March 17, 2009
Effects of Large-Scale Asset Purchases (LSAPs)

Supply Effects on Bond Yields

- FOMC memo (Cabana, et al., December 5) reviewed economic literature.
  - $500 billion purchase of long-term Treasuries could reduce 10-year Treasury yield 20 to 100 basis points.
  - Also lower long-term private yields.
- Public and private long-term yields historically have been highly correlated.
  - In recent months, these correlations have declined.

Yield Effects of Central Bank Communications*

Mortgage Market Rates

*Variables are 30-year conforming fixed mortgage rate, 30-year current coupon MBS yield, and 7.5 year off-the-run Treasury yield.
Macroeconomic Effects of Large-Scale Asset Purchases

Basic Principles

- Financial conditions broadly improve:
  - Purchases of Treasury securities or agency MBS lower yield on targeted asset
  - Own-yield declines spill over to other long-term interest rates
  - General decline in interest rates sparks higher equity prices, lower real exchange rate

- Consumption, investment, and net exports strength in response to:
  - Lower borrowing costs
  - Higher wealth
  - Improved international competitiveness of U.S. firms

FRB/US Estimates of the Output Effects of Purchasing a Further $500 Billion in Agency MBS

</tr>
</tbody>
</table>

Other Possible Channels

- Lower mortgage rates boost home prices
  - In theory, 15 percent rise in prices for each percentage point decline
  - Empirical evidence suggests smaller price increase of 2½ percent

- Mortgage refinancing transfers income
  - Borrowers gain at lenders expense
  - Calculations imply a modest boost to consumption

Real GDP Effects of a $1 Trillion LSAP Program

Percent change from baseline

- Standard model estimates
- With rel effects, 2-1/2% rise in home prices
- With rel effects, 15% rise in home prices
Using Asset Purchases to Compensate for the Monetary Policy Shortfall

Monetary Policy Shortfall

- Staff assumes that the funds rate will remain near zero for several years
- Unconstrained optimal monetary policy would ease even further
- Overcoming the monetary policy shortfall requires further fiscal or unconventional monetary action

Federal Funds Rate

Implications for the Outlook of Further Large-Scale Asset Purchases

Unemployment Rate

Core PCE Inflation

Caveats

- Results hinge on extensive financial spillover but evidence for stock market and exchange rate effects is slim
- Economic effects highly uncertain
  - Households and firms may be reluctant to spend under current conditions
  - Credit constraints may limit response of consumption and investment
  - Cash-strapped households may be more responsive than normal
- Inflation effects may be more substantial if asset purchases directly bolster Fed credibility
LSAP Risks

LSAPs and Monetary Policy Flexibility

- Marketable assets do not constrain policy stance.
  - Asset purchases stimulate activity.
  - Asset sales restrain activity.
- Outright sales could lead to a financial loss.
- Use as collateral to drain reserves still under development.

LSAPs and Fiscal Revenue

- LSAPs significantly increase Federal Reserve net income.
  - MBS yield 4-1/4%.
  - Reserves pay 1/4%.
- LSAPs increase Federal Reserve leverage.
- LSAPs increase maturity mismatch.
**Strategies**

**Assets under Consideration**

- Treasuries, agency debt, and agency MBS.
- MBS may have greater macroeconomic effect.
- Including Treasuries and agency debt may be a prudent strategy.

**Mortgage Market**

- Percentage points
- March 16, 1990=100

**Holding Down Mortgage Spread**

- Purchase new-production MBS.
- Sell put options on forward MBS.
- Communicate that mortgage rates are likely to remain low for several months.

Appendix 5: Materials used by Mr. Madigan
Class I FOMC – Restricted Controlled (FR)

Material for FOMC Briefing on Monetary Policy Alternatives

Brian Madigan
March 18, 2009
January FOMC Statement

The Federal Open Market Committee decided today to keep its target range for the federal funds rate at 0 to ¼ percent. The Committee continues to anticipate that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for some time.

Information received since the Committee met in December suggests that the economy has weakened further. Industrial production, housing starts, and employment have continued to decline steeply, as consumers and businesses have cut back spending. Furthermore, global demand appears to be slowing significantly. Conditions in some financial markets have improved, in part reflecting government efforts to provide liquidity and strengthen financial institutions; nevertheless, credit conditions for households and firms remain extremely tight. The Committee anticipates that a gradual recovery in economic activity will begin later this year, but the downside risks to that outlook are significant.

