OFFICE OF PRICES AND LIVING CONDITIONS

Kenneth V. Dalton, *Associate Commissioner*

The *CPI Detailed Report* is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Subscription price per year \$21 domestic, and \$26.25 foreign. Single copy domestic, \$7; foreign, \$8.75. Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents; telephone (202) 275-3054.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii; \$160 in Alaska and Canada.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC, and at additional mailing offices.

Price Movements

January 1991

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.6 percent before seasonal adjustment in January to a level of 134.6 (1982-84=100). For the 12-month period ended in January, the CPI-U increased 5.7 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.5 percent in January prior to seasonal adjustment. The January 1991 CPI-W level of 132.8 was 5.5 percent higher than the index in January 1990.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.4 percent in January, following increases of 0.3 percent in each of the preceding 2 months. Petroleum-based energy prices fell sharply in January, led by a 6.5-percent decrease in the index for motor fuels. The increase in the food index reflects a sharp upturn in fruit and vegetable prices, principally resulting from reduced supplies as a consequence of the adverse weather in late December. Excluding food and energy, the CPI-U rose 0.8 percent in January compared with an average monthly increase of 0.4 percent in 1990. This acceleration was largely due to increases in the indexes for lodging while out of town, apparel and upkeep, alcoholic beverages, and tobacco products. (Federal excise taxes on alcoholic beverages and cigarettes were increased on January 1.)

The index for food and beverages increased 0.9 percent in January. Prices for alcoholic beverages advanced a record 4.9 percent, reflecting only in part the increase in Federal excise taxes effective on January 1. Grocery store food prices, which rose 0.1 percent in December, increased 0.8 percent in January.

This acceleration was largely due to the sharp turnaround in the index for fruits and vegetables—up 2.9 percent in January, following a 0.6-percent decline in December—resulting from the effects of the adverse weather in late December. In particular, prices for oranges rose 37.2 percent and lettuce, 24.5 percent. Also contributing to the acceleration in food prices was a 1.3-percent increase in the index for cereal and bakery products. In contrast, prices for dairy products declined for the third consecutive month—down 1.2 percent in January—and the index for meats, poultry, fish and seafood, and eggs rose substantially less than in recent months—up 0.2 percent. Increases in prices for eggs and poultry—up 6.9 and 1.2 percent, respectively—more than offset declines in prices for beef, pork, and fish and seafood. The other major food and beverage group—food away from home—rose 0.1 percent in January.

The housing component, which rose 0.2 percent in December, advanced 0.8 percent in January, its largest increase since a 1.0-percent rise in June 1982. All three major housing groups contributed to the acceleration. Shelter costs advanced 0.8 percent in January, following a 0.4-percent increase in December. Within shelter, renters' costs rose 1.7 percent; homeowners' costs, 0.4 percent; and maintenance and repair costs, 0.2 percent. The large increase in renters' costs resulted from a 6.8-percent rise in lodging while out of town, reflecting seasonal price increases in vacation areas. Residential rents rose 0.1 percent. The index for fuels and other utilities turned up in January, increasing 1.6 percent. The index for household fuels rose 1.5 percent as increases in charges for electricity and natural gas—up 2.8 and 1.0 percent, respectively—more than offset a 5.6-percent drop in fuel oil prices. Fuel oil prices,

Other goods and services	.7	.6	.4	.5	.7	.8	.8	9.7	8.3

which rose 52.6 percent in the 3 months ended in October, have declined 11.9 percent in the past 3 months. The index for other utilities and public services advanced 1.7 percent, reflecting a sharp increase in charges for telephone services. A 4.0-percent rise in charges for local telephone services more than offset declines in long distance rates. The index for household furnishings and operations, which declined slightly in December, increased 0.4 percent in January.

The index for transportation declined 1.2 percent in January, reflecting a sharp drop in the index for motor fuels. Gasoline prices, which increased 27.2 percent in the 4 months ended in November before turning down in December, fell 6.9 percent in January. Also contributing to the decrease in the transportation component were declines in the indexes for used cars, tires, automobile body work and automotive registration, licensing, and inspection fees. Partially offsetting these declines was a substantial increase in automobile purchase costs. New car prices rose 1.3 percent in January, their largest monthly increase since May 1981. This advance reflects the continued introduction of higher priced 1991 models, as well as an end to consumer rebates on some domestic models. Automobile finance charges increased 0.7 percent in January. The index for public transportation rose 0.6 percent, largely as a result of the continued increase in airline fares. A 0.7-percent rise in January brought the increase in airline fares to 13.4 percent during the past 5 months.

