The Business Situation

By the Office of Business Economics

BUSINESS activity remained on an even keel in the late summer and early fall period with seasonal increases occurring in production, employment and consumer buying. Construction activity in September, seasonally adjusted, reached a new high—continuing the strength shown in the other months of this year.

Employment expanded in nonagricultural establishments in September as school hiring rose to accommodate record enrollment, labor disputes in the rubber and lumber industries were settled, and workers were added to meet seasonal demands in manufacturing and trade.

Personal income, still the basic support of private demand, has continued at a high and even rate. The slight decline from July to August was ascribable mostly to a corresponding reduction in wages and salaries in the commodity-producing industries. As indicated in the chart, the chief shrinkage in employment during the past year has occurred in these industries.

September sales at retail stores increased by the usual amount from August. For the third quarter as a whole, retail sales, seasonally adjusted, were equal to the second-quarter rate and also equal to the third quarter of 1953.

Consumption exceeds production

The volume of final aggregate demand for consumption, fixed investment and for Government-required goods and services continues in excess of production. This means that inventories held by business concerns are still being liquidated, and mainly so in the durable goods manufacturing industries.

In recent months, the reduction of inventories in productive and distributive channels has been accompanied by a relatively stable volume of sales. As a consequence, stock-sales ratios have been lowered—about 6 percent from this year's February high. The current ratio of about one and two-thirds months for manufacturing and trade combined is about the same as a year ago.

The recent improvement in inventory-sales ratios has been more marked in manufacturing than in trade, and more pronounced in durable goods lines than in nondurables. Based on seasonally-adjusted data, manufacturers and retailers of durable goods have reduced stock-sales ratios by 5 and 12 percent, respectively, from late winter highs; for durable-goods wholesalers the change has been more moderate. The reduction in motor vehicle dealers' holdings has been an important factor in the retail movement.

Stock-sales ratios for nondurable-goods firms in manufacturing and trade have edged down only moderately this year. Soft-goods inventories had not advanced in proportion to sales during the previous 2 years so that current positions, relative to sales, are more favorable than for durables. Late summer stock-sales ratios for both manufacturers and

distributors of nondurables were about the same as a year ago.

Analysis of manufacturers' inventories by stage of fabrication indicates that the relatively more favorable inventory position of nondurable-goods industries than of the durable-goods industries centers in finished goods and goods-in-process. Nondurable-goods stocks in these categories are slightly lower than in the corresponding period of last year. For durable-goods producers, goods finished and available for shipment are larger relative to current sales volume than a year ago. Goods-in-process inventories bear about the same relation to sales as in the summer of 1953, though considerably higher than in the pre-Korean period due to the relatively large percentage of defense material in the product mix.

Purchased materials held by both durable-goods and nondurable-goods manufacturers have been reduced quite sizably—bringing their ratios to sales to about the lowest points in recent years.

Production trends

Industrial production so far this year has been on a plateau, at a rate 9 percent below the peak second quarter of 1953 but about as high as the average for 1952. The Federal Reserve Board's seasonally adjusted production index has fluctuated within a narrow range of about 2 index points on a monthly basis, with an average of 124 for each of the first 3 quarters of this year. In late September and early October there was evidence of some pickup in operations in a few of the basic industries.

The production pattern during the year to date has been one of divergent trends for individual commodities, but these variations have been less pronounced than in the last 6 months of 1953. Output of durable goods as a whole declined through March and since has shown little or no change, while production of nondurable manufactures firmed up in the second quarter and has since held steady at the moderately higher rate.

In general, quarterly production movements among individual industries and products during the first 9 months of this year have been confined to relatively narrow limits. The only significant changes on the downside, apart from those where curtailment of output resulted largely from industrial disputes, occurred in a few of the metal-fabricating industries—steel, nonelectrical machinery, automobiles and railroad equipment. The drop in these areas reflects the general tapering off of capital outlays for new plant and equipment, cutbacks in defense production, and some drawing down of inventories.

Improvement in steel operations

Reduced activity in the durable goods industries together with the working off of inventories has been reflected in a relatively low rate of production in the Nation's steel-making facilities. During the first 9 months of this year steel mills operated at an average rate of 69 percent of the rated capacity in place at the beginning of the year and produced 64.2 million tons of steel ingots and steel for castings, a drop of about one-fourth from the comparable period a year ago.

In recent weeks there has been a significant pickup in mill operations, reflecting increased buying by steel-consuming industries. The scheduled weekly operating rate has advanced from 63 percent of rated capacity in early September to 72 percent of capacity in the second week in October.

Output in the automobile industry, the largest single consumer of steel, has been running considerably below last year's rate. Assemblies of passenger cars and trucks through September were nearly 15 percent below the 1953 volume. The low September production—350,000 units—was oc-

casioned by large-scale shutdowns for model changeovers and inventory adjustments for many makes of cars. While further shutdowns for these purposes are scheduled for October, production programs indicate substantial increases for the months ahead.

Sales of new passenger cars have been following a downward pattern more in line with prewar seasonal fluctuations than was the case in earlier postwar years. Dealer sales in September lagged behind the July-August rate; but since they were well above factory assemblies, dealer stocks have continued to decline and at month-end stood considerably below 1953.

Plants producing railroad equipment are operating at low levels as a result of the dearth of new orders and backlogs. In the most recent months, however, new orders have matched or even slightly exceeded shipments so that backlogs, while the lowest of the postwar period, have shown signs of leveling off.

For major household appliances demand has been relatively firm in 1954. Production in these lines has advanced since the first quarter. Stocks in the hands of manufacturers at the end of August were on the average somewhat below year-ago volumes and were not high in relation to current shipments.

In the case of television sets, slightly larger sales to consumers so far in 1954 as compared with 1953, coupled with a substantial drop in output, has resulted in a sharp inventory reduction since the beginning of the year.

Nondurable goods stable

In nondurable manufacturing, where the downward adjustment was less pronounced than in the durable goods industries, production has remained steady since March at a rate moderately above the first quarter, though still 5 percent below the high April-June period of 1953. Production trends have varied, however, among the individual industries. Food and beverages and the printing and publishing industries, two typically stable groups, have shown little or no change. In the paper and chemical groups decreases in output from the second quarter of 1953 to their low point were small and output has since expanded. In the other nondurable goods industries, the declines were much sharper with subsequent partial recoveries the rule.

Textile output, which had been declining since the spring of 1953, firmed moderately in the second quarter of 1954 and strengthened further in the summer. Despite this improvement, output is below a year ago. The market for cotton products appears to be definitely stronger than rayon and acetate; output of woolen and worsted fabrics, despite improvement in the second quarter, remains well below 1953.

All branches of the textile industry are currently operating well under capacity. The woolen and worsted industry is running at only some 40 percent of loom capacity, rayon and acetate at no better than 60 percent, while the cotton textile industry is running at about 80 percent of full-shift operation.

During the first half of 1954, per capita mill consumption of major textile fibers declined to an estimated 35.6 pounds, at annual rate, lower than any previous postwar year. Cotton, wool, and rayon and acetate consumption shared in the reduction. Only the new synthetic fibers increased per capita usage, as they have every year since 1947.

Textile-mill inventories have been undergoing a period of sustained liquidation since early 1951, only temporarily interrupted by the lagging adjustment of output to falling sales during the last half of 1953. Stock-sales ratios reflect improvement during the current year. However, a substantial proportion of the half-billion dollar reduction in inventory book values between the end of 1951 and the end of 1953—probably about half—represented price decline of

textile products, which fell about 10 percent in the 2-year period. Inventory reduction has been complicated by changing consumer preference for different types of fabric construction, blends, and fibers. During the past year, inventories of textile mills have fallen 10 percent in dollar value while the average price of such stocks has dropped considerably less.

Final demand for textiles and textile products has been better maintained than output so that apparel manufacturers

and, more recently, retailers have also been enabled to trim inventories. Thus, apparel-store stocks at the end of August were 5 percent below April, seasonally adjusted. Inventories held by apparel manufacturers, which were increasing during most of 1953, have been declining since last December. In August they reached the lowest point in 4 years. Recent increases in factory sales of apparel, combined with the continued decline in stocks, have resulted in a more favorable stock-sales relationship.

National Income and Corporate Profits

NATIONAL INCOME was fractionally higher in the second quarter of 1954 than in the first, and in general mirrored the overall stability in economic activity during this period which was reported in the earlier analysis of the gross national product in the August issue of the SURVEY. The second quarter national income total was at a seasonally adjusted annual rate of \$299½ billion.

National income had risen from \$291 billion in 1952 to a peak rate of \$308 billion in the second quarter of last year. It then declined in the second half with the major shift in national market patterns. The limited extent of the income decline, which has left about half the 1952-53 gain still intact, and the recent stability of the total reflect the orderly manner in which the economy has been adapting to the altered structure of demand. The first half annual rate of over \$299 billion was \$9 billion less than in the first half of 1953, and \$8 billion more than the 1952 full year total.

National income data show how the pattern of the adjustment thus far has been influenced by certain stabilizing factors in the corporate business segment of the economy. The main areas of falling demand have been those served primarily by corporations, and most of the effect of the decline on earnings from current production was absorbed through reductions in corporate taxes and undistributed profits, while income paid out to consumers—and hence consumer buying power—was relatively well maintained.

Other developments which have helped to sustain total production in this transition period following the end of the post-Korean rise in defense spending were discussed in the August issue of the SURVEY. They include the effects on consumer purchasing power of the rise in unemployment compensation payments (which are not a part of the national income) and of the reduction in Federal income taxes on individuals, as well as continued independent growth in various markets—chiefly construction and allied activities.

Manufacturing and transportation down

The market readjustment which began about the middle of 1953 was characterized chiefly by a general reaction from the previous high demand for durable goods. Federal expenditure for hard goods in connection with national security needs reached a maximum in the second quarter and declined thereafter. Purchases of durables for final use by individuals and by industry receded in the latter part of 1953 from the peaks established earlier in the year. At about the same time, the rapid buildup of business stocks of hard goods ceased, and substantial inventory liquidation followed.

The industrial structure of production in the first half of 1954 consequently differed in important respects from that a

year earlier. With the shrinkage in the demand for durables, declines averaging 9 percent in each case and totalling \$10½ billion at annual rates had occurred in income from manufacturing and transportation. Income arising in agriculture, mining, trade and government was about the same as a year earlier, while some expansion had been recorded in construction, services, communications and utilities, and in the finance-insurance-real estate group. These and other changes are shown in table 1.

Table 1.—National Income by Industrial Origin, 1951-54

Source: U. S. Department of Commerce, Office of Business Economics.

Income from manufacturing dropped \$5½ billion from the first to the second half of 1953, at seasonally adjusted annual rates, and declined by a further \$3½ billion to an annual rate of \$91 billion in the first six months of 1954.

