## U.S. DEPARTMENT OF LABOR

Lynn Martin, *Secretary*

### BUREAU OF LABOR STATISTICS

#### OFFICE OF PRICES AND LIVING CONDITIONS

Kenneth V. Dalton, *Associate Commissioner*

The *CPI Detailed Report* is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954. Subscription price per year \$23 domestic, and \$28.75 foreign. Single copy domestic, \$6; foreign, \$7.50. Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, telephone (202) 512-2311. For technical information call the CPI information and analysis office at (202) 272-5160.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii, \$160 in Alaska and Canada.

Information in this publication will be made available to sensory impaired individuals upon request. Voice phone: (202) 523-1221; TDD phone: (202) 523-3926; TDD Message Referral phone: 1-800-326-2577.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC, and at additional mailing offices.

# Price Movements

## January 1992

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.1 percent before seasonal adjustment in January to a level of 138.1 (1982-84=100). For the 12-month period ended in January, the CPI-U increased 2.6 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also rose 0.1 percent in January prior to seasonal adjustment. The January 1992 CPI-W level of 136.0 was 2.4 percent higher than the index in January 1991.

### CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.1 percent in January, following increases of 0.4 percent in November and 0.2 percent in December. During the past 3 months, the CPI-U has advanced at a 2.6-percent seasonally adjusted annual rate. Both the food and energy indexes registered declines in January—down 0.4 and 1.5 percent, respectively. A seasonally adjusted decline in prices for fresh fruits and vegetables was principally responsible for the drop in the food index. The decrease in

the energy index, the first since July, reflected a sharp drop in prices for petroleum-based energy products. Excluding food and energy, the CPI-U rose 0.3 percent in January after increasing 0.2 percent in December.

The index for food and beverages decreased 0.4 percent in January, following seasonal adjustment. Grocery store food prices, which rose 0.4 percent in December, fell 0.7 percent in January. Declines in the indexes for fruits and vegetables and for meats, poultry, fish, and eggs—down 4.1 and 1.0 percent, respectively—more than offset relatively large increases in the other three major grocery store food groups. Prices for fresh fruits and vegetables, which generally increase sharply in January, rose only 0.6 percent, resulting in a 7.0-percent seasonally adjusted decline. Beef and pork prices continued to fall—down 0.4 and 0.8 percent, respectively—and, coupled with a 12.4-percent drop in egg prices, more than offset an increase in poultry prices. However, the 1.0-percent increase in the index for cereal and bakery products was the largest advance in this component in 12 months. The indexes for dairy products and other food at home each increased 0.6 percent in January. The other two components of the food

and beverage index, restaurant meals and alcoholic beverages, rose 0.1 and 0.4 percent, respectively.

The housing index rose 0.2 percent in January, following increases of 0.3 percent in each of the preceding 4 months. A decline in the index for fuels and other utilities was responsible for the moderation, more than offsetting a larger increase in shelter costs and an upturn in the index for household furnishings and operations. Fuel oil prices declined for the second consecutive month—down 5.5 percent in January—and are now 31.3 percent lower than their peak level of October 1990. The indexes for natural gas and electricity also decreased in January, following seasonal adjustment—down 0.1 and 0.6 percent, respectively. Shelter costs rose 0.5 percent in January, following increases of 0.3 percent in each of the last 4 months of 1991. Within shelter, renters' and homeowners' costs rose 0.7 and 0.3 percent, respectively, while maintenance and repair costs declined 0.1 percent. The large increase in renters' costs reflects a 2.3-percent rise in the index for lodging while out of town. Residential rents rose 0.3 percent. The index for household furnishings and operations increased 0.3 percent in January after declining 0.2 percent in December.

The transportation component fell 0.3 percent in January, largely as a result of a decline in the index for motor fuels. Gasoline prices fell 1.9 percent and, as of January, were 18.1 percent lower than their peak level of November 1990. Also contributing to the decrease in the transportation component was a decline in automobile purchase costs. Used car prices fell 1.1 percent and a 0.1-percent increase in new car prices was more than offset

by a 2.4-percent drop in automobile finance charges. Automobile finance charges have fallen 9.5 percent in the past 12 months. Partially offsetting these declines were increases in the indexes for automobile insurance and public transportation. Automobile insurance costs rose 0.7 percent in January and were 8.3 percent above their level of a year ago. Public transportation costs, reflecting a sharp increase in intracity public transportation charges, increased 1.1 percent in January and have risen 4.6 percent since October 1991.

