the Census with miscellaneous industries, are shown as separate groups. In determining the relative importance of each series for purposes of weighting, the full amount of the value added by manufacture for each of the groups was distributed among the individual series within the group. In computing 1923 weights, used for the period from 1923 through 1929, Census of Manufactures data were reclassified to correspond as closely as possible with the classification used in 1937. Cost of contract work, which had been included in the value added by manufacture in 1923 but not in 1937, was subtracted from the value-added figures for the earlier year.

The broad grouping of manufacturing industries according to the durability of goods produced is approximately the same as that used by the Bureau of Labor Statistics in its classification of employment data. Indus-

tries producing metals and products, lumber and products, and stone, clay, and glass products are classified as durable; all other manufacturing industries are classified as nondurable. This grouping of industries is useful and broadly accurate, notwithstanding some specific limitations. Certain materials, such as steel ingots, used principally in the production of durable goods are also used in the manufacture of nondurable products like tin cans, while others classified as nondurable goods are used to some extent to make durable commodities, e.g., certain plastics made by industries included in the chemical group. Textiles, which as a group are classified as nondurable, include carpets and rugs, which are durable. Manufactured fuels like coke or fuel oil are classed as nondurable goods, although a considerable portion of them are used in producing durable goods. More detailed classification by individual series rather than by major groups would make little difference in the results shown for the indexes of durable manufactures and nondurable manufactures and might cause confusion in making comparisons with other published data.

Minerals are not classified as to durability but are divided into two groups—fuels and metals. Satisfactory current statistics are not available on nonmetallic minerals other than fuels.

Selection of base period

The period adopted as a base for the Board's new production index, the average for 1935-1939, is the latest five-year period for which data are available, and generally seems to meet the requirements for a satisfactory base better than any other recent period. Early this year various Federal Government agencies interested in the subject, acting through the Central Statistical Board, agreed upon the adoption of that period as a uniform base for all index numbers constructed by those agencies, unless for some reason it was not feasible. The reasons for adopting this period are set forth in some detail in the following statement issued by the Central Statistical Board:

"Adoption of a 1935-39 base for all general-purpose index numbers prepared by Federal agencies was recommended by the Central Statistical Board at a meeting held on May 23. The use of a uniform base period should facilitate comparison of the changes shown by such indexes. At present a multi-

plicity of base periods prevails. The Department of Agriculture publishes some index numbers on a pre-war base and others on a 1924-29 base; the Board of Governors of the Federal Reserve System uses a 1923-25 base; the Department of Labor, a 1923-25, a 1926, and a 1929 base; and the Department of Commerce, a 1923-25, a 1929, and a 1929-31 base.

"A more recent base has been urgently needed for index numbers for the following reasons: (1) Many statistical series are not available before 1935. Inclusion of such series in index numbers having base periods prior to that year forces fictitious adjustments of the base average. (2) The significance of any base period as a point of reference depends somewhat on the assumption that the index series may be expected to fluctuate around this level in the future. Important changes in economic relationships during recent years have largely destroyed the significance of pre-depression base periods.

"The five-year period, 1935 through 1939, is the most suitable recent period for adoption as a standard base. It is neither predominately a period of very high business activity nor one of very low business activity. It is long enough to meet the needs of agricultural indexes. It is recent. It includes 1939, for which decennial census data will shortly be available. It also covers three censuses of manufactures; one census of agriculture; two censuses of business; and one census of electrical industries. Because of its recency, there are far more bench-mark data (in addition to those from the census) available than for any earlier period.

"It was recognized by the Board that the need for adopting a new and recent base will recur periodically, although too frequent changes in base periods are not desirable. The Board therefore recommended that the question of base periods be reexamined before the end of another decade, and that consideration then be given to shifting the standard base period forward to a more recent series of years."

Industrial production chart book

A chart book of the indexes shown on pages 825 to 882 of this BULLETIN for total industrial production, 33 groups, and 81 individual series is being prepared and will be available for distribution around the middle of September at a charge of \$1.00. The book will be similar in page size to the Federal Reserve Chart Book. Each of the 115 charts will show indexes both without seasonal adjustment and adjusted for seasonal variation. Some series will cover the whole period from 1919 to date; most of the other series are from 1923 to date, while a few are for shorter periods.

SERIES INCLUDED IN THE INDEX OF INDUSTRIAL PRODUCTION

Series	Proportion of total index in base period	Daily average base	Initial date of series in index	Source
Industrial Production	100.00			
Manufactures	84.80			
Durable Manufactures	37.93			
Iron and steel.....	11.00			
Pig iron production.....	.87	85,000 net tons	1919	The Iron Age.
Steel ingot production.....	10.13	146,600 net tons	1919	American Iron and Steel Institute.
Machinery production.....	10.81	(1)	1923	Federal Reserve series based on the number of man hours worked, adjusted for estimated changes in output per man hour. Man-hour figures in recent years derived from U. S. Bureau of Labor Statistics data on the number employed and average hours worked.
Transportation equipment.....	5.92			
Aircraft production.....	.25	(1)	1932 ³	ditto
Railroad car production.....	.28	(1)	1923	ditto
Locomotive production.....	.07	(1)	1923	ditto
Shipbuilding.....	.53	(1)	1923	ditto
Automobile production.....	4.79	15,107 cars and trucks	1919	U. S. Bureau of the Census data on factory sales of passenger cars and commercial vehicles.
Nonferrous metals and products.....	2.81			
Copper smelting.....	.21	2,027 net tons	1919	Current figures: Copper Institute except for 5 months, Aug.-Dec. 1939, when monthly figures estimated. Prior to July 1933: Federal Reserve series based on data from the American Bureau of Metal Statistics and unpublished figures.
Lead production.....	.07	1,066 net tons	1921	American Bureau of Metal Statistics data on smelter receipts.
Zinc production.....	.13	1,391 net tons	1920	American Zinc Institute.
Copper deliveries.....	.44	2,203 net tons	1923	Current figures: Copper Institute except for 5 months, Aug.-Dec. 1939, when monthly figures estimated. Prior to August 1933 the American Bureau of Metal Statistics. Three month moving average placed at last month is used in index of industrial production.
Lead shipments.....	.15	1,623 net tons	1929 ³	American Bureau of Metal Statistics. Three month moving average placed at last month is used in index of industrial production.
Zinc shipments.....	.21	1,683 net tons	1923	American Zinc Institute. Three month moving average placed at last month is used in index of industrial production.
Tin deliveries.....	.20	185.8 gross tons	1919	Commodity Exchange, Inc. Three month moving average placed at last month is used in index of industrial production.
Other ²	1.40		1923	
Lumber and products.....	4.39			
Lumber production.....	2.90	(1)	1919	Federal Reserve series by major producing regions based on data published by the National Lumber Manufacturers Association and regional associations. Adjusted to U. S. Census of Manufactures and other bench-mark data.
Furniture.....	1.49	(1)	1923	Same as machinery production.
Stone, clay, and glass products.....	3.00			
Cement production.....	.40	291,700 barrels	1919	U. S. Bureau of Mines.
Common and face brick.....	.12		1923	
Common brick production.....	.08	(1)	1934 ³	Federal Reserve series based on U. S. Bureau of the Census data. Adjusted to U. S. Census of Manufactures data.
Face brick production.....	.04	(1)	1934 ³	Federal Reserve series based on U. S. Bureau of the Census data currently and prior to 1934 on the American Face Brick Association data. Adjusted to U. S. Bureau of the Census data.
Glass container production.....	.35	(1)	1925 ³	Federal Reserve series based on Glass Container Association data. Adjusted to U. S. Census of Manufactures data.
Polished plate glass production.....	.12	497,300 square feet	1923	Plate Glass Manufacturers of America.
Other ²	2.01		1923	
Nondurable Manufactures	46.87			
Textiles and products.....	11.22			
Cotton consumption.....	4.78	26,069 running bales	1919	U. S. Bureau of the Census.
Rayon deliveries.....	2.06	(1)	1923	Federal Reserve series based on data of the Textile Economics Bureau, Inc. Three month moving average placed at last month is used in index of industrial production.
Silk deliveries.....	1.00	1,641 bales	1919	Current figures: Commodity Exchange, Inc. since 1934. 1933 and 1934, National Federation of Textiles, Inc. 1919-1932, Silk Association of America. Re-exports, reported by the U. S. Bureau of Foreign and Domestic Commerce, are excluded. Three month moving average placed at last month is used in index of industrial production.

