# Price Movements
# July 1994

The Producer Price Index for Finished Goods moved up 0.5 percent, seasonally adjusted, from June to July. The Finished Goods Price Index showed no change in June and edged down 0.1 percent in May. Prices received by domestic producers of intermediate goods climbed 0.5 percent over the month in the wake of a 0.3-percent rise in June. Crude material prices dropped 0.9 percent following an increase of the same size a month earlier. (See table A.)

Most of the July advance in the Fnished Goods Price Index was due to a substantial advance in energy prices. Consumer food prices moved up after remaining unchanged in June. The index for finished goods other than foods and energy inched up 0.1 percent in July.

Before seasonal adjustment, the Producer Price Index for Finished Goods moved up 0.4 percent in July to 126.0 (1982=100). From July 1993 to July 1994, the Finished Goods Price Index rose 0.6 percent. During this same period, consumer food prices increased 1.0 percent, the energy goods index showed no change, and prices for finished goods other than foods and energy were up 0.5 percent. The Intermediate Goods Price Index advanced 1.6 percent during the 12 months ended in July 1994, and prices for crude goods were 0.6 percent higher than a year before.

## Finished goods

The Producer Price Index for finished energy goods climbed 2.5 percent, seasonally adjusted, in July following a 0.3-percent rise a month earlier. Gasoline and home heating oil prices advanced 8.0 and 6.4 percent, respectively, much more than in June. In addition, indexes for both residential electricity and gas turned up following June decreases.

Prices for finished consumer foods moved up 0.5 percent over the month after showing no change in the preceding month. The July advance was dominated by a 42.8-percent surge in the roasted coffee index. Higher prices were recorded for fresh vegetables except potatoes, as well as for unprocessed finfish, soft drinks, bakery products, and melons. Lower prices were registered, however, for dairy products, meats, shortening and cooking oils, and processed chickens.

The index for consumer goods other than foods and energy was unchanged from June to July after edging down 0.1 percent in June. The tobacco products index fell 0.2 percent after a considerably larger decline of 2.7 percent in the previous month. The passenger cars index rose 0.7 percent after seasonal adjustment following a 0.2-percent

increase in June; before seasonal adjustment, new car prices were up 0.2 percent in July. The index for newspaper circulation rates also advanced more than it did a month before. By contrast, prices for sanitary papers and health products and for prescription drugs turned down after increasing in June.

The capital equipment index inched up 0.1 percent for the second consecutive month. Increases for passenger cars, commercial furniture, special industry machinery, metalworking machinery, and transformers outweighed declines for electronic computers and construction machinery.

## Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components rose 0.5 percent in July after increasing 0.3 percent in June. Prices for energy goods turned up after declining slightly in June, and the index for nondurable manufacturing materials rose a little more than in the prior month. Prices for construction and durable manufacturing materials, however, rose considerably less than they had a month before, and the foods and feeds index fell more than it did a month earlier. (See table B.)

In July, the index for intermediate energy goods advanced 1.7 percent after edging 0.2 percent lower in June. Prices advanced more than in June for gasoline, diesel fuel, and jet fuel. Indexes for industrial natural gas and natural gas to electric utilities declined much less than in the previous month. In addition, prices for commercial natural gas, commercial electric power, and industrial power turned up after falling in June. In contrast, increases for liquefied petroleum gas and residual fuel slowed.

Prices for nondurable manufacturing materials registered a 0.9-percent advance in July following June's increase of 0.7 percent. Indexes for basic organic chemicals, paperboard, paper, nitrogenates, alkalies and chlorine, and woodpulp advanced sharply in July.

The index for construction materials moved up 0.3 percent in July after a June rise of 1.0 percent. The deceleration was chiefly due to softwood lumber prices, which turned down 3.6 percent following a June advance of 7.3 percent. Indexes for nonferrous wire and cable and for asphalt felts and coatings also fell after rising a month earlier. Prices for plywood, gypsum products, and for plumbing fixtures and brass fittings rose far less than in June. Indexes for fabricated structural metal products and plastic construction products, however, increased more than they had in the previous month.

The Producer Price Index for durable manufacturing materials rose 0.6 percent after increasing 1.4 percent in the prior month.The copper and brass mill shapes index turned down 2.2 percent after advancing 6.0 percent in June and 6.9 percent in May. The index for hardwood lumber also turned down in July. Prices for plywood, copper, and for building paper and board rose much less than in June. Conversely, the index for hot rolled steel sheet and strip turned up 1.5 percent in July after declining slightly in June. Prices for primary aluminum also rose after falling a month earlier. In addition, indexes for aluminum mill shapes and for cold rolled steel sheet and strip rose more than in June.

The intermediate foods and feeds index moved down 2.0 percent in July after declining 1.4 percent a month before. The prepared animal feeds index decreased 2.9 percent after a small advance in June. Confectionery material prices also turned down, and indexes for crude vegetable oils and fluid milk products fell more than in the previous month. By contrast, prices for natural and processed cheese fell 1.8 percent, much less than their 5.2-percent decline in June. Indexes for condensed and evaporated milk, pork, flour, and

for beef and veal also fell less than a month earlier.

## Crude goods

The Producer Price Index for Crude Materials for Further Processing moved down 0.9 percent in July, offsetting a June advance of the same amount. The index for crude energy materials turned down after rising in June, and the crude foodstuffs and feedstuffs index fell more than in the prior month. In contrast, the basic industrial materials index advanced more than it had a month before. (See table B.)

