

Supplement to Employment and Earnings

Supplement to Employment, Hours, and Earnings, United States, 1909-84
Revised establishment data

U.S. Department of Labor
Bureau of Labor Statistics
June 1985

U.S. DEPARTMENT OF LABOR
William E. Brock, Secretary

BUREAU OF LABOR STATISTICS
Janet L. Norwood, Commissioner

This supplement to the historical publication, *Employment, Hours, and Earnings, United States, 1909-84*, presents revised data from the survey of establishments.

This publication was prepared by the Division of Monthly Industry Employment Statistics in collaboration with the Division of Federal/State Monthly Surveys, the Division of Data Development and Users' Services, and the Division of Special Publications. The data are collected by State employment security agencies in cooperation with the Bureau of Labor Statistics. A brief description of the cooperative statistical programs of BLS with these agencies is presented in the Technical Note. The State agencies are listed on the inside back cover.

The supplement may be ordered through the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 at the price of \$8 domestic and \$10 foreign. Subscription prices per year for the monthly periodical, *Employment and Earnings*, \$31 domestic and \$38.75 foreign, include the supplement. Prices are subject to change by the U.S. Government Printing Office.

Communications on material in this publication should be addressed to Gerald J. Storch, Bureau of Labor Statistics, Washington, D.C. 20212, or phone: (202) 523-1172. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

The Secretary of Labor has determined that publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through July 1, 1985. Second-class postage paid at Washington, D.C. and at additional mailing addresses.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission.

Revised data on employment, hours, and earnings	v	Average hourly and weekly earnings of production or nonsupervisory workers on total private nonagricultural payrolls, in current and 1977 dollars	185
Employment, hours, and earnings by industry:		Average weekly overtime hours of production workers on manufacturing payrolls	185
Total nonagricultural establishments	3	Indexes of aggregate weekly hours of production or nonsupervisory workers on private nonagricultural payrolls (1977 = 100)	186
Total private	3	Special series by industry:	
Goods-producing	3	Indexes of aggregate weekly hours of production or nonsupervisory workers on private nonagricultural payrolls (1977 = 100)	193
Mining	4	Indexes of aggregate weekly payrolls of production or nonsupervisory workers on private nonagricultural payrolls (1977 = 100)	195
Construction	8	Average hourly and weekly earnings of production or nonsupervisory workers on private nonagricultural payrolls, in current and 1977 dollars	198
Manufacturing	13	Average hourly earnings, excluding overtime, of production workers on manufacturing payrolls	201
Durable goods	13	Footnotes	203
Nondurable goods	76	Technical note	204
Service-producing	119	BLS regional offices and cooperating State agencies (inside back cover)	
Private service-producing	119		
Transportation and public utilities	120		
Wholesale trade	127		
Retail trade	136		
Finance, insurance, and real estate	147		
Services	153		
Government	165		
Seasonally adjusted series by industry:			
Employees in nonagricultural establishments	171		
Women employees in nonagricultural establishments	175		
Production or nonsupervisory workers on private nonagricultural payrolls	179		
Average weekly hours of production or nonsupervisory workers on private nonagricultural payrolls	182		
Average hourly earnings of production or nonsupervisory workers on private nonagricultural payrolls	184		

Revised Data on Employment, Hours, and Earnings

This supplement presents revised detailed industry statistics on the Nation's nonagricultural workers adjusted to March 1984 benchmarks. Included are monthly and annual average employment from January 1983 through February 1985 for all employees and women employees; production workers in manufacturing and mining; construction workers in construction; and nonsupervisory workers in the remaining private nonagricultural industries. Also shown for private nonagricultural industries are average weekly hours and average hourly and weekly earnings. Average weekly overtime hours and average hourly earnings excluding overtime are presented for selected manufacturing series. Seasonally adjusted data are presented for a number of these series from January 1980 through February 1985. The supplement also includes indexes of aggregate weekly hours and aggregate weekly payrolls, and constant-dollar earnings related to 1977 as a base year.

This supplement, combined with the historical volume, *Employment, Hours, and Earnings, United States, 1909-84*, BLS Bulletin 1312-12, comprises the full historical series on national data derived from the establishment survey.

The major technical characteristics of the Current Employment Statistics program, such as scope, concepts, survey methods, estimating techniques, and limitations, highlighted in the next few paragraphs, are described fully in the technical note following the tables.

Benchmark adjustments

Periodically, BLS adjusts its industry employment series to more recent benchmarks (comprehensive counts of employment) to correct for sampling variability and for changes in the industrial activity of establishments. Estimates in this databook are projected from the most recent benchmark available—March 1984. Unadjusted series from April 1983 forward and seasonally adjusted

series from January 1980 forward are not comparable with those previously published in *Employment and Earnings* or the *Monthly Labor Review*. All unadjusted series for periods after March 1984 and all seasonally adjusted series for periods after December 1980 are subject to revision when the series are adjusted to new benchmark levels. The next revision is scheduled for publication in mid-1986.

