Supplement to Employment and Earnings

Supplement to Employment, Hours, and Earnings, United States, 1909-90
Revised establishment data

U.S. Department of Labor
Bureau of Labor Statistics
July 1991

U.S. Department of Labor
Lynn Martin, Secretary

Bureau of Labor Statistics
Janet L. Norwood, Commissioner

This supplement to the historical publication, *Employment, Hours, and Earnings, United States, 1909-90*, presents revised establishment-based data from the Current Employment Statistics (CES) program. Data are collected by State employment security agencies in cooperation with the Bureau of Labor Statistics. A brief description of the program is presented in the Technical Note. The State agencies are listed on the inside back cover.

This publication was prepared in the Division of Monthly Industry Employment Statistics in collaboration with the Division of Federal/State Monthly Surveys, the Data Users and Publication Services Group, and the Division of Editorial Services.

Communications on material in this publication should be addressed to Mary Lee Seifert, Bureau of Labor Statistics, Washington, DC 20212, or phone: (202) 523-1172. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents. Phone (202) 275-3054.

Second-class postage paid at Washington, DC and at additional mailing addresses.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission.

Indexes of aggregate weekly payrolls (1982=100)	167		

Revised employment, hours, and earnings data

This supplement presents revised monthly and annual average data on national establishment-based employment, hours, and earnings by detailed industry. The data are obtained from the Current Employment Statistics (CES) program, a Federal-State cooperative endeavor in which data are collected monthly from the payroll records of a sample of nonfarm business establishments. In 1991, the sample included over 350,000 establishments employing over 41 million wage and salary workers. The major technical characteristics of the CES program, such as collection, concepts, estimating techniques, and seasonal adjustment methodology, as well as comparisons with other series are described fully in the Technical Note following the tables.

Effective with the publication of data for May 1991, all establishment-based series on nonfarm payroll employment, hours, and earnings were adjusted to March 1990 benchmarks—comprehensive counts of employment based primarily on unemployment insurance reports filed by employers with State employment security agencies. All unadjusted data from April 1989 forward have been revised to incorporate the new benchmarks.

Coincident with the benchmark adjustments, all seasonally adjusted series were revised to reflect updated seasonal adjustment factors which incorporate the experience through March 1991. As a result, all seasonally adjusted series for the most recent 5-year period (1986-91) have been revised.

Also effective with the introduction of the March 1990 benchmarks, BLS introduced publication of employment, hours, and earnings data for 10 additional service-producing industries as part of an ongoing effort to increase data availability for the services sector.

This supplement presents unadjusted data from January 1989 and seasonally adjusted data from January 1986. However, data for the 10 new services-sector industries are published from the date of inception of each series. All series end

with February 1991, the last month of final published estimates prior to the benchmark revisions.

Included in the supplement are monthly and annual average employment for all employees (including government); women employees; production workers in mining and manufacturing; construction workers in construction; and nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services. Also shown for the private nonfarm industries are average weekly hours and average hourly and weekly earnings in current and constant (1982) dollars. Average weekly overtime hours are presented for selected manufacturing series. Also presented are special series for selected industries. These series include indexes of aggregate weekly hours and payrolls related to 1982 as the base year; diffusion indexes of employment change for the total private sector and for manufacturing industries; average hourly earnings, excluding and including lump-sum payments, for selected aerospace industries; and average hourly earnings, excluding overtime, for selected manufacturing industries.

This supplement combined with the historical bulletin, *Employment, Hours, and Earnings, United States, 1909-90*, BLS Bulletin 2370, comprises all published historical series of national data derived from the establishment survey. Current statistics comparable with those presented in the supplement are provided in the monthly publication, *Employment and Earnings*, beginning with the June 1991 issue. For details on ordering, see the inside front cover of this supplement. In addition, published series in the form of magnetic tapes and personal computer diskettes are available to interested data users on a cost-for-service basis. Inquiries concerning the tapes should be addressed to the Automatic Data Processing Support Staff, Bureau of Labor Statistics, Washington, DC 20212; those concerning diskettes should be addressed to the Division of Monthly Industry Employment Statistics.

See footnotes at end of tables.

Footnotes

¹ Includes all divisions except government.

² Data relate to production workers in mining and manufacturing; construction workers in construction; and nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services.

³ Includes mining, construction, and manufacturing.

⁴ Data relate to production workers in mining and manufacturing and construction workers in construction.

⁵ Traditional average hourly earnings series, excluding lump-sum payments, for selected aerospace industries are published in conjunction with special earnings series, which include lump-sum payments, in the Special Series section of this supplement. Average weekly earnings series are not computed or published. For additional information, see "A Note on Average Hourly Earnings in Aircraft (SIC 3721) and Guided Missiles and Space Vehicles (SIC 3761) Manufacturing" in the June 1988 and subsequent issues of *Employment and Earnings*.

⁶ Includes transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; services; and government.

⁷ Excludes government.

⁸ Data relate to nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services.