The crude energy materials index turned down 1.3 percent in July after climbing 3.3 percent a month earlier. The natural gas to pipelines index dropped 9.7 percent after increasing 1.0 percent in June.The crude petroleum index rose 6.3 percent, the fifth consecutive substantial monthly increase. Coal prices turned up after falling in the prior month.

The crude foodstuffs and feedstuffs index moved down 2.1 percent after declining 1.2 percent in June. The larger July decrease was partly due to the corn index, which dropped 14.0 percent in July after climbing 6.5 percent in June. Indexes for slaughter broilers and soybeans also turned down after increasing in June. In addition, the index for fresh vegetables except potatoes rose less in July (11.5 percent) than the month before (39.8 percent), and unprocessed finfish prices also rose less than they had in the prior month. Prices for Irish potatoes for processing fell 25 percent after remaining unchanged in June. The slaughter cattle index, however, turned up 6.4 percent after falling 5.1 percent in the prior month. Indexes for hay, wheat, fresh fruits and melons, and slaughter hogs also rose after declining a month earlier, and fluid milk prices fell less than in June.

The rise in the crude nonfood materials less energy index accelerated to 2.0 percent in July following an increase of 0.7 percent in June. Prices for iron and steel scrap climbed 4.1 percent after declining 8.2 percent in June. The index for softwood logs, bolts, and timber fell less than in the previous month. Prices for aluminum base scrap, cattle hides, and silver ores rose more than in the preceding month. By contrast, the raw cotton index dropped 11.8 percent after increasing in each of the last 7 months. In addition, prices for both copper base scrap and copper ores rose considerably less than a month earlier.

## Net output price indexes for mining, manufacturing, and other industries

*Mining*. The Producer Price Index for the net output of the domestic mining sector moved down 2.2 percent in July after advancing 2.6 percent a month earlier. (Net output price indexes are not seasonally adjusted.) The oil and gas extraction industry group index fell 3.6 percent after climbing 3.3 percent in June. The metal mining industry group domestic mining sector moved down 2.2 percent in July index advanced 5.1 percent following an 8.6 percent jump in the previous month. In July, the Producer Price Index for total mining industries stood at 74.2 (December 1984=100), down 1.3 percent from a year earlier.

*Manufacturing*. Prices received by producers for the net output of the domestic manufacturing sector moved up 0.2 percent in July, about the same as in most other recent months. The increase in the index for the petroleum refining industry group index accelerated from 1.4 percent in June to 4.4 percent in July. The primary metal industries group index moved up 0.7 percent, almost as much as in May and June. The lumber and wood products industry group index, however, declined 0.7 percent, offsetting an increase of the same size a month before. The index for total manufacturing industries stood at 120.8 (December 1984=100) in July, up 1.3 percent from July 1993.

*Other*. After dropping 10.4 percent in June, the index for passenger car rentals rebounded 8.8 percent a month later. Indexes for ferrous metal scrap collection, radio broadcasting, and hotels and motels also turned up in July after declining in June. The wastepaper collection index climbed more than 25 percent for the second consecutive month. The crude petroleum pipelines index advanced considerably more than it did a month before, and the travel agencies index fell less than in June. By contrast, air passenger transportation charges turned down 0.8 percent after increasing 1.3 percent in the preceding month; the truck rental and leasing index also decreased following a June advance. The airports and airport services index dropped 1.8 percent after showing no change in June.

# Price Highlights, First Half of 1994

By Craig Howell and Harry Briggs

The Producer Price Index for Finished Goods moved up at a seasonally adjusted annual rate of 1.6 percent during the first half of 1994. This followed a 1.4-percent rate of decline during the second half of 1993 and a 1.9-percent rate of increase in the first 6 months of last year. The upturn in early 1994 reflected the behavior of prices for energy goods and for finished goods other than foods and energy. The finished energy goods index climbed at an annual rate of 6.0 percent from December 1993 to June 1994; in contrast, energy prices fell at an 11.6-percent rate during the previous 6 months. Similarly, the index for finished goods other than foods and energy, which decreased at a 1.3-percent rate from June to December 1993, increased ats a 2.5-percent rate in the first half of 1994. Consumer food prices, by contrast, turned down at a 3.3-percent rate from December 1993 to June 1994 after rising at a rate of 4.2 percent in the latter half of 1993. (See table C.)

The authors are economists in the Office of Prices and Living Conditions, Bureau of Labor Statistics. For further information about the Producer Price Index call (202) 606-7705.

At earlier stages of processing, prices received by domestic producers of intermediate goods rose at a seasonally adjusted annual rate of 2.4 percent from December 1993 to June 1994. The intermediate goods index showed no change in the latter half of 1993 and increased at a 2.1-percent rate in the first 6 months of 1993. Advances during the first half of 1994 were led by both durable and nondurable manufacturing materials; however, construction material prices moved up much less than in the second half of 1993, and intermediate food and feed prices turned down.

After falling at a 3.4-percent annual rate from June to December 1993, the Crude Goods Price Index moved up at a 2.2-percent rate in the first half of 1994. The index for crude energy materials turned up sharply after slumping in the latter half of 1993, and basic industrial material prices advanced considerably more than in the preceding 6 months. The crude foodstuffs and feedstuffs index, however, turned down.

