Price Movements

January 1982

The Producer Price Index for Finished Goods moved up 0.4 percent from December to January on a seasonally adjusted basis. The January rise followed increases of 0.3 and 0.5 percent in December and November. The intermediate goods index also rose 0.4 percent, slightly more than in either of the 2 preceding months. Crude material prices turned up with a 1.7 percent advance, following 5 consecutive monthly declines; sharply higher prices for foodstuffs were largely responsible for this upturn (table A).

Among finished goods, consumer food prices climbed sharply after showing no change in December and small decreases in each of the 3 months before that. The index for consumer goods other than foods and energy also moved up following no change in December. Capital equipment prices increased but less than in most recent months. The finished energy goods index turned down after climbing rapidly at the end of 1981.

Before seasonal adjustment, the Producer Price Index for Finished Goods moved up 0.8 percent to 277.4 (1967=100). Over the year, the Finished Goods Price Index rose 6.3 percent. From January 1981 to January 1982, prices for finished consumer foods increased 2.2 percent, the index for finished energy goods advanced 11.2 percent, prices for finished consumer goods other than foods and energy rose 6.2 percent, and capital equipment prices were up 8.4 percent. The intermediate goods index was 5.1 percent higher than the year before, but crude material prices were down 3.0 percent.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods advanced 0.5 percent on a seasonally adjusted basis in January, following a 0.2 percent increase in December. Finished consumer foods rose 1.1 percent after showing no change in the previous

month. The January advance was the largest monthly increase since the drought in the summer of 1980. Prices turned up sharply for pork and eggs after declining markedly in December. Price increases accelerated for refined sugar, dairy products, roasted coffee, shortening, and fish. Prices for processed poultry and milled rice fell, but much less than a month earlier. On the other hand, fresh fruit prices turned down after rising in December, and prices for fresh vegetables rose considerably less than in the previous month.

The finished energy goods index turned down with a 0.9 percent drop, following increases of over 1 percent in both November and December. Prices turned down for gasoline and natural gas, and prices for home heating oil registered a small increase for the third consecutive month.

The index for finished consumer goods other than foods and energy increased 0.5 percent, following no change in December. Within this category, nondurables rose 1.0 percent, as price increases accelerated for periodicals, newspapers, textile housefurnishings, tires and tubes, and prescription drugs. Prices turned up after declining in December for alcoholic beverages and cosmetics. On the other hand, the consumer durables index edged down 0.1 percent. Passenger car prices turned down after rising in December, and prices for household flatware moved down after no change a month earlier.

Capital equipment. The Producer Price Index for capital equipment rose 0.4 percent, after increasing 0.6

percent in December. Prices turned down after rising a month earlier for some motor vehicles, generators, textile machinery, and metal forming machine tools. Price increases decelerated for agricultural machinery. However, price increases accelerated for construction machinery, commercial furniture, oilfield and gasfield machinery, and woodworking machinery.

Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components moved up 0.4 percent from December to January on a seasonally adjusted basis. This continuation of the recent pattern of moderate increases occurred in spite of sizable advances for energy and food prices.

The index for intermediate materials other than foods and energy edged up 0.1 percent, even less than in other recent months. The durable manufacturing materials index continued to recede, moving down 0.6 percent. Prices were lower for precious metals, zinc, nickel, copper, jewelers' materials, semifinished steel mill products, and flat glass. However, tin prices climbed rapidly for the sixth time in the last 7 months.

The nondurable manufacturing materials index declined 0.3 percent, following small increases in both previous months. Substantial price decreases were recorded for processed yarns, plastic resins, woodpulp, and leather. Small declines occurred for industrial chemicals and synthetic rubber. In contrast, prices advanced for gray and finished fabrics.

The index for construction materials registered no change in January. Prices fell for concrete products, asphalt roofing, fabricated structural metal products, and plastic construction products. These were offset by higher prices for softwood lumber, millwork, building paper and board, prepared paint, refractories, and heating equipment.

The manufacturing components index advanced 0.7 percent, as prices moved up for motor vehicle parts, metal stampings, and electronic components. However, prices decreased for machine ship products and electric motors. Among other categories of intermediate goods, prices surged for steel cans but dropped for photographic supplies.

The intermediate energy index rose 1.3 percent, more than in any other month since April. The impact of large increases for electric power and residual fuel oil was weakened by decreases for gasoline and liquefied petroleum gas.

The index for intermediate foods and feeds turned up with 2.2 percent advance, following several months of declines. Sharp increases occurred for flour and refined sugar used in food manufacturing, while prices for corn syrup fell.

