The *CPI Detailed Report* (ISSN 0095-926X; USPS 485-030) is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes—the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954 or by calling (202) 512-1800. Visa or MasterCard accepted. Fax (202) 512-2233. Subscription price per year: \$45 domestic, \$56.25 foreign. Single copy domestic, \$15.00; foreign, \$18.75. Prices are subject to change by the U.S. Government Printing Office.

Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or telephone (202) 512-1806. POSTMASTER: Send address changes to *CPI Detailed Report*, U.S. Government Printing Office, Washington, DC 20402.

For technical information, call the CPI Information and Analysis Office at (202) 691-7000, or write to Consumer Price Indexes, 2 Massachusetts Avenue, NE, Room 3615, Washington, DC 20212-0001.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii; \$160 in Alaska and Canada.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. This information is available to sensory impaired individuals upon request. Voice phone: (202) 691-STAT; Federal Relay Service: 1-800-877-8339. Data on the CPI can also be accessed at <http://stats.bls.gov/cpihome.htm> through the CPI homepage. Periodicals postage paid at Washington, DC and at additional mailing offices.

Price Movements

November 2000

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.1 percent in November, before seasonal adjustment, to a level of 174.1 (1982-84=100). For the 12-month period ended in November, the CPI-U increased 3.4 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.2 percent in November, prior to seasonal adjustment. The November level of 170.9 was 3.5 percent higher than the index in November 1999.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.2 percent in November, the same as in October. The food index, which rose 0.1 percent in October, was unchanged in November. The energy index increased 0.1 percent in November, following a 0.2-percent rise in October. In November, the index for petroleum-based energy increased 0.2 percent, while the index for energy services declined 0.1 percent. Excluding food and energy, the CPI-U rose 0.3 percent, following a 0.2-percent rise in October. A sharp upturn in the tobacco index was principally responsible for the larger advance in November.

During the first 11 months of 2000, the CPI-U rose at a 3.5-percent seasonally adjusted annual rate (SAAR). This compares with an increase of 2.7 percent for all of 1999. The energy index, which increased 13.4 percent in 1999, has risen at a 15.1-percent SAAR thus far in 2000. In the first 11 months of 2000, petroleum-based energy costs increased at an 18.9-percent SAAR, and charges for energy services rose at an 11.2-percent annual rate. The food index has risen at a 2.4-percent SAAR thus far in 2000, following a 1.9-percent increase for all of 1999. Excluding food and energy, the CPI-U has advanced at a 2.7-percent rate thus far in 2000, compared with a 1.9-percent rise for all of 1999.

The food and beverages index increased 0.1 percent in November, the same as in each of the preceding 2 months. The index for food at home declined 0.1 percent in November. The index for meats, poultry, fish, and eggs declined 1.0 percent in November. Poultry prices fell 3.0 percent as the index for other poultry, including turkey, declined 5.1 percent. Meat prices declined for the third consecutive month; a 1.2-percent drop in pork prices more than offset a 1.2-percent rise in the index for other meats, while the index for beef was unchanged. The indexes for

cereal and bakery products and for dairy products each declined 0.3 percent. The index for fruits and vegetables rose 0.7 percent in November. Within the fruits and vegetables group, the indexes for fresh fruits and for fresh vegetables rose 2.0 and 0.9 percent, respectively, more than offsetting a 2.0-percent decline in the index for processed fruits and vegetables. The index for nonalcoholic beverages rose 0.7 percent, reflecting a 1.5-percent increase in the index for carbonated drinks. The index for other food at home increased 0.6 percent. The other two components of the food and beverages index—food away from home and alcoholic beverages—increased 0.1 and 0.5 percent, respectively, in November.

The housing index increased 0.2 percent in November, following a 0.5-percent rise in October. The index for fuels and utilities, which advanced 1.3 percent in October, rose 0.1 percent in November. In November, the indexes for fuel oil and for electricity increased 0.1 and 0.2 percent, respectively, while the index for natural gas declined 0.7 percent. (Prior to seasonal adjustment, prices for fuel oil increased 2.1 percent; and charges for natural gas rose 2.0 percent, while charges for electricity declined 2.0 percent.) During the past 12 months, prices for fuel oil have increased 45.2 percent; charges for natural gas 25.6 percent. Charges for electricity have risen 2.3 percent. Shelter costs increased 0.3 percent in November, following a 0.4-percent rise in October. Within shelter, the indexes for rent and for owners' equivalent rent each increased 0.3 percent, and the index for lodging away from home rose 0.2 percent. The index for household furnishings and operations, which was unchanged in October, advanced 0.4 percent in November.