⁹ Data are based on reports summarized in the M-300 report by the Interstate Commerce Commission and relate to employment at the middle of the month. Hours and earnings averages are based upon monthly data (exclusive of switching and terminal companies) and relate to all

employees who received pay during the month, with the exception of executives, officials, and staff assistants (ICC Group 1). Data relate to line-haul railroads with annual operating revenues of \$50 million or more.

¹⁰ Money payments only; tips and the value of other payment in kind, such as free meals, uniforms, room and board, etc., are not included.

¹¹ Excludes nonoffice commissioned real estate sales agents.

¹² Total employee counts are provided by the Office of Personnel Management. Detailed industry estimates for the Executive Branch as well as those for women are derived from a BLS sample of over 6,000 reports. Data relate to civilian employment only and exclude the Central Intelligence Agency and the National Security Agency.

¹³ Includes rural mail carriers.

¹⁴ Figures are the percent of industries with employment increasing plus one-half of the industries with unchanged employment, where 50 percent indicates an equal balance between industries with increasing and decreasing employment. Data for the 1-, 3-, and 6-month spans are seasonally adjusted; those for the 12-month span are unadjusted. Data are centered within the span.

¹⁵ Derived by assuming that overtime hours are paid at the rate of time and one-half.

p=preliminary.

NOTE: N.e.c. is an abbreviation for "not elsewhere classified" and designates broad categories of industries which cannot be more specifically identified.

Technical Note

Data on nonfarm payroll employment, hours, and earnings are collected from the Current Employment Statistics (CES) program, commonly referred to as the establishment survey. The CES is a Federal-State cooperative endeavor in which data are collected from the payroll records of a sample of nonfarm business establishments. In 1991, the sample included over 350,000 establishments employing over 41 million wage and salary workers. This technical note describes the method of collection, concepts, scope, and estimating methods used in the preparation of the employment, hours, and earnings series derived from the CES program.

Collection

Federal-State cooperation

Under cooperative arrangements between the States and the Bureau of Labor Statistics, responding establishments report employment, hours, and earnings data to State agencies. The State agencies mail payroll report forms to the establishments and examine the returns for consistency, accuracy, and completeness. The States use the reported data to prepare State and area statistics and also send the reported data to BLS for use in preparing the national series. This avoids a duplicate reporting burden on establishments and, together with the use of similar estimating techniques at the national and State levels, promotes increased comparability between estimates.

Shuttle schedules

Data are collected on Form BLS 790—Report on Employment, Payroll, and Hours. The collecting agency returns the schedule to the respondent each month so that the next month's data can be entered on the space allotted for that month. This "shuttle" procedure assures maximum comparability and accuracy of reporting, since the respondent can see the figures that have been reported for previous months.

Form BLS 790 provides for entry of data on the total number of workers—all employees, women workers, production workers, and nonsupervisory workers—

on the payrolls of nonfarm establishments and, for most industries, payroll and hours of production or nonsupervisory workers for the pay period which includes the 12th of the month.

Concepts

Industrial classification

Establishments reporting on Form BLS 790 are classified into industries on the basis of their principal product or activity, determined from information on annual sales volume. This information is collected on a supplement to the quarterly unemployment insurance tax reports filed by employers. For an establishment making more than one product or engaging in more than one activity, the entire employment of the establishment is included in the industry of the principal product or activity.

All national, State, and area employment, hours, and earnings series are classified according to the 1987 *Standard Industrial Classification Manual*, published by the Office of Management and Budget. The conversion of national data to the 1987 SIC was effective with the publication of August 1990 data.

Industry employment

Employment data, except those for employees of the Federal Government, refer to persons on establishment payrolls who received pay for any part of the pay period which includes the 12th of the month. For Federal Government establishments, employment figures represent the number of persons who occupied positions on the last day of the calendar month. Intermittent workers are counted if they performed any service during the month.

The data exclude proprietors, the self-employed, unpaid volunteer or family workers, farm workers, and domestic workers. Salaried officers of corporations are included. Government employment covers only civilian employees; military personnel are excluded. Employees of the Central Intelligence Agency and the National Security Agency are also excluded.

Persons on establishment payrolls who are on paid sick leave (when pay is received directly from the firm), on paid holiday or paid vacation, or who work during a part of the pay period even though they are unemployed or on strike during the rest of the period, are counted as employed. Not counted as employed are persons who are laid off, on leave without pay, or on strike for the entire period, or who are hired but have not been paid during the period.

Industry hours and earnings

Hours and earnings data are derived from reports of payrolls and hours for production and related workers in manufacturing and mining, construction workers in construction, and nonsupervisory employees in the remaining private nonfarm components. These terms are defined below. When the pay period reported is longer than 1 week, the figures are converted to a weekly basis.

Production and related workers include working supervisors and all nonsupervisory workers (including group leaders and trainees) engaged in fabricating, processing, assembling, inspecting, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial and guard services, product development, auxiliary production for a plant's own use (e.g., power plant), and recordkeeping and other services closely associated with the above production operations.

