PPI Detailed Report (ISSN 1099-2855; USPS 485-050) is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights.

To order this periodical for 1 year, cite *PPI Detailed Report* (WPPI) and send your check for \$55.00 (\$68.75 foreign) or provide your VISA or MasterCard number and expiration date to Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15220-7954. Cost of the annual supplement only is \$40.00 domestic (\$50.00 foreign).

Subscribers will receive the next available subscription issue after their order is received. An acknowledgement card is sent to all customers after their subscription order is processed to let them know that they will receive the next available issue.

Please wait at least 6 weeks before inquiring about your order. Then write to Subscription Service Section, U.S. Government Printing Office, Stop: SSOM, Washington, DC 20402, telephone (202) 512-1800, or fax (202) 512-2168.

POSTMASTER: Send address changes to *PPI Detailed Report*, U.S. Government Printing Office, Washington, DC 20402-0001.

Price Movements January 2001

The Producer Price Index for Finished Goods advanced 1.1 percent in January, seasonally adjusted. January's rise followed a 0.2-percent increase in December 2000 and a 0.1-percent gain in November 2000. At the earlier stages of process, prices received by producers of intermediate goods increased 0.7 percent, following a 0.4-percent rise in the prior month, and the crude goods index advanced 13.9 percent, after posting an 8.5-percent increase a month earlier. (See table A.)

Among finished goods in January, prices for finished energy goods rose 3.8 percent, following a 0.8-percent gain in December. The index for finished consumer foods turned up 0.8 percent, after falling 0.4 percent a month ago. Prices for finished goods other than foods and energy rose 0.7 percent, after edging up 0.1 percent in December. Price increases for cigarettes and passenger cars accounted for a large part of this acceleration. Excluding cigarettes and passenger cars, the index for finished goods other than foods and energy would have risen 0.3 percent.

Before seasonal adjustment, the Producer Price Index for Finished Goods advanced 1.1 percent to stand at 141.2 (1982=100). From January 2000 to January 2001, prices for finished goods increased 4.8 percent. Over the same period, the finished energy goods index rose 21.6 percent, prices for finished goods other than foods and energy gained 2.0

percent, and the finished consumer foods index advanced 2.5 percent. Prices received by domestic producers of intermediate goods moved up 4.4 percent for the 12 months ended January 2001, and the index for crude goods registered a 46.5-percent gain for the same period.

Finished goods

The index for finished energy goods advanced 3.8 percent in January, after posting a 0.8-percent rise in December. Liquefied petroleum gas prices jumped 15.3 percent, after inching up 0.1 percent in the prior month. The gasoline index turned up, following a decline a month earlier. Prices

for residential natural gas and residential electric power rose more than they did in the previous month. Conversely, the index for home heating oil declined 3.6 percent in January, after falling 0.3 percent a month ago. Diesel fuel prices turned down, after rising last month.

The index for finished consumer foods rose 0.8 percent in January, after falling 0.4 percent in December. Much of this acceleration can be traced to the index for fresh and dry vegetables, which advanced 16.2 percent, following a 26.0-percent decline a month ago. Prices for soft drinks increased,

after showing no change last month. The index for fresh fruits and melons rose more than it did a month earlier. Prices for bakery products, processed fruits and vegetables, and confectionery end products turned up, after decreasing in the previous month. By contrast, pork prices fell 2.6 percent in January, following a 0.4-percent gain in December. The index for eggs for fresh use also turned down, after increasing in the prior month. Prices for dairy products and for finfish and shellfish rose less than a month ago, and the index for processed young chickens fell more than in December.

Prices for finished consumer goods other than foods and energy advanced 0.8 percent in January, following a 0.2-percent gain in December. The cigarette index increased 6.3 percent, after showing no change last month. Passenger car prices advanced more than they did a month earlier. The index for sanitary papers and health products turned up, following a decline in the previous month. Prices for pet food and cosmetics and other toilet preparations increased, after showing no change in the prior month. By contrast, the index for alcoholic beverages edged down 0.1 percent, following a 1.1-percent rise in December. Prices for floor coverings also turned down, after advancing a month ago. In January, price increases slowed for light motor trucks and book publishing.