The contraction became evident in the third quarter of last year, and was most pronounced in the fourth, when total income originating reached a quarterly figure from which there has been little further change during the first half of 1954 on a seasonally adjusted basis. The drop from the 1953 peak, like the previous buildup after mid-1952, was concentrated in the durable goods industries. Income in these industries seems to have drifted somewhat lower during 1954, but the net movement has been comparatively limited. Nondurables manufacturing in general rose less from 1952 to 1953, and its subsequent decline has been more moderate than that of the durables branch.

Transportation requirements declined after the middle of 1953 with the reduction in shipments of hard goods and also, as the drop in production of such goods was transmitted back

to earlier stages of the industrial process, with curtailment of traffic in basic materials such as steel and coal. Income in transportation dipped \$½ billion at annual rates from the first to the second half of 1953, and declined nearly \$1 billion more to the first six months of 1954. As in the case of manufacturing, a considerable degree of stability seems to have been achieved since the beginning of this year.

Other industries stable or higher

Income originating in contract construction has expanded throughout the period, with the uptrend in construction activity. The strength of demand in this industry reflects the accumulated need for housing, institutional, and commercial space, coupled with the high level of personal income and, since mid-1953, the effects of easier credit conditions and residential rent decontrol.

The recent trend in finance, insurance, and real estate has been similar, as table 1 shows. The expansion of credit required to finance the new building and the associated turnover of real estate has given rise to a substantial increase in interest payments, and the rental income of persons, which is also included with income from the real estate industry, has risen with additions to the national stock of buildings and the advance in average rents.

Income originating in communications and public utilities has also continued to expand throughout the period, with the strong underlying growth trend in the use of electric power and other utility services and the expansion of productive facilities.

Changes in other private industry divisions since early 1953 have been less pronounced. Income from the service industries showed a moderate increase, as consumer expenditures for a wide variety of services supplied by these industries continued to edge upward. Total income arising in wholesale and retail trade in the first half was virtually unchanged from the same period of last year, the total volume of business having declined only slightly after mid-1953. Income from agriculture was likewise about the same in the first six months of 1954 as a year earlier, but has varied from quarter to quarter. Recent developments in this industry were reviewed in the August SURVEY.

Income originating in government was relatively stable as a steady contraction in Federal payrolls was largely offset by an expansion in State and local government.

Impact on corporations

In both manufacturing and transportation, where the major declines occurred, nine-tenths of income originates in corporations. The impact of these declines on corporate business as a whole far outweighed the net total of the expansion realized by corporations in other industries, where this form of organization is generally less prevalent. As a result, aggregate income originating in corporate business during the first half of this year was at an annual rate nearly \$9 billion lower than in the same period of 1953. Income arising outside the corporate sphere, by contrast, was up \$1 billion.

These disparate movements are summarized below, at seasonally adjusted annual rates in billions of dollars.

	Totals		Changes	
	1953	1954	First to second half of 1953	Second half of 1953 to first half of 1954
Total national income...	307	303	290½	-4
Originating in:				
Corporations...	170½	166½	162	-4
Other legal forms.....	136½	136½	137½	1

Profits and employee compensation

Compensation of corporate employees in the first half of this year was down only \$2 billion or 1½ percent from the same period of 1953. During the initial stages of the adjustment, in the second half of last year, it was at an annual rate averaging \$1½ billion above that of the preceding six months. Since early in 1954, employee compensation has been approximately stable, apart from the limited downdrift in durable-goods manufacturing.

The vast bulk of the overall decline from the first half of 1953 in total income originating in corporations was absorbed by a drop of almost \$7 billion—16 percent—in the corporate profits share (which for national income purposes is measured before taxes on income).

Disposition of Corporate Profits

OFFICE OF BUSINESS ECONOMICS, U. S. D. C.

54-39-4

The profits share of total income originating in corporations amounted to about 21 percent in the first half of 1954. In table 2, this fraction is shown in historical perspective. The total of corporate property income, consisting almost entirely of profits since the prewar decline of interest charges, has been about one-fourth of all income from corporations in most prosperous peacetime years. The share of profits appears to have been somewhat lower in 1952—probably reflecting the impact of the steel strike—and in 1953, when it was affected by the onset of the current business readjustment in the latter half of the year.

The decline in after-tax profits relative to the total during this readjustment has been much smaller, of course, since the bulk of the reduction in before-tax profits was absorbed by a drop in taxes. In recent years, profits before tax have been divided roughly equally between taxes on corporate profits and profits after tax. Corporate profits after tax, as a proportion of corporate income originating, have amounted to around 10 percent in late years, a considerably smaller percentage than in the earlier postwar period.

These developments in corporate payrolls, profits, and taxes are reflected also in table 3, where they account for the principal changes shown to have occurred in recent quarters in the distribution of national income by type.

Profits, taxes, and dividends

Before-tax profits in the first two quarters were steady at a seasonally adjusted annual rate of \$34½ billion, compared to about \$42 billion in the first half of last year. Their \$7½ billion decline reflects not only the drop in the profits share as defined for national income purposes but also the disappearance of inventory gains, which had amounted to almost \$1 billion in the earlier period.

Federal and state income tax liability accruing in the first half of this year is estimated at a seasonally adjusted annual rate of \$17 billion, down \$5½ billion from the same months of 1953. Part of the reduction is due to the removal of the Federal excess profits tax. Much of it, however, is simply a reflection of the drop in the tax base. It should be noted that the present estimates of tax liability for early 1954 are less firm than the other figures used in this review, since there is less information on which to base them. The margin of error, however, is not large enough to affect the general outline of events given here.

At an annual rate of \$17½ billion in each of the first two quarters of 1954, after-tax profits were down \$2 billion from January–June 1953, the \$5½ billion reduction in Federal income taxes having absorbed most of the much larger decline in before-tax earnings. Apart from the effect of inventory gains and losses, this year's first-half rate was about the same recorded in other years since 1950.

In the early part of 1953, as in most of the period since 1940, more than half the total after-tax earnings of corporate business had been set aside as undistributed profits. The total so retained in the first half of this year—about 45 per-

cent of after-tax profits—amounted to \$8 billion at annual rates, compared to \$10½ billion a year before, as corporations absorbed the \$2 billion decline in after-tax profits and increased dividend payments \$½ billion.

The mechanics of corporate financing early in 1954, in which the impact of the curtailment in undistributed profits as a source of capital funds was partly offset by higher depreciation allowances and lower working capital requirements for carrying inventory, was discussed in last month's SURVEY. Corporate spending for fixed plant and equipment was relatively well maintained.

The foregoing analysis of the income effect of the market shift since the peak first half of 1953 is summarized in the accompanying charts.

Industrial shifts in 1954 profits

The most striking recent changes in the industrial pattern of before-tax profits are those implied in the shifting industrial structure of total national income. Of the overall decline in profits from the first half of 1953 to the corresponding period of this year, about three-fourths occurred in

manufacturing and most of the remainder was in transportation. Table 4 shows these and other changes in terms of actual half-yearly totals unadjusted for seasonal variation.

Manufacturing profits before tax in total were down more than 20 percent. The durables industries accounted for more than three-fourths of the drop, but decreases of varying magnitude were the general rule in all industries. Total profits in the durables group were down nearly 30 percent from the first six months of last year. Large contractions occurred in nearly all the metals and metal-processing lines, one of the most severe being in basic iron and steel. With

(Continued on p. 20)

MONTHLY BUSINESS STATISTICS

Addition to Statistical Section, Pages S-1 Through S-40

A NEW FEATURE appears in this issue of the *Survey of Current Business*. In order to make the statistical pages more helpful to subscribers, an additional column has been incorporated. This will permit the showing of data for the previous 14 months, instead of 13, as before.

THE EFFECT OF THIS CHANGE is that the data for the month preceding the calendar month in which the *Survey of Current Business* is published can be shown to the extent that they are available at the time the magazine goes to press. Only a fraction of the statistics for that month are so quickly available, of course, and the new column—in this issue, for September—cannot be complete. However, the change is designed to furnish the reader with the maximum information available.

WEEKLY SUPPLEMENTS will continue to provide subscribers with interim statistics. The availability of space for an additional month—on each S-page of the magazine—will make it more convenient for users to enter new data there during the month as they are received in the Weekly Supplements.

Foreign Grants and Credits

U. S. Government, Fiscal 1954

GRANTS and credits by the United States Government to foreign countries, measured by actual deliveries or payments, totaled \$5.2 billion in fiscal year 1954. This was a decline of one-fifth from fiscal year 1953. Both grants in the form of military supplies and services, and other net grants and credits declined in about the same proportion.

Transfers of military supplies and services exceeded \$1 billion in the June 1954 quarter—reflecting increased shipments to Indochina—but the lower rate in the preceding three quarters held the total for the year to \$3.5 billion, which compares with the postwar military grant peak of \$4.3 billion in the preceding fiscal year.

Net transfers on other grants and credits decreased steadily through the four quarters, aggregating \$1.6 billion for the fiscal year, a postwar low. These “nonmilitary” grants and credits include all relief, development, and technical cooperation assistance and all cash transfers to foreign governments except the contributions to the multilateral-construction program of the North Atlantic Treaty Organization. The last are included in the “military” category along with military “hardware” and other end-items, and military training and similar services.

Postwar assistance \$50 billion

In the 4 years since the Communist invasion of South Korea, the United States has supplied nearly \$11 billion in military grants to the NATO participants and our other allies, exclusive of the resources in manpower and material expended directly by the United States in the Korean conflict. The 4-year total of other assistance provided these countries was an approximately equivalent amount, although less was given each successive year.

In the 5 years from V-J Day to Korea, \$26 billion net grants and net credits had been given or lent by the United States Government. Only 5 percent of this pre-Korean assistance was military.

In total, inclusive of the capital investment of \$3.4 billion in the International Bank for Reconstruction and Development and International Monetary Fund, this Government has made available over \$50 billion in net postwar assistance to other countries. Half of this total has been provided under the mutual security program and its closely related predecessor programs for European recovery (beginning in 1948), mutual defense assistance (1949), and technical cooperation (1950).

Transfers to Europe off

For the first time since before World War II net transfers of other than military items to Western Europe (\$709 million) were less than to other areas (\$940 million). As table 1 shows, Western European aid had declined over \$500 million in the year, while other areas aggregated a \$150-million net increase, principally as a result of increased grants to Iran and Pakistan and loans to Brazil and Japan.