Collection of data

Each month, a representative panel of industrial, commercial, and government establishments, employing collectively over 35 million workers, voluntarily submits information from payroll records to the State agencies participating in the Current Employment Statistics program. After extracting data necessary for the preparation of State and area estimates on employment, hours, and earnings, these agencies forward the reports to BLS for use in the development of national estimates. This program is conducted jointly by BLS and State agencies.

Industrial classification

The Standard Industrial Classification (SIC) system is used to achieve uniformity and comparability in the presentation of industry data and to reflect structural changes that occur in a dynamic economy. The industry statistics in this databook are based on the 1972 *Standard Industrial Classification Manual* published by the Office of Management and Budget.

Related State and area statistics

Only national data are presented in this databook. The bulletin, *Employment, Hours, and Earnings, States and Areas, 1939-82* (BLS Bulletin 1370-17), and its supplement (BLS Bulletin 1370-18) provide similar information for all 50 States, the District of Columbia, Puer-

to Rico, the Virgin Islands, and 278 major labor market areas, most of which are Metropolitan Statistical Areas. The bulletin contains annual averages for total employment, average weekly hours, and average hourly and weekly earnings on the same basis as the national data.

Publication of current data

Beginning with the June 1985 issue, current statistics comparable with the figures shown in this supplement are provided each month in the periodical *Employment and Earnings* (For details on ordering, see the inside front cover of this supplement.)

Footnotes

¹ Includes all divisions except government.

² Data relate to production workers in mining and manufacturing; construction workers in construction; and nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services.

³ Includes mining, construction, and manufacturing.

⁴ Data relate to production workers in mining and manufacturing, and construction workers in construction.

⁵ 11-month average.

⁶ Not available.

⁷ Includes transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; services; and government.

⁸ Includes transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services.

⁹ Data relate to nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services.

¹⁰ Data are based on reports summarized in the M-300 report by the Interstate Commerce Commission and relate to employment at the middle

of the month. Hours and earnings averages are based upon monthly data (exclusive of switching and terminal companies) and relate to all employees who received pay during the month, with the exception of executives, officials, and staff assistants (ICC Group 1). Beginning in January 1978, data relate to line haul railroads with annual operating revenues of \$50 million or more. This class included all railroads with operating revenues of \$10 million or more for the years 1976 and 1977.

¹¹ Excludes data for telegraph messengers.

¹² Money payments only; tips are not included.

¹³ Excludes data on nonoffice sales agents.

¹⁴ Money payments only; additional value of board, room, uniforms, and tips are not included.

¹⁵ "All employees" estimates are prepared by the Office of Personnel Management. Data relate to civilian employment only and exclude the Central Intelligence Agency and the National Security Agency.

¹⁶ Includes rural mail carriers beginning in January 1983, an addition of 23,800 employees

¹⁷ Derived by assuming that overtime hours are paid at the rate of time and one-half.

Technical Note

This technical note describes the method of collection, concepts, scope, and estimating methods used in the preparation of the employment, hours, and earnings series shown in this bulletin.

COLLECTION

Payroll reports provide current information on wage and salary employment, hours, and earnings in nonagricultural establishments, by industry and geographic location.

Federal-State cooperation

Under cooperative arrangements between the States and the Bureau of Labor Statistics, responding establishments report employment, hours, and earnings data to State agencies. The State agencies mail payroll report forms to the establishments and examine the returns for consistency, accuracy, and completeness. The States use the reported data to prepare State and area statistics and also send the reported data to BLS for use in preparing the national series. This avoids a duplicate reporting burden on establishments, and together with the use of similar estimating techniques at the national and State levels, promotes increased comparability between estimates.

Shuttle schedules

Data are collected on Form BLS 790—Report on Employment, Payroll, and Hours. The collecting agency returns the schedule to the respondent each month so that the next month's data can be entered on the space allotted for that month. This "shuttle" procedure assures maximum comparability and accuracy of reporting, since the respondent can see the figures that have been reported for previous months.

Form BLS 790 provides for entry of data on the total number of workers on the payrolls of nonagricultural establishments and, for

most industries, payroll and hours of production and related workers or nonsupervisory workers for the pay period which includes the 12th of the month.

CONCEPTS

Industrial classification

Establishments reporting on Form BLS 790 are classified into industries on the basis of their principal product or activity, determined from information on annual sales volume. This information is collected on a supplement to the quarterly unemployment insurance tax reports filed by employers. For an establishment making more than one product or engaging in more than one activity, the entire employment of the establishment is included in the industry of the principal product or activity.