The capital equipment index increased 0.3 percent in January, following a 0.1-percent gain in December. Passenger car prices rose 1.2 percent, after advancing 0.2 percent in the previous month. The indexes for x-ray and electromedical equipment; heavy motor trucks; and tools, dies, jigs, fixtures, and industrial molds turned up, following declines in December. Prices for commercial furniture and civilian aircraft increased more than they did in the prior month. Conversely, the electronic computer index fell 5.4 percent in January, following a 2.0-percent decrease in December. Light motor truck prices

rose less than a month ago. Indexes for communication and related equipment and construction machinery and equipment declined, after showing no change in December.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components advanced 0.7 percent, seasonally adjusted, after registering a 0.4-percent gain in December. In January, prices for intermediate energy goods increased more than they did a month earlier, and the index for non-durable manufacturing materials turned up, following a decline in the previous month. By contrast, prices for durable manufacturing materials and materials and components for construction moved down, after rising in the prior month. The index for intermediate foods and feeds advanced 1.7-percent for the second consecutive month. Excluding foods and energy, prices for intermediate materials increased 0.2 percent, after showing no change a month ago. (See table B.)

The index for intermediate energy goods jumped 3.1 percent in January, following a 1.5-percent gain in December. Posting its largest increase since a 4.3-percent rise in February 1980, prices for commercial electric power moved up 3.9 percent, after advancing 0.5 percent in the previous month. Record increases for the commercial natural gas index (21.1 percent) and the natural gas to electric utilities index (64.4 percent) were recorded in January, following smaller gains in December. Indexes for liquefied petroleum gas and industrial electric power also rose more than they did a month ago. Gasoline prices turned up, after falling in the prior month. On the other hand, the jet fuel index dropped 12.9 percent in January, following a 3.0-percent rise in December. Diesel fuel

prices also declined, after advancing a month ago. The industrial natural gas index increased less than last month.

Prices for nondurable manufacturing materials rose 1.1 percent in January, after edging down 0.1 percent in December. The plastic resins and materials index advanced 2.3 percent, following a 2.8-percent drop in the previous month. Prices for basic organic chemicals (other than primary and intermediate basic organics), paper, and processed yarns and threads also turned up, after falling a month earlier. Indexes for nitrogenates and inedible fats and oils increased more than they did in the prior month. By contrast, prices for primary basic organic chemicals rose 1.3 percent, following a 3.2-percent gain in December. Indexes for finished fabrics and phosphates turned down, after advancing a month ago. Synthetic fiber prices declined, after showing no change a month earlier.

The durable manufacturing materials index decreased 0.7 percent in January, following a 0.2-percent gain in December. Prices for steel mill products dropped 1.7 percent (the largest decline since a 4.6-percent decline in January 1986), after showing no change in the previous month. Indexes for aluminum mill shapes, copper cathode and refined copper, and copper and brass mill shapes fell, following increases a month earlier. Prices for softwood plywood decreased more than they did in the prior month. On the other hand, the hardwood lumber index turned up 0.4 percent, after declining 0.6 percent in December. Prepared paint prices also rose, following a decrease a month ago. The index for primary aluminum (except extrusion billet) advanced more than in the previous month.

Prices for materials and components for construction turned down 0.3 percent in January, after edging up 0.1 percent in December. The softwood lumber index fell 2.9 percent, following a 0.1-percent gain a month earlier. Prices for fabricated structural metal products, asphalt felts and coatings, steel wire, and switchgear also decreased, after increasing in the prior month. Indexes for softwood plywood and gypsum products declined more than they did a month ago. By contrast, millwork prices advanced 0.3 percent, following no change in December. The heating equipment index rose more than in the previous month, while prices for fabricated ferrous wire products turned up, after falling a month earlier.

For the second consecutive month, the intermediate foods and feeds index increased 1.7 percent. In January, rising prices were observed for prepared animal feeds, fluid milk products, beef and veal, frozen ground meat patties, confectionery materials, refined sugar, and flour. Partly offsetting these advances were falling prices for pork; crude vegetable oils; natural, processed, and imitation cheese; and butter.