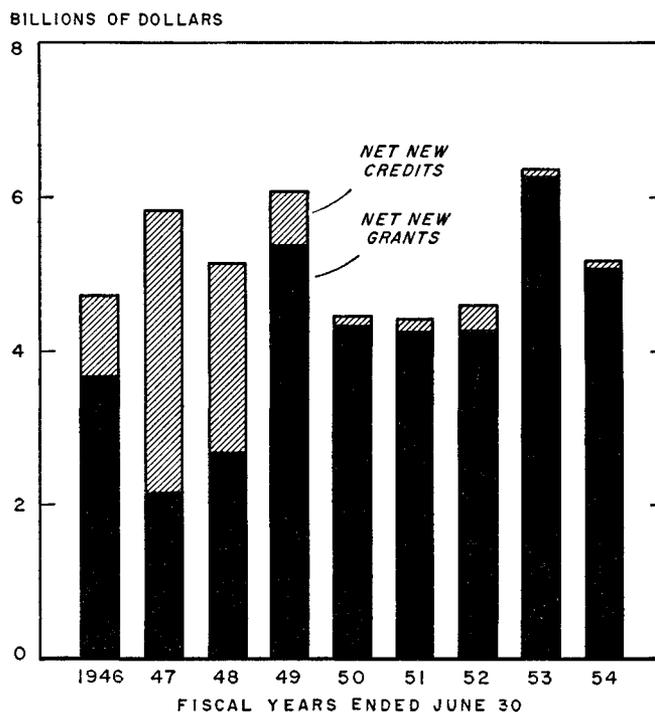

NOTE.—MR. KERBER IS A MEMBER OF THE BALANCE OF PAYMENTS DIVISION, OFFICE OF BUSINESS ECONOMICS.

This trend is also evident in military grants, although it was less pronounced. Transfers of military supplies and services to Western European countries participating in the North Atlantic Treaty Organization were comparatively stable during the year, but at a rate one-fifth below fiscal year 1953. On the other hand, after December 1953 the quarterly volume of military transfers under title III of the Mutual Security Act of 1951, covering Asia and the Pacific, more than doubled, so that the decline in deliveries to this area was less than 10 percent for the year.

Agricultural commodities

In the past year use of agricultural goods for defense support and other foreign assistance increased.

Postwar Foreign Grants and Credits

OFFICE OF BUSINESS ECONOMICS, U. S. D. C.

54-39-5

Wheat valued at \$70 million was given to Pakistan after a disastrous crop failure there, and wheat and flour to the value of \$7 million were shipped for famine relief to Jordan, Libya, and Bolivia. Through American private voluntary relief organizations, the Agriculture Department donated milk, butter, and cheese with an estimated value of \$67 million. Over \$250 million worth of agricultural products from the United States was included in other mutual security program aid, and Army food shipments to Korea were valued at \$20 million.

For fiscal year 1954 Congress had authorized (under section 550 of the Mutual Security Act of 1951) sale of surplus agricultural commodities for foreign currencies which are, in turn, being used to provide grants and credits abroad, both to the purchasing and to third countries. Of the \$245 million obligated for this purpose, approximately half had been shipped by June 30. However, only \$15 million of the resulting foreign currency proceeds was disbursed. The latter amount was for defense support payments to the United Kingdom and hence is included in the grant data. The use of surplus products for the extension of foreign grants or loans will be further expanded by appropriations for the current year.

Shipments of military equipment

Increased transfers of tanks and other vehicles, with equipment and spares, accounted for the \$160-million rise in military grant transfers under the mutual security program in the last quarter of fiscal year 1954. Almost one-third of the total value of military supplies reported shipped in that quarter was in this category. For the year as a whole other ordnance equipment—principally arms, artillery, and ammunition—represented the largest category of military assistance. Aggregating over \$1 billion, these shipments included 9,000 artillery pieces, 21 million rounds of artillery ammunition, and 700 million rounds of small arms and machine gun ammunition.

Deliveries of aircraft and equipment declined in value throughout fiscal year 1954, totaling half a billion dollars. This decline was partially compensated by the increasing value of transfers of vessels and equipment which aggregated one-third of a billion dollars in fiscal year 1954.

European military assistance includes \$104 million the United States Government contributed to the multilateral construction program designed to provide supporting facilities for NATO operations. United States contributions of \$202 million through fiscal year 1954 represent somewhat more than one-fourth of the total United States share authorized by the Congress in August 1954. The United States contributes about 38 percent of the jointly financed construction program agreed upon by all NATO countries.

Foreign procurement contracts

One-eighth of the military goods transferred abroad in the year ended June 1954 was purchased from foreign countries under the "offshore procurement" program. Total deliveries under offshore procurement contracts since the beginning of the program approximated \$650 million by the end of June 1954. New contracts less cancellations during the fiscal year and recent months leave about \$1.9 billion in outstanding offshore procurement contracts still to be delivered.

About one-third of these outstanding orders was in France, where over a billion dollars worth of orders was placed in 1952 and 1953, but only a nominal amount in the past fiscal year.

Armed Forces support

Orders in France in fiscal years 1952 and 1953 included about \$400 million under special programs designed to give assistance to that country through procurement by the United States of military end-items for use by the French forces, including the troops in Indochina. End-item deliveries under these special programs approximated \$150 million in each of the fiscal years 1953 and 1954.

During fiscal year 1954 some \$75 million more of military equipment was purchased in France under the regular offshore program. The French dollar position was considerably

helped by these and other United States Armed Forces purchases in that country (see SURVEY, August 1954, p. 7).

However, last year grants were also provided through reimbursement for French and Associated States of Indochina costs of forces in Indochina, in addition to offshore procurement of items returned to France as military grants.

Direct financial payments by the United States Government to the French included \$31 million in the first quarter of 1954 and \$65 million disbursed in the second quarter from the \$745 million made available by Congress and Presidential transfers as direct forces support to help defray French and Associated States costs in Indochina in calendar year 1954 From July through September over \$125 million more was disbursed for this purpose.

Last year's appropriation included also \$85 million in financial assistance for manufacturing of military goods which had not been disbursed by June 30.

In 3 of the past 4 years France was the principal recipient of United States Government grant transfers, omitting deliveries of military end-items. In the last year, because of the \$96-million direct forces support payments, net grant transfers to France increased slightly to total \$276 million.

United States collections

The balance of \$56 million due from the French Government on the July–August 1952 Export-Import Bank loan was repaid during the past year. The loan—advanced against anticipated French earnings under offshore-procurement contracts placed earlier in 1952—had helped ease the then difficult French dollar balance of payments problem. In August 1953, the French drew \$100 million in a similar advance on 1953 contracts; in consequence of an improved dollar earning position, they completely repaid this loan in March, 15 months before the final repayment was due. As a result of these large loan repayments, and the regular annual principal repayments of \$71 million on postwar credits, total net grants and credits to France for the year, other than transfers of military end-items, were slightly under those to the United Kingdom.

United Kingdom grants halved

Large allotments of economic assistance funds made in fiscal years 1952 and 1953 were drawn upon heavily by the United Kingdom in the latter year. Transfers against these earlier allotments and a current smaller one totaled half as much (\$197 million) in fiscal year 1954 as in the preceding fiscal period.

A defense support payment of \$15 million in sterling proceeds from agricultural commodity sales was disbursed in the June 1954 quarter. The United Kingdom will receive further payments in sterling which we had obtained from these sales; \$45 million from the fiscal year 1954 program was undisbursed at the year end. Like the French, the British at the end of June had not received the \$85 million appropriated for fiscal year 1954 for financial assistance for manufacturing of military goods—in this instance, aircraft. An appropriation of \$35 million was added to this program for fiscal year 1955, to be paid in sterling obtained through United States export of surplus agricultural commodities.

United Kingdom principal repayments on the \$3¼-billion loan and surplus property and war-account settlements were unchanged (\$53 million) in the last year as were overall new loan disbursements for development of resources in British overseas territories.

Grants for Germany

Grants to Germany in the 12 months ended June 30, 1954, mirrored the continued allotments made to the Federal

Republic for economic assistance to Berlin. Germany was also the principal recipient of the milk, butter, and cheese which the Agriculture Department made available to private voluntary relief organizations for distribution abroad and these shipments accounted for the year's increase in transfers to the Republic.

Net assistance to Germany in the preceding year was dominated by repayments on the 1951 and 1952 Export-Import Bank loans granted for the purchase of cotton and tobacco. More recently transactions on credits consisted principally of accelerated repayments on the outstanding balance of the surplus property credit, as adjusted in the debt settlement of 1953.

Beginning in July 1953, shipments valued at \$13 million were sent as part of the mutual security program through Berlin to alleviate the food shortages in East Germany.

European declines widespread

With the general improvement in economic conditions in Western Europe, and the curtailment of a general economic assistance program for that area, reductions from the preceding year exceeding \$50 million affected net nonmilitary grants and credits to Italy and Yugoslavia, in addition to those to France and the United Kingdom, described above.

Contrary to the trend, grants to Yugoslavia increased again in the June quarter, after a decline in the September 1953 quarter.

Recent increases were also noticeable in transfers to Greece and Turkey. Grants to Greece included large payments to settle its deficit in clearing accounts with other members of the European Payments Union. These special purpose payments represented about 44 and 35 percent of United States Government grants to Greece in the past 2 years, respectively. Turkey had received similar payments in the earlier year. Excluding these payments, grants to Turkey increased by one-fifth over the previous year.

Portugal was an exception to the decline of net nonmilitary grants and credits because of increased loan disbursements by the Export-Import Bank for the construction of the Pafuri railroad link in Mozambique.

Near East grants stable

Grants to the Arab countries continued on balance at about the same rate as in the preceding year. These grants were primarily for technical assistance but included shipments of wheat for emergency famine relief in Jordan and Libya. The grants to specific countries were about twice as large as in fiscal year 1953, more than offsetting the decrease from \$16 million to \$8½ million in United States Government contributions paid to the United Nations Relief and Works Agency for Palestine Refugees.

During fiscal year 1954, Israel received 30 percent of the exports of agricultural commodities donated by the United States Government through American private voluntary relief agencies. The decline in economic development assistance furnished under the mutual security program was offset by the \$20 million in shipments under the Agriculture Department program.

Aid to Iran and Pakistan

As noted above, the large increases of \$54 million in assistance to Iran and of \$64 million to Pakistan in the past year were a significant factor in the swing in United States Government nonmilitary aid emphasis from Europe.

In August 1953 a \$45-million grant for emergency economic assistance, including budgetary support, was au-

thorized for Iran. An additional \$15 million was added to this authorization between January and June 1954 to maintain the flow of essential imports. Local currency proceeds from the import program are used to meet the operating costs of the Iranian Government. These grant allotments were made by the United States Government to assist in restoring economic and political stability to Iran.

Pakistan, suffering from severe drought conditions, received \$15 million in wheat in fiscal year 1953 on repayment terms. With a worsening of the situation, Congress authorized a special grant of 700,000 tons of American wheat for relief and transfer of 300,000 tons for a wheat reserve. Shipments began late in June 1953 and in April 1954 the Government of Pakistan announced that the food situation had improved and that not all of the relief grant and none of the reserve transfer would be required. Over 610,000 tons of wheat were shipped, aggregating \$77 million in value, including United States Government freight payments when required.

