PPI Detailed Report (ISSN 1099-2855; USPS 485-050) is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights.

To order this periodical for 1 year, cite *PPI Detailed Report* (WPPI) and send your check for \$55 (\$68.75 foreign) or provide your VISA or MasterCard number and expiration date to Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15220-7954. Cost of the supplement only is \$40 domestic (\$50 foreign).

Subscribers will receive the next available subscription issue after their order is received. An acknowledgement card is sent to all customers after their subscription order is processed to let them know that they will receive the next available issue.

Please wait at least 6 weeks before inquiring about your order. Then write to Subscription Service Section, U.S. Government Printing Office, Stop: SSOM, Washington, DC 20402; telephone (202) 512-1800; or fax (202) 512-2168.

POSTMASTER: Send address changes to *PPI Detailed Report*, U.S. Government Printing Office, Washington, DC 20402-0001.

Price Movements January 2002

The Producer Price Index for Finished Goods edged up 0.1 percent in January, seasonally adjusted. This increase follows a 0.6-percent drop in December and a 0.5-percent decline in November. At the earlier stages of processing, prices received by intermediate goods manufacturers fell 0.1 percent, following a 0.8-percent decline in the prior month. The crude goods index increased 3.7 percent, after decreasing 9.6 percent in December. (See table A.) (Effective with this month's data release, the PPI's weights have been updated to 1997 shipment values. See note on page 6.)

January's upturn for finished goods was led by the energy goods index—which rose 0.1 percent, compared with a 3.9-percent decline in December. Rising prices for finished consumer foods—which increased 0.8 percent, following no change in the previous month—also contributed to the acceleration in finished goods. On the other hand, the index for finished goods other than foods and energy inched down 0.1 percent, after showing no change in December.

Before seasonal adjustment, the Producer Price Index for Finished Goods increased 0.2 percent in January, to stand at 137.5 (1982=100). From January 2001 to January 2002, prices for finished goods declined 2.6 percent. During the same period, the index for finished energy goods fell 20.1 percent. By contrast, prices for finished consumer foods rose 1.8 percent for the 12 months ended in January 2002, and the index for

finished goods other than foods and energy moved up 0.3 percent over the same period. At the earlier stages of processing, prices for intermediate goods decreased 4.6 percent during the past 12 months, and the index for crude goods dropped 40.4 percent.

Finished goods

Prices for finished energy goods turned up 0.1 percent in January, following a 3.9-percent decline in December. The gasoline index advanced 3.4 percent, after registering an 8.3-percent decrease in the previous month. Prices for residential natural gas, liquefied petroleum gas, and home heating oil also rose, after falling in December. By contrast, the residential electric power index turned down 1.4 percent in January, following a 0.1-percent gain in the prior month. January prices for finished lubricants and similar oils decreased at a faster rate than in December.

Prices for finished consumer foods rose 0.8 percent in January, after showing no change in December. The dairy products index turned up 1.6 percent, after declining 1.5 percent in the prior month. Prices for eggs for fresh use, processed young chickens, and finfish and shellfish also increased, after falling in December. The index for fresh and dry

vegetables rose more than it did a month ago. Prices for pork decreased at a slower rate than they did in December. Partially counteracting these price movements, the fresh fruits and melons index dropped 7.2 percent in January, following a 13.4-percent gain in the previous month. The indexes for beef and veal, soft drinks, and roasted coffee also turned down, after increasing in December. Prices for processed fruits and vegetables and for shortening and cooking oils rose at a slower rate in January than they did in the prior month.

The index for finished consumer goods other than foods and energy declined 0.1 percent in January, after showing no change in December. Falling prices for cigarettes, light motor trucks, sanitary papers and health products, tires, alcoholic beverages, men's and boys' apparel, and textile housefurnishings more than offset increasing prices for passenger cars, pharmaceutical preparations, book publishing, periodical circulation, floor coverings, household furniture, and sporting and athletic goods.