All national, State, and area employment, hours, and earnings series are classified according to the 1972 *Standard Industrial Classification Manual*, published by the Office of Management and Budget.

Industry employment

Employment data, except those for employees of the Federal Government, refer to persons on establishment payrolls who received pay for any part of the pay period which includes the 12th of the month. For Federal Government establishments, employment figures represent the number of persons who occupied positions on the last day of the calendar month. Intermittent workers are counted if they performed any service during the month.

The data exclude proprietors, the self-employed, unpaid volunteer or family workers, farm workers, and domestic workers. Salaried officers of corporations are included. Government employment covers only civilian employees; military personnel are excluded. Employees of the Central Intelligence Agency and the National Security Agency are also excluded.

Persons on establishment payrolls who are on paid sick leave (when pay is received directly from the firm), on paid holiday or paid vacation, or who work during a part of the pay period even though they are unemployed or on strike during the rest of the period, are counted as employed. Not counted as employed are persons who are laid off, on leave without pay, or on strike for the entire period, or who are hired but have not been paid during the period.

Industry hours and earnings

Hours and earnings data are derived from reports of payrolls and hours for production and related workers in manufacturing and mining, construction workers in construction, and nonsupervisory employees in the remaining private nonagricultural components. These terms are defined below. When the pay period reported is longer than 1 week, the figures are converted to a weekly basis.

Production and related workers include working supervisors and all nonsupervisory workers (including group leaders and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial and guard services, product development, auxiliary production for a plant's own use (e.g., power plant), and recordkeeping and other services closely associated with the above production operations.

Construction workers include the following employees in the construction division: Working supervisors, qualified craft workers, mechanics, apprentices, laborers, etc., whether working at the site of construction or in shops or yards, at jobs ordinarily performed by members of the construction trades (such as precutting and preassembling).

Nonsupervisory employees include employees (not above the working supervisory level) such as office and clerical workers, repairers, salespersons, operators, drivers, physicians, lawyers, accountants, nurses, social workers, teachers, research aides, drafters, photographers, beauticians, musicians, restaurant workers, custodial workers, attendants, line installers, laborers, janitors, guards, and other employees at similar occupational levels, whose services are closely associated with those of the employees listed.

Payroll covers the payroll for full- and part-time production, con-

struction, or nonsupervisory workers who received pay for any part of the pay period which includes the 12th of the month. The payroll is reported before deductions of any kind, e.g., for old-age and unemployment insurance, group insurance, withholding taxes, bonds, or union dues; also included is pay for overtime, holidays, vacations, and sick leave paid directly by the firm. Bonuses (unless earned and paid regularly each pay period), other pay not earned in the pay period reported (e.g., retroactive pay), tips, and the value of free rent, fuel, meals, or other payment in kind are excluded. Moreover, "fringe benefits" (such as health and other types of insurance, contributions to retirement, etc., paid by the employer) are also excluded.

Hours cover hours paid for, during the pay period which includes the 12th of the month, for production, construction, or nonsupervisory workers. The hours data include hours paid for holidays and vacations, and for sick leave when pay is received directly from the firm.

Overtime hours cover hours worked by production or related workers for which overtime premiums were paid because the hours exceeded the number of hours of either the straight-time workday or the workweek during the pay period which includes the 12th of the month. Weekend and holiday hours are included only if overtime premiums were paid. Hours for which only shift differential, hazard, incentive, or other similar types of premiums were paid are excluded.

Average hourly earnings are on a "gross" basis. They reflect not only changes in basic hourly and incentive wage rates but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. They also reflect shifts in the number of employees between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Averages of hourly earnings differ from wage rates. Earnings are the actual return to the worker for a stated period of time; rates are the amounts stipulated for a given unit of work or time. The earnings series do not measure the level of total labor costs on the part of the employer since the following are excluded: Irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings for those

employees not covered under the production worker, construction worker, or nonsupervisory employee definitions.

Average weekly earnings are derived by multiplying average weekly hours by average hourly earnings. Therefore, weekly earnings are affected not only by changes in average hourly earnings but also by changes in the length of the workweek. In addition, monthly variations in such factors as proportion of part-time workers, stoppages for varying reasons, labor turnover during the survey period, and absenteeism for which employees are not paid may cause the average workweek to fluctuate.

Long-term trends of average weekly earnings can be affected by structural changes in the makeup of the work force. For example, persistent long-term increases in the proportion of part-time workers in retail trade and many of the service industries have reduced average workweeks in these industries and have affected the average weekly earnings series.