The transportation component turned back up in November, advancing 0.3 percent after declining 0.4 percent in October. The index for gasoline prices, which declined 1.4 percent in October, rose 0.3 percent in

November. (Prior to seasonal adjustment, gasoline prices declined 0.1 percent.) During the past 12 months, gasoline prices have risen 21.6 percent. The index for new vehicles turned up in November, advancing 0.1 percent, following declines in each of the 3 preceding months. (Prior to seasonal adjustment, new vehicle prices rose 0.8 percent.) As of November, about 48 percent of the new vehicle sample was represented by 2001 models; in November 1999 new models represented about 58 percent of the sample. As they replace old models at dealerships, the 2001 models will continue to be phased in over the next several months, with appropriate adjustments for quality change. (For a report on quality changes for the 2001 vehicles represented in the Producer Price Index sample, see news release USDL-00-331, dated November 9, 2000.) The index for used cars and trucks increased 0.9 percent in November. Public transportation costs rose 0.5 percent, reflecting a 0.7-percent increase in airline fares. Airline fares have risen 5.1 percent during the past 12 months.

The index for apparel fell 0.4 percent in November, its first decline in 4 months. (Prior to seasonal adjustment, apparel prices declined 0.8 percent, reflecting the discounting of prices for women's wear.)

Medical care costs rose 0.2 percent in November to a level 4.3 percent higher than a year ago. In November, the index for medical care commodities—prescription and nonprescription drugs and medical supplies—rose 0.3 percent. The index for medical care services rose 0.1 percent. Charges for professional services and for hospital and related services increased 0.1 and 0.4 percent, respectively.

The index for recreation costs, which was unchanged in October, declined 0.1 percent in November. Price declines for toys, sporting goods, and video and audio

equipment were largely offset by price increases for books, photography, and cable television.

The index for education and communication declined 0.2 percent in November. Educational costs rose 0.4 percent, while the index for communication declined 0.9 percent. Within the communication group, the indexes for telephone services and for personal computers and peripheral equipment fell 0.8 and 2.6 percent, respectively.

The index for other goods and services, which declined 0.6 percent in October, increased 1.2 percent in November.

Cigarette prices, which fell 2.8 percent in October, increased 3.7 percent in November, accounting for the upturn in this major group.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.2 percent in November.

Variance Estimates for Changes in the Consumer Price Index, January 1999-December 1999

This article presents variance estimates for 1-month, 2-month, 6-month, and 12-month percent changes in the Consumer Price Index for All Urban Consumers (CPI-U). The estimates cover the period January 1999 through December 1999.¹ Each month the CPI collects prices from a sample of approximately 80,000 items in 23,000 outlets around the United States. When computing the CPI, variance is a measure of the uncertainty caused by the use of a *sample* of retail prices, instead of the complete universe of retail prices.

The most commonly used measure of sampling variability is the *standard error* of the estimate – the square root of the variance. The standard error of the CPI's change can be used to construct confidence intervals, to determine whether the change for a particular CPI series is significantly different from zero. This information should help users determine which index changes are significant.

Presentation of findings

The percent changes in the CPI, along with their standard errors, were estimated for all 12 months between January 1999 and December 1999. To summarize the results, tables 1V-5V show the median values of those percent changes, as well as the median values of their standard errors. Table 1V shows this information for the U.S. City Average, and tables 2V-5V show the information for the Northeast, Midwest, South, and West regions of the country.

For example, from January 1999 through December 1999, the 1-month changes in the U.S. City Average-All Items Index had a median value of 0.23 percent. The standard errors of those 12 estimates had a median value of 0.04 percent. Margins of error are usually expressed as a statistic's point estimate plus or minus 2 standard errors, so the margin of error on the CPI's 1-month change is approximately 0.23 percent plus or minus 0.08 percent. That means that in a typical 1-month period the true change in the CPI was probably somewhere between 0.15 percent and 0.31 percent. The tables also show median percent changes and standard errors for 2-month and 6-month intervals and for the full year 1999. Margins of error can be

calculated for these intervals in the same way as for 1-month periods.

