The *CPI Detailed Report*—(ISSN 0161-7311) is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954 or by calling (202) 783-3238, Visa or Mastercard accepted. FAX (202) 512-2233. Subscription price per year: \$23 domestic, \$28.75 foreign. Single copy domestic, \$7.50; foreign, \$9.38. Prices are subject to change by the U.S. Government Printing Office.

Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or telephone (202) 512-1806. POSTMASTER: Send address changes to *CPI Detailed Report*, U.S. Government Printing Office, Washington, DC 20402.

For Technical information call the CPI Information and Analysis Office at (202) 606-7000, or write to Consumer Price Indexes, 2 Massachusetts Avenue, NE, Room 3615, Washington, DC 20212-0001.

CPI MAILGRAM provides selected U. S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii; \$160 in Alaska and Canada.

Information in this publication will be made available to sensory impaired individuals upon request. Voice phone: (202) 606-STAT; TDD phone: (202) 606-5897; TDD message referral phone: 1-800-326-2577. This material is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC and at additional mailing offices.

Price Movements January 1996

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.6 percent before seasonal adjustment in January to a level of 154.4 (1982-84=100). For the 12-month period ended in January, the CPI-U increased 2.7 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.5 percent in January, prior to seasonal adjustment. The January 1996 CPI-W level of 151.7 was 2.6 percent higher than the index in January 1995.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.4 percent in January, following an increase of 0.2 percent in December. The energy index registered its second consecutive large increase, advancing 1.9 percent in January after increasing 1.1 percent in December. The index for petroleum-based energy rose 4.2 percent in January, following an increase of 2.0 percent in December. The food index increased 0.1 percent, the same as in December. Excluding food and energy, the CPI-U rose 0.3 percent, following increases of 0.1 percent in each of the 2 preceding months. Larger increases in the indexes for apparel and upkeep and for shelter, coupled with the substantially smaller decline in the index for airline fares, were responsible for the

acceleration in this index from December to January.

The food and beverages index rose 0.1 percent in January. The grocery store food index, which increased 0.1 percent in December, was unchanged in January. (Prior to seasonal adjustment, grocery store food prices rose 1.1 percent in January.) Smaller than seasonal increases in prices for fruits and vegetables—down 1.0 percent after seasonal adjustment—offset generally small increases in most other major grocery store food groups. The index for meats, poultry, fish, and eggs rose 0.1 percent in January, as increases in prices for poultry and eggs offset declines in the indexes for beef, pork, and for fish and seafood. The indexes for dairy products and other food at home increased 0.2 and 0.1 percent, respectively. The index for cereal and bakery products rose 0.9 percent in January, its largest advance since a similar increase in January 1991. Prices for bakery products rose 1.4 percent, reflecting a jump in flour prices. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—increased 0.1 and 0.4 percent, respectively, in January. A jump in wine prices—up 1.8 percent—reflecting a return to regular prices after late year inventory clearance was largely responsible for the advance in the alcoholic beverage index.

The housing component rose 0.3 percent in January, the

same as in December. Shelter costs rose 0.4 percent in January after increasing 0.2 percent in December. Within shelter, renters' costs and homeowners' costs rose 0.7 and 0.2 percent, respectively, while maintenance and repair costs decreased 0.2 percent. The rise in renters' costs reflects a 1.8 percent increase in the index for lodging while out of town; residential rents rose 0.3 percent. The index for fuel and utilities rose 0.5 percent in January, following a 0.2-percent increase in December. The index for household fuels rose 0.6 percent as increases of 8.8 percent in the index for fuel oil and 0.6 percent in the index for natural gas more than offset a 0.4-percent decline in the index for electricity. The index for other utilities and public services rose 0.3 percent, largely as a result of increases of 0.6 percent in the indexes for water and sewerage treatment and for cable television. The index for household furnishings and operation rose 0.2 percent in January as price declines for appliances partially offset increases in other housefurnishings.