In light of the declines in the prices of energy and other commodities in recent months and the prospects for considerable economic slack, the Committee expects that inflation pressures will remain subdued in coming quarters. Moreover, the Committee sees some risk that inflation could persist for a time below rates that best foster economic growth and price stability in the longer term.

The Federal Reserve will employ all available tools to promote the resumption of sustainable economic growth and to preserve price stability. The focus of the Committee's policy is to support the functioning of financial markets and stimulate the economy through open market operations and other measures that are likely to keep the size of the Federal Reserve's balance sheet at a high level. The Federal Reserve continues to purchase large quantities of agency debt and mortgage-backed securities to provide support to the mortgage and housing markets, and it stands ready to expand the quantity of such purchases and the duration of the purchase program as conditions warrant. The Committee also is prepared to purchase longer-term Treasury securities if evolving circumstances indicate that such transactions would be particularly effective in improving conditions in private credit markets. The Federal Reserve will be implementing the Term Asset-Backed Securities Loan Facility to facilitate the extension of credit to households and small businesses.

The Committee will continue to monitor carefully the size and composition of the Federal Reserve's balance sheet in light of evolving financial market developments and to assess whether expansions of or modifications to lending facilities would serve to further support credit markets and economic activity and help to preserve price stability.
Alternative A

1. Information received since the Federal Open Market Committee met in January indicates that the economy is undergoing a severe contraction and that the outlook for the next several quarters has worsened. Job losses, declining equity and housing wealth, and tight credit conditions have weighed on consumer sentiment and spending. Weaker sales prospects and difficulties in obtaining credit have led businesses to cut back on inventories and fixed investment. U.S. exports have slumped as a number of major trading partners have also fallen into recession. Although the near-term economic outlook is weak, the Committee anticipates that policy actions to stabilize financial markets and institutions, together with fiscal and monetary stimulus, will contribute to a gradual resumption of sustainable economic growth.

2. In light of increasing economic slack here and abroad, the Committee expects that inflation will remain subdued. Moreover, the Committee sees some risk that inflation could persist for a time below rates that best foster economic growth and price stability in the longer term.

3. In these circumstances, the Federal Reserve will employ all available tools to promote economic recovery and to preserve price stability. The Committee will maintain the target range for the federal funds rate at 0 to ¼ percent and anticipates that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for an extended period. To provide greater support to mortgage lending and housing markets, the Committee decided today to increase the size of the Federal Reserve’s balance sheet further by purchasing an additional $500 billion of agency mortgage-backed securities, bringing its total purchases of these securities to $1 trillion this year; at least half of this total will be acquired by June. The Committee also decided to boost its purchases of agency debt securities; it now anticipates purchasing $200 billion of such issues this year. Moreover, to help improve conditions in private credit markets, the Committee decided to purchase $300 billion of longer-term Treasury securities over the next six months. The Federal Reserve has launched the Term Asset-Backed Securities Loan Facility to facilitate the extension of credit to households and small businesses and anticipates that the range of eligible collateral for this facility is likely to be expanded to include other financial assets. The Committee will continue to monitor carefully the size and composition of the Federal Reserve's balance sheet in light of evolving financial market developments, and it will be assessing whether a faster pace of asset purchases would be helpful in improving credit market conditions and supporting economic activity.
Alternative B

1. Information received since the Federal Open Market Committee met in January indicates that the economy is undergoing a severe contraction and that the outlook for the next several quarters has worsened. Job losses, declining equity and housing wealth, and tight credit conditions have weighed on consumer sentiment and spending. Weaker sales prospects and difficulties in obtaining credit have led businesses to cut back on inventories and fixed investment. U.S. exports have slumped as a number of major trading partners have also fallen into recession. Although the near-term economic outlook is weak, the Committee anticipates that policy actions to stabilize financial markets and institutions, together with fiscal and monetary stimulus, will contribute to a gradual resumption of sustainable economic growth.

2. In light of increasing economic slack here and abroad, the Committee expects that inflation will remain subdued. Moreover, the Committee sees some risk that inflation could persist for a time below rates that best foster economic growth and price stability in the longer term.

