Producer Prices and Price Indexes

Data for June 1979

U.S. DEPARTMENT OF LABOR
Ray Marshall, Secretary

BUREAU OF LABOR STATISTICS
Janet L. Norwood, Commissioner

OFFICE OF PRICES
AND LIVING CONDITIONS
W. John Layng, Assistant Commissioner

Producer Prices and Price Indexes is a monthly report on producer price movements including statistical tables and technical notes. It may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Subscription Price:
\$16 a year domestic (includes
one supplement)
\$4 additional foreign

Single copy \$1.80.
Supplement \$2.70.

August 1979

The Secretary of Labor has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through July 1983. Controlled circulation postage paid at Washington, D.C. Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics.

3. Producer price indexes and percent changes for selected stage-of-processing groupings, seasonally adjusted	12	Technical note: Test data for producer price index revision	83
4. Producer price indexes and percent changes for commodity groupings	13	Brief explanation of producer price indexes	85
5. Producer price indexes by durability of product	14		
6. Producer prices and price indexes for commodity groupings and individual items	15		

Price Movements

June 1979

The Producer Price Index for Finished Goods rose 0.5 percent from May to June on a seasonally adjusted basis. The June increase followed a 0.4 percent rise in May and much larger advances in each of the preceding 8 months. Prices for intermediate (semifinished) goods moved up almost as much as in most other months so far this year. Crude material prices rose about the same as in May (table A).

Among finished goods, prices for consumer foods declined about as much as in May. Prices for capital equipment and consumer durables rose less than in most recent months. Price increases for consumer nondurable goods other than foods accelerated, however, largely because of continued steep advances for fuels (table B).

Before seasonal adjustment, the Producer Price Index for Finished Goods rose 0.5 percent to 213.4 (1967=100). Over the year, the Finished Goods Price Index increased 9.7

percent. The finished consumer foods index was up 6.8 percent from June 1978 to June 1979, the index for finished consumer goods excluding foods rose 11.9 percent, and capital equipment prices were 8.8 percent higher than a year ago. The Producer Price Index for intermediate goods increased 11.5 percent over the year, and prices for crude materials advanced 15.3 percent.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods (those eventually sold to retailers) increased 0.5 percent in June. Over the second quarter, this index rose at a 6.5 percent annual rate, considerably less than the 15.6 percent annual rate recorded in the first quarter. Prices for finished consumer foods fell sharply for the second consecutive month. The index for

may differ from those previously reported.
r=revised.

finished nonfood consumer goods moved up 1.4 percent in June, about the same as in both May and April. When prices of energy items are excluded from this index, the June advance was 0.6 percent.

The finished consumer foods index fell 1.2 percent, after moving down 1.3 percent in the previous month. In June, practically all of the decline was due to decreases in prices for beef and veal (2.4 percent), pork (6.0 percent), and processed poultry (15.8 percent). Prices rose for roasted coffee, fresh and dried fruits and vegetables, fish, eggs, vegetable oil end products, and dairy products.

Prices for consumer nondurables other than foods advanced 2.0 percent in June, the largest monthly increase since June 1974. For the 3 months ended in June, this index rose at a 23.1 percent annual rate, compared with a 14.7 percent annual rate in the first quarter of 1979. In June, prices continued to move up rapidly for home heating oil (8.4 percent) and gasoline (3.7 percent). Increases were also registered for leather footwear, tires and tubes, and pharmaceutical preparations.

The index for consumer durables advanced 0.4 percent in June, following a 0.7 percent rise in May. Over the second quarter, this index increased at an annual rate of 8.4 percent, compared with a 9.9 percent annual rate in the first quarter. In June, passenger car prices moved up slightly less than a month earlier. Large increases were registered for precious jewelry and household flatware.

Capital equipment. The Producer Price Index for capital equipment rose 0.5 percent in June, after rising 0.7 percent in May. For the 3 months ended in June, this index rose

at an annual rate of 9.6 percent, about the same as in the first quarter. The June advance was led by increases for railroad equipment, motor trucks, metal cutting machine tools, and photographic equipment. Many other kinds of capital equipment also moved up but generally not as much as in May.

Intermediate materials

The Producer Price Index for intermediate materials, supplies, and components rose 0.9 percent in June, seasonally adjusted, about the same as in May. The index for intermediate materials less foods and feeds advanced 1.0 percent for the second consecutive month; as in May, most of the increase was caused by sharply higher energy-related prices. Prices for intermediate goods less foods and energy moved up 0.5 percent, about the same as the 0.6 percent rise in May but much less than the increases registered in each of the first 4 months of 1979.

The index for processed fuels and lubricants moved up 3.8 percent in June, following an increase of 4.3 percent in May. During the second quarter, this index advanced at a seasonally adjusted annual rate of 55.7 percent, after rising at a 10.4 percent rate in the first 3 months of the year. In June, prices for commercial jet fuel, diesel fuel, lubricating oil materials, and liquefied petroleum gas rose more than in any other month so far this year. Prices for residual fuel and electric power also increased but not as much as in May.

The nondurable manufacturing materials index increased 0.8 percent over the month, somewhat less than in May

(1.2 percent). Prices for industrial chemicals, plastic resins and materials, paper, and paperboard rose considerably less than in most recent months, leather prices turned down after rising steeply during each of the first 5 months of 1979, and inedible fats and oils fell sharply for the second consecutive month. In contrast, prices for synthetic rubber and paint materials rose more rapidly than in most other months so far this year.