Series Included in the Index of Industrial Production—Continued

Series	Proportion of total index in base period	Daily average base	Initial date of series in index	Source
Paper and pulp— <i>Cont.</i> Soda pulp production	.03	(1)	1919	Federal Reserve series based on U. S. Federal Trade Commission data through May 1923, American Paper and Pulp Association data June 1923 through December 1933, and Soda Pulp Manufacturers Association data since January 1934. Adjusted to U. S. Census of Manufactures data.
Paper production.....	2.16			
Paperboard production.....	.72	(1)	1919	Federal Reserve series based on U. S. Federal Trade Commission data through May 1923, American Paper and Pulp Association data from June 1923 through December 1933, National Paperboard Association data 1934 to date. Adjusted to U. S. Census of Manufactures data.
Fine paper production.....	.24	(1)	1919	Federal Reserve series based on U. S. Federal Trade Commission data through May 1923, American Paper and Pulp Association data since May 1923. Adjusted to U. S. Census of Manufactures data.
Printing paper production.....	.44	(1)	1923	ditto
Tissue and absorbent paper production.....	.21	(1)	1923	ditto
Wrapping paper production.....	.46	(1)	1919	ditto
Newsprint production.....	.09	(1)	1919	Federal Reserve series based on U. S. Federal Trade Commission data through May 1923, Newsprint Service Bureau data since May 1923.
Paperboard container production.....	.64	(1)	1923	Federal Reserve series based on Paperboard Industries Association data January 1923 through December 1933, National Container Association data January 1934 to date. Adjusted to U. S. Census of Manufactures data.
Printing and publishing.....	6.44			
Newsprint consumption.....	3.22	(1)	1919	American Newspaper Publishers Association data with Federal Reserve adjustments in most back years.
Printing paper production...	3.22	(1)	1923	Same series described above.
Petroleum and coal products.....	2.14			
Petroleum refining.....	1.86			
Gasoline production.....	1.16	1,464,300 barrels	1919	U. S. Bureau of Mines.
Fuel oil production.....	.41	1,176,300 barrels	1919	ditto
Lubricating oil production.....	.20	87,600 barrels	1919	ditto
Kerosene production.....	.09	169,900 barrels	1919	ditto
Coke production.....	.28			
Byproduct coke production.....	.27	110,900 net tons	1919	ditto
Beehive coke production.....	.01	5,190 net tons	1919	ditto
Production of chemicals.....	6.27	(1)	1923	Same as machinery production.
Rubber products.....	1.39			
Rubber consumption.....	1.25	2,129 gross tons	1925 ¹	Rubber Manufacturers Association data including one-half of the quantity of reclaimed rubber reported consumed.
Tire and tube production.....	.14			
Pneumatic tire production.....	.12	201,300 casings	1920	Rubber Manufacturers Association.
Inner tube production.....	.02	192,300 tubes	1920	ditto
Minerals	15.20			
Fuels.....	13.01			
Bituminous coal production.....	3.44	1,300,000 net tons	1919	U. S. Bituminous Coal Division.
Anthracite production.....	.87	168,400 net tons	1919	U. S. Bureau of Mines.
Crude petroleum production.....	8.70	3,206,000 barrels	1919	ditto
Metals	2.19			
Iron ore shipments.....	.59	(1)	1919	Lake Superior Iron Ore Association.
Copper production.....	.44	1,761 net tons	1919	Same as copper smelting.
Lead production.....	.12	1,066 net tons	1921	American Bureau of Metal Statistics.
Zinc production.....	.12	1,391 net tons	1920	American Zinc Institute.
Gold production.....	.72	(1)	1932 ²	Federal Reserve series based on data from the American Bureau of Metal Statistics since 1932 and on data from the U. S. Bureau of the Mint in earlier years.
Silver production.....	.20	157,200 fine ounces	1921	American Bureau of Metal Statistics.

¹ Bases are shown only for those series for which indexes can be computed directly from regularly published data. Additional information necessary for series for which special adjustments are made may be obtained from the Division of Research and Statistics.

² Special series derived by adjusting the total of the individual series in this group to the general level shown by U. S. Census of Manufactures data for the group as a whole.

³ Monthly figures available only from date shown. In earlier years back to 1923 unpublished monthly estimates used in obtaining group and total indexes. For brief discussion see page 758 of this BULLETIN.

INDEXES OF INDUSTRIAL PRODUCTION, MANUFACTURING, AND MINING

[Adjusted for seasonal variation. 1935-39 average=100]

Year and month	In- dustrial production	Manufactures			Min- erals	Year and month	In- dustrial production	Manufactures			Min- erals

¹ No allowance made; basic series refer, mainly, to week ending nearest 15th of month.

² These are approximations for the industry as a whole. In the actual calculations the allowances used differ somewhat as between regions.

³ The additional holidays in February and November are Feb. 12 (Lincoln's Birthday) and Nov. 11 (Armistice Day). For Good Friday a full day allowance is made in silk deliveries and a half day in rayon deliveries.

⁴ The allowances shown are approximations for 1939. The number of working days in coal mining and beehive coke production are reported monthly by the Bureau of Mines and vary fractionally from time to time. Daily average output figures as reported by the Bureau are used in the computation of the indexes for these series. The holiday observed in April is April 1 (Eight Hour Day).

NOTE.—When a holiday falls on a Sunday it is assumed that it is observed on the following Monday and allowance is made accordingly. Fractional holiday allowances are made when it appears that only a part of the industry regularly observes the holiday. When a holiday for which a fractional allowance is made (for example: ½) falls on a Saturday which is a fractional working day (for example: ½), the holiday allowance made is the product of the two fractions (½×½=¼) and the total nonworking day allowance for that Saturday used as an example is: ½+¼=¾.

¹ These seasonal factors differ from those shown in the tables beginning on page 825 of this BULLETIN. The factors shown in this table were derived from and are for use with daily averages of monthly figures whereas the seasonal factors shown for these series on the later pages were derived by dividing three-month moving averages placed at the third month of the monthly indexes for 1939, without seasonal adjustment, by the corresponding moving averages of the seasonally adjusted monthly indexes.

² These seasonal factors were derived by dividing the monthly indexes of total lumber production for 1939, without seasonal adjustment, by the corresponding monthly seasonally adjusted indexes. The index of total lumber production is obtained by combining figures for the various lumber producing regions, for which separate seasonal factors are computed and used.

³ The method of seasonal adjustment for this series, and the factors used, may be obtained from the Division of Research and Statistics.

From a Legal Standpoint

Administrative interpretations of banking laws, new regulations issued by the Board of Governors and other similar material of interest to bankers.

Investments by Member Banks in Obligations of Certain Government Agencies

The Board of Governors recently received an inquiry with regard to the amount of certain obligations, guaranteed by the United States, which may be held by a member bank of the Federal Reserve System. Under the provisions of the Federal Reserve Act, State member banks are subject to the same limitations and conditions with respect to the purchasing, selling, underwriting and holding of investment securities and stock as are applicable in case of national banks under section 5136 of the United States Revised Statutes. The latter section provides that the limitations and restrictions therein contained as to dealing in, underwriting and purchasing investment securities by a national bank for its own account shall not apply to obligations of the United States and certain other types of obligations specifically mentioned. The Board was advised by the office of the Comptroller of the Currency that obligations of the Commodity Credit Corporation, the Reconstruction Finance Corporation, the United States Housing Authority and the Federal Farm Mortgage Corporation in the form of investment securities which, in accordance with law, are unconditionally guaranteed as to principal and interest by the United States, are considered by the office of the Comptroller as "exempted securities." Accordingly, the Board replied that a State member bank may purchase such obligations for its own account without regard to the limitations and restrictions of section 5136, United States Revised Statutes.

With respect to debentures of Federal Intermediate Credit Banks the Board replied that such obligations are issued under the authority of the Federal Farm Loan Act, as amended, and therefore are "exempted securities" by reason of the specific provisions of section 5136 of the United States Revised Statutes.

Obtaining Payment for Purchase of Securities in Cash Account Under Regulation T

The Board recently considered several questions regarding the provisions of Regulation T which relate to the maximum time permitted for obtaining payment in a special cash account under section 4(c) of the regulation. The general rule on this subject is stated in subdivision (2) of the section. Subject to a number of exceptions stated in subsequent subdivisions of the section, this subdivision provides that:

"(2) In case a customer purchases a security (other than an exempted security) in the special cash account and does not make full cash payment for the security within 7 days after the date on which the security is so purchased, the creditor shall, except as provided in the succeeding subdivisions of this section 4(c), promptly cancel or otherwise liquidate the transaction or the unsettled portion thereof."

Paying by sale of another security.—One inquiry related to the application of this provision to a question that may be described as follows:

A customer effects a purchase in a special cash account established pursuant to section 4(c) of the regulation. On the same day the customer sells in the account another security which he owns but which he has not yet deposited in the account. The proceeds of the sale, which was effected "seller 10", are sufficient to make full cash payment for the purchase, but such proceeds will not be available to the broker until after the time applicable under section 4(c) for obtaining payment for the purchase. May the sale be considered to constitute payment for the security purchased, and thus make it unnecessary to take alternative action?