Construction workers include the following employees in the construction division: Working supervisors, qualified craft workers, mechanics, apprentices, laborers, etc., whether working at the site of construction or in shops or yards, at jobs ordinarily performed by members of the construction trades (such as precutting and preassembling).

Nonsupervisory employees include employees (not above the working supervisory level) such as office and clerical workers, repairers, salespersons, operators, drivers, physicians, lawyers, accountants, nurses, social workers, teachers, research aides, drafters, photographers, beauticians, musicians, restaurant workers, custodial workers, attendants, line installers, laborers, janitors, guards, and other employees at similar occupational levels, whose services are closely associated with those of the employees listed.

Payroll covers the payroll for full- and part-time production, construction, or nonsupervisory workers who received pay for any part of the pay period which includes the 12th of the month. The payroll is reported before deductions of any kind, e.g., for old-age and unemployment insurance, group insurance, withholding taxes, bonds, or union dues; also included is pay for overtime, holidays, vacations, and sick leave paid directly by the firm. Bonuses (unless earned and paid regularly each pay period), other pay not earned in the pay period reported (e.g.,

retroactive pay), tips, and the value of free rent, fuel, meals, or other payment in kind are excluded. Moreover, "fringe benefits" (such as health and other types of insurance, contributions to retirement, etc., paid by the employers) are also excluded.

Hours cover hours paid for during the pay period which includes the 12th of the month, for production, construction, or nonsupervisory workers. The hours data include hours paid for holidays and vacations, and for sick leave when pay is received directly from the firm.

Overtime hours cover hours worked by production or related workers for which overtime premiums were paid because the hours exceeded the number of hours of either the straight-time workday or the workweek during the pay period which includes the 12th of the month. Weekend and holiday hours are included only if overtime premiums were paid. Hours for which only shift differential, hazard, incentive, or other similar types of premiums were paid are excluded.

Average weekly hours relate to the average hours for which pay was received and are different from standard or scheduled hours. Such factors as absenteeism, labor turnover, part-time work, and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect changes in the workweek of component industries.

Average overtime hours represent that portion of average weekly hours which exceeds regular hours and for which overtime premiums are paid. If an employee were to work on a paid holiday at regular rates, receiving as total compensation holiday pay plus straight-time pay for hours worked that day, no overtime hours would be reported.

Since overtime hours are premium hours by definition, average weekly hours and overtime hours do not necessarily move in the same direction from month to month. Such factors as stoppages, absenteeism, and labor turnover may not have the same influence on overtime as on average hours. Diverse trends at the industry-group level also may be caused by a marked change in average hours for a component industry where little or no overtime was worked in both the previous and current months.

Average hourly earnings are on a "gross" basis. They reflect not only changes in basic hourly and incentive wage rates but also such variable factors as premium pay for overtime and late-shift work and changes in output of workers paid on an incentive plan. They also reflect shifts in the number of employees between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Averages of hourly earnings differ from wage rates. Earnings are gross pay for a stated period of time; rates are the amounts stipulated for a given unit of work or time. The earnings series do not measure the level of total labor costs on the part of

the employer since the following are excluded: Irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings for those employees not covered under the production worker, construction worker, or nonsupervisory employee definitions.

Average hourly earnings including lump-sum wage payments are compiled only for aircraft (SIC 3721) and guided missiles and space vehicles (SIC 3761) manufacturing. The same concepts and estimation methods apply to these series as apply to the average hourly earnings series described above; the one difference between the series is definitional. The payroll data used to calculate this series include lump-sum payments made to production workers in lieu of general wage rate increases; such payments are excluded from the definition of gross payrolls used to calculate the other average hourly earnings series.

For each sample establishment in SIC 3721 and SIC 3761 covered by a lump-sum agreement, the reported payroll data are adjusted to include a prorated portion of the lump-sum payment. Such payments are generally made once a year and cover the following 12-month period. In order to spread the payment across this time period, a prorated portion of the payment is added to the payroll each month. This prorated portion is adjusted by an exit rate to reduce the lump-sum amount to account for persons who received the payment but left before the payment allocation period expired.

Average hourly earnings excluding overtime are computed by dividing the total production worker payroll for the industry group by the sum of the total production worker hours and one-half of total overtime hours. Only earnings due to overtime paid for at 1-1/2 times the straight-time rates are eliminated. No adjustment is made for other premium payment provisions, such as holiday work, late-shift work, and overtime rates other than time and one-half.

Railroad hours and earnings figures relate to Class I railroads (excluding switching and terminal companies) and are derived from monthly data summarized in the M-300 report of the Interstate Commerce Commission. Data refer to all employees, except executives, officials, and staff assistants (ICC group 1), who received pay during the month. Average hourly earnings are computed by dividing total compensation by total hours paid for. Average weekly hours are obtained by dividing the total number of hours paid for, converted to a weekly basis, by the number of employees, as defined above.

Average weekly earnings are derived by multiplying average weekly hours by average hourly earnings. Therefore, weekly earnings are affected not only by changes in average hourly earnings but also by changes in the length of the workweek. In addition, monthly variations in such factors as the proportion of part-time workers, stoppages for varying reasons, labor turnover during the survey period, and absenteeism for which employees are not paid may cause the average workweek to fluctuate.

