Price Movements

June 2000

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.6 percent in June, before seasonal adjustment, to a level of 172.3 (1982-84=100). For the 12-month period ended in June, the CPI-U increased 3.7 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also rose 0.6 percent in June, prior to seasonal adjustment. The June level of 169.1 was 3.9 percent higher than the index in June 1999.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.6 percent in June, after increasing 0.1 percent in May. The energy index, which declined 1.9 percent in May, increased 5.6 percent in June, accounting for three-fourths of the overall CPI-U advance. The index for petroleum-based energy rose 8.1 percent, and the index for energy services increased 2.9 percent. The food index, which advanced 0.5 percent in May, increased 0.1 percent in June. The moderation was largely the result of downturns in the indexes for fruits and vegetables and for cereal and bakery products. Excluding food and energy, the CPI-U rose 0.2 percent in June, the same as in both April and May.

See page 4 for a note on the use of hedonic models to adjust prices of selected products in the CPI for changes in quality.

Consumer prices rose at a seasonally adjusted annual rate (SAAR) of 2.6 percent in the second quarter, after advancing at a 5.8-percent rate in the first 3 months of 2000. This brings the year-to-date annual rate to 4.2 percent and compares with an increase of 2.7 percent for all of 1999. The acceleration in the overall CPI-U thus far in 2000 reflects an even sharper increase in energy prices than in 1999, coupled with slightly larger advances in the indexes for food and for all items less food and energy. The energy index, which rose 13.4 percent in 1999, has continued to accelerate this year, advancing at a 26.6-percent SAAR thus far in 2000. In the first half of 2000, petroleum-based energy costs increased at a 44.6-percent SAAR, and charges for energy services increased at a 10.2-percent annual rate. The food index rose at a 2.2-percent SAAR in the first 6 months of 2000, following an increase of 1.9 percent in all of 1999. Grocery store food prices also rose at a 2.2-percent SAAR in the first 6 months, with the largest increase among the six major grocery store food groups in the index for meats, poultry, fish, and eggs—up at an 8.5-percent rate.

The food and beverages index increased 0.1 percent in June. The index for food at home, which rose 0.7 percent in May, increased 0.1 percent in June. Most of the major food at home groups contributed to the deceleration in June. The index for fruits and vegetables, which rose 1.6 percent in May, decreased 0.7 percent in June. Within the fruits and vegetables group, a 2.8-percent decrease in the index for fresh fruits more than offset increases in the indexes for fresh vegetables and processed fruits and vegetables—up 1.0 and 0.2 percent, respectively. (Prior to seasonal adjustment, fresh vegetable prices fell 0.6 percent.) The indexes for cereal and bakery products and for dairy products also declined in June—down 0.7 and 0.1 percent, respectively. The index for meats, poultry, fish, and eggs rose 0.5 percent in June, after increasing 0.8 percent in May. In June, the index for beef continued to advance—up 1.1 percent—while the indexes for pork and for poultry turned down. During the first 6 months of the year, beef prices have risen at a 10.8-percent SAAR, pork prices at an 11.0-percent SAAR, and poultry prices at a 2.3-percent SAAR. The indexes for nonalcoholic beverages and other food at home each increased 0.4 percent in June. The other two components of the food and beverages index—food away from home and alcoholic beverages—increased 0.2 and 0.6 percent, respectively.

The index for housing increased 0.5 percent in June, following a 0.2-percent rise in May. The index for fuels and utilities, which declined 0.1 percent in May, advanced 2.2 percent in June. The index for natural gas rose a record 7.8 percent in June, its sixth consecutive monthly increase. During the first 6 months this year, this index has advanced at a 34.1-percent SAAR. The index for electricity increased 0.8 percent in June. (Prior to seasonal adjustment, charges for electricity rose 6.6 percent, reflecting the shift to seasonal rates in some areas.) The index for fuel oil

turned up in June—advancing 1.1 percent—following declines in each of the 3 preceding months. Through the first 6 months of 2000, fuel oil prices have advanced at a 40.9-percent SAAR. Shelter costs, which rose 0.3 percent in May, increased 0.4 percent in June. Within shelter, the index for rent increased 0.2 percent; owners' equivalent rent rose 0.3 percent; and the index for lodging away from home advanced 1.3 percent. (Prior to seasonal adjustment, the index for lodging away from home rose 2.6 percent.) The index for household furnishings and operations declined 0.1 percent in June.

The transportation component, which declined in both April and May, turned up sharply in June, advancing 1.8 percent. More than nine-tenths of the June advance was due to the sharp increase in gasoline prices. The 8.8-percent increase in the index for gasoline more than offset the price declines registered in April and May. As of June, the index for gasoline was 0.6 percent higher than its previous peak level of March 2000. The index for new vehicles declined 0.1 percent in June, after advancing 0.2 percent in May. The index for used cars and trucks rose 0.2 percent. Public transportation costs increased 1.0 percent, largely as a result of a 1.5-percent rise in airline fares. Airline fares have risen at an 18.7-percent SAAR thus far in 2000, after increasing 10.9 percent in all of 1999.