The transportation index, which turned up in slightly in December after declining throughout most of the second half of 1995, advanced 0.7 percent in January. A larger increase in the index for motor fuels and a smaller decline in airline fares were largely responsible for the acceleration in the transportation component. The index for motor fuels rose 3.8 percent as gasoline prices registered their first increase in 7 months. (Prior to seasonal adjustment, gasoline prices rose 2.3 percent in January.) The index for airline fares, which fell 5.5 percent in December, declined 0.9 percent in January. The increase of 0.1 percent in the index for new vehicle prices continues its pattern of very little movement evident since the introduction of the 1996 models. (As of January, the proportion of 1996 models was about 70 percent of the

new car sample.) Automobile finance charges declined for the fourth consecutive month—down 2.5 percent in January. The index for used cars rose 0.8 percent in January and has increased twice as much as the new car index during the past 12 months—up 3.6 percent.

The index for apparel and upkeep increased 0.7 percent in January. (Prior to seasonal adjustment, clothing prices fell 0.5 percent, reflecting post-holiday discounting.)

Medical care costs rose 0.4 percent in January to a level 4.0 percent above a year ago. The index for medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—increased 0.5 percent in January. The index for medical care services rose 0.4 percent. Charges for professional services and hospital and related services increased 0.3 and 0.5 percent, respectively, in January.

Entertainment costs rose 0.3 percent in January. Increases in the indexes for reading materials and for fees for participant sports—up 0.9 and 1.3 percent, respectively—accounted for virtually all of the January advance.

The index for other goods and services increased 0.2 percent in January, the same as in December. In January, the indexes for school books and supplies and personal financial services rose 1.0 and 1.6 percent, respectively, while the index for tobacco and smoking products declined 0.3 percent. (Prior to seasonal adjustment, the index for tobacco rose 0.5 percent.)

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers also rose 0.4 percent in January.

CPI-U 12-month changes, 1987 to present

Effects of the Government Shutdown on January CPI Data

As previously announced, the release of the Consumer Price Index for January, originally scheduled for February 14, was rescheduled for February 28. The scheduled collection of consumer price data, which generally consists of 3 consecutive 6-day pricing periods excluding weekends and holidays starting at the beginning of each month, was substantially altered for January. No collection of prices was possible until the end of the Federal Government shutdown on January 8. From that date through January 14, only the samples for housing and bimonthly collected commodity and services were available for pricing, and collection was further limited by the blizzard that closed many retail outlets and Bureau of Labor Statistics (BLS) offices during the week of January 8. The monthly pricing schedule was modified such that pricing period 1 (PP-1) was rescheduled from January 2-9 to January 15-19. PP-2 was rescheduled from January 10-18 to January 19-25 and PP-3 was rescheduled from January 19-26 to January 23-31. This resulted in virtually complete pricing for the January index; the number of price quotes collected and used in January 1996 was approximately 98 percent of the corresponding number for January 1995.

This alteration in the collection schedule for January increased the length of time between the December and January pricing periods by about one-third. This alteration of the January schedule will also have an effect of reducing the interval between the January and February pricing periods by a corresponding amount, with the result that the interval between December and February pricing periods will be in line with the historical pattern.

In view of the modified price collection schedule for the January CPI and the extended interval between the December and January indexes induced by it, BLS attempted to assess the effect of these changes on the January numbers. This analysis entailed the generation and comparison of January pricing relatives for each major group by individual pricing period for the preceding 3 years as well as the investigation of the effect of the modified pricing schedule on specific groups, such as apparel, which are known to have substantial seasonal movement between December and January. No conclusive evidence, however, could be found that the revised price collection schedule affected the January CPI change.

Intervention Analysis in Seasonal Adjustment

Seasonal adjustment is the process by which the typical seasonal movement of prices for goods or services in a Consumer Price Index series is quantified and factored out of the series. This process permits analysis of nonseasonal price movements. CPI series use the X-11-ARIMA (1988) program developed by Statistics Canada to calculate factors for seasonal adjustment of both historical and current series. Some CPI series are adjusted using Intervention Analysis Seasonal Adjustment in conjunction with X-11-ARIMA seasonal adjustment.