Food production expanded

Disbursements under the development assistance and technical cooperation program to Pakistan, initiated on a large scale the previous year, expanded in the last fiscal year to total \$8 million. This program places considerable emphasis on food production.

In India, United States Government financial assistance for development and other purposes was also directed to food production. Annual payments for such grants, in part used for fertilizer and irrigation projects, continued relatively unchanged at \$28 million. In preceding years, India has received large quantities of wheat from the United States Government, principally on a repayment basis.

Rehabilitation of Korea

Immediately after the Korean Armistice, the rate of grants of civilian supplies by the Armed Forces to Korea declined three-fourths. A new program, designed to help rehabilitation, was undertaken by the Foreign Operations Administration and began expanding late in the year. Meanwhile, Korea received shipments purchased from the payments of \$15 million made to the United Nations Korean Reconstruction Agency during fiscal year 1954, in addition to \$41 million provided the preceding year as a contribution through that international organization.

New funds provided for grant assistance to Korea for fiscal year 1955 were equal to the unexpended funds at the end of June and made available a total in excess of \$400 million for forthcoming economic assistance. Expenditure of these funds will soon restore the rate of Korean grants to previous high levels.

Indochina grants higher

Direct grant assistance to Indochina increased during the year and was comprised primarily of industrial equipment, machinery, vehicles, and fuel to maintain essential supply in the area.

Dollar payments to the French for support of forces in Indochina are made by the United States Government in Paris and are reported in the data for France. These disbursements, discussed above, helped to meet the costs of the French Expeditionary Corps and the Associated States Forces.

Programs for island countries

Net nonmilitary grants to Taiwan (Formosa) and the Philippines went down in the past year. The Philippines

significantly increased their principal repayments on credits, which considerably reduced the total annual net grants and credits to the Republic. The annual rate of net loan utilizations by Indonesia for development projects and the smaller technical cooperation program continued unchanged.

Japanese net credit utilization increased \$113 million in the past two fiscal years. Japan first paid off the Export-Import Bank \$40-million cotton credit of fiscal year 1952 and then drew on a new \$40-million credit extended in April 1953 and a \$60-million credit extended in October 1953. The first loan was at 2¼ percent interest, while the latter two were at 3½ percent. These cotton credits are extended with 15-month repayment terms. The most recent utilization was from commercial agent banks of the Export-Import Bank. Thus, no United States Government funds were

grants mirrored the resurgence of foot-and-mouth disease in Mexico and the famine relief shipments of wheat and wheat flour to Bolivia.

Funds available

The present session of Congress extensively reviewed the size and scope of the United States Government foreign aid programs. Including the new appropriations for fiscal year 1955 the amount of grants and credits potentially available for transfer to foreign countries at the beginning of the fiscal year aggregated \$16 billion.

More of the assistance than last year is to be placed on a repayable credit basis. Other basic trends which were initiated last year are continued. Transfer of surplus agricultural commodities for foreign currencies which are to be used for grants and credits will increase. Aid to Western Europe will continue to decline; that to the Asiatic countries is programed to increase. Technical assistance is to be more sharply focused on instruction and demonstration by restricting the provision of commodities and equipment to those necessary for such purposes.

Utilizations and appropriations

The total of carryover plus new legislative authority is shown in table 2. Utilization by cash transfer or delivery of a commodity or service to a foreign country generally occurs some time after the enactment of legislative authority.

Some part of aid appropriations is required to be used for the purchase of surplus agricultural commodities in the United States which are then sold for foreign currencies. Ultimate use of the foreign currencies in the provision of foreign grants or credits may be extended over a long time.

The carryover shown in table 2 includes the undisbursed lending authority of the Export-Import Bank, which is in the nature of a revolving fund and is not restricted to obligation or disbursement in a particular period. The total lending power of the Bank was increased to \$5 billion in August. In addition, the amounts available for credits include \$200 million which the Mutual Security Act of 1954 stipulated in section 505 must be on a loan basis if expended.

At the end of fiscal year 1954 the United States Government had \$11.8 billion in medium- and long-term loans outstanding to foreign countries, exclusive of World War I debts. These credits were extended principally in the first few postwar years, as the chart shows. Principal collections on these credits have exceeded \$500 million in each of the last 2 years while interest collections on the outstanding amounts rose one-fourth to total \$272 million last year.

More farm products authorized

As was indicated above, about \$225 million remains in potential expenditures of foreign currencies obtained from sale of surplus agricultural commodities under section 550 of the Mutual Security Act of 1951, as amended in 1953. Of that amount, approximately \$80 million has been set aside for the purchase of military equipment produced abroad to be retransferred as military grants.

This program is now expanded to include almost \$800 million of the nonmilitary grant funds available for use in fiscal year 1955 and subsequent years. Under the recent legislation at least \$350 million of the new aid funds must be used through the foreign currency sales procedure. Further, the Agriculture Trade Development and Assistance Act (Public Law 480) includes authority for 3 years to insti-

actually disbursed, although the United States Government assumes the risk on these credits and the outstanding notes may be purchased from the agent banks by the Export-Import Bank to the extent of principal in default.

American Republics credit activity

One-third of the new loan disbursements in fiscal year 1954 was to Brazil, which drew the \$180-million remainder from the special \$300-million loan extended by the Export-Import Bank in February 1953 to consolidate and liquidate past-due dollar accounts with American exporters. Brazil also drew \$37 million on development loans during the year, an increase of one-half over the previous year in this type of loan.

Development loans to Mexico in the 12 months ended June 30, 1954 (\$25 million) were 42 percent less than the preceding year. Ten other countries shared in the remaining annual disbursements of \$34 million.

Brazilian and Mexican loan repayments, \$13 million and \$10 million respectively, were slightly under the comparable figures for the preceding year. Fourteen other American Republics made payments totaling \$37 million.

Technical cooperation grants to the American Republics continued with little change in fiscal year 1954. Increased

(Continued on page 20)

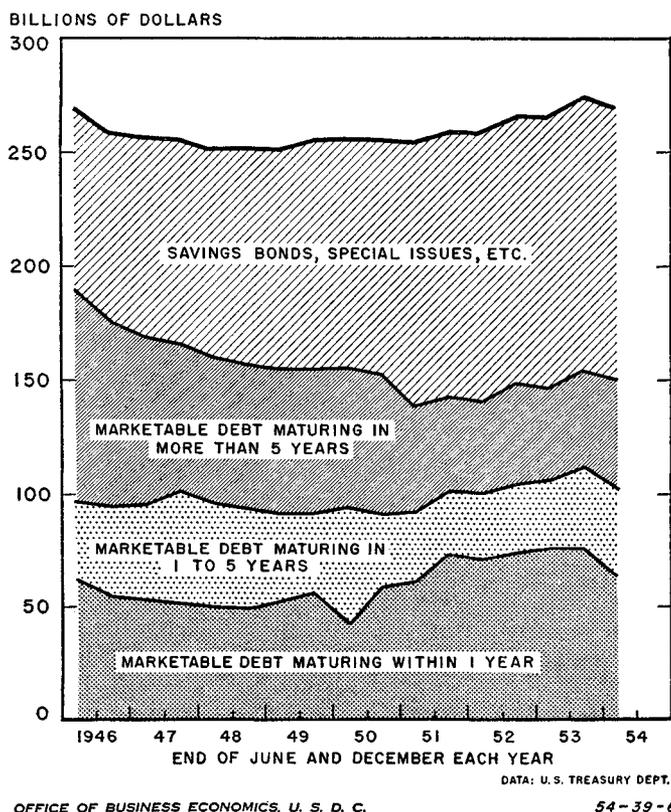

Private and Public Debt in 1953

THE total of net public and private debt reached \$585 billion at the end of last year. Net public debt accounted for about two-fifths of the aggregate, corporation debt for about one-third, and individuals' and noncorporate business debt for one-fourth.

The overall increase during 1953 was \$29½ billion. The rate of rise for the year was just under 5½ percent, compared with nearly 6 percent in 1952. Previous annual rates of expansion had been larger, amounting to 7 percent in 1951 and 9½ percent in 1950.

Composition of Federal Debt

Subject to statutory limitation,
semiannually, 1946-54

As in most recent years, the bulk of the increase during 1953 occurred in private obligations. Net private debt rose 7 percent; net public debt, 3 percent.

Private indebtedness accounted for 56 percent of total net debt at the end of last year. This fraction compares with 55 percent at the end of the previous year, 47 percent in 1949, and the wartime low of 34 percent in 1945. The sustained advance in the percentage has reflected the general postwar expansion of business and investment activity.

NOTE.—MR. OSBORNE AND MR. GORMAN ARE MEMBERS OF THE NATIONAL INCOME DIVISION, OFFICE OF BUSINESS ECONOMICS.

The \$21½ billion increase in private debt last year was accompanied by the investment of \$25½ billion in new housing and business plant, \$24½ billion in producers' durable equipment, and a rise of \$10 billion in private holdings of cash, deposits, and U. S. Government securities.

Gross debt, before consolidation of borrowers' accounts as explained in the technical note to this report, reached a total of \$683 billion at the end of 1953. During the year, gross Federal, State and local government debt moved up 4 percent to \$322 billion, and gross private debt rose nearly 7 percent to \$361 billion.

Changes in debt composition

All major debt categories increased in 1953 (see table 1). The broad pattern of change was similar to that recorded in 1952, reflecting the continuation of basic postwar trends in the Nation's economic growth. In each year, government net debt advanced about 3 percent, with the Federal debt rising by 2 percent and State and local debt by 11 percent. Corporate debt increased about 4½ percent during 1953 as compared with 5 percent the year before. Noncorporate business and personal debt rose 10 percent last year as against 13 percent in 1952. Slowing of the expansion in this last category is largely traceable to a drop in net new borrowing by consumers, which had spurted in 1952 with the relaxation of credit controls.

Partial data indicate that the uptrend of total debt was checked in the first half of 1954. There was a general contraction of short-term credit, partly seasonal in nature, and a considerable slowing in the rise of most types of private long-term indebtedness.

Net government debt apparently declined about 2 percent, as a drop in short-term Federal liabilities—partly seasonal and partly due to refinancing into longer-term issues—more than offset a growth in long-term debt and a continued sharp rise in State and local obligations. Corporate net debt was reduced around 7½ percent, the liquidation affecting bank loans, trade payables, and tax liabilities, while long-term debt expanded slightly. Noncorporate liabilities rose 2 percent; this movement was dominated by the advance of over 5 percent in nonfarm mortgages, and occurred in spite of declines in the totals of commercial and consumer credit outstanding.

While all of the short-term debt series mentioned—with the single exception of consumer credit—recorded decreases in the first half of last year also, in each case the drop this year was considerably more pronounced. Apparent reasons vary from category to category. A decline in transactions of types commonly credit-financed has played a part. Liquidation of inventories has affected the credit needs of business. Refinancing into longer-term obligations was a factor in the case of the Federal Government and certain other classes of borrowers. Finally, there seems to have been a somewhat more conservative attitude than previously toward the use of credit in financing consumer purchases.