After showing no change in December, the index for capital equipment edged down 0.1 percent in January. Decreasing prices for light motor trucks, civilian aircraft, and railroad equipment outweighed rising prices for passenger cars, electronic computers, and for pumps and compressors.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components inched down 0.1 percent in January, seasonally adjusted, after falling 0.8 percent in December. In January, prices for intermediate energy goods and for intermediate foods and feeds decreased less than

a month earlier. The indexes for construction materials and durable manufacturing materials turned up, following declines in the previous month. By contrast, prices for nondurable manufacturing materials fell at a faster rate in January than they did in December. Excluding foods and energy, the intermediate goods index was unchanged in January, after a slight decline in December. (See table B.)

The index for intermediate energy goods decreased 0.6 percent in January, following a 4.0-percent drop in December. January's falling prices for residual fuels, commercial electric power, industrial electric power, and natural gas to electric utilities outweighed price increases for jet fuels, diesel fuel, gasoline, and liquefied petroleum gas.

The index for materials and components for construction rose 0.2 percent in January, after declining 0.2 percent in December. Softwood lumber prices advanced 6.9 percent, following a 2.2-percent drop a month earlier. The indexes for plywood, hardwood lumber, and wiring devices also turned up, after decreasing in the prior month. Prices for gypsum products fell less in January than they did in December. On the other hand, the index for fabricated structural metal products declined 0.3 percent, following a 0.1-percent gain in December. In January, prices for nonferrous wire and cable, fabricated ferrous wire products, and heating equipment also turned down, after rising in the previous month.

The rate of decline in prices for intermediate foods and feeds slowed to 0.1 percent in January from a 1.0-percent rate of decline in December. January's price decreases for prepared animal feeds; beef and veal; pork; natural, processed, and imitation cheese; and dry, condensed, and evaporated milk products were offset by rising prices for flour, refined sugar, confectionery materials, and crude vegetable oils.

Subsequent to a 0.2-percent decline in December, the durable manufacturing materials index inched up 0.1 percent in January. Prices for hot rolled sheet and strip increased 0.6 percent, after falling 1.6 percent in the previous month. The indexes for hardwood lumber, plywood, and aluminum mill shapes also turned up, following declines a month earlier. Prepared paint prices rose more quickly in January than they did in December. By contrast, the index for building paper and board decreased 0.8 percent, after advancing 2.6 percent in the prior month. Prices for cold rolled sheet and strip and for hot rolled bars, plates, and structural shapes fell at a faster rate in January than they did in December. The cement index turned down, after rising a month ago.

Prices for nondurable manufacturing materials declined 1.2 percent in January, after moving down 0.9 percent in December. The index for medicinal and botanical chemicals posted a 6.1-percent drop, following a 0.2-percent decrease in the prior month. Prices for plastic resins and materials and for intermediate basic organic chemicals also fell more in January than they did in December. The index for paperboard turned down in January, while paper prices declined, after showing no change in December. By contrast, the index for primary basic organic chemicals decreased 0.6 percent in January, following an 8.0-percent drop in December. Prices for fertilizer materials, paint materials, and leather turned up, after moving down in the previous month. The woodpulp index rose more rapidly in January than it did in December.

Crude goods

The index for Crude Materials for Further Processing turned up 3.7 percent in January, compared with a 9.6-percent decrease in December. Both the crude energy materials and foodstuffs and feedstuffs indexes rose this month, following December declines.

Slightly counteracting these rising prices, the index for basic industrial materials fell more in January than in the prior month. (See table B.)

The index for crude energy materials rose 5.6 percent in January, subsequent to a 20.5-percent drop in December. Natural gas prices exhibited a similar pattern—turning up 4.9 percent in January, after falling 24.7 percent in the prior month. The indexes for crude petroleum and coal posted increases in January of 8.1 and 3.2 percent, respectively, following declines in December of 21.6 and 5.5 percent.

Prices for crude foodstuffs and feedstuffs increased 4.0 percent in January, following a 1.9-percent decline in December. Leading the acceleration, the index for slaughter hogs rose 26.4 percent, after falling 11.1 percent in December. The indexes for slaughter broilers and fryers and slaughter turkeys also increased in January, following a decrease in the prior month. Slaughter cattle prices rose faster in January than in the previous month. On the other hand, corn prices fell 4.5 percent in January, after posting a 1.9-percent gain in the previous month. The indexes for raw cane sugar and for fresh

fruits and melons also fell this month, following an increase in December.