Analysis of findings

Analysis of the data reveals three important observations. First, the standard errors increase as one moves from the U.S. City Average to individual regions of the country and from *all items* to individual item categories. Second, standard errors differ between item categories. Third, the standard errors decrease on a relative basis (standard error divided by price change), as the price change interval gets longer.

The primary reason standard errors increase as one moves from the U.S. City Average to individual regions of the country is the difference in sample sizes. In general, smaller sample sizes lead to larger standard errors. For example, the U.S. City Average-All Items Index is computed each month from the prices of approximately 80,000 selected items throughout the United States, and its median standard error for 1-month changes is 0.04 percent. By contrast, the Northeast Region-All Items Index is computed from the prices of approximately 17,000 selected items, and its median standard error is 0.09 percent. Regional indexes have larger standard errors, because their sample sizes are smaller.

The same effect can be observed as one moves from the all items index to individual item categories. Again, the U.S. City Average-All Items Index is computed each month from the prices of approximately 80,000 selected items, and its median standard error is 0.04 percent. By contrast, the U.S. City Average-Recreation Index is computed from the prices of approximately 4,000 items; and its median standard error is 0.13 percent, more than three times as large. So, again, smaller sample sizes lead to larger standard errors.

The second observation is that standard errors differ between item categories. There are two reasons for this. First, the item categories differ in sample size. For example, the U.S. City Average Food and Beverages Index is computed from approximately 33,000 prices each month, while the U.S. City Average-Recreation Index is computed from approximately 4,000 prices. Therefore, it is not surprising that the recreation index has larger standard errors. Second, there are real differences in item category price behaviors caused by different selling practices, seasonal influences, and consumer demand. This is

¹In 1998 significant changes were made to the CPI's structure and sample, and a new variance calculation system was implemented. For information on variances from 1978-1986, 1989-1993, 1993-1997 and 1998, see the *CPI Detailed Report* for February 1991, May 1994, February 1998, and December 1999, respectively.

especially true for apparel, where it is common for the prices of individual items to fluctuate by 50 percent or more each month. As a result, standard errors for apparel are large.

The third observation is that standard errors decrease on a relative basis (standard error divided by price change) as the price change interval gets longer. For the U.S. City Average-All Items Index, the median standard error divided by the median percent change is $0.04/0.23 = .17$ for 1-month changes, $0.05/0.40 = .12$ for 2-month changes, $0.08/1.30 = .062$ for 6-month changes, and $0.08/2.20 = .036$ for the 12-month change between December 1998 and December 1999. This shows that the relative accuracy of percent changes in the CPI improves as the price change interval gets longer. On an absolute basis, the standard errors increase; but they increase at a decreasing rate.

The data presented here indicate that users should exercise caution when using CPI estimates to make inferences about index changes for relatively short time periods, for individual goods and services, and for local areas. The standard errors of those estimates may be on the same order of magnitude as the estimates themselves; and, thus, few inferences about them are reliable.

Sources of error

One way of analyzing the error in a survey estimate is to divide the total error into two sources: *sampling error* and *non-sampling error*. Sampling error is the uncertainty in the CPI caused by the fact that a sample of retail prices is used to compute the CPI, instead of using the complete universe of retail prices. Non-sampling error is the rest of the error. Non-sampling error includes things like incorrect information given by survey respondents, data processing errors, etc. Non-sampling error arises, regardless of whether data are collected from a sample of retail prices or from the complete universe.

Another way of analyzing error is to divide it into *variance* and *bias*. The variance of the CPI is a measure of how close different estimates of the CPI would be to each other if it were possible to repeat the survey over-and-over using different samples. Of course, it is not feasible to repeat the survey over-and-over, but statistical theory allows the CPI's variance to be estimated anyway. A small variance, for example, indicates that multiple independent samples would produce values that are consistently very close to each other. *Bias* is the difference between the CPI's *expected* value and its *true* value. A statistic may have a small variance but a large bias, or it may have a large variance but a small bias. For an index to be considered accurate, both its variance and bias need to be small.