It is to be noted that a similar question was considered by the Board in the ruling published at page 1043 of the December 1938 Federal Reserve BULLETIN on the subject of "Paying for Purchase in Special Cash Account by Selling Another Security." In that case the security sold was deposited in the account prior to the expiration of the time permitted for obtaining payment of the securities purchased. In the present case, al-

though the sale was made within the required period, the securities so sold were not delivered into the account within that time.

It is recognized that such transactions might be evidence of an effort to evade the regulation in violation of section 4(a) which provides that:

"A special account established pursuant to this section shall not be used in any way for the purpose of evading or circumventing any of the provisions of this regulation."

Naturally, any such transaction should be carefully scrutinized for any such possibility, and any repetition of such a method of making payment by a customer would be especially subject to question. Assuming, however, that there is no such evasion or circumvention of the regulation, it is the view of the Board that the broker may, at his option, treat the customer as having made payment for the purchased security at the time when the other security was sold, and that this would be permissible even though the security sold had not been deposited in the account. The same conclusion would, of course, follow if the security sold had been deposited in the account but happened not to be in form for "good delivery."

Delayed offer of payment.—An inquiry was presented as to a situation in which a broker or dealer does not obtain full cash payment within the period applicable to the transaction but is offered payment promptly after the period and before he has cancelled or otherwise liquidated the transaction. The question was whether the broker or dealer in such circumstances may accept such payment and consider the provisions requiring cancellation or liquidation for failure to obtain payment to have been met.

The section provides various exceptions for cases where a period other than the seven-day period would be more appropriate. These exceptions do not include any provision for a payment which is offered promptly *after* the period applicable to the transaction, and it does not appear why any additional time should be permissible in such circumstances if there is no other ground for additional time. The provision for cancelling or otherwise liquidating the transaction when payment has not been obtained within the applicable period is explicit. There are various exceptions, including provision for an extension of time under certain conditions by an appropriate committee of a national securities

exchange, and it is the view of the Board that in the circumstances described the delayed payment by the customer may not be accepted as a substitute for the cancellation or liquidation of the transaction. This would be the case whether a brokerage or a dealer transaction was involved.

Additional time for shipment of securities.—Subdivision (4) of section 4(c) provides that:

"(4) If any shipment of securities is incidental to the consummation of the transaction, the period applicable to the transaction under subdivision (2) of this section 4(c) shall be deemed to be extended by the number of days required for all such shipments, but not by more than 7 days."

Questions were raised as to whether certain periods required for the shipment of securities were covered by this provision, and whether they might be added together (to a total such extension not exceeding the seven days specified in the provision). Such questions were presented as to the time of shipment from the place of purchase to the broker, from the broker to the customer, and to and from the transfer office.

Assuming that such shipments are not a subterfuge but actually are incidental to the consummation of the transaction, it is the view of the Board that each such period is covered by the provision. In addition, all such periods may be added together, provided, of course, that the total such extension for any transaction does not exceed the seven-day maximum specified in the provision.

Executive Order and Regulations on Transfers of Property of Latvia, Estonia and Lithuania

The Executive Order of April 10, 1940, as amended, and the Treasury Regulations issued thereunder providing that transfers of credit, foreign exchange transactions, the export or earmarking of coin, bullion, or currency, or other similar operations, by persons or institutions in the United States which involve property of Norway, Denmark, Belgium, Luxembourg, the Netherlands, or France, or any national thereof, shall be subject to license by the Secretary of the Treasury, were amended on July 15, 1940, so as to include property of Latvia, Estonia and Lithuania, or any national thereof.

The texts of the Executive Order and accompanying Regulations and amendments thereto are quoted in full in the May, June,

and July issues of the 1940 Federal Reserve BULLETIN. The texts of the July 15 amendments are as follows:

EXECUTIVE ORDER No. 8484

Amendment of Executive Order No. 8389 of April 10, 1940, as Amended

By virtue of the authority vested in me by section 5(b) of the Act of October 6, 1917 (40 Stat. 411), as amended, and by virtue of all other authority vested in me, I, FRANKLIN D. ROOSEVELT, PRESIDENT of the UNITED STATES OF AMERICA, do hereby amend Executive Order No. 8389 of April 10, 1940, as amended, so as to extend all the provisions thereof to, and with respect to, property in which Latvia, Estonia or Lithuania or any national thereof has at any time on or since July 10, 1940, had any interest of any nature whatsoever, direct or indirect, except that, in defining "Latvia," "Estonia," "Lithuania" and "national" thereof the date "July 10, 1940" shall be substituted for the dates appearing in the definitions of countries and nationals thereof.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE,
July 15, 1940.

Treasury Department, Office of the Secretary,
July 15, 1940

AMENDMENT TO REGULATIONS†

The Regulations of April 10, 1940, as amended (Sections 130.1 to 130.6), are further amended so as to extend all the provisions thereof to, and with respect to, property in which Latvia, Estonia or Lithuania or any national thereof has at any time on or since July 10, 1940, had any interest of any nature whatsoever, direct or indirect; except that reports on Form TFR-100 with respect to all property situated in the United States on July 10, 1940, in which Latvia, Estonia or Lithuania or any national thereof has at any time on or since July 10, 1940, had any interest of any nature whatsoever, direct or indirect, shall be filed by August 10, 1940.

H. MORGENTHAU, JR.,
Secretary of the Treasury.

Approved: July 15, 1940.
FRANKLIN D. ROOSEVELT.

General Licenses Issued by the Secretary of the Treasury

Since the publication of certain General Licenses on pages 649-654 of the July 1940 Federal Reserve BULLETIN, the following Licenses have been issued by the Secretary of the Treasury under authority of the Executive Order of April 10, 1940, as amended, and Regulations issued pursuant thereto relating to transactions in foreign exchange, etc.

† Sections 130.1 to 130.6; Sec. 5(b), 40 Stat. 415 and 966; Sec. 2, 48 Stat. 1; Public Resolution No. 69, 76th Congress; 12 U. S. C. 95a; Ex. Order 6560, Jan. 15, 1934; Ex. Order 8389, April 10, 1940; Ex. Order 8405, May 10, 1940; Ex. Order 8446, June 17, 1940; Ex. Order 8484, July 15, 1940.

Treasury Department, Office of the Secretary,
June 27, 1940

*Amendment to General License No. 19 Under Executive Order No. 8389, April 10, 1940, as Amended, and Regulations Issued Pursuant Thereto, Relating to Transactions in Foreign Exchange, Etc.**

General License No. 19 is hereby amended to read as follows:

"A general license is hereby granted authorizing banking institutions within the United States to make all payments, transfers and withdrawals from accounts in the name of any of the following: Banco Holandes Unido, Buenos Aires, Argentina, Caracas and Maracaibo, Venezuela; Banco Hollandez Unido, Rio de Janeiro, Santos and Sao Paulo, Brazil; and the branches of the Hollandsche Bank-Unie in Willemstad, Caracao and Oranjestad, Aruba.

"Banking institutions within the United States making such payments, transfers or withdrawals shall file promptly with the appropriate Federal Reserve bank weekly reports showing the details of the transactions during such period."

D. W. BELL,

Acting Secretary of the Treasury.

Treasury Department, Office of the Secretary,
June 27, 1940

*General License No. 22 Under Executive Order No. 8389, April 10, 1940, as Amended, and Regulations Issued Pursuant Thereto Relating to Transactions in Foreign Exchange, Etc.**

A general license is hereby granted authorizing banking institutions within the United States to make all payments, transfers and withdrawals from accounts in the name of the Banque Belge pour l'Etranger, Overseas, Ltd., including its New York agency.

Banking institutions within the United States making such payments, transfers, or withdrawals shall file promptly with the appropriate Federal Reserve bank weekly reports showing the details of the transactions during such period.

D. W. BELL,

Acting Secretary of the Treasury.

Treasury Department, Office of the Secretary,
July 6, 1940

*Amendment to General License No. 19, as Amended, Under Executive Order No. 8389, April 10, 1940, as Amended, and Regulations Issued Pursuant Thereto, Relating to Transactions in Foreign Exchange, Etc.**

General License No. 19, as amended, is hereby amended to read as follows:

"A general license is hereby granted authorizing banking institutions within the United States to make all payments, transfers and withdrawals from ac-

* Sec. 5(b), 40 Stat. 415 and 966; Sec. 2, 48 Stat. 1; Public Resolution No. 69, 76th Congress; 12 U.S.C. 95a; Ex. Order 6560, Jan. 15, 1934; Ex. Order 8389, April 10, 1940; Ex. Order 8405, May 10, 1940; Ex. Order 8446, June 17, 1940; Regulations, April 10, 1940, as amended May 10, 1940 and June 17, 1940.

counts in the name of any of the following: Banco Holandés Unido, Buenos Aires, Argentina, Carácas and Maracaibo, Venezuela; Banco Hollandez Unido, Rio de Janeiro, Santos and Sao Paulo, Brazil; the branches of the Hollandsche Bank-Unie in Willemstad, Curacao and Oranjestad, Aruba; Holland Bank Union, Haifa, Palestine and Istanbul, Turkey.