Average weekly hours relate to the average hours for which pay was received and are different from standard or scheduled hours. Such factors as absenteeism, labor turnover, part-time work, and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect changes in the workweek of component industries.

Average overtime hours represent that portion of average weekly hours which exceeds regular hours and for which overtime premiums are paid. If an employee were to work on a paid holiday at regular rates, receiving as total compensation holiday pay plus straight-time pay for hours worked that day, no overtime hours would be reported.

Since overtime hours are premium hours by definition, average weekly hours and overtime hours do not necessarily move in the same direction from month to month; for example, overtime premiums may be paid for hours exceeding the straight-time workday although less than a full week is worked. Diverse trends at the industry-group level also may be caused by a marked change in average hours for a component industry where little or no overtime was worked in both the previous and current months. In addition, such factors as stoppages, absenteeism, and labor turnover may not have the same influence on overtime as on average hours.

Railroad hours and earnings figures relate to Class 1 railroads (excluding switching and terminal companies) and are derived from monthly data summarized in the M-300 report of the In-

terstate Commerce Commission. Data refer to all employees, except executives, officials, and staff assistants (ICC Group 1), who received pay during the month. Average hourly earnings are computed by dividing total compensation by total hours paid for. Average weekly hours are obtained by dividing the total number of hours paid for, converted to a weekly basis, by the number of employees, as defined above. Average weekly earnings are derived by multiplying average weekly hours by average hourly earnings.

Real earnings, or earnings in constant dollars, are calculated from the earnings averages for the current month by using a deflator derived from the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W).

Average hourly earnings excluding overtime are computed by dividing the total production worker payroll for the industry group by the sum of the total production worker hours and one-half of total overtime hours. Only earnings due to overtime paid for at 1-1/2 times the straight-time rates are eliminated. No adjustment is made for other premium payment provisions, such as holiday work, late-shift work, and overtime rates other than time and one-half.

The indexes of aggregate weekly hours and payrolls are prepared by dividing the current month's aggregate by the monthly average for 1977. The hours aggregates are the product of average weekly hours and production worker employment, and the payroll aggregates are the product of the hours aggregates and average hourly earnings. At all the higher levels of aggregation, hours and payroll aggregates are the sum of the component aggregates.

ESTIMATING METHODS

The principal features of the procedure used to estimate employment for the industry statistics are (1) the use of the "link relative" technique, which is a form of ratio estimation, (2) the use of size and regional stratification, and (3) periodic adjustment of employment levels to new benchmarks. Other features of the procedures are summarized later in table A. Further details are given in the *BLS Handbook of Methods*, Bulletin 2134-1 (1982), chapter 2. Reprints are available upon request.

Table A. Summary of methods for computing industry statistics on employment, hours, and earnings

Employment, hours, and earnings	Basic estimating cell (industry, region, size, or region/size cell)	Aggregate industry level (division and where stratified industry)
Monthly data		
All employees	All-employee estimate for previous month multiplied by ratio of all employees in current month to all employees in previous month, for sample establishments which reported for both months. ¹	Sum of all-employee estimates for component cells
Production or nonsupervisory workers, women employees	All-employees estimate for current month multiplied by (1) ratio of production or nonsupervisory workers to all employees in sample establishments for current month, (2) estimated ratio of women to all employees. ²	Sum of production or nonsupervisory worker estimates, or estimates of women employees, for component cells
Average weekly hours	Production or nonsupervisory worker hours divided by number of production or nonsupervisory workers. ²	Average, weighted by production or nonsupervisory worker employment, of the average weekly hours for component cells.
Average weekly overtime hours	Production worker overtime hours divided by number of production workers. ²	Average, weighted by production worker employment, of the average weekly overtime hours for component cells
Average hourly earnings	Total production or nonsupervisory worker payroll divided by total production or nonsupervisory worker hours. ²	Average, weighted by aggregate hours, of the average hourly earnings for component cells
Average weekly earnings	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings
Annual average data		
All employees, women employees, and production or nonsupervisory workers	Sum of monthly estimates divided by 12	Sum of monthly estimates divided by 12
Average weekly hours	Annual total of aggregate hours (production or nonsupervisory worker employment multiplied by average weekly hours) divided by annual sum of employment.	Annual total of aggregate hours for production or nonsupervisory workers divided by annual sum of employment for these workers
Average weekly overtime hours	Annual total of aggregate overtime hours (production worker employment multiplied by average weekly overtime hours) divided by annual sum of employment.	Annual total of aggregate overtime hours for production workers divided by annual sum of employment for these workers
Average hourly earnings	Annual total of aggregate payrolls (product of production or nonsupervisory worker employment by weekly hours and hourly earnings) divided by annual aggregate hours.	Annual total of aggregate payrolls divided by annual aggregate hours
Average weekly earnings	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings.