The index for crude nonfood materials less energy dropped 0.5 percent in January, after declining 0.3 percent in the prior month. A downturn in January pulpwood prices—which fell 10.7 percent, following a 2.1-percent rise in December—was the leading cause of the faster rate of decline for basic industrial materials. Construction sand, gravel, and crushed stone prices also turned down in January, compared with an increase in December. The indexes for raw cotton and aluminum base scrap increased at a slower rate in January than they did in December, while the index for softwood logs, bolts, and timber fell faster in January than they did in the previous month. By contrast, the index for iron and steel scrap increased 0.7 percent in January, after posting a 4.6-percent decline in the prior month. The indexes for nonferrous metal ores and phosphates also rose in January, following a decline in December. Prices for hides and skins fell at a slower rate in January than they did in the previous month.

Net output price indexes for mining, manufacturing, and services industries

Mining. The Producer Price Index for the Net Output of Total Domestic Mining Industries advanced 4.6 percent in January, after posting a 16.3-percent drop in December. (Net output price indexes are not seasonally adjusted.) A 7.0-percent rise in prices received by the crude petroleum, natural gas, and natural gas liquids industry—which followed a 22.9-percent decline in December—accounted for most of the upturn in mining industry prices. The industry indexes for coal mining; gold ores; potash, soda, and borate minerals; crushed and broken limestone; and oil and gas field exploration services also turned up in January. On the other hand, prices received by the oil and gas well drilling industry decreased at a 3.0-percent rate, compared with a 0.6-percent dip a month earlier. The index for the iron ores industry fell 1.4 percent, after showing no change in the previous month. In January, the Producer Price Index for the Net Output of Total Mining Industries stood at 81.6 (December 1984 = 100), 56.1 percent below its year-ago level.

Manufacturing. After registering a 1.1-percent decline in December, the Producer Price Index for the Net Output of Total Manufacturing Industries edged up 0.2 percent in January. Much of this upturn can be traced to prices received by the industry group for petroleum refining and related products, which increased 3.5 percent in January, following a 13.6-percent drop a month earlier. The indexes for the printing and publishing industry and the lumber and wood products (except furniture) industry also turned up in January. Prices received by the industry groups for chemicals and allied products, transportation equipment, and food and kindred products fell less than they did in the previous month. The industry group index for electrical and electronic machinery and equipment jumped 0.6 percent in January, after showing

no change in December. Conversely, prices received by the tobacco manufactures industry decreased 1.7 percent, following no change in the prior month. The industry group index for paper and allied products moved down, following a December gain. In January, the Producer Price Index for the Net Output of Total Manufacturing Industries stood at 131.7 (December 1984 = 100), 2.3 percent lower than a year ago.

Services. Among service industries in January, advancing

prices were registered by the industries for engineering services, scheduled air transportation, skilled and intermediate care facilities, data processing services, advertising agencies, general medical and surgical hospitals, passenger car rental, cable and other pay television services, and legal services. Conversely, falling prices were experienced by the industries for help supply services, prepackaged software, radio broadcasting, wireless telecommunications, telephone communications (except radiotelephone), and airports, flying fields, and airport services.

Recalculation of Seasonal Adjustment Factors

Effective with this report, seasonal adjustment factors have been recalculated to reflect price-movement patterns during 2001 for stage-of-processing (SOP) and commodity groupings indexes. This routine annual recalculation may affect previously published seasonally adjusted indexes and percent changes for January 1997 through December 2001. Revised seasonally adjusted data for this period, as well as seasonal factors for commodity indexes to be used through

December 2002, were released February 13, 2002. To request this information, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

The table below provides monthly seasonally adjusted percent changes for the three major SOP categories during 2001, based on former and recalculated seasonal factors.

PPI Weights Have Been Updated

With the release of data for January 2002, the Bureau of Labor Statistics updated the value weights used to calculate Producer Price Indexes to more accurately reflect recent production and marketing patterns. The new weights are based on shipment values for the year 1997 published by the U.S. Census Bureau of the U.S. Department of Commerce. (From January 1996 through December 2001, PPI weights were based on 1992 census shipment values.)