"Banking institutions within the United States making such payments, transfers or withdrawals shall file promptly with the appropriate Federal Reserve bank weekly reports showing the details of the transactions during such period."

D. W. BELL,

Acting Secretary of the Treasury.

Treasury Department, Office of the Secretary,
July 15, 1940

*General License No. 23, Under Executive Order No. 8389, April 10, 1940, as Amended, and Regulations Issued Pursuant Thereto, Relating to Transactions in Foreign Exchange, Etc.**

General Licenses Nos. 1, 2, 4, 5, 9, 11 and 12, as amended, issued under Executive Order No. 8389 of April 10, 1940, as amended, are hereby further amended so that as of the date hereof there shall be substituted for the words "Norway, Denmark, the Netherlands, Belgium, Luxembourg or France," wherever they appear in such General Licenses, the words "Norway, Denmark, the Netherlands, Belgium, Luxembourg, France, Latvia, Estonia or Lithuania."

General License No. 12, as amended, issued under Executive Order No. 8389 of April 10, 1940, as amended, is hereby further amended by substituting a comma for the semi-colon at the end of subdivision 2 thereof and adding thereafter the following:

"or subject to the property interests therein as of July 10, 1940, of Latvia, Estonia or Lithuania or any national thereof;"

D. W. BELL,

Acting Secretary of the Treasury.

Treasury Department, Office of the Secretary,
July 15, 1940

*General License No. 24 Under Executive Order No. 8389, April 10, 1940, as Amended, and Regulations Issued Pursuant Thereto, Relating to Transactions in Foreign Exchange, Etc.**

A general license is hereby granted authorizing banking institutions within the United States to make payments from accounts in which Latvia, Estonia or Lithuania or a national thereof has a property interest within the meaning of the Executive Order of April 10, 1940, as amended, and the Regulations issued thereunder, of checks and drafts drawn or issued prior to July 10, 1940, and to accept and pay and debit to such accounts drafts drawn prior to July 10, 1940, under letters of credit; provided, that each banking institution making any payment or debit authorized by this general license shall file promptly with the appropriate Federal Reserve bank

weekly reports showing the details of such transactions.

D. W. BELL,

Acting Secretary of the Treasury.

From the Board's Correspondence

THE character and volume of inquiries addressed to the Board in recent years reflect the public's growing interest in problems related to money and banking. The inquiries cover a wide range of subjects representing many points of view, and it is believed that some of the Board's replies to the questions raised may be of interest to the readers of the BULLETIN. Selections for publication are made on the basis of frequency of inquiry, timeliness, and importance of subject matter.

The Interdistrict Settlement Fund

"What is the Interdistrict Settlement Fund and how is it used by the United States Treasury?"

THE Interdistrict Settlement Fund, which is operated in Washington by the Board of Governors of the Federal Reserve System, is used for the purpose of effecting telegraphic transfers of funds between Federal Reserve districts for the account of the twelve Federal Reserve Banks, for the account of member banks of the Federal Reserve System (and for nonmember clearing banks), and for the account of the United States Treasury. All transactions are effected by book entries.

When the Fund was established in 1915, about six months after the Federal Reserve System began operation, each Federal Reserve Bank was required to deposit \$1,000,000 in gold or gold certificates and to make such additional deposits from time to time as might be necessary to maintain that balance. Although individual Federal Reserve Banks could withdraw from the Fund any excess standing to their credit above \$1,000,000, they found it expedient as time went on to keep a large portion of their gold holdings in the Fund; for it enabled them to effect transfers by telegraph at a small fraction of the cost of shipping gold about the country. The Fund has since increased greatly in size and usefulness and at present amounts to about \$11,000,000,000. It now consists entirely of gold certificates held for the Federal Reserve Banks by the United States Treasury. Deposits in the Fund are made principally by the Treasurer of the United States, the Treasurer being given credit for them on the books of the Federal Reserve Banks. Practically the only difference between the original

arrangement and the present one is that formerly portions of the Fund to the credit of a given Reserve Bank might be withdrawn in actual gold, whereas at the present time they can be withdrawn only in gold certificates. Gold certificates, however, may not be paid out into circulation.

Interdistrict Settlement Fund transactions are made up primarily of transit clearings, Federal Reserve note clearings, and Government transfers of funds. Transit clearings effect settlements between the Federal Reserve Banks arising from the collection of checks and other items by the Federal Reserve Banks for member and nonmember clearing banks and the United States Treasury and from interdistrict transfers of funds made at the instance of member and nonmember clearing banks. The appropriate debits and credits to the accounts of respective Federal Reserve Banks on the books of the Fund are based on daily telegrams from each Federal Reserve Bank reporting the amounts collected by it for each of the other Federal Reserve Banks.

Federal Reserve note clearings effect settlements arising from receipt at each Federal Reserve Bank of Federal Reserve notes issued by other Federal Reserve Banks. The law prohibits, under penalty of a tax of ten per cent, a Federal Reserve Bank from paying out the notes of other Reserve Banks, and accordingly each Federal Reserve Bank sorts out such notes from its own. Those that are fit for further circulation are returned to the Banks that issued them; those that are unfit

are sent to the Treasury for retirement. Note clearings are based on daily telegrams from each Federal Reserve Bank reporting the amount of "fit" and "unfit" notes being sent by it to the Reserve Banks by which issued and to the Treasury.

The United States Treasury maintains its active checking accounts with the Federal Reserve Banks and has frequent occasion to transfer funds from one Federal Reserve Bank to another, depending on where the funds are most needed. These transfers are effected through the Interdistrict Settlement Fund at the Treasury's request. If, for example, the Treasury has large disbursements to make in the southwest at the same time that it is in receipt of large payments in the east, it may direct that its balances with the

Federal Reserve Banks of Boston, of New York, and of Philadelphia be debited given amounts and that its balances with the Federal Reserve Banks of Kansas City and of Dallas be credited correspondingly. These transfers would be effected within a few minutes by telegrams to the five Federal Reserve Banks concerned, and by corresponding debits and credits to the accounts of those Banks on the books of the Fund.

In a recent week the transit clearings effected through the Fund amounted to \$2,000,000,000, the Federal Reserve note clearings amounted to \$15,500,000, and transfers for the Treasury amounted to \$25,000,000. These transactions, as they affected the twelve Federal Reserve Banks, are shown in the following tabulations:

Federal Reserve Bank	Transit Clearings		F. R. Note Clearings		Transfers for Treasury	
	Debits	Credits	Debits	Credits	Debits	Credits
Boston.....	\$142,353,440.57	\$137,557,783.22	\$1,207,000.00	\$831,000.00		
New York.....	597,416,896.35	578,993,828.47	2,672,000.00	3,264,000.00	\$10,000,000.00	
Philadelphia.....	158,118,370.95	168,607,551.70	1,343,000.00	1,427,000.00	5,000,000.00	
Cleveland.....	168,269,872.34	185,072,581.97	1,809,000.00	1,523,000.00	5,000,000.00	
Richmond.....	155,366,119.39	177,713,966.27	1,309,000.00	272,000.00		
Atlanta.....	84,502,305.55	68,814,169.19	970,000.00	929,000.00		\$10,000,000.00
Chicago.....	273,549,889.05	298,953,581.12	2,152,000.00	2,881,000.00	5,000,000.00	10,000,000.00
St. Louis.....	117,374,545.52	115,123,085.04	872,000.00	2,140,000.00		
Minneapolis.....	47,185,182.25	47,666,594.18	595,000.00	146,000.00		5,000,000.00
Kansas City.....	107,840,335.02	99,723,534.20	1,045,000.00	947,000.00		
Dallas.....	87,532,792.33	85,499,950.77	655,000.00	612,000.00		
San Francisco.....	93,456,236.20	69,239,409.39	919,000.00	576,000.00		
Total.....	2,032,965,985.52	2,032,965,985.52	15,548,000.00	15,548,000.00	25,000,000.00	25,000,000.00

Transit Clearings.—The *debits* under Transit Clearings are the total of the payments made by a given Federal Reserve Bank to the others as a result of the clearance of checks and similar items; and the *credits* are the total of the payments received by it. Thus, for example, the Federal Reserve Bank of Boston was debited \$142,353,440.57 for checks and transfers payable by banks in its Federal Reserve district which were received by other Federal Reserve Banks. It was credited \$137,557,783.22, this being the amount of checks and transfers handled by it payable by banks in other Federal Reserve districts. The amount *debited* to it was subsequently charged to the reserve or clearing balances of the banks on which the checks were drawn or through which they were collected. The amount *credited* to it was subsequently absorbed by credits to the banks in its district from which the checks were received, or to the United States Treasury in the case of checks deposited by it.