3. In these circumstances, the Federal Reserve will employ all available tools to promote economic recovery and to preserve price stability. The Committee will maintain the target range for the federal funds rate at 0 to ¼ percent and anticipates that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for some time. To provide greater support to mortgage lending and housing markets, the Committee decided today to increase the size of the Federal Reserve’s balance sheet further by purchasing an additional $750 billion of agency mortgage-backed securities, bringing its total purchases of these securities to $1.25 trillion this year, and to increase its purchases of agency debt this year by $100 billion to a total of $200 billion. The Committee also is prepared to purchase longer-term Treasury securities if evolving circumstances indicate that such transactions would be particularly effective in improving conditions in private credit markets. The Federal Reserve has launched the Term Asset-Backed Securities Loan Facility to facilitate the extension of credit to households and small businesses and anticipates that the range of eligible collateral for this facility is likely to be expanded to include other financial assets. The Committee will continue to monitor carefully the size and composition of the Federal Reserve's balance sheet in light of evolving financial market developments and to assess whether lending facilities should be expanded or modified to provide further support to credit markets and economic activity and to help preserve price stability.
Alternative C

1. The Federal Open Market Committee decided today to keep its target range for the federal funds rate at 0 to ¼ percent. The Committee continues to anticipate that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for some time.

2. Information received since the Committee met in January indicates that the economy has slowed further. Job losses, declining equity and housing wealth, and tight credit conditions have weighed on consumer sentiment and spending. Weaker sales prospects and difficulties in obtaining credit have led businesses to cut back on inventories and fixed investment. Furthermore, global demand appears to be slowing significantly. Conditions in some financial markets have improved, in part reflecting government efforts to provide liquidity and strengthen financial institutions. The Committee anticipates that a gradual recovery in economic activity will begin later this year, but the downside risks to that outlook are significant.

3. In light of the declines in the prices of energy and other commodities that occurred last fall and the prospects for considerable economic slack, the Committee expects that inflation will remain subdued in coming quarters before returning to rates that best foster economic growth and price stability in the longer term.

4. The Federal Reserve will employ all available tools to promote the resumption of sustainable economic growth and to preserve price stability. The Federal Reserve continues to purchase large quantities of agency debt and mortgage-backed securities to provide support to the mortgage and housing markets, and it stands ready to expand the quantity of such purchases and the duration of the purchase program as conditions warrant. The Committee also is prepared to purchase longer-term Treasury securities if evolving circumstances indicate that such transactions would be particularly effective in improving conditions in private credit markets. The Federal Reserve has launched the Term Asset-Backed Securities Loan Facility to facilitate the extension of credit to households and small businesses and anticipates that the range of eligible collateral for this facility is likely to be expanded to include other financial assets. The Committee will continue to monitor carefully the size and composition of the Federal Reserve's balance sheet in light of evolving financial market developments and to assess whether lending facilities should be expanded or modified to provide further support to credit markets and economic activity and to help preserve price stability.
Alternative A'

1. The Federal Open Market Committee decided today to increase the size of the Federal Reserve’s balance sheet further by purchasing $300 billion of longer-term Treasury securities over the next six months and by acquiring an additional $500 billion of agency mortgage-backed securities (MBS) and $100 billion of agency debt securities this year. These steps will bring the Committee’s total purchases of agency MBS this year to $1 trillion, at least half of which will be acquired by June, and its total purchases of agency debt to $200 billion. The Committee anticipates that these actions will help improve conditions in private credit markets and will provide greater support to mortgage lending and housing markets. The Federal Reserve has launched the Term Asset-Backed Securities Loan Facility to facilitate the extension of credit to households and small businesses and anticipates that the range of eligible collateral for this facility is likely to be expanded to include other financial assets. The Committee will maintain the target range for the federal funds rate at 0 to ¼ percent and anticipates that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for some time.

2. This decision reflects information received since the Committee met in January that indicates that the economy is undergoing a severe contraction and that the outlook for the next several quarters has worsened. Job losses, declining equity and housing wealth, and tight credit conditions have weighed on consumer sentiment and spending. Weaker sales prospects and difficulties in obtaining credit have led businesses to cut back on inventories and fixed investment. U.S. exports have slumped as a number of major trading partners have also fallen into recession. Although the near-term economic outlook is weak, the Committee anticipates that policy actions to stabilize financial markets and institutions, together with fiscal and monetary stimulus, will contribute to a gradual resumption of sustainable economic growth.