All indexes are affected by this weight update, including all industry net output indexes and indexes calculated from traditional commodity groupings. In addition, weights were updated from the 1992 to the 1997 census for all stage-of-processing indexes, net output of industry by stage of process indexes, durability of product indexes, and special commodity-grouping indexes. This weight revision does not affect the arithmetic reference base used by the PPI index system.

Also with the publication of this data, SIC-classified indexes reflect updated input/output (I/O) ratios based on the 1992 Input-Output Account from the Bureau of Economic

Analysis (BEA) of the U.S. Department of Commerce. These I/O ratios, which represent the proportion of each industry's output consumed outside its industry, were updated from those reflected in BEA's 1987 Input-Output Account. This procedure does not affect the commodity-grouping indexes.

It is important to note that the PPI classification system and aggregation structure did not change as a result of the weight revisions discussed above. The weight update, however, does result in significant shifts in the relative importance of various industries and products, and these shifts will impact future aggregate indexes in a manner commensurate with the relative gains and losses in value weights from 1992 to 1997.

Relative importance data as of December 2001, based on the 1992 and 1997 weighting schemes, were made available on February 13, 2002. To request this information, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

Resampling of Industries

Effective with this report, the Producer Price Index (PPI) includes data for 28 resampled and 4 newly introduced industries. The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry shifts significantly. The first results of this systematic

process were published in July 1986. Subsequent efforts have been completed at 6-month intervals. For information on specific index additions, deletions, and recodes that are effective this month, see the January 2002 issue of the *PPI Detailed Report* or contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

New Producer Price Index for the Data Processing Services Industry—SIC 7374

As part of an ongoing effort by the Bureau of Labor Statistics (BLS) program to expand Producer Price Index (PPI) coverage of the services sector of the U.S. economy, a new price index for Data Processing Services was introduced into the PPI in January 2002. This index, SIC 7374-Data Processing Services, appears in table 5 of this publication and is available online via the BLS homepage <http://www.bls.gov>.

The primary output of SIC 7374 is the provision of electronic data processing services. In the broadest sense, computer services companies help their customers efficiently use technology. The processing services market consists of vendors who use their own computer systems—often utilizing proprietary software—to process customers' transactions and data. Companies that offer processing services collect, organize, and store a customer's transactions and other data for record-keeping purposes.

The service lines for which price indexes are available include:

- Transaction processing services
- Timesharing data processing services
- Data entry services

Price movements for the SIC 7374 index are based on changes in the revenue received by companies that provide data processing services. Each month, companies provide net transaction prices for a specified service. The transaction is an actual contract selected by probability, where the price-determining characteristics are held constant while the service is repriced. The prices used in index calculation are the actual prices billed for the selected service contract.

For further information on SIC 7374, contact Stephanie Shipley at (202) 691-7693. Ms. Shipley also can be reached by e-mail at shipley_s@bls.gov.

More Retail Trade Industries Added to the Producer Price Index

Price indexes for three more retail trade industries were added to the Producer Price Index (PPI) in December 2001, reflecting an ongoing effort to expand PPI coverage of the U.S. economy into areas other than mining and manufacturing. (Retail trade indexes for food stores, new car dealers, and miscellaneous retail establishments were added to the PPI in June 2000 and December 2000.) These newest PPIs, listed below by Standard Industrial Classification (SIC) code, appear in table 5 of the *PPI Detailed Report* and are available online via the BLS homepage (<http://www.bls.gov>).

SIC 5541 – Gasoline service stations
SIC 5551 – Boat dealers
SIC 5561 – Recreational vehicle dealers

Establishments in the retail sector are engaged primarily in purchasing goods for resale to consumers. Given that little, if any, transformation of these goods takes place, the PPI views retailers as suppliers of services (rather than goods). This implies that the output of a retail trade establishment can be estimated by the difference between the retail selling price of a good and the acquisition price for that same item. (Any discounts from vendors to the retailers and any discounts offered from retailers to consumers are captured.) The resulting gross margin prices reflect the value added by establishments for services such as marketing, storing, displaying goods in convenient locations, and making the goods easily available for customers to purchase.