The strength evident in the American economy in the later months of 1993 carried over into the first half of 1994; however, by midyear there were some signs of moderation in the pace of expansion. Consumer spending remained robust for most kinds of goods, although demand for nonautomotive items slackened somewhat in the second quarter. Capital expenditures provided solid support for the expansion, not only through investments in computers and other kinds of equipment but also through investments for new structures and plant expansion. Residential construction activity was hampered somewhat by the rapid increase in mortgage interest rates but was still brisk in many parts of the country. The resurgence in interest rates did, however, end the wave of mortgage refinancings that had facilated the boost in consumer spending in 1993, when interest rates slipped to their lowest levels in 20 years. Federal Government spending on defense continued to drop in the aftermath of the Cold War, and the overall Federal budget deficit contracted as tax revenues increased in line with the general expansion. Export demand was relatively weak, reflecting the sluggish economies of some of our major trading partners.

A prominent development during the first half of 1994 was a sudden runup in interest rates. Behind this was a growing conviction that the general economy was expanding so quickly that shortages of labor, materials, and capacity would soon be encountered, forcing an acceleration in the rate of inflation. Higher prices for a broad range of manufacturing materials, combined with a steep drop in the unemployment rate, provided evidence in support of these fears. A drop in the value of the American dollar against the Japanese yen and the German mark made imports more expensive and added to fears of impending inflationary pressures in this country. Nevertheless, by midyear accelerated inflation was still not apparent at the finished goods level. The widespread trend of recent years towards enhancing productivity through labor force reductions, reengineering of production processes, and investments in computer systems may have enabled producers of more highly processed goods to absorb wide fluctuations in material input prices without risking the loss of market share through raising their own output prices. The lack of any signs of an upturn in labor compensation costs, which account for the bulk of production costs for most highly processed goods as well as for services, further encouraged price restraint at the finished goods level.

## Crude materials

Crude energy prices moved up at an annual rate of 18.2 percent in the first half of 1994 following a 25.1-percent rate of decrease in the second half of 1993. The index for crude petroleum surged upwards at an 84.2-percent rate from December 1993 to June 1994 after dropping at a 45.9-percent rate in the latter half of 1993. The rapid price increase was the result of several factors, including a general increase in worldwide demand for petroleum products, the Northridge earthquake which ruptured pipelines in California, leaks on two North Sea production platforms, and speculation from investors who turned to this and other commodity markets when stock and bond markets fell. Among other crude energy items, the index for natural gas to pipelines fell much less in the first half of 1994 than during the last 6 months of 1993. The coal index, however, fell in the first half of 1994 following an advance during the last half of 1993.

The index for basic industrial materials advanced at a 9.6-percent seasonally adjusted annual rate in the first half of 1994 after increasing at a 5.0-percent rate in the second half of 1993. Prices for softwood logs, wastepaper, and copper base scrap rose during the first 6 months of 1994 following declines in the second half of 1993. In addition, indexes for copper ores, raw cotton, and aluminum base scrap rose far more rapidly from December 1993 to June 1994 than during the prior 6-month period. These advances, however, were partly offset by the substantial downturn in prices for iron and steel scrap, which descended at a 33.6-percent rate in the first half of 1994 following a 48.1-percent rate of increase during the last 6 months of 1993. Weak foreign demand, coupled with abundant supplies of scrap from automotive stamping plants, depressed ferrous scrap prices in spite of vigorous demand from domestic steel mills.

After advancing at a 15.7-percent rate from June to December 1993, prices for crude foodstuffs and feedstuffs fell at a 13.1- percent rate during the following 6 months. The index for corn declined at a 20.3-percent rate in the first half of 1994 after climbing at a rate of 118.3 percent during the final 6 months of 1993. Prices for corn are often driven by export demand or by the weather, and both factors contributed to their price decline in this period. Demand fell from major foreign purchasers of American corn, such as Canada and many of the nations of Eastern Europe; tight financial constraints in the nations of the former Soviet Union added to the situation. Generally favorable weather conditions in the spring contributed to expectations for a heavy corn harvest and lower prices in 1994 following the flood-related poor harvest of a year earlier. In addition, indexes for soybeans, wheat, fresh and dry vegetables, and alfalfa hay also fell during the first half of 1994 after advancing in the second half of 1993. Prices for slaughter cattle and slaughter hogs fell more from December 1993 to June 1994 than during the previous 6-month period. In contrast, indexes for fluid milk and for unprocessed finfish and shellfish rose during the first 6 months of 1994 following declines in the latter half of 1993, and slaughter broiler prices rose about twice as much in the first half of 1994 as in the second half of 1993.

## Intermediate materials

Prices for intermediate energy goods rose at a 2.2-percent seasonally adjusted annual rate in the first half of 1994 following an 11.7-percent rate of decline from June to December 1993. The diesel fuel index rose at a 27.9-percent rate in the first half of 1994 after declining steeply in the second half of 1993; the advance reflected the overall

strengthening of the economy. Indexes for gasoline, liquefied petroleum gas, jet fuels, and residual fuel also advanced during the first 6 months of 1994 after declining in the latter half of 1993. In contrast, prices for commercial and industrial natural gas and for natural gas to electric utilities declined in the first half of 1994 following second half advances in 1993. In addition, indexes for commercial and industrial electric power experienced a more rapid decline from December 1993 to June 1994 than during the previous 6 months.

