Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies, ¹ and then making the scanned versions text-searchable.² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that some material may have been redacted from this document if that material was received on a confidential basis. Redacted material is indicated by occasional gaps in the text or by gray boxes around non-text content. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optical character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

MONEY MARKET AND RESERVE RELATIONSHIPS

Recent developments

(1) Since the last meeting of the Committee, long-term credit markets, other than the market for State and local Government securities, have experienced further upward yield pressure. Yield advances--which ranged from 30 to 60 basis points on Government notes and bonds and amounted to about 30 basis points for high-grade new corporate issues -reflected a large volume of recent and forthcoming new corporate issues, heavy current and prospective borrowing in the Federal agency market, and a degree of market indigestion in the aftermath of the recent Treasury refunding. In recent days the corporate bond and Treasury coupon markets have tended to stabilize, with the latter market influenced by about \$130 million of purchases by the System and \$45 million by the Treasury. Yields on municipal bonds have declined on balance since the last meeting, reflecting cut-backs in offerings necessizated by interest rate ceilings, as well as expectations of market participants that the Senate will weaken the House tax-reform bill as it affects interest earnings on tax-exempt securities. Most recently, this market has weakened somewhat as sizable new offerings have been added to the forward calendar.

(2) Yields in the Treasury bill market fluctuated in a relatively narrow range over the past month. Large purchases of Treasury bills by foreign accounts were an important factor keeping yields from rising in a period of overall credit market pressure. The System also purchased some

FINANCIAL MARKET RELATIONSHIPS IN PERSPECTIVE ------

Average of total number of days in period.

S.A. - Seasonally adjusted. p - Preliminary.

1/ 2/ 3/ 4/ Includes issues carrying 5-year and 10-year call protection, * - issues carry a 10-year call protection.

Time deposits adjusted at all commercial banks.

Base is change for month preceding specified period or in case of weekly periods, the first week shown.

** - Reflects \$400 million reduction in member bank deposits resulting from withdrawal of a large country bank from System membership. Percentage annual rates are adjusted to eliminate this break in series.

October 3, 1969.

bills for its own account in the market. In early October, short-term bill yields were little changed from their levels around the time of the last Committee meeting, but most recently the 3-month bill declined to about 7 per cent. Most other short-term market interest rates rose over the period.

(3) The effective rate on Federal funds has averaged about 9-1/8 per cent since the last Committee meeting--somewhat higher than in the preceding inter-meeting period--with the weekly average rate fluctuating between 8-1/2 and 9-5/8 per cent. In the statement week ending September 10, the Federal funds rate was at the low end of its range, as the Treasury's pre-tax date borrowing from the Federal Reserve proved to be larger than expected and net borrowed reserves temporarily dropped to \$400 million. Thereafter, net borrowed reserves moved back into a \$900 million - \$1.2 billion range, and the Federal funds rate also moved up, with tax period pressures and dealer financing demands associated with the large Treasury refunding adding to money market pressures. Dealer loan rates at New York City banks were quoted most frequently between 9-1/2 and 10-1/4 per cent. Average member bank borrowing in the three statement weeks ending October 1 ranged from \$1.0 to \$1.4 billion.

(4) There was a small net expansion in total member bank deposits in September that reflected a further increase in U.S. Government balances and a reduced rate of outflow of time deposits. The bank credit proxy, unadjusted for Euro-dollar borrowings, increased at an annual rate of 2.5 per cent, in line with the 2 - 5 per cent range projected in the last Blue Book. Private demand deposits showed little net change on

-2-

average during the month rather than declining somewhat as had been projected. Time deposits contracted at a 2 per cent annual rate, in line with projections as flows of consumer-type deposits improved somewhat and CD attrition diminished.

(5) Funds obtained by banks from nondeposit sources declined on average during September. Euro-dollar borrowings from foreign branches added nearly one-half a percentage point to the adjusted bank credit proxy. Loan RP's continued their August decline, and all nondeposit sources together (other than borrowings from foreign branches) declined by a magnitude equivalent to about 1 percentage point in the credit proxy. In sum, the proxy plus Euro-dollars and other nondeposit sources rose at an annual rate of about 3 per cent.

(6) The following table summarizes annual rates of change in major deposit and reserve aggregates for the latter half of 1968 and thus far in 1969.