Intervention Analysis Seasonal Adjustment is a technique used to produce better seasonal adjustment. The technique allows nonseasonal economic phenomena such as level shifts to be factored out of the indexes before adjustment. A level shift is a change (or shift) in the price level of a CPI series occurring over 1 or several months caused by events such as a sales tax increase or oil embargo. The result is an adjustment based on a representation of the series with the seasonal pattern emphasized. Intervention Analysis Seasonal Adjustment also allows for seasonal shifts to be accounted for, resulting in a better seasonal adjustment in the periods before and after the shift occurred.

When Intervention Analysis Seasonal Adjustment is used in conjunction with X-11-ARIMA seasonal adjustment, the unusual events are modeled before the seasonal adjustment is done. Prior-adjustment factors from the Intervention Analysis Seasonal Adjustment are calculated and applied using the prior-adjustment option of X-11-ARIMA. For a more comprehensive discussion of Intervention Analysis Seasonal Adjustment, please see "Improvements in CPI Procedures" in the March 1990 issue of the *CPI Detailed Report*.

In January 1996, the series listed below were adjusted using Intervention Analysis Seasonal Adjustment before X-11-ARIMA processing. These series were examined using an 8-year span from 1988-95.

Nonalcoholic beverages
Alcoholic beverages
Alcoholic beverages at home
Beer and ale at home
Wine at home
Fuel oil and other household fuel commodities
Fuel oil
Utility (piped) gas
Women's coats and jackets
Women's dresses
Women's separates and sportswear
Women's underwear, nightwear, hosiery, and accessories
Women's suits
Girls' apparel
Motor fuel and motor oil
Motor fuel
Gasoline, all types
Unleaded regular gasoline
Unleaded premium gasoline
Tobacco and smoking products

For each series that was adjusted using Intervention Analysis Seasonal Adjustment prior to X-11-ARIMA processing, a complete list of level shifts is provided in the table below, along with the identified causes for each shift. Outliers, or extreme values for a particular month, are also included in the list.

For further information, write to the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, 2 Massachusetts Avenue NE., Room 3615, Washington, DC 20212-0001, or call Claire McAnaw Gallagher at (202) 606-6968.

