the BUSINESS SITUATION

THE new year started with a sharp pickup in consumer spending, which had shown only a modest improvement from the third to the fourth quarter despite

CHART 1
New Orders for Durable Goods

a large advance in disposable income. Seasonally adjusted retail sales in January are estimated to have increased significantly above the December rate, according to preliminary reports. Not only were automobile sales stronger but sales in nondurable goods stores were also considerably higher.

Personal income advanced in January but much less than it had in the last 2 months of 1967, and nonfarm establishment employment showed little change from December, primarily because bad weather held down construction activity. Industrial output fell back a little after very sharp gains in November and December, when the auto industry was recovering from the strike.

The reduction in auto output in January, which was due mainly to sporadic walkouts, and recently announced cut-backs in first quarter production schedules suggest that the recovery in autos will not add as much to the rise in GNP in the first quarter as had been thought. However, when allowance is made for the special factors affecting January developments, it would appear that a sizable increase in aggregate economic activity is in progress even though its dimension cannot be quantified.

Spart in durable goods orders

Doubts about the strength of demand in manufacturing should be lessened by recent changes in new orders. Orders showed a very sharp rise in December in both durable and nondurable goods industries; in durables, every major industry reported a substantial gain,

which brought the total for the quarter to a new peak, slightly above the previous high reached in the third quarter of 1966 (chart 1). Unfilled orders for durables at the end of December were \$2¼ billion above their level at the end of September (seasonally adjusted) and more than \$3 billion above their level at the end of 1966.

The improvement in new orders from the third to the fourth quarter was pronounced in the case of durable goods materials. The rise in primary metals reflected mainly the pickup in steel demand (discussed below). Orders for construction materials showed their first quarterly increase in over a year as construction activity continued to advance.

New orders for defense products, which had declined in the third quarter, moved up in the fourth almost back to the second quarter peak. Aircraft orders, a large and volatile component of this series, were especially heavy in December as they had been in June and again in October.

Demand for producers' durable equipment is rising but still lacks vigor. Orders for machinery and equipment improved in both November and December, but the total for the quarter was below the third quarter total and the very high rates of mid-1966.

Orders for consumer durables rose to a record rate in December. Orders for these goods were sluggish in the first half of 1967 because stocks held by distributors and dealers were heavy; with inventory positions improved by midyear and consumer demand advancing slowly but steadily, new business

received by manufacturers has gained considerably in the past two quarters.

Personal income up

After unusually large advances of \$6½ billion in November and \$7 billion in December, personal income rose only \$2 billion in January to a seasonally adjusted annual rate of \$651½ billion. Special, nonrecurring factors were partly responsible for the wide variation in the size of the monthly increases. The recovery from the strike bolstered private payrolls in November, and in December, Government payrolls were

nearly \$2 billion last month, after a \$3 billion increase in December; the advance slowed because of a reduction in construction payrolls and a slower rate of gain in manufacturing. Payroll incomes in the distributive and service industries continued their steady advance.

Nonpayroll incomes generally showed small gains, although dividend payments rebounded considerably from December, when they were depressed because of a reduction in yearend extras. Personal contributions for social insurance, which are deducted to arrive at personal income, increased \$1¼ billion in January because the taxable wage base for workers covered by Social Security was raised from \$6,600 per year to \$7,800.

Employment little changed

Most of last month's advance in private payrolls was attributable to higher average hourly earnings since hours of work declined and employment changed little from December, after seasonal adjustment. Employment was depressed by a very large cutback in the contract construction industry. Unusually cold weather during the first 3 weeks of January slowed building projects; as a result, the number of employees on construction payrolls, which normally declines by about 200,000 persons from December to January, fell by 325,000 this year.

An advance of nearly 45,000 persons in January brought seasonally adjusted employment in manufacturing close to the peak reached a year earlier. Much of the latest monthly rise was concentrated in the machinery and equipment industries; a 25,000 increase at non-electrical machinery plants reflected mainly the settlement in early January of a 39-day strike against a major producer of agricultural implements.

Industries other than construction and manufacturing generally reported higher levels of employment in January than in December. The largest increases were in State and local govern-

ment, the service industries, and retail trade.

The Nation's unemployment rate fell to a 14-year low of 3½ percent of the civilian labor force in January, after seasonal adjustment. Although the reduction from December may have been influenced by random developments, there can be little doubt that there has been a very distinct improvement in the unemployment situation since early last fall, when the overall rate was above 4 percent. Decreases in rates have occurred for virtually all occupational and industrial categories.

Auto sales improve

After a somewhat disappointing December, dealers' sales of new domestically produced automobiles rose to a seasonally adjusted annual rate of more than 8 million units in January (chart 2). Sales were at a 7.8 million rate in December and had fallen below 7 million in November. Sales in January may have received a fillip from special promotions. Dealers started off the new year with larger and more balanced stocks than in many months. Inventories at the beginning of 1968, at 1¼ million units (seasonally adjusted), were higher than at any other time since the end of June 1967. Stocks rose above the 1.3 million mark by the end of January and represented 1.9 months of sales at the January sales rate. This was somewhat below the ratio that prevailed in 1966 and well below the ratios of early 1967, when sales were depressed.

Rise in payments deficit

The U.S. balance of payments position deteriorated sharply from the third to the fourth quarter of 1967. Measured on the liquidity basis, the fourth quarter balance was adverse by \$1.8 billion, seasonally adjusted, as compared with a third quarter deficit of \$650 million. Measured on the official reserve transactions basis, the fourth quarter balance was adverse by \$1.2 billion, as com-

temporarily swollen by the lump-sum payment of the retroactive portion of the pay raises for military personnel and Federal civil service employees.