The index for apparel declined for the third consecutive month, down 0.6 percent in June. (Prior to seasonal adjustment, apparel prices fell 3.0 percent, reflecting seasonal price discounting on spring-summer wear.)

Medical care costs rose 0.4 percent in June and were 4.1 percent higher than a year ago. In June, the index for medical care commodities—prescription drugs, and nonprescription drugs and medical supplies—rose 0.2 percent. The index for medical care services rose 0.5 percent in June. Charges for professional services and for

hospital and related services increased 0.4 and 0.8 percent, respectively.

The index for recreation costs increased 0.3 percent in June, the same as in May. The index for admissions to movies, theaters, concerts, and sporting events rose 1.7 percent in June, accounting for about two-thirds of the overall increase in June recreation index.

The index for education and communication declined 0.1 percent in June, following a 0.1-percent increase in May. Educational costs rose 0.8 percent in June, while the index for communication declined 1.2 percent. The latter decrease reflects declines in the indexes for telephone services and for personal computers and peripheral equipment—down 1.3 and 2.8 percent, respectively.

The index for other goods and services declined for the second consecutive month, down 0.2 percent in June. Cigarette prices fell 1.4 percent in June, following a 2.8-percent decline in May but have advanced at an 11.0-percent SAAR thus far this year.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers increased 0.6 percent.

Extending the use of hedonic models to adjust prices for changes in quality

The Bureau of Labor Statistics (BLS) is continuing to expand the use in the Consumer Price Index (CPI) of quality adjustments derived from hedonic models. As first announced at the time of the January 2000 CPI release, hedonic quality adjustments for video cassette recorders and digital versatile disc players were incorporated into the index effective with the April 2000 CPI. These items are in the *other video equipment* item stratum, which contains video equipment other than televisions. Papers describing these adjustments are on the CPI's website (<http://stats.bls.gov/cpihome.htm>). Effective with the CPI for July 2000, BLS will extend hedonic quality adjustment to refrigerator/freezers and microwave ovens, which are part of the *major appliances* stratum, and to college textbooks, which are part of the *educational books and supplies* stratum.

A hedonic model decomposes the price of a consumer product into implicit prices for each of its important features and components, thereby providing an estimate of the value of each feature and component. We plan to extend this method to additional items in the CPI. As we do so, we will give CPI users notice at least 3 months before the first use of hedonic quality adjustment for each additional item and will have detailed papers on the models to be employed available by the time of first use.

The relative importance (share of weight), as of December 1999, of the *major appliances* stratum was 0.205 percent in the CPI for all Urban Consumers (CPI-U) and 0.236 percent in the CPI for Urban Wage Earners and Clerical Workers (CPI-W). Within *major appliances*, refrigerator/freezers are estimated to represent 33 percent of the weight and microwave ovens about 11 percent. The remaining items in this stratum—those that will not be

subject to hedonic quality adjustment at this time—include home freezers, washers and dryers, and conventional stoves and ovens. The December 1999 relative importance of the *educational books and supplies* stratum was 0.196 percent in the CPI-U and 0.192 percent in the CPI-W. Within *educational books and supplies*, college textbooks are estimated to represent 79 percent of the weight. The items in this stratum that will not be subject to hedonic quality adjustment at this time include elementary and high school books and supplies and encyclopedias and other reference books.

The hedonic models that BLS analysts developed for refrigerator/freezers and microwave ovens use observations collected for the CPI, supplemented with additional observations that BLS collected specifically for this purpose. The college textbook work was accomplished using only observations collected for the CPI, without supplemental collected data. Papers describing this work are in preparation and will be available before release of the July 2000 CPI.

Additional work on hedonic quality adjustment for telephones and for washers and dryers is under way at BLS.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:
M - Every month.

1 - January, March, May, July, September, and November.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Pittsburgh, PA;

Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA; Tampa-St. Petersburg-Clearwater, FL.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Pittsburgh, PA;

Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA; Tampa-St. Petersburg-Clearwater, FL.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U), which covers approximately 87 percent of the total population, and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W), which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for physicians' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest metropolitan areas and every other month in other areas. Prices of most goods and services are obtained by personal visits or telephone calls of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 26 local areas. Area indexes do not measure differences in the level of prices among cities; they measure only the average change in prices for each area since the base period.

The index measures price change from a designed reference date—1982-84, which equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period market basket of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65.