Series adjusted prior to X-11-ARIMA seasonal adjustment

Series	Level shift period(s)	Event	Outliers
Nonalcoholic beverages	6/94-8/94	Coffee price increase due primarily to two freezes in Brazil in July 1994, which combined with the effects of a poor crop in Latin America and restriction of available coffee by a cartel	7/89, 3/91
Alcoholic beverages	12/90-2/91	Federal excise tax increase on alcoholic beverages	1/91
Alcoholic beverages at home	12/90-2/91	Federal excise tax increase on alcoholic beverages	
Beer and ale at home	12/90-2/91	Federal excise tax increase on alcoholic beverages	1/91
Wine at home	12/90-2/91	Federal excise tax increase on still wine and artificially carbonated wine of 90 cents per gallon	1/91
Fuel oil and other household fuel commodities	7/90-10/90 11/90-5/91	Shortage and anticipated shortage in oil supply due to Iraqi invasion of Kuwait Recovery from price shock due to Iraqi invasion of Kuwait	1/90
Fuel oil	7/90-10/90 11/90-5/91	Shortage and anticipated shortage in oil supply due to Iraqi invasion of Kuwait Recovery from price shock due to Iraqi invasion of Kuwait	1/90
Utility (piped) gas	10/87-11/87 4/88-5/88 3/90-4/90 8/92-10/92 4/94-5/94	Unusually large rate decrease in CA, lower purchase gas adjustment in NY Unusually large rate increase in CA, higher purchase gas adjustment in NY Prices drop after unusually cold winter Hurricane Andrew affected production Lower summer rates, lower purchased gas adjustments	5/90, 3/92, 11/92, 4/95
Women's coats	none	not applicable	2/92, 6/92, 7/92, 12/93
Women's dresses	3/90 (positive seasonal shift)	The CPI changed its procedures to allow substitutions to occur earlier in the selling season than in previous years. Retailers' better control over inventories, which tends to limit price-cutting at the end of each season, exacerbated the shifts caused by the procedural change.	2/88, 7/88, 2/89, 2/90, 3/93
Women's separates	1/90 (negative seasonal shift)	The CPI changed its procedures to allow substitutions to occur earlier in the selling season than in previous years. Retailers' better control over inventories, which tends to limit price-cutting at the end of each season, exacerbated the shifts caused by the procedural change.	8/89, 4/92, 9/92, 7/95
Women's underwear, nightwear, hosiery and accessories	none	not applicable	3/89, 5/92, 12/92, 4/93
Women's suits	2/90 (positive level shift)	The CPI changed its procedures to allow substitutions to occur earlier in the selling season than in previous years. Retailers' better control over inventories, which tends to limit price-cutting at the end of each season, exacerbated the shifts caused by the procedural change.	2/88, 2/89, 8/93, 8/94, 1/95
Girls' apparel	1/90	The CPI changed its methodology to allow substitutions to occur earlier in the selling season than in previous years.	8/88, 5/89, 8/89, 10/92, 4/95
Motor fuel, motor oil, coolant, and other products	3/89-4/89 7/89-9/89 12/89-1/90 7/90-10/90 12/90-3/91 10/93 (positive level shift)	Short supply disruption due to Alaskan oil spill Over-reaction to short term supply disruption due to Alaskan oil spill Low supply of motor fuel as refineries met demand for fuel oil created by extreme cold weather Supply uncertainty from Iraqi invasion of Kuwait Recovery from price shock due to Iraqi invasion of Kuwait Increase in Federal motor fuel tax	
Motor fuel	3/89-4/89	Short supply disruption due to Alaskan oil spill Over-reaction to short term supply disruption due to Alaskan oil spill Low supply of motor fuel as refineries met demand for fuel oil created by extreme cold weather Supply uncertainty from Iraqi invasion of Kuwait Recovery from price shock due to Iraqi invasion of Kuwait Increase in Federal motor fuel tax	

Series adjusted prior to X-11-ARIMA seasonal adjustment

Series	Level shift period(s)	Event	Outliers
Gasoline, all types	3/89-4/89 7/89-9/89 12/89-1/90 7/90-1/90 12/90-3/91 10/93 (positive level shift)	Short supply disruption due to Alaskan oil spill Over-reaction to short term supply disruption Low supply of motor fuel as refineries met demand for fuel oil created by extreme cold weather Supply uncertainty from Iraqi invasion of Kuwait Recovery from price shock due to Iraqi invasion of Kuwait Increase in Federal motor fuel tax

Response Rates for the Consumer Price Indexes, 1995

Joseph Pavalone
Sue Marshall

This article and the accompanying tables update information previously published on response rates in the *CPI Detailed Reports* for January 1992, 1993, 1994, and 1995.

In an effort to measure the outcome of data collection for the CPI, BLS calculates response rates. Response rates measure the proportion of completed surveys to those issued and help measure the accuracy of the CPI. Failure of a data unit to respond at either the data collection stage or estimation stage represents a loss of statistical information which dilutes the accuracy of the sample. BLS publishes response rates annually to assist the data user in judging the accuracy of CPI data.

BLS calculates response rates for the CPI-U at the data collection phase for initiation and pricing, and at the data estimation phase for pricing. The response rate at the data collection phase is the number of responding sample units divided by the number of eligible sample units. A sample unit is eligible if it belongs to the defined target population and if it should provide information for one or more items. The response rate at estimation is defined as the number of sample units used in estimation divided by the number of eligible sample units.

Response rates for 1995 are presented in tables R-1 through R-16. Table R-1 shows response rates for all data included in the CPI-U, U.S. city average, by major group, for all of 1995. Tables R-2 through R-16 show rates for current data collection in selected areas for which indexes are published monthly and bimonthly.