The index for apparel and upkeep increased 1.0 percent in January. This reflects somewhat smaller than normal seasonal price reductions for fall and winter clothing as well

as the earlier than usual introduction of higher priced spring and summer clothing. The index for watches and jewelry rose 4.3 percent, in part reflecting the increase in Federal excise taxes.

The medical care component rose 0.6 percent in January to a level that was 9.7 percent above a year ago. In January, the index for medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—rose 0.8 percent. The index for medical care services increased 0.6 percent, with the cost of professional services and hospital and related services up 0.5 and 0.9 percent, respectively.

The entertainment index rose 0.7 percent in January, following increases of 0.1 percent in each of the 3 preceding months. A 1.6-percent increase in the index for reading materials accounted for about one-third of the entertainment advance.

The other goods and services component increased 0.7 percent in January, the same as in December. The index for tobacco products, reflecting a 4-cents-a-pack increase in the Federal excise tax effective on January 1, rose 1.2 percent. This advance, coupled with a 0.9-percent increase in the index for tuition and other school fees, accounted for over four-fifths of the rise in this major group.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.4 percent in January.

Changes to the CPI Detailed Report

The Bureau of Labor Statistics continuously evaluates the Consumer Price Index program to identify improvements in the program and to better meet the needs of users. Beginning with this issue, we are presenting more historical data, information for two new series, and clarification of table titles and several index series titles.

Historical data

In our recent Users' Survey, many respondents indicated that more historical data in the *CPI Detailed Report* would be helpful. Beginning with this issue, we are including six tables that present historical data and are deleting the one historical table, former table 3, that was included previously. The new historical data can be found in tables 24-29. Tables 24 and 27 contain the complete history of the all-items index for the U.S. city average, CPI-U and CPI-W, respectively. Tables 25 and 28 contain the past 10 December indexes and the current month's index for detailed expenditure categories and for special indexes. Tables 26 and 29 contain the percent changes from the previous December for the same indexes contained in tables 25 and 28.

New items

In addition to adding more historical data, we have added

indexes for two new items at the U.S. city average level, indoor plants and fresh cut flowers, and day care and nursery school fees. These indexes appear in tables 3, 4, 8, 9, 25, 26, 28, and 29.

New titles

We have also made some changes in the *CPI Detailed Report* to help clarify information for the user. Table titles now include either "(CPI-U)" for the All Urban Consumers population or "(CPI-W)" for the Urban Wage Earners and Clerical Workers population. For additional clarification, four published series have had title changes, although the content of the series is unchanged. These are:

Services less energy is now: **Services less energy services;**

Services less medical care is now: **Services less medical care services;**

Gas (piped) and electricity is now: **Gas (piped) and electricity (energy services);** and

Commodities less food and energy is now: **Commodities less food and energy commodities.**

Intervention Analysis in Seasonal Adjustment for the Consumer Price Index

The Bureau of Labor Statistics continuously evaluates the Consumer Price Index program to identify needed improvements. In the past, however, most improvements in procedures were introduced only at the time of major revision of the CPI, which occurred about every 10 years when the market basket of goods and services was updated.

BLS is now using a seasonal adjustment technique—intervention analysis—introduced in 1990. This article continues the discussion of intervention analysis begun then.

Seasonal adjustment is the process by which the seasonal movement of prices for goods or services in a Consumer Price Index series is quantified and then factored out of the series to permit analysis of nonseasonal price movements. The X-11-ARIMA program developed by Statistics Canada is used to calculate factors for seasonal adjustment of both historical and current series.

Briefly, the X-11-ARIMA program uses moving averages to distribute the movement for each series into three components: A *trend* component representing the long-term movement of the series; a *seasonal* component representing the intrayear cyclical movement; and an *irregular* component, representing random movement. The program works best when there is a relatively stable character to the series. Isolated extreme values, sharp movements, and/or discontinuities in the trend sometimes obscure the seasonal component of the series. The resulting factors are not as good a “fit” for the series as they could be.

To improve the seasonal adjustment for some series, the prior adjustment option of the X-11-ARIMA was applied. Prior adjustment means that some values in the CPI series to be seasonally adjusted are modified prior to the application of X-11-ARIMA. Prior adjustment factors were derived by using the technique called intervention analysis. This technique allows the user to identify and remove intervention effects from the series prior to seasonal adjustment.

