Notes on the Period of Production (in
English), ZEITSCHRIFT FÜR NATIONALÖKONOMIE,
Parts I-
December, 1936.

The article is a first instalment of an inquiry as to how far the period-of-production concept has survived recent criticism. Static equilibrium is shown to be a necessary assumption underlying the use of this concept. Fixed capital, circular production and subsistence fund are introduced into the analysis and a formula for the calculation of the average period of production is developed.