Crude goods

Registering the largest 1-month increase in crude goods prices since a 22.1-percent advance registered in August 1973, the Producer Price Index for Crude Materials for Further Processing increased 13.9 percent in January, seasonally adjusted, following an 8.5-percent gain in December. Indexes

for crude energy materials and basic industrial materials rose more in January than they did in the previous month. By contrast, prices for crude foodstuffs and feedstuffs advanced at a slower rate than in December. (See table B.)

The index for crude energy materials advanced 25.0 percent in January, following a 14.8-percent increase in December. Natural gas prices jumped 46.0 percent (the largest increase on record), after rising 35.3 percent in the previous month. The crude petroleum index fell 10.6 percent, following an 11.1-percent decrease a month ago. On the other hand, coal prices declined 3.0 percent, after a 3.0-percent gain in the prior month.

The index for crude nonfood material less energy increased 0.5 percent in January, after registering a 0.3-percent gain in December. Prices for iron and steel scrap advanced 8.3 percent, after rising 0.2 percent a month earlier. Indexes for aluminum base scrap and construction sand, gravel, and crushed stone turned up, after falling last month. Prices for wastepaper decreased less than they did in the prior month. Indexes for hardwood logs and pulpwood rose more than a month ago. By contrast, raw cotton prices declined 8.8 percent in January, after increasing 2.5 percent in December. The leaf tobacco index advanced at a slower rate than in the previous month. Prices for gold ores and phosphates turned down, after showing gains a month earlier.

The index for crude foodstuffs and feedstuffs increased 2.2 percent in January, after registering a 3.4-percent gain in December. Slaughter cattle prices moved up 2.5 percent, following a 5.5-percent rise in the previous month. Indexes for slaughter hogs, soybeans, and unprocessed shellfish turned down, after advancing a month ago. Prices for slaughter broilers and fryers increased less than they did a month earlier. By contrast, corn prices rose 7.0 percent, after falling 0.1 percent in December. The indexes for fresh and dry vegetables and wheat also advanced, after decreasing in the prior month. Fluid milk prices increased at a faster rate than a month earlier.

Net output price indexes for mining, manufacturing, and services industries

Mining. The Producer Price Index for the Net Output of Total Domestic Mining Industries rose 22.3 percent in January, following a 12.0-percent increase in December. (Net output price indexes are not seasonally adjusted.) Most of this acceleration can be traced to prices received by the crude petroleum, natural gas, and natural gas liquids industry, which jumped 27.9 percent, after posting a 14.9-percent gain in the prior month. In January, the index for the oil and gas field services industry group also rose at a faster pace than it did a month earlier. Prices received by the construction sand and gravel industry and the coal mining services industry increased, following declines in the previous month. The index for the crushed and broken limestone industry advanced, after showing no change last month. By contrast, prices received by the bituminous coal and lignite industry turned down 1.6 percent, following a 2.1-percent rise in December. The index for the gold ores industry also fell, after increasing a month ago.

Prices paid to kaolin and ball clay producers rose less than a month earlier. In January, the Producer Price Index for the Net Output of Total Domestic Mining Industries stood at 170.8 (December 1984=100), 90.8 percent above its year-ago level.

Manufacturing. The Producer Price Index for the Net Output of Total Domestic Manufacturing Industries increased 0.2 percent in January, after declining 0.4 percent in December. Rising prices paid to the tobacco manufactures, chemical and allied products, food and kindred products, and printing and publishing industry groups outweighed falling prices paid to the petroleum refining, lumber and wood products,

primary metals, and apparel industry groups. In January, the Producer Price Index for the Net Output of Total Domestic Manufacturing Industries stood at 134.7 (December 1984=100), 3.0 percent above its year-ago level.

Services. Among service industries in January, price increases were registered for offices of physicians, real estate agents and managers, legal services, hotels and motels, and the United States Postal Service. On the other hand, falling prices were observed for operators and lessors of nonresidential buildings; telephone communications, except radiotelephone; wireless telecommunications; and truck rental and leasing.