In those cases where modeling intervention resulted in better seasonal adjustment than the original series (as measured by the X-11-ARIMA supplied diagnostic statistics and economic analysis), these seasonal adjustments were accepted for use in producing the CPI.

Several categories of interventions may be removed from the series using intervention analysis:

- Level shift: A large change in price level which shifts a CPI

series. The entire shift may occur in one period (month) or may be spread out over a number of periods.

- Outlier: An extreme value for a specific month.
- Seasonal shift: A permanent change in the seasonal pattern of price change.

In each case, intervention analysis is used to smooth out the series by assigning each of these effects to a given component of the price movement—level shifts to the trend, outliers to the irregular, and seasonal shifts to the seasonal—by an analysis and identification of the causes of the effects. For example, a shift in level was noted in 1983 for fuel oil. Analysis revealed that the sharp change in product price level was due to an OPEC price cut and this price movement was assigned to the trend. Since outliers are random events, they have no identifiable explanation.

In January 1991, the series listed below were adjusted using intervention analysis before X-11-ARIMA processing. All series were examined using an 8-year span, 1983-90. Intervention analysis was used on two additional series this year, new trucks and tobacco and smoking products.

Fuel oil
Fuel oil and other household fuel commodities
Motor fuel
Gasoline
Leaded regular gasoline
Unleaded regular gasoline
New vehicles
New cars
New trucks
Women's coats and jackets
Women's dresses
Women's separates and sportswear
Women's nightwear, underwear, hosiery, and accessories
Women's suits
Girls' apparel
Tobacco and smoking products

For each series that was adjusted using intervention analysis, a complete list of level shifts and their identified causes is shown in table A1. The outliers for each series are included in the list. For further information, write to the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Room 3212 BC, Washington, DC 20212, or call Claire McAnaw at (202) 504-2051.

Table A1. Level shifts

Series	Period(s)	Event	Outliers
Fuel oil	1/83-3/83 12/85-7/86 7/90-10/90	OPEC price cut Increased supply from OPEC Shortage and anticipated shortage in oil supply due to Persian Gulf crisis	2/84, 1/86 1/90

Table A1. Level shifts—Continued

Series	Period(s)	Event	Outliers
New vehicles	3/89-4/89	Short-term supply disruption	
	7/89-9/89	Over-reaction to short-term supply disruption	
	12/89-1/90	Low supply due to unexpectedly cold weather	
	7/90-10/90	Iraq's invasion of Kuwait caused panic pricing	
	4/86-6/86	Domestic price increase and weak dollar	2/87, 3/87
	10/86-11/86	Discontinuation of rebates coupled with anticipation of 1987 tax bill	
	1/87-3/87	Enactment of 1987 tax bill; weak sales of cars; introduction of rebates for trucks	
	2/88-3/88	Domestic truck rebates	
	7/89-9/89	High inventories combined with unusual slump in sales	
	9/89-12/89	Higher than usual introductory prices for trucks	
New cars	4/86-6/86	Domestic price increase and weak dollar	9/88
	10/86-11/86	Discontinuation of rebates coupled with anticipation of 1987 tax bill	
	1/87-2/87	Enactment of 1987 tax bill and weak sales	
	6/89-9/89	High inventories combined with unusual slump in sales	
	1/90-3/90	Unusual slump in sales, consumer anxiety about higher tax bills	
New trucks	4/86-6/86	Domestic price increase and weak dollar	10/89, 12/89
	10/86-11/86	Discontinuation of rebates coupled with anticipation of 1987 Tax Bill	
	1/87-3/87	Enactment of 1987 tax bill; introduction of rebates for trucks	
	2/88-3/88	Domestic truck rebates	
	10/89-12/89	Higher than usual introductory prices	
Women's coats	12/84-1/85	Slack demand, excessive inventories	
	8/85-9/85	Higher than usual introductory prices	
	12/85-1/86	Slack demand, excessive inventories	
	8/87-9/87	Higher than usual introductory prices	
Women's dresses	2/87-3/87	New procedures for handling seasonal items	2/88, 2/89
Women's separates	1/84-3/84	Late introduction of spring/summer lines	8/88, 8/89
	3/87-4/87	New procedures for handling seasonal items	
Women's nightwear			5/86, 8/86 10/87, 11/87
Women's suits			2/87, 2/90
Girls' apparel	1/87-2/87	Early introduction of spring/summer lines	8/88, 5/89 8/89
	1/90 (positive level shift)	Procedural changes in comparability decisions	
Tobacco and smoking products	12/88-1/89	State excise tax increase and wholesale price increase for cigarettes	6/83, 12/85 12/89 6/90
	5/89-6/89	Wholesale price increase for cigarettes	
	5/90-7/90	State excise tax increase and wholesale price increase for cigarettes

Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

Regions are defined as the four Census regions.