Total wage and salary disbursements declined about \$½ billion from December to January mainly because Government payrolls returned to a more normal level. Private payrolls were up

HISTORICAL DATA

Historical national income and product data are available from the following sources:

1929-63: *The National Income and Product Accounts of the United States, 1929-65, Statistical Tables* (available from any U.S. Department of Commerce Field Office or from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, price \$1.00 per copy).

1964-66: July 1967 SURVEY OF CURRENT BUSINESS.

Fourth Quarter Inventory Developments—Investment Rises Substantially

THE pace of inventory investment quickened during the second half of 1967, reversing the experience of the first half. Inventory accumulation, which plummeted to a seasonally adjusted annual rate of only \$½ billion in the second quarter, rose to \$3.8 billion in the third and \$9.2 billion in the fourth (chart 3).

Prices of goods in inventory increased rapidly throughout 1967, and the increase accelerated in the final quarter of the year. As a result, inventories increased more in book value than on a GNP basis, and the spread widened in the fourth quarter.

Production for inventory accounted for fully one-third of the total GNP rise of \$16 billion in the fourth quarter of 1967 as compared with one-fifth of an equal GNP rise in the third. In the first half, the sizable reduction in inventory investment severely retarded the rise in overall output.

Every major nonfarm industry group reduced its inventory investment in the first half of 1967 from the unusually high rate of accumulation in the final quarter of 1966, while the liquidation of farm inventories slowed. In the third quarter, investment rates increased for farms and for all nonfarm industry groups except nondurable goods manufacturers. As chart 3 shows, manufacturers' inventory additions declined slightly from the third to the fourth quarter, so that farms and trade firms accounted for all of the \$5.4 billion fourth quarter rise in inventory investment.

Factors in fourth quarter rise

Several special factors contributed to the expansion in the rate of inventory investment from the third to the fourth

quarter. First, a record crop output last fall resulted in larger accumulations of stocks on farms and at wholesalers of farm products; these accumulations contributed about \$1½ billion (at seasonally adjusted annual rates) to the fourth quarter rise. Secondly, there was a shift from liquidation to accumulation of automotive dealers' stocks, reflecting the effects of both the Ford strike and

an earlier-than-usual model change-over. Finally, there was a sizable step-up in the rate of accumulation of steel. (More information on recent changes in steel inventories appears on p. 8.) Autos and steel each contributed almost \$1 billion to the fourth quarter rise in inventory investment.

Besides these developments, investment rose almost \$2 billion from the third to the fourth quarter in wholesale lines other than farm products, and another \$2 billion at retail nondurable goods stores. The latter reflected a shift from liquidation in the third quarter to accumulation in the fourth.

In contrast, additions to nonsteel stocks of durable goods manufacturers fell about \$1 billion, and additions to stocks of durable goods retailers other than automotive dealers declined about \$½ billion. The reduced rate of accumulation in the former group was most noticeable among machinery producers, and in the latter, among dealers in lumber, building, hardware, and miscellaneous durables.

Inventory Investment

Rose in second half of 1967 as accumulation of trade and farm stocks resumed

68-2-3

Yearend position

At yearend, stocks as a percentage of sales (or of GNP) were little different from a year earlier, although high compared with the 1963-65 period. The apparent excess was largely in durable goods manufacturing and to a small extent in wholesale trade. Inventories held by retailers of both durable and nondurable goods seemed low when judged by the stock-sales ratios prevailing earlier in the current cyclical advance.

Stock-sales ratios may not be a reliable guide to near-term inventory movements. For example, the current higher-than-normal ratios for suppliers of defense goods and of machinery and equipment may be justified by the record backlogs of unfilled orders held by these suppliers. Also, business expectations of improved sales and/or rising prices may result in a willingness to carry higher inventory. In addition, two special factors, the rebuilding of auto stocks and anticipatory stockpiling of steel, are likely to keep inventory investment high in the first half of this year.

Steel Production, Consumption, and Inventories

Number of Days Supply^{3/}

1. Three-month moving average centered on last month.

2. Includes wholesalers, excludes nonmanufacturing consumers.

3. Based on number of working days.

AFTER a year of fairly steady decline, iron and steel production rose in July 1967, and advanced through December. Although output fell in January, reports for early February indicate a rise in mill activity to a new peak. The seasonally adjusted rate of operations in January was 13 percent above the June 1967 trough but was still below the peak reached in the early summer of 1965, when the industry was pushing output to fill orders for strike-hedge buying as well as for a high rate of consumption.

New orders placed with steel mills began to increase in the second quarter of 1967, before the decline in output ended, and continued upward through the year. In December, orders booked by steel mills were the largest in nearly 4 years. The flow of new business since last spring has exceeded shipments by a wide margin, so that backlogs rose considerably and at the end of December were the highest in 13 months.

The turnabout in steel production last summer reflected a rise in consumption requirements and an increase in stocks at the mill level in anticipation of a rebuilding by steel consumers of depleted stocks. Consumers ended their liquidation of steel stocks at the end of the summer and shifted to accumulation in the fourth quarter. How much of this addition represented hedge buying is not known, but the heavy placement of new orders late in 1967 suggests the start of a new buildup of steel inventories by consumers as a hedge against the possibility of a steel strike after July 31, when the present labor contract expires. The latest round of buying for strike-hedge purposes is the fourth in 6 years and, if past experience is any guide, promises to dominate the course of steel production and to influence the behavior of business inventories significantly in 1968.