Crude materials

The Producer Price Index for Crude Materials for Further Processing moved up 1.7 percent on a seasonally adjusted basis, after falling 1.4 percent in December.

The upturn was primarily due to the index for foodstuffs and feedstuffs, which increased 4.4 percent after declining 2.8 percent in the previous month. After moving down for several months, prices for cattle, hogs, corn, and oilseeds rebounded with substantial increases in January. Live poultry, wheat, fluid milk, and hay also rose after falling for 2 months, and raw sugar and cocoa bean prices continued to move up rapidly. On the other hand, green coffee prices decreased after rising sharply in late 1981.

The index for crude nonfood materials other than energy moved down 3.4 percent, somewhat more than in December and about the same as November's decrease. Prices for copper base scrap and wastepaper continued to drop sharply, prices for aluminum base scrap and crude natural rubber fell after rising in December, and the newly-introduced index for logs and timber decreased 1.0 percent. In contrast, prices for iron and steel scrap and raw cotton, which had been declining for several months, climbed sharply. Cattle hide prices also rose substantially after decreasing in December.

The crude energy materials index edged down 0.1 percent, after moving up 1.3 and 0.5 percent in December and November. Natural gas prices, which had advanced substantially in the 2 previous months, fell 1.3 percent. Prices for crude petroleum were unchanged. In contrast, prices for coal rose 2.0 percent, far more than in any other month since July.

Addition of Data from the Producer Price Index Revision

Indexes for 16 more industries are now being calculated from the comprehensive program to revise the Producer Price Index. This expansion marks the introduction of indexes for boat building as well as for logging. Output price indexes are available for these industries and their major products beginning this month. The PPI revision program now covers 114 industries, which account for 31.5 percent of all mining and manufacturing production.

The industries being published for the first time in this phase of the PPI revision are the following:

<i>Standard Industrial Classifica- tion (SIC) code</i>	<i>Industry</i>
1211	Bituminous coal and lignite
2018	Poultry dressing plants
2079	Shortening, table oils, margarine, and other edible fats
2327	Men's, youths', and boys' separate trousers
2328	Men's, youths', and boys' work clothing
2411	Logging camps and logging contractors
3041	Rubber and plastics hose and belting
3296	Mineral wool
3354	Aluminum extruded products
3448	Prefabricated metal buildings and components
3547	Rolling mill machinery and equipment
3559	Special industry machinery, n.e.c.
3632	Household refrigerators and home and farm freezers
3643	Current-carrying wiring devices
3644	Noncurrent-carrying wiring devices
3732	Boat building and repairing

A total of 143 new items have been added this month to the list of commodities included in the Producer Price Index. Price movements for these items are based on the corresponding product indexes introduced from the PPI revision. The number of commodity indexes whose movements are based on data from the PPI revision now comes to more than 1,500 out of a total of approximately 6,000 indexes expected when the revision program is completed. A comprehensive summary of the various changes associated with the January 1982 addition of data from the PPI revision will appear in the February issue of this report.

Indexes from the PPI revision appear in table 4 of this report. Traditional indexes which correspond to the new indexes published in the revision program are now based on the movements of the corresponding revision indexes. As new industries are published, their product indexes also will be used in the traditional commodity and ISPI structures. Introduction of the next set of indexes for industries based on the PPI revision program is planned for July 1982. An entirely new industry-based stage-of-processing structure will eventually become the primary vehicle for releasing and analyzing price changes at the primary market level.

For a summary of the major difference between the new indexes and traditional commodity price indexes and ISPI's, see the technical note on "Data from the Producer Price Index Revision" in the back of this issue.

Recalculation of Seasonal Adjustment Factors

Effective with data for January 1982, seasonal adjustment factors have been recalculated to reflect 1981 price movement patterns for stage-of-processing (SOP) groupings, commodity groups, and durability groupings. This routine annual recalculation may affect seasonally adjusted indexes and percent changes from January 1977 to the present. Revised seasonally ad-

justed data for this period, as well as seasonal factors to be used through December 1982, are available on request from BLS. Table C below shows 1981 monthly seasonally adjusted percent changes for the three major SOP categories calculated with the old seasonal factors, compared with the percent changes for recalculated indexes which incorporate the new seasonal factors.

Changes in Table Formats and Numbering

Effective with this issue, the following significant changes have been made in the tables appearing in *Producer Prices and Price Indexes*:

1. The former table 3, "Producer price indexes and percent changes for selected stage-of-processing groupings, seasonally adjusted," has been replaced by a new table 3, "Producer price indexes for selected stage-of-processing groupings, seasonally adjusted." This will show historical seasonally adjusted indexes for the same stage-of-processing groupings shown on charts 1, 2, and 3, for 7 years through the most recent month.