After declining at a 2.6-percent annual rate during the final 6 months of 1993, the index for nondurable manufacturing materials climbed at a 5.1-percent rate in the first half of 1994. The basic organic chemicals index led the upturn, advancing at a 7.9-percent rate during the first 6 months of 1994 after declining at a 6.5-percent rate from June to December 1993. Prices for toluene, a chemical used as an additive for gasoline, advanced at a 63.6-percent rate during the first 6 months of 1994 following a 33.3-percent rate of decline in the latter half of 1993. A strengthening domestic gasoline market and shutdowns at European chemical plants led to particularly strong demand for domestically produced toluene throughout the first half of 1994. Among other items grouped within the nondurable manufacturing materials category, the following registered advances in the first half of 1994 after declining in the second half of 1993: Plastic resins and materials, woodpulp, paperboard, nitrogenates, paint materials, and inedible fats and oils. Indexes for synthetic fibers and for alkalies and chlorine, however, declined during the first 6 months of 1994 after climbing from June to December 1993.

The index for materials for durable manufacturing advanced at a 6.6-percent annual rate through the first 6 months of 1994, more than twice as fast as during the previous 6-month period. After a 9.3-percent rate of decline in the second half of 1993, the copper and brass mill shapes index climbed at a 44.3-percent rate from December 1993 to June 1994. Strong demand for copper and brass mill shapes from the automotive and construction industries (traditionally the two largest consumers), as well as sharp price increases for copper cathode, boosted prices for copper and brass mill shapes through the first half of 1994. Copper cathode prices turned up steeply, climbing at an 86.6-percent rate in the second half of 1994 after declining at a 9.1-percent rate during the last 6 months of 1993. The upturn reflected the surge in both domestic and world demand, partly fueled by an infusion of funds from investors avoiding stock and bond markets.

Among other durable manufacturing materials, indexes for aluminum mill shapes and for aluminum ingot rose through the first 6 months of 1994 after declining during the final half of 1993. Flat glass prices rose much more from Decmber 1993 to June 1994 than they did during the prior 6-month period. In contrast, indexes for hot rolled steel sheet and strip and for plywood declined during the first half of 1994 following increases in the final half of 1993. Prices for semi-finished steel mill products rose less in the first 6 months of 1994 than during the last 6 months of 1993. Even though the domestic steel industry enjoyed exceptionally strong demand in the first half of 1994, the PPI for steel mill products moved up at a rate of 1.8 percent, well below its pace during 1993.

In the first half of 1994, the Producer Price Index for intermediate foods and feeds declined at a 3.4-percent annual rate after advancing at a 12.1-percent rate from June to December 1993. Prices for prepared animal feeds fell at a 2.2-percent rate in the first half of 1994 following a 15.5-percent rate of increase during the second half of 1993; this downturn largely reflected lower prices for corn, the basic ingredient in many animal feed mixes. Indexes for crude vegetable oils, flour, and pork also declined through the first 6 months of 1994 after advancing in the latter half of 1993. In contrast, fluid milk and canned milk product prices registered increases in the first half of 1994 following declines in the prior 6-month period.

The rise in the construction materials index slowed to a 1.6-percent annual rate in the first half of 1994 following a 6.0-percent rate of advance from June to December 1993. This slowdown was largely due to the softwood lumber index, which declined at a 19.3-percent rate during the first 6 months of 1994 after climbing at a 44.7-percent rate during the previous 6-month period. In spite of the increased logging restrictions put in place around the country, logging in the South, where production is far harder to regulate because it is more likely than in other parts of the country to take place on privately owned lands, reached record levels in 1994. Prices for domestically logged softwood lumber were also hurt by a rising volume of imported Canadian lumber and by declines in export volume of American lumber. The surge in interest rates dampened the outlook for the residential construction market, particularly for single-family homes, which use more lumber per unit than multi-family dwellings do.

Among other construction materials, indexes for millwork and plywood fell in the first half of 1994 after rising in the second half of 1993. Indexes for nonferrous wire and cable and for asphalt felts and coatings, however, advanced from December 1993 to June 1994 following decreases in the prior 6-month period. Prices for gypsum products rose much more in the first 6 months of 1994 than during the second half of 1993.

## Finished goods

The Producer Price Index for finished consumer goods other than foods and energy moved up at a seasonally adjusted annual rate of 1.8-percent from December 1993 to June 1994 after dropping at a rate of 2.6 percent in the second half of 1993. Prices for new cars and light trucks climbed much more in the first half of 1994 than in the preceding 6

months. The increase in the index for circulation rates for periodicals also accelerated considerably, and indexes for sanitary papers and health products and for tires and tubes turned up following declines in the last 6 months of 1993. In addition, the tobacco products index moved down only slightly after a major drop last year. By contrast, indexes for alcoholic beverages, newspaper circulation rates, floor coverings, and home electronic equipment turned down after rising in the second half of 1993, and price increases slowed for textile housefurnishings and household furniture.

After edging up at a rate of less than 1 percent from June to December 1993, the passenger car index advanced at a 6.0-percent rate in the first 6 months of 1994. Similarly, the rise in the index for light trucks (which includes vans and pickup trucks) accelerated from a rate of 0.4 percent in the latter half of 1993 to an 11.4-percent rate in the opening half of 1994. Consumer demand for new cars and light trucks was even stronger in the first half of the year than it had been in all of 1993. The tobacco products index, which had fallen at an unprecedented seasonally adjusted annual rate of 39.1 percent in the second half of 1993, slowed its rate of decline to less than 1 percent in the opening half of 1994. The sharp cut in cigarette prices in the summer of 1993 was followed by a relatively modest rebound last December and virtually no change of any sort (before seasonal adjustment) in any of the first 6 months of 1994. Cigarette manufacturers abandoned their recent practice of twice-a-year price hikes in the face of heightened competition from heavily discounted brands.