Construction material prices were 0.5 percent higher than in May, a somewhat larger increase than the 0.1 percent rise in the previous month but considerably smaller than the increases recorded in the first 4 months of the year. The largest advances in June occurred for nonmetallic mineral products such as refractories, asphalt roofing, concrete products, and gypsum products. Prices for fabricated structural metal products, heating equipment, and plastic construction products also rose but not as much as in most recent months. Lower prices were recorded for millwork, building paper and board, and nonferrous wire and cable.

Prices for durable manufacturing materials rose 0.4 percent, the second consecutive moderate increase after 4 months of steep advances. Lower prices for copper, silver, steel, plywood, and hardwood lumber partly offset sharply higher prices for lead, nickel, gold, and jewelers' materials and findings.

Among other intermediate nonfood goods, some of the largest advances occurred for unsupported plastic film and sheeting, plastic packaging and shipping products, mechanical power transmission equipment, and parts for farm machinery other than tractors. On the other hand, prices fell for mining machinery parts and for switchgear and switchboard equipment.

The index for intermediate foods and feeds dropped 0.6 percent, following a 0.7 percent rise in May. Lower

prices for animal fats and oils, refined vegetable oils, flour, and manufactured animal feeds more than offset higher prices for crude vegetable oils, confectionery materials, and refined sugar for manufacturing.

Crude materials

The Producer Price Index for crude materials for further processing moved up 0.7 percent in June on a seasonally adjusted basis, following a 0.8 percent increase in May.

The index for crude nonfood materials rose 3.3 percent over the month after a 2.3 percent increase in May. The largest advance in June occurred for iron and steel scrap, which increased sharply following 2 months of substantial decreases. The 6.2 percent rise in the crude petroleum index (which includes only domestic production) was double the May increase and was the largest since June 1975. Natural gas prices rose but not as much as in most recent months. Raw cotton moved up substantially for the second consecutive month. Crude natural rubber turned up after decreasing in May. Price increases were also registered for iron ore, aluminum base scrap, and sand, gravel and crushed stone. On the other hand, prices for hides and skins declined moderately after a small rise in May, and copper base scrap fell almost as much as in the preceding month.

The index for crude foodstuffs and feedstuffs fell 1.2 percent after declining slightly for 2 consecutive months. Cattle prices fell somewhat less than in May, and hog prices fell at a steep rate for the fourth consecutive month. Live poultry declined sharply after a moderate increase in May. On the other hand, wheat prices moved up more than 10 percent for the second consecutive month, and green coffee and cocoa beans advanced 12.8 and 10.9 percent, respectively. Higher prices were also recorded for hay, raw cane sugar, fluid milk, and corn.

¹ Relative importance figures shown above have been recalculated to reflect the revisions of Producer Price Index data for December 1978. Data are shown expressed in a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 87 percent of total finished goods, about 80 percent of total intermediate materials, and about 87 percent of total crude materials. For each commodity component of the finished goods index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated

to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

² All data are subject to revision 4 months after original publication.

³ Not seasonally adjusted.

⁴ Not available.

Table 3. Producer price indexes and percent changes for selected stage-of-processing groupings, seasonally adjusted

Grouping	Indexes				Percent change at annual rate for—					
	Mar. 1979	Apr. 1979	May 1979	June 1979	3 months ending—				6 months ending—	
					Sept. 1978	Dec. 1978	Mar. 1979	June 1979	Dec. 1978	June 1979

¹ Dec. 1978=100.

² Prices for some items in this grouping are lagged 1 month.

³ Prices for natural gas (05-31) are lagged 1 month.

⁴ Includes only domestic production.

⁵ Prices for gasoline (05-71), light distillate (05-72), middle distillate (05-73), and residual fuels (05-74) are lagged 1 month.

⁶ Some prices for industrial chemicals (05-1) are lagged 1 month.

⁷ Dec. 1988=100.

⁸ Dec. 1970=100.

⁹ Dec. 1988=100.

Table 5. Producer price indexes, by durability of product

(1957=100)

¹ Data for February 1970 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

² Seasonal commodity—no price available this month.

³ Some of the titles of the individual commodity price indexes included in this grouping are not shown.

⁴ Not available.

⁵ Prices for some items in this grouping are lagged 1 month.

⁶ Regional price indexes for bituminous coal, industrial size, contract are presented in table 8 of

this report.

⁷ Prices for natural gas (05-31) are lagged 1 month.

⁸ Includes only domestic production. Some prices are lagged 1 month.

⁹ Prices for gasoline (05-71), light distillate (05-72), middle distillate (05-73), and residual fuels (05-74) are lagged 1 month.

¹⁰ Regional refined petroleum product prices and price indexes are presented in table 7 of this report.

¹¹ Some prices for industrial chemicals (05-1) are lagged 1 month.

¹ Data for February 1979 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices have been lagged 1 month since February 1972.

² Caution should be used in interpreting month-to-month changes, because of low response

rates from the sample of reporters which ranged from 30 to 60 percent for these particular indexes.

³ Not available.

