Senator Nelson. That question was raised—as to whether the notes when received are retired, or can they be put out again into circulation. That is a very important question.

Prof. Jenks. I think it is.
Senator Nelson. Now, the Bank of England notes, you know, after they are once redeemed, that is the end of them.

Prof. Jenks. Yes; that is the end of it.

Senator Nelson. And the question is whether——

Senator Hitchcock (interposing). There is a radical difference in the two cases, because in the case of the Bank of England when a note comes in gold is paid out for it.

Senator Nelson. Certainly; I understand that.

Senator Hitchcock. Or a credit is given for it upon the books of the bank. But in this case when the notes come in the Federal reserve bank may pay over to the Government of the United States the amount it has borrowed, and its commercial paper may still be segregated for the security of that loan.

Senator Nelson. Well, it may owe the money to the regional bank upon the commercial paper deposited.

Senator Hitchcock. No; I mean the regional bank which receives this note from the Government may still owe to the Government of the United States the amount that it borrowed when it got the note, and those securities may still be on deposit with the Government for the payment of that note.

Senator Nelson. But it did not borrow from the Government.

Senator Hitchcock. Certainly it did.

Senator Bristow. Yes; it borrowed from the Government.

Senator Hitchcock. The regional bank, in order to get currency, has got to segregate a certain amount of its notes, its commercial paper. Now, then, it procures a loan, say, for 30 days by the segregation of a particular batch of paper, and it gets currency.

Senator Nelson. It gets it for its notes.

Senator Hitchcock. It has borrowed this for 30 days. It procures $50,000 of currency. Now, suppose $10,000 of that currency comes in. Why should it be required to cancel it when it still owes the amount to the Government of the United States?

Senator Nelson. It simply owes it on the commercial paper that it has put up.

Senator Hitchcock. No; it owes it. It is an absolute obligation to the United States Treasury.

Senator Nelson. As an indorser of the commercial paper; that is all.

Senator Bristow. But how is it to get back this commercial paper from the Government?

Senator Hitchcock. It still has an obligation of $50,000. The only way to get back that $50,000 is to return either gold or currency. In the meanwhile the time has only half run, and $10,000 of those identical notes come in. Why should not the bank continue using those notes in its business until the 30 days have expired?

Senator Nelson. That is the question.

Senator Hitchcock. I am drawing a distinction——

Senator Nelson (interposing). I suggest the bill is not clear.

Senator Hitchcock. I am drawing a distinction between the Bank of England, which borrows nothing, and the reserve bank, which does make a loan.

Senator Nelson. It is not a loan from the Government, strictly speaking. The Government is acting simply as a depository. The
bank deposits this commercial paper with the Government, with the
bank's indorsement, and the bank is only liable to the Government
upon that paper as an indorser. The principal liability is upon the
man who executed the commercial paper. Is not that so?

Senator Hitchcock. No; the reserve bank has procured this
$50,000 of currency.

Senator Nelson. It has procured it how?

Senator Hitchcock. By depositing commercial paper which it has
in its assets.

Senator Nelson. I know, and that commercial paper is the prom­
ises of A, B, C, and D.

Senator Hitchcock. Yes; but the only security for the reserve
bank—

Senator Nelson (continuing). And the bank that deposits that—
the member bank—indorses that and is liable as indorser.

Senator Hitchcock. The member bank indorses it to the regional
reserve bank, and then the regional reserve owns the security dis­
counted. Now, owning this paper, it wants to procure $50,000 of
currency from the Government. It segregates this paper in its vault
instead of sending it on to Washington. Now, then, it has borrowed
$50,000 on this collateral security. When the 30 days are out it
can pay the $50,000 in cash or return its notes, the currency, to the
Government—either one.

Senator Nelson. Oh, not return the notes to the Government;
return them to the member bank that got the notes.

Senator Hitchcock. No; I am not talking about the commercial
notes; they are paid; they are canceled. I am talking about the
currency notes.

Senator Nelson. They are exactly the same.

Senator Hitchcock. No; the currency notes are secured from the
Treasury.

Senator Nelson. They are not secured from the Treasury. The
only security for the notes is the notes deposited with the bank with
the indorsement.

Senator Hitchcock. Senator, I think we are confusing terms by
using notes. Let us resort to “currency.” I will say this currency
comes from the United States Treasury to the reserve bank, and the
reserve bank deposits collateral as security for its loan. That col­
lateral represents the notes which have been discounted for the mem­
ber banks. Now, then, if the reserve bank has procured this currency
for 30 days, say, at the regular rate of interest or tax, when the 30
days have expired the reserve bank can either pay in gold or pay it
in the currency which it has secured.

Senator Nelson. Yes; but we will put a case. Let us say here is
a member bank which goes to the regional bank with $1,000 of
commercial paper, and says, “I want currency for this. I want cur­
rency of your regional bank for this commercial paper. I have in­
dorsed it,” and the commercial paper is left there on deposit with
the regional bank.

Senator Hitchcock. Oh, it is not left; it is discounted. These are
banks of discount.

Senator Nelson. No; it is left there. The member bank does not
keep that paper; it is left with the regional bank.
Senator Hitchcock. I say it is discounted there.
Senator Nelson. The bill does not even say that he has to put up notes.
Senator Hitchcock. I understand there are two methods by which the member bank can secure either credit or currency. It may borrow and deposit security or it may discount its commercial paper.
Senator Nelson. That commercial paper is due from time to time, and suppose that is paid; in the meanwhile—suppose the commercial paper is redeemed in the meanwhile; paid from time to time.
Senator Hitchcock. Yes.
Senator Nelson. The note—
Senator Hitchcock (interposing). What notes?
Senator Nelson. Just put yourself in this position: I am a member bank and you are a regional bank.
Senator Hitchcock. Yes.
Senator Nelson. I come to you and deposit $100,000 of notes, commercial paper. I want to get circulation.
Senator Hitchcock. Yes.
Senator Nelson. You give me circulation.
Senator Hitchcock. Yes.
Senator Nelson. In the meantime, as those notes fall due, I am redeeming them. I send you money for those notes, and keep redeeming them.
Senator Hitchcock. You mean the commercial paper?
Senator Nelson. The commercial paper, yes. I keep redeeming those notes as they are due.
Senator Hitchcock. You have nothing to do with them.
Senator Nelson. Of course I have. I have indorsed them.
Senator Hitchcock. No; the reserve bank owns them.
Senator Nelson. Yes; but I am indorser.
Senator Hitchcock. But the reserve bank owns that commercial paper. When it becomes due it sends it out for collection.
Senator Nelson. Have not I the right to pay it? I am an indorser on it.
Senator Hitchcock. Yes; but you won't be when it is paid, if the maker pays it.
Senator Nelson. The maker may pay it. Suppose the notes are paid; never mind whether they are paid by the maker of the notes or the indorser; they are paid, and I shall keep redeeming them. They are redeemed and paid off, and still the notes are out in circulation.
Senator Hitchcock. You mean the currency is out in circulation.
Senator Nelson. Yes; the currency is out in circulation, but the notes in the meantime are redeemed.
Senator Hitchcock. That is all right. The reserve bank meanwhile is making other loans. That identical currency does not have to be returned when the commercial paper is paid.
Senator Nelson. Won't it lead to inflation? That is the question.
Senator Hitchcock. I think not, because other loans are being demanded all the time, and the amount of advances which the reserve bank will require of the Treasury will depend upon the aggregate demand which the member banks are making upon it for discounts.
Senator Nelson. It is not of the reserve bank. The demand for currency comes from the member banks upon the reserve bank.
Senator Reed. Senator Hitchcock, I think what Senator Nelson has in mind—it bothers me a little now—is this: A bank goes down with $100,000 of promissory notes and it goes to the regional bank and puts up this $100,000 of notes.

Senator Nelson. And indorses them.

Senator Reed. And indorses them, and thereupon the regional bank issues or delivers $66,000 of currency and sets aside $34,000 of gold. Now, the transaction is thus far complete.

Senator Hitchcock. No; I think you stated it erroneously, Senator. When a member bank presents $100,000 in notes for discount, commercial paper for discount, it gets $100,000.

Senator Reed. Does it get $100,000 and the other bank set aside $33,000? I do not care either way. There is $100,000 then out. It is out in paper currency, and that bank, which deposited the promissory notes, has used that paper currency and it has gone into the business of the country. At the end of the 30 days this $100,000 in promissory notes which was deposited as collateral is paid into the regional bank. The $100,000 of paper currency is still out in circulation, and the regional bank has now $100,000 of ordinary money in its vaults and has in circulation $100,000 of its notes. Now, what is the provision for the retirement—compulsory retirement of those notes?

Senator Nelson. Let me add to that example, there: Suppose the member bank, after taking out this currency, taking out this new currency, and while this is outstanding—suppose the makers of these notes that have been deposited for circulation, of the member bank—suppose they come in and redeem these in national-bank notes. In that way, you will have a double quantity of currency. If you will have those promissory notes that were deposited as security for circulation, and you will have them redeemed by national-bank notes and then you will have the paper currency outstanding.

Senator Hitchcock. Those national-bank notes are redeemable at the Treasury in gold, so that if you call on the Treasury for gold, you will get gold for them.

Senator Reed. You have got to put in this bill a provision, if it is not already here in some form, that when that $100,000 promissory note has been paid, the regional bank shall thereupon retire $100,000 of its currency notes.

Senator Nelson. Can you have it elastic without that? I would like to hear Prof. Jenks on this point.

Prof. Jenks. May I explain the way it has seemed to me the bill intended to have this?

Senator Reed. We ought to be doing that instead of arguing this with each other, but occasionally that is the case with us.

Prof. Jenks. It is extremely important for me to know what the bill means. I had supposed the case was a little different from the way Senator Nelson expressed it. May I take the same illustration?

Senator Nelson. Yes.

Prof. Jenks. When the member bank wants to have $100,000 of these notes, that it can loan out, of course, to 50 or 100 different people, it takes the promissory notes from its customers as you suggest, indorses them, deposits them with the regional bank, and asks for $100,000 worth of notes, and gets the $100,000. I think,
as Senator Hitchcock suggested. The regional bank itself, of course, is compelled to keep, in addition to that $100,000 worth of indorsed commercial paper, 33⅓ per cent of lawful money, also, as a reserve. Now, Senator Hitchcock suggests that as those individual notes become due they will be sent out for collection. They, presumably, will be sent to the member bank and be collected through the member bank. But, as I understand the matter, as long as that member bank keeps that $100,000 worth of notes, which Senator Nelson says are out in circulation, it must keep, also, $100,000 worth of commercial paper in the vaults of the regional reserve bank. Now, this individual note, we will say, for $1,000 that is paid, must be replaced by another note for $1,000 that will meet the approval of the reserve agent. So there is a continual exchange, say day after day, almost, of these small individual notes indorsed by the various member banks, that are held against the notes issued from the regional reserve bank. They must keep, all of the time, the full amount there, but it is not the same notes all the time.

Senator Hitchcock. No; it is not a segregated lot of paper, it is just a limit that has to be kept.

Prof. Jenks. It is fluctuating every day. Now, here, I might add one thing that I think is an objection to this procedure. This Federal reserve agent at a large Federal reserve bank will have coming up for approval 100 or perhaps 1,000 different commercial notes every day. He has to be sending out some for collection, and he has to have others coming in to take their place. I do not see, myself, how he is going to be able to exercise any large amount of discretion. Neither do I see, under those circumstances, why there should be an absolute segregation of those notes. What he can do as a practical matter, and that is all he can do as a practical matter, is to see that there is kept against the notes that the bank has out an equal amount of paper which he considers good. Now, if they should be taken off one shelf in the vaults and put over onto another shelf, instead of merely having an entry made in the bank’s books, I cannot see that the process would be improved. If, instead of saying you would segregate in the vaults of the bank a sufficient amount of commercial paper, you would say you would segregate on the books of the bank an equal amount of commercial paper, that shall have the approval of the Federal reserve agent, it seems to me it is absolutely the same thing in practice. But, nevertheless, if you leave in your bill that it is to be segregated in the vault, it simply means that every one of those piles of notes has to be pulled over every day, practically, and perhaps 1,000 notes taken out and another 1,000 put in, and the Federal reserve agent could not do it.

Senator Pomerene. Your thought there is that means physical segregation?

Prof. Jenks. I so understand the bill. If it does not mean physical segregation then it means what I suggest, that it ought to be segregated on the books of the bank. That, I think, is essential.

Now, may I add a word to what Senator Nelson suggested in regard to inflation. Supposing, as the Senator says, that one man, to make the illustration specific, has borrowed $5,000. He has taken that $5,000 out in these new notes. He comes and pays them off with national bank notes. There, as you see, the national bank notes are
paid in, and the new notes are out in circulation. There is no inflation as long as those national bank notes stay in the bank. What the bank would do in a case of that kind I suppose is this: When it gets those national bank notes in its vault—I am speaking of the member bank—it may, if it wants to, send that $5,000 of notes into the regional reserve bank and say, "I would like to cancel $5,000 of my obligation," which I suppose it has a right to do. But it is more likely, I should suppose, for the time being at any rate, to hold those as part of its reserve and get the chance to put out other notes, the new Government notes, as best it can.

Senator Nelson. So, other than that, it will lead to no duplication or inflation?

Prof. Jenks. The point about inflation, as I think was suggested a little while ago, depends pretty largely upon the bankers themselves and depends upon how careful they are as to getting good security for the notes. Now, that is what I was going to bring out in a little different way. I think there is great danger under this bill of depleting the gold reserve of the country.

Senator Nelson. Before you go into that, I was going to ask you another question in connection with the subject. What provision is there in the bill for the regional banks acquiring the necessary gold reserve, assuming the reserve must be in gold, instead of lawful money—what provision is there in the bill; how can those regional banks secure under this bill an ample gold reserve? What machinery is there in the bill?

Prof. Jenks. There is no machinery in the bill by which they can secure a gold reserve, as I understand it. Of course the bill says, regarding the reserve, "gold or lawful money." There is no provision in the bill, as I understand it, that covers that point, except that the different member banks, to organize the regional reserve bank, have to pay in 10 per cent of their capital. I suppose that will be paid in in cash.

Senator Nelson. Suppose we make these notes redeemable in gold; ought we not in that case to require the subscription to the stock, or a part of it, to be paid in in gold?

Prof. Jenks. I would quite agree with that, Senator; I think so.

Senator Nelson. So that the regional bank could start with some gold as a reserve.

Prof. Jenks. I think so. I would quite agree to that.

Senator Weeks. When you say cash, you mean gold?

Prof. Jenks. I mean lawful money.

Senator Pomerene. They would have the Government deposit, and of course there is a substantial amount of gold.

Senator Nelson. That is a fluctuating amount.

Prof. Jenks. Yes; but would it not be a wiser plan, as the Senator suggested, to have the capital subscription paid in part at least in gold? Because I was going to suggest that the reserve against these notes be kept in gold instead of "lawful money." I suggest that for this reason: If the banks are as careful as I should suppose they would be, considering their responsibilities and considering also the responsibilities of the regional reserve banks, and the fact that the Federal board is watching them all the time—if they are careful as to the quality of the commercial paper they take, I do not see any
The consequence is that when any of these banks take in over their counters greenbacks, or gold certificates, or silver certificates—either the gold or the silver certificates—they will hold those. They won't pay them out, because they are all available for reserve, and they will want to hold them, of course, as reserve. They will pay out the new notes, just as now, with national-bank notes, and hold the others for reserve, and they will keep paying them back again into the regional reserve bank. Now, the consequence is, if there comes any slackening in business at all in any way they will have been pushing out those notes as fast as possible, and there will be a tendency toward inflation. It will be a slight tendency, I think, because that takes care of itself. There will be enough of a tendency probably, to push prices just a trifle up—not seriously, but enough to make a demand for the export of money. Now, the almost inevitable result, if you have even a little surplus of money in the country, is a tendency toward the export of money, and the only currency we can export is, of course, gold. I am inclined to think, with the enormous business demands, because the people are borrowing all the banks will let them, the banks will want to loan money just as long as there is a profit in it and as long as they think it is safe; that the banks will always pay out the notes and hold back the gold as a reserve. But there is a tendency toward inflation. I do not think it is a dangerous tendency, except to this extent, that it is almost sure to lead to a considerable export of gold. Now, I think, if you adopt Senator Nelson's suggestion and say that the reserve must be kept in gold—

Senator Pomerene (interposing). You mean the 33 per cent?

Prof. Jenks. Yes—should be kept in gold, then we have a demand for gold in this country that would be quite worth while, and it would be but a short time until we could make arrangements to simplify the currency by having some of these other forms of currency retired.

May I say another word in reference to that export of gold? We have, at the present time, a very large amount of gold in the country—a very large gold reserve. If, through the substitution of these new notes for gold it should lead to an export of gold in an amount, say, of several hundred millions—because I believe that is entirely possible—it would, beyond any question, tend toward an increase of world prices, which we all feel is not a good thing for the country now. I believe that is really a serious danger—not so much of getting too many notes out, but the substitution of notes for other forms of money—that would lead to the export of gold.

Senator Nelson. Prof. Jenks, we have an abundance of gold in this country for any amount of currency we need, have we not?
Prof. Jenks. Surely; I think so.
Senator Nelson. And all we have to do is to husband that and keep it so that it won't slip away from us.
Prof. Jenks. I think so. That brings up another point along that same line. Isn't it a good thing to make provision just as soon as it can reasonably be done for the retirement of a considerable quantity of national-bank notes—I, myself, would say the greenbacks, too? We are not going to have the use made of these new notes to so great an extent as I think would be, on the whole, desirable unless we make provision for the retirement of some other form of currency.
Senator Nelson. Will you allow me to make a suggestion?
Prof. Jenks. Certainly.
Senator Nelson. Would it not be wiser to leave the greenbacks alone and provide for the gradual retirement of the national-bank notes?
Prof. Jenks. Personally I should favor the retirement of the national-bank notes first.
Senator Nelson. So that you would have one kind of bank notes; that is to say, practically, as you stated a moment ago, bank notes with a Government guaranty?
Prof. Jenks. Yes; in essence.
Senator Nelson. And it would be better to have this currency gradually supplant the national-bank currency?
Prof. Jenks. I agree with that.
Senator Nelson. But you must let greenback alone.
Prof. Jenks. I probably shall, in view of the feeling shown here.
[Laughter.]
Senator Hitchcock. Now, I think you assented to a suggestion made by Senator Nelson, that the banks in joining this new system should be required to pay their capital of $105,000,000 in gold?
Senator Pomerene. Only a part of it.
Senator Nelson. I did not suggest the entire subscription; I said at least a part of it.
Prof. Jenks. The point of the matter, I think, Senator, hangs on just this: If we are going to make these notes redeemable in gold it is desirable that we provide some means for the regional reserve banks to secure gold, and I can see no simpler or better way than to say they shall pay at least part of the capital subscription in gold. and in that way cover that.
Senator Hitchcock. We already have pretty good evidence it is going to be a serious matter for the banks joining the association to part with this large amount of cash capital, because at the present time we only have in these national banks about 8 or 9 per cent of their deposits actually in gold or lawful money; and if their reserves are to be depleted by taking gold or legal tender out of it, it is going to make much more difficult their joining the association and is going to require them to call in loans for the purpose of raising the means.
Prof. Jenks. Would it not be sufficient to provide, as I understand was really implied in the Senator's question, that the gold could be paid in more or less gradually?
Senator Hitchcock. You mean the capital?
Prof. Jenks. You could pay in the capital in installments also, because the demands will not come upon it immediately; but if you
give a few months' time—six months—they ought to be able to get the gold.

Senator Hitchcock. You mean the individual banks joining this association?

Prof. Jenks. Yes. If they call in loans, as you suggest, they would not need to call them in to any great extent, because the large majority of those loans mature in six months. It would check things slightly. But, at the same time, their customers have need for loans every day, and they would be glad to get loans through the new note system.

Senator Hitchcock. What I mean when I said they would call in their loans—

Prof. Jenks (interposing). You mean it would check the amount that is put out?

Senator Hitchcock. I mean when notes come due, they would require their payment instead of renewing them. Under the present system the body of loans throughout the country does not fluctuate from season to season. It would to some extent.

Prof. Jenks. When the notes come in, if they want them renewed, they would renew them in credit. They are not required to be paid, but they could make another loan in these new notes.

Senator Hitchcock. There seems to be a contraction of credit almost inevitable in the banks if they are going to be required to pay cash. It has even been suggested that the banks be permitted to make a part payment of cash and a part payment of commercial paper, discounted simultaneously. But if you take the other course and require the banks to pay all in gold or in legal tender, you are going to add to the apprehension that already exists.

Prof. Jenks. It may be arranged in this way, as I said before: Supposing they would pay part in gold and part in commercial paper. That would, of course, keep working toward the place where the time limit would expire, so that gradually you could substitute one for the other. But they do not need to get this large gold reserve immediately, because they will only need to redeem those notes as the notes come out, and are presented for payment, and these notes are only going to be gradually substituted for the other forms of money. It is sufficient if the substitution of the gold for the other type of security is made in proportion to the issue of the notes themselves.

Senator Shafroth. What is the use of having such a large gold reserve in these regional banks, when $150,000,000 has been ample to sustain the whole structure of national bank notes and the greenbacks—probably a billion of dollars?

Prof. Jenks. There are two reasons, I think. The first reason is because it is of prime importance that there be no question of the quality of these notes in order to secure confidence; and, the second reason, the one I have given before, that, unless we do make a provision for these banks to hold gold to a very considerable extent in their reserves, we are almost sure to have a large export of gold because of the substitution of these notes for the other forms of currency.

And if we export gold to any very great extent it will, in the first place, lessen confidence in the security of the new system, and in the second place, if as much as four or five hundred millions go out in the
course of a year or two, that would have a tendency toward increasing prices in the world’s market, and I do not think we want to do anything—

Senator Shafroth. Do you think any money will go out of the country except for the purpose of settling balances against us?

Prof. Jenks. Those balances, of course, shift with the course of trade, and it is, as far as I am aware, the universal experience—and if I may go back again to the old technical expression we have heard so much of, Gresham’s law—that if you put into competition in any one country different kinds of currency the currency that, on the whole, is the cheapest for the people is the currency that is going to stay.

Senator Shafroth. Unless it is redeemable in gold?

Prof. Jenks. Well, unless it is redeemable in gold. Now, if you are going to make them redeemable in gold——

Senator Shafroth (interposing). The question purely is whether there should be a gold reservoir in the United States Treasury for the purpose of doing this, or whether we should have gold in each regional bank.

Prof. Jenks. I should say both.

Senator Shafroth. That would take four or five times as much gold.

Prof. Jenks. Yes; and I think it is a very desirable thing.

Senator Shafroth. I do not believe in locking up the gold for fun.

Prof. Jenks. But is it locking up gold for fun? Here is the situation, and I think it is what Senator Nelson has in mind as to the danger of inflation. When you have a dollar in gold you cannot loan more than that dollar, but if you can issue notes on that dollar you can issue, if there is anybody who will give you good security for them, three or four times the amount of the gold, and still have a reasonable degree of safety. Three to one gives all the safety we want. When it comes to putting this money into circulation, the banks are going to prefer to put out these notes instead of their national-bank notes or the gold certificates; they are going to put those out, and by putting them out it drives these others all into the reserves, and it will only mean the very slightest inflation. Prices will go up a little here, and as soon as prices go up only a little here, we shall find that we are in a position to export gold.

Senator Hitchcock. The exports of merchandise will be checked; prices rising will check the export in merchandise, and that compels the gold to go?

Prof. Jenks. That is it. It is a matter simply of the cost of shipping gold to Europe. If we can make a demand in the banks for reserves of some hundreds of millions of gold, then we will check that tendency. It is as the Senator says, if these notes are absolutely redeemable in gold and we keep enough gold here we are not going to ship it abroad. Even then there is a tendency toward expansion, because for every dollar in gold the notes are perfectly safe, 3 to 1, and that is all the law requires. I believe in the bank-note system, largely because it can adapt itself so easily to the necessities of trade. But I should think it extremely unfortunate if we were to export, in the course of the first two or three years, $400,000,000 or $500,000,000 of gold.
Senator Shafroth. We have had some very large inflation in the issuance of banking currency, expanding from two hundred and some odd millions in 1909 up to $750,000,000 now, and yet we see no movement of gold going away.

Prof. Jenks. I simply do not believe that there has been an inflation beyond the demands of business.

Senator Shafroth. But there has been a large amount of new money used?

Prof. Jenks. That is true.

Senator Weeks. It has not increased any more rapidly than the business demanded it?

Prof. Jenks. I do not think so.

Senator Weeks. I do not think so, either.

Prof. Jenks. I do not think there has been any inflation, except a temporary inflation.

Senator Weeks. Where there is an increased demand there is going to be an increased inflation now?

Prof. Jenks. May I explain that again? May I explain this with reference to the question of inflation. When business has been best, at times our national banks have issued considerable quantities of notes, but no more than business needed. When there came a slackening of business, we may have had a little too much currency at times, and at times we know gold has gone abroad. That export has not been enough to be at all serious. I think these new notes are likely to bring about a condition which is a good deal more serious, and that for this reason: There is a better opportunity for the banks to make money, to make their profits in loaning these notes and holding the other kinds of lawful money in reserve. These new notes can not be held in reserves. Whenever they get currency available for reserve they are going to keep that in their vaults instead of the new notes. Whenever they are called upon to make a loan they will pay out the new notes. That is good judgment.

Senator Weeks. Do you think they ought to be made legal reserves?

Prof. Jenks. No; I do not think so. What I think should be done is this: To make provision as fast as can be done for the retirement of our national-bank notes and see to it that we keep our gold here. If we retire the national-bank notes as soon as we can, then I should say that will make a void for a lot of these notes. I should be glad to see the system come down to nothing except gold and these notes and small currency. I think it would be wise to have these notes in denominations of not less than $5. I should leave the small coins and small certificates for the ordinary small change, because that is not so elastic as $5 notes and notes above that. I should be glad to see the present national-bank notes retired as soon as possible. Then if we have enough gold here we are perfectly safe. If we send abroad $500,000,000 of gold, or two-thirds of that, we shall feel it in increasing prices.

Senator Weeks. I want to discuss the question of sending gold abroad. Say Europe owes us money and we owe Europe money all the time; if that condition obtains either way, eventually the debt has got to be paid. We may delay the payment of the debt by various artificial means and the payment of the debt may be delayed, because the creditor in that case may find it to its advantage to loan its credit in the debtor country.
Now, suppose we have a balance of trade against us—it is not usual, but suppose we do have a balance of trade against us for a couple of hundred million dollars. In the ordinary course of business, if it were an individual transaction, we would have to pay that, and we can only pay it by shipping gold. That is one of the things you have in mind.

Let us suppose the interest rate is materially higher in this country than it is abroad, which is ordinarily the case. Is it not true that that money is likely to be loaned in this country so that we would not ship gold unless there was some scare which would induce the owner of that money abroad to draw it home and loan it out there at a lower rate? When this system is established—assuming it will be established—are we not going to have the means of preventing the shipment of gold under such conditions? For instance, we should, in my judgment, authorize the regional banks to invest some part of their capital and deposits in foreign bills, and instead of shipping gold we simply would send home their evidence of indebtedness against us, or we may increase our interest rate and should do it, which would have a moral influence in checking the exportation of gold.

By various other artificial means, such as Mr. Fisher indicated to us yesterday, in selling them short-time notes, either municipal or Government notes, it has been suggested that we refund some of these 2 per cent bonds in short-time Government notes, and use them for that purpose. Do you not think we can in that way, if that whole question is treated properly and scientifically and practically, that we can control the question of gold exportation from this country so that there will not be any probability of our losing gold in an amount that would embarrass us? That is a pretty comprehensive question.

Prof. Jenks. That is a pretty comprehensive question. As regards the way in which the question is put, I think I should agree to every individual statement, but at the same time I would answer the question you have asked in the affirmative again, that there is danger, I think. May I explain that?

In the first place, these various measures that you have suggested are, part of them, at any rate, as you say, artificial methods. Take, for example, the raising of the rate of discount. I suppose you mean by the Federal reserve board?

Senator Weeks. I do, and the raising of the rate of discount would have a tendency to induce the owner of the money to loan it here because he could get a higher rate.

Prof. Jenks. That is perfectly true.

Senator Hitchcock. We only postpone the day of settlement.

Senator Weeks. So that we can settle in some other way.

Prof. Jenks. There is where the point comes. It is an artificial method that must be applied by a group of men who are not really in touch with business, although they are in touch so far as getting reports is concerned. It is an artificial method that has to be employed from day to day. Is it not better to have a system that works substantially automatically, so that it will adjust itself? There are times when it is a good thing for this country to export gold and there are other times when it is a good thing to import gold. It all
depends upon the natural course of prices. As you say, Senator, we may at times postpone settlement. We may at times, perhaps, hasten settlement, if you want to.

But all of that is ignoring this fundamental condition that the banks are going to want to substitute these new notes for the money we now have on hand. As has been said repeatedly, there is money enough now in circulation to do our business very well under ordinary conditions. But if we are going to get the new notes into circulation we must either retire some other currency that we have in circulation now, or else we are bound to have, if these new notes are put into circulation, a surplus of currency, which will mean that we shall ship gold. I do not think it will make inflation to such an extent that it would be likely to cause a crisis. I think it would be much simpler for gold to flow abroad, as it would, unless we adopt these artificial means. But if we do adopt them, there is no telling just where we are going to stop, because this process is going to keep on for years. Why should it not?

If you are a banker you are going to use these new notes. If we provide that the gold shall be in the reserves there is a reason why the gold will stay here, and then we shall soon retire some of these other forms of currency, which I think should be done.

Senator Weeks. I think so, too. I have grave doubt whether the condition which you indicate is likely to exist; yet if there is any probability of it I admit that precaution should be taken to prevent it, and that is why I am in favor of a bank-note circulation, because I think that is absolutely responsive to trade, and it is impossible, as a practicable proposition, to get out more circulation than the needs of business require.

Prof. Jenks. I think that is so. when you have a sound system to begin with.

May I state, in a little different way, the conditions under which gold goes abroad? You say that in the trade between different countries and this country, if the balance is against us we shall have to pay, or if it is the other way we shall get the balance.

What do we pay that balance in? The statement is ordinarily made, and especially by banks, that we have to pay that in money. As a matter of fact we always pay balances in whatever is the cheapest to pay them in. That simply means this, that if we have a pretty big wheat crop, so that the price of wheat is low, we are paying those balances in wheat; and if we are having a big cotton crop and the price of cotton is low, they are being paid in cotton.

Senator Weeks. But the net balance is being paid in gold?

Prof. Jenks. Yes; although you suggested a moment ago that it will be done by artificial means. The net balance is not necessarily paid in gold. It is, of course, when we come to the bank statements, but ordinarily it shall be paid in other things. What I am afraid of in this system, as it stands, and what I think is almost certain to happen, is that we will find it cheaper to pay in gold than in anything else. That means that whenever anything occurs to increase prices here a little bit, then other people want to sell here.

Senator Hitchcock. Exports are checked?

Prof. Jenks. Exports are checked and the imports are increased at the same time.
Senator Hitchcock. Exports of merchandise are checked and imports are stimulated.

Senator Weeks. You forget that this tariff bill is going to so stimulate our foreign trade that there will not be any question about the settlement of our indebtedness.

Senator Hitchcock. It is also going to stimulate our exports.

Senator Weeks. That is what I mean.

Prof. Jenks. So far as I have seen the signs in the stores, they think it is going to stimulate the imports. But it is immaterial. I always feel that this currency question is much more important than the tariff question.

Senator Hitchcock. Certainly.

Prof. Jenks. I feel pretty strongly on this matter, that there is this tendency toward an expansion which may not run to the dangerous length of overspeculation, or to the extent of bringing on a crisis, but which is almost certain to run to the extent of a pretty large export of gold.

Senator Hitchcock. Can you give us any idea, Prof. Jenks, of the effect of an expanding currency upon the prices of commodities?

Prof. Jenks. Well, yes; speaking generally, I think so.

Senator Hitchcock. Does an increase in the supply of gold tend to increase prices?

Prof. Jenks. Yes; beyond all doubt.

Senator Hitchcock. Does an increase in the supply of paper currency have the same effect?

Prof. Jenks. Unless that is immediately so responsive to the demands of business that there is really no more money in circulation than is needed to meet its immediate demands.

Senator Hitchcock. Does an increase in bank credits have that effect?

Prof. Jenks. It all has the same effect.

Senator Hitchcock. Of raising prices.

Senator Shafroth. To the same extent as gold?

Prof. Jenks. No. We are fixed on a gold basis, as practically all the leading commercial nations of the world are. This gold basis is really the basis of practically all of the currency in these different nations, and also to a very considerable extent—it is in the terms of gold that we have all these credits. Whenever we have any new device in the currency system that tends to make the use of gold more effective, that has much the same effect as if we were to increase the amount of gold. I think that the putting of this new currency into circulation here is going to make gold more effective; if it does, it will have the same tendency, and so far as that is true, it will have the same effect in increasing prices that an increase in the gold supply would have.

Senator Hitchcock. It is proposed in this bill to very materially reduce the limit on reserves held by 7,000 national banks. What effect is that likely to have upon the volume of currency and upon prices?

Prof. Jenks. I should say again that while I am inclined to approve of that myself, I nevertheless feel that the effect is as your question intimates, practically the same as increasing the amount of currency. By currency we mean money in circulation, in distinction
from the money locked up in the vaults of the banks and that in any country.

Perhaps, I may venture to suggest something that I was saying to Senator Shafroth a little while ago, that as regards this question of the effect of the increased supply of gold upon prices, I feel that that is by far the most important element in the increase in prices that we have had the world over since 1897. In the same way again, the quantity of gold was by far the most important element in the decrease in prices that we had between 1872 and 1873 and 1897. I was saying to one of the members of the committee that I had made at two different periods some special studies which seemed to make that clear.

In 1897 I was asked to read a paper before the New York State Bankers' Association on "The causes of the fall of prices since 1873." By means of diagrams that showed the course of prices and the output of gold and silver and things of that kind, taking account of minor influences that always come in, it seemed to be clearly established that the chief reason for the fall in prices was the lessening output of gold, together with what was of still more importance, the very largely increased demand for gold in Europe, as several of the countries went over to the gold standard.

Then about a year and a half ago I was asked to read a paper before the State Bankers' Association of Michigan, and I suggested the question of "The causes of the increase in prices," and I applied the same principles, and see if they would work. Taking absolutely the same data, bringing them up to date, it established, with substantial clearness, that the main cause of the increase in prices had been the very largely increased output of gold without a corresponding increased demand for it.

Senator Shafroth. Has there been, at the same time, a great increase in the use of bank currency in France and Germany?

Prof. Jenks. There has been; it is all along the line. In all countries of the world, we are getting more and more to substitute methods of business for gold. You take, for example, our own country. Our country has more fully developed, particularly in the eastern part, the use of checks than probably any other country. In Germany they do not begin to use the number of checks that we do. But nevertheless they are getting to use them more and more during the last 10 or 15 years far more than earlier.

Senator Hitchcock. On the whole then, there has been since 1897 all over the world a great increase in the volume of the circulating medium?

Prof. Jenks. Beyond all doubt. In addition to that there have been improved methods, so that it has tended to stimulate the effect. That is the point in this bill. You are going to improve your method of handling gold so much that it will make it more serviceable than before. There is that tendency toward expansion of currency unless we retire more largely some of the other media of circulation. If you will retire other currency and require gold as reserve, we shall keep our gold.

Senator Nelson. I see your theory is that the rise and fall of prices is governed by the volume of currency?

Prof. Jenks. Not entirely, but that is the most fundamental thing.
Senator Nelson. Have you not overlooked the fact that in this country at least one of the main causes is that production has not kept pace with the demands for consumption; is that not a great factor?

Take it, for instance, in the matter of beef just now. It is not currency, it is because the ranch business is becoming obsolete, and we are raising less cattle in this country, and beef is becoming scarcer.

Prof. Jenks. I quite agree with that. My point is this: If you take any individual article like beef, you, of course, will find your immediate answer in the relation of the demand to the supply. If you take the great mass of commodities—of course, the best estimate that we have of those are in the figures collected by the Government—we get the average price as nearly as possible. Take those the world over and you will find a very decided increase in prices, some special commodities down and some up.

Senator Nelson. There is no great difference in the volume of currency in this country this year and last year?

Prof. Jenks. No; that is perfectly true.

Senator Nelson. Now, then, I want to call your attention to this fact. Have you observed the difference between the price of corn this year and last year, and the price of cotton this year and last year, and also the price of potatoes this year and last year. Can you charge those differences to the volume of currency?

Prof. Jenks. That is the point I made a moment ago, when you take single individual articles, and that is especially true of agricultural products, because when you take those you will find a temporary explanation from year to year in these local influences you spoke of. If you draw a chart of the course of general prices over a series of years there will be very little fluctuation from year to year but you will find the great waves of change over periods of years.

Senator Nelson. Is it not a fact with this country, Prof. Jenks, that our population, our body of consumers has been increasing faster than our producers have, especially producers of raw material?

Prof. Jenks. It is certainly true as regards the producers of raw material, but as regards the manufacturers it is not true.

Senator Nelson. Compare the difference between our urban and rural population, you can see the great change.

Prof. Jenks. I quite agree with that in regard to individual cases.

Senator Nelson. The urban population is a body of consumers, while the rural population is a body of producers?

Prof. Jenks. Yes; I grant that with regard to individual cases.

Senator Bristow. Has not this vast increase in agricultural prices had a tendency to lift the entire price level?

Prof. Jenks. Beyond question. On the other hand, there have been some counter influences.

Senator Bristow. Not in agriculture?

Senator Bristow. Do you not think this increase in the price of agricultural products is due practically wholly to what Senator Nelson called the congestion of the population in the centers?

Prof. Jenks. If you add to that also the difference in crops. As I was saying the other day, I am not sure that the short corn crop this year is not going to offset some of the effects of the tariff, because that
affects very materially the general level. Those are annual fluctuations.

Senator Bristow. I can see that a short corn crop would, because the wheat is not very high and corn is very high, relatively.

Prof. Jenks. Yes.

Senator Bristow. But you take this movement from the farm to the city, and it seems to me that that is as much responsible for the advance in prices as the circulating medium.

Prof. Jenks. That, beyond any question, is considerably so all over the world, because that tendency is practically universal. But at the same time, if you will go back over a period of 50 or 75 years and note the general changes in prices, you will find that the fundamental reason is, the output and use of gold, to my mind—of course, there are differences of opinion—but to my mind, that is more important than any other one of these things.

Senator Reed. What is?

Prof. Jenks. The supply of gold as it relates to the demand for it.

Senator Shafroth. Mr. Barry testified before the committee a few days ago, and he said that while there has been an apparent rise in the price of commodities, that so far as fixed investments are concerned, the prices are no higher than they were 12 or 15 years ago. He cited the stocks of railroads and urban property, and things of that kind. What do you think of that theory?

Prof. Jenks. That is true to a considerable extent, but I do not think it affects the question particularly. It is not true as to railroads.

Senator Reed. Nor as to railroad stocks, either.

Prof. Jenks. It is as regards a good many stocks.

Senator Reed. But the general average price of railroad stocks, except those companies that have absolutely flooded their treasury with watered stock, is much higher, the aggregate of the stock is higher—I mean the value of the whole stock issue is greater, but the value of an individual share may not be so great, because they have issued so many shares.

Senator Shafroth. I think the increase in farm lands has been going up because of the increase in the prices of products.

Prof. Jenks. There is another point in connection with that also. There is always a tendency in all countries as the demand for farm products increases, and the people have to use more and more intensive methods of agriculture to go to lands that originally were not quite so fertile as the other lands, and there is always a tendency for the price of agricultural products to go up, and that will continue.

Senator Reed. May I get back to a matter that concerns the bill? You stated, in discussing the difference between bank circulation and other forms, that one of the virtues of the bank circulation was that it responded to the business needs of the country. Now, I understand you to say that there has been going on in this country in recent years a real expansion outside of the mere matter of the amount of money, growing from the fact of an additional use of money through checks, so that the same dollar may be used many times in a day without passing from the place of deposit. That has been going on extensively?

Prof. Jenks. Yes.

Senator Reed. There has been an increase of gold, which has been an expansion. Now, on top of all that expansion, is it not true that
the national bank circulation, instead of retiring, as it ought to have done under those circumstances, has been increasing right along in this country?

Prof. Jenks. There is this other point, though, that the demands of business have also increased very greatly. And when we are speaking of an increase of the currency we always ought to speak of it in relation to the demand for the currency.

Senator Reed. But the demands of business—and we are coming right to the point I wanted to get at—always multiply in the face of an inflation, do they not?

Prof. Jenks. Surely.

Senator Reed. So that as you get inflation you get more demand and then more inflation to meet the demand, and these bank notes that are supposed to be an automatic check and to reduce that demand have utterly failed to do it, and have gone right along with the inflation, and therefore I think, Professor, that that is an idle dream that has been put before us many times—that the bank notes will retire automatically.

Prof. Jenks. Our national-bank notes will not, not our present notes.

Senator Reed. Certainly not. In 1911 there were $687,000,000, dropping the odd dollars. In 1912 there were $705,000,000, and there is a steady increase of those notes almost from the first, with the exception of a very few years when there was a decrease, and it seems to me those facts demonstrate that a bank-note circulation follows an inflation just like any other character of money.

Senator Weeks. Will you allow me to make this suggestion? I do not know anyone who ever contended that the national-bank currency which we have outstanding fluctuated with the volume of trade. The trouble with the circulation is that it has depended on the price of Government bonds rather than on the needs of the commercial community. If a bank could make 1 per cent or 2 per cent, or some other per cent on circulation, or a prospective profit on the principal of the bond which it purchased, then it would take out additional circulation.

Senator Hitchcock. Why will it not be so in this case? If a bank can make money by borrowing from the reserve bank, why will not the result be to stimulate loans?

Senator Weeks. Because the security which the bank holds is paid, and it has no need for the circulation any longer. In the case of the Government bond the security was never paid.

Prof. Jenks. Yes. I was about to say that I do not agree to Senator Reed's proposition for practically the same reason. Our present bank-note issue is not a bank-note issue in anything like the same sense as provided in this bill, or like a bank-note issue in Germany, France, or Canada. Canada is one of the best illustrations we have.

Senator Reed. I beg pardon for interrupting—

Prof. Jenks (interposing). Before you ask another question, I was going to suggest some means by which, I think, this system would now contract, and I was going to make one or two suggestions with respect to a method of making it contract still more promptly.

Senator Reed. That is what I wanted to get; but before we come to that let us consider this. I will waive the present bank note as a
demonstration, although to my mind it has not been fully answered, although I think that the considerations offered are entitled to weight. But I go back to the proposition I made a minute ago, to which you assented, that an increase in the volume of money increases prices, thus making a demand for more money. The increase in prices and the increase in volume of money stimulate industry, stimulate business, apparently, at least, and the greater the quantity the greater the demand. Thus we have an endless chain, if you please, constantly in operation. The appetite grows by what it feeds upon. And therefore I do not believe, and I have to be convinced, that there is any bank-note issue in the world or that can be devised that will automatically retire itself unless there is attached to its issue conditions forcing its retirement. I want to hear how that is going to be done under this bill.

Prof. Jenks. I am very glad you put the question in that way. I think there are two things to be said about that, and I quite agree with you when you say they either have to be forced to retirement or else there must be some inducement. Inducement is better than force——

Senator Reed (interposing). When I say "forced," I only mean that there must be a force created to cause their retirement. That force may be in the form of an absolute command or it may be in the attaching of conditions which make it desirable to get rid of that piece of paper.

Prof. Jenks. Yes. Now, as regards your first proposition, I would agree that an expanding currency—other things equal, unless there is a corresponding expansion of business—does tend toward increasing prices; and also that a tendency toward increase in prices does tend to make business go on faster. People want to expand their credits, and that is the fundamental cause of most of our crises, if they are monetary crises. And the trouble has been ordinarily, whenever we have had a monetary crisis, that there has not been this inducement toward a contraction of the currency. That has been the danger in many cases where we have had Government note issues or speculative bank-note issues not properly controlled.

There are two ways in which we can see to it that the currency does lessen when a normal business demand slackens. One is along the line of the German system, by which, when we get a certain amount of money out we put a tax on any larger amount and leave the banks to raise their rates of interest.

Senator Reed. I call that a force.

Prof. Jenks. That is a force. Another way, which, on the whole, I think, better, is the plan that is used in Canada. It is this: Each bank being anxious to get its own notes out so far as it can with safety, takes up the notes of every other bank and sends them back for redemption immediately. Now, as has been intimated here a number of times this morning, and was said a moment ago by the Senator——

Senator Reed. That certainly is a force, but it is not applied by the Government but by the other banks.

Prof. Jenks. All the better, because it is much more nearly automatic. They are both forces; that is true.
Let me suggest again that when a man makes a loan and gets these notes out there are that many in circulation. If he pay back his debts in notes, either of that bank or any other bank, that lessens the circulation by an equal amount, so that ordinarily in the course of business we have the expansion of the currency and contraction of the currency just in accordance with the normal demands.

Now, may I speak of the system you have in the bill. You have a system under which people will borrow. They will get these notes into circulation. We are speaking now, of course, of the member banks. When the notes are paid into the member bank, whether they are paid in these notes or in the notes of another Federal reserve bank, they will be held in the vaults of the member bank, and will be paid out over and over again. The system will not work automatically in the way it does in Canada. That is, they will not be sending any of the notes of the other banks back, and if those notes get quite a long way from home, there will be a considerable element of expansion.

Now, there are two ways in which that can be covered. The bill itself covers that in part by taxing the notes that are advanced to the separate regional banks, and if it seems that the demand is getting too strong the tax rate would be raised. That, again, is not automatic.

Senator Reed. That rests in human discretion.

Prof. Jenks. And that I do not think is wise. I was going to make another suggestion that perhaps may help. The amendment that was made to the bill providing that no reserve bank should issue the notes of another reserve bank was a very wise one, and that they redeem the notes of any other reserve banks that may come into their hands. That is wise. Why not extend that principle further? There are two ways: In the first place, say that no member bank shall pay out over its counter any notes except those of its own regional bank. That would strengthen the law a great deal along that line. The only objection I can see to that is the cost of shipping the notes that come in from any other regional bank back to the home regional bank, and I think the home regional bank could very well afford to pay that. That would go a long way toward strengthening the redemption system. That would bring it much more near the Canadian system.

Senator Pomerene. Would the Federal board, under the terms of this bill, have that authority?

Prof. Jenks. I had not supposed it would have that authority; and it seems to me the wise thing to do is to provide for that in the bill. And, further, what makes the Canadian banks return notes so promptly is that they are making money by doing it. Why not apply that same principle here?

Senator Pomerene. Let me see if I understand your limitation. Assuming that there is a regional bank in New York and a member bank of the Chicago regional bank would receive a New York note; then you would have that returned to New York, would you?

Prof. Jenks. What I mean is this: Supposing a member bank in Chicago—not the regional bank—gets this New York note. It would be allowed to lend that out over its counter, as I understand it, under this bill. It is only the Chicago regional bank that can not issue it
Senator Pomerene. I understand that, but that does not quite answer the thought I had in my mind. Would you refuse to permit the member bank of the Chicago regional bank to pay out a Chicago note also?

Prof. Jenks. Oh, no.

Senator Pomerene. That is, I mean after it had been once paid in.

Prof. Jenks. That do not think is of very great consequence, whether it does that or not. The bill, as I understand, provides that it could pay out its own regional bank notes over and over again. Personally I should like to have every regional bank not allowed to pay out its own notes the second time, as was intimated before—practically the Bank of England plan. It would be a little more expensive, but, in the first place, it would be an absolute check against counterfeiting, as these notes are being retired all the time; and another advantage would be, as in England, that you are in touch with your circulation all the time. But I think that is of much less importance.

Senator Reed. Are you not thereby circumscribing this to such an extent it would cease to have any value as money?

Prof. Jenks. Not at all, I think.

Senator Reed. Let me see if I understand you. Suppose I run a member bank in Kansas City; Senator Bristow runs a member bank across the street. I go over to Senator Bristow's bank and get $100,000 from the regional bank on 30, 60, and 90 day paper.

Prof. Jenks. You mean from his Federal reserve bank?

Senator Reed. No; from you, as a Federal reserve bank. A man comes in to borrow $100,000, and I pay it to him in cash. He walks across the street to Senator Bristow's bank and deposits that $100,000. Senator Bristow then has practically to cancel it.

Prof. Jenks. No; I do not mean that at all. The point I make is this: Suppose that you get $100,000 from your regional bank in Kansas City. There is no reason why you can not pay that out and forth as much as you like. But suppose a customer comes in, and when he makes his deposit with you he deposits some notes from the Chicago regional bank. Then I should say you should not take those and loan the Chicago reserve bank notes over your counter.

Senator Reed. What value do I get out of them? What good are they to me if I can not lend them out?

Prof. Jenks. You can get them redeemed through your regional bank.

Senator Reed. I must send those in to be redeemed?

Prof. Jenks. You must send them to your regional bank, which is across the street, as you say. Your regional bank would charge them against the Chicago bank.

Senator Reed. I can not find this bank across the street; it is 600 miles away.

Prof. Jenks. Then you send them to your regional bank, wherever it is, and the regional bank should pay——

Senator Reed (interposing). And have a constant stream of money going in every day by express?

Prof. Jenks. Absolutely; a stream of notes for redemption. Not necessarily by express; I should make a sound provision to use the parcel post these days.
Senator Reed. And I send these bills by parcel post?

Prof. Jenks. I think I should.

Senator Reed. I should want to cancel them before I send them, then.

Prof. Jenks. That is something you can arrange. There is this point to that, Senator——

Senator Reed (interposing). Is there not a plan that is much simpler than that and that will absolutely work? Let me suggest it to you.

Prof. Jenks. I have not finished with my plan yet.

Senator Reed. I thought you had. Proceed, then.

Prof. Jenks. I was going to say that I do not think that plan is as cumbersome as it might appear to be. In the first place, we know it is workable, because it is the plan that is worked continually in Canada and has been worked for years, and they pay the express charges without difficulty and are glad to do so for the sake of getting the notes of rival banks out of circulation.

Now, if you are a member of the Kansas City regional bank you are going to get 40 per cent of the profits they may make. You would be rather glad to have that currency circulation reasonably profitable.

Senator Reed. We are going to take that out of this bill, I think.

Prof. Jenks. That is something, of course, I have not any discretion about.

Senator Reed. I do not know, but I am just judging by the talk.

Prof. Jenks. I am not sure that it would be wise to take it out, because here would be an inducement to keep your circulation down. Now, if instead of paying that currency from Chicago out over and over again over your counter whenever you get the chance you send it to your regional bank you compel them to redeem it. You do not need to send it every night, but certainly as often as every week, and you would very likely send it every two or three days, as in Canada. And your regional bank could afford to pay the express charges in order to have that done, and you could afford to have them paid to get them out of circulation in your region.

Then there is another thing about it: By far the largest proportion of the bank notes in circulation in your region would be those of your own regional bank, of course. There would be relatively few from the Chicago region or the San Francisco region. That would help very decidedly this situation.

Another thing that would help still more is this: Why should you charge interest to the regional banks for having these notes issued to them unless it is necessary to keep the rate fluctuating from time to time to contract the currency? If the Federal reserve board charges interest to the regional bank, that interest is almost sure to be added to the loans to the customers throughout the country, and why should a farmer in Texas or a grain grower in Minnesota pay a half per cent or 1 per cent, or 2 per cent, maybe, for his bank notes, to put revenue into the Federal Treasury, unless the plan is absolutely necessary to contract the currency? If it is, I say by all means do it.

But it seems to me that by far the better system, and one that would tend to keep the rate of interest somewhat lower, one that would make the bill far more automatic, also relatively lessening the
power of the Federal reserve board, would be not to charge interest
and to let them have the profit that is suggested; but to provide they
shall issue over their counters only the notes of their own Federal
reserve bank and send the others back for redemption. Then you
will get a system that will work practically as automatically as the
one in Canada, I am inclined to think.

Senator Reed. I may suggest something that may be utterly chimerical, but I make the suggestion. Suppose we write into this bill
that when money has been issued by any Federal reserve bank it shall
at the end of not to exceed 90 days—or some other period—turn over
to the agent of the Government an amount of these bank notes—I
call them that to distinguish them—equal to the amount that is issued.
That is to say, a reserve bank to-day issues upon proper collateral
to member banks $1,000,000. At the end of 90 days that Federal re-
serve bank must turn over to the Federal reserve agent $1,000,000 of
their circulation, and if it can not do that it has to turn in other
money. Now, you have expanded the currency by $1,000,000 and you
have provided absolutely to end that expansion at the end of 90 days,
which is the maturity of the paper that was put up. What is the use
of all this circumlocution? Why not just do it? Maybe I am
wrong—

Prof. Jenks (interposing). I really think you are.

Senator Reed. If I am, I should like to have somebody point out
where.

Senator Hitchcock. I rather sympathize with that position of
Senator Reed. It seems to me the plan you propose, Professor, and
which seems to be contemplated by this bill, is going to involve tre-
mendous shipping of currency. It is going away from civilized
methods and getting back to the dark ages where actual transfers
had to be made. At the present time it is a mere matter of credit
which is transferred on the books of the banks, very largely, but you
propose the physical shipment of currency.

Prof. Jenks. Only the physical shipment of currency from sec-
tions of the country remote from where you are doing your business.

Senator Hitchcock. But this is a country which does business in
a very homogeneous way. We have no national lines, and business
does not run according to State lines.

Prof. Jenks. The essential thing, of course, is to see that you have
your contraction prompt; that you get your bills out of the way and
redeemed.

Senator Reed. And then, if this is workable, as I suggested, you
do not have to keep the printing presses running printing new money
and a lot of clerks destroying it. You set aside this money when it
comes into the Federal reserve bank, this $1,000,000; you take
$1,000,000 of these notes out of circulation and put them over with
the Federal reserve agent and he holds them. Day after to-morrow
that bank needs another $1,000,000 for a similar transaction. It
comes over and gets $1,000,000 of this currency that has been through
the channels of trade and takes it and loans it out, and at the end of
90 days it has to retire that $1,000,000 again, and you do not have to
keep the printing presses running. Maybe there is a hole in all
that—

Senator Pomerene (interposing). You make a fixed quantity of it?
Senator Reed. No; that does not make it a fixed quantity.

Senator Pomerene. There is $1,000,000 issued, and you destroy $1,000,000 at the end of 90 days.

Senator Reed. That is exactly the point. The point is, we have issued this $1,000,000 for the purpose of floating certain commercial transactions which we have been told all along are to pay this off. They are to do it within 90 days. At the end of 90 days, therefore, the use of this money for that particular transaction has ceased. If you leave it out longer you have an inflation. Now, this provides that the bank shall take it by direct methods—not by the indirect method of canceling bills that come into the wrong place—shall take up $1,000,000 of that currency.

Suppose we have $150,000,000 out, for the sake of illustration; that is, what we think is safe. We have issued $100,000,000. To-day the banks issue $5,000,000 more. Now, we have $105,000,000 out. To-morrow there is $5,000,000 more of this paper that has to be taken up. It is carried over here and retired with the Federal agent. The next day they need $5,000,000 more. They have taken out of the aggregate that is circulating around, and they have this money over there with the Federal reserve agent. They have gathered it up, and they simply take it and issue it upon this collateral. Then every time that collateral comes due—every 90 days—they have to have a contraction that equals the expansion, and that 90 days does not mean each period of 90 days; you are contracting and expanding all the time.

Prof. Jenks. That is the question, I think, the Senator here had in mind, and I was going to ask a question. What you mean, I understand, is this, that on every day a provision shall be made that there must be paid in to the Federal reserve agent as much money, or as many notes, or the equivalent of those notes, as was taken out 90 days before.

Senator Reed. Yes.

Prof. Jenks. So it keeps up a continuous process. So far as that is concerned, that is practically provided in the bill now, and I do not see that it affects the situation.

Senator Reed. If that is provided, that ends it, does it not?

Prof. Jenks. I do not think it does quite. What is provided is this, that the Federal reserve agent has reported to him every day, of course, what the situation of these accounts is. If a collateral note is paid off, he is either going to have the Government notes back or have some other collateral notes substituted.

Now, if the business is expanding, the chances are 10 to 1 that he does not get these bank notes in; and I do not quite see now that he ought to get the notes in, because he has substituted, we will say, for the $50,000 of collateral notes that are due to-day $50,000 others; and I am inclined to think that your plan would involve a good deal more shipment of money than mine would.

Senator Reed. I do not think it involves any.

Prof. Jenks. In this way: These loans are not made by the regional banks themselves, but through the different member banks that are scattered 100, 200, or 500 miles away.

Now, if those actual physical notes that are sent out from this regional bank have to go back to the regional bank so that they can be
turned over at the end of 90 days and the equivalent amount of them substituted, you have got a good deal more of shipment under your plan than I have under mine. Perhaps, however, I misunderstood you.

Senator Reed. No; I think you have gone into a detail that I did not take up.

Prof. Jenks. Yes.

Senator Reed. Well, the member bank now owes the regional bank $1,000,000, which it got from the regional bank 90 days ago?

Prof. Jenks. Yes.

Senator Reed. And its collateral is up with that regional bank?

Prof. Jenks. Yes.

Senator Reed. If the regional bank collects that collateral, it has now got in its vaults all the money it loaned out, and the $1,000,000 is still kiting around the country somewhere—the $1,000,000 of currency.

Now, the question is, how to get that back.

If you provide that the bank which got the accommodation wipes out its obligation by either—its obligation is already wiped out by the payment of this collateral if it is done in that way. I do not assume that it will be done in that way; I assume that those collateral notes will be collected by the member bank and remitted to the regional bank; and I assume that there will be passed through that regional bank, consequently, a large flow of this currency; that it will go there in vast quantities and that all it has got to do is to take the $1,000,000 of that that is coming in, retire it from circulation for the time, and turn it over to the Federal Government.

Senator Pomerene. Is it your contention that this $1,000,000 shall be set aside at the end of 90 days?

Senator Reed. Set aside; yes; at the end of a given period. In other words, I go down to a bank—I look at the transaction in this way: I go down with my credits to a Federal reserve bank, with $1,000,000 of promissory notes.

Prof. Jenks. Yes.

Senator Reed. Now, I in fact borrow from the Federal Government, for temporary use, $1,000,000 of this currency. The purpose is now, if I understand the thought of this bill, to carry me until the transaction involved in that 90-day paper which I put up has been completed and the paper has liquidated itself. That is the theory of this bill. Now, at the end of 90 days, that collateral has all matured.

Senator Nelson. And is paid.

Senator Reed. And is paid. Now, either the member bank has collected that or the regional bank has collected it. Assuming, for the present, that the regional bank has collected it, then at the end of 90 days, the regional bank is whole. It has got its money back, but it has got $1,000,000 of its notes floating around.

But, coming to that regional bank must be a constant stream of this bank currency, and I would make it the duty of the officers of that bank, at the end of 90 days, to take $1,000,000 of those notes and retire them. Then the transaction is completed; it is over.

If the member bank was to collect the collateral, it would be reimbursed now. And then I would make it the duty of the member
bank in that case to notify the regional bank, and the regional bank would deduct from the amount of credit to that member bank $1,000,000 and retire at once $1,000,000 of this paper.

Why is not that workable? I am not a practical banker—but you have got to pay that debt; and they have been telling us the reason there was not any inflation in this bill, or any dangerous inflation, and the reason it was a safe money was because the money was issued upon promissory notes, which represented an actual commercial transaction which liquidated itself. Now, that is——

Senator Nelson (interposing). Now, if I understand, Senator Reed, will you allow me to put your question into shorter form?

Senator Reed. Certainly. You generally can do that better than anybody I know.

Senator Nelson. If you would not take any offense, I would like to do it.

Senator Reed. No; I would not take any offense at all.

Senator Nelson. Would that be better, when one of those regional reserve notes, or currency, is redeemed by the Federal reserve bank, that was the end of that note; that it was retired from circulation? Would not that cover the point?

Senator Reed. That is what I mean.

Senator Nelson. Would not that be the safest way of regulating the currency automatically?

Prof. Jenks. As far as I understand, the bill does that now pretty well, except that it does not cancel its own notes.

Senator Shafroth. It holds them.

Prof. Jenks. It holds them. But there is a point that I am not quite sure I understand, and that is this: I think that most of these notes will be collected through the member banks.

Senator Nelson. You mean redeemed?

Prof. Jenks. Yes; redeemed. Well, now, I ought to put it this way: I ought not to have said "note." I mean the commercial paper.

Senator Nelson. The collateral for the currency.

Prof. Jenks. Yes: the 90-day paper which the Federal reserve bank is holding will be sent back to the member bank for collection. When that is collected it will be paid in these notes—this currency—and if it is paid in these notes, the proper credit is given to the member bank and some other commercial paper substituted in the regional bank.

But, now, why should that member bank—why should that cancel the currency note from its own regional bank? And the present bill does not provide that it should. It lets it hold that as long as it wants to. And I think that is all right; that will avoid shipping the notes back and forth. If they are to be shipped back and forth, as the Senator suggests, there would be a great deal of shipping.

Senator Reed. I do not think there would be any at all, if we follow it on. Let us take this transaction: You are a regional bank and I am a member bank.

Prof. Jenks. Yes.

Senator Reed. And I go to you and say, "I want to borrow $1,000,000."

Prof. Jenks. Yes.

Senator Reed. And I say, "Here is $1,000,000 collateral." It is put up with you simply to make you say, "I issue my obligation for
$1,000,000." It is due in 90 days. At the end of 90 days I have got to take it up. You give me the money. I take it home to my bank and loan it out.

The 90 days expires. I owe you $1,000,000. I have a balance there with you. I have been maintaining a balance. You charge me $1,000,000, and instantly substitute $1,000,000 for these notes that have been coming through your window, putting them with the representative of the Federal Government, who locks them up; they are no longer in circulation.

Now, I have no credit with the bank whatever. Of course I have to send you the money, or I have to send you a draft for that $1,000,000 on some other bank. And almost all of it will be done in that way. And all there is in the whole scheme of physical labor is the book entries and the action of the Federal reserve agent coming over to the bank across the aisle each day, and saying, "There is $1,000,000 of this paper to be retired; give it to me." And he takes it and locks it up.

Prof. Jenks. Let me ask you one question further. Now, supposing when he comes over and asks for that $1,000,000 I should say, "I have not $1,000,000 here in the notes that have been coming in, but I have," we will say, "$700,000 in those notes, and I will turn over $300,000 to you in lawful money."

Senator Reed. That is all right. The money has been shrunk that much. Now, you know mighty quick, when you get the notes, you will say to him, "I want to swap those notes for lawful money."

Prof. Jenks. I understand that the bill provides for that at the present time, with this exception, that if the notes that are on hand at the Federal reserve bank are its own notes it turns them over and they are held there to be issued again. If they are the notes from some other regional bank, they are canceled and sent back for redemption.

Senator Reed. I am not in favor of issuing a sectional currency in this country. So far as I am concerned, I want a dollar that has got the Government of the United States stamped on it; good not only in every part of this country, but I would like to see it good in every part of the world.

Senator Hinchcock. I think it might be a pretty serious embar­rassment to the western reserve bank to have suddenly dumped upon it a large volume of the reserve notes of another bank, because it can not pay those notes out without a penalty of 10 per cent. It can not hold them in its reserves, which it is obliged to maintain. It has got to suffer all the loss while it is sending them to the Treasury for redemption.

You take a western reserve bank; perhaps it would be a week or 10 days before it could get that back from the Treasury. And I agree with Senator Reed that there ought to be some way in which these reserve notes ought to be as good for any use in one part of the country as in another.

Prof. Jenks. They are as good till they reach the reserve bank. I do not see how they can be as good for reissue and still insure their prompt redemption so as to contract the currency. So far as that point of delay that you are making just now is concerned, that would seem to be a matter of the credit, that could be arranged with the Treasury and reserve agent promptly. There is no delay necessary.
Senator Reed. Why will not the currency be made absolutely stable for this reason? Let us take the illustration a little differently.

Prof. Jenks. Yes.

Senator Reed. Take your illustration. Here is $1,000,000, which it is the duty of Senator Bristow, as Federal reserve agent, in your regional bank, to see that the $1,000,000 that I have got from you is retired to-morrow.

Prof. Jenks. Yes.

Senator Reed. To-morrow morning he comes in to you and says: "Here is that paper that you issued to Senator Reed's bank and it is due and I want you to retire it."

You say, "We have only $700,000 of his paper." "All right," says Senator Bristow, "give me your $700,000 and give me $300,000 gold." And he takes that over and puts it in the Government till.

The gold that you have there is a complete answer to any danger or any question of inflation. You have it there to redeem these notes on demand. You have it there for every purpose. It is a little better than your note.

The whole scheme amounts to no more than this, that I issue my check and I start it kiting around the country. It comes due and you are my agent of redemption. Well, when it comes due the check is not there. You say, "All right, let the check stay out for $100, give me $100 in gold, and I will retire that gold from circulation." There is the same amount of circulation out, and while that circulation which is out is not of the highest type, as long as the gold is there locked up to represent it and redeem it at any moment it is pretty good.

Prof. Jenks. Yes; that is all right.

Senator Nelson. Prof. Jenks, you must not think that we are spending time unnecessarily—

Prof. Jenks (interposing). I think that is an extremely important point, Senator Nelson. It is a new matter that I had not seen before.

Senator Nelson. This matter which Senator Reed and others have been discussing is to me very important.

Prof. Jenks. Certainly, it is important.

Senator Nelson. Let me put a case like this to you: We will say that you are a member bank and that Senator Reed is a regional bank.

Prof. Jenks. Yes.

Senator Nelson. And you deposit with him $100,000 of commercial paper due in 90 days.

Prof. Jenks. Yes.

Senator Nelson. And you get $100,000 in his notes?

Prof. Jenks. Notes; yes.

Senator Nelson. Or currency.

Prof. Jenks. Yes.

Senator Nelson. You loan that out to people around the table here, let us say.

Prof. Jenks. Yes.

Senator Nelson. By and by that currency comes back to Senator Reed for redemption, and he has to redeem it.

Prof. Jenks. Yes.

Senator Nelson. In the meantime the 90 days have run and that commercial paper is paid. It has been paid to the bank that issued
the notes. The commercial paper has been paid; the 90-day paper has been paid; and there are the proceeds of that 90-day paper with Senator Reed and there are the notes. Now, should not the proceeds of those notes that have been paid wipe out that currency? If you are going to keep that currency in circulation after you have got the commercial paper redeemed, you must put other commercial paper in there in place of it.

Prof. Jenks. Surely.

Senator Nelson. So, if you put other commercial paper in place of it you must return the money that has been collected on the 90-day paper to the member bank.

Prof. Jenks. Unless you are substituting one piece of commercial paper for another.

Senator Nelson. If you change it before they are paid.

Prof. Jenks. Yes.

Senator Nelson. But if you do not change it before they are paid, what then?

Senator Hitchcock. We have been going on the assumption that the Federal reserve bank secured this currency from the Government upon a definite length of time.

Prof. Jenks. I did not suppose so.

Senator Nelson. Oh, no.

Senator Reed. No; I did not mean that. The Federal Treasury gives to its reserve agent—will furnish its reserve agent with a large amount of these bills and instruct him how he is to pay them out. And he will have it on hand in these banks all the time, undoubtedly.

Prof. Jenks. Oh, yes; undoubtedly. He could not go to Washington every time any demand came in.

Senator Hitchcock. They will change from day to day.

Senator Reed. And every day the Federal reserve board will be notified as to how much money there is out.

Prof. Jenks. Yes.

Senator Reed. And when they see that there is more money out than the law allows—and I am in favor of putting an absolute limit upon it—they, of course, stop. And beneath that point which I hope the law will fix they will have a discretion, and if they see that there is too much money going out will raise the interest rate; so that the interest rate to-morrow will be so much. Or they will say, “We will not issue any more.” I know you shake your head, Prof. Jenks, at the absolute limit of the law.

Prof. Jenks. Yes.

Senator Reed. But I have got more confidence in the law than I have in the best human judgment when it comes to matters of this kind.

Prof. Jenks. I agree to that also, but I should think—

Senator Reed (interposing). There should be a limit. I think it might be generously fixed.

Prof. Jenks. Yes.

Senator Reed. But there should be some point that this board can not exceed until Congress and the President pass another law changing it.

Prof. Jenks. Why not put the limit on the basis of your reserve, which will make it all absolutely safe? Then you have got it adjusted to the demand of business, whatever it may be.
Senator Hitchcock. One o'clock has come, shall we take a recess?

Senator Shafroth. I suggest, Mr. Chairman, that we meet again at half past 2.

Senator Hitchcock. All right. We will take a recess until half past 2.

(Thereupon, at 1.05 o'clock p. m., the committee took a recess until half past 2 o'clock.)

AFTER RECESS.

Senator Hitchcock. Prof. Jenks, will you resume your statement?

Senator Nelson. I would like, Mr. Chairman, to get back to a question that is not clear to me at all; and I am going to put the question in a little different form from that in which I put it this morning. Prof. Jenks, this currency issued by the regional banks is nothing but the promissory notes of the regional banks which are guaranteed by the Government?

Prof. Jenks. Substantially that.

Senator Nelson. A promissory note to obtain money.

Prof. Jenks. Yes.

Senator Nelson. Well, we will say that you are a member bank and I am a regional bank. You deposit with me $100,000 in notes—90-day commercial paper—and you get $100,000 of that currency from me. You put that currency in circulation, it goes around, and ultimately it comes back to me?

Prof. Jenks. Yes.

Senator Nelson. I redeem it as the regional bank. Now, it may not come back until after all that commercial paper has been paid and collected.

Prof. Jenks. Yes.

Senator Nelson. We will suppose that you did not want to renew those notes or put in new notes. You allowed the notes to be paid, they were collected, and the money went to the regional bank, and the reserve notes that were issued upon it came back to the regional bank. Now, in that case are not the notes paid?

Prof. Jenks. The notes are paid.

Senator Nelson. The notes are paid, and they ought to be extinguished, and there would be no warrant to put them in circulation again in such a case. Now, the only warrant for keeping those notes in circulation, Prof. Jenks, seems to me this, that in order to continue them in circulation the regional bank must keep paper there—substitute paper for the 90-day paper?

Prof. Jenks. Yes.

Senator Nelson. And keep a continuing stream of that paper?

Prof. Jenks. Yes.

Senator Nelson. As soon as you cease to do that, and the last deposit of notes you have left there are paid or redeemed, and the money goes back to the regional bank that issued the notes, those regional notes are paid, are they not?

Prof. Jenks. Those regional notes are paid—redeemed.

Senator Nelson. They are redeemed.

Prof. Jenks. Yes.

Senator Nelson. And they ought not to be in circulation again. Do you understand my question? I will put it again, so that you can understand it.
Senator Hitchcock. Yes; I would like to hear you restate it.

Senator Nelson. Suppose Prof. Jenks is a member bank and I am a regional bank. He deposits commercial paper, 90-day paper, with me, and I issue to him $100,000 in this new currency. He puts the currency out; it travels around through the world and finally comes back to me, the issuing bank. In the meantime those notes—that commercial paper that he deposited with me has become due and it is paid. Paid in to me, the regional bank.

Now, does not that, when those notes—suppose he does not care about renewing the notes or giving more notes.

Senator Pomerene. Renewing the collateral, you mean?

Senator Nelson. Yes; renewing the collateral. He allows those notes to be paid to me, the regional bank, in full. I get the money and the regional notes that are issued for that commercial paper come back to me. Now, are not those notes paid, those notes of the regional bank?

Senator Hitchcock. Well, my judgment would be that, as fast as the commercial paper is paid to the regional reserve bank, that bank will see its reserve increasing.

Senator Nelson. Yes.

Senator Hitchcock. And as its reserve increases it will reduce its obligation to the Government by turning in notes or gold without waiting for the particular currency to return; that it will be a daily transaction, that as the reserve of the regional bank increases by reason of the payment of commercial paper the regional bank will reduce its obligation to the Government, and it will not wait for the particular currency to come back; and when that comes back it may either be paid out for other loans or it may be turned over to the agent of the Government in the regional bank.

Senator Nelson. No. But as a matter of fact this new currency, while it is in form the obligation of the Government, is really the obligation of the bank; and it is a debt that you owe to the bank.

Senator Hitchcock. Yes; but I—

Senator Nelson (interposing). And if that debt has been paid, why should those notes circulate any longer?

Senator Hitchcock. It is like a national-bank note now. The national-bank note comes in for redemption at the bank. A man may come in and present it and get gold for it. But within five minutes afterwards the national bank, if it has a demand for loans, will pay it out to a man borrowing money, or will pay it out to a depositor who is withdrawing money.

Senator Nelson. But you see the Government bonds as security are a continuing security which remain there.

Senator Hitchcock. And for that reason the bank is not able to reduce its currency. It remains stationary. But under this new system, from day to day, as its cash reserve rises, it will pay off its currency obligation to the Government. It will not wait for any particular currency to come back; and on the other hand it will, even after it has come back, continue to keep it out until it has additional use for it and the state of its reserves requires its use.

Senator Nelson. Yes.

Senator Hitchcock. I think it is the reserve in the bank which is going to govern the volume of currency. Do you not agree with me, Prof. Jenks?
Senator Nelson. Let us go back to Prof. Jenks as the member bank. He has got this currency from me, the regional bank.

Senator Hitchcock. I think you are mistaken there.

Senator Nelson. And the currency he gets is the promissory note of the regional bank.

Senator Hitchcock. I think you are mistaken that he necessarily gets currency for it. If he runs a bank and he desires to discount paper with you——

Senator Nelson (interposing). There are two kinds of discount. I am putting a case where he discounts paper with the regional bank for the purpose of getting currency issued by that bank.

Senator Hitchcock. Well, let us say he discounts paper with you. It is for him to say whether he wants it in the form of notes of your bank or currency, but whichever way he gets it, he gets something which he can use in his business.

Senator Nelson. What do I get?

Senator Hitchcock. He does not necessarily get currency.

Senator Nelson. I am taking the case where the discount is made purely for the purpose of getting currency.

Senator Hitchcock. You may get gold.

Senator Nelson. Not necessarily. I deposit this paper under the provisions of the bill, and say, "I want to get currency for it."

Senator Hitchcock. The bill does not give him any right to say that he wants currency for it.

Senator Nelson. But, upon application, he may do so. It is, of course, in the discretion of the board to issue it.

Senator Hitchcock. No; it is in the discretion of the bank; but it uses that currency just as it uses gold or national-bank notes. And upon any application from a member bank—it will depend upon what that member bank wants—as to what that bank gets. It may merely want a credit upon the books of the reserve bank.

Senator Hollis. He has got a right to assume that he will get currency upon his application.

Senator Hitchcock. He has a right to assume that he will get currency, but it is not treated differently from any other form.

Senator Nelson. But what is that currency, except a promissory note of the bank to pay it——

Senator Hitchcock (interposing). That is right. Here is a national bank——

Senator Nelson (interposing). But he has deposited with me as security for the redemption of that currency commercial paper due in 90 days.

Senator Hitchcock. It is not for the redemption of that currency. It is for the payment of the notes——

Senator Nelson (interposing). It is for the redemption of payment of that currency.

Senator Hitchcock. No; I think not.

Senator Nelson. The currency is issued on that commercial paper and on nothing else.

Senator Hitchcock. I think you are mistaken, because that paper can be changed from day to day.

Senator Nelson. Suppose he does not want to change it?

Senator Hitchcock. If he leaves it to you, as the reserve bank, you can change it from day to day.
Senator Nelson. How can I change it, unless you have new sets of men who have given new notes to the member bank?

Senator Hitchcock. No; the bill gives the reserve bank the power to change that security from day to day.

Senator Nelson. But how can the reserve bank change it?

Senator Hitchcock. Very easily. If Prof. Jenks has deposited $100,000 commercial paper with you and taken out either currency or credit, the very next day—you deposit that with the Government agent—and the very next day you can go to the Government agent and say: "I want to withdraw $50,000 of that paper and I will give you $50,000 of other paper in its stead.

Senator Nelson. But suppose Prof. Jenks does not care to do that? Suppose he lets that paper go to maturity and the money is paid in? Suppose he does not care to substitute other paper for it?

Senator Hollis. Then at the end of 90 days he walks in and gives you lawful currency to take the place of that issued to you; and he owns that absolutely because he has paid you for it; and those bank notes stay out to take the place of the lawful currency you turned in.

Prof. Jenks. May I answer the Senator’s question as I understand it? It seems to me that he is perfectly right when he says this, that whenever those notes which have been issued for this $100,000 of collateral come in and are presented to the bank and redeemed that closes that transaction, and those notes are redeemed and that ends it.

Senator Nelson. And they should not be issued again.

Prof. Jenks. And the Senator says they should not be issued again. Now that might be put in this way: They may be canceled completely and some new notes of the same denomination printed; but in case the bank and the Government think it is wise, instead of having that extra expense of printing, they might have these same notes go out again; it is the same printing, but it is really a new transaction; it is substantially a new note.

It is just the same as if I were to issue my personal promissory note to the Senator for an obligation, if it would be likely that he would take it payable to bearer on demand, and without interest. Then, whenever I pay that note off he gives it back. Suppose, a week later, I have not torn that note up and I want to borrow some more money from him; if he wants to take the same piece of paper back again that is all right. It is a new note, of course. It would be unusual, but if I have in hand that form it may be used.

Senator Nelson. It is a new note?

Prof. Jenks. It is a new note absolutely. So I say this: If the note has been redeemed, and either that paper or some other piece of paper is put out, it is in reality a new note, a new obligation.

Senator Nelson. And should have a new deposit of commercial paper back of it?

Prof. Jenks. Oh, certainly, it would have a new deposit of commercial paper back of it.

Senator Pomerene. Does not the difference here arise from the fact that we provide that the reserve notes are not issued on the initiative of the member bank, but upon the initiative of the reserve bank?

Senator Hitchcock. Yes.

Senator Pomerene. And all that the member bank is concerned with is to get the proceeds of its discounted or rediscounted paper? And it is a question, primarily, for the reserve bank to make applica-
tion to the agent of the Federal Government for the reserve notes? And it is a question between the reserve bank and the agent as to when that collateral shall be renewed; and it is not a matter about which the member bank concerns itself?

Prof. Jenks. But, as I understand Senator Nelson's question——

Senator Nelson (interposing). Well, Prof. Jenks, will you tell me this: How can the reserve agent and the member bank renew those notes without action of the makers of them? They have got to be renewed by the makers of the notes, have they not?

Senator Pomerene. The reserve bank might take notes from the New York bank, or the Syracuse bank—I mean collateral notes—or the Buffalo bank, or any other bank; and it is a question between that reserve bank and the agent as to when this paper shall be redeemed and what additional collateral may be hypothecated from time to time.

Mr. Fisher. The point I understand Senator Nelson to make is this, that when the reserve bank finally returns these notes to the reserve agent and as they are redeemed and he takes something else instead, whether that closes that transaction. As I understand it, it does close that transaction.

Senator Pomerene. I think so.

Prof. Jenks. But it is still possible, under the law—and I judge is contemplated under the bill—that these same pieces of paper may be reissued a second time for new collateral put up. They do not need to print new paper every time.

Senator Pomerene. No; I should think not; I do not so understand the bill.

Prof. Jenks. I judge, also, if these notes are redeemed by the Treasury, that the Treasury sends those notes back to the Federal reserve bank and that the Federal reserve bank is authorized to put them into circulation again against proper collateral. They do not need to reprint every time; that is the point; but it is practically a new issue of notes every time after they have been redeemed once.

Senator Pomerene. Yes.

Senator Hitchcock. Now, do you think the effect of this is going to make it easier for banks to lend money?

Prof. Jenks. I think that, as the bill stands, it is going to make the banks rather more desirous of lending money, because there is a chance of a somewhat better profit than under the present national-bank note system. Under the present system, as I understand it, the direct profit of the banks on circulation is kept pretty low, below 4 per cent, including the interest on the bonds, as a rule. Under this system the profit of the banks would be substantially on the amount loaned above the reserve, whatever the rate of interest might be at the place where they were making the loans, less the interest that might be charged by the Government for the issuance of the note at the Federal reserve bank. That would presumably be the case. That, I should suppose, would be rather more than under the present circumstances, so I think they would be a little more eager to get the notes into circulation.

Senator Hitchcock. Now, if a man comes into a national bank in the city to borrow money, if he is perfectly good the bank will not be able to lend him because it is so near the limit of the reserve.
Prof. Jenks. Yes.

Senator Hitchcock. If he goes into such a bank, after this bill passes, that bank will be perfectly free to lend him, if his credit is good, because of its ability to rediscant his note or any other note like it at the reserve bank, and the operation would be profitable.

Prof. Jenks. Yes.

Senator Hitchcock. Now, I want to ask you, under those circumstances, whether the result will not be that there will be a probable expansion of bank loans?

Prof. Jenks. I think there is likely to be some expansion of loans. I do not see any reason for thinking there is going to be any very large expansion of bank loans. The reason for that is, that at the present time, although a bank may decline a loan, and sometimes I suppose has to, because it is near the limit of the reserve, that does not very often happen. It is only in times of extreme emergency that it happens. And there is where, it seems to me, is the special advantage of this bill. It is in times of real emergency when there is really a great emergency that the bank wants to go beyond a certain fixed limit. Under this bill, by means of rediscounts, it can. And, further than that, this bill allows the bank, without violating the law, to go below the fixed reserve of 33 1/3 per cent, as you have it in the bill.

Senator Hitchcock. Has not the experience of Germany been, with a system very similar to this, that there have been periodic expansions of credit which have been followed by a severe strain upon their banking system and then a depression because of the contraction?

Prof. Jenks. I think we are bound to have anyway, no matter what system we have, certain periods of expansion and, following them, periods of relative depression, but we ought not to say that the expansion would be the cause of the contraction. Contraction is part of the phenomenon, but I do not think it is strictly because of expansion. If I may explain a little further what I mean by that, I should say that ordinarily most of the panics we have had come from what we might call simply the weakness of human nature. When business is running on well and there is a tendency toward prosperity, every business man is anxious to expand his business, of course. He is making a good profit, and he goes to a bank and gets credit, and he continues expanding that credit as much as possible. The bank shares that same feeling. It says, "This man is good, and I will loan him freely"; and so the whole movement of the country, at times, is toward expansion of credit. There is practically no limit. But if credit keeps on expanding and everybody is borrowing, the people begin to get speculative; they take more and more risks, and the banks share in that feeling for a while. But finally the banks see things are going too far, because they are likely to be conservative on that line, and then they will say to the borrowers, "I have got to stiffen my rates a little," and they begin to check down on credits. When they do check down on loans, naturally that makes the man who has been borrowing have some trouble to pay his obligations and there is a tendency toward stress. Now, if the banks start this process early enough, by putting the discount rate up promptly and keeping the brakes on steadily, that may prevent a too great expan-
sion, and then, perhaps, a sudden panic. But I do not see how, considering human nature as it is, we are going to avoid those times of expansion, followed afterwards, perhaps, by times of rather rigid depression. Then, in a little while the same process is repeated. I think that is inevitable in human nature. The difficulty we want to avoid is as many bankruptcies as possible. As soon as people get to this highest period of expansion, under the present circumstances when there are one or two failures the banks feel the danger and begin to contract loans. The banks who have deposits with the reserve banks call on them, and the reserve banks find their reserves called out by the smaller banks all over the country. Each one is grasping to get its reserve out, and they shut down suddenly and too emphatically upon loans; then the big failures come and we have a panic.

Senator Hitchcock. I think it was in March or April the bank statement showed a very low level for the reserves. They were down to the danger line, and since March, up to September, the banks have been strengthening their reserves, because it was seen they were down to the danger line. Now, suppose in March the banks had not been able to see the danger line indicated by the low reserve; suppose they had been able to go to the reserve bank and get additional currency to lend their depositors; then that danger line would not have been seen, the natural contraction would not have resulted, and we would have gone on expanding credit in this country. Would not that have led to a worse disaster if the banks had been in a position to put that off by rediscounting paper?

Prof. Jenks. I do not think there is that danger, for this reason: When we are getting down toward the danger line under this system—provision is made here that the reserves shall be a certain fixed amount—then we can see it is time to contract the credits.

Senator Hitchcock. You mean the reserve kept, not in the individual banks, but in the regional bank?

Prof. Jenks. In both.

Senator Hitchcock. I do not see how the individual bank would know, because the individual bank, if it finds its reserve low, all it has to do is to rediscount paper with the regional bank and fortify itself with cash.

Prof. Jenks. Of course that would appear also in the falling reserve of the regional bank when it did that.

Senator Hitchcock. That would at once strengthen its reserve and every bank could do the same thing.

Prof. Jenks. The regional bank, when it saw things going that way, would say, "We are not prepared to discount paper except at a higher rate."

Senator Hitchcock. The regional bank?

Prof. Jenks. The regional bank directors, as well as other banks, will be able to see it in time.

Senator Hitchcock. Where do they see it?

Prof. Jenks. The Federal reserve board notices the reserves are getting low and it will notify the banks. Its statements are to be published weekly, as I understand it; at any rate, so that the whole country will be notified if the country does get into that situation. Under those circumstances the presumption is that the regional
banks would already have begun to put on the brakes, anyway, at about the same time. But, if they do not, it is the business of the Federal reserve board to say you must.

Senator Hitchcock. Suppose the reserve of the regional bank appears to be getting low, down to 33 per cent—and you favor allowing them to go lower in the banks?

Prof. Jenks. Yes; and put the tax high enough to stop it.

Senator Hitchcock. Suppose they had gotten down to 33 per cent. Now, a bank having applied for currency, can go there and get, say, a million dollars of currency from the Government, and set aside $300,000 for reserve and have $700,000 for—

Prof. Jenks. Oh, I beg your pardon, it does not set aside 33 per cent of that; it has to set aside 33 per cent in gold, which is quite a different proposition.

Senator Hitchcock. It is not so very different, because by putting out that currency it draws gold in. Gold is coming in over its counter all the time. It could not set aside the reserve out of that particular million dollars, but by getting that million dollars of currency it would be only required to keep $333,000 of gold or legal tender, so it would have $667,000 to advance the banks.

Prof. Jenks. If it keeps the requisite amount of gold back of it continually, and is careful with reference to the credit of the people to whom it is making its loans, it is safe. But of course there is always that danger, and I think that always will be true under whatever system you get. We shall expand in times of good credit, of real prosperity, all along the line, and the regional bank will be doing the same as the individual member banks. There is always danger of that. That can not, so far as I can see, be absolutely avoided. Under the proposed system, when we are on the verge of a crisis, with our reserves down to substantially 33 per cent, and a case comes in where a bank is on the verge of bankruptcy unless it gets a little help to carry it over and it can put up good collateral, the reserve bank will say, "Very well, you can have that, but you must pay a good high rate." And the presumption is, seeing that coming, they will be putting up the rate before the crisis comes, and that is what is done in Germany and France continually. As soon as they see the reserves diminishing they put up the discount rate, and that does put the brakes on.

Senator Hitchcock. You rely, then, on the Federal reserve bank checking the loans of the member banks?

Prof. Jenks. The reliance is all along the line, but the ultimate reliance is upon the Federal reserve board. Next the reliance is upon the boards of directors of the regional reserve banks, and then, beyond that, upon the boards of directors of the member banks, and that is one of the great advantages in this bill—you have there one great system. Really, if the proper requirements are made for having the regional banks and the Federal reserve board working together, you have one great system, where, as the law is now, you have 25,000 different fellows working in different ways.

Senator Hitchcock. Suppose John Smith comes into the bank now and applies for a loan and the banker tells him: "I am sorry, Smith; you have perfectly good credit, but I am not able to loan you because there is such a strong demand for money and we are down to our reserve limit." That is an answer to John Smith.
Suppose, now, under the new order of things, John Smith comes into a bank and the bank says, “We are sorry, Smith, we can not lend you; we are down to our reserve.” Smith says, “That does not make any difference; you can discount your paper with the reserve bank.” That is no answer to Smith.

Prof. Jenks. I think it is an answer to Smith, because the bank would put it this way: If John Smith is perfectly good and the bank is confident he is all right, then it is up to the bank to rediscount his paper and accommodate him.

Senator Hinchcock. Now, then, apply that to the tens of thousands of borrowers and the thousands of banks; is not that one influence alone going to expand bank loans?

Prof. Jenks. It will, some, but I think it will do no harm, and the reason for that is this, that John Smith is told: “Under the present circumstances you realize that the rate of discount has gone up, and instead of your paying $4\frac{3}{4}$ per cent, as I have been charging you before, because you are a good customer and have rather large loans, I have got to make it $6\frac{1}{2}$ per cent,” and that will rather open his eyes. And especially if it goes to 7, he will say, “I guess I will hold off a little bit.”

Senator Bristow. When it goes to 7 what is the bank paying the Government for the money?

Prof. Jenks. What the bank would be paying the Government for the money would depend upon what the board of directors of the regional bank says, with the approval of the Federal reserve board.

Senator Bristow. How much would you, in your judgment, think that ought to be?

Prof. Jenks. I do not believe I have much of a judgment on that matter. I do not think that question could be answered categorically in that way. It would all be dependent upon the circumstances of business at that time.

Senator Pomerene. That would be a variable quantity?

Prof. Jenks. Yes.

Senator Bristow. Here is John Smith and his loan is turned down, and he says, “I will have to charge 7 per cent,” when you have only been charging 6. He knows; he is an intelligent man and understands this bill. He knows on good security you can get money at the bank. You decline to do it and give those reasons. Now, suppose you lend this money at 7 per cent, how much is the bank to pay the Government for the use of that money?

Senator Nelson. The bill presupposes a tax of not less than a half of 1 per cent upon the currency.

Prof. Jenks. I do not think that covers it, Senator. It presupposes that tax, which I personally may be inclined to object to, but the point, I think, is rather dependent upon the discount rate. Now, I should suppose that the discount rate of the regional bank, in ordinary times, would not be high. I am not a banker; I have not much of an idea, but I should say, really, it would be very low—2 per cent, perhaps.

Senator Bristow. Two per cent?

Prof. Jenks. Remember, I do not want to be held to that as a definite thing, but I say when you get to this condition of affairs you
are speaking of, then I should expect the regional bank to put the rate up to 4 or 5 or 6 per cent, perhaps. You see, there is quite a difference between the question you are putting to me and the question that comes up in the Reichsbank in Germany or the Bank of England, or any of those that have a fixed rate of discount, and that difference is essentially this: In this country we are to deal only with the banks, but they also deal with the individual concerns. They go into the market in competition with other banks. The purpose of this bill, I think, is very wise. It does not deal with John Smith, no matter how big a man John Smith may be. It deals with other banks. And, moreover, the purpose of this Federal reserve bank is not to make profits. Its reserves are to back up the individual reserves throughout the country. It would, I should suppose, under the circumstances throughout the country, keep its interest rate down low enough so that it could pay the 5 per cent or 6 per cent and, if anything beyond that, enough to make it reasonably safe. But I do not think it should keep the rate of interest high enough to make big profits for the regional bank. They let the profits—and it in fact will have to—go to the member banks, or the member banks would not be in business with them.

Senator Bristow. Now, Professor, there are a number of sides to this. If this regional bank is loaning these member banks money for 2 or 3 or 4 per cent less than that member bank is asking its customers, your system will not stand 12 months in this country.

Prof. Jenks. Let us put the matter in this way: When the regional bank is rediscounting the paper of the member bank it is, after all, not of itself taking any large profits, while, if it would charge more than 1 or 2 per cent, the individual bank would not come to it. Why should it? The citizen knows that you are the manager of the local bank; you can loan money at 5 per cent, and where you get your money to loan, ordinarily, is from the deposits, on which you pay no interest at all. You have to keep a third of your deposits in your vaults in order to keep yourself safe and in order to be within the law, and you are getting a large part of what you loan for nothing.

Senator Bristow. That is not the fact, though.

Prof. Jenks. Not quite. Of course, we know in a bank with large deposits it has to pay 2 per cent.

Senator Bristow. The country banks pay more than that for the large part of their deposits.

Prof. Jenks. I suppose they do sometimes.

Senator Bristow. Usually.

Senator Shafroth. Most of the banks will require accounts of $5,000 balance before they will pay any interest.

Prof. Jenks. I was going to say also in the case of most of the banks in the larger cities they require the small depositors to have an account of at least $200 with no interest.

Senator Bristow. You take the average banks, and they pay interest on deposits of $200 to $500 on time certificates of deposit, the rates running all the way from 3, 4, or 5 per cent.

Prof. Jenks. That is another situation—the time deposit—that is another matter. We are talking about demand business. On demand business they do not.

Senator Bristow. No; on demand business they don't.
Prof. Jenks. On demand business, they do not, and a very considerable portion of their loans are made on these deposits.

Senator Shafroth. Three-fourths of them.

Prof. Jenks. Yes. Now, if they do that, why should they ordinarily go to the regional banks and pay any large amount of interest? In case of emergency, they will.

Senator Bristow. I will tell you why: They have loaned out all of their deposits, and along comes a farmer that is good, and they do not want to refuse him. He wants more money, and they are going to accommodate him. They can not turn him down. They have an excuse now. We are dealing with human nature.

Prof. Jenks. Certainly. That is an emergency.

Senator Bristow. He comes into my bank; our relations are very cordial, and he says, "I want $5,000." I will say, "Now, I don't know, our reserve is down, and I do not know what is coming, and I do not like to spare it." He will say, "Well, that is true," and he will be satisfied. He will have to be. But now, he will say, "We have a new system here; we have a Federal reserve bank here that you are a stockholder in, and they will discount your paper and give you the money to loan to me, and I want it; I need it." That bank is going to ask for that money.

Prof. Jenks. Oh, yes. And, for that matter, under those circumstances, which is a real emergency circumstance, he will pay the regional bank whatever they ask to be able to let him have it, if necessary.

Senator Bristow. Yes. Now, then, he says, "Here, your bank charges me 7 per cent, and it comes down here to Washington and gets the money for four," and it gets the money from the Government, as the public understands this to be, because if that is not what it means, then you are buncoing the public.

Prof. Jenks. Under those circumstances which are not the normal I should say they will charge the going rate there, whatever that is.

Senator Bristow. Professor, that is going to happen in every bank in the United States, just as sure as this law goes into effect, and I think you are up against a pretty serious proposition.

Senator Weeks. It seems to me you have probably fixed, in your mind, the rate of interest that will be charged by the reserve banks much lower than it will be in actual practice.

Prof. Jenks. Excuse me, I had not fixed any rate, at all.

Senator Weeks. I mean the rate you stated. That is the French bank rate.

Prof. Jenks. Yes.

Senator Weeks. But the actual result in European countries is that the rates have been substantially the same in the joint-stock banks and the central banks for a long period of years.

Prof. Jenks. Yes.

Senator Shafroth. It is a little higher in the joint-stock banks?

Senator Weeks. Frequently; sometimes higher and sometimes lower. I agree with Senator Bristow that if there were to be a difference in the rate of 2 or 3 per cent the people would not stand for it.

Prof. Jenks. I agree to that, too, Senator.

Senator Weeks. I do not think that would be a good thing. I think it would be a bad system, but I think, being in a developing
country as we are, the rate of the reserve bank should be higher than the European banks, and it would gradually equalize and lower the rates in the United States.

Prof. Jenks. Yes; I agree to what you say on that point.

Senator Nelson. But here is one point that strikes me: If a member bank can not charge a greater rate of interest than that paid to the reserve bank—

Prof. Jenks. It must.

Senator Nelson (continuing). It would have no profit; it would have the expenses of borrowing the money and loaning it again without any profit whatsoever.

Prof. Jenks. I do not understand Senator Bristow to imply that the rate should be the same.

Senator Bristow. I think the people might stand for 1 per cent, probably, or a half per cent, or something like that.

Prof. Jenks. Wasn't the point this, Senator, that the charge made by the smaller national banks would be made independently of the regional banks? The regional banks are primarily a reservoir to use when the member banks are pushed somewhat.

Senator Bristow. I will tell you, Professor, what I think. I think we are creating machinery here that invites me to go to my own bank and ask for credit when otherwise I would not, because I know there is a great reservoir here where this banker can get the money. I think that. I think we are creating too complex a machinery, a more complex machinery than is necessary to take care of a simple problem. What we need is an elastic currency.

Prof. Jenks. Yes.

Senator Bristow. And, they say, mobilization of reserves. The result of these hearings shows that there is not much to that. That is theoretical more than practical, because these reserves are being used every day now just about as much as they can. The fact is we have 6 per cent reserve in national banks, or a very little more. But, be that as it may, if there was some automatic way by which the bank at Salina, Kans.—that is where I live—could make me a loan, and let the loan depend on its action and its ability, but when the crisis came upon the center—the crisis, I think, never originates outside the center; it is never in the country; it is always in the center—when the crisis comes, so that the center can not get money to pay out to the exterior regions when they want it, but let it go to the Government with its assets and get that money. If New York, in 1907—that is where the crisis started—could have gone to the Federal sub-treasury with assets that were good and gotten $500,000,000, which is down here printed now, there would never have been any panic. Now, why can not we make some simple addition to the present facilities without taking the chance. Nobody knows what this bill will do. We can guess at it; we can theorize on it, but what will be the practical operation of it is an experiment.

Prof. Jenks. Of course, that is true with reference to almost any new thing. But it seems to me, on the other hand, Senator, that unless you do have the machinery of something of the type provided here, you are not going to get what you have put down as the first consideration, and that is, your elastic currency. That is something that must be provided for readily and steadily all the time.
This point you made last, with reference to the time of emergency is what is provided for in this bill, first, in the way of their being ultimately in a position to rediscount—and it is not expected that they will rediscount from day to day, as I understand it—to rediscount pretty freely, and to get notes to practically an unlimited amount as long as they can put up the security.

Senator Bristow. If they shall not have to do it from day to day. But we have no currency except this and the greenbacks; and the national-bank notes are to pass out?

Prof. Jenks. Ultimately.

Senator Bristow. All the currency we have is to be this currency, regulated by human judgment?

Prof. Jenks. Regulated by the demand of the local banks themselves. That is what it will amount to. I would not say it was entirely regulated by human judgment.

Senator Bristow. Would it not be? If the local banks want to issue these notes when it needs them, and then let them nominally retire and let the Government guarantee them?

Prof. Jenks. I, myself, said at the beginning of the hearing that my own personal preference would be for bank notes, properly secured. I said, so far as this bill is concerned, I think it is excellent along that line; although they were Government notes, they were issued only through the banks on the demand of the banks, with the banks responsible first, and responsible in practically all points up to the double liability of the stockholders and that the Government was only ultimately responsible, so that in effect, I think you have in this system here substantially what you are asking for, a bank note with a Government guaranty. That is what I think it really is, under a different name.

Senator Bristow. Yes; that is the theory advanced here by a number of people. Say that it is a bank note with a Government guaranty. Why should it not be arranged so that I could go into a bank at home, and if I borrow, say, $1,000, the bank gives me credit for $1,000; I simply deposit that. That is the way it is done, and that amount is there subject to my check.

Prof. Jenks. It is, now.

Senator Bristow. Now, if I wanted currency instead of credit, instead of a check book, why should not the bank give me its notes instead of a check book?

Prof. Jenks. As I said before, I think that this, with very slight modifications, could be so arranged that it would give its own note. I should say that substantially now the bank in giving these Government notes—is giving its own notes, because it is responsible for them just the same as if they were its own notes.

Senator Bristow. If that is true, why do we want the bank at Salina, Kans., to pay 5 per cent down here at its regional bank, and take 10 per cent out of the capital stock, and drain that little community of that much of its accumulations in order to do that?

Prof. Jenks. I think, perhaps, I see now the difference of opinion which we would have. I should say the reason why it had, the chief reason why it had to do that is because it is desirable to have a real system that will give a mobilization of reserves back here, so that if your bank finds itself more or less pinched at any time it
will be in a position to handle its reserves, whether or not it could under the absolutely independent circumstances it is in now. Even under our present system your bank out there has to keep a deposit in a reserve bank, and it is probable that it would anyway, even if it did not have to, as a matter of convenience.

Senator Bristow. Now, Professor, I think that the hearings we have had here have demonstrated this to my mind, that the reserve which we now have is much more elastic and more mobile than the reserve will be in the regional bank. It comes about in this way: Take the bank at Salina, Kans. It keeps its reserves at Kansas City, Chicago, and New York. Say it has $1,000,000 deposits; it will keep $90,000; we will say it has $30,000 in each of these cities. Now, in the course of its business it will sell exchange, probably $30,000 worth in one day on Kansas City and have very little demand on New York. Now, it has a little above the 9 per cent always. It has to be to make this secure. If it has more than 6 per cent in its vaults the amount runs up from $60,000 in the vaults until it is $75,000. It can go below $15,000. It has reserves in all of these cities; it can take out every dollar it has in New York or Chicago or Kansas City, if the sum total amounts to that, and so the bankers have told us that some days they do sell their entire account in Chicago, and the next day or the next week there may be a run in some other city. But in all of the cities and at home they have that mobilization and versatility, while now they have to have 5 per cent at home and 5 per cent in the regional banks, and they can not credit one with the other.

Prof. Jenks. Under the new system I believe the larger part of this will be done substantially as it is now, so far as that is concerned; but they must keep these minimum reserves, and as you say, the larger part of the business they will probably handle as they do now.

Senator Bristow. Then you will be impounding 5 per cent in this way here, which is of no use to them except as an insurance.

Prof. Jenks. There is the point. And, of course, there is a little bit more than that. There is the insurance, which is quite worth while, because these times of stress come every few years anyway, and in addition to that they are getting some return on this 5 per cent.

Senator Bristow. On the capital; not on the deposits?

Prof. Jenks. On the capital; not on the deposits.

Senator Bristow. In times of stress the experience of the country is, and I think it would be admitted by all of us now, that the country banker never has any trouble to get money from his reserve agent if that reserve agent can get the money.

Prof. Jenks. That is the point.

Senator Bristow. He does not have any trouble. Most of them get enough. The testimony here has been that the country banker’s reserve agent takes care of the country banker. If the reserve agent can take care of himself by going to the Treasury, as he could now, if it were made a little more flexible, and get this Government money we have printed down here, which has all the qualities which our timid friends want, there would be no trouble. Now, what is the use, as a practical proposition, in our taking the chances on disaster here when we can remedy the defect by such a simple process?

Prof. Jenks. Could not the question be put fully as well the other way? What is the use of our taking the risk of not having a pro-
vision of this kind, which is secure and certain, for something that would not be so sure and certain the other way? Just let me add one word further. Suppose we were to adopt the system you have in mind, and say we would permit—I do not know whether you mean the large private or national banks in the central reserve cities to get money there?

Senator Bristow. Any bank which has the assets.

Prof. Jenks. And then leave it to them to determine how they shall take care of their customers. There is a great deal of competition among the different bankers for currency all over the country in times of stress like that, and my impression is that the large majority of the people would prefer to have an institution of this kind provided in the bill, where they know they can go and there can be no chance for any question of discrimination on the part of some private banker who will have some customers he would be much more likely to want to take care of than of others.

Senator Bristow. I would let any bank that had collateral come in and get relief, any bank that wanted it. But, so far as the practical operation is concerned, if he had an opportunity to go to the sub-treasury which might be located in a reserve city and get relief, there is not a correspondent that would not take care of him because they know they could not hold him up.

Prof. Jenks. Yes.

Senator Nelson. I want to call your attention to this difference: Take a bank in a central reserve city; it is required to keep a reserve of 25 per cent, and technically under the law it has no right to pay that out. Now, this 5 per cent fund in the reserve bank can be used as a basis for discount?

Prof. Jenks. Yes.

Senator Nelson. There is not that inhibition against the use of that by the reserve bank that there is in the case of the central reserve bank?

Prof. Jenks. That is true.

Senator Nelson. So it can be made 5 per cent, and while it is a fixed amount it is not as fixed as under the central reserve system; it can be made the basis of discount by the regional bank, whereas under the other system the 25 per cent under the law could not be used at all.

Prof. Jenks. That is true. There was still another point I was going to make with reference to what has been said before. That question in regard to a subtreasury opens up the very broad question of the single central bank of the question of a Federal reserve board with active banking power, and, of course, that is an entirely different question.

Senator Bristow. I would like to have your judgment on that as compared with this.

Prof. Jenks. My own personal feeling on the matter is again largely on account of this matter of the mobilization of reserves, that the best system would be a single Federal reserve bank with branches that should be established where it is necessary, rather than a Federal reserve board.

Unless you can have that central bank, and have that handled in a way that would be for the interest of the country under very careful Government direction, I think the Federal reserve board should have
its powers as far as possible supervisory rather than immediately directive. That is one criticism that can be very properly made against this bill, that in a number of cases the Federal reserve board has so many powers given it, and it has such discretion given it, that it is in itself practically a central bank.

Senator Brisrow. Why not make it in fact a central bank and let it operate the bank just like a board of directors operate the regional bank?

Prof. Jenks. Personally, I should favor that.

Senator Nelson. Would it not be better to have one central bank under the control of the Federal board, with all the powers that this board has, than to have a number of reserve banks?

Prof. Jenks. I think there is no question about that.

Senator Nelson. Would it not be perfectly safe if it was under Government control?

Prof. Jenks. I think so; that is my own personal preference.

Senator Nelson. Could not the reserves be utilized much better and be more available if there is 1 bank than 10 or 12?

Prof. Jenks. That is my judgment, clearly. I think the number of 10 or 12 is a very serious defect in the bill. If that number were put at 3 or 4, with the board so organized that they could have pretty ready intercommunication, I think that would do fairly well. I personally would prefer 1. I think it would be better.

Senator Brisrow. I am trying, and I am glad to say this for the record, that I would like us to develop a system that will serve the country the best. I do not care who is the author of it or who gets the credit for it.

Prof. Jenks. Surely.

Senator Brisrow. It is the best thing for all of us to devise and work out some scheme that will satisfy the people better by giving them the best service.

Prof. Jenks. Clearly.

Senator Brisrow. I have been exceedingly hostile to the Aldrich scheme of a central bank. I believe it would be controlled by a few men for selfish purposes. That is my judgment. That practical plan which has been suggested here occasionally seems to me would be so much more simple than the one suggested in the bill; the control of it would be the same, because it would be controlled by the Government itself; and then if there was anything in the mobilization of reserves you get the best that can possibly be had, because you have a single reservoir, and then any bank that wanted to become a member would avail itself of the privileges, whether it was a State, national, or private bank, if they met certain requirements.

Prof. Jenks. I had not understood when you used the word "sub-treasury" that you had in mind a single central bank.

Senator Brisrow. I did not.

Prof. Jenks. I should have agreed with you more promptly if I had thought that was what you meant. I supposed you meant some Government official whose main business was something else, and that I think is an impossibility. If you are going to have a central bank to do this business you want expert managers who know the business through and through and whose business it is to look after it.

Senator Nelson. And they want to be men independent of the banks?
Prof. Jenks. Yes; I would agree to that.

Senator Nelson. Absolutely under the control of the Federal Government.

Prof. Jenks. I should agree to that. I think I should prefer this, however, since we are speaking of this Federal reserve board: It would be better if we had a single bank with a board of directors. If we are going to have anything like the Federal reserve board named in the bill, I should like to have it made clear that the banks that are supplying the capital have some minority representation. I should not care to have them appoint the directors. I favor something of this kind, that out of a board of seven or nine they appoint two or three, or select a number of men from whom the President would make the appointments.

Senator Nelson. Present a list?

Prof. Jenks. Present a list. If they were to have a choice of three out of nine, I should say they should present a list of, say, 9 or 10, from whom the President could select three appointees.

Senator Nelson. Or two out of seven?

Prof. Jenks. Let them present a list of six or eight, and let the President take any two out of that list, or reject them all and ask for another list if he did not care to select any out of the list that was first submitted.

The banks, after all, are putting up the capital. They have great interest in it. In fact, they are the customers; they are the depositors. Everybody has a great interest in it, and it is extremely important that any system we have should have the confidence of the community, including the confidence of the bankers.

Let them have a direct representation, with men who have had experience. If they nominate 10 men, the President could take any 2 out of their list, and they would know they were men whose judgment they could trust, and they would know everything that was going on, and I think that would be better than the system proposed in this bill.

Senator Nelson. You think that would be better than the advisory-board system?

Prof. Jenks. I think so. If we are going to have the present system with the advisory board, I think the advisory board's functions ought to be changed. Say the chairman and the vice chairman of the advisory board be given the right to sit, without vote, with the Federal reserve board, so that they would know everything that was going on and have a chance to express their opinions in regard to all matters that were up for consideration. I think the common people of the country, who are interested in these banks, because most of them are depositors or are interested in the bank notes, I think they would prefer that. I was very strongly opposed to the Aldrich bill because I thought it was economically unsound to give so much control to the banks. The representation of the Government was an ex officio representation. I think the banks ought to have a representation, but distinctly a minority representation.

While we are speaking in regard to the board may I add that if we are going to have a Federal reserve board such as is proposed here it would be much better if ex officio members were not put upon it! What can the Secretary of the Treasury do in the way of actual direction when it nearly kills any Secretary of the Treasury to do his
present work? If he is chairman of the board, that implies that he is going to appoint committees. He can not give the work the attention which it ought to have. It seems to me that while the Government should have representation, and, for that matter, should have the controlling representation, it should surely be a representation by men who are appointed because they know the business and can give their whole time to it.

Senator Nelson. Devote their whole time to it?

Prof. Jenks. Devote their whole time to it. They can call on the Secretary of the Treasury for any information within his power to give, and they can do the same with the Secretary of Agriculture and the Comptroller of the Currency. There is another point, however, about the Comptroller of the Currency. He is in a position to examine these banks. He will be playing in two capacities. I think that is rather unfortunate. I think the Federal reserve board would be distinctly better if the three ex-officio members were left off.

Senator Nelson. Some people have suggested that we take off two and leave the Secretary of the Treasury on alone. What do you think of that?

Prof. Jenks. I should be inclined to leave the Comptroller of the Currency on rather than the Secretary of the Treasury, if I were to leave any of them, because his business is primarily with the bankers, and the business of the Secretary of the Treasury is primarily not with the bankers.

Senator Nelson. The business of the Secretary of the Treasury is with the entire fiscal system of the United States?

Prof. Jenks. Yes. And, moreover, the Treasury Department is so enormous and the demands are so strong that no man as Secretary of the Treasury can give any attention to this business that is worth while.

Senator Nelson. You think it would be better to leave on the Comptroller of the Currency rather than the Secretary of the Treasury?

Prof. Jenks. Yes; of the two I should prefer to leave on the Comptroller of the Currency. He is devoting his time entirely to the banking question, but to a different phase of the banking question, so I should think it would be better if none of them were left on and the entire board be made up of men who would give their full attention and time to it.

When it comes to the inauguration of this system, with the selection of Federal reserve districts, I think to make of these three men an organization committee, as is proposed in the bill, can not be a practical thing. They can not give any time to this very difficult task of organizing the system to begin with. They will have to deputize it to secretaries and clerks. Instead of doing that, why not appoint three or five men who are men of the right type for the organization committee to begin with? That is simply in addition to the other. It seems to me a mistake, especially at the inauguration of the system, when they are going to make the whole plan, to put on men who are not expert bankers and who can not give any time to it. Why not put in three men that the President can pick out who are really experts and let them give their whole time to it and get the thing done right?
Senator Hitchcock. The sentiment of the committee is strong in that direction.

Prof. Jenks. I think as regards the board also, the ex officio members really can not do the work that ought to be done. If the board is going to have the powers given by this bill, it is extremely important that the members of the board should be able to give their whole time to the work. No man ought to take a position on that board if he is not an expert and is not willing to give his whole time to it. He ought to be well paid for it, and expect to give his whole time to it.

Senator Bristow. You spoke of the banks having representation on this board because they were the stockholders. How would it do to have the stock of this central bank a voluntary subscription?

Prof. Jenks. I had a suggestion along that line that I thought of putting before the committee later, but since you raise the question I will put it before you now. I do not feel that I can speak with quite the degree of positiveness about this that I should like to, but I think it is worth consideration. I think it is rather unfortunate to drive national banks into this system, or drive anybody into the system. It seems to me that, on the whole, the wise plan, as I said about the notes, is to make a system that seems best for the country, and make it so attractive that most of the banks would want to come in.

Now, this brings up the question of the bonds and of the way in which the banks come in. As it stands at this time you are practically to force them into the system. Would it do to say this to the banks: You have your 2 per cent bonds now on which you are issuing circulation. You may come in or you may stay out just as you like. If you stay out you keep your 2 per cents and continue as now; if you come in we will exchange the twos for threes and we will give you all the privileges of the system. If you do not come in you will get none of the privileges, but at the same time you are free to do as you please. I think the banks have some reason to feel that when the 2 per cents were issued they were supposed to hold them until 1930, and we can say to them, at the end of that time, "You will have to give up your circulation, and in the meantime you may be free to do as you like."

Then, in case the banks do not take enough stock to supply the capital that you want, say $100,000,000, open the subscription to private individuals to take the rest. Then, of course, the banks are in this position: If they have not come in within the time of that subscription, and want to come in afterwards, they must find their stock; they will have to buy from somebody else. In that case you would be sure of your capital, and as sure of your control as you are now. You would not have a great group of people feeling that they were hurt and were rather disposed to stay out, or feeling that they were being coerced, or anything of that kind. I rather think that under those circumstances most of them would want to come in.

Senator Sillabroth. Would not that policy lead to the principal object of the reserve banks being to make money, because their stockholders being paid stockholders, they naturally would want to get as big a dividend as possible?

Senator Bristow. Why not limit the dividend?

Prof. Jenks. There is another side to that. May I just add a word along that line? I rather think there will be no trouble, because you
have what is substantially, at any rate, a 5 per cent guaranteed dividend. It is not quite that, but I think it would amount to a 5 per cent dividend, and if you leave also a 40 per cent return on the amounts above that on the stock invested, you would have no trouble in getting investors, and you would find banks coming in and bidding for it before a great while, and I think you would have your stock above par.

Senator Shafroth. If you start with $285,000,000 of deposits by the Government and $400,000,000 of reserves and $150,000,000 of gold reserves, you have over $800,000,000 to start with, and you are bound to make money out of that?

Prof. Jenks. I think so. It seems to me that in all governmental matters it is a desirable thing to make the legislation rather attractive than compulsory, so far as it can be made so, and at the same time the rules must be rigid, in order to prevent abuse. I think most of the banks rather than keep their 2 per cents and stay out would prefer to take their 3 per cents and come in and give up their circulation and take their privilege of rediscounting; and incidentally that would bring about the other thought, which I think Senator Nelson has in mind, that we should get rid of all the present national-bank notes very promptly and substitute the other notes for them.

Senator Hitchcock. I would like to see how you can figure out a profit for the regional banks.

Prof. Jenks. I do not know that we can.

Senator Hitchcock. Suppose they make a margin of 1 per cent on their loans to member banks?

Prof. Jenks. It seems to be the opinion of a number of people here that they can not make more; that if they do there will be trouble on the part of the people; they would not stand for it at all.

Senator Hitchcock. What do you think would be a proper margin?

Prof. Jenks. On that question, as I said before, I should prefer not to give any figures, because I do not know. I am not a banker; I have not been in that kind of business at all, but there is this situation that is certain with reference to that: If they were to go into the regular banking business they could make large profits. They are not supposed to do that, but I should suppose that with the deposits they have and the loans they will make to other banks, it may be expected they will charge enough so they would be sure to pay their 5 per cent dividend and something beyond that, at any rate.

Senator Shafroth. To adopt the suggestion of the Senator from Kansas would make them make more money, if there is only to be a difference between the amount of discount and the amount the Government pays in relation to the matter. They must charge 4 or 5 per cent. If it goes to 5 per cent, it goes into their treasury.

Prof. Jenks. If you make the division a little differently and allow the Government to get more, would the people stand for that, too?

Senator Bristow. But when they discount a note they get all but just a bare margin, enough to permit the member bank to come out even.

Senator Hitchcock. Of course, that is all guesswork. I want to ask a few questions about something you suggested, Prof. Jenks, sometime ago. Do you think this bill provides for such a mobiliza-
tion of reserves as is brought about by the European organization of a central bank?

Prof. Jenks. No, I do not; I think there are too many regional banks.

Senator Hitchcock. Suppose there were only one bank. Would that be such a mobilization as they have in Europe?

Prof. Jenks. I see no reason why it should not.

Senator Hitchcock. Take the Crédit Lyonnais, in France. It is a customer of the Bank of France, but the law does not compel the Crédit Lyonnais to keep any per cent of its deposits in its own vaults. So the result is it only keeps till money in its own vaults. The rest of the money is loaned up virtually. That is absolute mobilization; the reserves are all in use; they are all centralized in the Bank of France. But in the system we have here the banks are required to keep a certain per cent of their reserve in cash in their vaults, and what is cash in their vaults is not mobilized. They are required to keep another certain per cent with the reserve agent, and only two-thirds of that is permitted to be used, so that is only mobilized to the extent of two-thirds, is it not? Is not our mobilization in efficiency far below the European mobilization?

Prof. Jenks. Under the bill as it stands it clearly is. If we were to have a single central reserve bank with its branches in different places, or even have two or three, or even four, your reserve banks would be in a much better position by charging one branch and crediting another with funds; to transfer their credits from one section of the country to another than they are now under this bill. Under this bill there is a provision for reserves here and there in different sections of the country. And even although there is a provision made in the bill that the Federal reserve board may compel them to rediscount—and if you are going to have the 12 regional banks, I see no way out of that—I do not think that is a normal, easy, ready way to do it. I think it is desirable they keep in their vaults a certain amount, say, 5 per cent, for cashing notes as they come in, for paying depositors, etc. They must keep a certain amount there, and it does not seem to me that is too large.