The capital equipment index moved up at a seasonally adjusted annual rate of 4.0 percent in the first 6 months of 1994, the fastest rate for any calendar half-year since the opening half of 1989. As with consumer goods, motor vehicles led the acceleration. The heavy trucks index climbed at an annual rate of 12.6-percent from December 1993 to June 1994 (compared with a rate of 0.9 percent during the preceding 6 months). Demand for new trucks expanded in line with the boost in trucking shipments associated with the broad economic expansion. Price increases also accelerated during the first half of 1994 for commercial furniture, ships, communication equipment, and machine tools, and the construction machinery index turned up after a slight decline in the previous 6 months. In addition, prices for electronic computers fell only half as fast as they had in the last half of 1993. By contrast, price increases slowed for civilian aircraft, railroad equipment, transformers, and mining and oil field machinery.

With the finished energy goods category, gasoline prices rebounded from a steep slump in the second half of 1993 by advancing at a seasonally adjusted annual rate of 22.6-percent during the opening half of 1994. (Before seasonal adjustment, gasoline prices surged at a 42.6-percent rate in the first 6 months of the year.) Similarly, the home heating oil index climbed at a rate of 37.6-percent from December 1993 to June 1994 following a sharp drop in the preceding 6 months. Demand for gasoline from both consumers and businesses was strong as the economy expanded and incomes improved, while home heating oil prices were spurred by an unusually harsh and prolonged winter in some parts of the country. Indexes for both residential electric power and residential gas rates turned down in the first half, however, partly reflecting earlier declines in fuel costs.

Among finished consumer foods, prices turned down in the opening half of 1994 for fresh fruits and vegetables, pork, milled rice, processed turkeys, and pasta. In addition, prices rose less than in the latter half of 1993 for processed chickens, processed fruits and vegetables, shortening cooking oils, bakery products, and roasted coffee. (The severe freezes that damaged the 1995 coffee bean crop in Brazil did not occur until after the June 1994 pricing date for roasted coffee.) Beef and veal prices declined at a double-digit rate, as they did in the preceding 6 months as well. Fish and soft drink prices turned up, however, and chicken egg prices edged up marginally following a steep drop in the second half of 1993.

## Net output

After falling at an 18.4-percent rate from June to December 1993, the Producer Price Index for the net output of the domestic mining sector moved up at annual rate of 9.0 percent during the next 6 months. (Net output price indexes are not seasonally adjusted.) The upturn was paced by the oil and gas extraction industry group index, which rose at an 11.6-percent rate following a rate decline of more than 25 percent in the second half of 1993. In addition, the metal mining industry group index advanced at a rate of 35.8 percent from December 1993 to June 1994, much more than its slight rate of advance during the previous 6 months. The bituminous coal mining group index, however, turned down at a 4.2-percent rate in the first half after rising modestly in the latter half of 1993.

Prices received by domestic producers for the net output of total manufacturing industries increased at an annual rate of 2.9 percent in the opening half of 1994 following a 1.2-percent rate of decrease from June to December 1993. Prices for the petroleum refining industry group climbed at at 22.5-percent rate after decreasing at a rate of nearly 30 percent in the preceding 6 months. During the first half of 1994, the primary metal industries groups index increased at a 6.5-percent rate, about triple its rate of the previous 6-month span. Most other major manufacturing industry group indexes moved up at a rate of less than 3 percent in the first half of the year.

Price rose at annual rates of more than 5 percent for a few industries outside of the mining and manufacturing sectors, including crude oil pipelines (11.0-percent annual rate), domestic deep sea transportation of freight (10.4 percent), truck rentals (7.8 percent), and hotels and motels (5.9 percent). In contrast, among the few declines were those registered for passenger car rentals (down at a 7.3 percent rate) and air cargo transportation rates (8.5 percent). Indexes that rose at

slower rates in the first half of 1994 than in the previous 6 months included air passenger transportation (2.6 versus 10.4 percent) and general hospitals (1.7 versus 4.6 percent).

# Resampling of Industries

Effective with this issue, another set of resampled industries is introduced. Under the resampling procedure, the sample for an industry is updated to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry has shifted significantly. The Bureau of Labor Statistics published the first results of this systematic process in July 1986. Subsequent efforts have been completed at 6-month intervals.

Thirty-three resampled manufacturing industries are being introduced this month. In addition, three industries are being introduced in the services component: Employment agencies; help supply services; and medical laboratories. Indexes for these industries and most of their products appear in table 5 of this report.

The industries resampled or introduced in July are as follows:

| *Standard Industrial Classification (SIC) code* | *Industry* |
|---|---|
| 2035 | Pickles, sauces, and salad dressings |
| 2051 | Bread and other bakery products, except cookies and crackers |
| 2087 | Flavoring extracts and flavoring syrups, n.e.c. |
| 2097 | Manufactured ice |
| 2111 | Cigarettes |
| 2429 | Special product sawmills, n.e.c. |
| 2451 | Mobile homes |
| 2511 | Wood household furniture, except upholstered |
| 2813 | Industrial gases |
| 2822 | Synthetic rubber |
| 2844 | Perfumes, cosmetics, and other toilet preparations |
| 3231 | Glass products, made of purchased glass |
| 3272 | Concrete products, except block and brick |
| 3511 | Turbines and turbine generator set units |
| 3532 | Mining machinery and equipment, excluding oil and gas field machinery and equipment |
| 3537 | Industrial trucks, tractor, trailers, and stackers |
| 3544 | Special dies and tools, die sets, jigs and fixtures, and industrial molds |
| 3553 | Woodwoorking machinery |
| 3567 | Industrial process furnaces and ovens |
| 3581 | Automatic vending machines |
| 3582 | Commerical laundry, dry-cleaning, and pressing machine |
| 3589 | Service industry machinery, n.e.c. |
| 3612 | Power, distribution, and specialty transformers |
| 3631 | Household cooking equipment |
| 3632 | Household refrigerators and home and farm freezers |
| 3633 | Household laundry equipment |
| 3635 | Household vacuum cleaners |
| 3639 | Household appliances, n.e.c. |
| 3661 | Telephone and telegraph apparatus |
| 3672 | Printed circuit boards |
| 3674 | Semiconductors and related devices |
| 3679 | Electronic components, n.e.c. |
| 3822 | Automatic building, refrigeration, and appliance controls |
| 7361 | Employment agencies |
| 7363 | Help supply services |
| 8071 | Medical laboratories |

[1] Indexes in this table are derived from the net-output-weighted industry price indexes shown in table 5. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly-titled indexes which are derived from traditional commodity groupings shown in table 6.

[2] Data for March 1994 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

[1] These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities index.

[2] Data for March 1994 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities except farm products: 02 through 15

All foods: 011, 017, and 02 less 0261, 0262, and 029

Processed foods: 02 less 0261, 0262, and 029

Industrial commodities less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 0327, 03370105, 03370109, 034, 03810169, 03810272, 03810274, 03810298, 03820102, 03820134, 03820303, 03830324, 03830325 and 1231

Hosiery: 03810169, 03810171, 03810272, 03810273, 03810363, and 03810365

Underwear and nightwear: 03810174, 03810175, 03810176, 03810177, 03810178, 03810274, 03810275, 03810276, 03810277, 03810368, and 03810369

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635, and 0636

Synthetic paint resins: 06220132, 066207, and 06620903

Volatile paint liquids: 06140141, 06140202, 06140341, 06140356, 06220306, 06220308, 06220309, and 06220311

Lumber and plywood: 081 and 083

Iron ore pellets, all areas: 10110201, 10110202, and 10110301

Steel mill products, including fabricated wire products: 1017 and 1088

Finished steel mill products, excluding fabricated wire products: 1017 less 101701 and 101702

Finished steel mill products, including fabricated wire products: 1017 and 1088 less 101701 and 101702

Stainless steel mill products: 10170293, 10170351, 10170359, 10170453, 10170454, 10170461, 10170551, 10170661, 10170662, 10170663, 10170664, 10170669, 10170751, 10170755, 10170852, and 10170853

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 10-3 through 10-8

Copper and copper products: 10210201, 10220107, 10220123, 10220162, 102301, 10240301, 10240302, 10240304, 10240305, 102502, 10260314, 10260317, 10260325, 10280301, 10280302, and 10280303

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 115, 116, 118, and 119

Agricultural machinery, including tractors: 1111 and 1112 less 11115211 and 111251

Metalworking machinery: 113A, 1132, 113304, 1137, and 1138

Total tractors: 1111 and 1128 less 11115211, 112802, and 112803

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 11115211 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 11115211

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

Construction materials: 062101, 0721, 081101, 081102, 081103, 081105, 081203, 081204, 082, 083, 08490105, 086, 092, 101502, 101703, 101704, 10170611, 10170627, 10250103, 10250104, 10250121, 10250123, 10250254, 10260307, 104101, 105, 106, 1071, 10730101, 10730102, 10730103, 10730109, 10730145, 10730146, 10730156, 10730164, 10730165, 107402, 107403, 107404, 10740501, 10740781, 10740786, 10740789, 10740791, 10740793, 10740795, 10810246, 10830222, 10830223, 10830301, 10830321, 10830323, 10830325, 10830329, 10830351, 10830361, 10880211, 10880213, 10880961, 10890566, 1142, 1147, 11490205, 11710106, 11710109, 11710111, 11710112, 11710113, 11710114, 11710117, 11710118, 11710121, 11710135, 11710263, 11710264, 11710266, 11710267, 11710272, 11710274, 11710282, 11710292, 11710294, 11710296, 123101, 1232, 13110413, 131105, 13110712, 132, 133, 134, 136, 137, 1392, 1393, 1394, and 139501

1/ Indexes in this table are derivad from tha primary product indexes in tabla 5 that ara weighted using 1977 input/output relationships. These indaxas only include inputs to construction which ara producad by tha mining and manufacturing sectors of the economy, excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as comprehensive measures of changes in construction costs. See note on page 190 of the July 1986 issue of Producer Price Indexes.

1/ Indexes in this table are derived from the product indexes in table 5. These indexes are composed of the goods used by the industries in each of the industry stage of process output indexes as shown by the 1977 input/output relationships. These material inputs include only domestic material input and do not include any imported materials which may be used.

2/ All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

3/ Not available.

4/ Percent of final input to consumers.

# Technical Notes

## Brief Explanation of Producer Price Indexes

Producer price indexes (PPI) measure average changes in prices received by domestic producers of commodities in all stages of processing. Most of the information used in calculating the indexes is obtained through the systematic sampling of nearly every industry in the manufacturing and mining sectors of the economy. The PPI program also includes some information from other sectors—agriculture, fishing, forestry, services, and gas and electricity. Because producer price indexes are designed to measure only the change in prices received for the output of domestic industries, imports are not included. The sample currently contains about 3,200 commodities and 80,000 quotations per month.