Credit conditions ease after mid-1953

Nearly all selective credit controls having been discontinued in 1952, the availability of credit and the movement of interest rates during 1953 were determined largely by the course of general business activity and the concurrent Federal monetary policies.

A relatively tight money situation prevailed during most of the first half of last year, with member bank borrowings higher than excess reserves, the Reserve bank discount rate on advances secured by Government obligations up to 2 percent, and demand for credit strong as business expanded. The maximum permissible rates on loans insured by the Federal Housing Administration or guaranteed by the Veterans Administration were raised to 4½ percent and corporate, municipal, and Treasury borrowing was at higher interest rates than previously. By midyear, yields on marketable forms of debt were generally the highest since the end of World War II.

In the second half of the year, a decline in business activity combined with an easier Federal Reserve policy to reverse the situation in the credit market. The Reserve System made substantial open market purchases in May, June, and July and lowered reserve requirements in July. By year-end, the member banks were largely out of debt to the System. While supply conditions were eased in the money markets, business demand for credit softened in the second half. Bank loans to business rose less than seasonally in the third quarter and declined contra-seasonally in the fourth. Interest rates and bond yields receded with these developments, and the credit supply situation became more favorable to new borrowing.

Federal debt edges upward

A 3½ percent rise during 1953 in the outstanding direct obligations of the Treasury and other Federal agencies added \$10 billion to gross Federal debt. Just under half this sum

was borrowed from sources within the Government, leaving a balance of somewhat more than \$5 billion to be obtained from investors, including the banking system. Security issues to cover this balance brought the net Federal debt up from slightly under \$223 billion at the beginning of the year to just over \$228 billion at the end.

About \$2 billion of the increase in total gross debt involved borrowing by Federal agencies other than the Treasury, and reflected largely the price support program of the Commodity Credit Corporation. In total, such agencies' needs for credit were more than covered by loans from the Treasury, and agency net debt to the public declined fractionally during the year.

Eight billion dollars of the increase in the Federal gross debt total was in direct obligations of the Treasury, and stemmed from the budgetary deficit. This deficit amounted to over \$9 billion in the calendar year 1953, up \$3½ billion from the year before, as defense expenditures reached their peak. However, the rise in the deficit was matched by a swing in the Treasury cash balance, which increased during 1952 and was reduced during 1953, and the scale of borrowing was similar in both years. Social security and other Federally administered funds took about \$2½ billion of Treasury obligations last year, as compared to \$3½ billion in 1952. Borrowing from outside sources (i. e., the increase in net debt) supplied the remainder of the funds needed. These and related transactions are summarized in the accompanying text table.

	Calendar year	
	1952 (billions of dollars)	1953
Budgetary deficit.....	5.8	9.2
Plus: Increase (+) or decrease (-) in cash balance.....	+1.8	-1.5
Clearing account, etc.....	.4	.1
Equals: Net borrowing.....	8.0	7.8
Intra-Government.....	3.6	2.4
From other sources.....	4.4	5.4

The chief outside suppliers of funds to cover last year's deficit were personal investors, State and local governments.

nonfinancial corporations, and the Federal Reserve banks. Holdings of each of these groups increased by more than \$1 billion. Insurance companies and mutual savings banks reduced their holdings of Treasury securities, and commercial bank purchases in the second half of the year were largely in replacement of securities liquidated during the first half. As compared with 1952, the main shifts in the pattern of fund sources were a rise in net purchases by nonfinancial corporations and personal investors and the reduced rate of investment by commercial banks.

Problems of debt management

Shadings in the accompanying chart indicate the maturity structure of the marketable Federal debt, while the total of marketable and nonmarketable types shown is the amount subject to statutory limitation.

A ceiling of \$275 billion was in effect throughout the period covered by this chart, with obligations not issued or guaranteed by the Treasury generally excluded but with no exclusion of Treasury securities held in U. S. Government investment and trust accounts. Under the pressure of rising military and other national security expenditures, the balance issuable within the limitation dwindled from \$18 billion in June 1950 to about \$8 billion at the end of calendar 1952, and to less than $\frac{1}{2}$ billion at the end of 1953. In recent years this margin has generally expanded somewhat with the annual seasonal peaks of tax collections, which have permitted temporary reductions in Treasury short-term debt between January and June, and has contracted again from July to December. Thus by mid-1954 the margin had increased to an estimated \$4 billion. This figure may be compared with the margin of \$9 $\frac{1}{2}$ billion a year earlier.

A bill raising the limitation from \$275 billion to \$281 billion until June 30, 1955, became law in late August 1954.

In meeting the financial requirements of World War II and the postwar period the Treasury incurred a large volume of short-term debt, which has had to be refinanced each year, and of medium-term debt which has fallen due at intervals during the postwar period.

About one-half the marketable securities outstanding at the beginning of 1952 fell due within the year, and this situation recurred in 1953. In 7 of the 9 major financing operations (excluding seasonal tax anticipation borrowing) carried out by the Treasury during 1953 and the first half of 1954, some lengthening of the debt has taken place. During 1953 these operations sufficed to keep the volume of 1-year maturities from rising significantly, and the stepped-up 1954 program combined with seasonal factors to reduce their total one-sixth, to \$63 $\frac{1}{2}$ billion, in the first half of this year.

State and local debt continues rise

The net debt of State and local governments continued its rapid postwar expansion with an increase of 11 percent during the fiscal year ending in mid-1953, and partial data suggest that the increase continued at an even more rapid rate during the year ended in June 1954. (Comprehensive statistics of State and local government debt, unlike the other data used in this report, are not compiled on a calendar year-end basis.) Since the end of World War II, State and local debt has approximately doubled.

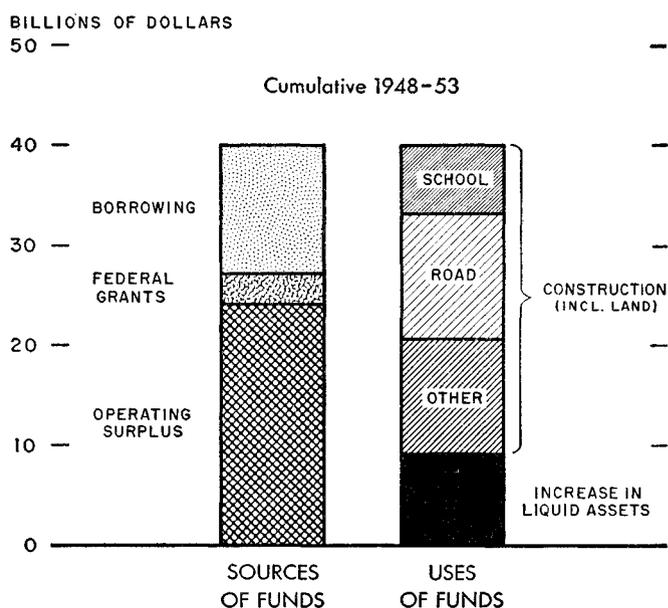

Borrowing by State and local governments has generally been undertaken for the purpose of financing capital improvements. In the accompanying chart, such borrowing over the 5-year period ending in June 1953 is shown in the perspective of the sources and uses of investment funds of these governments. Although some of the estimates are merely rough approximations, they suffice to show that credit has

been secondary to saving as a source of new capital, and that such new capital has been invested primarily in school, street and highway, and other fixed facilities.¹

The need for such facilities has been and continues urgent, both because of the postponement of construction from previous years and because of the rapid postwar rise in the school-age population and in motor vehicle traffic. At the same time, rising property values and the extension of the property tax base through new private building have operated in numerous jurisdictions to raise statutory debt limits tied to this base. With the large increases in debt during recent years, such limits continue to exert a restraining influence, however, in some areas.

State and Local Governments

Sources of funds to finance construction and add to liquid assets *

* FOR DEFINITIONS SEE TEXT FOOTNOTE 1
OFFICE OF BUSINESS ECONOMICS, U. S. D. C.

The chart also indicates a considerable expansion in the liquid asset holdings of State and local governments. The importance of these government accounts in the financing of the Federal deficit last year has already been noted. Their growth reflects a number of factors, including the requirements of sinking funds, the rise in working capital needs, the temporary investment of funds intended eventually to pay for capital improvements, and the expansion of retirement funds for public employees.

Gross State government debt expanded more rapidly, both dollar- and percentage-wise, in the fiscal year 1953 than in 1952. About three-fifths of the rise in gross debt last year was to finance the construction of toll roads. Borrowing for this purpose has become increasingly important in the past few years, and accounted for nearly one-fifth of the total outstanding at year-end.

Three-fourths of the rise in total gross debt of State governments during fiscal 1953 was accounted for by four States—California, New Jersey, Ohio, and Pennsylvania. Toll road borrowing was a significant factor in each case.

1. "Borrowing" in the chart represents the increase in gross debt during the five fiscal years, less an estimated \$1.1 billion borrowed to finance bonus payments to war veterans. The Federal grants-in-aid shown include only those associated with capital improvement programs. "Operating surplus" is calculated as the State and local government surplus on income and product account before credits to the Federal grants and before expenditures for bonus payments financed by current borrowing and outlays for land and new construction.

The dollar increase in *local government debt* during the fiscal year 1953 was the largest on record, as these subsidiary governmental units continued to face a large backlog of construction needs accumulated during the years of depression, war, and postwar population growth.

School district borrowing led the expansion, as it has for the past 7 years. Moreover, a considerable portion of the debt incurred during the year by other local units was probably also for schools. The rate of new construction for educational purposes was at a record high during the year ended in June 1953, and in fiscal 1954 it was 15 percent higher still.

The cost and availability of funds to State and local governments were affected by the relative tightness of the capital market during the year ending in June 1953. The large volume of new flotations in the first half of calendar 1953, combined with the demands for funds by other sectors of the economy, exerted a sustained upward pressure on municipal bond yields, which by June 30 last year were around 40 percent higher than at the same point in 1952, and the highest since the end of World War II. Under these circumstances, some of the planned flotations were postponed.

With the easing of credit conditions after mid-1953 and the decline in government bond yields which continued during the ensuing three quarters, State and municipal offerings for cash were in larger volume during each quarter of fiscal 1954 than in the corresponding periods a year earlier. Flotations

in the April-June quarter were the highest on record, 60 percent above the same months of 1953.

Corporate debt rise moderates

Corporate net debt rose \$7½ billion last year, \$½ billion less than during 1952. The 1953 increase centered in long-term issues, reflecting the trend in the use-pattern of corporate funds. (See discussion in last month's SURVEY.) While plant and equipment outlays expanded, the growth of working capital requirements has become progressively less with each year since its spurt upon the outbreak of the Korean hostilities.

