New York: Harper & Bros., 1936. Pp. viii, 480.

Review: by James Holladay, SOUTHERN ECONOMIC JOURNAL, III,  
no. 3, January, 1937, pp. 335-7.

by F. Cyril James, AMERICAN ECONOMIC REVIEW,  
XXVI, December, 1936, pp. 791-2.

Third book by Willis on FR System.  
which is a product of his investigation of central banking here and abroad.

Part I: Study of the organization and development of central banking. Fundamental principles developed up to the time of World War I.

Part 2: Analysis of major problems of operation of central banking: viz., problems of rediscounting, investments, open market operations; bankers' acceptances, control of specie supply and price level, note issues, reserves; interbank relationships, fiscal functions, clearings, and branch banking. He shows extent to which established techniques have been modified by wartime experience and the depression.

Part 3: Developments in central banking over past 20 years which have occurred because of growth of international lending and thus of interdependence of international markets.
