

FEDERAL RESERVE statistical release

G.12.3

For release at 9:15 a.m. (EST)

March 16, 1990

INDUSTRIAL PRODUCTION

Industrial production rose 0.6 percent in February following a revised 1.0 percent decline in January. The output of motor vehicles and parts increased sharply in February following the substantial cut in January, although the level of motor vehicle production in February was still more than 5 percent below its December level. Excluding motor vehicles and related industries, production was little changed in February. At 141.8 percent of the 1977 annual average, the total index in February was 0.9 percent higher than a year earlier. Manufacturing output increased 0.7 percent in February, and the factory operating rate rose 0.4 percentage point to 82.4 percent. Detailed data for capacity utilization are shown separately in release G.3.

Market Groupings

Output of consumer goods advanced 1.3 percent, reflecting the rebound in auto and light truck production; auto assemblies jumped to a 5.8 million unit annual rate from the 4.1 million unit rate in January. However, the output of home goods, such as appliances, was unchanged in February and has changed little, on balance, since last fall. The index for nondurable consumer goods decreased 0.3 percent, as the output of food and clothing declined. The rise in the production of business equipment was the result of the pickup in output of motor vehicles for business use, which are components of transit equipment. Production of manufacturing equipment was about unchanged, and the output of commercial equipment, which includes computers, fell about 0.5 percent. Output of construction supplies has changed little so far in 1990, after rising sharply during the fourth quarter of last year.

The production of materials edged up last month as gains in motor-vehicle related industries more than offset declines in nondurable and energy materials. The drop in nondurables was widespread, with the most significant declines occurring in textiles and chemicals. The decrease in energy materials mainly reflected the decline in coal mining.

Industrial Production: Summary

Seasonally adjusted

FRB RESEARCH LIBRARY

Industry Groupings

Apart from the gain in motor vehicles and parts, manufacturing output was little changed in February. Among durables, the production of primary metals, mainly steel, and lumber posted declines, while the output of aerospace industries rose as commercial aircraft and related industries increased again. Among nondurables, significant declines occurred in apparel and textiles, but gains in the output of printing and publishing continued to be robust. Outside of manufacturing, mining output fell, and production at utilities declined further in February as a result of the relatively mild weather.

Revisions

Total Industrial Production (Estimates as shown last month and current estimates)

Month	Index (1977=100)		Percentage change from previous month	
	Previous	Current	Previous	Current
November	142.2	142.3	.3	.3
December	142.5	142.4	.2	.1
January	140.9	141.0	-1.2	-1.0
February	NA	141.8	NA	.6

NA—not applicable.

NOTICE

A revision to Federal Reserve indexes of industrial production, capacity utilization, and electric power use by industries will be published with the release of the March indexes on April 17, 1990. At the same time, the Federal Reserve G12.3 statistical release, *Industrial Production*, and the G.3(402) release, *Capacity Utilization*, will be combined into the single publication:

G17(419) Industrial Production and Capacity Utilization

Points of Information:

♦ The industrial production and capacity indexes will be shown on a 1987 basis, both in terms of value-added weights and base period. Indexes of electric power use by industries will be rebased to 1987. Revisions will date from 1977 for industrial production; from 1967 for capacity and capacity utilization; and from 1972 for electric power.

♦ Historical data will be available on magnetic tape from the National Technical Information Service (703-487-4650).

♦ Revisions to the index of industrial production will be presented in an article in the April *Federal Reserve Bulletin*. Only a few modifications will be made to the series structure as described in *Industrial Production—1986 Edition*.

♦ The separate system of Capacity Utilization for Materials will be discontinued. Many of its components will be included in Mining and in an improved Primary Processing aggregate for Manufacturing. The revisions and structure modifications to the Capacity and Capacity Utilization statistics will be presented in an article in the June *Bulletin*.

♦ Data shown on the new combined release will be available on the day of issue through the Department of Commerce's online Economic Bulletin Board (202-377-3870).