Table 8. Producer price indexes for bituminous coal by region

(base 1979=100)

Code No.	Commodity	1979 ¹			Code No.	Commodity	1979 ¹		
		Feb.	May	June			Feb.	May	June
0812 03	Bituminous coal, industrial sizes				0802	Manufacturing	117.4	117.7	116.8
	contract	124.5	127.3	127.6	02	South Appalachia	(?)	(?)	(?)
0301	Steam electric utility	140.7	146.2	146.6	03	Midwest	120.7	121.9	121.1
01	North Appalachia	141.5	145.7	145.9	04	West	131.0	132.2	132.2
02	South Appalachia	146.4	151.1	151.1	0803	Metallurgical, high volatile	104.2	104.4	104.4
03	Midwest	139.9	147.7	149.2	02	South Appalachia	103.9	103.6	103.6
04	West	129.6	132.9	133.2	03	Midwest	(?)	(?)	(?)

¹ Data for February 1979 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

² Not available.

NOTE: These indexes are designed to measure changes in the price of coal sold in contract sales transactions (excluding captive production) in various domestic mining regions. Prices are reported by coal operators or sales agents, f.o.b. mine, per net short ton.

Table 9. Producer price indexes for special commodity groupings¹

(1957=100 unless otherwise indicated)

Commodity grouping	1978		1979		
	Annual average	June	Feb. ²	May ²	June ²
All commodities, less farm products	206.4	206.1	222.0	229.7	231.6
All foods	206.4	206.9	225.0	226.4	223.9
Processed foods	206.7	209.3	223.5	227.6	224.9
Industrial commodities, less fuels and power	197.2	196.4	209.6	215.5	216.5
Selected textile mill products (Dec. 1975=100)	196.6	186.4	110.6	112.6	113.1
Hosiery	166.3	165.7	169.9	110.4	110.4
Underwear and nightwear	156.9	156.6	166.3	167.7	166.3
Chemicals and allied products, including synthetic rubber and synthetic fibers and yarns	199.5	196.5	196.0	207.3	209.2
Pharmaceutical preparations	140.6	140.0	149.0	150.1	151.7
Lumber and wood products, excluding millwork	296.2	297.2	317.0	323.0	321.7
Special metals and metal products	259.6	266.4	225.6	231.9	233.1
Fabricated metal products	216.2	215.5	226.6	234.6	236.0
Copper and copper products	155.6	155.1	166.2	199.4	193.0
Machinery and motive products	199.4	169.4	206.0	204.6	205.4
Machinery and equipment, except electrical	214.3	213.2	226.1	231.1	232.2
Agricultural machinery, including tractors	216.3	212.9	226.5	230.9	232.3
Metallworking machinery	226.6	226.9	247.4	253.9	256.6
Numerically controlled machine tools (Dec. 1971=100)	179.1	177.7	190.9	194.4	196.0
Total tractors	226.7	226.2	242.5	246.6	246.4
Industrial valves	232.3	231.6	247.6	253.5	254.3
Industrial fittings	232.7	231.4	249.9	259.3	260.4
Abrasive grinding wheels	206.1	204.5	226.2	221.6	222.6
Construction materials	226.3	226.4	244.1	256.1	256.2
Agricultural machinery and equipment, less parts	212.7	209.9	224.4	227.0	226.1
Farm and garden tractors, less parts	216.1	211.9	225.6	229.9	231.1
Agricultural machinery excluding tractors, less parts	216.7	213.9	236.9	231.9	233.4

¹ These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping (titles in table 5). The weights are those used for the comprehensive All Commodities Index.

² Data for February 1979 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities, less farm products: 02 through 16

All foods: 01-1, 01-7, and 02 less 02-61, 02-02, and 02-0

Processed foods: 02 less 02-0, 02-61, and 02-62

Industrial commodities, less fuels and power: 02, 04, and 06 through 16

Selected textile mill products: 03-27, 03-37-01-06, 03-37-01-07, 03-37-01-08, 03-37-01-11, 03-37-02-42, 03-4, 03-61-01-65, 03-61-01-72, 03-61-01-73, 03-61-02-30, 03-61-02-72, 03-61-02-74, 03-61-03-62, 03-61-63-64, 03-62-01-62, 03-62-01-62, 03-62-01-63, 03-62-01-62, 03-62-02-12, 03-63-63-22, 03-63-63-42, and 12-61

Hosiery: 03-61-01-72, 03-61-01-73, 03-61-62-74, 03-61-63-64

Underwear and nightwear: 03-61-01-74, 03-61-61-76, 03-61-01-76, 03-61-61-77, 03-61-01-78, 03-61-02-74, 03-61-62-76, 03-61-62-76, and 08-61-63-62

Chemicals and allied products, including synthetic rubber and synthetic fibers: 06-1, 07-11-02 and 08 less 08-4

Pharmaceutical preparations: 06-35 and 06-36

Lumber and wood products, excluding millwork and other wood products: 08-1 and 08-3

Special metals and metal products: 10, 11-1, and 14-1

Fabricated metal products: 10-3, 10-4, 10-6, 10-6, 10-7, and 10-8

Copper and copper products: 10-22-01-06, 10-22-01-06, 10-22-01-13, 10-23-01, 10-24-01-06, 10-25-02, and 10-26-01

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 11-1, 11-2, 11-6, 11-4, 11-6, 11-6

Agricultural machinery, including tractors: 11-11, 11-12 less 11-11-61 and 11-12-61