Prospective developments

(7) Maintenance of prevailing money market conditions might be considered to include a weekly average Federal funds rate fluctuating between 8-1/2 and 9-1/2 per cent, member bank borrowings in a 1 - 1/2billion range, and net borrowed reserves in a \$900 million to \$1.2 billion range. Given these conditions, however, it seems likely that the 3-month bill rate would fluctuate in a somewhat higher range than recently--perhaps between 6.90 and 7.40 per cent. While announcement of the Treasury tax bill financing for payment on October 14 has had little immediate impact on bill rates, further upward rate pressures may develop from a yet to be announced further Treasury bill financing later this month, from additional agency financings, and from potential reversal of large recent German bill purchases in the market. Dealers have worked their bill positions down to relatively low levels in anticipation of these developments, however, and the System will be a net supplier of reserves during the next three weeks, partly to accommodate the \$400 million increase in required reserves resulting from imposition of marginal reserve requirements on Euro-dollars. To the extent German bill offerings do develop, therefore, the Desk may be in a position to acquire a sizable part of this supply directly.

(8) If the 3-month bill rate should rise to or above the upper end of the projected range, the market might become apprehensive that monetary policy had firmed further, with consequent problems for distributing the large volume of prospective Agency issues and for

-4-

clearing out the remaining overhang from the recent Treasury refunding. Such upward interest rate pressures would likely spread throughout the capital market, although expectations of lower interest rates could emerge as an offsetting factor if the weight of forthcoming business news were clearly on the bearish side. Should the bill rate climb enough to bring unfavorable market repercussions, it may be necessary to move toward the lower end of the recent range of fluctuation of the Federal funds rate and marginal reserve measures in order to maintain unchanged overall conditions in money and short-term credit markets.

(9) With the 3-month bill likely to remain at relatively high levels over the next few weeks, time and savings deposit flows at banks are most likely to remain adverse. On average, however, the extent of the further decline from September to October may be relatively small-per cent perhaps in a 0 to -3/range. Outflows of consumer-type time deposits should resume following the quarterly interest-crediting period, and attrition in CD's will continue. The CD decline may be noticeably less than in recent months, however, both because of the smaller volume of monthly maturities and because there is likely to be some further shifting of official foreign deposits from London branches of U.S. banks to head offices, of the sort that began to develop in late September.

(10) The money supply is likely to show a decline on average in October perhaps in a 2 - 5 per cent annual rate range. This would reflect mainly the abrupt drop in demand deposits in the last half of September which is expected to be only partially recovered during October.

-5-

(11) Total member bank deposits are likely to resume their decline in October, perhaps dropping in a 5 - 8 per cent annual rate range. This would imply further weakness, of course, in reserve aggregates. With deposits contracting further, banks may be somewhat more active than in recent weeks in the Euro-dollar market--although the total of Euro-dollar borrowings may not rise appreciably because of offsetting shifts in foreign official accounts. Banks may also become more active in the commercial paper market. Possible constrained availability of funds to the commercial paper market--reflecting in part strains on corporate liquidity--could tend to limit such borrowing, however, and outstanding loan RP's will continue to run-off. Altogether, Euro-dollar borrowings and other nondeposit sources of funds are not likely to add appreciably to funds available to banks (probably by an amount equivalent to no more than 1 percentage point in the proxy). Policy alternative

(12) If the Committee should decide to move toward somewhat less firm money market conditions, it might consider a Federal funds rate averaging around 8-1/4 to 8-1/2 per ceni, member bank borrowings around \$1 billion, and net borrowed reserves of around \$800 million. Over the short-run, such a move would seem unlikely to lead to sharp reductions in interest rates or to much change in monetary aggregates (as compared with a situation of no change in money market conditions). Interest rate declines would, of course, tend to be larger if market