Margin values provided to the PPI by the U.S. Census Bureau weight retail trade at the industry level. Item weights used in the PPI retail trade cells reflect margin weights for margin priced items and retail weights for retail priced items, in those rare cases that retail priced items are tracked. For example, an oil change that is done on the premises would be tracked on a retail price rather than on a gross-margin-price basis.

The PPI classifies establishments in the mining and manufacturing sectors based on their major revenue-generating activity. However, retail trade establishments are grouped using their “usual trade designation.” For example, many convenience stores sell groceries, prepared foods, and gasoline. Often, the major revenue-generating activity is selling gasoline. However, if the convenience store owner states that “convenience store” is the usual trade designation, the PPI treats the establishment as a convenience store, a service line within industry 5411, rather than as a gasoline service station, industry 5541.

SIC 5541, Gasoline Service Stations

SIC 5541, Gasoline Service Stations, are primarily engaged in selling gasoline and lubricating oils. These establishments frequently sell other merchandise, such as tires, batteries, and other automobile parts, or perform minor repair work. Gasoline service stations can be combined with other activities, such as grocery stores, convenience stores, or car washes. Price indexes are available for:

5541 Gasoline service stations
5541P Primary services
55411 Gasoline service stations with
convenience stores
55412 Other gasoline stations
5541SM Other receipts

The primary services designation for this industry tracks the retail sale of any item sold by a gasoline service station. For the most part, primary services are measured by tracking gross margin prices. There are, however, a minority of items primary to SIC 5541 that require the capture of only a retail price. Fountain beverages and prepared foods are examples of items primary to SIC 5541 that require only the capture of a retail price. Margin prices are not captured for these items because they are further processed by the station before sale. The other receipts category includes transactions such as warranties, car washes, and towing services.

Establishments in this industry were classified according to their usual trade designation. If sampled establishments called themselves gasoline service stations, they were classified in SIC 5541. When trade designation was not clear, sales were used as the basis for assignment. In general, establishments in 5541, either with or without convenience stores, tended to market themselves as gasoline stations. By contrast, facilities that designated themselves as belonging to industry 5411 generally marketed themselves as independent convenience stores.

SIC 5551, Boat Dealers

SIC 5551, Boat Dealers, are establishments primarily engaged in the retail sale of new and used motorboats and other watercraft, marine supplies, and outboard motors. Price indexes are available for:

5551 Boat dealers
5551P Primary services
5551SM Other receipts

The primary services index tracks either the difference between retail prices for goods and their acquisition prices or the average gross margin for a relatively homogeneous group of goods. Prices for repair services are captured on fee for service basis, and are included in the primary services designation. The other receipts category covers items such as financing and warranties provided by dealers.

Tracking gross margin prices for used boats required some procedural modifications, because each used boat is qualitatively unique. If, for example, the unit of measure for a specific transaction is one used boat, a typical item description might be "1 used 1998 outboard boat, 17 feet long, 125 horsepower, excellent overall condition." The likelihood of such a boat being transacted on a regular basis is not very great. Therefore, data are collected for used boats based on average gross margin for the entire category.

SIC 5561, Recreational Vehicle Dealers

SIC 5561, Recreational Vehicle (RV) Dealers, are establishments engaged primarily in the retail sale of new and used motor homes, recreational trailers, and campers (pickup

coaches). Establishments engaged primarily in the retail sale of mobile homes are classified in SIC 5271, and those selling utility trailers are classified in SIC 5599. Price indexes are available for:

5561 Recreational vehicle dealers
5561P Primary services
5561SM Other receipts

Services primary to this industry include the retail sale of any item from an RV dealer, as long as the dealer's usual trade designation fell under SIC 5561. Services rendered incidental to the retail sale of any item, such as repair services, are also categorized as primary services. For new RVs, parts, and accessories, retail prices less the acquisition costs—gross margin prices—are collected based on the item transacted (for example, one rearview mirror). Tracking gross margin prices for used RVs encounter the same difficulty as used boats in SIC 5551. As a result, average gross margin prices also are collected to price used RVs.

¹ Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. The first-published and final December relative importances initially appear, respectively, in the release tables containing January and May data.

