Kenneth V. Dalton, *Associate Commissioner*

The *CPI Detailed Report* is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Subscription price per year \$21 domestic, and \$26.25 foreign. Single copy domestic, \$7; foreign, \$8.75. Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents; telephone (202) 275-3054. For technical information call the CPI information and analysis office at (202) 272-5160.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii; \$160 in Alaska and Canada.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC, and at additional mailing offices.

Price Movements

July 1991

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.1 percent before seasonal adjustment in July to a level of 136.2 (1982-84=100). For the 12-month period ended in July, the CPI-U increased 4.4 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also rose 0.1 percent in July prior to seasonal adjustment. The July 1991 CPI-W level of 134.3 was 4.4 percent higher than the index in July 1990.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.2 percent in July, the same as the average monthly rate of increase during the first 6 months of the year. Both the food and energy indexes registered declines in July—down 0.6 and 0.4 percent, respectively. A sharp downturn in fresh fruit and vegetable prices was primarily responsible for the drop in the food index. Energy costs declined for the seventh time in the past 8 months as a decrease in petroleum-based energy goods more than offset an upturn in charges for gas and electricity. Excluding food and energy, the CPI-U rose 0.4 percent in July, the same as in June. Within this index, prices for commodities rose 0.4 percent, on the strength of higher clothing prices, and the services component rose 0.3 percent.

During the first 7 months of 1991, the CPI-U has advanced at a 2.7-percent seasonally adjusted annual rate (SAAR). In this period, energy costs have declined at a 15.5-percent rate, partially offsetting the increases in the indexes for food and other nonenergy items—up at annual rates of 2.2 and 4.9 percent, respectively.

	Percent changes, 12 months ended in December								SAAR 3 months ended in July
	1984	1985	1986	1987	1988	1989	1990	1991

Energy	.2	1.8	-19.7	8.2	.5	5.1	18.1	-15.5	
All items less energy . .	4.4	4.0	3.8	4.1	4.7	4.6	5.2	4.4	
Food	3.8	2.6	3.8	3.5	5.2	5.6	5.3	2.2	
All Items less food and energy	4.7	4.3	3.8	4.2	4.7	4.4	5.2	4.9	

The index for food and beverages declined 0.5 percent in July. Grocery store food prices fell 1.2 percent in July, following an increase of 0.7 percent in June. Fruit and vegetable prices, which rose 4.0 percent in June, declined 5.1 percent in July and accounted for nearly 90 percent of the grocery store food index drop. Within this category, price decreases of more than 20 percent were recorded for both lettuce and tomatoes. Despite plummeting in July, tomato prices remain 38.5 percent above their level at the beginning of the year. Also contributing to the July

grocery store food decline was a 0.5-percent drop in the index for meats, poultry, fish and eggs. Declines in the prices for beef, pork, fish, and eggs more than offset an increase in poultry prices. Each of the other major grocery store food group indexes—cereal and bakery products, dairy products, and other food at home—rose 0.1 percent in July. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.4 and 0.3 percent, respectively.

The housing component rose 0.3 percent in July, following an increase of 0.1 percent in June. A turnaround in the index for household fuels and other utilities—up 0.7 percent in July after a decline of the same amount in June—was the primary reason for the larger July increase. Within household fuels, a drop of 0.3 percent in prices for fuel oil was more than offset by increases of 1.8 and 0.8 percent in prices for piped gas and electricity, respectively. Shelter costs rose 0.2 percent in July after increasing 0.3 percent in June. Within shelter, renters' costs increased 0.3 percent and homeowners' costs, 0.2 percent. Also contributing to the larger July housing increase was an upturn in the index for household furnishings and operations which rose 0.3 percent, reflecting a return from summer sales for many major housefurnishing items.

Transportation costs were unchanged in July. Gasoline prices fell 2.2 percent in July, following a 0.3-percent decline in June and a 2.6-percent jump in May, the traditional start of the summer driving season. Gasoline prices are now 18.2 percent below their peak level of last November. The index for new vehicles registered a 0.2-percent increase after seasonal adjustment. Automobile finance charges fell 0.1 percent in July, their fifth consecutive monthly decline. Used car prices registered their third consecutive large increase—up 1.1 percent in July—after declining in each of the first 4 months of the year. Automobile insurance costs rose 1.3 percent in July to a level 8.3 percent higher than in July 1990. The index for public

transportation rose 0.1 percent as a decline of 0.3 percent in airline fares was more than offset by increases in charges for other intercity and intracity transportation—up 1.3 and 0.8 percent, respectively.

The index for apparel and upkeep rose 0.9 percent in July. Smaller than normal seasonal price reductions for spring and summer clothing, reflecting tight inventories, were accompanied by earlier than usual introduction of higher-priced fall and winter wear. In addition, jewelry prices, which had fallen sharply in each of the 2 preceding months, advanced 5.5 percent in July.