¹ The estimates are computed by multiplying the above product by bias adjustment factors, which compensate for the underrepresentation of newly formed enterprises and other sources of bias in the sample.

² The sample production-worker ratio, women-worker ratio, average weekly hours, average overtime hours, and average hourly earnings are modified by

a wedging technique designed to compensate for changes in the sample arising mainly from the voluntary character of the reporting. The wedging procedure accepts the advantage of continuity from the use of the matched sample and, at the same time, tapers or wedges the estimate toward the level of the latest sample average.

The "link relative" technique

From a sample composed of establishments reporting for both the previous and current months, the ratio of current-month employment to that of the previous month is computed. This is called a "link relative". The estimates of employment (all employees including production and nonproduction workers together) for the current month are obtained by multiplying the estimates for the previous month by these "link relatives". In addition, bias correction factors are applied to selected employment estimates each month. The size of the bias correction factors is determined from past benchmark comparisons. Beginning with data for April 1983, these factors are modified by changes in the sample link relatives for the most recent quarter.

Size and regional stratification

A number of industries are stratified by size of establishments and/or by region, and the stratified production or nonsupervisory worker data are used to weight the hours and earnings estimates into broader industry groupings. Accordingly, the basic estimating cell for an employment, hours, or earnings series may be a whole industry or a size stratum, a region stratum, or a size stratum of a region within an industry. This stratified estimating procedure offsets the tendency of the sample to produce biased estimates for certain industries.

Benchmark adjustments

Employment estimates are compared periodically with benchmarks (comprehensive counts of employment) for the various nonagricultural industries, and appropriate adjustments are made as indicated. The industry estimates in this publication are projected from March 1984 benchmark levels. Unadjusted data from April 1984 forward and seasonally adjusted data from January 1981 forward are subject to adjustment to future benchmarks. Normally, benchmark adjustments are made annually.

The primary sources of benchmark information are the employment data by industry, compiled quarterly by State agencies from reports of establishments covered under State unemployment insurance laws. These tabulations cover about 98 percent of employees on nonagricultural payrolls in the United States. Benchmark data for the residual are obtained from the records of the Social Security Administration, the Interstate Commerce Com-

Table B. Comparison of nonagricultural employment benchmarks and estimates for March 1984

Industry	Benchmark	Estimate	Percent difference
Total	92,587,000	92,234,000	0.4
Mining	952,000	967,000	-1.6
Construction	3,914,000	3,794,000	3.1
Manufacturing	19,151,000	19,323,000	-.9
Transportation and public utilities	5,063,000	5,055,000	.2
Wholesale trade	5,447,000	5,421,000	.5
Retail trade	15,891,000	15,629,000	1.6
Finance, insurance, and real estate	5,588,000	5,565,000	.4
Services	20,365,000	20,276,000	.4
Government	16,216,000	16,204,000	.1

mission, and a number of other agencies in private industry or government.

The estimates for the benchmark month are compared with new benchmark levels for each estimating cell. If revisions are necessary, the monthly series of estimates between benchmark periods are adjusted by correcting the differences between the new benchmark and the preceding one. The new benchmark for each industry then is carried forward progressively to the current month by use of the sample trends. Thus, the benchmark is used to establish the level of employment; the sample is used to measure the month-to-month changes in the level. A comparison of nonagricultural employment benchmarks and estimates for March 1984 is shown in table B.

THE SAMPLE

Design

The sampling plan used in the Current Employment Statistics program is an optimum allocation design known as "sampling proportionate to average size of establishment." Under this type of design, large establishments fall into the sample with certainty. The size of the samples for the various industries is determined on the basis of experience and cost considerations. In a manufacturing industry in which a large proportion of total employment is concentrated in relatively few establishments, a large percentage of total employment is included in the sample. Consequent-

ly, the sample design for such industries provides for a complete census of the larger establishments with only a few chosen from among the smaller establishments, or none at all if the concentration of employment is great enough. On the other hand, in an industry in which a large proportion of total employment is in small establishments, the sample design calls for inclusion of all large establishments and also for a substantial number of smaller ones. Many industries in the trade and services divisions fall into this category. To keep the sample to a size which can be handled by available resources, it is necessary to design samples for these industries with a smaller proportion of universe employment than is the case for most manufacturing industries. Since individual establishments in the nonmanufacturing divisions generally show less fluctuation from regular cyclical or seasonal patterns than do establishments in manufacturing industries, these smaller samples (in terms of employment) generally produce reliable estimates.