Long-term trends of average weekly earnings can be affected by structural changes in the makeup of the work force. For example, persistent long-term increases in the proportion of part-time workers in retail trade and many of the services industries have reduced average workweeks in these industries and have affected the average weekly earnings series.

Real earnings, or earnings in constant dollars, are calculated from the earnings averages for the current month by using a deflator derived from the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W).

Indexes

Indexes of aggregate weekly hours and payrolls are derived by dividing the current month's aggregate by the annual average aggregate for 1982. The hours aggregates are the product of average weekly hours and production worker employment; the payroll aggregates are the product of the hours aggregates and average hourly earnings. At all the higher levels of aggregation, hours and payroll aggregates are the sum of the component aggregates.

Diffusion indexes of employment change measure the dispersion among industries of the change in employment over the specified time span. The overall indexes are calculated from 356 seasonally adjusted employment series (3-digit SIC industries) covering all nonfarm payroll employment in the private sector. The manufacturing diffusion indexes are based on 139 3-digit industries. Prior to 1989, the overall and manufacturing indexes comprised 349 and 141 industries, respectively.

To derive the indexes, each component industry is assigned a value of 0, 50, or 100 percent, depending on whether its employment showed a decrease, no change, or an increase, respectively, over the time span. The average value (mean) is then calculated, and this percent is the diffusion index number.

The reference point for diffusion analysis is 50 percent, the value which indicates that the same number of component industries had increased as had decreased. Index numbers above 50 show that more industries had increasing employment, and values below 50 indicate that more had decreasing employment. The margin between the percent that increased and the percent that decreased is equal to the difference between the index and its complement, i.e., 100 minus the index. For example, an index of 65 percent means that 30 percent more industries had increasing employment than had decreasing employment ($65 - (100 - 65) = 30$). However, for dispersion analysis, the distance of the index number from the 50-percent reference point is the most significant observation.

Although diffusion indexes are commonly interpreted as showing the percent of components that increased over the time span, it should be remembered that the index reflects half of the unchanged components as well. (This is the effect of assigning a value of 50 percent to the unchanged components when computing the index.)

Estimating Methods

The principal features of the procedure used to estimate employment for the industry statistics are (1) the use of the "link relative" technique, which is a form of ratio estimation, (2) the use of size and regional stratification, and (3) periodic adjustment of employment levels to new benchmarks. Other features of the procedures are summarized in table A. Further details are given in the *BLS Handbook of Methods*, Bulletin 2285 (1988), chapter 2.

The "link relative" technique

From a sample composed of establishments reporting for both the previous and current months, the ratio of current-month employment to that of the previous month is computed. This is called a "link relative." The estimates of employment (all employees including production and nonproduction workers) for the current month are obtained by multiplying the estimates for the previous month by these "link relatives." In addition, bias correction factors are applied to most employment estimates each month. The size of the bias correction factors is determined from past benchmark comparisons. Beginning with data for April 1983, these factors are modified by changes in the sample link relatives for the most recent quarter.

Size and regional stratification

A number of industries are stratified by size of establishment and/or by region, and the stratified production or nonsupervisory worker data are used to weight the hours and earnings estimates into broader industry groupings. Accordingly, the basic estimating cell for an employment, hours, or earnings series may be a whole industry or a size stratum, a region stratum, or a size stratum of a region within an industry. This stratified estimating procedure offsets the tendency of the sample to produce biased estimates for certain industries.

Benchmark adjustments

Employment estimates are compared periodically with benchmarks (comprehensive counts of employment) for various nonfarm industries, and appropriate adjustments are made as indicated. The industry estimates in this publication are

projected from March 1990 benchmark levels. Unadjusted data from April 1990 forward and seasonally adjusted data from January 1987 forward are subject to adjustment to future benchmarks. Benchmark adjustments are made annually.

The primary sources of benchmark information are the employment data by industry, compiled quarterly by State agencies from reports of establishments covered under State unemployment insurance laws. These tabulations cover about 98 percent of employees on nonfarm payrolls in the United States. Benchmark data for the residual are obtained from the records of the Social Security Administration, the Interstate Commerce Commission, and a number of other agencies in private industry or government.

The estimates for the benchmark month are compared with new benchmark levels for each estimating cell. If revisions are necessary, the monthly series of estimates between benchmark periods are adjusted by correcting the differences between the new benchmark and the preceding one. The new benchmark for each industry then is carried forward progressively to the current month by use of the sample trends. Thus, the benchmark is used to establish the level of employment; the sample is used to measure the month-to-month changes in the level. A comparison of nonfarm employment benchmarks and estimates for March 1990 is shown in table B.