The Bureau of Labor Statistics is constantly trying to reduce the error in the CPI. Variance and sampling error are reduced by using a sample of retail prices that is as large as possible, given resource constraints. The Bureau has developed a model that optimizes the allocation of resources by indicating the number of prices that should

be observed in each geographic area and each item category, in order to minimize the variance of the U.S. City Average-All Items Index. The Bureau reduces non-sampling error through a series of computerized and professional data reviews, as well as through continuous survey process improvements and theoretical research.

Replication and variance estimation

An important advantage of using sampling is that the CPI's variance can be estimated directly from the sample data. Starting in 1978, the CPI's sample design has accommodated variance estimation by using two or more independent samples of items and outlets in each geographic area. This allows two or more statistically independent estimates of the index to be made. The independent samples are called *replicates*, and the set of all observed prices is called the *full sample*.

The CPI collects data in 38 geographic areas across the United States. The 38 areas consist of 31 *self-representing* areas and 7 *non-self-representing* areas. Self-representing areas are large metropolitan areas, such as the Boston metropolitan area, the St. Louis metropolitan area, and the San Francisco metropolitan area. Non-self-representing areas are collections of small metropolitan areas. For example, one non-self-representing area is a collection of 32 small metropolitan areas in the Northeast region (Buffalo, Hartford, Providence, Bangor, etc.) of which 8 areas were randomly selected to represent the entire set. Within each of the 38 areas, price data are collected for 211 item categories called *item strata*. Together, the 211 item strata cover all consumer purchases. Examples of item strata are bananas, women's dresses, and electricity.

Multiplying the number of areas by the number of item strata gives 8,018 ($= 38 \times 211$) different area and item combinations for which price indexes need to be calculated. Separate price indexes are calculated for each one of these 8,018 area/item combinations. After calculating all 8,018 of these *basic-level* indexes, the indexes are then aggregated to form *higher-level* indexes, using expenditure estimates from the Consumer Expenditure Survey as their weights. Examples of higher-level geographic areas are the four regions of the country (Northeast, Midwest, South; West); and examples of higher-level item categories are the eight major groups (food and beverages, housing, apparel, transportation, medical care, education and communication, recreation, and other goods and services). The highest level of geographic aggregation is the *U.S. City Average*, and the highest level of item aggregation is *All Items*.

Variances are computed with a Stratified Random Groups Method in which variances are computed separately for certain subsets of areas and items, and then those individual variances are combined to produce the variance of the entire area and item combination. Subsets of items are formed by the intersection of the item category with

each one of the eight major groups.

Let $CPI(A, I, f, t)$ denote the index value for area= A , item category= I , in month= t , where f indicates that it is the full-sample value, and let $CPI(A, I, f, t-k)$ denote the value of the same index in month= $t-k$. In general, the upper-case letter A denotes a *set* of areas, such as the Northeast or Mid-west region of the country; and the upper-case letter I denotes a higher-level item category, such as *all items* or *all items less food and energy*. Also let $CPI(A, I, r, t)$ and $CPI(A, I, r, t-k)$ be the corresponding index values for replicate= r . Most areas have two replicates, but some have more. Then, the full-sample k -month percent change between months $t-k$ and t is computed by dividing $CPI(A, I, f, t)$ by $CPI(A, I, f, t-k)$, subtracting 1, and multiplying by 100:

$$PC(A, I, f, t, t-k) = \left(\frac{CPI(A, I, f, t)}{CPI(A, I, f, t-k)} - 1 \right) \times 100$$

Every index has a weight $W(A, I, f)$ or $W(A, I, r)$ associated with it, which is used to combine the index with other indexes to produce indexes for large geographic areas and large item categories. For example, the weights are used to combine all 8,018 basic-level indexes into higher-level indexes such as the U.S. City Average-All Items Index. The product of an index and its weight is called a *cost weight*, $CW(A, I, r, t) = CPI(A, I, r, t) \times W(A, I, r)$, and it is an estimate of the total cost in area= A for consumption of item category= I in month= t .

