BURNS, A. E.

GOVERNMENT SPENDING AND ECONOMIC EXPANSION.

Washington: American Council on Public Affairs, 1940.

A rather detailed history of American experience with purposeful deficit financing. It is pointed out that government spending has become a powerful instrument by which the government is assuming economic initiative. The author accepts the theory and practice of the measure, but feels that not enough was spent during the recovery period.

---

Theoretical analysis based largely on S/I equilibrium conclusions of Keynes, applying them to US experience in great depression and down to 1938. They accept Keynes' arguments to exclusion of all other possible explanations of depression, and rely on govt. spending as only way to reestablish equilibrium. The 1933-37 recovery is attributed to this govt. spending and the reduction of public expenditures in 1936 is blamed for 1937 recession. Considerable emphasis is put on secular stagnation hypothesis

Hawtrey, R. G.

Public expenditure and trade depression, with discussion. (In: Journal of the Royal statistical society, pt.3,1933,p.438-477)

Suggests that currency depreciation is the most satisfactory measure of revival; when cheap money fails to bring about revival, there is more to be hoped from an open market policy... Suggests that Reserve bank open market policies in 1932 were never sufficiently appreciated.

---

Statistics, 1924-38 showing volume of capital expenditure of central and local govt. units of G.B. and by semi-public enterprises (rys., electricity, shipbuilding) that might easily be brought under close govt. control. These exps. are compared with total capital formation and their fluctuations are compared with private capital expenditures.

Gives estimates of the primary effect of public investment on national income and employment plus less reliable estimates of their secondary and tertiary effects

It discusses

Secular and cyclical deficiencies of purchasing power  
Considers various proposals for bolstering effective  
money demand.

- redistribution of income as means of raising the  
propensity to consume
- quantitative control of bank credit (Fisher's  
100% reserve proposal; Berle's proposal for  
capital banks)
- velocity stimulation
- negative rates of interest
- deficit financing
- business subsidies