The index for apparel and upkeep, which fell 1.1 percent in December, rose 0.3 percent in January after seasonal adjustment. Jewelry prices rose 4.7 percent in January, following an 8.2-percent decline in December, and accounted for virtually all of the apparel increase. The January price declines for most clothing items were about normal. (Prior to seasonal adjustment, the index for apparel and upkeep declined 1.3 percent.)

Medical care prices rose 0.7 percent in January, the same as in December, bringing the change from a year ago to 7.8 percent. The index for medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—increased 0.8 percent. The medical care services index advanced 0.7 percent, with the cost of professional and hospital and related services up 0.4 percent and 0.8 percent, respectively.

The entertainment index rose 0.1 percent in January, following declines in each of the preceding 2 months. This resulted in part from a 0.5-percent advance in the index for reading material—newspaper, magazines, periodical, and books.

The other goods and services index rose 0.3 percent in January, its smallest advance since September 1990. Increases in selected personal expenses (legal service fees and funeral expenses) more than offset a 0.7-percent decline in prices for tobacco and smoking products.

#### **CPI for Urban Wage Earners and Clerical Workers (CPI-W)**

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers was unchanged in January.

# Response Rates for the Consumer Price Index

In an effort to measure the outcome of data collection for the Consumer Price Index (CPI), BLS calculates response rates for the CPI. Response rates measure the proportion of completed surveys to those issued. Response rates help measure CPI accuracy. Failure of a data unit to respond at either the data collection stage or estimation stage represents a loss of statistical information which dilutes the accuracy of the sample. BLS publishes response rates annually to assist the data user in judging the accuracy of CPI data.

BLS calculates response rates for the CPI-U at the data collection phase for initiation and pricing, and at the data estimation phase for pricing. The response rate at the data collection phase is the number of responding sample units divided by the number of eligible sample units. A sample unit is eligible if it belongs to the defined target population and if responses should be collected from the unit for one or more items. The response rate at estimation is defined as the number of sample units used in estimation divided by the number of eligible sample units.

Response rates for 1991 are presented in tables R1-R17. Table R1 shows response rates for all data included in the CPI for All Urban Consumers, U.S. city average by major group, for all of 1991. Tables R2-R16 show rates for current data collection in selected areas for which indexes are published monthly and bimonthly. Table R17 shows the response rates for initiation for those areas which underwent sample rotation in 1991.

The response rates in tables R1-R16 are separated into commodities and services, and housing (shelter). Commodities and services are further broken down into outlets and quotes. An "outlet" is a generic term that designates the place where prices are collected. A "quote" is a specific item to be priced from a specific outlet. There may be from 1 to more than 50 quotes priced per outlet.

In table R1, it is important to note the relatively low per-

centages of quotes reported collected and used in estimation for apparel and upkeep. Low rates for these items can be partially attributed to the design of the apparel sample. Because apparel items are commonly in stores only during certain times of the year, most of the apparel sample is doubled, with each half of the sample designated for pricing during part of the year. Thus, at any particular time of the year a large number of apparel quotes, although eligible, are designated out of season and prices are not collected.

The housing (shelter) section in tables R1-R16 includes categories for owners, renters, and those for whom the tenure status is unknown. A unit qualifies as an owner or renter unit if its tenure status is known either by previous knowledge or is collected in the current interview period. The response rates at the data collection phase for housing (shelter) are separated into three categories. If useable information is obtained, the unit is designated *data reported*. If the assigned unit is located but is unoccupied, the unit is designated found *vacant*. In instances where the unit is eligible but no data are available (for example, refusals or no one at home) the unit is designated *other*.

Data for initiation (table R17) are for those areas which underwent sample rotation in 1991. Approximately one-fifth of the pricing areas, called primary sampling units, are rotated each year. The response rate data for initiation reflect the rate of success in attempting to price the new designated sample for the first time. These data are unique in that the outlets and quotes are only counted once, as opposed to the repeated (monthly or bimonthly) pricing that is reflected in tables R1-R16.

For additional information on response rates, write to the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Room 3216 BC, Washington, DC 20212, or call James Longacre at (202) 272-2385.