Long-term net debt rose \$6 billion during 1953, to a total of \$79½ billion at year-end. The increase in 1952 had been somewhat larger, amounting to about \$7 billion. While plant and equipment expenditures were up last year, funds available from retained profits and capital consumption allowances were also higher. These internal sources of funds accounted for about two-thirds of the total new capital applied to all purposes, in the corporate sector as a whole. Their moderate rise in relative importance last year was due partly to increased earnings and partly to the growth of the stock of assets subject to depreciation or emergency amortization charges.

The decline from 1952 in the net amount of long-term borrowing was confined to bank loans. The value of corporate bonds outstanding rose last year by about the

same amount as during 1952, a \$½ billion dip in new issues balancing a similar dip in retirements. Manufacturing corporation issues, which were in very large volume in 1952, fell off about 40 percent, while finance company flotations rose sharply.

During the first half of last year a near-record volume of new corporate issues came on the market, at a time when demand from governmental and other borrowers was also high. Corporate flotations encountered difficulty, and underwriting losses occurred. In some cases corporations voluntarily withdrew or cancelled bond offerings which had been prepared for sale. Some of the postponed issues were floated in the second half, when bond prices were up as the market situation eased, and fourth-quarter flotations were in substantial volume.

Total short-term corporate debt rose \$1½ billion last year. This advance was confined to obligations other than notes and accounts payable. To a large extent it represented the higher accrued liability for Federal income taxes resulting from larger profits in 1953. The total of notes and accounts payable did not recover fully from its first-half decline, and was down \$½ billion at year-end.

The balance sheet position of corporate business in the aggregate seems to have been somewhat strengthened as a result of the financial changes during 1953. The expansion in equity capital exceeded that in total debt. The ratio of current assets to current liabilities rose, and that of cash and Federal securities held to current liabilities likewise increased after having declined in 1950, 1951, and 1952.

Mortgage debt expansion continues

Nonfarm mortgage debt (other than corporate) amounted to \$83½ billion at the end of 1953. Last year's \$8½ billion advance was one of the largest ever recorded. Four-fifths of the expansion was in mortgage debt on 1- to 4-family residential property. This fraction was about the same as in other recent years.

The overall increase in mortgage debt on housing property (see table 6) reflected the improved availability of credit after midyear as well as the population growth and other trend factors which have helped to sustain the demand for new housing as the backlog of deferred needs which stimulated construction in the early postwar years has dwindled. The dollar volume of sales of new and existing houses during 1953 was substantially higher than in any other recent year, and new home mortgages written amounted to a total on the order of \$20 billion. Repayments on existing mortgage loans last year are estimated at \$12½ billion.

From the end of 1945 through 1953, about 8 million dwelling units valued at a total of \$74 billion were added to the Nation's stock of nonfarm housing, and the market value of the units already in existence rose considerably. Debt on new and old housing combined increased approximately \$54 billion in this period. During 1953 alone, about \$12 billion was spent for new residential construction, and the net addition to total residential mortgage debt was around 70 percent as much—a proportion just slightly lower than for the 8-year period as a whole.

About one-half of all owner-occupied dwellings are mortgaged, with the equity of the average mortgagor amounting to somewhat more than his mortgage debt. The owners' equity in newly acquired homes is relatively smaller, of course, ranging down to negligible proportions in some cases, but in new 1-family dwellings purchased last year with the aid of FHA-insured mortgages, for example, the owners' initial equity averaged about one-fifth of the value. In 4 out of 5 of all nonfarm homes held less than 2 years by the present owners, the equity amounted to one-fourth or more of value.

The total liability of mortgagor homeowners for property taxes and scheduled mortgage payments last year is estimated very roughly at around one-sixth of their disposable income. Only about 1 mortgagor family in 4 has committed as much as 20 percent of disposable income for these purposes, and only 1 in 12 has committed as much as 30 percent, according to a survey made early this year for the Federal Reserve Board.

Total fixed expenses for housing, inclusive of maintenance and utility costs, of 1953 new-home buyers using FHA-insured mortgages are estimated at around one-fifth of before-tax income. The proportion of housing cost in this group was highest for the 2 percent of such borrowers with income under \$3,000, where it averaged nearly 30 percent.

All types of lenders increased their holdings of 1-4 family mortgage loans during 1953. As in 1952, savings and loan associations were the principal sources of new funds for such loans, being responsible for slightly under one-half of the net increase in the total outstanding. Mutual savings banks replaced life insurance companies as the second most important supplier of funds last year.

Outstanding mortgage debt (including corporate obligations) on commercial and multifamily residential properties advanced more than \$2 billion in 1953, recording a greater increase than in either 1951 or 1952.

More than half the rise in financial institutions' holdings of such debt was secured by commercial properties. The \$0.7 billion advance last year in holdings of mortgages on commercial realty equalled those of 1950 and 1951 and was somewhat greater than that recorded in 1952. About \$0.3 billion of the new money was supplied by life insurance companies.

Multifamily residential debt held by financial institutions rose only \$½ billion in 1953. This was the smallest increase since 1947, and less than half that of 1951. Retardation of growth in this type of debt reflects the curtailment of multifamily building after 1951, and probably also a rise in loan repayments. Mutual savings banks were the principal source of new loan funds last year, accounting for more than half the total.

Rise in consumer credit slackens

The 12 percent increase in consumer credit outstanding during 1953 compares with a 20 percent rise in 1952, when the rate of borrowing had been sharply affected by the suspension of Regulation W in May. Nearly all of the advance last year, as in 1952, occurred in installment debt, and more than two-thirds of the increase in the latter during 1953 stemmed from the financing of new and used car sales.

Installment credit seems to have been relatively a somewhat less important element in the financing of automobile sales last year than in 1952, but the expanded volume of sales was associated with a gross total of auto credit extensions during the year as a whole about 10 percent larger than during 1952. Almost all of the net expansion in auto credit outstanding occurred during the first 9 months. In the final quarter, new extensions of auto loans declined to a point only slightly above repayments as sales tapered off.

The bulk of the net expansion in installment credit during 1953 was financed by banks and sales finance companies, in about equal proportions. This distribution was in contrast to that of 1952, when bank loans had been a relatively much more important element in the expansion. On the other hand, the sales finance organizations borrowed heavily from commercial banks last year in order to handle their record volume of transactions. The amount of installment credit held by retailers showed practically no change during 1953, after a half-billion dollar increase in their holdings in 1952.

1. Long-term debt is defined as having an original maturity of 1 year or more from date of issue; short-term debt as having an original maturity of less than 1 year.

Source: U. S. Treasury Department, Internal Revenue Service; Interstate Commerce Commission; U. S. Department of Commerce, Office of Business Economics.

In appraising the 1953 expansion in consumer debt from the standpoint of the burden involved, it is important to note certain characteristics of the borrowers. There appears to have been little change in the proportion of debtor families to all families. Rather, the net new borrowing seems to have reflected chiefly an increase in average debt per borrower—especially in the higher income groups—which was perhaps associated with the greater importance of auto loans in last year's consumer credit expansion. About 1 spending unit in 8 has payments on installment debt amounting to 20 percent or more of its disposable income, according to the Federal Reserve Board survey mentioned earlier. At the same time, around one-third of all debtor units were found to have liquid assets at least sufficient to cover their short- and intermediate-term debt.

Farm debt expands

Farm debt outstanding at the end of 1953 amounted to \$17 billion, the principal change during the year having been a \$1½ billion rise in loans held or guaranteed by the Commodity Credit Corporation. These loans are included with farm production debt in table 7. Their expansion was partly offset by a decline in other types of production debt. The total of mortgage obligations rose one-half billion dollars or 7 percent.

The amount of C. C. C. loans outstanding doubled during 1953, as cotton, wheat, corn and tobacco continued in large

supply and substantial portions of these crops moved under price support. Of the \$3 billion of such loans outstanding at year-end, banks held \$1 billion directly and held certificates of interest amounting to over \$1 billion in the remainder. The rest was held by the Commodity Credit Corporation.

Prior to the crop year 1953, such certificates of interest were used only in connection with price-support lending on cotton. Last year their use was extended to other supported commodities. They were negotiable obligations of the Commodity Credit Corporation, bearing interest at 2½ to 2½ percent, and were designed to facilitate the mobilization of bank credit as a supplement to government lending in support of farm prices.

Other production debt of farmers to banks and Federal agencies contracted last year for the first time since World War II. Such debt was down 6 percent to somewhat more than \$6 billion at year-end.

The reduction accompanied a decrease in the amount of working capital employed. Largely because of lower cattle prices, the total value of farm livestock and crop inventories other than those pledged against price support loans declined 16 percent to \$19½ billion. Moreover, building material and farm equipment purchases last year were below 1952 levels, and there seems to have been some refinancing of production credit into mortgage loans. Financial assets of farmers rose slightly to reach an aggregate of nearly \$22 billion.

Farm mortgage debt advanced 7 percent last year, to reach the highest total since 1934. The proportion of farm sales financed with the aid of borrowed funds was higher in 1953 than in 1952, and the average buyer's equity was a smaller fraction of the selling price.

Farm real estate debt at the end of the year amounted to a little over \$7½ billion, while farm realty had an estimated value of \$87½ billion after allowance for some decline in land prices during the year.

All categories of active lenders increased their holdings of farm mortgage debt during 1953. Life insurance companies, which hold over one-quarter of the total outstanding, had the highest rate of increase, and the Federal Land Banks had the next highest.

Other private debt rises

Of the two remaining categories of private debt shown in table 7, a decline in commercial obligations was more than offset by expansion in financial debt.

The commercial category represents bank loans to non-corporate nonfarm business. It includes not only regular commercial and industrial loans but also some auto, single-payment, and other consumption-type debt incurred by business proprietorships and partnerships. The downturn

in the total last year—the first since 1949—was confined to the commercial and industrial loan portion.

Loans to purchase or carry securities constitute the bulk of the financial debt shown in table 7. These loans amounted to \$5 billion at year-end, 6 percent above the total outstanding at the end of 1952. The other component of financial debt, representing policy and collateral loans of life insurance companies, rose 7 percent last year—more than in 1952 but about the same as in other recent years.

Technical Note

Gross debt is defined to include all classes of legal indebtedness except the following: (1) the deposit liability of banks and the amount of bank notes in circulation; (2) the value of outstanding policies and annuities of life insurance carriers; (3) the short-term debts among individuals and unincorporated nonfinancial business firms; and (4) the nominal debt of corporations, such as bonds which are authorized but unissued, or outstanding but reacquired.

Net debt for each of four sectors is defined as follows: Federal Government net debt is that owed to all other sectors of the economy except the Federal Government proper and its corporations and agencies; State and local government net debt is that owed to all other economic entities except State and local governments; corporate net debt is that owed to all other entities (including corporations) except to other corporate members of an affiliated system; and private noncorporate net (and gross) debt is the summation of all forms of legal non-corporate indebtedness except that among individuals and unincorporated nonfinancial business firms. Data showing adjustments for duplication involved in passing from gross to net debt are given in detail in tables 3, 4, and 5.