The Sample

Design

The sampling plan used in the CES program is an optimum allocation design known as "sampling proportionate to average size of establishment." Under this type of design, large establishments fall into the sample with certainty. The size of the samples for the various industries is determined on the basis of experience and cost considerations. In a manufacturing industry in which a large proportion of total employment is concentrated in relatively few establishments, a large percentage of total employment is included in the sample. Consequently, the sample design for such industries provides for a complete census of the larger establishments with only a few chosen from among the smaller establishments, or none at all if the concentration of employment is great enough. On the other hand, in an industry in which a large proportion of total employment is in small establishments, the sample design calls for inclusion of all large establishments and also for a substantial number of smaller ones. Many industries in the trade and services divisions fall into this category. To keep the sample to a size which can be handled

Table A. Summary of methods for computing industry statistics on employment, hours, and earnings

Employment, hours, and earnings	Basic estimating cell (industry, region, size, or region/size cell)	Aggregate industry level (division and, where stratified, industry)
Monthly data		
All employees	All-employee estimate for previous month multiplied by ratio of all employees in current month to all employees in previous month for sample establishments which reported for both months. ¹	Sum of all-employee estimates for component cells.
Production or nonsupervisory workers, women employees	All-employee estimate for current month multiplied by (1) estimated ratio of production or nonsupervisory workers to all employees from sample for current month, (2) estimated ratio of women to all employees. ²	Sum of production or nonsupervisory workers estimates, or estimates of women employees, for component cells.
Average weekly hours	Production or nonsupervisory worker hours divided by number of production or nonsupervisory workers. ²	Average, weighted by production or nonsupervisory worker employment, of the average weekly hours for component cells.
Average weekly overtime hours	Production worker overtime hours divided by number of production workers. ²	Average, weighted by production worker employment, of the average weekly overtime hours for component cells.
Average hourly earnings	Total production or nonsupervisory worker payroll divided by total production or nonsupervisory worker hours. ²	Average, weighted by aggregate hours, of the average hourly earnings for component cells.
Average weekly earnings	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings.
Annual average data		
All employees, women employees, and production or nonsupervisory workers	Sum of monthly estimates divided by 12.	Sum of monthly estimates divided by 12.
Average weekly hours	Annual total of aggregate hours (production or nonsupervisory worker employment multiplied by average weekly hours) divided by annual sum of employment.	Annual total of aggregate hours for production or nonsupervisory workers divided by annual sum of employment for these workers.
Average weekly overtime hours	Annual total of aggregate overtime hours (production worker employment multiplied by average weekly overtime hours) divided by annual sum of employment.	Annual total of aggregate overtime hours for production workers divided by annual sum of employment for these workers.
Average hourly earnings	Annual total of aggregate payrolls (product of production or nonsupervisory worker employment by weekly hours and hourly earnings) divided by annual aggregate hours.	Annual total of aggregate payrolls divided by annual aggregate hours.
Average weekly earnings	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings.

¹ The estimates are computed by multiplying the above product by bias adjustment factors, which compensate for the underrepresentation of newly formed enterprises and other sources of bias in the sample.

² The sample production worker ratio, women worker ratio, average weekly hours, average overtime hours, and average hourly earnings are

modified by a wedging technique designed to compensate for changes in the sample arising mainly from the voluntary character of the reporting. The wedging procedure accepts the advantage of continuity from the use of the matched sample and, at the same time, tapers or wedges the estimate toward the level of the latest sample average.

Table B. Comparison of nonfarm employment benchmarks and estimates for March 1990
(Numbers in thousands)

Industry	Benchmark	Estimate	Difference	
			Level	Percent
Total	109,114	109,343	-229	-0.2
Mining	692	715	-23	-3.3
Construction	4,865	4,906	-41	-0.8
Manufacturing	19,160	19,109	51	.3
Transportation and public utilities	5,735	5,750	-15	-0.3
Wholesale trade	6,167	6,326	-159	-2.6
Retail trade	19,302	19,361	-59	-0.3
Finance, insurance, and real estate	6,681	6,774	-93	-1.4
Services	27,944	27,866	78	.3
Government	18,568	18,536	32	.2

by available resources, it is necessary to design samples for these industries with a smaller proportion of universe employment than is the case for most manufacturing industries. Since individual establishments in the nonmanufacturing division generally show less fluctuation from regular cyclical or seasonal patterns than do establishments in manufacturing industries, these smaller samples (in terms of employment) generally produce reliable estimates.

In the context of the CES program, with its emphasis on producing timely data at minimum cost, a sample must be obtained which will provide coverage of a sufficiently large segment of the universe to provide reasonably reliable estimates that can be published promptly and regularly. The present sample meets these specifications for most industries. The sample design allows BLS to produce preliminary estimates each month for many industries within a few weeks after reports are mailed by respondents. At a somewhat later date, estimates in considerably greater industrial detail are also made available.

Coverage

The BLS sample of establishment employment and payrolls is the largest monthly sampling operation in the field of social statistics. Table C shows the latest benchmarks and the approximate proportion of total employment in each industry division covered by the sample of establishments furnishing monthly employment data. The coverage for individual industries within the division may vary from the proportions shown.