For the Stratified Random Groups Method used here, replicate percent changes are defined as follows: full sample cost weights are used for every geographic area within area= A except for one of the areas. In the omitted area, the full sample cost weight is replaced by a replicate cost weight. Let the lower case letter a denote one of the 38 basic-level areas included in area= A , and let the lower case letter i denote the intersection of item category= I with one of the eight major groups. Then, the replicate percent change for area= a , item subset= i , replicate= r between months $t-k$ and t is computed as:

$$PC_s(a, i, r, t, t-k) = \left(\frac{CW(A, I, f, t) - CW(a, i, f, t) + CW(a, i, r, t)}{CW(A, I, f, t-k) - CW(a, i, f, t-k) + CW(a, i, r, t-k)} - 1 \right) \times 100$$

for self-representing areas. For non-self-representing areas, another replicate percent change for area= a , item

category= I , replicate= r between months $t-k$ and t is computed as:

$$PC_n(a, i, r, t, t-k) = \left(\frac{CW(A, I, f, t) - CW(a, i, f, t) + CW(a, i, r, t)}{CW(A, I, f, t-k) - CW(a, i, f, t-k) + CW(a, i, r, t-k)} - 1 \right) \times 100$$

where:

$$CW(A, I, f, t) = \sum_{a \in A} \sum_{i \in I} CW(a, i, f, t)$$

$$CW(A, I, f, t) = \sum_{a \in A} CW(a, I, f, t)$$

$$CW(a, I, f, t) = \sum_{i \in I} CW(a, i, f, t)$$

and, likewise, for replicates. The symbol $a \in A$ means that the sum is over all basic-level areas within area= A , and the symbol $i \in I$ means that the sum is over all item categories that are intersections of item category= I with a major group.

Then, the variance is computed with the following Stratified Random Groups variance estimation formula:

$$\begin{aligned} V[PC(A, I, f, t, t-k)] = & \sum_{i \in I} \sum_{a \in A \cap S} \frac{1}{R_a(R_a - 1)} \sum_{r=1}^{R_a} (PC_s(a, i, r, t, t-k) - PC(A, I, f, t, t-k))^2 \\ & + \sum_{a \in A \cap N} \frac{1}{R_a(R_a - 1)} \sum_{r=1}^{R_a} (PC_n(a, i, r, t, t-k) - PC(A, I, f, t, t-k))^2 \end{aligned}$$

where S, N are the sets of all self-representing and non-self-representing areas in the CPI's geographic sample, respectively; and $A \cap S, A \cap N$ are the sets of all self-representing and non-self-representing areas within area= A . The number R_a is the number of replicates in area= a .

Finally, the standard error of the percent change is computed by taking the square root of its variance:

$$SE[PC(A, I, f, t, t-k)] = \sqrt{V[PC(A, I, f, t, t-k)]}.$$

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Pittsburgh, PA;

Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA; Tampa-St. Petersburg-Clearwater, FL.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.

¹ See region and area size on Table 10 for information about cross classifications.

² Indexes on a December 1997=100 base.

³ The 'All items' index size B/C is on a December 1996=100 base.

⁴ This index series was calculated using a Laspeyres estimator. All other item stratum index series converted to a geometric means estimator

in January, 1999.

⁵ Indexes on a December 1982=100 base.

⁶ Special index based on a substantially smaller sample.

⁷ Indexes on a December 1993=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1997=100 base.

⁴ Indexes on a December 1986=100 base.

NOTE: Index applies to a month as a whole, not to any specific date.

¹ Areas on pricing schedule 2 (see Table 10) will appear next month.

² For Washington-Baltimore, indexes are on a December 1997=100 base unless otherwise noted.

³ For Washington-Baltimore, index is on a November 1996=100 base.

⁴ For Washington-Baltimore, index is on a November 1997=100 base.

⁵ This index series was calculated using a Laspeyres estimator. All other item stratum index series converted to a geometric means estimator in January, 1999.

⁶ Indexes on a December 1982=100 base.

⁷ Special index based on a substantially smaller sample.

⁸ Indexes on a December 1993=100 base.

⁹ Indexes on a December 1997=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Pittsburgh, PA;

Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA; Tampa-St. Petersburg-Clearwater, FL.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.

¹ Regions defined as the four Census regions. See map in technical notes.

² This index series was calculated using a Laspeyres estimator. All other item stratum index series converted to a geometric means estimator in January, 1999.

³ Indexes on a December 1984=100 base

⁴ Indexes on a December 1997=100 base.

⁵ Special index based on a substantially smaller sample.

⁶ Indexes on a December 1993=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

¹ See region and area size on Table 10 for information about cross classifications.