Recalculation of Seasonal Adjustment Factors

Effective with this report, seasonal adjustment factors have been recalculated to reflect 2000 price movement patterns for stage-of-processing (SOP) and commodity groupings. This routine annual recalculation may affect seasonally adjusted indexes and percent changes from January 1996 to the present. Revised seasonally adjusted data for this period, as well as seasonal factors for commodity

indexes to be used through December 2001, are available, on request, from BLS. The table below shows 2000 monthly seasonally adjusted percent changes for the three major SOP categories calculated with the old seasonal factors, compared with the percent changes for recalculated indexes. The latter incorporate new seasonal factors that reflect 2000 price movement patterns.

Table C. Over-the-month percent changes in major stage-of-processing indexes, seasonally adjusted, using former and recalculated seasonal factors for 2000

Resampling of Industries

Effective with this report, the Producer Price Index (PPI) includes data for 41 resampled industries. The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI, to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry shifts significantly. The first results of this systemic process were published in July 1986. Subsequent efforts have been completed at 6-month intervals. For information on specific additions, deletions, and recodes of indexes that are effective this month,

see the January 2001 issue of the *PPI Detailed Report*, or contact the Section of Index Analysis and Public Information at (ppi-info@bls.gov) or (202) 691-7705.

Also with the January data release, 17 retail trade industries and 1 financial services industry were introduced into the PPI for the first time. The introduction of these industries is part of an ongoing effort to expand PPI coverage to sectors of the economy other than mining and manufacturing. Indexes for these industries appear in table 5 of the *PPI Detailed Report*.

Improved Quality Adjustment for Microprocessors

Effective with this report, the Bureau of Labor Statistics implemented a new quality valuation methodology for microprocessors designed and sold for computer applications. This new quality adjustment methodology views changes in the processing power of microprocessors as changes in quality and permits the explicit estimation of their value. The new approach replaced old procedures that were generally limited to considering price differences between

a new microprocessor and its predecessor as a measure of the value of the quality difference between the two.

For additional information, see the October 2000 issue of the *Producer Price Index Detailed Report*, or contact the Section of Index Analysis and Public Information at (ppi-info@bls.gov) or at (202) 691-7705.

New Retail Trade Industries in the PPI – SIC 59

The Bureau of Labor Statistics (BLS) began publishing producer price indexes for 17 retail trade industries classified in Standard Industrial Classification (SIC) 59 - Miscellaneous Retail, in January 2001. These indexes appear in table 5 of the *PPI Detailed Report*. Historical data back to June 2000 are available online, via the BLS homepage (<http://stats.bls.gov>). Publication of these new indexes follows the July 2000 introduction of Producer Price Indexes (PPIs) for Food Stores - SIC 54 and New Car Dealers - SIC 5511 and reflects the ongoing BLS effort to cover areas of the U.S. economy other than the mining and manufacturing sectors. With the introduction of SIC 59 into the PPI, total coverage of the retail trade sector now stands at just over fifty percent. The new industries include:

- SIC 5912 – Drug Stores and Proprietary Stores
- SIC 5921 – Liquor Stores
- SIC 5941 – Sporting Goods Stores and Bicycle Shops
- SIC 5942 – Book Stores
- SIC 5943 – Stationery Stores
- SIC 5944 – Jewelry Stores
- SIC 5945 – Hobby, Toy, and Game Shops
- SIC 5946 – Camera and Photographic Supply Stores
- SIC 5947 – Gift, Novelty, and Souvenir Stores
- SIC 5948 – Luggage and Leather Goods Stores
- SIC 5949 – Sewing, Needlework, and Piece Goods Stores
- SIC 5961 – Catalog and Mail-Order Houses
- SIC 5962 – Automatic Merchandising Machine Operators
- SIC 598 – Fuel Dealers
- SIC 5992 – Florists
- SIC 5995 – Optical Goods Stores
- SIC 5999 – Miscellaneous Retail Stores, Not Elsewhere Classified

Establishments in the retail sector are primarily engaged in purchasing goods for resale to the consumer. Given that little, if any, transformation of these goods takes place,

the PPI views a retailer as a supplier of services (rather than goods). This implies that the output of a retail trade establishment can be estimated by the difference between the retail selling price of a good and the acquisition price for that same item. (Any discounts from the vendor to the retailer and any discounts offered by the retailer to the consumer are captured.) The resulting gross margin prices reflect the value added by the establishment for services such as marketing, storing, displaying goods in convenient locations, and making the goods easily available for customers to purchase.

