

Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies,¹ and then making the scanned versions text-searchable.² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that this document may contain occasional gaps in the text. These gaps are the result of a redaction process that removed information obtained on a confidential basis. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optimal character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

THE DOMESTIC NONFINANCIAL ECONOMY

Mortgage Activity at S&Ls

Insured savings and loan associations issued new commitments to originate or purchase mortgage loans at a seasonally adjusted monthly rate of \$14.3 billion in August--10 percent below the upward-revised July figure. Outstanding mortgage commitments continued to rise, however, reaching a record \$47.8 billion at the end of August.

The net change in total mortgage assets held by insured S&Ls amounted to \$8.3 billion in August, down from a record \$8.8 billion in July. The decline reflected smaller net acquisitions of mortgage loans, as holdings of mortgage-backed securities increased by \$3.3 billion. Swaps of mortgages for pass-through securities, under the programs operated by FNMA and FHLMC, significantly affected the composition of S&L mortgage assets in August, as in most other months since late 1981.

1. Quarterly growth rates are computed on a quarterly average basis. Dollar amounts shown under memoranda for quarterly changes are calculated on an end-month-of-quarter basis.

2. The base for M1 is the second-quarter 1983 average. The base period for M2 is the February-March 1983 average. The base period for M3 is the fourth-quarter 1982 average.

3. M1 seasonally adjusted using an experimental model-based procedure applied to weekly data.

4. Overnight and continuing contract RPs issued to the nonbank public by commercial banks plus overnight Eurodollar deposits issued by branches of U.S. banks to U.S. nonbank customers, both net of amounts held by money market mutual funds. Excludes retail RPs, which are in the small time deposit component.

5. Beginning December, 1982, growth rates are for savings deposits, seasonally adjusted, plus money market deposit accounts (MMDAs), not seasonally adjusted. Commercial bank savings deposits excluding MMDAs, were unchanged in June and declined at rates of 10.2 percent in July and 11.2 percent in August. At thrift institutions, saving deposits excluding MMDAs increased during June at an annual rate of 12.5 percent and declined during July and August at rates of 2.0 and 0.7 percent respectively.

6. Net of large-denomination time deposits held by money market mutual funds and thrift institutions.

7. Consists of borrowings from other than commercial banks in the form of federal funds purchased, securities sold under agreements to repurchase and other liabilities for borrowed money (including borrowings from the Federal Reserve and unaffiliated foreign banks), loans sold to affiliates, loan RPs and other minor items. Data are partially estimated.

8. Consists of Treasury demand deposits at commercial banks and Treasury note balances.

INTERNATIONAL DEVELOPMENTS

U.S. Merchandise Trade Through August

In August the U.S. merchandise trade deficit increased to a record high monthly level. For July-August combined, the deficit was about \$73 billion annual rate, well above the second quarter deficit and about double the first quarter rate.

1/ As used in the Balance of Payments accounts and in the GNP accounts.

Exports in August were at virtually the same level as in July, and for the two months combined were at a rate only marginally higher than those recorded for the previous three quarters. Sluggish economic activity in major trading partner countries and the high exchange value

of the dollar continue to adversely affect demand for exports. The rise in agricultural exports in July and August was importantly attributable to the higher export price of soybeans. Small increases in exports of chemicals, machinery, consumer goods, and automotive products to Canada were largely offset by a drop in commercial aircraft exports from strong first-half rates.

Most of the change in merchandise trade flows in recent months were in imports in response to the pick-up in U.S. economic activity. Rising oil imports accounted for two-thirds of the August import increase and nearly half of the July increase. The volume of oil imports reached more than 6-1/2 million barrels per day (seasonally adjusted) in August, up from a second quarter average of just over 5 mbd. Oil import prices rose about 2 percent in August from July levels but were still well below the level of prices at the beginning of the year. [The oil import data for August are preliminary estimates.] The rise in nonoil imports in July and August was largely in a wide range of manufactured goods.