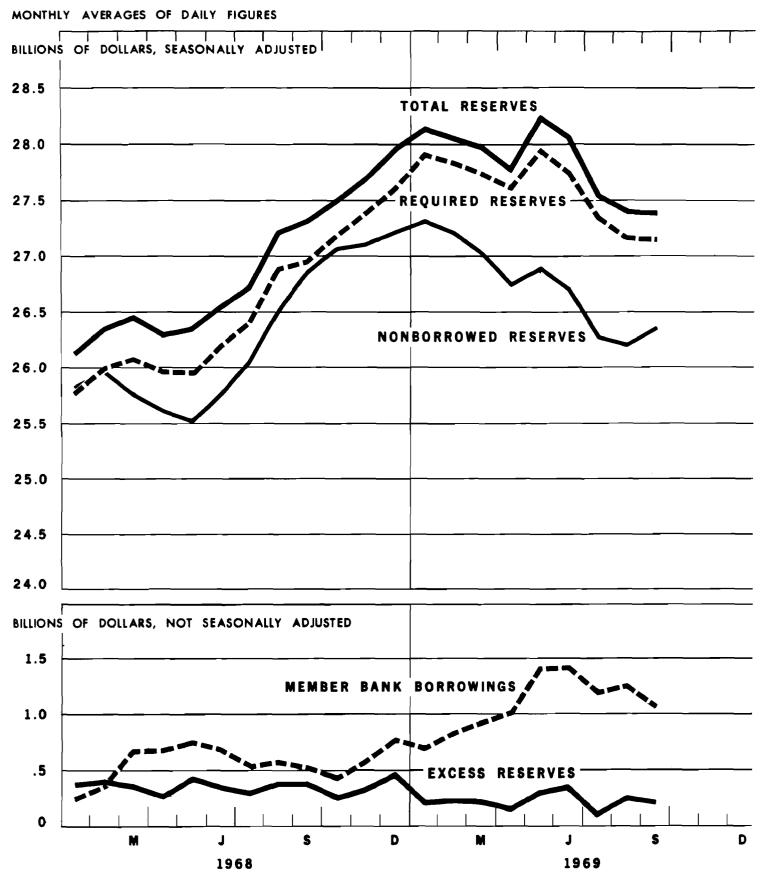

-6-

expectations were at the same time being affected by bearish business news. But banks would not be in any position to bid effectively for domestic CD's and thus would find it difficult to fuel downward pressures on longer-term interest rates by rebuilding their own portfolios and financing speculators. However, it is likely that banks would find the market for commercial paper a somewhat more attractive source of funds at the margin as short-term interest rate pressures abated. Also other types of investors, such as pension and mutual funds--where fund flows have been less restricted, might step-up their commitment of funds to long-term markets.

(13) The money market conditions outlined in the preceding paragraph might be accompanied by a 3-month bill rate moving down over the next three weeks into a 6.70 - 7.10 per cent range. The total of member bank deposits and nondeposit sources in these circumstances might decline in a 3 - 6 per cent range in October. This decline would be only a little smaller than that projected under a policy of no change, but the effects of an easing in policy on bank credit developments in November could be expected to be significantly larger. Money supply might turn out to be somewhat less weak than otherwise, particularly as time goes on, as less restrictive bank credit availability reduced the pressure on cash balances of businesses and consumers.

1/ For retrospective details, see Table 5.
 2/ See reverse side for explanation.
 3/ Includes estimated change for reserves held against Euro-dollars of \$400 million, effective October 16, 1969.
 p - Preliminary.

Explanation of Projections in Table 6

- 1. Changes in Federal Reserve credit indicate reserves needed to offset projected changes in required reserves and factors affecting the supply of reserves.
- 2. Projected changes in currency outside banks reflect seasonal movements plus an allowance for growth of about \$50 million per week.
- 3. Projected effects of Treasury operations, included in "technical factors," reflect scheduled and assumed calls in current two weeks and maintenance of Treasury balances with Federal Reserve at \$1.9 billion, thereafter.
- 4. Projected changes in required reserves assume the existing net reserve position of banks and the structure of interest rates in the market, as well as the current economic outlook. On the basis of these assumptions, projections reflect expected movements in bank credit and money in the period ahead, including the effects of such elements as the public's loan demand, repayments of previous loans, banks' investment preferences and willingness to supply loans, banks' desires and abilities to obtain time and savings deposits, and the Government's financing needs. The projections thus encompass normal seasonal developments, temporary bursts of loans demand and expected associated repayments not currently reflected by the seasonals, and whatever cyclical and growth demands for money and credit are expected in the projection period. Assumed Treasury financing operations include: \$2.0 billion, October 14.