# Intervention Analysis in Seasonal Adjustment

Seasonal adjustment is the process by which the seasonal movement of prices-for goods or services in a Consumer Price Index series is quantified and then factored out of the series to permit analysis of nonseasonal price movements. In most cases, the X-11-ARIMA program developed by Statistics Canada is used to calculate factors for seasonal adjustment of both historical and current series. Some series are adjusted using intervention analysis in conjunction with either X-11-ARIMA seasonal adjustment or *state space model-based seasonal adjustment* (see below).

Intervention analysis is a technique which can be used to produce a better seasonal adjustment. The technique allows nonseasonal economic phenomena such as level shifts to be factored out of the indexes before adjustment. The result is an adjustment based on a representation of the series with the seasonal pattern emphasized. Intervention analysis also allows for seasonal shifts to be accounted for, resulting in a better seasonal adjustment in the periods before and after the shift occurred.

When intervention analysis is used in conjunction with X-11-ARIMA seasonal adjustment, the interventions are modeled before seasonal adjustment. Prior-adjustment factors are calculated and then applied using the prior-adjustment option of X-11-ARIMA. For a more comprehensive discussion of intervention analysis, please see "Improvements in CPI Procedures," *CPI Detailed Report*, Bureau of Labor Statistics, March 1990.

In January 1992, the series listed below were adjusted using intervention analysis before X-11-ARIMA processing. All series were examined using an 8-year span, 1984-1991, with the exception of women's dresses and the new car size classes, which were examined using a 5-year span.

- Alcoholic beverages<sup>1</sup>
- Alcoholic beverages at home<sup>1</sup>
- Beer and ale at home<sup>1</sup>
- Fuel oil
- Fuel oil and other household fuel commodities
- Women's coats and jackets
- Women's dresses
- Women's separates and sportswear
- Women's underwear, nightwear, hosiery, and accessories
- Women's suits
- Girls' apparel
- New vehicles
- New cars
- Subcompact new cars<sup>1</sup>

- Compact new cars<sup>1</sup>
- Intermediate new cars<sup>1</sup>
- Full-size new cars<sup>1</sup>
- New trucks
- Motor fuel and motor oil
- Motor fuel
- Gasoline, all types
- Leaded regular gasoline
- Unleaded regular gasoline
- Unleaded premium gasoline
- Tobacco and smoking products

For each series that was adjusted using intervention analysis in conjunction with X-11-ARIMA, a complete list of level shifts is provided in the table below, along with the identified causes for each shift. Outliers for each series are included in the table.

An alternative to the intervention-adjusted X11-ARIMA procedure is the *state space model-based seasonal adjustment* method. This method adjusts simultaneously for interventions and seasonal effects, rather than sequentially as in the X-11-ARIMA methodology, using structural statistical models with explanatory variables. Recent BLS research on price data series including women's apparel demonstrates that, based on a number of statistical criteria, this method is a promising alternative to X-11-ARIMA and its intervention enhancements, whether or not structural shocks or interventions are present in the unadjusted series.<sup>2</sup>

The *state space* structural model-based method of seasonal adjustment was introduced this year for the adjustment of January 1991-December 1991 indexes for three women's apparel series. Dresses, separates and sportswear, and suits were the series affected by a structural change in the Consumer Price Index methodology which allowed earlier introduction of seasonal clothing. The change took place early in 1990, and affected the 1991 in-

<sup>1</sup> This series was seasonally adjusted using intervention analysis in conjunction with X-11-ARIMA for the first time this year.

<sup>2</sup> See Jain, Raj. "A State Space Modeling Approach to the Seasonal Adjustment of the Consumer Price Index and Other BLS Indexes: Some Empirical Results," *Proceeding of the Business and Economics Section*, American Statistical Association, 1990, pp. 461-466, and Jain, Raj. "A State Space Model-Based Approach to Intervention Analysis in the Seasonal Adjustment of BLS Series: Some Empirical Results," *Proceedings of the Business and Economics Section*, American Statistical Association, 1991, forthcoming.

dexes. For a more comprehensive discussion of the methodology change, see "Improvements in CPI Procedures," *CPI Detailed Report*, Bureau of Labor Statistics, May 1990. The resulting seasonal adjustment more accurately reflects the effects of the price methodology change on the indexes, and therefore results in more accurate seasonal seasonal adjustment factors.<sup>3</sup>

For further information, write to the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Room 3212 BC, Washington, DC 20212, or call Claire McAnaw at (202) 504-2051.