But when it comes to going back to the larger reserves, they ought to be held so they can be distributed wherever they are needed in different sections of the country, and I do not see how with 12 banks, even with your Federal reserve board to order them to rediscount, you are going to get that reserve in anything like as fluid a condition as they have in the European systems.

Senator Hitchcock. Perhaps the mobilization of reserves is not as good an expression as efficiency of deposits.

Prof. Jenks. Efficiency of the resources.

Senator Hitchcock. Yes; where they do not need reserves in any shape at all.

Prof. Jenks. The efficiency of the resources of the banks, I think, would be greatly increased with a central bank.

Senator Hitchcock. Is there not another reason why this is not effective, that the banks that do not belong to the system are not allowed to deposit, so, as far as they are concerned, there would be just as much scattering of deposits as there is now?

Prof. Jenks. Yes; though that depends upon what their credit is with the banks in the reserve cities, and, as indicated by Senator
Bristow some time ago, by the condition of those banks themselves in time of stress.

Senator Hitchcock. How do you estimate the relative importance of the mobilization of reserves as compared with providing an elastic currency? Which is more important?

Prof. Jenks. It is hard to answer where both seem so absolutely essential. My own feeling is that the thing of most importance now, under the present circumstances, taking the matter as a whole, is the question of the elasticity of the currency. I should put second the question of the disposal of the reserve. If we include in the question of the elasticity of the currency the system we have here for increasing that currency promptly, I should say that is far and away the more important.

Senator Hitchcock. That is what will save us from disasters in the shape of panics?

Prof. Jenks. Yes; under our present system of issuing notes I should think it would be the other way. But with the system you provide in the bill, where they can rediscount and get notes directly, I should say the note issue is far and away the more important.

Senator Shafroth. They dovetail into each other; when the reserve gets low, the notes issue.

Senator Bristow. The reserve is a minor quantity when you can get the notes.

Senator Shafroth. What would you think of this, Mr. Chairman: Provide that these reserves which are specified in this bill as a minimum could be drawn upon by the banks upon the consent of some person like either the Comptroller of the Currency or the president of the regional bank, so that instead of having it fixed as it were, and the bank trying to get along without doing that in emergencies, letting them go into that and run it down to zero?

Senator Hitchcock. I think the professor's suggestion about that is the best, that the banks be permitted to run below the limit on condition of their paying the tax upon their percentage of deficiency.

Senator Shafroth. That is good; but as a matter of fact, if you do not get that it seems to me that there ought to be some power that can give it in times of emergency.

Senator Hitchcock. I much prefer the automatic method.

Prof. Jenks. Of course, your bill now provides that the Federal reserve board may suspend that provision, which, I think, is unfortunate. But, on the other hand, this automatic provision—supposing you had a rule that there shall be 35 per cent of reserves, and that for every 1 per cent your reserve drops below that you charge a 1 per cent tax. It is suggested, I believe, that when you get below 30 per cent you charge 1½ per cent. Then you are in this position: When you get down to 30 per cent reserve you are going to pay 5 per cent; when you get down to 29 per cent you pay 6½ per cent; when you get down to 28 per cent you are going to pay 8 per cent, and so on. By the time you are down to 25 per cent reserve you can not make any loan at all unless a man is practically on the verge of bankruptcy—as in a case I heard of during the panic, when a large concern needed very much to borrow $5,000,000—it was a huge concern. It got it at 6 per cent and paid $1,000,000 bonus. Well, that was better than going into bankruptcy.
Senator Shafroth. Prof. Jenks, could you put down in concrete form that amendment you suggested, and exactly where it is to come in?

Prof. Jenks. Yes.

Senator Shafroth. And will you take with you one of these bills and make in it all other changes that you think advisable, and mark it "Amendments suggested by Prof. Jenks"?

Prof. Jenks. I should be pleased to do that.

Senator Brisow. I would like to ask you to amend this bill so as to provide for a central Federal reserve bank—a central bank governed by a Federal board. I have a preference—although I do not want to suggest it to you; of course, you would use your own judgment—for independent stock holding, the same as the Bank of France, so that the public would subscribe to the stock. Then any reputable banking institution that wanted to keep a reserve with this Federal bank could, by virtue of keeping that reserve, come to it for aid in time of need and get it on the proper collateral.

Prof. Jenks. I should have no objection to either of those.

Senator Brisow. Then any banking institution that was sound and had collateral could get it in time of need, and it would not break up in any way our democratic banking system, which, I think, is the pride of our country.

Prof. Jenks. For that matter, this present bill does not break up our present banking system.

Senator Brisow. Oh, I think it does; I think it breaks it up. This other could not. There is this concentration——

Prof. Jenks (interposing). I am not sure about that. I think the concentration in the other would be pretty nearly as much as in this; because, I think, if you are to have a bank of that kind, a national bank of that type, it should be the sole source of the issuing of notes. Ultimately, as I think it should be, it would almost of necessity need to establish a good many branches.

Senator Brisow. Of course, you have to have branches. But, Professor, suppose this Federal bank here in Washington could stand behind the notes of any banking institution in the country that had a proper standing—that was regularly examined by the Comptroller of the Currency, or whatever means we have for examining these banks—and that such a bank could issue up to the amount of its capital stock, whatever it is, of these bank notes?

Prof. Jenks. If by that you mean an independent issue of notes by that bank, I should not favor that; no. If you are going to have a central Federal bank, I should favor making it such a bank substantially as the Bank of Germany, as far as the note issue is concerned.

Senator Brisow. I do not know but what you are right; yes. It would issue notes and discount, and the Government would be behind it, because it would be a Government institution.

Prof. Jenks. That would be the point. I should be glad to do that.

Senator Nelson. Would you have no limitation at all behind the note issue?

Prof. Jenks. No; I would not in definite numbers of dollars. As regards definite figures there, it seems to me——
Senator Nelson (interposing). I mean definite proportions.

Prof. Jenks. Compared with the reserves? I would.

Senator Nelson. I mean of these reserve banks, of the amount of notes they could take out. Would you allow them to come in and apply on their commercial paper for any amount they saw fit?

Prof. Jenks. I would leave it discretionary with the central bank, of course, but I would limit only by the character of the paper you are going to put in and the amount of reserve that was kept.

Senator Nelson. But not otherwise?

Prof. Jenks. No.

Senator Nelson. You would not limit it in proportion to the stock and capital of the bank?

Prof. Jenks. No; I do not think I would. In a good many countries they do put the limitation at the amount of the capital stock, as in Canada. I do not see why that is necessary.

Senator Nelson. I know there is a limitation in Canada. What is that?

Prof. Jenks. The capital stock. They can issue up to the capital stock and not beyond, except from October 1 to January 31, when to move the crops they may issue, in addition, up to 15 per cent of the capital and surplus on payment of a tax. I do not think a fixed amount is a desirable thing myself. I do not see any reason why there should be any limit except a limit of absolute safety.

Senator Nelson. If we limit it to the capital stock, we could know then, in a general way, that they never could exceed that limit.

Prof. Jenks. We might want them to exceed that limit.

Senator Nelson. I do not think so. If this system prevails, we would never want them to exceed the amount of capital, if we get all the national banks into it.

Prof. Jenks. You mean the amount of the capital stock of the central reserve bank? I think we will.

Senator Nelson. The capital and surplus. The law contemplates they shall have a surplus of 20 per cent.

Prof. Jenks. Yes. I do not see any reason for that kind of limitation.

Senator Nelson. Would there not be danger, unless there were some kind of limitation, that we might get an undue inflation of our currency—that it might lead to undue speculation and to going a little too fast, as we commonly say?

Prof. Jenks. I do not feel that there is that danger, provided we have the proper supervision and provided we make our restrictions pretty rigid as regards the keeping of the reserves. I think the demands of business will attend to that and the proper methods of redemption also—a good many redemption centers.

Senator Nelson. Have not our troubles in the past come rather from poor banking than from bad currency; that is, from the banks unduly extending credits?

Prof. Jenks. It is still worse than that, I should say, Senator. Take the panic of 1837 for example. It was not merely that they were extending credits, but they were only too anxious—dishonestly so—to get these notes out that did not cost them anything.

Senator Nelson. Of course that is no criterion, that old State bank currency. I can remember as a boy seeing some of that old
stuff. But take the panic of 1893, and especially the panic of 1907, which the people at large call the bankers' panic. It did not arise from any vicious or unpropitious economic conditions in the country. The country as a rule was in a prosperous condition, and money was abundant in the country as a whole. It grew out of vicious banking and overextension of credit and an insufficiency of reserves.

Prof. Jenks. May I add just a word to that? In the main, I should say that was true, but it seems to me when it came to the panic finally it practically came from this, that there had been very prosperous years, there had been undue extension of credit until it was reaching the danger point, and then these larger banks that had been extending credit were practically forced to shut down on loans to a very considerable extent.

Senator Nelson. And shut down on their reserves. They would not respond on their reserves.

Prof. Jenks. How could they? Because here were the banks all over the country, each one anxious to strengthen its own reserves and pulling out its deposits from the others.

Senator Nelson. Do you know, Prof. Jenks, that, as a matter of fact, out in the Mississippi Valley a large number of our smaller banks, the banks with capital from $100,000 down to $25,000, never suspended at all, but kept open shop day after day, so the panic had no effect upon them?

Prof. Jenks. I know that, but it did have a little effect in some places. I remember going to a bank for some little loan, and the cashier said, "What do you want it for? We are taking care of our depositors and customers. If you need money to pay obligations"

Senator Nelson (interposing). That was a case where you wanted to borrow. I am speaking about depositors. Our depositors could draw on their accounts without limit.

Prof. Jenks. Oh, yes; they could where I was.

Senator Nelson. That showed the healthy condition of the Mississippi Valley, which is the heart of the agricultural part of the country. We were in a good condition out there.

Prof. Jenks. Yes; and at the same time I do not think, Senator, it is quite right to say you were in good condition as long as they were shutting down on loans on good security.

Senator Nelson. Why were we shutting down? Because under this vicious system of reserves our reserves were tied up in the East.

Prof. Jenks. That is so, certainly.

Senator Nelson. If our banks had had their supplies at home they could have supplied the local demand.

Senator Hitchcock. Now, Prof. Jenks, I understand you feel there is some probability of an expansion of credits under this new system?

Prof. Jenks. Yes.

Senator Hitchcock. More than under the present system?

Prof. Jenks. A little more; yes. Not enough, I think, to be a serious matter, provided you look after the proper gold reserves. But, as I said before noon, I think it will come in this way: Every bank will want to hold in its own vaults and to keep to its credit in the Federal reserve bank and elsewhere the lawful money that it
can use as a reserve. The consequence is it is going to pay over its counter whenever it can do so these new notes, and pull the other kinds of currency out of circulation. It is a substitution of one for the other. Now, under those circumstances we are going to have piling up in our vaults rather more of this lawful money than, on the whole, we need. My impression is it does not need to pile up enough to have the effect of raising the rate of exchange on London and the prices more than 1 or 2 per cent until we shall begin to see our best money going abroad—that is, our gold. I think the expansion will not be enough to force any panic at all to begin with, but at the same time it is desirable that the people of this country have the utmost confidence in the new system, whatever it may happen to be. If we should have $50,000,000 of gold going out people will say, "That looks very bad; things are going bad," even if we do not need that here; even if it would go under normal conditions. And if it got to $100,000,000 it would be a very serious matter on account of the effect it would have on confidence in the country.

Now, as a matter of fact, there might not need to be more than a very slight expansion in order to send that gold out. It would be simply a substitution of these new notes for another kind of money that would send gold out of the country. We need just expansion enough to raise the rates of exchange so we will ship gold instead of shipping more goods, and that does not take very much. It seems to me that the simplest way of stating what leads to the export of gold is this, that we always pay our foreign obligations in whatever is the cheapest thing to pay them in. Usually we pay them almost entirely in goods of some kind or other, but in times when money is peculiarly plentiful and prices here are getting a little high on that account, then we export gold. And that is a good thing under ordinary circumstances. If we have a good stable system, whenever business is in such a condition that prices here go up a little it is a good thing for something to go abroad. It comes back in the same way, and there is no trouble about that if your system is sound.

Senator Hitchcock. One of the evils complained of in this country at the present time is the high cost of living.

Prof. Jenks. That is what I was saying before, that the high cost of living would be affected by that only to a very slight extent in the first instance. It might put up prices a trifle, but not enough, I think, to detect it. It would be felt somewhat by people doing the exchange business, sending the gold abroad. But within three or four years, if we let three or four hundred millions of gold go abroad, or even more than that, as we could without endangering our system at all, I think we should have another increase in world prices that would be unfortunate.

Senator Hitchcock. And in the cost of living?

Prof. Jenks. Certainly.

Senator Hitchcock. Why, then, do you favor a bill of this sort when it involves this danger?

Prof. Jenks. Here is exactly why I favor it. As I suggested before, we have under the present conditions the most inelastic system that any country in the world that pretends to do business has.

Senator Hitchcock. Is our system any less elastic than that of England?
Prof. Jenks. Distinctly so.

Senator Hitchcock. They issue no notes at all, except $90,000,000, that are not represented by gold. The rest are all gold certificates, practically.

Prof. Jenks. They have enough notes in hand to do their ordinary business, and now and then they can issue an unlimited amount against the deposit of gold.

Senator Hitchcock. But they are nothing but gold certificates.

Prof. Jenks. That is eventually true.

Senator Hitchcock. What elasticity is there in the currency of the Bank of England? The Bank of England to-day can not issue a note except gold is deposited. When the gold comes out the note goes in.

Prof. Jenks. There is this, however, that tends to make their system—but not as far as that point is concerned—very elastic, and that is the elasticity of their credits. But as regards our currency, in connection with our reserves, we will have a good elastic currency if we provide for the proper system of redemption, which I think we have done in part, but that, as I said before, I think, ought to be extended further along that line.

Senator Hitchcock. I want to get back to what Senator Bristow said—

Prof. Jenks (interposing). May I just finish what I was saying here before you take that up? I do not think there is any material risk under this new system that can compare at all with the benefits under the new system, provided you will see to it that the reserves as fast as you can do it are put on a gold basis. You could do it within a year—six months, I think. And as long as your reserves for the redemption of these notes are to be in gold, if you will also make arrangements for the retirement as fast as necessary of the national-bank notes or of some of our other substitutes for money, so that these elastic notes will have the opportunity of circulation, you will have an excellent system. There is no danger of overexpansion if you make your gold reserves larger.

Senator Nelson. Prof. Jenks, is it not a fact that London is the seat of the international exchange market of the world?

Prof. Jenks. I suppose it is; yes.

Senator Nelson. And they require less currency, because it is a world clearing house, so that all the currency they require there is to settle balances on their international transactions?

Prof. Jenks. Yes; that is largely true.

Senator Nelson. Now, you take it, I believe, that these notes should be absolutely and unconditionally redeemed in gold?

Prof. Jenks. I should myself favor that; yes.

Senator Nelson. This bill proposes in one feature that we enter the international exchange market, as we ought to do, in order to do our business with foreign countries through our own banks. Now, we could not go into that field unless we have our notes, our currency, absolutely and unconditionally on a gold basis, could we?

Prof. Jenks. There is no doubt about that.

Senator Nelson. And under this system our regional banks here could establish branch banks in London, and those banks could, for this country, act as accepting houses and accept bills of exchange, and in that way we could carry on our business. In order to transact
our business now we have to rely on what they call accepting houses over there to accept our checks and bills of exchange. It is only after they have been accepted there by a merchant or bank or accepting house in London that they will accept them and allow them to circulate at par. Is not that true?

Prof. Jenks. Yes.

Senator Nelson. Now, we can, under this system, if I understand the purpose of it, if we adhere strictly to the gold standard, enter that field, and compete with the Europeans, at least so far as our own foreign trade is concerned.

Prof. Jenks. I see no reason why we should not.

Senator Nelson. And we need to do it.

Prof. Jenks. I think so.

Senator Nelson. And we are not in it at all now.

Prof. Jenks. No.

Senator Hitchcock. Here is a difference between currency and bank credits that I should like to have you clear up. I should like to see how under this bill any currency at all can be issued without inflation. If this plan is put into operation, we are going to have $100,000,000 of capital that the regional banks can lend. They are going to have Government deposits, say, of $150,000,000, of which they can lend two-thirds, or $100,000,000. They are going to have $450,000,000 of deposits of banks, of which they can lend $300,000,000. So that before they advance any currency at all to the banks of the United States they will have $500,000,000 of cash that they can lend to the individual banks. Now, does it not follow, therefore, that bank loans may be swollen to the extent of $500,000,000 before any currency is issued?

Prof. Jenks. Is not the implication of that question that you are getting this $500,000,000 without taking it from any place? Is not that money that you are speaking of now taken from places where it is loanable now? The Government deposits, for example, are—not entirely, but to a considerable extent—in other banks now.

Senator Hitchcock. Not very much. There has been only about $60,000,000 in the banks until very lately.

Prof. Jenks. Some of them are. And what comes from other banks into this regional bank here can be loaned now.

Senator Hitchcock. Oh, yes; ordinarily the Government has to keep about $60,000,000 in bank, but it has about $150,000,000 in the Treasury, which now is to be put into the regional bank. So I have made it very moderate when I say the Government deposits will be about $150,000,000, of which $100,000,000 can be loaned. The capital of $100,000,000 is taken out of other banks, and to some extent that is now being used probably. But the reserves amounting to $450,000,000 are largely located in bank vaults now, and not available, because the reserves are not used except to a partial extent. So it seems to me inevitable that these reserve banks will have actual cash funds to lend to the extent of three or four hundred, or possibly five hundred millions before they will call on the Government for any currency at all; and you are going to have an inflation of bank credits without any addition to the currency or any elastic character given to it.

Prof. Jenks. There is this, it seems to me, that covers the question of bank credits as well as the bank currency. You are not going to
lend to people that are not going to make some use of the money and pay for it; so far as the expansion is concerned along the line of either credit or currency, that depends, I think, entirely upon the control that your banking system has over the lending of that money.

Moreover, my own feeling is that there is rather more of that money loanable now than you had in mind, but that is a matter of detail.

Senator Hitchcock. These reserve banks will have large funds at their disposal to lend before they ask for any currency at all.

Prof. Jenks. Yes. But then there is also this about it. They can not go directly to the lending public. They, of course, may advance to the other banks; otherwise they do not use it.

Senator Hitchcock. Yes.

Prof. Jenks. And, as I understand the essential purpose of this bill—and the same thing would be true of a national bank—it is to back up the other banks when they need help.

Now, if the other banks need that, here is a great reservoir that can be drawn upon, just as now we have from time to time in the Treasury lying idle, considerable money and in time of emergency the Secretary of the Treasury has, in exceptional cases, put it out into circulation. This will come out in a much more normal, easy, businesslike way than has been done heretofore.

Senator Hitchcock. We will assume that there is some truth in these figures given here; and the idea has just occurred to me, and I want to ask you what the effect will be in this big expansion of bank credits and loans, without a corresponding increase in actual currency; is that a healthy thing?

Prof. Jenks. Why, I consider it not in the least unhealthy to have the banks have resources by which they could supply the business interests of the country freely at rather low rates.

One advantage that I hope is going to come from this system is on the whole something of a reduction in the rates of interest throughout the country. So far as this system is going to make our loanable capital more easily available, and more promptly available than it is now, so far there is going to be a tendency to a slight reduction in the rate of interest, and I think that is desirable. That is the only effect, so far as I can see.

The fact is, of course, that no bank is going to loan money unless there is a legitimate demand for it for business purposes; and under those circumstances it is rather desirable to have the capital so mobilized that it can be readily supplied at reasonable rates.

I would like, if that covers that question, to take up a question which I did not finish this forenoon, which you, Senator Hitchcock, as well as Senator Reed, were asking me about, because it is connected with this.

Senator Reed, in speaking of the redemption of these banknotes, spoke as if he were opposed to having the notes of the different regional banks distinguished one from the other; and he put the question somewhat in this way: In case one of the member banks goes to the Federal reserve bank and borrows $1,000,000, and takes that $1,000,000 in notes and deposits securities that would mature, we will say, in 90 days, Senator Reed's thought was that this bill should contain a provision—the law should contain a provision—that at the
end of 90 days the Federal reserve bank should account to the Federal reserve agent for $1,000,000 in notes, so far as it had notes in hand; and beyond that, in gold, provided gold is what is made the reserve; otherwise in lawful money; and his idea was that that should be embodied in the law.

He asked me what objection I had to that. And the committee adjourned before that was brought out fully. What brought that question out was the statement I had made earlier that I thought it would be desirable to extend the system forbidding the regional bank from paying out over its counter the notes of another regional bank. In case the system that the Senator was speaking about were put into effect, and the $1,000,000 had to be immediately accounted for in either notes or lawful money, I do not see that the system would work at all, because I do not see why any of the local banks, the member banks, would take out notes under those circumstances.

The reason why banks take out notes and issue notes instead of gold over their counter is because they can hold the gold as reserve, and they can issue three to one on it.

Now, in case they had to account at the end of 90 days either with the notes themselves, to begin with, or the money that had been used as a reserve, lawful money, they would not make that profit because they would have to call in loans to meet the obligation; and they simply would not take it out, the currency. If you limit the question to any one bank, one can easily see how that would be. The bank deposits its collateral in the form, we will say, of 90-day paper, and takes out its bank notes, which it pays out over the counter. At the time that commercial paper is redeemable it is taken up, to be sure, but its place is supplied in nine cases out of ten by still other paper that is put in—commercial paper that is put in there instead.

And in that way, by keeping their notes out and keeping the security—only continually changing the commercial paper—and the reserve of one-third, they are able to make a profit on two-thirds; that is, on three times as much as they would if they had to lend the gold itself.

It seems to me that the Senator's plan would practically force them, in some way or other, to redeem those bank notes every three months or to pay up the full amount in lawful money; and if they were to pay up the full amount in lawful money they would not make any profit on it.

Now, as a matter of fact, if each one of the member banks was in the same situation as this one bank that I have spoken of, the Federal reserve bank would not be getting in, from day to day, enough bank notes so that it could pay back all of the loans that were out. It would probably get back, we will say, a quarter or a third, and the rest would have to be paid over in the lawful money of the country that they are holding as reserves, and that would take the profit all away.

Senator Hitchcock. Well, it can pay it in the notes of other banks. Prof. Jenks. But they could not possibly get in the notes of other banks enough to cover. The main notes of other reserve banks that it got would be those that were sent in to pay obligations of member banks. They would not get the notes of other reserve banks in, any more than they would get in the notes of their own bank, unless the
proviso which I suggested were put in, that no member bank was allowed to pay out over its own counter the notes of any reserve bank other than its own. Then they would get the notes; otherwise, not. How would they do so? Suppose you were a member bank and had deposited $1,000,000 in gold commercial paper, and had taken in $1,000,000 of notes and were loaning them from day to day. You are keeping in your vaults or with the reserve bank cash to redeem any presented. But when it comes to a man paying the loan back to you, and he pays it in your own notes, you will not send them to the reserve bank; you will lend them to somebody else. Under the system as proposed in the bill, if, instead of paying you the notes of your own bank he pays the notes of another Federal reserve bank, you will do the same thing with them. There is no reason why you should send those notes in; you will loan those notes to somebody else the next day. The consequence is that you are not going to have a steady, regular redemption of the notes in this system.

Senator Hitchcock. That will lead to inflation.

Prof. Jenks. I fear it will, more or less. I think that is something of a danger.

Senator Hitchcock. Would not danger also result from the fact that all State banks would be permitted to use these funds as a part of their reserves?

Prof. Jenks. That is another matter that I think—I do not know that makes any very serious difference, because they can use the national bank notes for reserves now.

Senator Hitchcock. And they do use them very largely.

Prof. Jenks. Yes; they do use them to considerable extent. But there is this point to be made: It does not seem to me in this bill that we have gone far enough in way of providing for a steady, regular contraction.

Now, the only way we have provided for the contraction is: That when the member bank gets in a number of these notes—that is, when they find that people are not borrowing enough money from them so that they are getting a pretty large supply of these notes on hand—then if they want to reduce their credits with the Federal reserve bank they will send them in; they do not want to pay interest on them any more.

Then, the Federal reserve bank will turn them in also, and they will be redeemed. But that will not happen excepting from time to time when the bank feels that it is carrying more of these notes than is desirable to carry.

On the other hand, if you make this further provision that not only the Federal reserve bank must not pay out over its counter any notes except its own notes, but that none of its members shall pay out over its counter any notes of any Federal reserve bank except its own, those notes of other banks will be coming in every day to a very considerable extent; the cost will be the cost of shipping some of those notes. But that, in my judgment, is a relatively small item as compared with a steady, regular contraction; and the reason for the contraction will be the same as in the Canadian system.

Senator Hitchcock. You will have to penalize the bank for paying these out, will you not?

Prof. Jenks. Certainly; as now you will penalize the Federal reserve bank.
Senator Hitchcock. That is another objection, then, to their belonging to the association?

Prof. Jenks. No; I would more than overcome that by issuing the notes to the Federal reserve bank without any tax, and there would be a decided difference arising from that. Your provision in the bill is that you must charge a minimum of one-half of 1 per cent tax. I would take that tax off. This other provision for sending the notes back would be only, if I remember rightly, according to the rate under which the express companies carry currency now—I think it would not be over one twenty-fifth or one-fortieth of 1 per cent.

Senator Hitchcock. Let us see, then; there is another dilemma. If you issue this currency to the reserve bank without any charge, of course you either make a very large profit for the reserve bank which pays that currency out to its members, or else you make a very low rate of interest?

Prof. Jenks. Exactly. I think a low rate of interest is desirable.

Senator Hitchcock. If you make a low rate of interest you stimulate borrowing and lead to inflation?

Prof. Jenks. If you keep a proper supervision over credits it need not do so. I do not think there is any danger of inflation.

Senator Hitchcock. Then I come back to my former illustration of John Smith coming into a bank to borrow money. Let us suppose you are running a bank, we will say, at Wichita, Kans., and John Smith comes in to borrow money of you, and you tell John Smith that.

But, after a while this new system is put into operation, and you are a member bank and John Smith comes in to borrow money of you, and you tell John Smith that you would like to accommodate him but can not do so because your reserves are down, and John Smith thereupon says to you:

That does not make any difference if your reserves are down; you can always get currency from your Federal reserve bank at a low rate of interest, and therefore you can accommodate me if you want to.

There are thousands of member banks and hundreds of thousands of John Smiths, and how can you possibly avoid a great increase in the borrowing of money, because you have removed the great barrier which the banks now have in their reserve requirements. But there is no check at all if that bank can get indefinite rediscount from the reserve bank upon that paper.

Prof. Jenks. There is this to be said all along the line: Your national bank also has to keep its reserves against its deposits. But entirely aside from that, the whole question lies here: Is it not a desirable thing to have, on the whole, a low rate of interest and a lower rate of interest than we have now? One reason why I think it would be desirable to remove this half per cent tax is because I think it would, in all probability, lower the average rate of interest throughout all the Middle West and the West and the South by one-half per cent; and I think that would be a very desirable thing to do, provided you can be sure of your security.

Now, I think if John Smith comes in and can put up the proper security and can show he is going to use the money in a proper way—
BANKING AND CURRENCY.

and if he is one of my customers I know whether he is going to use it properly or not; otherwise I would not let him have it—I do not see why the loan should not be made. If, instead of charging him 7 per cent, I can let him have the money at 6 per cent or, better, at 5 per cent, it will be a good thing.

Senator Hitchcock. Now, take the case of John Smith again. Suppose he is going into the sheep business, and another John Smith is going into the sheep business, and another is going into the sheep business, and you get a great many John Smiths who are going into the sheep business. It looks profitable, but we all know that at times it has been enormously overdone, and has been followed by great losses all around. But suppose another John Smith is going into buying farms and another John Smith is going into the exploitation of an electric road. Where is going to be the check that the bank now has on the limit of its reserve against over-lending? We know that there comes a time when they over-lend. We know that there comes a period in every country where there is over-expansion and credit extended until disaster follows. How are you going to avoid it in this instance?

Prof. Jenks. But we know also that after that period of disaster there comes a period when credits are checked a good deal more than they ought to be, and everybody goes the other way.

Senator Hitchcock. Yes: and then they go the other way.

Prof. Jenks. I do not think it is possible to avoid those periods. That is human nature, and it is going to come. But I think it will go a long way to prevent reaching the breaking point if this plan is adopted.

Now, as to John Smith going into the sheep business and going into the farming business, we are not going to lend any money at all to John Smith, except on what we call bank paper, that is to say, it must be short-time paper; 90-day paper; the large majority of it should not be over 90 days.

Senator Hitchcock. That is, the reserve banks will not, but the individual banks will lend a great deal of money on paper that is not available with the reserve banks; they do not expect to rediscount all the paper they take in.

Prof. Jenks. That is doubtless true. But with that pressure on them, that they can not dispose of any paper with the Federal reserve bank that runs beyond 90 days, they have got that restraint upon them; and the question with them is what proportion of their paper shall go out for a period longer than 90 days—and the proportion ought to be kept pretty low.

Senator Bristow. Prof. Jenks, you say that you have got that answer to John Smith, that they can not lend it to him because his note does not mature in 90 days.

Prof. Jenks. I said let him have it whenever you could.

Senator Bristow. Yes; but if I understand your theory, that limits the credits to 90-day loans, which would be a safer loan than the loan to John Smith who was going into the sheep business, or enlarging his farming business.

Suppose that, instead of John Smith being in the sheep business, he sees a fine opportunity to prosecute some commercial business—say to buy and sell wheat, to go into the grain business—and he buys
his wheat and he buys it for the purpose of holding it for, we will say, 60 or 90 days, thinking the price is going to advance. He buys the wheat which he is going to sell, and he gives a 90-day note for it; and here is your merchantable product. And wheat goes down. That note is not as good as a six-months' note of the farmer who grew the wheat, because the farmer has got his farm and other things besides the wheat.

Now, you are taking the note that depends upon the wheat, which the man is likely to lose and break up on, and you are refusing the note of the farmer who has bought cattle and given a six-months' note—as he will have to do in order to market his cattle.

Prof. Jenks. So far as that is concerned, that is a matter for the judgment of the banker as to the nature of the credit. Of course it is true in our larger centers where wheat—using your illustration—is held in large quantities and is salable any day, that a great deal of money is loaned by the banks on elevator certificates; and if they allow a reasonable margin there it is a perfectly safe loan when that is done. But, on the other hand, if the wheat were, we will say, in the farmer's barn, it would be an entirely different proposition; the banks could not realize on it.

Senator Bristow. Why could they not?

Prof. Jenks. There is no bank that, as a practical matter, could go out on the farm and sell a man's wheat out of his barn. On the other hand, if the person who has given the note has his wheat in an elevator and has a receipt for it that he has assigned, that is an easy thing; and where the wheat is sold from day to day on the board of trade, it can dispose of it at any time within 24 hours.

The same thing holds on loans on farming lands. I would not say that I am positively opposed to this provision of the bill with regard to farm loans; but I should very much prefer that this provision relating to farm loans and to the savings be dropped out and provided for in other laws. There are systems of agricultural credits to which it would apply better than it would apply in this bill. That subject I should like to see in another bill.

The chief reason for my belief that mortgage loans are not good bank loans is they are too slow, they are not realizable; they are all right as a good security.

Senator Nelson. Is not that the case with these long-time railroad bonds which are sold on the market?

Prof. Jenks. That is a different thing.

Senator Nelson. They are not matured; they are simply auctioned off.

Prof. Jenks. As I understand, those will not be accepted anyhow as a basis for circulation.

Senator Nelson. But the big New York banks have been loaning on them, and they call them their secondary reserves.

Prof. Jenks. Yes; that is call loans; and this bill will dispose of that largely, I think.

Senator Nelson. We had a banker here from Minnesota who was speaking of the panic of 1893. He had said he had real estate mortgages; and of all the securities he had in his bank—of all the commercial paper he had in his bank he found those farm mortgages the most liquid. [Laughter.]
And he found that the life-insurance companies and other investors were ready to take them like hot cakes, that they would take them in preference to any other paper he had. And I knew of a case in that same panic where two banks in southern Minnesota stopped runs on their banks by passing out to the people who had certificates of deposit in those banks mortgages which they held. They told their depositors, "We lent out that money to your neighbors on these mortgages." They passed out the mortgages to them and that stopped the run. [Laughter.]

Prof. Jenks. I hope you will grant that those are very exceptional circumstances: and the people did not get cash, though their fears were stopped by the mortgages.

Senator Nelson. Oh, no; if you lived out in a farming community such as we have in the Mississippi Valley, where there are little country banks, you would find that the universal sentiment is that the safest loans they have are those kinds of loans.

Let me also tell you this: I live in a town where we have three banks; and the trouble with our banks is that they get more money on deposit than they can loan out. They used to invest it in what they call "mill" paper and "flour" in Minneapolis for 4½ or 5 per cent. By and by they bought the notes of a big Milwaukee brokerage house and it went into bankruptcy. They lost a good deal of money. They do not know how much money that institution had out. And the banks, while they invested in that kind of paper, were paying 8 per cent dividends. Instead of that in the last two years they have invested in Dakota real estate mortgages; and they have got twice the dividend and they have never had any trouble about the currency. Now, that is the way it works and your theories do not tally with our experience in the West.

Prof. Jenks. I was going to say that the main trouble there as regards the illustration you gave was that the loan made to the mill people was made on poor security really; it went to pieces.

Senator Nelson. The security itself was good enough, but they had overloaned.

Prof. Jenks. Yes; there is the point.

Senator Bristow. It is commercial paper that is floating all over the country now.

Prof. Jenks. Merely because paper is commercial paper is no reason one should lend on it. You want the paper which you as a banker approve because you know the parties and the nature of the security. You do not take any commercial paper that comes in.

I must say I think there is likely to be a weakness in this system as regards the Federal reserve banks. I think that a good many of our country banks sometimes do take commercial paper that is not first class. I do not see how the Federal reserve agent is going to exercise any great intelligence in examining that; he has got to get the indorsement of the local bank.

Senator Nelson. Well, let us take this case: A railroad bond is secured by a mortgage, and that is considered good security for these call loans—liquid security.

Prof. Jenks. That is the reason——

Senator Nelson (interposing). Now, in the case of a farm loan, it is a note secured by a mortgage, but sometimes it is a bond. It is
exactly on the same footing. And it is simply the question whether there is a market for those securities.

Prof. Jenks. That is it.

Senator Nelson. They have no stock exchange for those mortgages; but there is a constant demand for them; and the insurance companies and the savings banks in the East can see that. They prefer them to railroad bonds. There is a good market for them; and that makes them, just as liquid as those securities they have on the Stock Exchange in New York. That is what you overlook.

Prof. Jenks. No. I agree with that; but I do not entirely; and the reason for that is this: With reference to those farm mortgages, it happened that the university I was connected with earlier in my experience, Cornell University, had, some years ago, some $2,000,000, if I remember rightly, in farm mortgages, and they practically did not lose one dollar.

Senator Nelson. Yes.

Prof. Jenks. And they were getting their returns in. But they did not have to realize on them on short notice. If they had been in the position of many banks here that are likely to be called on to pay out deposits in 24 hours, those loans would not have been a good kind of loan for them.

On the other hand, if they had had bonds of the New York Central Railroad they would not have paid so much interest, and would not have been any more secure—perhaps not as good security as the farm loans.

Senator Nelson. But in the midst of a panic, such as 1907, those bonds were no more salable, because the people that had made call loans could not borrow the money from another bank on them. They had to get the money, and the result was that they were sacrificed on the stock exchange.

Prof. Jenks. I was going to say, with reference to those loans, that you can sell them on the stock exchange at any time—at a price. Of course the margin on the loans—the banker is supposed to be and is pretty careful to see that the margin is big enough so that it is secure.

Senator Nelson. Mr. Vanderlip, the head of the biggest bank in the country, says he is certain that, in the case of panic or money stringency, those were the worst kind of loans, that they were anything but liquid; and he thought the great virtue of this bill was getting away from those loans altogether.

Prof. Jenks. I quite agree with that; I think this bill, if put into effect, will to a very considerable extent turn investments, not only of New York banks, but other banks, away from call loans and stock-exchange loans into commercial loans up the State and elsewhere. Not only the big banks in New York make these call loans, but the smaller banks throughout the country, not merely put their money into New York banks at 2 per cent and have them loan it out, but they will send it to New York and say:

Loan this for me on the call market at 6 per cent or 7 per cent or 8 per cent, if money is tight.

Now, it is a bad thing for small country banks to speculate on the stock exchange on those call loans.
Senator Nelson. The national banks are partly driven to that because they have been cut off from the very best loans—real-estate loans.

Prof. Jenks. Yes.

Senator Nelson. Now, I want to ask you on another feature of this bill, and that is the savings-bank attachment to this bill. Do you think that it is advisable, especially in reference to the smaller commercial national banks?

Prof. Jenks. I was going to say—may I just add a word more on farm loans, and then I will answer that question.

Senator Nelson. Yes.

Prof. Jenks. As regards the farm loans, I think this is rather closely connected with the savings loans in a certain way, or with the savings department. In the case of most savings deposits, you take those savings with the understanding that you are to have notice before paying, 30 or 60 days' notice—some notice.

Senator Nelson. Yes.

Prof. Jenks. Now, I should say that, as a basis for a savings department, where, when you are called upon to pay, you have a right to the 30 or 60 day notice, then this kind of security you are speaking of is all right.

Senator Nelson. Are you aware of the fact, Prof. Jenks, that the small banks of the country practically are running a savings department?

Prof. Jenks. I understood that they were.

Senator Nelson. Yes. They pay interest on time deposits.

Prof. Jenks. Yes; I understood so.

Senator Nelson. If you limited the real-estate mortgages instead of basing them on capital—if you allowed them to lend 25 per cent of their time deposits on real estate, that would make it perfectly safe.

Prof. Jenks. I was wondering why that change had been made in this bill. In the earlier form of the bill there was a provision for time deposits, that has been stricken out of this bill—I think unwisely.

Senator Nelson. I do not know how that came in. I think it is the result of the caucus in the other House. [Laughter.]

Prof. Jenks. I think, myself, in regard to time loans, that it is a different thing. I have known savings banks in Illinois, where they are not restricted as these New York savings banks are, to have a very large part of their securities in good farm mortgages.

Senator Nelson. I want to tell you, Prof. Jenks, you go back in the interior, in the Mississippi Valley, and you will find the small banks with $25,000 capital, and they have been a great blessing, and the banks with $50,000 and $100,000.

Prof. Jenks. Yes; I grant that.

Senator Nelson. You will find, on the average, that sometimes two-thirds of their deposits are time deposits—really savings deposits.

Prof. Jenks. Yes.

Senator Nelson. Why should not they, on that class of deposits, which are practically like savings-bank deposits, why should not they be allowed to lend a limited amount of their time deposits on real-estate mortgages?
Prof. Jenks. I think they should be.
Senator Nelson. I am glad you finally agreed with me.

[Laughter.]

Prof. Jenks. I not merely finally agreed; I agreed at the beginning. I had not understood we were talking about time deposits; I thought we were talking about demand deposits.

Senator Nelson. If instead of a professor you were a farmer out West, you would be better qualified to speak about that. I hope you will take that in a Christian spirit. [Laughter.]

Prof. Jenks. Certainly.

Senator Pomerene. Professor, why would it not be wise, in view of the fact there are savings deposits in the national banks now, as I understand it, not permitted, perhaps, from the legal standpoint, but conducted rather by permission of the Comptroller of the Currency than by any legislative rule—why might it not be well to provide by a section in this statute for the plan now in force and omit, if I may say, so cumbersome a purpose in this bill?

Prof. Jenks. What I have said formerly with reference to this farm loan and savings department was this: That I thought provision should be made for agricultural loans, but made elsewhere. This bill is primarily a special currency matter. Now, why is it not wise, considering the extreme difficulty of this bill, to hold to the one main purpose of the bill and get that as nearly perfect as possible and take up, when you have the time, the matter of the agricultural loans and these savings loans, too? I think that would come in more naturally than the farm loans would, but you can handle that independently. I think one of the great needs of the country is an agricultural-loan system.

Senator Pomerene. I think so, too. You made a statement a while ago that there were other farm-credit systems which were preferable. Did you have any particular system in mind?

Prof. Jenks. I have in mind the mutual cooperative loan systems they have in Europe—Germany and elsewhere. They are quite closely allied, as regards the general plan, to cooperative loan and building associations and organizations of that kind. The general idea is much the same. I do not think that belongs in this bill.

Senator Hollis. That is already covered in a bill introduced by Mr. Fletcher.

Senator Martine. We have in the Senate now what is known as the Fletcher bill, covering this whole thing.

Prof. Jenks. Exactly. Why should we put it in here? I think you are quite right on that.

Senator Bristow. But that deals with an entirely different kind of country.

Prof. Jenks. That is true.

Senator Bristow. And if the banks in the small communities must be able to acquire all the deposits that are available, both time deposits and otherwise, or you rid the small communities of the facilities which they normally have now. If the banks are permitted, as they are now and ought to be, to take in all of those securities, then, in order that that community may have all the advantages of its
own resources in loaning to its own people for the good of its own community, they ought to have the opportunity to make this class of loans when they have the time deposits, it seems to me.

Prof. Jenks. As the Senator suggests, on the time deposits I have no objection.

Senator Bristow. That is all we contended for.

Prof. Jenks. You see, that provision was made in an earlier bill. There was a certain proposition for the time deposits, but that was dropped out of here. I have no objection to the time deposits.

Senator Hitchcock. Professor, do you think a uniform rate of interest should be established throughout the United States?

Prof. Jenks. I do not believe that is quite practicable. The conditions are quite different in different sections of the country, and I do not believe the conditions are such it would be practicable.

Senator Hitchcock. Do you think that one rate of interest should be charged to a reserve bank in the East and a different rate of interest should be charged to a reserve bank in the South for the use of currency?

Prof. Jenks. You remember my own preference is that the currency should be issued without any charge to either of them. But then, it seems to me, the situation is this: The rate of discount should be determined largely by the conditions of that section.

Senator Hitchcock. You think the directors of each Federal reserve bank should regulate the rate of interest?

Prof. Jenks. Yes. I think if you retain the bill that way it would regulate the interest, subject to the approval of the Federal reserve board. But I would let the initiative be taken by the local people, subject to the supervision of the board.

Senator Hitchcock. That means, practically, you would give to the Federal reserve board the power to establish one rate of interest in the East and another rate of interest in the West?

Prof. Jenks. Ultimately; but practically I should suppose the Federal reserve board, under most circumstances, would expect that the local reserve boards would handle that wisely.

Senator Hitchcock. Now, then, this is a Government facility we are providing: Should we charge the people in one State one price for a Government facility and the people in another State a different price?

Prof. Jenks. I do not think that is quite the right way to put it. It is this: The people in a locality are asking for an accommodation, and they pay for the accommodation the normal market rate, and the Government permits it to have the accommodation at the normal market rate. Now, if the normal market rate in Illinois is different from that in Massachusetts, well and good.

Senator Hitchcock. You say this is not a Government facility?

Prof. Jenks. No; I say they are going to ask for this facility, and why should not they pay for it?

Senator Hitchcock. Why should a man in Nebraska pay, to the same public corporation, backed by the Government, having special privileges from the Government, a higher rate for the use of the facility than the man in Massachusetts? Why should the bank in
Nebraska pay a higher rate when it has contributed one-tenth of its capital and one-fifth of its deposits to the reserve bank, than the bank in Massachusetts, which has made the same contribution?

Prof. Jenks. I think the situation is this, that it is only in the rather exceptional cases that these Government facilities are furnished. As regards the normal course of business the rate of interest is determined largely by what can be made on the capital invested, and there can be probably more made on it there than in the East and other places, because the supply is not so great?

Senator Hitchcock. I would have to question that right off.

Prof. Jenks. Local conditions largely determine, I think, the rate of profit on the investment of capital.

Senator Hitchcock. No rate of profit has been higher than has been made by the manufacturers of the East; no bank profit has been greater than the bank profit in New York City, anywhere in the world. And, on the other hand, there are out West borrowers with just as good securities as in the East, and I can not see the reason why a bank in Nebraska should pay more for the use of the Government facility there than should be paid for postage stamps there—something provided by all the people.

Prof. Jenks. The only difficulty as I can see—as a matter of fact, the rate of interest is largely determined by the profits that are made on capital in a normal investment as compared with the supply of capital there. Now, we do find higher rates of interest in practically all of the interior and relatively speaking undeveloped sections of the country, because of that added profit and because of that added demand, as compared with the supply. Those are the conditions that fix, that will regulate the normal rate of interest. That is what all the people pay for it there. Now, under those exceptional circumstances, the people go to the bank for accommodation, and they are granted the accommodation along the lines of what they are accustomed to pay, and along the lines of what regular business pays.

Senator Hitchcock. Of course I would have to dispute your assumption.

Prof. Jenks. Let me add a word; if you can show that the regular business rate of interest is the same throughout the country, substantially, then I would agree with you.

Senator Hitchcock. What we are going to do is to unify the country, to unify the banking system, which has been diverse. I think your argument falls to the ground there. But if your argument is true, then a man with a profitable business should be charged a higher rate of interest than a man with an unprofitable business.

Prof. Jenks. No; I do not think that follows. The profit of a man's business is not dependent entirely upon local conditions; it is dependent, to a very considerable extent, upon his skill, enterprise, and knowledge of the business, and things of that kind. That is where the chief source of his individual profit comes, and that does not determine the interest rate. The idea I had in mind and what I said was that the average profit upon capital, as compared with the capital that is available, determines the usual rate of interest, ordinarily. Now, it may be that under this system the facilities will
be improved a great deal, and if capital becomes as plentiful and profitable in the West and South as it is in the East, or substantially the same, that will of itself equalize the rate of interest. I think the bill has a tendency that way, but I do not think it will be uniform throughout the country.

Senator Hitchcock. Then you think a man doing business in the West who is prompt in paying his notes should be charged a higher rate of interest than a man in the East who is equally prompt in paying his notes simply because he happens to live out in the country?

Prof. Jenks. That is not all.

Senator Hitchcock (continuing). Where capital has been scarce, when the purpose of this bill is to unify the country and make the whole banking system into one?

Prof. Jenks. Let us put it the other way: Suppose you are a banker loaning money out in Nebraska. You find there is a demand for the capital you have there, so that you can loan it out on good security at 6 per cent right along; whereas, on equally good security, we find the supply of money in Massachusetts is such that a man is borrowing at 4 or 5 per cent. Now, you have a supply of money and you can get 6 per cent for it; you are not going to lend it at 4 or 5. When a man comes to you and asks for a loan you say, “Certainly, I will give you the loan, and I will give it to you at the normal rate. If you are not prepared to take that loan at that rate, here is Jones, next door to you, who is ready to take it.” That is the way the business is done. The bank gets the current rate charged in the region where it is. It is the one that fixes that rate. Now, when it comes to get this additional help from the Government bank, why of course he applies, furnishes his security, and he gets it, and the rate of interest in the different sections of the country is determined by the local conditions largely.

Senator Bristow. You understand the bill, as it stands now, gives each regional bank the power to fix the rate of interest they will charge to the member bank?

Prof. Jenks. Yes.

Senator Hitchcock. And has to charge each member bank the same rate?

Prof. Jenks. Yes.

Senator Hitchcock. You also understand the bill gives the central board the power to require the reserve banks to modify that rate of interest?

Prof. Jenks. I understood so. My understanding of the bill was this, that the local reserve boards, the directors, fix the rate first, and they then have to get the approval of the Federal reserve board. Now, if they try to fix a rate higher than the Federal reserve board thinks wise, the Federal reserve board won’t approve it, and it has to be put down. I think that is right.

Senator Shafroth. I think it has, perhaps, under this provision which says, “to supervise and regulate the issue and retirement of Federal reserve notes and to prescribe the form and tenor of such
notes.” That provision, evidently, implies the power to fix the rates of interest, and all that, and determine the rate of discount and the issuance of notes.

Senator Hitchcock. I think, virtually, the Federal reserve board has such large powers that it could influence the reserve banks by control of the public deposit of the issuance of currency, and that a hint to them to raise or lower rates would be followed.

Senator Shafroth. Then there is a further provision here, “to perform the duties, functions, or services specified or implied in this act.”

Prof. Jenks. Yes.

Senator Hitchcock. Is there anything further?

Prof. Jenks. I was simply going to add a word in connection with what you just said. I think, myself, the Federal reserve board should use its influence, as far as it can do so without disturbing conditions, to make a uniform rate of interest. It does not seem to me the business conditions of the country are such that they could now make it uniform, but I think, ultimately, you may have the rate of interest the same throughout the country, and I think they should use their influence to that end.

I would just like to add one word more in connection with what I said a while ago. It will take only a minute. It is this: I was speaking, some little time ago, with reference to the Federal reserve board and its constitution. It seems to me that whatever the composition of the Federal reserve board may be, provision should be so made that you would have only one member retiring each year, so that the board would really be a continuous board; and I think the time should be long enough so that no one President can possibly appoint a majority of the board after the first one has been appointed.

Senator Hitchcock. What would you think of having those members subject to recall by vote of the House of Representatives?

Prof. Jenks. I should not favor that at all.

Senator Hitchcock. Appointed by the President, confirmed by the Senate, and subject to recall by the House of Representatives?

Prof. Jenks. I should object to the second part.

Senator Hitchcock. For what reason?

Prof. Jenks. I think it is extremely desirable, in the light of what we have had going on in New York for the last few weeks, to keep anything like party politics out of the currency system, and I can not help feeling that a vote of the House of Representatives on anything of that kind would be sure to be colored by party lines.

Senator Hitchcock. Suppose that it turned out that a member of the board was misusing his office?

Prof. Jenks. I have not the slightest objection to having a member of the board removed.

Senator Hitchcock. Removed by vote of the House of Representatives without impeachment?

Prof. Jenks. No; I should say removed by the President, with charges filed, giving sufficient reasons.

Senator Hitchcock. You would rather trust the President than the House of Representatives?
Prof. JENKS. On anything of that kind. [Laughter.]

Senator NELSON. I have received a letter from Mr. G. D. La Bar, president of the First National Bank of Brainerd, Minn., which I desire to have go in the record.

Senator HITCHCOCK. Without objection the letter will be incorporated in the record.

(The letter referred to is as follows:)

THE FIRST NATIONAL BANK,
Brainerd, Minn., October 14, 1913.

Hon. Knute Nelson,
United States Senator, Washington, D. C.

My Dear Sir: Is the currency bill in the shape that it passed the House at all likely to go through the Senate? If so, how is a country national bank to compete with State banks? We are compelled to pay interest on time deposits—as practically all State banks do—and at the same time we are obliged to take the required amount of stock in the Federal bank, with an annual return of not to exceed 5 per cent, and also to carry the required percentage of deposits in the Federal bank as reserve, and on which balance we receive no interest whatever.

State banks would not be required to take stock in the Federal bank and receive not to exceed 5 per cent returns. Neither would they be compelled to carry a certain definite percentage of their deposits with the Federal bank as reserve and receive no interest whatever on such a balance. It is certainly a serious handicap for national banks that are compelled to qualify under the present bill.

We have heretofore been able to receive 2 per cent interest on reserve balances, which, in a measure, partially offsets the interest we have paid on deposits. We must continue to maintain some sort of balances in large cities for the purpose of drawing drafts to make the usual commercial transfers.

It seems to us that the new bill will have a tendency to contract rather than increase the loaning inclination of the country banks, particularly among conservative bankers, who dislike rediscounting paper, and having certain definite obligations maturing in large amounts at definite dates instead of the usual moderate withdrawals of deposits. I do not recall that we have rediscounted any paper in 20 years, and I am consequently very fearful of the new bill with its many peculiar and objectionable features.

The savings department plan of segregating assets does not appeal to us as practical or just.

Is it not possible to pass some bill which will enable banks to issue emergency currency with proper collateral, charging a sufficiently high tax, so that the same will be quickly retired, which, in addition to our present banking laws, would answer the requirements of the country much better than the proposed bill?

It certainly seems to us that the banks should have some voice in the matter, and that their suggestions should be given consideration and not entirely belittled and made to appear to the country at large as emanating from the big New York banks. We certainly have a few ideas of our own, and do not want to have our business endangered in the manner that it appears to us will be the case by the present Glass-Owen bill.

I have been with this bank over 30 years and have a considerable financial interest in it. We have built our bank slowly, but steadily and solidly, and we believe that we have been a factor in the upbuilding of the city, county, and even outside territory.

We trust that the provisions of whatever currency bill that is passed will not be so objectionable that it will compel us to change into the State system instead of continuing as a national bank.

Respectfully,
G. D. La Bar,
President.

Senator HOLLIS. Mr. Chairman, I wish to put in the record a letter which I have received from Mr. Frank H. Foster, cashier of
the Claremont National Bank, of Claremont, N. H., having special reference to the savings-bank provisions.

Senator Harrington. Without objection the letter will be incorporated in the record.

(The letter referred to is as follows:)

Claremont National Bank,
Claremont, N. H., September 13, 1913.

Hon. Henry F. Hollis,
United States Senate, Washington, D. C.

My dear Senator: I have received your kind letter of September 9 and am much interested to learn that the savings-department section of the Federal reserve act will receive careful attention by the Senate committee.

I am going to take the liberty to present a number of criticisms which occur to me on the section as it stands, which I assure you are offered in an entirely friendly spirit. It is my hope, which I am sure is shared by most national bankers in New Hampshire, that the act will be passed and in such form that it will not result in a wholesale surrender of national-bank charters. Such result would be deplorable, both from the standpoint of the general public interest and the credit of the administration. It would inevitably bring heavy financial loss to all national banks through the depreciation in the market price of the 2 per cent bonds, which would follow any general withdrawal from the national system; a loss which would fall with equal severity upon banks which remained in the system. As I understand it, any national bank surrendering its charter is obliged to deposit lawful money to the amount of its outstanding circulating notes, and the bonds would then be released to it and would, of course, come on the market. Should any considerable percentage of the $800,000,000 or so of twos now held by the banks be thrown on the market they would have to be sold practically on the basis of their investment value, and the market price, under these circumstances, might easily fall to 75 or 80.

Beginning with the phraseology of section 27: The section seems to take away with one hand what it offers with the other. First, on page 45, lines 2, 3, 4, and 5, and on page 46, lines 1 to 10, the purpose seems to be announced to exempt savings departments from restrictions existing in the present national-bank act. But there follows, on pages 46, 47, and 48, a set of new restrictions in regard to investments far more drastic than any existing in the present law.

Second, on page 45, lines 20 and 21, it seems to authorize savings departments to make loans on personal security, while the restrictive clauses, lettered A to F, on pages 46 and 47, eliminate loans on personal security altogether.

Furthermore, the language of the section is certainly ambiguous as to the status of savings departments now being operated by national banks under the present law, as it does not expressly state that such departments may not continue to be operated as at present.

Another criticism to which the section seems to me to be fairly open relates to the provisions requiring segregation of assets for savings-department business. It seems to me that segregation of assets is of little importance so long as no prior lien is created in favor of savings depositors upon assets so segregated. It is difficult to see wherein protection to depositors in savings departments would result, unless they were protected from loss made by the banks in their commercial departments. On the other hand, it is probable that the amount of capital stock segregated would in most cases constitute a smaller margin of protection to the savings depositors than they now have, where the whole capital, surplus, and undivided profits of the bank stand as a general guaranty fund for protection of all the depositors. I find that in the State of New Hampshire at the present time, as shown by the last published abstract from the comptroller's office, the national banks have in their capital, surplus, and undivided profits a guaranty fund equal to 60 per cent of their total deposits of all classes, and the percentage for the whole of New England is 52. In view of this very liberal protection to depositors, I can not see how the public interest calls for any separation of assets for the special protection of one class.
Again, on page 49, lines 1 to 13, a requirement is inserted in regard to deposits carried in other banks, making it necessary to carry separate accounts for such funds of the savings departments as may be deposited with other banks. This seems to be unnecessarily burdensome. Again, there is the provision, in lines 11, 12, and 13, forbidding the savings departments of the national banks to keep any current funds on deposit in the commercial department of the same bank. It seems to me that is the very place where they ought to be kept—at least a portion of them. As to the clause relative to a notice of withdrawal being required of savings depositors, that would be of very doubtful value to any bank. The requiring of such notice would only be resorted to in times of stress, and would in such case be a danger signal which would seriously imperil the bank in its commercial department. We have always gone on the theory that our assets must be kept invested in such a manner that we could meet heavy withdrawals without requiring any notice, and that to require such notice would come so near to being an act of insolvency in the eyes of the public that it would be of very little value to us.

The restriction upon investments of mutual savings banks imposed by New England and New York States, where such banks have been familiar to the public for many years, have been imposed, as I view it, mainly for the reason that the depositors are the bank, and any losses sustained must fall directly upon the depositors, whereas in national banks an entirely different situation exists, the stockholders necessarily assuming all risk of loss up to the amount of their stock and 100 per cent liability in addition. It does not seem logical to apply restrictions and regulations to national banks which may be entirely wise and proper in the case of purely mutual institutions. The management of every national bank must be credited with an honest purpose to safeguard not only the money of its depositors but also the interest of the stockholders, who must stand in the breach absolutely whenever a loss occurs.

If I were to be asked to make recommendations, they would take form somewhat as follows:

(a) Require no segregation of capital or assets.

(b) Allow not exceeding 50 per cent of savings deposits to be invested in loans on real estate in the State, Territory, or district where the bank is located, such loans being limited to 60 per cent of the value of the property.

(c) Allow, say, 20 per cent of savings deposits to be invested, subject to the approval of the comptroller, obtained in advance of such investments, in the stocks of railroads or other public-service corporations in the United States which have regularly earned and paid dividends for five years next preceding the date of such investments.

(d) Require 9 per cent reserve against savings deposits, one-third cash in bank, one-third with regional reserve bank, and one-third with reserve agents.

If the principle of segregation of assets and restriction of savings deposits to certain specified classes of securities is to be retained in the bill, the lines should certainly not be so drawn as to needlessly exclude from the field of investment good notes, bonds, and mortgages obtainable in the locality in which the bank is doing business. As the restrictive clauses stand a great majority of country banks would be unable to invest any considerable percentage of their savings deposits at home, as will be seen by an examination of the clauses in detail, as follows:

(a) Page 46, line 15. Farm mortgages having not over five years to run and not exceeding 50 per cent of the assessed valuation of the property. Savings banks in New England are allowed to make loans on any real estate without definite maturity up to 60 per cent in some States and 70 per cent in others of the value of the property, and it is left to the discretion of the bank itself to determine the value for the purpose of loaning.

(d) Page 47, line 6. Under this clause all municipal bonds in the States of New Hampshire and Vermont would be ruled out by the 25,000 population limitation except bonds of the cities of Burlington, Manchester, and Nashua. Whether these would come in at all under the 5 per cent debt limitation I have not ascertained. Most of the States, in defining what municipal bonds may be purchased by mutual savings banks, do not prescribe any population limit. Some of them prescribe a 5 per cent debt limit, exclusive of debt incurred for
waterworks in the case of cities, and a 3 per cent limit exclusive of waterworks bonds in the case of towns.

(c) The limitations imposed in this clause seem rather unscientific for the reason that many second mortgages or general lien railroad bonds are better secured than some first-mortgage bonds, as is well known to anybody at all familiar with such securities. For instance, some railroads and public utilities are built largely out of the proceeds of their first-mortgage bonds, which might not be a desirable security for a bank under any circumstances, whereas such active bonds as American Telephone & Telegraph Co. general lien bonds, or the convertible bonds of the same company, which are not mortgage bonds at all, would be a perfectly conservative investment of bank funds, readily marketable at all times.

(f) Bonds of real estate corporations are not to be had in this part of the country, or at least I know of none such ever having been offered to us. It seems to me that these proposed restrictions display the futility of attempting, by statute, to lay down rigid rules within which investments must be made governing banks all over the United States. Doubtless the purpose is a laudable one, but if the banking business of the country is to be strengthened and broadened the field for investment must not be narrowed to the vanishing point and a wide range must be left for the judgment and discretion of the officers of the bank itself, who must be credited with an honest purpose to safeguard the interests of their depositors and to loan the funds in their charge in such a way as to further the commercial interests of the communities which they are serving.

It does not strike me that it would be practicable to require that savings departments of national banks make their investments in conformity to the laws governing mutual savings banks in the States where they are located. It might work all right in New Hampshire, but mutual savings banks are little known outside the Northeastern part of the country, and the diversity and voluminous minutiae of the many State laws governing savings-bank investments, together with the practical nonexistence of mutual savings banks in some of the States, would make the administration of such a system very arduous to the authorities at Washington, and I believe unsatisfactory as well.

I wish it were possible for the new act to enlarge the powers of national banks to permit them to compete on more equal terms with trust companies—that is, to empower them, under proper regulations, to act as trustees and executors. I believe thoroughly in the proposition that a Federal bank charter should convey broad enough powers to enable the bank operating under it to transact any legitimate branch of banking, including the functions of trusteeship normally incidental thereto.

In conclusion, I feel impelled to strongly urge the elimination of the savings-department section altogether, or, if that should not meet with the approval of the committee, the substitution for it of a few short clauses reducing somewhat the reserve required against such deposits from the present 15 per cent and authorizing the investment of some portion of savings deposits in loans secured by real-estate mortgages and some reasonable percentage in approved railroad or public-service corporation stocks, leaving the existing field of investments otherwise untouched.

Thanking you for the opportunity given me to present these suggestions, I remain,

Very truly, yours,

Frank H. Foster, Cashier.

Senator Hitchcock. The committee will now stand adjourned until Monday at 10.30 o'clock a.m.

(Thereupon, at 5.20 o'clock p.m., the committee adjourned until Monday, October 20, 1913, at 10.30 o'clock a.m.)
The committee assembled at 10.40 o'clock a. m.
Present: Senators Hitchcock (acting chairman), O'Gorman, Reed, Pomerene, Shafroth, Hollis, Bristow, Weeks.

Senator Hitchcock. The committee will come to order, and we will hear this morning from Mr. Victor Morawetz.

STATEMENT OF VICTOR MORAWETZ, ESQ., OF NEW YORK, N. Y.

Senator Hitchcock. Will you please give your name, address, and business, Mr. Morawetz, so that we may have them in the record.

Senator Hitchcock. And your occupation?

Mr. Morawetz. I am a lawyer.

Senator O'Gorman. And you have, I believe, specialized in corporation and banking law?

Mr. Morawetz. I was for a period of 12 years chairman of the executive committee of the Atchison, Topeka & Santa Fe Railroad Co., having special charge of its financial affairs, and I am now a director of the National Bank of Commerce, of New York.

Senator Hollis. You might tell us what textbooks you have published and on what subjects.

Mr. Morawetz. I have given special attention to banking and currency questions for the last five or six years, and have published a small book and numerous pamphlets treating on this important subject.

Senator Hitchcock. Will you please proceed with your statement in your own way, and I would like to ask whether you care to be interrupted with questions, from time to time, or whether you prefer to finish your statement in consecutive order?

Mr. Morawetz. I prefer to be interrupted by questions whenever any member of the committee finds that I am not entirely clear or wishes additional information.

Gentlemen, for more than four years I have written and spoken in opposition to the central bank or Aldrich banking and currency plan. I have advocated the adoption of the regional or divisional reserve bank plan, which is, in substance, the plan embodied in the bill now before this committee. All my prejudices, therefore, are in favor of this plan. I am anxious to have the bill, now before the committee, perfected, so that it will carry into effect the plan which I have been advocating, and which I believe to be the best and most practicable plan for this country.

However, careful examination of the House bill before the committee, No. 7837, has convinced me that it contains a number of very serious defects, and that if it should become a law without amendment it would fail to carry into effect the beneficent purposes of its authors.

The first point to which I shall address myself is the issue of the notes provided for in this bill. The bill provides for an issue of notes which is to be printed by the Government and delivered to the banks,
which subsequently are to issue these notes. The bill says that the notes are to be Government obligations. Presumably, therefore, they are to be in the form of promissory notes of the Government. But the Government is not to issue any one of these notes; they are all to be issued by the banks.

The Government is not to pay any one of these notes; they are all to be paid by the banks. It is clear, therefore, that these notes are to be entirely unlike the present issue of greenbacks, which are promissory notes issued by the Government to pay its debts, and which are to be paid by the Government out of its funds. Under existing law the Government has pledged itself to maintain a very large reserve of gold for their payment.

The proposed notes, in truth and fact, are to be bank notes, although in form they are Government notes. They are, in truth and in fact, to be like our present national-bank notes, except that they are not to be secured by a deposit of Government 2 per cent bonds, but they are to be an asset currency secured by a first lien on the assets of the banks, and with a provision that the banks are to keep a reserve of 33½ per cent for their payment.

The Government also, is to be liable on these notes, nominally as maker, but really as guarantor. That is the honest fact concerning these notes.

Now, I have no quarrel with that arrangement except as to its form. It is artificial, and to many it is and to many it will be misleading.

Senator Hitchcock. Will you stop there to let us know how you think it will be misleading?

Mr. Morawetz. It is misleading to all those who do not study the provisions of this bill and ascertain the real facts underlying a certain amount of disguise.

The framers of this bill have been subjected to criticism, and I think very unjust criticism, within the last week on the ground that the bill provides for the issue of more greenbacks—fiat money, if you please. I say that criticism is unjust because these notes are not, in fact, to be Government notes; they are not to be issued by the Government; not one of them is issued by the Government. They are really notes of the banks, guaranteed by the Government.

Furthermore, it seems to me that this arrangement is likely to prove more or less misleading to those of our citizens who still adhere to the ideas which were prevalent 20 or 30 years ago, that it is desirable to pay the debts of the Government in its promissory notes and to have outstanding currency consisting of Government fiat money. They will not get under this bill what they may suppose they are getting.

And there is another consideration. It seems to me that a due regard for the opinion of foreign nations and of posterity is a reason for adopting a more direct method of issuing these notes. People will wonder why on earth the Congress of the United States found it necessary or desirable to resort to this indirect way of issuing what really amounted to guaranteed bank notes, and it is somewhat galling to my pride as an American citizen to think of the reasons which would have to be assigned to explain why these notes were put in this form.
Senator O'Gorman. Let me ask you, Mr. Morawetz, is it unusual for Governments to guarantee bank issues?

Mr. Morawetz. Very unusual.

Senator O'Gorman. Do any Governments guarantee bank issues?

Mr. Morawetz. I do not know of any Government which, in terms, guarantees the notes of any bank, though the great foreign central banks are so closely allied to the Governments that I believe there exists a practical guaranty by the Governments for their ultimate redemption. I should not myself see any objection to the Government of the United States guaranteeing this issue of bank notes. They will be perfectly good, and personally I see no objection to placing the guaranty of the Government on them.

Senator O'Gorman. Then, so far as the responsibility of the Government is concerned, it will make no difference whether the Government becomes the primary responsible party for the purpose of redeeming the notes or whether it is acting as a guarantor behind the bank? In either event the Government is responsible for the notes?

Mr. Morawetz. In either event the Government would be secondarily responsible.

Senator O'Gorman. In one case secondarily responsible and in one case primarily responsible?

Mr. Morawetz. In both cases secondarily responsible, because this bill would have to be read into the notes; it would be a part of the notes, and this bill says, in so many words, that the notes are to be paid by the banks; they are to be the primary obligors, and that the notes are merely loaned by the Government to the banks as accommodation paper.

Senator O'Gorman. Then, in either event the Government becomes responsible for the notes?

Mr. Morawetz. Yes, sir.

Senator O'Gorman. And as I understand you, up to the present time you only criticize the method or the form?

Mr. Morawetz. Yes, sir; I criticize only the form. I think it important that the form should be right, because of the reasons I have assigned and because of the precedent it might establish in the minds of many people who would not understand the real facts of the situation.

Senator O'Gorman. Do you see any advantage in the form proposed by the pending bill with respect to the enlarged confidence that might result from the Government apparently being the responsible party behind the notes?

Mr. Morawetz. None whatever. If people should attach greater faith to these notes because they are executed by the Government as principal obligor, then they would be misled, because the Government is not the principal obligor, and it will not have a dollar of money of its own for their payment. It can draw only on the banks to get the money to pay these notes if they should be presented to the Government.

Senator Weeks. You suggested, Mr. Morawetz, that if it were necessary to explain the reason for issuing the notes in this form in the future it would be an embarrassing thing to do.

Mr. Morawetz. I think so.
Senator WEEKS. What reason do you think could be assigned for issuing them in this form?

Mr. MORAWETZ. Political reasons.

Senator WEEKS. Any other?

Mr. MORAWETZ. I include in political reasons the platform of the Democratic Party.

Senator WEEKS. Then you mean party reasons?

Mr. MORAWETZ. Party reasons; yes.

Senator WEEKS. Any other reasons?

Mr. MORAWETZ. I know of none.

Senator HITCHCOCK. Suppose we assume, Mr. Morawetz, that among the 90,000,000 people in the United States there is a certain proportion, perhaps a large proportion, of people of an undiscriminating character, not able to understand the science of money, who will look upon these notes as money, and who think, primarily in their own minds, that money should be issued by the Government and that if issued by the banks, it gives the bank an unfair advantage and opens the possibility of imperilling the rights and interests of the common people, would you still say, taking that fact into account, that the Government, representing all the people, should nevertheless legislate so as to create bank notes which many of that class of people lack confidence in and which they reprehend as not desirable?

Mr. MORAWETZ. My answer, in the first place, is that the facts are not as assumed. We have to-day outstanding $720,000,000 of national-bank notes which are accepted as good as gold by the people of this country. These national-bank notes have not even on their face the guaranty of the Government, but they are indirectly guaranteed by the Government under the legislation pursuant to which they were issued. So, the assumption that it is necessary to issue these notes in the form of Government notes is entirely unfounded; but even if it were so I should not consider it justifiable to issue the notes in this form, and I should educate the people to the true situation.

Senator HITCHCOCK. It is true, as you say, that throughout the country there is this confidence in these particular bank notes, but I think it is also true that there is a very considerable sentiment among the people that the issuance of those notes constitutes a special privilege to that class of banks, out of which they have made a great deal of money, as they think, at the expense of the people. Does not that prejudice constitute, at least in part, the sentiment for the retirement of those notes? I do not share it, but that does exist, does it not?

Mr. MORAWETZ. I think, Mr. Chairman, it will be harder to defend before the people the loaning of the notes of this Government as accommodation paper to the banks than to defend the guaranty of properly constituted bank notes by the Government, because, as I have stated, this paper is simply accommodation paper which the Government is to lend to the banks.

Senator O'GORMAN. Will you pardon me right there while I ask you a question, Mr. Morawetz?

Mr. MORAWETZ. Certainly.

Senator O'GORMAN. Would your view regarding the obligation of the Government be affected at all if it appeared that the Government
would receive a substantial consideration from the banks of the country for the assumption of this liability? For instance, I have in mind what has been suggested more than once, that the profits of the regional banks, if we have regional banks, in excess of the 5 or 6 per cent that will be returned to the member banks as a return on their capital contribution, that the excess of surplus ought to go to the Government, and it has been estimated that that would amount to many millions each year. What do you think of the proposition that in return for that affirmative benefit to the Government, the Government, to advance the system generally, should undertake to issue these notes and become primarily responsible?

Mr. Morawetz. I attach no importance whatever to that consideration. In the first place the Government of this country is not in the business of selling its credit. The fact that the Government may receive a profit from these regional reserve banks is no reason for the issue of the notes, or for the lending of the credit of the Government. The only reason why the Government might be warranted in lending its credit in this way is to benefit the whole country by providing it with an unquestionably sound issue of currency. Personally I hope that the regional reserve banks will be managed so that there will be no profit in them. I hope they will be managed in such a way as to keep our banking and currency system on an absolutely firm and sound basis. That is the benefit to be obtained by this scheme, and none other.

Senator Weeks. Has it occurred to you, Mr. Morawetz, that there is a good deal of confusion in the minds of not only the average citizen but in the minds of many who have given some consideration to this subject as to the difference between money and credit instruments, and that many men who have taken the position, leaders and teachers in this subject, have believed that it was the duty of the Government to issue credit instruments as well as money?

Mr. Morawetz. No doubt there is that idea prevalent among many of the people, including some of the political leaders in this country, but it is not so anywhere else.

It has been asserted that the provisions of this bill for the issue of notes may lead to an inflation of the currency, with all the dangers consequent to an inflation of the currency. I do not share those fears. If we are to have in this country a flexible currency which will be subject to contraction as well as expansion, and which will adjust itself to the business needs of the country, it is absolutely necessary to place somewhere the power to control the issue of the notes, to limit their issue, to force their contraction when necessary.

Under his bill the several regional reserve banks are to have the power to issue notes subject, however, to an absolute veto power in the Federal reserve board representing the Government. This arrangement, therefore, is more conservative and safer than the Canadian plan, under which the banks have the power to issue notes without this outside check placed upon them. The only possible danger of inflation, of an excessive issue of currency under this plan, will arise from the number of regional banks. The more of these banks there are the more danger is there that they will put out more currency than the country really needs. If the number of these banks were limited to five or six, I should say that the danger of
inflation would be removed entirely, even without the veto power of this central board.

Senator Hitchcock. Can you outline how you think this tendency toward inflation will occur? As it stands now——

Senator Brislow (interposing). If Senator Hitchcock will allow me, before you go into that matter, I would like to ask a question. I understand you feel that there should be imposed in some board the authority to say when there shall be a contraction and when there shall be an expansion?

Mr. Morawetz. Not to say when there shall be an expansion, but to force a contraction when the country requires it.

Senator Brislow. And that would be a matter of judgment?

Mr. Morawetz. Yes, sir.

Senator Brislow. How are you going to provide against the very wide diversity of opinion that prevails among men as to what would be an expansion and what would not be?

Mr. Morawetz. It is a banking problem which experienced bankers do not have much difficulty in dealing with. It is a question which arises wherever there is a central bank, and in Canada, where there are nearly 30 banks, 10 or 12 of them, however, being leading banks, and practically ruling the others. They have no difficulty in these cases in determining the volume of notes that is safe.

Senator Brislow. This Federal board is not a bankers’ board. It is a political board; it is a board appointed by the President to exercise political functions. Otherwise it would not be made a Government board. Government is politics; I do not mean partisan politics, but its functions are political.

Senator Shafroth. A people’s board, you mean?

Mr. Morawetz. It is a governmental board.

Senator Brislow. A governmental board. One political school of thought in regard to banking matters may be in control or another political school of thought may be in control. If Mr. Bryan was at the head of that board he might say the currency out was not sufficient; that we did not have enough. If Mr. Aldrich was at the head of that board he might say it was excessive, and that there ought to be contraction. The difference of opinion among men is so varied that might there not be danger of precipitating this matter into politics and making it become a political question instead of a business question?

Mr. Morawetz. If you please, I will take up the question of party politics entering into this plan a little later. What I wish to say now is that I do not fear that there will be inflation of the currency so long as the number of the regional banks is limited. If there were no central board of control, there would be no danger of inflation, provided that the banks are required to keep an adequate reserve for the payment of the notes on demand. I should consider that the danger of inflation would exist even if there were no veto power in the central board.

Senator Hitchcock. We have had discussed at these hearings this question of possible inflation, and I was going to ask you to outline briefly the processes under this bill by which inflation might result. I do not know whether you mean an inflation of bank credits or an inflation of currency, or both?
Mr. Morawetz. I do not know how there could be inflation under this bill if you have a fairly intelligent management of these regional reserve banks.

Senator Hitchcock. I understood you to suggest there might be, under this bill.

Mr. Morawetz. It has been asserted. I say I do not agree with the criticism.

Senator O'Gorman. Did you not say whether there would be inflation or not might depend upon the number of banks?

Mr. Morawetz. Yes; I do say that if you increase the number of these banks so largely as to prevent them from adopting a uniform policy they might put out so many of these notes unless restrained as to practically force all the gold and lawful money in circulation into the bank vaults, thereby increasing enormously the reserves and credit power of the banks.

It is this process which in Canada has resulted in this situation: The only currency in Canada which is current among the people consists of bank notes and small government notes and subsidiary coin. All the gold in Canada has been taken into the banks, which have issued their notes in exchange.

Senator O'Gorman. Do you think there would be greater danger of inflation with 12 regional banks than with 5?

Mr. Morawetz. I think so. The same process has caused the national-bank notes all to be outstanding. They have displaced, taken the place of, that much lawful money, because every bank when it receives currency combs it out, keeps the lawful money, and issues its notes when currency is demanded. But to the people the notes and the lawful money and the gold are of equivalent value. When a man has more currency than he wants to carry in his pocket or keep in his till he does not pick out the national-bank notes and deposit them in the bank. He takes his currency without regard to its description and deposits it. But the bank immediately combs it out, as I have stated, and keeps the lawful money while issuing its notes whenever it can pay its debts in that way. By that process bank notes will become the circulating medium among the people as far as the people will take them and as far as the law permits them to be issued, while the gold or other lawful money will be taken into the banks.

Senator Hitchcock. What is the provision in Canada regarding the redemption of these bank notes? Suppose a bank receives one of its own notes, can it pay it out again?

Mr. Morawetz. I think not; no.

Senator Weeks. Well, they are permitted to pay it out?

Mr. Morawetz. Yes.

Senator Weeks. And whether they pay it out or not is dependent on whether it is profitable to put out their own notes?

Mr. Morawetz. Yes.

Senator Weeks. If it is profitable to put out their own notes they do so and send the notes of the other banks in for redemption.
Mr. Morawetz. But this process of substituting notes for money in circulation among the people will go on without regard to whether or not there are easy redemption opportunities. When a bank sends the notes of another bank in for redemption in lawful money, that does not put the lawful money into circulation; it merely transfers it from one bank to another bank. It is in my judgment a delusion to imagine that easy redemption opportunities will restrict this process of substituting bank notes for gold or other lawful money in circulation among the people. The only thing that will restrict that process is an absolute limit on the amount of bank notes which can be issued.

Senator Hitchcock. Do you think that limit should be placed within the judgment of a supervising board?

Mr. Morawetz. It has to be somewhere. Now, I should be satisfied if that limit were placed in the regional reserve bank with a veto power on the part of a Government board.

In the plan which I outlined some years ago for the creation of regional reserve banks, and for the issue of bank notes by them, I contemplated that the regional reserve banks would have a central bureau consisting of representatives of these banks, who would determine what amount of notes might be issued by the banks.

As I shall point out a little later, I think some such provision would be a beneficial one in this bill—I mean the constitution of a central board to deal with the issue of notes by the regional banks, instead of having each one separately deal with the Government.

Senator Hitchcock. Is not the power to limit or fix the volume of the currency the power to affect prices?

Mr. Morawetz. I do not think so.

Senator Hitchcock. Can you conceive of a condition of a considerable expansion of the currency that does not advance prices and stimulate business; or can you conceive of a contraction of currency that will not force sales and reduce prices? Are those not the inevitable consequences of those conditions?

Mr. Morawetz. There is a good deal of loose reasoning, as it seems to me, about the functions of currency. Nothing the banks can do; nothing the Government can do will put a dollar more of currency in actual circulation among the people. The people will carry in their pockets, and in their tills whatever amount of currency they find convenient; and no matter what quantity of the currency may be printed, they will not carry any more. If there is a surplus, they will deposit in the banks.

Senator Hitchcock. Does not the quantity in circulation in the pockets of the people, or in the tills, depend upon the activity of business, and is not the activity of business largely affected by the ease of loans?

Mr. Morawetz. Now you come to the real point. Business may be affected by the credit situation in the country—the ability to borrow from the banks. And this credit situation depends, first, on the ability of the banks to grant credit; secondly, upon their willingness to grant credits; and thirdly, on the confidence of the people in the future; their willingness to take credit and to embark in enterprises.

The only way in which an increase of the currency—we will assume of course that the currency is all kept at a parity with gold— the only
way in which an increase of the issue of bank notes can affect this situation in the least is by displacing gold, or lawful money, in circulation among the people; driving that into the bank vaults and thus increasing the reserves of the banks and their power to grant credit.

Senator Hitchcock. Suppose a law was passed compelling the banks to increase reserves; would not that inevitably contract the currency?

Mr. Morawetz. No; it would not contract the currency; it would contract their power to make loans.

Senator Hitchcock. Well, I mean under a note-issuing power. Suppose there was a power to issue currency, controlled as proposed in this bill, or as you suggest, by the banks; then suppose there were changes made in the law which increased the reserves from $\frac{33}{3}$ to 50 per cent; would not that inevitably contract the currency?

Mr. Morawetz. It would not contract—it depends upon what you mean by contracting the currency. It would contract the power of the banks to make loans surely.

Senator Hitchcock. And it would also contract their power to issue their demand obligations, and that would contract the currency, would it not?

Mr. Morawetz. It would not contract the amount of currency in circulation among the people.

Senator Hitchcock. It would contract credits, would it not?

Mr. Morawetz. It would contract the power of the banks to make loans; yes.

Senator O'Gorman. Therefore, it would have a restraining influence upon the credits that the banks would extend throughout the country.

Mr. Morawetz. Certainly.

Senator O'Gorman. I do not want to anticipate you, Mr. Morawetz; probably you are going to touch on it again; but in view of a remark you made a little while since, I should like to ask you a question or two. You said that the danger of inflation under a system substantially such as is proposed in the pending bill would be less with 5 or 6 regional banks than with 12; is that correct?

Mr. Morawetz. Yes.

Senator O'Gorman. The danger would be still less if you had but three regional banks, would it?

Mr. Morawetz. I think so.

Senator O'Gorman. Would not the danger be entirely removed, if you had but one?

Mr. Morawetz. No. A central bank managed unwisely could inflate currency just as much as 3 or 5 or 12 regional banks.

Senator O'Gorman. Yes. Now, would there be less danger with a single bank than with three?

Mr. Morawetz. I doubt it. I think if you had a number of these banks, each watching the other, it would tend toward conservatism, rather than to the contrary.

Senator O'Gorman. Then you think it would be better to have 12 than 5?

Mr. Morawetz. No. I think 12—I think it would be better to have 5 than 12, for various reasons, which I will touch on a little later.
Senator O'GORMAN. Yes. Now, I have but one other inquiry to make at this time. You said a little while since, while discussing what you conceived to be the impropriety of the Federal Government issuing these notes, or taking primary responsibility for them, that there were certain political or party reasons which seemed to suggest this change; and I think there was some reference made, either by you or by some member of the committee, to some declaration of the Democratic Party in its last national convention on the subject. Now, was any declaration made that makes it necessary for the Democratic Party to insist upon a Government issue, rather than a bank issue?

Mr. MORAWETZ. I do not think so.

Senator O'GORMAN. Well, I have the language here. I do not find any such declaration.

Senator SHAFFROTH. Will you read it into the record, Senator O'Gorman?

Senator O'GORMAN. The declaration made by the Democratic Party at the Baltimore convention last year is as follows [reading]:

We oppose the so-called Aldrich bill or the establishment of a central bank—

As I read that, the central bank referred to is the central bank in the Aldrich bill, which was a central bank to be dominated by private interests, which was the only kind of a central bank ever discussed up to that time—

And we believe the people of the country will be largely freed from panics and consequent unemployment and business depression by such a systematic revision of our banking laws as will render temporary relief in localities where such relief is needed, with protection from control or dominion by what is known as the Money Trust.

Banks exist for the accommodation of the public and not for the control of business. All legislation on the subject of banking and currency should have for its purpose the securing of these accommodations, on terms of absolute security to the public, and of complete protection from the misuse of power that wealth gives to those who possess it.

We condemn the present methods of depositing Government funds in a few favored banks, largely situated in or controlled by Wall Street, in return for political favors, and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, national and State, without discrimination as to locality, upon approved securities, and subject to call by the Government.

That is the only declaration made by the party; and it does not touch upon the subject to which your attention was invited a moment ago.

Mr. MORAWETZ. I can not deny it.

Senator O'GORMAN. That is all, Mr. Morawetz, for the present.

Senator WEEKS. Then the only reason you had in mind that could be assigned for issuing notes in the manner proposed in this bill does not exist?

Mr. MORAWETZ. It seems so.

Senator WEEKS. I wanted to ask you if you recalled any instance where a central bank had been managed with such lack of wisdom that there had been an inflation in the country served by that bank?

Mr. MORAWETZ. I know of no such instance; but my information is limited to the principal commercial countries of Europe.

Senator O'GORMAN. But you never knew of an instance in the history of any of the important commercial countries of Europe, did you?
Mr. Morawetz. None.

Now, gentleman, I wish to call attention to one provision of the bill relating to the issue of the notes which I regard as absolutely fatal to any sound or safe plan; and that is the provisions that the notes shall be paid or redeemed in gold or lawful money.

The objection to this provision for the payment of the notes in lawful money is not based on the ground that it would lead to inflation. There is no more danger of an undue increase of the aggregate amount of the currency if the notes are payable in lawful money than if the notes are payable in gold only.

But there is another danger. It is this: If the notes can be paid in lawful money, that is to say, in silver, or in greenbacks, the inevitable result will be to drain off from this country its gold and substitute notes in the place of the gold, without increasing the aggregate amount of the currency.

Senator O'Gorman. I think you will find every member of the committee in perfect accord with you in that last observation.

Senator Hitchcock. Well, the Senator from Colorado is not in accord with that.

Senator O'Gorman. I am not surprised.

Senator Shafrroth. No; I can not agree to that. I do not see how you come to that conclusion, Mr. Morawetz, in view of the fact that we have had bank notes payable in lawful money to the extent of $740,000,000 and we have not had our gold leave the country.

Mr. Morawetz. Because of the limit of the amount of the bank notes that could be issued, due to the limited amount of Government bonds available for their issue.

Senator Shafrroth. Well, $740,000,000 is a very large amount, considering what it was in 1900—$236,000,000.

Mr. Morawetz. The country has grown since then. Will you let me take this question up in due course?

Senator Shafrroth. All right.

Mr. Morawetz. Any indebtedness which we have to pay to foreign nations has to be paid in gold. The balances of trade have to be settled in gold. So that it happens every year—sometimes twice a year—that gold sufficient to cover these balances has to be shipped one way or the other way.

Furthermore the different interest rates in this country and in foreign countries sometimes results in shipments of currency from the country where the interest rate is low to the country where it is high, in order to obtain the profits resulting from the higher interest rate.

Now, as long as notes and gold and lawful money are at a parity, it is wholly immaterial to us in this country whether we use gold or lawful money. Foreign nations, however, can only use the gold, and when we have to make a payment to a foreign nation, it has to be made in gold. But subsequently, if we need more currency—if we require to use again the gold which we shipped abroad, what would happen under this bill, if you can keep lawful money in the banks as a reserve for the payment of the notes? Why, notes would be issued and the gold would not be imported. The gold would go out; but it would never come back, because notes would be issued whenever in this country there is a need for the additional currency.
Senator Shafroth. When balance had to be met coming to this country, would not they have to ship the gold in here?

Mr. Morawetz. No, sir. You could loan it out.

Senator Shafroth. Yes; but investments here invite capital also; and that means the shipment of gold here. We have had shipment of $5,000,000 gold, on the average, a year since 1878; the flow has been inward.

Mr. Morawetz. It is true, because we have sold about 6,000 millions of dollars of stocks and bonds to Europe.

Senator Shafroth. Well, we have had a very large export trade also.

Mr. Morawetz. Although, on its face, our exports of physical property exceed our imports by about $500,000,000 a year just now——

Senator Pomerene (interposing). More than that.

Mr. Morawetz (continuing). The true balance is heavily against us because of the enormous interest and dividend payments which we make abroad, the enormous expenditures of our people abroad, and the shipments of money by immigrants and other invisible exports.

Senator Shafroth. Yes; but that is a matter of guess, very largely, is it not?

Mr. Morawetz. I think not very largely. I think you can figure it out pretty closely.

Senator Shafroth. Well, I can not find statistics on it.

Mr. Morawetz. However, I will take that up a little later; that is a little off my question.

The point I make is that as long as these notes are payable in lawful money the tendency will be and the result will be to deplete the country of gold, to make silver and greenbacks constitute our bank reserves and leave this country in a very dangerous position in case of any contingency arising which would require a large amount of gold for shipment. If we should have a war, or if for any other reason a sudden demand should be made upon this country for a large amount of gold, we might soon find gold at a premium and our notes and silver currency at a discount.

Senator Shafroth. We had the Spanish War, didn’t we, and gold did not go to a premium?

Mr. Morawetz. Oh, yes; that was a small matter——

Senator Shafroth (interposing). Do you anticipate we are going to have any——

Mr. Morawetz (continuing). And we had not these notes out.

Senator Shafroth. We had quite a large number of national-bank notes redeemable in lawful money.

Mr. Morawetz. It is a question of degree. This country to-day has vastly more uncovered paper currency than any other commercial country in the world, not absolutely, but also in proportion to the amount of gold in the country and per capita of population. There is not one of the leading countries in the world to-day which has anything like the amount of paper currency and silver that the United States has.

Senator Hitchcock. Do you call national-bank notes uncovered?

Mr. Morawetz. I do.
Senator Hitchcock. Because a gold reserve is not provided against them?

Mr. Morawetz. Practically no reserve.

Senator Hitchcock. Although they are protected by national bonds?

Mr. Morawetz. That does not protect them.

Senator O'Gorman. It simply gives them the credit of the Government.

Senator Shafroth. You admit that the Aldrich bill was generally favored by the bankers of this country?

Mr. Morawetz. I believe it was by the majority of the bankers; yes.

Senator Shafroth. Do you not recall the fact that the currency which was authorized to be issued under that bill provided that it should be payable in lawful money, and did not even mention gold?

Mr. Morawetz. Yes; but that does not affect me.

I want to make a confession right here. A few years ago I suggested a regional bank plan providing for an issue of notes by the regional reserve banks and I proposed that the notes should be payable in lawful money. At that time I considered only the question of inflation, and I did not consider that to make the notes payable in lawful money would cause any inflation, but I overlooked this other danger. I confess I made a mistake then and I hope that this committee will not make the same mistake in the bill which you report to the Senate.

Senator Shafroth. How long ago did you get that plan up?

Mr. Morawetz. About four and a half years ago.

Senator Shafroth. My view is that making this money payable in lawful money has a tendency to preserve the gold reserve and therefore to make it easier for the Government to maintain a gold standard, because you do not have such a drain on gold. If you are going to have gold in each one of these regional banks, you are going to have 12 centers competing against the United States Treasury for gold which will take three or four times as much gold, scattered around in 12 regional banks, than it would if they were redeemable in lawful money and the lawful money redeemable in gold. It is a kind of buffer which the banks put up against paying it in gold, and therefore has a tendency to maintain the gold reserve and to maintain the gold standard. My usual illustration is, if a man has $1,000 in this currency and goes to one of these regional banks and says, "I want gold," the regional bank can say, "No; it isn't convenient for me to give you gold; I will give you lawful money." Then the man sends it down to Washington, and says, "I want gold for my lawful money," and the Government says, "Yes." The regional bank locks up its $1,000 and the Treasury here locks up its $1,000.

Mr. Morawetz. What money will the Government have in Washington to pay for this silver in gold?

Senator Shafroth. Gold.

Mr. Morawetz. Where will it get it?

Senator Shafroth. It has got $150,000,000 of gold—

Mr. Morawetz (interposing). It has not a dollar, sir; not a dollar of that belongs to the Government.

Senator Shafroth. It has got $150,000,000 of gold reserve.
Mr. Morawetz. That is pledged for greenbacks alone.
Senator Shafroth. Certainly; and this proposes that there shall be a reserve of 33 1/3 per cent.
Mr. Morawetz. Not for the silver.
Senator Shafroth. No; not for the silver.
Mr. Morawetz. You say a man can get his gold by going to Washington and presenting his silver——

Senator Shafroth (interposing). I do not know whether they have ever settled that or not, because silver is a full legal tender, and it seems to be taken current no matter whether the Treasury undertakes to do it one way or the other. But he has a right to demand gold; it is legal-tender money, and he gets it, and in that way the Government can act as a double redeemer. That is, with less money I can redeem greater quantities of outstanding currency by having the reserve bank cooperate with the Government in paying off and preserving the gold standard.

Mr. Morawetz. I candidly confess I do not see how that would operate in that way. I know in all cases I have observed bank notes took the place of gold in circulation.

Senator Shafroth. Did you ever hear of a national banker that wanted to make the present national-bank notes redeemable in gold instead of in lawful money?
Mr. Morawetz. I do not know of any case.

Senator Shafroth. Isn't it because it has a tendency to preserve the gold?
Mr. Morawetz. I think not.

Senator Shafroth. There is a less quantity of gold than there is of gold and lawful money, and consequently it would be easier to maintain the gold reserve if it were redeemable in one or the other than if it were redeemable only in gold, it seems to me.

Mr. Morawetz. I don't think it would operate that way. I think that the trouble with this provision is that no conservatism on the part of the banks and no conservatism on the part of the Federal reserve board can prevent the substitution of notes for gold as long as the gold does not have to be kept for the redemption of the notes.

Senator Shafroth. You know that the Bank of France prevents a run on gold by reason of the fact that their paper money is payable in gold or silver?
Mr. Morawetz. No, sir; I paid a premium this summer for gold in France. When I asked Morgan, Harges & Co. for gold they said, "We will give you 500 francs," $100, "but do not ask us for more, because we have to pay a premium for gold when we ask for it at the Bank of France."

Senator Shafroth. What was the premium?
Mr. Morawetz. A very small premium.

Senator Shafroth. A tenth of 1 per cent?
Mr. Morawetz. I do not know.

Senator Hitchcock. Unfortunately we have a session of the Senate at 12 o'clock, and we shall have to take a recess. In order that we may be close at hand during the session, we will meet this afternoon in the Judiciary Committee room in the Capitol.

(Thereupon the committee took a recess at 11.55 a. m. until 2 p. m).
Senator Hitchcock. Mr. Morawetz, I think you had perhaps better proceed with your statement.

STATEMENT OF VICTOR MORAWETZ, ESQ.—Resumed.

Mr. Morawetz. Before the adjournment of the committee I endeavored to point out that the provision in the pending bill allowing the banks to redeem the notes in lawful money inevitably would result in driving a large amount of gold out of this country and substituting notes in its place, and this result would occur without any fault or lack of conservatism on the part of the banks or of the Federal reserve board.

The bill provides that national banks which fail within a year to come in under this plan shall be dissolved. If any considerable number of the national banks should be dissolved in this way there might ensue a very disastrous result, which appears not to have been contemplated or considered by the authors of this bill; there would be an enormous contraction of the currency, because the national-bank notes of these dissolved banks would have to be taken up in lawful money. The contraction of the currency which would occur, if only a third of these banks failed to come in, in my judgment, would very likely result in a very severe money stringency and possibly a great panic. For that reason it seems to me that this provision dissolving such of the national banks as fail to come in under this plan should be stricken out of the bill.

If the plan is a good one, as I believe it is in substance, let the plan be put in operation first and at the next session of Congress, or within a year, if you please, let Congress then deal with those banks which have remained out. It would be an enormous peril, not to the banks, but to the country, to force the dissolution of any considerable number of these national banks as long as they have their present issues of bank notes outstanding. I am confident, from conversations which I have had with officers of leading national banks in New York, that all or nearly all of them will gladly join in carrying out any plan along these lines which they believe to be economically sound. I believe they will willingly make large sacrifices of profits rather than stay out of any plan which they believe sound. This threat of dissolving these banks is not really a threat of doing a great injury to the banks themselves; the pistol is not pointed at the banks, but it is pointed at the country. The effect of that provision is practically to say to the banks:

You must come in under this plan; if you don't the country is going to suffer from a great money stringency and possibly a panic.

Now, I do not think that is permissible legislation.

Senator Hitchcock. May that money stringency be overcome by the issue of asset currency under this bill?

Mr. Morawetz. That is the very point. It can not be. If the banks stay out, the reserve banks would not be strong enough, if they can be formed at all—they won't be strong enough to issue the requisite amount of these new notes to take the place of the national-
bank notes which must be withdrawn, because you will observe for
every one of these notes that may be issued the reserve banks must
put up an equal amount of the prescribed collateral and, in addition,
a reserve in lawful money equal to 33\(\frac{1}{3}\) per cent of the notes. The
fact ought to be recognized that the cooperation of the banks is es-
sential in order to make this plan a success, and the banks will give
their cooperation if they are given half a chance; but I think it is
due to them, it is due to the country, that the Government should
try to put this plan through with the cooperation of the banks and
not force it upon them in the first instance. First establish these re-
serve banks with the cooperation of such of the banks as are willing to
join, and then let Congress, which always will have the mastery,
deal with such of the banks as refuse to come in.

Senator O'Gorman. Would you permit the banks that refuse to
come in to avail themselves of this rediscount privilege?

Mr. Morawetz. Certainly not. Only the banks which come into
the plan and become members should have these privileges. I have
not a doubt that practically all of them, particularly the big banks
that I have come in contact with, will gladly come into this plan
at considerable sacrifices, if it is made economically sound.

Senator O'Gorman. You see it would be quite difficult to exclude
nonparticipating banks from the privileges of the rediscount sys-
tem, inasmuch as they could, by indirect and not entirely illegitimate
methods, pass their paper on to a bank that is a member of the sys-
tem and that bank would in turn enjoy the advantages of the redis-
count features of this system.

Mr. Morawetz. It might be so if the member banks join with the
banks that are not members to defeat the purpose of the bill.

Senator O'Gorman. It is fair to say in this connection, Mr. Mora-
wetz, that a number of bankers who have testified before you have,
without any reservation, expressed the opinion that this plan, if de-
vised, should have all the national banks in it, and they favor the
compulsory feature of the proposed bill which compels them to
come in or surrender their charters. It has been stated, in that same
connection, that bankers are, of course, like other people and, if it
is entirely optional with them to come in or stay out, they would be
likely to defer their coming in at all events until some one else experi-
ments, and that, in that way, it might be difficult to complete this
system within any such period as the authors of the bill hope it would
require.

Mr. Morawetz. I agree that all the national banks should be re-
quired to come into this plan, but I think that this requirement
should not be imposed by Congress until it can be done with safety
to the country. And it can not be done with safety to the country
until after you have established the reserve banks and assured the
success of the plan. It is possible, it is probable, that if you do not
make this plan compulsory, but make it permissive merely, there will
be established, at the outset, only three or four of these reserve
banks. Under a permissive plan, I am confident, a strong reserve
bank would be established in the eastern part of this country, New
York, Boston, Philadelphia, and the neighboring cities. There would
be enough banks there to form a strong regional reserve bank. I
mean enough would come in.
Senator O'Gorman. Do you mean by that one bank in that territory?

Mr. Morawetz. One for that territory. I believe that another bank could be formed without the compulsory provision, in and around Chicago; another one could take care of the Central West, and another one on the Pacific coast.

Senator O'Gorman. Well, now, are you sure as to that Pacific coast proposition?

Mr. Morawetz. I am not sure as to the Pacific coast proposition.

Senator O'Gorman. Would it not meet your view, as you have indicated during the day, to start out first with the reserve board in Washington, and then three regional banks to take the place of the banks in the central reserve cities, New York, Chicago, and St. Louis, and leaving the power confided to the reserve board to provide for one, two, or three, or possibly a greater number, ultimately, of reserve banks in excess of the initial number, as the needs of the country seemed to require and as the disposition of the country banks appeared to be favorable to the plan?

Mr. Morawetz. I should start with authorizing the central board to organize five of these banks, one for the Northeast, one for the Central West, including Chicago, one for the Pacific coast, one with its headquarters in St. Louis for the South and Southwest, or possibly one in St. Louis for the Southwest and another one in the South for the Southern States—the old Southern States. That would be five. But I should put the plan in operation as fast as any of these five banks should be organized. If three only should be organized, let it start with three.

Senator O'Gorman. Or if one or two?

Mr. Morawetz. Yes.

Senator Pomerene. Would you have those three cover the entire country or only sections of it?

Mr. Morawetz. Only sections of it.

Senator Brustow. Then would you have a double head and operate the old system in one part of the country and the new system in another?

Mr. Morawetz. I do not think there would be any difficulty. Simply the banks in those sections in which a regional bank had not been established would be in the position of nonassenting banks. There would be no difficulty.

Senator Weeks. You speak with considerable confidence of what would be done in the East and the Middle West. Do you think that could be done unless changes were made in the pending bill?

Mr. Morawetz. Certainly not. I think changes would have to be made in the bill—changes not to benefit the banks financially, but changes which experienced bankers deem necessary to sound banking.

Senator Weeks. That is substantially what you are pointing out, or what you are intending to point out—the changes you think necessary or desirable?

Mr. Morawetz. Yes, sir.

Senator Weeks. Now, do you not think, Mr. Morawetz, we have to use the greatest care not to produce confusion and uncertainty of what is going to come from this legislation or when it is going to take effect?

Mr. Morawetz. Assuredly.
Senator Weeks. Otherwise, is there not going to be a natural contraction and hesitation and stopping of business enterprises of the country?

Mr. Morawetz. I believe that is going to happen no matter what legislation you pass, and I think that a great many of the voters of this country will charge the legislation which is passed, whatever it may be, with being the cause of it.

Senator Weeks. You recognize we have a very delicate proposition.

Mr. Morawetz. You have a delicate proposition and you have a delicate situation to deal with.

Senator Weeks. And we ought to be quite sure of what we are doing before we do it?

Mr. Morawetz. Certainly.

Senator Brustow. Now, Mr. Morawetz, before you leave that point: You spoke of starting with three, possibly, and adding the others later. If it will come in now as part of your remarks, just as well, what objection would you have to the Federal board which is created, having the immediate charge of the Federal bank itself?

Mr. Morawetz. You mean to establish a central bank which is to be managed by the Government?

Senator O'Gorman. By the Federal board.

Senator Brustow. By the Federal board.

Senator O'Gorman. Of seven commissioners.

Senator Brustow. Yes; of seven commissioners. This is the idea I had in mind, and that is, that this board which will not have any ex officio officers—I do not think there ought to be any Government officers on the board—but let them be in the active management of the bank itself so that they are coming in direct personal contact with the operation of the business and thus understand it. I do not say a central bank, because according to my view it would not be a central bank; it would be a Federal bank.

Senator O'Gorman. A Federal bank of discount and reserve.

Senator Brustow. A bank of discount, a bank of reserve, and a bank of deposit of Government funds, and any reputable banking concern which has the proper assets could discount those assets at this bank, and let its operation be extended to the various sections of the country so as to meet the convenience of the people.

Now, what objection would you see to that?

Mr. Morawetz. Well, that is, in substance, the central bank or the Aldrich plan over again.

Senator Brustow. No. Now, I beg your pardon; you do not understand. This we will have now is the Aldrich plan with the head cut off. We have now, with the Aldrich plan, a bank managed by bankers, owned by bankers, operated by bankers—a private enterprise so far as the regional banks are concerned. Now, the central bank of the Aldrich plan has been left out, and in lieu of it a Federal reserve board of supervision has been created. Now, in substitution for that plan, I would create a bank that is not owned by the bankers, that is not operated by the bankers, but that is owned by stockholders and operated by the Federal Government for the convenience of the banking system of the country, but not controlled by the bankers at all.

Mr. Morawetz. I understand. It is to be a central institution or central bank, the capital of which is to be furnished by private indi-
viduals, if you please, anybody who wants to take stock in it or will take stock.

Senator O'Gorman. Preferably by the banks who want to come into the system.

Mr. Morawetz. They are not to have a vote in it, but it is to be managed by the Government itself through this board.

Senator Bristow. The subscriptions will be wholly voluntary. Now, it is not a central bank, and I will tell you why: A central bank is the center of a banking system, connected up, and it is the head and the center. Now, it is not proposed that this shall be the center of a banking system, but this shall be a Federal institution which will come to the relief of the banking system of the country, the democratic system which now exists, when such relief is needed.

Mr. Morawetz. Of course, it is all a question of definition, whether you call that a central bank or not. I should call it a central bank; it performs the functions and is very similar, in substance, to several of the great central banks in Europe which are managed by government appointees.

Senator Bristow. I guess there is but one, and that is the Bank of France?

Mr. Morawetz. The Bank of Germany.

Senator Bristow. The system we are now discussing is more nearly like the Bank of Germany than the one suggested by the question.

Mr. Morawetz. I do not think so, but that is of no consequence.

Senator Bristow. Is the Bank of France called a central bank?

Mr. Morawetz. It is generally called a central bank; yes.

Senator Bristow. I have never heard it called the central bank; I always heard it called the Bank of France.

Mr. Morawetz. That is a question of definition. I consider it a central bank, a large central institution which is the principal depository of the bank reserves, and whose function is not primarily to make money for its shareholders but to act as the balance wheel of the banking institutions of the country and to keep the finances of the whole country sound and safe. But that is a matter of definition. This is one of the points I expected to take up later, but I will take it up now. To my mind, the particular objection to any such scheme, which I call a central-bank scheme for the United States, is that it would inevitably result in sectional controversies and inject politics into the management of the whole system. In European countries banking and currency questions never have been considered political questions. In this country banking and currency questions have been considered as fit subjects of party politics from the beginning of the Government up to the present day. The First Bank of the United States ended in 1810 or 1817 in bitter political controversies and in the dissolution of the bank. The Second Bank of the United States ended in the so-called bank war in Jackson's time, and the bank was dissolved, not because it was inefficient or because it was not a useful institution but because the banking question was seized upon by the two political parties as a suitable political issue, and Mr. Clay and Mr. Jackson made it the principal issue of their presidential campaigns. After the war we all know that the question of the issue of our Government notes became a political question—not an
economical question, to be dealt with on its merits. Sections of the country wanted the National Government even to pay the interest on its bonds in its own depreciated paper currency. Then for 12 years the silver question was the principal issue between the political parties—I mean the free coinage of silver at 16 to 1. After that we had the compulsory guaranty of bank deposits as the principal issue of a presidential campaign, and now this very question—this very bill we have before us—is a party measure and, possibly, will have to be forced through by party caucus.

Senator O'Gorman. There is no substantial sentiment, of which I am aware, justifying that last conjecture of yours.

Mr. Morawetz. I hope it may not be so; but I was going on to say, if it should be so, I do not blame anybody; I do not think anybody here should be blamed. It is the result of the conditions which have prevailed in this country from Washington's time down. It is because the people of this country have chosen to treat banking and currency questions as fit subjects for party politics. What I am leading up to is this: The moment you have a central institution which is to dispense credit or take care of the banks throughout the country you immediately will have sectional demands made upon the central institution. At sometimes the South will want this central institution to lend credit to the banks of the South, so that they can help the planters to corner their cotton; at other times the West will want credit from this central institution to help the farmers to carry their products. And so it will be impossible, if you have a single central bank or central institution in this country, to avoid these sectional differences and sectional controversies, and the moment sectional differences and sectional controversies arise party politics will seize upon them and make them political issues.

Now that, to my mind, is the principal reason why one central bank or central institution for the whole of this country is unwise. It is wholly unnecessary. You can avoid these sectional differences by dividing the country into districts each as big as any country in Europe and quite big enough to have a central bank of its own. The central-bank system has been tried and has been found to work perfectly in every country in which it has been tried. The principle of the system unquestionably is sound. I would simply apply that principle, and you will have to apply it if you ever have sound banking in this country, but I would take each great division of this country separately and give it its own regional central bank.

Senator Bristow. Mr. Morawetz, suppose we do that. You have presented your views clearly, I think. Suppose we do that. Then do you favor giving the central board, which we create here in Washington the power to compel one regional bank to discount the paper of another regional bank?

Mr. Morawetz. I am convinced that it would not be wise to give the Federal board this power. I should give the Federal board some powers which are not given it by this bill, but I should take away that particular power to which you refer. If I believed that it was necessary to give the Federal board the power to hand over the reserves of one regional bank to another bank, I should consider the plan unsound. If these regional reserve banks are not strong enough to stand independently without giving that power to the Federal
Board I should consider that they were not adequate to serve the purposes for which they are created, and the whole plan, in my eyes, would stand condemned. But I believe that if you establish not more than five of these banks they would be strong enough, and they would serve all the purposes for which they were created without giving this power to the Federal reserve board.

Senator Bristow. If it is necessary to give that power to the Federal reserve board then the Federal reserve board would become the tyrant of political attacks, unless upon the request of a regional bank it would call upon some other regional bank to discount its paper. Now, the South might be in need of help.

Mr. Morawetz. Yes.

Senator Bristow. New York or Chicago might think they could not spare the help which the South wanted, and decline, because they would feel their own section of the country needed all the resources. The South would appeal to the Federal board to require them to do it, and this would at once precipitate the political controversy which you seek to avoid, it seems to me.

Mr. Morawetz. Exactly. And, furthermore, I think that provision would lead to unsound banking. It would be an invitation to some of these banks to rely upon the Federal board to help them with the reserves of other banks; and furthermore——

Senator Shafroth (interposing). Do you think they would do this, Senator Bristow, in view of the fact that each one of the reserve districts has a right to present the bank paper to the reserve bank and have money issued on it? What is the use of going to another bank?

Senator Bristow. But the authority is in the bill; and Mr. Vanderlip and others have said that they believed that authority was necessary.

Senator Shafroth. Well, it may be necessary in very extreme cases; but I do not believe it would be necessary one time in a year.

Mr. Morawetz. With great deference to these gentlemen, I believe it is not necessary.

Senator Pomerene. I was going to ask you a question in that connection. As I understand, your position is this: That each of these regional banks, when organized, would have sufficient strength and power of itself to meet the demands of that particular section. Now, if that be so, then what harm could come from giving the Federal reserve board the right, in the event that an emergency should arise, to transfer from one regional bank to another?

Mr. Morawetz. Each of these regional reserve banks, if properly managed, would be strong enough. But if you are going to start in by saying, “Go on, if your reserves fall short; if you extend yourself too much we will help you by turning over some of the reserves of the New York banks or of the Chicago banks,” you are going to make unsound banking; and furthermore——

Senator Shafroth (interposing). Well, for what reason would it be unsound banking?

Mr. Morawetz. Because they would be too free with their discounts. They would not keep up their discount rate to the proper point to prevent overextension in their sections of the country.

Senator Shafroth. If there were only one central bank, however, they would practically do the same thing, would they not? They
could take from the reserves of the central bank and say, "New Or­
leans needs more than this, and we will give it an undue proportion."

Mr. Morawetz. Yes.

Senator Shafroth. Or they may say, "California needs more and we will give it to them." And under one central bank it would have exactly this same power.

Mr. Morawetz. That would result in the sectional controversies which I want to avoid. And so this provision, I think, would lead to sectional controversies and ultimately would introduce politics into the situation.

Gentlemen, this country under its present system, without any regional banks or central bank, has prospered beyond all other nations. We have had occasional panics. Most of these panics were due to unsound currency conditions which no longer exist. Our currency to-day is all as good as gold, and there is no danger—if it is not increased—that any of it will ever become less valuable than it is.

All that is needed now, in my judgment, to prevent a recurrence of this scramble for money is to centralize to some extent—not wholly, but to centralize to some extent—the reserve money, so that it will be available when and where it is most needed. And that is the object of these regional reserve banks.

My advice would be, as I have stated, to limit the number of the banks to five; to establish them as fast as you can get them established by the voluntary action of the banks; and then, after you have your plan in working order, take up the question what shall be done with those banks which stay out. I think, ultimately, they ought to be coerced into coming in, but only after you have established a successful plan, and after this great difficulty of the present situation has been provided for—the difficulty arising from the outstanding national-bank notes. You can not dissolve any considerable number of these national banks until you have made adequate provision, through the regional banks, for the issue of currency to take the place of national-bank notes which will be redeemed.

Senator Bristow. Mr. Morawetz, you approve, as I understand, the appointment of this Federal board by the President, so that it is an appointive board?

Mr. Morawetz. I believe that if this system is adopted there should be a central board appointed by the President with the fullest supervisory powers, and also certain powers of controlling the operation of the banks. But these powers of control—these discretionary powers—should be strictly limited in such a way as to keep out sectional controversies and so as to prevent politics interfering with the operations of the board.

Senator Bristow. Well, if this central board is the supreme and superior authority, and if it is appointed by the President——

Mr. Morawetz (interposing). On certain subjects only.

Senator Bristow (continuing). Yes. Now, it seems to me—this is my view of it; it may be erroneous, of course, but I very firmly believe that the real authority in the management of this system—that is, the practical authority—exists in the board of management of the regional banks.

Mr. Morawetz. It ought to be there.

Senator Bristow. Now, why should not——
Mr. Morawetz (interposing). You say the board of management of the regional banks. Do you mean the board of directors of each bank?

Senator Bristow. Yes; of each bank. That is the real governing force in this system. The other authority is off here in Washington—not in direct contact with the system. Of course, there may be complaints here and there, and it interferes with the system more or less. It might manage it wisely and it might not; but why should not the Government appoint the board of directors of the regional banks if these regional banks are to be the real controlling factor in the administration of the system?

Mr. Morawetz. Because I do not think that such a management by Government appointees would be a good management. There have been cases in which the Government has appointed directors of Pacific railroads. You remember there used to be Government directors of some of the Pacific railroad companies, such as the Union Pacific. But I think that all railroad men will agree that the Government directors were not helpful to the good management of those railroad companies.

Senator Bristow. They were political appointees, were they not?

Mr. Morawetz. I am simply stating a fact.

Senator Bristow. Well, if it is wise for the President to appoint the supreme board, with authority in theory, why should not he appoint the managers who have authority in fact?

Mr. Morawetz. It is all a question of fact, not of theory. Now, as a fact, there is no doubt in my mind whatsoever that the business management of these institutions should be in the business men chosen by the banks. I think you would then have a good management. But the supervision of these institutions should be in the hands of a Government board, which should consist wholly of appointees of the President, and upon which the banks should not be represented.

Senator Bristow. Well, that is similar to the authority which the comptroller has over the present system.

Mr. Morawetz. Yes; and something more.

Senator Bristow. Yes; and something more. That is a theoretical supervision; and where something radical goes wrong, he takes possession—but it is after it has gone wrong.

Mr. Morawetz. That would not happen here. The comptroller has 7,000 and odd banks under him. Here there would be five; and you would have a body of eight first-class men, I hope, who would be appointed by the President, by and with the advice and consent of the Senate; and they would be in constant direct communication with each of these institutions and would have wider powers than the comptroller has over the individual banks now.

Senator Bristow. Mr. Morawetz, my objection to Mr. Aldrich's plan was that it was controlled by the banks, and that the central bank, which was the central authority and for which in this plan the central board has been substituted—was chosen by the banks; and I believe that certain great interests would control this institution so as to promote their desires when occasion required it.

And I believe that the country is against the plan suggested by Mr. Aldrich, because the country believes it would be controlled by selfish interests to serve their own purposes.
Now this system takes away the central bank and substitutes a board. But it centers the real control which the central bank under the Aldrich system had, in regional banks, and leaves the control of those regional banks exactly where Mr. Aldrich would put it in his system.

So my objection to this is that, instead of preventing the thing which the country feared would happen in Mr. Aldrich's bill, will actually happen by the control of the regional banks in this bill; and it is altogether——

Mr. Morawetz (interposing). I frankly must say that I think you are conjuring up a specter of the imagination.

Senator Bristow. Well, then, what is the objection to Mr. Aldrich's system?

Mr. Morawetz. I will come to that in a moment. These regional banks—what will they control? All they are there for, and all they are to accomplish is, to introduce a bond of unity among the scattered banks of the district to enable them, in a measure, to pool reserves, so that, in case of stress, or trouble, the reserves will be available to stave off a run upon individual banks, or a panic of any kind, and to furnish a general market for commercial paper, so that the banks will not be obliged to loan so much on stock-exchange collateral.

It is, to my mind, not a centralization scheme at all. It is a most democratic scheme. It is to help to strengthen the individual banks, the small banks particularly, and to make their credit—the whole of their credit—available for the commerce of this country, instead of forcing the individual banks to tie up a considerable part of their resources in railroad bonds and in stock-exchange loans.

Senator Bristow. Well, why could not all that you have said in behalf of these regional banks be said in behalf of Mr. Aldrich's system of organization?

Mr. Morawetz. It could, sir; it could. The fault of the Aldrich plan or of any central plan, as I have endeavored to point out, is that it inevitably will introduce sectional controversies and party politics into the management of the whole business.

Now, I brush aside as of minor importance in the Aldrich plan the controversy as to who shall control the board of directors of the central institution. I know that there are many who believe that some of the rich men of this country who would in some way, by hook or by crook, get control of that board of directors. I do not think so myself. I think the greater danger under the Aldrich plan was that the scattered small banks throughout the country—the country banks—would get the control of the management and that unsound banking practices—possibly inflation—might be the result under the Aldrich plan.

But, it is not a question of that; I do not care who controls the central institution. If it were controlled by individuals to-day, next year you would have the Government step in and take charge because sectional controversies would certainly arise. You never could work in this country a single central institution which would have to establish a uniform discount rate for all the country, or different rates for different sections, under any central bank, without having sectional controversies occur.

Senator Bristow. Well, it has been alleged, and we are urged to pass this bill because it is alleged, that it will break up what is com-
monly termed the "Money Trust"; and that the intention of this legis-
lation is to break up the control of credits that has been complained
of, and that this legislation is intended for that purpose. Well, Mr.
Bryan, the Secretary of State, in his speech which he delivered at
Waterloo, Iowa, has stated, last week, that that was what this legis-
lation was intended to do. And he intimated that those of us who
were insisting upon examining the subject with some care, before we
approved or disapproved the legislation, were simply the agents of
Wall Street in undertaking to delay legislation, because it was legis-
lation that would interfere with the operations of Wall Street.