Metallworking machinery: 11-32, 11-33-04, 11-37, and 11-38

Numerically controlled machine tools: 11-37-11-11, 11-37-11-12, 11-37-14-11, and 11-37-16

Total tractors: 11-11 and 11-38 less 11-11-61

Industrial valves: 11-46-01-61 through 11-46-01-60, 11-46-01-16 through 11-49-01-16, 11-49-01-21 through 11-49-01-27

Industrial fittings: 11-46-01-11 through 11-46-01-16

Abrasive grinding wheels: 11-66-11, 11-36-12, 11-66-12, 11-66-14, 11-36-16

Agricultural machinery and equipment, less parts (old commodity code 11-1): 11-1 less 11-11-61 and 11-12-61

Farm and garden tractors, less parts (old commodity code 11-11): 11-11 less 11-11-61

Agricultural machinery excluding tractors, less parts (old commodity code 11-12): 11-12 less 11-12-61

Construction materials: 06-21, 07-21, 08-11, 08-12-01-61, 08-12-01-62, 08-12-01-61, 08-12-01-71, 08-2, 08-3, 09-2, 10-13-02-30, 10-13-02-46, 10-13-02-66, 10-13-02-66, 10-13-02-66, 10-13-02-71, 10-13-02-60, 10-13-03-61, 10-15-01-61, 10-15-01-62, 10-15-01-63, 10-26-01-61, 10-26-01-63, 10-26-01-64, 10-26-01-66, 10-26-01-17, 10-26-01-16, 10-26-01-16, 10-26-01-16, 10-26-01-21, 10-26-01-23, 10-26-02-61, 10-26-02-62, 10-26-19-66, 10-26-01-66, 10-26-01-67, 10-26-01-66, 10-26-01-11, 10-26-62-67, 10-26-05-71, 10-41-01, 10-4, 10-4, 10-71, 10-73-01-01, 10-73-01-06, 10-73-01-11, 10-73-01-12, 10-73-01-13, 10-73-01-14, 10-73-01-16, 10-73-01-66, 10-73-01-67, 10-74-01-01, 10-74-01-61, 10-74-01-61, 10-74-01-62, 10-74-01-67, 10-74-01-61, 10-74-01-66, 10-81-01-66, 10-83-01-61, 10-83-01-66, 10-83-01-66, 10-83-01-67, 10-83-01-66, 10-83-01-11, 10-83-01-21, 10-83-01-63, 10-83-01-61, 10-83-01-66, 10-83-01-66, 10-83-01-67, 10-83-01-41, 10-83-01-46, 10-83-01-46, 10-86-01-66, 10-86-01-66, 10-86-01-61, 11-42, 11-47, 11-46-01-62, 11-46-01-66, 11-42-01-12, 11-43-01-16, 11-71-61-01, 11-71-61-02, 11-71-61-63, 11-71-61-04, 11-71-62-66, 11-71-62-71, 11-71-62-72, 12-11-61-06, 12-32, 12-11-01-01, 12-11-62-07, 12-2, 12-3, 12-4, 12-6, 12-7, 12-61, 12-62, 12-63

Table 10. Producer price indexes: Changes in commodity specifications, June 1979

Commodity code	New specification	Old specification
03-37-03-42	Nylon coating substrate, 840 denier, 66 - 67', 1.75 - 1.82 yards per pound, 20 - 21 x 20 - 21; manufacturer to manufacturer, converter or user, 10,000 yards or more, f.o.b. mill, yard.	Nylon coating substrate, 840 denier, 66', 1.75 yards/pound, 20 x 20; manufacturer to manufacturer, converter or user, 10,000 yards or more, f.o.b. mill, yard.
07-12-02-21	Tube, automobile, passenger car, 670/710 - 15, first line; manufacturer to wholesaler or dealer, f.o.b. factory with freight allowed on specified weight, or freight prepaid, each.	Tube, automobile, passenger car, 670/710 - 15, first line; manufacturer to wholesaler or dealer, f.o.b. factory with freight allowed on specified weight, each.
07-12-02-23	Tube, truck and bus, 8.25 x 20, standard grade, 100 level; manufacturer to wholesaler or distributor, f.o.b. factory with freight allowed on specified weight, or freight prepaid, each.	Tube, truck and bus, 8.25 x 20, standard grade, 100 level; manufacturer to wholesaler or distributor, f.o.b. factory with freight allowed on specified weight, each.
10-41-03-45	Other automotive hardware, including manual type seat adjuster sets, manual type window assemblies, parking brake assemblies, hood hinges, tailgate latches, and folding top compartment hinge assemblies, for current model year; manufacturer to O.E.M. in production line quantities, f.o.b. factory or f.o.b. shipping point, each.	Other automotive hardware, including manual type seat adjuster sets, manual type window regulator assemblies, parking brake assemblies, hood hinges and latches, tailgate latches, and folding top compartment hinge assemblies, for current model year; manufacturer to O.E.M. in production line quantities, f.o.b. factory or f.o.b. shipping point, each.
11-11-01-06	Tractor, wheel type, 50 - 70 P.T.O. horsepower, gasoline or diesel; manufacturer to dealer, f.o.b. factory, each.	Tractor, farm, 50 thru 70 P.T.O. h.p., diesel; manufacturer to dealer, f.o.b. factory, each.
11-11-01-07	Wheel tractor, 35 - 49 P.T.O. horsepower, gasoline or diesel; manufacturer to distributor or dealer, f.o.b. factory, each.	Wheel tractor, 35 - 49 P.T.O. h.p., diesel fuel; manufacturer to distributor or dealer, f.o.b. factory, each.
11-93-01-03	Electronic calculator, nonprinting, desk-top type, 1 - 2 memories; importer to user, f.o.b. destination, each.	Electronic calculator, nonprinting, desk top type, 14 - 20 digit capacity, 1 - 2 storage memories; importer to user, f.o.b. destination, each.
11-93-01-05	Printing calculator, electronic, nonprogrammable with integrated circuitry; importer to user or dealer, one or more, f.o.b. factory or destination, each.	Printing calculator, electronic, with integrated circuitry, four functions, nonprogrammable; importer to user or dealer, one or more, f.o.b. factory or destination, each.