In the context of the BLS Current Employment Statistics program, with its emphasis on producing timely data at minimum cost, a sample must be obtained which will provide coverage of a sufficiently large segment of the universe to provide reasonably reliable estimates that can be published promptly and regularly. The present sample meets these specifications for most industries. This sample design allows BLS to produce preliminary estimates each month for many industries and for many geographic levels within a few weeks after reports are mailed by respondents. At a somewhat later date, estimates in considerably greater industrial detail are also made available.

Coverage

The BLS sample of establishment employment and payrolls is the largest monthly sampling operation in the field of social statistics. Table C shows the approximate proportion of total employment in each industry division covered by the group of establishments furnishing monthly employment data. The coverage for individual industries within the division may vary from the proportions shown.

Reliability of the employment estimates

The estimates derived from the establishment survey may differ from the figures that would have been obtained if it were possible

Table C. Approximate size and coverage of BLS employment and payrolls sample, March 1984¹

Industry	Number of establishments in sample	Employees	
		Number reported	Percent of total
Total.....	221,700	36,946,000	40
Mining	3,400	376,000	39
Construction	21,500	827,000	21
Manufacturing	50,600	10,571,000	55
Transportation and public utilities	10,500	2,377,000	47
Wholesale trade	19,200	909,000	17
Retail trade	35,900	2,875,000	18
Finance, insurance, and real estate	15,900	2,101,000	38
Services	41,900	4,838,000	24
Government:			
Federal ²	5,100	2,779,000	100
State	4,000	3,121,000	82
Local	13,700	6,172,000	64

¹ Since a few establishments do not report payroll and hours information, hours and earnings estimates may be based on a slightly smaller sample than employment estimates.

² National estimates of Federal employment by agency are provided to BLS by the Office of Personnel Management. Detailed industry estimates for the Executive Branch, as well as State and area estimates of Federal employment, are based on a sample of 5,100 reports covering about 64 percent of employment in Federal establishments.

to take a complete census using the same schedules and procedures. The relatively large size of the BLS establishment sample assures a high degree of accuracy. However, since the link relative technique requires the use of the previous month's estimate as the base in computing the current month's estimate, small sampling and response errors may accumulate over several months. To remove this accumulated error, the estimates are usually adjusted annually to new benchmarks. In addition to correcting sampling and response errors, the benchmark revision adjusts the estimates for changes in the industrial classification of individual establishments resulting from changes in their product. In fact, at the more detailed industry levels, particularly within manufacturing, changes in classification are the major cause of benchmark adjustments. Another cause of differences results from improvements in the quality of the benchmark data. Table D presents the average percent revisions of employment estimates for the five most recent benchmarks, for major industry divisions. Detail-

Table D. Average benchmark revision in employment estimates and relative errors for average weekly hours and average hourly earnings by industry

(Percent)

Industry	Average benchmark revision in estimates of employment ¹	Relative error ²	
		Average weekly hours	Average hourly earnings
Total	0.2	—	—
Total private	.3	0.1	0.2
Mining	2.4	1.0	1.3
Construction	1.6	.2	.5
Manufacturing	.6	.1	.2
Durable goods	.6	.1	.3
Nondurable goods	.5	.1	.2
Transportation and public utilities	.2	.7	.6
Wholesale trade	.2	.2	.4
Retail trade	1.4	.2	.4
Finance, insurance, and real estate	.2	.2	.4
Services	.4	.4	.6
Government ³	.3	—	—

¹ The average percent revision in employment for the 1980-84 benchmarks.

² Relative errors relate to 1982 data.

³ Estimates for government are based on a total count for Federal Government provided by the Office of Personnel Management and a sample of State and local government reports.

ed descriptions of individual benchmark revisions are available from the Bureau upon request.

Hours and earnings estimates for cells are computed directly from reported figures and are not subject to benchmark revisions, although the broader groupings may be affected slightly by changes in employment weights. The hours and earnings estimates, however, are subject to sampling errors which may be expressed as relative errors of the estimates. (A relative error is a standard error expressed as a percent of the estimate.) Relative errors for major industries are presented in table D and for individual industries with the specified number of employees in table E. The chances are about 2 out of 3 that the hours and earnings estimates from the sample would differ by a smaller percentage than the relative error from the averages that would have been obtained from a complete census.

One measure of the reliability of ratio estimates is the root-mean-square error (RMSE). This measure is the standard deviation adjusted for the bias in estimates:

$$RMSE = \sqrt{(\text{Standard Deviation})^2 + (\text{Bias})^2}$$

If the bias is small, the chances are about 2 out of 3 that an estimate from the sample would differ from its benchmark by less than the root-mean-square error. The chances are about 19 out of 20 that the difference would be less than twice the root-mean-square error.