Now, with such eminent authority as that making such statements
as that, it seems to me that we can not ignore the fact that this
legislation is primarily intended, at least, to free the country from
what it is believed to be the controlling authority of certain great
financial interests. Well, if that is the case and these interests are in
control of the regional banks——

Senator O'Gorman (interposing). Will you permit an interrup-
tion there, Senator Bristow?

Senator Bristow. Certainly.

Senator O'Gorman. You know that the authors of this bill have
never stated that that was the purpose of this legislation. They have
invariably claimed, and I think correctly, that the only need of this
legislation is to provide a system whereby the elasticity of our cur-
rency can be promoted and whereby the metallic reserves of the coun-
try can be concentrated—mobilized.

Senator Bristow. That is true. I think that is true. But this
other element has been——

Senator O'Gorman (interposing). Injected.

Senator Bristow (continuing). Very forcibly, in a way, injected
into this question. The papers have been full of it and it leads me to
inquire if that is the purpose of this legislation, then should we not
undertake to provide against that evil? And I maintain that with
the banks in control of the actual authority, by having control of the
regional board, they are just as much in authority now——will be
under this law—as they otherwise would be.

Mr. Morawetz. Oh, no; not at all, in my judgment. This plan
makes careful provision for keeping the control of each regional
reserve bank out of the hands of any clique of banks. The division of
the board into three classes of directors, and the division of the banks
into groups for purposes of election, would wholly eliminate any
danger of that kind. The few big banks, in New York, for instance—
and those are the ones which I suppose are the "niggers in the wood-
pile"—would have very little to say in choosing the board of direc-
tors of the regional reserve bank which is to control them.

Senator Bristow. Well, now, Mr. Morawetz, you are a practical
man, and I try to be one. Do you not think that the influential
bankers in these regions will control the election of these directors?

Mr. Morawetz. I do not.

Senator Bristow. What makes you think they will not?

Mr. Morawetz. Because of my general knowledge of mankind
and of the conditions existing.

Senator Bristow. Do you not think they would like to control?

Mr. Morawetz. Oh, yes; anybody would.
Senator Bristow. Yes; any great banker would like to have control of the management of this great institution with which he is doing business.

Mr. Morawetz. Yes.

Senator Bristow. Now, has it not been your experience that a few powerful men can carefully organize an election and control it—or a convention and control it?

Mr. Morawetz. Sometimes, if it is not too big.

Senator Bristow. Did you ever see a convention so big that a few powerful men could not control it?

Mr. Morawetz. Oh, yes; I have seen a good many unexpected results happen at presidential conventions. [Laughter.]

Senator Bristow. Yes; unexpected; that is true. But, nevertheless, the powerful men were there. It has been suggested—and I think with a good deal of practical sense and judgment—that men thoroughly familiar with our region of the country can name now the men who would control the election of the board of directors of the regional bank. I think that a few of us can tell who will be in control of the regional bank out in that section where we live.

Senator O'Gorman. Are they good men? [Laughter.]

Senator Bristow. Yes; they are good men. But I think they have certain interests that they would protect first, and they would think they were doing the right thing in doing that; but it would be their interests with which they had a personal connection, which they would protect first.

Now, it is advocated by those who stand for these regional banks and their methods of electing directors, that it is a very democratic way of electing these boards of directors.

It has been my lot to attend a good many county and State conventions; and in a county or State convention every delegate has one vote, whether he comes from a township and is simply a farmer or whether he is a great lawyer living in the city; they are all on an equality; every man has one vote.

But it would be idle to say that the innocent farmer that comes up from the township has as much influence in the control of the action of that convention as the strong, aggressive man from the city.

Mr. Morawetz. Of course, intelligence everywhere ought to have, and does have, more influence than ignorance. This country would go to ruin in a very short time if superior ability did not give superior control, superior power. It ought to be so.

Senator Bristow. Now, in managing a convention—and this is a convention that is to elect the directors—intelligence plays a great part, of course, and it should do so. I do not want to discredit intelligence. But Sam Smith will say to John Jones, "You fellows down in your part of the county support our man for clerk of the court, and we will support your man for county superintendent."

And they fix up a slate the night before the convention meets: and the next morning it goes through—unless some clog gets in the wheels unexpectedly.

Senator O'Gorman. Is that the way they do it in Kansas, Senator Bristow? [Laughter.]

Senator Bristow. That is the way they do it everywhere—New York, California, and Texas, and everywhere else.
Senator Shafroth. They do not do it when the direct primary comes into effect.

Senator Bristow. Now, in order to avoid the evils which have grown up in our political life under that system, the direct primary has been injected in and made a part of our political institutions. Now, we propose here in this bill, in selecting directors of this powerful institution that is to control the currency and banking system of a vast region, the old method. There has not been a method used by a political boss for 50 years that can not be used effectively in the selection of these directors, in my opinion.

Mr. Morawetz. I do not agree with you as to that. I think this is a very democratic system which will work perfectly, and I think the other system of having the management appointed by the Government will be sure to inject party politics into the selection of the directors and to introduce every vice which you very justly wish to exclude. I think it would have just the effect which you wish it not to have. However, of course, that is merely a matter of judgment.

Senator Bristow. I do not believe I have gotten your reasons clearly as to why it is desirable to appoint the general supervising board and not to appoint the actual operating board.

Mr. Morawetz. Because the one is a business board having the business management of this banking business and the other is a supervisory board, with only very limited powers of direction conferred upon it for the protection of the general interests of the whole country.

Now, under this plan each reserve bank is required to pay the notes of any other reserve bank which comes to it and is to collect them from the issuing bank. There is no provision in this bill which would enable the paying bank to recover from the issuing bank the costs of exchange and the loss of interest. I think that ought to be covered. Under this plan if the New York reserve bank should issue a million dollars' worth of notes and those notes should be sent to California, the California bank would have to hand out a million dollars of its gold or lawful money and it would have to then reimburse itself by sending the notes to New York and getting its gold back, and it would have no recourse under this bill for the exchange or loss of interest. That certainly is a defect which ought to be covered.

Senator Hitchcock. There is a provision in the bill under which the San Francisco bank could charge those notes to the Government account.

Mr. Morawetz. If it has a Government deposit there, and then the Government would lose. It would stand in the breech.

Senator Hitchcock. The Government would then be required to demand payment of those notes from the New York bank?

Mr. Morawetz. Yes. But there is another provision in the bill which requires a reserve bank to receive at par as a deposit checks drawn or drafts drawn on other reserve banks. That is subject to the same criticism. It is not fair; it is not wise.

It seems to me that an essential feature of this plan is to require these reserve banks to establish a clearing house, and each reserve bank to keep a part of its reserve in that clearing house, not for banking purposes, but to settle balances that can not be cleared,
whether they be upon notes or other claims, such balances to be charged to the several banks with proper charges for exchange. That, however, is a practical matter which the banks would easily and readily work out for themselves. All that would be required is to give them authority to do this under regulations to be approved by the central board.

Now, my judgment is that inasmuch as all these provisions relating to the note issues are very imperfect, and I think practically unworkable under the present bill, the best course would be to strike out of the present bill not only the provisions dissolving the banks which do not come in within a year, but also all the provisions relating to note issues, and to take up these subjects at the next session of Congress, or within a short time after the organization of these banks. I do not think that provision for the issue of additional notes is at all necessary. The United States has, as I pointed out this morning, a superabundance of paper currency. We have more uncovered currency, more currency which is not gold, than any other country in the world, not only absolutely but also in proportion to our supply of gold and per capita of population.

Senator Pomerene. That has probably answered the question I was going to ask you as to whether or not the ratio between the paper currency uncovered in this country and the gold was greater or less than the ratio between the paper currency and gold in the other countries.

Mr. Morawetz. Much greater in this country. It is about twice as big in this country as in any other great country. We have outstanding, year in and year out, more uncovered paper currency than any of the great countries of Europe when its currency is expanded to its utmost.

Senator Shafrroth. Do not the Dominion notes of Canada have a reserve of only 25 per cent behind them?

Mr. Morawetz. Yes; I will take that up in a moment.

Senator Pomerene. Is not our commerce very materially different from that of the other countries, so that we really need more of the currency?

Mr. Morawetz. I speak of the ratio between the paper and the gold. We do not need as much currency for circulation as does France, where nearly all the debts are paid in currency, and not by check. But in England they have practically no paper currency at all. There are outstanding £18,000,000—under £18,000,000—under $90,000,000 of Bank of England notes, issued against Government deposits. Every other Bank of England note is issued against an equivalent amount of gold locked up in the vaults of the bank, and specifically set apart for its payment. So that Bank of England notes, for practical purposes, are the same as our gold certificates. Therefore in England there is gold enough to cover the currency for practical purposes. Yet England is the principal center of commercial credit for the whole world, and it is also the principal source from which the whole world draws gold when gold is needed. How do they do it? Simply because they have a proper reserve back in the Bank of England. It is not an enormous institution, but it is a properly managed reserve bank, such as we want to establish under this bill. The Bank of England is sufficient to keep financial condi-
tions sound and strong in England, and is sufficient to enable England to maintain her supremacy in commercial credits and in money transactions throughout the entire world.

In my judgment, if this bill is right, if it is worked out correctly, conditions in this country would be perfectly safe and sound without providing for the issue of another dollar of paper currency.

However, in urging——

Senator Hitchcock (interposing). Will you discuss, for a moment, the paper currency of France and Germany as you have discussed that of England?

Mr. Morawetz. The system in France and in Germany, of course, is different. The Bank of France and the Imperial Bank of Germany have the power to issue notes, asset currency, to a limited extent; but they use that power very sparingly.

As I have stated several times before, they never, under any circumstances, have as much uncovered paper currency in those countries as we have outstanding year in and year out. Each one of these banks is managed as a reserve bank ought to be, and I hope as these banks are going to be managed. They use their power of issuing notes solely as a means of keeping the financial situation in equilibrium throughout the country.

Senator Hitchcock. Is there any real restraint upon the Imperial Bank of Germany in the issuing of notes except that they must always keep a reserve of 33\(\frac{1}{3}\) per cent?

Mr. Morawetz. Thirty-three and a third per cent. When they get beyond a certain point they have to pay 5 per cent tax.

Senator Hitchcock. Does that not seem to be a rather moderate limitation? Is there anything very stringent there?

Mr. Morawetz. No; but, gentlemen, a tax is not necessary in Germany, because the management of that bank would not dream of putting out notes merely to make money, and the tax is not really necessary to deter them from putting out notes when notes ought not to be put out.

Senator Hitchcock. At the time that Germany had her reserve below 40 per cent, how much uncovered currency did that involve?

Mr. Morawetz. I do not know the figures.

Senator Hitchcock. You are sure it would be less than we have?

Mr. Morawetz. Oh, yes; much less. I have forgotten just what those figures are. I think about one-half as much as we have, per capita.

Senator Hitchcock. In speaking of uncovered currency I suppose you are only referring to demand currency?
Mr. Morawetz. I am speaking of all currency which has to be kept up to the gold standard. Silver, except subsidiary silver, is exactly the same, for practical purposes, as paper.

Senator Pomerene. I have been informed that the actual per capita circulation in France, and by that I mean in actual circulation, is about $40 per capita. In this country, while nominally we have about $33 or $34 per capita, as a matter of fact we have only about $17.70 per capita actual circulation. I mean that, taking the reserves from the total money of the country, which is in fact not in circulation.

Mr. Morawetz. About $17, I think, is right. But you understand the reason for that is that in this country we pay largely by checks. In France scarcely anything is paid by checks. Every tradesman always collects payments and makes payments in money.

Senator Hitchcock. You recommend that this bill be passed after striking out the clause authorizing the issuance of additional currency?

Mr. Morawetz. I recommend—I think really the wisest course would be to do that, with the intention of dealing with the currency question separately at the next session of Congress.

Senator Hitchcock. In that case the reserve banks would have nothing to loan to the member banks and nothing with which to discount the notes of member banks, except the reserve in the vaults.

Mr. Morawetz. Except capital and deposits.

Senator Hitchcock. Would there not be a tendency to produce a stringency by that process of moving these reserves from their present place to the new place and not authorizing the banks which have been created to issue currency?

Mr. Morawetz. I do not think so. Of course you would not do it all at once. The transfers would be made gradually.

Senator Shafroth. There would be no currency, in that event, to take the place of the retired national-bank notes.

Mr. Morawetz. There would not be any retired national-bank notes. They would remain outstanding for the present. You can not deal with the question until you have your divisional reserve banks successful and sufficiently strong to enable them to issue notes in place of such of the $700,000,000 of these notes as are retired.

Senator O'Gorman. Where would your relief come from in a time of stress or in time of conditions such as we had in 1907?

Mr. Morawetz. The relief would come through the use of the reserves which have been pooled in the divisional reserve bank.

The trouble in 1907 arose from the fact that whereas there was plenty of reserve money each bank locked up its reserve and was afraid to use it to help the weak banks.

Now if this reserve money has been in a central institution, in a divisional reserve bank, it would have been available, and we would not have had the trouble. As a matter of fact, the trouble was stopped by this very process of pooling reserves through the clearing house. What you want to do is——

Senator Hitchcock (interposing). Was there not something more than that? Did not those clearing houses issue clearing-house currency which relieved the stringency?
Mr. Morawetz. Yes; but it really was not that. The clearing house forced the banks to accept these orders upon each other, but if the currency had been in the hands of the clearing houses so that the clearing houses might have said, "We will rediscount some of your paper; here is the money," the trouble would have been avoided.

This bill, if it works at all—and it will work—will give us five banks working on the same principle as the Bank of England, and each one of these banks will have a territory five times as big as the Bank of England.

Senator Pomerene. Mr. Morawetz, I think, in answer to a question a moment ago by Senator Bristow, you made a statement that you would take from the Federal board the power to make transfers from one regional bank to another, but at the same time you would give it certain other powers, but I do not think you went into that subject.

Mr. Morawetz. Not yet.

Senator Pomerene. Have you that in mind?

Mr. Morawetz. I have it marked down, and I will discuss it a little later.

Senator Pomerene. I would like to have your suggestion.

Mr. Morawetz. I recognize fully—I think anyone must recognize that these regional banks will have to be under very strict governmental supervision, and that certain discretionary powers must be vested in the governmental board. I think everybody must agree also that the greatest possible pains should be taken to exclude party politics from this central board.

Now, the bill as drafted here provides that of the four appointed members not more than two shall belong to the same political party, thus recognizing the likelihood of politics entering into it. It goes on then and provides that three of the seven members shall be appointed by the administration. In fact, two of them are to be Cabinet officers. Now, it seems to me that is a most unwise provision, because inevitably the result would be to make the administration responsible in the eyes of the people for the acts of this Federal reserve board. I strongly urge that all of the seven members of this central Federal reserve board shall be appointed by the President, by and with the advice and consent of the Senate, and that all the restrictions which are imposed by the bill in the selection of the members of this board be eliminated. We must trust somebody, and I think far and away the safest plan is to trust the President and the Senate to get good men for this board.

Senator Hitchcock. What do you mean by "good" men? What type of men will they be? What qualifications should they have?

Mr. Morawetz. Men of high character, who are not in politics, and who are not in the banking business.

Senator Hitchcock. For instance, would you appoint a lawyer who had never had any banking experience?

Mr. Morawetz. There are a great many lawyers who have not had banking experience who, in my opinion, would probably fill this position better than the average banker. The fact is, gentlemen——

Senator Hitchcock (interposing). Would you appoint a college professor?
Mr. Morawetz. Not too many of them.
Senator Hitchcock. Would you think there should be upon the board any men who are familiar with the workings of a bank?
Mr. Morawetz. Yes; I think so. I think probably one or two of them. I think it is better that they should not all be ex-bank presidents. As a matter of fact, men of the—

Senator Hitchcock (interposing). Why would you object to practical bankers?
Mr. Morawetz. I do not object to them, but I recognize the fact that the great majority of the successful bank presidents in the United States are routine men, who started in as clerks and worked their way up, and who really do not know very much about finance. They know all about discounting paper and making loans, and they know the mechanical end of banking. Some of them, of course, are very able financiers, but I am speaking of the average. I think there are many successful bank presidents who would be wholly inadequate to fill this position.

Senator Shafroth. You were about to comment on the qualifications of the lawyer as a member of this board, and you were stopped by a question. Will you go on with that?
Mr. Morawetz. I was about to say that there are a great many lawyers who have acquired a general business knowledge which would make them eminently fitted for this position.
Senator Bristow. What about newspaper men?
Mr. Morawetz. I do not know. I presume there are some newspaper men who might be fitted for the position. You can not, by any statutory definition, insure the appointment of good men to this office. You have got to rely on the President of the United States and the Senate, and there is no better reliance.

Senator Hitchcock. I was trying to get at your idea as to what class of men should be on this board, or what general qualifications they should have. Should they be men of experience in the financial history of the world, for instance, and familiar with the history of banks of issue; familiar with the experience of Germany and France and England and Canada, and with world commerce, or should they be men who understand the details of the banking business, or should they be college professors and theorists?
Mr. Morawetz. They should not be college professors or theorists.
Senator Hitchcock. Would a professor of political economy be qualified?
Mr. Morawetz. No; I do not think so. His knowledge of political economy would not disqualify him, but, I think, perhaps he would not have sufficient practical business knowledge to enable him to fill the position.

Senator Hitchcock. Would you object to nominating the eight men in the record here? [Laughter.]
Mr. Morawetz. I should object; yes, sir.
Senator Shafroth. You might start a boom for some of your friends. [Laughter.]

Senator O'Gorman. Just in passing, Mr. Morawetz, so we may keep this record straight, you are a lawyer yourself?
Mr. Morawetz. I am a lawyer.
Senator O'Gorman. And you know something about banking?
Mr. Morawetz. A little.

Senator Bristow. Now, it has been the practice in the national institutions to appoint a Secretary of the Treasury who has been a banker and then let him choose his assistants from newspaper boys who have been useful about the Capitol. Do you think that would be a good plan for this board, or do you think that would likely happen in the creating of this board?

Mr. Morawetz. I do not think that would happen; no, sir.

Senator O'Gorman. Not under Democratic administration.

Mr. Morawetz. I think everything would depend on how this system is started, and I am satisfied, under the present administration, it would be started right. The standard would be high. It has been suggested that the men on this board should be men of high standing, similar to the judges of the Supreme Court, and, I think, the Interstate Commerce Commission, likewise, has been mentioned. I believe that if the standard were set high at the beginning it would be kept up.

Senator O'Gorman. Mr. Morawetz, I am clear in my own mind that there is no reason a Secretary of Agriculture should be a member of this reserve board. I am equally clear that the Comptroller of the Currency should not be. I am a little in doubt as to whether there may not be some special reason why the Secretary of the Treasury might not be a member of the board. What is your impression as to that?

Mr. Morawetz. I thought over that a good deal, and my first impression was that it was desirable the Secretary of the Treasury should be on that board. But I have reached the firm conviction that it would be better not to have him on that board at all, so that the action of this board should not be considered the action of the administration.

Senator Bristow. Do you think, Mr. Morawetz, there is any more reason for putting the Secretary on this board than there would be for putting the Attorney General on the Interstate Commerce Commission?

Mr. Morawetz. There is some difference, but the illustration is not inapt. Of course, the Secretary of the Treasury represents the financial interests of the United States, and the United States will have large dealings with the banks. Nevertheless, I think the Secretary of the Treasury should stand apart, and he should be supreme in all things within his jurisdiction. If he were on this board he would only be one-seventh of the board, and he never should be put in that position.

Senator O'Gorman. Then, apart from that, you would suppose that the Secretary of the Treasury would have all of his time occupied with the duties of that office?

Mr. Morawetz. I am very sure of it.

Senator O'Gorman. And that it would not be fair to impose additional burdens upon him?

Mr. Morawetz. I feel that way. That is another reason and a very strong one.

Senator Hitchcock. It has been suggested that the Secretary of the Treasury, however, should control to some extent the deposits of the Government funds and, in that way, he probably would be able to influence the system.
Mr. Morawetz. That is a different matter. If the deposit of Government funds is to be discretionary, then, of course, the Secretary of the Treasury should exercise that discretion. You mean the choice of the banks?

Senator Hitchcock. Not altogether. A question has been raised here whether or not the bill wisely makes it absolutely obligatory upon the Secretary of the Treasury to deposit in these banks every dollar of Government funds as fast as it comes in. An emergency might arise which would make it necessary for the Secretary of the Treasury to accumulate funds or accumulate gold, or an emergency might arise in which the administration might not approve a certain policy of the board. It might feel that the policy was getting in the direction of inflation, and that the withdrawal of Government funds would tend to counteract it.

Mr. Morawetz. Perhaps I have a more trustful disposition than some of the gentlemen present, but I should trust the Secretary of the Treasury with a discretion in that regard, just as I would trust the managers, the boards of directors of the reserve banks, with the same measure of honesty and sense of fair dealing with which I would trust the Government officials.

Senator Shafroth. Is it not important that the Secretary of the Treasury should be on this board because the question as to whether Government funds shall draw interest or not is to be determined, and we have, at the present time, about $280,000,000 of money that would be Government deposits?

Senator O'Gorman. If you are going to give the Government all the surplus profits earned by the regional banks beyond the 5 or 6 per cent that will be paid to member banks as interest on their capital contributions, what advantage is there in giving the Government interest, because you are simply making the Government pay it?

Mr. Morawetz. Then, there is another point—

Senator Shafroth. It is not the way it is now.

Senator O'Gorman. No; of course not.

Mr. Morawetz. As the bill is drawn, after paying 5 per cent dividends on the stock, part of the surplus is to be given to depositors by way of interest, and the Government would share in that. I do not like the provision in the bill requiring the payment of special interest on Government deposits.

Senator Pomerene. In that connection it has been urged that the Government should not have interest unless the member banks get interest.

Senator O'Gorman. On their deposits?

Senator Pomerene. On their deposits; but, on the other hand, the member banks, a great many of them, if not the majority of them, pay their depositors interest. This is particularly for the benefit of the banks. Now, if the depositors in the member banks are to get interest, what reason is there why the Government should not, for the same reason, get some interest on the deposits it may have?

Mr. Morawetz. Why, because the deposits in the member banks are used in the regular course of the banking business, whereas the deposits of these reserve banks are not there to make money, but are there for the purpose of rediscounting.

Senator Pomerene. For the banks.
Mr. Morawetz. For the benefit of the banks, yes. This bill contains a provision which will make it necessary at the end of 20 years to go through all this turmoil over again, because at that time the charters of these banks are to expire. I suggest that this limitation be stricken out, the charters of these reserve banks being subject to withdrawal or dissolution at any time by Congress and the bill itself being subject to amendment, alteration, or repeal at the will of Congress. You will recall the cases of the first bank of the United States and of the second bank of the United States, which had similar provisions.

Senator Pomerene. That is, you would let power be vested in some administrative branch of the Government to renew the charters?

Mr. Morawetz. No, sir. I should have the charters run indefinitely until repealed. If ever there was a lesson of history which we ought to heed, it is that such banks should not be chartered for a limited period. The bill says:

The Federal reserve bank, so incorporated, shall have succession for a period of 20 years from its organization, unless sooner dissolved by act of Congress.

Now, what I would provide is, “shall have succession until dissolved by act of Congress.” At the end of the bill, furthermore, there is a provision that the right to amend, alter, or repeal this act is hereby expressly reserved. Therefore this limitation of 20 years is wholly unnecessary for the protection of the public, but it makes it necessary before the expiration of 20 years to pass a new act of Congress to keep the banks alive.

The bill does not make specific provision as to the executive management of the reserve banks. It provides that there shall be a chairman of the board of directors, who is to be appointed by the central board. But it does not indicate what his powers shall be. In my judgment, the executive management of the bank should under no circumstances be in the chairman or representative of the central board. The business management should be in a president and other officers selected by the board, all of whom should hold office at the will of the board. The chairman appointed by the central board should merely preside at the meetings of the board of directors and should perform the other functions assigned to him under this bill as representative of the Federal board of control.

In section 15 there is a provision giving to the reserve banks the power to fix their discount rates, subject to the review and determination of the Federal board. The purpose, as I understand it, of that reservation of power to the Federal board is to enable that board to compel a reserve bank to raise its discount rate, if, in the opinion of the Federal board, the bank has established too low a discount rate that is depleting its reserves too fast by making rediscounts. I think that should be amended by expressing the purpose which I understand to underly this reservation of power, namely, that the Federal reserve board shall have power to fix the minimum discount rate of a Federal reserve bank. No reserve bank can be kept safe and sound if its board of directors can be compelled by some outside authority to lend out its reserves when they think the reserve ought not to be lent out, when the bank ought to strengthen itself. The control over the discount rate should be simply to enable the Federal
board to require the discount rate to be raised to such a point as the Federal board thinks necessary for the safety of the banks.

Senator Bristow. Well, now, would not that lead to one reserve bank raising, and, possibly by so doing, seek to fortify its reserve and another bank undertake to do the same thing, and so you will have a competition among the reserve banks for reserve?

Mr. Morawetz. I do not think so. Of course it is conceivable that the management of these five regional reserve banks, if there are five, or the management of a single reserve bank, may so manage their affairs as to harm the interests of the country. But you have to trust somebody.

I have already discussed the question as to the number of regional reserve banks. I only want to say that the whole plan is enormously weakened by having so many as 12. I do not think, myself, it will be practicable to carry out the plan at all, as under this bill they are compelled to start with 12 of them. I doubt very much whether it would be possible to establish 12 regional reserve banks at the present time with the qualifications prescribed in this bill.

Senator O'Gorman. And, as you understand this bill, if 11 of the regional reserve banks were formed and organized and ready for business, they could not do anything until the twelfth was organized?

Mr. Morawetz. That is my understanding. But there is no possible advantage that I can see from having so many. The whole object, to my mind, of this plan is to have a separate reserve bank for each great subdivision of the country— I mean subdivision according to interests. The East, the South, the Central West, the Pacific States, and possibly the Southwest. Every additional reserve bank you establish will simply weaken the scheme. Now, the capital of these banks is to be subscribed by the member banks. There is a provision that each member bank shall subscribe for capital of its reserve bank an amount equal to 20 per cent of its own capital, of which 10 per cent is to be paid up and the other 10 per cent stand as an overhanging debt.

Senator O'Gorman. It is a double liability.

Mr. Morawetz. It is a stock liability. Now, that provision is, to my mind, unwise. The interests of the member banks and the regional reserve banks are the same and their needs probably will come hand in hand. Whenever a regional reserve bank will want to call in the unpaid capital, the member banks will need it a great deal more than the reserve bank. Whatever capital is subscribed should be paid up promptly—that is, within six months or in installments; but it should be paid up. I should limit the subscriptions of the banks to 10 per cent of their capital, but I should authorize the regional reserve banks to obtain additional capital by issuing and selling to the public a 5 per cent cumulative preferred stock without any voting power, such stock to be free from taxation.

Senator Hitchcock. State taxation or national?

Mr. Morawetz. Both. It would be a very attractive investment. I have no doubt people would subscribe for any amount of it that would be needed, and it would greatly strengthen these banks and also interest the public in their management. I should be glad to see it arranged so that only a limited amount of this stock may be held by any one person.
Senator Hitchcock. Free from taxation. Do you think it would be necessary to offer such stock on a 5 per cent basis?

Mr. Morawetz. No; I should say 5 per cent would be a maximum.

Senator Hitchcock. It seemed to me it could bear less very easily if it is free from taxation.

Mr. Morawetz. At the present time I do not think it should bear less than 4 per cent.

Senator Hitchcock. Oh, not less than 4. I thought you said 5.

Mr. Morawetz. I did say 5.

Senator Bristow. Do you think, Mr. Morawetz, the Federal Government would have any trouble in getting subscriptions to the Federal bank stock with a 4 per cent dividend free from taxation?

Mr. Morawetz. No. The Government, as long as it keeps up the gold standard and as long as it issues obligations strictly redeemable in gold, I think, can obtain money at a 3½ per cent basis to-day.

Senator Hitchcock. Mr. Morawetz, do you thoroughly believe in this system of having the banks rediscount their paper in order to increase their business? Of course it is un-American thoroughly; it is a new departure. Now, are not there some evils in that we are likely to have?

Mr. Morawetz. No. The rediscount rate will always be kept up so high that there will be very little, if any, profit to the bank in rediscounting. There will be no profit to them in rediscounting except as they want to replenish their reserve.

Senator Hitchcock. That is not the case in other countries having a rediscount system. The rediscount rate is quite low, and it is to encourage rediscounts.

Mr. Morawetz. They vary, of course. They are regulated according to the prevailing conditions.

Senator Hitchcock. Then, is it possible that the discount rate will be high in this country and low in the European countries after the banks in the United States have contributed a tenth of their capital and impounded their reserves, neither of which is required in European countries? If, then, they are to be subject to a high discount rate—

Mr. Morawetz. In European countries the central bank has a capital, a considerable capital, as we propose here.

Senator Hitchcock. But I mean none of it has been contributed by the banks. The banks of Europe are not asked to make any sacrifices at all to their central banks—none whatever.

Mr. Morawetz. They did that originally.

Senator Hitchcock. No.

Mr. Morawetz. They did originally, because the capital had to come from somewhere.

Senator Hitchcock. In the case of Germany they bought up the Bank of Prussia and there was no forced contribution from any other banks. And in the case of the Bank of France, as I recall, a new institution was established.

Mr. Morawetz. The capital of the bank, the money of the bank, has been taken from somewhere.

Senator Hitchcock. Not necessarily from the banking capital of the country.

Mr. Morawetz. Where would it come from?
Senator Hitchcock. Why, it may come from many different sources.

Mr. Morawetz. What source?

Senator Hitchcock. Suppose it is thrown open to public subscription?

Mr. Morawetz. Then the people to get money to pay for their subscription will have to draw the money out of the banks.

Senator Hitchcock. It does not detract from the investments of the banks. Let me instance you: A bank is making 10 per cent on its capital. It is required to take out one-tenth of that and be content with 5 per cent. That is a real sacrifice. Now, shall a bank in the United States be required to make that sacrifice and then be subject to a higher discount rate than European banks are? How high a rate of discount were you estimating, in your judgment, when you thought the rate of discount would be high?

Mr. Morawetz. Why, the rate of discount I should say would be adjusted according to the reserves of the reserve banks.

Senator Hitchcock. At that time?

Mr. Morawetz. For the time being.

Senator Hitchcock. Now, then, if it is a high rate, as you seem to think it ought to be, is not that a direct burden upon the borrowing public?

Mr. Morawetz. I do not think so. So far as the deposits in the reserve banks are concerned, they are the same as cash in vaults. They continue to be reserves of the banks which may be the depositors in the reserve bank.

Senator Hitchcock. Do you think, as the authors of this bill argue, that this will result in reducing the rate of interest to the borrowing public?

Mr. Morawetz. I think it will ultimately; yes. It will take time to adjust it, however.

Senator Hitchcock. How do you reconcile that with having a high rate of discount and make it difficult for the banks to discount?

Mr. Morawetz. When I say "high rate," I mean higher than a low rate. It will be a steadier rate.

Senator Hitchcock. Let me instance you: Suppose the rate of discount in a Western town—the bank was lending money at 6 per cent.

Mr. Morawetz. Yes.

Senator Hitchcock. What rate of discount will the bank have to pay in order to get money from the Federal reserve bank?

Mr. Morawetz. That, I would say, would depend on the condition of the Federal reserve bank. If the Federal reserve bank found that credits were expanded, it would make a discount rate of 7 per cent, perhaps. If, on the other hand, it found that money was accumulating, and that the rate ought to be lowered, it would make a 5 per cent rate, and that would bring down the rate of the banks. It is in that way that the Bank of England regulates the discount rate—indirectly regulates the discount rate for the whole country. The bank rate nearly always differs a little from the open-market rate—I mean the current rate.

Senator Hitchcock. Then, I understand you to argue that the discount privilege is not likely to be very largely used?

Mr. Morawetz. It will not be largely used when money is easy; it will be largely used, it will be valuable, only when money grows tight.
Senator Hitchcock. Now, if these Federal banks start out with $100,000,000 capital, $400,000,000 deposits, and $150,000,000 Government deposits they would have available $100,000,000 in capital, and they would have two-thirds of $400,000,000 itself, for loans, which, we will say, is $275,000,000, and they will have available two-thirds of the Government deposits, which will be $100,000,000—or $475,000,000. Now, will there be a demand for anything like that amount from banks that are members of the organization?

Mr. Morawetz. I do not think there will be a demand for that amount when money is easy.

Senator Hitchcock. Then, how are these reserve banks going to pay expenses if they are not going to be able to loan out the cash they have, and they have these enormous running expenses to pay, because they are clearing houses for the whole country?

Mr. Morawetz. Well, whenever money rates go up, then the banks will avail themselves of the rediscount privilege and the central bank will make money—will make a high rate of interest.

Senator O'Gorman. The rates will be regulated according to existing conditions?

Mr. Morawetz. According to the existing conditions. There will be times when the earnings of these reserve banks will be small. There is no doubt about that, when money is very easy. However, in this country money rarely is easy for a long time. When money is easy the banks will prefer not to rediscount their paper, but to keep it for themselves. I do not doubt myself that these reserve banks will be able, while keeping a large reserve, 50 per cent reserve, which they ought to keep in normal times, to make the 5 per cent dividend on their capital and something over.

Senator O'Gorman. You do not think they will?

Mr. Morawetz. I think they will. I am sure they will.

Senator Hitchcock. Have you made any computation of the cost of clearing these checks and drafts for the whole country?

Mr. Morawetz. I have not. I think that this scheme would considerably reduce the cost of clearings of member banks among themselves—that is, the members of a particular reserve bank—because it would be by simply book entries and would involve no cost except a little postage. Clearings among the different reserve banks also could largely be adjusted without shipments of coin, and, so far as it should involve expense, the expense would have to be paid by the different banks. But I do not think it would amount to a very large sum.

Senator Hitchcock. Do you think that the rate of discount in these banks—say there are a dozen of these regional reserve banks—should be under the control of the Federal board?

Mr. Morawetz. No. As I stated a little while ago, I think the Federal board should have or may properly have the power to require a reserve bank to raise its rate of discount, if it is too low. But it ought not to have the power to lower a rate of discount which the board of directors think is necessary.

Senator Reed. Now, Mr. Morawetz—if you will pardon me, Senator?

Senator Hitchcock (interposing). Go ahead.

Senator Reed. One of the great reasons for undertaking to establish this system is to prevent a congestion—congestion is not the
right term—it is to prevent a squeeze, if you please, in the money market.

Senator Pomerene. Contraction in the money market. It is to prevent the accumulation of large sums of money in given places, which may be very necessary to have in order to relieve a stringency.

Mr. Morawetz. Yes.

Senator Reed. If you take away the power of a controlling board to reduce the rate, do you not defeat one of the principal objects of this legislation?

Mr. Morawetz. I do not think so. I think that the great majority of stringencies in this country invariably have resulted from too low discount rates. The cause of all money stringencies—the ultimate or original cause of all money stringencies—is interest rates so low as to invite the overexpansion which causes the trouble.

Senator Reed. Well, that you maintain is the primary cause?

Mr. Morawetz. Yes; the primary cause.

Senator Reed. Let me give you a concrete illustration—I do not mean to interrupt you. But these 12 banks, if all the banks of the country join, or the greater proportion of the banks, State and National—they are powerful institutions, they will have enormous capital. That, indeed, is the very object of the bill, to make them powerful; and most advocates of this system who have appeared here have advocated making a smaller number in order that each bank might be more powerful.

Mr. Morawetz. Certainly.

Senator Reed. So that it may come to the aid of the country in time of distress. That thought implies that there will come a time of distress, a time when banks become somewhat frightened; when the public gets somewhat frightened.

Now, if each of these 12 banks, being great reservoirs of money and power, are run by the bankers who are the directors, of course the first thing that they will desire to do will be to protect their banks; make them safe.

Therefore, when a stringency comes on, when a shiver goes over the financial world, their disposition will be that which obtains in every bank, to conserve their resources and get ready for the evil day, and be sure they are very ready.

The very purpose of this bill is to draw on this reservoir at a time of that kind; to make it so that the small banks of the country and the banks of the cities will have a place to go that is not drawing in money at the time all the other banks are drawing in money, but stands ready to pay it out. Do you think it is wise to take away from this central board the power to say that the time has come to pay it out?

Mr. Morawetz. I think it very unwise to do that, because it would lead to unsound banking, and it is not right, in my judgment, to say that these banks are established to quell panics. Their purpose is to prevent the conditions which result in panics.

Senator Reed. I understand that.

Mr. Morawetz. The main purpose of these banks is to prevent the cause of panics; and the cause of panics in almost every instance is too low discount rates, or interest rates.

Senator Reed. Then you think the purpose of these banks, stating it practically, is to raise discount rates in this country?
Mr. Morawetz. No; to steady the discount rates.
Senator Reed. To keep them up?
Mr. Morawetz. To steady the discount rates; to make them sufficiently high at certain times to prevent overexpansion and to make them low, reasonably low, at other times. In France the discount rate does not vary 1 per cent year in and year out; and it is all because of this system.

Senator Reed. Do you think it is safe then to vest in the board of directors of the regional banks the power to raise discount rates and to lower discount rates?
Mr. Morawetz. I think it is necessary and proper to give them the power to adjust the discount rate according to the banking situation.
Senator Reed. Yes.
Mr. Morawetz. It must be—we can not have any properly managed bank unless its directors have this power. It is through the discount rate that a bank can keep itself sound and strong; and only by that means.
Senator Reed. Yes. Then you think it is safe to put that power in the regional-bank directors?
Mr. Morawetz. Surely.
Senator Reed. Of course, six of those men are elected by the banks.
Mr. Morawetz. Yes.
Senator Reed. And will represent the banks?
Mr. Morawetz. Yes.
Senator Reed. And they will dominate and control?
Mr. Morawetz. Yes.
Senator Reed. Do you think those six men will be any more patriotic, any more intelligent than the seven—or nine—men that may constitute the central board?
Mr. Morawetz. They will be more capable of managing the affairs of their district than the seven members of the central board, assuredly.

Senator Reed. Suppose there was a central bank, Mr. Morawetz, with about 12 branches—almost everybody advocates the central bank around here—not everybody; but there is a great trend that way.
Senator Shaprock. Mr. Morawetz says not.
Senator Reed. I am not saying Mr. Morawetz does. But if there was a central bank with 12 branches, what would the directors of that central bank do? They would raise and lower discount rates, would they not? Do you think they could do that intelligently?
Mr. Morawetz. I do not think they could do it intelligently for the whole country. I think it is utterly impracticable that the same discount rate should be established for all the country at the same time.
Senator Reed. Well, I do not mean that.
Mr. Morawetz. Now, under a central-bank plan, you would either have to do that, have a cast-iron rate applicable to the whole country, or you would have a varying rate. I do not think any central board could establish a varying rate; no.
Senator Reed. Well, in the last analysis your position, as I take it, is this: That the regional bank directors having been elected by the banks, the regional bank would be under the control of the bankers and not under the control of the public?
Mr. Morawetz. Yes.

Senator Reed (continuing). Ought to be allowed to run that bank and have the full right to raise the discount rates as far as they wanted to raise them and to lower them as far as they desired to lower them—subject only to the right of the central board to require the raising of the rates?

Mr. Morawetz. To require a minimum rate.

Senator Reed. And that is because you think, first, that a central board is not so closely in touch with the situation as the directors of the 12 banks will be; and secondly, is it not because you also think the bankers are better capable of handling this business than the public?

Mr. Morawetz. Yes; that is true.

Senator Reed. So that what you really want is a bank-controlled system of banks?

Mr. Morawetz. With certain limitations.

Senator Reed. Yes. And I suppose you think that the Government ought, by statute, then, provide that the Secretary of the Treasury must put all of the money the people now have, and all of the money they may hereafter get, excepting the 5 per cent reserve, in the system of banks that is to be controlled by the banks?

Mr. Morawetz. No, sir. As I said a little while ago-----

Senator Reed (interposing). I did not hear that; I was not here then.

Mr. Morawetz (continuing). I should leave that in the discretion of the Secretary of the Treasury.

Senator Reed. From the experience of the past, the bankers having run the banking business of this country in their own way, and disaster after disaster having occurred, do you not think it is almost time that the representatives of the public should put, if not a controlling hand, at least a restraining hand, upon the banking system of the country?

Mr. Morawetz. No, sir. Every disaster, every financial disaster which has happened to this country, with the exception of the last, I should attribute to Congress, and not to the banks. I should attribute it to the unsound currency system which has prevailed throughout this country.

And the last trouble was due to a variety of causes. It was due to overexpansion; to the fact that the banks gave all the credit the public wanted, instead of holding it down; so that there was overexpansion, and a smash came. When the smash came, the leading banks in New York and the leading trust companies got together and they poured out their money and stopped it.

Senator Reed. They stopped it principally with money from the Federal Treasury, did they not?

Mr. Morawetz. No, sir; they poured out—there was a little trust company in which I happened to be a small stockholder, and I know that word was sent to hand over $500,000 to help this situation, and they handed it over.

Senator Reed. Yes. I know the banks can do that there as they do in other places.

Now, you speak of Congress being to blame for all the panics in this country. We did not have any national-bank system until the
war, did we, and Congress did not do much legislating about the banks before then? And we had wildcat banks all over this country, did we not?

Mr. Morawetz. Well, Congress refused to renew the charter of the First Bank of the United States, and Congress refused to renew the charter of the Second Bank of the United States.

Senator Reed. Are those two of the crimes that you attribute to Congress?

Mr. Morawetz. Well, when you go back so far; I will say that I was not thinking of those olden times; I was passing them over. I was only thinking of events within my own memory.

Senator Reed. Let us come then to what act Congress did that brought on the panic of 1876.

Senator Shafroth. 1873.

Senator Reed. Yes; 1873. What did Congress do along that time to bring that panic on?

Mr. Morawetz. Well, it had not enacted a sound currency system.

Senator Reed. Well, then, you simply put it to the question of the enactment of a sound currency system—at least by Congress?

Mr. Morawetz. We have that now. I consider the present currency system sound. I think the present currency is all right. There would never be any trouble if you leave it alone.

Senator Reed. What brought on the panic of 1893? What act of Congress brought on the panic of 1893?

Mr. Morawetz. Well, the silver coinage.

Senator Reed. The silver coinage?

Mr. Morawetz. Yes; the issue of silver dollars.

Senator Reed. Do you think that brought on that panic?

Mr. Morawetz. I do.

Senator Reed. You do not think the banking situation had anything to do with it?

Mr. Morawetz. Yes; undoubtedly. I have been preaching always that our banking situation is defective, because we have no concentration—we have no reserve banks in this country; none at all.

Senator Reed. Well, the banks have always had a chance to get up a reserve scheme of their own, and they have not done it. I do not think it is just or fair, Mr. Morawetz, for a man of your distinguished reputation as a lawyer in this country to charge if a thing does happen under a law that it is the result of a law that Congress passed; and then, if it happens that there is no law, to say that Congress is chargeable with not having passed a law; and then, in the same breath, that Congress ought not to interfere in these matters, but ought to let them run themselves.

Mr. Morawetz. Of course, it was not fair if construed strictly. After all, Congress only does what the people of this country want Congress to do; and the real culprit is the whole people; we did not—

Senator Reed (interposing). You do believe that Congress—that the people must pass the laws which provide the currency system? You believe that that is to be done by the laws of Congress, do you not?

Mr. Morawetz. Certainly.
Senator Reed. That far, then, we are agreed. Then, again, you believe that Congress ought to establish a system of banks, do you not?

Mr. Morawetz. Of reserve banks; yes, sir.

Senator Reed. And I suppose you are in accord with the establishment of the national-bank system?

Mr. Morawetz. Yes.

Senator Reed. Well, if we are going to establish this system of banks, and if we have had all of these troubles, do you not think there ought to be checks and safeguards put into the law that will, as far as possible, make that system a safe system?

Mr. Morawetz. Yes; making sure that these safeguards will not introduce evils greater than those they are designed to correct.

Senator Reed. Yes; of course, we had better abide a present evil rather than to experiment a while?

Mr. Morawetz. Or introduce a worse one.

Senator Reed. Yes; I agree with you on that. Have you discussed the question of possible inflation under this bill? I came in rather late.

Mr. Morawetz. Yes; I have.

Senator Reed. Then I will not ask you a question about that.

Mr. Morawetz. I will state, in just a word, that I consider that the issue of these notes is all wrong in form, but it is all right in substance. I consider that there is no danger of inflating the volume of the currency, because it can only be issued by the voluntary action of these reserve banks, subject to the veto power vested in the central board.

Senator Reed. But you are going to veto their right to stop reducing rates, are you not?

Mr. Morawetz. I am speaking now of the issuing of notes, sir. I say the issuing of notes is safer even than the Canadian system, because there the banks issue the notes when they want to.

Senator Pomerene. Did you say it is safer "in Canada" or safer than the Canadian system?

Mr. Morawetz. Safer than the Canadian system, because here the banks can only issue the notes subject to a veto power vested in the central board. But I was going on to say that the provision in this bill permitting the notes to be paid and redeemed in lawful money is a fatal defect, not because it leads to an inflation of the volume of the currency but because its inevitable result will be to drive the gold out of the country and substitute these notes for it, notwithstanding the utmost conservatism on the part of the banks and of the central board.

Senator Reed. Mr. Morawetz, you said a little while ago that every financial disturbance had back of it the fact that money was too cheap—

Mr. Morawetz (interposing). I said had been.

Senator Reed (continuing). That money flowed out too easily; the rate was too cheap.

Mr. Morawetz. Yes.

Senator Reed. Now, who has fixed the rate?

Mr. Morawetz. The competition of the banks.

Senator Reed. Congress never fixed it, did it?
Mr. Morawetz. No; the banks did.
Senator Reed. The banks did?
Mr. Morawetz. Yes.
Senator Reed. Now, you propose to leave in these Federal reserve directors the power, still, to reduce the rates?
Mr. Morawetz. No, sir; I say that the central board shall have the power to raise them.
Senator Reed. Yes; to raise them. But you leave in the bank the power to reduce. You take away from the board up here the power to fix, and you vest in the banks the power to raise if it wants to and lower if it wants to the rate, and limit the powers of the Federal board to simply raising it?
Mr. Morawetz. Yes, sir.
Senator Reed. You still leave in the banks that very power which has proposed, according to your theory, all the panics, do you not?
Mr. Morawetz. No, sir. Of course, no bank can be managed unless its board of directors can fix its discount rate.
Senator Reed. Yes.
Mr. Morawetz. Of course, you are quite right, that the fixing of the discount rates must be left with the banks. But I see no objection to giving to the central board the power to raise the rate if it thinks that safety requires it. The trouble under the present system is that we have 25,000 banks, all competing for business.
Senator Reed. That will still continue, will it not?
Mr. Morawetz. Yes, sir; the 25,000 will compete for business, each lending its resources up to the limit. But these reserve banks will not be managed that way.
Senator Reed. Do you not think that a wise central board would never order one of these regional banks to lower its rate of discount unless it became manifest that bank was piling up money, and in some way injuring business pretty plainly?
Now, I am talking about a board that is composed of wise men, students of finance, and appointed, as such a board ought to be, of the very best talent of the country?
Mr. Morawetz. I do not think that it is any more practical to get high-class able men to act on this central board than it is to get them to act on the boards of directors of the reserve banks. On the contrary, I think it would be easier, much easier, to find able, conscientious, patriotic men to act as directors of these reserve banks than it will be to find such men to come here to Washington and devote their lives to sitting on that central board. That is my judgment.
Senator Reed. But your wise and patriotic man who is selected here is utterly disinterested. Your wise and patriotic man who sits upon the board of directors of the regional bank is not disinterested, for two reasons: First, he is selected by an interested class; and, second, he is very likely to be financially interested in the transactions that he must handle from time to time—and any man would be influenced by that. Do you think an interested party is as likely to be as patriotic as a disinterested one?
Mr. Morawetz. Oh, the self-interest is far off. I can only speak of my own experience, my own observation, my own beliefs. We are now speculating on things that may happen in the future. I am satisfied that you will get as able, as patriotic, and as disinterested
action from the directors of these reserve banks appointed by the banks as you will get from that Federal board sitting in Washington.

Senator Reed. You say the interest is far off. Let us see if that will necessarily follow. If you were to put upon this board of directors of the regional banks, say, a country banker that had a bank with $50,000 of capital, his interest might not be very great. But suppose that the banks of New York City were to select as one of the directors of the regional bank there located Mr. Vanderlip, whose bank carries $250,000,000 of deposits, and suppose they were to select the next two largest bankers of New York, men who were interested not only in one bank, but in a dozen banks; men who had organized trust companies that are to control the stocks of banks, and who control the trust companies through voting trusts, and so on. So that if they could control the rate of discount in that regional bank they might be able to raise it, say, 1 per cent, whereby they would gather into their own particular banks very largely increased profits. Do you not think that would be a pretty substantial interest?

Mr. Morawetz. Yes, sir; I do; I do.

Senator Reed. I am glad to hear you say that, because I looked for you to be just that frank.

Senator Hitchcock. How would you avoid that danger; that evil? That is a new thought which Senator Reed develops. Here are these big banks in the city interested in maintaining a higher rate of interest, possibly. If represented on the board they might use their influence to fix such a rate of interest for the reserve bank as would enable them to continue to get the maximum rates on their customers?

Mr. Morawetz. I think all bankers of experience will agree that the interest of the banks is not to have tight money or a very high interest rate; but it is to have a fair, steady interest rate without pressure, and that they will always try to obtain. They do not make money when the interest rate is very low, and they do not prosper when the interest rate is very high and their deposits are drawn out.

Of course, we will never make much progress by assertions of what people will do, because you never can prove it. But I should suggest that a proper course would be to enact this bill with the fewest limitations upon the action of the bankers—of the banks, or interferences by this central board with the action of the banks—as possible. Then, if you find on trial that changes in the bill, restrictions upon the board of directors of the reserve banks, or an extension of the power of the central board is advisable, why, Congress will so enact.

Senator Hitchcock. Do you think that the same rate of discount should prevail all over the country?

Mr. Morawetz. No, sir; I think it would be utterly impracticable.

Senator Hitchcock. Well, is it right for Congress to create a great public facility of this sort, a utility, and then make it possible to charge people in one part of the country a higher rate for its use than the people in another part?

Mr. Morawetz. You speak of Congress creating a public utility. Congress is merely enabling the banks of each district to serve their constituents.

Senator Hitchcock. Now, let me take that up a little. It is supposed to put $150,000,000 in the banks to be loaned out.
Mr. Morawetz. On the terms proposed I should prefer to have the Government keep this money.

Senator Hitchcock. I am talking about the bill as it is. It puts $150,000,000 in the banks.

Mr. Morawetz. Presumably the Secretary of the Treasury will put the money in those banks which he thinks deserve to have it the most.

Senator Hitchcock. In addition to that, it is loaning its credit on the notes?

Mr. Morawetz. I do not think the banks want it. I do not think so. I do not think it is necessary.

Senator Hitchcock. I am talking about the bill as it is. As a matter of fact, the Government's credit is being loaned to the banks, and the money is being used for the supposed purpose of standardizing and reducing the rate of interest to the people and making the banks safe for depositors. Now, then, is it proper to make such a public utility by using what belongs to all the people, namely, the Government's balance and the Government's credit, and then permitting them to charge the people in one part of the country a higher rate of interest than is charged to the people in another part of the country for its use?

Mr. Morawetz. I grant you that the money or the credit furnished by all the people should not be furnished to some of the people on better terms than to others. But what is proposed here is to take the money from some of the people and give it to other people.

Senator Hitchcock. Now, let us see what is proposed here. There are to be 12 regional banks, we will assume, and each of those represents a certain district. It holds the reserves of that particular district. Each of those reserve banks, in addition, has the right to apply to the Government for currency upon the segregation of a certain class of paper. Now, that currency is Government currency. Is it right to have one rate of interest charged for the use of the Government's credit to one section of the country at a higher rate charged to the people in another part of the country?

Mr. Morawetz. The Government should charge the same.

Senator Hitchcock. We are agreed upon that point. Now, do you think the reserve banks should be required to charge the same rate to each one of their member banks?

Mr. Morawetz. For the same kind of paper, most assuredly.

Senator Hitchcock. The same rate should prevail over any given area covered by any given bank. Do you not think, in addition to that, that the Federal board should have the power to equalize the rates charged by the different reserve banks?

Mr. Morawetz. I do not.

Senator Reed. Then we would have the spectacle of a bank, say, in Minnesota, being compelled to pay and discount, possibly, at the rate of, say, 7 per cent, and a bank down in Virginia having a rate of, say, 5 per cent, and of course that would mean that the borrowing community in Virginia would be getting its money at a lower rate of interest than the borrowing community in Minnesota would be getting its money, although the people in Minnesota have contributed just as large a proportion of their means and resources to the institution as the people in Virginia have.
Mr. Morawetz. Why is the rate higher in Minnesota than in Virginia?

Senator Hitchcock. I do not think it should be. I think that we are undertaking to unify this system, or ought to unify it.

Mr. Morawetz. There is a reason for it. It is a question of supply and demand, is it not?

Senator Hitchcock. Yes.

Mr. Morawetz. The rate in Minnesota is high because Minnesota has not the same capital or because there is greater speculation going on in Minnesota.

Senator Hitchcock. You are taking just as large a proportion of the capital of Minnesota as you are taking of that of Virginia.

Mr. Morawetz. I know; but the interest rate is due to the supply and demand of all the capital within the district.

Senator Hitchcock. And yet you are agreed that the currency which you sent to Minnesota should bear the same rate of interest as the currency which is sent to Virginia?

Mr. Morawetz. I do not see how it can be avoided.

Senator Hitchcock. But that the regional bank which gets the currency should not be required to put it out on the same basis?

Mr. Morawetz. The regional bank fixes its rate of discount according to the necessities of its situation. It puts it up if it finds that its reserves are running out. It has to do that as a matter of protection.

Senator Hitchcock. In Minnesota the regional bank pays nothing for its reserves. In Virginia it pays no interest upon its reserves. It receives its reserves on the same basis. Its operating expenses are no larger in Minnesota than they are in Virginia. Why, then, should the regional reserve bank be permitted to charge its member banks higher rates of interest in one place than another?

Mr. Morawetz. Because it has only a certain amount of reserve money, and it is bound to hold on to a very large amount of that in order to meet the situation of its constituents.

Senator Hitchcock. But this currency furnished by the Treasury Department is supposed to supply whatever lack there may be.

Mr. Morawetz. That is a delusion, I think. I do not think it will. The currency furnished by the Government of the United States is not going to give credit power to the banks. All it possibly can do will be to save the banks from the necessity of paying out reserve money.

Senator Hitchcock. You are speaking now of the reserve banks?

Mr. Morawetz. The reserve banks; yes. What can a reserve bank do with this currency? It can not loan on it. It can not rediscount on it, and the bank which wants to replenish its reserves—a local bank which wants to replenish its reserves—will not find any consolation if the reserve bank offers it some of these notes which are no good as reserves.

Senator Hitchcock. That is very true. But the reserve bank is constantly receiving funds for deposits, every day?

Mr. Morawetz. Yes.

Senator Hitchcock. If it can hold the gold which comes in and the legal tender which comes in, and loan out instead, on application, the currency it receives from the Government, it seems to me it is expanding its means and serving its customers.
Mr. Morawetz. All that these note issues will amount to and all that they are good for is to take care of the fluctuations in the amount of currency used in circulation by the country, the hand-to-hand circulation. It will not give credit to the banks, and what the people want is credit.

Senator Hitchcock. At certain seasons of the year heavy withdrawals are made from the banks by depositors that these notes will take care of.

Mr. Morawetz. During the crop-moving season more money is used, more hand-to-hand circulation, and these notes will supply that. But the high interest rate is due to a demand for bank credit, because the banks are loaned up to the limit, and then they charge a very high rate. The issue of notes will not help that.

Senator Hitchcock. It seems to me that as long as the reserve banks can keep a 33\% per cent reserve it can continue to procure currency from the Government and advance it to its member banks, and that the member banks can use that currency to meet the demands of the depositors.

Mr. Morawetz. To the extent that they want circulating currency, and there is a fluctuation of, perhaps, $200,000,000 a year. You can not make people take more than that.

Senator Hitchcock. You think the elastic character of currency should be only to the extent of $200,000,000 a year?

Mr. Morawetz. That would be about enough.

Senator Hitchcock. Do you not think, in view of that fact, that it is foolish to tear up this $700,000,000 of national-bank notes when this system is thoroughly established and satisfactory?

Mr. Morawetz. I think there is no hurry about it. I should like to see this matter postponed until the next session of Congress. I do not think it is necessary to settle this matter at present.

Senator Hitchcock. We have interrupted you a great deal and would be glad to have you continue now.

Mr. Morawetz. I will enumerate a few more points that I would like to call to your attention. Under this bill the reserve banks are given power to invest in Government, State, and municipal bonds. I think that is all wrong. They should no more have power to invest their reserves in Government, State, or municipal bonds than in railroad bonds. No part of the reserves of these banks should be tied up in anything except business paper. They should, however, be authorized to buy short Treasury warrants or obligations of the Government, obligations having no more than six months to run.

Senator Hitchcock. What would you think of having the 2 per cent bonds converted into bonds which should be at pleasure convertible into currency and having the reserve banks buy those bonds?

Mr. Morawetz. If I understand you, the reserve banks are to buy the 2 per cents and the Government is to convert them into non-interest-bearing notes?

Senator Hitchcock. On demand, and convert them back into bonds on presentation. Have the Treasury stand ready at any time when 2 per cent bonds are presented to issue currency to the same amount, and when the currency is presented issue bonds, so that when the demand for currency ceased it would stop interest on the bonds, and when the demand for currency subsided it would be returned to the Treasury and the investor would get his 2 per cent investment.
Mr. Morawetz. The Government notes are promises to pay gold on demand. Suppose they are presented and payment is asked for in gold, how is the Government going to pay them?

Senator Hitchcock. They would be made only payable in 10 years, so that they would be 10-year bonds and meanwhile at any time payable in currency certificates or bond certificates which would pass as currency.

Mr. Morawetz. Yes; but who is going to redeem those certificates if they are presented? They are payable on demand.

Senator Hitchcock. The certificates are payable in bonds.

Mr. Morawetz. You mean it is a kind of fiat money?

Senator Hitchcock. No; it is a currency payable in bonds, and the bonds payable in currency, interchangeably, and good for reserves in reserve banks.

Mr. Morawetz. Then it is an irredeemable Government note.

Senator Hitchcock. No; at the end of 10 years it is payable in gold.

Mr. Morawetz. It is a Government note redeemable at the end of 10 years.

Senator Hitchcock. The bond would be a Government note payable in 10 years in gold; the currency would be payable in the bond.

Mr. Morawetz. But it is, as I say, simply a note of the Government in 10 years.

Senator Hitchcock. Yes; that is what it is now, but it is payable in 30 years.

Mr. Morawetz. No; it is not currency at all now. It is supposed to be an investment. You want to have this pass from hand to hand and make it a legal tender?

Senator Hitchcock. No; it has been proposed that these are to be used by the banks for reserves.

Mr. Morawetz. But, sir, a reserve——

Senator Hitchcock (interposing). Either in the form of a bond——

Mr. Morawetz (interposing). A reserve is not a reserve unless it is gold. It would be a sham reserve. It would not be real money. Supposing a man wanted to cash in his bank notes. Suppose he wanted to send gold abroad or pay a debt in gold—for many debts are payable in gold. They would be of no earthly use to him, would they?

Senator Hitchcock. Yes; they could be made redeemable in gold at the banks, just as the other currency is made redeemable in gold. They would be just as available to the banks as gold.

Mr. Morawetz. If I understand you, then, the banks would become obligated to pay in gold the $700,000,000 of 10-year notes?

Senator Hitchcock. The plan suggested to the committee through Senator Thomas was that $75,000,000 of the 2 per cent bonds should be retired every six months, and in lieu of them should be issued 10-year Government bonds, payable in gold, bearing 2 per cent interest. Those bonds should be available by the banks—by the reserve banks—for reserve purposes, and in case they needed currency to meet obligations they could turn the bonds into the Treasury instantly and get currency, and when the bonds were in the Treasury they would cease to bear interest. When the demand for currency sub-
sided the currency would be returned to the Treasury and the bonds would be returned to the banks and resume bearing interest.

Mr. Morawetz. If I understand that, sir, it seems to be utterly unsound.

Senator Hitchcock. We thought it was rather peculiar. We would like to have you point out the defects in it.

Mr. Morawetz. In the first place, the 10-year bonds are no more reserves than are 1,000-year bonds. Reserve money must be gold or legal tender; it must be real money. Now, these bonds, when converted into Government notes, would not be money, if I understand the matter. If I understand you correctly, they would be the promissory notes of the Government to pay money in 10 years.

Senator Hitchcock. As I recall the proposition, the reserve banks would be under obligations to redeem them in gold on presentation.

Mr. Morawetz. Redeem the Government notes?

Senator Hitchcock. Yes; just as they are required to do under this bill.

Mr. Morawetz. Oh, well, then, the scheme, if I understand it, amounts to this, that the banks are to buy these Government bonds and are to have the option, instead of holding the 2 per cent bonds as an investment, they are to have the option to issue in exchange therefor their own notes payable in gold. Is that right?

Senator Bristow. Yes; whenever it was more profitable to take out currency and currency was needed, they could take it out and retire the bonds; and then when the currency was not more profitable and the bonds were more profitable they would take out the bonds and retire the currency.

Mr. Morawetz. I presume that the United States ultimately would expect to pay those 2 per cents; that is, if a bank should take back its currency, it could go to the Treasury and get back its bonds?

Senator Hitchcock. Yes.

Mr. Morawetz. The scheme would be unsound, for the reason that the banks would be issuing their promises to pay in gold without having any reserve for the payment of those notes in gold.

Senator Hitchcock. They could afford to keep a reserve against those notes just as well as the notes provided for in this bill. They would have currency when there was a strong demand for currency, and they would have a 2 per cent investment when the demand was slack.

Mr. Morawetz. Well, if the banks are strong enough; that is, if they have the gold reserve, I do not see any objection to it, if I understand it correctly.

Senator Weeks. How are the banks to be reimbursed for retiring Government indebtedness?

Mr. Morawetz. If I understand the statement of Senator Hitchcock, at the end of 10 years the Government is going to pay them in gold.

Senator Weeks. That is the proposition, yes. But suppose, at the end of one year the notes are presented at the bank and the bank retired them?

Senator Hitchcock. These notes then are in the vaults of the bank, and as soon as it has a sufficient number of notes it presents them to the Government and gets back its bonds and the bonds bear 2 per cent interest.
Mr. Morawetz. It really, sir, appears to be a substitution of new bond-secured notes for the present national-bank notes.

Senator Bristow. And gives it flexibility?

Mr. Morawetz. Only there is a flexibility about it, and there will be an adequate reserve for these notes. It seems to me that limited to the present issue of national-bank notes, it is all right.

Senator Hitchcock. Do you suppose these 10-year bonds would be salable abroad?

Mr. Morawetz. No; I do not think they would be salable now at an acceptable price.

Senator Hitchcock. It has been suggested, Mr. Morawetz, that in order to allow you to keep your engagement to-morrow morning, you might return to-morrow afternoon and Mr. Gilbert might go on in the morning.

Mr. Morawetz. I would rather come at half past 10 o'clock, morning, if it suits the committee.

Senator Hitchcock. Very well. If there are no further questions at this time——

Senator Reed (interposing). I wanted to ask Mr. Morawetz one question on the theme that we were talking about a while ago, and which I have not quite finished.

I want to return to the proposition in regard to the control of a regional bank in New York City. I suggested to you, Mr. Morawetz, that if, for instance, Mr. Vanderlip should be a director—I do not know which of the banks in New York City are next largest to the bank of which he is president.

Mr. Morawetz. The Bank of Commerce is the largest, and the First National Bank is next after that.

Senator Reed. Now, if the presidents of those banks, or men selected by them, were selected, you agreed with me that they might have a substantial interest in the question of the rate of discount, because it would affect their bank. I want to proceed one step farther than that and ask you if it is not a pretty well known fact that a considerable number of banks in New York, generally known by the name of Morgan group, while they have independent directors, at the present time, nevertheless, they have a trustee arrangement by which the directors of those banks are controlled through this voting trust.

Mr. Morawetz. A voting trust?

Senator Reed. I will put in plain, blunt, speech.

Mr. Morawetz. Yes; so I will understand it.

Senator Reed. I am not vouching for the accuracy of this, but I am asking you thinking you may know: It has been stated to me that there are a considerable number of banks in New York City, all of them having their separate directors, and yet having an agreement by which three men name the board of directors of all of these banks, and that one of these men is Mr. Daniel Reed. Do you know anything about that?

Mr. Morawetz. I never heard anything of that kind before; no, sir. But if you ask me whether I believe it to be a fact, I should say no, I do not. It is something entirely new to me.

Senator Reed. You do know, do you not, there is a system of interlocking directorates there, of course? There are a good many banks who have upon their boards of directors a number of men who are
on the boards of other banks, so that there is an interlocking in that way. I do not think, of course, that is the result of accident, do you? That means that there is some plan back of that condition—some reason for it.

Mr. Morawetz. Yes; of course there is some reason. But may I explain?

Senator Reed. Certainly. I am not insinuating that it may be a malicious and bad reason, but there is some reason. Now, do you know what that reason is? And you can make any explanation, of course, Mr. Morawetz, you desire to. We are asking your advice here.

Mr. Morawetz. Let me explain. In the management of a big bank you have a board of directors, generally a large board, of men prominent in affairs who might once a month, rarely oftener, have read to them a report in general terms of how many millions were loaned each week on call and how many on time, etc., and a statement of the condition of the bank. Then they ratify the action of the executive committee of the bank, the executive committee of the bank having met sufficiently often to pass on the discounts. The board of directors at their meetings, no matter how able, how wise, how acute they might be, could not possibly pass on the active business of the bank. That is managed by the executive committee and the president.

Senator Reed. Yes.

Mr. Morawetz. Now, these large banks like to have prominent names on their boards of directors, and occasionally—very rarely, however—some great question may come up upon which the opinion of the full board is desired.

Senator Reed. But this board of directors does something else than that. does it not?

Mr. Morawetz. The board of directors choose the president and it chooses the executive committee.

Senator Reed. Exactly. The man, then, that controls the board of directors controls that bank, does he not?

Mr. Morawetz. Yes; ultimately.

Senator Reed. The man, then, that controls the board of directors potentially influences the bank?

Mr. Morawetz. The management of the bank.

Senator Reed. Now, don't you think, Mr. Morawetz, that there is a reason for this interlocking directorate system that has been so extensively followed, outside of any mere desire of the bank to have prominent names?

Mr. Morawetz. Unquestionably if a man owns a large amount of the stock of a bank he chooses the people whom he trusts, whom he believes in, to act as directors.

Senator Reed. Yes.

Mr. Morawetz. And the people who are chosen by him would realize or recognize that fact. But in the vast majority of cases I am sure that the directors of these large banks, even when they hold a small amount of stock, would act according to their best judgment without any regard to the control of the stock of the bank.

Senator Reed. I am not challenging motives; that is, I am not attributing unnecessarily any sinister or bad motives.
Mr. Morawetz. Yes.

Senator Reed. But I am trying to get at this thought, whether there is not a reason for that system, and whether, if I may suggest, the banks have not practiced this for the purpose of a unification of interest.

Mr. Morawetz. I do not think so; no.

Senator Reed. Let me see if I can not cite you something that may have a bearing on it. You know, do you not, that Mr. Vanderlip's bank created a trust company with $10,000,000 of capital, and that it created every dollar of that capital by declaring a dividend to its stockholders out of the city bank?

Mr. Morawetz. Surplus.

Senator Reed. And transferred that over to the coffers of the trust company. You also know, do you not, that provision was made and written upon every share of stock of that trust company that it should be voted for a long period of years by three trustees, and that those three trustees were officers of the city bank?

Mr. Morawetz. It was really a part of the city bank. It was intended to continue part of the city bank.

Senator Reed. Now, you know, do you not, that that trust company immediately embarked in the enterprise of acquiring the stock of other banks, and that the larger portion of its assets were speedily invested in the stock of other banks, so that, among other things, it absolutely owned all of the stock of the Butchers' Bank—the Butchers' and something else. Now, does not that look a little as though there was an attempt at unification of interest and control of the banks as a whole, as a system?

Mr. Morawetz. Obviously, to that extent.

Senator Reed. Now, adding to that fact, you find the same system of banks that have been largely supposed to be dominated by one great controlling interest, and you find the directors of each of these banks interlocking with the directors of other banks or being a part of the directors of other banks. Taking into consideration the fact that the whole trend of modern business is toward consolidation and against active and keen competition, and adding to all that that they got up a clearing-house association in the city of New York which transacts some very important business and has very large deposits on hand—I am just asking you to take all that into consideration as a sort of a hypothetical statement—and then I want to ask you this question: If you do not think that these same great interests, through a joint-stock ownership in a reserve bank established in New York City, with full power of control in the board of directors, elected by these banks, would be able to pretty thoroughly dominate the New York financial market, and if they will not make that the very medium of control—if there is not a danger there, now, I am asking you as a patriotic citizen if there is not a danger there. I am not using this as an attack on New York; I am just talking about the condition.

Mr. Morawetz. Well, I will answer you frankly. If I thought that the results would be as you say, I should think there was a danger. But I am perfectly convinced that there is not any danger whatsoever. In the first place, I do not think that this unification of interest is carried nearly as far as you have, apparently, in mind. In the second place, I do not think that these large institutions in New York,
under this arrangement here, would get the control of the reserve bank.

Senator Reed. Of the regional bank in New York.

Mr. Morawetz. The regional bank in New York.

Senator Reed. Now, why would they not inevitably control it?

Mr. Morawetz. I do not think they would have the voting power in the selection of the directors here. Every country bank—this regional bank in New York would include Pennsylvania, and, I suppose, all of the States north of the Pennsylvania line.

Senator Reed. What division of it would have to be made? If you go according to capital, I think there would be a regional bank in New York City alone.

Mr. Morawetz. I do not think that there ought to be. I should have one for all the Northeastern States, including New York—well, all the States north of Maryland and east of Ohio.

Senator Reed. That would, of course, make the bank very large—the largest bank in the country.

Mr. Morawetz. It would; yes.

Senator Reed. And very much the more powerful.

Mr. Morawetz. It would be; yes.

Senator Reed. And the talk that has been had here of deconcentrating—if I may use that term—the congestion of money in New York and sending it elsewhere would at once be defeated, because you would create a regional bank there that would have a tendency to secure further increases.

Mr. Morawetz. I do not see how it would draw from the other parts of the country.

Senator Reed. It will draw from all this territory you propose to add to New York.

Mr. Morawetz. It would strengthen the banks there. I do not see how it would diminish their credit power in the slightest.

Senator Reed. You then do not think it would be wise to establish a regional bank in New York City? You would want to take in some country territory as a kind of a safeguard?

Mr. Morawetz. No, sir; not on that ground. I would take it in because I think the number of these regional reserve banks should be limited to five. I see absolutely nothing to gain by multiplying the number of these banks, and I see a great deal to lose.

Senator Reed. Is there anything to be gained in having more than one?

Mr. Morawetz. Yes.

Senator Reed. What is the gain? If 12 is too many and 1 is too little, you must have in mind, of course, some reason why there should be a definite number. Perhaps you have gone into that, and if you have I will not detain you, because I will read your evidence.

Mr. Morawetz. I have gone into it quite fully. But to tell, in a few words, my reason, it is this: One of the important things to avoid is the injecting into the management of the banks sectional controversies and party politics, because if you do that you will not only ruin the business interests of the country but you will bring ruin, frequently, on a political party which does not deserve ruin. If you have the management of these banks an issue of party politics, the party to which the administration for the time being belongs will inevitably
be held responsible by a large number of the voters of this country for the management of the banks, and when times of business depression, of unemployment and distress, come, such as I believe there will be before long, the party which established these banks or has control of them will be held responsible—unjustly so, but it will be held responsible. Therefore I think it is in the interest of sound business, and it is in the interest of good government, at any rate in this country, that sectional controversies and party politics be kept out of the management of the banks. If you have one bank representing the whole country, you are bound to have sectional controversies and party politics. Therefore the only safe course, in my judgment, is to have a separate reserve bank for each of the great sections of the country—one for the East, one for the South, one for the Central West, one for the Pacific coast, and perhaps one also for the Southwest.

Senator Reed. Then, that would argue you perhaps ought to have more than 12, because then you could so distribute them that the whole question of sectionalism would be avoided.

Mr. Morawetz. Then you won't have any reserve banks, you know. That would defeat the plan. There would not be the concentration of money which was necessary to any safe plan.

Senator Reed. If you had $100,000,000—it is a very pleasant suggestion I am making now—

Mr. Morawetz. I am smiling.

Senator Reed (continuing). Which I hope will produce a favorable reply—and you had it all in one place, do you think it would be much more powerful than if you had it in 12 places and you could instantly reach the 12 places?

Mr. Morawetz. Well, I could only answer that by quoting Lord Bacon. One of his aphorisms was, "Generalities are barren." I think that is one of those general statements.

Senator Reed. I am going to apply my general statement. Suppose there was, in the 12 regional banks, a given amount of money?

Mr. Morawetz. Yes.

Senator Reed. It is one-twelfth of the whole amount in the banks. But there is a central power that can use each of the 12 parts instantly. Do you think that system is much weaker than if you had it all piled up in one treasury dominated by the same controlling power?

Mr. Morawetz. It is practically the same thing.

Senator Reed. Exactly. That is the way I understand this system.

Mr. Morawetz. And if you are going to have the Federal reserve board have this power you will have the principal vice of the Aldrich plan back again.

Senator Reed. Only this, that this is controlled by the people of the United States, while he proposed to have it controlled by the banks of the United States.

Mr. Morawetz. Well, by the representatives of the people—that is, by the political party in control of the Government for the time being.

Senator Reed. I hardly think so under this system, because this board is, in effect, a permanent board.

Mr. Morawetz. Well, they would be held responsible, sir.

Senator Reed. Oh, yes.
Mr. Morawetz. It would have the evil effect of——

Senator Reed (interposing). Well, we must choose between bank control and Government control, in the last analysis, must we not, Mr. Morawetz? We can not get away from one or the other; and each of them will have their defects.

Mr. Morawetz. I think there is a middle course, and that is bank control, subject to supervision by the Government, and subject to limitations in special matters.

Senator Hitchcock. It is now half-past 5 o'clock, and the committee will adjourn until to-morrow morning at half-past 10, to meet in the regular committee room of the Committee on Banking and Currency.

(Thereupon, at 5.30 o'clock p. m., the committee adjourned until to-morrow (Tuesday) October 21, 1913, at 10.30 o'clock a. m.)

TUESDAY, OCTOBER 21, 1913.

Committee on Banking and Currency, United States Senate, Washington, D. C.

The committee assembled at 10.40 o'clock a. m.

Present: Senators Hitchcock (acting chairman), O'Gorman, Reed, Pomerene, Shafroth, Hollis, Nelson, Bristow, and Weeks.

Senator Hitchcock. Mr. Morawetz, will you resume where you left off yesterday, as nearly as you can? I will say that we have a session of the Senate at 12 o'clock.

STATEMENT OF VICTOR MORAWETZ, ESQ., OF NEW YORK, N. Y.—Resumed.

Mr. Morawetz. The bill before the committee provides that each reserve bank may establish a limited number of branches within its district, and it may be held that it does not permit a reserve bank to establish any other branch offices or agencies.

I think this power should be broadened and each regional reserve bank should have power to establish branches, offices, or agencies for the transaction of any of its authorized business anywhere within its district or outside of its district, in its discretion. I think the broadest power should be given to these banks to carry on their legitimate business wherever it is found advisable; and in particular I think the broadest power should be given to each of these banks to deal with other reserve banks throughout the country.

Senator Hitchcock. What phraseology would you suggest as to the establishment of branch banks by reserve banks?

Mr. Morawetz. I should provide that each reserve bank may establish branches or agencies wherever its board of directors may deem advisable, within or without its district.

Senator Hitchcock. Would there be any occasion to establish them outside of the United States?

Mr. Morawetz. No; probably not. It might be limited to the United States.

Senator Nelson. Would you have those branches outside of the district of the bank?
Mr. Morawetz. Yes, sir.

Senator Nelson. Would there not be a conflict, then, between those regional banks and other regional banks? Would there not be competition, then, between the different regional banks in their respective territories?

Mr. Morawetz. I do not mean to give to the reserve banks power to carry on their operations at will outside of their districts. But whatever proper and legitimate business a bank may have occasion to carry on outside of its district it should be enabled to carry on through an agency established for that purpose.

Senator Nelson. Well, would you allow it to do a deposit and discount business outside of its district?

Mr. Morawetz. I should not. But each reserve bank should have authority to employ another reserve bank or any agency to take care of the redemption and collection of its notes and to do whatever the statute permits the reserve bank to do outside of its district.

Senator Hitchcock. Well, the power might be, then, to establish branches within its district or to locate agencies outside of its district for the transaction of legitimate business.

Mr. Morawetz. I think that should be the provision, exactly.

Senator Hitchcock. There is a difference between a branch and an agency of a bank?

Mr. Morawetz. Yes, sir. I do not mean to broaden the authorized operations of the reserve banks by this provision which I am suggesting.

Senator Hitchcock. Yes; I see. Will you proceed?

Mr. Morawetz. As I stated yesterday, I think that the reserve banks should be empowered—I think they might be required to establish a central clearing house to clear the debts, including notes, among the various reserve banks.

Senator Nelson. By the term "notes," do you refer to the ordinary promissory notes?

Mr. Morawetz. I refer to the proposed currency notes.

Senator Nelson. The currency notes; yes.

Mr. Morawetz. The success of this plan depends upon securing an adequate concentration of reserve money in the regional reserve banks. I think that under this bill the desired result would not be attained, and that for two reasons.

One reason is that the number of reserve banks is too large. It should be limited to five or six at the most.

The other reason arises from the provisions of section 20 of the bill, relating to the disposition of the reserves of the member banks.

Senator Weeks. Do you think that your testimony given here before the committee yesterday will clearly set forth your reasons why you think a number of reserve banks are preferable to one? I did not hear all of it, so that I am not sure whether it did.

Mr. Morawetz. I have endeavored to cover that point. My principal reasons for preferring the regional reserve-bank plan to the central-bank plan are that any plan providing for a centralization of all the reserves of the country in one bank, or any plan subjecting control of the reserves of all the banks to one central body, would inevitably result in sectional controversies, and would inevitably inject party politics into the control of the banking situation of this country. That, to my mind, would be absolutely fatal.
Senator Nelson. But do you not think that this system of regional banks would be entirely ineffective if you did not compel one regional bank, willingly or unwillingly, to discount the paper of another regional bank?

Mr. Morawetz. I do not, sir. I dealt with that point yesterday.

Senator Nelson. You think they could do business without that provision in the bill?

Mr. Morawetz. I do. I think that provision in the bill would be a source of weakness rather than a source of strength. If this plan is worth anything, each regional reserve bank would be strong enough to stand independently. If this plan is worth anything, each regional reserve bank would be ample to enable the banks within its district to serve the public adequately.

Senator Nelson. Your theory, then, is that these regional banks should be conducted as though they were the only bank for that particular region?

Mr. Morawetz. Yes.

Senator Nelson. And as though that region, in respect to the bank, was a country by itself?

Mr. Morawetz. I think that each of these regional banks should be conducted as a reserve bank for the banks located within its district. If the number of these banks were limited to five or six, each having a territory larger than Germany or France, and nearly all of them being very powerful institutions, I think that the centralization of reserve money would be adequate.

Senator Nelson. Suppose a regional bank, during the seasonal demand at New Orleans, should be short of funds, and suppose at that same time a regional bank at Chicago should have an abundance of loanable funds, you would not have anything in the law, then, compelling the regional bank at Chicago to help out the regional bank at New Orleans?

Mr. Morawetz. I should not. I should trust the business sense of the banks; and I should leave to the Government, through the Secretary of the Treasury, the power to dispose of the Government deposits.

Senator Nelson. Yes.

Mr. Morawetz. At his discretion; and, also, I should leave to the central board the power to permit particular banks to issue notes—to permit notes to be issued by anyone of the regional reserve banks which it thinks is in need of currency.

Senator Nelson. Yes; but it could not do that without an application from the regional bank and the tender of securities by it.

Mr. Morawetz. Exactly.

Senator Nelson. The tender of commercial paper.

Mr. Morawetz. Exactly.

Senator Nelson. The move would have to come from below, not from above.

Mr. Morawetz. In the case you mentioned, the regional bank at New Orleans would apply for notes, and probably it would apply also for the deposit of more Government funds, and the Secretary or the central board would then pass upon the propriety of the application.

Senator Nelson. Well, would not that embarrass the administration, if they should use the Government funds in favor of one par-
ticular reserve bank as against another; dump them all into New Orleans, instead of putting them into other places; would not that lead to friction and embarrassment?

Mr. Morawetz. I think not. That is being done now; and I think public opinion—

Senator Nelson (interposing). Well, is that not one of the criticisms of the system now in vogue?

Mr. Morawetz. It is the subject of some criticism; but I do not think it is a severe criticism. I think if you had the five regional banks established, and had also this power in the Secretary of the Treasury, each would operate as a check upon the other.

Senator Nelson. Then, the long and short of it is that you believe that this provision in the bill compelling one regional bank to discount and help out another regional bank, whether it was willing to do so or not, on the mandate of the Federal reserve board, is unnecessary and ought to be eliminated?

Mr. Morawetz. I think it is unnecessary, and I think it is bad in its results, for several reasons, one being that it will inevitably result in sectional demands and sectional controversies and in party politics entering into the question of controlling the action of the central board.

In the second place, it may lead to unsound banking, because in some instances it may cause the weaker regional banks to discount notes when they ought to hoard their resources.

And, thirdly, it will prevent any of the regional banks from being managed safely, because no bank can be managed with safety if the disposition of its reserves is in the hands of an outside body. The only way in which a bank can be kept sound is by the control of its reserves, and no board of directors can manage the bank properly unless it has that control.

Senator Nelson. But are you not doing violence in your theory to the fundamental principles? The fundamental principles, as I understand them, are, first, to provide an elastic currency based upon commercial paper. The other is to mobilize the reserves and make them available in case of an emergency.

Now, in the case I put to you of the New Orleans bank, you said relief would come from two sources. One was from the Government deposits and the other was from the issue of these new bank notes upon application of the bank.

So, in that matter, instead of relying upon two of the main features of the bill, you took one principle of the bill and then that collateral matter; the one principle of the bill you took was the right to issue asset currency, and the other—a sort of collateral issue—was the right to handle Government deposits. And you overlooked the other fundamental principle of the bill and would not apply that, or did not apply it, in respect to the mobilization of the reserves.

In other words, when it came to that feature of the bill, you would confine that to the operation of the bank at New Orleans. Do you not see that that is where your doctrine leads you to?

Mr. Morawetz. I stated that if this plan is worth anything, if these regional banks are strong enough to serve their purpose, it will
not be necessary to take away the reserve from other sections and transfer them in the way proposed. This bill, if it gives this power to the central board, practically is the central-bank plan shorn of a good many of its advantages. Instead of having——

Senator Nelson (interposing). No doubt it is the central-bank plan, as it is in the bill.

Mr. Morawetz. It has the vice of the central-bank plan without its advantages. It practically—instead of having a properly organized banking institution having control of all of the reserves of the country—splits them up under the management of separate boards of directors and then puts the control in the hands of an outside board sitting in Washington. It is the Aldrich plan, or the central-bank plan, in a disguised form, shorn of many of its business advantages.

Senator Nelson. Well, is not the radical difference between that and what you call the Aldrich plan the fact that, under his plan, the banks were to control, while under this plan the control is absolutely in the hands of the Government, through a board appointed by the President?

Mr. Morawetz. Yes, sir; it is an artificial, badly constructed central bank, with a board of directors appointed by the Government and sitting in Washington.

Senator Nelson. Yes. It is, then, in essence a central bank as the bill is framed.

Mr. Morawetz. I think so.

Senator Nelson. Yes.

Senator Weeks. Well, does it not provide for as great concentration of power in its final analysis as most central banks?

Mr. Morawetz. Very nearly it does. It introduces the principal vice of the central-bank system, namely, that it will inject sectional controversies and party politics into the management of the banks throughout the country.

Senator Weeks. It does not seem to me that I am able to follow you, Mr. Morawetz, as to the question of sectional influence or sectional policies, if we have more than one bank. It seems to me that if, as you suggest, we have five banks representing five different sections of the country, that in itself is going to create a sectional policy.

Mr. Morawetz. The reason it seemed to be advisable to have in this country what practically amounts to five central banks or reserve banks, which is the same thing, is that in this way you are able to avoid the conflict which arises from the great difference in the requirements of the different sections of the country for credits and for currency. It enables you to establish a bank for each of the principal sections of the country; and if you keep down the number sufficiently, these banks will work in harmony with each other voluntarily, not under compulsion.

You have in Europe, and Europe is not larger than the United States, territorially, you have 15, I think, central banks. They do not fight each other, but they work harmoniously with each other, each country having its own bank and looking out specially for its own interests; but in large matters the banks act in harmony.

Senator Hitchcock. Mr. Morawetz, that is a question that I am greatly interested in. Can you detail briefly how these central banks of Europe operate together? Do they buy and sell paper of each other?
Mr. Morawetz. Not under ordinary circumstances.
Senator O'Gorman. Do they under any circumstances buy and sell paper of one another?
Mr. Morawetz. Well, whether they buy paper or not, I do not know. They lend gold to each other.
Senator O'Gorman. They lend paper to each other?
Mr. Morawetz. They lend gold to each other.
Senator O'Gorman. They lend gold?
Mr. Morawetz. Yes; they lend gold to each other.
Senator Hitchcock. Now, in the case of a loan of gold, is that a loan or is that a transfer by the purchase of commercial paper or national obligations?
Mr. Morawetz. My understanding is that it is by way of loan.
Senator Hitchcock. A direct loan or a deposit at interest?
Mr. Morawetz. I regret that I can not give you definite and reliable information on that point.
Senator Nelson. Is it not a fact—
Mr. Morawetz (interposing). My understanding is that on occasions—for instance, the Bank of France has loaned large sums of gold to the Bank of England, which, after some months, was returned.
Senator Hitchcock. Well, is that not due to the fact that all of these central banks are interested in stable conditions in Europe?
Mr. Morawetz. Yes, sir; it is.
Senator Hitchcock. So that if conditions result in a stringency in one country it is to the interest of the other, if it has a surplus, to relieve it?
Mr. Morawetz. Yes. But I think the cooperation of the central banks in Europe is more in the form of adjustment of the bank rates than by the actual transfer of gold. Each one of these institutions keeps itself informed as to conditions in the other countries, and of the central banks of these other countries. And then there is a mutual adjustment of the bank rate, so as to allow the gold to flow where it is needed the most.
Senator Hitchcock. Well, in this country, for instance, if one of these reserve banks had a slack demand for advances, or for loans, and another bank had a strong demand in its district, the one having the surplus of cash could readily buy paper of the other one; that would relieve the necessity of having that other one apply for currency.
Mr. Morawetz. Exactly. And I will strongly urge, as I have said before, that power be given to these reserve banks to deal freely with each other. In the present bill it is only after obtaining permission from the central board that a reserve bank can rediscount paper or otherwise deal with another reserve bank.
Senator Hitchcock. Now, there is no reason why these reserve banks should not buy and sell exchange of each other, very much as a bank in New York buys and sells European exchange.
Mr. Morawetz. Most assuredly.
Senator Hitchcock. In fact, it is necessary for the equalizing of conditions in the country that they should do that very thing, is it not?
Mr. Morawetz. Assuredly. I think the correct policy in the drafting of this bill is to give the broadest power to these banks to deal with each other and see how they exercise those powers. Congress
will be sitting here every year, and if the practices developed by these
banks should not be satisfactory, Congress can easily remedy the
situation by additional legislation. It is true that a power for good
may be abused and become a power for evil. But you can not have
a good bank and make these institutions beneficial to the country
unless you give broad, discretionary powers of management to their
boards of directors.

Senator Weeks. It does not seem to me, Mr. Morawetz, that your
territorial theory has any bearing on this case at all; but it is simply
a question of a political unit. If it had any bearing in Europe they
would have half a dozen regional banks in Russia, for instance, be­
cause the territory of Russia is 20 times as large as the territory of
the Netherlands—or perhaps 30 times; I do not know how many
times. If territory has any bearing, I should think that that condi-
tion would prevail in Europe. But the central banks of Europe are
established in each country, because it is a political unit, and the
citizens of that country want to have their own bank, and not be
obliged to go to the bank of some other country for their rediscounts
and their accommodations.

Mr. Morawetz. I grant that it is not merely a matter of territorial
expanse. It is a matter of sectional interest and of traditions of the
country. In no country of Europe are banking and currency ques­
tions considered fit questions for party politics; and in no country
of Europe do the people of the various sections of the country at­
tempt to regulate the banking policy of the country.

In the United States, on the other hand, banking and currency
have, from the very beginning of the Government to the present day,
been considered particularly attractive subjects for party politics.

Senator Weeks. You know that is all over now, do you not?

[Laughter.]

Mr. Morawetz. I do not, sir. I see it going on at the present day,
in connection with this very bill which you have before this com­
mittee.

Senator O'Gorman. Where do you observe evidences of that?

Mr. Morawetz. In the newspapers—not among members of the
committee. [Laughter.]

Senator O'Gorman. Well, I think it is fair to say that in my own
opinion—and I would almost venture to speak for all my colleagues
on this committee here—there is less reason to suspect that partisan
considerations have anything to do with the national banking and
currency system at this time than at any previous time of the history
of the Government.

Mr. Morawetz. I hope that that is true, sir.

Senator Nelson. You need not hope about it; it is really true.

[Laughter.]

Mr. Morawetz. I am sure it is true in this committee. But
whether it is true throughout the country is another matter.

Senator Nelson. Oh, well, the country has a great faith in this
committee. [Laughter.]

Senator O'Gorman. And I think that opinion very generally pre­
vails among public men in Washington that the time has passed, not
to return, when political or partisan considerations will have any­
thing to do with banking and currency legislation in this country.
Mr. Morawetz. I sincerely hope so.
Senator Pomerene. There is not any doubt about it.
Mr. Morawetz. I was going on to say——
Senator Hitchcock (interposing). Well, I would like to ask the Senator from New York a question: Whether he thinks it would be possible to incorporate in this bill a system of note issue not in accord with the Democratic platform?
Senator O'Gorman. The Democratic platform of 1912, which is the only party declaration now recognized by members of the Democratic Party, has nothing to say on the subject alluded to by the chairman. It makes no reference whatever to note issues.
Senator Hitchcock. Well, I had in mind the Democratic platform of 1908, which did cover that point.
Senator O'Gorman. Well, I think it would be assumed that the party creed now influential with followers of the Democratic Party is to be found in the national platform of 1912, and in no other platform.
Senator Weeks. I suppose, Senator O'Gorman, that your conclusion would be that the Democratic Party had been progressive in that respect?
Senator O'Gorman. Yes; it has been progressive. This is a progressive age. The Republican Party has progressed so far that it has lost a very respectable part of its former following. [Laughter.] Now, I think we may return to the bill. [Laughter.]

Mr. Morawetz. I was going on to say that the provisions of this bill would prevent adequate concentration of the reserve money in these reserve banks for two reasons: One being the large number of banks required to be formed; and the other, the provisions of section 20 of the bill, relating to the reserves of the individual member banks.
These provisions, in my judgment, should be altered; instead of compelling each individual bank to keep locked up in its own vaults a certain specified percentage of its required reserve, it should merely permit them to keep a specified percentage locked up and compel them to deposit all the rest in the reserve banks.
It may be that it is expedient to have 6 per cent of the reserves—6 per cent of the 15 per cent of the reserves of the country banks locked up in their vaults, because some of the country banks may be at some distance from a reserve center where they can obtain currency when needed.
But there is certainly no reason why city banks should be required to retain, locked up in their vaults, more than the country banks, because they will have within reach at any time the reserves of the Federal reserve bank of their district or some branch of this reserve bank.
Senator O'Gorman. In other words, the city banks will have greater facilities for procuring aid when needed?
Mr. Morawetz. Yes; when needed.
Senator Reed. Greater than the country banks?
Mr. Morawetz. Yes, sir; they need less cash in their vaults than the country banks.
Senator Reed. Do you think there ought to be any system established that would discriminate in favor of city banks as against the country banks?
Mr. Morawetz. No, sir.
Senator O'Gorman. That is the discrimination that he wants to avoid. If the country bank may contend that 6 per cent of its reserves locked up in its vaults is enough, there is no reason why the city bank should be required to keep a larger amount.

Mr. Morawetz. The city banks will be in a better position to obtain currency from the reserve banks.

Senator Reed. That is just what I asked: Do you think there ought to be a system established that would give the city banks a facility that was not extended to the country banks?

Mr. Morawetz. No, sir.

Senator Nelson. Now, can you see any occasion, Mr. Morawetz, in view of the tenor of this bill and of the plan proposed—can you see any occasion for keeping up the distinction between country banks, banks of reserve cities, and banks of central reserve cities; could we not now, under this system, adopt one uniform plan as to reserves for all three classes of banks?

Mr. Morawetz. I think so. I think you are probably right in that regard.

The only reason why the reserve city bank, or central reserve city bank, should be required to hold larger cash reserves than the country banks, is that those reserve city banks and central reserve city banks hold the reserves of other banks. But if the—

Senator Nelson (interposing). But they will cease to do it now under this bill.

Mr. Morawetz. They will cease to do it under this bill.

Senator Hitchcock. Well, now, will they?

Mr. Morawetz. They ought to.

Senator Hitchcock. Well, as a matter of fact, will they, under this bill? Suppose half the banks of the country do not come in under this system; they must still have their city reserve agents.

And suppose also the banks that come into the system desire to keep a part of their balances with city banks—as they undoubtedly will, according to all the testimony here—those balances will be subject to seasonal withdrawal, often quite sudden.

Should the city bank be permitted to run so low on the reserves that whenever the country banks begin to draw out their balances the city bank must rush to the reserve banks for assistance? Would not that be apt to put a sudden strain upon the reserve banks?

Mr. Morawetz. I think you are right. But I hope that ultimately it will be provided that no bank shall keep any part of its reserve as a deposit in any bank except a reserve bank.

Senator Hitchcock. Well, of course, we can not legislate for State banks, which constitute two-thirds of the banks of the United States; and if, after this bill is passed, a large number of country national banks denationalize themselves, they are not permitted to keep their reserves in the reserve banks; and they must necessarily keep them in the city banks.

Mr. Morawetz. Then the subject might be covered by providing that any bank which holds reserves of other banks shall itself keep up a larger reserve, and that the banks which do not hold reserves of other banks shall be required only to keep up the smaller reserve required for the country banks.

Senator Hitchcock. I think some distinction of that sort is imperative, because the situation will not be the same in this country
as it is in Europe. The European private bank or the incorporated bank is able to do with a very small reserve for the very reason that it has no country-bank balances.

Mr. Morawetz. I fully agree with that policy.

Senator Nelson. Have you looked into this question: Does this section 20, providing for this new system of reserves of national banks, operate to repeal the existing system of reserves, or is that wiped out by this—

Mr. Morawetz (interposing). It is, as I understand it, wiped out by this as to member banks.

Senator Nelson. Repealed by implication? There is no express repeal of that part of the law; there is not in this section at all events.

Mr. Morawetz. This section relates only to member banks.

Senator Nelson. Yes; but I mean while this provides the reserves of member banks shall be kept in their own vaults and in the regional banks, does it do away with the other system?

Mr. Morawetz. Of those banks which are not member banks?

Senator Nelson. No. Does it do away with the system as it now exists—depositing in reserve cities and central reserve cities? Does this become a complete substitute for the present system?

Mr. Morawetz. As I understand it; yes, sir.

Senator Nelson. Well, it is only by implication; it does not directly repeal the other system.

Mr. Morawetz. It begins by stating:

That from and after the date when the Secretary of the Treasury shall have officially announced, in such manner as he may elect, the fact that a Federal reserve bank has been established in any designated district, every banking association within said district which shall have subscribed for stock in such Federal reserve bank shall be required to establish and maintain reserves as follows:

I think that, in connection with the remaining language of this section—

Senator Nelson (interposing). It repeals it because it is inconsistent with the other provisions.

Mr. Morawetz. Yes, sir.

Senator Nelson. It is repealed by implication.

Mr. Morawetz. By implication—

Senator Nelson (interposing). Arising from inconsistency.

Mr. Morawetz. Yes, sir; if you like.

Senator Weeks. As a practical proposition is there any reason why a bank in a city where a reserve bank is located, or a branch of a reserve bank, should keep any of its reserve in its own vaults? Why should it not keep all its reserves with the reserve bank?

Mr. Morawetz. I think it should keep all of its reserve with the reserve bank, except a small amount convenient for the use of the day.

Senator Weeks. That is exactly what it would do unless the law prevents it.

Mr. Morawetz. Exactly; but the proposed bill prevents it, and it ought to be changed in that regard. I suggest that this provision be amended by requiring each bank to deposit in a reserve bank or banks the whole of its lawful money reserves except such portion, not exceeding in any event 5 per cent, as it may carry in its own
vaults. I should be willing to give all the banks coming in under this plan, city banks and country banks, the privilege of keeping in their vaults 5 per cent out of the prescribed percentage required, but compel them to deposit in the reserve banks the balance.

Senator Weeks. I think you would make a mistake to do that, because the reserve which the country bank must maintain depends very largely on the location of the bank. It may be removed from any other bank such a distance that its requirements would compel it to carry a larger amount of cash than a bank located in the same town with other banks or in a community near other banks. I think the bank itself has got to determine the amount of cash it shall carry, and that must be determined by the experience it has had with its customers.

Senator Pomerene. You would leave that optional with each bank?

Senator Weeks. To some degree, I think, it has to be.

Mr. Morawetz. I fully agree with you, Senator, in that regard, but certainly no bank should be required to lock up in its vaults more reserve than the bank itself thinks necessary.

Senator Weeks. No; I do not think so either.

Senator Reed. Now let me ask just one question about this matter. I am going to ask it in the form of a statement. It seems to me that the reserves of banks were ultimately intended as a security to depositors. Therefore, if the bank has that reserve where it is absolutely certain to be ultimately and within a reasonably short time at the disposal of the depositors, it seems to me the purpose of the measure is met. It seems to me utterly immaterial therefore whether a country bank has 1 per cent reserve or no reserve or 20 per cent reserve in its own vaults, provided it has the full reserve in the vaults of the regional bank, because it is there and can be obtained.

Senator Nelson. How can it be obtained from the regional bank?

Suppose a local bank is in an emergency, a run is made on it. How can it get those reserves?

Senator Reed. For the mere matter of meeting a run the reserve does not do any good. You are not allowed to impair it except under these penalties. Then it is rarely the case that a country bank is so far from another country bank that it can not get help from there on the instant, and any country bank would advance the ten, twenty, or thirty, or even one hundred thousand dollars if it absolutely knew that the bank asking the accommodation had that amount of money with the regional bank subject to its call. So that if a few hours' time were necessary they could get help in that way. Now, does not that affect this question of reserves all the way through?

Mr. Morawetz. It is a practical question. Each case depends upon the circumstances. The principle, however, is that no bank should lock up in its vaults more money than is reasonably necessary to meet its immediate requirements.

Senator Reed. I agree with that.

Mr. Morawetz. Under this bill a bank can only deposit its reserve in its own regional reserve bank. I think that is a mistake. In effect it will force the country banks throughout the United States, and the reserve city banks, to keep separate bank deposits in other cities for the purpose of transacting their necessary banking business in those cities.
Senator Hitchcock. That has been my judgment, but that objection has been answered by stating that drafts of a member bank on a reserve bank will pass at par under the terms of this bill anywhere in the United States, and, therefore, a member bank will have no need for a New York correspondent, even though its reserve bank is located in New Orleans, because the draft on New Orleans will be accepted by the regional bank in New York at par.

Mr. Morawetz. I don't think that is a sound way of meeting the difficulty. I think a better plan is to permit a member bank to keep part of its reserve in any other of the reserve banks in the country.

Senator Nelson. Do you see where that leads to, Mr. Morawetz? Your doctrine that you stated a moment ago was that each regional bank should be, as it were, a law unto itself; that it should conduct its business independently of other regional reserve banks, especially as to reserves. Now, if you make these territorial reserve banks and allow the member banks in that territory to put their reserves in other districts you can cripple a local regional bank. Suppose the member banks in the regional bank at New Orleans, instead of depositing their reserves with that bank, could deposit them all in New York and Chicago. Would you not cripple the New Orleans regional bank? Would you not deprive it of a part of its reserve that is supposed to be a help for it in time of need?

Senator Pomerene. Except that under this plan the Federal reserve board could require a transfer.

Senator Nelson. Yes; but he is opposed to that; he says that ought not to be. He says that the provision of the bill never ought to be in here; that they do not need that. That is why I am asking this question. Would not that cripple the regional reserve bank at New Orleans, if the member banks in that territory could keep their reserves in the regional bank at Chicago or New York?

Mr. Morawetz. If the member banks in New Orleans should make a practice of keeping their reserves, or most of their reserves, outside of their district, it would undoubtedly weaken the local bank. But the member banks are not there for the benefit of the reserve bank. The reserve bank is established to benefit the member banks. The member banks would keep in the New Orleans bank so much of their reserves as business conditions indicate ought to be kept in New Orleans, and they would keep——

Senator Nelson (interposing). Mr. Morawetz, can you not see that the application of your doctrine would pile up the reserves in great centers like New York and Chicago; that if it were optional with the member banks where to put their reserves they could all be piled up in New York and Chicago?

Mr. Morawetz. They would not be any more than they are to-day. The piling up of money in New York to-day is due partly to the fact that all these banks throughout the country have to keep some money available in New York for their legitimate business, and that should be continued, and it must be continued under any plan which you adopt. Largely, however, this concentration of money in New York is due to the fact that the money can be loaned out on call in New York on stock-exchange collateral, and the banks holding this money pay interest on the deposit. Now, under this plan the money is not available for those purposes. If you do not allow the banks through-
out the country to keep a sufficient amount of their money deposited in the reserve banks of Chicago and of New York to transact their legitimate business in those cities you simply force them to keep that amount of money deposited in ordinary commercial banks in those centers, and that is a thing to be avoided, because no commercial bank should act as a depository of the reserves of other banks. You do not avoid the thing which you wish to prevent by providing that the banks of each district must keep all their reserves in their own reserve bank. You simply force them, in addition, to keep adequate deposits in those money centers where they have to transact business for their customers.

Senator Reed. Now, Mr. Morawetz, what business is there that can not be transacted through the regional bank under this plan? Suppose that a bank in Omaha, Nebr., has a large amount of business to transact in New York regularly—large numbers of drafts that it must draw from day to day. Why can not those drafts be put through the regional bank of New York?

Mr. Morawetz. In the case you mention I understand that the Omaha bank would have payments to make and payments to receive in New York.

Senator Reed. Yes.

Mr. Morawetz. If that be so, the business ought to be transacted in New York—must be transacted in New York—and can best be transacted by a bank in New York.

Senator Reed. Well, we are assuming we will have a regional bank in New York. Now, the merchant in Omaha wants to pay a bill to an importer in New York.

Mr. Morawetz. He draws on his deposit in New York.

Senator Reed. He makes his draft——

Senator Nelson (interposing). No; he draws on his deposit at St. Louis. Call that the regional bank. That is the way you want to put it.

Senator Reed. Well, I do not know that that would follow. He wants to pay this man in New York, and he goes down to his bank, and he gets a draft on that bank. He sends that draft to the merchant in New York, and the merchant in New York puts it through his bank, gets credit for it, and that bank puts all the drafts through the regional bank, and the balance is effected there. Why is not that entirely practicable?

Mr. Morawetz. It means that the Omaha merchant is going to pay the importer by giving him in effect the money in Omaha.

Senator Reed. No; it gives him the money in New York, and the balances are arranged between the regional bank that is located in Omaha and the bank there.

Mr. Morawetz. It could be done in that roundabout way, undoubtedly.

Senator Reed. How is it done now? They send it on to their correspondent in New York, where they have some money, and it is paid.

Mr. Morawetz. Paid there?

Senator Reed. Paid there. And this provides that all this paper shall be par, and therefore when the merchant in New York goes with a draft drawn by a member bank in Omaha he gets his money.
Mr. Morawetz. It ought not to be par. It is all wrong, according to my view, that the exchange and loss of interest through exchange should be suffered by——.

Senator Reed (interposing). I think what you say there is worthy of favorable consideration, but let us say that it is not par, and that their rate of exchange is fixed and is a reasonable rate of exchange. That would have to be paid, of course, to any bank in New York where you kept the money, or else you would have to keep enough money there to offset the accommodation. First or last, these things have to be paid off.

Mr. Morawetz. The suggestion I made is not vital, I agree. It could be worked out without this privilege given to member banks to keep part of their reserves outside of their district. I think it would be an advantage.

Senator Reed. Now, I want to spend a moment with you on that reserve question. You are anxious to get away?

Mr. Morawetz. I understand the committee will rise at 12.

Senator Reed. I shall be through in a moment with this one question. I understand one of the great evils of our present system is this: We have what we call a reserve. We keep part of it in the vaults of the member banks, and that is a reserve. We deposit the balance in other banks, and they redeposit it and loan it out, so that the reserve practically ceases to exist as a real reserve in case of emergency. Now, that is the evil we are trying to get rid of. What is the use of perpetuating that evil by providing that a part of the reserves shall be kept in other banks? That is only clinging on to the evils of the present system. Why not put the reserves down to the lowest point they can safely be maintained at, and require an actual bona fide reserve at that point—a real reserve that can not be impaired except under penalties? Then, having reduced that reserve as low as it can safely be reduced, let the banks deposit their other moneys wherever they please, not calling them reserves when they are not reserves, but calling them what they are, deposits of money with other banks. Why not do this thing directly, and not have a reserve that is not a reserve?

Mr. Morawetz. I think the bill does so, only it does not go far enough in requiring the reserves to be concentrated in these reserve banks. The deposit by one bank in another commercial bank, which is not conducted in the way in which a reserve bank must be conducted to be safe, is a possible danger which I think ought to be avoided.

Senator Reed. Let me ask you one further question. Do you not think that the great element of danger, or one great element of danger, is in the fact that money is deposited from one bank to another, and then perhaps to still a third or fourth, so that when the money is tied up by any one of this chain of banks it ties up that amount of money in all of them? Is not that one of our dangers to-day?

Mr. Morawetz. I think it is.

Senator Reed. Now, why would it not be proper to require a bank receiving the deposits of another bank to keep a larger reserve as against the deposits of that other bank than it is required to keep where it simply receives a deposit from an ordinary customer?

Mr. Morawetz. That suggestion, I think, is entirely sound. I published it myself some years ago.
Senator Reed. I have not seen it. I am glad you did.

Senator Pomerene. Was not that thought borne in mind when you said a moment ago a large reserve was required in reserve and central reserve cities——

Senator Nelson (interposing). Will you excuse me a minute, Senator?

Senator Pomerene. Surely.

Senator Nelson. Now, the reserves outside of the vaults of the bank are to be put in the regional reserve bank; is not that so?

Mr. Morawetz. Yes, sir.

Senator Nelson. And does not the bill contemplate that the regional bank shall have a reserve of 33 per cent?

Mr. Morawetz. As a minimum.

Senator Nelson. As a minimum against deposits as well as currency?

Mr. Morawetz. Yes, sir.

Senator Nelson. So that under the law, as I understand it—and I wanted to get his views on it—these regional banks are required to keep a reserve of 33\(\frac{1}{3}\) per cent on their deposits?

Senator Reed. I understand that, Senator.

Mr. Morawetz. It ought to be larger.

Senator Reed. And I recognize the value of that, but I am dealing with a little different question.

Senator Nelson. I see.

Senator Reed. Assume, now, that a bank has its reserves in the regional banks, but now it is required for purposes of business to deposit a large sum of money in another bank outside of the reserve, and that bank then takes it and redeposits part of it, so that you have a lot of money now that is not called a reserve but which, nevertheless, is money which must be used by the bank in case of emergency, and which is liable to be tied up by the same processes through which the reserves have heretofore been tied up.

I am directing my inquiry to this proposition, whether it would not be wise to provide that ordinary commercial banks, where they receive the deposits of other banks, shall hold a larger reserve in their vaults against those deposits than they are required to hold as against the deposits of the ordinary customer, so that not so much of this money will be loaned two or three times?

Mr. Morawetz. I cordially agree with the Senator’s suggestion. It is economically sound.

I shall say little on the subject of loans on farm lands. I think everybody agrees that making nine months’ loans on farm land is not sound banking.

Senator Nelson. Oh, no; we do not agree about that at all. What we disagree about is that nine months is of no account. It ought to be five years.

Mr. Morawetz. Then, I should say, it is not banking at all.

Senator Nelson. What about your railroad bonds that are due in 20 to 30 years? Loans are made with those bonds as security, and the railroad bond is secured by a mortgage.

Mr. Morawetz. The loans are not made for five years, sir. The only kind of loans which a properly managed bank ought to make are a short-time loan on business paper.
Senator Nelson. Not on stock collateral?

Mr. Morawetz. Any collateral. The collateral is not the point. The objection is not to the security. I am not objecting to the security in this case. Farm lands may be perfectly good security, but it is the character of the loan—nine months and probably not payable then.

Senator Reed. Do I understand you to mean this, that I am a member bank and Senator Pomerene comes in to me with a farm mortgage payable in five years and borrows from me $100,000 and puts up a farm mortgage as collateral. He puts up his note with that collateral attached to it. His note is carried by me to you as a regional bank. Do you mean that is a perfectly good transaction because I put the money out on 30 days or 60 days?

Mr. Morawetz. There is no insuperable objection to that, but it is another proposition.

Senator Reed. That would put us on the same basis as though we had attached a railroad bond secured by a mortgage due in 50 years as collateral.

Mr. Morawetz. There is no material difference between those two cases; but that is not the point I am discussing. I am discussing——

Senator Reed (interposing). That is the one I am discussing now, because I am glad to find some man that agrees with me that a farm mortgage as collateral is just as good as a railroad bond as collateral.

Mr. Morawetz. I think it is, or it may be.

Senator Reed. It is the character of the maturity of the paper and not the maturity——

Mr. Morawetz (interposing). Of the collateral.

Senator Reed. Yes; of the collateral.

Mr. Morawetz. I think everybody agrees to that; it is the character of the loan itself. But the point I am referring to is that contained in section 26 of this bill, which provides that a national banking association not situated in a reserve city or central reserve city may loan not only its part of its surplus but part of its capital on nine months' paper secured by a farm mortgage. I say that is not sound banking. The only thing that can be said in mitigation of this section of the bill is that the baby is not going to be a very large one by reason of the limitations placed by this section upon the exercise of the power.

Senator Nelson. Instead of a percentage of the capital and surplus, suppose you took a certain percentage of the time deposits of the bank, as distinguished from the check deposits?

Mr. Morawetz. Well, I do not think that would make any difference, because time deposits are not for nine months or anything like nine months.

Senator Nelson. Oh, yes; any amount of deposits are for six months, nine months, and a year.

Mr. Morawetz. It is very rare, however.

Senator Nelson. No. You are not acquainted out West, evidently.

Mr. Morawetz. I stand corrected, then.

Senator Pomerene. In the Western States, even in Ohio, there is a very large amount of bank deposits there made for a year, and certificates of deposit are taken.

Mr. Morawetz. I supposed they were all payable upon 30 days' notice.
Senator Pomerene. Oh, no. They issue certificates of deposit.

Mr. Morawetz. Then I stand corrected.

Senator Nelson. Drawing interest.

Mr. Morawetz. I acknowledge that the nine-month loans on farm mortgages are not really more objectionable than the loans which I believe are made in certain sections of the country for a shorter period with a perfect understanding they are not going to be paid at maturity. I should like to see this subject also dealt with in the bill so as to prevent that practice, which I believe is quite common in certain sections of the United States.

The bill provides for savings departments in the national banks, and it contains a very strict provision that if a bank establishes a savings department the securities or the assets in such department shall be physically separated from the assets of the commercial department. Now, we all recognize that it is of the utmost importance that savings banks should be kept absolutely safe and sound. A default of a savings bank is, to my mind, a very much more serious thing than the default of an ordinary commercial bank. For that reason I trust that this committee will not listen to any suggestions that would tend to a weakening of the security of the depositors in the savings departments of the banks which may be established under this clause. But in particular I hope the committee will not listen to the suggestion which I believe has been made that the banks be permitted to establish these savings departments and to commingle the assets of the two departments and to carry them on as one bank.

Senator Pomerene. You think they ought to be entirely separated?

Mr. Morawetz. I think the bill is right—they ought to be separated.

Senator Pomerene. With separate books, etc.?

Mr. Morawetz. Yes, sir.

Senator Pomerene. Well, you would be practically doubling the expense in these smaller banks; for instance in the West where they have $15,000, $25,000, or $50,000 capital stock.

Mr. Morawetz. I do not think that would be the result. Whatever system may be adopted it certainly will be necessary to keep the books, whether in separate volumes or different portions of the same books, in such a manner as to indicate the liabilities and the assets of the savings departments.

Senator Reed. How will you get the banks in then, Mr. Morawetz?

At the present time it appears that nearly every national bank in the country is engaged in doing what is here termed a savings-bank business. It receives time deposits and it receives time deposits to an enormous amount.

Senator Nelson. And pays interest on them.

Senator Reed. And pays interest upon those deposits. Now, when this bill is prepared I can not see where a national bank has a substantial right that every State bank does not possess. And if we make the restrictions in this bill hard there will be nothing to keep the national banks from denationalizing and going into the State systems where they are permitted to mix their funds and permitted, in addition to that, to do many things a national bank can not do. Now, how are you going to keep them in? That is one of the hardest problems this committee has to solve.
Mr. Morawetz. It should not keep them in by enabling them to do their business in an unsound and unsafe way. Time deposits I do not consider savings deposits. They are two distinct things.

Senator Reed. Well, if you draw that line and say that a bank may, notwithstanding any inhibition of this bill, receive money on time deposits, that would, of course, meet many difficulties that have been raised. But throughout these hearings all bankers have insisted that a time deposit is merely a savings-bank arrangement.

Mr. Morawetz. I do not think that is correct. Savings deposits are deposits which are to be invested in securities and which are to be repaid only on a substantial notice.

Senator Hitchcock. Twelve o'clock has now arrived, and the Senate meets at 12. If there is no objection the committee will take a recess until 2 o'clock.

Senator Reed. Does Mr. Morawetz have to leave now?

Mr. Morawetz. I have an appointment at 3 o'clock in one of the Government offices which I must keep.

Senator Reed. Will it take you the rest of the afternoon?

Mr. Morawetz. That I do not know.

Senator Hitchcock. Then Mr. Gilbert has been here for two days. This is the second day. Mr. Gilbert is president of the Market & Fulton National Bank of New York City.

Senator Reed. Mr. Chairman, I make this suggestion, that any of the members of the committee who feel it is necessary to go over to the Senate will go and the rest will remain. We get this notice to go there, for every Democrat to be in his seat, and so forth, and then we get notice we must get this bill out very quickly, and it is difficult to do both. I would be content to sit here until 1 o'clock unless we get notice. We might send a guard over there to see they do not make any mistakes in our absence.

Senator Hitchcock. I will ask Senator Reed to take the chair as I am going over. There are several papers here which probably ought to be printed in the record.

Senator Reed. You can all read Mr. Morawetz's testimony.

Senator Hitchcock. Without objection the communication from Mr. Scudder of the Richmond Trust & Savings Co., will be printed in the record as an addition to his testimony heretofore given. Also the communication from Mr. Sereno S. Pratt, secretary of the Chamber of Commerce of the State of New York, transmitting a report of that body on the Federal reserve act. Both of these, I think, should be printed in the record and also a supplemental communication from Mr. Flannagan, who testified before us, and who asked for the privilege, as I recall, of submitting a supplemental communication. (The papers referred to will be found at the conclusion of Mr. Morawetz's testimony.)

Senator Reed. The matter is before you. Are there any further questions you desire to ask?

Senator Nelson. I want to call your attention, Mr. Morawetz, to this fact. A practice has grown up among the national banks of the West and I do not know how far east it extends (I mean the great agricultural States of the Mississippi Valley, the upper valley), of national banks doing practically a savings-bank business. That is, they receive time deposits agreeing to pay interest on them, usually
in the form of deposit, which generally run from four months to a year. They hardly ever pay interest unless they are kept at least four months. And their rates vary. If they are certificates of deposit for one year they pay a greater rate of interest than they do for four months or six months. Now, that business has grown up there, and the banks, especially in the agricultural communities, that is the small banks with $25,000 capital, have over half of their deposits of that kind. In many instances two-thirds of their deposits are time deposits. Now, that practice has grown up and it has worked satisfactorily in those communities, but they require the same reserves for that kind of deposit as for the other. The proceeds of that money are used like the other proceeds in a bank for commercial purposes. It has worked well. Now, Whithers, in his book on money, describes something analogous in the English system. He says the banks there have two forms of deposits, one he calls "current deposits," subject to check, and the other is a deposit account which requires notice before they can withdraw it and on which they pay interest. That is, the joint stock banks in England have two accounts with their customers, one they call a current account subject to check, on which no interest is paid, and the other is a deposit account requiring 20 days' notice, or 30 days', I do not know which, on which they pay interest.

Mr. Morawetz. That is correct.