Margin weights provided to the PPI by the Bureau of the Census were used to weight retail trade at the 4-digit industry level. Item weights that are used in the PPI retail trade cells reflect margin weights for margin priced items and retail weights for retail priced items, in those rare cases when retail priced items are being measured. (A baked good that is made on the premises is an example of an item that would *not* have a margin price.)

The PPI classifies establishments in the mining and manufacturing sectors based on their major revenue-generating activity. However, retail trade establishments are grouped using their *usual trade designation*. For example, many drug stores carry related product lines, such as cosmetics, toiletries, tobacco, and novelty merchandise. Therefore, a store that sells prescription drugs is treated as a drug store by the PPI when the owner states that *drug store* is that establishment's usual trade designation, even if the primary revenue-generating activity comes from selling non-drug merchandise.

The largest industry within SIC Major Group 59 - Miscellaneous Retail is SIC 5912 - Drug Stores and Proprietary Stores. For PPI publication, this industry is categorized into prescription drugs and over-the-counter drugs and all other goods. Proportions used to allocate category weights were derived from gross-margin dollars obtained from industry trade journals.

New Producer Price Indexes for Security Brokers, Dealers, and Investment Banking Companies – SIC 6211

Effective with the release of data for January 2001, the Producer Price Index (PPI) introduced indexes for financial services industry SIC 6211– Security Brokers, Dealers, and Investment Banking Companies. This is the PPI’s inaugural publication in the financial sector and reflects the ongoing efforts to expand coverage beyond the mining and manufacturing sectors of the economy. These new indexes appear in table 5 of the *PPI Detailed Report* and are available online via the BLS homepage (<http://stats.bls.gov>). The SIC 6211 service lines for which indexes are available include:

- Brokerage services
 - Exchange-listed equities
 - All other securities
- Dealer transactions
 - Market making in over-the-counter equities
 - Debt securities and all other trading
- Investment banking services
- Other securities related services, including margin lending and mutual fund sales

While brokers and dealers perform similar functions by acting as intermediaries between buyers and sellers, there remains a clear distinction between the two. Brokers do *not* own the securities they trade and are usually paid commissions based on either a flat fee or a percentage of a transaction’s value.

By contrast, dealers own the securities they trade and receive compensation based on the difference between the dealer’s purchase and selling price for a security. Dealers are

also required to act as *market makers*. That is, dealers must stand ready to buy and sell securities to facilitate market trading. Market making in over-the-counter equities includes all stocks traded on the National Association of Securities Dealers Automated Quotation (NASDAQ) system. Dealers also transact corporate bonds, treasury bills, futures, and options.

Investment banking services include underwriting initial public offerings, advisory services for mergers and acquisitions, private placements, and asset securitization.

The PPI for *other securities related services, including margin lending and mutual fund sales* encompasses a wide variety of additional financial services that security brokerage and investment banking companies perform. A significant component of this index is margin lending. Margin is a secured loan toward the purchase of securities, where securities in the client’s account act as collateral. The price or fee for this service is usually a percentage based on the amount of the loan. This industry’s establishments may also receive commissions or fees for selling shares of mutual funds to investors.

SIC 6211 indexes measure changes in the revenue received by security brokers, dealers, and investment banking companies. Therefore, price quotations are generated from specific transactions, where the characteristics of each trade, investment banking deal, or other related services are held constant from the time they were initiated into the PPI survey. By affecting commissions and fees, changes in securities values will drive changes in the PPI.

¹ Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. The first-published and final December relative importances initially appear, respectively, in the release tables containing January and May data.

² The indexes for September 2000 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision four months after original publication.

³ Includes crude petroleum.

⁴ Excludes crude petroleum.

⁵ Percent of total finished goods.

⁶ Percent of total intermediate materials.

⁷ Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

⁸ Percent of total crude materials.