² Indexes on a December 1997=100 base.

³ The 'All items' index size B/C is on a December 1996=100 base.

⁴ This index series was calculated using a Laspeyres estimator. All other item stratum index series converted to a geometric means estimator

in January, 1999.

⁵ Indexes on a December 1984=100 base

⁶ Special index based on a substantially smaller sample.

⁷ Indexes on a December 1993=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

¹ Indexes on a December 1997=100 base.

² Special index based on a substantially smaller sample.

³ This index series was calculated using a Laspeyres estimator. All other item stratum index series converted to a geometric means estimator in January, 1999.

⁴ Indexes on a December 1982=100 base.

⁵ Indexes on a December 1986=100 base.

⁶ Indexes on a December 1983=100 base.

⁷ Indexes on a December 1990=100 base.

⁸ Indexes on a December 1993=100 base.

⁹ Indexes on a December 1996=100 base.

¹⁰ Indexes on a December 1988=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

Technical Note

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U), which covers approximately 87 percent of the total population, and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W), which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for physicians' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest metropolitan areas and every other month in other areas. Prices of most goods and services are obtained by personal visits or telephone calls of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 26 local areas. Area indexes do not measure differences in the level of prices among cities; they measure only the average change in prices for each area since the base period.

The index measures price change from a designed reference date—1982-84, which equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period market basket of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65.

For further details see *BLS Handbook of Methods*, Chapter 17, the Consumer Price Index, Bulletin 2490, April 1997.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes, rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The example below illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index point change</i>	
CPI	115.7
Less previous index	111.2
Equals index point change	4.5
<i>Percent change</i>	
Index point difference	4.5
Divided by the previous index	111.2
Equals	0.040
Results multiplied by 100	0.040x100
Equals percent change	4.0

Energy Prices

Prices are usually available for the U.S. city average, 13 large metropolitan areas, the 4 census regions, 3 size classifications, and 10 areas reflecting the 4 Census regions cross-classified by the 3 population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA appears. This designation also appears if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the CPI. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas, and for 500 kilowatt hours of electricity (shown in table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Because heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised CPI.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. (See

table P1.) Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity or quick payment.

Gasoline and automotive diesel fuel. Gasoline and diesel prices, shown in table P3, are collected at the pump from a sample of full service, mini-service, and self-service gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU's (U.S. Department of Energy)

1 kwh = 3,412 BTU's (Edison Electric Institute)

1 gallon #2 fuel oil = 140,000 BTU's (U.S. Department of Energy)

Food and Beverage Prices

Actual weighted average prices for food and beverages are calculated each month at the national level and for the four Census geographic regions, as shown in table P4. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot, in general, be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted that the average prices for food in this report reflect

variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA appears. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price is not published and NA appears for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from BLS regional offices or from the Washington office upon request.

Seasonally Adjusted and Unadjusted Data

Because different groups use price data for different purposes, the Bureau of Labor Statistics publishes seasonally adjusted, as well as unadjusted, changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred, because they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1995 through 1999 were replaced at the end of 1999. The seasonal movement of all items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year, the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years; but the seasonally adjusted indexes will be used before that period.

Seasonally adjusted data, including the *all items* index levels, are subject to revision for up to 5 years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced

seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values or sharp movements that might distort the seasonal pattern are estimated and removed from the data before calculation of seasonal factors. Since the calculation of seasonal factors for 1996, X-12-ARIMA software has been used for Intervention Analysis Seasonal Adjustment.

For the fuel oil and the motor fuels indexes, this procedure is used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For the breakfast cereal index, the procedure is used to offset the effects of price-cutting among cereal manufacturers. For the educational books and supplies index, the procedure is used to account for greater-than-normal sale prices on educational reference books. For some alcoholic beverage series, Intervention Analysis Seasonal Adjustment is used to offset the effects of increased brewer's costs, along with increased demand for specialty beers. For the nonalcoholic beverages index, the procedure is used to offset the effects of a large increase in coffee prices due to adverse weather. For the fats and oils series, the procedure is used to account for lower domestic butter stocks, lower cold storage supplies, and anticipation of a bumper soybean crop. For the new trucks index, the procedure is applied to account for loyalty rebates offered to customers by American automakers. For the water and sewerage maintenance index, the procedure is used to account for a data collection anomaly.

