Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies, ¹ and then making the scanned versions text-searchable. ² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that this document may contain occasional gaps in the text. These gaps are the result of a redaction process that removed information obtained on a confidential basis. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optimal character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

DOMESTIC NONFINANCIAL ECONOMY

Consumer Prices

The consumer price index for all urban consumers rose 0.2 percent in July. Energy prices fell 0.7 percent, as gasoline prices dropped 2.2 percent in the wake of recent declines in crude oil costs and high levels of gasoline inventories. Food prices rose 0.3 percent, as declines in prices for pork, poultry, and eggs partially offset moderate increases in the price of fruits and vegetables and most other types of food at home. Poultry prices came down sharply at the farm, producer, and consumer levels in July.

Consumer prices other than food and energy rose 0.4 percent in July, about the same as the average monthly rate of increase in the preceding twelve months. Among the components of this index, service prices continued to rise considerably faster than consumer goods prices, which have been held down by the moderation in import prices. Prices of commodities other than food and energy rose 0.1 percent in July. Apparel prices fell 0.9 percent as retailers, who needed to trim stocks to make room for the fall clothing line, discounted prices more than usual. New car prices fell 0.4 percent as automakers stepped up incentive programs to clear out their inventories before the 1990 models begin to reach showrooms. Non-energy services prices jumped 0.6 percent, led by large increases in the cost of out-of-town lodging, hospital services, and educational services. Residential rent and owners' equivalent rent rose 0.3 percent and 0.4 percent, respectively, the same pace as in the preceding twelve months.

*--calendar year

n.a. -- not available

Note: Details may not add to totals due to rounding.

^{1.} The Administration figures are from the Mid-Session Review of the Budget (July 18, 1989), which incorporates the Bipartisan Budget Agreement but does not include on-budget RTC spending in FY1989.

^{2.} The CBO figures are baseline budget estimates from An Analysis of President Reagan's Budgetary Proposals for Fiscal Year 1990 (February 1989).

New CBO estimates will be released August 17, 1989.

^{3.} Budget receipts, outlays, and surplus/deficit include social security (OASDI) receipts, outlays and surplus, respectively. The OASDI surplus is excluded from the "on-budget" deficit and shown separately as "off-budget", as classified under current law.

^{4.} Other means of financing are checks issued less checks paid, accrued items and changes in other financial assets and liabilities.

^{5.} HEB is the NIPA measure in current dollars with cyclically-sensitive receipts and outlays adjusted to a 6 percent unemployment rate. Quarterly figures for change in HEB and FI are not at annual rates. Change in HEB, as a percent of nominal potential GNP, is reversed in sign. FI is the weighted difference of discretionary federal spending and tax changes (in 1982 dollars), scaled by real federal purchases. For change in HEB and FI, (-) indicates restraint.

^{1.} Amounts shown are from fourth quarter to fourth quarter.

^{2.} Nontransactions M2 is seasonally adjusted as a whole.

^{3.} Commercial bank savings deposits excluding MMDAs grew during June and July at rates of -5.9 percent and 2.6 percent, respectively. At thrift institutions, savings deposits excluding MMDAs grew during June and July at rates of -9.2 percent and -6 percent, respectively.

^{4.} The non-M2 component of M3 is seasonally adjusted as a whole.

^{5.} Net of large denomination time deposits held by money market mutual funds and thrift institutions.

^{6.} Dollar amounts shown under memoranda are calculated on an end-month-of-quarter basis.

^{7.} Consists of borrowing from other than commercial banks in the form of federal funds purchased, securities sold under agreements to repurchase, and other liabilities for borrowed money (including borrowing from the Federal Reserve and unaffiliated foreign banks, loan RPs and other minor items). Data are partially estimated.

^{8.} Consists of Treasury demand deposits and note balances at commercial banks.

INTERNATIONAL DEVELOPMENTS

U.S. Merchandise Trade

In June, the U.S. merchandise trade deficit was \$8.2 billion (seasonally adjusted, Census basis, customs valuation), compared with \$10.1 billion (revised) in May. For the second quarter, the deficit was somewhat smaller than in the first quarter.

Exports in June were 1.5 percent higher than in May, primarily a result of increases in capital and consumer goods. Exports in the second quarter rose 4.8 percent, bringing the level of exports to 15 percent above that of a year earlier. This recent strength in exports has been spread among industrial supplies, capital goods (particularly machinery, but also aircraft and computers), and consumer goods.

Imports declined 3.6 percent in June, largely because of a drop in the value of oil. There was a decline in both the price of imported oil (by 73 cents per barrel) and quantity (by 5 percent) from peak May levels. Nonetheless, the value of oil imports in the second quarter was 25 percent higher than in the first quarter with most of the increase in prices. Non-oil imports in the second quarter were at about the same level as in the first quarter; increases in imports of capital goods (primarily aircraft and computers) and consumer goods were largely offset by declines in the value of imports of automotive products and food.