Senator Nelson. Now, that is analogous to the system our banks out West have been operating; and the banks doing that kind of business see no occasion for establishing a separate savings bank department as contemplated in this bill. That would be deterring in the case of the country banks and would be tying up over half of the deposits of those banks for purely permanent investments such as contemplated by a pure savings bank, instead of making them available for commercial purposes. Now, can you see any harm in that system which has prevailed in these country banks?

Mr. Morawetz. I see no harm in that system.

Senator Nelson. And is not that better than requiring these small banks to have an independent savings department and keep their funds, as you said a moment ago, physically separate?

Mr. Morawetz. I agree with all the Senator has said. And if I supposed this provision of the bill relating to savings departments applied to time deposits such as the Senator has subscribed, I should unhesitatingly agree that it ought to be amended. I think there is no need, either, of keeping as large a reserve for such time deposits as for demand deposits. But the time deposits should fall into the category of demand deposits within a certain number of days before they mature.

Senator Nelson. You must never lose sight of the fact, Mr. Morawetz, that while in a big city you can have three branches—you can have a commercial department; you can have a savings department; and you can have a loan and trust company—in the small country town of 2,000 or 3,000 people it is utterly impossible to have those three institutions. They can not live. A bank there must do all of those kinds of business, and must do it in order to make it pay for the bank, and must do it to accommodate the public.

S. Doc. 232, 63-1—vol 3—50
Mr. Morawetz. I agree to that. In a pamphlet which I published several years ago I urged that power to establish savings departments should be given to the national banks. I agree, further, as I have stated, that the reserves for these savings deposits should be materially less than for the demand deposits.

Senator Nelson. Well, that should not be the case where the moneys derived from the deposits are mingled together and kept as one fund for commercial purposes, should it?

Mr. Morawetz. I think so.

Senator Nelson. Our banks, while they carry on this savings business that I have described, when it comes to loaning their money they mix all these deposits, both savings and the other deposits—they mix them all. It is a common fund, and out of that common fund they supply the wants of the community.

Mr. Morawetz. I appreciate that, but reserves are kept to secure the immediate payment of the deposits. They are not to make good the loans. Therefore, if a bank has large demand liabilities in the form of deposits, it should keep large reserves. If it has large obligations that mature at some future time, there is no need why it should keep equivalent reserves on hand until about the time when these time deposits are going to mature.

Senator Nelson. Now, what other parts of the bill here—I was not here yesterday, and I regret very much I could not be here—what other parts of the bill which you have not referred to would you like to refer to and take up and discuss with us now?

Mr. Morawetz. Well, I have gone over—I think there are more than 20 different provisions in the bill which I discussed.

Senator Nelson. I shall read what you said yesterday.

Mr. Morawetz. If I may be permitted, in closing my testimony, I will state a few of the provisions of this bill which I think it is vital to amend.

Senator Nelson. Yes; I will be very glad to have you recapitulate in brief.

Mr. Morawetz. First, the proposed notes to be issued under this bill should be payable in gold.

Senator Nelson. Nothing else?

Mr. Morawetz. Nothing else. Second, great care should be taken to eliminate from this bill all provisions which are likely to result in sectional differences and controversies, because sectional differences and controversies will bring politics ultimately to bear upon the control and management of the banking system. The Federal board of control should be a body entirely separate from the administration for the time being. No Cabinet officer or officers, subject to appointment and removal by the President, should be a member of the Federal board of control. In my judgment, also, no banker or appointee of bankers should be on that board. It should be made up of seven high-class men appointed by the President, by and with the advice and consent of the Senate.

All those provisions giving to this central board discretionary power to interfere with the management of the regional reserve banks where sectional interest or sectional demands are likely to arise should be eliminated. The Federal board of control should not have power to hand over the funds of one reserve bank to another. It should not have power to fix the discount rate of any one
reserve bank, but it may have power to fix a minimum discount rate for any separate district.

Third, the provision of the bill dissolving all such national banks as fail to come into the plan within a year should be stricken out—not out of consideration for the banks. The banks have no constitutional or moral right to continue in existence and to do business under the existing laws if the welfare of the country requires that the law be changed. It is the right of Congress, in fact it is the duty of Congress, to change the laws governing national banks whenever and to the extent that Congress deems changes necessary for the welfare of this country.

Senator Nelson. Even to legislate them directly out of existence.

Mr. Morawetz. Yes; even to legislate them directly out of existence.

Senator Nelson. Suppose we have no new currency law, but simply pass a bill, make a bill providing for the immediate dissolution of all national banks.

Mr. Morawetz. If it were for the welfare of the country, you would have a right to do it, and I think it would be your duty to do it. But, sir, the objection to this provision is that under existing conditions it would be fatal to this country to destroy the national banks. It would be fatal in its result. If this bill were passed in its present form and any considerable number of the banks went out of existence, it would be fatal for the reason that the result would be such a contraction of the currency of this country as would almost certainly precipitate a panic.

Senator Reed. Suppose they do not come into the system?

Mr. Morawetz. If they do not come into the system, after you have gotten these reserve banks established and after you have made provision for the issue of a safe currency to take the place of the outstanding national-bank notes, then pass an act compelling them to come in or go out of existence.

Senator Reed. But if they do not come into the system, perhaps we will not have any power to establish these banks. The establishment of this system presupposes that the national banks or some banks will come in enough to create regional banks with sufficient power so that they amount to something.

Mr. Morawetz. Mr. Chairman (Senator Reed), it seems to me that it is necessary to face the fact you can not carry out this plan or any other plan without the cooperation of a large part of the banks.

Senator Reed. I agree to that, but the point that is troubling me now is this: You say we shall not compel the banks to come in, because if we should pass the law in that way and a large part of them should disorganize there would be universal ruin following. That is not your expression, but that covers it. Now, let us grant that is true.

Senator O'Gorman. It is not universal, it would be national ruin.

Senator Nelson. Yes; that expresses it.

Senator Reed. National ruin. I mean universal as applied to our conditions in this country.

Senator Nelson. It might reach into the Philippines.

Senator O'Gorman. Or Porto Rico.

Senator Nelson. Yes; or Porto Rico.
Senator Reed. Accepting the correction: Now, if the banks were so averse to this bill that they would lay down their charters and cease to do business rather than come in, does it not almost necessarily follow that they would not voluntarily come in, and if they do not voluntarily come in, we would have nothing with which to establish these banks. Therefore, the suggestion you make that after the system is established we might apply coercive measures if we desire, seems to me to have the fallacy in it that we can not establish the system unless the banks do come in.

Mr. Morawetz. I see no fallacy. I have stated that you must face the fact that you can not carry out this plan unless a large proportion of the banks come in. Not all need come in, but a considerable proportion of the banks. After you have established the reserve banks with such of the banks as come in, then you will be in a position to put pressure to bear upon those who remain out.

Senator Nelson. But what Senator Reed means, and you overlook, is: Suppose you leave it entirely optional with all national banks whether they will come in or not, under this bill, and do not provide in the first instance that if they fail to come in they shall be subject to forfeiture or loss of their charters as national banks. Would there then be a sufficient number of national banks coming into this voluntarily to establish these regional reserve banks? Have you any idea they will be sufficient, if you leave the matter wholly voluntary?

Mr. Morawetz. I am confident that if this bill should be amended in the few particulars, all of which, according to my view, are necessary to make the scheme economically sound and safe, a considerable majority of the banks in the East will come in.

Senator Weeks. What makes you confident of that?

Mr. Morawetz. My conversations with financial men in New York.

Senator Reed. Mr. Morawetz, what would you say of applying the power of Congress under its interstate-commerce rights to this situation so that the banks would find it very unprofitable to stay out?

Mr. Morawetz. You mean all of the banks?

Senator Weeks. Yes; the banks doing an interstate business; that is, sending checks and drafts from one city to another.

Mr. Morawetz. I am very strongly opposed, on principle, and also as a matter of policy, to legislation by indirection. I think a much better and a wiser course would be to make this bill acceptable not to all banks but to fair-minded bankers, such as I believe a majority of the bankers to be.

Senator Weeks. Is not this true, as a practical proposition: It is necessary to start the system and it must be started fairly promptly, or else we are likely to have chaos in our banking and industrial affairs.

Mr. Morawetz. Yes.

Senator Weeks. Now, unless we compel banks to come in, are we not likely to see all banks hesitate and want to see what develops, what the experience of the others who have gone in is or has been, a generally conservative desire to take advantage of the experience of those who have tried the experiment? That is exactly what happened when we passed the Aldrich-Vreeland bill, which you and I agree was not a great measure, but might be a very useful one. We provided that associations should be formed, and the associations were not
formed until pressure was brought by the Treasury Department on groups of banks to form the associations as provided by the bill. Now, will not exactly that thing happen in this case, unless we compel national banks to join, and join without any considerable delay?

Mr. Morawetz. Well, my objections to the clause of the bill which we are discussing are not founded on consideration for the banks. I should be willing to put pressure upon them, but I urge that you can not put the pressure upon them in that way. You must find some other way of bringing pressure to bear upon the banks to come into this plan. You can not, with safety to the country, adopt the method which is provided in this bill.

Senator Reed. How would this do, Mr. Morawetz: If I understand, the kernel of the objection to compulsory measures, in your mind, lies in the fact that if we provide in the bill a hard and fast rule by which, at the end of a given time, banks not coming in will cease to exist, and therefore, as they are the sources of the bank currency, whenever they would go out of business that currency would be contracted and a sudden contraction would bring panicky conditions. I understand that to be the kernel of your thought. That is your thought?

Mr. Morawetz. Yes, sir.

Senator Reed. Now, how would it be, instead of providing a hard and fast rule that at the end of 12 months those not coming in should be forced out of existence, to provide that this board, this central board, should have the right, or the Secretary of the Treasury should have the right, to arrest the charter of such bank or banks as he saw fit, so that he might apply this pressure or might not; he might apply it to all banks at once, or he might apply it to part of them.

Mr. Morawetz. I do not think that would be any better than the provision now in the bill. I should urge that the proper course would be to make the provisions of this bill in such form as to be acceptable to a majority of the banks for, after all, their cooperation is essential. It would be a sound policy to work in consultation with the banks in preparing a bill which a majority of them will be willing to accept and work under. And then, after you have succeeded in organizing some of these Federal reserve banks, pass a law compelling the remaining banks to come in. But I should like to see the compulsion extend a great deal further than this bill provides. I should like to compel the State banks as well as the national banks all to come in.

Senator Reed. How could we do that, because the interstate commerce powers of the Government have already been stretched to a point that sometimes I think is alarming.

Mr. Morawetz. I am inclined to think it could be done.

Senator Reed. I wish you would suggest how. I have very great regard for your opinion as a lawyer.

Senator Nelson. I would suggest to him that we ought to have done it in the income-tax law requiring State banks to take out a license before doing business as State banks, and then put in the conditions. Perhaps we could have reached it in that way.

Senator Reed. That would be exercising the taxing power.
Senator Nelson. How is that?
Senator Reed. That would be applying the taxing power.
Senator Nelson. Yes.
Mr. Morawetz. I am utterly opposed to the exercise of the taxing power to nullify the Constitution by indirection. I do believe, however, that sound banks, organized and conducted according to a uniform system, are as necessary to the transaction of interstate commerce as are railways and highways, and therefore I do believe that Congress has a broad power of regulating the banking business throughout the country.
Senator Reed. Under the interstate-commerce provision?
Mr. Morawetz. Yes.
Senator Reed. That is what I suggested. Now, can you give us a method of practically applying that? By what means? Just by a general law that all banks engaged in interstate commerce must become members of this system? That is compulsion with a vengeance.
Mr. Morawetz. I should like to consider that question further before answering.
Senator Reed. I wish you would.
Mr. Morawetz. I wish to state, however, Senator, that I have given very careful consideration to the constitutional powers of Congress to regulate corporations engaged in banking or interstate business of any kind, and I published an article in which I discussed that matter in the June, 1913, number of the Harvard Law Review.
Senator Reed. I am sure I speak for the other members of the committee, both present and absent, when I say that we would like very much if you would file with us your views as to the method of applying this principle, and we will have the clerk of the committee get your article, unless you desire to rewrite it, applying it to this proposition. That is a matter which has not been much discussed, and I am glad to find a lawyer of your eminence agreeing that we have that power.

Now, I want to ask you this, as a practical proposition, aside, and in asking this question, I do not mean that I am committing myself to it. It is a mere suggestion: How would it do as a matter of inducement to banks to come into this system if we were to provide a very low rate of exchange, or an absolute parity, as is in this bill, for member banks, with a higher rate of exchange for business done by other banks passing through, and permit all business of other banks to pass through, under some regulation, making a discrimination in favor of the member banks? That is, by way of inducement, rather than compulsion.

Mr. Morawetz. I should be disposed to doubt the efficacy of the plan just suggested. I think that the way of accomplishing the desired result would be to make a few changes in the bill to meet the ideas of the leading bankers as to what sound banking demands.

Senator Reed. But, Mr. Morawetz, we can not, in order to get the banks in, permit the bankers to write this bill for the country.

Mr. Morawetz. I do not mean that, sir.

Senator Reed. I know you do not mean that.

Mr. Morawetz. I did not mean that. You need not see them again. You probably know, from the testimony before this com-
mittee, what will be needed to satisfy the leading bankers; and as the leading bankers go the great majority of the bankers will go.

Senator Reed. I mean more than that. We can not afford to write a bill for the whole country which gives to the banks any advantage they ought not to possess. Neither do I think, under the same construction, that we can afford to deny to the bankers those rights which are necessary to the maintenance of a banking system; but we might make this bill so attractive to the bankers that it would be so unattractive to everybody else that it would not live long.

Mr. Morawetz. Sir, I believe that a great many of the leading bankers of this country are patriotic men, who will come into this plan even at a great loss to their own banks.

Senator Reed. I am glad to hear you say that. Let me ask you one question which is aside from that. This bill, in the contribution to the capital of the regional banks, proposes to require a contribution of a certain amount of capital. Now, many banks in the country have a very small capital in proportion to their real assets; I mean their real net assets. They have a very large surplus, and they have other funds. Do you not think that the contribution ought to be, not upon the basis of capital but upon the basis of capital and surplus, whatever the percentage might be?

Mr. Morawetz. I do not think so.

Senator Reed. Let me see. I think there is a bank in New York—

Mr. Morawetz (interposing). You are probably thinking of the Chemical National Bank, which had a surplus perhaps 40 times the amount of its capital.

Senator Reed. Yes.

Mr. Morawetz. But that has all been changed. The Chemical National Bank increased its capital stock enormously and changed surplus into capital.

Senator Reed. But now, as banks are ordinarily organized to-day, right in the inception of the organization most of them provide capital stock and at the same time provide surplus, and start with a surplus. Now, the surplus in some banks is very large; and then they have undivided profits, which is also a very large sum sometimes. Is the amount of the capital stock the real starting point?

Mr. Morawetz. It is. The capital is fixed and can not be impaired. The surplus is a fluctuating thing, which can be paid out as dividends, and which changes from year to year and from month to month.

If thought advisable, there would be no objection, to my mind, in requiring a corporation to take stock in its reserve bank equal to 10 per cent of its capital and surplus at the time of its formation.

Senator Reed. That is what I meant.

Mr. Morawetz. But I do not think it would serve any useful purpose, and it would introduce uncertainty in the plan, because the surplus is not a matter of record. It is subject to constant change. The bank could increase the surplus the day after its subscription to 100 per cent. And it could pay out its surplus to its stockholders.

Senator Reed. I do not refer to what would happen hereafter, but I meant in the primary subscription of the bank.

Mr. Morawetz. Suppose a bank, then, reduces its surplus. What then?
Senator Reed. If it does that—
Mr. Morawetz (interposing). It gets part of its subscription back.
Senator Reed. It has increased its assets, and it would have a larger contribution to the central bank than it would then need to maintain—
Mr. Morawetz (interposing). Than it would be allowed to have under the bill?
Senator Reed. Yes; than it would be allowed to have under the bill.
Mr. Morawetz. I really think the advantage is so very trifling that it is entirely outweighed by the manifest inconveniences which would arise if the right or the obligation to subscribe were fixed by the surplus, which is not a matter of record, and which is subject to daily fluctuation, and which is wholly within the control of the bank. I do think, however, and I urge the committee to consider my suggestion carefully, that it would be advisable to require member banks to invest 10 per cent of their capital in the stock of their reserve bank, to be paid up within six months and subject to no further liability to contribute an additional per cent, as provided in this bill, but to authorize the reserve banks, under the supervision and control of the Federal board, to offer for public subscription a preferred stock without voting power, entitling the holders to cumulative dividends when earned at a rate not exceeding 5 per cent. It is very desirable to strengthen the capital of these reserve banks as much as possible, so that they will not be so largely dependent on the deposits of other banks for their power to help the banking situation in time of need.
Senator Reed. You would have that preferred stock paid this 5 per cent dividend before the banks received any profits?
Mr. Morawetz. Surely.
Senator Nelson. Mr. Morawetz, do you not think that if we here in the Senate should have gone to work and passed this bill just as it came to us from the House that it would have wrought a great deal of financial and commercial disturbance in this country and proved a detriment to the country?
Mr. Morawetz. I think it would have resulted in a catastrophe.
Senator Nelson. You think this committee, then, is fully justified in deliberating and carefully considering this bill, in order to improve it?
Mr. Morawetz. I think it is more than justified, sir, in doing that.
Senator Nelson. And to get all the light we can from experienced men like yourself and others?
Mr. Morawetz. I do not like to include myself.
Senator Nelson. Well, I think you have given us a good deal of valuable information.
Mr. Morawetz. But I cordially agree with the view that this bill needs a careful overhauling.
Senator Nelson. And ought we not, in a matter of such supreme importance to the welfare of the country, proceed with caution and deliberation?
Mr. Morawetz. Surely.
Senator Nelson. And is it not a further fact, Mr. Morawetz, that this fall we are in a fairly good condition; crops are moving; there seems to be plenty of money in the country to handle the crops;
there seems to be no immediate urgency for making a running pace. Is that not so?

Mr. Morawetz. That is true.

Senator Nelson. I want to call your attention to the fact that a short time ago the Secretary of the Treasury proposed to distribute $50,000,000 to move the crops throughout the country. He could only succeed in disposing of half of that. He offered $3,000,000 to our banks in Minnesota to move the crops. You know we are a great wheat State. Of the $3,000,000 he offered a million and a half, I think, to Minneapolis, which is a great grain center, and half a million to St. Paul and half a million to Duluth, and Duluth took a half a million, but Minneapolis and St. Paul did not need it.

Mr. Morawetz. They are very prosperous cities.

Senator Nelson. Do you not think under those circumstances we should take time to act with deliberation and caution and judgment?

Mr. Morawetz. I feel that of all legislation none requires more care and deliberation than banking and currency legislation, and it would be a fatal thing to this country if this banking and currency bill were passed in as incomplete and unfinished and imperfect a condition as was the income-tax bill.

But, on the other hand, I think it is very desirable that banking and currency legislation subjects be disposed of with all practicable speed. It has been hanging over the country now for years, and it is in itself a disturbing element. While all time should be taken to make the bill as perfect as it can be made, no time should be wasted.

Senator Nelson. You must remember one thing, that while we may be able to pass fairly good laws, we can not manufacture good bankers.

Mr. Morawetz. That is true.

Senator Nelson. And do you not recognize the fact that the bankers' panic in New York in 1907 came rather from bad banking than from bad laws?

Mr. Morawetz. I think it came, sir, from a bad system, a system under which there existed 25,000 individual banks scattered over this country with no means of obtaining cooperation or unity of action with regard to the use of the reserve, the aggregate amount of which was quite adequate.

Senator Nelson. The trouble was, Mr. Morawetz, the little country banks in the interior, like rivulets, had all been pouring their streams into the big central reserve cities, especially New York and Chicago. They had been pouring it in freely, gathering it up from their country merchants and farmers and sending in their money to those cities, and when the emergency arose they found a good deal of it tied up in call loans on stock collaterals, and they could not get it. Is not that a fact?

Mr. Morawetz. It is a fact, as I stated a little while ago, that the underlying trouble was that there was no way of using the reserve money in the aggregate when and where it was needed, and that situation was due to the fact that the deposits of the country banks of their reserves with reserve city banks and the central reserve city banks were of no use as reserves.
Senator Nelson. Do you not consider the fact—now to begin with, a national bank, in the ordinary sense, is supposed to be a commercial bank, is it not?

Mr. Morawetz. Yes, sir.

Senator Nelson. Now, do you not think it is diverting the business of that bank from its legitimate commercial purposes to invest the moneys of such a bank in call loans on stock collaterals, for the purpose of carrying what they call margins.

Mr. Morawetz. I do.

Senator Nelson. Is it not a diversion of the business of such a bank from its commercial purposes, for which it was designed, into channels it ought not to go into?

Mr. Morawetz. To that I agree.

Senator Nelson. That is a thing that has grown up, not because the law directed it, but because the banks have been guilty of that. That is what the banks have been guilty of, is it not?

Mr. Morawetz. That practice has grown up because of the absence of any reserve banks which would furnish a market for the rediscounting of paper held by the banks.

Senator Nelson. The law did not plan that system. That is a system—this system of loaning on call loans is a system which has been created and built up by the banks, it is not?

Mr. Morawetz. It is because of the defective nature of the system. Inasmuch as under this system there is no rediscount market for commercial paper, it is not a liquid asset. Each bank feels that it must keep part of its assets so that it can get reserve money when it needs it. That is the reason why the banks make these call loans.

Senator Nelson. Do you not know that in the case of a bank these stock collateral loans are anything but liquid loans?

Mr. Morawetz. Yes.

Senator Nelson. They are not liquid.

Mr. Morawetz. Each bank looks no farther than its own situation. Each bank says, "We will keep part of our assets in the form of these call loans on stock exchange collateral, so that when we want the money we can demand it," but it does not consider the fact that every other bank is in the same position, and that when one bank calls a loan to replenish its reserves the money must come out of some other bank, so that the gain of the one bank is the loss of the other.

Senator Nelson. Yes. Is it not a fact, Mr. Morawetz, that in the midst of a panic or stringency such as we had in 1907, that really the only liquid loans are bills of exchange, accompanied by bills of lading for the necessaries of life, like cotton, wheat, flour, and such products? Those are really the only liquid loans. Was it not by means of such bills that we secured upward of $100,000,000 of gold in the panic of 1907? Some people called them documentary bills; some people called them commercial bills. Was that not what brought nearly $100,000,000 of gold into the country? It was not brought here on finance bills.

Mr. Morawetz. That, and to sales of commodities and bonds and stocks.

Senator Nelson. My information was, and I got it from no less an authority than Mr. Vanderlip—I have his letter written some time ago—and he said that the 95 million odd of gold were obtained upon
commercial bills of exchange drawn against wheat, flour, and cotton, and not through what they call finance bills. You know the distinction between a commercial and a finance bill?

Mr. Morawetz. Perfectly. I think, Senator, this gold was obtained in part also by sales of securities and out-and-out sales of commodities, and probably—

Senator Nelson (interposing). Mr. Vanderlip, and I have his letter for it, says not.

Senator Reed. It would be strange if there was not something of that kind done.

Mr. Morawetz. I think a great deal of it came in that way. The foreigners undoubtedly bought more wheat than usual, and more cotton than usual, but not such a vast amount more than usual. A great deal of it was—

Senator Nelson (interposing). You recall that during that fall the crop of wheat in the world was not very large, and there was a great demand for it; there happened to be, fortunately, a great demand abroad for wheat that fall. There was not such a surplus at this time, so that, Mr. Morawetz, when you study it you will find that the banks, by the stock loans, loans on stock collateral for the purpose of carrying margins, have built up a system that has proved in times of stress their own ruin. Is that not a fact, to some extent?

Mr. Morawetz. To some extent, it is quite true; yes, sir.

I want to add that I have no sympathy with the argument which has often been advanced by the bankers and officers of trust companies that the investment of these institutions of large sums in bonds and stocks, principally bonds, makes a kind of secondary reserve in times of stress.

Senator Nelson. But not in times of panic?

Mr. Morawetz. I say I do not sympathize with that view. Such investments are less excusable than the collateral loans. It is undoubtedly true that the call loans are a very convenient way of using part of the credit power of the banks.

Senator Nelson. In normal times that may be so. What we should legislate against is a hurricane and a storm.

Mr. Morawetz. What you want to legislate for is not to create a cyclone-proof cellar to protect people in case of a hurricane, but what you want to obtain is a system which will prevent a hurricane from ever striking this country again. You want to prevent the recurrence of panics and not merely mitigate these dangers after they have occurred.

Senator Nelson. You see, in piping times of peace, we get along fairly well with our present national banking system. We have at all events had a sound currency if it has not been elastic.

I am old enough to have had a little experience with our old State banks' paper currency. I knew what that meant. We have had a good currency, and a safe currency. It may not have been as elastic as it might have been. But outside of that currency this system has brought on the catastrophes in New York time and again, and did not grow from that currency system. It grew out of a vicious system of banking.

Mr. Morawetz. The panics in Cleveland's time were due to the currency.
Senator Nelson. No.

Mr. Morawetz. The currency to-day I regard as sound. There is not the slightest danger.

Senator Nelson. You are mistaken. In Cleveland's time the country was in a state of stagnation, and then we had injected a good deal of silver into our currency, but in 1907 the country was in a prosperous condition, and economically sound. There was no occasion for that panic, and to show you that I will state that out in the West there were a good many places, small country towns, where they kept open shop and paid out money and took in money, just as though there had been no panic in New York at all.

Mr. Morawetz. The currency in this country——

Senator Reed (interposing). Had you anything else to say, Mr. Morawetz?

Mr. Morawetz. I was going to reply to Senator Nelson's question.

Senator Reed. I beg your pardon. Go right ahead.

Mr. Morawetz. The currency of this country, in my opinion, is perfectly safe and sound at this day. The issue of silver dollars worth 50 cents, intrinsically, to the dollar has been stopped. The issue of greenbacks has been stopped and the Government has pledged itself to pay those outstanding on demand in gold, and to maintain an adequate reserve in gold; and the issue of bank notes has been stopped by the exhaustion of the Government bonds.

Senator Reed. Mr. Morawetz, I think I am warranted in thanking you, sir, on behalf of the committee, and I only wish you might continue your talk indefinitely.

At 2 o'clock Mr. Gilbert will begin at once. Unless we are forced to remain in the Senate, we will reconvene at 2 o'clock this afternoon.

(The papers referred to by Senator Hitchcock are as follows:)

RICHMOND TRUST & SAVINGS CO.,
Richmond, Va., October 20, 1913.

Hon. Robert L. Owen,
Chairman Senate Committee on Banking and Currency,
Washington, D. C.

DEAR SIR: Pursuant to the committee's request of last week I now beg to submit my suggestions in writing for the consideration of your committee, viz:

(1) Federal reserve districts (sec. 2).—Reduce the number of Federal reserve banks to seven and name the points to wit: New York, Boston, Washington, New Orleans, Chicago, Denver, San Francisco. The headquarters of this Federal reserve board to be established at Washington, but with a clause authorizing removal to any other "Federal reserve bank point" (for instance, in time of national danger); i. e., by and with the consent of Congress.

The capital to be supplied on a basis of 6 per cent of the member banks' capital, surplus, and undivided profits as of July 1, 1913; one-half payable at once, one-fourth in 60 days, and the remainder in 120 days. (It must be obvious that the only fair computation is on surplus as well as capital.)

(2) Division of earnings (sec. 7).—Six per cent instead of 5 per cent.

(3) Federal reserve board (secs. 11 and 13).—Abolish the "Federal advisory council" by entirely eliminating section 13. Increase the Federal reserve board to 11, so that one appointment can be made by the President from each of the seven sections or districts having in it a Federal reserve bank. The eighth member to be chosen by vote of a majority of the banks belonging to the entire system. Make the term for life, subject to good behavior, just like the Supreme Court judges, and, in order to get good men, place the salary at $12,000 per annum.

(4) Rediscounts (sec. 14).—Amend line 1, page 26, to read: "Any member bank" instead of "Any national bank."
I think it important to prohibit Federal reserve banks lending either on their own stock or on the stock of any other Federal reserve bank, directly or indirectly.

(5) Open-market operations (sec. 15).—Place a conservative "limit" on these transactions.

(6) Note issues (sec. 17).—On page 23 amend by erasing in lines 14 and 15 the words "at par and without charge for exchange or collection," and insert instead, after line 19, these words, "in accordance with the rules and regulations to be prescribed from time to time by the Federal reserve board." Erase lines 20, 21, 22, and the word "patrons" in line 23, and insert the following words instead: "Member banks shall make such charges to their patrons for collecting checks and drafts as shall be prescribed by the rules and regulations issued from time to time by the Federal board."

(7) Savings department (sec. 27).—The conditions regarding "savings" being entirely different in some sections of the country from the conditions prevailing in other parts of the United States, I suggest that this entire clause be simplified as follows:

"That the Federal reserve board shall be, and is hereby, authorized to exempt the savings departments of national banking associations from any and every restriction upon classes or kind of business laid down in the National banking act. And it shall be the duty of said board within one year after its organization to prepare and publish rules and regulations for the conduct of business by the savings departments of every member bank under this act."

But if the committee insists on inserting in this section all that the Federal reserve board shall do, then I call attention to the fact that they should amend the eighth line, page 48, by inserting, after the words "savings department," these words: "As well as the method and form of withdrawal."

(This is important because in many localities pass-book withdrawals have degenerated into wholesale checking accounts; to the great danger of the community, by thus destroying the only known safeguard on "savings deposits.")

(8) Foreign branches (sec. 28).—Amend line 16, page 49, to read that any "member bank" instead of any "national banking association"; and wherever this same error in phraseology occurs, in the entire bill, amend accordingly.

(9) Change of numbers.—Amend sections 29 and 30, numbering them instead respectively 30 and 31.

(10) Agricultural credit banks.—Add section No. 29, as follows:

"The Federal reserve board shall have the power to consider applications for the establishment of, and to establish throughout the country agricultural credit banks under such rules and regulations as it shall formulate and promulgate from time to time; but in no event shall any Federal reserve bank subscribe exceeding 5 per cent of its capital stock toward the capital stock of an agricultural credit bank, and then only when such agricultural credit bank is located in the district covered by the said Federal reserve bank. No "branch" of a Federal reserve bank and no member bank under this act shall subscribe to the capital stock of such an agricultural credit bank, nor lend directly or indirectly upon the stock of such agricultural credit bank."

Yours, very truly,

S. D. Scudder,
Vice President and Treasurer.

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK.

NEW YORK, N. Y., OCTOBER 20, 1913.

HON. ROBERT L. OWEN,
Chairman Committee on Banking and Currency,
UNITED STATES SENATE, WASHINGTON, D. C.

DEAR SIR: I am directed to send to you the inclosed printed copy of a report adopted to-day by the New York Chamber of Commerce on the Federal reserve act and to call your earnest attention to it.

This report was adopted on recommendation of a committee, 11 of whom are prominent merchants and 6 are leading bankers of this city. A copy of the report and also a copy of the Federal reserve act, as it passed the House of Representatives, were sent to each of the 1,600 members of the chamber in advance of the special meeting of October 20, to consider the same.

Note carefully.
Every effort was made to obtain a full and free expression of opinion by the membership of the chamber; and its adoption at the special meeting is therefore proof that it represents the sentiment of New York on this great measure. As will be seen from the language of the report the desire is to cooperate with Congress in perfecting this most important legislation.

Yours, very respectfully,

SERENO S. PRATT, Secretary.

[Inclosure.]

Chamber of Commerce of the State of New York.

At a special meeting of the Chamber of Commerce of the State of New York, held October 20, 1913, the following report, presented by the committee on finance and currency, was unanimously adopted. The committee was enlarged by the addition of 11 merchants, and the report and a copy of the proposed act were sent to every member of the chamber in advance of the meeting.

JOHN CLAFLIN, President.

Attest:

SERENO S. PRATT, Secretary.

REPORT ON THE FEDERAL RESERVE ACT.

NEW YORK, N. Y., October 16, 1913.

To the Chamber of Commerce:

Your standing committee on finance and currency, composed of 7 bankers, having been enlarged by the addition of 11 merchants for the purpose of the consideration and report upon the Federal reserve act (H. R. 7837), now pending in the United States Senate, has made a careful study of this important bill and now respectfully submits its report. This report was first adopted by a subcommittee of 5 merchants and later by the full committee of 18. Its conclusions are based upon an independent study of the provisions of the bill, which study was illumined by the instructive discussion of the measure at the recent conference conducted by the Academy of Political Science. The two sessions of the conference, held in the hall of the chamber, were attended by hundreds of the members of the chamber, who listened with the deepest interest to the statements of Chairman Owen, of the Senate Committee on Banking and Currency, and Representative Bulkley, of the House Committee on Banking and Currency, and the debate which followed. In order that our membership might be further prepared to act intelligently upon this measure, a copy of the Federal reserve act was mailed to each member, and, moreover, a copy of this report has been sent to the members in advance of the special meeting called to pass upon it.

Your committee believes that experience is the greatest asset as it is also the surest guide to wisdom and the best preventive of errors in judgment in professional, political, commercial, and industrial life.

If there is one phase of the complex conditions of modern business in which more than another the wisdom gained by experience should obtain and be expressed it is in the currency and banking system of any great nation and in its administration.

For reasons which it is not necessary to discuss or review here the United States has long rested under a system unscientific, if not, indeed, unsound, which has proven inadequate to stand the strain of stressful times; and with many serious restraints and setbacks has achieved its material progress in spite of rather than because of the structure of its financial system.

Yet all the while we have had the example of other great nations pursuing their way through wars and pestilence, through fire and floods, through collapse of unwise speculation and shrinkage of security values with no disastrous disturbance or serious interruption to the progress of their productive energies and the interchange of commodities.

Experience, therefore, lies ready at our hand. Shall we avail ourselves of it; and, grasping the fundamental principles which underlie all successful systems, differing only in details, apply them to our own needs and conditions with equally beneficent results,
It is the conviction of your committee that such has been the intention of the Federal Congress and administration; and if we differ with them in our views as to the methods to be employed, it is because we believe that some of the provisions of the present bill will not permit of the free play and influence of some of those principles which it has attempted to recognize and which experience has proved are fundamentally necessary to security, flexibility, and fluidity of credit and exchange.

We should be untrue to ourselves and to the record of this chamber on the banking and currency question if we failed to point out what we believe to be the ideal solution, and frankly recognizing that, because of the complex conditions in our country, the ideal may be unattainable at this time, to suggest such changes in the present bill as we believe of vital importance to accomplish the ends which the needs of our commerce demand and which the security and advancement of our industrial and financial existence require.

The ideal solution, in our judgment, would be one central reserve association, dealing only with member banks and the Government; issuing currency against commercial notes having a definite and limited maturity, redeemable in gold and protected by an adequate gold reserve, this currency to be the obligation of the central reserve association issuing it and not involving the credit of the Government for its guarantee or redemption; other outstanding forms of currency to be gradually retired; the Government to use the reserve association as its depository and fiscal agent and to be adequately represented on its board of management; its operation generally to be under Government supervision, but not under absolute political control.

If this solution is not attainable at this time, recognizing that the present bill contains some features greatly superior to the existing system, your committee urges amendments to the proposed act in the following particulars:

1. The reduction in the number of Federal reserve banks to not exceeding four, with powers to operate branches within their own Federal reserve district.

Note.—If the desired strength resulting from the concentration of reserves is really to be obtained, and if in times of emergency there is to be a greater strength by unity of action of the reserve banks, with a small number of Federal reserve banks, cooperation tending to approximate the advantages of a single reserve reservoir might be possible. With 12 or more we believe that would be difficult and improbable and that there would in emergencies be likely to develop the same individual struggle for reserves that we have seen cause disaster before. The fewer their number the greater their strength would be in proportion, and the greater therefore the sense of security in the minds of all the people in their respective districts, a factor which must not be overlooked, for timidity and fear breed panics.

With too many districts it is entirely possible that in some of the large centers there would be a number of joint-stock banks and possibly even of private banks of greater financial power than the Federal reserve bank of that district, which in itself would deprive the latter of much of its expected influence, and of the confidence of the people. Four reserve banks as the maximum, suggested by your committee, would amply permit, North, South, East, and West to be fully embraced.

2. That membership in the Federal reserve banks be made of such importance to the national banks that it need not be made compulsory.

3. The retirement as promptly as possible of existing national-bank notes by the purchase by the Government at par of the outstanding 2 per cent bonds, or by some equitable arrangement by which the Federal reserve banks would take over these bonds from the national banks.

Note.—This country has long since passed the point where it needs to sustain a market for its bonds by an arbitrary and artificial means, which operates to the disadvantage of its commerce and of its citizens by maintaining an inflexible currency.
On the other hand it is unjust that banks which have invested their funds in Government bonds which did not return in interest and profits on circulation a sufficient sum out of which to create a sinking fund, should have to suffer loss by the withdrawal of the privilege or the substitution of a bond unmarketable at par.

4. That of the seven members of the Federal reserve board, not more than five should be appointed by the President, none of whom should hold other executive office, and not fewer than two should be elected by the member banks of the regional reserve banks, and that the compensation of the members of the Federal reserve board should be not less than $25,000 per annum each.

Note.—The present provision in the bill designates three of the seven constituting the Federal reserve board from executive members of the Government charged with a multiplicity of duties in administration which must inevitably absorb so much of their time and thought that it is not apparent to your committee how they could possibly also exercise the important and responsible functions entailed upon members of the Federal reserve board.

In urging as strongly as we know how that at least two members of this board should be elected by the member banks of the Federal reserve banks, your committee again refers to the opening paragraphs in this report, pointing out that experience in administration is, in its opinion, of vast importance, and while this proposal would preserve a majority and control for the Government representatives this plan would assure beyond peradventure a minority of men trained and experienced in such special functions.

Private capital, and particularly banking capital, has been charged with being grasping and with the desire to take to itself great earnings, but even if this is true private capital has shown great care in the selection and liberality in the compensation of men to place at the head of its banking institutions, and stockholders in banks of even moderate size have always been ready to pay to a talented man several times the salary provided for the members of the Federal reserve board in the present bill. If private capital has indeed been grasping, it has been willing to pay large remuneration, because it believed that thereby it could secure high talent, and your committee believes that it will not be possible to secure the talent, experience, and judgment requisite to administer the broad powers and responsibilities of the Federal reserve board at the compensation proposed in the present bill.

5. That the rate of dividend to be allowed to member banks on their proportionate shares of the capital of their regional reserve bank should be 6 per cent instead of 5, and that all further profits of the regional reserve banks should be paid over to the Government of the United States.

Note.—If the Federal reserve banks are to be in fact public-utility institutions, chiefly if not solely for the safeguarding of the commerce, industry, and financial operations of the country, they should be operated primarily for that purpose and not for profit beyond a reasonable return upon the necessary capital contributed, and member banks should be free from the influences or temptations to govern their relations with regional banks by expected further profits, which the present provisions in the bill might tend to create.

6. That the Federal reserve notes be issued by the Federal reserve banks without guaranty by the Government.

Note.—It is questionable whether in the proposal to make these notes the obligations of the United States the question has been considered from an international viewpoint as thoroughly as from a purely national one. Whether it desires to be so or not the United States is about as much affected by international monetary conditions as any of the foreign nations. Already the great nations of western Europe as well as India in the East are engaged in an extraordinary struggle for the accumulation of increased gold reserves. Conceive of the conditions which might be caused by a great European confederation of war intensifying this struggle for gold to titanic proportions. Possibly the citizens of the United States, no matter what domestic financial conditions
arrive, may not create embarrassment by wholesale demands for redemption in gold; but rich as the United States is it is still an immensely debtor nation and must continue to be so for many years, while there remain many natural resources to be developed and new industrial activities to be provided with capital, and moreover there remain enormous quantities of our securities held for investment abroad.

A European conflagration, and it has been perilously near at least twice within the past three years on the admission of the leading statesmen of Europe would certainly result in an enormous foreign demand for gold, and the liquidation of our securities would dominate our international exchange market.

Conceivably, conditions might thus arise which would create such an ebb tide of gold that even the Federal reserve banks, if they were the issuers of the currency, could not stem or stop it, and in such an event the Government might have to come forward with its power and credit for the preservation of our domestic interests, but in that case the Government would be entering the lists with undiminished power on behalf of others and for the sustaining of other's credit and not entering the contest as a supplicant on its own behalf and for the preservation of its own credit, an immensely different position in strength and effectiveness than would exist if the Government itself had issued the notes.

Having these various considerations in view, your committee proposes the adoption by the chamber of the following preamble and resolution:

Whereas we are keenly alive to the defects of our present banking system and to the great advantages to commerce and industry that will certainly follow the enactment of a law recognizing the correct principles governing a centralization of banking reserves and the creation of an elastic bank-note currency; and

Whereas we believe that the measure which has passed the House of Representatives and is now pending in the Senate of the United States embraces in a considerable degree the recognition of those principles, and with necessary amendments may, if enacted into law, be of untold value to the commerce and industry of America; and we are in strong sympathy with the desire of the administration for the enactment of an adequate law: Therefore be it

Resolved, That the Chamber of Commerce of the State of New York recommends the enactment of the present measure after such changes have been made as banking and commercial experience may indicate to be necessary for the practical working of the law, and that this body specifically recommends:

(1) The reduction of the number of Federal reserve banks to not more than four;

(2) That a strong effort be made to save the national banking system from a loss in numbers through national banks taking out State charters, by making the provisions of the measure sufficiently satisfactory to banks to obtain their cooperation, and, if possible, to secure the accession of State banks and trust companies to the Federal reserve organization, so that the measure will tend to unify our banking system;

(3) That provision be made for a speedier retirement of the present bond-secured national bank note circulation by the redemption of Government bonds now securing circulation, in order as promptly as possible to make room for a sufficient amount of the new notes to give true elasticity to the currency;

(4) That at least two members of the Federal reserve board shall be elected by the member banks of the Federal reserve banks, and that the members to be appointed by the President shall not hold other executive offices;

(5) That after paying 6 per cent dividend on the capital of the Federal reserve banks that any further profits shall be paid into the Treasury of the United States Government;

(6) That the proposed note issue be the obligations of the Federal reserve banks issuing the notes and not of the United States: And be it further

Resolved, That if the pending measure be amended so as to conform in fundamental principles and administration to the approved practices of world banking in security and flexibility, we urge upon the management of national banks a broad and unselfish view and a hearty cooperation, believing that any temporary inconvenience arising from changed methods will be far more than compensated.
by advantages which will flow from a sound banking and currency system that will benefit the commerce of the whole country.

Respectfully submitted.

Wiggins; of the committee on finance and currency and members of the chamber associated therewith for the consideration of this subject.

NEW YORK, October 16, 1913.

ADDITIONAL STATEMENT by WILLIAM W. FLANNAGAN, OF MONTCLAIR, N. J.

On reading pages 1650 to 1656 of the record of the committee, it seems that the questions and answers lead to the conclusion, that in order to prevent an over-issue of circulating notes by the Federal reserve banks, it will be necessary or desirable to regulate the interest rate by the time for which the discount is made; the examination concludes by the witness saying: “There should be some slight excess of the rate from month to month,” the questioning Senator conceding “that is of course reasonable.”

Now, we know that this is entirely impracticable, and that if such a provision was put into the bill it would raise “a howl” from one end of the country to the other as being an effort to uproot the business usage of the country. How could you defend the assertion that this was putting a penalty upon the extension of reasonable credit in accordance with usual trade requirements and was encouraging, in addition to interest charges, the demand for the payment of a useless premium for the nearest approach to cash transactions?

I believe this wrong conclusion is based upon the false premises assumed, as shown in the examination of the witness, to wit:

(1) “That a discount by the reserve bank is a loan of money.”
(2) “That the issuance of circulating notes is measured by the volume of discounts made.”

Banks don’t lend money. They lend a substitute for money. I know this assertion will be called by some, uselessly drawing a technical difference “splitting hairs,” “a distinction without a difference,” all of which I deny. On the contrary, the fact is fundamental; it is the statement of a distinction which must be drawn in order to understand the mechanism of banking, especially by our legislators, if they would save themselves from wrong conclusions and the people from the result of grave errors occasioned thereby.

The common belief, exemplified in the expression that banks receive money from one class and lend it to another class is entirely erroneous. They do nothing of the kind. If it were true, then the total amount of the loans by the banks would be the volume of money in circulation or less, which we know is not so. The loans and discounts by the national banks alone are more than double the total “money” of the country, including as “money” all the coin and all the paper substitutes in circulation, whether issued by the Government or by the banks, and all held in their vaults.

I said the banks lend a “substitute for money”—it is usually called “credit”—and this term is apt to produce confusion of thought from the various meanings in which the word “credit” is used.

It is “credit” that is loaned or given, but only in the sense of a book credit made by the bank, as an acknowledgment of a debt; it is not “credit” in the usual sense of confidence nor of belief in future compliance with a promise. This latter “credit” is what the bank’s customer extends to the bank when he accepts the book credit. This book credit made by the bank is the debt of the bank; it is called in banking parlance a deposit; it is the “substitute for money” which the bank lends, and it is used as such substitute by the borrower by means of a check.

At a risk of being prolix I would say that the mechanism of banking consists of the exchange of bank debts for other debts or for money. In the case of exercising the function of discount or loan, the bank exchanges its promise to pay on demand for the customer’s promise to pay in the future. Because the fulfillment of the bank’s promise is occasionally immediately required it does not change the nature of the transaction. This requirement, as a matter
of practice is usually, if not invariably, a separate transaction by means of a check—either the customer's or the bank cashier's check.

In the case of exercising the function of deposit the bank exchanges with the customer its promise to pay on demand for some other promise to pay when the deposit is in the form of a check or currency (paper money), or gives such promise to pay in exchange for coin when the deposit is made in coin; the latter does not constitute 1 per cent of the deposits made.

The remaining function of banking is called circulation or note issue; it is properly only a change in the form of the bank's debt and should be exercised only for the convenience of the depositor and not for the profit of the bank. We have been erroneously taught through the national-bank act to look upon the bank function of note issue as a source of profit. This profit was the great inducement held out by the framers of that act, for it allowed the drawing of interest from the Government on the bonds deposited and at the same time the earning of interest from the public on the circulating notes issued—i.e., double interest on the same capital invested. But this act was adopted primarily to provide a market for the Government bonds, not for the purpose of providing a uniform currency. The former destroyed the true bank function of note issue, from the evils of which destruction we now seek relief, while the latter is the unexpected benefit which we must retain.

The only difference between the debt of the bank represented by the circulating note and the debt represented by the deposit is that the first named is a debt to the public—i.e., an unknown creditor—and the last named is a debt to the depositor, a known creditor. A circulating note can not properly come into existence except in discharge of a preexisting debt by the bank, either in the form of a deposit created by the exchange for other debts or coin, or as the proceeds of a loan or discount; and hence it follows this form of bank debt should be created only at the creditor's option.

To illustrate the mechanism of banking with a concrete case, and in order to emphasize what I have said, let us take the example of a bank with a paid-up capital of $100,000, and say that on the first day it opened it received current deposits of $100,000 from many customers, of which $50,000 was in checks on other banks, $40,000 in currency, and $10,000 in coin. At the close of business that day the statement of condition would show as follows:

Assets:
- Cash for capital paid in: $100,000
- Due from other banks: 50,000
- Cash:
  - Currency: 40,000
  - Specie: 10,000
- Total: 200,000

Liabilities:
- Capital stock: 100,000
- Deposits: 100,000
- Total: 200,000

We will suppose that within a week the bank has made discounts at 6 per cent to the full amount of its capital and to the extent of one-half the first day's deposits at an average time of, say, 60 days; supposing, also, that the checks paid and the deposits received during the week have left the net deposits from customers (other than discounts) the same as on the opening day.

Then the statement of condition will show as follows:

Assets:
- Bills and notes discounted: 150,000
- Due from other banks: 50,000
- Cash:
  - Capital paid in: 100,000
  - Currency: 40,000
  - Specie: 10,000
- Total: 350,000
Liabilities:
- Capital stock: $100,000
- Discount and interest: 1,500
- Deposits: 248,500

Total: 350,000

The statement shows a much stronger position than prudence requires or banking practice ever demands, the bank having a reserve in quick assets of 80 per cent of its liabilities. But the statement shows also that the bank has loaned $150,000 and has added $148,500 to the circulating medium of the country, at a profit of $1,500, and still has $200,000 in available cash assets, being double the amount of the capital with which it started.

This looks on its face as a case of "having your pie and eating it, too," but the truth is that this and many other transactions in banking are exemplifications of this supposed impossibility.

The reason of this and the solution of the paradox is that the banks create a debt which the public—i.e., the banks' customers—accept as a substitute for coin. The promise of payment or debt, as evidenced by the credit on the bank's books, is accepted by the customer in lieu of payment, and this credit—or deposit—is honor bound by the customer by means of an order—or check—which is used by the customer to discharge other debts created in the daily interchange of commodities and service by the people, called the requirements of trade.

Now, these deposits or debts of the bankers are as much a part of the circulating medium of the country as if they were coin or bank notes: indeed, they constitute more than 95 per cent of this circulating medium, and are used to perform all the functions of money except the final cancellation and extinction of debt, which can be done only with coin.

To the extent that this substitution of bank debts for coin can be safely made both the people and the banks benefit. It has become a necessity for all civilized peoples and is the essence of banking everywhere.

All banking and currency legislation in every country are but variations or restrictions under which this substitution may be made, in order to accord with the habits, customs, and development of the people, all such laws being only different methods of securing safety in this substitution from the people's standpoint.

The banker's problem is to have the people substitute his demand debt for coin, to the fullest extent consistent with safety, which safety, from his standpoint, consists in being in the position at all times to discharge this debt whenever demanded. Experience has demonstrated that the law of average applies to these demand debts in a similar manner as it does to the business of life insurance. Men don't die all at one time, nor do they demand payment of their deposits at any one time.

Epidemics do sometimes come, and we provide against them as best we may by sanitary laws and quarantine. Financial panics also sometimes sweep over the land, and against these you are now seeking to provide as a part of the beneficial legislation you are considering.

The Federal reserve banks are intended to do for the member banks what the member and other banks do for the people. They are to furnish a debt, which can and will at all times be accepted as a substitute for coin, irrespective of commercial crises and financial panics. This debt, unless our whole business methods are revolutionized and entirely changed (which does not appear likely and certainly is not desirable), will be in the form of deposits to be transferred and used as a circulating medium, as now, by means of checks.

The member bank, when it asks for a rediscount from the Federal reserve bank, will have the proceeds placed to its credit and will use these proceeds in its regular operations by means of checks, or drafts as they are usually called, when made by a bank. It should not be presumed that these proceeds will be asked to be remitted in circulating notes any more than is done now. There appears to be no reason why such would be the case.

At some seasons of the year these notes will be required, but only because the member bank needs them for its customers, it being wisely provided that these notes can not be counted as reserve money by the member banks.

The measure and limit of discounts by the reserve banks will be the demand by the member banks, restricted to commercial paper as defined by the act, and further restricted by the required gold reserve to be held by the reserve bank against deposits as well as note issues. The volume of notes which may
be issued has no relation whatever to the amount of discounts which may be asked by the member banks.

The reserve banks will grant discounts as the business requirements of the member banks demand, limited by the reserve requirements of the law. The issuance of notes is entirely a different function and will be exercised in response to an entirely different requirement.

ADDRESS BY RAYMOND B. COX, ASSISTANT CASHIER FOURTH NATIONAL BANK OF THE CITY OF NEW YORK, BEFORE THE CLEARING HOUSE SECTION OF THE AMERICAN BANKERS' ASSOCIATION, THIRTIETH ANNUAL CONVENTION, AT BOSTON, OCTOBER, 1913.

"NEEDED REFORMS IN CHECK-COLLECTION LAWS AND METHODS."

The history of banking is the history of note issue. Note issue, in a broad sense, may be defined as the process through which the individual exchanges his credit, which has only a local value, with the credit of the bank, which has a general value. While the granting of credit may be said to be the foundation on which commercial banking rests, the effective use of credit through credit instruments is the test by which a banking system is measured to determine its success or failure. Note issue has been declared to be a lost art in American banking, a statement that is not without some basis of fact when we consider that the system provided by the national-bank act fails almost entirely to properly perform those functions for which a bank-note issue is especially intended.

It is an economic truth that commerce and trade depending for its existence upon exchange will find a medium of exchange whether or not one is provided by the Government under which the exchange of commodities is effected. Thus we find shells and beads performing the functions of a medium among primitive peoples. In colonial days, when there had been little specie imported to the newly discovered country, skins of animals, tobacco, and other forms of wealth supplied the deficiency, not through any legislative statute, but in obedience to natural law which knows no rule save the law of necessity.

The operation of this law of economic necessity is well illustrated in the evolution of our chief circulating medium during the period between 1865 and 1875. When the national-bank act put an end to the issue of notes by individual banks we were left without a medium that would respond readily to the demands of trade. Obedient to the economic law of necessity something else was substituted that performed the functions of the more elastic State bank notes which had been discontinued. The instrument employed was the bank check, not new in itself, but new in the sense that it took on an increased importance from that day, an importance that has steadily increased to the present time, until now more than 90 per cent of payments are made by check.

This development has been due not only to the need of some such medium as has been suggested, but also to the fact that the check is superior in many ways to the true bank note which it so closely resembles in use. It is better adapted to the service of the people and to our independent system of more than 25,000 banks. People are encouraged to open bank accounts and make use of checks who would never carry such accounts otherwise. Thrift is thus encouraged and millions of dollars are turned into productive channels instead of being allowed to lie idle. We have educated the people to carry check books rather than wallets. While the amount of profit resulting to the banks is not entirely tangible, it can be appreciated even by the most shallow observer of financial conditions. It is hard to see how the business public could very well get along without the check, and bankers of to-day would not think of doing otherwise than encouraging the use of checks to the fullest possible extent.

But while the check is like the bank note, both in function and principle, in form it is like the bill of exchange, and hence we find that it is governed by the law applying to bills of exchange. It is drawn upon a bank as drawee, to the order of a payee, and is signed by the drawer. It is for a definite amount payable at a certain place on demand. Hence it seems only natural that the laws of the bill of exchange should govern the use of the check. Yet this is only relatively true. The bill of exchange is a commercial commodity to be bought and sold, but the check must be considered from the side of the function it is intended to perform. A check is primarily for the payment of debt, and in
seldom intended to be used for any other purpose. In this it enjoys an advantage over the bank note in that it can be made to fit the debt, whereas the note is ready made. It is for the exact amount of the debt and can be negotiated only by the payee. Title does not always pass by delivery, as is the case of the bank note, but usually by indorsement. Hence the check for many purposes is as superior to the bank note as the clearing-house currency certificate is superior to actual gold for the payment of clearing-house balances.

Unfortunately, however, in the rapid development of the check system, banks have utilized the check to a gradually increasing extent for their own advantage, so that now its original function has disappeared from the minds of bankers and they consider only its collection, and this as a means of enlarging their business or of enhancing their profits. This perversion of the true purpose of the check has been further augmented and complicated by the lack of definite and uniform State or National laws governing its increasing use in this country. In other words, both practice and law operate to hamper its rapid passage from payee to paying bank. As result of this hopelessly confused condition bankers are confronted with the problem of first reorganizing their own practice and of then securing from the courts a code of statute laws which will be specifically drawn for the check and which will similarly apply thereto throughout the Nation, as checks are sent from every State into every other State.

It is not the purpose at this time to state definitely the changes which should be made in our customs and laws, but to analyze the present status of the bank check and to suggest the nature of changes which are necessary before our banking system can ever be considered economic and scientific, for checks are just as important a part of the system as are note system and reserves.

As previously stated, checks are created generally for the sole purpose of satisfying an existing debt. The drawer of a legitimate trade check never contemplates that his instrument is to be used for any other purpose, and it is a function of the bank to use its facilities for the consummation of this purpose and for no other. The extent to which they do otherwise is a clog in the wheels of commerce and a tax on other business industries. However, banks, in the mad rush for deposit balances and profits, seem to have disregarded this fundamental business principle. It must be admitted in the first consideration of this subject, however, that all of these errors are the outcome, directly or indirectly, of what is known in this country as the collection-exchange charge. Original offenders are the banks which charge more than expenses for payment of their own checks presented through the mails. Rarely does a bank ever charge even expenses for payment of checks presented in person at its own window. On the other hand, rarely do they neglect to charge a distant holder, who has not the opportunity of objecting. This is the practice followed or encouraged by nearly all banks which have created a system in this country which must be called at least inconsistent and unscientific. It is to avoid this charge upon these checks which cannot be collected by the receiving bank's own messengers that they are sent here, there, and everywhere, apparently irrespective of their place of payment, and in being so sent are used for additional incidental purposes both by the sender and by the receiver. The sender not only adopts the group system to reduce expenses, but also to use these checks for creating balances in desired cities, a purpose most certainly not contemplated by the makers.

If this sender is also one of those banks which charges more than expenses in remitting for its own checks, it is therefore guilty of excessive tax, delayed presentation, and perverted use of checks. Further, if this same bank solicits from other banks, as do most city institutions, large volumes of checks payable outside of its own city, it does so mainly to secure the balance which it may require for such collection service. Having secured these balances and the volume of business, the bank sees another opportunity to secure an additional balance from these same checks, and for this purpose it proposes to pay a subagent for collecting a portion of the business in return for a commensurate balance. Such are the ramifications through which probably 50 per cent of the checks pass before they are finally presented for payment. Necessarily, such a system extremely hampers and retards the free circulation and rapid redemption of checks, which is demanded by the best interest of commerce and industry. Not only would a remedy of this situation be a benefit to business generally, but also it would be a boon to the banks themselves, if they would realize it, and as a unit cooperate to that end. There is no aggregate profit in such business, for what one makes another loses, and as has been aptly said, no industry as such can tax itself rich. To eliminate this confusion would be
to dispense with many of the present-day unprofitable bickerings and to place the banking business on a more scientific basis.

The problem has been partly solved in some sections of the country through the operations of what is known as the country clearing house. The entire solution of the problem and its complete elimination from American banking is now offered to the public in paragraph 6, section 17, of the proposed Federal reserve act. The very fact that such a paragraph has been introduced into the bill indicates that the situation has become so serious that Federal legislation seems necessary. While comparatively insignificant, this is undoubtedly one of the most important and most carefully constructed sections of the bill. Its author was evidently thoroughly familiar with existing conditions, and he has in a few brilliantly conceived sentences proposed to reform through the new system the great practical weakness and difficulty in our present banking methods. Its influence will be far-reaching and be equally beneficial to the banks and to the business public, for whom alone the banks are organized. If enacted and operated as at present outlined, checks will assume their proper place in the transactions of the Nation's business. They will serve the purpose for which they are created by business men, and when this is done they will be immediately redeemed and disappear instead of being used in many subsidiary ways incidental to the business public, yet expensive to them and confusing to the banking system. Banks will then be as they should—purely institutions of discount, deposit, and issue, and conduct their business accordingly without having to assume the rôle which they do. Pyramided bank balances will disappear and deposit balances will represent the true funds or credits which their figures indicate.

That such a condition should have become part of our system is no discredit to the American banker. Our present system, the amalgamation or adoptions from many heterogeneous systems, has been in a continual process of development and has been forced to serve many varying conditions of war and peace, of trade activity and inactivity. Throughout our history the entire banking effort has been to provide funds and credit to build up our industries, with little time to consider perfection of the machinery used for the purpose. The condition is peculiar to this country, for the European systems of banking were well thoroughly established before the advantages of checks were realized, and it was an easy matter for them to adjust their check system to the banking system, which they did. The crossed-check system and the London Country Clearing House, organized in 1858, or 175 years after the establishment of the Bank of England, regulates such matters in that country. Likewise does the Giro Conto serve the business public of Germany.

This, however, is but one phase of the question, the practical phase. The legal status of the check is equally confused and undetermined, not only here, but also in England and wherever used. While this subject has not received much consideration in America, it has been conspicuously before foreign bankers, and for many years they have been endeavoring through local and international conferences to adopt a code which, while establishing the necessary laws to regulate checks, would permit them to facilitate commercial transactions, for which they exist, in a manner free and unhampered by legal uncertainties or differences.

Now that there is proposed a remedy for the existing wrong check-collection methods, it would be most opportune to join with other countries and consider at this time the revision and unification of check-collecting laws. While the uniform negotiable-instrument law is generally in force in this country, yet this statute is designed primarily for bills of exchange, and, as has been said, the check is but one form of a bill of exchange and is so different from all others and plays such an important part in the commerce of the country—90 per cent of the transactions being effected by it—that a uniform check law would not only be justified, but has become almost a necessity. Such a reform would be entirely within the province of the American Bankers' Association, and for this purpose no other organization or body of men are so well equipped.

Reviewing the present legal status of the check of the United States we find that its free circulation and redemption are hampered by certain legal encumbrances—variances between statute laws of States and differences of prominent judicial decisions in similar cases. Conspicuous among these handicaps and differences may be noted the following:

The permission under the negotiable-instrument law to indorse checks as bills of exchange, qualified and conditionally, thus subjecting them to the complications of law possible in such cases and imposing a burdensome duty on the
purchasing bank. Legal indorsements on checks should be simplified to include only those which are necessary to complete the transactions for which the check was issued or endorsed.

Indefiniteness and length of time which may elapse after delivery before a check is presented for payment.

Lack of definiteness in the prescribed form of drawing a check.

The wide differences among statutes and decisions regarding the relations between banks and depositors and banks and correspondents.

It is a universal practice among banks to receive checks from depositors and give them immediate credit for the same. Despite this common custom, the courts differ as to who is the real owner of the checks in question and what liability the banks assume in their actions. This should undoubtedly be definitely established by uniform statute, as should the relation between banks which send miscellaneous checks to each other. All goes well until the check is lost or some bank interested in its collection falls, when there is a needless confusion. The courts seem to disregard the present-day customs and intent of parties and base their decisions on rulings passed many years ago under very different conditions. A code of laws definitely regulating these matters would eliminate many disputes and difficulties occurring daily in banks all over the country. Likewise there should be a uniform statute relieving banks of responsibility for sending checks direct to the paying bank for redemption.

These are but a few of the local problems in the check-collecting laws which should be regulated, yet even these few are of sufficient importance to justify this body in giving serious consideration to the subject.

In Europe international conferences have been held at The Hague to draw up a uniform bill of exchange act. The International Law Association has held in all about 30 conferences, with the result that not only are the laws of shipping and carriage by sea fast approaching unification, but the laws governing the bill of exchange have narrowed down from a dozen or more conflicting codes to practically two, the law of Continental Europe and that of England and America, which are nearly identical. It is a significant fact that these many conferences have developed the thought that there should also be a uniform international check law. The efforts in this direction have disclosed that nearly all the important nations abroad recognize that checks should be subject to laws of their own, paralleling yet distinct from the bills of exchange laws.

We need not concern ourselves in this paper with international check law, except to make the broad statement that in any legal remedies proposed we should consider the future possibilities of the use of the bank check as a medium for making international payments. It is universally admitted that there are many matters concerning checks which must be adjusted to conform to local customs and practices. It is with this phase of check legislation that we are interested, especially since American laws in this respect seem to be far behind those in force in other nations. It is not within the possibilities of a paper of this length to note all the very interesting laws that are in force abroad pertaining to the collection of checks. It is enough to draw the contrast that there are such laws where we have none. For example, in nearly every country except England and America there is a law requiring checks to be presented for payment within a definite time. In Belgium the period between date and presentment is 3 to 6 days; France and Switzerland, 5 to 8 days; Germany, 10 days; and so on. Even Japan has a limit of 7 days. The need of such a law has not been so apparent in England, probably because since 1868 country checks have been collected through the London Clearing House. That there should be a law of this nature in our country, based, of course, on distances, is not an extravagant proposition in any sense.

Another custom prevailing abroad that is worthy of note is the practice of "crossing" checks. By drawing parallel lines across the face of a check the maker gives notice that the check may be negotiated only between banks, and if the check be useless between individuals or subsequent indorsers. Protection is thus afforded the banks against items that may be lost or get into the hands of improper parties who could get value by forging an indorsement. The custom of "crossing" checks is spreading from England to France and Germany. Is it too bold a statement to suggest that a better plan in this country to protect both banks and the public would be to limit the number of indorsements? Such a precedent is already established by the Government in connection with post-office money orders, which might otherwise be used as a circulating medium instead of being sent for prompt redemption.
Generally speaking, the foreign banker enjoys a much more certain ground than his American confrère in making payment of checks sent for collection. As a German writer has well put it:

"In the mighty rush of daily business the clerk to whom the settling of these instruments is trusted ought only to look at the balance of the customer and his signature, and not ponder over any judicial questions and possible discrepancies of check laws."

Summing up the various conditions that operate against the proper use of the bank check as a convenient and satisfactory debt-paying credit instrument, it has been shown that they classify themselves into two groups: Those which may be termed unscientific, if not actually improper banking practices on the one hand, and legal obstacles and differences on the other. There is every evidence that the first difficulty is already in process of correction. Whether it shall be left to organization of banks, such as this body or clearing houses or individual banks, or whether, as seems probable, the solution will come through new currency legislation, the effect will be the same.

On the other hand, the legal phase of the check-collecting subject seems to hinge upon the following points, which can only be cleared up by legislation similar to the uniform negotiable instrument act:

1. A separate code should be enacted covering bank checks.
2. The relationship between the depositor and the bank must be definitely fixed as regards the deposit of checks for collection when credit is given at the time the deposit of checks is made.
3. The relations between banks handling such items for collection must be established.

In adjusting these problems several important details are involved, such as the intent of indorsement stamps, fixing of the time between the date of delivery of a check and the date of presentation, the liability of banks in choosing proper agents, and the rights of both the banks and depositors when checks are unpaid.

These reforms can not be accomplished without considerable study and much discussion. It is apparent, however, that they must be provided for if we really wish to adjust our banking system to the best interest of the Nation's commerce and industry. Now that banking reform is at such a critical stage, it would be well for the American bankers to begin at once a serious and active consideration of our check-collecting laws and methods.

(Thereupon, at 1 o'clock p. m., the committee took a recess until 2 o'clock p. m.)

AFTER RECESS.

Senator Reed. Mr. Gilbert, will you please state for the benefit of the record your name, place of residence, and your business?

STATEMENT OF ALEXANDER GILBERT, PRESIDENT OF THE MARKET & FULTON NATIONAL BANK, OF NEW YORK.

Mr. Gilbert. My name is Alexander Gilbert; I reside in Plainfield, N. J. I am president of the Market & Fulton National Bank, of New York.

Senator Nelson. Of what bank?

Mr. Gilbert. Of the Market & Fulton National Bank, of New York.

Senator Reed. How long have you been in the banking business?

Mr. Gilbert. I am almost ashamed to answer that question. I have been in the banking business over 50 years.

Senator Reed. And what is the capital of your bank and its surplus?

Mr. Gilbert. The capital is $1,000,000 and the surplus is $1,900,000.

Senator Reed. How long have you been president of that bank?

Mr. Gilbert. I have been president for 17 years.
Senator Pomerene. What deposits have you in that bank?

Mr. Gilbert. Our deposits are about $10,000,000.

Senator Reed. Can you tell us, in the rough, what proportion of your deposits are the deposits of other banks?

Mr. Gilbert. About $2,500,000.

Senator Reed. Have you been, at any time, the representative of other banks, or of other banking associations, such as clearing houses, etc.?

Mr. Gilbert. I was president of the New York Clearing House during the panic years of 1907 and 1908.

Senator Reed. Had you, prior to 1907, been the president of the clearing house?

Mr. Gilbert. No; I had been a member of the clearing-house committee, but prior to 1907 I was not president of the association.

Senator Reed. Were you president at the time the panic came on, or did you come into office after that?

Mr. Gilbert. No. I was president before the panic.

Senator Reed. How long before the panic?

Mr. Gilbert. I think I was elected in October, 1907. The panic broke out very shortly after that.

Senator Reed. And, prior to that, you had been a member of what board of the clearing house?

Mr. Gilbert. The clearing-house committee.

Senator Reed. Well, the clearing house of New York is composed of what?

Mr. Gilbert. It is composed of 31 national banks, 17 State banks, and 15 trust companies.

Senator Reed. Do you know what the aggregate capital of the members of the clearing house is?

Mr. Gilbert. The banks have a capitalization of about $119,000,000, I think.

Senator Reed. You say "the banks." Does that include the trust companies?

Mr. Gilbert. That does not include the trust companies. I could not say definitely just what the capital of the trust companies is.

Senator Reed. This clearing-house association, does it have any fund that it carries for any purpose?

Mr. Gilbert. No. It has no funds outside of its yearly income, which is all used up for administrative purposes every year.

Senator Reed. I had in mind——

Mr. Gilbert (interposing). Except that it owns its own real estate.

Senator Reed. What I had in mind was a fund for the purpose of clearing, that was kept in some form.

Senator Pomerene. That is, do the banks keep a fund in the clearing house?

Senator Reed. Yes; do they keep a fund in the clearing house?

Mr. Gilbert. Practically, yes; and practically, no. The banks deposit gold in the clearing house and take out clearing-house certificates, which they use in settlement of their daily balances. That is simply in order to protect the banks against loss—from carrying their cash settlements through the streets.

Senator Reed. It is a sort of guaranty fund?
Mr. Gilbert. Well, the certificate is substituted for the gold.

Senator Reed. And the clearing house is the custodian of that gold?

Mr. Gilbert. Yes.

Senator Reed. Do you know about how much of that there was in 1907; about what that fund was?

Mr. Gilbert. No; I do not. I think it very seldom amounts to more than $50,000,000 or $60,000,000. It varies with the amount of cash. When I say "cash," I mean the clearings of cash, lawful money, gold, and legal-tender notes, which, from time to time, accumulate in the banks. Of course, when the banks get a larger amount than they want to carry in their own vaults they send it down to the clearing house and take out clearing-house certificates, because those clearing-house certificates are always available for settlement of our daily balances.

Senator Reed. And when the bank comes and gets clearing-house certificates they are charged against this gold; is that it?

Mr. Gilbert. Yes; on the books of the clearing house.

Senator Reed. Well, why do they keep gold instead of lawful money?

Mr. Gilbert. Well, they keep a certain amount of both. The New York bankers, the clearing-house bankers, are, and always have been, a very conservative body of men. I do not think it would be possible to find a more conservative body of men in the world than the bankers of the New York Clearing House; and they always aim to develop and maintain the highest degree of conservatism among their member banks and are very strict and rigid in their examinations from time to time.

Senator Nelson. This money, or this gold, is deposited there by the brokers—

Mr. Gilbert (interposing). Brokers have nothing to do with it.

Senator Nelson. I mean the banks deposit it.

Mr. Gilbert. The banks deposit the gold in the clearing house.

Senator Nelson. The banks deposit the gold in the clearing house; and is the gold actually kept in the vaults of the clearing house?

Mr. Gilbert. Oh, yes.

Senator Nelson. You have a sort of bank, then, for that business?

Mr. Gilbert. The clearing house has its own vaults.

Senator Nelson. Yes; and the gold is deposited there. And you issue these clearing-house certificates?

Mr. Gilbert. Yes.

Senator Nelson. And that is used in liquidating the balances?

Mr. Gilbert. Yes.

Senator Pomerene. And for no other purpose?

Mr. Gilbert. And for no other purpose.

Senator Nelson. And it is to save the lugging around of the gold or the money, is it not?

Mr. Gilbert. Yes. And in answer to Senator Reed's question as to why they keep gold instead of lawful money, they realize it is a good policy to establish and to carry from time to time a good gold reserve.

Senator Reed. That is a good way to keep it in one place.
Mr. Gilbert. Yes. I want to emphasize just one thing, and that is these clearing-house certificates differ from the clearing-house certificates which we issued during the panic in this respect only, that in the panic in order to protect our lawful money reserves, we issued these clearing-house certificates against the assets of the member banks—that is, commercial paper and such other bond securities or stock securities as they might have—and those certificates were not used outside of the clearing house; they never circulated as money.

Senator Reed. What certificates do you mean?

Mr. Gilbert. The ones that were issued during the panic.

Senator Shafroth. The clearing-house certificates?

Mr. Gilbert. The clearing-house certificates.

Senator Nelson. But let me ask you this question: Those certificates were certificates held by the individual banks, were they not?

Mr. Gilbert. By the individual members.

Senator Nelson. They did not do as was done in the panic of 1873, make them a joint liability of the clearing house?

Mr. Gilbert. Oh, yes; the joint liability of all the banks who were members of the clearing house.

Senator Nelson. Yes.

Mr. Gilbert. But they were not used outside of the clearing house association; they were only used for the purpose of settlement of balances from day to day.

Senator Nelson. They took the place of those other gold certificates that you had?

Senator Reed. You did not pay them out over your counter?

Mr. Gilbert. No; we did not pay them out over our counters; and they did not go out of our possession; and there was a penalty against using them outside the clearing house. I want to again emphasize that, because there is a wrong impression which has gotten abroad about these certificates.

Senator Reed. They used them generally in my district as currency.

Mr. Gilbert. During the earlier panic, in 1873 and 1893, before their use extended itself to other clearing houses of the country, they were not used outside of the clearing houses; and New York has never departed from that custom. It was simply an agreement among the member banks with each other, in which they practically said, "You have not the money to pay us in gold; we will lend you this money; you owe it to us." And we owed one another; that is all; and these certificates were simply due bills which represented the debts one bank owed another in the clearing house; they never went outside the clearing house.

Senator Nelson. But these due bills were the joint due bills, then, of the entire association, were they not?

Mr. Gilbert. Yes.

Senator Nelson. But they were delivered to the banks which had an account to settle; and if that bank used when to settle its balances, they were a debt from it to the clearing house, were they not?

Mr. Gilbert. When a bank found its lawful reserves were getting low it would take security to the clearing house committee and say, "I would like to take out a certain amount of clearing-house certificates to settle balances," and the clearing-house certificates were
issued on the deposit of securities with a margin of 25 per cent over and above the amount of certificates issued.

Senator Nelson. Yes.

Senator Pomerene. The collateral consisted of approved bonds, did it?

Mr. Gilbert. Approved bonds and commercial paper.

Senator Pomerene. And stocks?

Mr. Gilbert. Yes; stocks that were approved by the committee.

Senator Reed. Can you tell us, in the aggregate, how much of that was done; what was the aggregate of the certificates?

Mr. Gilbert. That were issued during the panic?

Senator Reed. Yes.

Mr. Gilbert. I think the maximum issue was something over $90,000,000.

Senator Reed. At one time?

Mr. Gilbert. At one time; and those certificates bore 6 per cent interest.

Senator Pomerene. That is $90,000,000 in addition to the gold certificates which were out?

Mr. Gilbert. Yes; $90,000,000 of clearing-house certificates.

Senator Nelson. I suppose, for the time being, they took the place of the other certificates?

Mr. Gilbert. Yes; for the time being they were used for that.

Senator Nelson. In lieu of those you issued on the gold?

Senator Reed. You held your gold intact, did you not?

Mr. Gilbert. Now, gentlemen, in connection with that, let us discuss this feature—section 17 of this bill.

Senator Reed. May I interrupt you, Mr. Gilbert, to ask one question?

Mr. Gilbert. Yes; certainly.

Senator Reed. You were charged 6 per cent on those certificates during the panic?

Mr. Gilbert. Yes.

Senator Reed. Why?

Mr. Gilbert. So that a member of the clearing house would not keep them out one day longer than was absolutely necessary.

Senator Reed. You bankers, dealing among yourselves, thought it was a proper and necessary thing to put that sort of a check on the issue of those certificates, did you?

Mr. Gilbert. Exactly; that was it, I think. And it served its purpose, because just the moment a bank found that it was in a position to pay off those clearing-house certificates, or a portion of them, they were paid off or reduced.

Senator Weeks. How long did they remain outstanding?

Mr. Gilbert. Why, I think that they were all retired within four months; that is my impression; four or five months.

Senator Weeks. And most of them within 60 days?

Mr. Gilbert. Most of them within 90 days; I would not say 60 days.

Senator Weeks. Your rate of interest was lower than the rate on clearing-house certificates that was charged in some cities.

Mr. Gilbert. Our rate was never higher than 6 per cent.
Senator Weeks. In Boston the rate was 7.2 per cent.

Mr. Gilbert. Our rate was never higher than 6 per cent.

Senator Nelson. Those other certificates that you spoke of first—they do not draw interest, do they?

Mr. Gilbert. No; those certificates are simply substituted for gold.

Senator Nelson. Yes; they are like our gold certificates here?

Mr. Gilbert. Now, section 17 of the new bill. I would like to call your attention to this while we are on that subject.

Senator Reed. What page is that on?

Senator Pomerene. It begins on page 29, I think.

Mr. Gilbert. I was looking for the section. I thought it was section 17 which provides that.

Senator Shafroth. Section 17 is the section about the note issue.

Senator Nelson. It is the discount provision that I think you are after.

Mr. Gilbert. It refers to the prohibition against the issue of clearing-house certificates hereafter.

Senator Pomerene. Oh, I did not know that was what you were after.

Mr. Gilbert. I thought it was section 17. Well, I can not find it just for the moment; but the bill provides, in substance, that hereafter no——

Senator Reed (interposing). Here it is.

Mr. Gilbert. Will you read it, please?

Senator Nelson. What page?

Senator Reed. I found it on page 36—beginning at the bottom of page 35. [Reading:]

Meanwhile every national bank may continue to apply for and receive circulating notes from the Comptroller of the Currency based upon the deposit of 2 per cent bonds or of any other bonds bearing the circulation privilege——

Mr. Gilbert. That is it.

Senator Reed. [Reading:]

But no national bank shall be permitted to issue other circulating notes, except such as are secured as in this section provided, or to issue or to make use of any substitute for such circulating notes in the form of clearing-house loan certificates, cashier's checks, or other obligation.

Mr. Gilbert. That is it, exactly. Now, you will notice the language there:

But no national bank shall be permitted to issue other circulating notes, except such as are secured as in this section provided, or to issue or to make use of any substitute for such circulating notes in the form of clearing-house loan certificates, cashier's checks, or other obligation.

What I want to call your attention to is, that the clearing-house certificates as issued by the New York Clearing House under panic conditions never were issued as a substitute for circulating notes. So that this prohibition does not apply to those clearing-house certificates that were issued, for they never were used as circulating notes. Do you get my idea?

Senator Reed. Yes; I get your idea.

Senator Pomerene. Well, were they so used among the members of the clearing house; if so, they served the same function, did they not?

Mr. Gilbert. They never were circulated outside the clearing house, or served any other purpose than to settle the balances between the members.
Senator Reed. Well, what would you say as to this provision, is it not broad enough to cover it.

But no national bank shall be permitted to issue other circulating notes, except such as are secured as in this section provided, or to issue or to make use of any substitute—

Mr. Gilbert. Where is that, Senator Reed?
Senator Reed. That follows right on.
Mr. Gilbert. In section 20?
Senator Reed. No; in section 19.

Or to issue or to make use of any substitute for such circulating notes in the form of clearing-house loan certificates, cashier's checks, or other obligation.

Mr. Gilbert. Well, the point I make is that they never were used as a substitute for circulating notes, any more than cashier's checks as generally issued are so used.

Senator Shafroth. Well, in case they were used as currency it would apply.

Mr. Gilbert. Yes; it would apply to them then.
Senator Reed. Well, do you think this language ought to be broadened so as to stop the thing that occurred in New York during the panic?

Mr. Gilbert. I do not think it should. I think the time may come when the use of clearing-house certificates for the purpose for which the New York Clearing House uses them might be very advantageous.

Senator Reed. Between the banks?
Mr. Gilbert. Yes; between the banks.
Senator Reed. For use between the banks?
Mr. Gilbert. Yes, sir.

Senator Reed. You would not want a section put in the bill that would bar the banks of New York from the privilege of taking, say, $50,000,000 of gold to a common center and putting it into the custody of some man or institution and then issuing a certificate to each bank for its proportion of that gold, so that it might exchange those certificates for liquidated balances? You would not think that ought to be done?

Mr. Gilbert. Oh, no.

Senator Nelson. Well, what about the other certificates, such as you issued during the panic?

Mr. Gilbert. Well, I was going to say that you can not appreciate without having had practical experience the great advantage to the business interests of the country that arises from the fact that the New York banks can maintain the settlement of exchanges through the New York Clearing House, through which checks, drafts, and other items to the extent of $200,000,000 or $300,000,000 are passing for redemption every day, and are redeemed by the use of those clearing-house certificates between its members.

Senator Reed. That is, the gold certificates?
Mr. Gilbert. No. That is the clearing-house certificates which we issue in times of panic against securities held by the banks.

Senator Reed. Well, I wanted to be sure.

Mr. Gilbert. Of course there could be no objection against the gold certificates, because they are simply certificates issued against the deposit of gold.
Senator Nelson. I suppose you think this language, "loan certificates," leaves the certificates that you issued during the panic outside—not covered by the bill?

Mr. Gilbert. Well, I think it could be so interpreted. I hope it could be so interpreted, because I think it very essential that they should not be prohibited.

Senator Reed. Well, would that be so necessary if you could take collateral directly over to the regional reserve bank and get the money?

Mr. Gilbert. No; if the regional reserve bank maintains its character at all times as a reserve association and does not dwindle into an ordinary, commonplace bank, through its desire to do a large business. I can foresee the possibility of one of the regional reserve banks loaning its assets to such an extent that it would not be able to afford any relief in time of panic.

Senator Shafroth. The power to issue money, however, would be there.

Mr. Gilbert. The power to issue circulating notes.

Senator Shafroth. Upon collateral.

Mr. Gilbert. Upon 33½ per cent gold reserve.

Senator Shafroth. Yes.

Mr. Gilbert. Which ought to be 50 per cent. But even that power may be exhausted if we should pass through a period of inflation to which the regional reserve banks would give way.

Senator Nelson. It would be contingent on whether the banks had the commercial paper to deposit with their reserve bank, would it not?

Mr. Gilbert. It would be contingent upon their ability to loan any further.

Senator Nelson. Yes.

Mr. Gilbert. They may have exhausted their loaning power.

Senator Reed. You think, Mr. Gilbert, that we might confront a condition sometime when, if you needed $100,000,000 in a great emergency, the $50,000,000 in gold could not be produced—if we had a 50 per cent reserve—or the $33,000,000 under the present provision—could not be produced?

Mr. Gilbert. I think it is possible.

Senator Reed. And right at the very crucial hour we would have to stop.

Mr. Gilbert. Yes; why not?

Senator Reed. And you think there ought to be a saving clause of some kind in the bill to cover that situation?

Mr. Gilbert. Why, in our own clearing-house banks we are obliged to carry a 25 per cent reserve, and when the indication of an approaching panic is most seriously felt it is indicated by our reserve, which has got down to a limit which makes it necessary for us to stop the loaning, because we have exhausted our loaning limit.

Then the demand is for banking credit. It is not for currency; currency would do us no good, because currency does not count in our "lawful-money" reserve. And very few people are able to differentiate, really, in discussing this question, lawful-money reserve, banking credit, and currency. And almost every man who—I will not say almost every man, but a very large number of magazine writers who write on banking reforms—seem to think that the bank
quote is the most important factor in the problem, the great cure-all for panics and money crises.

Senator Reed. What do you think about it?

Mr. Gilbert. The fact is that banking credit is the thing; 95 percent of the business of the country is done on credit, and when a merchant goes into a bank, in times of great stringency, and says, "I want you to loan me $10,000, or $15,000, or $20,000 to meet notes I have coming due," he does not want bank notes, he wants the bank to put $10,000, or $15,000, or $20,000 to his credit.

Senator Nelson. So that he can check against it.

Mr. Gilbert. So that he can check against it. And the bank says: "Why, I can not do that; if I do that, I have got to increase my lawful money reserve. I am below my reserve now; I can not loan any more." Bank notes would not do the bank any good.

Senator Nelson. And that very loan would make you put up a bigger reserve?

Mr. Gilbert. Exactly.

Senator Reed. Well, if these notes are received as a reserve only requiring 33^{\frac{1}{3}} percent to be kept against them in the regional reserve bank, then he could get $3 for $1. That is, he could take $100,000 of gold to the regional bank—I mean a bank can do this—and they can get $300,000 of paper. Now, they could use that paper in their own reserves.

Mr. Gilbert. No; he could not do that.

Senator Reed. Under this bill?

Mr. Gilbert. No; he could not do that.

Senator Nelson. No; they can not issue currency on the deposit of gold, can they?

Mr. Gilbert. No.

Senator Shapiro. It must be additional—

Senator Reed (interposing). Of course, I implied that they carry over paper that this man who desires to borrow $300,000 would give to the bank—his paper for $300,000. They would have that. They would have to carry that over to the regional bank, and they would have to carry over $100,000 of gold, and then they could get $300,000 of paper.

Mr. Gilbert. Do you not see that if they had $100,000 of gold they could increase their own loans on the basis of that $100,000 of gold?

Senator Reed. They could increase their own loans on that basis, but they could increase them more with the currency, could they not?

Mr. Gilbert. No; they could not, because $100,000 of gold in a national bank will carry an expansion of $400,000 of loans.

Senator Reed. Of loans? But $300,000 of this paper money would carry $1,200,000—

Mr. Gilbert (interposing). Will you please let me explain?

Senator Reed. Yes; that is what I want.

Mr. Gilbert. A merchant comes in and says to the bank: "I want to make a loan of $400,000 and I want you to put it to my credit." Now, if they had that $100,000 free——

Senator Nelson. In gold.

Mr. Gilbert. In gold. That $100,000 would be sufficient reserve to carry against that $400,000 loan.

Senator Nelson. Under existing law?
Mr. Gilbert. Yes; under existing law.

Senator Reed. Yes; I understand. But suppose that you had your $100,000 of gold, and you get your $400,000 of paper from your merchant, and you take the $100,000 in gold and your merchant's paper and go to the Federal reserve bank, and they issue $300,000 of this money, which you carry over and put in your vaults—and which is a full legal tender—a reserve now is held against that money, and there is held in the regional bank the gold reserves.

Mr. Gilbert. You are reasoning on the theory that the notes of the Federal reserve bank will be not only a legal tender but "lawful-money" reserve in a member bank, and that will not be the case.

Senator Reed. Well, let us leave the question out, for the moment, of the lawful-money reserve.

Mr. Gilbert. But it could not be left out.

Senator Reed. You think that you could not use them for reserves—you would have to go and get 25 per cent of gold to put up in your own vaults—do you?

Mr. Gilbert. I mean to say that they could not make the loan unless they had the reserve there.

Senator Reed. Of gold?

Mr. Gilbert. Yes; the reserve of gold.

Senator Reed. Then it is necessary to make these notes available as reserves or you destroy their utility?

Mr. Gilbert. You destroy the elasticity of the bank notes by making them available for reserve purposes.

Senator Nelson. It would make them inelastic if they are used as reserves?

Mr. Gilbert. Yes, sir.

Senator Reed. Yes. But if Mr. Gilbert is correct, and I understand him, the sum of his reasoning is that there could be no possible benefit coming from this bill.

Mr. Gilbert. I do not say that. I have not said that.

Senator Reed. But if you said that a bank having enough money to put up with the reserve bank in gold, and putting it up and getting this money, and carrying it back in the proportion of 3 to 1 and putting it into its vaults, is no better off——

Mr. Gilbert (interposing). No; you misunderstand me.

Senator Reed (continuing). And can not loan any more money than it could before——

Mr. Gilbert (interposing). You misunderstand what I say.

Senator Reed. I evidently do.

Mr. Gilbert. If I wanted to use the Federal reserve bank to increase my reserve I would simply send over the bills receivable to the Federal reserve bank and tell them to put those to my credit. And that balance in the Federal reserve bank would be additional reserve for me, because my balance in the Federal reserve bank counts as part of my reserves.

Senator Reed. Yes.

Mr. Gilbert. It would not be necessary for me to take the gold out of the Federal reserve bank.

Senator Reed. I understand that.

Mr. Gilbert. And then there might possibly be this condition, which frequently happens in the ordinary everyday banks—in the
large banks—that there might be this condition in the Federal reserve bank, that they had all loaned up to the full capacity of their reserves.

Senator Reed. Their gold?

Mr. Gilbert. Their gold; and they would not be able lawfully to increase their loans. I only instance the fact of the New York banks to show that it is possible for the reserve banks in the course of time to be placed exactly in the same condition that the present commercial banks of New York are frequently placed in.

Senator Reed. Well, do you think that the remedy for that is to continue—or provide that banks still can get together and, among themselves, circulate their own obligations?

Mr. Gilbert. No; I do not. But I mean to say that, when conditions arise in New York and a panic is about to ensue, the use of the clearing-house certificate as it has been used by the New York banks in the time of panics simply between the members, not as circulating notes but simply between the members for the settlement of balances, confers very, very great advantages on the business interests of the country, for the reason that if the daily settlements at the New York Clearing House should become paralyzed so that they could not settle their daily exchanges, you can not foretell what might happen.

Senator Reed. Then you would want to add to this bill a clause something like this:

Provided, however, That nothing herein contained shall prohibit banks which are members of clearing houses from arranging between themselves a method for clearing their balances through clearing-house certificates.

Mr. Gilbert. In times of extreme emergency.

Senator Reed. Yes; in times of extreme emergency.

Senator Nelson. How would it be, Mr. Gilbert, to put in a proviso that you should have authority with the consent of the Federal reserve board?

Mr. Gilbert. Well, I think in a case of that kind I would be perfectly willing to leave that in the hands of the board, because I think any board composed of intelligent men would see how necessary it would be.

Senator Weeks. The present law provides sufficient means to prevent issuing clearing-house certificates and putting them into circulation, does it not?

Mr. Gilbert. I think that they have been issued by various clearing houses in the country and circulated.

Senator Weeks. A great many clearing houses issued them and put them in circulation.

Mr. Gilbert. I think that ought to be stopped.

Senator Weeks. Well, if you apply the 10 per cent tax on State circulation, that would stop their circulating, would it not?

Mr. Gilbert. Yes; that tax would stop it.

Senator Reed. Mr. Gilbert, a suggestion comes from Senator Bristow, which is that when you have concluded your statement, in order that the statement may be in concrete form—either to-day or within two or three days—you take one of these bills and prepare your suggestions as amendments and attach them right to the bill.

Mr. Gilbert. Yes.
Senator Reed. And then we will have them in a form in which we can use them.

Mr. Gilbert. Yes.

Senator Reed. That has been done by one or two others. Now, Mr. Gilbert, is there anything else along this line of which you wish to speak?

Senator Pomerene. Before Mr. Gilbert leaves this question in reference to certificates, I want to call your attention to this language. This inhibition here applies to national banks alone: "But no national bank shall be permitted to issue," and so forth.

Mr. Gilbert. Yes.

Senator Pomerene. It seems to me, from my reading of this, that in view of the fact that State institutions and trust companies are permitted to come in under the bill, whatever this inhibition is, it ought to apply to all of them, as well as to national banks. What is your thought about that?

Mr. Gilbert. Well, of course it would not apply to any other than national banks.

Senator Pomerene. Not as it stands?

Mr. Gilbert. No.

Senator Nelson. The clearing house is not a national bank; it is an association of national and State banks?

Mr. Gilbert. Yes.

Senator Nelson. And these certificates are the notes of that concern?

Mr. Gilbert. This inhibition applies to the clearing houses.

Senator Pomerene. But this says: "No national bank shall be permitted to issue," etc.

Mr. Gilbert. Yes.

Senator Reed. And it is not broad enough to cover the clearing houses now. It should be "no national bank, member bank, clearing house, or other association." And that language will have to be broadened not only to cover the member banks but the association formed by banks.

Senator Pomerene. Clearing-house associations.

Senator Reed. And then, should this bill not contain an absolute prohibition against any bank that is not a member bank, or a tax for engaging in this business?

Senator Pomerene. That may be so, too.

Senator Nelson. You could add a proviso there, after the word "obligation."

_Provided, however, That such loan certificates may be issued in times of financial stringency with the consent of the national board._

Senator Pomerene. The Federal reserve board?

Senator Nelson. Yes; with the approval of the Federal reserve board; that is, if you get their approval, then you can issue such certificates as you did in the panic.

Mr. Gilbert. Yes.

Senator Nelson. As I understand it, you simply believe that the privilege should exist in case of an emergency or financial stringency; you do not want it for any other purpose, and you want it on that account, that you fear that these regional banks may not always be in
a position to bridge you over in such emergency, and you want this
place of safety left open for you?

Mr. Gilbert. The question would then arise as to whether the re-
lation of the Federal reserve board to the clearing houses of the coun-
try would be such that they could exercise any power in that direc-
tion. Their control is simply over the regional reserve banks.

Senator Nelson. Yes. But suppose we put in a condition that you
could not use those clearing-house certificates without their consent
and gave the board jurisdiction to that extent?

Mr. Gilbert. Yes. That is something that would have to be
thought over very carefully.

Senator Reed. I want to make this suggestion in that connection:
That that power can be exercised through a taxing power to provide
that such certificates when issued should bear some tax burden which
would stop it.

Mr. Gilbert. Yes.

Senator Reed. And I want to suggest and impress on the commit-
tee the propriety of considering whether the system ought not to be
so drawn that the nonmember institution could not avail itself of
these benefits, offering an additional inducement for the banks to
come in.

Are there any other questions on this branch? Mr. Gilbert, you
may proceed with your suggestions.

Mr. Gilbert. You have no other questions?

Senator Reed. No.

Mr. Gilbert. I have given a good deal of thought to the question
of how many regional reserve banks ought to be organized under
this bill, and I was asked to write a paper upon that subject, and if
you have patience enough to listen to it I will read it to you.

Senator Nelson. I would be very glad to hear it.

Senator Sahrroth. All right; we would like to hear it.

Mr. Gilbert. In studying carefully the provisions of the “Act to
provide for the establishment of Federal reserve banks” I am per-
suaded that inasmuch as the Federal reserve banks are authorized to
establish branches it would be unwise to provide for more than six
reserve banks at the outset, for the reason that the proposed system is
theoretical and experimental and should be started from a lower level
and developed with the business requirements of the country.

The establishment of 12 reserve banks with an aggregate capitali-
zation of $100,000,000 is illogical, and I fear would prove disappointing
for the reason that the capital of a majority of them would be too
small to give them much importance or usefulness as reserve associa-
tions. And again, it is doubtful if divided into small units they could
be made to pay dividends promised the member banks on the capital
invested. The dealings of the Federal banks are restricted to the
member banks and the Government. Their principal source of in-
come will be derived from rediscounting commercial paper for
member banks. Outside of this they are restricted to investments
in United States, State, and municipal bonds, gold and foreign ex-
change. They can also in the open market buy and sell prime bank-
ers’ bills—domestic and foreign. If their transactions are largely con-
ffined to rediscounting for member banks they would fulfill their most
important function and prove their right to exist; but it does not ap-
pear that they could earn dividends. The last report of the Comptroller of the Currency shows that borrowing and rediscounts by all the national banks of the country at the present time amount to about $108,000,000, which divided between 12 regional banks would hardly pay running expenses, and this in a year of exceptional strenuous money conditions.

Senator Reed. Will you kindly read that last paragraph again?

Mr. Gilbert. The last report of the Comptroller of the Currency shows that borrowing and rediscounts by all the national banks of the country at the present time amount to about $108,000,000, which divided between 12 regional banks would hardly pay running expenses, and this in a year of exceptional strenuous money conditions. I do not mean the principal, of $108,000,000, divided up, but the interest.

When conditions are normal the demand for rediscounts is not nearly as large. Possibly the facility for obtaining rediscounts offered by the Federal reserve banks might awaken the spirit of speculation and tempt the member banks into new fields of investment, and thus increase the demand for rediscounts. Or they could go into the bond market and purchase such bonds as the law permits, and thus increase their earning capacity, but they could not do this to any great extent without impairing their usefulness as reserve associations. Their power to buy prime bankers' bills of the kinds made eligible for rediscount in the open market would avail them little until an open money market is fully developed, which is not probable in the near future. Banks are not selling paper in the open market, neither are they accepting paper for their customers—I mean by that, accepting drafts—although it is within the range of possibility that the open market may be more quickly developed under the operations of the act than is now anticipated. Investing in prime sterling bills would be a safe and conservative investment, and probably a wise one, for the reason that it would give them command of gold to the extent of the investment when wanted; but the rate of interest on this investment would not be very high. It would be much easier for 6 reserve banks to earn dividends than for 12. The running expenses would be largely reduced and their usefulness would be increased in proportion to their increased strength. The Comptroller of the Currency in his reports divides the national banks of the country into six groups, viz: New England, Eastern, Southern, Middle West, Western, and Pacific States. If one Federal reserve bank could be allotted to each group, it would, in my judgment, better conform to the present geographical and business requirements of the country than to have 12; and each reserve bank would by reason of its greater strength in capital and deposits exert greater influence in time of need. Under such a distribution the following statements will show, in round numbers, the aggregate capital, deposits, and borrowings of the respective groups as shown in the comptroller's report of August 9, 1913. Now, here I have divided the banks of the country into these groups, as shown—

Senator Nelson (interposing). Have you followed the grouping of the comptroller?

Mr. Gilbert. Yes; I have followed the grouping of the comptroller. I will show how much capital each group would have under
present conditions, and then I have made another statement showing what the strength of the reserve banks in these groups would be.

Senator Pomerene. Are you limiting your figures to national banks?

Mr. Gilbert. Yes; limited to national banks.

Senator Pomerene. Alone?

Mr. Gilbert. Yes, sir; the national banks.

Senator Reed. Assuming they all come in?

Mr. Gilbert. Assuming they all come in.

Senator Reed. And assuming they all borrow from these regional banks, whereas they might borrow from other banks.

Mr. Gilbert. Exactly.

Senator Nelson. What is the capitalization of the several groups?

Mr. Gilbert. The present capital of the several groups is:

New England States: Capital, $101,000,000; deposits, $598,000,000; rediscounts and bills payable, $4,300,000.

The Eastern States——

Senator Pomerene. No; $4,000,000,000, you mean, do you not?

Mr. Gilbert. $4,000,000.

Senator Nelson. Discounts?

Mr. Gilbert. That is the discounts—their borrowings.

Senator Pomerene. Oh, I misunderstood you.

Senator Bristow. Do I understand the total amount of the borrowings is only $4,000,000?

Mr. Gilbert. The total of the New England group, as shown by the comptroller's report, was only $4,300,000, which shows how little they borrow.

Senator Nelson. You mean the rediscounts of the banks?

Mr. Gilbert. Yes; the rediscounts of the banks.

Senator Nelson. The amounts borrowed by the banks?

Mr. Gilbert. The amounts borrowed by the different banks of the whole group. And you want to bear in mind a very small portion of that is rediscounts. By far the larger proportion is on what they call bills payable, that would not be eligible for rediscount.

The Eastern States—that means New York, New Jersey, Pennsylvania, Delaware, Maryland, and the District of Columbia. The present capital of the national banks in the group amounts to $336,000,000; the deposits, $3,145,000,000; rediscounts and bills payable, $18,600,000.

Senator Bristow. $18,000,000?

Mr. Gilbert. $18,600,000.

Senator Reed. I am going to suggest that when you prepare this for print you name the States—the New England States, such and such, etc.

Senator Shafroth. You can do it by initials—"N. Y.", etc.

Mr. Gilbert. Yes; I can prepare that very easily.

Senator Nelson. He has followed the grouping of the Comptroller of the Currency.

Senator Reed. Yes; but there is nothing in this paper that would indicate to a Member of Congress just what the groups were, and he would have to go and look it up.

Senator Bristow. Mr. Gilbert, let me get that clear in my mind. the deposits were $3,145,000,000?
Mr. Gilbert. Yes.
Senator Bristow. And the rediscounts only $18,000,000?
Mr. Gilbert. Rediscounts and borrowings.
Senator Nelson. What the banks borrowed; not what they loaned out?
Mr. Gilbert. Yes; $18,600,000.
Southern States: Capital, $173,000,000; deposits, $796,000,000; rediscounts and bills payable, $63,000,000.
Senator Nelson. Larger in proportion than anywhere else.
Mr. Gilbert. The South is a larger borrower than any other group. They borrow three-fifths of all that is borrowed.
Senator Weeks. That is due, first, to insufficient capital; second, to the cotton crop maturing at practically the same time, and, third, to the fact that the South is developing very rapidly now.
Mr. Gilbert. Middle West: Capital, $283,000,000; deposits, $2,293,000,000; rediscounts and bills payable, $11,000,000.
Senator Bristow. What States does that take in?
Mr. Gilbert. Well, the Middle West takes in——
Senator Bristow (interposing). Illinois, Michigan, Wisconsin, Indiana——
Mr. Gilbert. I have it here.
Senator Nelson. It is in the comptroller’s report.
Mr. Gilbert. It takes in Illinois, Ohio——
Senator Reed. He can get those States, and he will give them in his table.
Mr. Gilbert. Western States: Capital, $72,000,000; deposits, $539,000,000; rediscounts and bills payable, $4,400,000.
Senator Shafroth. If you could follow up your statement with just naming those States and leaving out these interruptions in relation to the States, I think it would make it more intelligible.
Senator Nelson. I think this statement I have here will show it.
Mr. Gilbert. That will show it—the grouping.
Senator Nelson. The New England States are Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut; the Eastern States, New York, New Jersey, Pennsylvania, Delaware, Maryland, and the District of Columbia; the Southern States, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Kentucky, and Tennessee; Middle Western States are Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, and Missouri; the Western States are North Dakota, South Dakota, Nebraska, Kansas, Montana, Wyoming, Colorado, New Mexico, and Oklahoma; and the Pacific States are Washington, Oregon, California, Idaho, Utah, Nevada, Arizona, and Alaska.
(The figures given above by Mr. Gilbert are as follows:)

<table>
<thead>
<tr>

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis
BANKING AND CURRENCY.

Southern States (Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Kentucky, and Tennessee):

- **Capital**: $173,000,000
- **Deposits**: 796,000,000
- **Rediscounts and bills payable**: 63,000,000

Middle West (Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, and Missouri):

- **Capital**: 283,000,000
- **Deposits**: 2,293,000,000
- **Rediscounts and bills payable**: 11,000,000

Western States (North Dakota, South Dakota, Nebraska, Kansas, Montana, Wyoming, Colorado, New Mexico, and Oklahoma):

- **Capital**: 72,000,000
- **Deposits**: 539,000,000
- **Rediscounts and bills payable**: 4,400,000

Pacific States (Washington, Oregon, California, Idaho, Utah, Nevada, Arizona, and Alaska):

- **Capital**: 89,000,000
- **Deposits**: 506,000,000
- **Rediscounts and bills payable**: 7,500,000

Mr. Gilbert. Then I have made another table which shows the statement of Federal reserve banks of above groups, showing capital, deposits, cash, and amount of rediscounts for member banks at beginning of business if all of the national banks of the country immediately subscribe and pay for stock and transfer that portion of its reserve which the law requires after 14 months.

Senator Nelson. The 5 per cent?

Mr. Gilbert. Yes. In the New England group the capital of the regional reserve bank would be $10,000,000, deposits $30,000,000.

Senator Nelson. That would give it $40,000,000?

Mr. Gilbert. That would give them cash $35,700,000; bills discounted, $4,300,000.

Senator Bristow. Now, there are a number of banks, are there not, that are strong in New England?

Mr. Gilbert. That would be the Federal reserve bank—$10,000,000. Senator Bristow. I mean there are a number of banks there now that would have larger deposits than it would?

Mr. Gilbert. Not many. I doubt if there are more than one or two banks. Senator Weeks probably would know. What is the largest bank in Boston, Senator Weeks?

Senator Weeks. The National Shawmut.

Mr. Gilbert. What is its capital?

Senator Weeks. $10,000,000.

Mr. Gilbert. And deposits?

Senator Weeks. Deposits of about $85,000,000.

Senator Reed. Now, there is one misleading statement in your phraseology, and that was the amount of rediscounts. The amount of rediscounts which you have figured there is the amount of rediscounts that they now use in New England?

Mr. Gilbert. I mean to say, the Federal reserve bank would have all that borrowing if they borrowed the same amount. They would borrow it from the Federal reserve bank. They borrow $4,300,000.

Senator Reed. I understand; it is plain now, and I knew what you meant.

Mr. Gilbert. In the Eastern group, that is, New York, New Jersey, Pennsylvania, Delaware, Maryland, and the District of Co-
lumbia, the capital of the bank would be $33,600,000; deposits $160,000,000, and they would have cash on hand $175,000,000 and bills discounted $18,600,000.

Senator Pomerene. If it will not interrupt you, you would expect, of course, under the new system that the rediscounting would be very materially increased, would you not?

Mr. Gilbert. Well, I would think this, that possibly the facility with which rediscounting could be obtained might stimulate the banks of the different groups to enlarge their business—to go into new fields and make new investments—and consequently require larger rediscounts.

Senator Pomerene. Well, it would be practically introducing into this country the rediscount system which prevails in Europe.

Mr. Gilbert. Much of which is done in the open market.

Senator Pomerene. Yes. That might be done here too, but have you taken into consideration this fact; for instance, in the group of New England States, where your figures were capital and deposits of about $40,000,000. Now, you are taking away from the banking capital of the New England States $40,000,000, which you are segregating in the regional bank, and there being that much under the control of the regional bank, it must necessarily follow, it would seem to me, that the rediscount privilege would have to be very greatly increased in order that the New England States might have the same banking capital that they had prior to the adoption of the system.

Mr. Gilbert. They will have the same banking capital. The member banks will continue doing business. The only question is how much the member banks will borrow.

Senator Pomerene. Yes; but they have $40,000,000 now that are in the ordinary course of trade now segregated and put into the regional bank.

Mr. Gilbert. It is part of their reserve, which they have been carrying, and will not be required to carry, that is put into the Federal reserve bank. There is no decrease of banking capital at all.

Now, the Southern group, would have a capital of $17,000,000; deposits, $40,000,000; bills discounted, $63,000,000. They would be required to issue notes, because their cash would be overdrawn.

Senator Reed. They would start out borrowers.

Mr. Gilbert. They would start out in debt; yes.

Senator Reed. Instead of being a reserve, there would be a deficit there.

Mr. Gilbert. In the Middle West the capital would be $28,000,000; deposits, $115,000,000; bills discounted, $11,000,000; and cash, $132,000,000.

Senator Nelson. What do you base that cash on?

Mr. Gilbert. That is the cash that is transferred to them by the member banks as reserve.

Senator Nelson. You count that as cash?

Mr. Gilbert. I am giving a table of Federal reserve banks as they would stand if all of the reserve of member banks was transferred.

Senator Nelson. You count the part of the reserve transferred as cash?
Mr. Gilbert. In the western group the capital would be $7,200,000; deposits, $27,000,000. Of course in this table I have not made any allowance for United States deposits, because I do not know how that would be distributed. Bills discounted would be $4,400,000 and cash $29,800,000.

Now, as to the size of these various regional banks: There would be one bank with $7,200,000. The next smallest would be $10,000,000, the next $17,000,000, the next $28,000,000, and the next $33,000,000. New York would be the largest, the Middle West would be the next, and the South would be the next.

Senator Bristow. You did not read the Pacific coast division.

Mr. Gilbert. No; I will give you that now. The Pacific slope group capital would be $8,900,000; deposits, $28,300,000; bills discounted, $7,500,000; and cash, $29,700,000.

Senator Reed. That is the smallest bank, then?

Mr. Gilbert. No; the Middle West—the western group.

Senator Nelson. The western group is the smallest.

Senator Pomerene. What was the Pacific coast capital?

Mr. Gilbert. $8,900,000, and their borrowing $7,500,000.

Senator Nelson. To make that come up to the others those two divisions ought to be grouped in order to make them have a capital commensurate with the others.

Mr. Gilbert. I have only introduced this to give you gentlemen an intelligent idea of how it would be possible to group those banks.

Senator Bristow. If we made 12 of them, we would have a lot of trouble, would we not?

Mr. Gilbert. I think you would.

(The figures above given are as follows:)

**New England States (Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut):**

- Capital: $10,000,000
- Deposits: $30,000,000
- Cash: $35,700,000
- Bills discounted: $4,300,000

**Eastern States (New York, New Jersey, Pennsylvania, Delaware, Maryland, and the District of Columbia):**

- Capital: $33,600,000
- Deposits: $160,000,000
- Cash: $175,000,000
- Bills discounted: $18,000,000

**Southern States (Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Kentucky, and Tennessee):**

- Capital: $17,000,000
- Deposits: $40,000,000
- Cash: Overdrawn
- Bills discounted: $63,000,000

**Middle Western States (Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, and Missouri):**

- Capital: $28,000,000
- Deposits: $115,000,000
- Cash: $132,000,000
- Bills discounted: $11,000,000

**Western States (North Dakota, South Dakota, Nebraska, Kansas, Montana, Wyoming, Colorado, New Mexico, and Oklahoma):**

- Capital: $7,200,000
- Deposits: $27,000,000
- Cash: Overdrawn
- Bills discounted: $4,400,000

- Cash: $20,800,000
Mr. Gilbert. An analysis of these statements shows that more than three-fifths of the borrowing and rediscounting was for the southern group and that the Federal reserve bank of that group is the only one that would show a paying business for 1913. A careful investigation of the comptroller's figures convinces me that the business of the country does not require at the present time 12 Federal reserve banks; it does not require 6, but 6 would be better than 12, and if the proposed system is to become a law I should favor the division of the country into reserve districts to correspond with the grouping of the comptroller in his reports, viz., one each for New England, Eastern States, Southern States, Middle West, Western States, and the Pacific States.

It should be borne in mind that the object of banking reform is not to increase banking facilities but to remedy existing defects in our present system and make it conform to the requirements of modern business conditions. It would appear that the framers of the proposed Federal reserve bill have failed to differentiate these two objects and that the proposed 12 Federal reserve banks will if organized never attain to the dignity and prestige that should characterize Federal reserve banks. We hear much about the influence to result from these new banks in stimulating business, lowering the rates of interest, and giving to banks facilities they never before enjoyed. But herein lies one great danger which if not properly guarded against may lead to dangerous expansion of credit. It is important that the Federal reserve bank or banks, whether there is one or more, should not lose the character of a reserve bank, but always be in condition to weather the severest storm that it may be called upon to pass through. In this respect I believe 1 bank would be better than 12—would be stronger, could be administered more economically and would not necessitate a close investment of its funds to make dividends for its stockholders. The reserve bank or banks should never in normal times carry less than 50 per cent reserve against liabilities in order to be ever ready for the unexpected.

Senator Reed. Now, that is very interesting, and it seems to me that you have argued the impracticability of establishing six banks with the country divided as it is divided, into these particular six groups, that it would be necessary to modify that grouping, even if we had six banks, so that the southern bank would be stronger.

Mr. Gilbert. That is what I remarked a moment ago. I only put in these tables from the comptroller's figures in order to present the idea. I did not mean to give the idea that it would be wise to follow.

Senator Shafroth. You would require a new grouping?

Mr. Gilbert. It might possibly, yes. But, inasmuch as the grouping was there in that form, I thought it would show not only the banking capital of the different sections of the country, but the borrowing capacity of the different sections of the country, which was the important thing I had in mind.
Senator Reed. Now, of course if all the national banks did not come in just in proportion as they stayed out this whole system is weakened?

Mr. Gilbert. Yes, sir.

Senator Reed. Just in proportion as the State banks and trust companies might come in, in addition to the national banks, it would be strengthened.

Mr. Gilbert. Exactly.

Senator Reed. And the whole question of how many will come in, of State banks at least, and trust companies, is problematical. The amount of rediscounts that banks might indulge in is problematical; the effect of the withdrawing of deposits of the reserves from the places they now are and the placing of them over into this reserve system is also problematical, is it not?

Mr. Gilbert. Yes.

Senator Reed. And does not all that indicate that in starting this system it would be well to start gradually?

Mr. Gilbert. That is what I recommend, that the system should be developed and built up as the business of the country requires; that you do not want at the outset to build up an entirely new system and substitute it for the present system.

Senator Reed. Will you kindly refer to your figures of the New York bank? I will assume that one of these regional banks in that group would be located in New York.

Mr. Gilbert. Yes.

Senator Reed. I would like to have you kindly tell me what its capital would be.

Mr. Gilbert. $33,000,000.

Senator Reed. It would be a little larger, then, than the largest bank of New York?

Mr. Gilbert. Yes; it would be $33,600,000; deposits, $160,000,000.

Senator Reed. And its deposits would be less than the deposits of the City Bank now?

Mr. Gilbert. Yes.

Senator Reed. Will you kindly refer to your figures of the New York bank? I will assume that one of these regional banks in that group would be located in New York.

Senator Reed. I would like to have you kindly tell me what its capital would be.

Mr. Gilbert. $33,000,000.

Senator Reed. It would be a little larger, then, than the largest bank of New York?

Mr. Gilbert. Yes; it would be $33,600,000; deposits, $160,000,000.

Senator Reed. And its deposits would be less than the deposits of the City Bank now?

Mr. Gilbert. Yes.

Senator Reed. And its present deposits would exceed the deposits of this particular bank?

Mr. Gilbert. Yes. This bank would come next to the City Bank.

Senator Reed. Let me ask, do you think there ought to be a limit on the amount of capital any one bank could have—private bank?

Mr. Gilbert. No: I do not.
Senator Reed. Do you think there ought to be any limit on the amount of deposits a bank should have in proportion to its capital?

Mr. Gilbert. Well, I never have thought so. I have thought this, along that line, applying simply my thought to my own bank, that about as large a business as we ought to do, to do it safely and conservatively, ought not to exceed six or seven times our capital and surplus. That is what I have thought with regard to our own business.

Senator Weeks. Mr. Gilbert, if you will let me correct your statement about the City Bank, it has $25,000,000 capital and $25,000,000 surplus and $4,500,000 undivided profits.

Mr. Gilbert. And how much is the Commerce?

Senator Weeks. The Commerce has $25,000,000 with $10,000,000 surplus.

Senator Reed. So there would be two banks there with a greater capital than this bank?

Mr. Gilbert. How is the First National?

Senator Weeks. Ten, fifteen, and six?

Mr. Gilbert. Yes.

Senator Reed. I wish, Senator Weeks, that right in this connection and at this point you would put in the capital and surplus and undivided profits and deposits of the larger of the New York banks, so that they might appear in the record.

Senator Weeks. The banks which have the largest capital and surplus are the National City Bank, the National Bank of Commerce, the First National Bank, the National Park Bank, the Hanover National Bank, the Chase National Bank, and the Mechanics and Metal National Bank.

The capital, surplus, and undivided profits of these banks are as follows:

<table>
<thead>
<tr>
<th>Name</th>
<th>Capital</th>
<th>Surplus</th>
<th>Undivided profits</th>
</tr>
</thead>
<tbody>

</table>

Senator Bristow. I want to ask you a few more questions, Mr. Gilbert. You stated in your paper that you think one Federal reserve bank would be better than any number. What would you think of one Federal reserve bank, managed by this Federal reserve board, which is designed to have supervision over the 12, and let it have the active—

Mr. Gilbert (interposing). I do not think the Federal reserve board would be necessary then. As I understand the new bill, the Federal reserve board is provided to tie, as it were, the regional banks together, to give them that same degree of unity which a Federal bank with branches would have. A Federal bank with branches could, of course, transfer its money to any section of the country where there might be branches. As I understand the idea
underlying the proposed bill, it is that the regional reserve banks may have the same facilities; that what one section lacks or what one reserve bank lacks another may be authorized to make up.

Senator Bristow. I understand that. That is the theory. Now, you said that this Federal reserve board would then not be necessary. That would then leave the control of the central bank in the hands of the bankers?

Mr. Gilbert. Unless you made other provisions—

Senator Bristow (interposing). Yes.

Mr. Gilbert. Of course, I can see a possibility of your surrounding a central bank with the same safeguards and restrictions that you throw around this regional reserve system. You could give it the same safeguards and might not require the central reserve board.

Senator Bristow. I think there were a number of features—at least, I believe that the proper thing in order to accomplish the purpose which this bill intends would be to have a Federal bank with branches, but I would not consent, so far as my vote goes, that there should be one bank as powerful and commanding as it would be if it were controlled by the bankers themselves. I would want that controlled by the Government, with the Federal bank giving all the facilities to the banks that their own bank would give, so far as the rediscounting of paper or the issuing of currency was concerned; and, of course, it would be a place of deposit?

Mr. Gilbert. Yes.

Senator Bristow. It would not be run for profit, except to make a fair and reasonable return to the stockholders.

Mr. Gilbert. That is my idea of a Federal reserve bank—that it should not be run for profit.

Senator Bristow. It should not be run for profit, but run to supplement and strengthen the present banking system as it is?

Mr. Gilbert. Exactly.

Senator Bristow. To do that I think it ought to be independent from the control of any element of the banking system, or all elements of the banking system, and ought to have the same rights and the same opportunities, absolutely free. I think—I may be wrong, but I very firmly believe that the only way to do that and to satisfy the country that it is done is to have this Federal bank governed by a board appointed by the President and confirmed by the Senate. I would have the stock subscription voluntary—not compel anybody to come, but invite them to come in and make it so useful that no bank could afford not to come in.

Mr. Gilbert. I think that is feasible and wise. I think in the case of one bank it could be done, because the capital would be forthcoming in the case of one bank. It might be more or less, but it would be sufficient to meet the requirements of a central bank. I say central bank; it would not be a central bank along the lines of the European central banks, because it would be confined to member banks alone, and would deal only with banks and the Government.

Senator Reed. Be a Government bank?

Mr. Gilbert. Yes. You can call it by any name you please—Federal reserve bank, central bank, or central reserve bank; anything you please.