<sup>3</sup> Intervention analysis in combination with X-11-ARIMA continued to be used for the adjustment of all women's apparel indexes prior to January 1991.

## Series adjustments prior to X-11-ARIMA seasonal adjustment

Series	Level shifts period(s)	Event	Outliers
Alcoholic beverages	9/85-10/85	Federal excise tax increase on distilled spirits.	1/91
	12/90-2/91	Federal excise tax increase.	
Alcoholic beverages at home	9/85-10/85	Federal excise tax increase on distilled spirits.	none
	12/90-2/91	Federal excise tax increase.	
Beer and ale at home	12/90-2/91	Federal excise tax increase.	none
Fuel oil and other household fuel commodities	1/86-4/86	Increased supply from OPEC.	1/90
	7/90-10/90	Shortage and anticipated shortage in oil supply due to Persian Gulf crisis.	
	11/90-5/91	Recovery from price shock due to Persian Gulf crisis.	
Fuel oil	12/85-7/86	Increased supply from OPEC.	1/86, 1/90
	7/90-10/90	Shortage and anticipated shortage in oil supply due to Persian Gulf crisis.	
	11/90-5/91	Recovery from price shock due to Persian Gulf crisis.	
Women's coats	12/8-41/85	Slack demand, excessive inventories.	7/87
	8/85-9/85	Higher than usual introductory prices.	
	12/85-1/86	Slack demand, excessive inventories.	
	8/87-9/87	Higher than usual introductory prices.	
Women's dresses <sup>2</sup>	1/90	Negative seasonal shift resulting from a methodological change allowing substitutions to occur earlier in the selling season than in previous years. Retailer's better control over price-cutting activity at the end of each season, exacerbated the shifts caused by the procedural changes.	7/88, 8/91
	3/90	Positive seasonal shift.	
Women's separates <sup>2</sup>	1/84-3/84	Late introduction of spring/summer lines	8/88, 8/89
	3/87-4/87	New procedures for handling seasonal items.	
	1/90	Negative seasonal shift resulting from a methodological change allowing substitutions to occur earlier in the selling season than in previous years. Retailer's better control over inventories, which tend to lessen price-cutting activity at the end of each season, exacerbated the shifts caused by the procedural changes.	
Women's nightwear			8/86, 10/87 11/87, 3/89

**Series adjustment prior to X-11-ARIMA seasonal adjustment—Continued**

<b>Series</b>	<b>Level shifts period(s)</b>	<b>Event</b>	<b>Outliers</b>
Women's suits <sup>2</sup> 2/87, 7/87	1/90 2/90	Negatives seasonal shift resulting from a methodological change allowing substitutions to occur earlier in the selling season than in previous years. Retailer's better control over inventories, which tend to lessen price-cutting activity at the end of each season, exacerbated the shifts caused by the procedural changes.	
Girl's apparel	1/90	The CPI changed its methodology to allow substitutions to occur earlier in the selling season than in previous years.	6/87, 8/88, 5/89, 8/89
New vehicles	4/86-6/86 0/86-11/86 1/87-3/87 2/88-3/88 7/89-9/89	Domestic price increase and weak dollar. Discontinuation of rebates with anticipation of 1987 tax bill. Enactment of 1987 tax bill; domestic sales down 20.9 percent from previous February; incentives increased. Domestic truck rebates. High inventories combined with unusual slump in sales.	2/87, 3/87
New cars	4/86-6/86 10/86-11/86 1/87-2/87 6/89-9/89 1/90-3/90	Domestic price increase and weak dollar. Discontinuation of rebates with anticipation of 1987 tax bill. Enactment of 1987 tax bill; domestic sales down 20.9 percent from previous February; incentives increased. High inventories combined with unusual slump in sales. Weakest sales in 7 years for Big Three. Domestic dealers blamed bad weather, consumer anxiety about higher income and property tax bills; bigger rebates and concessions.	9/88
Subcompact new cars	1/87-2/87 7/89-9/89 2/90	Enactment of 1987 tax bill; domestic sales down 20.9 percent from previous February; incentives increased. High inventories combined with unusual slump in sales. Weakest sales in 7 years for Big Three. Domestic dealers blamed bad weather, consumer anxiety about higher income and property tax bills; bigger rebates, and concessions.	3/87, 9/88
Compact new cars	1/87-2/87	Enactment of 1987 tax bill; domestic sales down 20.9 percent from previous February; incentives increased.	3/87