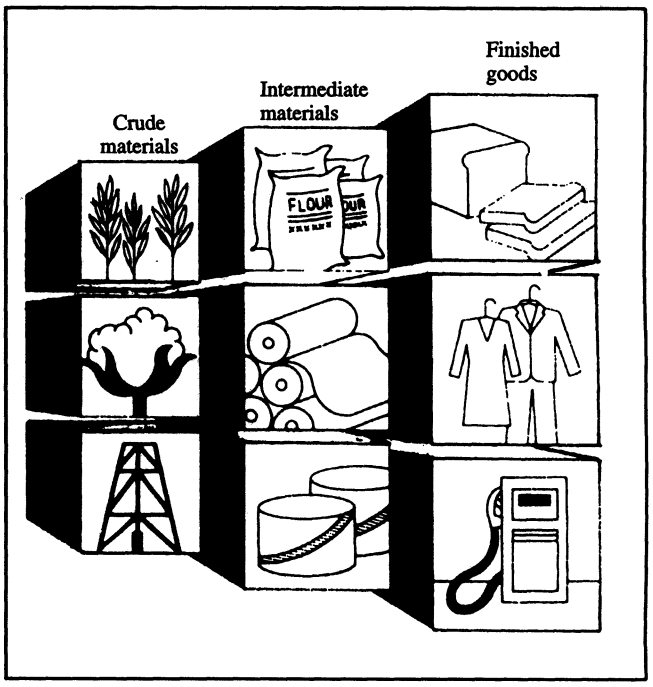

There are three primary systems of indexes within the PPI program: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure (table 1) organizes products by class of buyer and degree of fabrication. The entire output of various industries is sampled to derive price indexes for the net output of in–dustries and their products (table 5). The commodity structure (table 6) organizes products by similarity of end-use or material composition.

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, and nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufacturered or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude ppetroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

Producer price indexes for the net output of industries and their products are grouped according to the Standard Industrial Classification (SIC) and the Census product code extension of the SIC. Industry price indexes are compatible with other economic time series organized by SIC codes, such as data on employment, wages, and productivity. Table 4 lists indexes for the net output of major mining and manufacturing industry groups at the 2-digit level. Table 5 includes data for SIC industries and industry groups (2-, 3-, and 4-digit levels); indexes for Census product classes (5- and 6-digit levels), products (7-digit level), and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Indexes may be represented by one to three kinds of product indexes. Every industry has primary product in-

dexes to show changes in prices received by establishments classified in the industry for products made primarily, but not always exclusively, within the industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, some industries also may have secondary product indexes that show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, e.g., resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Some product indexes published in table 5 correspond to 8-digit commodity indexes in table 6. In these cases, movement of the latter indexes are calculated on the basis of movements of their counterparts in table 5. Although most such indexes continue to be published in table 6 on a base period of 1982=100 or some later base, corresponding indexes in table 5 are published on a base of the month of their introduction. Even though index levels for corresponding items may differ, monthly percent changes will be identical. (See "Calculating Index Changes," below.)

Producer price indexes are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices are normally reported by mail questionnaire for the Tuesday of the week containing the 13th.

Price data are provided on a voluntary and confidential basis; no one but sworn BLS employees are allowed access to individual company price reports. The Bureau publishes price indexes instead of unit dollar prices. All producer price indexes are routinely subject to revision once, 4 months after original publication, to reflect the availability of late reports and corrections by respondents.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments in one industry to establishments classified in another industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes such as the all commodities index are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Weights for most traditional commodity groupings of the PPI, as well as all indexes (such as stage-of-processing indexes) calculated from traditional commodity groupings currently reflect 1987 values of shipments as reported in the Census of Manufactures and other sources. From January 1987 through December 1991, PPI weights were derived from 1982 shipment values. Many industry indexes which are based on the SIC system, continue to be calculated with 1987 net output weights.

Effective with publication of January 1988 data, many important PPI series (including all stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100, to coincide with the reference year of shipment weights. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The new reference base is not used for indexes with a base later than December 1981, nor for indexes for the net output of industries and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 16, "Producer Prices," in *BLS Handbook of Methods* (1992), Bulletin 2414. Reprints are available from the Bureau of Labor Statistics on request (202-606-STAT).

## Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than as changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The computation of index point and percent changes is shown in the box.

| | |
|---|---|
| *Index point change* | |
| Finished Goods Price Index | 107.5 |
| Less previous index | 104.0 |
| Equals index point change | 3.5 |
| *Index percent change* | |
| Index point change | 3.5 |
| Divided by the previous index | 104.0 |
| Equals | 0.034 |
| Results multiplied by100 | 0.034 x 100 |
| Equals percent change | 3.4 |

Percent changes for 3-month and 6-month period can be expressed as annual rates that are computed according

Federal Reserve Bank of St. Louis

to the standard formula for compound growth rates. These data indicate what the percent change would be if the rate for a given 3- or 6-month span were maintained for a 12-month period.

Each index measures price changes from a reference period which equals 100.0 (1982 or some later month). An increase of 5.5 percent from the reference period in the Finished Goods Price Index for example, is shown as 105.5. This change can also be expressed in dollars as follows: "Prices received by domestic producers of a systematic sample of finished goods have risen from $100 in 1982 to $105.50 today." Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods today are 10 percent lower than they were in 1982.