Table 11. Producer price indexes for the output of selected SIC Industries

(1967=100 UNLESS OTHERWISE INDICATED)

1967-101 UNLESS OTHERWISE INDICATED			PRICE INDEX				
1972 SIC CODE	INDUSTRY DESCRIPTION	OTHER INDEX BASES	1978		1979

¹ Price indexes in this table are derived from a pilot survey to test methods and procedures for a comprehensive revision of the Producer Price indexes. (See Technical Note, page 57.) Data for February 1979 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

² Some of the individual product indexes included in this industry are not shown; therefore the published components will not balance.

³ Not available.

New Sample for the Railroad Freight Index*

Railroad freight indexes in table 15 are based on a sample of freight shipments for 1976, which replaces the old sample of freight shipments for 1969. Indexes based on the new sample have been linked with indexes based on the old sample to provide a continuous measure of price change for railroad freight. In addition, indexes are now published for more subgroups of the industry than in the past.

Indexes based on the new sample have been calculated for January through June 1979. December 1978 was the month in which the new indexes were linked to the old indexes. All new indexes which were linked to old indexes have an index base of 1969=100; all new indexes for the new publication areas (for example, STCC group 0133) were not linked to any old index and have an index base of December 1978=100. New indexes for January, February, March, and April 1979 are now official and replace indexes previously released which were based on the old (1969) sample. The methodology used to introduce the new sample follows.

Universe

Each year the Interstate Commerce Commission (ICC) requires all line-haul railroads whose operating revenues exceed a certain minimum to submit samples of their terminated freight traffic.¹ In 1976, all line-haul railroads which averaged at least \$3 million in operating revenues over the previous three years were required to participate in the ICC survey. Seventy-six railroads satisfied this criterion.

Three types of records of freight shipments serve as sampling units for this survey: waybills, carloads from waybills subject to the EM-5 process, and carloads from multiple car movement statements. The most common type of record is the freight waybill. In general, any waybill which was issued a waybill number of "1" or a waybill number ending in "01" by the originating railroad will become part of the sample of the terminating railroad. It is assumed that this sampling process is equivalent to selecting a simple random sample without replacement, with a sampling fraction of one waybill out of every hundred.

Some railroads use a different procedure for all terminated waybills with six or more carloads. In this procedure, known as the EM-5 process, a sample of carloads is selected from a list containing all carloads from all waybills with six

or more carloads which were terminated in a given time period determined by each railroad. The sampling fraction is one carload out of every hundred.

Finally, railroads may file multiple car movement statements with the ICC. The same combination of origin, destination, and commodity shipped may appear many times in the universe of freight shipments. Each combination identifies a shipment cluster. A multiple car movement statement lists, by shipment cluster, all carloads which were shipped over a fixed period of time, usually a month. The ICC selects a sample of carloads from these multiple car movement statements, with a sampling fraction of one carload out of every hundred. It is possible that more than one carload will be selected from a shipment cluster.

In short, the three types of records are sampled at a rate of one record out of every hundred to provide what is assumed to be the equivalent of a simple random sample selected without replacement.

BLS sample design

The ICC furnished the Bureau of Labor Statistics (BLS) with a computer tape which listed all freight records in the 1976 ICC sample. On this tape, all carload records which belonged to the same shipment cluster on a multiple car movement statement were listed together, as though they comprised a single record. These groupings of carloads, or subclusters, were preserved by BLS. There were 182,264 records and subclusters on the tape.

Using the Standard Transportation Commodity Code (STCC) number as the stratification variable, BLS partitioned the list into 23 strata. Within the strata, records and subclusters were listed in ascending order by STCC number. There were additional sorts of records and subclusters with the same STCC number. A systematic, probability-proportionate-to-size sample was selected from each stratum. The measure of size for sampling was the revenue figure listed on the ICC tape for the record or subcluster. Some (519) of the records and subclusters showed zero revenue; BLS used average carload revenue data from the 1976 edition of *Carload Waybill Statistics*, which is based on the ICC survey, to supply each record and subcluster with a nonzero measure of size before sampling. The BLS sample contained 477 waybill records, 60 carload records from waybills subject to the EM-5 process, and 13 subclusters.²

*This article was prepared by John Schwemberger of the Division of Industrial Prices and Price Indexes, Office of Prices and Living Conditions, Bureau of Labor Statistics.