The response rates in tables R-1 through R-16 are separated into commodities and services, and the shelter portion

Joseph Pavalone and Sue Marshall are economists in the Office of Prices and Living Conditions.

of housing. Commodities and services are further broken down into outlets and quotes. An "outlet" is a generic term that designates the place where prices are collected. A "quote" is a specific item to be priced in a specific outlet. There may be from 1 to more than 50 quotes priced in each outlet.

In table R-1, it is important to note the relatively low percentages of quotes collected and used in estimation for apparel and upkeep. Low rates for these items can be partially attributed to the design of the apparel sample. Because seasonal apparel items commonly are in stores only during certain times of the year, most of the apparel sample is doubled, with each half of the sample designated for pricing during part of the year. Thus, at any particular time of the year, a large number of apparel quotes, although eligible, are designated out of season and are not collected.

The shelter section in tables R-1 through R-16 includes tenure categories for owners, renters, and those for whom the tenure status is unknown. A unit qualifies as an owner or renter unit if its tenure status is known either by previous knowledge or is collected in the current interview period. The response rates at the data collection phase for shelter are separated into three categories: Data reported, found vacant, and other. If useable information is obtained, the unit is designated *data reported*. If the assigned unit is located but is unoccupied, the unit is designated *found vacant*. In instances where the unit is eligible but no data are available (for example, refusals or no one at home) the unit is designated *other*.

For additional information on response rates, write to the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Room 3615, 2 Massachusetts Avenue, NE., Washington, DC 20212-0001, or call Joseph Pavalone at (202) 606-7000.

Note: For the shelter component, the number of owner units used in estimation may be higher than the number listed under "Data reported." The use of owner units in estimation is based on matching renter data, not on their own collection status. This applies to both U.S. city average data as well as metropolitan area data.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1986=100 base.

⁴ In addition, the following metropolitan areas are published semiannually and appear in tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Atlanta, GA; Buffalo-Niagara Falls, NY; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder, CO; Honolulu, HI;

Kansas City, MO-KS; Milwaukee, WI; Minneapolis-St. Paul, MN-WI; Portland-Vancouver, OR-WA; San Diego, CA; and Seattle-Tacoma, WA.

The following metropolitan areas are published annually and appear in tables 16A and 23A of the January issue of the CPI Detailed Report: New Orleans, LA and Tampa-St. Petersburg-Clearwater, FL.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

Table 11. Consumer Price Index for All Urban Consumers (CPI-U): Regions ¹, by expenditure category and commodity and service group

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1986=100 base.

⁴ In addition, the following metropolitan areas are published semiannually and appear in tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Atlanta, GA; Buffalo-Niagara Falls, NY; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder, CO; Honolulu, HI;

Kansas City, MO-KS; Milwaukee, WI; Minneapolis-St. Paul, MN-WI; Portland-Vancouver, OR-WA; San Diego, CA; and Seattle-Tacoma, WA.

The following metropolitan areas are published annually and appear in tables 16A and 23A of the January issue of the CPI Detailed Report: New Orleans, LA and Tampa-St. Petersburg-Clearwater, FL.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Areas on pricing schedule 2 (see table 10) will appear next month.

² Indexes are on a November 1984=100 base in Baltimore, Boston, Miami, St. Louis, Washington. Indexes are on a December 1984=100 base in the U.S., Chicago, Cleveland, Los Angeles, New York, Philadelphia, San Francisco.

³ Indexes on a November 1986=100 base in Baltimore, Boston,

Cleveland, Miami, St. Louis, and Washington. Indexes on a December 1986=100 base in U.S., Chicago, Los Angeles, New York, Philadelphia, San Francisco.

⁴ Indexes on a December 1993=100 base.

⁵ Index on a November 1977=100 base in Miami.

Annual Average, 1995

The tables in this section correspond to the monthly tables. Corresponding missing tables have no annual averages calculated.