Steel consumption

Steel consumption in 1967 showed its first annual reduction since 1961. According to Census data, steel used by manufacturing consumers, who account for roughly 70 to 75 percent of aggregate consumption, totaled 63.6 million tons in 1967, 6 percent less than the record volume of 1966.¹ Most of the 1967 decline was concentrated in the automotive, household appliances, and railroad equipment industries; in these groups, production decreases from 1966 to 1967 averaged close to 10 percent as a group. Two important exceptions to the general trend in manufacturing were the container industry, where consumption, which is dominated by the food and beverage industries, rose slightly, and ordnance, where consumption rose substantially as a result of expanding defense needs. Among the important nonmanufacturing industries, steel usage last year appears to have declined moderately in construction, as a result of a 2½ percent decline in real construction outlays, and sharply in the railroad industry.

After a sharp decline from the second half of 1966 to the first half of 1967, steel consumption by manufacturers rose steadily (seasonally adjusted) in the second half of 1967, reflecting the improvement in durable goods production. By December, the use of steel by manufacturing consumers was 15 percent above the midyear low point, after seasonal adjustment. The December rate of manufacturers' consumption exceeded the monthly average for all of 1966, and was equal to the rate in the first quarter, the high quarter of that year. Firm data are lacking, but it is likely that consumption in nonmanufacturing industries also improved in the second half of last year since real construction outlays rose sharply during this period.

Inventory buildup underway

Although steel consumption has improved noticeably from last spring to this winter, changes in steel inventories

appear to have accounted for the greater part of the rise (seasonally adjusted) in steel production. Steel inventories held by producing mills, manufacturing consumers, and wholesalers as a group declined in the second quarter of 1967 but increased slightly in the third quarter and considerably in the fourth (chart 4). The fourth quarter spurt in total steel inventories reflected a shift from liquidation to accumulation by manufacturing consumers while producing mills continued to add to their stocks at the third quarter rate.

Steel inventories of manufacturers had declined steeply over a period of almost 2 years after a very large buildup that culminated in the summer of 1965, when the current labor contract was signed. Most of the correction of that buildup was completed by mid-1966, but after a brief interruption, liquidation was resumed because of a weakening in steel consumption in late 1966. Liquidation was pronounced in the spring of 1967, but it moderated considerably in the summer.

Although manufacturing consumers increased their holdings of steel in the fourth quarter, their stocks still appear

to be quite low, especially in relation to steel consumption. Since August, they have been the equivalent of a 35-day supply in terms of the daily rate of consumption. This is the lowest ratio since the introduction of these statistics in late 1961.

The behavior of mill inventories has been in striking contrast to the behavior of stocks held by manufacturing consumers. Since the end of 1965, mills have increased their stocks fairly steadily, offsetting the decline at the consumer level. Last year, mills increased their inventories in every quarter on a seasonally adjusted basis; additions were moderate in the first two quarters but became pronounced in both the third and the fourth. This step-up, like some earlier ones, was in anticipation of increased buying by steel consumers; in 1962, 1963, and 1964-65, when hedge buying was prominent, stock buildups at mills also preceded accumulation by consumers (chart 4).

The physical volume of steel inventories that are presented in the third panel of chart 4 are shown in terms of quarterly changes, expressed on a current dollar (GNP) basis, in chart 5.

Change in Value of Inventories of Steel Mill Shapes

Note: Values are computed on a current dollar (GNP) basis. Data include holdings of steel mills including work in process, manufacturing consumers, and wholesalers.

Basic data: Census

U.S. Department of Commerce, Office of Business Economics

68-2-5

1. These data and data pertaining to inventories refer to steel mill shapes, which account for the bulk of total output of the steel industry.

Imports at a new high

Although production and shipments of steel declined in 1967, imports of foreign steel were at a record rate. Last year, domestic firms imported almost 11½ million tons, 6½ percent above 1966 and more than double the 1962-64 average. At the same time, exports of steel to foreign countries were about the same as in 1966, bringing to a halt 2 straight years of reduction.

The steel import balance—imports minus exports—amounted to 9.8 million tons in 1967, the largest on record and the ninth consecutive year of an unfavorable trade balance in this metal (chart 6). In dollar terms, the import balance amounted to almost \$900 million in 1967. Prior to 1959, the United States had been a consistent net exporter of steel by a sizable margin. Gross imports in 1967 equaled 12 percent of the total supply of steel available to the domestic market. In 1966, the proportion was 11 percent,

and during the fifties, it was a very low 2 percent (table 1).

Imports of foreign steel have shown a strong upward trend over the past decade, partly as a result of the growth in steel-making capacity abroad and the ability of foreign firms to compete in U.S. markets on favorable terms. This trend has been accentuated by the periodic waves of inventory building that have preceded and accompanied labor negotiations. The policy of supplementing domestic requirements of steel by large-scale purchases from foreign producers dates back to 1959. Principally as a result of the 4-month strike in that year, imported steel reached 4.4 million tons, more than three times the average volume of the preceding 10 years. This pattern of stepped-up imports was repeated in 1962, 1963, and 1964-65, when new contracts were signed without a strike. From the third to the fourth quarter of 1967, steel imports showed a sharp rise,

reaching an annual rate of more than 13 million tons.

(Continued from p. 2)

pared with a surplus of nearly \$0.5 billion in the third quarter.

Several factors accounted for the change in the balance measured on either basis. Among the more important was the substantial narrowing in the merchandise trade surplus as imports increased more than \$0.5 billion while exports declined. Net foreign purchases of U.S. securities other than Treasury issues were also reduced, mainly because of portfolio liquidations by the British Government in order to defend the exchange value of the pound.