The medical care component rose 0.6 percent in July, the same as the average monthly increase in the first 6 months of 1991. The index for medical care commodities rose 0.8 percent, partially due to a 0.9-percent rise in prices for nonprescription drugs and medical supplies. The index for medical care services increased 0.5 percent, with the cost of professional services and hospital and related services up 0.4 and 0.6 percent, respectively.

Entertainment costs rose 0.4 percent in July, following a 0.2-percent rise in June. Increases in the indexes for reading materials and in fees for music lessons or sports instruction accounted for over half of the entertainment advance.

The 0.3-percent increases in the index for other goods and services follows a 0.8-percent advance in June. The index for tobacco and smoking products, which rose 2.1 percent in June, declined 0.8 percent in July after seasonal adjustment. Increases in the indexes for tuition and other school fees and in school books and supplies—up 0.8 and 0.7 percent, respectively—accounted for about 95 percent of the rise in this major group.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.1 percent in July.

Recent Effects of Energy on the CPI

A decline in energy prices led to a moderate 2.7-percent increase at a seasonally adjusted annual rate in the All Items Consumer Price Index for All Urban Consumers (CPI-U) for the first half of 1991. During that period, energy prices fell at a 17.2-percent rate. The last full-year decline in energy prices occurred in 1986, when they dropped 19.7 percent and resulted in the small 1.1-percent rise in the CPI-U. Excluding energy, which represents just over 8 percent of the total CPI-U market basket, consumer prices rose at a 4.7-percent annual rate during the first 6 months of 1991.

In 1990, when energy prices surged 18.1 percent, the all items CPI-U rose 6.1 percent, its largest increase since 1980. The annual rate of increase in the CPI-U since 1980 had remained between 3.8 percent and 4.6 percent for each year except 1986. The CPI for All Items Less Energy rose 5.2 percent in 1990, its largest increase in 10 years.

In only 2 years since 1980 have energy prices changed at double-digit rates—1986 and 1990. (See chart A.) These 2 years correspond with periods during which the annual change for the all items index strayed from the 3.8 to 4.6 percent range.

The recent dramatic movements of energy prices were the result of war in Kuwait and Iraq. After Iraq invaded and occupied Kuwait in August of 1990, the risk associated with the uncertainty of oil supplies caused the prices of petroleum and petroleum-based products to jump. Between August and October 1990, energy prices posted large increases. (See chart B.) After fears of oil supply disruptions dissipated, prices began to stabilize and then decrease later in the year. The first 3 months of 1991 saw energy prices falling rapidly, at a 30.7-percent annual rate. The sharp turnaround in energy prices is evident in the annualized rates of price change for the second half of 1990 and the first half of 1991—30.7 percent and -17.2 percent, respectively.

The all items index reflected this reversal in the energy component on a smaller scale. Its relatively large increase of 6.1 percent in 1990 compares with a relatively small advance of 2.7 percent in the first half of 1991. The greater stability in the index for All Items Less Energy kept the turnaround from being more pronounced. That index rose only slightly less in the first half of 1991 than in all of 1990, dropping from a 5.2-percent increase in 1990 to an annual rate of 4.7 percent in the first half of 1991.

Within the energy category, it was the petroleum-based energy commodities section (motor fuel and fuel oil) that caused the fluctuation in energy prices in 1990 and 1991. The Energy Commodities index, which represents more than half of the total energy component, rose by a substantial 35.4 percent in 1990. Motor fuel prices jumped 36.5 percent while those for fuel oil were up 29.9 percent. Prices for these items turned around in the first half of 1991 and registered large decreases. The motor fuel index fell at a 29.1-percent rate, while the index for fuel oil dropped at an even greater rate—44.7 percent. Meanwhile, energy services (natural gas and electricity) showed relatively little movement in either 1990 or 1991. The energy services index rose just 1.5 percent in 1990 and at an annual rate of 0.5 percent in the first 6 months of 1991.

Energy commodity prices had risen rapidly in the period from August to October 1990, in conjunction with the Iraqi invasion of Kuwait, reaching a rate of 171.9 percent over that 3-month span. As worries about oil supplies diminished, prices of energy commodities leveled off in November and declined in December. The Energy Commodities index then fell at least 5 percent in each of the first 3 months of 1991 as prices receded from their inflated, post-Iraqi invasion levels. For the 3 months ended in March, energy commodity prices fell at an annual rate of 52.8 percent. Since then, prices have moved within a narrower range, and registered a positive annual rate of 3.8 percent in the second quarter.

Prices for All Items Less Energy have not followed the pattern of movement in energy prices, which have been much more variable. Besides increasing or decreasing by lesser magnitudes, the timing of the movements was different. For example, the largest monthly increase for the All Items Less Energy index occurred in January of this year, while its movements for last August, September, and October were somewhat unremarkable.