Pricing

For each selected waybill record, BLS obtained prices for all the services reflected on that record. In particular, BLS priced the accessorial services (e.g., refrigeration) as well as the line-haul services; this differs from the ICC survey collection procedure in which only revenue derived from line-haul charges is collected.

For records in the sample that were not waybills, BLS priced the entire economic transaction corresponding to that record. When a carload record from a waybill subject to the EM-5 process appeared in the BLS sample, BLS priced all services on that waybill. When a subcluster of carload records from a multiple car movement statement appeared in the sample, BLS priced the entire cluster which contained the subcluster.

These pricing practices introduce duplicate units in the frame from which the ICC sample was selected. Each pricing unit corresponding to a carload record appears in the ICC frame as many times as there are carloads on that pricing unit. For example, an EM-5 type waybill with ten carloads must be regarded as being listed ten times in the ICC frame. A special factor was inserted into the estimation formulas to account for this duplication. (See below.)

Parameters of interest

The major parameters of interest for BLS are the Laspeyres price index at time t for the railroad freight industry, $I^{(t)}$, and the percent change in this index from time s to time t , $\Delta I^{(s,t)}$. A Laspeyres price index measures the price change over time for a fixed universe of goods and services. In general, a Laspeyres index has the form:

$$\frac{\sum_{i=1}^N P_i^{(t)} Q_i^{(o)}}{\sum_{i=1}^N P_i^{(o)} Q_i^{(o)}}$$

where N is the number of goods and services in the universe; $P_i^{(o)}$, the price at the reference time; $Q_i^{(o)}$, the quantity at the reference time; and $P_i^{(t)}$, the price at time t .

BLS uses a modified Laspeyres index ($I^{(t)}$) which accounts for the fact that over time some services may disappear and cannot be priced. The mathematical expression for $I^{(t)}$ is:

$$(*)I^{(t)} =$$

$$\frac{\sum_{i=1}^L w_i \frac{Y_i^{(t)}(t)}{X_i^{(t)}}}{\sum_{i=1}^L w_i \frac{Y_i^{(t-1)}(t)}{X_i^{(t)}}} \times \dots \times \frac{\sum_{i=1}^L w_i \frac{Y_i^{(b+1)}(b+1)}{X_i^{(b+1)}}}{\sum_{i=1}^L w_i \frac{Y_i^{(b)}(b+1)}{X_i^{(b+1)}}} \times J^{(b)},$$

where

$$Y_i^{(u)}(v) = \sum_{j=1}^{N_i} \left[\frac{\sum_{k \in U_{ij}^{(v)}} P_{ijk}^{(u)} Q_{ijk}^{(a)}}{D_{ij}} \right]$$

and

$$X_i^{(v)} = \sum_{j=1}^{N_i} \left[\frac{\sum_{k \in U_{ij}^{(v)}} P_{ijk}^{(a)} Q_{ijk}^{(a)}}{D_{ij}} \right]$$

The definitions are:

- L = the number of strata in the BLS sample;
- N_i = the number of records in the frame from which the ICC sample was selected which satisfy the defining characterization of the i th BLS stratum; we will say such records are in the i th universe stratum;
- W_i = the 1976 relative importance of the i th universe stratum in the rail freight universe; symbolically,

$$W_i = \sum_{j=1}^{N_i} \left(\sum_{k \in U_{ij}^{(a)}} P_{ijk}^{(a)} Q_{ijk}^{(a)} / D_{ij} \right);$$

- $U_{ij}^{(a)}$ = the set of subscripts of the services that appear on the pricing unit (either a waybill or a cluster of carloads) in the period a ($a=1976$) corresponding to the j th record in the i th universe stratum;
- $P_{ijk}^{(a)}$ = the price or rate at the time of purchase in period a for the k th service on the pricing unit corresponding to the j th record in the i th universe stratum;
- $Q_{ijk}^{(a)}$ = the quantity in period a associated with the k th service on the pricing unit corresponding to the j th record in the i th universe stratum³;
- $U_{ij}^{(v)}$ = the set of subscripts of the services on the pricing unit corresponding to the j th record in the i th universe stratum which are still available for purchase at time v ;
- $P_{ijk}^{(u)}$ = the price or rate at time u for the k th service on the pricing unit corresponding to the j th record in the i th universe stratum;
- D_{ij} = the duplication correction factor (which corrects for those cases where the pricing unit is in the frame once for each carload on that pricing unit):

$$D_{ij} = \begin{cases} 1, & \text{if the record} \\ & \text{subscribed by} \\ & \text{(i,j) is a} \\ & \text{waybill;} \\ \text{the number of} & \\ \text{carloads on the} & \\ \text{pricing unit} & \\ \text{corresponding} & \\ \text{to record (i,j),} & \text{otherwise; and} \end{cases}$$

$J(b)$ = the index for the rail freight industry at time b (b =December 1978), based on the universe of 1969 freight shipments.

Experience with the old (1969) sample indicated that some services available in 1976 will not be available at a later time; hence, certain prices $P_{ijk}^{(u)}$ cannot be obtained for all time points u . For example, a record in the 1976 universe of shipments may refer to a shipment of coal from a particular mine to a city. If the mine goes out of business at time t , shipments from the mine will cease at time t . The index of formula (*) is based on available services; services no longer available are, in effect, linked out of the index. Thus, the number of services in the index will gradually shrink over time.