Federal Reserve Note Clearings.—The *debits* under Federal Reserve Note Clearings are the total of Federal Reserve notes which found their way to Reserve Banks other than those by which they were issued and had to be paid by the latter. The *credits* are the total of Federal Reserve notes received by Federal Reserve Banks which did not issue them. Thus, for example, the Federal Reserve Bank of Boston had to pay \$1,207,000 of its own notes received by other Federal Reserve Banks. At the same time it received payment from other Federal Reserve Banks for notes issued by them in the amount of \$831,000, which had been received by it.

Transfers for Government Account.—*Debits* under Transfers for Government Account show the amounts transferred from certain Federal Reserve Banks, and *credits* show the amounts transferred to certain Federal Reserve Banks.

Current Events

Designation of Ronald Ransom as Vice Chairman of the Board of Governors of the Federal Reserve System

The President of the United States issued an Executive Order on July 18, 1940, designating Ronald Ransom as Vice Chairman of the Board of Governors of the Federal Reserve System, to serve as such for a term of four years from August 6, 1940, unless and until his services as a member of the Board shall have sooner terminated.

Transfers of Intra-District Territory

In recent weeks transfers of territory within two Federal Reserve districts have been effected, in neither case changing the district boundaries. Effective June 1, 1940, Presidio County, Texas, was transferred from the San Antonio Branch territory to the El Paso Branch territory of the Federal Reserve Bank of Dallas. Effective July 1, 1940, the following counties in North Carolina were transferred from the territory of the head office of the Federal Reserve Bank of Richmond to the territory of its Charlotte Branch:

Alamance	Guilford	Richmond
Anson	Lee	Rockingham
Chatham	Montgomery	Stokes
Davidson	Moore	Surry
Davie	Randolph	Yadkin
Forsyth		

The redrawn map of Federal Reserve districts incorporating these changes is shown opposite page 745.

Admissions of State Banks to Membership in the Federal Reserve System

The following State Banks have been admitted to membership in the Federal Reserve System during the period June 16, 1940 to July 15, 1940, inclusive.

<i>District of Columbia</i>	
Washington—The City Bank of Washington.	
<i>Illinois</i>	
Shelbyville—Shelby Loan & Trust Company.	
<i>Indiana</i>	
Decatur—The First State Bank of Decatur, Indiana.	
Franklin—Farmers Trust Company.	
Richland—The Lake State Bank.	

Sweetser—The Farmer's State Bank.
Sandborn—The Sandborn Banking Co.

Iowa

Corydon—Corydon State Bank.

Michigan

Merrill—The Farmers and Merchants State Bank of Merrill.

Plymouth—Plymouth United Savings Bank.

New York

Utica—First Bank & Trust Company of Utica. (This bank was organized as part of the plan previously made public whereby a new bank would be organized to assume the deposit liabilities of the First Citizens Bank and Trust Company of Utica, a State member bank.)

Ohio

Canton—The Peoples Bank.

Crestline—The Farmers & Citizens State Bank.
Richwood—The Richwood Banking Company.

Oklahoma

Canton—Bank of Canton.

Texas

Knox City—The Citizens State Bank.

Correction

The following corrected figures should be substituted for those shown in the tables appearing on pages 526, 586 and 587 of the June 1940 issue of the BULLETIN:

	Number of banks		Retail installment paper (In thousands of dollars)			Ratio of total installment paper to customer loans
	Reporting some retail installment paper	Reporting no retail installment paper	Total	Arising from retail sales of and secured by automotive vehicles	Arising from retail sales of and secured by other goods	
All insured commercial banks—total (pages 526 and 586).....	10,381	3,112	541,243	387,591	153,652	5.1
Insured nonmember banks—total (page 526).....	5,360	1,784	140,548	112,833	27,715	9.0

National Summary of Business Conditions

Compiled July 16 and released for publication July 18. Figures shown on charts may differ from preliminary figures used in text. Later developments are discussed on pages 745-752 of this BULLETIN.

VOLUME of industrial production increased rapidly during June and rose somewhat further in the first half of July. Distribution of commodities through retail and wholesale markets and by rail continued active.

Production

The Board's seasonally adjusted index of industrial production advanced from 106 in May to 114 in June. In that month, as in May, increases in activity were most marked in the iron and steel and textile industries where declines earlier in the year had been greatest.

Steel ingot production rose from 60 per cent of capacity at the beginning of May to 87 per cent in the latter part of June and was maintained at about that level in the first

amounting to about 10 per cent of steel-producing capacity.

Automobile production, which had begun to decline in May, continued to decrease in June and the first half of July reflecting in large part seasonal influences. Retail sales of automobiles were in large volume and dealers' stocks of new and used cars declined from the high levels prevailing earlier.

In the textile industry there was a further sharp advance in activity at woolen mills, and at cotton mills output was reduced less than seasonally. Rayon production was maintained at earlier high levels while at silk mills activity remained near the unusually low rate reached in May.

Coal production continued in large volume during June, but output of crude petroleum declined in the latter part of the month, owing to reduced production in Texas fields.

Value of construction contract awards showed little change from May to June, according to F. W. Dodge Corporation figures for 37 Eastern States. Awards for private residential building decreased more than seasonally, following a sharp rise in May, and contracts for private nonresidential building also declined. Contracts for public construction increased further in June, owing in part to expansion in the construction of Army and Navy air bases.

Distribution

Department store sales in June were maintained at the May level, although usually there is a considerable decline, and the Board's seasonally adjusted index advanced to 93 as compared with 87 in May and a level of about 89 earlier in the year. Sales at variety stores showed little change from May to June, continuing at the advanced level that has prevailed since the beginning of the year. In the early part of July department

three weeks of July. Production of coke and pig iron showed similar sharp increases and iron ore shipments down the Lakes were at near-capacity levels. Demand for steel was general as most domestic steel-consuming industries were operating at high rates. Exports of steel, which had declined in April, rose to earlier high levels in May and June,

DEPARTMENT STORE SALES AND STOCKS

Indexes of value of sales and stocks, adjusted for seasonal variation, 1923-1925 average = 100.

store sales declined seasonally from the June level.

Freight-car loadings increased further in June. Shipments of coal and miscellaneous merchandise continued to expand and loadings of coke, which usually decline at this season, showed a substantial rise.

Commodity prices

Prices of a number of industrial materials, particularly steel scrap, copper, rubber, and silk, declined from the middle of June to the middle of July. Wheat prices also showed decreases in this period, while prices of live-stock and products advanced owing partly to seasonal influences.

Agriculture

Production of major crops this season, according to the July 1 report of the Department of Agriculture, may be slightly lower than last season. Tobacco production will be sharply reduced from last year, when the crop was unusually large. Domestic supplies

WHOLESALE PRICES OF BASIC COMMODITIES

Federal Reserve groupings of Bureau of Labor Statistics data. Thursday figures, January 4, 1934, to July 25, 1940.

of wheat and other field crops as well as of vegetables and fruit are expected to show little change from last season. Indicated hog production this year will be about 10 per cent smaller than last year.

Bank credit

Total loans and investments at reporting member banks in 101 leading cities increased during the five weeks ending July 10, chiefly as a result of increases in holdings of short-term United States Government obligations and in commercial loans. Holdings of United States Government bonds and loans to security brokers and dealers declined.

MONEY RATES IN NEW YORK CITY

Minimum rate on rediscount for and advances to member banks by Federal Reserve Bank; weekly averages of daily yields of 3- to 5-year Treasury notes and Treasury bonds callable after 12 years, and average discount on new issues of 91-day Treasury bills offered within week. For weeks ending January 6, 1934, to July 20, 1940.

The monetary gold stock increased by \$885,000,000 in this five-week period, the largest gold acquisition for any corresponding period on record. This inflow of gold was reflected in a growth of \$310,000,000 in foreign bank balances with the Federal Reserve Banks and in increased deposits and reserves of member banks. On July 10, excess reserves of member banks amounted to \$6,833,000,000.

Government security market

Prices of Government securities, which had advanced sharply in June, showed further increases after July 8 when the Treasury announced a new bond issue for cash subscription. Between June 10 and July 15 the price of the 1960-65 bonds rose about 3 points, and the yield on this issue declined from 2.52 per cent to 2.34 per cent as compared with 2.26 per cent at the year's peak in prices on April 2.