Senator Reed. Just so you do not call it the Bank of the United States?
Mr. Gilbert. Yes. I think in that case the capital would be forthcoming and it would not be necessary to make it compulsory, and for that reason it would be much less objectionable, and I think, if it was not made compulsory the objection to Federal control would entirely disappear. I think there would be no objection at all. I think a good deal of the objection to Government control as provided in the present bill arises from the fact that the banks are compelled to subscribe to capital and to furnish 75 per cent, more or less, of the three-fourths of the deposits and are denied representation. They practically own the Federal reserve banks. They have two-thirds or three-fourths of the deposits, and are denied representation. They do not ask for control. They never have asked for control, but they ask for proper representation on that board of control, in order that they may inject into it a healthy amount of banking knowledge and banking capacity and banking conservatism.

Senator O'Gorman. Would that not be supplied by the advisory council named by the bankers?

Mr. Gilbert. The advisory council is entirely without power. It would meet four times a year.

Senator O'Gorman. If the bankers had a minority representation——

Mr. Gilbert (interposing). But the advisory council——

Senator O'Gorman (interposing). They would not be in control; the majority would control. The only advantage of having a minority representation of the banks would be that they would be enabled to intelligently advise the entire board what to do and how to manage the business. That same advice would be given by the advisory council named by the banks.

Mr. Gilbert. It would, with this exception, Senator. As I understand the composition of the advisory council, the members are without a vote. Take three bankers on a Federal board of control comprised of nine; while they would not control, they would have a vote, and if they were voting in favor of a correct policy, and two or three members were in unison with them, they could prevent the adoption of any unwise policy.

Senator O'Gorman. Not any more than the protest of the advisory council. Public opinion has much to do in the regulation of governmental affairs, and it is difficult to conceive of a reserve board consisting of seven citizens doing anything with respect to the business aspect of it which would invite the condemnation and criticism of the other men constituting the bankers' advisory council.

Mr. Gilbert. Now, admitting all that as true, let us look at it from another standpoint. There is great opposition on the part of the bankers to that feature of the bill simply because they feel, as I said a moment ago, that they own all the capital and two-thirds of the deposits, and they ought to have representation. Why not give it to them? They do not control; they can not control. Why not remove that opposition? It will go a long way toward inducing the banks to come in.

Senator Reed. How do you think the banks would feel if we would apply that at the other end? If we gave the banks a minority representation on the central board, and the Government took a further representation in the regional banks?
Senator O'Gorman. In other words, what would the banks do if they had a minority representation on the reserve board and a minority representation in the regional bank?

Mr. Gilbert. Well, of course, the Federal board of control is the board that will shape the policy of the regional banks, and while they nominally have the election of six directors in the regional reserve banks, they feel they have not control after all.

Senator Reed. How do you think it would suit them if we gave them, say, one-third at both places?

Mr. Gilbert. I have felt this way about it myself, as I said awhile ago: Why not give them three members on the Federal reserve board? What harm can come from that?

Senator Nelson. Would not two do? Give them two out of seven.

Mr. Gilbert. You have nine—

Senator Nelson (interposing). No; seven on the Federal reserve board, is it not?

Senator O'Gorman. Seven.

Senator Nelson. If you gave the banks two out of seven they ought to be satisfied with that.

Mr. Gilbert. I think very likely they would be.

Senator Reed. Do you think they would be satisfied, then, if they had three out of the nine directors of the regional banks?

Mr. Gilbert. Why should they be?

Senator Reed. I understood you to say a moment ago that it was a question of representation rather than control, and I thought perhaps we could make a swap.

Mr. Gilbert. Why would you want to make a swap? That would only open another door for opposition. I would not do that.

Senator Reed. Of course, we can wipe out all opposition to this bill among the banks very readily, but we might get into some difficulty with the people of the country.

Mr. Gilbert. I do not think so. I do not think the people of the country are so anxious to have this—that is to say, I do not think the people of the country understand and interpret the bankers of the country as our legislators in Washington do, or a great many of them do. I think that the bankers, especially the bankers of the East, and more especially the bankers of New York, are misunderstood and misinterpreted at Washington to a very, very much greater extent than they are throughout the country at large.

Senator Reed. You do not live out in the country at large, and I do, and I say frankly I think there is a great deal of prejudice which is unjust against banks—absolutely unjust prejudice—and there is also some prejudice among the bankers against the people at Washington just as unjust. I think there is some right and wrong, but I think this, since we are discussing this matter in this desultory way: That the people in this country would never tolerate the creation of a great central bank controlled by bankers, nor the creation of a system over which they did not exercise a supreme control as to its broad and general policies. Now, I think that is the sentiment. I know it is the sentiment of the part of the country in which I live.

Mr. Gilbert. I think the bankers would be perfectly willing to concede all that.

Senator Reed. I said the other day to some gentleman that I get letters every few days attacking all the bankers, which I think are
very intolerant. Yet I think that when bankers get the notion that there is somebody here at Washington wanting to wipe out the banking system, they are equally intolerant and less excusable, because they ought to know better. We want to make the banking system of this country strong; we do not want to destroy the banks; we want to make a strong banking system, and that is the purpose of this bill.

If you are through with that branch of the subject, there is one thing I want to ask before you leave the stand.

Senator Bristow. If you will pardon me a moment, Senator Reed, there is one question I would like to ask him before he leaves that.

Senator Reed. Certainly.

Senator Bristow. Mr. Gilbert, speaking of the control of these regional reserve banks, I am frank to say that I am opposed to the present system of control of the regional reserve banks. I do not believe in the control of the regional reserve bank as is provided in this bill, and I am going to do what I can to have that phase of the bill amended. There may not be many members of the committee who agree with me, but I do not mind saying what my views are. If we are to have a Federal system, I want a Federal system open and frank and let the Federal Government take the responsibility for it. I do not want any hybrid. Which do you think would be the best—I want your judgment—to have a Federal reserve bank organized, as I suggested a while ago, governed by a Federal board similar to the one proposed in this bill, except that I would not have any ex officio members on it, with sufficient branches in the reserve cities of the country to handle the business, governed by a Federal board absolutely, with voluntary subscriptions to the stock, and let it perform all the functions which are needed in order to control the situation, as has been outlined. Would that be, in your judgment, a better system than the one we are undertaking to provide here, even with the reduced number of regional banks?

Mr. Gilbert. I think that it would.

Senator Bristow. I believe that the banking business of the country, so far as the credits that go to a large enterprise which comes in competition with such institutions as the Steel Corporation and some of the great railroads are concerned, have been controlled, so that the amount of money necessary to build a railroad, if it is in competition with some of the powerful lines, could not be obtained, and they would be strong enough with the banking institutions of the Nation to prevent it, and this does not break up that control. I do not believe it does. I am asking you frankly, because I want your judgment on that. From your point of view, would this Federal bank—could it not be made absolutely independent of such selfish control?

Mr. Gilbert. I think it could.

Senator Bristow. And could not that be done without endangering any legitimate commercial or financial enterprise which any bank might want to promote?

Mr. Gilbert. I think it could.

Senator Bristow. Is that not all you want to do when you have provided for any emergency system? Is not our banking system good enough for any nation on earth?
Mr. Gilbert. I think it is. Let me say in that connection just this: I have been officially connected with the New York Clearing House for 50 years. I have passed through every panic since the Civil War. And I think I can say conscientiously that I never have seen a panic that, in its incipiency, could not have been arrested and held in check if we had had one bank of reserve, a Federal bank of reserve, a central bank of reserve, or a Government bank of reserve; if we had had one bank of reserve to which the banks of the central reserve cities could have taken their short-time commercial paper and had it converted into cash in order to have held their reserves together.

Senator Reed. You have led up to the very question I wanted to ask you about. You have been the president of the New York Clearing House and have had a long experience. I would like to back up on this question of panics, beginning with the latest. I wish you would tell this committee, in as succinct a way as possible, what brought about the panic of 1907, and what signals of warning, if any, the banks had, and give us your views on it.

Mr. Gilbert. Now, gentlemen, in order to do that I would have to go back to about 1900 or 1901.

Senator Reed. Very well. Begin at whatever place is most logical with you.

Mr. Gilbert. At the time the United States Steel Corporation was formed, that was the beginning of the era of big corporations in this country. The successful launching of the United States Steel Corporation and the large amount of money that was made out of it stimulated the formation of these big corporations throughout the country.

Senator Reed. What we commonly call trusts?

Mr. Gilbert. Trusts; yes. One after another was formed until the country was flooded with syndicates seeking to merge big business enterprises and form big corporations.

Senator Reed. Issuing a lot of watered stock?

Mr. Gilbert. That always follows, of course.

Senator Nelson. That always follows in those cases.

Mr. Gilbert. And that was followed by the formation of large trust companies throughout the country to finance the securities of these big corporations. That stimulated every kind of business enterprise. The result was excessive expansion of business and excessive speculation during all the years between 1901 and 1907.

Senator O'Gorman. Would you call those boom years?

Mr. Gilbert. I would call them years of great business inflation—boom years; yes—1907 saw the culmination. It was something that had to come. It grew out of what had been taking place for four or five years before. It was like the thunder shower that comes to clear up the atmosphere. And it did clear it up. Nothing else would have cleared it up.

I do not have any sympathy whatever, gentlemen, with the theory that it was bad business management or the bad business operations of the banks of the East that precipitated the panic of 1907. The business inflation and the speculation which grew out of it was country-wide. It was all over the country. It came from every section of the country.
Senator O'Gorman. What was the immediate cause of the panic?
Mr. Gilbert. I think the immediate cause, as I recall it, was the failure of the Knickerbocker Trust Co.

Senator O'Gorman. What could have saved that situation?
Mr. Gilbert. A bank of rediscount.

Senator O'Gorman. Then there was a scarcity of currency at that particular time?
Mr. Gilbert. A scarcity, not of currency, but of banking credit.

Senator O'Gorman. Credit?
Mr. Gilbert. Yes; banking credit. The credit of the country had become so strained that merchants could not get the accommodation which they required of their banks to meet their maturing obligations, and when that condition ensues it is only a step from that to distrust, apprehension, fear——

Senator Reed (interposing). Panic.
Mr. Gilbert (continuing). Rising interest rates, the dropping of securities, panic, and a crash. Every panic comes the same way.

Senator Reed. Reduced to a sentence, the organization and overcapitalization of the big industrial combinations brought on the panic of 1907?
Mr. Gilbert. Well, I would not put it in that shape, exactly.

Senator O'Gorman. Overexpansion of business activities for six years?
Mr. Gilbert. That is it, exactly.

Senator Reed. I will add to my previous statement that the multiplication or increase of business incident to that overcapitalization and speculation; would that be about it?
Mr. Gilbert. Well, I would prefer——

Senator Reed (interposing). To let your statement stand?
Mr. Gilbert. Yes; to let my statement stand as it is.

Senator Nelson. The first place in New York where trouble broke out was in the Mercantile Bank?
Mr. Gilbert. Yes; I think, very likely.

Senator Nelson. I think that was the first.
Mr. Gilbert. The Heinze Bank.

Senator Nelson. Yes; the Heinze Bank, and then the two trust companies?
Mr. Gilbert. Yes.

Senator Nelson. And it was like a prairie fire; it got away from you up there?
Mr. Gilbert. Yes.

Senator Reed. I wanted to ask you a few more questions. You have been dealing with generalizations; you have been saying that there was overstimulation of business; the merchant could not renew his loans or get his accommodation as he had expected, and that introduces an element of distrust, etc. Now, that was country-wide.

Did that result in a drain of money from New York and the other central reserve cities, or did the New York and the other central reserve city banks have more money? Did they draw money to themselves or was the money drawn away from them before the panic actually came?

Mr. Gilbert. No; the demand for money became so great that credit facilities were strained, and the New York banks commenced to lose their lawful money reserves.
Senator Reed. Now, did they lose through other banks withdrawing; through country banks withdrawing?

Mr. Gilbert. Through withdrawals by interior banks. Of course, the very approach of a panic stimulated the fears of the interior banks, and they, actuated by a desire to strengthen their lawful money reserves, drew on New York very heavily.

Senator Reed. So that New York had a drain upon it instead of New York drawing upon the country for money and locking it up?

Mr. Gilbert. Oh, indeed, yes; New York ran largely below its reserves. I cannot give you the figures now. I wrote an article for one of the New York magazines which gave a concise statement of the condition of things at that time.

Senator O'Gorman. When were the first symptoms of the approaching panic in 1907 observed?

Senator Nelson. The 19th of October.

Mr. Gilbert. I was going to say about the 20th to the 25th of October.

Senator O'Gorman. Were those the first symptoms?

Mr. Gilbert. Those were the first symptoms—or, at least, the first acute symptoms.

Senator O'Gorman. I ask that because I have a recollection of meeting a gentleman in July who had large business interests in New York, who spoke of the probable approach of the panic which culminated in October afterwards. In July that was.

Senator Nelson. Yes.

Mr. Gilbert. Well, of course, the bankers themselves, for two or three months prior to the outbreak of the panic, realized that there was great danger of inflation and speculation being carried to such a point that it would get beyond control. And they felt a misgiving as to the actual condition of things as early as July and August. There is no question about that.

Senator Reed. You have spoken about the reserves in New York being lower in the banks. But that is a little different proposition from the one which I have put—your reserves might have been lowered by loans made in New York?

Mr. Gilbert. No; they were not.

Senator Reed. Were your reserves lowered through the withdrawal of balances, or parts of the balances, of the banks outside of New York?

Mr. Gilbert. They were lowered by actual shipments of money.

Senator Nelson. Mr. Gilbert, one witness here stated that on the first Sunday of the panic a committee of the clearing house met and decided that they would not extend any help to that Heinze bank or to the Morse bank, unless they would remove Morse and Heinze from the control of those institutions. That is true, is it not?

Mr. Gilbert. That is practically true.

Senator Nelson. Yes. And this witness also claimed that that very fact, that that committee of the clearing house took that action on Sunday and it became known the next morning—that was one of the things that bred the want of confidence in your money institutions of New York.

Mr. Gilbert. No; that is not correct. I have a very clear recollection of that, for I was one of the committee of three that went to
the Mercantile Bank on that Sunday morning, and I was the spokes-
man for the three.

Senator Reed. What did you go there for?

Mr. Gilbert. We went there because, I think, through an examina-
tion made by our own clearing-house examining force, we discovered
that the Mercantile Bank was in a strained condition and it had
applied to the clearing house for help.

Senator Reed. Oh, they had applied for help, and you went there
to see whether you ought to give it to them?

Mr. Gilbert. Well, they had applied for help—

Senator Nelson (interposing). And you decided that you would
not give it unless they removed Heinze; is that not correct?

Mr. Gilbert. Let me give the story as I remember it—and I think
my memory is very clear on that point. They had applied to the
clearing house for help. The clearing house, before deciding, sent
their examining committee to look over the affairs of the bank and
see how they stood. The committee reported that, through mis-
management, the bank was in a bad condition—that is, they were
not insolvent; they had assets enough to pay their liabilities; but
they had made unwise loans and had mismanaged in a way that made
it desirable for a change of administration—

Senator Reed (interposing). What was the character of that mis-
management? Were these loans made to themselves to promote
their own enterprises?

Mr. Gilbert. You see, gentlemen, I am speaking entirely from
memory.

Senator Reed. Yes.

Mr. Gilbert. And I do not wish to go into details for fear I may
make some misstatement. If I had my memoranda before me, I
would be perfectly willing to give it to the committee.

Senator Reed. I wish we had it, because it refers to a point which
has been much disputed in the hearings before this committee.

Mr. Gilbert. In a general way I will tell you what happened.

We went there Sunday morning. First, we had a meeting at the
clearing house and we resolved that before extending any help we
would call for the resignation of all the directors, in order that the
bank might be put into new hands. And we went there. We were
all gathered around the directors' table, as we are now, and I arose
and stated what the decision of the clearing house was. I said:

Gentlemen, we are willing to help you. We are anxious to help you. Your
bank has a long and honorable record; but there is only one condition upon
which we will help you, and that is that the directors hand in their resigna-
tions to us and allow us to put the bank into new hands.

Senator Reed. Well, was it to be put in particular hands?

Mr. Gilbert. Our policy was to obtain the resignation of certain
ones of the old directors, and in order to accomplish this to get the
resignations of all—

Senator O'Gorman (interposing). That is, you wanted the resigna-
tions of some of them?

Mr. Gilbert. We wanted the resignations of some of them; we
wanted some to resign. This was accomplished; the ones objected
to resigned, the others remained, and they chose their own president.
They had one or two men in view. So far as that is concerned, the
thing was done in a businesslike way and there was no clearing-house pressure in the direction of the management of the bank at all.

Senator Reed. They actually did it?

Mr. Gilbert. They actually did it.

Senator O'Gorman. And they all handed in their resignations, did they not?

Mr. Gilbert. They all handed in their resignations.

Senator Reed. That was what bank?

Mr. Gilbert. The Mercantile National Bank.

Senator Reed. And who was president?

Mr. Gilbert. Mr. Heinze.

Senator O'Gorman. Was it Heinze or Miles O'Brien?

Mr. Gilbert. I think Miles O'Brien was vice president.

Senator Nelson. Heinze was president.

Senator O'Gorman. Miles O'Brien was the active officer.

Senator Nelson. What steps did you take with Morse's bank?

Did you take similar steps with his bank?

Mr. Gilbert. Morse's bank—let me recall. Morse was the president of the Bank of North America.

Senator Weeks. Morse was not the president, was he? Was not Curtis the president?

Mr. Gilbert. Yes; Curtis was the president. I think Morse was vice president.

Senator Weeks. I think so.

Mr. Gilbert. Yes; I think Morse was vice president.

Senator Nelson. Well, tell us what you did with Morse and his bank.

Mr. Gilbert. Well, I am trying to recall now just how the thing occurred with the Bank of North America.

Senator O'Gorman. That was a very large bank, was it not?

Mr. Gilbert. Yes; it was a large bank—a good-sized bank.

Senator O'Gorman. With approximately what deposits?

Mr. Gilbert. Oh, I think they had about $30,000,000 of deposits.

It was not one of the largest banks, but it was a large bank.

Senator O'Gorman. Well, to refresh your recollection there, was there not some statement at that time that Morse was using the credit of his own bank to promote some of his industrial enterprises?

Mr. Gilbert. There was that statement; yes. I think the resignation of Morse was brought about through a meeting of some members of the clearing-house committee, with some of the directors of the Bank of North America, which resulted in their obtaining Morse's resignation and Curtis's resignation, and making Mr. Havermeyer president of the bank. That is my recollection, but just exactly the details of the thing I do not remember.

Senator O'Gorman. Well, a practical question: Did the clearing house give all the assistance to the Heinze and the Morse bank that they needed at the time?

Mr. Gilbert. Yes; we issued clearing-house certificates to them and gave them what help they asked for.

Senator Nelson. That is after they had purged themselves in the manner you have indicated?

Mr. Gilbert. Yes.

Senator Nelson. Well, do you not think that that action—I am not criticizing the action of itself; it may have been warranted; but do
you not think if the public found out the action you had taken on that
Sunday with Heinze's bank and Morse's bank, that tended to breed a
want of confidence?

Mr. Gilbert. I do not think so.

Senator Nelson. Did it not aggravate it; was it not worse after
that?

Mr. Gilbert. I do not think so. I think the public were highly
satisfied with our elimination of the objectionable element.

Senator Nelson. But did you not follow that up immediately with
suspension?

Mr. Gilbert. Not for several months afterwards.

Senator Nelson. Why, the banks closed?

Mr. Gilbert. No. The Mercantile Bank——

Senator Nelson (interposing). I do not mean suspension of the
bank; I mean suspension of payments.

Mr. Gilbert. Oh, no.

Senator Nelson. Oh, yes. They closed within a week after that.

Mr. Gilbert. Oh, no; the Mercantile Bank did not close.

Senator Nelson. I do not mean the bank suspended and went into
liquidation; but I mean your banks there stopped paying cash, as
you say, promptly.

Mr. Gilbert. We issued clearing-house certificates.

Senator Nelson. That is what I mean. Immediately the follow­
ing Monday or Tuesday after this Sunday?

Mr. Gilbert. I can not tell you whether our dealings with the
Mercantile Bank were before the issuance of clearing-house certifi­
cates or afterwards. But I think that——

Senator O'Gorman (interposing). Now, Mr. Gilbert, will you get
down to the panic preceding that—the panic of 1893?

Senator Reed. I would like to ask this question before you leave
this subject: Do you know anything about a meeting at Mr. Morgan's
house at which it was decided to refuse to return to the banks of the
interior the money that was in the New York banks?

Mr. Gilbert. Never heard of such a thing.

Senator Reed. Would you have been likely to know of it if it was
true?

Mr. Gilbert. I very likely should.

Senator Reed. Before I leave the question, if Senator O'Gorman
will pardon me one further inquiry—you spoke about being unable to
give details because you did not have your memoranda, and said if
you did have it you could probably give the details. I am very
greatly interested myself in clearing up this much-disputed question,
because it has been contended in said quarters, and believed by some
people, that the banks of New York for certain reasons desired to
eliminate Mr. Heinze and Mr. Morse, and that they started with the
purpose of eliminating them, and that the result was a distrust which
finally came mighty near eliminating all of them for the time being.

Now, it would therefore be interesting, and I think very valuable,
to have at first hand from a man who was on the ground the details
and the reasons—the exact reasons. I think it would be of value to
the banks—of value in the matter of advising the public.

And if you have no objection, I would thank you very much if you
would procure that memoranda and give us a statement of it, either
personally or in writing.
Mr. Gilbert. I would be only too happy to help clear it up. I would be only too glad to go home and refresh my memory and come back and tell you all about it.

Senator O'Gorman. You probably would not have to come back if you would just dictate the statement to your stenographer and send it to the chairman of the committee, giving your recollection of the incidents connected with the panic of 1907.

Mr. Gilbert. I would rather come back, because I want to put it in right.

Senator Reed. I should be very glad to have you do so.

Mr. Gilbert. I do not want to make a bald statement which might be misinterpreted.

Senator Bristow. Yes; it would be more satisfactory to have you return and give it to us personally.

Senator O'Gorman. Going back to the panic of 1893, what were the features of that, and the conditions that led up to it?

Mr. Gilbert. The 1893 panic?

Senator O'Gorman. Yes.

Mr. Gilbert. I think that grew out of the Treasury conditions, did it not?

Senator O'Gorman. Well, your recollection is not clear on that?

Mr. Gilbert. General expansion and speculation.

Senator Nelson. The Jay Cooke failure.

Senator O'Gorman. The general inflation?

Mr. Gilbert. Yes.

Senator O'Gorman. That explains everything, does it not?

Mr. Gilbert. Yes; excessive speculation, general inflation of business, too much railroad construction after the war. This reached its culmination in 1873.

Senator Nelson. With the Jay Cooke failure also.

Mr. Gilbert. Yes.

Senator Nelson. But do you not remember this, Mr. Gilbert, that after the panic of 1873 you appointed a committee of the clearing house to investigate that panic and to make a report, and that committee reported unanimously to the clearing house of New York that the one bad feature that brought about the situation there was the fact that they were paying interest on the deposits of banks?

Mr. Gilbert. Yes; I remember that.

Senator Nelson. And that the board unanimously recommended that the banks cease paying interest on bank deposits?

Mr. Gilbert. I recall that; yes, sir.

Senator Nelson. Yes. And that you attempted to enforce it, but there was a small minority of the banks that would not agree to it. Is that not true?

Mr. Gilbert. Yes; quite a large number would not agree to it.

Senator Nelson. Well, do you not think, still, that that has been a vice of the present reserve system—the drawing of funds of the country banks to the cities and paying them interest on them; that that has been one of the things that has piled up money in New York and led the banks to protect themselves, or to recoup themselves from paying that interest on bank deposits to loan out their money on call loans with stock collaterals?
Mr. Gilbert. Well, I do not think they did it for that purpose—to loan out the money on call loans—because they never get a very high rate of interest on their call loans.

Senator Nelson. Well, they get more than 2 per cent—a little.

Mr. Gilbert. Not much; not enough to justify them in doing that.

Senator Nelson. Well, they save themselves.

Mr. Gilbert. Oh, this much I will agree to in your statement: That it would be better for New York if so large an amount of money did not concentrate there.

Senator Nelson. In dull times.

Mr. Gilbert. Yes.

Senator O'Gorman. Why would it be better?

Mr. Gilbert. Simply because in times of panic the withdrawal of that money, or the danger of withdrawal, is one of the things that we have to look out for; and if it was not there, the interior banks could not make such heavy drafts upon us.

Senator Nelson. And the payment of interest attracts the money there, does it not?

Mr. Gilbert. Yes; the payment of the interest. The interior banks send it to New York because they get the interest on it, of course.

Senator Reed. To what extent did the loaning of money on call in New York upon stock-exchange securities contribute to the panic of 1907?

Mr. Gilbert. Well, that is hard for me to answer; that is a situation that is hard for me to diagnose. There is one thing you want to bear in mind, and that is to differentiate what I would call legitimate, nonspeculative Wall Street loans from what you would call speculative Wall Street loans.

Senator Nelson. Marginal loans.

Mr. Gilbert. Well, I would not say marginal loans, because the marginal principle is connected with every branch of business that is carried on in this country. Tobacco is bought on margin; wheat is bought and sold on margin; corn is bought and sold on margin; everything is bought and sold on margin.

Senator O'Gorman. And the business man nine times out of ten is carrying on his business on a margin.

Mr. Gilbert. Exactly; and a very large proportion of the business of this country is carried on without any margin at all. It is carried on open accounts on the books of the merchant, and 95 per cent of the business of the country is done on credits.

But I want to fix your thought on this Wall Street business, which seems to be somewhat misunderstood and exaggerated in your minds. There is a large amount of that Wall Street business that is just as legitimate and nonspeculative as any business in the world.

Senator Nelson. But look here, Mr. Gilbert—excuse me if you have not finished.

Mr. Gilbert. Yes; let me finish, please. There are a large number of large, respectable banking houses in New York that have to borrow large sums of money to carry the securities of the country that are placed in their hands for sale and distribution, without which the country could not get along. Those houses and those loans are just as important to the business enterprise of the country as any other business.
Take our large transportation companies and all our large industrial enterprises that are issuing bonds and stocks and other securities. They could not get along were it not for the facilities that are offered by these big houses to furnish money as they require it.

New York—Wall Street, the stock exchange of Wall Street—that is the largest and quickest open market in the world for the sale of securities. It is the quickest call-loan money market in the world. And we cannot get along without it. Under all the restrictions and safeguards you may throw around it you cannot lessen the amount of money that Wall Street in its legitimate business requires to borrow from the banks of New York.

Senator Nelson. I know; but is not that diverting the liquid assets or money from the channels of commerce and manufacturing industries into quasi-permanent investments? Is that not drawing it out from our every-day trade and commerce that should be supported—the traffic of the country—and is it not investing it in something of a more permanent character? Is it not more of the permanent investment and diversion of funds from purely commercial purposes?

Mr. Gilbert. No; it is not a permanent investment at all.

Senator Nelson. No; it may not be in the sense that it is perpetual; but, still, it is more of a long-time investment than commercial paper, ordinarily.

Mr. Gilbert. The banks of New York carry a certain amount of their money in call loans to have what you would call a secondary reserve—to adjust the fluctuation of their lawful money reserves. And it is always quick and responsive, except—

Senator Nelson (interposing). But not in times of panics?

Mr. Gilbert. Not so much so; but it does not entirely lose its responsive character in times of panic. It may with some houses; but there are always a large number of houses that are able to respond.

Senator Nelson. Now, I want to ask you a question, and I am very anxious to get to the bottom of it. My recollection is that during the panic somewhere about $95,000,000 of gold was imported, mainly on commercial bills. The bank circulation was increased, in round numbers, about $50,000,000 during that period, and the Government deposited mainly in the New York banks and mainly in two or three banks between $30,000,000 and $40,000,000.

So that during the panic—I mean during the panic when you were living on clearing-house certificates there—there was injected $95,000,000 of gold, $50,000,000 of additional bank-note circulation, and Government deposits to the extent of—my recollection is somewhere around $40,000,000.

Now, where did that money go to during that period? Was it used to stop the panic on the stock exchange?

Mr. Gilbert. No; it was not used to stop a panic on the stock exchange.

Senator Nelson. Where did it go? Most of the money—the Government deposits—went to New York at that time, nearly all of it.

Mr. Gilbert. In 1908 I appeared before the House committee or the Senate committee—I think both—and I was asked this question: "Is it true that you are loaning money at this time to stock-exchange houses for purposes of speculation?" I said: "It is not true." "But
are you not loaning money to stock-exchange houses at this time?"

"We are."

Senator Nelson. Yes.

Mr. Gilbert. "We are loaning money and trying to protect every weak spot that legitimately needs protection in order to stay the panic."

Senator Nelson. Yes.

Mr. Gilbert. "And if it is a responsible Wall Street house that needs protection or a responsible dry goods establishment or industrial corporation, we loan the one as quickly as the other."

Senator Nelson. What about these stock brokers who deal in call loans and put up securities? What about them?

Mr. Gilbert. Well, it is necessary that you should understand this connection with the stock brokers: There are a large number of first-class, strong stock brokerage houses——

Senator Nelson. Yes.

Mr. Gilbert (continuing). Who keep large accounts with certain of the New York banks and do a legitimate business.

Senator Nelson. Yes; I am not criticizing. I am not saying it is illegitimate, but my idea is that it is a business that is of a speculative character.

Senator O'Gorman. Mr. Gilbert—are you through, Senator Nelson?

Senator Nelson. No; just a moment. But I will stop if you want to go on now, Senator O'Gorman.

Senator O'Gorman. No. I only wanted to ask a question suggested by a remark which you made, Senator Nelson. Is it not a fact that when New York received about $170,000,000 or $175,000,000, in the manner indicated by Senator Nelson, inclusive of the money that was furnished by the United States Government and sent over to Wall Street, a large part of that money was used by the New York bankers to accommodate the country bankers throughout the country during that time, Mr. Gilbert?

Mr. Gilbert. To accommodate the country bankers?

Senator O'Gorman. Yes; to make loans. We have had country bankers testify here before this committee that right in the midst of the panic they went to New York and got their money. I received a letter to-day from a country banker to the same effect, that during the height of the panic he received from the New York bankers at 6 per cent.

Mr. Gilbert. Yes; we were sending them money all the time; just as we could afford to spare it.

Gentlemen, I try to make every word express conscientiously what I have to say upon this subject, but I want to say to you that although I was close to the command of the ship during the whole panic of 1907, I never really became aware of anything in our business transactions, either with Wall Street houses or the bankers of the country or the merchants of the country, that I would be ashamed to tell in the utmost detail.

I have seen statements made from time to time about the New York banks dealing with Wall Street that were not only very much exaggerated but which were untrue. They simply showed that the people who made those statements—and they were made in high political quarters—did not really understand the transaction of busi-
ness between the banks of New York and Wall Street or the necessity for their making advances here, there, and in other places.

But during the panic of 1907 the bankers of New York—the clearing-house bankers—worked as conscientiously as they possibly could to help every legitimate business man who needed it, if he had an account with them.

Senator O'Gorman. Mr. Gilbert, will you allow me to ask you another question here?

Mr. Gilbert. Certainly.

Senator O'Gorman. It has been suggested that there is an inducement to the country banker to send part of his reserves to New York because he is able to secure 2 per cent of interest; and that to the extent that he is induced to send his money to New York local legitimate demands in his own locality are neglected.

Is it not a fact that every country banker who sends his money to New York does it more because he wants to be in a position to get accommodation from city banks than because he gets a nominal return of 2 per cent interest on deposits?

Mr. Gilbert. There are two or three things which influence the country banker to keep his account in New York. In the first place, he wants to be able to draw against the New York bank for New York exchange. He wants interest on his money. It constitutes a part of his reserve. The law requires him to carry a reserve, and he can get interest on that portion he keeps in New York, and he can get rediscounts from his bankers. If he did not have a balance there, of course he would not have any claim on his bank and would not ask accommodation.

Senator Nelson. Do you not think this bill is much better as to the reserve than the existing system?

Mr. Gilbert. Yes. I really think it will be to my interest to say so. I think it favors the banks.

Senator Nelson. In one respect we have carried out the report of your clearing-house committee in 1873; that is, to not pay interest on balances.

Mr. Gilbert. Now, gentlemen, while we are talking about this clearing-house business, here is a thing I would like for you to know.

Senator Nelson. I am afraid I am diverting you.

Mr. Gilbert. No; that is all right.

Senator Brustow. You started out, originally, when Senator Nelson began interrogating you, and stated there were two kinds of business in Wall Street, and the Senator did not allow you to finish, and you have never stated what the two kinds of business are that are done on Wall Street. Now, what is the difference in those two?

Mr. Gilbert. Well, the difference, I tried to explain, was what I would call a legitimate, nonspeculative Wall Street business which the New York banks have to handle, is the business of those large concerns who negotiate loans and securities for the large corporations of the country. Take our transportation lines and our industrial lines that are issuing securities all the time, and which need to be distributed, and they need advances on those securities before they are distributed.

Senator Brustow. That is, if the Santa Fe Railroad concluded to extend its lines somewhere or double its track, and wanted to issue
bonds to get the money to do it, there is a banking house on Wall Street that takes and floats that security on commission?

Mr. Gilbert. There are banking houses, there are large banking houses of New York or in the near adjacent large cities that are always willing to undertake the sale and distribution of those securities.

Senator Bristow. You would call that legitimate banking business?

Mr. Gilbert. I think it is not only legitimate, but I think it is a highly important business.

Senator Nelson. If you will allow me, I would like to have you explain to the committee how they go to work—what is the plan on which they float those securities and what is the bonus or compensation?

Mr. Gilbert. I could not go into that, because I do not belong to the inner circle.

Senator Reed. You would call that legitimate business?

Mr. Gilbert. I think it is not only legitimate, but I think it is a highly important business.

Senator Nelson. You would call that legitimate banking business?

Mr. Gilbert. I think it is not only legitimate, but I think it is a highly important business.

Senator Nelson. If you will allow me, I would like to have you explain to the committee how they go to work—what is the plan on which they float those securities and what is the bonus or compensation?

Mr. Gilbert. I could not go into that, because I do not belong to the inner circle.

Senator Reed. You still have not given us the speculative. You have told us about the legitimate things but you have not told us about the speculative business.

Mr. Gilbert. The speculative business is what you call the marginal business. It is the purchase and sale of stock on the stock exchange, which is carried on margin.

Senator Reed. Now, was there, during this panic of 1907, a lot of capital used for the purpose of enabling certain institutions or men to control that market?

Mr. Gilbert. So far as my knowledge goes, I should say no; I never heard of it.

Senator O'Gorman. You mean to steady the market, Senator?

Senator Reed. Suppose I am a speculator on Wall Street. I am not a speculator, I am a broker; and I have been doing business for a lot of speculators by buying and selling simply on margin for what they can make from day to day. Now, the Santa Fe Railroad Co. finds its securities are tumbling, and they give me a lot of money to go in and steady the market with. Was a lot of that done?

Mr. Gilbert. Not done through the clearing house.

Senator Reed. By the banks?

Mr. Gilbert. Not to my knowledge.

Senator Reed. Now, let me ask you another question. Do you know anything about any refusal to advance money to any large institutions so that they were forced into liquidation or forced to sell just prior to that panic?

Mr. Gilbert. No, I do not.

Senator Reed. Not during the panic?

Mr. Gilbert. No; I do not.

Senator Reed. I refer, now, to be specific, to the Tennessee Coal & Iron Co. It has been claimed here that it was a perfectly solvent concern, and that their credit was shut off at the bank, and they were forced to sell.

Mr. Gilbert. I do not know anything personally about the Tennessee Coal & Iron Co. I was not present at the meeting at Mr. Morgan's house.

Senator O'Gorman. Or the subsequent meeting at the White House?
Mr. Gilbert. No; I was not.

Senator Nelson. I happened to be at the White House that very night, about an hour before.

Mr. Gilbert. But I can easily understand they could have applied for loans and were not able to get them.

Senator Reed. I understand that could happen to anybody. But it would be a mighty different thing if it happened to a legitimate enterprise, when the banks were in cash and it is a part of the business of the banks, as you have stated, to take care of these large industrial concerns—to float their loans for them. Now, that being the case, it is quite one thing to have denied an institution credit which was tottering on the verge of bankruptcy, and was about to fail, and to have denied credit to an institution that was entitled to credit for the ultimate purpose of forcing that institution either into bankruptcy or into a sale they did not desire to make. That is what I am talking about.

Mr. Gilbert. Of course. I know what you are after; but, at the same time, as I say, I am not familiar with the inside history of that. I was not at the meeting, and I never learned the details.

Senator Nelson. You suffered from that panic through a scarcity of currency?

Mr. Gilbert. We always do in time of panic.

Senator Nelson. The newspapers sent out a report that Mr. Morgan had stopped the panic and relieved the financial situation and broken the back of the panic by absorbing the Tennessee Coal & Iron Co. Now, what he did—he did not put any money into it—he exchanged the 4 per cent bonds of the Steel Trust for the stock of the Tennessee Coal & Iron Co. Can you explain how that made currency more plentiful in New York City?

Mr. Gilbert. No; I cannot. I would not undertake to do that. But I do not think the Tennessee Coal & Iron Co. had any relation whatever to the currency. When currency became scarce, when the speculators in currency saw that it was getting scarce—they always, in times of panic, know that currency will probably get scarce—they commenced to hoard it for speculative purposes.

Senator Nelson. Then Mr. Morgan did not really relieve the panic by effecting that exchange of securities?

Mr. Gilbert. No; not at all.

Senator Nelson. It had no effect on it at all?

Mr. Gilbert. It had no relation to it.

Senator Nelson. How do you account for the fact that the papers heralded it—what a great thing he had done?

Mr. Gilbert. I would hardly be responsible for what the newspapers said.

Senator Nelson. You remember the papers said so?

Mr. Gilbert. I cannot say I do.

Senator Pomerene. You remember at that very time there were $27,000,000 in Government funds deposited in banks in New York?

Mr. Gilbert. There was $25,000,000.

Senator O'Gorman. I do not know that we are making much progress, Mr. Chairman, with our bill. This, of course, is all very interesting. Is there anything else you want to say, Mr. Gilbert?
Mr. Gilbert. While we are on that Wall Street theory I want to say this——

Senator Reed. I want you to discuss, if you kindly will, this provision of the bill which undertakes to limit the loaning of money on speculative collateral.

Mr. Gilbert. Yes. You will allow me to introduce this?

Senator Reed. Oh, certainly.

Mr. Gilbert (continuing). Because I think it has some bearing on the subject, and I think it possibly may correct a wrong impression which prevails in Congress in regard to the relation of New York banks and Wall Street to other sections of the country.

Senator O'Gorman. Mr. Gilbert, you will not find that impression prevailing in this committee, except on the part of those gentlemen from the West.

Senator Nelson. Oh, I want to disabuse the Senator's mind. Mr. Gilbert, while I have asked many questions, I have no prejudice whatever against the banks; not at all. I am only, in these questions, voicing the sentiment of the Mississippi Valley, of our people out there; that is all. [Laughter.]

Mr. Gilbert. This is a statement that was made up at the close of business on September 24, which showed——

Senator O'Gorman (interposing). This year?

Mr. Gilbert. Yes; September 24 of this year. It shows the distribution of loans and discounts made by 30 of the largest banks and trust companies in New York, each having approximately $20,000,000 or more of loans and discounts, and aggregate loans and discounts of $1,226,974,500. I present this to show one thing, that the statement made here by one of your body—one of the Senators—that the banks of the South failed to get accommodations from New York because New York was investing its money in Wall Street, was not correct.

Senator O'Gorman. That has been contradicted by other southern bankers during this hearing.

Mr. Gilbert. I would like to read this to you just to show you how far from the truth that is. The loans made to Wall Street brokers for banks outside of the city of New York; that is, through their New York correspondents on September 24——

Senator Reed (interposing). What year?

Mr. Gilbert (continuing). This year—was $174,945,900. That is, loans made to Wall Street brokers for banks outside the city of New York.

Loans made to Wall Street brokers for banks' own account; that is, by the New York banks, $264,383,800.

Senator Bristow. One was $179,000,000?

Mr. Gilbert. $174,000,000 loans made to Wall Street brokers for banks outside of the city of New York; that is, the interior banks.

Senator Bristow. The other was $264,000,000?

Mr. Gilbert. The other was $264,383,800.

Other loans, discounts, and advances of every nature, distributed geographically as follows:

Southern States: Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Kentucky, Tennessee, Texas, and Arkansas, $174,140,500.

Making a total, altogether, of $1,226,974,500, out of which $264,000,000 was made by New York banks to Wall Street. So there is nearly one thousand millions of dollars loaned outside.

Senator O'Gorman. That is, made by New York City for the rest of the country?

Mr. Gilbert. Yes; made by New York for the rest of the country.

Senator Nelson. It was investments made by the brokers for country banks, was it not? Loans?

Mr. Gilbert. No; you do not understand; $174,000,000 was sent to New York banks by their interior correspondents—the country banks.

Senator Nelson. Yes; for investment.

Mr. Gilbert. For investment? To loan on call, so that they could have it as a secondary reserve. Some of these large interior banks carry a secondary reserve in New York all the time, so that they can get it on demand.

Senator O'Gorman. $175,000,000 came from interior banks to New York?

Mr. Gilbert. Yes.

Senator O'Gorman. Now, during the same period, how much money went out of New York City to the various sections of the United States?

Mr. Gilbert. At the same time New York banks were loaning for their own account $264,383,000 to Wall Street, and to all other sections of the country, including that $264,000,000, $1,226,974,500.

Senator O'Gorman. Then approximately, in rough figures, Mr. Gilbert, while $174,000,000 or $175,000,000 came from the interior banks for investment or deposit in New York—

Mr. Gilbert (interposing). No; not for deposit in New York. It was not sent for that purpose.

Senator O'Gorman. For investment in New York call loans, New York was sending out almost a billion dollars through the country?

Mr. Gilbert. That is it exactly.

Senator Nelson. And New York had a little over $200,000,000 in call loans?

Senator Reed. But while New York was sending this money out for loan over the country, it ought to be stated how much New York had of the moneys of the country banks deposited in her banks.

Mr. Gilbert. Well, they had due national banks outside $330,000,000.

Senator Reed. So that New York was not furnishing money to the country, but New York was receiving from the country something like $100,000,000 more than it loaned back. Am I not correct?

Mr. Gilbert. Oh, no. We were loaning a billion dollars.

Senator Reed. Oh, I understand.
The figures above given by Mr. Gilbert are, in tabulated form, as follows:)

Distribution of loans and discounts made by 30 of the largest banks and trust companies in New York City, each having approximately $20,000,000 or more of loans and discounts, and aggregate loans and discounts of $1,226,974,500 at close of business September 24, 1918.

First, loans made to Wall Street brokers for banks outside of the city of New York. $174,945,900

Second, loans made to Wall Street brokers for banks' own account. 264,383,800

Third, other loans, discounts, and advances of every nature distributed geographically as below:

Total Southern States: Southern States—Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Kentucky, Tennessee, Texas, and Arkansas. 174,140,500

Total Western States: Middle Western States—Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, and Missouri; Western States—North Dakota, South Dakota, Nebraska, Kansas, Montana, Wyoming, Colorado, Oklahoma, and New Mexico; Pacific States—Washington, Oregon, California, Idaho, Utah, Nevada, and Arizona. 167,720,600

Foreign: Canada, etc. 2,898,800

Total banks' own loans. 1,226,974,500

Senator POMERENE. Let me understand what is the nature of those loans. With money from the outside you say there is more than a billion dollars loaned out. What is the nature of those loans?

Mr. GILBERT. It is paper discounted and loans in various ways.

Senator POMERENE. Does it include bond issues and matters of that sort?

Mr. GILBERT. Yes, to some extent; seven-eighths of the amount would be probably commercial paper and loans on securities.

Senator REED. How much of that money loaned to the country was insurance money that had been collected from the country?

Mr. GILBERT. I do not know what you refer to by "insurance money."

Senator REED. Insurance premiums collected over the country and brought into the insurance coffers and put into the banks.

Mr. GILBERT. That has never exerted an important enough influence to be spoken about to any extent. I never heard anything about it.

Senator REED. Is it not something like $300,000,000?

Mr. GILBERT. I could not tell you that. Of course the insurance companies in New York keep their bank accounts in New York.

Senator REED. What I was interested in was a question Senator O'Gorman apparently had in his mind—he was never quite able to bring it out—was that New York not only financed itself, but the business of the rest of the country, and I am trying to disabuse his mind. [Laughter.]

Senator O'GORMAN. But you see that, for a given year, 1913, while $175,000,000 has come into New York from interior banks, New York sends out over a billion dollars.
Senator Nelson. As I understand your figures, Mr. Gilbert, see if I get the right idea: One hundred and seventy-five million dollars has been sent in by country banks for investment in call loans.

Mr. Gilbert. Yes.

Senator Nelson. But during that same period New York banks have invested something over $200,000,000 in the same kind of loans.

Mr. Gilbert. $264,000,000.

Senator Nelson. And about 1,000 millions in commercial loans through the country.

Mr. Gilbert. That is it exactly.

Senator Reed. The country banks have deposited $300,000,000.

Mr. Gilbert. $331,000,000.

Senator O'Gorman. In addition to the $175,000,000?

Mr. Gilbert. That is the amount of reserve money that they carried, due other national banks.

Senator Bristow. That was national banks only?

Mr. Gilbert. Yes.

Senator Bristow. What about State banks and trust companies?

Mr. Gilbert. It is not a large amount. I should say, in round figures, about $150,000,000. But I can tell you accurately just what it is. [After a pause.] No: I can not, either.

Senator Reed. Was that money sent to the country banks, or was it in the shape of bank credits—that 1,000 millions of dollars?

Mr. Gilbert. Why, it was discounting commercial paper and extending accommodations of all kinds, asked for by merchants, manufacturers, and banks of the country.

Senator Bristow. Of course, New York is not a commercial center, and this 1,000 millions that you sent out, of course, you got from the country in the processes of business. It did not originate—there is nothing in New York that is created there? It is simply a mart of trade, is it not?

Mr. Gilbert. Oh, my dear fellow, nothing in New York that is created there.

Senator Bristow. What do you create in New York?

Senator O'Gorman. Will you allow me to interpose? Our manufacturing interests in the City of New York exceed in volume all the manufacturing interests of all the New England States, including the great manufacturing State of Massachusetts.

Senator Bristow. In the City of New York?

Senator O'Gorman. In the City of New York. It is the greatest manufacturing city in all the world.

Senator Nelson. They make all the clothing there for America. [Laughter.]

Senator O'Gorman. Am I right, Senator Weeks?

Senator Weeks. I think you are substantially right, but that is not disparaging New England.

Senator O'Gorman. Not at all.

Senator Nelson. I think from your total, Mr. Gilbert, from the 1,000 millions your banks advanced for commercial purposes to the outside country, you should deduct the $200,000,000 of country deposits you have, reserve money. Give them credit.

Senator Bristow. That was $331,000,000.
Mr. Gilbert. Why not deduct all the deposits we receive from all of our customers?

Senator Nelson. No; I refer to bank deposits.

Senator Reed. Why not deduct them all?

Mr. Gilbert. Yes; why not deduct them all?

Senator Nelson. So you can not claim you are loaning out your own money, altogether.

Mr. Gilbert. We have nothing but our capital and surplus. All the rest belongs to our depositors.

Senator Nelson. And the bulk of your deposits, a large share of them, are country bank deposits?

Mr. Gilbert. Oh, no.

Senator Pomerene. A great many manufacturing concerns are in the West.

Mr. Gilbert. The deposits in the clearing-house banks amount to about $1,350,000,000.

Senator Nelson. How much of that is represented by New York discounts?

Mr. Gilbert. A large portion of it. That is the fund we use for discounting purposes.

Senator Nelson. Your deposits, you know, are to a large extent bank credits that you give for your discounts.

Mr. Gilbert. Yes.

Senator Nelson. Now, a merchant comes in there and gives his note for $10,000. You hold his note and give him credit for $10,000 on the books and call that part of your deposits.

Mr. Gilbert. We do, of course, because we loan out our depositors' money.

Senator Nelson. Yes. And, deducting your discounts to New York people from your deposits, what is the net amount?

Mr. Gilbert. That I could not tell without going into a very close calculation. The deposits from customers amount to 200 or 300 millions daily, principally in New York City. That is actual deposits.

Senator Nelson. How much do your discounts average?

Mr. Gilbert. I could not tell that.

Senator Nelson. They constitute the bulk of your deposits?

Mr. Gilbert. What I am speaking about now is the actual deposits.

Senator Pomerene. Mr. Gilbert, let me suggest in that connection: You have a large number of manufacturing establishments and mercantile establishments in the Western States that carry accounts in your New York banks?

Mr. Gilbert. Yes.

Senator Pomerene. Large manufacturing establishments will get lines of credit of your banks?

Mr. Gilbert. Yes.

Senator Pomerene. And they carry heavy accounts in your banks?

Mr. Gilbert. Yes.

Senator Pomerene. So that while there is a large amount of paper discounted, there is a large amount of deposits also made over your counter by western concerns. That is correct, is it not?

Mr. Gilbert. Yes.

Senator Pomerene. Can you state the amount?
Mr. Gilbert. Well, I would not try to. It would be simply straining my memory.

Senator O’Gorman. The particular item he is interested in is, Can you give an idea of the amount of Ohio money coming into New York City? [Laughter.] Senator Reed. I am interested in this question, as to how much of the deposits of this money that New York sent out to the country was actual money belonging to the citizens of New York and how much of it was money that belonged outside of New York. Could you tell us that?

Mr. Gilbert. Well, it would be rather difficult to differentiate. I would like to express it on the general principle that the business of the New York banks is to receive deposits from their customers and to loan out the deposits of their customers after keeping a lawful reserve against it in their vaults.

Senator Reed. And their customers are not limited to New York, but extend over the country?

Mr. Gilbert. That is it exactly.

Senator Reed. So that there is a large-sized hole——

Mr. Gilbert. We do not differentiate as to whom we loan or where we loan it. We have our own clientele and the interests of the bank is to accommodate its customers, if it can do it with safety.

Senator Reed. I was only discussing Senator O’Gorman’s——

Mr. Gilbert (continuing). And it always tries to do it. It does not discriminate between the man who lives out of New York and the man who lives in New York.

Senator O’Gorman. Your bank would take Kansas City money just as readily?

Mr. Gilbert. Yes; it would take Kansas City money just as readily.

Senator Reed. But just as soon as it takes that Kansas City money Senator O’Gorman says it is New York money. [Laughter.]

Senator Nelson. Now, Mr. Gilbert, are there other portions of the bill you want to discuss?

Mr. Gilbert. After listening to Mr. Morawetz with a great deal of interest last night, I went home and wrote this off before I went to bed:

Whatever view is expressed as to the practical working of the proposed currency bill must be on the assumption that all of the national banks will enter the new system. If we could definitely determine this point we could accurately determine the changes that would follow the introduction of the measure. If perchance it should happen that a large number of banks should decline to make the change, it would imperil the success of the bill at the start. The advantages which this bill offers would seem to outweigh the disadvantages, and yet there are some features which serve to keep alive a good deal of opposition to the measure, and which can be removed without any sacrifice of principle. The most prominent of these is the refusal to give the banks a proper representation on the board of control. They are to become the owners of all the stock and about two-thirds of the deposits, and be without voice in the management. They do not ask for control, but simply for a healthy leaven of banking knowledge, banking capacity, and banking conservatism. Why not concede this? The request is reasonable and logical and would be justified by all business practice.

The compulsory features of the bill compelling subscription to capital and deposit of reserves seem very obnoxious, but it must be admitted they are vital to the working out of the plan as laid out.
They would not seem so obnoxious if the member banks should be given proper representation on the board of control, but to be threatened with dissolution on refusal to accept the plan creates an opposition that otherwise might not exist. And if the penalty should have to be enforced to any great extent the result would be disastrous for a time to the business interests of the country.

While it may be that all national banks will within a reasonable time enter the system, it would not be wise to rely entirely on compulsion to get them in.

Senator O'GORMAN. Does that conclude your views?

Mr. GILBERT. Unless you want to talk to me on some other point.

Senator REED. I want to ask you a question: If this bill is put into effect, of course the money that goes into those regional banks must come from some place. I take it that a large amount of the money will be withdrawn from central reserve cities in order to transfer it into the regional bank?

Mr. GILBERT. Yes.

Senator REED. And, of course, from the reserve cities there will be money drawn from, strictly speaking, the country banks?

Mr. GILBERT. Yes.

Senator REED. Now, during that transition period, will that involve any considerable contraction?

Mr. GILBERT. Well, I have some figures here which bear on that point. I will give it to you in gross.

Senator REED. Have you written an article upon it?

Mr. GILBERT. No; but I have a calculation that was made by a personal friend of mine, a banker, which he gave me to look over. I do not feel at liberty to present it, but it contains the information you would like to have. From this analysis of the best working of the proposed bill it would appear that at once after the law goes into effect the banks in New York City may be called upon to pay out the amount of $85,000,000 of the present deposits from national banks, which, after allowing for the 20 per cent reserve released thereon, would mean a contraction of loans to the amount of $68,000,000, all of which, it would seem, would have to be provided for from their own resources, because their deposit of 3 per cent of their reserve with the Federal reserve bank is not called for until after 60 days, and they probably would have no claim upon said bank for discount accommodations until deposit had been made. In addition to the contraction of the amount named above would be the amount required to meet two of the 4½ per cent that the reserve city banks could draw out after 60 days, which would amount to $34,468,263, and the 10 per cent payment on account of the capital of the Federal reserve bank, which would amount to $11,970,000, thus producing a total contraction in the loans of the New York City national banks, after allowing for the 18 per cent reserve released on deposits withdrawn, of $40,000,000 at the expiration of 60 days after the act goes into effect; showing that in 60 days after the act becomes operative the withdrawal of deposits of national banks in the city of New York would amount to $120,000,000, and the loans of such national banks of the city of New York would be contracted $108,000,000.

Senator REED. That is the application of this to the city of New York?

Mr. GILBERT. Yes, sir; to the clearing-house banks of the city of New York.
Senator Reed. Now, if that is true, and assuming we want to create this system and that it is a desirable thing, what suggestion have you to make as to a method by which the system could be created without suddenly withdrawing that money and so doing the work of creating the system as not to give the financial situation a violent and sudden lurch or jar?

Senator O'Gorman. Suppose that provision were made to have the 20 per cent payment made in five different installments of 4 per cent each—

Senator Nelson (interposing). They will be in two payments; the other is only subject to call.

Senator O'Gorman. I understand that. My question will only relate to the first payment of 10 per cent. I am making that in five payments, extending over a period of 18 months. Would that lessen the contraction?

Mr. Gilbert. That is only a matter of $11,000,000.

Senator Nelson. Senator, will you kindly allow me to suggest another thought in connection with yours, and that is, if we adopted Mr. Gilbert's plan of one central bank, or reduced the number to four or five we could reduce the corporation to half the amount and get enough capital for this central bank to start on.

Mr. Gilbert. Yes; if it were one central bank $20,000,000 would be ample to start with.

Senator O'Gorman. Suppose you make the actual cash contribution 5 per cent, in 5 payments extending over a period of 18 months.

Mr. Gilbert. I do not think, so far as the capital payments are concerned, it would cut very much of a figure.

Senator O'Gorman. Suppose the same idea were carried out with reference to the deposits; instead of requiring the deposit of 5 per cent of the reserves—

Mr. Gilbert (interposing). That would make a very good deal of difference.

Senator O'Gorman (continuing). Have that in 5 equal payments, covering a period of a year or more. Would not that minimize the disturbance necessarily incident to such a change?

Mr. Gilbert. Yes; it would, of course. But it would also lessen the ability of the Federal reserve banks to discount, because they would rely on the transfers of reserves.

Senator O'Gorman. But the development of the bank would in that way be gradual.

Mr. Gilbert. You could easily see, though, from the statement I have furnished here, that the borrowing by the banks of the country is not heavy, and they probably would have ample resources to accommodate all legitimate borrowing.

Senator Reed. Besides that the banks would not need to borrow a large amount if they were required to transfer only a small amount.

Mr. Gilbert. No; they would not.

Senator Bristow. If we followed out the idea of the Federal reserve bank, of one Federal reserve bank, this transfer could be made with very much less disturbance, could it not, to the whole banking and financial system of the country?

Mr. Gilbert. Yes; it could be. It would not require as much capital to commence with, and the transference of the reserves to the central bank could be made in several installments.
Senator Bristow. If experience demonstrated that we needed more; if we found that, because of the peculiar conditions in our country, additional banks should be created, that could be done as experience pointed out the way?

Senator O'Gorman. The power could be confided to the reserve board from time to time to create additional banks, indicating the limit to which the board might go.

Senator Bristow. Yes; that might be done. It would simplify it very much.

Mr. Gilbert. I think it would; yes.

Senator O'Gorman. Let me ask you another question right there. Do you think, Mr. Gilbert, that a Government board of seven members, such as is proposed in this bill, constituting the reserve board, could dispose of the applications for rediscount from the member banks as intelligently as the members of the regional banks as constituted by this bill?

Mr. Gilbert. I do not.

Senator O'Gorman. You would have more confidence in the personnel of the regional banks—

Mr. Gilbert (interposing). The administration of the regional bank alone is competent to decide the question, it seems to me.

Senator O'Gorman. As to rediscount?

Mr. Gilbert. As to rediscount.

Senator O'Gorman. You do not think this reserve board could take up that work?

Mr. Gilbert. I should not think it ought to do it.

Senator O'Gorman. It would have to do it if we had but a single bank.

Mr. Gilbert. No; the administrative officers of the bank could do it. The Federal board would simply supervise.

Senator Nelson. Suppose, Mr. Gilbert, you had, under the Federal board for this central bank, a discount committee of nine.

Mr. Gilbert. Every well-regulated bank of any size has an executive committee. Now, the bank officers are the ones that are familiar with the standing of their customers. The administrative officers of a regional reserve bank would know the banks of their district. It would be their duty to become familiar with their habits.

Senator O'Gorman. You evidently look upon that as one of the advantages of the regional bank system, do you?

Mr. Gilbert. It is an advantage; yes. At the same time the central bank should distribute its branches throughout the country and the branches would come in close and intimate contact—

Senator O'Gorman (interposing). And perform that same function?

Mr. Gilbert. Yes.

Senator Pomerene. I think that Mr. Gilbert, among other things, was going to discuss before us the question of foreign exchange, and I was anxious to hear him.

Mr. Gilbert. I do not want to go into that now, but perhaps the next time I come I shall do so. However, here are one or two things that I jotted down last night, and that I should like to emphasize.

Much stress is being laid on the industrial expansion that will result from the establishment of the Federal reserve bank owing to their capacity to expand credit. It must not be overlooked, however,
that there is a limit to their power to expand credit, and when that
limit has been reached they will be simply ordinary banks in com-
petition with each other with no reserve power to meet unexpected
crises. The reserve bank should not seek to build up a big business,
to expand credit, or to make profit. Its prime object should be to
maintain its reserve power and be always ready to perform its proper
function in a money crisis. If it can not do this and earn dividends
it would be better to dispense with the dividends. Under normal
business conditions it should not carry less than 50 per cent reserve
against all its liabilities, otherwise it will not be ready for a crisis
when it comes. Under normal conditions it is doubtful if all of the
reserve banks can pay dividends to stockholders; certainly not for
several years.

The bank-note issue should not be guaranteed by the United States
Government nor made payable at the United States Treasury. This
would be a mistake that would prove embarrassing to the Government
in a panic. We have only to go back to the panic of 1907 to find a
parallel case in the volume of national-bank notes that were presented
for redemption.

I was in Washington in 1908 and I called on Secretary Cortelyou,*
to talk over the Aldrich-Vreeland bill, which was then before
Congress. He told me at that time that the Treasury Department
was very much embarrassed by the large volume of national-bank
notes that were being presented for redemption; that it had almost
exhausted his cash balances; and that his force was not large enough
to send the notes that were presented for redemption home to the
banks of issue, and he was waiting for an appropriation to enlarge
his force to do that. After talking with him, I suggested that he
use his influence with Congress to omit from the face of the notes
issued under the Aldrich-Vreeland bill, if the bill became a law,
the words "Payable by the Treasury of the United States in lawful
money," and I think it was done. I know that he and I both com-
municated with several of the influential members of both Houses at
that time, and I think when that bill passed it was omitted. I think
it is very necessary you should consider that, because it is not neces-
sary that these bills should be payable at the Treasury of the
United States.

Senator Weeks. If you will allow me to interrupt you, you will
find that the bills that have been printed since have all been alike,
and they have had these words on them: "Secured by a deposit of
United States bonds or other securities," instead of "Secured by
deposit of United States bonds" as heretofore. That, I think, was
the only change made in the bill.

Mr. Gilbert. But, under the national-bank act, the old bills were
stamped on their face, "Payable at the Treasury of the United
States."

Senator Weeks. I have not one of the bills in my pocket, but if
that were true I think that has been left off.

Mr. Gilbert. I think it has been left off, and I think it was left
off as a result of that experience in 1907. Don't you remember?

Senator Weeks. Yes; I remember very well. But even now in
normal times the Treasury has redeemed more national-bank bills
than the 5 per cent fund amounts to. There is an actual debit there
to-day against the banks.
Mr. Gilbert. The volume was very, very large, indeed, and it embarrassed the Treasury Department very much.

Senator Reed. What is the limit, Senator?

Senator Weeks. There is no limit.

Senator Nelson. You believe, of course, that these notes should be redeemable in gold only?

Mr. Gilbert. I do. Let me continue.

Let these be the notes of the Federal reserve banks protected by a 50 per cent gold reserve, a first lien upon the assets, and payable on presentation in gold at any Federal reserve bank. They would be amply secured by the 50 per cent reserve and the commercial paper behind them, and the fact that they were not guaranteed by the Government might possibly add to their elasticity by causing them to be presented for redemption more quickly than otherwise would be the case.

Federal reserve banks should pay out their own notes only. Notes of other Federal reserve banks when received should be sent home for redemption. If not guaranteed by the Government, they would be less likely to be carried in reserves of State banks and trust companies, nonmembers.

Senator O'Gorman. Do you see any advantage at all in having the notes Government notes?

Mr. Gilbert. No; I do not.

Senator O'Gorman. Do you know why it is proposed that they be Government notes rather than bank notes?

Mr. Gilbert. I do not. Since I became familiar with the bill I have formed the impression that there is an influence in the Cabinet which is in favor of having the Government issue its own notes, instead of allowing the banks to issue notes.

Senator O'Gorman. That is the only explanation you can think of?

Mr. Gilbert. That is the only explanation.

Senator O'Gorman. You do not approve of it?

Mr. Gilbert. I do not.

Senator O'Gorman. You think it is not sound?

Mr. Gilbert. I do not think it is sound. My own view is that I would as much as possible divorce the Government from——

Senator Reed (interposing). Do you think that the 50 per cent reserve under this bill against notes issued by these Federal reserve banks would be perfectly sound?

Mr. Gilbert. I do.

Senator Reed. Do you think they should always be redeemable in gold?

Mr. Gilbert. Yes; I think so.

Senator Reed. If that is true, if you have a system that provides that the notes shall always be redeemed in gold at the till of the bank, a system which is safe and sound, how can a run upon the Treasury be effected, and why should it ever be effected? The minute you say that currency is absolutely safe you take out all danger to the indorser.

Mr. Gilbert. There never was any question about the national-bank notes, but they were turned home in such large volume for payment to the Treasury of the United States.

Senator Reed. That is because there was a raid on the gold; they were raiding for gold, were they not?
Mr. Gilbert. They were payable in lawful money.

Senator Nelson. Ought not the burden of gold redemption to be put entirely on the regional banks instead of the Government?

Mr. Gilbert. I think we should do everything we can to concentrate in these regional reserve banks a large gold fund.

Senator Reed. And make them keep it?

Mr. Gilbert. And make them keep it.

Senator Nelson. And call upon the Government to supply the gold.

Mr. Gilbert. In fact. I sometimes think that, being regional reserve banks, they ought to be a higher order of bank than the ordinary commercial bank of the country, especially as we have between 700 and 800 million of national-bank currency outstanding, and that it will be a good many years before it is largely reduced, and that, in order to make these regional reserve banks extra conservative, we should compel them to carry a much larger gold reserve.

Senator O'Gorman. Why do you urge a 50 per cent gold reserve instead of the 33 1/3 per cent proposed in the bill?

Mr. Gilbert. Because I think it would be safer.

Senator O'Gorman. Would not 33 1/3 per cent be safe?

Mr. Gilbert. I do not say I do not think 33 1/3 per cent reserve would be good, conservative management—using care to discount short-time commercial paper—but a reserve bank should only discount short-time commercial paper; it should be maturing all the time.

Take the Bank of France. Under the First Empire, when Napoleon became Emperor he felt that he wanted a bank that would have a little more banking power than the Bank of France, as it existed at that time, had. So he said to his finance minister: "I have drawn up a scheme for a bank; I want to read it to you." And he read it over to him. It was a scheme which provided for making advances on short-time commercial paper, with three good names, and a very small gold reserve, but a gold reserve large enough to meet any demands that might be made for the redemption of the notes. He said to him, "I want you to take that to the corps legislatif and present it as your own bill, because if they know it is my bill they won't pass it. If you present it as your own bill they will give it more consideration." That bill was introduced and eventually became the system under which the Bank of France was organized and operated.

I only mention that to show he had the right idea there, that a reasonable gold reserve and short-time commercial paper amply secured, which would be redeeming itself all the time, would keep that bank amply supplied with gold to meet its notes as they became due.

Senator O'Gorman. You now touch upon an objection which has been strenuously urged on behalf of the country bankers. It is this: In various sections of the country the country bankers do not deal in the commercial paper with which the banks in large cities are familiar—the paper running for 30, 60, or 90 days. They deal largely in what is called "seasonal paper," very frequently running from six to nine months. It is claimed on their behalf that they can not avail themselves of the rediscount privileges of this bill, or, if they do enjoy the privilege at all, they can only enjoy it in a modified way. Of course, it is suggested that even with six months
paper it is available for discount during the second half of that period; so also with the nine months' paper. But it has appeared before this committee that under the plan proposed in this bill country banks will only have a modified use of this privilege. How can you remedy that?

Mr. Gilbert. Unfortunately that is an obstacle.

Senator O'Gorman. Do you think it possible that the reserve board might, under rules and regulations, permit a certain percentage of the rediscounts in certain regions to be used for paper maturing longer than 90 days?

Mr. Gilbert. I do not think the correct working of the system ought to admit of the rediscounting of—

Senator O'Gorman (interposing). You think any maturity longer than 90 days is not a liquid asset?

Mr. Gilbert. I do for a reserve bank.

Senator Nelson. I think there is an avenue out of the difficulty, and that is this: The large commercial banks would always have an abundance of such paper to discount, and they could supply the smaller banks. The smaller banks could obtain their discounts from the larger banks.

Senator O'Gorman. That is true—

Mr. Gilbert. They could supply the currency.

Senator Nelson. Yes.

Senator O'Gorman. The fact would still remain that the country bank is not permitted to enjoy the rediscount privileges of this bill—

Senator Nelson (interposing). That is true.

Senator O'Gorman. To the same extent as the large city bank.

Mr. Gilbert. That is right.

Senator Pomerene. I was about to suggest this thought with regard to that matter: Assuming you are right as to the 90-day provision, here is a farmer who wants $1,000, and he gives his season note for it. He expects to pay that out of his wheat crop or out of the sale, it may be, of stock which he has fattened. Assuming that his credit is the same as that of the merchant who has commercial paper within the contemplation of this statute, why should he not be given the same right? Why should not that paper be given the same right of discount at the bank as the merchant's note that is given for merchandise? Why is it not one and the same thing?

Senator O'Gorman. They are maturing at different periods.

Senator Pomerene. I am waiving that, for the time being. If a note of that character is to mature within 90 days, why should it not have the privilege of discount just the same as the merchant's note?

Mr. Gilbert. The only reply I could make to that would be this: I understand the character of the farmer's paper very well, and I know it is difficult for the farmer to borrow money on the same terms as a merchant can borrow money. Of course, the farmer borrows from his own bank, and the amount of paper that is received from farmers must be a very small portion of the amount of paper that the bank would discount.

Senator Pomerene. That depends. If you go into the agricultural regions—for instance, in Minnesota, Kansas, or Nebraska,
where the industries are almost entirely agricultural or closely allied thereto—I suspect a goodly part of their paper would be farmers' paper.

Mr. Gilbert. They would have to have a sufficient amount of good commercial paper, eligible for discount, to supply their needs, I should think, in case they wanted rediscount.

Senator Reed. That is what we are told by these gentlemen from the small banks that are really farmers' banks; that is, banks of which the farmers are the principal supporters or shareholders.

Senator Pomerene. And that is true in a good many of the rural districts.

Mr. Gilbert. Exception might be made in favor of the paper in the agricultural districts, up to a certain percentage. I can not see any other solution.

Senator Pomerene. Would there be any objection to it from an economic standpoint?

Senator O'Gorman. If you will pardon me, Senator, it occurs to me there might be this objection: The success of this proposed system depends upon several requirements, an important one being that the assets of these regional banks shall always be liquid; and, in the estimation of bankers, an asset can not be considered liquid that takes more than 90 days to mature.

Senator Pomerene. Here is a farmer that wants $1,000, which he expects to pay as soon as his wheat crop is harvested and marketed. When he borrows it it may be 6 months' paper, but when it is within 90 days of maturity—

Senator O'Gorman (interposing). He can use it under this bill. He may have a 1-year note, but during the last 90 days he can discount it.

Senator Pomerene. That is just one of the difficulties here. It is said by some of the witnesses that that is not really commercial paper, within the contemplation of the act.

Mr. Gilbert. I should say so, too.

Senator O'Gorman. That it is not commercial paper?

Senator Pomerene. What is there inherently different between the merchant's paper maturing within 90 days and the farmer's paper which is maturing within 90 days? I am assuming, of course, that they are men of equal credit and standing in the community.

Mr. Gilbert. Is it not true that the farmers as a class rely upon their banks to carry them until their crops are marketed?

Senator Reed. But he has drawn the note—

Senator Pomerene (interposing). He has drawn the note so the note has to mature, and its collection is enforceable just the same as the collection of the merchant’s paper is enforceable.

Senator Reed. It is a 9 months' note, due in the month of August, and he intends to pay it out of his wheat crop, and by that time his wheat crop is harvested, thrashed, and marketed. Now, it is not put up with the bank until the 1st day of July. It is then due, we will say, the 15th day of August.

Mr. Gilbert. If his crop did not turn out well, it would have to be carried another year.

Senator Bristow. What about the merchant? If the crop did not turn out well——
Mr. Gilbert (interposing). He is provided with the merchandise to pay his note.

Senator Pomerene. The farmer has the same credit, even if his crop is a failure. He expected to take care of it in the same way.

Mr. Gilbert. Of course, we draw our conclusions from experience. We find that, as a rule, the commercial paper we get from businessmen is very largely paid at maturity, and our experience with eastern farmers—of course, we have had no experience with western farmers—is that a note payable in even three, six, or nine months is really payable at the farmer's convenience.

Senator Pomerene. I suspect we have got to recognize this as a fact: That when any paper is rediscounted the regional bank is going to depend largely upon the indorsement of the member bank.

Mr. Gilbert. Yes.

Senator Pomerene. And if the member bank is willing to take the paper of the farmer and to rediscount it, he would understand whether or not it was probably going to be paid when it matured.

Mr. Gilbert. Here is one question I would like to submit to you gentlemen. I read the remarks made by Senator Owen last night at some gathering of bankers in this city. The remarks appeared in the papers this morning, and the question arose as to the banks' ability to buy paper in the open market, and the Senator is quoted as having said that one of the powers of the regional reserve bank would be to enter the market and buy commercial paper. Some banker present raised the query as to whether or not that would not be competing with other banks. It occurred to me——

Senator O’Gorman (interposing). That is only for the purpose of regulating the interest and discount rate.

Mr. Gilbert. It occurred to me that under the law as I understand it the regional bank can only enter the open market to buy commercial paper that is eligible for rediscount, and only paper that has the indorsement of a member bank is eligible for rediscount.

Senator Nelson. You are right about that, I think.

Mr. Gilbert. And there will be no paper in the market that is indorsed by member banks until an open money market is created. Is that not correct?

Senator Reed. I think you are right on that.

Senator Nelson. It seems to me you are right about it. I think your deduction is correct.

Senator Reed. Unless the bill is amended.

Senator Nelson. There is one question more I would like to ask you, Mr. Gilbert, and that is do you not think that the extensive discount privileges are the discount privileges extended here to the regional banks and the privilege that the member banks have to discount may lead to the inflation of credit?

Mr. Gilbert. It can very easily do that.

Senator Nelson. And be very general?

Mr. Gilbert. Yes, sir.

Senator Nelson. And there may be a danger in it?

Mr. Gilbert. I think so.

Senator Nelson. Can you suggest any limitation that we ought to put into the bill?
Senator Reed. I do not think that construction follows—that construction which has been made here. I do not think that construction necessarily follows.

Mr. Gilbert. What is that?

Senator Reed. That they could not buy anything unless it was paper indorsed by another bank.

Senator Nelson. It must be paper eligible for rediscount.

Senator Reed. Of course, in construing any act you must take into consideration all of its language.

Section 15 says:

That any Federal reserve bank may, under rules and regulations prescribed by the Federal reserve board, purchase and sell in the open market, either from or to domestic or foreign banks——

Mr. Gilbert. "From or to."

Senator Reed (reading):

From or to domestic or foreign banks, firms, corporations, or individuals, prime bankers' bills——

Mr. Gilbert. "Prime bankers' bills."

Senator Reed. Yes. [Reading:]

And bills of exchange of the kinds and maturities by this act made eligible for rediscount and cable transfers.

Now, I think the construction that would necessarily be put on that would be——

Mr. Gilbert (interposing). What would you call “prime bankers' bills” and “bills of exchange”?

Senator Reed. What are prime bills or bills of exchange? I have contended all along we have no rule to go by. But, waiving that, I am simply discussing the question whether a bank would have to indorse them. I think this section certainly would be susceptible of the construction and would probably be construed to mean this: That the words “bills of exchange and the kinds and maturities by this act made eligible for rediscount,” that that would mean that they must be promissory notes or bills of exchange maturing within 30 days and signed in the manner in which a note must be signed if it passes through a bank and is indorsed and by it rediscounted, but that the indorsement of a member bank—I hardly think that would be necessary under that language.

Mr. Gilbert. I am sorry if that is the proper construction.

Senator Bristow. I think that is undoubtedly a good construction.

Now, Mr. Gilbert, do you find anything in the bill as to the difference in the paper that can be used as the basis for currency or which the bank will rediscount? Could the bank rediscount paper that could not be used as a basis for currency by the regional bank?

Mr. Gilbert. As I interpret the bill, you can only rediscount commercial paper of certain maturities.

Senator Bristow. Any paper that it can rediscount can be used as the basis for currency, as I understand it.

Mr. Gilbert. Well, it will be used, of course.

Senator Nelson. That is the way the bill reads.

Senator O'Gorman. It is contemplated that the paper must be of a character upon which currency can be issued by the Government?

Senator Nelson. There is no doubt about that.
Senator Weeks. If we had a strictly correct system, when that rediscount was made it would be put to the credit of the bank making the application, and it would not make any difference to the reserve bank whether it gave the discounting bank currency or a credit on its books or a check.

Mr. Gilbert. None at all.

Senator Weeks. It would be the same thing.

Senator Reed. I believe that is all at this time, Mr. Gilbert. If you can come back, say, on Friday, and give us the additional information which was asked for, I think we can hear you on that day.

Mr. Gilbert. I can return on Friday.

Senator Reed. I have here a letter which was handed me by Senator Martine for insertion in the record, and, if there is no objection, the letter will be placed in the record at this point.

(The letter referred to is as follows:)

FIRST NATIONAL BANK,
Plainfield, N. J., October 14, 1913.

Hon. James E. Martine,
Washington, D. C.

Dear Sir: We feel constrained to call upon you to use your utmost endeavors to defeat the passage of the present currency bill. Among the features particularly objectionable to us are the segregation of savings and commercial funds. If the proposed bill becomes law, we will be forced to call in loans aggregating over $1,000,000, and you can readily imagine what that would mean to merchants of Plainfield, or, as an alternative, we must surrender our national charter and throw our Government bonds on a sagging market which at to-day's prices would mean a loss of from $12,000 to $15,000. It would seem that if banks situated as we are are to be forced out of the national banking system a method should be provided by which the Government twos should be paid off immediately at par.

We have been 10 years building up our savings department business, and this segregation of assets plan would be the destruction of it, as we can not pay 4 per cent interest, as we are now doing and are forced to do by the trust-company competition, and loan the money at a profit on the securities to which it is proposed to restrict the investment of such funds. The proposed plan is not only bad for the banks, but bad for the community at large, as it curtails our loans to our home people who need the money and forces investment in outside securities. Moreover, it would immediately create a situation whereby we would have a surplus of funds in our savings department and an extreme shortage in our commercial department. The act proposes to prohibit one department using the surplus funds of the other, or, in other words, we must let our savings-department money lay idle or invest it out of town and borrow money to supply the needs of our customers, or else refuse to loan them their reasonable requirements. We believe the strict enforcement of the proposed law will put the country in such a state of chaos that business men will not know what to do.

We urge you to give this matter most careful consideration, and would greatly appreciate a favorable reply from you.

Very truly, yours,
J. A. Hubbard.
C. Frank French.
B. Frank Coriell.
D. M. Runyon.
E. H. Bird.

(W. R. Coddington.
J. A. Smith.
A. J. Brunson.
P. Z. Zeiglio.

(The following are inserted at the request of the chairman of the committee:)

Statement showing clearings for 1912, from Jan. 1 to Dec. 28.

<table>

</tbody>
</table>
The subcommittee on inland exchange which was appointed by the clearing-house committee last April to investigate the subject of exchange charges on inland checks after months of constant activity made its report last Monday.

After quoting the resolution under which the committee was appointed, the following results of the investigations are set forth:

Your committee approached this investigation with an entirely unprejudiced mind and has maintained an attitude of strict impartiality throughout. It has given careful consideration to the facts it has gathered and feels that it is now in a position to report its conclusions and the findings upon which these conclusions are based.

Under its direction two forms were prepared. A copy of one of these forms was sent to each bank and trust company member of the New York Clearing House Association, the purpose being to place the committee in possession of information with respect to what, if any, changes they felt should be made in our existing rules and regulations affecting the collection of country checks.

In furtherance of your committee's desire to receive as many different points of view as possible on this most important subject it met frequently at the clearing house during the spring and summer months for the purpose of discussing it in a frank and unbiased way with the president or such officer as he elected to represent him of each clearing-house institution.

The second form prepared under the committee's supervision was designed for use in conveying to it certain information for statistical purposes in respect of the amount, source of receipt, disposition, and cost of collection, as well as time consumed in collecting foreign items received by each individual institution during the month of May, 1912. A copy of this form was handed to each member's representative at the time he appeared before the committee, with a careful explanation of its purpose and confidential nature.

The figures compiled from the data contained in these reports indicate that the gross income of the members of the clearing-house association from collection exchange during the year 1911 was—

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Collection exchange during 1911</td>
<td>$2,139,551.00</td>
</tr>
<tr>
<td>Exchange cost</td>
<td>$1,176,162.00</td>
</tr>
<tr>
<td>Proportionate share postage, rent, stationery, and salaries for 1911</td>
<td>569,461.78</td>
</tr>
<tr>
<td>Estimated loss of interest on interest-bearing accounts where immediate credit is given for foreign checks, based upon figures submitted by eight of the largest institutions in the clearing house</td>
<td>296,460.00</td>
</tr>
<tr>
<td>New income</td>
<td>97,467.22</td>
</tr>
</tbody>
</table>

It should be borne in mind that this net income is the result of handling a volume of business, based on the figures gathered for the year 1911, of approximately $4,859,187,900, and when distributed between the 64 active members of the clearing-house association represents an annual increment of income to each of only about $1,500.

The figures gathered by your committee for the month of May, 1912, show:

- Daily average of foreign checks received, $16,284,346.
- As to discretionary and charge points this volume was distributed as follows:
  - Discretionary points $11,404,363
  - One-tenth points $3,938,198
  - One-fourth points $895,785

It will be observed from these figures that of our daily volume of out-of-town business for May, 1912, 71 per cent was on the discretionary points, 24 per cent was on the one-tenth points, and only 5 per cent was on the one-fourth points.

The daily average amount of cash items outstanding during the same period was $88,215,328, indicating that the average time consumed in the collection of our country checks was 4.19 days.
Banking and Currency.

Your committee also procured from the members of the clearing-house association the data with reference to the average daily standings of cash items during the year 1911, which amounted to $37,356,628. Considerable labor was involved to the banks in providing this information, but as a medium for comparison with the same figures for May, 1912, which, as previously stated, totaled $68,215,528, the committee was enabled to confirm its impressions that the month of May, upon which its principal figures were based, was an excellent average month.

The succeeding table shows the average daily amount, the average time consumed, and the average cost of collecting checks on the discretionary points, and also on a number of other more important nondiscretionary cities of the United States:

<table>

</table>

Subsequent to the appointment of this committee on inland exchange by the clearing-house committee of the New York Clearing House Association the bankers' association of New York, New Jersey, Connecticut, and Massachusetts took similar action. These committees in due course communicated to your committee their desire to discuss this subject fully with it. Their requests were gladly granted, and at appointed times your committee has had the pleasure of entertaining the representatives of each of these associations.

In view of the foregoing résumé of the scope and detail of the work of your committee and of the facts thus ascertained, and because your committee is convinced that the operation of the present rules and regulations of the New York Clearing House Association in respect of charge on inland exchange results in barely making good to the banks and trust companies making their exchanges through the clearing house their actual outlay in handling such business, including the amounts of exchange charged on or deducted from return remittances, without substantial return for the enormous volume of the business thus undertaken and its risks, your committee feels itself compelled, in the interest of the conservative business methods which are required in good banking, respectfully to recommend that the main body of the existing rules and regulations of the New York Clearing House Association regarding collections outside of the city of New York shall remain unchanged.

In the judgment of your committee, however, within certain restricted territories, and for reasons which are in each instance peculiar to the areas in-
involved, the rules should be modified with advantage alike to ourselves and to
the inland banks and business interests affected by them.
After a careful consideration of all the questions involved it furthermore
respectfully recommends that all banks and trust companies in the States of
Massachusetts, Rhode Island, Connecticut, New Jersey, and New York which
will engage themselves in writing to the manager of the New York Clearing
House over the signature of the president, cashier, or treasurer to remit to
the members of the New York Clearing House Association at par in New York
funds on the day of receipt the charge shall in all cases be discretionary with
the collecting bank.
It is not proposed that the foregoing recommendations shall in any way dis­
turb the relations now existing between our members and the banks located in
the present discretionary cities.
In the opinion of your committee this proposed modification of the rule re­
specting discretionary places, so as to include the entire region mentioned, pro­
vided the local banks themselves in any community wish it, rather than ex­
tending the privilege to a few specially designated cities or towns in that ter­
ritory, will, if adopted, do much toward relieving the irritation and dissatis­
faction which have heretofore existed among many near-by banks not situated
in a discretionary city. This proposal affords opportunity to the banks in each
locality to determine for themselves and for their customers whether or not they
wish to enjoy the benefits and share the burdens of a discretionary or free
collection point.
All of which is respectfully submitted.

James G. Cannon,
Walter E. Frew,
Joseph T. Talbert,
Edward Townsend,
John W. Platten,

Committee on Inland Exchange.

The report will be considered by the clearing-house committee and its recom­
mendation acted upon by the full membership at a meeting to be held in the
clearing house on December 4 at 2 p. m.

Chamber of Commerce of the United States of America.

Riggs Building,
Washington, D. C., October 18, 1913.

Hon. Robert L. Owen,
Chairman Committee on Banking and Currency,
United States Senate, Washington, D. C.

Dear Senator Owen: Pursuant to my promise I herewith submit for the
record a complete tabulation of the referendum vote of this chamber upon the
report of its committee on currency and banking relative to the Owen-Glass
currency bill.

Very sincerely, yours,

Elliot F. Goodwin, Secretary.
Referendum No. 4.

Statement of vote on the question of approval of the report of the standing committee on currency and banking of the Chamber of Commerce of the United States of America upon the Owen-Glass currency bill (S. 2639, H. R. 6454, Sixty-third Congress, first session).

[Question submitted Aug. 26, 1913; vote closed Oct. 10, 1913.]

(Thereupon, at 5.42 o'clock p.m., the committee adjourned to meet to-morrow, Wednesday, October 22, 1913, at 10.30 o'clock a.m.)
The committee assembled at 10.40 o'clock a. m.

Present: Senators O'Gorman (presiding), Hitchcock, Reed, Hollis, McLean, Nelson, Bristow, and Weeks.

Senator O'Gorman. Mr. Gilbert, you may resume where you left off last night.

STATEMENT OF ALEXANDER GILBERT—Resumed.

Mr. Gilbert. The only part of my testimony which was not complete was that which dealt with the relations of the clearing house with four banks which afterwards went into liquidation. I did not yesterday feel that I could state clearly and definitely the dealings of the New York Clearing House with those banks, because the dates of the different borrowings with relation to the outbreak of the panic had escaped my mind entirely.

Senator Hollis. What year was that, please?

Mr. Gilbert. That was in 1907. After I got back to my hotel last evening I looked over my papers, and I found some memoranda there which refreshed my mind, so I got the thing pretty clearly in my mind.

By the by, before I go ahead with this I would like to correct my testimony of yesterday. I was asked when I was elected president of the clearing house, and I stated October, 1907. That was true, but I had first been elected president of the clearing house October, 1906, so that during the years 1906 and 1907 and until October, 1908, I was president of the clearing house, which covered the entire period of the panic and one year previous. That enables me to say this, that during the years 1906 and 1907, from October, 1906, to October, 1907, before the outbreak of the panic, there were four banks which were being very closely watched by the clearing-house committee.

Senator O'Gorman. You mean they were suspects?

Mr. Gilbert. They were suspects.

Senator Weeks. Were they members of the clearing-house association?

Mr. Gilbert. They were members of the clearing-house association.

Senator Nelson. Have you any objection to giving their names?

Mr. Gilbert. None whatever. They were the Mercantile, the Bank of North America, the Mechanics & Traders, and the Oriental.

Senator Nelson. Those were all banks—not trust companies.

Mr. Gilbert. They were banks.

Senator O'Gorman. All Federal banks?

Mr. Gilbert. No; the Mercantile was a national bank; the Oriental and the Mechanics & Traders were State banks; and the Bank of North America, I think, was a national bank—the National Bank of North America—yes. Two national banks and two State banks.

Senator O'Gorman. Will you state, briefly, why they were under suspicion?
Mr. Gilbert. The Mercantile Bank was under the Heinze influence. Heinze had obtained a control of the stock and elected himself president, and of course the bankers in the clearing house were very familiar with Heinze's operations, and they knew pretty well what kind of a banking administration he would be likely to give the Mercantile Bank.

The Bank of North America was under the Morse influence, and Morse was in various operations which made him one of the suspects. The Mechanics' & Traders' Bank had been captured by a man named Sullivan, who owned a chain of banks in Brooklyn under the leadership of the Union Bank in Brooklyn. He had, I think, 20 or 22 branch banks in Brooklyn, and he had acquired control of the Mechanics' & Traders' Bank, because the Mechanics' & Traders' Bank was a clearing-house bank in New York, and he wanted to get a direct connection with the clearing house, and Sullivan became a suspect.

Senator O'Gorman. Is he in prison now?
Mr. Gilbert. Yes; he is in prison now.

Senator O'Gorman. He was afterwards indicted.

Senator Nelson. And imprisoned?
Mr. Gilbert. He is in prison now; yes. The Oriental Bank had a change of management. I think it was a southern representation that got control of the Oriental Bank, and from a number of their practices which the clearing house became cognizant of they thought it their duty to watch the Oriental, although the Oriental had had a long and honorable record.

Senator O'Gorman. It subsequently liquidated and paid everybody.
Mr. Gilbert. Yes; I think it did.

Senator O'Gorman. I was a judge in New York at the time, and there were certain proceedings that came before me affecting that bank, and I know they liquidated and paid everybody.

Mr. Gilbert. Yes; I think you are right. Three or four days before the outbreak of the panic these small banks—one or all of them—applied to the clearing house for help. That is, before the outbreak of the panic.

Senator Nelson. Applied to the clearing house for help?

Mr. Gilbert. Yes. And the clearing house at that time, when they applied, had not issued clearing-house certificates. Please take note of this; I want to emphasize this to show you that there was no desire on the part of any member of the clearing house or the administration of the clearing house to crush any of these banks, because as soon as they applied for help, although we had not issued clearing-house certificates, we formed a syndicate among ourselves to advance them the money they wanted.

Senator Hollis. Was that not partly, at least, a measure of self-protection?

Mr. Gilbert. Certainly.

Senator Hollis. Because as soon as you get a hole through a dam the whole dam is apt to go.

Mr. Gilbert. Certainly. We wanted to save the situation, and we simply said to the members who were gathered around the advisory board of the clearing-house committee: "How much will you lend
this bank?" "How much will you?" "How much will you?" to each of the members present, and we contributed to it and raised a fund to help these banks before we knew we were going to issue clearing-house certificates. I mention that to show you the banks appreciated the situation, and there was no desire on the part of any member to crush out any other bank because of competition. We wanted to save the situation.

Senator O'Gorman. You looked on the management of those small banks with distrust?

Mr. Gilbert. We did, and yet we wanted to help them. We wanted to sustain them if we could.

Senator Nelson. When you started to help them what then took place?

Mr. Gilbert. Let me read here, which is evidently a statement by some member of the clearing house, because it details very correctly the situation. It is headed, "A Tale of Two Banks." It was published in the Boston Transcript.

Senator O'Gorman. If you have no objections, Mr. Gilbert, we will have the stenographer place that in the report.

Mr. Gilbert. I will not read it all, but let me read first the case of the Mechanics & Traders Bank.

Senator Nelson. That is the Heinze bank?

Mr. Gilbert. No; the Sullivan bank. I stated yesterday in my testimony, so far as the Mercantile Bank was concerned, after they applied for help we made an examination of the Mercantile Bank and that resulted in the Sunday morning interview and our asking the resignation of the officers and directors so, that a new administration could take charge and continue the bank. The Mercantile Bank was assisted promptly and they worked out all right and Mr. Morse and his influence resigned from the bank, and we eliminated that influence, which was a very good piece of work so far as the Mercantile was concerned, because the Mercantile was shortly relieved of its troubles and put on its feet and worked out splendidly.

Senator Weeks. Mr. Morse was not an officer in the Mercantile, was he?

Mr. Gilbert. No; he was one of the directors, but Heinze was the president.

Senator Weeks. Are you quite sure about that? My recollection was the same as Senator O'Gorman's that Mr. O'Brien was the president. Are you sure of that?

Mr. Gilbert. No; Mr. Heinze was president.

Senator O'Gorman. He may have been the vice president.

Mr. Gilbert. That is right.

Senator O'Gorman. He had had a long Mercantile career and association in the house of John Claffin. I think he had been invited to go into the banking business by Mr. Morse perhaps five, six, or seven years before the failure.

Mr. Gilbert. Yes; I think you are right about that. Now, with regard to the Mechanics & Traders, between October 18 and 25 the banks of the clearing house made cash loans to the Mechanics & Traders Bank of $2,220,000. This was converted into clearing house loan certificates October 26, 1907. As soon as the clearing house issued the clearing-house certificates then the loans which had been
made to the bank by various other member banks were retired and the clearing-house certificates took their place. These loans were made on the assurances of Chief Examiner M. W. Hutchins of the State banking department that the bank was solvent. The aggregate issue amounted to $4,520,000.

Senator Weeks. To that bank?
Mr. Gilbert. To that bank.

Senator Nelson. Clearing-house certificates?
Mr. Gilbert. Clearing-house certificates.

Senator Weeks. What was the capital of that bank?
Mr. Gilbert. I think the capital of the Mechanics & Traders was $2,000,000.

Senator Weeks. And how much in deposits did they have?
Mr. Gilbert. Well, it was not a large bank. The deposits were not, I think, over $10,000,000 to $15,000,000.

Senator Weeks. Then, in all probability their loans were not smaller than, say, seven or eight millions?
Mr. Gilbert. Probably not. Of course, I have not the definite data before me and I could not speak intelligently.

Senator Weeks. In other words, they must have taken out clearing-house certificates equal to about half of their loans?
Mr. Gilbert. I think they took out pretty nearly as much as they had negotiable assets to borrow upon; that is, good liquid assets to borrow upon. That was my impression. The aggregate issue amounted to $4,520,000, and these were outstanding 137 days. That is nearly five months.

January 30, 1908, this bank was placed in the hands of the superintendent of the State banking department. The charge was made and reiterated before the Pujo committee that had the clearing-house loan committee extended credit the bank would have been saved. The inference intended was, of course, that credit could and should have been extended, and that if it was not, the reason was that two representatives of the Corn Exchange Bank, who also were members of the clearing-house committee, had used their influence to put a competitor out of business. That was the statement made to the committee.

Senator Nelson. The Pujo committee?
Mr. Gilbert. It is true that the clearing-house committee demanded more and a different kind of collateral from the Mechanics & Traders Bank, and that when this was not forthcoming it refused to extend credit. The collateral back of the loans had a face value of some $6,873,000, but before the receivers of the Mechanics & Traders Bank paid off the balance due the clearing house, $2,100,000, the committee had begun to collect $3,447,000 of the collateral and had received $1,000,000 in cash; the balance went to protest. The point is that the result of the attempt to collect on the collateral clearly demonstrated that the loan committee of the clearing house exercised good judgment in confining their advances to the proportion they did. This bank had from October 26, 1907, to January 30, 1908, to adjust its affairs. It wanted more money, but at no time could offer acceptable collateral in addition.

The point was made by Mr. Untermyer, in questioning witnesses before the Pujo committee, that the Metropolitan Bank of New York
had taken over the Mechanics & Traders and paid off all its de-
opositors in full, thus, according to the intimations of Mr. Unter-
myer, confuting the judgment of the clearing-house committee that
the bank was in danger when further loans were refused.

But the testimony was not permitted to go far enough to tell all
the facts in the case. It is true that the Metropolitan took over
the New York branches of the Mechanics & Traders and paid off the
depositors, but it is also true that the bank was allowed to reopen
by the State banking department on the deferred-payment plan
under the title of the Union Bank of Brooklyn.

Senator O'Gorman. Would you prefer to read it all?

Mr. Gilbert. Yes; I would like to have this go on the record.

Senator O'Gorman. The only reason that justifies my making this
suggestion is that there are two witnesses who were here yesterday,
and they were promised a hearing this morning.

Senator Hollis. I do not see the exact bearing of this.

Senator O'Gorman. It was in answer to some inquiries made last
night, particularly by Senator Reed, who is not here to get the benefit
of it, as to how the panic of 1907 began in New York.

Mr. Gilbert. I am exceedingly anxious that the Senator should
understand this, because the New York banks have been placed in a
wrong position in regard to this.

(At this point Senator Reed entered the room.)

Senator O'Gorman. Senator, Mr. Gilbert is giving at some length
an explanation as to the panic of 1907.

Mr. Gilbert. As I was saying, the Mechanics & Traders' was per-
mitted to reopen and go into business again under the title of the
Union Bank of Brooklyn. After Sullivan, who was at the head of
the Union Bank of Brooklyn, got control of the Mechanics & Traders,
and when the Mechanics & Traders' went out of existence he simply
got permission to go ahead under his old banking affiliations in
Brooklyn. I was just referring to the failure of the Mechanics &
Traders' Bank, because the statement was made that because of the
refusal of the clearing-house committee in New York to extend it
additional credit, it was compelled to go to the wall, whereas if credit
had been extended it could have been saved. That is all in the record
now, and I will go on.

The testimony was not permitted to go far enough to tell all the
facts in the case. It is true that the Metropolitan took over the New
York branches of the Mechanics & Traders' and paid off the de-
opositors, but it is also true that the bank was allowed to reopen by
the State banking department, on the deferred-payment plan, under
the title of the Union Bank of Brooklyn. This occurred in October,
1908. This Union Bank, successor to the Mechanics & Traders', closed
its doors April 4, 1910, and up to date it has not paid one cent to its
depositors.

The books showed that a large portion of the unliquidated assets
of the Union Bank were in the Mechanics & Traders' Bank when
that bank closed January 30, 1908. In other words, the Union Bank
allowed deposits of money to be used to pay off all deposits. Now, the
probabilities are said to be that after a long wait the Union Bank
depositors will receive dividends not to exceed 50 per cent. The
former president of the Mechanics & Traders', David J. Sullivan,
and W. C. Damron, a director of the same bank, are serving terms in the State prison for offenses growing out of the situation described.

Senator O'Gorman. Who is the director?

Mr. Gilbert. William C. Damron, a director.

Senator O'Gorman. A Brooklyn banker?

Mr. Gilbert. Yes. Now, that, it seems to me, ought to pretty fully clear up the situation, as far as the Mechanics & Traders' Bank is concerned.

Senator O'Gorman. When did the Carnegie Trust Co. go under?

That is more recent?

Mr. Gilbert. It is more recent; yes.

Senator Reed. So the sum of it then was that this bank was actually in an insolvent condition?

Mr. Gilbert. To state it briefly, the bank borrowed money before the clearing house commenced to issue clearing-house certificates.

Senator Nelson. It borrowed of the clearing-house members.

Mr. Gilbert. Yes; they borrowed of the clearing-house members, and after the clearing-house certificates were issued they paid off those loans with the clearing-house certificates, and the clearing house loaned them up to the extent of four or five millions of dollars, which was all they had collateral to offer for, and when they wanted more the clearing house refused to give it to them.

Senator Reed. As I say, the sum of it all is that the clearing house supported them to the full extent of their good assets, and the bank was actually insolvent, and the clearing house, having gone to the point where it could go no further without danger of losing, stopped advancing money?

Mr. Gilbert. That is it, exactly.

Senator Weeks. Now, Mr. Gilbert, the real point at issue, I think, in all this controversy is whether the New York Clearing House is preventing banks coming into the clearing house on account of a desire to prevent them from developing into active competitors, or whether it is using its strength and power to destroy banks that it wants to get rid of because they were competitors. When you boil all this controversy down about the New York Clearing House I think it is covered in that statement. You have had long experience with the clearing house, and I think if you will state to the committee whether within your knowledge there has been any case where a bank has been refused membership in it or has been forced out, if it were solvent and serving the public, I believe you will cover the whole question.

Mr. Gilbert. Well, of course, Mr. Weeks, you, as a member of banking interests in Boston, know that the clearing house has its rules and regulations with regard to the qualifications for membership, etc. A bank to enter the New York Clearing House must have a capital of $500,000 and a reasonable surplus; and before being admitted to membership they are examined very carefully—very rigidly, I will say—with reference to their methods of doing business, the character of their assets, and their banking habits. I never have known of any disposition on the part of members of the clearing house to force out or to deny membership to any bank that was worthy of membership. As an illustration of that—well, I will let
the statement stand there. I have never seen any disposition what­ever on the part of the membership of the New York Clearing House to bar from membership any bank that was really eligible for mem­bership; and any bank that is not eligible for membership really has the facilities of the clearing house through its ability to make negotiations with member banks to clear for them.

Senator O'GORMAN. Have you ever known a case where business rivalry or jealousy has been sufficient to keep out a bank that wanted to come in the clearing house?

Mr. GILBERT. I never have known a single case, Senator; I can not recall a single case.

Senator O'GORMAN. Whatever may have been said with regard to the banking interests of New York toward Mr. Morse and Mr. Heinze and their banking activities, the objection of the clearing house to them was due to their methods rather than any other cause.

Mr. GILBERT. Entirely.

Senator O'GORMAN. I think that covers that situation. Is there any other question?

Senator HITCHCOCK. I did not have the pleasure of hearing Mr. Gilbert yesterday afternoon, and I would like to ask a few ques­tions. Suppose, Mr. Gilbert, under this new system, when it is in vogue——

Senator O'GORMAN (interposing). Do you know who the writer of the article is?

Mr. GILBERT. I do not.

Senator O'GORMAN. But it correctly states the facts?

Mr. GILBERT. It correctly states the facts as I know them.

(The article referred to by Mr. Gilbert will be found at the con­clusion of his statement.)

Senator HITCHCOCK. I wanted to propose a hypothetical condition to Mr. Gilbert and see what course would be adopted. If this new system were in practice which is proposed in this bill, suppose there should follow a condition when there should be a considerable deficit in our national revenues. Suppose that should be accompanied, as it might be and has been in the past, by a condition of fear in the business world, and railroads going into the hands of receivers, and a considerable exportation of gold, and such a stringency in the bank­ing world as to produce runs on the banks of the country or some of the banks here and there, with possibly an occasional bank failure, say, of a bank not in the system. What method would then be adopted by the board of control to check such a condition or the con­ditions that would arise under those circumstances?

Mr. GILBERT. That would be a very serious situation. It is really, I think, an extreme case. I think it would tax the regional banks to their utmost. Their discounting facilities would have to be exer­cised to their fullest extent and the issue of bank notes would have to be permitted up to the fullest extent of its reserve.

Senator HITCHCOCK. Now, then, suppose they made a great issue of national currency under those circumstances. Would not that intensify the exportation of gold?

Mr. GILBERT. It probably would, if they had to go beyond their gold-reserve limit. If they could keep up their gold reserve, if they could keep it from going below $33\frac{3}{4}$ per cent, it might not have that effect.
Senator Hitchcock. Would it not be very hard to maintain the gold reserve while there was a constant demand for more currency?

Mr. Gilbert. I think it would.

Senator Hitchcock. And the more the currency expanded the more easily it would flow abroad?

Mr. Gilbert. I think it would.

Senator O'Gorman. Do you know of any way, under those conditions, to discourage or prevent the exportation of gold? Could it be stopped?

Mr. Gilbert. In the panic of 1907, when currency had been hoarded and a premium of 4 or 5 per cent existed on currency, the banks imported gold, but they were only able to import gold through the issuance of clearing-house certificates. You say, How did they do it through the issuance of clearing-house certificates? We could use our clearing-house certificates for the settlement of our balances in the clearing house. We could arrange through our large foreign-exchange houses to import gold for us. We were paying them for currency and a premium for doing it, but we were paying them in our checks, which were settled in the New York Clearing House, and our balances in the New York Clearing House were settled, not with money but with our clearing-house certificates. So we could buy gold or we could import gold from abroad so long as there were foreign-exchange balances abroad to draw against.

Senator O'Gorman. Would not the conditions that would permit you to import gold also permit you to retain the gold in this country?

Mr. Gilbert. That would depend largely upon the condition of the exchange market.

Senator O'Gorman. In that connection, I want to make this observation. It has been suggested here at some time during these hearings that we could control the gold in our own country, or discourage its export, by placing a tax on the exportation of gold. What would be the effect of such a practice? Would it discourage the importation of gold?

Mr. Gilbert. I think it would have a disastrous effect on foreign trade as well as gold imports.

Senator O'Gorman. You think it would?

Mr. Gilbert. I think it would. I think it would be difficult to prevent by tax the outflow of gold.

Senator Reed. It would be a danger signal—

Mr. Gilbert (interposing). A dangerous thing to do; it would be an interference with the natural laws of trade.

Senator Reed. What do you actually pay for this gold? Say you want $10,000,000 of gold from Europe. Of course, you have to pay for it. What do you pay for it? What do you pay for it with? Bills of exchange or what?

Mr. Gilbert. If we want $100,000,000 of gold from Europe we have to buy foreign exchange; we have to arrange with a foreign exchange house to import the gold for us.

Senator Reed. How do you pay that foreign exchange house?

Mr. Gilbert. We pay the foreign exchange house in New York that imports the gold in check drawn against funds here which covers the gold, with interest, shipping charges, and commission added. The balances abroad accumulate just in proportion to the volume of
our export commodities more or less. If we have a balance abroad we can buy exchange just as we can buy any other commodity.

Senator Reed. I was assuming that the balance of trade was against us, and, of course, there would be a balance abroad then, but it would probably be small——

Mr. Gilbert (interposing). Then your balances must be constituted in some other way, either through borrowings abroad, or finance bills——

Senator Reed (interposing). What do you include in finance bills in this sense?

Mr. Gilbert. Well, if a bank wants to borrow a half million dollars abroad for immediate use it would, through a foreign exchange house, sell foreign exchange.

Senator O'Gorman. Where will it get the foreign exchange; will they get it in the market in the first place?

Mr. Gilbert. No; it will create foreign exchange by drawing on a foreign bank or banking house through its agent in New York and depositing securities with the New York agent. This draft is indorsed by the New York agent and forwarded to the foreign bank or banker for acceptance. When accepted it becomes a prime bankers' bill, eligible for rediscount or sale in the open market abroad. These drafts are generally drawn for 60 or 90 days and are cashed by the New York agent at the prevailing market price of exchange, less the agent's commission. When due they are payable in sight exchange. This is the modus operandi of borrowing on finance bills.

Senator Reed. Just to get that down in A, B, C style, if your bank wanted $5,000,000 of gold you would first try to ascertain whether there were balances over there that some of your correspondents or people you were in relations with could draw against?

Mr. Gilbert. If we wanted the gold, we would have to import it through a foreign exchange house, either by negotiating a loan and depositing securities against it or by paying cash for it in New York or by buying foreign exchange and using it abroad. If we wanted money for immediate use, we could arrange to sell foreign exchange in this market, as I have already explained.

Senator O'Gorman. To sell or to buy?

Mr. Gilbert. To sell. They practically sell it in this market and give us the proceeds.

Senator Reed. You would then make a draft upon whom?

Mr. Gilbert. Upon the foreign exchange house with which we were dealing.

Senator Reed. And this local exchange house would indorse the draft?

Mr. Gilbert. Yes; and we put up the securities.

Senator Reed. And you would put up bonds and stock, etc.?

Mr. Gilbert. Or commercial paper—any acceptable security.

Senator Reed. Then, that draft having been indorsed in this way, it would be sent over to the agent of this foreign exchange house in London and he would take that draft to a bank or capitalist and sell it?

Mr. Gilbert. It would practically be sold in this market. They would buy it themselves, and they would give us the cash, and then they would send it to their agent for acceptance. If he wants to
hold it until it matures, well and good; but if he wants money over there, it is eligible for rediscount.

Senator Reed (interposing). They give you the gold?

Mr. Gilbert. Yes; if we should desire it.

Senator Reed. Very well. I merely wanted to get the details of that method.

Senator O'Gorman. Would you get the gold or the proceeds?

Mr. Gilbert. The draft, after it had been indorsed by our foreign exchange house—the one we were dealing with—would be practically sold in this market. That house might buy it themselves, and they would give us their check at once. We want the money at once. They sell that for us; we are selling it to them.

Senator O'Gorman. Now, you get a check, for what?

Mr. Gilbert. A check on their bank for currency—clearing-house money.

Senator Reed. How does that bring gold in?

Mr. Gilbert. They can arrange to give us the gold if we want it.

Senator Reed (interposing). They send it abroad and they bring the gold in?

Mr. Gilbert. If they want it; yes.

Senator O'Gorman. And adjust balances from time to time.

Mr. Gilbert. Yes.

Senator Hitchcock. Is it customary for the New York banks to keep balances in London?

Mr. Gilbert. Some of the larger banks do; those who deal largely in foreign exchange.

Senator O'Gorman. Of course, if there are certain large banking institutions, like Mr. Morgan's firm, that have large foreign connections?

Mr. Gilbert. Oh, yes; and there are banks like the City Bank and the Bank of Commerce and others who deal largely in foreign exchange and have balances on the other side.

Senator Hitchcock. They keep those balances simply for the purpose of accommodating their customers who have remittances to make to London?

Mr. Gilbert. Why, yes; they keep those balances to draw against.

Senator Hitchcock. Just as a western bank would keep a balance in New York, because western men must have New York exchange.

Mr. Gilbert. Yes; exactly.

Senator Hitchcock. So the only way in which a man in New York can get exchange on London is by buying it of New York concerns?

Mr. Gilbert. That is it.

Senator Hitchcock. And that compels New York concerns to keep balances in London?

Mr. Gilbert. Yes.

Senator Hitchcock. Now, do London banks keep balances in New York?

Mr. Gilbert. Not to any great extent.

Senator Hitchcock. How do people in London, then, make their remittances to New York for grain and cotton and such goods as America sells?

Mr. Gilbert. They would do it by buying foreign exchange, through foreign exchange bankers.
Senator Hitchcock. Then the London firm which sells them the exchange must have an account to draw against?

Mr. Gilbert. Of course.

Senator Hitchcock. So some of the London banks do keep balances in New York?

Mr. Gilbert. Of course. Suppose a merchant wants to settle a bill in New York. He goes to a foreign exchange banker there and buys a bill of exchange and sends it over here.

Senator Hitchcock. Well, a bill of exchange is simply an order on some one in New York, and that order can not be issued unless there is a credit there, can it?

Mr. Gilbert. Of course not.

Senator Hitchcock. So there must be balances kept in New York banks by European houses.

Senator O'Gorman. They might not be balances; they might be credits.

Mr. Gilbert. There are always debits and credits on both sides. Foreign exchange houses are constantly buying and selling exchange and adjusting balances by the shipment of exchange or gold.

Senator Hitchcock. Is there anywhere anything like a report as to the extent to which those balances exist?

Mr. Gilbert. I do not know of any.

Senator Hitchcock. We have, for instance, complete knowledge of the credits in New York belonging to the West, and we have knowledge of the credits in Chicago belonging to the West, and we have not any figures at all to show to what extent the New York houses have credits in London.

Mr. Gilbert. You see, this whole question resolves itself into this: It depends entirely upon the volume of exports and imports. A merchant abroad wants to pay for the importation of goods from this side. A country that is not exporting to this country, of course, would have no balances here to draw against, and consequently a country that has very small export relations with this country would probably have to settle its balance through London and send us London exchange.

Senator Hitchcock. Partly because London is a great buyer.

Mr. Gilbert. Yes; London always has balances to draw against on this side. The ability of one country to maintain balances to draw against on this side depends entirely upon its export and import business.

Senator Hitchcock. I want to revert again to the question I asked you, based on a hypothetical condition. I understand you to say that if the country should be afflicted as I pictured, if we should have a considerable exportation of gold to Europe, possibly by some perfectly legitimate method; if we should have runs on banks and uneasiness in the banking world and should have a deficit in our national revenues so that the Government would be drawing its funds out of these reserve banks in order to meet that deficit; if United States notes were being presented at the Treasury for gold, and gold certificates were being presented at the Treasury to procure gold, and gold exportations were in progress, and the reserve banks were met by a large demand from their member banks for rediscounts, and in order to grant those rediscounts they were compelled to call upon the Treasury for additional paper currency; and if that
additional paper currency were issued so that there would be an expansion of our currency, that very remedy would tend to intensify the exportation of gold?

Mr. Gilbert. It would tend to inflate things materially. So long as they demanded currency for their customers, of course they would have commercial paper to deposit with the Federal board agent for additional currency, but their gold reserve might be depleted; it might not be sufficient to maintain the volume they would have to carry. In that case they might have to borrow gold abroad. Frequently in a money panic England has to borrow of France, and they borrow on exchequer bonds or on commercial paper.

Senator Hitchcock. The difficulty about emitting an increased amount of paper currency is that it makes it easier for gold to leave the country, is it not?

Mr. Gilbert. Yes; that is the effect.

Senator Hitchcock. So the remedy they would be compelled to apply would really intensify one of the evils they were seeking to combat?

Mr. Gilbert. Yes; it would. The greater the volume of bank notes issued—-

Senator Nelson (interposing). But could not the discount fever, as I call it—the eagerness for excessive discounts—be checked by raising the discount rate to such a figure that it would not be possible to discount? Would not that be a restraining influence?

Senator Hitchcock. Senator, perhaps you have a misconception. I am not basing this increased issue of currency upon the idea that people are asking for an unusually large amount of credit at the member banks. They are not. But the member banks are embarrassed by demands for deposits, and in order to satisfy those demands they take paper which they already have to the reserve banks, have it discounted, and get the currency.

Senator Nelson. But the depositors are the member banks.

Senator Hitchcock. Yes: but it is the individual men and women who are drawing this money out that creates a demand on the member banks for currency, and it is in order to settle the demand of the member banks for currency that the reserve banks are compelled to discount commercial paper. It is because commercial paper is being turned into currency.

Senator Nelson. But suppose the discount rates are high, it can not be profitable.

Senator Hitchcock. That does not make any difference. The bank that has a run on it, a withdrawal of funds that are being taken out to be put into stockings, can not benefit matters much by raising the rate. It must go to the reserve bank to get the relief.

Senator Nelson. But the reserve bank, in issuing currency—-

Mr. Gilbert (interposing). Of course, that is a very extreme case, you know, and it is really a panicky condition that prevails.

Senator Hitchcock. That is what we want to provide against, and I am asking whether the remedy that is provided in such a case is really going to meet the situation.

Mr. Gilbert. When a panic prevails and is under full headway no ordinary safeguard can check it.

Senator O'Gorman. It is like a fever; it must run its course.
Mr. Gilbert. It must work itself out. It is like a disease in the system. You have lived at a riotous pace until you have disordered your system to such an extent you must have a fit of sickness before you can relieve yourself of that condition.

Senator Reed. Are we to understand, then, that there is no way of preventing these panics?

Mr. Gilbert. There is a way of preventing panics, but I am speaking now with reference to the case that Senator Hitchcock stated.

Senator O'Gorman. You wish to be understood, Mr. Gilbert, as saying that there is a way of preventing the conditions——

Mr. Gilbert (interposing). The conditions which lead up to panics.

Senator Reed. But if we take such a case as that stated in Senator Hitchcock's hypothetical question, which, I think, really involves a panic, then you think there is a day of reckoning and there has got to be trouble and disaster, and how it will work out depends upon the particular conditions of each case?

Mr. Gilbert. That is very true.

Senator Reed. Then, I understand, you think that with such a panicky condition given, neither this bill nor any other bill you can suggest would enable immediate relief to be given?

Mr. Gilbert. I do not know of any bill that would.

Senator Reed. You do not think the issuance of this paper money, even in very large volume, would end the panic?

Mr. Gilbert. No; not after it got started. In 1907 the issuance of clearing-house certificates stopped the panic immediately, as far as credit was concerned. It made it possible for the banks to accommodate their dealers and give them what they required for legitimate business purposes. Of course, no bank wanted to take out clearing-house certificates to a greater extent than was necessary, but they were all willing to take out a volume sufficient to accommodate the customers for their legitimate requirements. Before the issuance of clearing-house certificates, when a merchant went to his bank and said, “I want $10,000 or $15,000 to meet my immediate obligations,” the bank was compelled to say, “Now, you will have to go very easy with us, for we are below our reserve and we can not increase our loans and discounts.” But after the banks had decided to issue clearing-house certificates the banks could hypothecate their securities and obtain clearing-house certificates, and then they could extend to their customers accommodations for their legitimate requirements. The trouble was this—that there was a hoarding of currency. Currency, of course, is needed for certain things—for the payment of wages, for all our retail business operations, and for other things—and our manufacturers and those who required currency wanted currency, and they wanted gold to make their customhouse payments: but the hoarding of currency locked up not only the paper money but gold, and it was difficult to get that.

I came to Washington at that time. Senator Weeks probably remembers, because I went before his committee, and I suggested that they make an amendment to the banking act which would permit the New York banks, or the central reserve city banks, to deposit the clearing-house certificates with the controller and take out currency against those instead of being required to furnish United States
bonds—that the term “other securities” would embrace clearing-house certificates. Do you remember?

Senator Weeks. I think I do.

Mr. Gilbert. Now, if we could have been granted that facility at that time we could have broken the premium on currency in 10 days, because the very moment we could advertise the fact that the Government was going to receive our clearing-house certificates and issue currency against them—

Senator O'Gorman (interposing). Do you understand there is any legal difficulty in the way of the Treasury accepting those clearing-house certificates?

Mr. Gilbert. I think I had a talk with Senator Weeks at that time. I wrote an amendment and presented it to his committee, and I think Senator Weeks told me afterwards “the difficulty is, we can not get such an act through Congress.”

Senator O'Gorman. As a matter of law, you probably would not be required to put it through Congress, because under a recent interpretation of the same law by the same administration it will be in the discretion of the Secretary to accept that as adequate security.

Senator Reed. Senator, is there not a basis there for misapprehension? Mr. McAdoo deposited the moneys of the United States in various banks upon that kind of security. Mr. McAdoo did not issue new money.

Senator Reed. Now, I confess that I am not clear as to how the issuance of the clearing-house certificates between the banks enables the banks to extend accommodation to their customers.

Mr. Gilbert. I will try to make that clear. Senator Reed. For instance, John Wanamaker wants to borrow $5,000,000 for the purpose of meeting obligations, the notes of his firm that are out floating around the country and that are maturing. Now, he comes to your bank and says, “I want $5,000,000.” The currency of the country is tied up and we have the condition of 1907. Take that condition. How does the issuance of clearing-house certificates enable your bank to extend to him $5,000,000 of credit and give him the money to actually pay that $5,000,000 of debt?

Mr. Gilbert. I will try to make that clear to you. The necessity for maintaining a lawful money reserve in gold and lawful money is largely to meet our payments day by day in settlement of our balances with the clearing house. All the checks that are drawn against us and the notes that are maturing that are payable at our bank come to us, as a rule, from the clearing house. We take to the clearing house every day at 10 o'clock all the checks of the various banks, all the items drawn on the various banks in New York. We take them to the clearing house, and we receive all that are drawn against us, and we settle the balance.

