"The rate of interest, the bank rate, and the stabilization of prices." QUARTERLY JOURNAL OF ECONOMICS, August 1928. 19 pp.

The control of the quantity of the monetary unit in a country is in the hands of the central bank and the ultimate means for effecting this control is the bank rate. This rate should correspond to the natural rate of interest bringing about equilibrium in the s/d for disposal of capital. In practice this rate will be the one that maintains stability in the general level of prices.