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures may in most cases be obtained from earlier BULLETINS and from Annual Reports of the Board of Governors for 1937 and earlier years. Current figures compiled by the Board are generally released prior to publication in the BULLETIN and press statements will be sent without charge to those wishing them. For a list of current releases see FEDERAL RESERVE PUBLICATIONS at the back of this BULLETIN.

¹ Includes industrial advances and bills bought, shown separately in subsequent tables.

² End of month and Wednesday figures estimated.

NOTE.—For description of figures in this table and discussion of their significance, see BULLETIN for July 1935, pp. 419-429. Reprints of article together with available back figures, may be obtained upon request from Division of Research and Statistics. Back figures are also shown in Annual Report for 1937 (tables 3 and 4) and for excess reserves in BULLETIN for August 1935, pp. 499-500. Back figures for end of month and Wednesday dates since January 6, 1937 on maturity distribution of security holdings will be supplied on request.

FEDERAL RESERVE BANK DISCOUNT RATES

[Per cent per annum]

Federal Reserve Bank	Rediscounts and advances under sections 13 and 13a of the Federal Reserve Act except last paragraph of Section 13				Advances under Section 10(b) of the Federal Reserve Act		Advances secured by direct obligations of the United States (last paragraph of Section 13 of the Federal Reserve Act)			
	Secured by direct and eligible guaranteed obligations of the U. S.		All other				To banks		To others

¹ Two and one-half per cent to lenders other than banks. NOTE.—Rates applicable to United States Government securities' repurchase agreements are as follows: New York, one per cent; Cleveland, Kansas City, and Dallas, one and one-half per cent.
Back figures.—See Annual Report for 1937 (table 40).

FEDERAL RESERVE BANK BUYING RATES ON ACCEPTANCES

[Per cent per annum]

Maturity	Rate in effect on July 31	In effect beginning—	Previous rate
1-15 days ¹	1½	Oct. 20, 1933	1
16-30 days.....	1½	do.	1
31-45 days.....	1½	do.	1
46-60 days.....	1½	do.	1
61-90 days.....	1½	do.	1
91-120 days.....	¾	do.	1
121-180 days.....	¾	do.	1½

¹ This rate also applies to acceptances bought under repurchase agreements, which agreements are always for a period of 15 days or less.

NOTE.—Minimum buying rates at the Federal Reserve Bank of New York on prime bankers' acceptances payable in dollars; higher rates may be charged for other classes of bills. The same minimum rates apply to purchases, if any, made by other Federal Reserve Banks.

Back figures.—See Annual Report for 1937 (table 41).

MEMBER BANK RESERVE REQUIREMENTS

[Per cent of deposits]

Classes of deposits and banks	June 21, 1917— Aug. 15, 1936	Aug. 16, 1936— Feb. 28, 1937	Mar. 1, 1937— Apr. 30, 1937	May 1, 1937— Apr. 15, 1938	Apr. 16, 1938— and after
On net demand deposits: ¹					
Central reserve city.....	13	19½	22½	26	22½
Reserve city.....	10	15	17½	20	17½
Country.....	7	10½	12½	14	12
On time deposits:					
All member banks.....	3	4½	5½	6	5

¹ See footnote to table on p. 790 for explanation of method of computing net demand deposits.

MARGIN REQUIREMENTS¹

Prescribed by Board of Governors of the Federal Reserve System in accordance with Securities Exchange Act of 1934
[Per cent of market value]

	Apr. 1, 1936— Oct. 31, 1937	Nov. 1, 1937 and after
For extensions of credit by brokers and dealers on listed securities, under Regulation T.....	55	40
For short sales, under Regulation T.....	(?)	50
For loans by banks on stocks, under Regulation U.....	55	40

¹ Regulations T and U limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown above are the difference between the market value (100%) and the maximum loan value.

² Requirement under Regulation T was the margin "customarily required" by the broker.

³ Regulation U became effective May 1, 1936.

NOTE.—Regulations T and U also provide special margin requirements for "omnibus" accounts and loans to brokers and dealers.

FEDERAL RESERVE BANK RATES ON INDUSTRIAL ADVANCES

Rates in effect July 31, 1940, on advances and commitments under Sec. 13b of the Federal Reserve Act

[Per cent per annum except as indicated by footnote ³]

Federal Reserve Bank	Advances direct to industrial or commercial organizations	Advances to financing institutions—		Commitments to make advances
		On portion for which institution is obligated	On remaining portion	
Boston.....	3½-6	3	3½	½-1
New York.....	4-6	3	4-5	1-2
Philadelphia.....	4-6	(1) 2½	(2)	½-2
Cleveland.....	4½-6	3½	4	1
Richmond.....	6	4-6	4-6	1-2
Atlanta.....	5-6	5	5	½
Chicago.....	5-6	(1) 2½	5-6	1-2
St. Louis.....	4-5½	3½	4	(2) 1
Minneapolis.....	6	4½-5	4½-5	1
Kansas City.....	4-6	4	4	(2) 2
Dallas.....	5-6	4	5-6	1
San Francisco.....	5-6	3-4	4-5	½-2

¹ Authorized rate one per cent above prevailing discount rate.

² Same as to borrower but not less than four per cent.

³ Minimum charge one-half of one per cent.

Back figures.—See Annual Report for 1937 (table 40).

MAXIMUM RATES ON TIME DEPOSITS

Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q.

[Per cent per annum]

	Nov. 1, 1933 to Jan. 31, 1935	Feb. 1, 1935 to Dec. 31, 1935	In effect beginning Jan. 1, 1936
Savings deposits.....	3	2½	2½
Postal savings deposits.....	3	2½	2½
Other time deposits payable in:			
6 months or more.....	3	2½	2½
90 days to 6 months.....	3	2½	2
Less than 90 days.....	3	2½	1

NOTE.—Maximum rates that may be paid by insured nonmember banks as established by the Federal Deposit Insurance Corporation, effective February 1, 1936, are the same as those in effect for member banks. In some States the maximum rates established by the Board and the Federal Deposit Insurance Corporation are superseded by lower maximum rates established by State authority.

* Preliminary. * Revised.

¹ Gold held under earmark at Federal Reserve Banks for foreign account on June 29, 1940, in millions of dollars: 1,706.2.

² Figures based on rate of \$20.67 a fine ounce in January 1934 and \$35 a fine ounce thereafter.

NOTE.—Figures for domestic production of gold are those published in table, p. 885, adjusted to exclude Philippine Islands production received in United States. Adjustment based on annual figures reported by Director of Mint and monthly imports of gold to U. S. from Philippines. For back figures see Annual Report for 1937 (table 29).

BANK SUSPENSIONS¹

	Total, all banks	Member banks		Nonmember banks	
		National	State	Insured ²	Not insured
Number of banks suspended:					
1934	57	1	-----	8	48
1935	34	4	-----	22	8
1936	44	1	-----	40	3
1937	59	4	2	47	6
1938	55	1	1	47	6
1939	42	4	3	25	10
1940—Jan.-June	14	-----	-----	12	2
Deposits of suspended banks (in thousands of dollars): ³					
1934	36,937	40	-----	1,912	34,985
1935	10,015	5,313	-----	3,763	939
1936	11,306	507	-----	10,207	592
1937	19,723	7,379	1,708	10,156	480
1938	13,012	36	211	11,721	1,044
1939	34,998	1,341	24,629	6,589	2,439
1940—Jan.-June	3,940	-----	-----	3,752	188

¹ Represents banks which, during the periods shown, closed temporarily or permanently on account of financial difficulties; does not include banks whose deposit liabilities were assumed by other banks at the time of closing (in some instances with the aid of Federal Deposit Insurance Corporation loans).

² Federal deposit insurance became operative January 1, 1934.

³ Deposits of member banks and insured nonmember banks suspended are as of dates of suspension, and deposits of noninsured nonmember banks are based on the latest data available at the time the suspensions were reported.

Back figures.—See Annual Report for 1937 (table 76).

May	37,257	14,536	19,659	3,063
June	35,005	13,110	18,850	3,045

¹ Comprises centers for which bank debit figures are available beginning with 1919, except that one substitution was made in 1920 and one in 1928.

² Centers (other than the 141 centers) for which bank debits are currently reported. The number has changed very little since 1934 and has numbered 133 since 1936.

Back figures.—See Annual Report for 1937 (Table 71), which also gives a definition of bank debits. Figures for individual reporting cities and totals by Federal Reserve districts are available in mimeographed form.