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

Seasonally adjusted data are preferred for analyzing general price trends in the economy because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends.

Unadjusted data are of primary interest to users who need information which can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists; and commodity traders. It is the unadjusted data that are generally cited in escalating longterm contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties,* BLS Report 807, 1991 edition, available on request from BLS.)

Seasonal factors used in computing seasonally adjusted indexes are derived from the X-11 Seasonal Adjustment Method. Annual updates replace the most recent 5 years of seasonal data, e.g., data from January through December 1991 were replaced at the beginning of 1992. Indexes for most broad commodity groupings and 8-digit individual commodities in table 6, as well as industry and Census product indexes in tables 4 and 5, do not undergo the seasonal adjustment process and, therefore, are published only as unadjusted data.

Some indexes are adjusted directly, i.e., independently of the seasonal movements of other more detailed series comprising the category in question. This is the case for all indexes in table 6 which are adjusted, as well as for certain basic stage-of-processing categories in table 1. Seasonal movements for most stage-of-processing indexes are derived indirectly by the aggregate method, which combines movements of the basic stage-of-proceessing categories with those of a wide variety of food and certain other subproduct class (6-digit level) series.

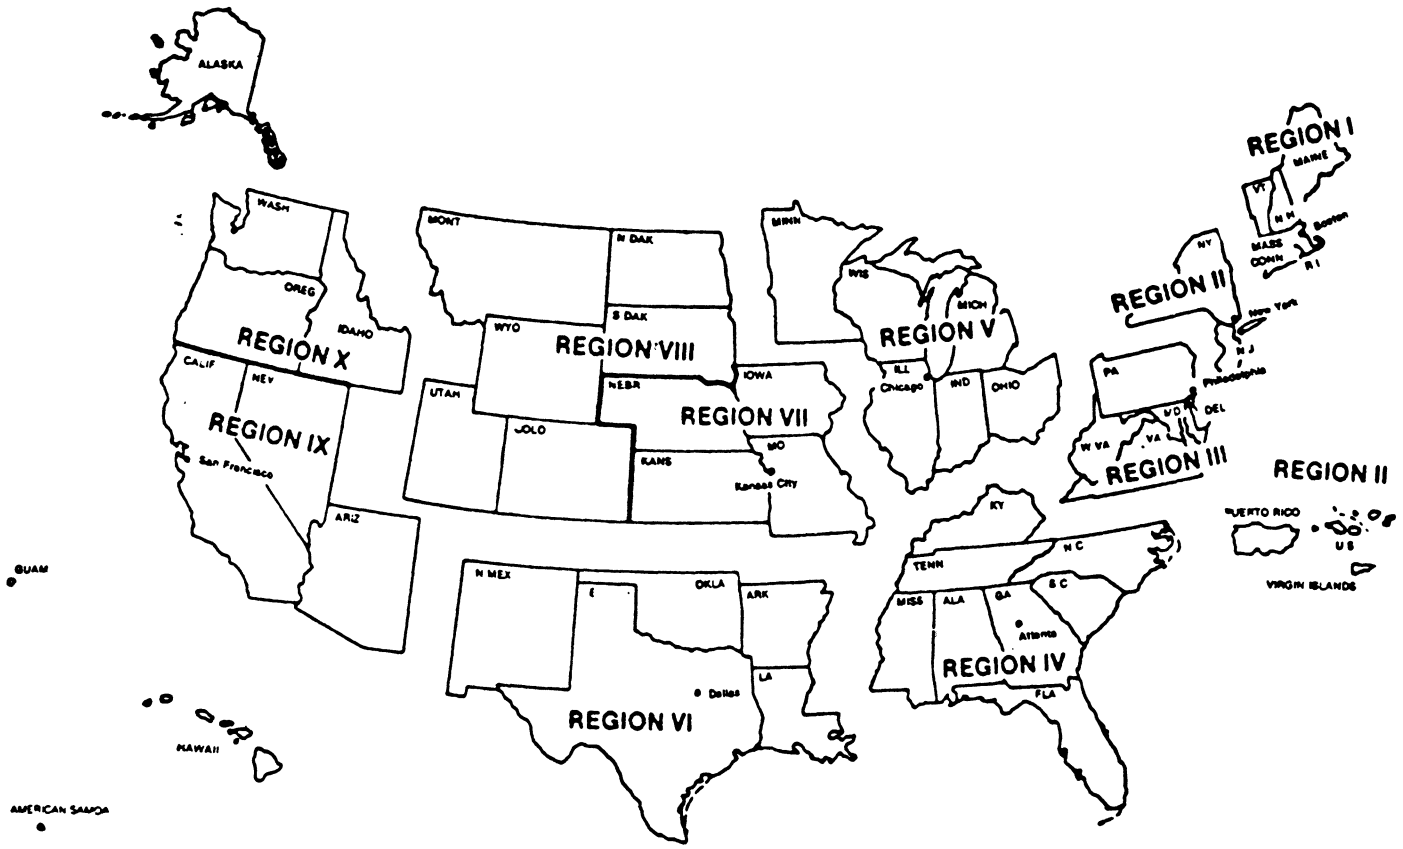

Direct seasonal adjustment produces a more complete elimination of seasonal movements than the aggregative method does. However, the direct seasonal adjustment process does not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonally adjusted data can also become problematic when previously stable and predictable timing patterns of pricing behavior abruptly change. If the new timing pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will be chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.