These concepts were more fully discussed in the October 1950 issue of the SURVEY. The statistical bases for the present estimates are in general similar to those used in the past. These have been explained in articles in the July 1944 and September 1945 issues of the SURVEY and in the special bulletin "Indebtedness in the United States, 1929-41" (Department of Commerce Economic Series No. 21, U. S. Government Printing Office, 1942). In the September 1946, September 1947 and September 1953 articles modifications of former procedures were noted.

This year's tables include minor technical revisions in several categories of nonfarm non-corporate debt. The series on multifamily residential and commercial mortgages has been revised to include the small amount of Federal National Mortgage Association holdings of such debt, and to correct a misallocation affecting mutual savings banks' 1945 and 1946 holdings. The allocation of nonconsumer single-payment loans between the commercial and financial categories has been modified, and nonconsumer installment credit has been included

^p Preliminary.

1. The data represent mortgage loans on commercial and residential property, and exclude real estate mortgage bonds. Multifamily and commercial property mortgages owned by corporations and held by other nonfinancial corporations are also excluded.

2. The corporate mortgage debt total is included in the total corporate long-term debt outstanding, table 5.

3. Includes portfolio loans of the Veterans' Administration.

1. Includes regular mortgages, purchase-money mortgages, and sales contracts.

2. Includes agricultural loans to farmers and farmers' cooperatives by institutional lenders; farmers' financial and consumer debt is included under the "nonfarm" categories.

3. Comprises debt owed to banks for purchasing or carrying securities, customers' debt

to brokers, and debt owed to life insurance companies by policyholders.

Sources: U. S. Department of Agriculture, Agricultural Research Service; Board of Governors of the Federal Reserve System; U. S. Department of Commerce, Office of Business Economics.

in commercial debt totals. These revisions are relatively small in the aggregate and have not been carried back beyond 1945.

Other revisions for recent years have resulted from the incorporation of additional basic data not previously available.

In table 4, the distribution of local government debt by types of civil divisions shown for

1950 and subsequent years is not strictly comparable with that shown for 1949 and earlier years because of changes in the Bureau of the Census classification of these units, particularly cities and special districts. (See "Governmental Debt in 1951," Bureau of the Census, December 1951.)

Debt statistics for 1944 and earlier years are given in the SURVEY issue of September 1953.

National Income and Corporate Profits

(Continued from p. 6)

major airplane manufacturers' profits up from last year, the total for transportation equipment other than autos was much less affected than were profits of the other industries in the metals group. Among the nonmetals, sharp relative declines took place in the lumber and furniture industries.

The nondurables group total was off 13 percent. Petroleum refining and food, which together accounted for about two-fifths of total profits in this group in the first half of 1953,

showed only fractional declines. Chemicals, which had earned one-fourth of the total nondurables profits, were down about 15 percent. Profits in paper and printing were off relatively somewhat less, while decreases in most other nondurables industries ranged higher, being sharpest in textiles and apparel.

Apart from the variation between the durables and nondurables groups, there has been some difference also between the profits experience of small and large manufacturing companies since mid-1953. The initial decline in total before-tax profits of small corporations in most industries appears to have been comparatively sharp, but their relative position has subsequently tended to improve.

Profits in transportation have been reduced not only by the decline in revenue consequent upon reduced shipments of durables and basic materials but also by the gradual rise in emergency amortization charges on defense facilities. Table 4 reflects the characteristic volatility of profits in this industry, in which fixed costs normally take a large fraction of total revenues.

In the communication and public utilities group, the up-trend of total profits has been sustained by the general economic growth and a backlog of unfilled demand, to meet which an extensive program of facilities expansion is being carried forward.

Profits in the "all other" group shown in table 4 have been lower in the first half of this year. The largest single factor in their decline was a drop in trade profits with the softening in the market for automobiles.

Foreign Grants and Credits

(Continued from p. 12)

tute direct transfer of surplus agricultural commodities to foreign countries for famine relief. This Act also facilitates greater Government donation of commodities through the private voluntary relief organizations and additional credits and military grants with foreign currencies obtained from the sale of surplus agricultural commodities.

Technical Note

The measure of foreign grants and credits generally is in terms of goods delivered or shipped by the United States Government, services rendered by the United States Government, or cash disbursed by the United States Government to or for the account of a foreign government or other foreign entity. Return of grants and principal collections are measured in similar fashion.

For security reasons military aid furnished under the mutual security program cannot be shown by country, but only by areas as designated in authorizing legislation. Transfers of

military assistance generally reflect the area of consignment of the equipment; in particular data for Asia and the Pacific include shipments to Indochina while those for Western Europe include shipments to France, a part of which may have replaced equipment used by the French forces in Indochina. Military aid to Europe includes supplies, services, and contributions to the multilateral-construction program of the North Atlantic Treaty Organization. The latter item is treated in the balance-of-payments computations as a military purchase of services rather than a grant (see SURVEY, August 1954, p. 8).

Grants include agricultural surpluses donated by the Government for distribution abroad through American voluntary relief agencies. Credits include some which have been extended by the United States Government to private entities in the country specified, in some instances with the guaranty of the foreign government indicated.

"Military equipment loans" are included as part of military grants; these "loans" are essentially transfers on an indeterminate basis, generally requiring only the return of the identical item, if available. In essence, this was the requirement pertaining to wartime lend-lease transfers of watercraft, which were similarly treated in these statistics. Values netted at time of return are not necessarily equal to the original "loan" value.

Data are based upon reports submitted by operating agencies of the United States Government. Some figures given for grants are partly estimated. Data for 1954 are preliminary.

Further definition and explanation of these data are contained in the *Foreign Aid* supplement of the SURVEY OF CURRENT BUSINESS, published in November 1952, and available at \$1.00 from the Superintendent of Documents, Washington 25, D. C., or the various Department of Commerce field offices.

Monthly BUSINESS STATISTICS

THE STATISTICS here are a continuation of the data published in BUSINESS STATISTICS, the 1953 Statistical Supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$1.50) contains monthly data for the years 1949 to 1952, and monthly averages for earlier years back to 1935 insofar as available; it also provides a description of each series and references to sources of monthly figures prior to 1949. Series added or revised since publication of the 1953 Supplement are indicated by an asterisk (*) and a dagger (†), respectively, the accompanying footnote indicating where historical data and a descriptive note may be found. The terms "unadjusted" and "adjusted" used to designate index numbers and dollar values refer to adjustment of monthly figures for seasonal variation.

Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

*Revised.
 †Revised series. Quarterly estimates of national income and product have been revised back to 1939 (annual data, to 1929); quarterly and monthly estimates of personal income, back to 1929 (monthly revisions prior to May 1953 appear in the 1954 issue of the National Income Supplement). For quarterly data prior to 2d quarter 1953, see pp. 8 and 9 of the July 1954 SURVEY.
 ‡Includes inventory valuation adjustment. §Government sales are not deducted. \$Personal saving is excess of disposable income over personal consumption expenditures shown as a component of gross national product above.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

\ddagger Revised. \P Preliminary. \S See note marked "†" on p. S-2.
 \ddagger New series. Compiled by the Board of Governors of the Federal Reserve System. For description of the index and back figures, see the May 1954 FEDERAL RESERVE BULLETIN and subsequent issues.
 \S The term "business" here includes only manufacturing and trade. Business inventories as shown on p. S-1 cover data for all types of producers, both farm and nonfarm. Unadjusted data for manufacturing are shown on p. S-4; those for retail and wholesale trade, on pp. S-9 and S-10.
 \ddagger Revised series. Data have been adjusted to more recent benchmarks; all revisions prior to 1953 are available upon request (most of the data published in the 1953 issue of BUSINESS STATISTICS are now obsolete). Data

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954								
	August	September	October	November	December	January	February	March	April	May	June	July	August	September

* Revised. ¹ Index on base previously used (1935-39=100) is 192.3.

† See corresponding note on p. S-3.

‡ See corresponding note on p. S-4.

§ Data are from Dun and Bradstreet, Inc.

¶ Revised beginning 1910 to incorporate revisions in the component price series and to reflect changes in the basic weights; revised annual data for 1910-53 for prices received appear on p. 23 of the April 1954 SURVEY.

‡ Revisions for 1937-53 for prices paid and 1910-53 for parity ratio appear on p. 24 of the April 1954 SURVEY.

⊕ Ratio of prices received to prices paid (including interest, taxes, and wage rates).

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

Revised. Preliminary. Includes temporary Post Office employees hired during Christmas season; there were about 289,000 such employees in all areas.

See corresponding note on p. S-11.

Data beginning January 1953 have been revised to exclude the employees of the General Accounting Office and Government Printing Office. At the end of January 1954, employment in these agencies was as follows: Continental United States—GAO, 5,800; GPO, 7,100; Wash., D. C.—GAO, 4,300; GPO, 6,900.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

* Revised. † Preliminary. ‡ See corresponding note on p. S-11.
 † Revised to include only privately operated lines; data shown in the March 1954 SURVEY and earlier issues cover both privately operated and government-operated lines.
 ‡ Revised series. Beginning with the February 1954 SURVEY, data have been revised to exclude transitional claims and, therefore, more closely represent instances of new unemployment.
 * New series. Compiled by the U. S. Department of Labor, Bureau of Employment Security

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

* Revised. † See note marked "§". ‡ For national defense and related activities; not strictly comparable with data beginning February 1954.

§ See note "Q" on page S-16.

† For a description of these new data and for figures prior to February 1953, see the January and March 1954 issues of the FEDERAL RESERVE BULLETIN.

§ Effective with February 1954, data are reported on a budgetary basis; they are not entirely comparable with earlier data which are as originally shown in the daily Treasury Statement.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

* Revised. † Preliminary.

‡ Revised data for January-July 1952 for new paid-for insurance written are shown on p. S-17 of the October 1953 SURVEY; revisions for 1951-52 for premium income will be shown later.

§ Data for 1953 for total ordinary insurance written include revisions not distributed by regions.

¶ Or increase in earmarked gold (-).

‡ Revised series, reflecting change in number of reporting banks and centers. Data for 1943-53 for New York City appear on p. 23 of the September 1954 SURVEY; those for other centers will be shown later.

¶ Includes Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.

* New series. Compiled jointly by the Federal Trade and Securities and Exchange Commissions. Data are estimated totals based on reports from all manufacturing corporations registered with SEC, all nonregistered manufacturing corporations with total assets of \$5,000,000 and over at the end of 1949, and a sample of nonregistered manufacturing corporations with total assets of less than \$5,000,000 at the end of 1949. Comparable data beginning with the first quarter of 1951 are available upon request.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

♠ Revised.
 †Data have been revised (beginning August 1945) to include fares charged by transit companies operating in cities having a 1950 population of 25,000 or over; revisions prior to August 1952 will be shown later.