Although the balance of payments was adverse by an exceptionally large amount in the fourth quarter, U.S. official reserve assets increased for the third quarter in a row; however, their composition changed markedly. Gold holdings declined \$1 billion while holdings of convertible currencies increased nearly \$1.2 billion.

More detailed information for the fourth quarter and full year is available in a press release, and estimates based on more complete information will appear in the March SURVEY.

Federal Programs for Fiscal 1969

A renewed call for a 10 percent surtax, stringency in a number of domestic programs, and the expectation of a relatively moderate increase in Vietnam expenditures were the principal features of the fiscal 1969 budget submitted to Congress in January.

These projected budgetary developments are expected to give rise to a more restrictive fiscal policy in calendar 1968 than last year. As spelled out in the *Annual Report of the Council of Economic Advisers*, a Federal deficit of \$5 billion in calendar 1968 is expected on a national income accounts (NIA) basis, considerably smaller than the \$12½ billion deficit in 1967. The new budget embodies the President's tax proposals, which are estimated to add \$8 billion to NIA receipts in 1968. If the proposals are not passed, last year's large deficit will continue.

Economic assumptions

The budget estimates assume that GNP in calendar 1968 will total \$846 billion, an increase of 7½ percent over 1967, as compared with last year's 5½ percent advance. Personal income is estimated at \$675 billion, \$49 billion more than in 1967. Corporate profits before taxes are projected to rise about \$7 billion, from \$80 billion to \$87 billion. These projections, as well as the budget estimates discussed below, assume passage of the proposed surtax.

The following review outlines projected budget patterns; explains the new budget concept and compares it with that used in the national income accounts; and analyzes the changes in receipts and expenditures in fiscal 1968-69 as measured in the national income and product accounts.

Shift in budget pattern

The movement toward a smaller deficit is evident in the new unified budget as well as on the NIA basis. Under the new budget concept, the deficit shifts from \$19½ billion in fiscal 1968 to \$8 billion in fiscal 1969 (table 1). When net lending is excluded from budget outlays, the resulting "expenditure account deficit" shifts from \$14 billion to \$4½ billion. On an NIA basis, the deficit declines from \$10 billion in 1968 to \$2½ billion in 1969. Table 1 also shows the former administrative and cash budgets for purposes of comparison.

In the first half of this calendar year, the budget (NIA basis) is expected to shift toward restraint as Federal receipts are projected to rise more than expenditures. Such a shift would reduce the NIA deficit to about \$5 billion (annual rate)—considerably below the \$12½ billion registered in the second half of 1967.

National defense purchases of goods and services are expected to increase only moderately in the first half. Subsidies (less the current surplus of government enterprises) are projected to fall substantially as a consequence of the January postal rate increase. Of the other categories of expenditures, only transfer payments are likely to rise much more rapidly than in the recent past because of the \$3½ billion increase in Social Security benefits payable in March.

Prompt enactment of the personal and corporate surcharge plus higher social insurance contributions will bolster receipts which, are also expected to reflect strong economic growth during the first half of this year. The budget anticipates that the surcharge will add about \$3½ billion (annual rate) to corporate tax accruals beginning in the first quarter, and about \$6 billion to personal tax payments beginning April 1.

58-2-7

The deficit in the second half of 1968 will be close to that of the first half, although the Federal civilian and military pay raise—\$1½ billion at annual rates—may provide a temporary bulge in the third quarter. Defense outlays will also pick up somewhat, but increases in nondefense spending are projected to slow down because of the economies in the fiscal 1969 budget.

The deficit is expected to disappear in the first half of 1969. Receipts will move ahead rapidly because of higher Social Security rates and heavy final settlements of personal income taxes. (The increase in tax liabilities stemming from the surcharge will exceed withholdings in calendar 1968, requiring higher settlements early in 1969.) Expenditures will also advance, but at a less rapid pace.

Federal receipts and expenditures as measured in the national income and product accounts for the fiscal years 1967-69 are shown in table 2.

New Budget Concepts

The fiscal 1969 budget was presented to Congress in a new and more comprehensive format along lines recommended by the President's Commission on Budget Concepts. The new format is designed to present the Government's receipts and expenditures more mean-

ingfully and comprehensively and to overcome the confusion of previous years when three budgets—administrative, cash, and NIA—were utilized. Table 3 summarizes the major differences in budget concepts.

The new unified budget essentially follows the recommendations that the President's Commission on Budget Concepts presented in its report last October. The major recommendations were:

(1) A single budget to replace the three concepts as the principal financial plan of the Government,

(2) Broad coverage to include all Federal programs, including trust funds,

(3) Division of total Government outlays into an expenditure account and a loan account,

(4) Netting receipts that are "market oriented" against related expenditures,

(5) Recording receipts and expenditures on an accrual basis.

All of the above recommendations except the last were implemented in the 1969 budget. The shift to accrual accounting is now under study and will be adopted within the next several years when the required changes in financial and accounting records and procedures have been made.

A number of other changes recom-

mended by the Commission were also made in the new budget. Sales of participation certificates, which had been netted against expenditures in the former administrative and cash budgets, no longer affect the size of the budget deficit but, like the sale of Government bonds, are treated as a means of financing the deficit. In addition, Government debt has been redefined to include securities issued by Federal agencies as well as debt issued by the Treasury and to exclude debt held by trust funds and by Federal agencies. A significant recommendation that could not be implemented this year was that the implicit subsidy in the form of interest rates below market rates on Government loans be specifically disclosed in the expenditure account at the time the loans are made.