The index at time t for groups of strata can be obtained from formula (*). If S_h is a set of subscribers of universe strata, the index for the collection of strata subscribed by S_h can be obtained from equation (*) by summing over i in S_h instead of summing over all i from 1 to L . Of course, $J(b)$ in equation (*) must be replaced with either 100 or $J_h(b)$, the index at time b for the STCC group in the 1969 universe of shipments which corresponds to the group of strata identified by S_h . If S_h contains only one subscriber, the index will have a simple form.

Estimation

The estimation strategy in this subject was to estimate the parameters $Y_1^{(u)}(v)$ and $X_1(v)$ with unbiased estimators⁴, and to find acceptable values, $\tilde{W}_i$, for the weights W_i , either from the sample or some external source. An estimator for $J(b)$, $\hat{J}(b)$, is available from the old rail freight sample. All necessary estimation formulas can be obtained by substituting $\hat{Y}_1^{(u)}(v)$ for $Y_1^{(u)}(v)$, $\hat{X}_1(v)$ for $X_1(v)$, $\tilde{W}_i$ for W_i , and $\hat{J}(b)$ for $J(b)$ in the formulas of the preceding section. The formulas for $\hat{Y}_1^{(u)}(v)$ and $\hat{X}_1(v)$ are:

$$\hat{Y}_1^{(u)}(v) = \sum_{j \in T_i} \left[\left(\frac{\sum_{k \in U_{ij}} P_{ijk}^{(u)} Q_{ijk}^{(a)}}{D_{ij}} \right) 100 \frac{V_i}{n_i V_{ij}} \right]$$

and

$$\hat{X}_1(v) = \sum_{j \in T_i} \left[\left(\frac{\sum_{k \in U_{ij}} P_{ijk}^{(a)} Q_{ijk}^{(a)}}{D_{ij}} \right) 100 \frac{V_i}{n_i V_{ij}} \right],$$

where

T_i = the set of subscribers of all records in the i th universe stratum which are in the BLS sample;

n_i = the number of records and subclusters which were selected from the i th universe stratum when BLS selected its subsample from the ICC sample;

V_{ij} = the measure of size involved in the selection of the BLS subsample for the j th record in the i th universe stratum (note that records in the same subcluster all have the same measure of size for BLS sampling); and

V_i = the sum of the measures of size of all the records and subclusters in the frame from which BLS selected its subsample which are in the i th universe stratum.⁵

The factor 100 in the above formulas is the sampling weight due to the first-stage sample, the ICC sample. The factor $\frac{V_i}{n_i V_{ij}}$ is the sampling weight due to the second-stage sample, the BLS sample. The factor D_{ij} is a duplication adjustment, introduced because of the differences between ICC sampling units and BLS pricing units.

It was decided to set $\tilde{W}_i = 100 \tilde{V}_i$, where $\tilde{V}_i$ equals V_i minus the measures of size furnished by BLS for the records in stratum i that originally showed zero revenue on the computer tape which listed the ICC sample. That is, the ICC sample tape was the source for the values of the strata weights. (The factor 100 is, once again, the first-stage sampling weight.) The 519 records which showed zero revenue were given non-zero measures of size as potential BLS pricing units, but were regarded as records with zero revenue in weight estimation to avoid a double counting problem.⁶ The weights $\tilde{W}_i = 100 \tilde{V}_i$ were considered the most accurate that could be found for the universe to which the BLS price indexes apply, the universe of all line-haul and accessorial services listed on records of freight shipments which terminated in 1976 with the seventy-six railroads required to participate in the 1976 ICC railroad freight survey.

FOOTNOTES

¹ However, terminated shipments originating from Canada and Mexico and terminated shipments weighing less than 10,000 pounds which were shipped at "less than carload" or "any-quantity" rates are not submitted.

² Of the 550 units, only 533 were priced. The remaining 17 were not priced for various reasons. Twelve of the 17 were in-bound transit bills. The services listed on these bills are also listed on the out-bound transit bills. To avoid a double counting problem, BLS declared the in-bound transit bills to be out-of-scope. All services on the out-bound transit bills were priced.

³ Since in-bound transit bills are out-of-scope, define $Q_{ijk}^{(a)}$ to equal 0 if (i,j) subscripts a record associated with an in-bound transit waybill.

⁴ The estimators used here are sometimes known as Horvitz-Thompson estimators. See H.S. Konijn, *Statistical Theory of Sample Survey Design and Analysis*, North Holland, London, 1973, p. 235.

⁵ Recall $Q_{ijk}^{(a)} = 0$ if the record (i,j) is associated with an in-bound transit bill. Note that the estimators $\hat{Y}_i^{(u)}(v)$ and $\hat{X}_i(v)$ are unconditionally unbiased. It is possible to construct conditionally unbiased estimators by re-defining V_i and n_i . However, since the factor V_i/n_i cancels in the ratio $\hat{Y}_i^{(u)}(v)/\hat{X}_i(v)$, the complications of a conditional estimator will not be discussed here.

⁶ Some of the records with zero revenue are records of in-bound and out-bound transit shipments. (See note 2.) BLS recognized that the ICC and BLS handled the duplication of services on transit bills differently. Accordingly, BLS did not modify the revenue figures on the ICC sample tape when it used the tape for weight estimation.