Table C. Employment benchmarks and approximate coverage of BLS employment and payrolls sample, March 1991

Industry	Benchmark (thousands)	Sample coverage ¹		
		Number of establish- ments	Employees	
			Number (thousands)	Percent of benchmark
Total	109,114	289,390	40,714	37
Mining	692	3,314	279	40
Construction	4,865	26,593	963	20
Manufacturing	19,160	52,304	9,236	48
Transportation and public utilities	5,735	214,686	22,370	41
Wholesale trade	6,167	25,029	1,153	19
Retail trade	19,302	57,331	4,214	22
Finance, insurance, and real estate	6,681	21,395	2,110	32
Services	27,944	66,947	6,506	23
Government:				
Federal	3,082	(3)	3,082	100
State	4,386	5,175	3,498	80
Local	11,100	16,616	7,303	66

¹ Counts reflect reports used in final estimates. Since not all establishments report payroll and hours information, hours and earnings estimates are based on a smaller sample than employment estimates.

² The Interstate Commerce Commission provides a complete count of employment for Class I railroads. A small sample is used to estimate hours and earnings data.

³ Total Federal employment counts by agency for use in national estimates are provided to BLS by the Office of Personnel Management. Detailed industry estimates for the Executive Branch, as well as State and area estimates of Federal employment, are based on a sample of 6,000 reports covering about 58 percent of employment in Federal establishments.

Reliability of the employment estimates

The estimates derived from the establishment survey may differ from the figures that would have been obtained if it were possible to take a complete census using the same schedules and procedures. The relatively large size of the BLS establishment sample assures a high degree of accuracy. However, since the link relative technique requires the use of the previous month's estimate as the base in computing the current month's estimate, small sampling and response errors may accumulate over several months. To remove this accumulated error, the estimates are adjusted annually to new benchmarks. In addition to correcting sampling and response errors, the benchmark revision adjusts the estimates for changes in the industrial classification of individual establishments resulting from changes in their product. In fact, at the more detailed industry levels, particularly within manufacturing, changes in classification are the major cause of benchmark adjustments. Differences also result from improvement in the quality of the benchmark data. Table D presents the average percent revisions of employment estimates for the five most recent benchmarks, for major industry divisions. Detailed descriptions of individual benchmark revisions are available from the Bureau upon request.

Table D. Average benchmark revision in employment estimates and relative errors for average weekly hours and average hourly earnings by industry
(In percent)

Industry	Average benchmark revision in employment estimates ¹	Relative error ²	
		Average weekly hours	Average hourly earnings
Total	0.2	—	—
Total private	.3	0.1	0.2
Mining	2.6	1.0	1.3
Construction	1.3	.2	.5
Manufacturing	.7	.1	.2
Durable goods	.6	.1	.3
Nondurable goods	.9	.1	.2
Transportation and public utilities	.6	.7	.6
Wholesale trade	1.5	.2	.4
Retail trade	.5	.2	.4
Finance, insurance, and real estate	.6	.2	.4
Services	.4	.4	.6
Government ³	.3	—	—

¹ The average percent revision in employment for the 1986-90 benchmarks.

² Relative errors relate to 1982 data.

³ Data for government are based on a total count for Federal Government provided by the Office of Personnel Management and a sample of State and local government reports.

Table E. Root-mean-square errors of differences between benchmarks and estimates of employment and average relative errors for average weekly hours and average hourly earnings

Size of employment estimate	Root-mean-square error of employment estimates ¹	Relative error ² (in percent)	
		Average weekly hours	Average hourly earnings
50,000	2,100	2.2	4.0
100,000	3,900	1.3	2.3
200,000	5,600	1.1	2.0
500,000	14,000	.9	1.6
1,000,000	15,000	.8	1.2
2,000,000	26,000	.5	.9

¹ Assuming 12-month intervals between benchmark revisions.

² Relative errors relate to 1982 data.

Hours and earnings estimates for cells are computed directly from reported figures and are not subject to benchmark revisions, although the broader grouping may be affected slightly by changes in employment weights. The hours and earnings estimates, however, are subject to sampling errors, which may be expressed as relative errors of the estimates. (A relative error is a standard error expressed as a percent of the estimate.) Relative errors for major industries are presented in table

D and for individual industries with the specified number of employees in table E. The chances are about 2 out of 3 that the hours and earnings estimates from the sample would differ by a smaller percentage than the relative error from the averages that would have been obtained from a complete census.

One measure of the reliability of ratio estimates is the root-mean-square error (RMSE). This measure is the standard deviation adjusted for the bias in estimates:

$$RMSE = \sqrt{(\text{standard deviation})^2 + (\text{bias})^2}$$

If the bias is small, the chances are about 2 out of 3 that an estimate from the sample would differ from its benchmark by less than the root-mean-square error. The chances are about 19 out of 20 that the difference would be less than twice the root-mean-square error.

Approximations of the root-mean-square errors of differences between final estimates and benchmarks are presented in table E. Since the differences are those that have accumulated at the end of 12 monthly estimates, the amount of difference that accumulates in 1 month is much smaller, or approximately 1/12 of the amount indicated.