A description of Intervention Analysis Seasonal Adjustment, as well as a list of unusual events modeled and seasonal factors for these items, may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212, or by calling Claire McAnaw Gallagher on (202) 691-6968. Ms. Gallagher may also be reached at gallagher_c@bls.gov by e-mail.

Metropolitan Areas

BLS publishes price indexes for three major metropolitan areas monthly:

Chicago-Gary-Kenosha, IL-IN-WI
Los Angeles-Riverside-Orange County, CA
New York-Northern New Jersey-Long Island,
NY-NJ-CT-PA

Data for additional 11 metropolitan areas are published every other month [on an odd (January, March, etc.) or even (February, April, etc.) month schedule] for the following areas:

Atlanta, GA	-even
Boston-Brockton-Nashua, MA-NH-ME-CT	-odd
Cleveland-Akron, OH	-odd
Dallas-Fort Worth, TX	-odd
Detroit-Ann Arbor-Flint, MI	-even
Houston-Galveston-Brazoria, TX	-even
Miami-Fort Lauderdale, FL	-even

Philadelphia-Wilmington-Atlantic City, PA-NJ-DE-MD	-even
San Francisco-Oakland-San Jose, CA	-even
Seattle-Tacoma-Bremerton, WA	-even
Washington-Baltimore, DC-MD-VA-WV	-odd

(Note: The designation even or odd refers to the month during which the area's price change is measured. Due to the time needed for processing, data are released 2 to 3 weeks into the following month.)

Data are published for another group of 12 metropolitan areas on a semiannual basis. These indexes, which refer to the arithmetic average for the 6-month periods from January through June and July through December, are published with release of the CPI for July and January, respectively, in August and February for:

Anchorage, AK
Cincinnati-Hamilton, OH-KY-IN
Denver-Boulder-Greeley, CO
Honolulu, HI
Kansas City, MO-KS
Milwaukee-Racine, WI
Minneapolis-St. Paul, MN-WI
Pittsburgh, PA
Portland-Salem, OR-WA
San Diego, CA
St. Louis, MO-IL
Tampa-St. Petersburg-Clearwater, FL

How to Obtain Consumer Price Index Information

Consumer Price Index (CPI) information is available from the Bureau of Labor Statistics (BLS) electronically, through publication subscriptions, and via telephone and fax through automated recordings. Information specialists are also available in the national and regional offices, to provide help and to respond to questions.

Electronic access to CPI data

BLS on the Internet. Through the Internet, BLS provides free, continuous access to published CPI data and press releases. The most recent month's CPI is made available immediately at the time of release. Additionally, a database called LABSTAT, containing current and historical data for the CPI, is accessible. Data and press releases from other BLS surveys are also available. The BLS site is accessible via the World Wide Web (WWW), Gopher, and File Transfer Protocol (FTP), as described below. Send e-mail to labstat.helpdesk@bls.gov for help using any of these systems.

World Wide Web. BLS maintains a Web site <http://stats.bls.gov> on the Internet. This BLS homepage provides access to LABSTAT, as well as links to program-specific homepages. The CPI homepage <http://stats.bls.gov/>

cpihome.htm provides other CPI information, as well as indexes. This includes a brief explanation of methodology, frequently asked questions and answers, contacts for further information, and explanations of how the CPI handles special items, like medical care and housing. In addition, CPI press releases and historical data for metropolitan areas can be accessed by linking to regional office homepages from the main BLS Web site listed above.

FTP and Gopher. These tools provide access to CPI LABSTAT data, as well as documentation and press release files organized in hierarchical directories. Connect to stats.bls.gov using FTP or Gopher. Log on as "anonymous," and use your complete Internet e-mail address as the password.

Subscriptions to CPI publications

Summary data. Free, monthly, 2-page publication containing 1- and 12-month percent changes for selected U.S. city average Consumer Price Index for All Urban Consumers (CPI-U) and Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) index series. The all items index data for each local area are also included. To be added to the mailing list, write to: Office of Publications, Bureau of Labor Statistics, 2 Massachusetts Avenue, NE, Room 2850, Washington, DC 20212-0001, or call (202) 691-5200 or any of the BLS regional offices listed below.