Approximations of the root-mean-square errors of differences between final estimates and benchmarks are presented in table E. Since the differences are those that have accumulated at the end of 12 monthly estimates, the amount of difference that accumulates in 1 month is much smaller, or approximately 1/12 of the amount indicated.

Table E. Root-mean-square errors of differences between benchmarks and estimates of employment and average relative errors for average weekly hours and average hourly earnings

Size of employment estimate	Root-mean-square error of employment estimates ¹	Relative error ² (in percent)	
		Average weekly hours	Average hourly earnings
50,000	2,100	2.2	4.0
100,000	3,900	1.3	2.3
200,000	5,600	1.1	2.0
500,000	14,000	.9	1.6
1,000,000	15,000	.8	1.2
2,000,000	26,000	.5	.9

¹ Assuming 12-month intervals between benchmark revisions.

² Relative errors relate to 1982 data.

SEASONAL ADJUSTMENT

Many economic statistics reflect a regular recurring seasonal movement which can be estimated on the basis of past experience. By eliminating that part of the change which can be ascribed to usual seasonal variation, it is possible to observe the cyclical and other nonseasonal movements in the series. However, in evaluating deviations from the seasonal pattern—that is, changes in a seasonally adjusted series—it is important to note that seasonal adjustment is merely an approximation based

on past experience. Seasonally adjusted estimates have a broader margin of possible error than the original data on which they are based, since they are subject not only to sampling and other errors but, in addition, are affected by the uncertainties of the seasonal adjustment process itself. The seasonally adjusted establishment-based series shown in this supplement reflect the experience through March 1985. Current seasonally adjusted data are published regularly in *Employment and Earnings*.

The seasonal adjustment methodology used for these series is an adaptation of the standard ratio-to-moving-average method. It provides for "moving" adjustment factors to take account of changing seasonal patterns. Since July 1980, the specific procedure used to seasonally adjust the BLS employment, hours, and earnings series is the X-11 ARIMA method, developed by Statistics Canada. A detailed description of this procedure appears in *The X-11 ARIMA Seasonal Adjustment Method*, by Estela Bee Dagum, Statistics Canada Catalogue No. 12-564E, February 1980.

All series are seasonally adjusted using the multiplicative models under X-11 ARIMA. Seasonal adjustment factors used in calculating the current year's estimates are based on actual data through March of 1985 and projected data through March of 1986. These factors appear in the June 1985 issue of *Employment and Earnings*. Seasonal adjustment factors are applied directly to the component series. Seasonally adjusted totals for most of these series are then obtained by taking a weighted average of the seasonally adjusted data for the component series.

Seasonally adjusted average weekly earnings are the product of seasonally adjusted average hourly earnings and seasonally adjusted average weekly hours. Average hourly and weekly earnings in constant dollars, seasonally adjusted, are obtained by dividing average earnings, seasonally adjusted, by the seasonally adjusted Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W), and multiplying by 100. Indexes of aggregate weekly hours, seasonally adjusted, are obtained by multiplying average weekly hours, seasonally adjusted, by production or non-supervisory workers, seasonally adjusted, and dividing by the 1977 base. For total private, total goods-producing, total private service-producing, trade, manufacturing, and durable and non-durable goods industries, the indexes of aggregate weekly hours, seasonally adjusted, are obtained by summing the aggregate weekly hours, seasonally adjusted, for the appropriate component industries and dividing by the 1977 base.

Seasonally adjusted data are not published for a number of series characterized by small seasonal components relative to their trend-cycle and/or irregular components. However, these "failed" or unsatisfactory seasonally adjusted series are used in the aggregation to higher level seasonally adjusted series.

Prior to June 1983, seasonal adjustment factors for Federal Government employment were derived from unadjusted data which excluded Christmas temporary workers employed by the Postal Service. In earlier years, the number of these workers was substantial, and at times varied greatly from year to year, based on administrative decisions of the Postal Service. Hence, it was considered desirable to exclude this group from the unadjusted data upon which the seasonal adjustment factors were based. In the past several years, the number of these workers has decreased to the point where their presence has no impact on seasonal adjustment. Temporary census takers for the 1980 decennial census will continue to be removed prior to the calculation of seasonal factors for Federal Government employment.

COMPARABILITY OF DATA WITH OTHER SERIES

Current Population Survey

Data based on household interviews are obtained from a sample survey of the population. The survey is conducted each month by the Bureau of the Census for the Bureau of Labor Statistics and provides a comprehensive measure of the labor force, i.e., the total number of civilians 16 years of age and over who are employed or unemployed. It also provides data on their personal and economic characteristics such as age, sex, race, marital status, occupation, industry, hours of work, and duration of unemployment. The information is collected by trained interviewers from a sample of about 59,500 households throughout the country and is based on the activity or status reported for the calendar week including the 12th of the month. These data are published monthly in *Employment and Earnings*.