Volatility in energy prices can still exert great influence on the All Items CPI-U. Although petroleum-based energy only accounts for less than 5 percent of the total CPI-U market basket, the magnitude of its price swings can cause its movements to be felt throughout the index. In this recent case of energy price run-ups, the effects seemed to have been short-lived and did not manifest themselves throughout other areas of the index.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions are defined as the four Census regions.

³ Indexes on a December 1986 = 100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions are defined as the four Census regions.

³ Indexes on a December 1986=100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Regions are defined as the four Census regions.

² Indexes are on a December 1977 = 100 base except for the U.S. which is on a 1967 = 100 base.

³ Indexes on a December 1982 = 100 base.

⁴ Indexes on a December 1986 = 100 base.

NA Data not adequate for publication.

- Data not available.

¹ Regions are defined as the four Census regions.

NA Data not adequate for publication.

² Deposit may be included in price.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 57,000 housing units and approximately 19,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and services establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuel, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Some data, such as used car prices, are obtained from secondary sources.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of country, for cross-classifications of regions and population-size classes, and for 29 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, 1982-84, which equals 100.0. An increase of 7 percent, for example, is shown as 107.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$100 in 1982-84 to \$107.

For further details, see *BLS Handbook of Methods*, BLS Bulletin 2285, April 1988, and *The Consumer Price Index: 1987 Revision*, BLS Report 736, January 1987.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	112.5
Less previous index	108.5
Equals index point change	4.0
Percent Change	
Index point difference	4.0
Divided by the previous index	108.5
Equals	0.037
Results multiplied by one hundred	0.037×100
Equals percent change	3.7

Energy Prices

Prices are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census regions cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas for 500 kilowatt hours of electricity (table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU'S (U.S. Department of Energy).
1 kwh = 3,412 BTU'S (Edison Electric Institute)
1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from the BLS regional offices or from the Washington office upon request.

Reference Base Change

Beginning with the release of data for January 1988 in February 1988, most Consumer Price Indexes have shifted to a new reference base year. All indexes previously expressed on a base of 1967=100, or any other base through December 1981, have been rebased to 1982-84=100. Only indexes with a base later than December 1981 have maintained their bases. This base change was reviewed by the Office of Federal Statistical Policy and Standards, Office of Management and Budget, and is in keeping with the Government's longstanding policy to update index bases periodically. Selection of the 1982-84 period was made to coincide with the updated expenditure weights, which are based upon data tabulated from the Consumer Expenditure Surveys for 1982, 1983, and 1984. The last rebasing of CPI data occurred in

February 1971, when the 1967 base was substituted for the former 1957-59 base.

Historical data for each CPI series on the new base are available from the Bureau of Labor Statistics. For the convenience of users, the BLS will continue to publish all-items indexes for the U.S. city average, and for the individual local areas for which CPI's are published, on their former official reference base (1967=100 in most cases).

Conversion factors and an accompanying fact sheet on rebasing are available from BLS. Dividing by one of these factors will rebase the related index series from its current 1982-84 base to its previous reference base. (*Users should note:* Because of rounding effects, there may be occasional minor differences between the final rebased index and the result obtained using the conversion factor.)

Adjustment of Shelter Indexes for Aging Effects

Beginning with the January 1988 CPI, the Bureau of Labor Statistics adjusted the monthly CPI shelter indexes for the change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the chosen method is operationally feasible.¹ The adjustment affects CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

The quality of a housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing units.² The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect.

¹ A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and *Journal of Business and Economic Statistics*, Vol. 6, No. 3, July 1988, pp. 359-71 and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects," BLS Working Paper No. 160, April 1986, and *Journal of Urban Economics*, Vol. 23, March 1988, pp. 162-78. These papers are available from the BLS on request.

² For details on existing quality adjustment methods, see, *BLS Handbook of Methods*, chapter 19 (BLS Bulletin 2285).

The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship between a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1985 through 1989 were replaced at the end of 1989. The seasonal movement of all items and 45 other aggregations is derived by combining the seasonal movement of 55 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 55 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years,

but the seasonally adjusted indexes will be used before that period.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called intervention analysis for some CPI series. Intervention analysis allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are removed from the data prior to calculation of seasonal factors. For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally

adjusted data for those series. For some women's apparel indexes and the girls' apparel index, the procedure was used to offset the effects of changes in pricing methodology; and for new cars and for new vehicles, this procedure was used to offset the effects of changes in marketing strategies and the introduction of new models. A description of intervention analysis, as well as a list of events treated as interventions and seasonal factors for these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212 or by calling Claire McAnaw on (202)504-2051.