ALL BANKS IN THE UNITED STATES

Comprises all national banks in the continental United States and all State commercial banks, trust companies, mutual and stock savings banks and such private and industrial banks as are included in abstracts issued by State banking departments. Also includes, during the period June 1934-June 1935, private banks which, pursuant to the provisions of sec. 21 (a) of the Banking Act of 1933, submitted condition reports to the Comptroller of the Currency. Under the amended provisions of sec. 21 (a) private banks no longer report to the Comptroller of the Currency. For comparative figures of private banks included in the figures from June 1934 to December 1935, see Federal Reserve BULLETIN for December 1935, p. 883, and July 1936, p. 535. Figures for nonmember banks are for dates indicated or nearest thereto for which figures are available.

¹ Prior to Dec. 30, 1933, member-bank figures include interbank deposits not subject to immediate withdrawal, which aggregated \$103,000,000 on that date. The nonmember bank figures include interbank deposits to the extent that they are not shown separately in a few State bank abstracts.

² Beginning December 1938 figures of loans and investments exclude approximately \$50,000,000 and \$100,000,000, heretofore reported as loans and investments, respectively, which indirectly represent bank premises or other real estate and are now classified in condition reports among "Other assets."

³ One bank (with deposits, excluding interbank deposits, of \$90,000,000 and total loans and investments of \$96,000,000 on December 30, 1939) which was formerly classified as a mutual savings bank, is included in the March 26, 1940 figures in "Other nonmember banks" column.

Back figures.—See Annual Report for 1937 (tables 48-49).

¹ Classifications indicated were revised as of Dec. 31, 1938; for explanation see BULLETIN for January, 1939, pp. 22-23, and BULLETIN for April, 1939, pp. 259-264, 332. Beginning June 30, 1939, detailed classifications available on June and December dates only.

² Not reported separately prior to December 1938 except for weekly reporting banks in leading cities.

³ Figures in this column prior to Dec. 31, 1938, represent all loans on securities, regardless of purpose, excepting only loans on securities to banks and to brokers and dealers.

⁴ This is a residual item and, because of the revised loan classifications, figures beginning Dec. 31, 1938, are not comparable with earlier figures.

⁵ Includes Treasury certificates of indebtedness through 1934.

⁶ Breakdown of loans and investments not reported separately.

⁷ Central reserve city banks.

Back figures.—See Annual Report for 1937 (tables 52-58).

¹ Prior to Dec. 31, 1935, excludes balances with private banks to the extent that they were then reported in "Other assets." Since Oct. 25, 1933, includes time balances with domestic banks which on that date amounted to \$69,000,000 and which prior to that time were reported in "Other assets."

² Demand deposits other than interbank and U. S. Government, less cash items reported as in process of collection and, prior to Dec. 31, 1935, less cash items reported on hand but not in process of collection.

³ Includes "Due to Federal Reserve Banks (transit account)," known as "Due to Federal Reserve Banks (deferred credits)" prior to Dec. 31, 1935.

⁴ U. S. Treasurer's time deposits, open account, are combined with postal savings (time) deposits.

⁵ Central reserve city banks.

⁶ Partly estimated.

Back figures.—See Annual Report for 1937 (tables 52-58).

¹ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of firms' own partners.

² Includes both money borrowed from banks and trust companies in New York City and elsewhere in the United States and also money borrowed from other lenders (not including member firms of national securities exchanges).

NOTE.—For explanation of these figures see "Statistics on Margin Accounts" in BULLETIN for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

Back figures.—See BULLETIN for March 1938, p. 196, and (for data in detail) Annual Report for 1937 (table 69).

¹ Some of the loans made by the regional agricultural credit corporations (prior to October 1935) and by the banks for cooperatives and most of the loans made by the production credit associations are discounted with the Federal intermediate credit banks. The amounts in this column are thus included in the three columns under those headings. Such loans are not always discounted in the same month in which the original credit is extended.

* Average per working day.

¹ This production index will be superseded in future issues of the BULLETIN by the Board's new index of industrial production shown on pages 764-765 and described on pages 753-771 in this BULLETIN.

² 3-month moving average of F. W. Dodge Corporation data, centered at second month; for description see p. 358 of BULLETIN for July 1931.

³ The indexes for factory employment and payrolls unadjusted for seasonal variation are compiled by the Bureau of Labor Statistics. For description of the seasonally adjusted index of factory employment compiled by Federal Reserve Board of Governors see BULLETIN for October 1938, pp. 835-837, and for October 1939, p. 878. For current indexes of groups and separate industries see pp. 810-813. Underlying figures are for payroll period ending nearest middle of month.

⁴ For indexes of groups see p. 815.

Back figures.—See Annual Report for 1937 (table 81). For department store sales see BULLETIN for October 1938, p. 918; for factory employment and payrolls see BULLETIN for October 1938, pp. 838-866, and for October 1939, pp. 879-887.

^p Preliminary. ^c Corrected.

¹ In chart 12 loans to banks on securities are included in the total of "security loans" prior to June 30, 1937 and in the total of "other loans" since that date.

² Figures are reported on somewhat different basis beginning December 31, 1938. For detailed explanation of the changes and for estimates on old basis as of December 31, 1938, see BULLETIN for April 1939, page 332.

³ Not originally plotted in chart book.

⁴ Partly estimated.

⁵ Detailed breakdown of loans and investments now available on June and December dates only.

¹ Comprises all State commercial banks, trust companies, mutual and stock savings banks, cash depositories (in South Carolina), and such private banks and industrial banks as are included in abstracts issued by State banking departments.

² The figures for Alabama, Georgia, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Missouri, New Jersey, Ohio, and Tennessee were derived by adding to the March 26, 1940 figures of State bank members of the Federal Reserve System the December 30, 1939 figures of non-member banks in existence as such on both that date and March 26, 1940. For Maine and Minnesota the figures are as of March 30, 1940. For New York and Rhode Island the figures for savings banks are as of December 30, 1939.

³ The figures for some States are as of call dates other than March 29, 1939; see page 566 of July 1939 BULLETIN.

⁴ June 30, 1939.

¹ Figures in the March 1940 columns for Indiana, Maryland, Massachusetts, New Jersey, New York, Ohio, Rhode Island, and Vermont are as of December 30, 1939; Maine and Minnesota, March 30, 1940; New Hampshire, June 30, 1939. All figures in the December 1939 columns are as of December 30 except New Hampshire, which are as of June 30, 1939. All figures in the March 1939 columns are as of March 29 except as indicated in the footnote on page 567 of the July 1939 BULLETIN.

² Beginning with the Mar. 1940 call, this bank is no longer classified as a mutual savings bank. It is, however included in the figures covering "all State banks" and "all banks" as in the past.

INDUSTRIAL PRODUCTION: REVISED INDEXES

Commercial banks	897-898
Foreign exchange rates	899
Price movements:	
Wholesale prices	900
Retail food prices and cost of living	901
Security prices	901

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins; some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures may in most cases be obtained from earlier BULLETINS and from Annual Reports of the Board of Governors for 1937 and earlier years. Daily and monthly press releases giving daily and monthly average foreign exchange rates will be sent without charge to those wishing them. Other data on the following pages are not regularly released prior to publication.

¹ Preliminary. ² Revised.

³ Figure carried forward from last previous official report, as indicated by last previous unfootnoted figure except in the case of Spain and Germany; Spanish figures officially reported on Aug. 1, 1936, and April 30, 1938, and last official German report dated June 15, 1939.

⁴ Totals do not include Government gold reserves shown in separate section at end of table, or other central reserves which are unreported or which are too minor to be included. Among unreported reserves are those of the U. S. S. R., those in the Canadian, Swiss, and Netherlands stabilization funds, and certain German holdings. Totals may include some figures which are preliminary or carried forward from previous report dates (see footnote 1).

⁵ Beginning April 1940, reports on certain Argentine gold reserves no longer available.

⁶ These countries are: Albania, Algeria, Australia, Austria through Mar. 7, 1938, Belgian Congo, Bolivia, China, Danzig through Aug. 31, 1939, Ecuador, El Salvador, Estonia, Guatemala, Finland, Latvia, Lithuania, Morocco, and Thailand (Siam). Figures for certain of these countries have been carried forward from latest report date (see footnote 1).

NOTE.—For back figures and description of table see footnotes to table in BULLETIN for December 1937, p. 1262, and August 1936, p. 667; also see BULLETIN for July 1936, pp. 544-547, and June 1935, pp. 368-372.

For details regarding special transfers of gold by central banks to Government exchange funds, and vice versa, see notes to section at end of table and notes to tables on central banks, pp. 892-895.

¹ Reported at infrequent intervals or on delayed basis: U. S.—Exchange Stabilization Fund (Special A/c No. 1); U. K.—Exchange Equalization Account; France—Exchange Stabilization Fund and Rentes Fund; Belgium—Treasury.

² Figure for Mar. 1937, first date reported.

³ Figure for Sept. 1937.

⁴ First date reported.