Seasonal Adjustment

Many economic statistics reflect regularly recurring seasonal movements which can be estimated on the basis of past experience. By eliminating that part of the change which can be ascribed to usual seasonal variation, it is possible to observe the cyclical and other nonseasonal movements in the series. However, in evaluating deviations from the seasonal pattern—that is, changes in a seasonally adjusted series—it is important to note that seasonal adjustment is merely an approximation based on past experience. Seasonally adjusted estimates have a broader margin of possible error than the original data on which they are based, since they are subject not only to sampling and other errors but, in addition, are affected by the uncertainties of the seasonal adjustment process itself.

Since the early 1980's, the BLS has used the X-11 ARIMA (Auto-Regressive Integrated Moving Average) seasonal adjustment procedure to seasonally adjust establishment-based employment, hours, and earnings data. The X-11 ARIMA program has been run once each year after benchmarking and seasonal adjustment factors have been projected and published for 12 months ahead (April-March). Beginning in June 1989, with the introduction of the March 1988 benchmarks, the Bureau introduced a modification to this procedure to parallel that used in adjusting the household survey data in that seasonal adjustment factors are calculated and published twice a year. This schedule was interrupted by the incorporation of the 1987

SIC revision. Effective with the publication of August 1990 data, seasonal adjustment factors for the 9-month period, August 1990-April 1991, were introduced along with the release of March 1989 benchmark levels based on the new SIC structure. Factors for the 6-month period May-October 1991 were computed and published with the release of May 1991 estimates, reestablishing the practice of publishing 6 months of factors. Revisions of historical data will continue to be made once a year, coincident with the benchmark revisions.

BLS has developed an extension of X-11 ARIMA to allow it to more adequately adjust for the effects of the presence or absence of religious holidays in the April survey reference period and of Labor Day in the September reference period. Beginning with the computation of projected factors for the period beginning in April 1990, this moving-holiday extension was used for the seasonal adjustment of series on average weekly hours and manufacturing overtime hours.

All series are seasonally adjusted using multiplicative models under X-11 ARIMA. Seasonal adjustment factors are applied directly to the component series. Seasonally adjusted totals for most of these series are then obtained by taking a weighted average of the seasonally adjusted data for the component series.

Seasonally adjusted average weekly earnings are the product of seasonally adjusted average hourly earnings and seasonally adjusted average weekly hours. Average hourly and weekly earnings in constant dollars, seasonally adjusted, are obtained by dividing average earnings, seasonally adjusted, by the seasonally adjusted Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W), and multiplying by 100. Indexes of aggregate weekly hours, seasonally adjusted, are obtained by multiplying average weekly hours, seasonally adjusted, by production or nonsupervisory workers, seasonally adjusted, and dividing by the 1982 annual average base. For total private, total goods-producing, total private service-producing, and major industry divisions, the indexes of aggregate weekly hours, seasonally adjusted, are obtained by summing the aggregate weekly hours, seasonally adjusted, for the appropriate component industries and dividing by the 1982 annual average base.

Seasonally adjusted data are not published for a number of series characterized by small seasonal components relative to their trend-cycle and/or irregular components. These "failed" or unsatisfactory seasonally adjusted series, however, are used in the aggregation to higher level seasonally adjusted series.

Seasonal adjustment factors for Federal Government employment are derived from unadjusted data which include Christmas temporary workers employed by the Postal Service. The number of temporary census workers for the decennial censuses are removed, however, prior to the calculation of seasonal adjustment factors.

Comparability of Data with Other Series

Current Population Survey

Data based on household interviews are obtained from a sample survey of the population. The survey is conducted each month by the Bureau of the Census for the Bureau of Labor Statistics and provides a comprehensive measure of the labor force, i.e., the total number of civilians 16 years of age and over who are employed or unemployed. It also provides data on their personal and economic characteristics such as age, sex, race, marital status, occupation, industry, hours of work, and duration of unemployment. This information is collected by trained interviewers from a sample of about 60,000 households throughout the country and is based on the activity or status reported for the calendar week including the 12th of the month. These data are published monthly in *Employment and Earnings*. Historical national data appear in *Labor Force Statistics Derived from the Current Population Survey, 1948-87*, BLS Bulletin 2307.

Data from payroll reports and household interviews differ from each other because of differences in definition and coverage, sources of information, methods of collection, and estimating procedures. Sampling variability and response errors are additional reasons for discrepancies. Some specific factors which have a differential effect on levels and trends of the two series are described as follows:

Coverage. The household survey definition of employment comprises wage and salary workers (including domestics and other private household workers), self-employed persons, and unpaid workers who worked 15 hours or more during the survey week in family-operated enterprises. Civilian employment in both agricultural and nonagricultural industries is included. The payroll survey covers only wage and salary employees on the payrolls of nonfarm establishments.

Multiple jobholding. The household survey provides information on the work status of the population without duplication, since each person is classified as employed, unemployed, or not in the labor force. Employed persons holding more than one job are counted only once, and are classified according to the job at which they worked the greatest number of hours during the survey week. In the figures based on establishment records, persons who worked in more than one establishment during the reporting period are counted each time their names appear on payrolls.