**Series adjustment prior to X-11-ARIMA seasonal adjustment—Continued**

<b>Series</b>	<b>Level shifts period(s)</b>	<b>Event</b>	<b>Outliers</b>
Intermediate new cars	1/87-2/87	Enactment of 1987 tax bill; domestic sales down 20.9 percent from previous February; incentives increased.	11/87, 1/88, 9/88
Full-size new cars			1/87, 1/88, 9/88, 12/89
New trucks	4/86-6/86 10/86-11/86 1/87-3/87 2/88-3/88	Domestic price increase and weak dollar. Discontinuation of rebates coupled with anticipation of 1987 tax bill. Enactment of 1987 tax bill; introduction of rebates for trucks. Domestic truck rebates.	10/89, 2/90
Motor fuel and motor oil	2/86-4/86 12/86-2/87 3/89-4/89 7/89-9/89 12/89-1/90 7/90-10/90 12/90-3/91	Saudi Arabia increased production. OPEC reunification. Short-term supply disruption. Over-reaction to short-term supply disruption. Low supply due to unexpected very cold weather. Iraqi invasion of Kuwait caused panic pricing. Recovery from price shock due to Persian Gulf crisis.	6/86, 8/86
Motor fuel	2/86-4/86 12/86-2/87 3/89-4/89 7/89-9/89 12/89-1/90 7/90-10/90 12/90-3/91	Saudi Arabia increased production. OPEC reunification. Short-term supply disruption. Over-reaction to short-term supply disruption. Low supply due to unexpected very cold weather. Iraqi invasion of Kuwait caused panic pricing. Recovery from price shock due to Persian Gulf crisis.	6/86, 8/86
Gasoline, all types	2/86-4/86 12/86-2/87 3/89-4/89 7/89-9/89 12/89-1/90 7/90-10/90 12/90-3/91	Saudi Arabia increased production. OPEC reunification. Short-term supply disruption. Over-reaction to short-term supply disruption. Low supply due to unexpected very cold weather. Iraqi invasion of Kuwait caused panic pricing. Recovery from price shock due to Persian Gulf crisis.	6/86, 8/86
Leaded regular gasoline <sup>1</sup>	2/8-64/86 12/8-62/87	Saudi Arabia increased production. OPEC reunification.	6/86, 8/86

**Series adjustments prior to X-11-ARIMA seasonal adjustment—Continued**

<b>Series</b>	<b>Level shifts period(s)</b>	<b>Event</b>	<b>Outliers</b>
	3/89-4/89	Short-term supply disruption.	
	7/89-9/89	Over-reaction to short-term supply disruption.	
	2/89-1/90	Low supply due to unexpected very cold weather.	
	7/90-10/90	Iraqi invasion of Kuwait caused panic pricing.	
Unleaded regular gasoline	2/86-4/86	Saudi Arabia increased production.	6/86, 8/86
	12/86-2/87	OPEC reunification.	
	3/89-4/89	Short-term supply disruption.	
	7/89-9/89	Over-reaction to short-term supply disruption.	
	12/89-1/90	Low supply due to unexpected very cold weather.	
	7/90-10/90	Iraqi invasion of Kuwait caused panic pricing.	
	12/90-3/91	Recovery from price shock due to Persian Gulf crisis.	
Unleaded premium gasoline	2/86-4/86	Saudi Arabia increased production.	6/86, 8/86
	12/86-2/87	OPEC reunification.	
	3/89-4/89	Short-term supply disruption.	
	7/89-9/89	Over-reaction to short-term supply disruption.	
	12/89-1/90	Low supply due to unexpected very cold weather.	
	7/90-10/90	Iraqi invasion of Kuwait caused panic pricing.	
	12/90-3/91	Recovery from price shock due to Persian Gulf crisis.	
Tobacco and smoking products	12/88-1/89	State excise tax increase and wholesale price increase for cigarettes.	12/85, 12/89
	5/89-6/89	Wholesale price increase for cigarettes.	
	5/90-7/90	State excise tax increase and wholesale price increase.	
	12/90-1/91	Federal excise tax increase.	

<sup>1</sup> Leaded regular gasoline was last published in April 1991. The seasonal factors previously published are the final seasonal factors for this series.

<sup>2</sup> This series was prior-adjusted using intervention analysis. Revised seasonally adjusted indexes were computed for January 1987-December

1990 using X-11-ARIMA. The seasonally adjusted indexes for January 1991-December 1991 were calculated using a state space model-based approach with interventions to model the methodology-induced seasonal shift.