² The indexes for September 2001 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision four months after original publication.

¹ Indexes in this table are derived from the net-output-weighted industry price indexes shown in table 5. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly-titled indexes which are derived from traditional commodity groupings shown in table 6.

² Data for September 2001 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

¹ Industry and product class indexes may include products not shown separately.

² The indexes for September 2001 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

³ Not available.

⁴ Seasonal product—no price available this month.

⁵ The special index for 9331 in which prices reflect premiums only, contrasts with the index shown elsewhere in this table for SIC 6331, where prices reflect premiums plus the amount of investment income earned on the invested portion of the premium.
n.e.c. = Not elsewhere classified.

¹ Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1992 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as

comprehensive measures of construction costs. See note on page 190 of the July 1986 issue of *Producer Price Indexes*.

² The indexes for September 2001 have been recalculated to incorporate late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

These indexes are composed of the goods used by the industries in each of the industry stage of process output indexes as shown by the 1992 input/output relationships. These material inputs include only domestic material input and do not include any imported materials which may be used.

² The indexes for September 2001 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Technical Note

Brief Explanation of Producer Price Indexes

The term Producer Price Index (PPI) refers to a family of indexes that measure the average change over time in the selling prices received by domestic producers of goods and services. The PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI); CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices may differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the transportation, utilities, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of producer price indexes: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances; and nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton

yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

Commodity Indexes

The commodity classification structure of the Producer Price Index organizes products by similarity of end use or material composition, regardless of their industry of origin. Fifteen major commodity groupings (2-digit level) make up the all commodities index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit).

Nearly all 8-digit commodities under the traditional com-

modity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes are identical to movements of their counterparts. Therefore, monthly percent changes for corresponding indexes will be virtually identical even though their respective index levels may differ.

Industry Net-Output Price Indexes

Producer price indexes for the net output of industries and their products are grouped according to the Standard Industrial Classification (SIC). Industry price indexes are compatible with other economic time series organized by SIC codes, such as data on employment, wages, and productivity. Table 5 includes data for SIC industries and industry groups (2-, 3-, and 4-digit levels); indexes for Census product classes (5- and 6-digit levels), products (7-digit level), and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, e.g., resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Some product indexes published in table 5 correspond to 8-digit commodity indexes in table 6. In these cases, movements of the latter indexes are calculated on the basis of movements of their counterparts in table 5. Although most of these indexes continue to be published in table 6 on a base period of 1982=100 or some later base, corresponding indexes in table 5 are published on a base of the month of their introduction.

Data Collection

Producer price indexes are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. The Bureau of Labor Statistics (BLS) strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices are normally reported by mail questionnaire for the Tuesday of the week containing the 13th.

Price data are provided on a voluntary and confidential basis; no one but sworn BLS employees are allowed access to individual company price reports. The Bureau publishes price indexes instead of unit dollar prices. All producer price indexes are routinely subject to revision once, 4 months after original publication, to reflect the availability of late reports and corrections by respondents.

The BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI every January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced service industries includes the month in which an article describing the industry's content appeared in the *PPI Detailed Report*:

<i>Industry</i>	<i>SIC</i>	<i>PPI Detailed Report Issue</i>

Weights

Weights for most traditional commodity groupings of the PPI, as well as all indexes (such as stage-of-processing indexes) calculated from traditional commodity groupings, currently reflect 1992 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1992 through December 1995, PPI weights were derived from 1987 shipment values. Industry indexes shown in table 5 are also now calculated with 1992 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments in one industry to establishments classified in another industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes such as the all commodities index are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any changes to previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The new reference base is not used for indexes with a base later than December 1981, nor for indexes for the net output of industries and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. Reprints are available from the Bureau of Labor Statistics on request.

Calculating Index Changes

Each index measures price changes from a reference period which equals 100.0 (1982 or some later month). An increase of 5.5 percent from the reference period in the finished goods price index, for example, is shown as 105.5. This change can

also be expressed in dollars as follows: "Prices received by domestic producers of a systematic sample of finished goods have risen from \$100 in 1982 to \$105.50 today." Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods today are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point changes

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted, and unadjusted changes each month.