§It should be noted that data for 1938-44 shown in BUSINESS STATISTICS (1953 edition) are not comparable with subsequent data in that volume and in the SURVEY beginning with the October 1953 issue. The data through 1944 cover reporting intercity common carriers of all types of commodities, whereas later data are for carriers of general commodities only (i. e., they exclude carriers of special commodities and intercity contract carriers). Data for 1945 for carriers of all types, comparable with earlier data, are as follows: Number of reporting carriers, 1,408; operating revenues, \$185,132,000; expenses, \$184,708,000; revenue freight carried, 25,839,000 tons.

♠ Data for October 1953 and January, May, and July 1954 are for 5 weeks; other months, 4 weeks. † Revised data for July 1953, \$71,983,000.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

⊘ Revised. ⊘ Revisions for 1952 appear in the October 1953 Survey; those for the 1st and 2d quarters of 1953 are available upon request.
 † Data beginning July 1953 exclude production of wines and vermouth; for July 1952-June 1953 such production totaled 88,000 gallons.
 ‡ Revisions for July 1952-March 1953 for rectified spirits, etc., and wines and distilling materials appear in the June 1954 Survey; those for January-December 1952 for fluid milk production, in the March 1954 issue. Revisions prior to December 1952 are available upon request as follows: Beginning 1951 for cheese, condensed milk, and nonfat dry milk solids; beginning 1952 for butter, evaporated milk, and dry whole milk. * Revisions for April-June 1953 (thous. lb.): 8,134; 8,021; 5,270.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

* Revised. ♀ Preliminary. ♂ Estimate for 1953. ♀ October 1 estimate of 1954 crop.
 ♂ Old crop only; new grain not reported until beginning of new crop year (July for barley, oats, and wheat; October for corn).
 ♀ Bags of 100 lb.; prior to the October 1953 SURVEY, data were shown in thous. of bu. of 45 lb.
 ♂ The total includes wheat owned by the Commodity Credit Corporation and stored off farms in its own steel and wooden bins; such data are not included in the breakdown of stocks.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

♂ Revised. ♀ Preliminary.

1 Estimate for 1953. 2 October 1 estimate of 1954 crop. 3 Revision for April 1953: 7,962,000 pounds.

♂ Revisions for 1952 are shown in the April 1954 SURVEY.

♀ Data for January-June 1953 represent price for New York and Newark; thereafter, for New York and Northeastern New Jersey.

§ Revised to represent data based on number of stamps used by manufacturers; revisions prior to May 1952 will be shown later.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

⊕ Revised. ⊕ Preliminary.
 ⊕ Revised monthly data (for production, shipments, and stocks; also orders, except for all types of lumber) are available upon request as follows: Total, all types, January 1950-February 1953; Douglas fir, January 1952-February 1953; Southern pine, January-December 1951; Western pine, January 1950-February 1953.
 †Revisions for 1952 for exports of Douglas fir sawmill products will be shown later.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

* Revised. † Preliminary. ‡ Data beginning August 1953 represent industry totals based on a different sample.

† New series. Data for hardwood plywood are compiled by the U. S. Department of Commerce, Bureau of the Census; they cover all known market producers of hardwood types, except as indicated. Earlier figures on a comparable basis are not available.

‡ Douglas fir plywood production is compiled by the Douglas Fir Plywood Association. Data presented are total industry figures, based on reports from plants controlling, on the average, approximately 90 percent of industry capacity. The monthly totals are estimated from weekly reports by prorating split weeks on the basis of a 5-day workweek, with allowance for generally observed holidays. Later figures for 1953 will be published as they are made available by the compilers in their current reports.

§ Data for production and receipts of iron and steel scrap are compiled by the U. S. Department of Interior, Bureau of Mines; data prior to 1953 are not available for publication.

¶ In the 1952 edition of the export schedule, certain items (pipe fittings, welding rods, bolts, fabricated structural and other shapes) were transferred from the steel-mill products to the metal manufactures category. The data through 1952 as shown in the 1953 edition of BUSINESS STATISTICS were adjusted to include exports of these commodities for comparability with the earlier data. Exports beginning January 1953 as published in the March 1953 SURVEY and subsequent issues exclude these items which averaged 21,300 short tons per month in 1953.

¶ Revisions for 1952 are shown in the April 1954 SURVEY.

† For 1954, percent of capacity is calculated on annual capacity as of January 1, 1954, of 124,330,410 tons of steel; 1953 data are based on capacity as of January 1, 1953, of 117,547,470 tons.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey

† Revised. ‡ Preliminary. § Represents 5 weeks' production.
 ¶ Revisions for oil burners for January-July 1952 are shown in a footnote on p. S-33 of the January 1954 Survey; revised data for other items of heating apparatus will be shown later.
 ♂ Data beginning June 1953 are compiled by *The Institute of Boiler and Radiator Manufacturers* and represent substantially complete coverage of shipments of cast iron radiators and convectors.
 Δ Monthly totals for 1953 reflect adjustments to the annual survey. Such adjustments have not been made for components; therefore, detail does not add to total.
 *New series. For source of data and brief description, see corresponding note on p. S-34 of September 1954 Survey.
 † Revised to reflect use of new base period; data prior to August 1952 for all series (except for foundry equipment) will be shown later.
 ‡ Includes contractors' off-highway wheel-type tractors.
 § Radio production comprises home, portable battery, automobile, and clock models; television sets include combination models. Data for September and December 1953 and March, June, and September 1954 cover 5 weeks; other months, 4 weeks.
 ¶ Data for January-October 1953 cover 17 companies, November-December, 18, and beginning January 1954, 19 companies.
 † Data beginning 3d quarter of 1953 for polyphase induction motors cover 33 companies; for direct current motors and generators, data beginning 1st quarter 1954 cover 26 companies, 3d and 4th quarters 1953, 27.
 ‡ Revised to represent weighted average price of anthracite stove based on quotations in 6 cities as follows: Baltimore, Boston, Laconia (N. H.), Madison (Wis.), Middletown (Conn.), and New York.
 * Revisions for January-July 1953 (thous. short tons): 2,707; 2,438; 2,354; 2,048; 2,869; 2,975; 2,551.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey

* Revised. † Preliminary. ‡ Data cover a 5-week period. § See note marked "§" for change in sample coverage beginning January 1954.

¶ Revisions for 1952 are shown in the August 1953 SURVEY. † Includes laminated board (reported as component board), also sheathing and formboard.

* New series. Compiled by the U. S. Department of Commerce, Bureau of the Census. Data are estimated industry totals derived as follows: Men's apparel—estimates beginning January 1954 are based on a monthly sample survey of manufacturers, accounting for approximately 75 percent of the total 1952 production; data prior to 1954 are based on a sample covering establishments that accounted for about 90 percent of the total 1951 cuttings of these items. Women's outerwear—based on reports from establishments classified in the women's principal outerwear industries for the specified items; monthly data beginning January 1954 are estimated from reports of producers that account for approximately 75 percent of total output; quarterly estimates prior to 1954 are based on reports from 2,500 establishments accounting for about 90 percent of total shipments in 1951. Cuttings for 1950 and 1951 will be shown later; data for 1952 (except men's dungarees, etc.) are shown at bottom of p. S-38 of the December 1953 SURVEY. Cuttings of men's dungarees and waistband overalls for January-December 1952 and January 1954 appear in the April 1954 SURVEY.

† Data for October and December 1953 and March and June 1954 cover 5-week periods and for other months, 4 weeks.

Unless otherwise stated, statistics through 1952 and descriptive notes are shown in the 1953 Statistical Supplement to the Survey	1953					1954

* Revised. † Preliminary. ‡ Data cover a 14-week period; other data, 13 weeks.

‡ Preliminary estimate of production based on Ward's Reports, Inc. Revised production for preceding month: 436,700 passenger cars; 73,700 trucks.

† Revisions for 1952 are shown in the August 1953 SURVEY.

‡ Data exclude all military-type exports. Scattered monthly revisions for 1952 for motor vehicles will be shown later.

‡ Revised beginning 1952 to include production of converter dollies; data as revised are comparable with figures through 1951 shown in the 1953 issue of BUSINESS STATISTICS. Revisions for January-September 1952 are shown in the December 1953 SURVEY.

† Excludes railroad shops except when noted.

* New series; monthly data prior to 1953 will be shown later.

‡ Not including railroad-owned private refrigerator cars.

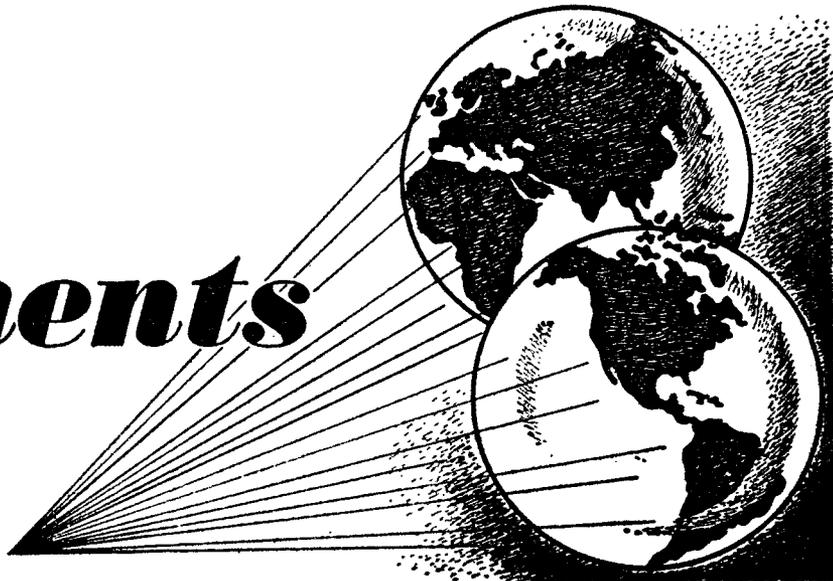

† Revised exports for May 1952, 41 locomotives.

foreign investments

**THE COMPLETE RESULTS OF THE FIFTH PERIODIC CENSUS OF
AMERICAN DIRECT INVESTMENTS ABROAD . . .**

**. . . a report
presenting information basic to the making
of intelligent decisions regarding the
investment of private capital abroad.**

A WEALTH OF DETAIL ON OUR EXISTING INVESTMENTS AND OUR INVESTORS' EXPERIENCE WITH THEM—INCLUDING EXTENSIVE BREAKDOWNS OF THE INCOME AND CAPITAL MOVEMENTS BY COUNTRY AND INDUSTRY, AND DATA ON LOCAL ASSETS, FOREIGN PARTICIPATION, AND FOREIGN INCOME TAXES PAID—ROUNDS OUT THE INTERIM ESTIMATES REGULARLY PUBLISHED IN THE SURVEY OF CURRENT BUSINESS.