For further details see *BLS Handbook of Methods*, Chapter 17, the Consumer Price Index, Bulletin 2490, April 1997.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes, rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The example below illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index point change</i>	
CPI	115.7
Less previous index	111.2
Equals index point change	4.5
<i>Percent change</i>	
Index point difference	4.5
Divided by the previous index	111.2
Equals	0.040
Results multiplied by 100	0.040x100
Equals percent change	4.0

Energy Prices

Prices are usually available for the U.S. city average, 13 large metropolitan areas, the 4 census regions, 3 size classifications, and 10 areas reflecting the 4 Census regions cross-classified by the 3 population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA appears. This designation also appears if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the CPI. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas, and for 500 kilowatt hours of electricity (shown in table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Because heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised CPI.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. (See

table P1.) Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity or quick payment.

Gasoline and automotive diesel fuel. Gasoline and diesel prices, shown in table P3, are collected at the pump from a sample of full service, mini-service, and self-service gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU's (U.S. Department of Energy)

1 kwh = 3,412 BTU's (Edison Electric Institute)

1 gallon #2 fuel oil = 140,000 BTU's (U.S. Department of Energy)

Food and Beverage Prices

Actual weighted average prices for food and beverages are calculated each month at the national level and for the four Census geographic regions, as shown in table P4. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot, in general, be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted that the average prices for food in this report reflect

variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA appears. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price is not published and NA appears for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from BLS regional offices or from the Washington office upon request.

Seasonally Adjusted and Unadjusted Data

Because different groups use price data for different purposes, the Bureau of Labor Statistics publishes seasonally adjusted, as well as unadjusted, changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred, because they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1995 through 1999 were replaced at the end of 1999. The seasonal movement of all items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year, the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years; but the seasonally adjusted indexes will be used before that period.

Seasonally adjusted data, including the *all items* index levels, are subject to revision for up to 5 years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced

seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values or sharp movements that might distort the seasonal pattern are estimated and removed from the data before calculation of seasonal factors. Since the calculation of seasonal factors for 1996, X-12-ARIMA software has been used for Intervention Analysis Seasonal Adjustment.

For the fuel oil and the motor fuels indexes, this procedure is used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For the breakfast cereal index, the procedure is used to offset the effects of price-cutting among cereal manufacturers. For the educational books and supplies index, the procedure is used to account for greater-than-normal sale prices on educational reference books. For some alcoholic beverage series, Intervention Analysis Seasonal Adjustment is used to offset the effects of increased brewer's costs, along with increased demand for specialty beers. For the nonalcoholic beverages index, the procedure is used to offset the effects of a large increase in coffee prices due to adverse weather. For the fats and oils series, the procedure is used to account for lower domestic butter stocks, lower cold storage supplies, and anticipation of a bumper soybean crop. For the new trucks index, the procedure is applied to account for loyalty rebates offered to customers by American automakers. For the water and sewerage maintenance index, the procedure is used to account for a data collection anomaly.

A description of Intervention Analysis Seasonal Adjustment, as well as a list of unusual events modeled and seasonal factors for these items, may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212, or by calling Claire McAnaw Gallagher on (202) 691-6968. Metropolitan Areas

BLS publishes price indexes for three major metropolitan areas monthly:

Chicago-Gary-Kenosha, IL-IN-WI
Los Angeles-Riverside-Orange County, CA
New York-Northern New Jersey-Long Island,
NY-NJ-CT-PA

Data for additional 11 metropolitan areas are published every other month [on an odd (January, March, etc.) or even (February, April, etc.) month schedule] for the following areas:

Atlanta, GA	-even
Boston-Brockton-Nashua, MA-NH-ME-CT	-odd
Cleveland-Akron, OH	-odd

Detroit-Ann Arbor-Flint, MI	-even
Houston-Galveston-Brazoria, TX	-even
Miami-Fort Lauderdale, FL	-even

Philadelphia-Wilmington-Atlantic City, PA-NJ-DE-MD	-even
San Francisco-Oakland-San Jose, CA	-even
Seattle-Tacoma-Bremerton, WA	-even
Washington-Baltimore, DC-MD-VA-WV	-odd

(Note: The designation even or odd refers to the month during which the area's price change is measured. Due to the time needed for processing, data are released 2 to 3 weeks into the following month.)

Data are published for another group of 12 metropolitan areas on a semiannual basis. These indexes, which refer to the arithmetic average for the 6-month periods from January through June and July through December, are published with release of the CPI for July and January, respectively, in August and February for:

Honolulu, HI
Kansas City, MO-KS
Milwaukee-Racine, WI
Minneapolis-St. Paul, MN-WI
Pittsburgh, PA
Portland-Salem, OR-WA
San Diego, CA
St. Louis, MO-IL
Tampa-St. Petersburg-Clearwater, FL