¹ Industry and product class indexes may include products not shown separately.

² The indexes for September 2000 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

³ Not available.

⁴ Seasonal product—no price available this month.

⁵ The special index for 9331 in which prices reflect premiums only, contrasts with the index shown elsewhere in this table for SIC 6331, where prices reflect premiums plus the amount of investment income earned on the invested portion of the premium. n.e.c. = Not elsewhere classified.

¹ Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1977 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as

comprehensive measures of construction costs. See note on page 190 of the July 1986 issue of *Producer Price Indexes*.

¹ Indexes in this table are derived from the industry indexes in table 5. Industries are allocated to stages of process based on inter-industry shipment patterns from the 1977 input/output relationships.

² The indexes for September 2000 have been recalculated to incorporate

late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

¹ Indexes in this table are derived from the product indexes in table 5. These indexes are composed of the goods used by the industries in each of the industry stage of process output indexes as shown by the 1977 input/output relationships. These material inputs include only domestic material input and do not include any imported materials which may be used.

² The indexes for September 2000 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

³ Not available.

Technical Note

Brief Explanation of Producer Price Indexes

The term Producer Price Index (PPI) refers to a family of indexes that measure the average change over time in the selling prices received by domestic producers of goods and services. The PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI); CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices may differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the transportation, utilities, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of producer price indexes: (1) stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances; and nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton

yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

Commodity Indexes

The commodity classification structure of the Producer Price Index organizes products by similarity of end use or material composition, regardless of their industry of origin. Fifteen major commodity groupings (2-digit level) make up the all commodities index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit).

Nearly all 8-digit commodities under the traditional com-

modity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes are identical to movements of their counterparts. Therefore, monthly percent changes for corresponding indexes will be virtually identical even though their respective index levels may differ.

Industry Net-Output Price Indexes

Producer price indexes for the net output of industries and their products are grouped according to the Standard Industrial Classification (SIC). Industry price indexes are compatible with other economic time series organized by SIC codes, such as data on employment, wages, and productivity. Table 5 includes data for SIC industries and industry groups (2-, 3-, and 4-digit levels); indexes for Census product classes (5- and 6-digit levels), products (7-digit level), and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, e.g., resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Some product indexes published in table 5 correspond to 8-digit commodity indexes in table 6. In these cases, movements of the latter indexes are calculated on the basis of movements of their counterparts in table 5. Although most of these indexes continue to be published in table 6 on a base period of 1982=100 or some later base, corresponding indexes in table 5 are published on a base of the month of their introduction.

Data Collection

Producer price indexes are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. The Bureau of Labor Statistics (BLS) strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices are normally reported by mail questionnaire for the Tuesday of the week containing the 13th.

Price data are provided on a voluntary and confidential basis; no one but sworn BLS employees are allowed access to individual company price reports. The Bureau publishes price indexes instead of unit dollar prices. All producer price indexes are routinely subject to revision once, 4 months after original publication, to reflect the availability of late reports and corrections by respondents.

The BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI every January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced service industries includes the month in which an article describing the industry's content appeared in the *PPI Detailed Report*:

Weights

Weights for most traditional commodity groupings of the PPI, as well as all indexes (such as stage-of-processing indexes) calculated from traditional commodity groupings, currently reflect 1992 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1992 through December 1995, PPI weights were derived from 1987 shipment values. Industry indexes shown in table 5 are also now calculated with 1992 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments in one industry to establishments classified in another industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes such as the all commodities index are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any changes to previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The new reference base is not used for indexes with a base later than December 1981, nor for indexes for the net output of industries and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. Reprints are available from the Bureau of Labor Statistics on request.

Calculating Index Changes

Each index measures price changes from a reference period which equals 100.0 (1982 or some later month). An increase of 5.5 percent from the reference period in the finished goods price index, for example, is shown as 105.5. This change can

also be expressed in dollars as follows: "Prices received by domestic producers of a systematic sample of finished goods have risen from \$100 in 1982 to \$105.50 today." Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods today are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point changes

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted, and unadjusted changes each month.

