

Resampling of Industries

Twenty-eight resampled manufacturing industries and two resampled mining industries are being introduced this month. Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics published the first results of this systematic process in July 1986. Subsequent efforts have been completed at 6-month intervals.

Indexes for the resampled industries and most of their products appear in table 5. Included for the first time are four new industry indexes for the air transportation and travel industries. In addition, two special grouping indexes have been introduced: Stainless steel mill products; and Iron ore pellets, all areas. These appear in table 8.

Resampling of Industries

Forty-one resampled manufacturing industries and 3 resampled mining industries are being introduced this month. Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics has published the results of the resampling procedure since July 1986 at 6-month intervals.

Indexes for the resampled industries and most of their products appear in table 5.

The industries resampled in July are as follows:

Resampling of Industries

This issue of *Producer Price Indexes* introduces another set of resampled industries along with new series for the computer industry and gas and electric utilities. Details on these new series follow the list of resampled industries below. Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics published the first results of this systematic process in the July 1986 issue of *Producer Price Indexes*. Subsequent efforts have been completed at 6-month intervals.

Twenty new or resampled industries are being introduced this month. Indexes for these industries and most of their products will continue to appear in table 5.

Industry

2015	Poultry slaughtering and processing
2037	Frozen fruits, fruit juices, and vegetables
2299	Textile goods, n.e.c.
2353	Hats, caps, and millinery
2591	Drapery hardware and window blinds and shades
2653	Corrugated and solid fiber boxes
2673	Plastics, foil, and coated paper bags
2674	Uncoated paper and multiwall bags
2796	Plate making and related services
3053	Gaskets, packing, and sealing devices
3142	House slippers
3497	Metal foil and leaf
3571	Electronic computers
3648	Lighting equipment, n.e.c.
3843	Dental equipment and supplies
3851	Ophthalmic goods
3965	Fasteners, buttons, needles, and pins
3999	Manufacturing industries, n.e.c.
4449	Water transportation of freight, n.e.c.
4981	Electric power and natural gas utilities

Computers. Monthly indexes for electronic computers are

now included for the first time in the Producer Price Index. BLS has published experimental price indexes for computers on a quarterly basis for 2 years; based on experience gained during this period, the Bureau has integrated indexes for computers into the PPI system. These data appear as industry code 3571 in table 5 and as commodity code 11-51 in table 6. These series are allocated between the consumer goods and the capital equipment portions of the Finished Goods Price Index and account for approximately 0.8 percent of the total weight of finished goods as of December 1990. Data are not seasonally adjusted and are available on the reference base of December 1990=100. Table 13, showing experimental price indexes for computers, has been discontinued. New indexes for computers are not directly comparable to the experimental indexes; however, this issue of the detailed report contains December 1990 data for the experimental computer price indexes. This provides users with indexes for both the experimental and the new indexes for computers for the same month. For more information on these experimental indexes, see "New price index for the computer industry" by James Sinclair and Brian Catron, in the October 1990 issue of the *Monthly Labor Review*.

Energy. Indexes for the residential sector are now included for the first time for both the electric and natural gas industries at the finished goods level. The residential gas component accounts for about 3.2 percent of total Finished Goods and the residential electric power component makes up about 5.9 percent. In addition to not seasonally adjusted data, seasonally adjusted indexes for these two series are available as well; seasonal factors are calculated from corresponding categories in the Consumer Price Index (CPI). The electric and natural gas utilities data are shown in table 6 as commodity codes 05-41 and 05-51, respectively, and in table 5 as product codes 4981-1 and 4981-2. The intermediate energy goods category has been expanded to include indexes for commercial gas, industrial gas, and natural gas to electric utilities. The present series for commercial and industrial power will continue to be published in table 6; regional data formerly presented in table 6 are now shown in table 5. (See table 19 for a list of recodes for these regional data). The index for natural gas to pipelines (commodity code 05-31) is now allocated entirely to the crude energy goods category. Industry codes 1311 (Crude petroleum and natural gas) and 1321 (Natural gas liquids) are not affected by these changes and continue to appear in table 5.

Resampling of Industries

Effective with this issue of *Producer Price Indexes*, another set of resampled industries is introduced, including 28 agriculture classifications, one mining industry, and 35 manufacturing industries. Indexes for four other industries—refrigerated warehousing and storage, freight transportation on the Great Lakes-St. Lawrence Seaway, marine cargo handling, and passenger car rental—are also being introduced. Indexes for most of these industries and their products continue to appear in table 5. Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics published the first results of this systematic process in July 1986. Subsequent efforts have been completed at 6-month intervals.