As table 3 indicates, the new budget concept, particularly the "expenditure account," is much closer in coverage and in the treatment of financial transactions to the present treatment of Federal expenditures in the national income accounts than were the former administrative and cash budgets. Furthermore, after the shift to accruals is completed, receipts in the new budget should be close to those based on present NIA concepts.

Reconciliation of deficits

Table 4 shows a summary reconciliation of the new unified budget deficit, the expenditure account deficit, and the deficit as recorded on the NIA basis. By focusing on the deficit, it is possible to disregard differences in the treatment of netting; these differences affect the level of expenditures and receipts but do not alter the surplus or deficit. (Some examples of differences in netting are the treatment of Government contributions to employee retirement funds, contributions to National Service Life Insurance and U.S. Government Life Insurance, and the sales of Commodity Credit Corporation (CCC) wheat certificates. These are netted against expenditures in the new budget but are shown on a gross basis in the national income accounts.)

Since all net lending as defined by the Budget Bureau in the new unified budget is excluded from both the expenditure account deficit and the NIA

deficit, the following comments will focus on the relationship between the last two measures.

First, the two differ in the timing of receipts. In the national income accounts, most types of receipts, such as corporate income and excise taxes, are recorded on an accrual basis; personal income taxes are recorded on a payments basis. In contrast, the new budget currently records all receipts on a cash collection basis. (As was noted above, a shift to an accrual basis is planned in the future, but it is being deferred until expenditures can be recorded in the same way.)

Second, the two concepts differ in the timing of purchases of goods and services. The NIA records purchases on a delivery basis, generally consistent with the timing in the rest of the national accounts; the new budget currently records them on a checks issued basis.

When the new budget shifts to an accrual basis, expenditures will be recorded at the time production occurs, regardless of when delivery or payment is made. The Commission feels that it

would be "highly desirable and advantageous" for Federal expenditures in the national income accounts to follow suit. For this to happen, more information than is now available will be needed to synchronize Government purchases with changes in (private) business inventories. At the present time, work-in-process on Government orders is included mainly in the change-in-business-inventories component of the GNP.

Third, there is a difference due to the scope of loans included in expenditures. Federal expenditures in the national income accounts exclude all lending transactions except CCC "nonrecourse" commodity loans, which are treated as purchases rather than loans. Most lending is also excluded from the "expenditure account" in the new budget, the principal exceptions being the above-mentioned CCC loans, foreign loans made on noncommercial terms, and certain domestic loans where repayment may be waived under specified conditions, for example, loans for supersonic transport development, mineral exploration, and student assistance.

Fourth, there are a number of other adjustments, which have been combined in table 4; they include differences in the treatment of foreign currency transactions (the NIA records foreign currency when spent, the new budget when it is acquired in exchange for dollars), the purchase of land, geographical exclusions, and several other items.

Fiscal 1969 Receipts

Federal receipts on an NIA basis in fiscal 1969 are estimated to reach \$182½ billion, an increase of nearly \$21½ billion over projected fiscal 1968 revenues. If realized, this would be the largest increase in receipts since the Korean war.

Over \$11½ billion of this advance can be attributed to the expected growth of income, output, and profits during the year. Another \$6½ billion is the result of proposals to raise personal income tax payments and corporate profits tax liabilities and—to a much smaller extent—to initiate or raise charges for users of the Nation's high-

ways, airways, and waterways. The remaining \$3½ billion represents the rise in Social Security taxes resulting from both the higher ceiling on wages subject to tax and higher tax rates under present law. Although not included in the budget estimates, an additional \$200 million (annual rate) would be added to receipts by enactment of the recently proposed travel taxes, according to Treasury estimates.

Personal tax and nontax payments account for \$12¼ billion of the total advance. About \$7½ billion of the increase is attributed to an expected rise in personal income and capital gains. Another \$5½ billion results from the proposed 10 percent surcharge on individual taxes scheduled to be effective from April 1, 1968, to June 30, 1969. The surcharge would add about \$1½ billion to payments in fiscal 1968 and \$7 billion in fiscal 1969.

The tax proposal exempts single persons who earn up to \$1,900 and married couples (with two children) who earn \$5,000 or less. It would increase total individual income tax li-

CHART 8

Changes in Federal Government Receipts (NIA Basis)

68-2-9

abilities 7.5 percent in calendar 1968 and 5 percent in 1969. Withholding rates would be raised 10 percent on April 1, 1968, and would remain at that level until the law automatically expires on June 30, 1969.

Estate and gift taxes, which have not contributed much to the increase in personal tax payments in recent years, are projected to rise over \$¼ billion in fiscal 1969 to reach nearly \$3½ billion.

Higher corporate taxes

The surcharge will also have a substantial impact on corporate profits tax accruals. If the administration's tax proposals win congressional approval, corporate taxes as recorded in the national income accounts will rise 10 percent in the first quarter of calendar 1968 and drop in the first quarter of 1969. The projected drop from 1968 reflects the 5 percent increase in liabilities effective in 1969; like the individual surcharge, the corporate increase will be effective for only half of calendar 1969. The surcharge would add about \$1¼ billion to fiscal 1968 liabilities and over \$2½ billion in fiscal 1969; the difference accounts for nearly

one-third of the projected \$3 billion rise in these taxes. Higher profits account for the rest of the advance. Calendar 1968 profits—particularly in the first half—are expected to rise strongly, reversing the substantial drop of the previous year.