Seasonally adjusted data are preferred for analyzing general price trends in the economy, because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends.

Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from BLS.)

In most cases, seasonal factors used in computing seasonally adjusted indexes have, in the past, been derived using the X-11-ARIMA Seasonal Adjustment Method. However, the PPI program upgraded to X-12 beginning in 1998. Each

year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior.¹ For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through the aggregative method, which combines movements of a wide variety of subproduct class (6-digit level) series.²

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

¹ Note that most broad commodity groupings and 8-digit individual commodities, as well as industry and census product indexes, are not seasonally adjusted and are, therefore, not included in this annual review.

² Tests previously conducted on the stage-of-processing indexes did not find significant residual seasonality.

Producer Price Index Data Via the Internet

The Bureau of Labor Statistics has made producer price index series and news releases available via the Internet. BLS provides Internet access through a World Wide Web (WWW) homepage and a file transfer protocol (FTP) service.

Retrieving PPI data from the BLS WWW site

Among other things, the BLS WWW site offers news releases and most PPI historical data. Enter the BLS homepage address <http://stats.bls.gov> using a WWW browser. After clicking the "Data" button on the homepage, the user can retrieve PPI data in any of six ways:

- **Most Requested Series** is a form-based application which allows the user to quickly obtain PPI time series data by selecting from a list of the most commonly requested time series, including "all commodities" and the stage-of-processing indexes (e.g., finished goods). Within each list, any one or all of the time series shown can be selected. The user can choose date ranges and output options prior to executing the query.

- **Selective Access** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides the user through the PPI classification system by listing index titles and does not require use of commodity or industry (SIC) codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. The user can choose date ranges and output options prior to executing the query.

- **News Releases** contains the most current press release produced by the PPI program. The release contains text explanations of aggregate index movement provided by PPI economists. It also contains preformatted data, including most aggregates and selected commodity indexes.

- **Series Report** is a form-based application that uses PPI time series identifiers (commodity or SIC codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

For PPI data, there are two basic formats to identify specific time series. For commodity codes and stage-of-processing codes, enter a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted). For industry product codes, enter a "pcu" prefix and a "#" between the fourth and fifth characters of the product code. *In both cases, no spaces are required.*

Example:

Commodity code	Will provide data for:
wpusop3000	Finished goods, not seasonally adjusted
wps063	Drugs and pharmaceuticals, seasonally adjusted
Product code	Will provide data for:
pcu28__#	Chemicals and allied products, not seasonally adjusted
pcu3711#111	Passenger cars, not seasonally adjusted

Note that the first product code uses two underscores as placeholders to complete the reference to a 2-digit product code time series.

• **FTP Site.** Given limitations on the amount of data users can extract from applications provided on the BLS WWW site, the FTP server is best suited for those requiring access to either a large volume of time series data or other PPI related documentation (e.g., seasonal factor and relative importance tables). For increased efficiency, it is suggested that users download files without opening, if their Internet browser permits. Enter *ftp://ftp.bls.gov* to access the FTP site.

Data and documentation available for download include:

- | | Directory: |
|---------------------------|----------------------------|
| • SIC current series | <i>/pub/time.series/pc</i> |
| • SIC discontinued series | <i>/pub/time.series/pd</i> |

- | | |
|-----------------------|----------------------------------|
| • Commodity series | <i>/pub/time.series/wp</i> |
| • Special requests | <i>/pub/special.requests/ppi</i> |
| • Latest news release | <i>/pub/news.release/ppi.txt</i> |

The FTP site maintains files to help with searches and downloads. These files are centrally located in the */pub/doc* directory. Within this directory, go to the *overview.doc* file for an overview relating to all BLS data available through the FTP site. For *commodity-based PPI data* (which appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report), the program help file is *wp.doc*. For *industry-based PPI data* (which appear in tables 4, 5, 9, 10, and 11 of the monthly PPI report), the file is *pc.doc*. For industry-based time series that have been discontinued, go to *pd.doc*. (These and other help files are also maintained within each of the five directories listed above.)

• **Economy at a Glance** is a table that contains current data on various economic indicators produced by BLS. The user also can view these key time series graphically.