Annual average tables:

- 1A CPI-U, US, Expenditure category and commodity and service group
- 3A CPI-U, US, Detailed expenditure categories
- 6A CPI-W, US, Expenditure category and commodity and service group
- 8A CPI-W, US, Detailed expenditure categories
- 11A CPI-U, Regions, expenditure category and commodity and service group
- 12A CPI-U, Population size classes, Expenditure category and commodity and service group
- 13A CPI-U, Cross classification of region and population size classes, expenditure category and commodity and service group
- 16A CPI-U, Selected areas, expenditure category and commodity and service group
- 18A CPI-W, Regions, expenditure category and commodity and service group
- 19A CPI-W, Population size classes, expenditure category and commodity and service group
- 20A CPI-W, Cross classification of region and population size classes, expenditure category and commodity and service group
- 23A CPI-W, Selected areas, expenditure category and commodity and service group

Table 1A. Consumer Price Index for All Urban Consumers (CPI-U): U.S. city average, by expenditure category and commodity and service group

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, medicine, and the other goods that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 57,000 housing units and approximately 19,000 retail establishments—department stores, supermarkets, hospitals, gasoline stations and other types of stores and services establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuel, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by either personal visits or telephone calls from the Bureau's trained representatives. Some data, such as used car prices, are obtained from secondary sources.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of country, for cross-classifications of regions and population-size classes, and for 29 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, usually 1982-84, which equals 100.0. An increase of 7 percent, for example, is shown as 107.0. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$100 in 1982-84 to \$107.

For further details see *BLS Handbook of Methods*, BLS Bulletin 2414, September 1992.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index point change</i>	
CPI	112.5
Less previous index	108.5
Equals index point change	4.0
<i>Percent change</i>	
Index point difference	4.0
Divided by the previous index	108.5
Equals	0.037
Results multiplied by one hundred	0.037×100
Equals percent change	3.7