Two additional corporate income tax proposals do not affect corporate tax accruals in the national income accounts. One would raise a corporation's estimated tax for any calendar year from 70 to 80 percent of its final liability; the other would eliminate over a 5-year period the present exemption of the first \$100,000 of liability from estimated quarterly corporate tax payments.

Deferral of excise cuts

Indirect business tax and nontax accruals are expected to rise \$1 billion, to about \$18 billion. The increase reflects about \$¼ billion of normal growth in alcohol, tobacco, and manufacturers' excise taxes as well as customs duties and nontaxes, and over \$¼ billion of proposals for new or higher user charges, principally higher levies on diesel fuel, heavy trucks, and aviation services.

The projected increase in indirect business taxes is dependent on favorable congressional action to continue the excise taxes on automobiles and telephone service at current rates. Under present law, the automobile excise tax will decline from 7 percent to 2 percent on April 1, 1968, and to 1 percent on January 1, 1969. The telephone tax is scheduled to fall from 10 percent to 1 percent on April 1, 1968, and to be eliminated entirely on January 1, 1969. The current proposals would continue both levies at their present rates until July 1, 1969. Without congressional action, the level of indirect business taxes would fall about \$½ billion in fiscal 1968 and \$2½ billion in fiscal 1969.

Spurt in contributions

Social insurance contributions, the fastest rising category of NIA receipts in recent years, are projected at \$43½ billion, in fiscal 1969, an increase of \$4¼ billion over fiscal 1968 and almost double the \$22 billion figure recorded in fiscal 1963. Nearly \$3½ billion of the 1969 advance is due to recent changes in Social Security financing. After recent congressional action, the maximum earnings subject to tax rose from \$6,600 to \$7,800 as of January 1, 1968, and the combined employee-employer payroll tax will increase from 8.8 percent to 9.6 percent on January 1, 1969. (One-fourth of the rate increase is for the hospital insurance program.)

The major effect of the increase in earnings subject to tax will occur in fiscal 1969 because all of that year will be affected by the base change whereas only a part of fiscal 1968 will be so affected. In addition, the voluntary monthly contributions made by enrollees in the supplementary medical insurance program will increase from \$3 to \$4 on April 1, 1968.

The remaining increases in Social Security contributions result mainly from continued growth in the number of persons and the volume of payrolls covered by the Social Security system. Contributions for other programs—unemployment insurance, railroad and Federal civilian retirement, and Government life insurance—show little advance on balance.

Source: U.S. Department of Commerce, Office of Business Economics.

Fiscal 1969 Expenditures

Federal expenditures as measured in the national income accounts are projected to rise about \$14 billion in fiscal 1969, somewhat less than the \$16 billion advance forecast for the current fiscal year. Purchases of goods and services—defense and nondefense—together with transfer payments account for more than three-fourths of the rise.

National defense purchases—the largest single category of NIA expenditures—are expected to increase by \$4½ billion, the smallest increase since before the Vietnam conflict. The relatively moderate advance is based on a leveling off of the U.S. commitment in Vietnam. The budget estimates that Vietnam spending in fiscal 1969 will be \$25½ billion, an increase of only \$1¼ billion from the \$24½ billion level predicted for this fiscal year. The number of military personnel in Vietnam is projected to stabilize at 525,000, only slightly above our present forces there. (The budget does not include the costs resulting from the recent callup of nearly 15,000 reservists.)

Pay raises scheduled

Rising defense costs, aside from Vietnam, account for the remaining \$3 billion increase, most of which is in the Department of Defense (DOD). Higher military and civilian pay scales, scheduled to be effective July 1, 1968,

under existing law, will add about \$1 billion, and the first full-year effect of the December 1967 pay raise will add another \$¼ billion. The remainder of the net increase in DOD outlays is attributable mainly to higher prices of goods.

New orders for strategic forces will rise substantially in fiscal 1969, although their major impact on expenditures will be felt in subsequent years. New orders for production and deployment of antiballistic missiles (Sentinel) and large procurements of improved land- (Minuteman III) and sea-based (Poseidon) ICBM's are scheduled. Both Minuteman III and Poseidon are designed to carry multiple warheads and other devices aimed at increasing their capability to penetrate enemy defenses. In addition, the DOD will initiate a program of further hardening Minuteman III silos to make them even less vulnerable to enemy attack and will begin converting the nuclear missile-carrying submarines to handle the more powerful Poseidon. (Table 5 provides a detailed breakdown of DOD military expenditures in the new unified budget; these outlays differ somewhat in scope and timing from national defense purchases in the national income accounts.)

For the first time in several years, Atomic Energy Commission outlays will accelerate. The increase of over \$200 million is due largely to expenditures on nuclear weaponry and production facilities required for the Sentinel antiballistic missile system.

Nondefense purchases are slated to rise \$2 billion from fiscal 1968 to fiscal 1969. Higher agricultural purchases account for much of the rise; the decline that began in CCC inventories in fiscal 1963 is expected to halt in fiscal 1969. A pay raise for Federal workers and other increased outlays resulting from higher workloads, particularly in the Social Security Administration and the Internal Revenue Service, account for the rest of the advance.

Space outlays will continue to ebb, declining to about \$4½ billion, well below the nearly \$6 billion level of fiscal 1966, and about \$¼ billion under fiscal 1968. Expenditures for the Apollo

lunar landing program will be reduced nearly \$½ billion. Planned increases in programs of unmanned planetary probes will partially offset this reduction.