August	54.4	55.8	58.1
September	42.5	50.0	54.8
October	55.2	52.4	47.6
November	51.8	47.8	52.8
December	50.2	52.4	53.2
1990			
January	57.5	51.2	50.0

NOTE: THE DIFFUSION INDEXES SHOW THE PERCENT OF THE INDUSTRIAL PRODUCTION INDEX'S 252 SEASONALLY ADJUSTED COMPONENT SERIES THAT IN THE MONTH INDICATED WERE HIGHER THAN THEY WERE ONE MONTH EARLIER, THREE MONTHS EARLIER, AND SIX MONTHS EARLIER. IN CALCULATING THE DIFFUSION INDEXES, HALF OF THE UN-CHANGED COMPONENTS ARE COUNTED AS BEING HIGHER AND NO ALLOWANCE IS MADE FOR THE RELATIVE IMPORTANCE OF THE INDIVIDUAL COMPONENTS IN TOTAL INDUSTRIAL PRODUCTION. DIFFUSION INDEXES BASED ON CHANGES OVER A SIX-MONTH PERIOD GENERALLY SHOW MORE PRONOUNCED CYCLICAL PATTERNS THAN DIFFUSION INDEXES BASED ON CHANGES OVER SHORTER PERIODS.

Note: The electric power use data by industry, shown in billions of kilowatt hours for 1977, are from the Census of Manufactures of that year and from other sources. They are provided for information and are not used as weights to compile the electric power use indexes. All index aggregations, with their detailed components, are calculated from the kilowatt hour data collected in the Federal Reserve survey of electric power use by industry. The electric power total includes only those major divisions of industries--mining and manufacturing--for which data are collected in this Federal Reserve survey. The total does not include gas or electric utility kilowatt hour use. The supplementary grouping, "Total, less nondefense, nuclear" is shown separately because the nondefense nuclear materials series (part of SIC 2819) accounts for a disproportionately large part of total electric power use. Since the value added proportion for this industry is a considerably smaller part of total IP than its share of total electric power use, excluding this component from total power use facilitates comparisons with total IP.

Explanatory Note

Coverage. The index is a measure of industrial production expressed as a percentage of output in a reference period (currently 1977). The changes in the physical output of the nation's factories, mines, and electric and gas utilities are represented by 252 individual series in the index, covering 27 pertinent two-digit codes of the *Standard Industrial Classification* (SIC). For each individual series, index series relatives are calculated first and are then aggregated in the following two ways: (1) market groupings, such as consumer goods, equipment, intermediate products, and materials, from which the seasonally adjusted total index is derived (tables 1A and 1B), and (2) industry groupings, such as SIC two-digit industries, and major aggregates of these groupings, such as durable and nondurable manufacturing, mining, and utilities (tables 2A and 2B).

Market groupings. For purposes of analysis the individual industrial output series are grouped into materials, intermediate products, and final products; together, the latter two form the products category. Materials are industrial output requiring further processing within industry; intermediate products are expected to become inputs in nonindustrial sectors such as construction, farming, and services; and final products are assumed to enter final use as items of private consumption, government use, or capital formation. In the index, final products are subdivided into consumer goods and equipment.

Timing. A first estimate of output for a month is published about the 15th of the following month. This estimate may be revised in each of the next three months as new data become available. After the fourth month, indexes are not revised further until the time of an annual revision or a benchmark revision. The last three benchmark revisions were published in 1971, 1976, and 1985. Such revisions are derived mainly from the quinquennial *Census of Manufactures*, the quinquennial *Census of Mineral Industries*, and the *Annual Survey of Manufactures*, all prepared by the Bureau of the Census, and the *Minerals Yearbook* of the Bureau of the Mines.

Source data. The indexes of industrial production are constructed from monthly data of two types: (1) directly measured output in physical units; and (2) estimates of output derived from data on input, expressed in physical units, adjusted by conversion factors that relate these inputs to physical output. The data on directly measured physical product (pounds, yards, barrels, and the like) are obtained from reports of the Bureau of the Census, the Bureau of Mines, other government agencies, and trade associations. When suitable monthly data on physical product are unavailable, estimates of physical output based on input data (kilowatt hours, production-worker hours) are used. The hours worked by production workers are collected in the monthly establishment survey of the Bureau of Labor Statistics, while data on the kilowatt hours used in industry are collected from electric utilities by the Federal Reserve Banks. The estimates of input conversion are based mainly on historical relationships that were derived from censuses and annual surveys and, when appropriate, on more recent cyclical, technological and statistical developments. Users of the index should bear in mind that, especially for the first and second estimates of a given month's indexes, the available source data are limited and are subject to change in the months following their initial receipt as well as in benchmark revisions.