⁵ Transfers in 1939: from Bank to Account, \$1,648,000,000 on Jan. 6, and \$1,162,000,000 on Sept. 6; from Account to Bank, \$26,000,000 on Mar. 1, and \$94,000,000 on July 12.

Gold production in U. S. S. R.: No regular Government statistics on gold production in U. S. S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows—at \$20.67 per fine ounce: 1929, \$15,000,000; 1930, \$31,000,000; 1931, \$34,000,000; 1932, \$40,000,000; 1933, \$56,000,000; at \$35 per fine ounce: 1933, \$95,000,000; 1934, \$135,000,000; 1935, \$158,000,000; 1936, \$185,000,000; 1937, \$180,000,000; 1938 (preliminary), \$184,000,000.

¹ Preliminary.

² Revised.

³ Includes Philippine Islands production received in United States.

NOTE.—For monthly figures back to January 1929 and for explanation of table see BULLETIN for March 1939, p. 227; February 1939, p. 151; June 1938, pp. 539-540; and April 1933, pp. 233-35. For annual figures of world production back to 1873 (including Russia-U. S. S. R.), see Annual Report of Director of Mint for 1939, p. 106; and 1936, pp. 108-109. Figures for Canada beginning January 1939 are subject to official revision.

¹ Differs from official customhouse figures in which imports and exports for January 1934 are valued at approximately \$20.67 a fine ounce.

² Includes \$31,830,000 from Argentina.

³ Includes \$28,097,000 from China and Hong Kong; \$15,719,000 from Italy; \$10,953,000 from Norway; \$10,077,000 from Chile.

⁴ Includes \$4,503,000 from Argentina.

⁵ Includes \$5,157,000 from Hong Kong.

⁶ Includes \$6,363,000 from Italy; \$4,087,000 from Hong Kong.

⁷ Includes \$6,414,000 from Norway; \$5,586,000 from Italy.

⁸ Includes \$19,527,000 from Norway; \$5,452,000 from Hong Kong.

⁹ Includes \$13,878,000 from Norway; \$5,570,000 from U. S. S. R.; \$5,566,000 from Italy.

¹⁰ Includes \$11,780,000 from Italy.

¹¹ Includes \$16,108,000 from Italy; \$5,984,000 from Hungary.

¹² Includes \$3,248,000 from Italy.

¹³ Includes \$13,673,000 from Yugoslavia.

NOTE.—For gross import and export figures and for additional countries see table on p. 792.

¹ Beginning April 1938 figures refer to Greater Germany.

² Includes \$17,465,000 exported to Rumania and unspecified net imports of \$95,937,000.

³ Includes \$67,655,000 exported to Central and South America, excluding British countries.

⁴ Figures for April and May include exports to Canada of \$45,972,000 and \$144,910,000 respectively.

⁵ No figures published since August 1939.

⁶ Includes net exports to Canada of \$115,515,000.

⁷ Through March 1935 gold held by government; subsequently, gold held by Reserve Bank of India to which government gold was transferred.

⁸ Figures derived from preceding columns; gold movement plus production minus increases in Indian reserves and gold earmarked for foreign account in India.

⁹ Includes net import of \$19,926,000 from Czecho-Slovakia and net export of \$15,374,000 to Austria.

¹⁰ Includes net import of \$26,555,000 from Czecho-Slovakia.

¹¹ No figures published since June 1939.

¹² May include a net increase or decrease in gold earmarked for foreign account, not reported separately since November 1939.

¹³ No figures published since December 1939.

NOTE.—Switzerland.—In some cases annual aggregates of official monthly figures differ somewhat from revised official totals published for year as a whole.

¹ Effective Mar. 1, 1939, gold valued at current prices instead of legal parity (see BULLETIN for April 1939, p. 271).

² Securities and silver coin held as cover for fiduciary issue, which has been fixed at £630,000,000 since June 12, 1940; for information concerning previous status of fiduciary issue see BULLETIN for November 1939, p. 1024, and April 1939, p. 339.

³ On Jan. 6, 1939, £200,000,000 of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1, 1939, about £5,500,000 (at current price) transferred from Exchange Account to Bank; on July 12, 1939, £20,000,000 of gold transferred from Exchange Account to Bank; on Sept. 6, 1939, £279,000,000 transferred from Bank to Exchange Account.

⁴ By decree of Feb. 29, 1940 (see BULLETIN for May 1940, pp. 406-407), gold revalued on basis of 23.34 milligrams gold 0.900 fine per franc. Increment of about 17,000,000,000 francs supplemented by certain other funds was applied to the full repayment of advances to the Government granted under authority of the decree of Nov. 12, 1938, in the amount of 20,473,000,000 francs. Gold also revalued in Oct. 1936, July 1937, and Nov. 1938. For further details see BULLETIN for November 1936, pp. 878-880; September 1937, p. 853; and January 1939, p. 29.

⁵ Negotiable bills of Caisse Autonome, bills bought under authority of decree of June 17, 1938 (see BULLETIN for August 1938, p. 650) and, from Mar. 28, 1940, 30,000,000,000 francs of negotiable Treasury bills received in return for gold transferred to Stabilization Fund on Mar. 7, 1940.

⁶ Bills and warrants endorsed by National Wheat Board (law of Aug. 15, 1936—see BULLETIN for October 1936, pp. 785-786), and bills rediscounted for account of Banques Populaires (law of Aug. 19, 1936—see BULLETIN for October 1936, p. 788).

⁷ Includes advances granted under authority of Conventions between Bank of France and Treasury of June 18, 1936, June 30, 1937, March 22, 1938, and April 14, 1938, as modified by Convention of Nov. 12, 1938; Convention of Sept. 29, 1938, approved by decree of Sept. 1, 1939; and Convention of Feb. 29, 1940 (see BULLETIN for May 1940, pp. 406-407).

⁸ On April 20, and again on Aug. 3, 1939, 5,000,000,000 francs of gold transferred from Stabilization Fund to Bank of France; on Mar. 7, 1940, 30,000,000,000 francs of gold transferred from Bank of France to Stabilization Fund.

NOTE.—For further explanation of table see BULLETIN for July 1935, p. 463, and February 1931, pp. 81-83.

¹ Averages of weekly figures through August 1939; beginning September 1939 figures refer to one week near end of month.

² Through December 1937 excludes deposits in offices outside England and Wales, which are included in total. Figures for 10 banks not available beginning 1936.

³ District Bank included beginning in 1936.

NOTE.—For other back figures and explanation of tables see BULLETIN for October 1933, pp. 639-640.

¹ Combined monthly balance sheets not published for December. Prior to merger of two of the banks in February 1932 figures refer to six large Berlin banks. Beginning in 1935 figures are not entirely comparable with those shown for previous years due to changes in reporting practice (see BULLETIN for June 1935, p. 389).

² No figures available since June 1939.

NOTE.—For other back figures and explanation of tables see BULLETIN for August 1939, p. 699; June 1935, pp. 388-390; and October 1933, pp. 641-646.

NOTE.—Developments affecting averages since July 1939 have been as follows: No rates certified for following days: Argentina—Aug. 26-Oct. 16; Belgium—since May 9; Brazil—Sept. 1; Bulgaria—since Aug. 29; Canada—official rate Mar. 1-21, first reported in addition to free rate beginning Mar. 22; Denmark—Aug. 26-31 and since April 8; Egypt—since Sept. 1; Finland—Aug. 26-Sept. 1 and Sept. 3-5; France—since June 15; Hun-
gary—Aug. 26-Nov. 8 and Jan. 27-Feb. 8; Netherlands—since May 9; Norway—Aug. 26-29 and since April 8; Poland—since Aug. 25; Rumania—
Aug. 26-Nov. 5 and since Jan. 31; Spain—Mar. 30-Apr. 1; Turkey—Aug. 25-28 and since Sept. 1; United Kingdom—official rate Mar. 1-24, first
reported in addition to free rate beginning Mar. 25; Uruguay—controlled rate, Sept. 1-Nov. 28, and non-controlled rate, Oct. 17-Nov. 28; Yugoslavia
—Aug. 26-Nov. 5. Official rate for Australia first reported in addition to free rate beginning Apr. 1. Averages based on nominal quotations for
at least 5 days a month as follows: Aug.—Australia; Sept.—South Africa; Sept. and Oct.—British India, Hong Kong, Japan, and Straits Settlements;
Nov., Dec., Jan., and Feb.—British India, Germany, and Yugoslavia; Dec., Jan., and Feb.—Finland; Mar.—Finland, Germany, and Yugoslavia;
Apr.—New Zealand; Apr., May, and June—Germany, Sweden, and Yugoslavia; June—Italy. For further information concerning nominal status
of exchange quotations, special factors affecting the averages, and changes in the bases of quotation, see BULLETIN for September 1939, p. 831; March
1939, p. 236; and March 1938, p. 244.