Transfers continue sharp rise

Government expenditures, in addition to influencing GNP directly through purchases of goods and services, contribute to aggregate demand indirectly through various other types of outlays such as grants-in-aid, transfers, interest payments, and subsidies. Grants-in-aid help finance State and local programs, such as highway and hospital construction; the other types of outlays increase private incomes and expenditures.

Outlays other than for purchases of goods and services are projected to rise about \$7¼ billion, somewhat less than the \$7½ billion estimated for fiscal 1968. Paced by higher Social Security benefits, transfer payments to persons account for nearly \$5 billion of this rise. Grants-in-aid to State and local governments are expected to advance \$2 billion; net interest paid is estimated to rise \$½ billion. The other NIA categories—subsidies (less the current surplus of Government enterprises) and foreign transfers—show little change.

The exceptional gain in personal transfers marks the third straight year that increases in this category have amounted to about \$5 billion or better. The estimated rise from fiscal 1966 to fiscal 1969 is over \$16 billion, an amount close to the entire increase in transfers in the previous 10 years. The introduction of Medicare, higher average benefits in many programs, and a growing number of beneficiaries have been major elements in this advance.

Higher Social Security benefits

Social Security benefits (including Medicare) account for about \$4 billion of the 1968-69 advance, with roughly half of that attributable to the recently passed Social Security Amendments. This legislation—effective in March—provides for a 13 percent across-the-board increase in benefits affecting 24 million persons, a rise in the minimum monthly benefits from \$44 to \$55, increased benefits for 690,000 noninsured persons 72 and over, liberalization of the earnings test, and other program changes that will augment personal transfers. The remaining half of the Social Security advance is due to addi-

tional OASDI beneficiaries, higher hospital and medical costs, and increased utilization of Medicare services.

Larger benefits for veterans are also expected to boost transfer payments. Over 800,000 servicemen are currently being discharged from the Armed Forces each year as compared with 500,000 prior to the Vietnam war. Education, training, and other readjustment benefits for these men as well as increased expenditures for non-service-connected pensioners (who were recently given cost-of-living increases averaging 5.4 percent) are reflected in the fiscal 1969 increase in personal transfer payments.

Other programs affecting transfers, including manpower services, Federal civilian pensions, military pensions, railroad retirement, and unemployment insurance, are also expected to register increases.

Slower growth in grants

Continued growth in grants-in-aid is called for in the fiscal 1969 budget although the increase is below the previous year because of budgetary restrictions. Urban assistance and medical

programs have been stressed in the new budget.

A substantial advance in urban aid—well over \$½ billion—is centered around the Model Cities program, urban renewal, public housing, water and sewer facilities, and urban transportation. Medical and health care grants—including programs for health manpower, research, and regional medical programs as well as Medicaid—show similar increases. The rapid expansion of Medicaid reflects rising medical prices and the expansion of the program from 43 to 48 States. An estimated 8½ million persons will receive assistance totaling over \$2 billion in fiscal 1969.

The largest grant programs—public assistance (excluding Medicaid) and highways—account for only a modest fraction of the fiscal 1969 advance. Education grants are expected to decline, reflecting decreases in grants for higher education construction and for purchases of equipment, books, and counseling services at the elementary and secondary level. Among the wide range of other grant programs, vocational rehabilitation, maternal and child welfare, employment security, water pollution, and Appalachian development show marked increases.

Net interest paid will advance only slightly less than in fiscal 1968. The projected rise in both years results from higher Federal debt and rising interest rates. The budget estimates assume no further increases in interest rates, but since rates have risen sharply in recent months, refinancing of maturing obligations at the prevailing higher levels will increase interest payments.

Subsidies (less the current surplus of Government enterprises) are projected to level off in fiscal 1969 following an expected \$¼ billion drop during the current fiscal year. Higher agricultural subsidies (mainly for feed grains) will be offset by a declining postal deficit if the budget estimates materialize. The lower postal deficit reflects largely the first full year of the recently enacted rise in postal rates (partially offset by additional costs of pay increases for postal workers). The operating deficit of the CCC is also expected to decline.

^q Revised. ^p Preliminary. ^a See note 1 on p. S-1.

¹ Estimates for Oct.-Dec. 1967 based on anticipated capital expenditures of business.

² Estimates for Jan.-Mar. 1968 based on anticipated capital expenditures of business.

³ Anticipated expenditures for the year 1967 are as follows (in bil. \$.): All industries, 61.48; manufacturing, total, 26.34; durable goods industries, 13.78; nondurable goods industries, 13.07; mining, 1.43; railroad, 1.55; transportation, 3.88; public utilities, 9.59; commercial and other (incl. communication), 18.20. ⁴ Includes communication.

⁵ Includes inventory valuation adjustment.

⁶ Personal outlays comprise personal consumption expenditures, interest paid by consumers, and personal transfer payments to foreigners.

⁷ Personal saving is excess of disposable income over personal outlays.

⁸ Data for individual durable and nondurable goods industries components appear in the Mar., June, Sept., and Dec. issues of the SURVEY.