Improvement among the 28 agricultural classifications include:

- There are new indexes for potatoes for processing, melons, and berries, and coverage has been expanded for citrus fruits, deciduous fruits, and tree nuts. The pricing source for fresh fruits and vegetables is now shipping sites, instead of terminal markets, which have declined in importance and whose prices include freight charges.
- Titles of many livestock and poultry categories now include the term "slaughter" to distinguish these animals from breeder stocks, dairy cows, layer hens, etc. In addition, since more quotations have been included for cattle, hogs, and lambs, there will be fewer occasions in the future when indexes for these categories cannot be published because of an insufficient number of price reports.
- There are 72 quotes for all finfish, with 20 just for salmon, resulting in more reliable prices for this product area. New indexes for shellfish are also being introduced.
- Commodity code 01-7, now called chicken eggs, has been divided into two categories: one for eggs for fresh use, to reflect price changes for eggs sold to consumers and other end users; and another for breaker eggs, to reflect price changes for sales to processed egg users.

As in the past, no data will be published on a Standard Industrial Classification (SIC) basis for farm products or fish.

Resampling of Industries

Effective with this issue, another set of resampled industries is introduced. Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics published the first results of this systematic process in July 1986. Subsequent efforts have been completed at 6-month intervals.

Resampling is being introduced this month for 2 mining industries and 26 manufacturing industries. In addition, indexes for three service industries are being introduced for the first time. Indexes for these industries and most of their products will continue to appear in table 5 of the detailed report, *Producer Price Indexes*.

Resampling of Industries

This issue of *Producer Price Indexes* introduces 50 new or resampled industries. Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics published the first results of this systematic process in July 1986. Subsequent efforts have been completed at 6-month intervals.

Among the newly introduced series are data for hospital services. (See page 5.) Indexes for these 50 industries and most of their products appear in table 5 of this report.

Computers. The sample for computers has been revised and expanded. The new publication structure includes indexes for computers, including personal and portable computers (SIC industry code 3571), as well as a new series of indexes for computer storage devices (SIC industry code 3572). These data appear under their respective industry codes in table 5. These series, whose weights are allocated between the consumer goods and the capital equipment portions of the Finished Goods Price Index, account for approximately 1 percent of the total weight of finished goods as of December 1992. Data are available on a not seasonally adjusted basis on the reference base of December 1992=100 for most series; however, data for SIC industry code 3571 and for commodity code 11-51 remain on the December 1990=100 reference base for continuity.

For information on specific additions, deletions, and recodes of indexes that are effective this month, see tables 13 through 19.

Resampling of Industries

Effective with this issue of *Producer Price Indexes*, 2 mining and 32 manufacturing resampled industries are being introduced. In addition, five industries are being introduced in the services component, including hotels and motels, general warehousing, and cable and other pay television. Indexes for these industries and most of their products appear in table 5 of this report.

Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics published the first results of this systematic process in July 1986. Subsequent resampling efforts have been completed at 6-month intervals.

The industries resampled or introduced in June are as follows:

Resampling of Industries

Effective with this issue of *Producer Price Indexes*, 35 new or resampled industries are being introduced. Among the newly introduced series are data for computer terminals, computer peripheral equipment, and for offices and clinics of doctors of medicine. Indexes for these industries and most of their products will continue to appear in table 5 of this report.

Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics published the first results of this systematic process in July 1986. Subsequent efforts have been completed at 6-month intervals.

For information on specific additions, deletions, and recodes of indexes that are effective this month, see tables 13 through 18.

Pharmaceuticals. Effective this month, experimental indexes for the pharmaceutical preparations industry and its products, designated as industry code 9811, are available on a monthly basis upon request. These experimental indexes differ from those published for the pharmaceutical preparations industry (industry code 2834) in table 5. The experimental indexes include a sample of prescription pharmaceuticals produced in Puerto Rico as well as those produced in the United States, while the table 5 indexes (like all other indexes in the detailed report) exclude Puerto Rico. For data or further information, contact Rodger Hippen or Doug Kanoza on Area Code (202) 606-7723.

Resampling of Industries

Effective with this issue, another set of resampled industries is introduced. Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics published the first results of this systematic process in July 1986. Subsequent efforts have been completed at 6-month intervals.

Thirty-three resampled manufacturing industries are being introduced this month. In addition, three industries are being introduced in the services component: Employment agencies; help supply services; and medical laboratories. Indexes for these industries and most of their products appear in table 5 of this report.

The industries resampled or introduced in July are as follows:

<i>Standard Industrial Classification (SIC) code</i>	<i>Industry</i>
2035	Pickles, sauces, and salad dressings
2051	Bread and other bakery products, except cookies and crackers
2087	Flavoring extracts and flavoring syrups, n.e.c.