<sup>1</sup> Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

<sup>2</sup> Regions are defined as the four Census regions.

<sup>3</sup> Indexes on a December 1986=100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

<sup>1</sup> Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

<sup>2</sup> Regions are defined as the four Census regions.

<sup>3</sup> Indexes on a December 1986=100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

# Technical Notes

## Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 57,000 housing units and approximately 19,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and services establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuel, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Some data, such as used car prices, are obtained from secondary sources.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of country, for cross-classifications of regions and population-size classes, and for 29 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, 1982-84, which equals 100.0. An increase of 7 percent, for example, is shown as 107.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$100 in 1982-84 to \$107.

For further details, see *BLS Handbook of Methods*, BLS Bulletin 2285, April 1988, and *The Consumer Price Index: 1987 Revision*, BLS Report 736, January 1987.

## Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	112.5
Less previous index	108.5
Equals index point change	4.0
Percent Change	
Index point difference	4.0
Divided by the previous index	108.5
Equals	0.037
Results multiplied by one hundred	$0.037 \times 100$
Equals percent change	3.7

## Energy Prices

Price are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census regions cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

*Natural gas and electricity.* Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas for 500 kilowatt hours of electricity (table PI) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

*Fuel oil.* Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

*Gasoline.* Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU'S (U.S. Department of Energy).  
1 kwh = 3,412 BTU'S (Edison Electric Institute)  
1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

## Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from the BLS regional offices or from the Washington office upon request.

## Reference Base Change

Beginning with the release of data for January 1988 in February 1988, most Consumer Price Indexes have shifted to a new reference base year. All indexes previously expressed on a base of 1967=100, or any other base through December 1981, have been rebased to 1982-84=100. Only indexes with a base later than December 1981 have maintained their bases. This base change was reviewed by the Office of Federal Statistical Policy and Standards, Office of Management and Budget, and is in keeping with the Government's longstanding policy to update index bases periodically. Selection of the 1982-84 period was made to coincide with the updated expenditure weights, which are based upon data tabulated from the Consumer Expenditure Surveys for 1982, 1983, and 1984. The last rebasing of CPI data occurred in

February 1971, when the 1967 base was substituted for the former 1957-59 base.

Historical data for each CPI series on the new base are available from the Bureau of Labor Statistics. For the convenience of users, the BLS will continue to publish all-items indexes for the U.S. city average, and for the individual local areas for which CPI's are published, on their former official reference base (1967=100 in most cases).

Conversion factors and an accompanying fact sheet on rebasing are available from BLS. Dividing by one of these factors will rebase the related index series from its current 1982-84 base to its previous reference base. (*Users should note:* Because of rounding effects, there may be occasional minor differences between the final rebased index and the result obtained using the conversion factor.)

### Adjustment of Shelter Indexes for Aging Effects

Beginning with the January 1988 CPI, the Bureau of Labor Statistics adjusted the monthly CPI shelter indexes for the change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the chosen method is operationally feasible.<sup>1</sup> The adjustment affects CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

The quality of a housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing units.<sup>2</sup> The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect.

<sup>1</sup> A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and *Journal of Business and Economic Statistics*, Vol. 6, No. 3, July 1988, pp. 359-71 and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects," BLS Working Paper No. 160, April 1986, and *Journal of Urban Economics*, Vol. 23, March 1988, pp. 162-78. These papers are available from the BLS on request.

<sup>2</sup> For details on existing quality adjustment methods, see, *BLS Handbook of Methods*, chapter 19 (BLS Bulletin 2285).

The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship between a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

### Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1985 through 1989 were replaced at the end of 1989. The seasonal movement of all items and 45 other aggregations is derived by combining the seasonal movement of 55 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 55 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years,

but the seasonally adjusted indexes will be used before that period.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called intervention analysis for some CPI series. Intervention analysis allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are removed from the data prior to calculation of seasonal factors. For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally

adjusted data for those series. For some women's apparel indexes and the girls' apparel index, the procedure was used to offset the effects of changes in pricing methodology; and for new cars and for new vehicles, this procedure was used to offset the effects of changes in marketing strategies and the introduction of new models. A description of intervention analysis, as well as a list of events treated as interventions and seasonal factors for these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212 or by calling Claire McAnaw on (202)504-2051.
