Preface

In this two-volume publication, the Bureau of Economic Analysis presents the revised estimates of the national income and product accounts (NIPA's) for 1929–94 that reflect the most recent comprehensive and annual revisions of the NIPA's.[1] The results of the comprehensive revision, including revised estimates of fixed reproducible tangible wealth, were released from January 1996 to May 1997, and the results of the 1997 annual revision were released in July 1997.

The 1996 comprehensive revision was the 10th of its kind since the Department of Commerce first published national income statistics in 1942. Comprehensive, or benchmark, revisions differ from annual NIPA revisions because of the scope of the changes and because of the number of years that are subject to revision. Comprehensive revisions incorporate three major types of improvements: (1) Definitional and classificational changes that update the accounts to more accurately portray the evolving U.S. economy, (2) statistical changes that update the accounts to reflect the introduction of new and improved methodologies and the incorporation of newly available and revised source data, and (3) presentational changes that update the NIPA tables to reflect the definitional, classificational, and statistical changes and to make the tables more informative.

The first section of this publication describes the definitions and classifications underlying the NIPA's. The second section discusses the presentation of the NIPA's, and the third section discusses the statistical conventions used for the NIPA estimates. An appendix lists the principal source data and methods used to prepare the estimates of gross domestic product.

1. For specific information about these revisions, see the SURVEY OF CURRENT BUSINESS articles listed in the box "Information About NIPA Methodology."

Acknowledgments

Gerald F. Donahoe, former Associate Director for National Income, Expenditure, and Wealth Accounts and Robert P. Parker, Chief Statistician, supervised the preparation of the comprehensive revision of the national income and product accounts (NIPA's) of the United States. Leon W Taub, former Chief of the National Income and Wealth Division, and Karl D. Galbraith, Chief of the Government Division, directed major parts of the revision. Christian Ehemann and Karl D. Galbraith—assisted by Peter G. Beall, Pamela A. Kelly, Kurt Kunze, Donald L. Peters, Claire G. Pitzer, Brooks B. Robinson, and Teresa L. Weadock—coordinated and conducted the estimation review process.

Christian Ehemann directed improvements in the methodology for measuring real output and prices. Shelby W. Herman and D. Timothy Dobbs directed improvements for calculating depreciation. Bruce T. Grimm directed the preparation of improved semiconductor prices.

Eugene P. Seskin—under the guidance of Brent R. Moulton, Associate Director for National Income, Expenditure, and Wealth Accounts, and of Robert P. Parker—prepared the text for this volume. Duane Hackmann designed and prepared the tables.

M. Gretchen Gibson of the Current Business Analysis Division coordinated the preparation of the publication for printing. Eric B. Manning typeset the text and tables, and W. Ronnie Foster designed the cover.

n.e.c. Not elsewhere classified.

1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to the average weekly hours per employee on full-time schedules.

2. Includes Coast Guard.

3. Included in anthracite mining (line 9).

4. Included in lumber and basic timber products (line 16).

5. Included with iron and steel and their products, including ordnance (line 19).

6. Included with educational services, n.e.c. (line 71).

NOTE.—Estimates in this table are based on the 1942 Standard Industrial Classification (SIC).

1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules.

2. Includes Coast Guard.

NOTE.—Estimates in this table are based on the 1972 Standard Industrial Classification (SIC).

1. Full-time equivalent employees equals the number of employees on full-time schedules plus the number of employees on part-time schedules converted to a full-time basis. The number of full-time equivalent employees in each industry is the product of the total number of employees and the ratio of average weekly hours per employee for all employees to average weekly hours per employee on full-time schedules.

2. Consists of museums, botanical and zoological gardens; engineering and management services; and services, not elsewhere classified.

3. Includes Coast Guard.

4. Beginning with 1993, includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE.— Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

NOTE.— Chain-type quantity and price indexes are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Implicit price deflators are weighted averages of the detailed price indexes used to prepare each aggregate and component and are calculated as the ratio of current- to chained-dollar output multiplied by 100.

Percent changes from preceding period for items in this table are shown in table 8.1. (Contributions to the percent change in real gross domestic product are shown in table 8.2.)

1. Consists of office buildings, except those constructed at industrial sites and those constructed by utilities for their own use.
2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings used for commercial purposes.
3. Consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.
4. Consists primarily of streets, dams and reservoirs, sewer and water facilities, and airfields. Also includes buildings of private local transit systems for 1929–58; beginning with 1959, these buildings are included in other nonresidential buildings.
5. Consists primarily of dormitories, fraternity and sorority houses, and nurses' homes.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.

3. Compensation of government employees engaged in new force-account construction and related expenditures for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addenda.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries.

3. Compensation of government employees engaged in new force-account construction and related expenditures for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addendum.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

1. Consists of final sales and change in business inventories of new autos assembled in the United States.

2. Consists of personal consumption expenditures, producers' durable equipment, and gross government investment.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Chain-type quantity indexes for the series in this table appear in table 7.18.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Chain-type quantity indexes for the series in this table appear in table 7.19.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Except for farm proprietorships and partnerships (line 14) and other private business (line 18), the capital consumption adjustment is calculated in two parts. The adjustment for consistent accounting at historical cost converts depreciation, based on the service lives and depreciation schedules employed by firms when filing their income tax returns, to consistent service lives and empirically-based depreciation schedules. The adjustment for current replacement cost converts the historical cost series with consistent accounting to a current replacement cost series. For farm proprietorships and partnerships and other private business, the historical cost series is based on consistent service lives and empirically-based depreciation schedules so that the adjustment reflects only a conversion to current replacement cost.