2. The former table 8, "Producer price indexes for bituminous coal by regions," has been deleted. Regional price indexes for bituminous coal are now being generated under the Producer Price Index Revision program and will appear each month in table 4.

3. The former table 10, "Producer price indexes: Changes in commodity specifications" has been deleted. In those months when specification changes are made, an appropriate table will appear after all the regular tables.

4. The former table 12, "Percent changes in producer price indexes for the output of selected SIC industries," has been deleted.

5. The following tables have been renumbered.

<i>Description</i>	<i>Former number</i>	<i>New number</i>

¹ Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 89 percent of total finished goods, about 88 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed.

For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

² All data are subject to revision 4 months after original publication.

³ Not seasonally adjusted.

⁴ Not available.

NOTE: Seasonally adjusted data shown may differ from those previously reported. See footnote 1 on table A.

¹ Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

² Data for September 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

³ Not available.

⁴ Prices for all items in this grouping are lagged 1 month.

⁵ Regional refined petroleum product prices and price indexes are presented in table 7.

⁶ Prices for some items in this grouping are lagged 1 month. N.E.C. = Not elsewhere classified.

NOTE: Titles of some commodities are not shown in this table because they fail to meet our publication criteria.

¹ Data for September 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

² Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

¹ These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities Index.

² Data for September 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities, less farm products: 02 through 15

All foods: 011,017, and 02 less 0261, 0262, and 029

Processed foods: 02 less 0261, 0262, and 029

Industrial commodities, less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 0327, 03370105, 03370107, 03370109, 03370111, 034, 03810155, 03810172, 03810173, 03810239, 03810272, 03810274, 03810362, 03810364, 038201, 038202, 03830322, 03830342 and 1231

Hosiery: 03810172, 03810173, 03810272, 03810364

Underwear and nightwear: 03810174, 03810175, 03810176, 03810177, 03810178, 03810274, 03810275, 03810278, and 03810362

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635 and 0636

Lumber and wood products, excluding millwork and other wood products: 081 and 083

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 103, 104, 105, 106, 107, and 108

Copper and copper products: 10220123, 10220124, 10220125, 102301, 10240301, 10240302, 10240304, 10240305, 102502, and 102601

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 116, 118, and 119

Agricultural machinery, including tractors: 1111, 1112 less 111151 and 111251

Metalworking machinery: 1132, 113304, 1137, and 1138

Numerically controlled machine tools: 11371111, 11371112, 11371411 and 113716

Total tractors: 1111 and 1128 less 111151, 112802 and 112803

Industrial valves: 11490101 through 11490106, 11490116 through 11490119, 11490121 through 11490127

Industrial fittings: 11490111 through 11490115

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 111151 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 111151

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

Construction materials: 0621, 0721, 0811, 08120171, 082, 083, 092, 10130239, 10130248, 10130255, 10130263, 10130269, 10130271, 10130289, 10130291, 101502, 10250101, 10250103, 10250104, 10250105, 10250117, 10250118, 10250119, 10250121, 10250131, 10250254, 10251993, 10260106, 10260107, 10260109, 10260111, 10260267, 10260271, 104101, 105, 106, 1071, 10730101, 10730106, 10730111, 10730112, 10730113, 10730114, 10730115, 10730155, 10730157, 107402, 107403, 107404, 10740501, 10740731, 10740781, 10740782, 10740787, 10740791, 10810146, 10830201, 10830203, 10830205, 10830207, 10830209, 10830211, 10830301, 10830321, 10830323, 10830325, 10830329, 10830351, 10830361, 10890526, 10890533, 10890551, 1142, 1147, 11490102, 11490106, 11490112, 11490115, 11710101, 11710102, 11710103, 11710104, 11710265, 11710271, 11710273, 1232, 131105, 132, 133, 134, 136, 137, 1391, 1392, 1393

¹ Standard Transportation Commodity Code.² The price index for total railroad freight also includes STCC groups not shown separately.³ The figure shown for each item is its percent of total railroad freight.⁴ Dec. 1978 = 100.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton

yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price change by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices

generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from \$100 in 1967 to \$225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude

every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4. "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed sub-products (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by

establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11, 12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables 6, 11, or 13 on their original base period of 1967=100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11, 12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based*. The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be

constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights*. Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry

shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of the PPI revision, see two *Monthly Labor Review* articles by John F. Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979.
