¹ The relative importance of a component of the PPI represents its value weight that is allocated to a particular stage-of-processing (SOP) category—finished goods, intermediate materials, or crude materials. This is expressed as a percentage of the total weight of the SOP category. The "Revised" column shows relative importance figures for December 1997, based on 1992 shipment values from the *Census of Manufactures* and other sources, and reflects all sample revisions effective January 1998. The

"Former" column provides relative importance figures for the same month before the revision of the index sample. Groupings and subtotals may not add exactly to totals because of rounding differences. The value 0.000 represents either a percentage less than 0.0005, or a grouping newly introduced or deleted in January 1998 (if the 0.000 appears in the "former" or "revised" column, respectively). Table 9 identifies newly introduced or deleted groupings.

¹ The relative importance of a component of the PPI represents its value weight that is allocated to a particular stage-of-processing (SOP) category--finished goods, intermediate materials, or crude materials. This value is expressed as a percentage of the total weight of the SOP category. The "Revised" column shows relative importance figures for December 1998, based on 1992 shipment values from the *Census of Manufactures* and other sources, and reflects all sample revisions effective

January 1999. The "Former" column provides relative importance figures for the same month before any sample revisions. Groupings and sub-totals may not add exactly to totals because of rounding. The value of "0.000" represents either a percentage less than 0.0005, or a grouping newly introduced or deleted in January 1999. Table 9 explicitly identifies which groupings are newly introduced, deleted, or have relative importance values of less than 0.0005.