1. Employer contributions to publicly administered programs are classified as employer contributions for social insurance. Employer contributions to privately administered programs are classified as other labor income. Consequently, government contributions to privately administered health and life insurance and to workers' compensation plans for government employees are classified as other labor income.

2. Consists largely of directors' fees and of judicial fees.

1. Remitted earnings to foreign residents from their unincorporated U.S. affiliates are treated as dividends paid by domestic corporate business (line 2) and as dividends received by the rest of the world (line 10). Prior to 1980, reinvested earnings of unincorporated U.S. affiliates were also treated as dividends.

2. Earnings of U.S. residents remitted by their unincorporated foreign affiliates are treated as dividends paid by the rest of the world (line 5) and as dividends received by domestic corporate business (line 7). Prior to 1982, reinvested earnings of unincorporated foreign affiliates were also treated as dividends.

1. Excludes interest paid or received by government enterprises, which is included in the government sector.
2. Consists of interest paid on the deposit liabilities of commercial and mutual savings banks, savings and loan associations, and credit unions.
3. Interest received by nonfinancial sole proprietorships and partnerships is considered interest received by persons and is included in line 29.

NOTE.—In table 8.18, imputed interest paid (line 36) is the difference between the property income received by financial intermediaries from the investment of depositors' or beneficiaries' funds and the interest paid by them to business, persons, and governments, and the rest of the world. In table 8.19, imputed interest (line 55)—the interest component of imputations that affect GNP—consists of the imputed interest paid by financial intermediaries other than life insurance carriers and private noninsured pension plans to persons and government, and the interest paid on owner-occupied housing and on buildings and equipment owned and used by nonprofit institutions serving individuals.

1. Contributions for these programs, for which a social insurance fund is imputed, are set equal to benefits paid. These payments are funded directly out of current budget.
2. Prior to 1984, all military retirement programs were funded directly out of current budget. With the establishment of the Military Retirement Trust Fund in October 1984, only the Coast Guard program continues to be funded directly out of current budget.
3. Consists largely of retirement programs for Public Health Service officers and employees of the judiciary.
4. Consists of payments for medical services for dependents of active duty military personnel at nonmilitary facilities.

NOTES.—(1) Only national income and product items for which there are imputations are shown in this table. (2) In table 8.18, imputed interest paid (line 36) is the difference between the property income received from the investment of depositors' or beneficiaries' funds and the interest paid by them to business, persons, governments, and the rest of the world. In table 8.19, imputed interest (line 55)—the interest component of imputations that affect GNP—consists of the imputed interest paid by financial intermediaries other than life insurance carriers and private noninsured pension plans to persons and government, and the interest paid on owner-occupied housing and on buildings and equipment owned and used by nonprofit institutions serving individuals.

1. Consists largely of an adjustment to expense all meals and entertainment, of oilwell bonus payments written off, of adjustments for insurance carriers and savings and loan associations, of amortization of intangible assets, and of tax-exempt interest income.

2. Consists of the Farm Credit System for 1947 forward and the Federal home loan banks for 1952 forward.

3. Consists of private noninsured pension plans, nonprofit organizations serving business, and credit unions.

4. Includes the imputed financial service charge paid by corporations to domestic securities dealers who do not charge an explicit commission.

5. Beginning with 1984, the investment tax credit is included in other tax credits (line 26).

1. Consists of the imputations included in personal income shown in table 8.19 except for employer-paid health and life insurance premiums (line 115). In table 8.26, these premiums are included in line 4.

2. Equals imputed interest received by persons from life insurance carriers and private noninsured pension plans as shown in table 8.18 (line 51).

3. Consists of income earned by low-income individuals who are not required to file income tax returns, unreported income that is included in the NIPA measure, and gross errors and omissions in lines 2 through 15. Also includes the net effect of errors in the IRS adjusted gross income (line 17) and NIPA personal income (line 1) measures. Such errors can arise from the sample used by IRS to estimate line 17 and from the source data used by BEA to estimate line 1.

Index to the NIPA Tables

The entries in this index refer to the table numbers in the full 142-table set of the national income and product accounts (NIPA's). The 57 tables that appear each month in the SURVEY OF CURRENT BUSINESS are identified by bold italic type in the index; other tables are printed in regular type.

The first character of the NIPA table number (the number preceding the decimal point) identifies the table as belonging to one of the following subject areas:

1. National Product and Income
2. Personal Income and Outlays
3. Government Receipts, Current Expenditures, and Gross Investment
4. Foreign Transactions
5. Saving and Investment
6. Income and Employment by Industry
7. Quantity and Price Indexes
8. Supplemental Tables
9. Seasonally Unadjusted Estimates

For most of the NIPA tables showing the industry distributions of gross domestic product, national income, and their components, a suffix is used to represent the year of the Standard Industrial Classification (SIC) underlying the estimates. Estimates for 1929–48, based on the 1942 SIC, are shown in tables designated with an "A" suffix; estimates for 1948–87, based on the 1972 SIC, are shown in tables with a "B" suffix; and estimates for 1987 forward, based on the 1987 SIC, are shown in tables with a "C" suffix.
