METZLER, Lloyd A.

"Wealth, Saving, and the Rate of Interest," THE
JOURNAL OF POLITICAL ECONOMY, LIX,
1951.

"The distinguishing feature of the classical theory of the interest rate is its emphasis upon so-called 'real' conditions of demand and supply and its denial of the influence of monetary policy or banking policy. The classical economists believe that there exists a unique interest rate, or a unique pattern of long-term and short-term rates, at which the economic system is in equilibrium and that this unique interest rate cannot be influenced by changes in the quantity of money,"