Table 15. Price indexes and percent changes for total railroad freight and selected STCC¹ groups

(1929=100 unless otherwise indicated)

Code ¹	Description	1978 relative importance ²	1978 indexes						Percent change to June 1978 from:

¹ Standard Transportation Commodity Code.

² The figure shown for each item is its percent of total railroad freight.

³ The price index for total railroad freight also includes STCC groups not shown separately.

⁴ Dec. 1978=100.

NA= Not available.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads'

prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

The indexes for January through June are based on a sample of 1978 freight shipments which was introduced last month. The indexes for January, February, March, and April replace indexes based on the 1998 sample which were previously released for those months. See the preceding article for a description of the new sample.

Technical Note: Test Data for Producer Price Index Revision

Test data from the pilot survey for the Producer Price Index (PPI) revision have been developed for the period beginning January 1978 and are published each month in table 14, "Producer price indexes for the net output of selected industries and products," in this report. The revision is being undertaken as a comprehensive effort to make major improvements in the measurement of price changes by domestic producers of goods and services. The data now available are from a pilot survey conducted to test the methods and procedures for the comprehensive revision. The revision will be conducted on an industry-by-industry basis. The results for the first industries in the full-scale survey will be available in the fall of 1979. Coverage of all mining and manufacturing industries is scheduled for completion in 1984.

The four industries covered in the pilot survey are: Soybean oil mills (SIC 2075), newspaper printing and publishing (SIC 2711), concrete products other than block and brick (SIC 3272), and household laundry equipment (SIC 3633). These industries were selected because they offered a wide range of pricing problems on which to test the new techniques. Indexes covering some of these same industries will continue to be calculated under the old program. The new indexes will not begin replacing the old ones in the Producer Price Index until early 1980.

These pilot survey indexes differ from indexes in the current Producer Price Index in a number of important respects:

- (1) They are *industry-based* indexes. The entire output of each industry is sampled, including secondary production and miscellaneous receipts. The current Producer Price Indexes are based on a sample of major products. Even the Industry-Sector Price Indexes (ISPI's) are derived from these product indexes. The current ISPI's do not price miscellaneous receipts, and the prices for primary and secondary production are obtained from any producer of the product even if that producer does not belong to the industry. The newly published pilot survey indexes are derived from prices supplied strictly by producers within the industry. As a result, the pilot product indexes apply only to the production within the industry. After all mining and manufacturing industries are covered by the revision, product indexes will be constructed covering all production of the product.

- (2) These new indexes are classified in accordance with the *Standard Industrial Classification* (SIC) system and incorporate most features of the Census of Manufactures product code extensions of the SIC. The coding will make the data easier to use in conjunction with other industry-oriented economic data.
- (3) *Net output values of shipments* are used as weights in preparing the index. Net output values refer to the value of shipments leaving the industry. In contrast, the weights used in the current PPI's and ISPI's are gross shipment values, which include shipments *within* an industry. The resulting multiple counting of price changes is one of the major defects of the current indexes. The current stage-of-processing indexes partially correct this defect, but the new indexes consistently correct it at all levels.
- (4) Increased emphasis is being given to obtaining actual *transaction prices at the time of shipment*. Although it has been a general objective of the current program to obtain transaction prices, they have not been obtained for significant portions of the index. In addition, some products in the current PPI intentionally have been priced at order prices rather than shipment prices.
- (5) *Probability sampling* was used to select the firms to be asked to report prices. As a result, firms of all sizes are included in the sample. In addition, within the firm, the individual items to be priced and the terms of the transaction were chosen using probability techniques. In the current PPI, major companies selected on a judgment basis are asked to report prices for volume-selling items under "typical" transaction terms.

Since this is a pilot survey, a number of changes will be introduced as the full-scale survey is put in place. These changes include the following:

- (1) Greater product detail will generally be available because of larger sample sizes and increased capabilities to combine product areas that are not publishable by themselves. The 5-digit product class indexes, which cannot now be calculated, will be produced.
- (2) Ultimately, the survey will cover all shipments by all 493 industries in mining and manufacturing. The present PPI's cover only about 50 percent of

this value; the pilot survey covers about 2 percent of it.

- (3) Improved calculation techniques will be introduced, including the use of Census of Manufactures shipment data to weight the 7-digit product indexes to higher levels. The pilot indexes rely on the estimated relative importance of products based on shipment data derived from the survey itself.

- (4) Estimates of sampling error will be published.

For further information on the underlying concepts and methodology of the Producer Price Index revision, see "Improving the Measurement of Producer Price Change," by John F. Early, in the April 1978 issue of the *Monthly Labor Review*. Reprints are available from the Bureau of Labor Statistics upon request.

Brief Explanation of Producer Price Indexes

Producer Price Indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer Price Indexes can be organized by stage of processing or by commodity. The stage of processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished

goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage of processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating Producer Price Indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Re-

spondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base Producer Price Indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating Producer Price Indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage of processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 85 percent from the reference period in the Finished Goods Price Index, for example, is shown as 185.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from \$100 in 1967 to \$185."

A Note about Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box below shows the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index Point Change</i>	
Finished Goods Price Index	185.5
less previous index	<u>184.5</u>
equals index point change	1.0
<i>Index Percent Change</i>	
Index point change	<u>1.0</u>
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

A Note on Seasonally Adjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.