Energy Prices

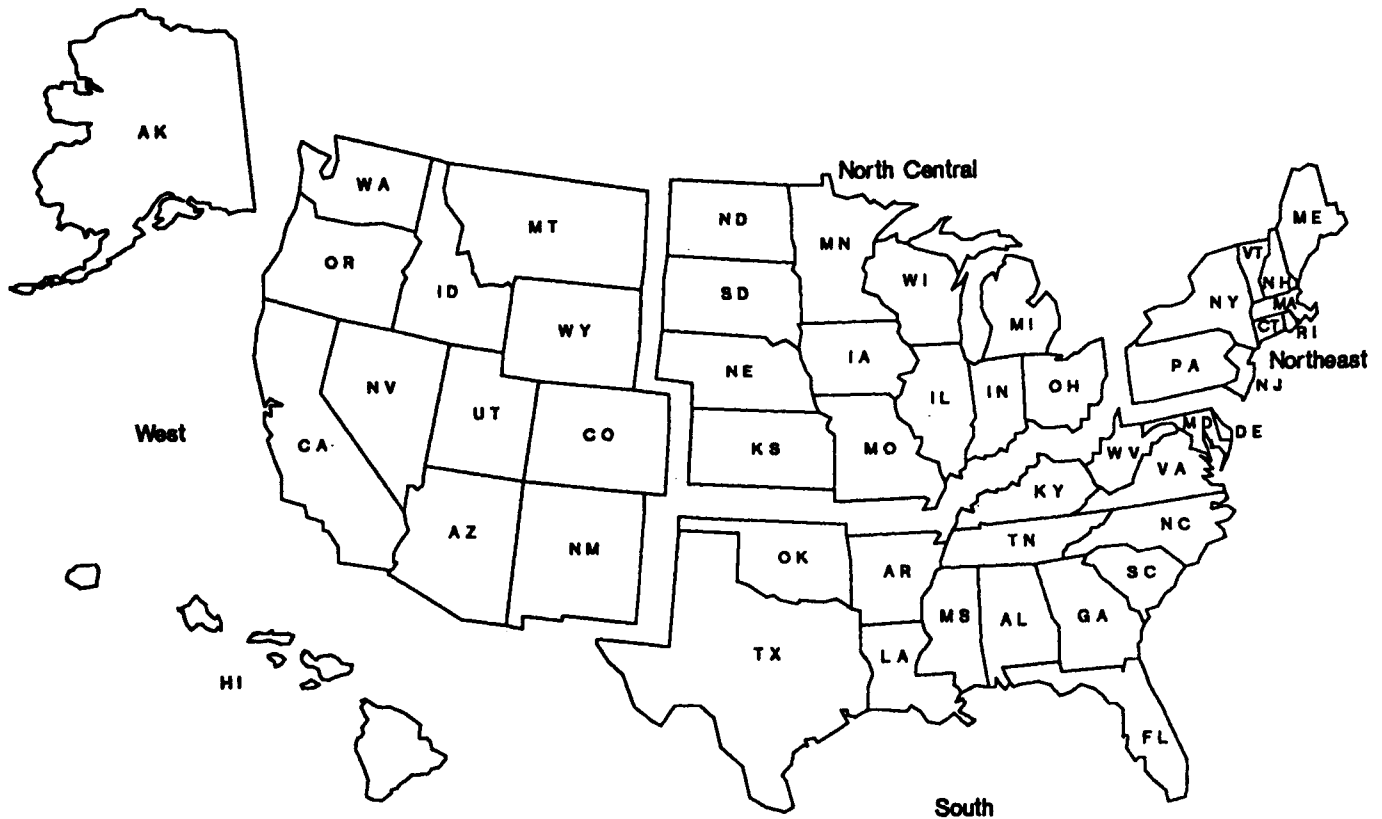

Prices are usually available for the U.S. city average, 15 large metropolitan areas, the four census regions, four size classifications, and 13 areas reflecting the four Census regions cross-classified by the four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA appears. This designation also appears if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average price per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas for 500 kilowatt hours of electricity (table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residen-

Census Regions

tial consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU's (U.S. Department of Energy).

1 kwh = 3,412 BTU'S (Edison Electric Institute).

1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped however, that regional average prices will help satisfy the need for local area data. It should be noted that the average prices for food in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA appears. When a price is not available from an individual store in any month, as estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price is not published and NA appears for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from the BLS regional offices or from the Washington office upon request.

Adjustment of Shelter Indexes for Aging Effects

Beginning with January 1988 CPI, the Bureau of Labor Statistics adjusts the monthly CPI shelter indexes for the

change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the chosen method is operationally feasible.¹ The adjustment affect CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

The quality of housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing unit.²

The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect.

The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship between a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month. For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

¹ A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and *Journal of Business and Economic Statistics*, Vol. 6, No. 3, July 1988, pp. 359-71 and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects," BLS Working Paper No. 160, April 1986, and *Journal of Urban Economics*, Vol. 23, March 1988, 162-78. These papers are available from the BLS on request.

² For detail on existing quality adjustment methods, see *BLS Handbook of Methods*, chapter 19 (BLS Bulletin 2414).

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

In most cases, seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, for example, data from 1987 through 1991 were replaced at the end of 1991. The seasonal movement of all items and 47 other aggregations is derived by combining the seasonal movement of 60 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. Occasionally, a component changes its seasonal adjustment status from seasonally adjusted to not seasonally adjusted. When this occurs, not seasonally adjusted data are used for the last 5 years, but before that period the seasonally adjusted indexes remain in calculations of higher-level seasonally adjusted indexes.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called intervention analysis in conjunction with X-11-ARIMA for some CPI series. Intervention analysis allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are removed from the data prior to calculation of seasonal factors in X-11-ARIMA.

For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For some women's apparel indexes and the girls' apparel index, the procedure was used to offset the effects of changes in pricing methodology; and for new cars, new trucks, and new vehicles, this procedure was used to offset the effects of changes in marketing strategies and the introduction of new models. For the tobacco and smoking products index, this procedure was used to offset the effects of increases in excise taxes and wholesale tobacco prices. For some alcoholic beverage series, intervention was used to offset the effects of excise tax increases.

An alternative to the intervention-adjusted X-11-ARIMA procedure is the state space model-based seasonal adjustment method. This method adjusts simultaneously for interventions and seasonal effects, rather than sequentially as in the X-11-ARIMA methodology, using structural statistical models with explanatory variables. The state space structural model-based method of seasonal adjustment was introduced in 1992 for the adjustment of January 1991-December 1991 indexes for three women's apparel series: Dresses, separates and sportswear, and suits.