Senator Reed. And you may transact $5,000,000 worth of business and actually not use $1,000 of cash?

Mr. Gilbert. Exactly.

Senator Reed. Because one offsets the other?

Mr. Gilbert. We strike a balance. But when there comes a time when we have not the money to use for the settlement of our clear-
ing-house balances—because they must be settled in gold or lawful money—then we have to provide some other means of settlement, and so long as we can provide some other means of settling our balances at the clearing house every day we can go on making loans as usual.

Senator Reed. But they do not pay this money out.

Mr. Gilbert. No; we pay it by settling the balances every day.

Senator O'Gorman. How do you settle them? Just by adjusting the debit and credit?

Mr. Gilbert. Just by adjusting the debit and credit. When we make a loan it is not drawn out, Senator, in cash. It is drawn against us in a check and it comes against us into the clearing house the next day, and it is offset by the items we send to the clearing house for settlement, which are checks on other banks deposited with us.

Senator O'Gorman. How do you make the difference good—by cashier's checks?

Mr. Gilbert. No; by taking the actual gold there.

Senator Hitchcock. Until you begin issuing clearing-house certificates.

Senator Reed. I must ask your pardon for my apparent dullness, but you New Yorkers must have some charity for Senator Bristow and myself. Now, here is $5,000,000 that John Wanamaker owes to 100 men scattered over the country. He must pay them $5,000,000 on notes that mature on the first day of July. That money has to be taken out of New York and sent to these people. In the ordinary course of business he would come to you; he would give you his note for $5,000,000; you would give him a credit upon your books for $5,000,000. He would immediately draw his checks for $5,000,000 and get drafts and send those drafts out to these different people to take up his notes. The drafts would come back, and the money would have to be paid.

Mr. Gilbert. Yes. Now, they would all come back through the New York Clearing House. If they were all on our bank they would come back to us from time to time through the New York Clearing House. Every day at the New York Clearing House we receive everything that is drawn against us, and we take to the New York Clearing House everything we receive from our customers drawn on other banks through the New York Clearing House, and we offset the debits and credits by settling the balance.

Senator Reed. Now, there has actually been sent from New York $5,000,000. Does not that depreciate the aggregate of the money that the New York banks would have by that amount, although you use the clearing-house certificates?

Mr. Gilbert. It would, if we were not getting money every day from other sources.

Senator Reed. If I understand you, then, at the same time this transaction goes on and that money is going out of your bank in this way there is another bank which collects in—

Mr. Gilbert (interposing). It goes to some other banks, of course.

Senator Reed. Collecting in money—

Mr. Gilbert (interposing). Yes.

Senator Reed. What you really do by the clearing-house arrangement is to unite all the banks into one general scheme whereby the
debts and credits on the whole offset each other; and there must be—if you maintain your clearing-house stability and do not drain the whole system of banks—a stream of money or credits coming in to equalize the stream that is going out?

Mr. Gilbert. Exactly. The balance required to settle the whole every day at the New York Clearing House is a very small percentage of the whole.

Mr. Gilbert. Exactly, and the balance required to sustain the whole every day at the New York Clearing House is a very small percentage of the whole.

Senator Reed. By this system checks and drafts all take the place of money for the time being, so that you can have transactions aggregating, perhaps, $50,000,000 or $60,000,000 carried on through checks and drafts, and perhaps there will not be $20,000 of actual cash in the transaction to digest the balance?

Mr. Gilbert. That is the theory exactly.

Senator Reed. And the fact of the clearing-house certificate being issued carries that balance from day to day, and what you lack to supply that to-day in the way of cash the clearing-house certificate is given, and to-morrow the balance being the other way, you use that certificate and wipe it out?

Mr. Gilbert. That is it exactly. When we have not the money to supply the balance we issue clearing-house certificates and use those.

Senator Reed. It looks a good deal like the miracle of the loaves and fishes, but I guess you make it work.

Senator Hitchcock. That is all right when conditions are normal.

Mr. Gilbert. That is when conditions are abnormal, Senator.

Senator Hitchcock. Suppose rumors get afloat that a certain big bank is in trouble, and a run starts on that bank and some of the depositors go and demand their cash and others write their checks for the amount of their balances and deposit those checks in other banks, and the result is such a tremendous flow of checks upon that bank that they much more than offset the checks which it receives on other banks, so that that bank is not able to meet its clearing-house balance. Then the question arises whether the clearing house will issue certificates or give the bank credit.

Mr. Gilbert. The general rule would be for the members of the clearing house to protect that bank. They would examine that bank to see if it was in a solvent condition.

Senator Hitchcock. What method of protection can they adopt?

Mr. Gilbert. Loaning it money to meet the balances at the clearing house.

Senator Hitchcock. Rediscout its paper?

Mr. Gilbert. Yes; rediscout its paper.

Senator Hitchcock. Now, I want to ask you this question: Suppose after this bill is in effect it becomes necessary for the Federal board to exercise one of its powers and nominally to suspend one of the Federal reserve banks for violating any of the provisions of this act. The Federal reserve bank is required to keep a reserve of 33\(\frac{1}{3}\)% per cent against its notes and its deposits. Suppose its reserves, in spite of its efforts, fell to 2\(\frac{1}{2}\)% per cent and the board should suspend that reserve bank and appoint a receiver. What would the effect of that action be?
Mr. Gilbert. The effect of that action upon the district represented by the Federal reserve bank would be very serious.
Senator Reed. Would it not be so on the whole system?
Senator Hitchcock. There would be several hundred banks in the whole region which would suddenly have their reserves tied up?
Mr. Gilbert. Their rediscount privileges suspended.
Senator Hitchcock. Their rediscount privileges suspended. What would they do for rediscount?
Mr. Gilbert. They would have to make arrangements elsewhere.
Senator Hitchcock. No reserve bank could rediscount their paper under this bill?
Mr. Gilbert. No.
Senator Hitchcock. Is not that a serious possibility?
Mr. Gilbert. It would produce a serious condition.
Senator Hollis. It is a very serious possibility when a man owes money and can not pay it.
Senator Reed. Is there not a great difference between failure of a bank of this character, where there are some 600 or 700 or possibly 2,000 banks in a region, the stockholders in which all have their reserves in the one bank, and that one bank has issued a large amount of circulating notes, and, as Senator Hitchcock has put in his hypothesis, they have not been able to maintain their gold reserves, and that is the only bank of reserve for all the 600 or 700 or 2,000 or 3,000 banks, and you close the doors of that bank. What will happen to those other banks?
Senator Hollis. My point is that that is exactly what would happen if you assume that the Bank of England, or the Bank of France, or the Imperial Bank of Germany—if such a thing should happen there it would not mean a disaster.
Senator Reed. I am not contrasting them with the Bank of England.
Senator Hollis. Because the Bank of England would have a reserve.
Senator Reed. This bill, put into operation and a condition assumed as Senator Hitchcock has stated in his question, is a very different proposition from that which would occur now, and I want to contrast the proposed situation with the present situation. At the present time the banks do not have their reserves in any one bank. They may be in many banks, and in fact are in many banks. In the second place, they do not have any common stock ownership. Their capital is unimpaired. They act as integers, each bank. Each bank is a thing by itself, and, as a matter of fact, in the last panic, the majority of the strictly country banks—I do not refer to the legal definition of country banks, but the small banks out in the country districts—never closed their doors and never restricted payments, because they were independent banks. We are asked to leave that system and go into a new system, and it is very pertinent to know what the dangers are, as well as the advantages, and I confess I am greatly interested.
Senator Hitchcock. I think it is one of the defects of the bill that the spectacle is presented of one of these great reserve banks being suspended and in the hands of a receiver, probably because it is insolvent. It has then a great many stockholding banks whose stock would be impaired, and it has a great many stockholding banks
whose reserves would be impounded, and it is a clearing house for a vast region which is practically paralyzed for the time being, and it seems to me there may be a condition involving a possibility of a great dislocation of commerce, with nothing provided to be done under the circumstances.

Senator Hollis. My point was that any system that can be conceived by man can be supposed to be in a condition where it is hopeless. I can not assume a condition that would——

Senator Hitchcock (interposing). Do you not think, if such a condition should arise, the bill should contain a provision as to what should be done. Are we to have a financial desert and no provision for anything which may be done?

Senator Hollis. What I mean is that you can not build up and construct a system concerning which you can not also assume that it may break down.

Mr. Gilbert. Let me say this: The men who framed the present national banking system were fully as wise, in their day and generation, as the men who are trying to legislate for a financial system to-day. They thought over this question of reserves and mobilization of reserves a long time before they adopted that bill. They did not do it without knowledge. It is not true that under this system the reserves of the banks are scattered over the country in a thousand and one places. It never has been true. That has been one of the mis-statements which has been accepted and considered as true in all the discussion of this currency question.

What did they do? They divided the banks of the country into three groups—the country banks, the reserve city banks, and the central-reserve city banks. They said the country banks shall carry 15 per cent reserve, three-fifths of which may be on deposit in a reserve city bank. They said the reserve city bank should carry 25 per cent reserve, one-half of which should be on deposit with a central-reserve city bank, and the central-reserve city bank should carry 25 per cent cash reserve in its vault. The tendency has been for the reserves of the country to grow steadily toward the central-reserve cities, so that the central-reserve cities, and particularly New York—the central-reserve cities, we will say, are the banks of rediscount for the other banks of the country, the country banks and the reserve city banks.

Now, that provided for a simple and natural flow of the reserves of the cities toward a point where they would naturally flow in harmony with the natural trend of business.

Senator Hitchcock. Let me go on a little further. Suppose such a condition should arise so that the Federal reserve board felt required, under the terms of this bill, to suspend a great reserve bank with, say, 2,000 member banks and a mass of reserve deposits and a great deal of currency outstanding, subject to presentation, and a receiver were appointed, as provided for in this bill. That receiver could not go on and discount paper, could he? Suppose the bank is put in the hands of a receiver, could he go on and discount paper?

Mr. Gilbert. Not at all, unless provision is made by law to meet the emergency——

Senator Hitchcock (interposing). As it is now, when a bank goes into the hands of a receiver, that stops the operations of the bank?

Mr. Gilbert. Nothing can be paid out.
Senator Hitchcock. It must be liquidated. Do you think it is a wise provision to allow such a thing to happen?

Mr. Gilbert. I do not.

Senator Hitchcock. It seems to me that is one of the serious defects.

Senator Reed. What can we do to remedy it?

Senator Nelson. If you will pardon me for interrupting you, the only way you could do that is to provide that all of the assets of the bank put in liquidation should be put into one of the other live regional banks, and let that live regional bank carry on the balance of the work. That is the only way you could do it. You would have to provide the machinery.

For instance, if we had five regional banks, and one of them should suspend or be put in liquidation, the only way you could get immediate relief would be for it to turn its assets into another bank for payment.

Senator Reed. How would it be to have the Secretary of the Treasury take hold of it and proceed to do very much as is done now; instead of closing its doors, as the bank examiner might do now, that they proceed immediately to discharge its obligations?

Mr. Gilbert. How would it do to provide that the Federal reserve board should take charge of it?

Senator Hitchcock. It might, under its receivership, if it were provided for.

Senator Reed. Now, I want to suggest, in this connection, a thing that has been in my mind for some time. I am not referring to bank guaranties, but I am asking you if it is not wise for the income of these banks to be so arranged that there is some surplus income, and that income to be set aside and held in the Federal Treasury in some special fund for the purpose of strengthening the whole banking system, retiring the debts of the Government, possibly, in part, to have a fund to make good just such a situation as this, or to make good any failed member bank, so that depositors could be paid?

I understand there is in Canada a system by which the banks pay a voluntary tribute into a fund, so that if any bank closes its doors the depositors at once get their money.

Mr. Gilbert. That is to protect the circulation?

Senator Reed. That is to protect the circulation. Why not extend it to the protection, actually, of depositors?

Mr. Gilbert. I never believed in the principle of guaranteeing deposits.

Senator Reed. I am not speaking about an absolute guaranty; I am speaking about creating a fund in this way that could be used for that purpose. There is a difference, of course, between paying, so far as the fund might go, and absolutely guaranteeing them.

Mr. Gilbert. I think the whole thing suggests this: How unwise it would be to undertake to force this measure through hastily. It requires a great deal of careful deliberation. There are a number of problems that will be discovered in this bill that you have not yet discovered. You have been wrestling with this question for some time. You have heard the views of numerous people. You do not understand it. You simply understand the surface features of the bill. We do not know how it will work after it is set up as a piece of machinery, and you have got to carefully weigh this thing, to get
all the expert advice on the subject that you can, in order to help you to solve all these problems which now perplex you, and have them worked out, so that you may determine beforehand how it will be necessary to perfect this machinery before setting it up into practical operation, because if it is not right when it is set up, it may be very annoying or may be very disadvantageous to the business of the country.

Senator Reed. But, in view of the fact that we need a house, and we are displeased with the whole plan, do you not think we ought to build the house and then let the architects pass on it afterwards and find out whether it will stand up?

Mr. Gilbert. I think this: I think that time is not an essential element. I think that the old system is working well now, and there are no portents of ill in the financial skies. I think we can run along with the present system for a number of years yet. There is no excessive speculation, no panicky conditions. The country is in excellent condition in a business way, and I think it will pay you gentlemen, and I think it will pay the whole country, to take all the time that is necessary to work this out and reduce it to its most perfect state before substituting an entirely new system for this old one.

Senator Reed. Referring to the proposition that was put to you in the form of several questions, but which remains as a proposition, as far as I am concerned, and I think I speak for the committee, you say you can not answer that now offhand?

Mr. Gilbert. No.

Senator Reed. I recognize the fact that a question of that kind ought not to be answered offhand, and is not answered offhand by thoughtful men. Will you, after you return home, if you think of a possible solution, suggest it to us in writing?

Mr. Gilbert. I will. If you will reduce to writing several of these questions and send them to me, I will give it my most thoughtful consideration, and give you the benefit of my conclusions.

I am just as anxious as you are to help solve this problem and to work it out. I would like to say—I feel, in order that you may understand my position—I want to say this, that I am thankful to you gentlemen for undertaking to try to give us a bank of rediscount. It is the one thing we have needed for years and years. Ever since the panic of 1873 we have felt the need of a bank of rediscount, and have never been able to find any way to get it, and we are indebted to you for trying to give it to us. In trying to give us that you introduce a number of other problems which require very careful consideration, and I will be only too glad to help you all I can in solving this problem.

Senator Reed. May I ask you a question on one other matter? I do not think Mr. Gilbert has touched on this matter. What method should be adopted to restrict the issuance of paper, so that a redundancy may not be created?

Mr. Gilbert. Do you mean bank notes?

Senator Reed. Bank notes; yes. I mean this circulation that is contemplated in the bill, whether we call them bank notes or Treasury notes. What checks are necessary in order to prevent inflation? Is it an arbitrary amount fixed by law? Is it the interest rate; and if so, how should that be applied; or is it a combination of both?
Mr. Gilbert. I should say the best thing to restrict the issuance of bank notes is the requirement that a very heavy gold reserve should be carried against it.

Senator Reed. Of course, that is an absolute restriction.

Mr. Gilbert. And that the paper rediscounted should be of such a quality that banks could not have it in overabundance. I do not think that in any other way it would be wise for you to undertake to restrict the issuance of it, because when a merchant rediscounts at a Federal reserve bank, he is entitled to draw against it, either as a bank credit or in currency—draw his check against it or draw bank notes—and he would not draw bank notes for any other purpose than for which he legitimately required them.

Senator Reed. Mr. Gilbert, I am absolutely unable to formulate in my mind, and I have not heard anybody else yet formulate a definition of commercial paper that to my mind means much. We can say that a note shall be commercial in its character, in accordance with the law merchant. We can say it must be signed by two people or three people, or any other number. We can say it must mature within a given period of time, and that before currency is issued against it, it must be indorsed. Of course, that system has many safeguards, the principal one being the fact that the member bank will probably not accept and indorse the paper unless the makers are supposed to be good. I do not know how you are going to go beyond that, unless you, following this idea of paper being self-liquidating, attach a bill of lading or a warehouse receipt to the paper, and everybody has said that will not do.

Mr. Gilbert. Oh, no; that would not do.

Senator Reed. So that we come to the question of a promissory note of a certain maturity. Is not that a certain way?

Mr. Gilbert. It grows out of a legitimate business transaction.

Senator Reed. How will you know it grows out of a legitimate business transaction? I am distressed about this situation. I wish somebody would give us a solution.

Let me suppose that you run a bank out in the State of Kansas, or in the city of New York, and you want some money. I come to you with a note signed by John Jones for $100,000, and I put it through your bank, and you take it down and have currency issued against it, putting up $33,000 of gold, and we get $100,000 of currency. Now, we have increased the circulation of the country $66,000 net. The other is there in gold, and that transaction can be indefinitely multiplied. On its face it is an absolute compliance with this bill. In times of speculation, in times of stress, I do not see how that is to be avoided.

Mr. Gilbert. Let me say, Senator, you are building up a situation that is not likely ever to exist.

In the first place, with regard to the overissuance of currency, it does not seem to me that there can possibly be any inflation of the currency if you will provide a 50 per cent gold reserve to be kept and maintained against the issuance of currency, and that the bills shall be payable in gold on presentation at any Federal reserve bank, and that no bank shall pay out bills of any other Federal reserve bank. It seems to me that that will undoubtedly take care of the situation, so far as inflation is concerned.
Senator Reed. I concede that when you raise the gold reserve higher, that, of course, is almost an absolute check.

Mr. Gilbert. In addition to that—

Senator Reed (interposing). But there is a great difference between 50 per cent and 33 1/3 per cent, is there not?

Mr. Gilbert. I know there is, and I think it ought to be 50. In addition to that, your trouble about the paper currency is not likely to exist, and for this reason:

In the first place you are discounting for your member bank, and your member bank is offering to you a short-time commercial paper which it has discounted for its customers. It may once in a while slip in a piece of paper that would not probably measure up to commercial paper, but he will endeavor to give you commercial paper, and when you rediscount that for him he is not going to ask you to give him currency against it; he is either going to rediscount it to make good his reserve, because he will not come to you for rediscount until his reserve requires it, and if he wants it for currency perhaps he will not want very much, because currency is not required very much. Ninety-five per cent of the business of the country is done on credit, and currency is an unimportant thing except as it may be wanted for the payment of wages, and to carry on our retail trade, and the merchant generally gives his notes, and does not want currency unless it is for small retail items. He draws his check, and the issuance of currency by the Federal reserve bank is not likely to be very heavy. Of course, in manufacturing towns currency may be required to pay wages, and they may draw currency for that purpose.

Senator Reed. Then your one idea is that the best check is a larger gold reserve, and if you make that 50 per cent you think that, in itself, fixes the line of safety?

Mr. Gilbert. I think that with the care that will be exercised about the quality of paper that is rediscounted and the making of these notes payable in gold by the banks of issue—the Federal reserve banks—and prohibiting one bank from paying out any but its own notes it will prevent inflation.

So far as the inflation of the currency is concerned, that does not trouble me at all in connection with this measure. It is the inflation of credits that I would fear more than the inflation of currency.

Senator Reed. Well, how would you prevent the inflation of credits?

Mr. Gilbert. By being very careful as to the character of paper that is rediscounted.

Senator Reed. Well, that goes to the question of the management of the regional bank, does it not?

Mr. Gilbert. Exactly; that is true.

Senator Reed. And we can hardly write it into a bill, can we?

Mr. Gilbert. No; we can not.

Senator Reed. We have got to leave it to the board of directors of a bank—just the same as if I go to your bank to-morrow and want to give you my note and get a loan.

Mr. Gilbert. Exactly; that is it.

Senator Reed. You, then, are going to pass on the question of whether you are going to give me that money or not?
Mr. Gilbert. Yes.
Senator Reed. And that puts the same power, then, in the regional bank over the member banks which the ordinary bank has to-day over its customers. You say that is where it ought to be vested?
Mr. Gilbert. Yes, sir.
Senator Reed. Then there is this unfortunate thing in connection with that. To-day the individual who is not satisfied with his bank—of course, if he thinks he is badly treated, he goes to another bank?
Mr. Gilbert. Yes; that is right.
Senator Reed. But these banks, being members of a regional bank and living under its system, will have only one place to go, and if they are refused accommodations there they would be in pretty bad shape, would they not?
Mr. Gilbert. Yes.
Senator Reed. Then that is not exactly desirable, is it?
Mr. Gilbert. Well, do you refer to the member banks being refused?
Senator Reed. Yes.
Mr. Gilbert. Well, it would simply impress upon the administration of the member banks the necessity of doing business on wise and conservative principles.
Senator Reed. Suppose the board of directors, however, being possessed of this great power should unjustly use it and discriminate against certain member banks?
Mr. Gilbert. Well, of course, there is always that risk. We are on the planet, and we have got to go around with it; and we are all human, and we have got to consider human defects, you know.
Senator Reed. Well, the present condition is this: It is one where that element of human selfishness or human, prejudice or individual mistakes has been constantly guarded against and offset by the opportunity to go elsewhere.
So that it seems to me that, when I deprive you of your opportunity to go to a number of places and confine you to one place, it is my duty, if I am doing that, to be pretty careful to see that you shall be fairly treated at that one place. Now, is there not some way to provide for that?
Mr. Gilbert. Well, as a general rule, Senator Reed, every man is fairly treated according to his deserts, you know—especially in the business world.
Senator Nelson. You have one check here, Mr. Gilbert, on this discounting, and that is that these member banks always have to indorse and guarantee all paper that they seek to have rediscounted.
Mr. Gilbert. Yes; that is true.
Senator Nelson. And naturally will not that make the banks careful as to what paper they take?
Mr. Gilbert. It certainly will, and it is a good thing.
Senator Nelson. And does not a banker, as a matter of fact, in making his loans take into account who the borrowers are as well as the signature and the time the note runs?
Mr. Gilbert. They are very, very careful indeed.
Senator Reed. All that is true of the general run of banks. The general run of banks do business honestly and discreetly. I am thinking about the power of this regional reserve bank to crush a bank if they wanted to do so. And I think that the reputation of a bank
for solvency is almost as delicate a thing as the reputation of a woman; suspicion is almost equal to destruction.

Mr. Gilbert. And do you not realize this, that the fact of a member bank, when it applies for rediscount, having to expose the character of paper that it has taken from its customers, is going to make it very careful?

Senator Reed. Yes; I think that is true. But now I am speaking about the other end of it. The power is put into the hands of the board that controls the regional banks to say “Yes” or “No.”

Suppose you come up with perfectly proper paper—paper that is ordinarily good—they refuse you. Then Senator Bristow comes up with paper that is no better and gets the accommodation. Every bank in the district will know inevitably—or at least a lot of them will know—that you have been refused by that regional bank.

Mr. Gilbert. Well, refusing——

Senator Reed (interposing). And your customers will get to know it.

Mr. Gilbert. I think any emergency of that kind would correct itself, because any member bank that was being unjustly dealt with would inevitably appeal to the Federal reserve board and say, “We are not being treated right.”

Senator Reed. You think that is the real check?

Senator Bristow. Well, it would be all over with that bank, as far as its reputation is concerned, if it has to take an appeal and fight out, practically, a lawsuit to establish its reputation with the public, you know.

Mr. Gilbert. Well, the customers of a bank understand pretty generally what the reputation of the bank they deal with is, I find.

Senator Bristow. Well, this power will be abused—all power is abused more or less.

Mr. Gilbert. Well, of course, that is a——

Senator Bristow (interposing). The powers of the courts have been abused outrageously in some instances. Receivers have been appointed for solvent concerns at the instigation of selfish and designing men.

Mr. Gilbert. But if the Federal reserve bank is administered as a reserve bank and not as a bank to make money, that spirit is not likely to prevail; and that is why I emphasized the point yesterday that these Federal reserve banks should be of a higher class than the ordinary, everyday bank. They must be made to administer the business at all times, remembering that they are reserve banks. They have got to maintain that character and they have got to be ever ready for an unexpected crisis. And the question of profit must be something that is not thought of.

Senator Nelson. And that is one reason why they ought to have a 50 per cent gold reserve.

Mr. Gilbert. Yes; that is one reason they should have a 50 per cent gold reserve.

Senator Nelson. Yes. They should be the conservators of the credit of the country.

Mr. Gilbert. Yes; they should.

Senator Bristow. Why would it not be better—it grows on me more and more as we go on from day to day—for this reserve bank to be
a Federal bank and not owned or controlled by the banks at all; an independent Federal institution, with a capital and enormous resources of its own, so that any flurry that happened in the ordinary banking business of the country would not affect it?

Mr. Gilbert. Well, I have always felt, and I feel now, that the banking business of the country, apart from the question of control, ought to be divorced from the Government. It ought not to—the business of the country will take care of the banking end of it, if it is permitted to without too much interfering. I see the necessity of Government control, Government supervision, to the extent that the Government now supervises national banks of the country. But I do not think it would be wise to put the Government into the position where it could interfere with the legitimate business operations of the country.

Senator Bristow. Well, this Federal reserve bank would certainly not interfere with that?

Mr. Gilbert. No; I think this bill recognizes the idea which I have in mind; it is simply supervision rather than administration.

Senator Nelson. The fundamental principle, Mr. Gilbert, is this, that the basis of our whole credit system is founded after all, when you boil it down, upon the commercial paper, upon the notes and bills which your customers discount at the banks—which you discount.

Mr. Gilbert. Exactly; that is true.

Senator Nelson. They come to your bank and put up their notes and bills of exchange.

Mr. Gilbert. Exactly.

Senator Nelson. And you credit them on the books and call them depositors, and that is the whole basis of the fabric?

Mr. Gilbert. Yes; that is it.

Senator Nelson. Of course, if the Government would go into the business and say to the people: "Come here and file your notes and bills with us and we will open an account with you, and give you a credit on the other side of the ledger," then you could go to the Government in place of the private bank.

Mr. Gilbert. Except that the Government would surround itself with restrictions and safeguards and technicalities.

Senator Nelson. Yes.

Mr. Gilbert. That a real business operation of the banks would not do.

Senator Nelson. Now, the deposits that you parade, you banks—and I am not using the expression in an odious sense; but in one sense you are really parading what you owe to your customers.

Mr. Gilbert. Yes; if you exempt from that our capital and surplus.

Senator Nelson. Yes; I mean if we exempt your capital and surplus. The deposits that you parade before the public are really what you owe to your customers.

Mr. Gilbert. Yes.

Senator Nelson. And those debts which you owe to your customers—what you have to show for them are the notes and bills which they have deposited with you; is that not a fact?

Mr. Gilbert. Yes.

Senator Nelson. And that is the whole basis of the matter. And when you speak of the volume of the bank’s credits it simply means how much the people of the country have put up in commercial paper.
and deposited with the banks. That is the basis of it, is it not—outside of the mere capital and surplus?

Mr. Gilbert. Well, the whole problem could be very easily stated. The merchant goes to his “bills payable” account and he finds he has a larger amount of notes maturing than he has money in bank to pay. What does he do? He simply goes to his portfolio and he takes out a certain amount of commercial paper and says to his banker, “Put that to my credit.”

Senator Nelson. And you credit it on the books of the bank?

Mr. Gilbert. And we simply say “indorse it.”

Senator Nelson (interposing). And then you credit it to him on your books and call him a “deposito’?”

Mr. Gilbert. And his notes are presented for payment and are settled, and the world knows nothing about it whatever, and business goes on as usual. Now, that thing is taking place all the time. That constitutes the main business of the banking system all over the country.

Senator Nelson. Yes.

Mr. Gilbert. And this builds up this tremendous superstructure of commercial credits that is always outstanding; and that tremendous superstructure rises and falls and represents the exact rise and fall of the volume of business of the country.

And if anything happened to interfere with that so that when the merchant goes to his bank, when credit is stringent from overexpansion of business, or excessive speculation, or both combined, or from any other cause, and he goes to his bank and he finds that he can not do that as usual, then something happens.

Senator Nelson. Yes.

Mr. Gilbert. Now, abroad nothing would happen. And why? Because the joint-stock banks there, when they find that condition, go to their portfolios, as the merchant did in the other case, and take out their “bills payable” and go to the bank——

Senator Nelson (interposing). The Bank of England?

Mr. Gilbert. Yes; or the Imperial Bank of Germany, or the Bank of France; and they say to one of those banks: “Put this paper to my credit;” and they rediscount for their customers; they give their customers what they want, and everything goes on as usual, don’t you see?

Senator Nelson. Yes.

Mr. Gilbert. But here when we come to that point that credit is strained and we can not accommodate our customers something happens. What is it? Credit gets scarce, interest rises, prices of securities fall, distrust prevails, and then panic.

Mr. Gilbert. But it has an account there.

Senator Bristow. Yes; it has an account, but the Bank of England is an independent institution, over which that bank has no control, and with which it has nothing to do, except as a creditor.

Mr. Gilbert. Well, the cases are parallel there, because our customers do not own our stock.

Senator Bristow. But in this institution that we are providing for under this bill, the banks own an interest?
Mr. Gilbert. Certainly.
Senator Bristow. They are operating these institutions; and it is a part of the banking system?
Mr. Gilbert. Yes.
Senator Bristow. And it would be affected by the same influences that affect the banks?
Mr. Gilbert. Well, I do not think that that necessarily follows.
Senator Nelson. We propose to take the control away from them.
Senator Bristow. Well, this control is, perhaps, a superficial and nominal control at Washington. It looks big, but there is nothing to it, any more than the power the Comptroller of the Currency has now—I would not say there is nothing to it, but—
Senator Nelson (interposing). There is under the new system.
Senator Bristow. I am referring to the new system. There is very little control over it.
Senator Reed. You hold that in the practical operation of this bill, the six members of the boards of directors of the regional banks, who are elected by the banks, will run those banks, do you?
Senator Bristow. They will run the institutions.
Senator Reed. And that there will be no interference by the central board, except some such regulation, perhaps, as the Interstate Commerce Commission exercises over railroads?
Senator Bristow. Well, it is entirely different from that.
Senator Reed. Very different; but I am using that, Senator Bristow, only as a parallel to the extent that it is a supervision and not management.
Senator Bristow. Yes; that is true; except that the Interstate Commerce Commission has more the functions of a court than this will have; and its cases are tried out. The citizen who thinks that he is abused and is not treated fairly by a railroad goes to the Interstate Commerce Commission, and the commission examines into the case and orders the railroad to do a certain thing. I do not think this Federal reserve board will sustain that relation to the banking business of the country. I do not think that would be possible. It seems to me it would be more logical—like the supervision of the comptroller's office over the present system—or will be in its practical operation.
Mr. Gilbert. Well, I do not think there will be any objection to that.
Senator Nelson. It is away beyond the power which the comptroller has now.
Mr. Gilbert. Yes.
Senator Bristow. Of course, they would have more power than the comptroller has now.
Senator Nelson. Absolutely.
Senator Reed. Well, it is a power—and I am not prepared to differ with the Senator from Kansas at the present time, although I reserve the right to do so. [Laughter.] But it is a power, probably, that will not be exercised except where the board of directors of the regional bank are manifestly doing an unwise thing. And therefore I think what the Senator says is true. You have a bank owned by bankers and controlled by bankers, and in that respect it is to be distinguished very radically from the Bank of England.
Senator Bristow. Or the Bank of France; I think so, very much.

Senator Nelson. Well, in this banking situation it is not altogether dependent on the statutes or laws that we enact, but it requires good, honest men. Now, there are a great many Republics in America that have, on paper, as good constitutions and laws as we have here in the United States; but their Governments are failures, because the men do not know how to use those instrumentalities.

But we ought to assume here, I think, in all fairness, that if we make a fair law the bankers of this country will seek to administer that in a spirit of fairness in the interest of the American people. Their very life depends on it.

Mr. Gilbert. I think they will.

Senator Nelson. What makes the elasticity in currency is the wants of commerce. Suppose I go to you as a banker, and I make a loan. I give you my note for $10,000, and I say to you, “Mr. Gilbert, I want $5,000 of currency.”

Mr. Gilbert. Yes.

Senator Nelson. And the other $5,000 you give me credit for?

Mr. Gilbert. Yes.

Senator Nelson. Now, that transaction grows out of commerce.

Mr. Gilbert. We give you credit for the whole, and you draw what currency you want.

Senator Nelson. Yes. I take the currency; and I say I want $5,000 in currency, and the rest give me a book credit for. Now, that is a business transaction and it grows out of my needs and wants.

Mr. Gilbert. Yes, sir.

Senator Nelson. And that is what regulates the ebb and flow of credits, is it not?

Mr. Gilbert. Yes.

Senator Nelson. Or something of that kind. And that is how you get an elastic currency, when you base it upon the real commercial wants of the country.

But, now, you bankers have a mission, high and low, and that is not to give credits, not to take the notes of people that are not entitled to credit.

Mr. Gilbert. Exactly.

Senator Nelson. Not to allow gamblers or promoters, who engage in hazardous enterprises, to float them by giving them credit on your books, either in the shape of credits or in currency.

Mr. Gilbert. It is in the banking, as it is in every other business, everything depends upon the wisdom and conservatism of the men who are engaged in it.

Senator Nelson. Yes. After all, we can pass the most stringent laws, and if you bankers are all scoundrels and rogues and do not want to carry on your business in a legitimate way the laws will be a failure.

Mr. Gilbert. Yes; and I want to state this: That I have a much higher opinion of the bankers of the country than—I will not say you, gentlemen—the average legislator has. [Laughter.]

I think, when you consider that in every town in this country and in every city in this country the banking men are looked up to for advice by their customers, and the banking men are confided in and believed in and respected——

Senator Nelson (interposing). That is true.
Mr. Gilbert (continuing). They must be a pretty high class of men.

Senator Reed. Well, Mr. Gilbert, I want to get myself clearly in the exceptions in this legislative condemnation. I want you to understand that I have the profoundest regard for bankers. 'They lend me money. [Laughter.]

Now, I do not think we need discuss this phase of it. But I want to discuss one feature. I want to suggest to the Senator from Kansas that, while it is true that there is merit in having a bank entirely disassociated from bankers, there are certain elements of strength in it; and while it is true that these regional banks under this system will be controlled by the banks, that might be an element of strength instead of an element of weakness if it is properly managed. And for this reason:

Every bank that is a member of that regional bank is interested in the maintenance of the regional bank. If it fails, all go down together.

Mr. Gilbert. And if it is unwisely administered all will go down.

Senator Reed. Yes: if it is unwisely administered all will suffer. They are not only interested in that, but they are interested in the solvency and in the safe business methods of all other member banks, because if a member bank is doing an unsafe business with the regional bank there the security of each other bank is impaired.

So that there is that compensating element, and it may be great enough to overbalance the objection. I do not want to discuss this at length; I simply want to drop that thought here, because I think it is a matter that we ought to consider.

Is there any other question that any member wants to ask Mr. Gilbert?

Senator Nelson. There is just one other matter that I do not know that I ought to bother him with. But I wanted to go back to that importation of gold into the United States. As I understand, those importations are made through two kinds of bills of exchange—what I call finance bills and commercial bills, usually accompanied with a bill of lading. For instance, a draft is drawn on a business house or a merchant in London, accompanied with a bill of lading for so many thousands of barrels of flour shipped from Minneapolis, or so many thousand barrels of wheat. That is a commercial bill of exchange, and on that gold can be brought here, can it not?

Mr. Gilbert. Yes; anything that piles up a balance abroad, you know, gives us a balance to draw on.

Senator Nelson. Yes. Now, the difference with a finance bill is that it is not based on any such articles of commerce?

Mr. Gilbert. Yes; it is simply borrowing money abroad.

Senator Nelson. It is simply borrowing money abroad on securities that you have put up.

Mr. Gilbert. On securities that are deposited there.

Senator Nelson. Yes; on securities deposited there—for the benefit of the man that is drawn on abroad?

Mr. Gilbert. No; for the benefit of the man who wants the money.

Senator Nelson. Well, the securities are for the benefit of the man abroad.

Mr. Gilbert. Exactly.
Senator Nelson. And it is on those two classes of bills that we get gold here from abroad?

Mr. Gilbert. Well, I would not confine it to those, because those foreign banking houses have their expedients for getting gold. I am not, of course, a dealer in foreign exchange, and I only have a general knowledge of the subject.

Senator Nelson. Yes.

Mr. Gilbert. Of course a foreign exchange house, with strong backing abroad, can resort to other methods of building up its balance there.

Senator Nelson. Yes.

Mr. Gilbert. It might borrow on bonds, or it might have some means of discounting over there.

Senator Nelson. Yes; a great deal will depend upon whether you have to ship actual gold; and that is very seldom. But a great deal also will depend on the balance of trade, will it not?

Mr. Gilbert. Oh, yes; a great deal will depend on the balance of trade.

Senator Nelson. The balance of trade, whether the foreign country is owing us or we are owing them.

Mr. Gilbert. Although in the panic of 1907, at the very worst time, we imported $100,000,000 of gold from abroad.

Senator Nelson. Yes; well, Mr. Vanderlip tells me that that was imported on commercial bills.

Mr. Gilbert. Very likely it was largely on commercial bills.

Senator Nelson. Yes; not on finance bills, but on commercial bills.

Mr. Gilbert. But, prior to the outbreak of 1907, there was borrowed abroad on finance bills about $500,000,000. And it was that—

Senator Nelson (interposing). Yes; now, I remember the time—

Senator Reed (interposing). Senator Nelson, will you not let Mr. Gilbert finish his sentence? You say, Mr. Gilbert, it was that that did what?

Mr. Gilbert. It was that, largely, that created a feeling of apprehension here, some months before the panic broke out; the knowledge that so large an amount of money was being borrowed abroad.

Senator Nelson. Yes; on finance bills.

Mr. Gilbert. Because we were putting ourselves at the mercy of our creditors over there; the moment they would say: "The time has come for you to pay up," and ask us to pay up, it was going to cause a drain upon us.

Senator Reed. Now, if you had borrowed that on commercial bills; on bills representing wheat, cotton, corn, or cattle—

Mr. Gilbert (interposing). Our basis then would have been a sound commercial basis.

Senator Reed. Then the wheat, cotton, corn, and cattle, etc., would have liquidated it?

Mr. Gilbert. Yes.

Senator Nelson. Yes; would have liquidated it. That is the difference between a commercial bill and a finance bill?

Mr. Gilbert. Yes; that is it.

Senator Nelson. Now, I recall that during the last year of Cleveland's administration there were firms in New York who were con-
continually shipping gold abroad; they would use the Treasury notes to get the gold out of the subtreasury.

**Mr. Gilbert.** Yes.

**Senator Nelson.** And then they were paying for the gold over there, and those firms found it profitable to ship it, and they shipped the actual gold. I remember one firm—I think it was Heidelbach, Ickelheimer & Co., or some such name as that—that kept shipping week after week.

**Mr. Gilbert.** I do not know that it was confined to any one firm.

**Senator Nelson.** No; but there were shipments of actual gold in those days.

**Mr. Gilbert.** But the export or import of gold depends, as a rule, entirely on the profit in doing it.

**Senator Nelson.** Yes, of course.

**Mr. Gilbert.** If there is no profit in exporting gold, it will not be exported.

**Senator Nelson.** And it depends a great deal on the state of the exchanges.

**Mr. Gilbert.** Entirely. That is what regulates it.

**Senator Nelson.** Yes; if the balance, when you look over the whole horizon, is in our favor gold will come here, and if the balance is against us it will go abroad.

**Mr. Gilbert.** Gold will come here if it is in our favor, unless it is temporarily thwarted by raising rates abroad.

**Senator Nelson.** Yes.

**Mr. Gilbert.** Making it more profitable to keep the gold over there than to send it here.

**Senator Reed.** Is there anything in this bill now that will enable us, in an effective way, to control discount rates, or exchange rates, I should have said, so that if the gold started to drop it could be gathered in by these banks—I mean our gold reserve?

**Mr. Gilbert.** I do not see how. The raising of the interest rate by the Federal reserve bank would have this effect on its members, and no other effect that I can see: It would compel its members to confine their rediscounts to sheer necessity; to borrow as little as possible—that is, to borrow only what was absolutely required to accommodate their customers—and if there was any, if among their customers there was anything like a tendency to expansion, or speculation, the member bank would try to control its customers and say, “You must not push me too hard, because the interest rate has been advanced and I do not want to pay the rate.” Do you not see that it could have that effect?

**Senator Nelson.** There is only one possible exception that I can see. Take a great regional bank at New York City. If their discount rates were very high, a great deal higher than abroad, and we make our paper redeemable absolutely in gold, why, foreigners might come here and say, “If we can get 7 per cent in New York, we will invest some of our funds there instead of at 5 per cent in London.”

**Mr. Gilbert.** That might be if we had an open money market here and had the same class of prime paper always to be bought; but the foreigner is not apt to come here to buy our ordinary commercial paper, because he does not know anything about it. When
he can buy the class of paper that is indorsed by strong, conservative banks, it might tempt him.

Senator Nelson. Yes.

Senator Reed. Now, you speak about an open money market. What about that? Do you think that is a good condition to have?

Mr. Gilbert. Excellent.

Senator Reed. Well, what is necessary to bring it about? Is it a thing that can be brought about by any law, or is it a thing that must grow up out of business conditions?

Mr. Gilbert. It must grow up out of business conditions.

Senator Reed. Why has it never grown up here?

Mr. Gilbert. Simply because we never have exercised our banking privileges—or rather, we have never had the same banking privileges the bankers have abroad. The provision in this bill which permits bankers to accept the drafts of their customers drawn on the bank would make the same class of paper which prevails to a large extent abroad—prime bankers’ bills.

Senator Nelson. Yes.

Mr. Gilbert. But they do not have that here now.

Senator Nelson. No; you see, they do not deal in promissory notes, as we do. They deal in bills of exchange and drafts.

Senator Reed. Acceptances.

Senator Nelson. Acceptances, yes.

Senator Reed. Is there any further question to be asked of Mr. Gilbert?

Senator Nelson. No.

Senator Hollis. I just want to ask you this, Mr. Gilbert: Do you recall how it was that we borrowed that $500,000,000 before the panic of 1907?

Mr. Gilbert. Well, it largely grew out of speculation.

Senator Hollis. What was that?

Mr. Gilbert. Out of stock-exchange speculation largely.

Senator Hollis. That is, you sent gold abroad to speculate in securities?

Mr. Gilbert. No; we borrowed gold from abroad.

Senator Hollis. Oh, you borrowed it from abroad?

Mr. Gilbert. Just negotiated the ordinary finance bill, by depositing securities and borrowing abroad instead of here.

Senator Reed. Do you know that recalls to my mind the fact that, while we started yesterday to discuss the question of the undesirability of the banks loaning money for speculative purposes—we will say on the New York Stock Exchange—we never did get down to what method of restriction, or what safeguard should be interposed.

Mr. Gilbert. I do not think that you can interpose any safeguard or any restriction that will prevent that condition, because——

Senator Reed (interposing). This bill undertakes to do it.

Mr. Gilbert. I know it does; and it will, to a certain extent. But then, I do not think there will be any less amount of money loaned to the stock-exchange houses in New York than there is now. Of course, speculation may be restricted to some small extent.

But there always is, and always will be, a certain volume of money required to carry on the legitimate—and when I say “legitimate” I mean the non speculative business of Wall Street and its large houses, and what you would call the speculative interests. There always will
be speculative interests. In one sense it is legitimate, unless it is
carried to excess. And there always will be a demand for a certain
amount of money to carry on that business. It exists in every civil­
ized country in the world under the best banking conditions. And
after this bill goes into operation the result will be, probably, to limit
the amount of call loans and to expand to a larger degree the time
loans.

Senator Hollis. Now, I want to ask you this——

Mr. Gilbert (interposing). There is one thing that you want to
bear in mind, that those loans are so well secured that they are very
desirable loans. I can not recall, in my long connection with the
banking interests in New York, a single case where there has been
an absolute loss to any bank from the loans made in Wall Street;
and they are considered prime loans; and that is why the country
banks, in order to make a secondary reserve, send their money there
to have it invested on call. And a great volume of the money that is
loaned in Wall Street is on time. It is attended with very much less
risk than going into the market and buying commercial paper.

Senator Reed. I understand perfectly that a financial house,
whether it is located on Wall Street or on Pennsylvania Avenue, that
is engaged in gathering together large amounts of money and using
them for the purpose of financing a new railroad or an electric-light
plant or a telephone plant or anything of that kind, is engaged not
only in a legitimate business but probably in a very useful business
for the country, and that that involves the sale of the stock of that
railroad or that electric light company, or the bonds, or both.

Now, that is legitimate. But what about this thing that is set up
there in New York, where they post the value of stocks and men are
betting that the stocks are going up two points; and if the stock
goes up they make money and somebody else loses, so that you have
a wild, almost indescribable mob, surging and beating back and forth,
and suddenly the market breaks, and when the market breaks all
the country, to a certain extent, reflects that condition, and then it
breaks and breaks until the banks that held those securities begin to
break?

It seems to me there must be some remedy for that sort of thing,
and I wondered if you could not suggest it.

Mr. Gilbert. But, Senator, if you were to go to New York and
go into the stock exchange and watch the buying and selling of
stocks, and then go down to the cotton exchange and watch the buy­
ing and selling of cotton, and then go down to the wheat pit and
watch the buying and selling of wheat, and then go down to the to­
bacco exchange and watch the buying and selling of tobacco, you
would see exactly the same conditions.

Senator Reed. Well, that only argues this, that whereas we once
had in this country gambling joints running everywhere, a man
who attacked the system could have been answered, "Why, they have
them in every city." I want to know if there is not some way that
that influence, not only in the stock exchange; I am not saying it is
worse than the others, but all that illegitimate speculation, gambling
pure and simple, can be stopped and business reduced to a legitimate
level. There ought to be some means to do this.

Mr. Gilbert. I will say this: Since the report of the Hughes com-
mission, five years ago, which grew out of the conditions of 1907,
strenuous efforts have been made. It was admitted at that time
that there were evils existing in the New York Stock Exchange
which ought to be corrected, and strenuous efforts have been made
to correct them, and there is less to complain of in the New York
Stock Exchange in that respect now than there ever has been before.
I think there have been a great many reforms instigated, and they
have gone about as far as they can go at the present time to reform it.

But it is only necessary to go back a few years to a time when the
same agitation prevailed in Germany, and they actually passed laws
there to prohibit this marginal speculation on the stock exchange.
And after a year of two they repealed the law, because they found
it was really injurious to the country. They repealed the law.

Senator Reed. Yes: I know that that fact has been stated, although
I have never understood the particular reason for it.

Mr. Gilbert. And in every country, and in this country particu­
larly, where fortunes are so easily made that men always have
money, there is a disposition to speculate in something; and the
easiest thing to speculate in is stocks and bonds, and one of the
legitimate results of that speculation is the maintaining of prices
at which these securities can always be sold. You can always find
a place to sell them.

And if it was not for the fact that those prices are maintained
through the daily operation of these exchanges men would be
reluctant to invest in railroad securities. They would say, “I do
not want to buy a railroad security, because I can not dispose of it
when I want to: I do not know, I might want to convert it and
get my money back, and there is no regular market or opportunity
for doing that.”

But the daily operations of the stock exchange make it not only
the quickest market in the world for the disposal of those securities,
but make it a market that maintains the prices of securities. And
it is the same with wheat and grain and tobacco and corn.

Senator Reed. I believe that is rather aside from the purposes of
this bill, but it dovetails in along the line of the effort to control the
call loans.

Mr. Gilbert. But it is interesting as a side issue.

Senator Reed. Yes. Now, is there anything further to be asked
of Mr. Gilbert?

Mr. Gilbert. Am I excused, Mr. Chairman?

Senator Reed. Yes; we are very greatly obliged to you, and appre­
ciate your having given us your views.

Senator Nelson. Yes; we are very much obliged to you.

Mr. Gilbert. I am very glad to have been with you, gentlemen;
and if I can render any further assistance I will be very glad to
render it.

Senator Reed. If you will agree to revise your opinion of the public
men of Washington, we will agree to look as charitably as possible
upon the bankers of New York.

Mr. Gilbert. I want to say this, gentlemen, that I will go away
entertaining a very much higher respect for our public men than
I had when I came here.

Senator Nelson. You have come to the conclusion that we are,
after all, searchers after truth, have you?
Mr. Gilbert. I have come to the conclusion that you know more about this banking business—

Senator Nelson (interposing). Than you thought we did?

Mr. Gilbert. Yes.

(From the Boston (Mass.) Transcript, Saturday, Mar. 1, 1913.)

A TALE OF TWO BANKS.

WASHINGTON, February 28.

In the attack of the Pujo committee upon the New York Clearing House Association and some of its practices, much stress has been laid by Attorney Untermyer upon the cases involving the Oriental Bank of Brooklyn and the Mechanics & Traders' Bank of New York. Mr. Untermyer in fact has sought to create a general prejudice against the Clearing House Association by allegations, repeatedly hammered in at the hearings, that these two banks were closed by the action of the committee in refusing them credit during the panic of 1907–8, and an attempt has been made to show that this refusal proceeded from a desire to stifle competition.

The whole story of the events which led to the suspension of these banks was not told to the Pujo committee nor does the committee report set forth the facts in the two cases. On the contrary, this alleged abuse of the power of credit by the New York Clearing House has been worked for all it is worth to prejudice the country against certain of the New York financiers and to indicate to Congress that drastic legislation directed against the New York Clearing House is necessary.

CASE OF THE MECHANICS & TRADERS' BANK.

The facts are that between October 18 and October 25, 1907, the banks of the clearing house made cash loans to the Mechanics & Traders' Bank of $2,220,000. This was converted into clearing house loan certificates October 26, 1907. These loans were made on the assurances of Chief Examiner M. W. Hutchins, of the State banking department, that the bank was solvent. The aggregate issue amounted to $4,520,000. Certificates of the Mechanics & Traders' were outstanding 137 days.

January 30, 1908, this bank was placed in the hands of the superintendent of the State banking department. The charge was made and was reiterated before the Pujo committee that had the clearing-house loan committee extended credit the bank would have been saved. The inference intended was, of course, that credit could and should have been extended, and that if it was not, the reason was that two representatives of the Corn Exchange Bank, who also were members of the clearing-house committee, had used their influence to put a competitor out of business.

BETTER COLLATERAL WANTED.

It is true, according to the most trustworthy information, that the clearing-house committee demanded more and a different kind of collateral from the Mechanics & Traders' Bank, and that when this was not forthcoming it refused to extend credit. The collateral back of the loans had a face value of some $6,373,000; but before the receivers of the Mechanics & Traders' Bank paid off the balance due the clearing house—$2,100,000—the committee had begun to collect $8,447,000 of the collateral and had received $1,000,000 in cash; the balance went to protest. The point is that the result of the attempt to collect on the collateral clearly demonstrated that the loan committee of the clearing house exercised good judgment in confining their advances to the proportion they
This bank had from October 26, 1907, to January 30, 1908, to adjust its affairs. It wanted more money, but at no time offered new collateral.

The point was made by Mr. Untermyer, in questioning witnesses before the Pujo committee, that the Metropolitan Bank of New York had taken over the Mechanics & Traders' and paid off all its depositors in full; thus, according to the intimations of Mr. Untermyer, confuting the judgment of the clearing-house committee that the bank was in danger when further loans were refused.

The remainder of the facts.

But the testimony was not permitted to go far enough to tell all the facts in the case. It is true that the Metropolitan took over the New York branches of the Mechanics & Traders' and paid off the depositors, but it is also true that the bank was allowed to reopen by the State banking department, on the deferred payment plan, under the title of the Union Bank of Brooklyn. This occurred in October, 1908. This Union Bank, successor to the Mechanics & Traders', closed its doors April 4, 1910, and up to date it has not paid one cent to its depositors.

The books showed that a large proportion of the unliquidated assets of the Union Bank were in the Mechanics & Traders' Bank when that bank closed January 30, 1908. In other words, the Union Bank allowed new deposits of money to be used to pay off old deposits. The probabilities are said to be that after a long wait the Union Bank depositors will receive dividends not to exceed 50 per cent. The former president of the Mechanics & Traders', David J. Sullivan, and W. C. Damron, a director of the same bank, are serving terms in the State prison for offenses growing out of the situation described.

Oriental Bank case illuminating.

The case of the Oriental Bank is equally illuminating when reviewed with knowledge of the actual facts. As with the Mechanics & Traders' Bank, its affairs came to a crisis January 30, 1908. It had borrowed several million through the clearing house loan committee and certificates for a part of its borrowings were outstanding. Most of the clearing house certificates in other parts of the country had been retired—those of the Chicago Clearing House were finally cancelled on January 17, the Chicago Clearing House on January 11 having decided that certificates could no longer be used in meeting debit balances.

The New York Clearing House Association became anxious for a return to normal conditions, and on January 25 the clearing-house committee, believing that the emergency which had made the use of loan certificates necessary had passed, sent a letter to each bank which had not retired its certificates, expressing the desire that all loan certificates be retired on or before February 6. On January 23, two days before this action, the directors of the National Bank of North America (the Morse bank) had requested that the national-bank examiner take charge of their bank because of heavy withdrawals during the previous three weeks and further expected heavy withdrawals. Notwithstanding that the Oriental and the Mechanics & Traders' had had more than three months in which to clean up their affairs, both banks notified the clearing house that they would be unable to retire their certificates. The clearing house, seeking to aid these institutions as far as was deemed prudent, immediately instructed its manager to notify the two banks that the note of the committee expressing the desire that all certificates be retired by February 6 had been recalled and that the two banks would not be pressed to redeem their certificates. This was done by the manager on January 28.

Directors' refusal to guarantee.

The story of the Mechanics & Traders' already has been told. The Oriental Bank not only was unable to comply with the request of the clearing house, but it called on the clearing-house committee for a million dollars more. It was notified that it would be accommodated with the loan, provided the directors of the Oriental Bank would guarantee the loan. This evidently they were unwilling or unable to do. The clearing-house committee waited until midnight of January 29 to hear from the directors of the Oriental Bank, and as no word was forthcoming the bank was closed the next day. How the Oriental Bank
could have been treated more considerately, consistently with the principles of safe banking, is not explained in the report of the Pujo committee.

It will be recalled that the downfall of the Oriental Bank was imputed in part to the machinations of two directors of the Corn Exchange Bank, of whom one was Walter E. Frew, now president of the bank, and one of the most interesting witnesses before the Pujo committee. Another witness was R. W. Jones, Jr., former president of the Oriental Bank, whose reflections upon the New York Clearing House were made part of the Untermyer ammunition.

**MR. JONES WRITES MR. FREW.**

How Mr. Jones reconciles his testimony before the Pujo committee with the following letter written by him to Mr. Frew, under date of January 17, 1913, is another of the mysteries unexplained in the Untermyer report:

**NEW YORK, January 17, 1911.**

My Dear Mr. Frew: I have been endeavoring for the past two or three days to call upon you personally and express the pleasure which I have had at the announcement of your election as president of the Corn Exchange Bank. While it has not been my pleasure to know you intimately, I want to avail myself of this opportunity especially to express to you the appreciation which I have always felt of the attitude taken by you at the time of the panic of 1907, in connection with the situation which surrounded the Oriental Bank at that time; and while your efforts to protect us did not succeed, they were none the less appreciated by both Mr. Hugh Kelly and myself.

I extend to you my very best wishes in your new official connection, and you may be assured that if an opportunity is ever presented to serve you it will afford me a great deal of pleasure to avail myself of it.

Yours, very truly,

R. W. Jones, Jr.

It is cited as interesting in connection with the period of the downfall of the Oriental and the Mechanics & Traders' Banks that at that time the call rate of interest was only 2 per cent, which shows that money was plentiful. The surplus cash reserve of the members of the New York Clearing House Association was $40,526,000. Loans on proper security or good paper were easily obtainable at that time. It is asserted by gentlemen with authority to speak that if the Mechanics & Traders' Bank had been able to offer proper security the same accommodation would have been offered to them as was offered to the Oriental Bank on January 30.

W. E. B.
Senator Nelson. I think we had better invite him Thursday, because I do not know how many of the Minnesota country bankers are coming here.

Senator Reed. With the consent of the committee, then, I will notify Mr. Motsinger, by telegraph, that if he is here Thursday the committee will try to hear him.

Then there is another communication that has reached me. I presume that copies have been sent to the other members of the committee. It is on the letterhead of the First National Bank of Tombstone, Ariz., and seems to be signed by T. R. Brandt, cashier of that bank. It incloses a memorial in the nature of a criticism of certain features of this bill. It seems to have been prepared with some care, and I suggest that it be printed.

Senator Nelson. All right; let it go into the record.

(The memorial referred to will be found at the conclusion of this day's proceedings.)

(Thereupon, at 1 o'clock p.m., the committee took a recess until 2 o'clock p.m.)

AFTER RECESS.

STATEMENT OF RICHARD H. LONG, FRAMINGHAM, MASS., MANUFACTURER OF SHOES AND SHOE MACHINERY AND DEALER IN SHOES AND SHOE MACHINERY.

Senator Hollis. Mr. Long, we will hear from you now. Please give your name and address to the stenographer so that we will have it in the record.

Now you may proceed and make your statement in your own way.

Mr. Long. I appear before the committee as a manufacturer and a merchant, and my reason for coming is that I had not seen any account in the papers that merchants and manufacturers had appeared before the committee to any extent, and I believe the currency bill, if it is enacted, should consider the merchants, manufacturers, and farmers fully as much as any other factors in the country. Under the present conditions of banking as it is in New England I believe the credit that is given by banks goes first to the large industries that are represented in the banks or connected with them, and after that to the men who are engaged in buying and selling stocks, and that the commercial man comes last.

I am in favor of the bill as it is, rather than not have a currency bill enacted. I believe a currency bill should be enacted to bring about more independence in banking circles and to give the trading people of the country, who are engaged in real business rather than speculative business, a better chance than they have to-day.

Senator Bristow. Now, if you will pardon me, Mr. Long, wherein do you think this bill would make more independent the banking business of the country?

Mr. Long. I believe the regional banks—that the individual banking houses would do business with them where now they do it largely with a few banks. I believe it would be distributed better.

Senator Bristow. But the regional banks are owned by the bankers; they are run by directors elected by the bankers; it is part of the-
banks; and the control is a banker's control and a banker's ownership. Now, wherein you are going to get independence is what struck me.

Mr. Long. I believe the banking interests now are controlled by a few people. For instance, in New England the banking interests are controlled largely by a few banks in Boston. They have correspondents largely throughout New England.

Senator Bristow. You say through correspondents in New England, in your opinion, there are a few banks in Boston that control the credit?

Mr. Long. That is it.

Senator Bristow. Have you any doubt that if the banks which those few banks control are to elect the directors of the regional bank, which they are to do under this bill, there will not be any difficulty in those banks controlling the directors?

Mr. Long. I do not think the bank ought to elect a majority of the directors. But I think, even if they do, that the control of the regional bank, so far as it goes, from the men appointed by the reserve board, will make those regional banks much more independent than the banks are to-day of banking control.

Senator Bristow. Of course you think that. I think there will be less independence myself. I have not any doubt about it. Instead of getting away from the thing you are seeking to get away from, by favoring this bill I think you are simply riveting it by law upon this country. Now, let me suggest to you that those banks—with 1,500, 2,000, or 4,000, I do not know how many banks you have in New England—with this independent arrangement, if they can not get discount at Boston, can go to New York or some place else if they want to. If, with this democracy in the banking business in New England that we have now, these men are able to control and dominate as you suggest, then if they succeed in getting control of the board of directors of the regional banks they have absolutely got it, and you are helpless. You have got to go to that bank then; the banks could not go any place else under the law.

Mr. Long. I do not understand that the bill would prevent the national banks or those that come into the regional bank—I do not understand it would prevent them from going to any other banks to do business. Is that a part of the bill?

Senator Bristow. They can not discount, because they can not keep their reserves except at the regional bank. The country bank discounts its bills now with the city bank, the reserve bank where it keeps its reserve.

Mr. Long. Yes.

Senator Bristow. Now, if it is not satisfied with the reserve bank where it keeps its reserve, it will go to some other bank. It has an opportunity of going to other banks.

Mr. Long. Doesn't it have the same opportunity under this bill?

Senator Bristow. No; the law requires it to carry its reserves in this regional bank, and it can not carry them any place else.

Mr. Long. Could it not keep a deposit any place else?

Senator Bristow. Oh, it can keep a deposit, but it can not keep the reserve. The reserve, under the law, must be in the regional bank.

Mr. Long. As I understand it, this bill would not affect the banks except those that go into this system. The other banks would be independent.
Senator Bristow. They would be just as they are now.

Mr. Long. And the fact that the manager of the regional bank would be appointed by the Federal reserve board would take away the entire control, as the regional bank would not be so entirely controlled by the banks as the banks are to-day.

Senator Bristow. There would be a difference of opinion there. I think it would be more so, but then I am just giving you my views. I do not want to interrupt you any further.

Mr. Long. I believe, however, that the bank should not control the reserves of the regional bank, and that the capital for those banks should not be required from the national banks. I think it should be subscribed by the public, so that it would make the regional banks entirely independent. In that case it would take away, to a certain extent, the monopoly of credit that is now held by a few people.

Senator Bristow. That is, you would have the board of directors of the regional banks appointed by the Government instead of elected by the banks?

Mr. Long. Yes; if the capital was supplied by the public there would be no reason for the banks appointing the directors.

Senator Bristow. No.

Mr. Long. As I understand, this bill provides they shall elect six directors.

Senator Bristow. Yes; they shall elect six directors.

Mr. Long. I believe that if the banks are to elect directors they should only elect three, and the Government should elect the majority.

Senator Bristow. In that event you would not recommend compulsory subscription; that is, you would not advocate the principle of compelling the banks to create this institution and then not allowing them to have the control or a voice in managing a thing which their own money had created? You would advocate that it be a voluntary subscription and independently managed?

Mr. Long. That is it—voluntary subscription and independent management. And if the 5 per cent dividend was not sufficient to get the capital necessary, I believe it should be increased to 6, so as to allow the stockholders to have a dividend of 6 per cent.

Senator McLean. Have you ever had trouble in securing accommodations?

Mr. Long. Yes, sir; I have had troubles.

Senator McLean. Do you have competitors in the shoe-machinery business?

Mr. Long. Yes, sir; I do not know whether the committee would like to hear it.

Senator Hollis. I wish you would give us a short history of your experience.

Senator McLean. A year and a half ago, in a hearing before the Committee on Interstate Commerce, Mr. Brandeis, or some one, then testified before the committee of the existence in New England of parties who were very anxious to organize a competing concern to the manufacturers of shoe machinery. As he stated, if I recollect correctly, the project failed because the people interested in this new concern could not get accommodations from the banks, and they could not get it because the banks were in a conspiracy with the old shoe-machinery concern. Perhaps you are the person he referred to.
Mr. LONG. No; I was not the person he referred to, but I did have troubles along that line. If the committee would like to hear them, I can tell them briefly.

Senator HOLLIS. I would like to have a brief statement of that.

Mr. LONG. It was in 1907; I petitioned for a bill in the Massachusetts Legislature to prevent the shoe-machinery company from making certain contracts, and that bill was enacted into law after considerable controversy. At that time I was a shoe manufacturer of this machinery company, and I wanted to be free. During the time that contest was on in our factory we discarded the machines of the machinery company.

Senator HOLLIS. You mean what is known as the United Shoe Machinery Co.?

Mr. LONG. Yes. My company discarded the machines of that company, and a new company was organized to manufacture shoes with machines we bought—secured in different places. Shortly after that the United brought seven or eight suits for infringement against me personally and against the different companies that made the machines and against the new company we organized to carry on the shoe business, and I was informed, soon after that, by the manager of our machinery company, which was a very small company, that if we did not stop trying to do business in competition with the United Co. and give up opposing them, they would see we were put out of business.

Senator MCLEAN. Who informed you?

Mr. LONG. The superintendent of our machinery factory. He said he was informed by a machine man, and that the information came from the management of the department of the United Shoe Machinery Co. The information came to me that they had a representative in every bank in the city of Boston, and they would see to it I could not borrow a dollar in Boston of any of the banks with which I was doing business. At that time I had a credit line, when I wanted it, of, perhaps, $200,000, and soon after that all the banks I did business with told me to pay up, and since that time none of those banks would give me any credit. I was also informed that this machinery company had power to prevent me from getting credit at any bank through New England or even through New York. I had had credit in those cities—New York, Springfield, Worcester, and Albany—and while I applied for it and they gave me to understand it would be granted, it was turned down. I did find one bank in Springfield where one of the directors arranged for a line of $25,000 credit. I met the credit man of that bank in Framingham on his way to Boston, and I was informed that his Boston correspondent would like to open an account with me and gave me a line of credit, and he took me and introduced me to the vice president of that Boston bank, and the vice president, after the Springfield man went out, said: "You do not suppose, Mr. Long, you are going to get any credit here, do you; don't you know that the president of the United Shoe Machinery Co. and five other directors in that company are directors here and, of course, you can not get any money here?" The result was that the Springfield bank turned down the credit.

Senator WEEKS. What bank was that, Mr. Long?

Mr. LONG. That was the First National of Boston.
Senator Bristol. Now, you attribute that to the influence of the United Shoe Machinery Co.?

Mr. Long. I had the information before, and that was the result.

Senator Bristol. Was there any legitimate question as to the validity of your solvency; that is, your ability to fulfill your obligations?

Mr. Long. There should not have been more question then than there ever was.

Senator Bristol. Before that you had no trouble in getting credit?

Mr. Long. Before that I had no trouble in getting credit.

Senator McLean. How many years have you been in business?

Mr. Long. Since 1896, the old company. This was in 1908.

Senator McLean. Were you asking for a much larger line of credit than usual?

Mr. Long. No. No; the banks had loaned me $50,000, or $75,000, on credit altogether.

Senator McLean. You said you wanted $200,000?

Mr. Long. No; I said we had lines of credit of about that amount. The local bank of Framingham would always give us credit when we asked it. They would be as well informed as anyone.

Senator McLean. What reason did the banks give you for denying your credit?

Mr. Long. Some of them said I had better get out of the shoe-machinery business. They were afraid of the machinery company, what it would do to us.

Senator Bristol. That is, you think that these banks that would have had a disposition to let you have the money were afraid that in competition with the Shoe Machinery Co. you would fail and were afraid you would not be good; or were they afraid that the hostility of the Shoe Machinery Co. to them would make them lose more money than your business was worth to them? Which was it?

Mr. Long. I think they thought it advisable to be friendly to the Shoe Machinery Co., which had a large amount of money on deposit in Boston in the different banks. And they did have representatives, directly or indirectly, on the boards of most of the banks of Boston, or a large number of the banks.

Senator Bristol. Now, the story you tell is very interesting, and of course I think a good deal of that kind of business has been done in this country myself. But the strange thing is that gentlemen like you think this bill would remedy that situation. I think it makes it worse. It seems to me, Mr. Long, you must admit that if the banks that can be influenced by the Shoe Machinery Co. should control the election of the board of directors of the regional bank for New England then they have everything they want, because they control the very source of supply and the banks could not go out and seek independent help, because the reserves are, by law, forced into this bank.

Mr. Long. That would be true to some extent, but I think even under this present bill the three members of the board of directors who are appointed by the Federal reserve board would help to bring about more independence in banking.

Senator Bristol. Suppose they were not unfriendly to the Shoe Machinery Co.; then what would happen?
Mr. Long. Suppose they were unfriendly?
Senator Bristow. Suppose they were not unfriendly.
Mr. Long. Those three members?
Senator Bristow. Yes.
Mr. Long. I do not see anything in this bill that would make the condition any worse than it is.
Senator Bristow. It would not make it any better, would it?
Mr. Long. I think it would tend to make it better.
Senator Bristow. Will you please tell me just how?
Mr. Long. I believe under the present condition there is a large concentration of credit. I believe that with these regional banks the credit would be distributed.
Senator Bristow. What makes you think that when the regional banks are all controlled by the very men that now control the credit?
Mr. Long. That gets back to the credit, whether the three men appointed by the Federal reserve board would have enough independence to see that those banks would not be influenced.
Senator Bristow. They are in the minority, aren't they?
Mr. Long. Yes; they are in the minority.
Senator Bristow. How much influence does a minority stockholder have in the management of those corporations?
Mr. Long. I understand that the Federal reserve board have the right to remove any of the members of the regional banks, and if those three men were independent and saw the banks were not being carried on independently they could appeal to the Federal reserve board and have those directors removed. But I believe the situation would be much better if the banks did not control these regional banks—if they did not have a majority of the board of directors.
Senator Bristow. I agree with you—have the bank as an independent bank, and that the banks do not own it and do not control it. That is an entirely different proposition.
Mr. Long. I believe it should be that way.
Senator Bristow. But I understood you to suggest that you wanted this bill as a remedy, and for my life I can't see it. I think instead of getting a remedy you are fastening your hands with shackles a great deal worse than you are to-day.
Mr. Long. I am not looking at myself at the present time.
Senator Bristow. I was referring to men situated as you have been.
Mr. Long. Yes; but I think this bill, while it would not be a real remedy, it would to an extent be a remedy, and it would tend toward bringing about more independence in banking. I believe, as I understand, this bill intends to bring about a method where banks can rediscount their paper and have a credit that will be more elastic than the present. I think the principle is a good one.
Senator Bristow. Yes, Mr. Long. I am sorry to say that a good many gentlemen have the same impression you have from political stories that have been circulated through the country in order to give favor to this bill. But, for myself, I think it is an erroneous impression; that that does not come from applying your knowledge of practical affairs to the provisions as they are written in the bill.
Mr. Long. Well, I believe that under this present bill if a person was discriminated against in a line of credit he could go individually to his local bank, and if they did not give him relief there he
could personally go to the Federal reserve board and point out the situation, and it would help to bring about a better condition. But I do not think it is a perfect bill. I think a bill for the purpose of having a better system of credit could be drawn, and I think this bill should be amended, and I think the best way to amend it would be to take away the control from the banks and not require the banks to furnish the capital, except so far as they wished to do it.

Senator Bristow. I entirely agree with you on that proposition, and, so far as I am concerned, I am in favor of that kind of a bank. But that is as antagonistic to the provisions of this bill as anything could be.

Mr. Long. Well, you do not think this bill would make the situation any worse than it is?

Senator Bristow. I think it would; yes. I think so. I think it concentrates the credit a good deal more than it is now—makes it possible.

Mr. Long. Don’t you think the publicity that would be brought about in the conduct of the affairs of the regional bank would bring about more independence in banking?

Senator Bristow. I do not see any publicity here that is provided for.

Mr. Long. You do not think the three men appointed by the Federal reserve board would have any influence?

Senator Bristow. I do not think they would pay much attention to it. If the board of directors did not pay any attention to this experience of yours—the board of directors was off somewhere; it was the officers of the bank that turned you down. You will have nine on the board of directors, but the officers will run this thing. That the directors will come, and they will be presented with the matter, and they will decide it is a delusion and a snare for men situated as you are, in my opinion. That is the reason I am opposed to it, because I do not think it accomplishes anything at all that gentlemen situated as you are feel the need of. I do not know anything about the facts of your case, but I have no doubt but what certain powerful interests can prevent a man from getting credit, no matter how good he is, because the banks do not want to incur the hostility of those interests; and the men who control those interests have power enough and selfishness enough to want to destroy their competitors and to do it in any way they can, and they will use their power with the banks, and the banks do not want to go up against a dangerous proposition. It may not be because they have any part in the conspiracy in question, but they are prudent business men and do not want to get into a controversy that will be dangerous or detrimental to the interests of the stockholders, and that will stop them.

Mr. Long. There is one provision of this bill relating to farm loans that I think would be a good thing for all parts of the country, because the farmers could have a way of borrowing money. Even in New England there are a good many small farmers that need money for a few months, who own property that is not mortgaged, and if they could borrow money for a few months from their own bank, dealing with the regional bank, I believe that would be a material help.

Senator Bristow. It would be a benefit to the farmers you have in New England?
Mr. Long. I think so. I think, in my own town of Framingham, there are farmers it would help.

Senator Bristow. Can you tell us—a few months would not do us any good out West—the kind of paper that the farmers have?

Mr. Long. I understand those farm loans would be short-time paper with the property as collateral.

Senator Hollis. A mortgage.

Mr. Long. Yes; a mortgage.

Senator Bristow. Would that be of much use to the farmer in New England?

Mr. Long. I think it would.

Senator Bristow. How do they make their loans up there: just as business men do, three months' time?

Mr. Long. Three or four or six months. As I understand the bill, they could borrow for six months or eight months, and the banks would carry it for a few months and then send it to the regional bank for discount.

Senator Bristow. In the farming regions in the West and Central West a 12-months' limitation would destroy the usefulness of that, because their loans practically are all made for five years; and I wondered what conditions in New England would make a 12-months' farm loan of value to you that it would not be to us out West. What crop does the farmer gather that enables him to meet the note?

Mr. Long. They raise hay and other crops. I think hay is the principal crop. But there are times that the farmer needs money, and I think any help you can give to the farmer might help him to raise larger crops and reduce the high cost of living?

Senator Bristow. Well, the high cost of living does not come from the high price the farmer gets for what he raises. It comes from the prices we have to pay after it leaves the farmer. The farmer is not getting any more for his wheat now than he got many, many years ago. A few things are higher but many things are not. The high cost of living has been charged to the farmer, and in making this tariff bill—which ought not to be referred to, I suppose—he has been made the victim. The real evil is the commercial system we have and not the high cost of producing the farm products, in my judgment.

Senator O'Gorman. Has this witness concluded?

Senator Bristow. There is nothing else, unless Mr. Long wishes to add something else to his statement.

Mr. Long. I think I have said about everything I wanted to say, except to reiterate that I think in this bill, before it is finally enacted, the merchant, the manufacturer, and the farmer should be considered; but even in its present form I think it would be a benefit to them and bring about more independence in banking.

Senator Reed. How are we to consider the merchants, the manufacturers, etc., in this bill? How are they to be protected any more definitely than they are by virtue of building up a strong, safe banking system, regulated in its great outlines by the Government?

Mr. Long. In times of stringency I believe the merchant, the manufacturer, and the farmer is the man that is refused credit first, and I believe this bill, with its rediscount feature, as it is in its present form, with its rediscounting privileges, will make a more elastic system of credit.
Senator Nelson. You know, of course, that the farmers and merchants can not go to these regional banks and get a discount, don't you?

Mr. Long. But their own banks. A merchant would go to his own bank.

Senator Nelson. They can do that now, can they not?

Mr. Long. Yes; but the bank in a small town could not loan over a certain amount of money to a manufacturer. If he wanted more money than his bank could loan at the present time, he would be obliged to go elsewhere; but if the bank could rediscount his paper, he could get a larger line of credit.

Senator O'Gorman. Can not any bank now find adequate opportunity to rediscount its paper when it has to do that?

Mr. Long. I think under the present condition—at the present time—the leading banks frown on the idea of rediscounting paper. It is not considered to be sound banking.

Senator O'Gorman. And you think the custom will become legitimate under the proposed plan?

Mr. Long. I believe under this bill if the banks were required to deposit a certain amount of money with the regional banks it would bring about a practice of rediscounting paper.

Senator Nelson. Do you believe that the banks are the creators of wealth, or any banking system? Does that create wealth or credit of itself?

Mr. Long. I think a banking system may limit credit or enlarge credit. I do not think they create credit.

Senator Nelson. Does not the credit and currency of the country hinge upon the prosperity of the country?

Mr. Long. Yes.

Senator Nelson. And the volume of production—what the farmers produce and the manufacturers manufacture, and the merchants handle?

Mr. Long. Yes, sir.

Senator Nelson. Is not that what makes business? Is not that what builds the credit?

Mr. Long. That is.

Senator Nelson. And the banks do not do it. They are simply the vehicle; the instrumentality?

Mr. Long. Yes.

Senator O'Gorman. Does any other Senator desire to ask a question?

Senator Reed. I did not hear this gentleman's testimony. I have been told you say you were engaged in the manufacturing business and could not get money?

Mr. Long. Yes, sir; I was manufacturing shoes and shoe machinery.

Senator Reed. Where?

Mr. Long. Framingham, Mass. I introduced a petition for a bill in the Massachusetts Legislature in 1907 that became a law after quite a contest, and at that time I was using machines from that company under contracts of lease, and while the legislation was going through the house and senate we discarded the machinery from that company, and our old company that was under contract went out of
business and a new company was organized to manufacture shoes with machinery that we bought. Soon after that the superintendent of a branch of our business that was looking after the machinery informed me that through another machinery man, a representative of the United Shoe Machinery Co., word had come along to me that if I did not stop opposing them they would see I would not be able to borrow any money in Boston from the banks I was doing business with. At that time I had lines of credit in Boston of about $200,000. That credit was taken away, and since that time I have not received any discounts from those banks.

Senator O'GORMAN. Was any reason given by the banks for taking that away from you?

Mr. LONG. They said that I had better go out of the machinery business and stop opposing the United Shoe Machinery Co.

Senator WEEKS. What banks were you borrowing from?

Mr. LONG. I was borrowing from the Commonwealth Trust Co., of Boston.

Senator WEEKS. How much credit did you have?

Mr. LONG. I had a line of $100,000. I owed them $50,000, and I was promised $50,000 more. The Atlantic National Bank, of Boston, I had a line of credit there up to about $75,000. I was offered a line of credit by the New England National Bank of $50,000.

Senator REED. You did not go out of business, did you?

Mr. LONG. No, sir.

Senator REED. Where did you get your money?

Mr. LONG. I was obliged to limit my business, to sell through retail stores that I owned, and be slow in paying my bills until we made money enough to be more independent.

Senator REED. Are you running now?

Mr. LONG. Yes, sir.

Senator REED. Has your business been prosperous since?

Mr. LONG. Not anywhere near as prosperous as before, because I was limited for a time in credit.

Senator REED. But you have not had any failure?

Mr. LONG. No, sir.

Senator REED. You have been doing a paying business all the time?

Mr. LONG. We conducted business all the time.

Senator REED. What I am trying to get at is whether there was any such condition in your business, at the time you say those credits were refused, to have led a conservative banker to have refused you credit because your business was not in a good condition?

Mr. LONG. I do not think there was. We paid the notes, and the different banks refused to make further discounts.

Senator O'GORMAN. Did the bank have reason to fear that your competition with these other large interests might so involve you as to impair your ability to meet your obligations?

Mr. LONG. I do not think so. I owned real estate, free and clear of encumbrance, that cost me nearly $500,000.

Senator NELSON. Were you an incorporated company?

Mr. LONG. Yes, sir.

Senator NELSON. You succeeded another company, as I understand it?

Mr. LONG. Yes; the Framingham Shoe Co. is the company that succeeded the old company.
Senator Nelson. The old company succeeded that?
Mr. Long. The Framingham Shoe Co. is the present company.
The old company was the R. H. Long Shoe Manufacturing Co.
Senator Nelson. Did you buy out the old company when you
formed the new company?
Mr. Long. I owned the old company. I owned all the stock.
Senator Nelson. And you changed into a new company. What
did you make the change for?
Mr. Long. I did not change into the new company. The old com­
pany went out of business. It had contracts with the United that
it could not use any other machinery, and that company went out
of business.
Senator Nelson. That was your company, too?
Mr. Long. Yes, sir.
Senator Nelson. And then you formed a new company?
Mr. Long. Yes, sir.
Senator Nelson. How much stock and bonds did it have?
Mr. Long. The new company has a capital of $225,000.
Senator Nelson. In stock?
Mr. Long. Yes.
Senator Nelson. And how many bonds outstanding?
Mr. Long. No bonds.
Senator Nelson. No mortgage?
Mr. Long. No, sir.
Senator Nelson. And who held the stock?
Mr. Long. I held the stock, all but a few shares.
Senator Nelson. All but 2 shares?
Mr. Long. All but a few shares—maybe 8 or 10 shares.
Senator Nelson. So it was really a one-man company?
Mr. Long. Yes, sir. The notes I offered to the banks were the
notes of the Framingham Shoe Co., payable to me, with my indorse­
ment.
Senator O'Gorman. With your indorsement?
Mr. Long. With my indorsement: and I at that time owned real
estate in Framingham that cost me about $500,000.
Senator Reed. Now, you are bucking, as the term goes, this United
Shoe Machinery Co., consisting in refusing their machines and no
other?
Mr. Long. Yes.
Senator Reed. And putting in a rival machine?
Mr. Long. Putting in other machines; yes, sir.
Senator Reed. And your old company had had a contract binding
it to use the United Shoe Co.'s machines?
Mr. Long. Yes. sir.
Senator Reed. Did you repudiate those contracts—that is, break
any contract in any sense—or just refused to keep the machines
longer?
Mr. Long. Yes; we claimed their contracts were illegal.
Senator Reed. Had you agreed to use their machines for a given
period of years?
Mr. Long. Yes.
Senator Reed. And you repudiated that by means of reorganiza­
Mr. Long. Not exactly that; the old company was a Massachusetts company, which simply went out of business.

Senator Reed. It went out of business, and the contract came to an end because you no longer used them?

Mr. Long. Yes, sir.

Senator Reed. Did this contract bind your company to use the machines for a given period of time, or was it terminable when the company ceased to manufacture?

Mr. Long. Most of the contracts would practically terminate when the factory ceased to do business. There were some which were continuous.

Senator Reed. Was there any claim that you had been really guilty of a breach of good faith when you adopted this method of escaping from the contract?

Mr. Long. There was never a suit or claim brought against the old company on account of the contract. There was some infringement suit against me personally.

Senator Nelson. Were you the principal owner of the old company?

Mr. Long. Yes, sir.

Senator Nelson. So you simply changed your corporate name?

Mr. Long. No; the old company went out of business.

Senator Nelson. You went out of business, and then you took on a new name?

Mr. Long. A new company was organized.

Senator Nelson. A new company was organized?

Mr. Long. Yes, sir.

Senator O'Gorman. What did the old company do with its plant?

Mr. Long. They had a plant which they hired.

Senator Nelson. Did they have any plant which they turned over to the new company?

Mr. Long. No; the new company bought some merchandise.

Senator Nelson. What did the $250,000 of stock represent?

Mr. Long. Investments.

Senator Nelson. In what?

Mr. Long. Merchandise and cash.

Senator Nelson. Good will?

Mr. Long. No. There was $25,000 of good will in the company.

Senator O'Gorman. You say the plant held by the first company was rented?

Mr. Long. Yes, sir.

Senator O'Gorman. From you?

Mr. Long. No.

Senator O'Gorman. From whom?

Mr. Long. From the Coburn Manufacturing Co.

Senator Reed. You said there was some infringement suit brought. When was that brought, before or after you changed your company name?

Mr. Long. They were brought after the new company was organized.

Senator Reed. They claimed you were then using a machine which was, in fact, an infringement of other patents?

Mr. Long. Yes.
Senator Reed. Did those suits claim large amounts of money as damages?

Mr. Long. There was no amount; it was simply a suit with a request for an injunction.

Senator Reed. Were those suits for injunction pending at the time the banks said they did not care to let you have any more money?

Mr. Long. Some of them were.

Senator Reed. After the suits had been disposed of, did you ever again apply to these banks for credit?

Mr. Long. I did.

Senator Reed. Was it still refused to you?

Mr. Long. Yes.

Senator O'Gorman. How were the suits decided?

Mr. Long. So far as they went they were decided in my favor.

Senator O'Gorman. Are you doing business with any of those banks which refused to give you credit then?

Mr. Long. No, sir.

Senator Weeks. Did the United Shoe Machinery Co. have an account with the Atlantic National Bank at this time?

Mr. Long. I do not think so.

Senator Weeks. You do not know whether it did or not?

Mr. Long. No; I do not.

Senator Weeks. Did it have any director on the board of directors of the Atlantic National Bank?

Mr. Long. I do not know.

Senator Weeks. Did anybody connected with the United Shoe Machinery Co. own any stock in the Atlantic National Bank?

Mr. Long. I do not know.

Senator Weeks. Did the United Shoe Machinery Co. have a deposit in the New England National Bank?

Mr. Long. I do not know.

Senator Weeks. Did anybody connected with the United Shoe Machinery Co. belong to the board of directors of the New England National Bank?

Mr. Long. I think they did.

Senator Weeks. Who?

Mr. Long. I do not know, except from what the vice president said to me about the loan.

Senator Weeks. You do not know who?

Mr. Long. No.

Senator Weeks. Did they own any stock in the New England National Bank?

Mr. Long. I do not know.

Senator Weeks. Did the United Shoe Machinery Co. keep an account with the Commonwealth Trust Co.?

Mr. Long. I understand they did.

Senator Weeks. Do you know whether it did or not?

Mr. Long. I was told they did.

Senator Weeks. Did it have any directors on the board of the Commonwealth Trust Co.?

Mr. Long. I do not know that.

Senator Weeks. Did they own any stock in the Commonwealth Trust Co.?
Mr. Long. I do not know.

Senator Weeks. Before Mr. Long leaves the stand I want to make a brief statement, and I would like to have him make any corrections in regard to it before he leaves, if there are any points he wants to raise.

This is an old story which he has brought to us relating to a controversy between himself and the United Shoe Machinery Co. I know nothing about its merits; neither do I know of any influences brought to bear by any large corporations to prevent their rivals from obtaining accommodations in banks. It is possible that such may have been done in some cases, but I see no evidence of it in the complaint he has made, but in regard to the First National Bank, I want to say the information Mr. Long has given the committee is, in my judgment, not entitled to any credit.

Mr. Long. If you will allow me to interrupt you.

Senator Weeks. Let me finish my statement, and then you may make any corrections you desire.

At the time to which he refers I was one of the directors of the First National Bank, and as I was here in Washington I knew nothing personally about this matter. Mr. Long was my opponent in the primaries last fall as a candidate for Congress and made his campaign against me because of my being on a board of directors with certain directors of the United Shoe Machinery Co.

At that time I naturally wanted to find out whether Mr. Long had any real grievance against the First National Bank, of which I was an officer, so I made inquiry, and I learned as a result of my inquiry that Mr. Long did apply for a loan at the bank, but he never had kept an account with it. He asked to open an account at the bank by making a loan. Ordinarily, when a man predicates opening an account by making a loan, there is hesitation on the part of the bank as to proceeding any further with him. In this particular case one of the vice presidents of the bank, Mr. Dimmell, did say to Mr. Long that he did not think his statement warranted the bank's loaning him money under such circumstances, and later on, after he had investigated Mr. Long and obtained a report upon his commercial rating, he was confirmed in that opinion, so that at another time when Mr. Long called at the bank and saw the president and asked to open an account and make a loan, the same reply was made to him, and that reply was made because, in the first place, Mr. Long had been engaged in business in Belchertown, Mass., and had made a pretty bad failure in his business, and, in the second place, he not only was manufacturing shoes and shoe machinery but he maintained a considerable number of stores. He manufactures and sells the Waldorf shoe. It constitutes a business with a good many strings to it, and it has not been the policy of the bank to loan money under those circumstances to any borrower.

But these replies made by the president and vice president of the bank were made without any consultation with any director connected with the United Shoe Machinery Co. or any other director. They were based entirely, in my judgment, on the merits of the case, and had no other motive whatever.

Mr. Long. I would like to correct one statement made by Senator Weeks in regard to a failure in Belchertown. I did not make any
failure. The same company was in business in Framingham that was in business in Belchertown.

Senator Weeks. I have always been told—I do not want to do you any injustice—that there were a number of people in Belchertown who lost money through your manufacturing industry there.

Mr. Long. That was a political story.

Senator Weeks. If so, I apologize, and would strike that from the record.

Mr. Long. I did not come here to refer to my own troubles with banks. I came before this committee to say that in framing the bill the manufacturers and merchants should be considered in the framing of the bill that is to be enacted into law—manufacturers, merchants, and farmers. I think they need additional credit facilities more than the big industrial corporations and people connected with the stock exchange, who, in my opinion, have the first call on the money in the banks.

Senator Weeks. That is a general opinion, I think.

Senator O'Gorman. Are there any further questions? If not, Mr. Long, we will excuse you.

We will now hear from Mr. Vinson.

STATEMENT OF TAYLOR VINSON, ESQ., OF HUNTINGTON, W. VA.

Senator O'Gorman. Mr. Vinson, state your full name, your residence, and business activities for the record.

Mr. Vinson. My name is Taylor Vinson; my residence is Huntington, W. Va.; I am a lawyer and interested in the coal business.

Mr. Chairman and gentlemen of the committee, I want to apologize for the presumption I have in appearing before your committee. There are some phases of this bill which is now under consideration which I have looked at from the practical point of view of the man who has most business with banks as a borrower, as it affects his own personal affairs. I think, in that respect I represent one of a very large and numerous class of business men.

I am encouraged to proceed with this statement I am going to make by reason of statements I have heard since I have been here, coming from different members of the committee. They foreshadowed what I have to recommend, and I would not be here, in view of the very great and continued criticism coming from such high and respectable sources against this bill if I did not have something, which, in my judgment, is better to offer as a substitute. I hope that will be a sufficient apology, Mr. Chairman, for taking up your time for a few moments.

In my study of the principles of legislation, which I had to do as a student of law, there are two or three fundamental precepts which, if followed, ought not to lead any legislative body very far astray. There are one or two also which I would like to read, and which I think are axiomatic.

One is that the supply of currency is a governmental function and not a private function. I lay that down as a principle which I will elaborate a little later. The exercise of a governmental function should never be committed to private persons having personal interests to serve. In other words, no judge should decide a case in which he is personally interested.
The central-bank plan, known as the Aldrich plan, and the regional-bank plan which is outlined in the bill before this committee are the same as far as this principle is concerned, and both these plans violate this principle. That is, the regional banks and the central bank are owned and controlled by private persons representing private rights and yet exercising the most sacred governmental functions.

Criticisms that have been directed toward the central-bank plan, as originated by ex-Senator Aldrich, so far as its being a private institution, governed and controlled by private individuals representing private stockholders, as being a most dangerous exercise of power over the supply of currency that is to be issued and controlled by a purely private institution—I say the argument is just as strong, if not more so, against the principle that a regional bank as provided for in this bill.

Those are two precepts, and I have another on the question of reserves. The necessity for reserves is to create primarily in the mind of the depositor the implicit confidence in the ability of his bank to return his money whenever he calls for it. To divert the bank reserves into the purchase of bills and notes by the reserve agent weakens and impairs that confidence and produces fears and apprehensions that, at times, necessarily lead to panics.

In other words, reserve money if diverted and spent for other purposes, however redeemed, ceases to be reserve.

Along that line and carrying out that idea, Mr. Chairman, I have prepared a bill which, if I had the honor of being a member of this committee, when the committee got into executive session, I would move to substitute for the bill now before you.

I will state the principle of this bill very briefly. It is to create a currency department of the Treasury of the United States. That currency department would be, for the sake of convenience, called a Treasury bank. I used that term because I did not think of anything more appropriate. That Treasury bank would be governed and controlled entirely by a board of governors composed of seven members. Of course six of these members would be appointed by the President; and the Secretary of the Treasury, by reason of his affiliation with the business, would be ex officio a member of the board but not the chairman.

These members would be appointed for periods of 12 years—I mean the 6 members. That is, the first appointment would be two for 4 years, two for 8 years, and two for 12 years, so that no President, even if he might have the mind to do so—which I feel sure he would not—could put in different persons on the board—persons affiliated with any particular political party; he would be unable to do that.

This would be a board of governors, each of whom would have necessarily as a qualification an intimate knowledge of banking conditions, but yet be entirely divorced from banking or any banking interests, whether as a director or stockholder. This board would be as strong and as great in character and in ability to discharge the functions that they would be called upon to discharge as you find in the character and ability of the members of the Supreme Court of the United States to discharge the duties that they are called upon to discharge. It would not be influenced by any personal considera-
tions whatever. In other words, it would have a new form along the
very particular lines of an interstate commerce commission, vested,
however, with very much greater responsibilities and requiring a
more conservative exercise of judgment.

Now, then, if that board were created, and we had this bank, if
you please, which is simply another name for that part of the Treas­
ury Department; we will call it a Treasury bank, because under that
name this department would exercise its functions. Then, if any
bank in the country, whether National or State bank, desired the
privilege of rediscounting any of its commercial paper, or I might
say short-time paper, it would make its application to this board
of governors along the same lines as provided in this bill, the same
as would apply to the regional bank. The application would not be
made directly to the board of governors, would establish State offices,
if you please, in each collection district of the United States, if it
was necessary to accommodate the local banks, and they would use
the internal-revenue collector for that particular district as their
representative and agent, and he would be under their direction. So
that when an application came it would go first into his hands, and
then, having the supervision of the income tax and the excise tax on
all corporations in his territory, he would have practically a credit
statement showing the individual credit of most men and most makers
and indorsers of paper that would come before him for action.

Senator Weeks. What you propose is to make a separate bank in
the Treasury Department, which shall, essentially, be a central bank
under Government control?

Mr. Vinson. Absolutely.

Senator Weeks. That is your proposition.

Mr. Vinson. That is it.

Senator Weeks. Without going into details?

Mr. Vinson. Without going into details. It is necessary to go into
a few details, so that these details may be contrasted with the pro­
visions of the bill before you.

Senator Hitchcock. Where does the bank get the money it is to
loan?

Mr. Vinson. The Treasury bank?

Senator Hitchcock. Yes.

Mr. Vinson. Well, in the first place, it would be authorized,
directly, to issue notes—to issue Treasury bank notes. The bonds
that are now held by the Treasury to secure the circulation of the
national banks would be reissued and turned over to this Treasury
bank as 3 per cent bonds instead of 2 per cent bonds, and then all
the national banks, and all other banks having national-bank notes,
would simply send those notes to the Treasury bank, and the Treasury
bank would issue those notes, and in that way you would have a
retirement of your national-bank notes, the payment of which is
secured by the $725,000,000 of bonds, 3 per cent bonds instead of
2 per cents, with the right of the Treasury bank to pledge these bonds
at any time the gold reserve might run low.

Senator Hitchcock. The $700,000,000 of national-bank notes would
be supplanted by $740,000,000 of Treasury notes to begin with—
United States notes?

Mr. Vinson. Yes, sir. Back of those Treasury notes would be the
same amount of United States 3 per cent bonds.
Senator Hitchcock. They would all be outstanding?
Mr. Vinson. They would all be outstanding.
Senator Hitchcock. As the bonds came in, where would the Treasury bank get the additional funds to lend?
Mr. Vinson. Well, I have not yet reached that point. I wanted to explain how the bill will mathematically retire all bank notes, and silver certificates and gold certificates, so that the whole country will have but one character of paper money.
Senator O'Gorman. Do you provide for the retirement of the greenbacks?
Mr. Vinson. Yes, sir.
Senator Weeks. Before you go on with that, I want to come back to your original premise. On what do you base your statement that it is a Government function to issue circulation?
Mr. Vinson. I base it upon the criticisms that were offered by the friends of the present measure against what we call the central-bank idea of the Aldrich measure.
Senator Weeks. Is there anything in the Constitution or in the practice of nations which warrants any such conclusion?
Mr. Vinson. I do not know that it would be a constitutional requirement.
Senator Weeks. I see there is nothing in the practice of other Governments which warrants the conclusion that it is a governmental function to issue circulation?
Mr. Vinson. I think the practice of other Governments is directly to the contrary.
Senator Weeks. You want to throw away the experience of the world and adopt something new?
Mr. Vinson. I would like to throw away the experience that would not be applicable to our own country. A great deal of stress has been laid by the friends of the Aldrich plan upon the fact that the banks of England, Germany, and France have been controlled along parallel lines to the proposed Aldrich bank so successfully for such a long period. That is the precedent which the lawyer would call it, that he sites in support of his proposition. But the conditions are so very different there from what they are here that the precedent ceases to be a precedent upon analysis.
Now, I have no doubt that the people of England and the Governments of these various countries feel that the Government, as such, must retain every particle of the credit that it has, so that it may, on extremely short notice, be able to use all that credit and raise a tremendous war fund, and that the people, knowing that fact, have more confidence, in all probability, in the stability of these banks of issue than they would have if the Government stood back of them. That is not our condition.
Senator Nelson. Your idea is to retire the present national bank notes by substituting 3 per cent bonds for the 2 per cent bonds, and having the Government keep those 3 per cent bonds as a basis for this new circulating medium?
Mr. Vinson. As a basis rather of redemption. In other words, the bonds would only be let out whenever the notes which the Government issued to retire the national-bank notes were presented for payment.

Senator Nelson. Would you measure the quantity of the notes by these new 3 per cent bonds?

Mr. Vinson. I think you would measure the quantity the same as now.

Senator Nelson. Would you not still have this bond-secured currency to that extent? You would have a currency based on 3 per cent bonds instead of 2 per cent bonds?

Mr. Vinson. Yes; that would be it, substantially.

Senator Weeks. How can you redeem a note with a bond?

Mr. Vinson. You would get one with a bond.

Senator Weeks. How?

Mr. Vinson. By selling it.

Senator Weeks. To whom are you going to sell them?

Mr. Vinson. I think anybody would buy them.

Senator Weeks. Any time anybody came with a note to redeem, you would sell the bond?

Mr. Vinson. Certainly not. I take it the governors of the bank always have on hand a sufficient quantity of gold to meet all requirements.

Senator Weeks. Have you provided for that?

Mr. Vinson. Absolutely. I would give the governors the power to sell the bonds——

Senator Nelson (interposing). You would have the currency redeemable in gold?

Mr. Vinson. Absolutely.

Senator Nelson. And made a legal tender?

Mr. Vinson. Absolutely. My idea is this: That any currency—that is, the currency ought to be just as good as gold, under any and all circumstances. I think the very idea of the expression "lawful money" used in this bill is bad. The idea of having any money that is not lawful money, paying debts with it and using it in our every-day affairs, using money that is not strictly speaking lawful money, is a bad idea.

Senator Nelson. I am asking simply in order to get some light on your preposition. Now, beyond the circulation that would arise from the conversion of the 2 per cent bonds to 3 per cent bonds, what would you base that other extended circulation on, the circulation beyond that?

Mr. Vinson. For the discount of the notes?

Senator Nelson. Well, if you issued more circulating notes than would be covered by these new 3 per cent bonds, what would you base those on?

Mr. Vinson. You would not issue any more than were covered by the 3 per cent bonds and these notes would have back of them precisely the same governmental guarantee which they have now.

Senator Nelson. You would have Government bonds as the basis of that currency?

Mr. Vinson. Oh, to be sure. The faith of the Government would be back of all the note issues.

Senator Nelson. How could you get elasticity in the currency?
Mr. Vinson. Very simple. As a bank would borrow money, or rather, rediscount it at this Treasury bank by the approval of the board, it would take notes that would mature inside of 120 days out of its own portfolio and have them discounted, and when those notes were paid the money arising from the payment of the note would go into the Treasury bank again.

Senator Nelson. Then, unless you provide the Treasury with a special discount fund, the Treasury would simply discount this paper by issuing more currency?

Mr. Vinson. It would.

Senator Nelson. So that really you provide, in addition to this bond-secured currency, more currency, based upon the paper discounted.

Mr. Vinson. Asset currency.

Senator Nelson. Go on and give us the rest of your plan.

Mr. Vinson. That is the plan, in a very few words; so that at no time could any individual or any section, or any bank, have any other feeling, so far as the currency supply is concerned, than a feeling that they had been exactly and justly dealt with.

Senator Hitchcock. How much would you allow a bank to rediscount?

Mr. Vinson. Forty per cent.

Senator Hitchcock. Of what?

Mr. Vinson. Of their loans and discounts.

Senator Hitchcock. How do you arrive at that particular feature?

Mr. Vinson. Forty per cent?

Senator Hitchcock. Yes.

Mr. Vinson. Well, I took up the idea and made some little investigation about it and found that, generally speaking, particularly among country banks, they would have 40 per cent of what you might call loans that would certainly be paid upon maturity. I called upon the banks at home in order to get that figure. I do not mean to say that is accurate at all, but in order to prevent an inflation of the currency there should be a limit of the amount of discount that any bank may secure.

Senator Hitchcock. Then, of course, the more the bank extended its loans, the greater its ability would be to secure currency from the Treasury?

Mr. Vinson. That would naturally follow, just as in the bill before you the more loans the bank would have the more capacity it would have to secure Treasury notes.

Senator Hitchcock. Would it not be safer and more conservative to place a limit on the bank's capital rather than on its action in inflating its loans?

Mr. Vinson. As the loans would mature the primary basis of the money to be secured on them would be better.

Now, then, there is another change which it seems to me is particularly desirable. I would reduce the reserves from the 25 per cent now required, and the 15 per cent now required—reduce them down to 10 per cent; 5 per cent of that reserve would be deposited with the Treasury bank and the other 5 per cent would be required to be kept in the vault of the bank.

Senator Hitchcock. Suppose a bank had taken out bills to the full limit, and, in the first place, had loaned out all of its loanable
funds, so that its reserve is down to the danger line, and then it procured 40 per cent additional currency, to extend its outstanding loans, and suppose, when it was unexpected, there would be a run on it; what would you do?

Mr. Vinson. It would be limited to 40 per cent at any one time.

Senator Hitchcock. Take a hypothetical case of a bank which has $100,000 capital and a million dollars of loans. That is possible; they sometimes run as strong as that. Suppose such a bank, having loaned to its limit, should go to the Treasury and secure $400,000 of currency and loan that out, so that it would have $1,400,000 of loans outstanding, and then suppose its depositors began a run on it so that it was pretty well extended. What would that bank do to protect itself?

Mr. Vinson. In the first place, it would have its reserve to start on, in the Treasury bank.

Senator Hitchcock. Of course, but you say it would be only 15 per cent. It would still have 85 per cent of its depositors to pay, if they all came in at the same time.

Mr. Vinson. Where there is a threatened run on a bank it can use all of its other assets to borrow additional money in order to stop that run if in the judgment of the governors it is entitled to it.

Senator Hitchcock. It has exhausted its resources and the Treasury would extend its loans?

Mr. Vinson. Yes, sir.

Senator Hitchcock. Suppose it finds itself in a weak position, and its depositors get into a panic. Having exhausted its resources, how can it protect itself from its depositors?

Mr. Vinson. It has the other 60 per cent, together with this 10 per cent of reserves.

Senator Hitchcock. It can not discount those.

Mr. Vinson. I know. I have a section covering that, so that when a bank run is threatened or started upon a bank the Treasury board— I mean the board of governors of the Treasury bank—may come to its rescue, if in their judgment it is entitled to the credit.

Senator O'Gorman. You would call that an emergency fund?

Mr. Vinson. Absolutely for an emergency, and the board of governors would exercise their discretion as to whether it should have aid or not.

Senator O'Gorman. Do you think it is prudent to allow the privileges of rediscount in order to enable a member bank to extend its line of loans, or should the advantages of rediscount be restricted only to the procuring of money with which to pay depositors?

Mr. Vinson. Senator, I think that, to a certain extent, and I might say a limited extent, the bank ought to have the power to get additional money, provided always that it has paper—I mean bills and notes—in its vaults that have maturities running from 20 to 30 to 40 or 60 days up to 4 months that will surely be paid at maturity.

Senator O'Gorman. Is that not always subject to the danger of inflation?

Mr. Vinson. It can only be an inflation for 4 months at the outside, and the inflation settles itself. It redeems itself.

Senator O'Gorman. Going back for a moment, you suggested substituting 3 per cent bonds without the circulating privilege?
Mr. Vinson. No circulation would be required.

Senator O'Gorman. It would simply be a 3 per cent investment?

Mr. Vinson. That is it.

Senator O'Gorman. Do you think that is a sufficient rate of interest in these times, even for a Government security—3 per cent?

Mr. Vinson. Of course those bonds and the interest arising from the bonds would be nontaxable, nor would the interest on the bond itself be subject to the income or inheritance tax; but I think bonds of that kind would command a premium.

Senator O'Gorman. Do you really think so?

Mr. Vinson. Yes; I do. They are practically commanding a premium now.

Senator O'Gorman. The 3 per cent bonds?

Mr. Vinson. I think so.

Senator Hitchcock. They are about par.

Mr. Vinson. About par? I think I saw them quoted at 101.

Senator McLean. I think they have been quoted at 99.

Mr. Vinson. The last quotation I saw was 101.

Senator O'Gorman. Do you not think the normal trend in the future for the interest rate will be upward rather than downward?

Mr. Vinson. That depends on the supply of money.

Senator O'Gorman. Having in mind our experience in recent years, the trend has been upward?

Mr. Vinson. That is because the business has grown faster than the money, and, of course, as greater capital demands are made, naturally that increases the rate which business has to pay for its capital. You take the best railroads in the country to-day, and it is very hard for them to get money under 7 or 8 per cent. Four or five years ago, until this tremendous capitalistic demand was created by the growing business of the country, they could get money for 4½ or 5 per cent.

Senator O'Gorman. Yes; and some of the best city bonds are now being sold at 4½ per cent?

Mr. Vinson. Yes.

Senator O'Gorman. But nevertheless you feel confident that the 3 per cent bond would maintain its value at par?

Mr. Vinson. I think so, judging from past experience, Senator. I do not believe there would be any doubt about it.

Senator Hitchcock. Returning now to this incident of a bank with a million dollars of loans, which, on the strength of its loans has secured $400,000 of currency, or 40 per cent from the Treasury; then its loans amount to $1,400,000. Now, then, would it be entitled to an additional 40 per cent on the $400,000?

Mr. Vinson. Certainly not. It would not be entitled to any more loans until those loans had been paid off and the money arising from them was all sent back to the Treasury Department. You would have a continuing redemption.

Senator Hitchcock. You would just allow it to make one loan?

Mr. Vinson. No; I would give it credit for 40 per cent.

Senator Hitchcock. This additional $400,000 would entitle it to an additional credit of $160,000?

Mr. Vinson. Not at all.

Senator Hitchcock. It is commercial paper.
Mr. Vinson. But you would base that on its deposits out, and it may be when it was running up to its full limit; then all that would have to be retired and paid before it would be eligible for another loan.

Senator Hitchcock. Just allow it one loan?
Mr. Vinson. Just allow it one loan up to 40 per cent.
Senator O'Gorman. You would give it 40 per cent practically all the time?
Mr. Vinson. Yes; 40 per cent practically all the time, at the time when they required it.

Now, if the paper which was pledged or sold to secure that credit was all paid, there is no reason why, if it has sufficient satisfactory paper in its vaults, that another 40 per cent credit might be added to it at the time the loan was paid back.

Senator Hitchcock. Let us make it specific. On January 1 the bank has a million dollars of commercial paper. It applies to the Federal Treasury and gets $400,000 of currency and that exhausts what it is entitled to on its commercial paper?
Mr. Vinson. Yes, sir.
Senator Hitchcock. Five days after that it comes to the Treasury, and as I have here $400,000—I have now $400,000 of commercial paper.
Mr. Vinson. Yes.
Senator Hitchcock. It thereupon loans out this $400,000 of currency and secures $400,000 more of commercial paper, bringing its commercial paper up to $1,000,000 again. Would not it then be entitled to another $400,000 of currency?
Mr. Vinson. I do not think so. Senator, under the plan.
Senator Hitchcock. Well, you have to guard against that.
Mr. Vinson. They would hold the securities, I think, in there. I think it would be limited to the 40 per cent.

Senator O'Gorman. Have you prepared a bill?
Mr. Vinson. Yes, sir; I have prepared a bill to that effect.

Senator Hitchcock. There is something in your suggestion; but I think the standard has got to be the capital of the bank.

Mr. Vinson. Well, I figured the other way—on the loans and discounts.

And on the matter of reserves, a great deal has been said about reserves; and going back to my primary principle, if you please, a reserve that is used for other purposes than a reserve ceases to be a reserve. That follows necessarily. Just as to-day the reserves that
the country banks send to their New York reserve banks under the existing system, those banks are practically compelled to use those reserves and not keep them there.

Senator Hitchcock. Five per cent of them.

Mr. Vinson. Yes. I say that it is a business necessity that they must be used. And the very minute they lend that money out, whether it is on a stock-exchange collateral, or on time paper, or whatever they do with it, it then ceases to be a reserve. And it is that fact, if you please, Senator, that creates in the minds of most bankers that apprehension, that dread, that fear that—some time in the next month, or two or three months, we will have a money squeeze, and if we do, I had better be looking out about my reserves, because I know to-day that they are not in existence.

Now, it seems to me that that is one fault, if not the great and chiepest fault, of our existing system.

Senator Hitchcock. You do not mean to have the bank keep them all in cash, do you?

Mr. Vinson. I would keep it in cash; one-half of it in the bank itself for its daily uses. I would have it keep that much more over its daily uses. Of course, it would have to deposit a lot of other cash in its correspondents, to take care of its business. And yet I would keep in the Treasury always a 5 per cent reserve, available any minute.

Senator Hitchcock. What would the Treasury do with it?

Mr. Vinson. They would simply hold it as a basis of its own circulation, if you please. I would have that paid in 1 per cent a month, for 18 or 20 months; have it paid in there as a permanent reserve fund.

Senator Hitchcock. You mean as a basis for circulation?

Mr. Vinson. I mean as a basis for the notes it issued to the banks that applied for them.

Senator Hitchcock. You mean in case they are presented for payment?

Mr. Vinson. Yes; in case they are presented for payment. A portion of that reserve, or a small portion of that reserve, might be used.

Senator Hitchcock. Would not the Treasury be doing exactly what you object to the New York banks doing, using the reserves of those banks?

Mr. Vinson. That is true; but it will be limited to using a very small portion of the reserves. The very fact, however, that the gold is there will create in the minds of the people into whose hands the notes go a confidence and a belief that they are safe.

Senator Hitchcock. What portion of it would you allow the Treasury to use?

Mr. Vinson. From 1 to 2 per cent of it. The very fact that it is there, however, and available for the use of the bank is a creator of the confidence that is necessary in the conducting of the banking business.

So, I think, that our experience along that line should justify a position that would be against the diversion of reserves by the banks as they exist—and also the same practice that is now proposed to be perpetuated in the bill that is now pending.

In other words, the regional banks will lend out the banks' reserves for the district in which it is located.
Senator Hitchcock. Only two-thirds of it.
Mr. Vinson. Two-thirds of the reserves?
Senator Hitchcock. Yes.
Mr. Vinson. Well, that would be subject to control, would it not?
Senator Hitchcock. No; the banks are required to keep a reserve themselves of 33$\frac{1}{3}$ per cent, which means that they are permitted to lend out a maximum of 66$\frac{2}{3}$ per cent of their reserves.
Mr. Vinson. Of their reserves? That is what I thought. They would lend out two-thirds of the reserves that are put in there, and upon which the banks would have to depend to be used in a case of emergency.

Now, I want to point out, or make some contrast----

Senator Hitchcock (interposing). Well, of course, in case of emergency, those individual banks can always apply to the reserve bank, and the reserve bank can procure currency to meet an emergency.

Mr. Vinson. Yes: if it has got the gold.
Senator Hitchcock. Yes.
Mr. Vinson. If it has not got the gold it can not.

Senator O'Gorman. Do you think an internal-revenue collector could as intelligently pass upon applications for rediscount as the officers of a regional bank, as provided for in this bill?

Mr. Vinson. I think, Senator, very much more so.

Senator O'Gorman. Do you not think the average collector, under the new income-tax law, will have all he can attend to in performing the ordinary duties of his office, without imposing this additional burden upon him?

Mr. Vinson. I would think there should be: and my bill provides for an increase of his force, so that he would be at the head of the business that he has now to attend to.

Senator O'Gorman. Your plan, then, would really impose upon an internal-revenue collector a substantial part of the banking system of the country, would it not?

Mr. Vinson. Only in getting information and passing upon the solvency of the paper that the banks have to offer: and also----

Senator O'Gorman (interposing). Well, that is one of the two most important functions of the proposed bill, is it not?

Mr. Vinson. That is one of the functions that he would have to exercise, and he would have most of the information right in his office, by reason of his other duties.

Senator O'Gorman. You, of course, recognize that the abilities that might qualify a man for internal-revenue collector might not furnish the necessary equipment for performing the duty that you would now assign to him?

Mr. Vinson. That may be very true. I say that might be very true, but the machinery to get at the information concerning the solvency and the desirability of the paper which the banks would offer for rediscount could be ascertained very much quicker by him.

Senator O'Gorman. Do you not think that could be used to very much better advantage—and I can see that it could be used to advantage—by putting that information that an internal-revenue collector may have at the service of a regional bank, for instance, or the officers of a regional bank? They would be at liberty, under the law, to
make an examination of any returns that may be lodged in the office of the collector of the district.

Mr. Vinson. I can readily understand that, if the regional bank would establish in each State or in each collection district an agency for securing this information—

Senator O'Gorman (interposing). For credit information?

Mr. Vinson. Yes; for credit information. Why, doubtless it could be done as well. It would have to be done, though, in connection with the internal-revenue collector's office; that is, to make it accurate.

Senator O'Gorman. Yes.

Mr. Vinson. Now, it could be done, I think, very much more effectively if it was done under his direction, because he has already got most of the information in his office.

Senator O'Gorman. You see, there is a sentiment prevailing in this committee largely, if not entirely, at the present time that the provision in the original bill making certain Cabinet officers members of the reserve board is unwise and will probably be rejected by this committee—if I may venture to say that much now—because of the belief that a Cabinet officer has all that he can attend to in looking after the business of his department, just as an internal-revenue collector has probably all he can attend to in looking after the affairs of his office. And men charged with the great responsibility—none greater, perhaps, under our system—of looking after the banking facilities of this country as contemplated by this bill or any similar bills will be required to be capable and big men, giving all their time—

Mr. Vinson (interposing). That is true.

Senator O'Gorman (continuing). To those duties and to no other duties.

Mr. Vinson. I say that is true. The idea I had in making the Secretary of the Treasury a member of this board was not so much to exercise the same kind and character of functions as the other members of the board—I mean the same time and duty—but to have him be in touch with it.

Senator O'Gorman. Yes.

Mr. Vinson. So that one could be interdependent upon the other.

Senator O'Gorman. If you have your bill ready, we will have the stenographer insert it in the record.

Mr. Vinson. Thank you. Yes; it is ready.

(The proposed bill referred to will be found at the conclusion of Mr. Vinson's remarks.)

Senator Nelson. Let me ask you a question in that connection. In your system what change, if any, do you make in bank reserves?

Mr. Vinson. I reduce them; I reduce them from 25 to 10 per cent.

Senator Nelson. Yes; you reduce them. But would you still allow the reserves to be kept in reserve cities or central reserve cities, or would you have the reserves kept in the Treasury Department?

Mr. Vinson. Kept right in the bank.

Senator Nelson. You would reduce the reserves and have them all kept in the Treasury?

Mr. Vinson. I mean one-half of them.

Senator Nelson. And the other half in the vaults of the bank?

Mr. Vinson. Yes; the other half in the vaults of the bank.
Senator Nelson. Would you do away with reserve cities and central reserve cities?

Mr. Vinson. Absolutely.

Senator O'Gorman. That would be your method of mobilizing and concentrating reserves?

Mr. Vinson. Absolutely. My own idea is that a reserve should be a real and an actual reserve.

Senator Nelson. And a protection for the depositors?

Mr. Vinson. And a protection for the depositors, and not a reserve that is represented only by a credit on some bank's books.

Senator O'Gorman. Yes.

Senator Nelson. Loans and discounts?

Mr. Vinson. Yes; loans and discounts.

Senator Nelson. I see.

Mr. Vinson. Now, I want to contrast some of the provisions I have outlined with the provisions of the present bill.

Senator Nelson. Yes; I would be glad to hear you do that.

Mr. Vinson. I want to take up the difference between the board of governors that I have outlined and the board of directors of the regional banks, and let us see which one would probably, if not necessarily, do the simplest and fairest justice to all the banking interests and the industrial and commercial interests.

I will first take up the regional directors. There are six of these directors and that is a majority of—

Senator Nelson (interposing). Of two-thirds.

Mr. Vinson. Of two-thirds that will have the control of this bank.

Now, to illustrate the criticism that I have to offer on the bill as now drawn—

Senator O'Gorman (interposing). Is that not a modified control? It is all subject to the final supervision and control of the Federal reserve board here at Washington, is it not?

Mr. Vinson. I do not understand that the reserve board at Washington would pass, or assume to pass, on the judgment exercised by the board of directors of the regional bank on questions of discount, I mean on questions of rediscounting paper; I do not think they have any power to do that under the present bill.

Senator Nelson. Well, they would if it was the purpose to obtain currency. If the rediscount was for the purpose of obtaining currency by the regional bank, then the board would have a voice in the matter.

Mr. Vinson. I do not understand, Senator, that the reserve board would ever pass on the application of any bank for rediscount to the regional banks. I understand that that would be determined entirely by the board of directors of the regional bank. I mean—

Senator Nelson (interposing). You mean to the member banks?

Mr. Vinson. To the member banks, yes; that is what I am speaking of.

Senator Nelson. Well, the member banks can not draw currency except indirectly.

Mr. Vinson. Well, they can get credit, which is the same thing.

Senator Nelson. They have to apply to the regional bank for the currency.
Mr. Vinson. I understand. That is what I say, that the directors of the regional bank will pass upon whether it will allow me, as a banker, to get currency and rediscount my paper there or not.

Senator Nelson. Yes; you are right about that.

Mr. Vinson. And the reserve board will have nothing to do with that, except, of course, to furnish a general supply of currency that goes into the regional banks. But how that supply shall be distributed to the different banks in the different sections of that particular region is left exclusively to the board of directors of that bank.

Senator Nelson. Of the regional bank?

Mr. Vinson. Yes; of the regional bank, I mean.

Now, let me illustrate by what probably would be a fair example in the event that this bill becomes a law as it is now written.