3. In light of increasing economic slack here and abroad, the Committee expects that inflation will remain subdued. Moreover, the Committee sees some risk that inflation could persist for a time below rates that best foster economic growth and price stability in the longer term.

4. The Federal Reserve will continue to employ all available tools to promote economic recovery and to preserve price stability. The Committee will monitor carefully the size and composition of the Federal Reserve's balance sheet in light of evolving financial market developments and, and it will be assessing whether a faster pace of asset purchases would be helpful in improving credit market conditions and supporting economic activity.
Alternative B'

1. The Federal Open Market Committee decided today to increase the size of the Federal Reserve’s balance sheet further by purchasing an additional $750 billion of agency mortgage-backed securities and an additional $100 billion of agency debt. These actions will bring the Committee’s total purchases of these securities over the course of this year to $1.25 trillion and $200 billion, respectively. The Committee anticipates that this action will provide greater support to mortgage lending and housing markets. The Committee also is prepared to purchase longer-term Treasury securities if evolving circumstances indicate that such transactions would be particularly effective in improving conditions in private credit markets. The Federal Reserve has launched the Term Asset-Backed Securities Loan Facility to facilitate the extension of credit to households and small businesses and anticipates that the range of eligible collateral for this facility is likely to be expanded to include other financial assets. The Committee will maintain the target range for the federal funds rate at 0 to ¼ percent and anticipates that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for some time.

Directive Wording – Alternative A/A’

The Federal Open Market Committee seeks monetary and financial conditions that will foster price stability and promote sustainable growth in output. To further its long-run objectives, the Committee seeks conditions in reserve markets consistent with federal funds trading in a range from 0 to ¼ percent. The Committee directs the Desk to purchase GSE debt, agency-guaranteed MBS, and longer-term Treasury securities during the intermeeting period with the aim of providing support to the mortgage and housing markets and economic activity. The timing and pace of these purchases should depend on conditions in the markets for such securities and on a broader assessment of private credit market conditions in primary mortgage markets and the housing sector. The Desk is expected to purchase up to $200 billion in housing-related GSE debt by the end of the second quarter of this year. The Desk is expected to purchase at least $500 billion in agency-guaranteed MBS by the end of the second quarter of this year and is expected to purchase up to $1 trillion of these securities by the end of this year. The Committee also directs the Desk to purchase long-term Treasury securities during the intermeeting period. By the end of this year, the Desk is expected to purchase up to $300 billion of long-term Treasury securities, with the aim of improving conditions in private credit markets. The System Open Market Account Manager and the Secretary will keep the Committee informed of ongoing developments regarding the System’s balance sheet that could affect the attainment over time of the Committee’s objectives of maximum employment and price stability.

Appendix 6: Materials used by Messrs. Plosser and Bullard
Bullard/Plosser Statement

Alternative B"

1. The Federal Open Market Committee decided today to continue to increase the Federal Reserve balance sheet through the purchase of agency MBS and Treasury securities. The Committee expects the growth rate of the MBS and Treasury components of the balance sheet combined to average about 10 percent per month. The Committee will carefully monitor macroeconomic and financial conditions and adjust this rate of expansion as warranted.

2. The Federal Reserve has launched the Term Asset-Backed Securities Loan Facility to facilitate the extension of credit to households and small businesses and anticipates that the range of eligible collateral for this facility is likely to be expanded to include other financial assets. The Committee will maintain the target range for the federal funds rate at 0 to 1/4 percent and anticipates that economic conditions are likely to warrant exceptionally low levels of the federal funds rate for some time.

3. The decision reflects the Committee’s view that the economy is undergoing a severe contraction. Although the near-term outlook is weak, the Committee anticipates that market forces and policy actions will contribute to a gradual resumption of sustainable economic growth.

4. In light of increasing economic slack here and abroad, the Committee expects that inflation will remain subdued. Moreover, the Committee sees some risk that inflation could persist for a time below rates that best foster economic growth and price stability in the longer term.

5. The Federal Reserve will continue to employ all available tools to promote economic recovery and to preserve price stability. The Committee will monitor carefully the size and composition of the Federal Reserve’s balance sheet in light of evolving financial market developments and will assess whether lending facilities should be expanded or modified to provide further support to credit markets and economic activity and to help preserve price stability.