⁹ More complete details are given in the quarterly reviews in the Mar., June, Sept., and Dec. issues of the SURVEY.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1964	1965	1966	1965				1966				1967				1968

† Revised. † Revised total; monthly revisions are not available. ‡ Total for 11 months. § Reported year-end stocks. See BUSINESS STATISTICS. ¶ For month shown. * Data cover 5 weeks; other periods, 4 weeks. ** Excludes orders for motors 1-20 hp.; domestic sales of this class in 1966 totaled \$127.6 mil.; Dec. 1967, \$7.5 mil. † Effective 1st quarter 1967, total shipments and shovel loaders include types not previously covered and off-highway wheel tractors exclude types previously covered; also, the wheel tractors for 3d quarter 1967 omit

one type (usually included) to avoid disclosure of individual operations. † Revised series. Data have been adjusted to new benchmarks back to Jan. 1956; the revised data reflect new companies as well as types of machines now classified as machine tools. ‡ Total includes data not shown separately. § Radio production comprises table, portable battery, auto, and clock models; television sets over monochrome and color units.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1965	1966	1966	1967												1968

¹Revised. ²Data cover 5 weeks; other months, 4 weeks. ³Ginnings to Dec. 13.

⁴Ginnings to Jan. 16. ⁵Crop for the year 1966. ⁶Dec. 1 estimate of 1967 crop.

⁷Includes data not shown separately.

⁸Stocks (owned by weaving mills and billed and held for others) exclude bedsheeting, toweling, and blanketing, and billed and held stocks of denims.

⁹Unfilled orders cover wool apparel (including polyester-wool) finished fabrics; production and stocks exclude figures for such finished fabrics. Orders also exclude bedsheeting, toweling, and blanketing.

¹⁰Total ginnings to end of month indicated, except as noted.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1965	1966	1966	1967												1968

* Revised. ¹ Season average. ² For 5 weeks, other months, 4 weeks. ³ For month shown. ⁴ Less than 500 bales. ⁵ Comparable margins for Sept. 1967, 78.50 cents; see note **.

¹ Beginning Sept. 1967, average of 14 markets.

* New series. Beginning Aug. 1966, mill margins refer to weighted averages of 71 types of

unfinished carded yarn cloths and to simple averages of 8 combed yarn cloths and 4 polyester-cotton blends (beginning Oct. 1967, 5 blends); no comparable data prior to Aug.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS

*Revised. ¹ Preliminary estimate of production. ² Annual total includes revisions not distributed by months. ³ Revised to reflect Jan.-Apr. imports from Canada of new and used cars and other motor vehicles not specifically identified; beginning May 1966, data refer to total imports (incl. those from Canada) of new, on-the-highway, four-wheeled passenger automobiles. Revised Jan.-Apr. 1966 data (thous.): 77.9; 73.0; 93.7;

SECTIONS

General:

Business indicators	1-7
Commodity prices	7-9
Construction and real estate	9, 10
Domestic trade	10-12
Labor force, employment, and earnings	12-16
Finance	16-21
Foreign trade of the United States	21-23
Transportation and communications	23, 24

Industry:

Chemicals and allied products	24, 25
Electric power and gas	25, 26
Food and kindred products; tobacco	26-30
Leather and products	30
Lumber and products	31
Metals and manufactures	31-34
Petroleum, coal, and products	34, 36
Pulp, paper, and paper products	36, 37
Rubber and rubber products	37
Stone, clay, and glass products	38
Textile products	38-40
Transportation equipment	40

INDIVIDUAL SERIES

Advertising	10, 11, 16
Aerospace vehicles	40
Agricultural loans	16
Air carrier operations	23
Aircraft and parts	4, 6, 7, 40
Alcohol, denatured and ethyl	25
Alcoholic beverages	11, 26
Aluminum	33
Apparel	1, 3, 4, 8, 9, 11-15, 40
Asphalt and tar products	35, 36
Automobiles, etc.	1, 3-9, 11, 12, 19, 22, 23, 40
Balance of international payments	2, 3
Banking	16, 17
Barley	27
Battery shipments	34
Beef and veal	28
Beverages	4, 8, 11, 22, 23, 26
Blast furnaces, steel works, etc.	5-7
Bonds, outstanding, issued, prices, sales, yields	18-20
Brass and bronze	33
Brick	38
Broker's balances	20
Building and construction materials	7-8
Building costs	10, 31, 36, 38
Building permits	10
Business incorporations (new), failures	7
Business sales and inventories	5
Butter	26
Cattle and calves	28
Cement and concrete products	9, 10, 38
Cereal and bakery products	8
Chain-store sales, firms with 11 or more stores	12
Cheese	26
Chemicals	4-6, 8, 13-15, 19, 22-25
Cigarettes and cigars	30
Clay products	9, 38
Coal	4, 8, 22, 34, 35
Cocoa	23, 29
Coffee	23, 29
Coke	35
Communication	2, 19, 24
Confectionery, sales	29
Construction:	
Contracts	9
Costs	10
Employment, unemployment, hours, earnings	13-15
Fixed investment, structures	1
Highways and roads	9, 10
Housing starts	10
New construction put in place	9
Consumer credit	17, 18
Consumer expenditures	1
Consumer goods output, index	3, 4
Consumer price index	7, 8
Copper	33
Corn	27
Cost of living (see Consumer price index)	7, 8
Cotton, raw and manufactures	7, 9, 22, 38, 39
Cottonseed cake and meal and oil	30
Credit, short- and intermediate-term	17, 18
Crops	3, 7, 27, 28, 30, 38
Crude oil and natural gas	4, 35
Currency in circulation	19
Dairy products	3, 7, 8, 26, 27
Debts, bank	16
Debt, U.S. Government	18
Department stores	11, 12
Deposits, bank	16, 17, 19
Disputes, industrial	16, 17
Distilled spirits	26
Dividend payments, rates, and yields	2, 3, 18-21
Drug stores, sales	11, 12

Earnings, weekly and hourly	14, 15
Eating and drinking places	11, 12
Eggs and poultry	3, 7, 28, 29