Seasonal adjustment. Individual series are seasonally adjusted by the X-11 Method II of the Bureau of the Census with the intervention analysis technique applied to the series. The seasonal factors currently being used are based on data through 1986 for most of the individual series and through 1988 for the aggregates. Individual series and major aggregate series are seasonally adjusted independently, and the factors for the aggregate series in the summary table and in tables 1 and 2 are reviewed monthly. The seasonally adjusted total index is aggregated from the seasonally adjusted market groupings of the index and may not precisely equal an aggregation of the seasonally

adjusted industry groupings. A simple aggregation of the seasonally adjusted individual series within groupings may not precisely equal the seasonally adjusted groupings, primarily because aggregates are adjusted independently.

Weights. The total index and the various groupings of the component series are currently aggregated on the basis of 1977 value-added weights, which are shown in the first column of the index tables under the heading proportions. Value-added weights for 1972 are used for the 1972-77 period, while 1967 weights are used for the 1967-72 period. The weight years for earlier periods after World War II are 1963, 1958, 1954, and 1947. The indexes for the various periods are linked to provide the continuous final results expressed in relation to the 1977 comparison year taken as 100. The gross-value-weighted product series are expressed in terms of 1982 dollars.

Formula. The symbolic expression for the total index (I_t) is

$$I_t = \sum \left(\frac{q_{77} p_{77}}{\sum q_{77} p_{77}} \right) \cdot \left(\frac{q_t}{q_{77}} \right) \cdot 100 = \frac{\sum q_t q_{77}}{\sum q_{77} p_{77}} \cdot 100,$$

where q is quantity, p is Census value added per unit of output, t represents the t th period, and 77 denotes base-year values.

Reliability. The median of the revisions in total industrial production, without regard to sign, between the first and fourth estimates is 0.3 percent: that is, in about half of the cases the absolute value of the revision from the first to the fourth estimate was less than 0.3 percent. (This calculation used data for the period from January 1972 to January 1985.) Over the same period, positive changes in the first estimate were confirmed in the fourth estimate (available three months later) about 94 percent of the time. Negative changes in the first estimate were confirmed in the fourth estimate about 85 percent of the time. Thus the likelihood is high that the first estimate for a month will indicate the direction of change in the total index in a reliable manner. However, the magnitude of change as first estimated typically is revised during the next three months; these revisions are based on revised and more complete data sources. The estimates for the higher aggregates generally are considered more reliable than the estimates for their individual components. Revisions to the components often offset each other and thereby reduce the size of revisions to the aggregates.

Rounding. Changes shown for index components may not aggregate to changes for totals because of independent rounding. Percentage changes are calculated from indexes expressed in more digits following the decimal point than shown in their rounded form in the present release. Therefore, percentage changes calculated from the rounded indexes may not entirely coincide with the percentage changes calculated from unrounded indexes.

Literature. *Industrial Production - 1986 Edition* contains a more detailed description of the index and the procedures used in compiling it, plus a history of its development, a glossary of terms, and a bibliography. The new edition was published in December 1986. To obtain copies of *Industrial Production - 1986 Edition*, write to the Publication Services, Board of Governors of the Federal Reserve System, Washington, DC 20551. The price of this volume of about 440 pages is \$9.00 per copy. Selected data on industrial production are also published monthly in the Financial and Business Statistics section of the *Federal Reserve Bulletin*.

Release date. The scheduled publication dates for 1990 are January 17, February 16, March 16, April 17, May 15, June 15, July 17, August 16, September 14, October 17, November 14, and December 14. To confirm the current month's release date, phone 202-452-3206 about the 11th of the month.