A description of intervention analysis, including a list of

events treated as interventions and the seasonal factors for these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Room 3615, Washington, DC 20212-0001 or by calling Claire McAnaw at (202) 606-6968.

Metropolitan Areas

BLS publishes five major metropolitan areas monthly:

Chicago-Gary-Lake County, IL-IN-WI
 Los Angeles-Anaheim-Riverside, CA
 New York-Northern NJ-Long Island, NY-NJ-CT
 Philadelphia-Wilmington-Trenton PA-NJ-DE-MD
 San Francisco-Oakland-San Jose, CA

Data for additional 10 metropolitan areas are published every other month [on an odd (January, March, etc.) or even (February, April etc.) month schedule] for the following areas:

Baltimore, MD	-odd
Boston-Lawrence—Salem, MA-NH	-odd
Cleveland-Akron—Lorain, OH	-odd
Dallas-Fort Worth, TX	-even
Detroit-Ann Arbor, MI	-even
Houston, TX	-even
Miami-Fort Lauderdale, FL	-odd
Pittsburgh-Beaver Valley, PA	-even
St. Louis-East St. Louis, MO-IL	-odd
Washington, DC-MD-VA	-odd

(Note: The designation even or odd refers to the month during which the area's price change is measured. Due to the time needed for processing, data are released 2 to 3 weeks in to the following month.)

Data are published for another group of 12 metropolitan areas on a semiannual basis. These indexes, which refer to the arithmetic average for the 6-month periods from January through June and July through December, are published with release of the CPI for July and January, respectively, in August and February for:

Anchorage, AK	Kansas City, MO-KS
Atlanta, GA	Milwaukee, WI
Buffalo-Niagara Falls, NY	Minneapolis-St. Paul MN-WI
Cincinnati-Hamilton, OH-KY-IN	Portland-Vancouver, OR-WA
Denver-Boulder, CO	San Diego, CA
Honolulu, HI	Seattle-Tacoma, WA

Finally, BLS recently began publication of CPI's for two metropolitan areas on an annual basis. These indexes represent the arithmetic averages for the 12-monthly period from January through December of each year. They are published with the release of the CPI for January, i.e., in February. These areas are:

New Orleans, LA
 Tampa-St. Petersburg-Clearwater, FL

CPI on Electronic Bulletin Board

A limited amount of CPI information is currently available via the Department of Labor's electronic bulletin board system (BBS). The data are accessible for downloading free of charge at virtually anytime to any person who has a personal computer with a modem and communications software. The phone number for the BBS is (202) 219-4784.

Included on the *Labor News* BBS are all items indexes for the CPI-U and CPI-W for both the U.S. city average and the Washington, D.C. area from 1980 to the present. Also included on the BBS are average prices for the U.S. from 1990 to the present for natural gas, electricity, fuel oil, and gasoline (all types, unleaded regular, and unleaded premium). More indexes or average prices may be added in the future.

The BBS is set to use the most common personal computer parameters. Users should set their communication software to the following:

BAUD RATE:	300-14,400 bps
DATA BITS:	8
STOP BITS:	1

PARITY: NONE
FULL DUPLEX
TERMINAL TYPE: ANSI, VT100, or ANSI-BBS

The *Labor News* BBS is divided into different sections, or "Libraries," with the one containing CPI information being CPIINFO.

Labor News is a menu-driven BBS. Users can select among choices presented on the screen to access the information desired. Typing a "?" will bring up a "Help" screen for on-line assistance. It is also possible to download a users manual for the BBS.

Please note that the BBS shuts down for maintenance every day from 3:00 A.M. to 3:15 A.M. (Eastern time), and Mondays from 7:30 A.M. to 8:00 A.M.

The system operator of the *Labor News* BBS, Don Berry, may be reached at (202) 219-7343. The system operator of the CPI Library, Joe Chelena, may be reached at (202) 606-6982 or via E-mail through the BBS under the name JOEC.