The States of West Virginia, Virginia, Kentucky, Tennessee, Alabama, and Georgia would, in all probability, go into one region. Then in the organization of that regional bank there are six directors to be elected by the banks—in three groups. The three largest cities in that group would be Richmond, Va.; Atlanta, Ga.; and Louisville, Ky.

Each one of these groups would elect two directors. One would be a director of one of the banks and the other would be a friend.

The larger cities, controlling the money centers and having their correspondents all over the States, particularly that in which they are located, can concentrate the vote upon the man they would recommend, whereas in a State like Tennessee or West Virginia, that has no large city, the banks there would not know the people who had been offered or nominated by these large banks. And in that way each of these three large centers, if you please, both commercial and industrial and banking centers, would dominate necessarily the selection of these directors.

Senator Nelson. That might be possible as to six of them, but three of them------

Mr. Vinson (interposing). I am speaking of the six now, Senator, and I will come to the three a little later on.

Senator Nelson. Yes.

Mr. Vinson. Now, what is the result of all of that? Take, for instance, the group of the banks in Louisville, Ky., to illustrate the point I want to make. They select from among their number a director of one of their banks for class A. Then they select some friend, who is supposed to represent the industrial and commercial interests, under class B.

Now, of course, that will be a personal friend, necessarily, of that particular group of banks that will get together and combine their efforts, and they will secure the greatest number of votes in the district—I mean in that particular group in that district—just exactly as it will occur in Richmond, Va., and will occur in Atlanta, Ga.

In other words, with the influence of the large centers, why, they can say and will say, “We want our directors to be elected here, because we want men that we know ourselves.” In other words, they will proceed upon the theory that “we want our friends in court,” and it is perfectly natural that they should do that. Then, when they get their friends------

Senator O'Gorman (interposing). If they can.
Mr. Vinson. Well, they can do it, because they have got more power, and they can concentrate.

Senator O'Gorman. How will they have more power?

Mr. Vinson. They will have more power in this way: Take the banks in and around the larger cities and the small towns; they do their business in these large cities, and frequently the same parties that get a control of the larger banks in the city have shares of stock in a small way in a country bank, so as to tie the two together, rather, in a system and work in harmony. That is a characteristic all over that section of the country. You will find that the representatives—the cashiers and presidents, or some large stockholder—in a large bank will have his friends and his interests with the small banks, in order to get their business. It is rather a close corporation. It is a usual practice, and is a benefit to both of them.

Senator Hitchcock. Suppose they get the directions they want, what can they do with them?

Mr. Vinson. Well, let us see. Then the directors are installed. There are two there representing the interests of the bankers in Richmond, Va. There are two representing the interests of the bankers in Louisville, Ky. There are two representing the interests of bankers in Atlanta, Ga. There are none there to represent the interests of local banks, outside of a minority that would be appointed by this Federal reserve board.

Senator Hitchcock. Now, assuming that, what can they do?

Mr. Vinson. Let us see: The first thing they will do is to sit down and appoint a discount committee, composed, perhaps, of three members.

Now, that discount committee is the real governor of that bank; and, of course, they will appoint that committee out of their own number. Naturally, they will have the power to do it and will exercise that power. Every piece of paper that comes up there from any bank in those five or six States must meet the approval of this discount committee.

It must be remembered and kept in mind that each member of this discount committee—or, rather, one member of it, surely—is a director of a bank of his own, and the other two are so tied up with the banking interests, either as borrowers or as friends of the bank—they may be railroad presidents, for that matter, or they may be the heads of the largest manufacturing establishments of the country—yet they are great borrowers of large sums of money. In other words, those banks select their friends.

Then the question comes up of segregating and determining who shall have discounts at the bank and who shall receive favors, if they are not in a position to grant favors all around; and it is more than human nature could be expected to do, I think, to expect that those men will not grant their favors to their own cities.

Senator Bristow. There is no doubt about it.

Mr. Vinson. Do you think there is any doubt about that, Senator?

Senator Bristow. Not a bit.

Senator Hitchcock. What would you think of a provision that a member bank is as a matter of right entitled to discount to the extent of its capital stock, and no member bank shall have the right to discounts exceeding twice the amount of its capital stock, so as to limit the power of this board of directors?
Mr. Vinson. Senator, there is not any question in the world that it
does and can mean nothing else. I know that there has been a lot of
fear expressed by well-meaning people that the Federal reserve board
and also the local board, although selected by banks, would be sub­
ject to political manipulation. I have no fear of that. But, Sen­
ator, the thing that I do fear is that they will be subject to and inter­
ested in business manipulation.

Senator O'Gorman. What is your answer to Senator Hitchcock's
question?

Mr. Vinson. I beg your pardon. Will you please ask the question
again? I did not get it.

Senator Hitchcock. I say, what would you say to the proposition
that the discretionary power of the board of directors should be so
limited that any bank, being a member of the system, should be en­
titled to discount to the extent of its capital stock at any time on the
presentation of paper that comes within the terms of the bill, and
that no member bank should receive discounts in excess of twice its
capital stock?

Mr. Vinson. Senator, if you are going to pass this bill along the
lines on which it is drawn, it seems to me that your suggestion will
be an absolute necessity.

Senator Hitchcock. Would you allow the board of directors some
discretionary power?

Mr. Vinson. Naturally, I would allow them the discretion of say­
ing what paper is good and what paper is not good. Of course they
could use that discretion to the very great detriment of a section or a
lot of banks which they do not want to favor.

Senator O'Gorman. Would not Senator Hitchcock's suggestion be
also valuable in minimizing the dangers incident to inflation and
overexpansion, which might exist if there was substantially no limit
upon the activities of the regional bank in extending credits?

Mr. Vinson. I think undoubtedly that it would be a most danger­
ous thing to do to leave the bill in the form in which it is now, which
is that a bank may get a discount to an unlimited extent upon the
paper which it has.

Senator Hitchcock. Now, another question. What would you
think of having one rate of discount on paper up to the extent of the
capital stock of a bank and a higher rate of discount if it goes above
that in its discounts?

Mr. Vinson. I think that the rate of discount should be variable,
so that if a bank had a disposition to extend to too great an extent its
discounts it could be discouraged.

Senator Nelson. And check by a higher rate?

Mr. Vinson. Yes; checked by the higher rate.

Senator Nelson. Yes.

Mr. Vinson. In the bill I have prepared I provide that the board
of governors shall regulate the rate, not less than 2 per cent and not
more than 6 per cent.

Senator Hitchcock. Well, I think the rates ought to be the same
to every member bank; and I am inclined to think that when a bank
passes a certain amount in its discounts and still requires more, it
ought to pay a higher rate for those discounts.
Senator Nelson. You will find in practice—as to having a uniform rate, if you had a dozen regional banks, or six or eight, you would find that it would not work in practice.

Senator Hitchcock. I mean to say that every regional bank must have the same rates for its member banks.

Senator Nelson. Yes; but we could not have the same rate for the several regional banks over the country.

Senator Hitchcock. Well, I want to approximate that at least by providing that the currency furnished the regional banks shall be furnished on the same terms to each of them.

Senator Nelson. Yes; that is right.

Senator O'Gorman. Have you concluded your observations, Mr. Vinson?

Mr. Vinson. I simply wanted to point out, in a brief way, some other objections to the present bill.

One objection, and I think it is a very serious one, is that it will withdraw, by reason of the requirements under the bill that the bank shall pay 20 per cent of their capital into the regional banks—10 per cent at all events and probably 20—and in addition to that an average of about 8 per cent on all deposits——

Senator O'Gorman (interposing). Five per cent.

Mr. Vinson. That is, in the——

Mr. Vinson. Yes; in the country banks. Nine per cent in the large banks. Senator, I think it is.

Senator Nelson. It will probably average about 8 per cent.

Mr. Vinson. I think it will average about 8 per cent.

Senator Nelson. That is after three years.

Mr. Vinson. Yes; I mean when the bank is really in running order.

Senator Nelson. Yes.

Mr. Vinson. Now, let us see just what that really means. That really means that, in round numbers, there would be something over $100,000,000 on a 10 per cent basis, or $200,000,000 on a 20 per cent basis: and for the sake of the power vested there, we will say the $200,000,000 is withdrawn from the banking power of the country by reason of the assessments on their capital.

Now, in addition to that, there is withdrawn an average of 8 per cent on all deposits, which, in round figures, would be $480,000,000 more.

Senator O'Gorman. Of course, you think that would all possibly cause a contraction in the credit?

Mr. Vinson. Naturally.

Senator O'Gorman. Yes. Now, suppose the contributions were not made until the time had arrived—or it was close to the time when the banks could begin the rediscount features of the bill, so that the two things would be simultaneously—the money paid in and the right to withdraw it?

Mr. Vinson. That was the very point I was coming to. I think (and I believe I have very good grounds for thinking) that the banks would be very reluctant to go into the discounting at all, and would only do so under compulsion.

Senator O'Gorman. What would you think of a proposition requiring the national banks to contribute only 5 per cent of their capital, and allowing them to pay that 5 per cent in five payments?
Senator Nelson. Monthly payments—what would you say to that?

Senator O’Gorman. Monthly, or perhaps a longer period, extending to a year or 18 months. Would not the withdrawals be so gradual that they would not perceptibly interfere with the credit of the country?

Mr. Vinson. If you would limit it to 5 per cent, I think that would be true. But when you are holding over these banks—every one of them—the prospect, and you might say the expectation, of a call for 10 per cent more——

Senator O’Gorman (interposing). No; I say suppose the law provided for only 5 per cent?

Mr. Vinson. I mean, if you limit it to 5 per cent—that is, the amount of capital to be taken by the banks—and then do run it over a period of 18 to 24 months of course it would be withdrawn so gradually that it would not be the same shock to the business community.

Senator O’Gorman. Would you say that that would create a sufficient fund for the regional banks to do business with?

Mr. Vinson. I think so.

Senator Nelson. What have you to say as to the number of regional banks?

Mr. Vinson. I do not know, Senator. If you are going to have regional banks at all, I do not see any objection to having four or five.

Senator Nelson. What about a dozen?

Mr. Vinson. Or a dozen.

Senator O’Gorman. What about two dozen?

Mr. Vinson. Well, of course, you limit the power of the regional banks to do good by increasing the number. But you do more than that. There is an advantage to it, because you bring it down closer to the banks that need it; and these local banks will exercise more influence and be more independent the greater the number of regional banks.

Senator O’Gorman. Well, if you had but four or five regional banks, each regional bank would have branches and agencies within its region.

Mr. Vinson. Yes; that is, I mean if you have competitive agencies located in the different localities, then I think two or three regional banks will be sufficient.

Senator O’Gorman. Yes.

Mr. Vinson. They would have to do all their work through their local agencies everywhere and simply sit up there and pass upon those things.

Now, there is one other matter I want to call the attention of the committee to, and that is the character of the paper that is eligible for rediscount. I am constrained to believe that the authors of the bill allowed this provision to go in through oversight—that is, the kind of notes that are to be eligible for rediscount in the regional reserve banks.

According to this, and the definition is not clear, it says:

Upon the indorsement of any member bank any Federal reserve bank may discount notes and bills of exchange arising out of commercial transactions.
And then the bill undertakes to define what the term "commercial transactions" means.

That is, notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used or may be used for such purposes.

And then it limits definition as follows:

But such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities.

Now, I can not quite believe that the committee that prepared the bill really meant just what they have said in there, because if they did, it means that most of the transactions in the country—I mean the business transactions and the paper growing out of them, however solvent and safe it may be—are blacklisted; they are outlawed.

In other words, if I own stock in the bank and I want to sell that stock to some person, no matter how good their credit may be, he may say, "I will give you my note for it due in 90 days," and I am more than willing to do it.

The man who gives the note, the maker of the note, there is no question of his responsibility. I take that note to my bank and I want to get the currency to get it discounted. My banker looks at it and says, "You secured this note by selling your stock to Mr. Smith." I say, "Yes." He says, "Then I can not take it."

Senator O'Gorman. I do not think it is necessary to dwell on that, because it was obvious that it was the design of the authors to confine the restriction to purely speculative transactions.

Mr. Vinson. Yes.

Senator O'Gorman. And the committee, if I mistake not, will see that the verbiage of that provision is substantially changed, so that it will not operate to your prejudice in a case such as you now suggest.

Mr. Vinson. Yes. Well, I am very glad of that.

Senator Bristow. I unfortunately had to leave during a part of your statement, Mr. Vinson, but, as I understand it, you propose a Treasury bank, in substance?

Mr. Vinson. Yes, sir.

Senator Bristow. That shall exercise these functions of rediscount, and so forth?

Mr. Vinson. Yes, sir.

Senator Bristow. And that the evil that you think is incident to this bill in the organization of the boards of directors of the regional banks, and I agree fully with your ideas, would be entirely eliminated, because this Treasury bank, as you call it, would be governed by a board appointed by the President?

Mr. Vinson. Yes, sir.

Senator Bristow. And it would be a bank of rediscount?

Senator O'Gorman. And of reserve.

Senator Bristow. And a bank of issue and a bank of reserve?

Mr. Vinson. Yes, sir.

Senator Bristow. And as a practical man you have no doubt but that the control, the vital control, of the regional banks will be by the big banks that have the largest number of country correspondents in the region?
Mr. Vinson. I think it is absolutely inevitable.

Senator Bristow. And any practical man can not have any other view about it, it seems to me.

Mr. Vinson. I do not think they could.

Senator O'Gorman. Are there any other questions?

Senator Nelson. You had better leave your bill with the committee, Mr. Vinson. And I ask, Mr. Chairman, that the bill be printed in the record.

Senator O'Gorman. Yes; it will be printed in the record.

Mr. Vinson. I want to extend my thanks for your courtesy, gentlemen.

Senator O'Gorman. We are very much instructed by your suggestions.

(The bill referred to is as follows:)

AN ACT To create a Treasury bank, to provide an elastic currency, to afford means of selling or rediscounting commercial paper to provide a more effective supervision of banking in the United States, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the short title of this act shall be the "Treasury bank act."

Sec. 2. There is hereby created an additional department of the Treasury of the United States, to be known as the United States Treasury bank, to be organized and vested with the powers and duties as hereinafter prescribed. It shall continue in existence until such time as Congress may determine by subsequent legislation. Under the name of "Treasury bank" it may bring and prosecute any suit in equity or action at law in any court of the United States within whose territorial jurisdiction any one of the defendants may reside, regardless of the amount in controversy, for the purpose of enforcing any claim it may have growing out of the provisions of this act. It shall be located in the city of Washington, D. C.

Sec. 3. The Treasury bank shall be under the control and direction of a board of governors composed of seven members. The Secretary of the Treasury shall be ex officio member of the board. The other six members shall be appointed by the President, by and with the advice and consent of the Senate. Two members of the board shall be appointed for the term of 4 years and two for the term of 8 years and two for the term of 12 years, and thereafter all appointments of members of the board shall be for a period of 12 years, except appointments to fill vacancies shall be for the unexpired term only. Not more than three of the board to be appointed by the President shall at any time during their term be members of the same political party. The appointed members of the board shall receive a salary of $12,000 per annum, and the Secretary of the Treasury shall receive a salary of $4,000 per year for acting as member of the board. From among their number the board shall from time to time select a chairman. The board is hereby authorized and directed to appoint a secretary and such agents, representatives, and employees as may be necessary in executing the provisions of this act. The board shall prescribe the duties and fix the compensation for all persons appointed or employed by it. All appointees and employees of the board shall hold their positions only during the pleasure of the board. The board is hereby empowered to establish all rules, regulations, and conditions for the purposes of carrying out and enforcing the provisions of this act. The members of the board appointed by the President shall devote all their time to the duties herein imposed and shall have no pecuniary interest in any banking institution subject to this act during the time they are acting as such members. At least three members of the board shall have had a banking experience prior to their appointment. The board shall cause to be kept a record and books of account of all their transactions and proceedings. The board shall provide suitable offices in the Treasury Building if practicable, and if there should not be accommodations in that building then as near thereto as may be. Any member of the board may be impeached for incompetence, neglect of duty, drunkenness, or gross partiality.
in favor of or against any bank or group of banks, or locality, in the administration of this act. Such impeachment proceedings shall be the same as proceedings for the impeachment of Federal judges, and during the time the impeachment is pending such member of the board shall be suspended and prohibited from acting as a member of the board.

Sec. 4. The Treasury bank shall be the custodian and depository of all Government moneys and funds, which shall be drawn upon by check or draft to meet governmental expenses and appropriations, under rules and regulations to be prescribed by the Secretary of the Treasury: Provided, however, That all Government deposits in national banks at the time this act goes into effect may remain with such banks until such time as the Secretary of the Treasury may determine. Government revenues as collected may be deposited with the Treasury bank at its State offices, under rules and regulations to be prescribed by the board. The board is hereby empowered to use the office of the collector of internal revenue for each district as a State or local agency, and the collector of each district shall be under the control and direction of the board, in aid of executing this act. The board shall prescribe the compensation to be paid the collector.

REDEMPTION OF EXISTING NOTES.

Sec. 5. All national banks shall, as soon as practicable after this act takes effect, transmit to the Treasury bank all the notes of national banks and all the notes and certificates issued by the United States, except gold certificates, which they may have or thereafter acquire, and shall receive therefor an equal amount of the notes of the Treasury bank in such denominations as the national banks may designate.

Sec. 6. The Treasurer of the United States shall turn over to the Treasury bank all the bonds deposited by national banks to secure circulation, and thereupon the obligation of national banks to redeem their outstanding notes in species shall cease and determine, but said banks may redeem their outstanding notes in Treasury bank notes. The Treasury bank shall redeem all national-bank notes on demand either in gold or with its own notes at the election of the holder of the national-bank notes. Upon application of the board the Secretary of the Treasury shall issue 3 per cent bonds of the United States in exchange for 2 per cent bonds at par. The interest on the bonds to be issued shall be payable semiannually and the principal in 25 years, both principal and interest payable in gold. The bonds so issued shall become the property of the Treasury bank and may be pledged or sold from time to time to provide specie when required for redemption purposes. The Treasurer of the United States shall determine the premium on bonds deposited to secure circulation, based on the average market value of such bonds for the year 1912, and shall pay such premium to the banks depositing the bonds, and shall also refund to the national banks the 5 per cent heretofore retained to cover expenses of redemption.

Sec. 7. Any holder of notes or certificates heretofore issued by the United States in any form or denomination, or of gold coin or gold bullion, may deposit the same with the Treasury bank and receive therefor the notes of the Treasury bank in like value and amount. All notes and certificates heretofore issued by the United States coming into the Treasury bank shall be redeemed by the Treasury of the United States by paying to the Treasury bank the specie therefor according to the tenor thereof and in compliance with existing law for such redemptions. The notes and certificates redeemed as in this section provided shall be canceled or destroyed.

Sec. 8. After this act becomes operative no notes shall be issued by national banks, nor shall the United States Treasury Department issue any notes or certificates to be used as a circulating medium. Any notes issued by State banks, trust companies, or State banking institutions, intended as a circulating medium, shall pay an annual tax of 10 per cent on the par value thereof to the United States. The issue of notes or certificates intended as a circulating medium shall hereafter be limited to the Treasury bank. And all notes issued by the Treasury bank shall be redeemed in gold, on demand, either by the Treasury bank or the United States Treasury at the election of the holder thereof.

Sec. 9. The United States Treasurer shall pay to the Treasury bank in gold the principal and interest of the bonds delivered to the Treasury bank as the same become due and payable, after deducting any sums which the treasurer may have paid in redemption of national-bank notes.

S. Doc. 232, 63-1—vol 3—60
PURCHASE OF SECURITIES FROM BANKS.

Sec. 10. It shall be the duty of the Treasury bank to purchase negotiable notes, acceptances, and bills of exchange from national banks and pay therefor its own notes issued for that purpose upon the following terms and conditions, viz: 

(a) The amount of such securities which may be purchased from any national bank shall not at any one time exceed 40 per cent of the loans and discounts of the bank selling the same; and 

(b) The maturity of the securities purchased under this section shall not be for a longer period of time than 120 days from the dates of their purchase; and 

(c) All such securities shall be approved by a majority of the board of governors of the Treasury bank. The board may for any reason reject any security so offered for sale; and 

(d) All securities purchased hereunder shall be indorsed by the bank offering the same, authorized and directed by resolution of the board of directors of said bank. Such indorsement shall constitute a first lien upon all the assets of the bank as a security for the payment of the paper so indorsed at its maturity; and 

(e) Upon default in the payment of the purchased security when it is due and payable, the governors of the Treasury bank may direct the Comptroller of the Currency to take possession of said bank and all its assets, and forthwith collect therefrom a sufficient sum to pay any such defaulted paper, unless the indorsing bank shall pay the same to the Treasury bank in the same manner as if there had been no default; and 

(f) Upon all securities purchased the Treasury Bank shall charge a discount fee of not less than 2 per cent nor more than 6 per cent per annum of the principal and accrued interest, to be deducted from the proceeds arising from said sale, the residue of such proceeds to be transmitted to the order of the selling bank in the notes of the Treasury Bank; and 

(g) The funds arising from the payment of the securities purchased shall be forthwith returned in currency to the Treasury Bank, which when done shall release the indorsing bank of its obligations assumed by virtue of its indorsement; and 

(h) The board of governors of the Treasury Bank shall cause such independent examinations to be made of the national banks and the securities offered and owned by them from time to time, as in their judgment may seem expedient.

STATE BANKS AND TRUST COMPANIES.

Sec. 11. Any trust company or banking institution organized under the laws of any State or Territory of the United States, having a paid up and unimpaired capital of not less than $25,000, may avail itself of the provisions of section 10 of this act and sell to the Treasury Bank negotiable notes, acceptances, and bills of exchange owned by it upon the same terms and conditions applicable to national banks. 

Sec. 12. From the sums arising from the bond-interest payments provided for in section — and the discount on purchased notes provided for in sections 10 and 11, and interest paid on deposits in banks, section —, the board of governors shall pay the cost and expense of executing the provisions of this act, and the interest on sums deposited with it as reserves, as required in section —, and the residue of its income shall be credited to the United States at annual periods.

Sec. 13. Each national bank shall keep an available cash reserve of not less than 5 per cent of its deposits in its bank and not less than 5 per cent of its deposits with the Treasury Bank. Deposits of reserves with the Treasury Bank shall be in gold and may be made in five equal installments of four months each after this act takes effect. Reserves required by the law now in force shall not be reduced below 15 per cent until the full 5 per cent has been deposited with the Treasury banks. The reserve shall only be used in emergencies to meet the demand of depositors, and shall be subject to call by the bank owning the reserves with the approval of the board of governors of the Treasury Bank.

Sec. 14. The board of governors of the Treasury Bank may, in their discretion, advance notes of the Treasury Bank to any national bank or trust company or State banking institution in an amount sufficient to meet a run upon said banks.
or trust companies by its depositors, whenever in the judgment of said board such bank or trust company is perfectly solvent. But the board of governors shall only issue such Treasury Bank notes upon ample and easily convertible security to be approved by the board.

Sec. 15. The board of governors may authorize the Treasury bank to deposit with national banks, State banks, or trust companies any Government funds not required to meet current demands. Such deposits shall be secured by bonds of the United States, or State or municipal bonds, delivered to the Treasury bank for that purpose. Not more than 75 per cent of the par value of State or municipal bonds so delivered shall be deposited with the applicant where such bonds are offered as security. Such deposits may be withdrawn at any time by the Treasury bank upon giving 20 days' notice of its intention so to do. The board of governors in determining the banks to receive such deposits shall be governed as far as practicable by the currency requirements in the different sections of the country. The bank receiving such deposits shall pay to the Treasury bank interest at the rate of 3 per cent per annum. As additional security for the repayment of such deposits, the Treasury bank shall have a first lien upon all the assets of said banks.

Sec. 16. The board of governors may establish branch offices of the Treasury bank in each of the States and Territories of the United States where the conveniences of the banks located in that State or Territory may require, and prescribe rules and regulations for the management of said offices.

Sec. 17. Banks and trust companies desiring to sell securities to the Treasury bank, as provided in section 10, shall make application therefor upon blanks to be furnished by the board of governors, specifying in detail the kind of security with names of makers and indorsers and date of maturity, and upon receiving such application the board shall send a representative forthwith to examine said bank and the securities offered, who shall report to the governors. For the purpose of making the investigation the board may designate any regular bank examiner who is available. The Treasury bank may keep at any branch office a sufficient amount of its own notes or Government funds to facilitate the delivery of proceeds of purchased securities to the bank selling the same.

Sec. 18. The governors shall publish a weekly statement of the transactions and condition of the Treasury bank, and make a report to the Senate and House of Representatives every six months, and at such other times as either may request.

Sec. 19. The board of governors may authorize national banks to establish branch banks in foreign countries, under such requirements, rules, and regulations as the board may prescribe.

Sec. 20. The board of governors shall prescribe the form, size, and denomination of all Treasury bank notes to be issued hereunder, and may exchange new notes for notes that are mutilated or soiled. All notes issued by the Treasury bank shall be a legal tender, and accepted in payment of all debts, dues, and obligations, public and private.

Sec. 21. The board shall prescribe rules and regulations whereby national banks will be permitted to make loans on real estate security: Provided, however, that loans upon real-estate security shall not exceed 20 per cent of their paid-up and unimpaired capital.

Sec. 22. All notes issued by the Treasury Bank under the provisions of this act shall become obligations of the United States, payable in gold on demand, at the office of the Treasurer of the United States, and the Secretary of the Treasury is hereby empowered to issue and sell, or pledge the bonds of the United States for the purpose of providing gold necessary to redeem the notes issued by the Treasury Bank as the same may be required. The bonds authorized to be issued under this section shall be 40-year bonds from the date of issue, bearing 3 per cent per annum, payable semiannually, both principal and interest payable in gold. Neither principal nor interest of such bonds and those mentioned in section — shall be subject to any tax or levy by the United States, or any State or municipality thereof, nor shall the same be subject to any income or inheritance tax imposed by the United States, or any State or municipality.

Sec. 23. All acts and parts of acts, inconsistent with the provisions of this act, are hereby repealed.
STATEMENT OF F. J. SYME, OF NEW YORK, N. Y.

Senator O'Gorman. You are the publisher of The Shareholder, Mr. Syme?

Mr. Syme. Yes, sir.

Senator O'Gorman. What is The Shareholder?

Mr. Syme. It is a regular Wall Street paper; strictly a Wall Street paper.

Senator O'Gorman. What do you mean by that?

Mr. Syme. I mean that the news it contains is almost exclusively relating to Wall Street affairs.

Senator O'Gorman. It is a financial paper, is it?

Mr. Syme. It is a financial paper; yes, sir.

Senator O'Gorman. You have been conducting it for how many years?

Mr. Syme. For 17 years.

Senator O'Gorman. You are the editor of it?

Mr. Syme. Yes, sir.

Senator O'Gorman. What were your business activities before you became the editor of this paper?

Mr. Syme. For a time I was interested in the selling of municipal bonds. Previous to that, however, I was located in New Orleans, La., and was largely in the rice-milling business.

Senator O'Gorman. And then for the last 17 years you have been a student of finance, have you?

Mr. Syme. A student of finance, yes.

Senator O'Gorman. And you have been familiar with the financial conditions in the country?

Mr. Syme. Yes, for the last 25 years.

Senator O'Gorman. You have read the pending bill, have you?

Mr. Syme. I have; yes, sir.

Senator O'Gorman. Will you state to the committee what comment you have to make upon it?

Mr. Syme. Well, gentlemen, one of the objections to that bill, as I see it, is the fact that it takes from Congress the right to designate what securities shall be taken to the Treasury Department and currency given for them. That has always been a right of Congress. Congress has always exercised that peculiar right. It was congressional legislation that stated that gold could be deposited with the Treasury Department and Treasury notes given out for the gold. It was also under a law of Congress that Government bonds could be taken to the Treasury Department in the same way and currency issued for those Government bonds.

At a later period the question came up whether silver could be taken to the Treasury Department and the holder receive currency for it; but Congress balked at silver and said "no."

Now, these were all congressional functions, the functions of Congress. At the present time it is proposed that a different class of securities shall be taken to the Treasury Department and currency issued for them; but the bill does not say that Congress shall say what those securities shall be. It does not state, for instance, that Congress shall say that such and such a security can be taken to the Treasury Department——
Senator Nelson (interposing). But can Congress do any more than lay down general rules? How can Congress take up each piece of paper in detail and examine it and say whether it may be used?

Mr. Syme. Very easily, Senator; that is done every day.

Senator Nelson. How could we pass on the paper here in Washington?

Mr. Syme. I will tell you how it is done. Take the stock exchange of New York, for instance. It designates certain stocks and bonds which shall be listed.

Senator Nelson. Yes.

Mr. Syme. Our various State legislatures also designate what bonds shall be safely invested in by the savings banks. That question of designating is not near as difficult as you would suppose. It is very easy, in fact.

Senator O'Gorman. What change would you suggest in the language used in the act?

Mr. Syme. On that particular point?

Senator O'Gorman. Yes.

Mr. Syme. I would suggest, for instance, that all this designating be done by Congress.

Senator O'Gorman. Congress will designate in this act, if it is enacted.

Mr. Syme. No; I do not understand it so. Your act says that the regional bank shall do the designating—start the thing. It is their volition that starts the whole proceeding.

Senator Nelson. No; we lay down the rule in the bill. We describe the class of paper.

Mr. Syme. You describe the class?

Senator Nelson. Yes; in the bill.

Mr. Syme. You do not designate the particular thing. You do not say, for instance, that the bonds of the New York Central Railroad Co. can be taken to the Treasury Department.

Senator Nelson. We do not want them.

Mr. Syme. Well, I took that stock as a case in point. There are lots of other things you do want. For instance, what you want—

Senator Nelson (interposing). What we want is commercial paper.

Mr. Syme. That is not the whole object of the bill. All right, then, state your man. You pass a law that the notes of John D. Rockefeller shall be received at the Treasury Department and Treasury notes be issued for them. State your man. If you want a certain man, state your man.

Senator Nelson. We have got to have a census of the country on that. [Laughter.]

Mr. Syme. I say I rather object to this bill on account of its change of the whole tendency of the country on that particular point, as to the designation of what shall be used and what shall not be used.

Senator Nelson. We would have to have a census of all possible borrowers in the country in order to put them in an act of Congress.

Mr. Syme. I do not think that is the case. Of course that is a matter of opinion. But I do not think that is so. I think, in other words, that Congress can, in a very short time, pick out a billion or two of dollars of stock throughout the country, or, if you choose,
commercial paper throughout the country, and that when this is presented to the Treasury Department currency shall be issued for it. Now, there is a whole lot of trouble that has grown out of the fact that Congress proposes to give up that right to designate. That right to designate, I do not think for the best interest of the country or Congress itself, for that matter, it should give it up. I think it is one of the perquisites of Congress, and it should be held onto. Senator Nelson. Well, we are glad to get everything we can. [Laughter.]

Mr. Syme. You just take and see where all that leads to. You take, for instance, a case where Congress does not do that. These regional reserves do do it. The result of it all is that instead of looking at the thing, which Congress would look at, these regional reserves look at the man, and all the modern finance is directed toward looking at the thing. For instance, a man comes to that bank and wants to get a discount, say, of $100,000, or $200,000, or, if you choose, $1,000. The bank president considers the man more than he does the actual thing.

Senator Nelson. What is the actual thing in that case?

Mr. Syme. In that case it would probably be the man's general reputation. He was known as a man of good repute, and because he is known as a man of good repute the discount is allowed. As to what he brings there, it is not of near as much value as his general repute. In other words, the banking system of the country gradually gets down to the point where good repute is everything and the thing on which the loan is to be made is nothing. Good repute is at a premium. The actual thing itself is at a discount. Now, I can illustrate that, perhaps, very well by a little incident that occurred in my own affairs only two or three days ago. I went to a certain gentleman from whom I had been accustomed to borrow for the last 10 years. I, of course, do not owe anything at the present time. He was a private banker. I wanted to get a loan on some presses, some newspaper presses. We happened to need a little money. I suggested to him that he make me a loan on the two presses we had. He would not do it. The thing was not the right thing. There was a case where the man was a sensible man.

Senator Nelson. Did you offer a mortgage?

Mr. Syme. Oh, yes. That part would have all been fixed up, but he objected. The thing was not right; the security I offered him was not right. My general repute was all right, of course, and also the party who was interested with me, but that man, of course—he was a wealthy man—took the right view of the case. He wanted the thing to be right, and not the man. Now, this law will reverse all that. It will make the man everything and the thing nothing. Most of the loans that will come into the Federal Treasury under those circumstances will be based not upon the thing but upon the general reputation of the man, and I regard that as slightly objectionable. I think, in other words, that the Government, in loaning its money out, ought to stick to the general idea of regarding the security more than regarding the individual that brings it there; and the whole tendency of this law, so far as I can see, is to exalt the man above the thing that he offers as his security. Well, now, there is another feature of the case. It is proposed, under this bill, as far as I can make it out, that Government notes
up to about seven or eight billion of dollars will be issued, and it is doing it on pieces of paper that I do not think are legally drawn for any such purpose as that. I have my doubts as to whether there is any paper in existence, to any such amount as that at all events, which the Government can, with safety, take and issue any such large amount of governmental certificates for. In other words, I think before any such extensive amount of loaning out is gone into we ought to have a system of national incorporation under which of course there would be governmental supervision over a great many of our corporations. And under those circumstances the loans of such companies, I think, would be correct for this particular purpose. I have my doubts as to whether a single piece of paper exists in the country to-day on which the best results would be received by the Government for the issuance of this very large amount of credit.

There is another decided objection to this plan, and that is the permanency connected with it. Under this plan these regional banks can take a piece of paper to-day and pass it through and get the money for it. To-morrow they probably would not do the same thing. So there is no permanency connected with this peculiar thing. I do not think, in other words, that the bill as it stands would improve the general condition of the country a bit. I think it would raise a number of general conditions which would be unfavorable. I am satisfied that what some of these gentlemen have said here to-day is true. I am satisfied that there would be a very large amount of favoritism growing out of it. Certain regional banks would make up their minds to favor certain institutions, certain manufacturing establishments. Take a case, for instance, where a regional bank was located in Louisville, if you choose. That particular bank would want to build up the interests of Louisville.

Senator Reed. Oh, we can not assume any such thing as that, when this bank at Louisville will not be officered by Louisville bankers and when the whole thing is under command of the general board. Is there any other criticism you have of this particular bill?

Mr. Syme. I rather think that it is a bad bill. I have nothing in particular to say of the bill.

Senator Reed. It is just a general idea?

Mr. Syme. Yes.

Senator Reed. Is there any other gentleman here waiting to be heard?

Mr. Peck. I would like to be heard for a few moments.

STATEMENT OF L. T. PECK, CASHIER OF THE FIRST NATIONAL BANK OF HAWAII, HONOLULU.

Senator Reed. Proceed, sir.

Mr. Peck. I would like the privilege of calling to the attention of the committee, Mr. Chairman [Senator Reed], that the act provides for the entry into a new system of national banks located in the continental United States. That, in itself, eliminates the insular United States—the organized Territory of Hawaii. I have no objections to make to that. The bill, as it has come to the Senate, I am making no objection to that part of it, but there are provisions in this bill
which seemingly apply to all existing national banks, whether con-
tinental or insular.

There are five national banks in the island of Hawaii, one in the
island of Oahu, of which I am cashier, and four in the island of
Maui. Now, on the island of Oahu is stationed at present a large
military force, and large revenues are collected from public dues,
and large disbursements are made, relatively speaking. The pay of
the troops alone is something in the neighborhood of three and a half
millions a year. The disbursements, probably, will be upward of
five millions a year.

Senator Reed. What are the average deposits of that bank?
Mr. Peck. The deposits of our bank at present, exclusive of the
Government deposits, are about one and a quarter millions. The
capital is $500,000; the surplus and profits about $230,000 more.

Senator Reed. What other national banks are there on that island?
Mr. Peck. None, sir.

Senator Reed. Any other banks of any character?
Mr. Peck. Yes, sir; there are. The capital, surplus, and profits
of the four leading banks in Honolulu alone are something like three
and a half million dollars—the commercial banks. Then there are
trust companies, savings banks, and private banks which bring the
total capital and surplus up to about four and one half millions.

Senator Reed. How many national banks are there in the islands,
speaking of all of them?
Mr. Peck. Five.

Senator Reed. Now, what you want this committee to do is to
consider those islands and the advisability of taking the banks of
those islands into the bill?
Mr. Peck. Not exactly, Senator. I said I had no criticisms to
offer as to the action of the House in excluding Hawaii from the
benefits or provisions of the bill.

Senator Nelson. You are willing to be excluded?
Mr. Peck. I beg your pardon?

Senator Nelson. You are willing to be excluded from the system?
Mr. Peck. We are not anxious to be excluded. We do not pre-
tend to come up from out little island Territory and suggest to the
Congress of the United States just how they shall legislate for this
Nation.

Senator Reed. But do you want to be taken into this general plan
or do you want to be left out of it?

Mr. Peck. Speaking for myself and for my own bank, the First
National Bank, which is the largest national bank there, I would
say that up to this time we have never felt the need of a rediscount
market. I do not think our bank has ever rediscounted a dollar of
its paper, and the banks in the Territory have taken care, very
readily, of the commercial needs of the Territory thus far. I came
here to suggest that in passing this bill the existing rights of the na-
tional banks in Hawaii be not unduly affected, because there are
provisions in this bill which seemingly provide for partial annul-
ment of portions of the national-bank act that would apply to us.
For instance, it says in this bill that the section referring to the
counting of 5 per cent redemption money lodged by any national
bank in the Treasury shall no longer be allowed to any national
bank. That, of course, includes the five banks in Hawaii; and it
also provides in section 16, and this is the important part of it, which I especially wish to bring to the attention of the committee, that all moneys now held in the general fund, etc., shall be deposited in Federal reserve banks, etc., and thereafter the revenues of the Government shall be regularly deposited in such banks, and disbursements shall be made by agents, drawn against such deposits. I should like to suggest that provision be made that that does not affect the Government depository or such depositories as may hereafter be established in Hawaii. There is now a depository there—our own bank is a depository—with a maximum balance of $500,000, and upon it is placed the responsibility of making all of the disbursements and financing all of the cash needs of the Army, the Navy, and the other bureaus of the United States Government stationed in Hawaii.

Senator Reed. Under a special act?

Mr. Peck. Under the general banking act we have been designated as a depository by the Secretary of the Treasury and deposit United States bonds and Territorial bonds to secure that.

Senator Reed. When you say "responsibility placed upon you" you mean——

Mr. Peck (interposing). As a depository.

Senator Reed. You mean as to the matter of paying those bills?

Mr. Peck. As a fiscal agent of the United States.

Senator Hitchcock. The Government is really under compulsion to use your bank there, if it uses any bank. It could not use a reserve bank in the United States to make payments in Hawaii?

Mr. Peck. No, sir.

Senator Hitchcock. At least, I suppose you have to cash the Government checks there?

Mr. Peck. All of the disbursing accounts, 39 of them, are kept with the depository itself and not in the Treasury of the United States. That was for the convenience of the Government.

Senator Nelson. Does the Government remit the cash to you or how do you get it there?

Mr. Peck. I think it has only remitted once, in any actual currency.

Senator Hitchcock. What is the method of paying those bills?

Mr. Peck. They are paid in gold coin and silver.

Senator Hitchcock. Where does the Government get the gold from?

Mr. Peck. From the public revenues, the import duties, customs, and internal-revenue receipts, and also placing the main-land credits to the credit of the depository when there are not sufficient local receipts to meet the disbursements.

Senator Hitchcock. That is, the customs and internal revenues are paid into your bank by the Government officers, and then taken out by the officer who makes the disbursements?

Mr. Peck. Yes.

Senator Hitchcock. The Government does not ship gold to make payments there?

Mr. Peck. Exactly.

Senator Hitchcock. But it pays out of your bank because it has a credit in your bank from the receipt of revenues?
Mr. Peck. Yes, sir; revenues.

Senator Nelson. That belongs to the Territory?

Mr. Peck. They belong to the United States Government.

Senator Nelson. They do not exceed the customs duties and internal revenues?

Mr. Peck. And surplus moneys and funds are deposited elsewhere.

Senator Nelson. I suppose you get exchange from the Pacific coast—from San Francisco—do you not?

Mr. Peck. We utilize the exchange conditions between the islands and the mainland, and do this free of cost to the Government.

Senator Nelson. Instead of shipping the currency there you exchange your credits?

Mr. Peck. Exchange them, as far as we are able. Occasionally, actual shipments are made, and whenever the revenues between steamers exceed the disbursements between steamers, we remit the excess deposits to the United States Treasury.

Senator Nelson. Do the revenues of the Government that are collected by the Government there equal the disbursements of the Government in your islands?

Mr. Peck. Not at present.

Senator Nelson. So there is a small balance that has to be sent there in some way?

Mr. Peck. Quite a balance at the present time, Senator.

Senator Reed. The question I want to get at is this, whether the banks out there want to come into this system or whether they want to be excepted from the bill and under some special provision?

Mr. Peck. Well, Senator, we are the only national banks in Honolulu, and on the island of Hawaii there are other banks of lesser size.

Senator Reed. There are other banks on the island of Hawaii?

Mr. Peck. I said of lesser size. There are four banks on the island of Maui.

Senator Reed. National banks?

Mr. Peck. National banks, country banks, located right out in small villages.

Senator Nelson. There are four right outside of this bank of yours, as I understand it?

Mr. Peck. Yes, Senator.

Senator Nelson. National banks. Now, what he wants—I can see what he wants—he wants the Bank of Hawaii treated just like these regional banks are to be treated in respect to Government funds; that is, it is to be made the depository of Government funds there for disbursement. That is what you desire, is it not, without coming into the system?

Mr. Peck. I am afraid I have not made myself clear. I will state it again. In legislating for the national banks in the continental United States I would suggest that you see to it that the legislation in no particular unwittingly affects the present status of the insular national banks in Hawaii. That is the proposition.

Senator Nelson. Where do you keep your reserves at present?

Mr. Peck. And let me add, also, Senator, that that has nothing to do with the question of whether or not we come into the system. I would answer that on its merits—that question. We keep our reserve in designated reserve agents with San Francisco and New York.
Senator Nelson. That is, except what you have to keep in your own vaults?

Mr. Peck. Yes. We are supposed to keep in our own vaults, by law, 6 per cent reserve; but on account of our isolated position, being six days removed by sail from San Francisco, we actually have to keep in our vaults, at present and have for some time past, something approaching 50 per cent of our demand liabilities, in order to be able to furnish the cash on the checks of the Government disbursement officers, in order to supply the coin for the pay of the troops, etc., and other disbursements of the Government. I simply want that the status shall not be unwittingly affected by the passage of this bill.

Senator Nelson. I would like to suggest that you prepare such amendments as you think would fit your case.

Mr. Peck. I have just drawn up a few lines here, Senator. As I am a layman, they very likely would have to be altered, but the sense is in them. It would be, perhaps, to take the place of section 29:

Each and every provision of this act relating to national and other banks, banking associations, and trust companies shall apply only to those located in the continental United States.

And I would also suggest that the committee make provision for the proper collection and depositing of public revenues in all places where there are collecting offices of the Government and no reserve bank provided for at that point, or no agency of a reserve bank, because if neither a reserve bank nor a branch be established where the revenues originate, there will be no place for the revenues provided for in the bill to be deposited at all; because they must be deposited, apparently as collected, in those reserve banks.

Senator Nelson. I can see it would be a great outrage to your Territory to take the revenues away from your bank and put them into the continental United States. That would be a great mistake.

Mr. Peck. It would be an embarrassment to the Government which would be severe.

Senator Nelson. The Government would have to transmit the funds there to pay its bills?

Mr. Peck. It would. And as everything there is paid in coin, and if they should keep transporting the funds from month to month eventually, perhaps, they would have a good share of the gold reserve of the mainland in that island.

Senator Reed. Are you inclined to come into this system?

Mr. Peck. If we needed discounts in a hurry we could send word by mail—six days to San Francisco, wait three or four or five days for a return steamer—and six days later we would get our reply. And in the meantime we might either be out of commission or not need the relief.
Senator Reed. Do you consider, then, you ought to be required to carry a larger reserve by law than you are now, if you are allowed to keep there, in this isolated position, an isolated banking system?

Mr. Peck. We do that there now. We carry, instead of 6 per cent, the minimum required by law, a minimum of probably 40 per cent. And, in ordinary requirements, they practically balance each other in one island, where the whole thing, as it were, is a wash between debits and credits, and we provide for the coin requirements of the United States Government for the pay of its troops, who are paid in actual gold coin, and the naval expenditures—everything is paid in gold coin.

Senator Reed. Why could not they be paid in ordinary national-bank notes?

Mr. Peck. Because of the habits of the people.

Senator Reed. It is just a matter of habit, is it?

Mr. Peck. Yes, sir; from time immemorial. Originally in these islands they had moneys from all parts of the world. In 1873 they had a Hawaiian coinage minted in the United States.

Senator Nelson. Do you have currency circulating in the shape of gold certificates?

Mr. Peck. No, sir; we have gold coin. The people do not care to carry paper money. There is no paper money in circulation to speak of.

Senator Bristow. None in circulation?

Mr. Peck. Not to speak of. As fast as it accumulates from the tourists it is gathered together and held for the accommodation of returning tourists and the unused portion is shipped back by express or registered mail, insured, to the mainland.

Senator Bristow. California uses a great deal of gold coin. I suppose there is more down there than in all the rest of the United States, and it is used even to a greater extent in the Hawaiian Islands, is it?

Mr. Peck. It is universal.

Senator Bristow. It seems to me to be a great waste to be using gold coin and wearing it out when it could be in the vault of a bank and its representative in the form of a gold certificate could be carried around.

Mr. Peck. Some people think that coin is more sanitary.

Senator Reed. What about your own bank circulation? You have a national-bank circulation?

Mr. Peck. We have $250,000 bank circulation.

Senator Reed. What do you do with it?

Mr. Peck. It is paid out and distributed through the agency of the bank in Washington, as is the case with many other national banks.

Senator Nelson. Do not your notes circulate among the people there?

Mr. Peck. No paper money circulates there. We take that out for the convenience of the currency system of the United States Government.

Senator Nelson. You have to take out a given amount?

Senator Reed. What do you do with it? You say you have $250,000 and that it was paid out through a bank in Washington?

Mr. Peck. Yes; through our agency here.

Senator Reed. What do they do; get you gold?
Mr. Peck. Where it was originally—all they pay out now from day to day is the redemptions which take place.

Senator Reed. I want to get this in my mind. You have $250,000 from the Federal Government of bank bills which you never put back in circulation. What do you do with it?

Mr. Peck. We put it in circulation through our agency here.

Senator Reed. You have a bank here with which you do business and you put this money in that bank, and then that bank, I suppose, handles your bills of exchange and everything of that sort for you in this country or part of it?

Mr. Peck. Only in a very small way. As national-bank notes are as good as any other form of money they are exchanged into eastern credits, and those eastern credits we transmute to local credits through the instrumentality of the exchange at Honolulu.

Senator Reed. And in that way you get gold?

Mr. Peck. Yes, sir.

Senator Reed. Transmit them into gold. I see the point. Then, if I get you right, what you want is an amendment to this bill providing that nothing in this bill shall impair the rights or the privileges of the banks situated outside the continental United States which are now national banks. You have no further suggestion than that to make at this time?

Mr. Peck. Except, if the committee had a notion that it might alter, fundamentally, this provision and include insular territory as well as continental territory and attach, as it were, our distant islands to the Federal reserve districts in which California would be included, for instance, I would like to discuss that point; but if it has no such notion I would leave the whole matter without discussing it.

Senator Reed. I do not know what the committee will do.

Senator O'Gorman. I do not think it was intended to extend beyond this continent.

Senator Nelson. We could amend this section 16, which says:

That all moneys now held in the general fund of the Treasury shall, upon the direction of the Secretary of the Treasury, within 12 months after the passage of this act, be deposited in Federal reserve banks, which banks shall act as fiscal agents of the United States; and thereafter the revenues of the Government shall be regularly deposited in such banks, and disbursements shall be made by checks drawn against such deposits.

We could except Hawaii from that so that the revenues of the Government collected in Hawaii need not be deposited in these regional banks.

Senator O'Gorman. Do you think it was ever designed that this was to be extended to Hawaii, Porto Rico, or the Philippines?

Senator Nelson. I do not know that they have any national banks there.

Senator O'Gorman. It should be confined to this continent; in my judgment that was the intention of the framers of the bill.

Senator Reed. We would have to go a little further than Senator Nelson's suggestion, because my attention has been called by Mr. Peck to the fact that there is some other language in the bill which repeals certain privileges of the national-banking act.

Senator Nelson. We would have to amend it. This relates to Government deposits only. He has suggested an amendment to the other
provision of the bill. I do not know whether we have any national banks in Porto Rico.

Mr. Peck. There are none there.

Senator Nelson. And none in the Philippine Islands?

Mr. Peck. None there.

Senator Nelson. I think Hawaii is the only place.

Mr. Peck. Alaska—if Alaska be a part of the continental United States, then this bill must give Alaska representation in this scheme.

Senator Nelson. I suppose it is in the continent of North America, and it would be a part of the continental United States; but, of course, that would not apply to your islands or to Porto Rico. But we can put a provision in the bill including Alaska in order to save any question about it, if it is necessary.

Senator Reed. I suggest that you file with the committee your suggestions as to what ought to be done, provided the system was extended to Honolulu, and your objections to its being extended there at all, if you have objections. I suggest that you file that with the committee in the form of a brief, so that we may save a little time and get through with the rest of the witnesses who are here to-day.

Mr. Peck. I do not feel that I am empowered to speak for the other financial institutions of the islands.

Senator O'Gorman. How many banking institutions are there there?

Mr. Peck. With the branches, about 15 or 20.

Senator O'Gorman. How many American?

Mr. Peck. Everything is American there, with the exception of the branch bank of the Yokohama Specie Bank of Japan.

Senator O'Gorman. Is that a large bank?

Mr. Peck. It has the finest banking house in Honolulu.

Senator Reed. What is its capital?

Mr. Peck. I do not know. It is a bank with world branches. Their headquarters are in Japan. It is a very powerful institution.

Senator Nelson. The bank which is in Hawaii is simply a branch of this Japanese bank?

Mr. Peck. That is it, Senator.

I would like to call the attention of the committee to this phrase, one page 14, line 9, of the bill: "Any national banking association now organized." The word "continental" is not used there. It says—

any national banking association now organized which shall not within one year after the passage of this act become a national banking association under the provisions hereinafter stated, or which shall fail to comply with any of the provisions of this act applicable thereto, shall be dissolved.

We want to feel sure that we will not be dissolved.

Senator O'Gorman. You will not be dissolved. How many national banks are there in the island of Hawaii?

Mr. Peck. Five.

Senator Nelson. Those are small banks?

Mr. Peck. Four on the island of Maui; two have $25,000 capital, and two have $50,000, and they are comparatively new, and the surplus is not large. But on the island of Hawaii the banking operations are in rather large figures. The exports every year amount to about $55,000,000.
Senator Reed. If you care to express it, what is your opinion of permitting foreign banks to maintain branches in those islands?

Mr. Peck. There are a great many Japanese aliens and Chinese aliens in those islands who can not become American citizens. All Japanese born there can become citizens. Eventually those that are born there will outnumber the Americans considerably. They will, of course, control the electorate of the islands.

Senator O'Gorman. When will that condition arise?

Mr. Peck. I think it has been estimated, but I could not tell, Senator. There is a very high birth rate there.

Senator Nelson. Probably within 25 years?

Mr. Peck. It might be within 25 years. It may be sooner. There are a number of oriental voters there now.

Senator O'Gorman. How long have you been in the islands?

Mr. Peck. About 13 years; Brooklyn is my birthplace.

Senator Reed. Then we are in danger of having a dependency of the United States controlled from Japan, are we not?

Mr. Peck. That is a pretty large political question, not a banking question, and, of course, I could answer questions as a banker better, perhaps, along these latter lines, but at the same time the Congress of the United States controls the status of the Territory of Hawaii. What it made it can unmake. It has the power.

Senator O'Gorman. There is no doubt about that. What is your suggestion in that respect, if you have any to make?

Mr. Peck. There is no danger whatsoever at the present time, and I hope there will be none in times to come. I hope that we will Americanize those Japanese who are born there and who are going to live amongst us and who are very worthy people, indeed. There is no prejudice in Hawaii against the Japanese. Sometimes some concern is felt as to the possible attitude of the Japanese Government toward America, as such concern is felt on the mainland; but, so far as the denizens in Hawaii are concerned, they mingle with us, they do business with us, and comport themselves with dignity and industry, and I can not say anything but well of them.

Senator Reed. You did not answer my question as to what you thought of a foreign bank maintaining a branch in Hawaii. Do you think it ought to be permitted to continue?

Mr. Peck. I think so, sir.

Senator Hollis. What amount of your bank notes are redeemed in Washington now?

Mr. Peck. I presume about the same proportion as that of other banks.

Senator Hollis. You do not know exactly?

Mr. Peck. I could make up that statement and have it sent to you.

Senator Hollis. I wish you would.

(The memorial introduced by Senator Reed is as follows:)

TOMBSTONE, Ariz., October 17, 1913.

THE SENATE COMMITTEE ON BANKING AND CURRENCY.

Washington, D. C.

GENTLEMEN: Before the "steam roller" is invoked to pass the Glass bill, I desire to invite the attention of its sponsors to a point that appears to have escaped their attention.

During the debate on the bill upon the floor of the House it was sought to learn to what extent it would be necessary for member banks to rediscount
with the Federal reserve banks in order to inaugurate the system and how long it would be necessary to renew such rediscounts.

Mr. Bulkley, of Ohio, who is Mr. Glass's right-hand man, had the floor. I quote from the Congressional Record of September 12, page 5152:

"Mr. Smith of Minnesota. Have you made any computation as to just when the central reserve banks will be able to pay off that $162,000,000 that they rediscount, or is it a sort of an endless chain, whereby they will have to keep redepositing continuously?"

"Mr. Bulkley. I think they may have to carry this for some time. I would not be able to say exactly how rapidly these banks will be able to readjust their circumstances; but certainly they are enormously in debt now because of deposits which have been made with them by country and outside banks, and in course of time they will have to liquidate that debt. This table only shows that there will be no embarrassment about their liquidating it. How long it will take to work it off I could not say."

"Mr. Madden. Did I understand the gentleman to say that there would be rediscounts amounting to about $300,000,000 altogether?"

"Mr. Bulkley. The rediscounts will be about $266,000,000."

"Mr. Madden. In order to make the payments required with the central reserve bank?"

"Mr. Bulkley. With the regional reserve banks.

"Mr. Madden. With the different banks that are to go into it?"

"Mr. Bulkley. Yes; that is correct.

"Mr. Madden. That means that they do not have any money with which to make the payment, does it not?"

"Mr. Bulkley. It means that they are about that much short of having enough."

"Mr. Madden. That if the cash was required to organize the Federal reserve banks, they could be organized under this system?"

"Mr. Bulkley. Yes; that is true.

"Mr. Madden. When you rediscount the $266,000,000 in order to make payments for which you have no money, will not this rediscounted paper have to be renewed at the end of the term for which it is rediscounted?"

"Mr. Bulkley. To the extent that it can not be paid, which would be to a large extent, I think."

The inference to be gathered from the foregoing is that perhaps the larger part of this paper would have to be renewed and so carried for some time, but there was no hint or suggestion given of the wild inflation that lies just ahead.

Here I desire to advert to the "report" of the committee when reporting the bill to the House. I quote from item 12, on page 66:

"If it be asserted that this process will lead to inflation the answer to be made is that whether it will or not is a matter in the hands of the reserve banks which will have it in their power, by fixing their rate of discount suitably to prevent the banks from creating with them by rediscounting reserve balances in excess of the required 5 per cent."

The 5 per cent referred to is the 5 per cent of the deposits of banks which it is proposed shall be paid over to the Federal reserve banks to inaugurate the system.

So, Mr. Bulkley states that it will be necessary for the banks to rediscount $266 millions of their paper in order to complete their payments of 5 per cent of deposits, and that such portion of it as can not be paid at maturity will have to be renewed.

The committee's report states that when the payment of 5 per cent of deposits is complete that from this point forward inflation will be within the control of the Federal reserve banks through fixing the rate of discount.

Now I will call attention that the bill provides for the retirement of the national-bank notes through a period of 20 years, amounting to 725 millions of dollars, and their replacement by Federal reserve Treasury notes. The Federal reserve Treasury notes must be based upon rediscounts taken over from the banks.

To start the system the banks must rediscount 206 millions, and at the end of 20 years must have contributed further rediscounts of 725 millions, making a round billion dollars of rediscounted paper that must be furnished by the member banks to cover these two items alone, and which must be furnished without reference whatever to a discount rate. They are absolute requirements forced by the transposition of the currency.
It should be noted and understood that the transposition of the currency will require 725 millions of rediscounts in addition to the 266 millions of rediscounts first mentioned, the situation being this: Holding the 266 millions of rediscounts, the Federal reserve banks could take out a like amount of currency but not having any demand liabilities they can not pay it out except in the purchase of additional assets (presumably further rediscounts). Thus, when they had paid it all out they would then have 266 millions of rediscounts in addition to the first 266 millions of rediscounts.

Therefore the minimum requirement to inaugurate the system and transpose the currency will be a billion dollars of rediscounts forced over from the member banks.

Furthermore, the natural growth, population, and business of the country will call for additional currency, which likewise must be based upon further rediscounts.

It is fair to estimate this increase for the coming 20 years at perhaps 500 millions, which, if correct, will swell the volume of rediscounts to a billion and one-half.

Lastly, we come to the rediscounting for purely credit purposes, and which item is properly controlled by the discount rate.

From what has been said of the bill we have been led to believe that everybody and your Uncle could borrow all kinds of money under this bill, and renew about as you please. Banks are invited to loan without limit.

What will be the aggregate of rediscounts held by the Federal reserve banks at the end of 20 years?

Will the proponents of this bill answer the question?

Let us be conservative and guess the amount of rediscounts held at 1,500 millions.

If this amount of the choicest paper in the banks be taken over, where will the banks get paper from to replace it with, and what will be the quality of said last paper?

Do the makers of this measure think that sound loans founded upon matured business grow on bushes over night?

What new path do you seek to lead us in?

The question, which will this bill produce, inflation or contraction, is no longer a matter of doubt. The facts as set forth and taken from the bill itself prove to a certainty that it is the wildest scheme of inflation set up within an age. Forced inflation at that.

Again, at the same time, we could easily experience drastic contraction in the attempt to install this system; causes by the banks declining to rediscount as it is intended they shall, but instead, exercise their right to call in their loans resulting in a panic in credit.

This bill is loaded at both ends.

Let us look at the earnings of the Federal reserve banks a moment; 1,500 million of rediscounts at 5 per cent brings 75 millions of dollars a year—quite a chunk of interest and should leave very handsome earnings to be divided 60 per cent to the Government and 40 per cent to the banks; but we are not quite sure of the 40, for the Federal reserve board might (will) take a notion to raise the interest rate on currency from the minimum of one-half to possibly 31/2 and in this way take over practically all the profits before division time comes.

Coming back to Mr. Smith's question of, when will the banks become able to free themselves from liability on rediscount?

The answer is absolutely plain; never under the sun. It goes the other way.

The banks are to be permanently yoked to that burden and our system of individual and independent banks blotted out.

A continued and swelling line of rediscounts must be furnished by them forevermore.

Why was it that when this information was asked for on the floor of the House that it was withheld?

What was the object?

Why did not Mr. Bulkley inform the gentleman that this 266 millions was only an entering wedge, and that the amount was to be augmented by a forced increase multiplied many times over within the next 20 years?

Why this deception? What? Ye gods, is it possible that Mr. Bulkley himself did not know any different?

S. Doc. 232, 63-1—vol 3—61
If this be true, then, what of the high company he has been associated with in the preparation of this most wonderful mistake? Did they not know different? If they did, why then did they not disclose the facts in their report?

Which conclusion shall we arrive at?

There are other weighty objections to this bill, which are under current discussion, but the defect herein pointed out is fundamental and vital.

The bill must be reframed entirely. Therefore I suggest, gentlemen, to lock your steamroller up and go home and let's think it over a while longer.

We are not in the least danger from a currency panic and will not be as long as we have the Vreeland law (which can be extended), and as for the credit situation, we are now suffering from inflation and a moderate restraint upon credit for some little time to come will be all for our own best good.

Study the subject; we can learn much yet; we have just commenced.

Make haste slowly.

Very truly,

T. R. BRANDT.

(Thereupon, at 5 o'clock p.m., the committee went into executive session, and afterwards adjourned to meet at 10.30 o'clock a.m., to-morrow, Thursday, October 23, 1913.)

THURSDAY, OCTOBER 23, 1913.

COMMITTEE ON BANKING AND CURRENCY,
UNITED STATES SENATE,
WASHINGTON, D. C.

The committee met at 10.55 o'clock a.m.

Present: Senators O'Gorman (presiding), Hitchcock, Reed, Pom­
erene, Shafroth, Hollis, Nelson, Bristow, McLean, and Weeks.

Senator O'Gorman. Mr. Crozier, we will now hear you. Will you kindly give your full name, address, and business activities to the stenographer?

STATEMENT OF ALFRED OWEN CROZIER, OF COLLEGE HILL, CINCINNATI, OHIO.

Senator O'Gorman. What is your business?

Senator O'Gorman. Mr. Crozier, I think I have been reading, with great interest, one of your productions during the last few days.

Mr. Crozier. With my sympathy if you have, Mr. Chairman.

Senator O'Gorman. No; it is adding to whatever information I may have on the subject. You are not a banker yourself?

Mr. Crozier. No, sir.

Senator O'Gorman. You have a brother who is a banker?

Mr. Crozier. I have; yes, sir.

Senator O'Gorman. You have written on the subject of banking and currency?

Mr. Crozier. Yes, sir.

Senator O'Gorman. You have spoken and lectured at times?

Mr. Crozier. Yes, sir.

Senator O'Gorman. You say you are a lawyer?

Mr. Crozier. I am; yes, sir.

Senator O'Gorman. You have no banking affiliations?

Mr. Crozier. None whatever.
Senator O'Gorman. You have read this bill?

Mr. Crozier. Yes, sir.

Senator O'Gorman. Now, you may state your views of this bill.

Mr. Crozier. Before discussing the subject more generally, if instead of adopting a complete ideal banking and currency plan it is decided to merely prop up the present system by enacting the measure recently passed by the House, I respectfully suggest the following modifications:

First. Make cash reserves of each bank 15 per cent, of which 5 per cent shall be kept in the bank's vaults, 5 per cent in the regional reserve bank, and 5 per cent in any banks in that system, the amount so deposited in any bank shall not exceed 10 per cent of the capital stock of the depositing bank, or of the bank receiving such reserve deposits.

Senator Bristow. Just give me that again; I did not catch that fully.

Senator Nelson. Read the whole paragraph.

Mr. Crozier. First, make cash reserves of each bank 15 per cent, of which 5 per cent shall be kept in the bank's vaults, 5 per cent in the regional reserve bank, and 5 per cent in any banks in the system.

Senator Nelson. Any other banks?

Mr. Crozier. Any other banks in system. The amounts so deposited in any bank shall not exceed 10 per cent of the capital stock of the depositing bank or of the bank receiving such reserve deposit.

Senator Hollis. That would cut it up very badly in the case of most banks that would have a fairly small capital and very large deposits. You have that in mind, and that is your idea?

Mr. Crozier. Precisely. Let me finish the paragraph, and then I would be glad to make any further explanation. If all State and national banks join, this plan would centralize about $500,000,000 of reserves for the purposes of protection and rediscount; leave $500,000,000 in the banks' vaults and decentralize and scatter in small amounts for safety the other $500,000,000, instead of centralizing same in a few large cities. If the reserves had been scattered in 1907 there would not have been a general panic and suspension of cash payments by the banks.

Senator O'Gorman. Mr. Crozier, let me ask you here: You appeared before the House committee last year, did you not?

Mr. Crozier. In 1908.

Senator O'Gorman. As far back as that?

Mr. Crozier. Yes.

Senator O'Gorman. You appeared before the so-called Glass committee a year ago, did you not?

Mr. Crozier. I did, by invitation of the committee, but it was submitted in printed form, rather than in person.

Senator O'Gorman. You presented then the same views you are presenting here now?

Mr. Crozier. No, sir; an entirely different side. You will find, Mr. Chairman (I will say right here, in this connection) that through your courtesy you have already included in the report of your hearings an entire complete substitute bill and an analysis of the various systems, which I submitted through a Senator, a friend of mine, and that will be found in part 18 of your printed hearings.
Senator O'Gorman. So that what you have to say to-day will be supplemental to that?

Mr. Crozier. Supplemental to that, but largely on a different subject than there discussed.

The purpose of this, gentlemen, is to scatter, to concentrate a portion of the reserves for protection and rediscount and scatter the rest for the safety of the banks, and to also do justice to all parts of the country in giving a large part of the country an opportunity to have for local use a portion of the bank reserves. I do not believe it is fair or right or wise or safe to continue the present reserve system which compels by law the taking away of vast sums of money from every section of the United States and concentrating it in a few large so-called reserve cities for the exclusive benefit and use of those reserve cities. Now, if this change is made in your law, which you can do here, it will mean that the large banks in the cities will scatter their reserves. Why? Because outlying sections, the country banks in outlying sections, can afford to pay 3 per cent and sometimes 4 per cent for use of those reserves.

Senator Nelson. Is not that a danger, to allow them to pay interest on it?

Mr. Crozier. I think not. I think that the demand for money, Senator, should regulate largely the interest rate.

Senator Nelson. No; but I mean on these reserves. Would not that be a temptation for banks to send it to remote corners where they could get an extraordinary high rate of interest?

Mr. Crozier. I think there is no element of danger in that, Senator, provided the deposit in any given bank is restricted to 10 per cent of the capital stock of either bank.

Senator Nelson. Suppose you had 10 or 20 banks to make deposits in one bank to that extent? You see what an enormous amount of bankers' deposits they would have?

Mr. Crozier. But the concentration would not be anything like as great, Senator, as it is under the present system where New York gets in the neighborhood of a third of all the reserve money in the United States. And the present system has operated to make a rate of interest of from 1 to 2 per cent in one financial center where most of the reserve money is used for stock speculation, and while money for those purposes is loaned for those rates, commercial business of all sections of the country is compelled to pay 5 and 6 per cent for the use of money for their business. This would tend to equalize the interest rate for the benefit of all sections of the country, and would not impair the safety of the reserve system.

Second. Make more clear the power of the Federal reserve board to remove class B bank directors for any act it deems not to be in the interest of agricultural, commercial, or industrial interests of the district, or for the welfare of the general public. That will make the Federal board a real power, instead of largely an ornamental figurehead. As now written, the Federal reserve board's right of removal is only if it thinks those men have ceased to be representative of that class. In other words, ceased to be agricultural, commercial, or industrial people. Now, the board should have the power of removal if those men, by their official acts fail to represent the agri-
cultural, commercial, or industrial interests of the general public, because the Federal board represents the general public.

Third. Empower the Federal reserve board to fix from day to day for Federal banks the general discount rate charged local member banks which shall be uniform throughout the United States. Remember, gentlemen, it is chiefly the public currency and revenues—the property of the people—that is being loaned by the Federal banks. When a system is created by an act of the General Government to dispose of the public currency and public revenues belonging to all of the people there is no justification in morals and should not be in law for discriminating in the interest rate charged for public currency between sections of the same country. There is a further reason, gentlemen, a scientific reason: If you would give to the Federal reserve board the absolute power possessed by the Bank of England to fix and change from day to day the interest rate, the discount rate, you will have created one of the most useful powers in the hands of an agency of the General Government of all the people by which it can intelligently and effectively check improper general speculation and encourage the development of prosperity. In other words, as you know and have been told by distinguished financial men who have been here, an increase in the general discount rate always tends to check speculative operation and activities throughout the country. On the other hand, a decrease of the general discount rate tends instantly to release money and thereby a tenfold volume of bankers' credit based on that money that the banks at once seek to find profitable outlets for, and business is artificially stimulated throughout the country. So that the mere raising and lowering of the general discount rate, if it is exercised wisely and intelligently by a central patriotic authority, can be made a tonic and means a governor by which automatically, to a measurable extent, the prosperity and business conditions of the country can be regulated. Therefore a power so enormous should not, in my judgment, be delegated to any private corporation or dozen private corporations to be used for private profit, because those corporations naturally would use it to increase the interest rate and thereby increase the profit of such banks as own the corporations.

Fourth. Prohibit discrimination and favoritism by Federal banks as between member banks in the matter of service or interest rates. Now, gentlemen, while these regional banks are to be private corporations this bill gives them very large special privileges and powers. Senator O'GORMAN. Gives to whom?

Mr. Crozier. This bill gives to the Federal banks and regional banks very large powers and very large and rich and valuable special privileges. The system of control of these Federal banks is private.

Senator O'GORMAN. Why private? There are three members appointed by the reserve board strictly governmental officials. Of course the six others are selected by the various member banks.

Mr. Crozier. Precisely; and that is why it is private instead of public in the control and management of the banks.

Senator O'GORMAN. You say the three officers named by the reserve board are private officials?

Mr. Crozier. No, sir. No; you do not understand me. I said the control and management of the regional bank is a private control and not a public control and management.
Senator O'Gorman. I can not agree with you. The regional banks, even under the pending bill, are ultimately controlled by a public governmental board residing here in Washington. I can appreciate the observation you made a moment ago, that perhaps sufficient powers have not been conferred on the reserve board to give it effectual control over the several regional banks.

Mr. Crozier. Yes.

Senator O'Gorman. That is a matter that can be easily corrected.

Mr. Crozier. Yes; but I am taking the present bill as it stands now, Senator. The House has already passed it, and I must necessarily discuss the bill in the legal form or its present structure.

Those are private corporations, they are privately owned and privately managed in law. Now, it is true that the Government board has very large moral influence there, and that that moral influence would be very beneficial and useful, I grant. But speaking legally, the banks and not the Government choose six of the nine directors, and therefore it is private control and management as the bill now reads.

For that reason, it seems to me, as you are to take away from the Government and turn over to 12 private corporations formed by the banks an entire exclusive monopoly of every dollar of the public currency of the United States and every dollar of the public revenues of the United States, and turn them over to these private central banks, if you please, for the profit of those private corporations, it seems to me it is the duty of Congress to absolutely insure in the bill that these public funds will be administered by those private banks, private corporations, without discrimination or partiality. For the same reasons that the Interstate Commerce Commission is authorized——

(At this point there was a call for a quorum of the Senate.)

Senator O'Gorman. Gentlemen, we will now adjourn to the committee room of the Judiciary Committee on the ground floor of the Senate wing of the Capitol, as it is necessary for us to answer the roll calls.

(Thereupon, at 11.15 o'clock a.m., the committee adjourned to the Judiciary Committee room in the Capitol.)

Senator O'Gorman. You may proceed, Mr. Crozier.

Mr. Crozier. The matters of prohibiting discrimination by Federal reserve banks, as between local member banks, is a matter that is equally justifiable with the law prohibiting discrimination by railroads between customers in the matter of railroad rates and service, in my judgment.

And it is in some respects more important, because it is not inconceivable that, in some instances, a clique may obtain control of the regional banks; and unless there is this safeguard provided there may be favors extended to one local bank and denied to others, and there should be nothing of that kind; every bank, especially if they come in under compulsion, should have the protection of an affirmative prohibition in this law.

Senator Nelson. Now, how would you put that into the bill? What rule could you lay down in the bill—putting it into words?

Mr. Crozier. I would empower the Federal board to remove any and all directors of Federal banks that participate or permit discrimination by Federal banks in the administration of their powers.
Senator Nelson. But that would not be laying down a rule of guidance for the regional banks. I mean, what rule would you lay down for the guidance of the regional banks to prevent discrimination?

Mr. Crozier. The granting, for instance, of rediscounts to one bank and refusing them to another bank on precisely the same class of paper.

Senator Hitchcock. What would you think of providing that every member bank, as a matter of right, should be entitled to rediscounts to the extent of the capital stock, and that no member bank should be permitted to have discounts in excess of twice its capital stock, except in case of an emergency, and then only upon reference to the Federal reserve board?

Mr. Crozier. That, Senator, is an absolutely essential provision if the law of supply and demand instead of the arbitrary will of the directors of a private regional corporation is to govern in the world of finance and banking.

Senator Hitchcock. Then, what would you think of this further provision, that the rate of discount should be the same to all member banks, and should be higher when the member bank is accorded discounts exceeding the amount of its capital stock?

Mr. Crozier. I have already stated—I think you were not present at the time—that I favor a uniform rate of discount throughout the United States.

Senator Nelson. On the part of the regional banks. Mr. Crozier took that stand.

Mr. Crozier. Yes; on the part of the regional banks, and fixed by the Government board, and changed from day to day or from week to week. And I would say, further, that for extra loans granted as a mere emergency I would make a special rate. I would provide in the rules put out by the Government board a special higher rate that would operate, when that emergency was over, to bring back the emergency currency into the general pile.

Senator Hitchcock. That is, you would allow a bank, up to the amount of its capital stock, for instance, to have the lowest rate?

Mr. Crozier. The minimum—the maximum, rather.

Senator Hitchcock. Well, the minimum rate.

Mr. Crozier. The minimum and the maximum are the same.

Senator Hitchcock. And then if it required discounts in excess of its capital stock it should pay a higher rate?

Mr. Crozier. Yes, sir.

Senator Hitchcock. But the rate in all cases to be the same to the member banks?

Mr. Crozier. Yes. I stated before that in morals, and I thought in law, there was no justification for granting by law to private regional corporations the power to discriminate between localities of the same kind in the price of interest for public currency and public revenues distributed through those private corporations for the public use.

Fifth. Prohibit any bank in the system charging more than 7 per cent for either time or demand loans, or discrimination between customers in the rates paid for deposits or charged for loans under similar conditions. This refers, of course, to local banks.

Senator Nelson. Member banks.
Mr. Crozier. Yes; member banks. You are all familiar with the fact that the practice in New York has grown up on the stock exchange of bidding the price of call loans to 10, 20, 30, and 50 per cent, and sometimes 100, 200, and 300 per cent—during the Northern Pacific corner.

Now, that increased interest rate automatically acts as a magnet and entices the money all over the United States away from local business, local industry, and local banks into that one center, to be used chiefly for speculative purposes. It is a scandal; it is a wrong on the whole country; it is a thing that ought to have been abolished years ago.

Senator O'Gorman. What should be abolished?

Mr. Crozier. The charging of more than 7 per cent for either time or call loans.

Senator O'Gorman. You mean it should be prohibited?

Mr. Crozier. Prohibited; yes; because it is a fraud on the whole country. It is a thing that creates tensions, and it has done more than any other one thing, gentlemen, to bring on panics in this country.

Are the 48 States utterly helpless to change a condition in one city of one State that repeatedly operates to demoralize the financial and banking conditions of the whole country? Are we helpless? I think we are not helpless, gentlemen, provided in this very measure you gentlemen take the initiative and try to correct that wrong.

It is well known—it has been brought out in the investigations which have been conducted by authority of Congress—that banks incorporated under national law repeatedly participated in the scheme of inflating call rates, and over and over have called loans at one end of the bank for the sole purpose of forcing their customers to go to the other end of the same bank and submit to a usurious interest rate; and all this under charters granted and existing by Federal laws. The system is wrong; it is a scandal.

Sixth. Prohibit the granting or calling of loans for the purpose of influencing the quotation prices of securities and the contracting of loans or increasing of interest rates in concert or cooperation by the banks to influence public opinion or the action of any legislative body or the political action of bank customers.

Senator Nelson. Will you please repeat that? I did not get it.

Mr. Crozier. Six, prohibit the granting or calling in of loans for the purpose of influencing quotation prices of securities and the contracting of loans or increasing of interest rates in concert or cooperation by the banks to influence public opinion or the action of any legislative body or the political action of bank customers.

Senator Nelson. How could that be put in practical operation? In what way would you do it?

Mr. Crozier. If you will make a declaration, a prohibition in your law, a specific prohibition in this law, prohibiting that practice, even if you put no penalty behind it, the statutes of the United States will furnish a penalty of three years' imprisonment or not to exceed $10,000 fine under the conspiracy act.

Senator Hitchcock. You would have to prove a motive?

Mr. Crozier. Yes; you would have to prove it. All criminal matters are subject to proof. If the proof can not be provided, then there is no injury to the banks. But I remember—and you gentlemen
remember—within recent months the distinguished Secretary of the Treasury of the United States was reported in the open press notices as specifically charging that there was a conspiracy, or words to that effect, among certain of the large banking interests to put a contraction upon the currency and to raise interest rates for the sake of forcing public opinion—to force Congress into passing currency legislation desired by those institutions. I say that is not a proper business for banks to engage in chartered under Federal authority. And this is the place to correct that evil, if it is ever to be corrected.

Senator Nelson. Did the Secretary of the Treasury furnish any proof of that fact?

Mr. Crozier. I can not say that he did. He referred——

Senator O'Gorman (interposing). Do you personally know of anything that justified that suspicion or fear on his part?

Mr. Crozier. No; not on his part. No; I am not in the confidence of the Secretary of the Treasury.

Senator Shafroth. Well, on your own part, do you know of any combination? Have you any proof of any combination?

Mr. Crozier. I am a lawyer, and a number of these gentlemen are lawyers. We know that circumstantial evidence sometimes is the most valuable.

Senator Shafroth. Certainly.

Mr. Crozier. And six or seven months ago the condition of business in this country never had been as healthy as at that time.

Senator Hitchcock. Well, I do not know about that. In March, when the bank statements were made, the reserves were at their lowest ebb, and the banks have been struggling ever since that time to strengthen them.

Mr. Crozier. Senator, that has been, over and over, put up as an unhealthy—or as an evidence of lack of prosperity in the country.

Senator Hitchcock. No; it shows a strained condition of the banking resources.

Mr. Crozier. On the part of the banks.

Senator Hitchcock. But it does not show—and at once, when it was revealed, the banks went to work to try to fortify themselves, which they should have done.

Mr. Crozier. Yes; but not in the fire-alarm way in which it was done. An official of the National City Bank of New York, which bank is the leader, has always been the leader in taking away from the Government and the people of the United States the control of their public currency and putting it into the hands of a private corporation—in other words, the leader in the movement for the Aldrich central-bank plan—an official of that bank went out to Detroit in the spring, and in a public address rang the fire alarm that naturally would set every bank in the United States into calling its loans and strengthening its reserves.

Senator Hitchcock. Can you put into the record what he said?

Mr. Crozier. I have not it with me.

Senator Hitchcock. Can you procure it?

Mr. Crozier. I think I could.

Senator Hitchcock. I ask that that be done. I would like to know what this was—what specific thing was done; what specific thing was said.
Mr. Crozier. I will try to find that, because at the time I know I was sure that started a movement for the contraction of the currency—for the contraction of bank loans that would be nation-wide before it got through.

Senator Nelson. But do you not think the condition of the banks, as revealed by the statement that Senator Hitchcock referred to—do you not think that that justified——

Mr. Crozier (interposing). It justified the banks, Senator, in strengthening their reserves privately; but it did not justify the publication in the public press of the whole country of an alarming condition and the publication of it in the face of the announcement from the President that an effort was to be made to put over currency legislation at this session of Congress. Now, it is impossible——

Senator Hitchcock (interposing). I think you are getting your dates mixed, Mr. Crozier. The President did not take that position until later. It was midsummer before the President took that position.

Senator Shafroth. It was the 24th of June.

Senator Hitchcock. Yes; and the condition of the banks of the United States, as I remember, was revealed in their March statements.

Mr. Crozier. I think you are correct as to the formal announcement of the President; but shortly after the President's inauguration, if my memory serves me correctly, it was pretty generally published throughout the United States that currency and tariff were both to be considered, at least, at this session of Congress. I do not think that the formal statement of the President that they must be completed during this session was made until the time you speak of, but it was generally understood by the banks and by everybody that currency would come up at this special session, at least for discussion; and those people, the interests back of the Aldrich plan, have been busy night and day for the last six years.

Senator O'Gorman. Have you any other views bearing on the provisions of this bill, Mr. Crozier?

Mr. Crozier. Yes; that is exactly what I am coming to.

Seven. Empower the Federal reserve board to loan currency direct to any local bank in the system, as well as to the regional banks, on the same securities required by Federal banks.

Senator Nelson. Will you repeat that statement and let me see if I understand it?

Mr. Crozier. Seven. Empower the Federal reserve board to loan currency direct to any local bank in the system, as well as to the regional banks, on the same security required by Federal banks or regional banks, whenever such board deems that the public welfare requires such action.

Senator Nelson. Well, the Federal reserve board would not have anything to loan; the only way they could do it would be to order one regional bank to loan to another.

Mr. Crozier. No. They have the public currency absolutely under their sole control at the outset.

Senator O'Gorman. You may proceed, Mr. Crozier.
that is the only way local banks and the business public can be protected against possible abuse of the currency monopoly by a regional bank; absolutely the only way. You are creating, if you put this bill through, 12 private monopolies—private corporations owned by the banks, to which private corporations you are delegating by act of Congress an absolute monopoly of every dollar of the public currency of the United States and every dollar of the public revenues of the United States.

Senator Hitchcock. Well, that is the way the bill is now. It will not be that way when it comes out of this committee.

Mr. Crozier. I hope not. But I have no way of seeing into the minds of this committee.

You are doing that, gentlemen; more than that. You are putting into the hands of those regional reserve banks exclusively, and not in the hands of the Government board, the exercise of the power of elasticity that we all desire to establish.

Eighth. Preferably eliminate the regional-bank feature and merge a reasonable portion of all bank reserves for purposes of protection and rediscount under the control of the Federal board, such board to be increased in size, and have its powers enlarged and properly safeguarded. The number of regional banks should not be reduced if they are to be owned and controlled by private interests instead of the Government.

The object of the big banks in demanding fewer regional banks is to increase their grip on the system and make more easy and certain the monopoly of all money and bank credit, and of private control of the public currency, which this measure openly grants to the powers of privilege.

If the Government is to retain absolute, instead of pretended, control, then one bank or public agency is all that is needed, and will be more simple and scientific than a dozen or any other number of scattered agencies exercising currency powers.

The so-called administration currency bill grants just what Wall Street and the big banks for 25 years have been striving for, namely, private instead of public control of the public currency.

I know that, gentlemen, for on the 17th day of December, 1907, I was in the city of New York at the meeting of the National Civic Federation, when the chairman of the committee, Mr. Seligman, in the presence of the meeting in which the representatives of Wall Street were in the majority, presented their currency resolutions. This was right during the panic—or right after the panic.

I moved as an amendment a proviso to that resolution, and the proviso was this:

Provided. That the power to control the volume of the public currency in circulation among the people shall not be taken from the Government and put into private hands.

I asked Mr. Seligman and the committee in public to accept that amendment, and they refused to do so.

Senator Hitchcock. Do you think that the Government now controls the volume of currency?

Mr. Crozier. It does to a large extent; but it is not elastic.

Senator Hitchcock. Will you point out to the committee how the Government controls it?
Mr. Crozier. It controls it—it issues it and turns it over, of course, on bonds—

Senator Hitchcock (interposing). Well, how would the Secretary of the Treasury—you mean by the Government, the Secretary of the Treasury, I suppose—how would he go to work, now, to expand the currency?

Mr. Crozier. He can not do it under the present law.

Senator Hitchcock. Under the present law he can not contract it.

Mr. Crozier. Under the present law he can not contract it.

Senator Hitchcock. Then how do you say it is under the control of the Government?

Mr. Crozier. I say it should be under the control of the Government. That is the power I want put into the hands of the Federal board or agency, the power of elasticity; and I do not want it taken away from the Federal board or from the Government or from the people and put into the hands of private corporations, to be exercised for private profit and without due regard to the general welfare.

Senator Hitchcock. Well, do you know of any country where it is under the control of the Government?

Mr. Crozier. Well, I can not say I do, in the strictest sense; but I do not know of any other Government where we have the people in control of the Government as we have here—to the same extent.

Senator Hitchcock. Let me ask you this question: What would be the effect if it were in the power of the Treasury Department and the Treasury Department should be able to exercise it by greatly expanding the currency? What would be the effect of that?

Mr. Crozier. I am opposed to doing it in that way. I want created a deliberative, law-controlled agency or, preferably, a department of the Government segregated from the ordinary business of the Government and from the financial affairs of the Government; a United States monetary council; a body just as deliberative and intelligent as the Supreme Court of the United States.

Senator Hitchcock. Well, suppose that should be created to your liking, and it should expand the currency, with the power that you have suggested conferred upon it. What would the effect be?

Mr. Crozier. Increasing the volume of money in circulation would increase the credit tenfold.

Senator Hitchcock. What would be the effect upon prices?

Mr. Crozier. The effect would be to increase them.

Senator Hitchcock. Do you think that any body of men ought to have the power to increase prices?

Mr. Crozier. I think they ought to have the power to increase or decrease them.

Senator Hitchcock. Would it not be better to have the volume of currency responsive to the needs of business?
Mr. Crozier. It will be so under an intelligent and wise board. That board will not be arbitrary, if it is intelligent and honest and efficient.

Senator Nelson. But what rule of elasticity would that board follow? What would be the rules that would guide the board?

Mr. Crozier. The same rules that you have here, except that it would have a better judgment and a more public judgment, because it would have the instrumentality for influencing the thing with due regard, not to locality, but to the whole country and the whole situation.

Now, if we are to assume, gentlemen, that in a republican form of government it is impossible for Congress to create a public body that it is safe to delegate these governmental powers to and that therefore we must take these powers away from the Government and delegate them to some private corporation, run for profit, that is different; I do not agree with you. I believe in the republican form of government and in the ability of that form of government to construct a public agency, a department of government, that will be absolutely free from all political taint or partisan bias and free from control by the influence of Wall Street or anybody else—just the same as the Supreme Court is to-day.

But it should be a separate department of the Government; it should not be intermixed or intermeddled with the Treasury Department work at all.

Senator Nelson. You would have to have a bureau of elasticity then. [Laughter.]

Senator Hitchcock. A rubber bureau. [Laughter.]

Senator O'Gorman. You may proceed, Mr. Crozier, with your remarks.

Mr. Crozier. If the gentleman will take the trouble and have the patience to read, in part 18 of your published proceedings, you will find a complete bill there.

Senator Nelson. I will try to read it.

Mr. Crozier. It will give you an idea of the precise machinery that should be used for that purpose.

The so-called administration currency bill grants just what Wall Street and the big banks for 25 years have been striving for, namely, private instead of public control of the public currency. It does this as completely as did the Aldrich bill. Both measures rob the Government and the people of all effective control over the public money supply and vest in the banks exclusively the dangerous power to make money among the people scarce or plenty. The Aldrich bill put this power in one private central bank. The administration bill puts it in 12 regional central banks, all owned exclusively by the identical private interests that would have owned and run the one Aldrich bank.

Mr. Crozier. There is absolutely no difference between the two measures in legal effect as to the control of the volume of currency in circulation. In one case the Aldrich bank and in the other the 12 regional banks exclusively decide the quantity of public currency that shall be put out among the people through local banks by rediscounting commercial paper, what locality, and which banks shall get it, and the price that must be paid for it. They also exclusively decide the quantity of currency that shall be taken away from the
people by stopping the rediscounting and forcing local banks to gather up the people's cash and hand it to the regional banks to pay maturing rediscounted paper, and they only decide when this shall be done.

Senator Hitchcock. None of that would be true if the law were to provide that every bank, as a matter of right, should be entitled to a certain line of discount at any time.

Mr. Crozier. That would help very much, and if you will increase the powers of the Federal board over those banks; to put the Federal Government in supreme control of the discount rate, so that the law of supply and demand will regulate it, I am in favor of this bill, if we can not get an ideal system.

Senator Shafroth. You do not think then the central board itself ought to have the power to increase and decrease?

Mr. Crozier. I will explain that a little later.

Senator Shafroth. All right.

Mr. Crozier. In other words, the imperial power of elasticity of the public currency and the tenfold volume of bank credit are loans built upon such currency, is wielded exclusively by these central corporations owned by the banks. This is a life and death power over all local banks and all business. It can be used to create or destroy prosperity; to ward off or cause stringencies and panics. By making money artificially scarce interest rates throughout the country can be arbitrarily raised and the bank tax on all business and cost of living increased for the profit of the banks owning these regional central banks, and without the slightest benefit to the people. These 12 corporations together cover the whole country and monopolize and use for private gain every dollar of the public currency, and all public revenues of the United States. Not a dollar can be put into circulation among the people by their Government without the consent of and on terms fixed by these 12 private-money trusts.

The Federal reserve board is utterly powerless. It can print and pledge the credit of the Government to a billion dollars of public currency and turn it over on its terms to the 12 reserve banks. Then its power ends. It can not compel the regional banks to put a dollar into actual circulation through local banks, no matter how badly it is needed by the people as a medium of exchange. It can not prevent the regional banks from suddenly withdrawing the entire billion from circulation, even if that course demoralized all business and wrecked all prices. The power to inflate and contract the volume of the public currency in the hands of the people and banks is vested not in the Federal board, but in the dozen private banking corporations.

Senator Reed. Do you think if the regional banks of this country were to do the things you speak of that it would be more than about two days and a half until the directors would be removed under the power of removal?

Mr. Crozier. There is no power of removal. I have already discussed that. I discussed that before you came in, I think. There is no power of removal of the three class B directors, so long as they are themselves commercial, agricultural, or industrial men. I asked for an amendment along that line before you came in, Senator.

Senator Reed. There is a power of removal which is limited to the three?
Mr. Crozier. Yes.

Senator Reed. If we could remove those three and appoint three others, we would be able to run that bank again in a few days?

Mr. Crozier. Yes; under this bill. I am only discussing the bill which may be evolved.

Senator Reed. I am talking about this unbelievable thing.

Senator Shafroth. Of course, it is not likely that this will occur.

Mr. Crozier. Let me say in answer to the Senator, I am not saying, and do not say, and would not say that every bank or any bank now, next week, next month, or next year would do these things to this extreme, but when you gentlemen are making a statute you do not assume that the powers you grant probably will not be abused, but you safeguard the language of the statute so that selfish interests can not abuse those powers, even if they are inclined to do so.

Senator Reed. That is all right. I was asking about your claim that we could not control in an extreme case. Undoubtedly the control would be there.

Mr. Crozier. Yes. There is, under the language of the bill passed by the House, no control or power in the Federal board to remove the directors of Federal banks, so long as these class B directors are themselves commercial, agricultural, or industrial men.

Gentlemen, that is private control of the public currency, the power in private hands to manipulate or arbitrarily raise and lower the prices of all securities, commodities, property, and human labor by simply inflating and contracting at the will of such corporations the outstanding quantity of the public currency of the United States.

Senator Reed. What do you say of this section in regard to the powers given to this central board:

To suspend the officials of Federal reserve banks and, for cause stated in writing with opportunity of hearing, require the removal of said officials for incompetency.

That would cover the case you have been discussing.

Mr. Crozier. I do not think so.

Senator Reed. "Dereliction of duty," that would cover it; would it not? "Dereliction of duty, fraud, or deceit, such removal to be subject to approval by the President of the United States."

Senator Shafroth. There is another clause in there to the effect that when they shall be satisfied that they do not represent the agricultural or industrial interests they may be removed.

Mr. Crozier. That means if they stop being agricultural men and become bankers they should be put off the board. What I want in there is a section providing that if they cease, by their official acts, to serve the interests of those particular interests they should have the power of removal.

Senator Reed. Section D provides, among the powers of this central board:

To supervise and regulate the issue and retirement of Federal reserve notes and to prescribe the form and tenor of such notes.

Read that in connection with paragraph (f), which says:

To suspend the officials of Federal reserve banks, and, for cause stated in writing with opportunity of hearing, require the removal of said officials for incompetency, dereliction of duty, fraud, or deceit, such removal to be subject to approval by the President of the United States.

It seems to me there would be a manifest power there.
Mr. Crozier. Suppose, Senator, the regional bank directors should say, "Speculation is becoming rife; let us call in 25 per cent of our loans." Now, the Federal reserve board might believe that that was a tremendous burden on business, but it would be only an error of judgment.

Senator Reed. But that would be incompetency?

Mr. Crozier. Yes, sir.

Senator Reed. The Federal reserve board undoubtedly would have the power, and there is no court in the country that would interfere with their power.

Mr. Crozier. I would like to see that clause put in the bill, Senator. I would like to see that specific clause put in the bill, making the Federal reserve board the supreme court on this and all other questions that come up under this bill.

Senator Nelson. Will you repeat that statement you made a while ago?

Mr. Crozier. That is, private control of the public currency, the power in private hands to manipulate or arbitrarily raise and lower the prices of all securities, commodities, property, and human labor by simply inflating and contracting at the will of such corporations the outstanding quantity of the public currency of the United States. All authorities agree, so far as I know, that an inflation of the money in circulation, the money of the people, tends to automatically increase prices.

Senator Nelson. The banks can not do it. The call for the currency must come from the regional banks. They must put up their commercial paper. The regional bank can not issue, haphazard, currency and scatter it among the people and then bring it back. They can only issue it where there is a call by the member banks.

Mr. Crozier. That is true.

Senator Nelson. So the demand comes from the consumers in the first instance?

Mr. Crozier. They have the power to refuse to comply with the demand. If the law of supply and demand of legitimate business—and commercial paper is legitimate business, if it is genuine commercial paper—if that law of supply and demand can be put into your bill, so it will be the Government and not the arbitrary will of the board of directors of the private corporation, you will take out very much of the danger.

Senator Hitchcock. That is undoubtedly the purpose of the bill, and the committee will see to it.

Mr. Crozier. I hope so.

Senator Shafroth. You have your amendment all prepared?

Mr. Crozier. No; I have just suggested it.

Senator Nelson. He has a bill in the record.

Mr. Crozier. I have a complete bill in the record.

Senator Shafroth. You had better put in your amendment just as you want it, so that instead of going to your philosophy we can go to the language used.

Senator O'Gorman. Let me make this statement for the record. As I understand it, your proposed bill, which has been submitted, really provides for a central bank with branches under Government control?
Mr. Crozier. It is not a bank in any sense of the word whatever, but a central agency, a monetary council.

Senator O'Gorman. It is intended to discharge the two main functions sought to be advanced by this bill, providing for the rediscount of commercial paper?

Mr. Crozier. It is not strictly rediscount.

Senator O'Gorman. It is an accommodation?

Mr. Crozier. No; it is loaning on the security of commercial paper instead of bonds; that is all. It is not a rediscount.

Senator O'Gorman. It also makes provision for the mobilization of reserves?

Mr. Crozier. It is to form an ideal money and banking system. I am here because of the expression in the newspapers that there was some probability of this bill in its general form going through, and if that is to be, then I wanted it changed in certain particulars, and if it can be made so that it is a patriotic thing, so that the Government is in control, I have no objection to the banks. They should be used. My bill provides that the currency must be put out through the banks. They are natural agencies. They have the situation in hand all over the country, but I want the banks to pay the Government whatever the true value of that currency is, and I do not want it given to them and allow them to make all the profits from the Government. There is no reason why it should not be that way. It is a business matter, pure and simple.

This measure makes it possible for selfish private interests for selfish objects to use the whole public currency to harm or despoil all the people in spite of the Federal board, or all the powers of the Government of the Republic. Is this democracy? It is not rule by the people, but rule of the people by the dozen calculating private corporations.

The business heartbeats of 100,000,000 people can be stopped any time without notice of these corporations to raise interest rates or influence elections or legislation, suddenly obstruct the free play of circulation, the currency, the life fluid of all business, by temporarily stopping the rediscounting for local banks and requiring the payment of maturing short-time rediscounted paper in cash by the banks. We must remember that under our bank reserve system the volume of bank credit loans is ten times the total cash in the reserves. That a currency contraction that withdraws $500,000,000 from bank reserves will force the banks to instantly require their business customers to pay up $5,000,000,000 of bank loans. The sudden and unexpected contraction of bank loans five or even one billion dollars means nation-wide stringency, if not panic.

What folly, then, to put this dangerous power over all the people and their business activities into the hands of the very private interests that will profit most by using such power for selfish purposes at the expense of the people. Why not leave it where it now is and has been for 50 years—in the hands of the Government—for the good of all?

By establishing a proper Government agency to hold bank reserves and use the same with the public currency and revenues to protect the banks and put currency into circulation through the banks we can get the desired currency elasticity in practical and scientific form with-

S. Doc. 232, 63-1—vol 3—62
out delegating these sovereign governmental powers to private corporations.

The administration currency bill should be simplified and changed so it will provide genuine public control of the public currency. The regional-bank feature should be eliminated and the Government board enlarged, safeguarded, and given adequate powers. It should not be a bank or do a banking business. It needs no capital stock. The bank reserves, currency, and public revenues will provide ample funds for all purposes. Every dollar should be a real dollar, good to pay a dollar of debt or purchase, full legal tender, redeemable in and secured by an adequate reserve of actual gold. Behind it should be the faith and credit and taxing power of the Federal Government. Such a currency always will be sound and never depreciate. What more do we need? Why should we have less? Congress must answer those questions.

Gentlemen, one of the wickedest things in this bill is the fact that it proposes to create a possible $1,000,000,000 of optional currency, not one dollar of which can be used to pay any private debt, and the man selling goods to a purchaser may refuse to accept it if it is tendered to him. And yet it is to be an obligation of the Government of the United States and for the banking of the Government of the United States. I say that it is not the province of Congress to authorize the creation and putting into circulation of $1,000,000,000 of currency that the people think is real money, and when they tender it to redeem some mortgage at the last moment to be told that that is not a legal tender and that they have lost their property.

Senator Hitchcock. Do national-bank notes have that effect?

Mr. Crozier. They have not, and that is why I am opposed to it.

Senator Hitchcock. Can you give us any instances of what you refer to?

Mr. Crozier. I had one gentleman in Denver tell me of a case of a piece of mining property of great value on which there was borrowed in Wall Street about $150,000. The loan was made, and after they received it they developed the mine to the point where immense ore reserves were shown. These people suddenly foreclosed, and they got the money elsewhere and got together their last dollar to redeem it, and part of that money tendered was bank notes and part of it was gold certificates, and they were refused, because gold certificates are not legal tender, although there is 100 per cent of gold in the Treasury to secure them. They were mere warehouse receipts.

There is nearly 90 per cent of money in actual circulation in this country under the law of Congress which is not worth the paper it is written on, if anybody cares to refuse it, because it is not legal-tender money.

Senator Weeks. Did you investigate to see whether that story which you have related to us was true or not?

Mr. Crozier. I did not personally investigate it, but it came from a business man in Denver who, I suppose, knew what he was talking about.

Senator Nelson. Senator Shafroth may know something about that.

Senator Shafroth. Not that particular instance, but I remember a time when a man wanted to make a tender of $3,000, and he laid down $3,000 in gold, because he felt sure the people with whom he
was making the settlement would not take anything else. I have seen several instances where they have resorted to that.

Mr. Crozier. Now, gentlemen, I would like to ask some member of this committee to explain why a gold certificate is not a legal tender?

Senator Hitchcock. I supposed it was a legal tender.

Mr. Crozier. It is not.

Senator Nelson. It is not.

Mr. Crozier. Over $1,000,000,000 of those certificates are put out by the Government of the United States and they have 100 per cent of gold behind them, and yet they are utterly worthless paper in any business transaction between private individuals if the other party cares to refuse to accept them.

Senator O'Gorman. Do you know any reason why any currency issued with the authority of the United States Government and with its approval should not be regarded as legal tender for all purposes?

Mr. Crozier. There is no reason.

Senator O'Gorman. I am asking if you know any good reason.

Mr. Crozier. I have asked that question of a great many learned men about this legal-tender money, and the only answer I have ever obtained—I have asked it of college professors of economics, and they are preaching it in the great colleges and universities of this country to young men who are coming up to be the future citizens, as the reason why it should not be the legal tender, and that is if it is made real money some time the Government of the United States may issue too much of it. In other words, they are preaching distrust of republican institutions and the safety of republican governments to those tens of thousands of young men in the educational institutions of the United States.

Senator Reed. That is interesting, but we can not undertake to reform the universities of this country.

Mr. Crozier. But the Senator asked the question. I simply say I have put that question to a good many men.

Senator Weeks. I do not think it is worth while to indulge in a discussion of that subject at this time, but I think the reasons are ample and conclusive why such a circulation should not be made legal tender.

Mr. Crozier. I have never yet found any reasons that were advanced, excepting the one I have suggested, that there would be too much of it.

Now, then, my contention is this, that every dollar issued by the authority of Congress should be a full legal tender—should be redeemable in gold and should have behind it a reserve of actual gold.

There can be no question about the soundness of that currency, because the Aldrich bill provided a currency that was to have behind it not the guaranty of the Government, but only 33⅓ per cent of gold, and not really even that, because under the Aldrich bill silver could have been used exclusively, and not a dollar of gold behind that currency. Greenbacks could have been used exclusively and not a dollar of either gold or silver to secure the Aldrich bill currency. The same is true of your bill.

Senator O'Gorman. You may proceed with your points, Mr. Crozier.
Mr. Crozier. The whole power of the Federal Government right now is being exerted to regulate or destroy trusts and combines as unlawful, dangerous, and against the general welfare. How strange that instead of protecting the independent banking system and competition for loans by forbidding banks to confederate to monopolize money and credit and raise interest rates, this pending currency bill would actually force the 25,000 banks to unite for mutual profit and advantage in a dozen corporate combines to which an absolute and binding monopoly of the entire public supply of money and bank credit of the United States is granted by act of Congress. A private monopoly of money and bank credit is the most dangerous and burdensome of all monopolies, because no important business can long thrive or even exist without a reasonable and ready supply of currency and credit available at fair interest rates.

I can not believe that the President and his advisers have as yet considered the question from this angle. It seems impossible that they would knowingly fasten upon the country by law an odious private monopoly of the public supply of money and bank credit, or while publicly proclaiming Government control of the public currency actually seek to put through Congress a measure that in fact and in law establishes absolute private control of the public currency in most complete and dangerous form.

I have no desire to obstruct or unnecessarily delay currency legislation if it is wise, sound, and patriotic. But we must not go faster than we can analyze and understand the important and far-reaching effects of proposed legislation. Although a lifelong Republican until that party, under the lead of Aldrich in 1912, took its official stand for private control of the public currency, my sympathies have since been with the President and his supporters in Congress. But if Democracy, in spite of the teachings of Jefferson and the warnings of Jackson, is now to be also officially committed to private control of the public currency and surrender everything to the big banks for the sake of accomplishing currency legislation quickly instead of more deliberately, the way is likely to be opened for revolutionary political changes in the near future. There is not the slightest doubt that the progressive two-thirds of both parties desire public instead of private control of the public currency. Will not these progressives come together in the Progressive Party or some new party in defense of their birthright and to preserve popular control of the public money supply if both Republican and Democratic Parties yield to the pressure of Wall Street and the big banks and take control of the public currency away from the Government and put it into private hands? What else can they do? Gentlemen, you may be shaping the issues of the next campaign and influencing powerfully the future history of the country in designing this currency legislation. I will gladly go with you in the support of any wise and practicable system that does not surrender to private interests the great sovereign power of issuing and regulating the volume of the public currency in circulation among the people.

Garfield said that whoever controls the supply of currency would, to a large extent, control the business and activities of all the people. The great and immortal Jefferson declared that a private central bank issuing the public currency was a greater menace to the liberties of the people than a standing army.
Senator O'Gorman. Did he have in mind a central bank controlled by private interests?

Mr. Crozier. Exactly that; the same as these regional banks are. Would not he, if now among us, say the same of a dozen private central banks all owned by the same private interests and possessing an absolute monopoly of putting into circulation every single dollar of the public currency of the United States? Personally I shall continue to follow the wise and patriotic teachings of Jefferson even if all the leaders of modern Democracy choose to follow Aldrich and other strange gods.

It seemed unfair to oppose one plan without at least tentatively suggesting another. Therefore I took the liberty of preparing the plan for an ideal money and banking system found in the bill you so kindly printed in full in part 18 of the published hearings of the Senate Banking and Currency Committee. I have no prejudices against banks or bankers and want them protected fully as to all their legitimate interests. But they must keep out of the Government's business of issuing and regulating the volume of public currency, and the Government should keep out of the ordinary banking business. There can be no safe or justifiable partnership between the Government of the Republic and any private interests.

Senator O'Gorman. We thank you for coming before us, Mr. Crozier.

Senator Shafroth. Will you formulate those amendments which you suggested and send them to the chairman, and mark them as suggestions made by you for amendments to this bill?

Mr. Crozier. I will be glad to do so.

Senator O'Gorman. I have here some suggestions which have come from Mr. Dawson, who appeared before us some days ago, containing proposed amendments to the pending bill, and, if there be no objection, his communication will be printed in the record.

Senator Bristow. I desire to say we requested Mr. Dawson to send us suggestions.

Senator O'Gorman. And in the same way Mr. Vanderlip has been recalled to amplify certain changes in the bill which he suggested when he was here before.

(The communication referred to is as follows:)

First National Bank,
Davenport, Iowa, October 18, 1913.

Hon. Robert L. Owen,
Chairman Committee on Banking and Currency,
United States Senate, Washington, D. C.

My Dear Mr. Chairman: In response to the kind invitation of the committee, I herewith present the amendments suggested to the pending currency bill which, in my opinion, will tend to make the measure satisfactory to the 7,000 so-called country national banks.

I am much stronger in the opinions presented to your committee on the 10th instant than I was at that time. Upon my return I addressed a letter to every country national bank in Iowa and to about 60 more in Illinois. In that letter I stated the essential changes which I had recommended to your committee and asked for the opinion of the country banker with respect to the same. Up to this time replies have been received from about 125 banks and these replies are most interesting. I believe the committee will derive much information from them, and so I am forwarding them to you for the record.

You will, I am sure, be impressed with the sincerity and good temper of these letters from men who are conducting the national bank of from $25,000 to
$100,000 capital in the average village or town throughout the country. You will note also that hardly a single suggestion is contained in all these letters that was not presented in my testimony to your committee. The most gratifying feature of all, however, is the inevitable conclusion which one reaches after reading these letters that if the essential changes suggested to the bill are made the measure will meet with general approval in the smaller communities and by nearly 90 per cent of existing national banks.

As none of these essential changes go to the underlying principles of the bill, but are merely matters of detail which are relatively unimportant in comparison with the larger aspects of the measure, I am confident that they will appeal strongly to the good judgment of the committee.

The changes which will make the bill satisfactory to the smaller national banks are these:

1. Lessen the capital-stock subscription.
2. Protection against loss on the 2 per cent bonds.
3. Protection against loss in the shifting of reserves.
4. Permit the rediscount of a limited amount of six months' paper.
5. Equalize the privileges with State banks, with which they are in direct competition.

I am inclosing herewith copy of the letter which I addressed to the bankers in conducting my referendum and seeking to fairly ascertain the sentiment of that large class of the smaller banks. I have endeavored to obtain a fair expression of their views, and this your committee will find in the responses which I am sending for the record. I am sure your committee will appreciate that this is about the only way that a direct expression from banks of this large class can be presented for your consideration.

In forwarding these replies I have prepared them for printing in the hearings, and having carefully read them all, I am confident that your committee will find them useful to have at hand in convenient form.

In submitting the amendments I have put them down in the order in which they come in the bill. All of the amendments relate to the five changes above enumerated, except, possibly, the one regarding section 11, which pertains to the organization of the Federal reserve board.

Thanking you personally for your many courtesies, and assuring you that the smaller national banks of the country will heartily appreciate the friendly consideration of these suggestions, I am, with high regard,

Very truly, yours,

A. F. Dawson.

[Inclosure.]

FIRST NATIONAL BANK,
DAVENPORT, IOWA, OCTOBER 14, 1913.

GENTLEMEN: At the conclusion of an extended hearing before the Senate Committee on Banking and Currency last Friday, I was requested by Chairman Owen to prepare and submit such amendments as would tend to make the bill satisfactory to the average national bank. In this hearing we discussed the bill wholly from the standpoint of banks with a capital of $25,000 to $100,000, of which there are nearly 7,000 in the United States; arguing that the proposed system could not be a success unless these banks were induced to enter it. I suggested the following changes to make the bill more satisfactory to banks of this class:

1. Lessen the capital-stock subscription.
2. Protection against loss on the 2 per cent bonds.
3. Protection against loss in the shifting of reserves.
4. Permit the rediscount of a limited quantity of six months' paper.
5. Give us equal privileges with the State banks, with which we are in direct competition.

Will you kindly favor me with your opinion of these suggested changes and any other amendments that you think will improve the bill?

This looks like an opportunity to secure legislation that will better enable us to serve the people in our respective communities, as the amendments proposed will have careful consideration by the committee when it comes to put the bill in final shape to be reported to the Senate.
Will you please give me the benefit of your advice and suggestion in this important matter so that the facts may be fairly laid before the committee? As the time for action is very short, I shall hope to have your reply by return mail.

Very truly, yours,

A. F. Dawson.

AMENDMENTS SUBMITTED BY A. F. DAWSON, OF DAVENPORT, IOWA.

Page 2, line 22, strike out the word "twelve" and insert in lieu thereof the word "five."

Page 8, line 10, after the word "districts," strike out all down to and including the word "district" in line 15.

Page 12, amend section 7 so that it will read as follows:

"Sect. 7. That after the payment of all necessary expenses and taxes of a Federal reserve bank, the member banks shall be entitled to receive an annual dividend of five per centum on the paid-in capital stock, which dividend shall be cumulative. One-half of the net earnings, after the aforesaid dividend claims have been fully met, shall be paid into a surplus fund until such fund shall amount to twenty per centum of the paid-in capital stock of such bank, and of the remaining one-half fifty per centum shall be paid to the United States and fifty per centum to the member banks in the ratio of their average balances with the Federal reserve bank for the preceding year. Whenever, and so long as, the surplus fund of a Federal reserve bank amounts to twenty per centum of the paid-in capital stock the member banks shall be entitled to receive an annual dividend of six per centum on the paid-in capital stock. Fifty per centum of the net earnings, after the aforesaid dividend claims have been fully met, shall be paid to the United States and fifty per centum to the member banks in proportion to their annual average balances with such Federal reserve bank; all earnings derived by the United States from Federal reserve banks shall constitute a sinking fund to be held for the reduction of the outstanding bonded indebtedness of the United States, said reduction to be accomplished under regulations to be prescribed by the Secretary of the Treasury."

Reasons for changes suggested: It is a fair, businesslike proposition to pay a reasonable dividend to the stockholder, and then divide equally the balance between the two partners, who supply the deposits. As the Government will supply about one-fourth of the deposits and the member banks about three-fourths a division of the excess profits half and half would seem to be eminently fair to the Government.

Page 16, line 15, strike out the words "the reserve" and insert in lieu thereof the words "all the."

When State banks avail themselves of the privileges of the system they should be subject to the same requirements as national banks.

Page 17, amend the first paragraph of section 11 so that it will read as follows:

"Sect. 11. That there shall be created a Federal reserve board, which shall consist of seven members, and it shall be composed in the following manner:

"First. One ex officio member, namely, the Secretary of the Treasury.

"Second. Two members to be elected by the member banks in the several Federal reserve districts. They shall be elected by ballot, each member bank having one vote. One shall be designated to serve for five and one for seven years, respectively, and thereafter each member so elected shall serve for a term of seven years unless sooner removed for cause by the President. Said first election shall be conducted under rules and regulations prescribed by the reserve bank organization committee. All subsequent elections shall be conducted by the board of directors of the several Federal reserve banks under rules and regulations approved by the Federal reserve board.

"Third. Four members to be appointed by the President of the United States by and with the advice and consent of the Senate. In selecting the four appointive members of the Federal reserve board, not more than one of whom shall be selected from any one Federal reserve district, the President shall have due regard to a fair representation of the different geographical divisions
of the country. The four members of the Federal reserve board appointed by
the President and confirmed as aforesaid, and the two members elected by the
member banks shall devote their entire time to the business of the Federal
reserve board and shall each receive an annual salary of $12,000, together with
an allowance for actual necessary traveling expenses, and the Comptroller of
the Currency shall, in addition to the salary now paid him, receive the sum of
$5,000 annually. Of the four members thus appointed by the President not
more than two shall be of the same political party, and at least one of them
shall be a person experienced in banking. Two shall be designated by the
President to serve for three, one for five, and one for seven years, respectively,
and thereafter each member so appointed shall serve for a term of seven years
unless sooner removed for cause by the President. Of the four persons thus ap­
pointed, one shall be designated by the President as manager and one as vice
manager of the Federal reserve board. The manager of the Federal reserve
board, subject to the superintendence of the Secretary of the Treasury and the
Federal reserve board, shall be the active executive officer of the Federal
reserve board.

This seems to provide a control which will be secure against political con­
trol on the one hand or the control of concentrated wealth on the other. This
attempts to steer between these two dangers.

Page 22, strike out all of lines 1 and 2.

I do not think the board would ever have occasion to suspend the reserve
requirements with reference to Federal reserve notes, but if an emergency
arose where such suspension would save the day it should not be prohibited.

Page 22, strike out all of section 13.

The proposed advisory council is unnecessary if member banks are given
representation on the Federal reserve board.

Page 25, strike out the third paragraph of section 14 and insert in lieu thereof
the following:

"Upon the indorsement of any member bank, if a country bank as defined
by existing law, any Federal reserve bank may discount the paper of the
classes hereinafore described having a maturity of more than ninety days
and not more than one hundred and eighty days; but not more than fifteen
per centum of the total paper of the classes described in this and the preceding
paragraph shall have a maturity of more than ninety days."

This permits the rediscount of a limited amount of six months' paper, and
I regard this as vital if the benefits of the system are to be conveyed to the
smaller national banks. The above might be inserted as a new paragraph,
allowing the third paragraph to stand as it now is, if thought preferable.

Page 29, lines 2, 3, and 4, strike out the proviso.

This is a matter which, in my judgment, should be left to the discretion of the
directors of the Federal reserve banks and the Federal reserve board. If the
new system is not to be conducted as a money-making institution for the Gov­
ernment, some people can not understand why the Federal reserve banks should
pay interest on Government deposits and not on other deposits.

Page 29, lines 22 and 23, strike out the words "or lawful money."

These new notes should be redeemable in gold.

Page 23, line 13, strike out all down to and including the word "patrons" in
line 23.

This provision is very objectionable to the smaller banks. I am convinced
that it would be unwise to enter into this matter of exchange charges between
banks further than to provide that drafts drawn on a Federal reserve bank by
any member bank should be honored at par by every other member bank. This
can easily be arranged by a regulation of the directors of the Federal reserve
bank.

Page 30, line 13, strike out all after the word "accredited" down to the end
of the paragraph and insert in lieu thereof the following:

"Whenever in the opinion of the Federal reserve board the collateral deposited
with the Federal reserve agent shall be less in value than the amount of the
notes issued to said Federal reserve bank, it shall require additional collateral,
in order that the collateral may always equal the amount of such notes, deduct­
ing, however, from the amount of the notes any deposits in lawful money
which may have been made with the Government to offset said notes, as here­
after provided."

Page 31, line 6, strike out all after the word "bank" down to and including the
word "out," in line 15.
Page 36, line 17, amend paragraph (a) of section 20 so that it will read as follows:

“(a) If a country bank as defined by existing law, it shall hold and maintain a reserve equal to twelve per centum of the aggregate amount of its deposits, not including savings deposits hereinafter provided for. Five-twelfths of such reserve shall consist of money which national banks may under existing law count as legal reserve, held actually in the bank's own vaults. After sixty days from the date aforesaid and for a period of six months at least one-twelfth within the next succeeding six months at least two-twelfths, and thereafter at least four-twelfths of such reserve shall consist of a credit balance with the Federal reserve bank of its district. The remainder of the twelve per centum reserve herebefore required may, for a period of thirty-six months from and after the date fixed by the Secretary of the Treasury as herebefore provided, consist of balances due from national banks in reserve or central reserve cities as now defined by law. From and after a date thirty-six months subsequent to the date fixed by the Secretary of the Treasury as herebefore provided the said remainder of the twelve per centum reserve required of each country bank shall consist either in whole or in part of reserve money in the bank's own vaults or of credit balance with the Federal reserve bank of its district.”

This provides a little more gradual process of shifting the reserves of country banks. I believe the shift could be accomplished in this way without material disturbance or inconvenience.

Page 39, after line 4, insert a new paragraph, as follows:

“The board of directors of the Federal reserve bank may in its discretion fix from time to time a rate of interest to be paid on the deposits of member banks, subject to the approval of the Federal reserve board, and such rate shall be uniform throughout the United States, and in no case shall it exceed the rate of interest paid on Government deposits.”

I believe this discretion should be included in the bill. We have seen how potential this question of interest has been in centralizing reserves in private hands. One of the main objects of this bill is to mobilize reserves, and should those in control of the system not be given discretion to employ such means as will most successfully and fairly accomplish this resettle?

Page 39, lines 18 and 19, strike out the words “or lawful money.”

I would allow section 26 to remain in the bill as it now stands, so that national banks without a savings department might be permitted to make a limited amount of farm mortgage loans running not to exceed one year.

Page 44, amend section 27 so as to read as follows:

“SAVINGS DEPARTMENT.

“Sec. 27. That any national banking association may make application to the Comptroller of the Currency for permission to open a savings department. In making such application any national banking association may further apply for power to act as trustee for mortgage loans subject to the limitations and conditions herein prescribed. Whenever the Comptroller of the Currency shall have approved any such application he shall so inform the applying bank, and thereafter it shall be authorized to receive savings deposits as so defined, under rules and regulations to be prescribed by the Comptroller of the Currency.