Indexes on a December 1986=100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

Table 11. Consumer Price Index for All Urban Consumers (CPI-U): Regions ¹, by expenditure category and commodity and service group

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions are defined as the four Census regions.

³ Indexes on a December 1986=100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Regions are defined as the four Census regions.

² Indexes are on a December 1977 = 100 base except for the U.S. which is on a 1967 = 100 base.

³ Indexes on a December 1984 = 100 base.

⁴ Indexes on a December 1986 = 100 base.

^{NA} Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 57,000 housing units and approximately 19,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and services establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuel, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Some data, such as used car prices, are obtained from secondary sources.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of country, for cross-classifications of regions and population-size classes, and for 29 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, 1982-84, which equals 100.0. An increase of 7 percent, for example, is shown as 107.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$100 in 1982-84 to \$107.

For further details, see *BLS Handbook of Methods*, BLS Bulletin 2285, April 1988, and *The Consumer Price Index: 1987 Revision*, BLS Report 736, January 1987.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are effected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	112.5
Less previous index	108.5
Equals index point change	4.0
Percent Change	
Index point difference	4.0
Divided by the previous index	108.5
Equals	0.037
Results multiplied by one hundred	0.037×100
Equals percent change	3.7

Energy Prices

Prices are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census regions cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas for 500 kilowatt hours of electricity (table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU'S (U.S. Department of Energy).

1 kwh = 3,412 BTU'S (Edison Electric Institute)

1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from the BLS regional offices or from the Washington office upon request.

Reference Base Change

Beginning with the release of data for January 1988 in February 1988, most Consumer Price Indexes have shifted to a new reference base year. All indexes previously expressed on a base of 1967=100, or any other base through December 1981, have been rebased to 1982-84=100. Only indexes with a base later than December 1981 have maintained their bases. This base change was reviewed by the Office of Federal Statistical Policy and Standards, Office of Management and Budget, and is in keeping with the Government's longstanding policy to update index bases periodically. Selection of the 1982-84 period was made to coincide with the updated expenditure weights, which are based upon data tabulated from the Consumer Expenditure Surveys for 1982, 1983, and 1984. The last rebasing of CPI data occurred in

February 1971, when the 1967 base was substituted for the former 1957-59 base.

Historical data for each CPI series on the new base are available from the Bureau of Labor Statistics. For the convenience of users, the BLS will continue to publish all-items indexes for the U.S. city average, and for the individual local areas for which CPI's are published, on their former official reference base (1967=100 in most cases).

Conversion factors and an accompanying fact sheet on rebasing are available from BLS. Dividing by one of these factors will rebase the related index series from its current 1982-84 base to its previous reference base. (*Users should note:* Because of rounding effects, there may be occasional minor differences between the final rebased index and the result obtained using the conversion factor.)

Adjustment of Shelter Indexes for Aging Effects

Beginning with the January 1988 CPI, the Bureau of Labor Statistics adjusted the monthly CPI shelter indexes for the change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the chosen method is operationally feasible.¹ The adjustment affects CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

The quality of a housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing units.² The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect.

¹ A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and *Journal of Business and Economic Statistics*, Vol. 6, No. 3, July 1988, pp. 359-71 and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects," BLS Working Paper No. 160, April 1986, and *Journal of Urban Economics*, Vol. 23, March 1988, pp. 162-78. These papers are available from the BLS on request.

² For details on existing quality adjustment methods, see, *BLS Handbook of Methods*, chapter 19 (BLS Bulletin 2285).

The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship between a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1985 through 1989 were replaced at the end of 1989. The seasonal movement of all items and 45 other aggregations is derived by combining the seasonal movement of 55 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 55 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years,

but the seasonally adjusted indexes will be used before that period.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called intervention analysis for some CPI series. Intervention analysis allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are removed from the data prior to calculation of seasonal factors. For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally

adjusted data for those series. For some women's apparel indexes and the girls' apparel index, the procedure was used to offset the effects of changes in pricing methodology; and for new cars and for new vehicles, this procedure was used to offset the effects of changes in marketing strategies and the introduction of new models. A description of intervention analysis, as well as a list of events treated as interventions and seasonal factors for these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212 or by calling Claire McAnaw on (202)504-2051.