Unpaid absences from jobs. The household survey includes among the employed all persons who had jobs but were not at work during the survey week—that is, were not working but had jobs from which they were temporarily absent because of

illness, bad weather, vacation, labor-management dispute, or because they were taking time off for various other reasons, even if they were not paid by their employers for the time off. Payroll reports include persons on leave which is paid for by the company and exclude those on leave without pay for the entire payroll period.

Hours of work. The household survey measures hours actually worked, whereas the payroll survey measures hours paid for by employers. In the household survey, all persons with a job but not at work are excluded from the hours distributions and the computations of average hours. In the payroll survey, employees on paid vacation, paid holiday, or paid sick leave are included and assigned the number of hours for which they were paid during the reporting period.

Earnings. The household survey measures median earnings of wage and salary workers in all occupations and industries in both the private and public sectors. Data refer to the usual earnings received from the worker's sole or primary job. Data from the establishment survey refer to average earnings of production and related workers in mining and manufacturing, construction workers in construction, and nonsupervisory employees in private service-producing industries.

County Business Patterns

Data in *County Business Patterns* (CBP), published by the Bureau of the Census, differ from BLS establishment statistics in the treatment of central administrative offices and auxiliary units. Differences also may arise because of industrial classi-

fication and reporting practices. In addition, CBP excludes interstate railroads and government, and coverage is incomplete for some of the nonprofit activities.

Employment covered by State unemployment insurance programs

Most nonfarm wage and salary workers are covered by unemployment insurance programs. However, certain employees, such as those working for interstate railroads or members of religious orders working in parochial schools and churches, are not covered. They are included, however, in BLS establishment statistics. Data for railroads are obtained from the Interstate Commerce Commission; data for parochial schools and churches are obtained from the U.S. Office of Education, the National Catholic Welfare Conference, the National Council of Churches, and surveys of churches conducted by several State agencies.

Statistics on manufactures and business, Bureau of the Census

BLS establishment statistics on employment differ from employment counts derived by the Bureau of the Census from its censuses or sample surveys of manufacturing and business establishments. The major reasons for noncomparability are different treatment of business units considered parts of an establishment, such as central administrative offices and auxiliary units, the industrial classification of establishments, and different reporting patterns by multiunit companies. There are also differences in the scope of the industries covered, e.g., the Census of Business excludes professional services, public utilities, and financial establishments, whereas these are included in the BLS establishment statistics.

Where to Find Information on Employment and Unemployment

Employment and Earnings:

Monthly periodical containing labor force and establishment data. National, State, and area figures on employment, unemployment, hours, and earnings. Order *Employment and Earnings* from Superintendent of Documents, U.S. Government Printing Office, Washington, DC. 20402. Includes text, statistical tables, and technical notes.

Electronic News Release:

Quickest. Accessible electronically immediately at release time through BLS news release service. Write the Office of Publications, Bureau of Labor Statistics, Washington, DC. 20212, or call (202) 523-1913.

Employment Situation News Release:

Copies of this national monthly release reach the public about a week after the release date. Write: Inquiries and Correspondence, Bureau of Labor Statistics, Washington, DC 20212.

Telephone:

Quick summary on 24-hour recorded message. Key numbers, plus other BLS indicators and upcoming release dates. Call (202) 523-9658.

Machine-Readable Form:

Labor force data from the household survey and employment, hours, and earnings data from the establishment survey are available on both computer tape and diskette. For information, write the Office of Publications, Bureau of Labor Statistics, Washington, DC. 20212 or call (202) 523-1090.

Monthly Labor Review:

Employment and unemployment statistics included in monthly 53-page summary of BLS data and in analytical articles. Available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The Bureau of Labor Statistics' Bulletin on Employee Benefits in Medium and Large Firms, 1989

U.S. Department of Labor
Bureau of Labor Statistics
Bulletin 2363

Data available

Incidence and detailed characteristics of 15 employee benefits paid for at least in part by employer: Lunch and rest periods, holidays, vacations, and personal, funeral, jury-duty, military, parental, and sick leave; sickness and accident, long-term disability, and life insurance; health care; and private retirement/capital accumulation plans. Retirement data include defined benefit plans and defined contribution plans, such as savings and thrift plans with salary reduction arrangements permitted under the Internal Revenue Code.

Incidence and provisions of flexible benefits plans, reimbursement accounts, and unpaid parental leave.

Incidence data on 21 other benefits, including educational assistance, subsidized parking, subsidized child care, wellness programs, and employee assistance counseling programs.

Data are presented separately for three occupational groups—professional-administrative, technical-clerical, and production-service workers.

Coverage

Major benefits in private sector establishments of the United States, except Alaska and Hawaii, employing at least 100 workers.

Source of Data

Sample of about 2,000 establishments in a cross-section of the Nation's private industries; primarily by personal interview.

Uses

Benefit administration in public and private employment.
Union contract negotiations.
Conciliation and arbitration in public and private sectors.
Development of legislation affecting the welfare of workers.

Also available

The 1987 survey of employee benefits in State and local governments.