Seasonally adjusted data are preferred for analyzing general price trends in the economy, because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends.

Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from BLS.)

In most cases, seasonal factors used in computing seasonally adjusted indexes have, in the past, been derived using the X-11-ARIMA Seasonal Adjustment Method. However, the PPI program upgraded to X-12 beginning in 1998. Each

year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior.¹ For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through the aggregative method, which combines movements of a wide variety of subproduct class (6-digit level) series.²

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

¹ Note that most broad commodity groupings and 8-digit individual commodities, as well as industry and census product indexes, are not seasonally adjusted and are, therefore, not included in this annual review.

² Tests previously conducted on the stage-of-processing indexes did not find significant residual seasonality.

Producer Price Index Data Via the Internet

In 1995, the Bureau of Labor Statistics (BLS) began posting producer price index (PPI) series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, usage of these sites eclipsed that of more traditional methods of data dissemination such as subscriptions to the *PPI Detailed Report*. For example, there have been approximately 1.1 million electronic accesses of PPI series during the 12 months ended July 31, 2001.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the PPI homepage by entering the WWW address (<http://www.bls.gov/ppi>). Scrolling down the page to the "Get Detailed Statistics" header reveals the following five methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including "all commodities" and the stage-of-processing indexes (for example, finished goods). Within each list, any one or all of the time series shown can be selected. The user can choose date ranges and output options after executing the query using the reformat button above the data output table.

- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides the user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry (SIC-based) codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on the user's browser capability. The one screen option is a JavaScript application which utilizes a single screen to guide the user through the available time series data. The second option is the multiple screen, nonJava-based application. Both methods allow the user to browse the PPI coding structure and select multiple series codes. The user can choose data ranges and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that uses PPI time series identifiers (commodity or SIC codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

For PPI data, there are two basic formats to identify specific

codes, enter a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted). For industry product codes, enter a “pcu” prefix and a “#” between the fourth and fifth characters of the product code. *In both cases, no spaces are required.*

Example:

Commodity code	Will provide data for:
wps063	Drugs and pharmaceuticals, seasonally adjusted
wpusop3000	Finished goods, not seasonally adjusted
Product code	Will provide data for:
pcu28__#	Chemicals and allied products, not seasonally adjusted
pcu3711#111	Passenger cars

Note that the first product code uses two underscores as placeholders to complete the reference to a two-digit product code time series.

- **Flat Files** and the FTP server are best suited for those users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). For increased efficiency, it is suggested that users download files without opening, if their Internet browser permits. The FTP site can be accessed at (<ftp://ftp.bls.gov>) or directly from the links on the “Get Detailed Statistics” page or the PPI homepage.

Data and documentation available for download include:

	Directory:
• SIC Current Series	/pub/time.series/pc
• SIC Discontinued Series	/pub/time.series/pd
• Commodity Series	/pub/time.series/wp
• Special Requests	/pub/special.requests/ppi
• Latest News Release	/pub/news.release/ppi.txt

The FTP site maintains files to help with searches and downloads. These files are centrally located in the **/pub/doc** directory. Within this directory, go to the **overview.doc** file for an overview relating to all BLS data available through the FTP site. For *commodity-based PPI data* (which appear in tables 1, 2, 6, 7, and 8 of the PPI monthly detailed report), the program help file is **wp.doc**. For *industry-based PPI data* (which appear in tables 4, 5, 9, 10, and 11 of the monthly PPI report), the file is **pc.doc**. For industry-based time series that have been discontinued, go to **pd.doc**. (These and other help files also are maintained within each of the five directories listed above.)

Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (<http://www.bls.gov>). After clicking the “Get Detailed Statistics” link at the top of the homepage, the user may view a chart that lists all of the available BLS programs. The following four methods are available for PPI data: Most requested series, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page including: Economic news releases, series report, and economy at a glance.

Additional information

The PPI homepage (<http://www.bls.gov/ppi>) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information directly at (202) 691-7705 or ppi-info@bls.gov. Data also can be obtained by calling the national Fax-on-Demand service at (202) 691-6325; this service enables customers to request faxes of BLS data 24 hours a day, 7 days a week.