CPI Detailed Report. This is the most comprehensive report on the Consumer Price Index. This publication may be ordered by writing to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954 or by calling (202) 512-1800. Subscriptions cost \$27 per year.

Monthly Labor Review (MLR). The MLR provides selected CPI data included in a monthly summary of BLS data and occasional articles and methodological descriptions too extensive for inclusion in the *CPI Detailed Report*. The MLR costs \$27 per year. This publication may be ordered by writing to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954 or by calling (202) 512-1800.

Recorded CPI data

Summary CPI data are provided on 24-hour recorded messages. Detailed CPI information is available by calling (202) 691-5200. A touch-tone telephone is recommended, as this system allows the user to select specific indexes from lists of available data.

Recorded summaries of CPI data are also available by calling any one of the metropolitan area CPI hot lines listed below. These hot line summaries typically include data for the U.S. city average, as well as for the specified area. These recordings are approximately 3 minutes in length, do not require a touch-tone telephone, and are available 24 hours a day, 7 days a week.

Area	Hotline Number
Anchorage	(907) 271-2770
Atlanta	(404) 331-3415
Baltimore	(410) 962-4898
Boston	(617) 565-2325/2327
Chicago	(312) 353-1880
Cincinnati	(513) 684-2349
Cleveland	(216) 522-3852
Dallas	(214) 767-6970
Denver	(303) 844-1726
Detroit	(313) 226-7558
Honolulu	(808) 541-2808
Houston	(713) 718-3753
Indianapolis	(317) 226-7885
Kansas City	(816) 426-2481
Los Angeles	(310) 235-6884
Milwaukee	(414) 276-2579
Minneapolis-St. Paul	(612) 290-3996
New York	(212) 337-2404/2408
Philadelphia	(215) 596-1156
Pittsburgh	(412) 644-2900
Portland	(503) 231-2045
San Diego	(619) 557-6538
San Francisco	(415) 975-4350
Seattle	(206) 553-0645
St. Louis	(314) 539-3581
Washington, DC	(202) 691-6994

Other sources of CPI data

Technical information is available during normal working hours, Monday through Friday, by calling (202) 691-7000 or any of the regional offices listed below.

Fax-on-Demand. A wide variety of BLS information and data, including the CPI, are available from the BLS *Ready Facts* catalog, via fax-on-demand. CPI documents from *Ready Facts* that are available around the clock include the monthly CPI press release, selected national, regional and metropolitan area historical summaries, and some technical information. The latest CPI information is posted during the morning of release day. Call (202) 691-6325 and follow instructions to have the latest *Ready Facts* catalog sent to you. All regional offices also have fax systems in place; their systems include all information available from the national catalog, in

addition to region-specific information on the CPI. Phone and fax-on-demand numbers for the eight regional offices are:

<i>Office</i>	<i>Fax-on-Demand</i>	<i>Telephone</i>
Atlanta	(404) 331-3403	(404) 331-3415
Boston	(617) 565-9167	(617) 565-2327
Chicago	(312) 353-1880	(312) 353-1880
Dallas	(214) 767-9613	(214) 767-6970
Kansas City	(816) 426-3152	(816) 426-2481
New York	(212) 337-2412	(212) 337-2400
Philadelphia	(215) 596-4160	(215) 596-1154
San Francisco	(415) 975-4567	(415) 975-4350
Washington, DC	(202) 691-6325	(202) 691-7000

Historical tables. These include all published indexes for each of the detailed CPI components. These tables are available via the Internet, by calling (202) 691-7000 in the national office, or by contacting any of the regional offices listed above.

Descriptive publications. These publications describe the CPI and ways to use it. They include simple fact sheets discussing specific topics about the CPI, a broader, nontechnical overview of the CPI in a question and answer format, and a technical and thorough description of the CPI and its methodology. These publications are available upon request by calling (202) 691-7000, and many are included on the CPI homepage on the Internet.

Special publications. Also available are various special publications, such as *Relative Importance of Components in the Consumer Price Index* and materials describing the annual revisions of seasonally adjusted CPI data. For more information, call (202) 691-7000.

Further information can be obtained from the Office of Prices and Living Conditions, Bureau of Labor Statistics, 2 Massachusetts Avenue, NE., Room 3615, Washington, DC 20212-0001, telephone (202) 691-7000 or by calling any of the regional offices listed above.
