---

Monograph on short-term financing by the US Govt. since 1918. His findings substantially endorse those of Prof. Hollander in his volume on earlier period of 'war borrowing' (1919).

Final chapter deals with: floating debt and money market; cost of govt. borrowing; holders of short-term obligations; short-term securities as equalizers of the market at tax-payment dates; floating debt and the banking system; floating debt as a bank asset; floating debt in open-market operations; floating debt and inflation.