Data from payroll reports and household interviews differ from each other because of differences in definition and coverage, sources of information, methods of collection, and estimating procedures. Sampling variability and response errors are additional reasons for discrepancies.

Some specific factors which have a differential effect on levels and trends of the two series are described as follows:

Coverage. The household survey definition of employment comprises wage and salary workers (including domestics and other private household workers), self-employed persons, and unpaid workers who worked 15 hours or more during the survey week in family-operated enterprises. Civilian employment in both agricultural and nonagricultural industries is included. The payroll survey covers only wage and salary employees on the payrolls of nonagricultural establishments.

Multiple jobholding. The household survey provides information on the work status of the population without duplication, since each person is classified as employed, unemployed, or not in the labor force. Employed persons holding more than one job are counted only once, and are classified according to the job at which they worked the greatest number of hours during the survey week. In the figures based on establishment records, persons who worked in more than one establishment during the reporting period are counted each time their name appears on payrolls.

Unpaid absences from jobs. The household survey includes among the employed all persons who had jobs but were not at work during the survey week—that is, were not working but had jobs from which they were temporarily absent because of illness, bad weather, vacation, labor management dispute, or because they were taking time off for various other reasons, even if they were not paid by their employers for the time off. Payroll reports include persons on leave which is paid for by the company and exclude those on leave without pay for the entire payroll period.

Hours of work. The household survey measures hours actually worked, whereas the payroll survey measures hours paid for by employers. In the household survey all persons with a job but not at work are excluded from the hours distributions and the computations of average hours. In the payroll survey, employees on paid vacation, paid holiday, or paid sick leave are included and assigned the number of hours for which they were paid during the reporting period.

Earnings. The household survey measures median earnings of wage and salary workers in all occupations and industries in both

the private and public sectors. Data refer to the usual earnings received from the worker's sole or primary job. Data from the establishment survey generally refer to average earnings of production and related workers in mining and manufacturing, construction workers in construction, and nonsupervisory employees in private service-producing industries.

County Business Patterns

Data in *County Business Patterns*, published by the Bureau of the Census, differ from BLS establishment statistics in the treatment of central administrative offices and auxiliary units. Differences also may arise because of industrial classification and reporting practices. In addition, CBP excludes interstate railroads and government, and coverage is incomplete for some of the non-profit activities.

Employment covered by State unemployment insurance programs

Most nonagricultural wage and salary workers are covered by unemployment insurance programs. However, certain employees, such as those working for interstate railroads or members of religious orders working in parochial schools and churches, are not covered. They are included, however, in BLS establishment statistics. Data for railroads are obtained from the Interstate Commerce Commission; data for parochial schools and churches are obtained from the U.S. Office of Education, the National Catholic Welfare Conference, the National Council of Churches, and surveys of churches conducted by several State agencies.

Statistics on manufactures and business, Bureau of the Census

BLS establishment statistics on employment differ from employment counts derived by the Bureau of the Census from its censuses or sample surveys of manufacturing and business establishments. The major reasons for noncomparability are different treatment of business units considered parts of an establishment, such as central administrative offices and auxiliary units, the industrial classification of establishments, and different reporting patterns by multiunit companies. There are also differences in the scope of the industries covered, e.g., the Census of Business excludes professional services, public utilities, and financial establishments, whereas these are included in the BLS statistics.

Employee Benefits in Medium and Large Firms, 1984

U.S. Department of Labor
Bureau of Labor Statistics
Bulletin 2237

The Bureau of Labor Statistics issues its 1984 bulletin on employee benefits in medium and large firms. This survey is the sixth in an annual series.

Data available

- Incidence and detailed characteristics of 11 private sector employee benefits paid for at least in part by the employer: Lunch and rest periods, holidays, vacations, and personal and sick leave; sickness and accident, long-term disability, health, and life insurance; and private retirement pension plans.
- Incidence data on 18 other employee benefits, including stock, savings and thrift, and profit sharing plans; employee discounts; and educational assistance.
- Data presented separately for three occupational groups—professional-administrative, technical-clerical, and production workers.

Coverage

- Major benefits in medium and large firms, nationwide.
- Minimum employment in establishments covered is generally 100 or 250 employees, depending on the industry.

Source of data

- Sample of about 1,500 establishments in a cross-section of the Nation's private

industries; primarily by personal interview.

Uses

- Benefit administration in public and private employment.
- Union contract negotiations.
- Conciliation and arbitration in public and private sectors.
- Development of legislation affecting the welfare of workers.