“All business transacted by the commercial department of any such national bank shall be in every respect subject to the limitations and requirements provided in the national banking act as modified by this act, and such business shall henceforward be known as commercial business.

“The savings department of each such national bank shall be authorized to accumulate and loan the funds of its depositors, to receive deposits of current funds, to purchase securities authorized by the Federal reserve board, to loan any funds so accumulated upon real estate or other authorized security and to collect the same with interest, and to declare and pay dividends or interest upon its deposits. In making loans secured by improved and unencumbered farm land, no such loan shall be made for a period longer than five years, nor for an amount exceeding fifty per centum of the actual value of the property offered as security, and such property shall be situated within the Federal reserve district in which the bank is located.

“The Federal reserve board is hereby authorized to exempt the savings departments of national banking associations from any and every restriction upon classes or kinds of business laid down in the national banking act, and
It shall be the duty of said board to make and publish at its discretion lists of securities, paper, bonds, and other forms of investment which the savings departments of national banks shall be authorized to buy or loan upon; and said lists need not be uniform throughout the United States, but shall be adapted to the conditions of business in different sections of the country.

"It shall be the duty of every national bank to maintain, with respect to all deposit liabilities of its savings department, a reserve in money which may under existing law be counted as reserve, equal to not less than five per centum of the total deposit liabilities of such department, and every national bank authorized to maintain a savings department is hereby exempted from the reserve requirements of the national banking act and of this act in respect to the said deposit liabilities of its savings department, except as in this section provided. Every regulation made in pursuance of this section shall be duly published, and also posted in every member bank having a savings department."

This change eliminates the segregation of capital, etc., which is impractical and unworkable in the smaller banks. The farm loan provision, to be of any material value in serving the people in this regard, must permit such loans to run for five years. It is generally conceded that the best investments for savings banks are first-mortgage loans secured by improved and unencumbered farms.

All of which is most respectfully submitted.

A. F. Dawson.

Senator Reed. Before Mr. Vanderlip begins, let me make this statement: Mr. Dawson forwarded to the clerk of the committee a large number of letters which he had received from the bankers in his State in response to certain questions which he had propounded to them, and he asked that all these letters be printed in the record. After looking through them in a desultory way and talking with Senator Pomerene, we suggested to the clerk that it would only be necessary to print the letter sent out by Mr. Dawson and the number of replies he had received in the affirmative or negative to each proposition instead of printing the mass of correspondence, which would take up a great many pages. I state that to the committee so they may understand the situation.

Senator Shafroth. How many pages will this make now?

Senator O'Gorman. Oh, not more than about 10 pages.

(The additional statement of Albert F. Dawson, president of the First National Bank, of Davenport, Iowa, follows:)

Mr. Dawson. Upon my return home after the hearing accorded to me by this committee on the 10th instant I took immediate steps to ascertain the views of the "country" national banks in the Middle West with respect to those amendments to the pending bill which I had suggested with a view to remove the objections made by banks with a capital of from $25,000 to $100,000. In order to get a fair expression direct from each bank I sent a letter to each of the 325 "country" national banks in Iowa and about 70 in addition to bankers of the same class in Illinois. This letter was sent out under date of October 14, and following is a copy of it:

Davenport, Iowa, October 14, 1913.

My Dear Sir: At the conclusion of an extended hearing before the Senate Committee on Banking and Currency last Friday I was requested by Chairman Owen to prepare and submit such amendments as would tend to make the bill satisfactory to the average national bank. In this hearing we discussed the bill wholly from the standpoint of banks with a capital of $25,000 to $100,000, of which there are nearly 7,000 in the United States, arguing that the proposed system could not be a success unless these banks were induced to enter it. I suggested the following changes to make the bill more satisfactory to banks of this class:

1. Lessen the capital-stock subscription.
2. Protection against loss on the 2 per cent bonds.
3. Protection against loss in the shifting of reserves.
BANKING AND CURRENCY.

(4) Permit the rediscount of a limited quantity of six-months' paper.
(5) Give us equal privileges with the State banks with which we are in direct competition.

Will you kindly favor me with your opinion of these suggested changes and any other amendments that you think will improve the bill?

This looks like an opportunity to secure legislation that will better enable us to serve the people in our respective communities, as the amendments proposed will have careful consideration by the committee when it comes to put the bill in final shape to be reported to the Senate.

Will you please give me the benefit of your advice and suggestion in this important matter, so that the facts may be fairly laid before the committee? As the time for action is very short, I shall hope to have your reply by return mail.

Very truly, yours.

A. F. Dawson.

(Of the 123 answers to the above filed with the committee 122 expressed their approval of the suggested amendments, 1 being opposed thereto.)

Senator O'Gorman. Mr. Vanderlip, you may proceed. The committee will be glad to receive any further suggestions you may have to offer regarding the pending legislation.

FURTHER STATEMENT OF FRANK A. VANDERLIP, NEW YORK, N. Y.

Mr. Vanderlip. Following my previous hearing, it was suggested by some of the members of the committee that I engage my mind with the problem of whether or not a bank could be formed which would be entirely under the control of the Government, and which would be a feasible and workable institution. I have been giving my very best attention to that subject. To state the conclusion, rather than the road by which it was reached, I will say that I believe that is possible. I believe you can create an institution every officer of which will be appointed by the Government and the control of which will lie solely with these public officers, an institution in which the banks will have no word of Government whatever, and which still would be satisfactory to the banks and would be a workable plan. I shall be glad to elucidate that plan, if you wish.

Senator O'Gorman. You may proceed.

Mr. Vanderlip. I would suggest the granting of a charter to a Federal reserve bank, with $100,000,000 of capital—a fixed amount of capital, not a variable amount. The head office would be located in Washington, and there would be as many branches as the governors of the bank might see fit to provide, probably starting with 12, the number of regional banks now suggested.

I would adopt the idea of the present bill in regard to the appointment, in the very first instance, of an organization committee. The function of this committee would be to divide the territory of the United States into, we will say, 12 districts, and to select one city in each of those districts which would be the seat of a branch of the Federal reserve bank.

The stock of this bank should be either entirely owned by the Government, the funds for the purpose being secured by the sale of Government bonds at the lowest interest rate at which those bonds would float, or it might be offered to the public generally, and the success of that offering insured by requiring the banks to underwrite a pro rata proportion. There would be no need of any restriction
on the purchase, sale, or accumulation of the stock, because it would have no rights whatever, except a right to receive a specified dividend. The stock would have no voting power, and no right of any character except to receive dividends and, in the event of liquidation, to receive back the amount of money that was paid in, but no accumulation of surplus, should there be any surplus—which there probably would not be—in the event of liquidation.

I would have the Government of this institution absolutely and completely in the hands of a board of seven men appointed by the President of the United States with the advice and consent of the Senate. These men would serve for terms of 14 years, the first board to be classified so that the term of office for one director would expire every second year, and thereafter appointments should be made for 14 years. There should be no ex officio appointments, but all members should be selected by the President for these terms, and there should be a clause in the act directive to the President that these appointments shall be made from men qualified for the duties, that the appointments shall in no case be made as political rewards, and that three at least of the seven should be men who have had acknowledged banking and financial experience.

Senator Reed. And I suppose, Mr. Vanderlip, you would add that at the time of their appointment and during the holding of that office they should have no banking connections whatever?

Mr. Vanderlip. Oh, absolutely.

Senator Weeks. Stockholding or otherwise.

Mr. Vanderlip. And that would be the case of all appointees of the bank in any official or executive capacity. They should have no relation, either official or financial, with any other existing banking institution.

I would provide that each branch be equipped with an executive committee of seven, to be appointed by the board of the Federal reserve bank, and with the same directive clause that they should be appointed for their qualifications or experience, and that at least three of the seven should have had acknowledged banking and financial experience.

The President would designate one member of the board to act as governor and one as deputy governor; and the governor, or in his absence the deputy governor, would act as chairman of the board and be the chief executive officer of the bank. In the case of the executive committee the board of the Federal reserve bank would designate a chairman and a vice chairman, and the chairman would be chairman of the board, or in his absence the vice chairman would be. The executive committee would elect officers of the branch other than themselves. The titles of the executive officers would not be president, vice president, etc., but their functions would be similar to the functions of such officers in a bank; that is, the chief executive officers.

Senator Hitchcock. Who would elect those officers?

Mr. Vanderlip. The executive committees.

Senator Hitchcock. The executive committees of what?

Mr. Vanderlip. Of each bank; that is, subject to the approval of the board of the Federal reserve bank. Every act of the executive committee would at all times be subject to the approval of the Federal reserve board.
Senator Nelson. Here in Washington?
Mr. Vanderlip. Here in Washington. That board would be supreme in every particular in the management of this institution.

Senator O'Gorman. Will you state here, Mr. Vanderlip, why it would be necessary with a branch to have officials other than the seven governors who would be named by the reserve board?

Mr. Vanderlip. The branches would be the active executive factors of this institution. These branches would have the right to rediscount and would rediscount commercial paper for member banks.

There should be a permanent trained banking staff, who would work under the direction, first, of the executive committee, and, in the last instance, under the board of the Federal reserve bank.

Senator Hitchcock. These directors would give their whole time to the service of the branch?

Mr. Vanderlip. That should be specifically provided, that they should give it their whole time.

I should have said in regard to the stock that I would attach a double liability to it if it is sold to the public.

Senator Hitchcock. Would you limit the quantity that individuals might buy?

Mr. Vanderlip. I would not, because it would not make any difference in the management if one individual owned it all he would have no influence whatever.

Senator O'Gorman. If this entire system is to become a public utility system and is to be conducted not primarily for the purpose of private gain, and if the return to the holders of stock will be restricted to a fixed dividend rate of perhaps 5 or 6 per cent, would it be well to impose an additional liability on the holders of such stock?

Mr. Vanderlip. On reflection, perhaps not. I probably was influenced by the present practice.

Senator O'Gorman. Would not that discourage the public from investing in such stocks?

Mr. Vanderlip. I think it would, yes; and be such a discouragement as would offset the benefit. I am inclined to think you are right on that.

Senator Reed. Besides, Mr. Vanderlip, if this stock were sold, the best holding in the world for it would be a general holding among the people; I should think that would be the most helpful construction. And therefore it might be held in large part by people who invested their savings in it, and a double liability would not amount to much.

Mr. Vanderlip. I quite agree with you and withdraw that suggestion.

Senator Nelson. What dividend rate would you suggest, Mr. Vanderlip, on that stock?

Mr. Vanderlip. The lowest rate that will float the stock at par.

Now, there will be some question as to the earning capacity. Of course, the cheapest thing for the Government to do would be to sell its bonds at the lowest possible rate. It could sell $100,000,000 of bonds at 3½ per cent. I doubt if it could float $100,000,000 of stock at 5 per cent. My judgment would be, as conditions are now, that about 5½ per cent would be the point at which that stock would float; 6 per cent would be a little too high, and 5 per cent would be distinctly
doubtful. The rate ought to be such that the burden of underwriting the stocks which you impose on the banks would not be a serious one and would not result in the banks getting any great amount of that stock.

Senator Hitchcock. Would you think 5 per cent would be too low if it were made a cumulative dividend?

Mr. Vanderlip. It should be cumulative, undoubtedly.

Senator Nelson. Do you not think a stock of that kind under those conditions would be analogous to a permanent annuity, and would it not be a popular investment for that purpose?

Mr. Vanderlip. It would after the bank had been running a sufficient length of time to demonstrate its earning capacity, and I think there would be no doubt about its earning capacity.

Senator Hitchcock. What would you think of the proposition to have the Government subscribe for a part of this stock and issue bonds to pay for it until a market was found for it?

Mr. Vanderlip. It might well be provided that the Government instead of the banks underwrite the issue. That is to say, they would offer it to the public and take what the public did not take and later sell it to the public.

Senator McLean. How would it do to allot it to the highest bidder?

Mr. Vanderlip. If you made the rate 6 per cent, I think I should allot it to the highest bidder. I would think well of the plan that was adopted when the Spanish War loan bonds were sold of allotting to the smallest subscribers first, giving as wide a distribution of this stock as you could—give it to the public; give it to the small investor first. If the public won't take it, then the banks must take it. Or we might adopt the suggestion that has been made here, and let the Government itself underwrite it, and not make a forced underwriting on the part of the banks. You must, in some way, if you launch this enterprise, insure its success. You would have to insure its success on the start by raising this money, and either the Government or the banks would have to stand ready to take what the public declined to take.

Senator Weeks. Let me give you another thought about the double liability. Double liability presupposes the possibility of a failure. I do not think there ought to be such a possibility in this kind of bank.

Mr. Vanderlip. I quite agree with you. I think the double liability is wrong.

Senator Weeks. That the organization should be such that there could not be such a thing as a failure of the bank.

Senator O'Gorman. Mr. Vanderlip, bearing upon your suggestion that the stock be underwritten by the banks, you mean by all the national banks?

Mr. Vanderlip. By all national banks, pro rata; that is to say, in the proportion that the capital of each bank bears to the total capital of all national banks on a given day.

Senator O'Gorman. Assuming there would be some national banks—because there would be some—not in favor of this plan, would they not be likely to protest, as they are protesting now, that this additional burden should not be placed upon them?
Mr. Vanderlip. They would protest exactly as they are protesting now, but with less force, because they would not be obliged to make a permanent investment. They could perfectly well measure their loss, because they could sell the stock the day after they got it.

Senator O'Gorman. Do you not think this plan would more generally invite public confidence if the banks had nothing to do with the creation of the system, leaving it to the public and the Government?

Mr. Vanderlip. It would be most desirable if you would be willing to do that. Leave the banks out entirely; the banks will welcome that.

I should have said in regard to the appointment of the board of the Federal reserve bank that the President should distribute them geographically, so as to give due weight to commercial sections of the country; not to geographical extent but to commercial importance, and that the members of this board should be retired automatically at some age; the same age, perhaps, as the Supreme Court judges.

Senator Reed. When you say they should be distributed commercially, you mean distributed so that they could meet the present or developing lines of commercial activity?

Mr. Vanderlip. Yes, sir.

Senator Bristow. Mr. Vanderlip, why do you recommend 14 years as the term of service?

Mr. Vanderlip. I regard long terms as absolutely essential to insure proper character for this board. It is through that point that I am willing to come at all to the thought of an institution entirely controlled by Government appointees. With one member retiring every two years there can then be hardly any question of partisan politics in that board. I think there is the greatest safety not only in the character of appointments, but in the ripe experience which the men would gather and in the thought that it was practically a life appointment of the very highest character that a man in finance or business could attain.

Senator Nelson. And you would get more of a continuity of practice, policy, and administration?

Mr. Vanderlip. Yes, sir.

Senator Bristow. What salary would you recommend?

Mr. Vanderlip. The very highest you are willing to pay; and any salary that is now paid by the Government to any officers other than the President would seem to me too small. I know you would find it hard to give these men salaries higher than the Supreme Court justices or Cabinet officers. Really, the minimum should be $15,000, with probably $17,500 for the governor.

Senator Bristow. Why do you suggest seven directors for the branches, the seven to devote their entire time to it, and then, outside of the seven directors, have the officers selected? It seems to me that that is a pretty big organization for a branch.

Mr. Vanderlip. It will be a pretty big institution. It will be an extremely big institution with a tremendous amount of detail. If this institution is to carry on the exchange business—which means the collection of exchanges—that in itself will require an organization—a genius of management—of the very highest character. It will be a work of detail equal to almost any job you might think of.
Senator O'Gorman. If I catch your meaning at this point, Mr. Vanderlip, these seven officials managing the branch, appointed by the members of the Federal reserve board, may act relatively as a board of directors does in an ordinary private institution, and they will control the action of the bank?

Mr. Vanderlip. Yes, sir; but I would presume they would be somewhat closer to the detail work than is an ordinary board of directors. They would be more analogous to the managers of a foreign bank, that is not run by a president, but is run by two or three; or, as in the case of some banks in Germany, five managers, and under them the active executive officers.

Senator Nelson. Would not five be sufficient?

Mr. Vanderlip. I should see no serious objection to that.

Senator Hitchcock. Can you make any guess as to the number of employees such a branch would probably have?

Mr. Vanderlip. The branches would, of course, be of different sizes. A number of employees are going to be required to handle the collections. That is a tremendously detailed work.

Senator Bristow. Why should it handle the collections?

Mr. Vanderlip. That is absolutely essential, it seems to me, to the working of this plan, or any plan such as you have in mind. One answer would be because it will be a great economy to the commerce of the country, a great saving, a speeding up of the handling of collections, and in every way an economy.

But there is a much more significant reason than that. To handle collections banks have to keep deposits with other banks. That some of them are seeking to avoid, or, at least, seeking to make unnecessary. You will find country bankers objecting—until they come to understand this plan—to the fact that they must keep their reserves without interest in the Federal reserve bank or the regional banks, and they feel they must also keep about the same lines of deposits with their correspondents as they have before, because they do not grasp the significance of the collection feature. If the Federal reserve bank will undertake the collection business and will have the proper rediscount facilities, there is practically no reason for one bank to keep a balance with any other bank. Now, it is important that that should be done, for if you are going to compel the country bank to keep its reserve without interest, and still the exigencies of business compel it to keep a balance with a correspondent practically as large as it is already keeping, it works to the evident disadvantage of the bank.

Senator Hitchcock. The branches you provide for would have substantially the same functions as the regional banks under this bill?

Mr. Vanderlip. Almost precisely.

Senator Hitchcock. Are you able to make any estimate of the number of employees such a branch would require?

Mr. Vanderlip. That would, of course, depend almost entirely upon the size of the branch and the volume of the collections. I should think it would take easily several hundred employees in the larger branches.

Senator O'Gorman. Assuming, under the pending bill, that New York City were constituted a single regional center, that we had one regional bank for New York City, have you calculated the probable number of employees such a regional bank would require?
Mr. Vanderlip. I suppose the City Bank employs more than 100 men on that particular branch of business.

Senator O'Gorman. Looking after collections?

Mr. Vanderlip. The City Bank has about 14 or 15 per cent of the total deposits of all the clearing-house banks. You can see from that that a rough guess would be 700 men, or something like that. Of course that is a very offhand estimate.

Senator Hitchcock. One man handles, I understand, 1,500 or 2,000 checks a day. Is that right?

Mr. Vanderlip. I am not sufficiently familiar with that detail to answer.

Senator Bristow. Why would it not do to let the country banks divide their reserves, and let them keep part of them, say, with the Federal bank—that is, make a smaller reserve requirement, and let them keep their deposits with commercial banks, as they do now, to such extent as they think desirable?

Mr. Vanderlip. That is feasible, but I have presumed the point was pretty nearly settled that you wanted to take from the central reserve city banks the duplication of deposits which results from their holding the reserves of other banks.

Senator Reed. That is the great danger in the present system, is it not?

Mr. Vanderlip. No, sir; that is not the great danger—

Senator Reed (interposing). Or, is it not one great danger?

Mr. Vanderlip (continuing). I am inclined to think the present system is not as good a system as you would have with all the reserves in the vault or in the Federal reserve bank.

Senator Bristow. Now, suppose this were a bank of issue and could issue currency to meet a stringency or demand; could the evil which has resulted from the pyramiding of these reserves result after that system was once established? Could not the banks get the relief they desired so that there would be no trouble in these centers as a result?

Mr. Vanderlip. I would not quite admit that the evil has come from this system of holding reserves; it has, in a measure. Either system—the one of the Government bank or the one you have been considering that has been passed by the House—will, I believe, obviate the recurrence of any such condition as, for example, in 1907, when it was a physical impossibility to supply the currency that was demanded by 25,000 frightened banks that wanted to build up their own reserves. There is the trouble. It is at the country bank end, not at the city bank end, that our system is defective. Of course, the two ends are related, but the trouble comes from the country bank becoming frightened—and by "country bank" I really mean all banks—and drawing to itself more reserve than it requires. What we want is mobilization of reserves—a reserve reservoir—and we want but one, and you will never get this thing just right until you get but one, either actually or in fact, or by relating the members you do have so they are in effect one.

Senator Hitchcock. What reserves would you require this Government bank to hold?

Mr. Vanderlip. Perhaps it would be better for me to run through the plan and take these questions up in their natural order.

S. Doc. 232. 63-1—vol 3—63
Senator Nelson. I should like to hear your reserve plan and your currency plan.

Senator Bristow. That would be better.

Mr. Vanderlip. The earnings of the bank would—in the case of the Government subscribing to all the stock—first be devoted to an accumulation of a surplus of, let us say, 20 per cent. After that half to the accumulation of a further surplus and half to the Government, until the total surplus equals 50 per cent, after which all earnings would go to the Government. In the case of the public subscribing to the stock, the net earnings would first be devoted to paying the dividend, then to an accumulation of a surplus up to 20 per cent, then half to an accumulation of a further surplus and half to the Government, and after the surplus had reached 50 per cent all the remaining earnings to the Government.

I would devote all the earnings which the Government receives to the cancellation of the public debt, under specific terms which should be in the bill calling for tenders of bonds.

The customers of the bank should be only the Government and qualified member banks. Qualified member banks would include all national banks, and might include State banks and trust companies under proper restrictions of admission.

The Government should deposit all of its general fund with the bank and constitute the bank its fiscal agent.

Senator Hitchcock. Is there any objection to leaving that optional with the Secretary of the Treasury?

Mr. Vanderlip. I should think so. This is a Government institution solely, and the funds of the Government ought to be deposited there. Otherwise a Secretary of the Treasury might withdraw from commerce that entire deposit, which would, of course, be the principal deposit of the bank, and you might have the management of the bank and the management of the Treasury at loggerheads, and the bank could be broken.

Senator Hitchcock. What would lead a Secretary of the Treasury to do that thing?

Mr. Vanderlip. I do not always know what leads Secretaries of the Treasury to do what they do.

Senator Shafroth. If these directors were long-time appointees, say 14 years, there might be an entirely different political party, and that might lead to a rupture.

Senator Hitchcock. Do you think the withdrawal of Government funds would seriously cripple the bank and possibly lead to its breaking?

Mr. Vanderlip. I can readily conceive a condition of the bank where if you would draw $150,000,000 or more of reserve money out of it the reserve would then be away below the legal limit, and this would lead to the bank's serious embarrassment, if not to closing.

Senator Hitchcock. Of course, you are providing a power to issue currency and a power to issue Government bonds—

Mr. Vanderlip (interposing). But the Government bank could not pay its currency to the Government.

Senator Hitchcock. I understand you are giving the officers of the Federal board the power to issue Government bonds?

Mr. Vanderlip. No power to issue bonds; no, sir. I do not understand the question—power to issue bonds?
Senator Hitchcock. Let me ask you this: You propose to give the Federal board the power to issue currency?

Mr. Vanderlip. Certainly.

Senator Hitchcock. How do you propose to have that currency secured?

Mr. Vanderlip. I will come to that in the regular order, if I may.

Senator Hitchcock. Would not that involve the power to sell bonds to get gold?

Mr. Vanderlip. No, sir.

Senator O'Gorman. The hour for adjournment has arrived, and we will take a recess until 2 o'clock.

(Thereupon, at 1 o'clock p. m., a recess was taken until 2 o'clock p. m.)

AFTER RECESS.

Senator O'Gorman. I think we may resume, Mr. Vanderlip.

STATEMENT OF FRANK A. VANDERLIP—Resumed.

Mr. Vanderlip. The reserve requirement for national banks I would have so changed as gradually to transfer the reserves from correspondent banks now acting as reserve agents, so that ultimately all reserves would be in the vaults of the member banks and in the vaults of the Federal reserve bank in the form of balances. The reserve requirement should be the same for all banks, country or city, because no bank would have any reserve responsibility to another bank, and there would be no reason why any one bank should be compelled to keep any larger reserve than any other.

Senator O'Gorman. Do you suggest what that reserve ought to be?

Mr. Vanderlip. I am inclined to think that a reserve of 12 per cent for all banks would be sufficient; and, in that connection—I reached that conclusion for this reason—I would recommend that the minimum reserve of the Federal reserve bank be 50 per cent rather than 33 1/3 per cent—that it would be 50 per cent for all outstanding demand liabilities, including the notes that it might issue.

Senator Weeks. The same reserve for notes would apply to all other forms of liabilities?

Mr. Vanderlip. Yes.

Senator Nelson. Fifty per cent?

Mr. Vanderlip. Fifty per cent for both notes and deposits. I would permit the board of the Federal reserve bank in an emergency to suspend the reserve requirements for 30 days and to continue such suspension for periods of 15 days. The reserve bank would be empowered to rediscout for member banks paper of a self-liquidating character, to be defined by the act.

Senator Nelson. But there would be no member bank under this system, in the sense we have it in the bill?

Mr. Vanderlip. No, not exactly in that sense; but there would be member banks. Perhaps a better term would be “depositing banks.”

Senator O'Gorman. Because that would be the only test.

Mr. Vanderlip. The only test would be, Are bank depositors—are they permitted to deposit? All national banks would be depositors,
and State banks and trust companies might be, and all depositor banks should have the right of rediscount.

Senator Pomerene. You would have no qualification?

Mr. Vanderlip. I would certainly have a qualification for the State banks. I will come to that in due order.

Senator Pomerene. But not so far as the national banks are concerned?

Mr. Vanderlip. Every national bank must keep its reserve deposit as this law would indicate.

Senator Pomerene. Of 12 per cent?

Mr. Vanderlip. Of 12 per cent, a portion in its vault and a portion with the Federal reserve bank. And, by the way, I should permit it to keep any amount which it choose to keep in the Federal reserve bank above the minimum that it must keep there. I would not make it keep in its vault any more than its needs require.

Senator Nelson. Five per cent out of the 12?

Mr. Vanderlip. I would not have any fixed amount. I would let it keep as little in its vault as it could. For instance, a city bank doing a character of business that required very little currency would keep practically all of its reserve with the Federal reserve bank, knowing it could, at a moment's notice, convert its balance there into currency if it had a demand. Now, I would limit the amount that the depositor bank might rediscount. I think a fair limit would be the amount of its capital and surplus. I would permit the bank to go into the domestic market—

Senator Nelson (interposing). Excuse me, but you say you would limit it to that. You refer to discounts in general or discounts for the sake of obtaining currency?

Mr. Vanderlip. Discounts in general, made directly on the application of the bank that is rediscounting. I would limit it to the purchase of paper in the open discount market that bore the indorsement of a bank. I would permit the bank to go into the open discount market and buy paper, but only paper that bore the indorsement of a depositor bank. In the foreign market I would permit a bank to go into the discount market and buy prime foreign bills without any regard to an indorsement by a depositing bank. The bank would also have to have the power to deal in gold coin and bullion and in the obligations of the United States Government, and probably of the insular possessions.

Senator Hitchcock. Suppose the Government had need of more funds: Would it have the right to borrow of the bank?

Mr. Vanderlip. I should think it might have the right to borrow from the bank.

Senator Nelson. It ought to have that right?

Mr. Vanderlip. It probably ought to have that right, but there would be something of a question. The bank is an instrument of the Government. The bank is wholly controlled by Government officers, by public officers. That is a question I would want to reflect on before giving an opinion.

Senator Hitchcock. In Germany, as I recall it, the Reichsbank loans to the German Government by buying short-time bills, but those representing the stockholders have the right to put a veto on it so as to limit the amount.
Mr. Vanderlip. The trouble here would be that there would be no one who could put a veto on it.

Senator O'Gorman. Why not? Why not have the reserve board exercise that power?

Senator Hitchcock. Because they are Government officials and do not represent the stockholders.

Senator O'Gorman. It is true they represent the Government in the sense that they are Government officials. Yet their principal responsibility lies in a proper administration of this system, and power could very well be confined to them, notwithstanding the fact they are appointees of the President, to use their own judgment as to the extent to which the Government might procure credit in an emergency.

Senator Nelson. At all events, Mr. Vanderlip, excusing me for interrupting you, the loans to the Government should be short-time loans and not permanent investments.

Mr. Vanderlip. That is exactly what I was about to say. In no event ought the Government to place its obligation with the bank where the maturity was more than a year. It must be banking paper.

Senator O'Gorman. The Government would at all times possess the power it now has of getting money on its bonds—by issuing and selling bonds in the open market.

Mr. Vanderlip. Always. Now, I come to a point that I regard as of the greatest importance, and one that has always baffled me herebefore in trying to see how a central bank, officered by public officers, could possibly be made to work. I think the question came up in the hearing I had here before. A central bank covering the whole country must have different rates of discount in different communities, else a community with a high interest rate will borrow all the funds of the bank before the community with the low interest rate reaches the point where it wants to borrow any.

Senator Hitchcock. Suppose you limit the amount that can be advanced to any bank.

Mr. Vanderlip. Senator Hitchcock, you suggested in the hearing this morning a thought which I had never heard before in any discussion, and one that I have embodied in this bill, and which I thought was a new invention. I believe it is the most important thought that we have had on the line of a Government bank. It is this: I would have a uniform minimum rate of discount in every branch and for every bank, but that uniform minimum rate would apply only to a certain percentage of borrowing. If the individual bank is permitted to rediscount up to an amount equal to its capital and surplus, I would say that it may rediscount 30 per cent of that at the minimum rate. Then as it increased its rediscount above that, I would have a progressively increasing rate above the minimum rate. There you get the repressive measure where it belongs—not on the community but on the individual bank. You might have a community in which nearly all the banks were borrowing over the 30 per cent and paying more than the minimum rate, and one bank that had been running conservatively and borrowed nothing. When it came in the market, if the rates were different in the different parts of the country, it would be at a disadvantage. It would have to be penalized because of what its neighbors had been doing. Under
this plan the bank in a high interest rate community, where every one of its neighbors was paying more than the minimum, when there came need for it to borrow could borrow at the minimum rate up to 30 per cent of the total amount it could borrow, the minimum rate in the West being just as low as for New York banks, New England banks, or any other banks. That would be perfectly fair to every bank, and the minimum rate would apply everywhere throughout the country to every bank alike, and would be advanced as the individual bank's borrowing increased above, let us say, 30 per cent of the total.

Now, it was the discovery of that idea that brought me to the conclusion you could have a Government bank officered by public authority. Without that, this thing would be perfectly certain to happen: There would be political pressure from the community that was being charged a higher rate than some other community, and that political pressure would certainly move a public body, and you could not get the repressive action of the discount rate which you would be able to get by this very simple method. I was somewhat astonished and greatly pleased that you had arrived at that conclusion.

Senator Hitchcock. I am very glad to have your indorsement. [Laughter.]

Mr. Vanderlip. As fiscal agent of the Government I would have the Federal reserve bank charged with the duties now imposed on the Treasury of the United States, and on the Bureau of Redemption in the office of the Comptroller of the Currency. I would transfer the present redemption fund which is now in the general fund—improperly in the general fund, because it is a trust fund—I would transfer that to this bank to be held as a trust fund, never as a part of its reserve, but to be held as a trust fund, and would charge this bank with the detail of redemption and the custody of bonds to secure national bank note circulation as long as that circulation is outstanding.

Senator Hitchcock. Of course, that would not add to the resources of the bank; it would simply be for economical reasons.

Mr. Vanderlip. Yes.

Senator Weeks. How much of a charge would that bank be permitted to make for that service?

Mr. Vanderlip. I think it should not make any charge. The Government does not make any charge, and the bank ought properly, as fiscal agent, to assume that duty. Now, that is a suggestion. It is not an essential part of this plan, but it seems to be a sound suggestion.

I would authorize this bank to issue circulating notes. Now, there is the great difference and the great improvement that this plan would have over any plan that has been having your consideration, so far as I know. I think I said in my former hearing that I regarded the issue of these notes in the form of an obligation of the Government as wrong and as tending to lead to disaster, but that until it led to disaster that scheme would work. That I believe. But the more I reflected on it the greater emphasis I put upon the unwisdom of placing the Government obligation on the notes. Here anyone who holds the opinion that the people should control the
currency would find nothing contrary to that view by permitting this bank to make the obligation and to be solely responsible for the redemption of the notes. It would be the people. A bank wholly officered by public employees is the voice of the people, and that is the way the note ought to be issued—the obligation of the bank and not the obligation of the Government.

Senator Hitchcock. What would be back of the note of such a bank?

Mr. Vanderlip. The note should be secured by segregating rediscounted paper to the amount of 100 per cent, or one-year exchequer notes of the Government, to which I will refer later, and a 50 per cent gold reserve. Or the note might be secured by 100 per cent gold reserve.

Now, there might be conditions arise where there will be outstanding notes in excess of the amount of commercial paper the bank will have, but under those conditions the notes should be covered by 100 per cent of gold, and the bank should be perfectly free to issue its notes without limit so long as they are covered by 100 per cent in gold. There will be an actual flow of gold into the bank, and notes should be put out whenever they are demanded, and the bank's gold stock could always be increased in that way with 100 per cent gold-covering notes outstanding to any extent.

Senator Hitchcock. You mean notes may be put out even when rediscounts are not coming in, simply because the banks are asked for currency.

Mr. Vanderlip. Yes; but in that case they should have 100 per cent gold back of them.

Senator Hitchcock. The bank asking for currency may procure it either by depositing gold or drawing against their balances?

Mr. Vanderlip. Yes.

Senator Pomerene. Then you have two distinct classes of notes?

Mr. Vanderlip. No, sir; they would be exactly the same. The note must be covered either by 100 per cent of gold or by 100 per cent of rediscount paper.

Senator Nelson. With a reserve of 50 per cent?

Mr. Vanderlip (continuing). Or exchequer notes and 50 per cent of gold.

Senator Nelson. Your reserve?

Senator Hitchcock. But to the extent that the notes exceeded the discount paper, they must be covered entirely by gold?

Mr. Vanderlip. Entirely with gold.

Senator Pomerene. You would expect those notes, redeemable then by the gold, to be practically the same as all gold certificates?

Mr. Vanderlip. Yes.

Senator Weeks. Would you make them legal tender?

Mr. Vanderlip. I would not.

Senator Pomerene. Why?

Mr. Vanderlip. Because they are, after all, a credit instrument. I see no reason whatever why a gold certificate, which is not a credit instrument, but a representative of gold, should not be a legal tender. I can not conceive any reason at all why it should not. But, parenthetically, I believe there are the strongest reasons why the size of the gold certificates should be increased. Gold in the form of gold certi-
ficates of $10 and $20 denomination ought not to be found in the pockets of the people. They ought to be in the bank reserves, and the thing in your pockets ought to be the note of the bank, always redeemable in gold.

Senator Nelson. You would have these new notes legal tender?

Mr. Vanderlip. I would not, sir.

Senator Bristow. But you would make the gold certificates legal tender?

Mr. Vanderlip. Yes.

Senator Hitchcock. Can you state briefly what evil might result from making them legal tender?

Mr. Vanderlip. They are not money in any sense; they are a credit instrument; they are a promise to pay—they are a promise to redeem in money. They ought not to be made money, and no hardship can follow not doing so. It may be that there has been sometimes a case where a man presenting a national-bank note has met with the statement, “That is not legal tender, and I will not receive it.” That case is so rare, if it ever did occur, that the point is negligible. Certainly the national-bank note was always convertible into legal tender, and, of course, the note of this bank always should be.

Senator Hitchcock. I understand, as an academic proposition, it is not sound or not wise or not legitimate to make them legal tender. But as a practicable proposition, I can not see what evil would result. Supposing it were done, just for the convenience of the people, what evil could result?

Mr. Vanderlip. An obligation to pay is and ought to continue to be an obligation to pay money—to pay gold—not an obligation to give somebody’s promise to pay gold. I do not think that is academic; I think it is real. On the other hand, I can see no objection at all to their not being made legal tender, because they will perform every function you want a circulating note to perform. I would give them every quality that the present national-bank note has. They should be received for public dues, and they should have all the qualities contained in the national-bank act in reference to national bank circulating notes.

Senator Hitchcock. I can see why they should not be made good for bank reserves, because then the gold might get away from the banks, which would be bad; but I have not been able to see why they should not be made legal tender. The man who receives them perforce can get gold for them. I can not see that he suffers anything. Now, there must be some practical reason.

Mr. Vanderlip. He does not suffer anything if he can get the gold. If he can not get it, he certainly ought not to be forced to take the promise to pay.

Senator Hitchcock. You are assuming that the note is always redeemable in gold.

Mr. Vanderlip. If that is so, the note will always circulate as well as legal tender, except in the rarest possible instances.

Senator Hitchcock. I realize that, but is there anything that can result as a practicable evil by making them legal tender?

Mr. Vanderlip. Yes. If by any chance this bank got in such a condition that it could not redeem those notes and reserve conditions were suspended, and it was not compelled to redeem them, just as the Government itself did not redeem its promises to pay for a great
many years, then to force a creditor to take that depreciated note, instead of the gold he is entitled to, would be an evil.

Senator Nelson. And they would be depreciated in price, as was the case of the legal-tender notes during the war.

Mr. Vanderlip. Yes.

Senator O’Gorman. They went down, I think, as low as 33 or 35 cents on the dollar.

Senator Nelson. It might not get as bad as that, but it would lead to depreciation.

Senator Hitchcock. Of course, those notes were issued without any gold reserve at all, without any provisions that are now made for safety. But I am still not able to see who would suffer or what evil would really arise by making them legal tender. They are legal tender, as I understand you to propose, when presented to the Government.

Mr. Vanderlip. Because this is a Government institution.

Senator Hitchcock. Yes.

Mr. Vanderlip. The Government ought to be ready and announce its purpose to receive them.

Senator Hitchcock. Therefore the Government, receiving them, can pay them out for any purpose. They are perfectly good.

Mr. Vanderlip. It could not pay them for any purpose where its contract was to pay gold.

Senator Hitchcock. Those cases are rare, and the great volume of obligations could be made in them.

Mr. Vanderlip. Nearly every corporation mortgage for the last 10 years has been made payable in gold.

Senator Hitchcock. They would not be affected, then; they would not suffer by making these legal tender?

Mr. Vanderlip. They certainly might if they became depreciated and the income of the corporation was paid in the depreciated note, while the outgo was paid in gold. It would suffer very much.

Senator Bristow. Would making these legal tender have a tendency to have contracts made payable in gold more than would be the case if they were not made legal tender?

Mr. Vanderlip. It would have a tendency. Contracts are now very largely made payable in gold when the amount is large and the period considerable.

Senator Nelson. Are these long-time railroad bonds payable in gold?

Mr. Vanderlip. Almost invariably.

Now, on the subject of having those notes the obligation not of the Government but of the banks I heard a witness in this room this morning say that universities are teaching disloyalty to our Government. They are teaching history, and there never has been a case in history where the Government established a fiat obligation that that obligation did not go below par and usually lead to disaster.

Senator Nelson. Are you taking up the question of how to secure the gold for the redemption?

Mr. Vanderlip. I am providing that they keep 50 per cent gold reserve.

Senator Nelson. Yes; but how is that gold to be acquired?

Mr. Vanderlip. That will come in in the payment for the stock, in the deposits of the Government, and in the deposits of reserves by
all the depositing banks. That will not all be gold; that will be partly gold and partly legal tender. I think that part of the reserve which specifically covers the note might well be made gold—to protect a note redeemable in gold.

Senator Nelson. Would it not help us if we made the customs payable in gold?

Mr. Vanderlip. No, sir; the customs in this case might just as well be payable in notes as gold, because they are going to be deposited right back into the banks. If the import dues were paid in gold, importers would draw gold out of the bank for it and it would come right back into the bank again.

Senator Hitchcock. Have you made any estimate as to the possible volume of these notes which would be issued?

Mr. Vanderlip. A suggestion I am just about to make would operate at once, or as soon as would be practicable, to replace $300,000,000 or $350,000,000 of national-bank notes by these notes. Except from that I should doubt if in normal times there would be very many of these notes with the present level of business. In the crop-moving period I think there would be $200,000,000 more. Then in future years, as the needs for currency expanded with growing business, the amount of these notes would expand.

Senator Hitchcock. Why would you retire $350,000,000 of national-bank notes, when in your former testimony you expressed the opinion that our currency is not redundant at any time to an extent greater than $150,000,000, as I recall it?

Mr. Vanderlip. I would do that and keep exactly in accord with my former testimony. It was to the effect that if you did not retire some of the present existing national-bank notes there would not be room enough in our circulation for the purely elastic factor; that in normal times we have enough circulation. We would only, therefore, have to issue these notes for the peak of the load, and there might be none at all in the springtime, but only in the fall, in the crop-moving period. We ought to get some of these out of the way to make room for a note of an elastic quality. And then I would also provide the bank with a one-year exchequer note, as I explained in the hearing before. In a word, the plan would be this: Gradually, and over such period as the Federal reserve board may decide upon, the Federal reserve bank shall offer to purchase the 2 per cent bonds of the United States deposited to secure circulating notes of the national banks, at par, and up to an amount equal to one-half of such bonds deposited with the Treasury of the United States as security for national-bank note circulation. Now, it would pay for these by taking the redemption responsibility for the notes that are outstanding and would then exchange the 2 per cent bonds that it got for the 3 per cent one-year exchequer notes.

Now, you may say at once that that represents a loss to the Government. But with the tax the bank would pay—and that tax to be a lien upon its earnings ahead of any dividends—an amount equal to 1½ per cent on an amount of notes equal to these exchequer notes issued—that would compensate the Government for the payment of 1 per cent additional interest, and would compensate also for the loss of the one-half of 1 per cent tax now paid on circulating notes secured by 2 per cent bonds.
Senator Pomerene. Do I understand that tax to be on the exchequer notes you referred to?

Mr. Vanderlip. The tax would be on circulating notes secured by exchequer notes.

Senator Pomerene. Yes.

Mr. Vanderlip. I would gradually substitute rediscounted paper for the exchequer notes and leave them free in the treasury of the bank. This gives the bank an employment for its funds in normal times. In normal times there will be no great amount of rediscounts in this country. You remember the advantage of the rediscount system is not to employ all of your funds all the time in such rediscounts. It is not for a bank to borrow from this central reserve bank, and loan those funds at a higher rate to its customers. In normal times the bank will not go to the central reserve bank to rediscount at all.

The advantage is only that you can go there in the last emergency; that is the great advantage of it, that you can always go there; that you can always make your commercial paper liquid. Normally, the rate will be too high to go there. Normally, a bank will go into the open discount market and sell some of its commercial paper; or it may borrow through other banks. But the knowledge that it can always go there, can always make liquid its commercial paper, is the great thing.

Senator Hitchcock. I do not believe I quite get clear in my mind this process. You would have the banks take over $350,000,000 of 2 per cent bonds now held in the Treasury for the various banks?

Mr. Vanderlip. Yes.

Senator Hitchcock. Now, what would the bank pay for those?

Mr. Vanderlip. It would assume the national bank notes now outstanding. That would be equivalent to paying par for the bonds.

Senator Hitchcock. Well, the national-bank notes outstanding belong to the banks of issue.

Mr. Vanderlip. I know. Now, this bank would assume those notes outstanding that are secured by this $350,000,000 of bonds.

Senator Hitchcock. It would assume their redemption?

Mr. Vanderlip. Yes; it would assume their redemption and retirement.

Senator Hitchcock. And what would it redeem them with?

Mr. Vanderlip. With its own notes, which it would be enabled to issue by putting these exchequer notes under the new circulating notes. Now, they would only remain under them temporarily. Ultimately commercial paper would come under them and the exchequer notes would be free in the Treasury. But, generally speaking, the $350,000,000 of national bank notes would be replaced by $350,000,000 of notes of the Federal reserve bank.

Senator Hitchcock. Well, the $350,000,000 of 2 per cent Government bonds which would be taken over would be replaced then—

Senator O'Gorman (interposing). Substituted.

Senator Hitchcock. Substituted by exchequer notes.

Mr. Vanderlip. They would be absolutely retired by the Government. They would be received by the Government, and in their place the one-year exchequer notes would be issued.

Senator Hitchcock. And they would belong to this bank?
Mr. Vanderlip. Yes.
Senator Hitchcock. And bear 3 per cent interest?
Mr. Vanderlip. They would bear 3 per cent interest; they would mature every year; but the bank would be under obligation to renew them. They would renew them, probably, one-twelfth each month, or something of that kind.
Senator Nelson. But that right of converting 2 per cent bonds into 3 per cent exchequer notes, as you speak of, ought to be prorated among the banks, ought it not?
Mr. Vanderlip. Oh, yes.
Senator Nelson. According to their bond holdings?
Mr. Vanderlip. Certainly.
Senator Nelson. Otherwise it would not be fair.
Mr. Vanderlip. It would not fair. Each bank ought to be permitted to sell one-half of its bonds that are up to secure circulation at par for this purpose.
Senator Hitchcock. But the Government would be paying 3 per cent on its bonds instead of paying 2 per cent. How do you compensate it for that loss?
Mr. Vanderlip. By giving them the tax of $1\frac{1}{2}$ per cent on the notes.
Senator Hitchcock. What notes?
Mr. Vanderlip. The notes that the Federal reserve bank is to issue to retire the national-bank notes.
Senator Hitchcock. But you see that would be taxing itself, would it not?
Mr. Vanderlip. It would be taxing itself, except that I say that that tax shall be a lien ahead of any dividends.
Senator Hitchcock. But, then, if the bank earns dividends any surplus over the dividends it is allowed to pay goes to the Government?
Mr. Vanderlip. Then you might say, in effect, that it will be taxing itself.
Senator Hitchcock. So that you do not relieve the Government; and the Government would be paying 3 per cent interest instead of 2 per cent.
Mr. Vanderlip. The Government would be taxing itself, in effect, if you could accomplish all the purposes that are sought to be accomplished, without doing this thing and make the earnings of the bank as high as they would be if you had not converted 2 per cent bonds into 3 per cent notes. But the earnings of the bank would really be materially higher as a result of converting bonds into notes; so much higher that the Government would profit instead of lose by making the notes bear 3 per cent.
Senator O'Gorman. Would not the benefit that the Government would derive from the enjoyment from the surplus profits of this Federal reserve bank be more than ample compensation?
Mr. Vanderlip. Very much more, in my opinion.
Senator O'Gorman. For the immediate loss to which it may be exposed.
Mr. Vanderlip. Yes, sir.
Senator O'Gorman. In paying 3 per cent interest, where heretofore it has paid only 2 per cent.
Mr. Vanderlip. Yes, sir.
Senator Weeks. Have you made any estimate of how much that surplus profit would be?

Mr. Vanderlip. I have not; but I feel quite confident that that would be the case.

Senator Weeks. Do you think the dividends should be made cumulative?

Mr. Vanderlip. Yes, sir.

Senator Nelson. With a 50 per cent reserve in gold, Mr. Vanderlip, could you not issue that currency based upon these exchequer bills in larger volume than the par value of the exchequer bills—than their face value?

Mr. Vanderlip. I would not advise that, and I would not encourage the bank at all to use these exchequer bills as cover for circulating notes. The rediscounted paper is what should be used, and the exchequer notes should be held there in the Treasury for the employment of funds in a scant time. You see you pay 3 per cent on these notes, but to whom do you pay it? You pay it right back to yourself, practically, because the Government gets the earnings of the bank.

Then these exchequer notes become of the greatest value in influencing a gold movement or in protecting the bank in any time of stress. They would be a perfectly ideal bankable paper in any commercial market in the world. With the highest possible credit and short maturity, they would be the ideal thing for a bank to have to operate with in the money markets of the world. The bank could go to the Bank of France or to the Bank of England or anywhere where there was credit to be had or gold to be bought and buy it with that obligation.

Senator Hitchcock. Well, as a matter of fact, would not they slowly drift out of the country, and would it not happen after 10 years that this bank would not have any of these choice 3 per cent bonds?

Mr. Vanderlip. At the end of every year they come back into the hands of the bank. The Government pays them and issues new ones in their place, which the bank buys. They can not drift out of the country in the way you suggest. If they drift out of the country—that is, if the bank used them in order to buy gold, we will say, in London as soon as they mature—and some of them will mature in 30 days, some of them will mature in 60 days, and so on, and the last will mature in a year—they will at maturity be presented for payment and new ones at once bought by the bank.

Senator Hitchcock. Then, suppose the United States should become involved in war and it should find itself in a position where it had to market great quantities of bonds, would it not happen that it would not be able to renew these bonds on a 3 per cent basis?

Mr. Vanderlip. The bank pledges itself for 20 years to renew them—

Senator Hitchcock (interposing). Oh, you have that in the charter of the bank, have you?

Mr. Vanderlip. Yes, sir. That must be fundamental, that the bank is under pledge to renew them.

I would have this measure provide a national clearing house, as I explained this morning, and not alone for the reason that it would be a great economic engine, but that you must provide for the col-
lection of checks without imposing on banks the necessity of keeping balances with other banks.

Senator Weeks. Mr. Vanderlip, that would be one of the most difficult things to do in this measure which you propose. Country banks—probably 22,000 or 23,000 out of the 25,000 believe that their interests are going to be jeopardized if that is done, and universally they have opposed any such action. Now, what can we do to prevent their making a material loss in revenues and still carry out the suggestion which you make?

Mr. Vanderlip. Point out that they oppose it, not on economic grounds, which, if they understand it they must admit are sound, but on selfish grounds of earnings; and try to show them that if they will be broad gauged and put into operation a measure that will be for the best interests of this whole country, their earnings will be larger, although reduced by this small amount of profit which they make now on collections.

Senator O'Gorman. Mr. Vanderlip, let me give you a concrete case. A gentleman representing the second largest bank in the State of Mississippi testified before us recently that the net profits of the bank amounted to $40,000 a year.

Senator Weeks. $48,000, was it not?

Senator O'Gorman. Perhaps it was. It was something over $40,000, and he said $20,000, almost 50 per cent of the net profits of the bank, were derived from exchange charges; and he said, in substance, that if a system were adopted by which their profits would be so materially reduced, that they would, of course, surrender their national charter, and continue as a State bank and continue to enjoy that revenue. Now, what would you say to that?

Mr. Vanderlip. I would say that I fear that these $20,000 profits were gross. If you analyze exactly what he said, he probably said that he got $20,000 in gross—he may not have used the word “gross” in his collection charges. I can not believe that any bank that is doing anything like a normal business derives half of its net profits out of the net profits of the collection business. It is not so; that is all.

Senator O'Gorman. We have been told by all representatives of country banks that their profits, perhaps on a capital of $25,000 or less, might probably not exceed $15,000 or $20,000 a year—and that they may make as much as $2,500 a year or $3,000 from exchange charges.

Mr. Vanderlip. A gentleman was making that statement to me the other day, and I challenged it; and he admitted that what he meant was that the gross profits out of collections were equal to one-half of his net earnings. Well, when you come to analyze that statement, the taking away of the collection business would not fall so heavily on that bank. If a bank is doing a business where half of its earnings come out of the community for paying collection charges, it is charging the community too much, and that community is paying too great a charge for that bank's services.

Senator Weeks. Is it not true in the case of small banks of that kind, that about the same force would have to be maintained, whether they were doing this collection business or not; so that the receipts from the collection business are practically net?
Mr. Vanderlip. Well, that might be, in some measure, true.

Senator Weeks. In small banks?

Senator Nelson. Now, is not the situation altered somewhat under your plan from what it is in the bill, because there is nothing compulsory? That is, the country bank need not come into the system; they can stay outside and are not obliged to come in.

Mr. Vanderlip. They must come in, so far as the reserve provisions are concerned.

Senator Nelson. That is all. There is nothing else compulsory, particularly if you do not compel them to underwrite this public subscription of stock. There is nothing compulsory at all, except this reserve requirement; they must keep their reserve where you tell them to. That is all.

Senator Nelson. They need not do their clearances through these subsidiary banks?

Mr. Vanderlip. Not at all.

Senator Nelson. So that the situation is not, practically, under your plan as it would be under the plan proposed in the bill?

Mr. Vanderlip. Well, in effect this bank would do the clearing business so cheaply and so effectively that it would take it away from the other banks. The economy would be so great that that would be the effect.

Senator Nelson. Yes.

Senator Hitchcock. I would like to have your opinion on this, Mr. Vanderlip. Suppose it is a fact, as I believe it to be, that there are possibly several thousand small communities in the United States which depend upon a bank, say, of $10,000 capital, and that bank is a great convenience to that community, and it has, say, $7,000 of deposits. It is not possible with that volume of deposits to have loans sufficient to pay a dividend upon the capital and a decent salary to the men that run the bank.

Now, they eke out dividends and their salaries by these collection charges. Would you not say that the bank is of sufficient convenience to that community to warrant a continuance of that system?

Mr. Vanderlip. I would say that it is a great convenience to the community, and that under this plan it still would retain a considerable amount of what it makes out of collections. That is to say, a merchant in that community having a bill to pay in New York will come in to buy a New York draft under our present system. In order to sell a New York draft that bank has got to keep a balance in New York to write it on.

Under the system that I propose, or that is proposed in the bill that is before you, when a merchant comes in to get a piece of paper that will pay a New York draft the bank will merely write its check on the central reserve bank or, in the other case, on the regional bank. Instead of writing it on a New York bank it writes it on the central reserve bank or on the regional bank. It can sell it; it can get some charge, some commission, there just the same.

But its check on its deposit in the central reserve bank is par in New York or par anywhere else. It can write drafts for its customers that will be par anywhere in the United States, without keeping
the balance anywhere in the United States, except in the Federal reserve bank.

Senator Hitchcock. Well, that is true. But it still is not getting what it gets now. I understand a discount on such checks of its customers has come to it for collection. And now suppose that bank, not being able through a little charge on its drafts and through the interest on its loans to make a living, to make an existence possible, goes out of business. The people of that community then go back to the idea of keeping their little hoards in stockings or in bedticks or under mattresses or they go 10 or 15 miles away and deposit it in a bank. Has not that community suffered a loss?

Mr. Vanderlip. They have suffered a very great and very real loss if that were the effect, but that will not be the effect. The effect will be that that bank having the new facilities provided by either of these plans will prosper more, even in spite of this small loss, than it ever prospered before.

Senator Hitchcock. I think it is very questionable whether that bank gets any advantage out of this new system, however, which is proposed, because it has a privilege of discount now with its city correspondent, and its city correspondent might take paper which could not be available under the bill that we have before us or the one which you have, so that it gets no benefit at all.

Mr. Vanderlip. The community in which that bank is operating will get a lower level of interest under either of these plans.

Senator Hitchcock. Well, I hope that will be the result, but I have never been able to see how such a bank gets any benefit out of this system.

Mr. Vanderlip. If the community does get a lower level of interest rate, the community will prosper more.

Senator Hitchcock. But I think all these little banks will be wiped out. They do not exist in any European country where the centralized bank system prevails. You will find no such banks in France or in Germany or anywhere where that system prevails.

Mr. Vanderlip. Personally I should be very glad, looking at the question from the point of view of the bank with which I am connected, to pass a measure that will compel the small banks of the country to keep deposits with us. My whole personal interest is on that side. But my judgment is that the advantage of the whole country lies on the side of the national clearing house.

Senator Nelson. Well, the little country banks, Mr. Vanderlip, not being required to keep deposits in other banks for exchange business as they do now would have more loanable funds at home, would they not?

Mr. Vanderlip. Yes; and instead of getting 2 per cent for that balance as they now do they would get 5 or 6 per cent.

Senator Nelson. And that would compensate them in a measure for that small loss, would it not?

Mr. Vanderlip. I believe it would compensate them fully.

Senator Bristow. Mr. Vanderlip, if Senator Nelson is through, I should like to ask you a question.

Senator Nelson. I have finished.

Senator Bristow. There is one feature that has been discussed a good deal since you were here the other day in regard to this exchange
matter, and that is the payments by check. Bankers do not like it, but the people do.

We have developed these small banks all over the country, and the country bank solicits from farmers and different citizens in its community and asks the people to deposit their money with it, and then to take a check book and pay out by check.

And I think that that has resulted—the use of checks in this country in the establishment and maintenance of a great many small banks, because it has drawn the money that was kept around in bureau drawers and other places in the community into a center; and instead of keeping the money in his pocket or hidden away somewhere, the citizen takes a check, and when he pay for any article of merchandise, or for a pig, or a cow he draws a check for it; he does not carry the money with him; the money is in the bank; and somebody has borrowed it that needed it; and so it builds up the community.

Now, the use of checks has become so common in this country that when a merchant in Salina, Kans., pays his Chicago house, he frequently—I say usually—simply draws a check on his local bank and sends it: it goes to Chicago, and they do not have to go and get a money order; they do not have to go and get an express order, or they do not have to go and buy a bank draft. The citizen does it at night, after everything is closed up. And in our part of the country the pay rolls are paid by check; everything is done by check.

Now, with this discount system—not discount system——

Senator O'Gorman (interposing). Clearing system.

Senator Bristow. Yes; clearing system that is suggested here; would not that break up or interfere with that process?

Mr. Vanderlip. No; it would greatly facilitate it.

Senator Bristow. Now, tell me how it would facilitate it.

Mr. Vanderlip. By facilitating the collection of the check. If that check reaches the Chicago merchant, he deposits it with his bank and is charged exchange on it. Anything that will facilitate the collection of that check is of advantage to the merchant, and therefore of advantage to the man who issues the check, because, in the end, that is where the cost must fall.

The merchant is not going to do business without profit. He is going to put into his pocket something to cover the loss of time and of commission in collecting that check. Anything that will facilitate the collection of that check will increase the use of similar checks.

Senator Bristow. Well, that is very satisfactory if it will operate that way.

Now, there is another advantage to the local merchant or the local citizen in our part of the country. Settlements are made the 1st of the month; and nearly all of the routine business is done and payments made the 1st of the month; collections are made the 1st of the month. The merchant on the last day of the month will go over his accounts. He knows what is due and where his check will reach the creditor on the 1st of the month; if it does, he will get a discount probably. He collects on the 1st of the month. He draws those checks when he probably has not the money in the bank. His bank account may be low; it would not begin to pay them, and he depends upon his collections on the 1st or 2d day of the month to

S. Doc. 232, 63-1—vol 3——64
meet those checks by the time they get back; and that is done every­where.

Now, in the normal operations of the business of the country there are thousands and hundreds of thousands of men who handle their business in that way. And anything that we did here that would disturb or make difficult this routine-established method of business would be received with very great disfavor. And I do not want anything in this bill that we may pass here to in any way disturb that situation.

Mr. Vanderlip. This measure will not facilitate the kiting of checks. It will not facilitate the business of writing a check when you have not a balance in the bank to pay it with. This will shorten the time between the blotting of your signature on a check and the time when that check is charged against your account; there is not any doubt about that.

Now, if you think it desirable for people to be able to write checks without having a balance in the bank, and let those balances come after a while, and increase the time between the day you sign the check and the day you are charged with it, you do not want this system.

Senator Pomerene. And the kiting of a check is neither fair to the banker nor fair to the payee of a check, is it?

Mr. Vanderlip. No, sir.

Senator Shafroth. Mr. Vanderlip, how would it do to put a maximum charge of $1 a thousand for collection?

Mr. Vanderlip. I would not be prepared to answer that as to the figure. Certainly you do not want this bank to do a service without being paid for it. You do not want to impose on this bank the necessity of crediting in New York at par a check that has been drawn in San Francisco, and that the bank cannot get its credit for until that check has traveled to San Francisco. You must permit it to charge what it is right to charge—what would be fair for the service performed—either a charge in the form of a commission, or in a delayed credit of the item—

Senator Shafroth (interposing). The only thing is, the country banks are protesting very strongly against this bill, and there is also some protest that excessive charges are made; and I thought that if you could put a limit upon it it might be a compromise that would be well to consider.

Senator Bristow. Mr. Vanderlip, suppose that I draw a check for $1,000, living in Kansas, as I do, to pay a debt which I owed in Chicago—we will say to the Butler Paper Co. And that company deposits that check in a Chicago bank with which it does business, and that check is then sent back to the bank upon which it is drawn at Salina. The bank at Salina, Kans., does not charge me anything. It wants me to make my remittances that way. It prefers that I should do so. What charge is made—what bank gets the charges on that check?

Mr. Vanderlip. I will tell you who does charge you something; that is, the Butler Paper Co.; because you have paid them with something that is not worth par; you have paid them with a piece of paper that they have to do one of two things with, either to put it in their bank and get a delayed credit for it, which means a credit after
some days, just to give the bank time to collect it, or be charged a collection commission.

Senator Bristow. Theoretically you are right, but practically you are not.

Senator O'Gorman. You are a favored depositor there, Senator Bristow.

Senator Bristow. The Butler Paper Co. credit me with that check just the same as if it were a bank draft, or a postal money order, or an express money order; it makes no difference to them. I get exactly the credit, penny for penny, that I would even if I sent the money by express.

Mr. Vanderlip. You will admit that it is worth less to the Butler Paper Co. than cash or a Chicago draft, will you not?

Senator Bristow. I do not know.

Mr. Vanderlip. I can prove that it is, because I can tell you that they will not be able to get a par credit for that. They must pay a commission.

Senator Bristow. Well, I want to know what charges are made against this check in its trip from Salina to Chicago and back again.

Mr. Vanderlip. The Chicago bank will charge the Butler Paper Co. a commission. The Chicago bank will probably send that check to Kansas City and will pay nearly all of their commission to Kansas City. Kansas City will send it on to Salina, Kans., and probably has an arrangement with the Salina bank to remit once a week, so that the Kansas City bank will be out an average of four days. It must have charged a commission that will compensate it for interest. The Chicago bank must have charged a commission that will compensate it for interest, because it has credited this as cash to the Butler Paper Co. It does not get it back under a week. It is not cash, it is froth. It is a piece of paper in the mail. It will take a week to get that back from Salina, Kans., and perhaps more; a week to get it in the form of money in the vault of the Chicago bank.

The Butler Paper Co. has, however, obtained a balance that it can check on, and they must be charged a commission for collecting that piece of paper equal to the interest and to such work as may be connected with the collection, interest for the period from the time the credit is given to the paper company until the time the bank gets into its vault the equivalent amount of money.

Senator Bristow. As a matter of fact, the bank may charge the Butler Paper Co., and it may not. All banks do not make a charge for that.

Mr. Vanderlip. I believe they do in Chicago. I believe there is a clearing-house rule there compelling all banks to charge.

Senator Bristow. Now we will take another illustration. Suppose that I have a customer at Plainville, Kans., who owes me $100 and sends me a check on the Plainville bank in payment of that $100, and I deposit the check and credit his account with $100. When I deposit that check it is credited to my account for $100. I never pay anything, and my Plainville customer never pays anything.

Mr. Vanderlip. You pay something, and you do not know it.

Senator Bristow. That is a very convenient way to pay debts.
Mr. Vanderlip. You keep a deposit balance with that bank, else it would not receive that check and credit you with it at once.

Senator Nelson. Why?

Mr. Vanderlip. And it pays you no interest on that deposit balance.

Senator Bristow. No.

Mr. Vanderlip. And that is where you pay it.

Senator Bristow. Well, if this system were changed so that I could not do that, I would get no interest on the deposit anyhow.

Mr. Vanderlip. The system would not be changed so that you could not do that. You could do all of these things. You could do everything you have been talking about here. The new system would only facilitate—it would only shorten the time, make the collection more rapid.

Senator Bristow. I do not object to shortening the time. I do not ask that this be artificially delayed. I think that it would be dishonest to artificially delay it. But I do contend that the system that has been developed by the small country banks for the purpose of gathering together the money in its vaults, so that the people can loan to the bank and the bank can loan it to the people, and take it out of the dark places where it does no good to anybody, and bring it where it can be used by the community—which is all the product of or which has resulted, rather, in the checking system—I think that anything that would destroy the check system or retard it would be injurious to the community and to the country as a whole.

And then its convenience is such that my sympathies have all been with the country bankers, because I felt that it was of great advantage to the country and that if these small banks had not been established, so as to gather together these sums and send them to the centers, we would not have anything like the banking system we have got now. And it is a wonderful convenience. And that is why I do not want to favor any exchange provisions here that will in any way interfere with that.

Mr. Vanderlip. The bank is compensated by the proposed new conditions. They will more than compensate it.

Senator Bristow. So far as the checks of a bank are concerned, that was only of secondary importance, except as it might affect its earnings which are necessary, but I was primarily looking at the convenience to the community, and I know that if that convenience was taken away the measure would not be considered upon its merits; it would be regarded as an aggravation; it would be a source of great opposition.

Senator Weeks. Is it not possible that the Butler Paper Co. might have sold to Senator Bristow a bill of goods at a slightly lower price if they knew they were going to receive cash instead of a check which would take five or six days to collect?

Mr. Vanderlip. I think it possible; certainly if it were a large transaction.

Senator Bristow. I think the banks who get the use of this money absorb that charge, because they can afford to do it on account of the deposits they get, and the business men keep the deposits there because it is convenient to have them there. The banks absorb those checks, and what I suspect is that the big banks who feel the burden of those country checks would like to get out from under.
Mr. Vanderlip. We get from $200,000 to $300,000 a year gross in charges.

Senator O'Gorman. Exchange charges?

Mr. Vanderlip. Exchange charges.

Senator Brister. New York has the reputation of being pretty swift on exchange charges.

Senator O'Gorman. I understand you are quite prepared to see a system adopted by which you will lose that revenue?

Mr. Vanderlip. Yes, sir; because we believe we would get other advantages.

Senator Hitchcock. Would you materially reduce the force in your bank?

Mr. Vanderlip. Yes; quite materially.

Senator Weeks. I would like to call attention to a controversy which has been going on in the press between two usually well-informed men about the cost of this collection system, and I would like your opinion in regard to it. I do not remember the figures.

Senator Hitchcock. I have them right here. One man estimates the cost of such a system to be $8,675,000 a year, and the other says that is about $6,000,000 more than it should be.

Senator Weeks. What have you to say about that, Mr. Vanderlip?

Mr. Vanderlip. I am not a technical banker. I did not grow up in a bank. I know very little about the technical details of a bank. I am not prepared to express an opinion. I would suspect, perhaps, that here, as in many other cases, the truth will lie between the extremes. I am not prepared to express an opinion on that. I know the gentleman to whom you refer, and I have a very high opinion indeed of the technical knowledge of the one who makes the highest estimate. I am inclined to think he may be too high, but I would not undertake to demonstrate that without a study which I have not given to the subject.

Senator O'Gorman. You may proceed, Mr. Vanderlip.

Mr. Vanderlip. I would enlarge the charter rights of the national banks in order to permit them to compete successfully with trust companies that will be admitted to the system. That is to say, I would not put a premium on a national bank going out of the system, taking out a trust company charter and becoming a depositor of a Federal reserve bank.

The main expansion of charter rights should be to permit a national bank to have branches in the city where it is located, and to establish foreign branches, and to exercise general trust-company functions. That will prevent banks going out of the national banking system, taking out trust company charters, and becoming depositors in the central bank.

Senator Nelson. Let me see if I understand you right there. You speak of trust-company functions. Would you include in that the right, under proper restrictions, to loan on farm mortgages?

Mr. Vanderlip. I would not, if I was personally writing the bill. Still I sympathize quite strongly with the view of western bankers, who find they can make a better loan on that kind of security, and who find that State banks are competing with them.

Senator Nelson. You must remember one thing, Mr. Vanderlip, and that is what a great thing those farm mortgages are for the big insurance companies.
Mr. Vanderlip. Yes; I know.

Senator Nelson. They are a very great source of investment. The insurance companies prefer them to stocks and bonds.

Mr. Vanderlip. As I have said before, I do not believe the provision in this act that is on the table is a dangerous one. I do not altogether like it, but I do not believe it is dangerous.

Senator Weeks. You spoke of foreign banks just now. Have you come to any conclusion in regard to the amount of capital that would be required in order to establish a bank, for instance, in the Argentine Republic, to successfully compete with foreign banks there?

Mr. Vanderlip. It would take a large amount of capital. They are used to seeing very large figures in the capitalization of banks there, although in that case the stock is not fully paid, as a rule. We have, and I think should have, no system of partly paid capital stock, and I think to successfully establish a bank in any South American country will require a showing of very considerable capital in order to compete with existing banks.

Senator Weeks. About how much?

Mr. Vanderlip. I would not think of anything under a million dollars. In Buenos Aires, I should think $5,000,000 would be a minimum for a great American bank.

Senator Weeks. That is, capital segregated for that purpose?

Mr. Vanderlip. If you are going to segregate capital—I do not quite see the point of it. It seems to me that the honor, and really the credit of the whole bank, would have to be pledged to any branch of the bank.

Senator Nelson. Would it not do to have a branch in South America and in London, and have those branches with the power of what you call accepting houses?

Mr. Vanderlip. They should have.

Senator Nelson. So that drafts could be drawn on those branches and accepted by them, and would not such drafts circulate like the European drafts?

Mr. Vanderlip. Yes, sir; they would go into the open discount market then.

Senator Nelson. They would go into the open discount market in London and every other continental bourse.

Senator O'Gorman. Mr. Vanderlip, have you any acquaintance with the banking requirements in different foreign countries where some of our national banks would establish branches under either of these plans?

Mr. Vanderlip. I have made a wide study of South American banking conditions.

Senator O'Gorman. Of course, you would expect that any branch of a national bank doing business abroad would continue to conform to the requirements of the national banking act?

Mr. Vanderlip. Perfectly.

Senator O'Gorman. As we may modify it. Suppose the local laws may have some requirements at variance with the requirements of our national laws. How would that conflict be met—because the natives of those foreign countries will have an interest in the proper maintenance of these banks; they will be doing business with our banks; they will be depositors and borrowers?
Mr. Vanderlip. As a matter of fact, the laws are very generous in South American countries toward either branches of foreign banks or banks organized under the laws of foreign countries. Of course, you could not permit a bank organized under our laws to have branches in another country that would impose conditions opposed to the conditions you impose. They might impose conditions in addition to those; but you could not permit the establishment of a branch where the law of some other country would in any way fundamentally change the impositions of our own laws.

Senator Hitchcock. Would the reserves be kept in this country?

Mr. Vanderlip. They could not be entirely. That is a point that would have to be worked out. The whole subject needs very careful study, and is very lightly treated in the bill before you.

Senator Hitchcock. There is nothing in the bill that indicate what should be done with the reserves?

Mr. Vanderlip. No.

Senator Hitchcock. You are opposed to segregation?

Mr. Vanderlip. I do not say I am opposed to segregation; but, as a matter of fact, I feel sure that the whole credit of the bank is pledged to the support of the credit of the branch.

Senator Hitchcock. Unless you have segregation and the branch be organized, the reserves would necessarily have to be kept in this country?

Mr. Vanderlip. They would, and any till money that the branch kept would have to be in addition.

Senator O'Gorman. Do you not think the laws of foreign countries would have to be very liberal which would permit the reserves of one of our branches in a foreign country to be retained in this country?

Mr. Vanderlip. There are few countries that have any minimum reserve requirements.

Senator Reed. Mr. Vanderlip, is not this question you are now discussing—the amount of reserves to be kept in a foreign branch—one that would almost necessarily have to be referred to the discretion of a central board of control, so that that board, within the exercise of its discretion, could prescribe the rules and conditions with reference to the reserves of such banks, and generally with reference to the transaction of their business?

Mr. Vanderlip. I think it is, and I think it well could be with such a board as I have suggested here—a board absolutely removed from politics, made permanent, having continuity, and being of the character that I believe such provisions as I have suggested here would insure.

Senator Nelson. These foreign branches, would they be branches of this big central Federal bank, or would they be branches of our national banks?

Mr. Vanderlip. Those are two entirely different subjects.

Senator Nelson. What have you been referring to?

Mr. Vanderlip. I have been referring to our national banks up to this time. It is true that the Federal reserve bank itself ought either to have agents or branches in at least three of the European centers.

Senator Nelson. Ought it not to have branches there, through which they could make our acceptances over there?
Mr. Vanderlip. I think, probably, it would have to be something in the nature of a subbranch. We have talked here of 12 branches and any number of subbranches, and I should think the foreign offices would be in the nature of subbranches.

Senator Weeks. Is the National City Bank doing any business through such an agent at this time?

Mr. Vanderlip. It is doing no business. The National City Bank has a resident representative in London. He does no actual business. I mean he signs no paper; he is not an officer of the bank.

Senator Nelson. Does he make any acceptances?

Mr. Vanderlip. Nothing of the kind.

Senator Nelson. What we need is practically an acceptance house abroad, is it not?

Mr. Vanderlip. Yes; and we need the right of acceptance by national banks, and I would not limit that as in this bill to the acceptance of paper that arises out of the importation or exportation of goods. I would permit acceptances also in domestic transactions, and keep a limit to the amount of half—

Senator Nelson (interposing). And acceptances of finance bills, too?

Mr. Vanderlip. No, sir.

Senator Nelson. Commercial bills?

Mr. Vanderlip. Commercial bills.

Senator Reed. What limit do you refer to?

Mr. Vanderlip. Half the capital and surplus would be a fair limit.

Senator Reed. What is the objection, if any, to banks dealing in exchange?

Mr. Vanderlip. No objection in the world that I know of.

Senator Reed. Foreign exchange?

Mr. Vanderlip. The National City Bank is quite the largest dealer in exchange in the country, and I have never heard any objection to engaging in that business. It is essentially a part of the commerce of the country to handle foreign exchange.

Senator Reed. When I say exchange—what is the objection to a bank dealing in acceptances with foreign banks, provided there is a reasonable limit; is there any sound objection?

Mr. Vanderlip. There is no sound reason whatever, and there is a great advantage. It permits a bank which has the power of acceptance to sell its credit, and it is a perfectly proper act for the bank to do. Under our present system you can not sell the credit of a bank. Its credit is only evidenced in the willingness of people to deposit money in it.

Senator O'Gorman. The moment a bank gives its acceptance, it enlarges its liability?

Mr. Vanderlip. Yes, sir.

Senator O'Gorman. It is not contemplated that such a liability is to be taken into consideration in fixing the reserve?

Mr. Vanderlip. No; and therefore you limit the liability and hedge it about with collateral security. That is to say, collateral credit in the form of the liability of the drawer of the bill you accept.
Senator O'Gorman. In other words, when you give your acceptance, if at the same time you obtain adequate collateral, you are really enlarging your assets, at least to the same extent you are increasing your liabilities?

Mr. Vanderlip. Yes, sir.

Senator O'Gorman. So the safety of the plan would depend upon the judgment employed in the acceptance of the collateral?

Mr. Vanderlip. Exactly.

Senator Hitchcock. When you make a loan you increase your assets, do you not?

Mr. Vanderlip. It is just the same except that it does not take the cash out of your bank. Some one else provides that, because they put weight upon your credit which you have added to the credit of the other man.

Senator Reed. And the same character of judgment must be applied in making an ordinary loan over the counter as would be applied in issuing an acceptance or signing an acceptance. It is the same thing?

Mr. Vanderlip. Just the same character, but perhaps a little more caution would be exercised in regard to an acceptance because it runs longer than the average loan. An acceptance might run for six months, while the average loan of city banks is less than that.

Senator Nelson. A good many of these bills are drawn upon the proceeds of the bills of lading which accompany them, and that amounts to a security accompanying the bill, does it not?

Mr. Vanderlip. That is a direct collateral security.

Senator Nelson. That is a direct collateral security in the very highest grade of bills?

Mr. Vanderlip. It is typical of the right kind of loans a bank should make.

Senator Weeks. As a result of your investigations in South America, if proper provision were made in this bill for establishing branches, do you think you would divert any of your capital to that purpose?

Mr. Vanderlip. There are great difficulties in the way. There is, unquestionably, a profitable field there, and merchants of the United States would be greatly aided by the establishment of American banks. The greatest difficulty lies entirely outside of any legislation. It lies in the inability to get men of the right type who will learn the language, and who will become residents among the people, and who will absent themselves from the country. I have become almost convinced that it is, at the present time, so difficult that at least the establishment of South American branches is going to be a slow process.

Senator Weeks. Do commercial houses have any difficulty in getting men for that purpose?

Mr. Vanderlip. They do.

Senator Hitchcock. If a bank should keep a reserve against a note which it issues, why should it not keep a reserve against an acceptance which it gives?

Mr. Vanderlip. Because an acceptance is not a demand obligation; that is, it is an obligation maturing at a fixed date. Why should you keep a reserve against that any more than against loans?
Senator O'Gorman. You may continue, Mr. Vanderlip.

Mr. Vanderlip. I would permit State banks and trust companies to be admitted to membership by conforming to the same capital, reserve, and examination requirements which national banks are obliged to meet in similar localities. The Federal reserve board should have the power to examine any member bank, and should examine a State bank before it was admitted to the advantages of the system.

I would make the circulating notes of the Federal reserve bank a first lien upon all its assets, and I would make——

Senator Nelson (interposing). Prior to dividends?

Mr. Vanderlip. Prior to deposits, absolutely a first lien on everything, and depositors could not be paid off until the circulating notes were paid. I would protect the innocent holder of a circulating note, absolutely. Then, in turn, I should let the Federal reserve bank have the first lien upon assets of member banks for any indebtedness due from the member banks. This central bank must not lose money on bad loans. You would, by that method, give it not only the rediscounted paper but you would give it a first lien beyond that if some of the rediscounted paper proved bad. If it proved bad you have recourse to the first lien.

In respect to the rate of dividend that you would have to pay in order to float the stock at par, if you will exempt that dividend from all taxes which it is feasible to exempt it from—I am not a lawyer and I do not know how far you could go on that—that would be, of course, helpful in enabling you to float the stock at a lower dividend rate than otherwise.

These are the general heads of what I believe would be an economically sound scheme for a bank entirely controlled by the Government, and I believe it would be acceptable to the bankers of the country, after they came to understand it. I am not at all sure——

Senator Hitchcock (interposing). You did not make any statement of the subject of bank reserves since luncheon, did you?

Mr. Vanderlip. I believe I discussed that before luncheon; but I would have a uniform reserve requirement for national banks. That reserve, of course, would have to be kept either as a deposit balance or as cash in the vaults; rather, it would have to be kept as both, and I would permit a national bank to keep any part of the reserve which it saw fit with the Federal reserve bank, but would compel it to keep some minimum amount.

Senator Hitchcock. Do you think that a bank which itself acts as a reserve agent for country banks should keep a larger reserve than the bank which does not?

Mr. Vanderlip. I know it should.

Senator Hitchcock. What would you fix the reserve to be?

Mr. Vanderlip. I think probably 12 per cent would be sufficient, if you increased the reserve to be held by the central reserve bank. If you left that reserve at 33⅓ per cent and dropped the reserve of all national banks to 12 per cent, there would be too much capacity for expansion. I would make the Federal reserve bank keep a minimum of 50 per cent reserve.

Senator Nelson. For notes and deposits?

Mr. Vanderlip. For notes and deposits both.
Senator O'Gorman. Mr. Vanderlip, why do you propose that the central reserve banks should have 12 agencies? How do you fix on the number as 12?

Mr. Vanderlip. I only fixed on it because presumably a great deal of thought has been given to the subject, and 12 was fixed on by the measure before you, and that seems to me about right.

Senator O'Gorman. Would you be prepared to recommend that the number of agencies be left to the discretion of the Federal reserve board?

Mr. Vanderlip. I would. I should say it would be wiser to fix the exact number in the first instance in the bill and leave it, after one or two or three years, to the discretion of the board to increase or decrease that number.

Senator O'Gorman. Mr. Vanderlip, is there any substantial difference between the plan which you suggest and the plan described in the pending bill, excepting that you have revived a method of creating a banking system without requiring the qualifying banks to furnish the capital?

Mr. Vanderlip. I believe there are most fundamental differences, and one that is of more importance than any other is the fact that you have made the bank note the obligation of the bank and not unnecessarily and dangerously added the obligation of the Government.

Senator O'Gorman. Even under the system proposed in the pending bill, that is still an open question.

Mr. Vanderlip. Of course, I can only talk to what the pending bill is.

Senator O'Gorman. Yes.

Senator Hitchcock. You say that is the obligation of the bank?

Mr. Vanderlip. Yes, sir.

Senator Hitchcock. Can you conceive of the possibility that a bank officered entirely by United States officials appointed by the President would default on its obligations and those obligations not be assumed by the National Government? Would not the National Government be morally responsible for them?

Mr. Vanderlip. The National Government might ultimately assume those obligations. I am not altogether sure. I do not think the National Government has thus far shown to a certainty that it is going to discharge its obligations against the 2 per cent bonds, and the public does not think so; if it did, the bonds would not be selling below par.

Senator Reed. Mr. Vanderlip, say the Government sold a 2 per cent bond to A B: it agreed to pay him 2 per cent interest, and it has done so. It agreed that it would pay that bond at a given date, and that date of maturity has not yet arrived.

Senator Shafroth. It will be 1930.

Senator Reed. How can you justly say the Government has defaulted in its obligations?

Mr. Vanderlip. I do not say the Government has defaulted in its obligations, but I do say that it has not, as yet, indicated to a certainty that it is going fully to fulfill its obligation.

Senator Reed. What is its obligation?
Mr. Vanderlip. Its obligation, presumably, is to leave a free field for circulating notes to the national banks who buy these very low interest rate bonds for the purpose of taking out circulating notes. You now propose to fill that field otherwise.

Senator Reed. You are speaking about this bill, that we might in this bill do something——

Mr. Vanderlip (interposing). Oh, certainly. It is the prospect as to whether you will or will not do the right thing in this bill that has sent the bonds below par.

Senator Reed. That is a very different thing from saying the Government has defaulted. What you really mean to say is that somebody has imagined that the Government may do something that will impair a utility that has been heretofore attached to these bonds, and that that gentleman, in anticipation of a general fall which may never come, has been around peddling his bonds for less than their face.

Mr. Vanderlip. I would also say that nobody has imagined you would do something that would keep them at par and is therefore a buyer at par.

Senator Reed. Of course, it is said that bankers are the most unimaginative people in the world. [Laughter.] And I suppose that is a good thing. Mr. Vanderlip, I am interested in one question here that I wish you would go into, even at the risk of repetition. It is proposed to establish, under this plan which you suggest, a Government bank. It is organized under a law to be enacted. It is to be officered, from president to janitor, by men appointed by the President of the United States. Its very activity and power spring from the Federal Government. It is to become the fiscal agent of the United States Government, and into its vaults every penny of money collected by the Government is to go. Now, that institution, created in that way, is about to issue letters of credit, if you please, and put them out to the people of the country as money. What reason is there that it should not make them good?

Mr. Vanderlip. No reason under heaven, and you must be sure that they will make it good and not depend on some outside agency to do it.

Senator Reed. Now, if the people must make it good, what is the difficulty about saying on the face of the note that the United States Government will make that note good?

Mr. Vanderlip. Because it is no function of the Government at all to create a piece of fiat money and lend it to a banking institution. And if I can read history, there never has been a case where a Government has started in to create fiat money in that way that it has not, after starting on a sound principle, edged along toward an unsound principle and eventually found itself with its obligation below par and discredited.

Senator Reed. I think we differ about terms. I want to ask you what you mean by fiat money.

Mr. Vanderlip. I mean an obligation to pay on demand without having deposited in full the thing that you have agreed to pay.

Senator Reed. Very well. I am not assuming now that this bank will issue a single note unless it has back of that note gold coin or gold bars or good commercial paper guaranteed by the member banks
and all the safeguards thrown around this currency that can be
thrown around it. Now, you do not call that fiat money, do you?

Mr. Vanderlip. Absolutely fiat. That only speaks for the credit
of the borrower. The Government loans this note to the bank. The
Government has no reserve back of it; it merely has looked well to
the credit of the borrower.

Senator Reed. Very well. You say that it fiat money?

Mr. Vanderlip. Absolutely.

Senator Reed. Now, the bank, under proper management, may
want to issue a billion dollars of that fiat money, secured in that way.
If the bank makes a bad disposition of it, disposes of it without
proper collateral, of course the bank will go down. But it is pro­
posed to make the conditions so that the bad disposition is impos­
able—

Mr. Vanderlip (interposing). Then why add to a perfect note?

Senator Reed. I ask you the corresponding question. If a failure
is impossible, what difficulty is there about writing your name
upon it?

Mr. Vanderlip. There is no demand on the part of anybody who
will take that paper to have the name of the Government written on
it. If there is any danger at all then the danger is a great one to
the guarantor, and there is no demand for the guaranty; there is no
necessity for it; you have created a good note. It will float on the
characteristics you have given it, and you should not involve the
credit of the Government by adding something that no one calls for
simply because you feel that the Government should control the issue.
Under the plan proposed the Government will control the issue, but
the obligation will extend only to the assets of the bank.

Senator Reed. Now, I propose to sell to you the promissory note
of A B, which I decline to indorse except without recourse, and yet
I say to you, “There is no possibility of this note ever being de­
faulted.” Mr. Vanderlip, is the only reason back of this argument
the possible fact that the Federal Government may incur a loss by
guaranteeing an absolutely sound currency?

Mr. Vanderlip. No, sir; the reason is the Federal Government has
started upon a course of issuing these demand promises to pay and
loaning them to a bank. Started on that course, history tells us that
the next step will be the creation of more money of the same kind
for another purpose not so sound.

Senator Reed. You are afraid, then, not so much of this system
which you propose to inaugurate, with the modification I am now
discussing, as you are that in the future the Government of the
United States might issue other and different money upon other and
different kinds of security?

Mr. Vanderlip. That it may issue exactly the same kind of money
upon a less security.

Senator Reed. In other words, the bank board of seven men which
you propose to create might, simply because the Government created
the note, proceed to let those notes pass out with less security than
they would if the Government had not created the note?

Mr. Vanderlip. That is not the point; not that that bank board
will not care for the credit of that bank, but that there will come a
demand, if you are willing to create this fiat money and lend it to this
central bank, that you next create some more of it and lend it to the shippers of wheat and the growers of cotton, to whom you will—

Senator Reed. I catch your point. You are afraid that the mere fact that the Government guarantees this money would lead to the demand that the Government guarantee other and different money. That would be a very different proposition.

Mr. Vanderlip. History is full of just such instances.

Senator Reed. I know; but, Mr. Vanderlip, history is full of every kind of wildcat banking. History is full of every kind of failure in government. The history of the world shows that there never was a Government set up that did not end in a monarchy, and yet our fathers had the temerity to build a Republic. I want to know if there is anything economically sound except that, because I am very much interested in it.

Mr. Vanderlip. No, sir. As I have said repeatedly, the plan in this bill will work just as well if the note be the obligation of the Government as it would if it were properly and soundly the obligation only of the bank, up to a point where the credit of the bank or the credit of the Government becomes involved, or, of course, up to a point where the Government will issue some more or similar notes for a dissimilar purpose.

Senator Reed. Yes. Now, you propose, under your plan, to make these notes a full legal tender?

Mr. Vanderlip. No, sir; I make them the same quality as the present national-bank notes. They are receivable for public dues, but are not a full legal tender.

Senator Reed. Receivable for public dues?

Mr. Vanderlip. Yes, sir.

Senator Reed. That is, the Government must take them?

Mr. Vanderlip. The Government must take them.

Senator Reed. But private individuals not?

Mr. Vanderlip. Yes, sir.

Senator Reed. Now, will you tell me why a private individual should not take them?

Mr. Vanderlip. Because if a private individual has made a contract to receive gold he should not be compelled to receive payment in somebody's promise to pay gold. Now, in the case of the Government, the Government would deposit its receipts with the bank daily in any event. It may just as well receive them in the bank's notes as in gold; whichever way it receives them, it would turn them that day into a deposit balance with the bank. By depositing the note the bank redeems the note.

Senator Shafroth. Why do you say, Mr. Vanderlip, that the contract is made for payment in gold, when we know when we can take the United States notes there and compel the party to take those in liquidation of the claim?

Mr. Vanderlip. I say that it is payable in gold. It is true you can compel the other party to accept something else, because you have made a law which says that something which is not money is legal tender. Because of that law you can compel a man to receive a thing that is not money. Now, that is wrong. However, it is the law.

Senator Shafroth. Do you not recognize that at the same time we have not a sufficient quantity of legal-tender money to act as reserves for national banks?
Mr. Vanderlip. No, sir.
Senator Shafroth. Do not a stream of redemptions go to the Treasury every year to the extent of $600,000,000?
Mr. Vanderlip. I am happy to say they do; that is the proper function of the bank note. It should go to redemption.
Senator Shafroth. Then you think that is an advantage instead of a disadvantage?
Mr. Vanderlip. Unquestionably; that is perfectly fundamental. A bank note that did not go to redemption would cease to perform its proper function.
Senator Shafroth. Did they go to redemption as much when there were fewer bank notes and proportionately a larger amount of legal-tender money?
Mr. Vanderlip. I think the proportion of redemptions was about the same when the amount was very much smaller. Of course, it is true, and should be true, that if there is a greater demand for currency the bank note will not go to redemption so rapidly. That is what should happen and that is what happens in this case. That is to say, if there were a greater demand even for reserve money, the banks would collect reserve money from the public and it would be replaced by the bank note.
Senator Shafroth. And is not the member bank sending that money down here to Washington to get legal-tender money for it?
Mr. Vanderlip. It is.
Senator Shafroth. And you think if there were more legal-tender money that would still continue? Would not the bank have actually more of the legal-tender money in circulation, and therefore would not have to send to Washington for it?
Mr. Vanderlip. No; it would go on just the same. If you had more legal-tender money, if the bank reserves were redundant, the bank loans would be expanded just as certainly as any effect will follow a cause; and as the note came into the bank, not being available for reserve, it would then flow down here to be redeemed in legal tender. We always want more legal tender, because we will always expand our loans as long as we have legal tender enough to support the expansion.
Senator Shafroth. Mr. Vanderlip, if the State banks and trust companies come into this system, they will make a very large demand for more legal-tender money, will they not, to act as reserve?
Mr. Vanderlip. That would depend upon whether the total reserve requirement were larger in this measure than is now required from State banks. That would not be the case in New York; it would be the reverse.
Senator Shafroth. But if the 18,000 banks that now have a right to keep bank notes for their reserves were to come into this scheme with the same requirement as national banks, of compelling reserves, would not that necessitate a great quantity of legal-tender money to act as reserve?
Mr. Vanderlip. You mean to take the place of the bank notes that they now hold in their reserves?
Senator Shafroth. Yes.
Mr. Vanderlip. I was told by the chairman of the committee at the last hearing that the total amount of such notes held by State
banks and in National banks was around $80,000,000, as I recollect. It is not a large amount.

Senator Shafroth. Yes; but don't you see the State banks are not required to keep as large reserves, and if that requirement is made larger there will be a large demand for legal-tender money to act as reserves.

Mr. Vanderlip. But I say the State banks with which I am familiar are required to keep a larger reserve.

Senator O'Gorman. Of course, there are some States that do not require any reserve.

Mr. Vanderlip. Exactly; but even if there were no reserve requirement you would probably find they would keep a reserve about as large as this provides.

Senator Reed. Mr. Vanderlip, I confess that I still am unable to comprehend the real utility of a scheme which results in $600,000,000 of the $700,000,000 of national-bank notes being sent to the Treasury every year, redeemed at the Treasury, and immediately reissued. What useful purpose does that serve? That may seem a kindergarten question, but I want to get at it.

Mr. Vanderlip. A bank note ought to be the currency in the pockets of the people, of course, ought it not?

Senator Reed. The more we have of small currency in the pockets of the people, I presume, the better.

Mr. Vanderlip. Not at all. You only want an amount in the pockets of the people that will facilitate their ordinary business. And, as I said, with much emphasis at my former hearing, that is a matter over which you have as little influence as any matter connected with the banking business. What we carry in our pockets is a fixed amount.

Senator Reed. Very well.

Mr. Vanderlip. Now, that amount will fluctuate—

Senator Reed (interposing). Why should it be a bank note rather than any other note?

Mr. Vanderlip. Because you want the reserve money to be in the bank to form a basis for credit. You want circulating in the hands of the people a note that will conform in volume absolutely to the needs of the people and will be wiped out of existence as soon as it is not in use in their pockets. As soon as it comes into the bank it should disappear. And you can not pay that note out again, as you say, unless there is a demand for currency. Frequently there is a little demand for currency and we are unable to get out our own circulation at all. That is the case through several months of the year in some years. You can not always get out circulation. You have an inflow of these notes for redemption that is much larger than the outgo of currency that is demanded, and you redeem the surplus—

Senator Reed (interposing). Let us say that your bank has—how many million dollars do you have out in bank notes?

Mr. Vanderlip. About $3,500,000.

Senator Reed. Very well. Those bank notes of yours are gathered up by other banks and sent into the Treasury for redemption?

Mr. Vanderlip. Yes.

Senator Reed. And pretty soon all your $3,500,000 is wiped out and there has been sent out in lieu of it greenbacks, silver certificates, etc.
BANKING AND CURRENCY.

Mr. Vanderlip. No. This is the point. There probably has been nothing sent out in lieu of it. There has been less demand for circulation in the pockets of the people.

Senator Reed. Very well; it is retired?

Mr. Vanderlip. Yes.

Senator Reed. And you have not any money out?

Mr. Vanderlip. Yes.

Senator Reed. How does it get out again?

Mr. Vanderlip. Then, when the people want more money, when we have crops moving, when we have to hire the labor for crop moving, and have that larger use for money, it comes out.

Senator Reed. That is what I want to get at. How does it come out?

Mr. Vanderlip. Because the banker in your State that is in a community where the farmer is going to use more money finds his reserves being drawn out, and he sends to St. Louis for currency, and St. Louis in turn sends to New York, and unless they ask for reserve money we will send them a bank note. The bank note gets right out into the hands of the day laborer—

Senator Reed (interposing). And you send to the Government, saying you want some more money?

Mr. Vanderlip. Yes, sir.

Senator Reed. You say, in effect, "You have retired all our bank currency, and now we want it again"?

Mr. Vanderlip. As soon as it is retired we get it again and hold it in our own vaults. We have to pay no tax on it as long as it is in our own vaults. When a demand for currency comes we ship it out, unless it is a demand for reserve money.

Senator Reed. Now, you get $3,500,000 from the Treasury to-day. You take it down and put it in your bank vaults and hold it there, and you have to pay a tax upon it—

Mr. Vanderlip (interposing). No, sir; we do not, until we emit it.

Senator Reed. Unless you emit it?

Mr. Vanderlip. Yes, sir.

Senator Reed. It goes around and circulates and gets into the banks in Chicago. The banks in Chicago send it down for redemption, and now it is retired. Immediately it is sent back—

Mr. Vanderlip. Yes, sir.

Senator Reed. And you either pay it out at once or lock it up until you need it?

Mr. Vanderlip. We lock it up if our receipts of national-bank notes are larger than the shipments of money that need not be reserve money. Now, we are shipping money, we will say, every day, some of which must be reserve money, because we are asked to send reserve money, and some of which need not be reserve money. We are receiving national-bank notes every day. If the amount of our shipments is less than the amount of our receipts there is no point in getting out our own notes for these shipments. We might just as well pay out in these other notes and send the surplus down here for redemption.

Senator Reed. Then, as I understand you, the whole question amounts to this: The method of redemption, plus the tax, is a means of limiting the amount of this currency which may be out. If you
had no tax you would draw your $3,500,000, you would put it in your vaults, and you would lend it whenever you pleased. It would go out into circulation, other banks would keep it in their vaults, lending it when there was a demand made. But, in view of the fact that there is a place of redemption and that by sending it in a bank can thereby escape this tax, there is an incentive to send it in and have it canceled?

Mr. Vanderlip. The great incentive is another one, however. The bank that sends it in does not thereby escape any tax. The motive for sending it in is to get reserve money. The bank has more currency than it can pay out. You can not pay out currency unless somebody wants it. It is not because you have a surplus of currency you are going to increase your loans. A loan is usually collected in the form of a deposit balance; it is seldom collected in currency.

Senator Reed. But you must have a legal-tender reserve, so they send it in and exchange it for a legal-tender reserve?

Mr. Vanderlip. Yes, sir; that is the motive back of the redemption of the national-bank note.

Senator Reed. In other words, the Government with its funds has to continually furnish the reserves back of the national-bank money?

Mr. Vanderlip. The Government is merely an agent. The national banks must first put up the money that the Government uses to redeem these notes. It is not Government funds at all that are going to be used to redeem the notes.

Senator Reed. It is the money we got for the bonds.

Mr. Vanderlip. Not at all; it is the money that is put up in the 5 per cent redemption fund. It always has to be kept there, and always does redeem all that comes in. We have to make that good daily; just as often as there are charges against it we are notified that our redemption fund is deficient and we must build it up. Our redemption fund is never exhausted.

Senator Reed. If those bank notes were a full legal tender and could be used for reserves, there would not be any necessity for sending them in at all?

Mr. Vanderlip. No; nor any limit to the expansive possibilities they would be made a basis for.

Senator Reed. Except that the bank would have to buy Government bonds.

Mr. Vanderlip. That would be the only limit.

Senator Pomerene. Mr. Vanderlip, did you discuss the question of the qualifications which you would require of State banks and trust companies in order to enter into this plan of yours?

Mr. Vanderlip. In a general way. I would make the qualifications the same as for national banks, with similar limitations as to capital, as to reserves, and as to examinations. I would permit the Federal reserve board to make such other regulations as they found in practice necessary to make. I would always insist that that board examine a bank before it was admitted as a depositor, if it were a State bank.

Senator O'Gorman. Then, in a word, you would permit the State banks to come into the system under such rules and regulations as the reserve board would establish?

Mr. Vanderlip. I would; such a reserve board as I have suggested here. I would always emphasize the character of that board.
Senator O'Gorman. Two of those essential requirements, however, would be that the State bank would comply with the national-bank requirements respecting reserve and the State bank would also, as you stated, deposit in this Federal bank?

Mr. Vanderlip. Oh, of course.

Senator O'Gorman. What is your suggestion as to the amount or extent of the deposit that would have to be made by a State bank? Would you leave that with the reserve board?

Mr. Vanderlip. It should make exactly the same deposit as a national bank would make. It must have the same reserve requirements.

Senator Nelson. And the same capital?

Mr. Vanderlip. The same capital as a national bank in a similar locality.

Senator O'Gorman. What would be the requirement of a national bank with respect to deposits? I did not hear you state that.

Mr. Vanderlip. That the national bank would keep a reserve of 12 per cent, of which at least 5 per cent must be kept on deposit with the Federal reserve bank.

Senator O'Gorman. When you spoke, then, of deposits by national banks you had reference to the portion that would be deposited?

Mr. Vanderlip. Nothing more at all.

Senator Reed. There has been a great deal said here about the reluctance of banks to rediscount, and the figures compiled by the comptroller show that there is an astonishingly small amount of discounts recorded. What do you know about the custom of indirectly discounting paper?

Mr. Vanderlip. There is such a custom.

Senator Reed. To what extent do you think it is practiced?

Mr. Vanderlip. I do not know. It is discouraged by leading banks. I believe the highest amount of direct rediscounts that the comptroller's reports have shown is $109,000,000, which was reported last summer.

Senator O'Gorman. Outstanding at one time?

Mr. Vanderlip. Outstanding at one time. As a guess, I should think there might be $30,000,000 of rediscounts that do not show.

Senator Nelson. What is the form in which those indirect discounts appear?

Mr. Vanderlip. The form varies. A bank may induce a lending bank to buy certain commercial paper which it holds and give it a letter directing it to charge the borrowing bank's balance when that paper matures. Sometimes the bank will sell to its own directors commercial paper, and its directors will unite in making a loan, the bank showing no rediscounts. Those, I think, are the two most important methods.

Senator O'Gorman. Why is that resorted to?

Mr. Vanderlip. So as not to show a rediscount on the published statement.

Senator Reed. Mr. Vanderlip, I was told of one bank that carries $9,000,000 of bank deposits, the president of which stated they actually had loaned $4,500,000 to the banks by what he called indirect discounts.

Mr. Vanderlip. That bank was encouraging that sort of business. That is not a fair average.
(At this point, to enable members of the committee to vote in the Senate, a recess was taken, at the expiration of which the hearing was resumed.)

Senator O'Gorman. Mr. Vanderlip, have you any further observations to offer?

Mr. Vanderlip. I have gone through the details of the plan. I have no specific observations to offer, except possibly to try further to emphasize the essential differences between the plan I have suggested, or outlined, and the plan that is before you, as it has passed the House. I believe those differences are absolutely fundamental and make the differences between a sound and unsound piece of legislation. I should say there are three differences of vital importance:

The difference that makes the note the obligation of a bank and not the obligation of the Government I regard as of the greatest importance. I can not overemphasize my feeling in that respect.

The difference which permits of a single bank and of a single discount rate alike to all banks I regard as a difference of great importance, and one which gives much greater equity to this measure than to the other. It would be impossible to adopt this theory with 12 or any other number of various banks—this theory of a uniform discount rate. It can only be adopted by a central bank.

Senator Hitchcock. Will you permit me to interrupt you for a question? I intended to ask you some questions before we took this recess.

Senator Bristow. He was outlining the differences between this suggested plan, Senator, and the present bill. Suppose he completes that first.

Senator Hitchcock. Yes.

Mr. Vanderlip. This measure will not be compulsory upon the banks unless you compel them to underwrite the stock, which you may do. But, in that event, the compulsion would be not nearly so obnoxious, because the bank could sell the stock if it so desired. I think it is superior in that it would distribute the stock to a large number of people.

Senator O'Gorman. Right there, if you will pardon me. Having in mind the dividend would probably be exempt from all taxation, do you care to modify the view you expressed this morning that it ought to be 5½ or 6 per cent?

Mr. Vanderlip. I am inclined to think if the dividend is exempt from all tax and there is no double liability on the stock, you could float it at 5 per cent.

Senator Hitchcock. Now, you speak of the national banks or member banks underwriting this stock subscription.

Mr. Vanderlip. Yes.

Senator Hitchcock. You would give them a monopoly of the initial purchase of this stock?

Mr. Vanderlip. Exactly the reverse. I would give the public the monopoly, permitting the banks only to buy after the public had refused to take it.

Senator Hitchcock. Would you permit the public to take it at par?

Mr. Vanderlip. Certainly.
Senator Weeks. How would you allot it?

Mr. Vanderlip. I would allot it first to the smallest subscribers, just as the Spanish War bonds were allotted, so as to get as wide a distribution as possible.

Senator Weeks. At par? I understood you to say you would sell to the highest bidder.

Mr. Vanderlip. That would be another view to take. In that event, of course, the stock would be allotted to the highest bidders, and you could not allot it to the smallest subscriber.

Senator Nelson. The fairest would be to make the dividend so fair and low that you would sell it at par.

Mr. Vanderlip. I think that would be the fairer way, to sell it at par and then to allot to the smallest subscriber.

Senator Hitchcock. You would not exempt the dividend from this stock as far as the income taxes are concerned—the Federal income tax?

Senator O'Gorman. If you say "all taxes" that would embrace it.

Mr. Vanderlip. I would, if you deemed that feasible. That is to say, if you want to float this stock at the lowest possible dividend basis, then you will exempt it from all taxes. Any taxation you add would in effect make it necessary to pay a higher dividend rate. Whether the small amount of the income tax would make it necessary to pay a dividend above 5 per cent is a question.

Senator Hitchcock. Would not that be a direct inducement for wealthy people who would have a very high rate of income tax to pay, to invest in this stock and thus concentrate its ownership? And that is exactly what we do not want to do.

Senator O'Gorman. You could place a limitation as to the number of shares any individual would be permitted to take.

Mr. Vanderlip. That would be possible. There would be no point in doing that, as the stock has no voting rights in any way.

Senator Hitchcock. But you said it was very desirable to have this widely scattered among the people.

Mr. Vanderlip. I think so.

Senator Hitchcock. In rather small allotments, as those are people who have difficulty in making investments; but if you exempt it from the income tax it would not affect many of them, because those people have the minimum of income. But it would be an inducement for the very wealthy people to buy this stock, because they might escape a 10 or a 5 per cent income tax, so, I think, it should not be exempted from the income tax.

Mr. Vanderlip. There is no principle involved in exempting it from any tax. The only point in exempting it from a tax is to enable you to float it at the lowest dividend rate.

Senator Hitchcock. Have you any doubt that a 5 per cent Government stock of that sort would sell at par without any exemptions?

Mr. Vanderlip. If you are perfectly sure of it, and will provide that the Government will take any unsold part, all right.

Now, the last and one of the very important points of difference I want to emphasize is the character of this board of management. I think I said at the last hearing, in answer to a question of Senator Pomerene, that I was not afraid of Government management; I was greatly afraid of inexperienced or partisan management. I believe
this insures a management that is continuous, experienced, and that will be free from partisan influence, and will be of a character that the banks can fairly trust. The long term, without any ex officio members, is of vital significance.

Senator Hitchcock. What limitation would you put on the power of that board as to the rate it would charge for the use of rediscounts?

Mr. Vanderlip. No limitation whatever.

Senator Hitchcock. You would allow them to give this for nothing—to give rediscounts for nothing?

Mr. Vanderlip. It is inconceivable that a board that is sane would do that. They are governed by the reserve requirement. You do not need a law further than that. If they must have a minimum 50 per cent gold reserve, they would very quickly reach a point where they would have to raise the rate.

Senator Hitchcock. They might have a reserve of 60 per cent gold and yet refuse to discount, too.

Mr. Vanderlip. They should never refuse to discount sound paper. They should make the rate as high as the necessities of their position dictate. They should never refuse to discount sound paper.

Senator Hitchcock. If it made a discount rate of one-half of 1 per cent, that would certainly greatly expand currency, would it not?

Mr. Vanderlip. No, sir; it would expand the credits of the bank, but not the currency.

Senator Hitchcock. That additional credit of the bank after the reserve surplus of the deposits is exhausted would mean an increase in currency?

Mr. Vanderlip. How can a bank get out any currency that is not needed for use in the hands of the people? Let us take a definite illustration. Suppose the National City Bank is a member and decides to rediscount $10,000,000 of paper, can it get out any more currency as a result of that? It will have a credit; it will have a balance in the central reserve bank, but it can not make you carry any more currency in your pocket, nor can it make any customer of the bank take any currency because it happens to have a credit somewhere.

Senator Hitchcock. Let me put a case this way: Suppose a bank out West has reached its legal capacity, and borrowers come to it for additional loans, and it finds that by applying to a branch of the United States bank it can discount paper on a very low basis. It will make the loans, because the discount rate is so low as to enable it to make an adequate profit.

Mr. Vanderlip. The discount rate of the Federal reserve bank will never be lower than the current rate that the depositing bank is loaning to its customers, presumably. It would be a very extraordinary condition under which you would find the discount rate lower than the current rate. The function of this bank is to be a place of last resort to go to after banks have found, because of
changed conditions, they have taken too much commercial paper. It offers a means to turn commercial paper into a liquid reserve.

Senator Hitchcock. Take your bank. Suppose there is a strong demand for money, and you have been loaning freely, obtaining 4½ and perhaps 5 per cent, and you reach a point when you want to discount some paper. Suppose they refused to discount for you at less than 6 per cent. What would you do?

Mr. Vanderlip. We will discount at 6 if we find we are running below our reserve. We would not do it in order to loan at 5½.

Senator Hitchcock. Suppose they made a discount rate of 3 per cent, what would you do?

Mr. Vanderlip. If they made a discount rate of 3 per cent it would be certain we could not loan at 5½ per cent. That situation can not exist, because our neighbors would also have a rediscount rate of 3 per cent.

Senator Hitchcock. If you could discount your notes at 3 per cent you certainly can accept those loans that come over your counter?

Mr. Vanderlip. At 5½ per cent; yes. But water would run up hill as quickly as such a situation would exist. It can not exist.

Senator Hitchcock. Has not that been the history in Germany? Whenever abroad there has been a strong period of exploitation of business and industry Germany has been developing and her foreign trade has been growing; that the German bank has rediscounted heavily at the Reichsbank, and the Reichsbank has finally reached a period of expansion?

Mr. Vanderlip. Has reached a period, undoubtedly, where it has a large amount of rediscounts, but has always sustained itself by advancing the discount rate until we have found the German banks borrowing in the New York market at times at 9 per cent. We have loaned to first-class German banks at 9 per cent.

Senator O'Gorman. Do you expect, then, that this system of rediscount will be used by a member bank for the purpose of making new loans, or will it be devoted entirely to procuring the money to keep up the required reserve?

Mr. Vanderlip. It will be its function to keep up the required reserve.

Senator O'Gorman. Now, with that limited field of activity on the part of the Federal bank, will it be able to make this money that will be required for its maintenance and pay 5 per cent, if that be the dividend provided for, to the stockholders?

Mr. Vanderlip. It will be able to employ $350,000,000 at 3 per cent, less the 1½ per cent tax, and to loan $350,000,000 circulating notes, as we have provided that amount of one-year Treasury notes. It will be able to go into the open discount market and buy paper indorsed by any member bank at whatever rate is ruling. It will be able to go into the foreign discount markets and buy prime bankers' bills at whatever rate is ruling there.

Senator Hitchcock. Would you explain how the bank can issue $350,000,000 of notes? Perhaps you will let me ask some questions to develop it. You say a bank with 100 millions of capital?

Mr. Vanderlip. Yes.

Senator Hitchcock. Suppose that is all put in in gold.

Mr. Vanderlip. Yes.
Senator Hitchcock. You then propose that it shall take, we will say, over $300,000,000 of 2 per cent bonds; and you say issue $300,000,000 of its notes?

Mr. Vanderlip. It will issue them as rapidly as the notes that the bonds are sustaining are retired; that is, as rapidly as an equivalent amount of national-bank notes are retired.

Senator Hitchcock. Now, then, it must keep a 50 per cent reserve against those notes. How is it going to get that 50 per cent reserve?

Mr. Vanderlip. It will have 100 millions of capital, presumably $150,000,000 of Government deposits. I have not the figures in mind, but let us say four or five hundred millions of deposits of reserve banks.

Senator Hitchcock. It must keep, though, a 50 per cent reserve against the Government deposits and also against the other deposits.

Mr. Vanderlip. Yes.

Senator Hitchcock. Now, then, what has it to loan in that case, if its capital is more than absorbed by the reserve required against the notes? The notes are $300,000,000, and there will be $150,000,000 reserve there, at the outset. If the Government deposits $150,000,000, that would require another 100 million of reserve.

Mr. Vanderlip. No; seventy-five.

Senator Hitchcock. $75,000,000 in reserve; and if the banks deposit, say, $300,000,000, that would require another $150,000,000 in gold reserve.

Senator O'Gorman. Did you not say the banks might deposit about $400,000,000?

Mr. Vanderlip. I should think they would deposit about $400,000,000. The statement of the bank would be about this: It would have capital, $100,000,000; Government deposits, $150,000,000; and bank deposits, let us say, of $400,000,000.

Senator O'Gorman. Making a total of $650,000,000.

Mr. Vanderlip. It would have deposits of $550,000,000, against which it would have to keep $275,000,000 of gold. It would have $375,000,000 of gold free.

Senator Hitchcock. How does it get that $375,000,000?

Mr. Vanderlip. Capital, $100,000,000; Government deposits, $150,000,000; and bank deposits, $400,000,000.

Senator Hitchcock. How can all the banks—all the banks could not pay in that much gold. How could you require the banks to make their deposits in gold?

Mr. Vanderlip. They would pay in that much gold—gold or lawful money. They might have to rediscount some. I am presuming, in setting up this statement of the bank, that on the start they all pay it in and rediscount nothing.

Senator Hitchcock. You have a need for $275,000,000 in gold reserves right off.

Mr. Vanderlip. Yes, sir.

Senator Hitchcock. Against your notes.

Mr. Vanderlip. You have $375,000,000 of free gold or lawful money.

Senator Hitchcock. You have $375,000,000 cash?

Mr. Vanderlip. Of cash.

Senator Reed. You can loan that cash to the banks and rediscount paper with it?
Mr. Vanderlip. Let us say you loan $100,000,000 to the banks; then you would have $275,000,000, and you would only need $175,000,000 as a gold reserve against this $350,000,000 of notes, and you will have $100,000,000 of free cash remaining.

Senator Hitchcock. You figure it will not be necessary to procure gold in any way except through the sale of capital stock——

Mr. Vanderlip (interposing). The deposit of the Government and the deposit of the banks.

Senator Hitchcock. And that that would procure sufficient gold for the initial issue of $350,000,000 in notes?

Mr. Vanderlip. Yes.

Senator O'Gorman. Will interest be paid on Government deposits?

Mr. Vanderlip. Oh, no; not under any circumstances would interest be paid. Now, Senator Hitchcock, if the bank did find itself short, it could sell some of these one-year exchequer notes either in the domestic market or abroad. They would be freed from segregation to secure the note issue as rapidly as the Federal reserve bank discounted for other banks and got rediscounts in hand to put under the note issue.

Senator O'Gorman. Does any other Senator desire to ask any questions?

Senator Bristow. I have been very much interested in this, Mr. Vanderlip. I have been in favor of a Government bank, such as you have described, controlled by the Government, the stock owned by the people and not by the banks, which was entirely independent of the banks and in shape so as to serve the banks when they needed it, and that this service will be extended under conditions which the law prescribes, and any bank that complied with those provisions as outlined in the law should have the right to the aid which it needed in time of stress as a matter of right. I have been in favor of that because I believe it is necessary in order to maintain the democratic banking system which we have, so as to render all of the banks independent of any monopolization of credit. I do not think that there is that independence now that ought to have been. I do not agree with the opinion which you advanced in your last hearing, that anybody who had good security could get credit at the banks. I think that depends upon the interest of the bank, its depositors, and the directors, and if some one should come and want credit that came in conflict with the interests of some of the patrons of that bank that were powerful and had enough influence with it, it would be denied, not because it was not good but because it interfered with some other business. Now, naturally I am interested in the view—I know you are not for a Government bank, managed by the Government, for the same reasons I have indicated, which are reasons that prompted me.

Mr. Vanderlip. I believe those reasons do not exist, and I challenge you to present a single case where there has been such a discrimination in any important way in New York. I never have heard of it. It may exist, but I do not believe it does exist, and I know that it does not exist as a general thing. But that is neither here nor there.

Senator Bristow. We had one gentleman before the committee yesterday who told us his story, which I believe to be substantially true in some particulars.

Senator O'Gorman. Did you credit the whole of it, after Senator Weeks's statement?
Senator Bristow. No.

Senator Weeks. I am sorry that the Senator from Kansas believed it, because I denied it explicitly.

Senator Bristow. The Senator from Massachusetts denied his statement as to one of the banks, but not as to the others.

Senator Weeks. If the Senator from Kansas will recall, I asked the witness if the corporation of which he was complaining had any deposit in any banks where his deposits were, and he replied in the negative in each case.

Senator Bristow. I remember distinctly those questions, and I think they were very ingenious and plausible; but, nevertheless, I think the shoe machinery company is powerful enough to prevent a man from getting credit if it interferes with their business.

Senator Weeks. I think that is likely, but I do not think it has ever been done.

Senator Nelson. Would you limit the deposit to banks?

Mr. Vanderlip. Banks and the Government positively to be the only depositors.

Senator Nelson. And would you limit the discounts to the banks?

Mr. Vanderlip. Unquestionably. I would permit them to have no domestic transaction that did not bear the indorsement of a member bank.

Senator Nelson. The deposits and discounts must all be carried on with banks and not individuals?

Mr. Vanderlip. Yes, sir.

Senator Pomerene. Would you permit it to go out and buy securities of any kind?

Mr. Vanderlip. No securities except the bonds of the United States and its insular possessions; and, really, the bank ought to have no obligations of that sort except short time ones. I would be quite willing to prohibit the bank having any obligation of any kind, even of the Government, which ran over a year, except the first issue of 2 per cent bonds, which would at once be changed to exchequer notes.

Senator O'Gorman. You have alluded to some great differences between the plan you suggest and the plan embodied in this bill, and I think the Senators recognize the difference between the two plans. With respect to one, I want to see if I understand you correctly, and that is, while under the plan proposed by the pending bill the banks will have a controlling interest in each one of the proposed 12 regional banks—

Mr. Vanderlip (interposing). They will elect six of the nine directors.

Senator O'Gorman (continuing). Under your system, which you recommend and suggest, the banking interests of the country will have no representation of any kind, from the top of the system in Washington down to the most humble position in any one of the agency banks.

Mr. Vanderlip. Absolutely none at all; no more than it has in the Treasury or in any other department of the Government.

Senator O'Gorman. Every official would get his authority either through the President or through some one appointed by the President of the United States?

Mr. Vanderlip. Yes, sir.
Senator O'Gorman. Is there anything else to be asked of the witness?

Senator Bristow. Yes; I have a number of questions I wanted to ask. Continuing the matter which we were discussing, Mr. Vanderlip, it of course would be unnecessary for you and I to proceed into an argument as to the control of credits by these great institutions of the country. I think Mr. Moffitt, in the financing of his railroad, was handicapped by the banks of New York who refused him the credit he was entitled to, because of the powerful interests he was antagonizing, and not because he was not promoting a railroad that was just as good a railroad as those who were fighting him. And, I think, in my own State, that the railroad enterprises have been killed not because they were not good, sound, and economical, but because they interfered with the interests of the Santa Fe Railroad, the Union Pacific, the Southern Pacific, and other lines that run up there.

Mr. Vanderlip. Do you regard the building of a railroad as a proper function for a commercial bank?

Senator Bristow. Banks that would be a part of this system finance railroads and handle their bonds and sell them. That is done by the banks that would be part of this system or any system that is created. But that is simply an illustration.

But if those are the reasons which have prompted me, that is to preserve the democratic independence of our banking system, which I think is the best system in the world, because it gives opportunity to men to go out into the banking business and make a success on their own initiative; and this is one of the fields of activity in our country that is not monopolized, except when you get into the larger matters of credit. And I want to preserve that democratic independence. Now, I was interested, therefore, in the reasons that led you, holding views so radically different from mine, to finally come to the same conclusion I do.

Mr. Vanderlip. I would say that I never would have reached this conclusion, I believe, had it not been for the views you hold. I was profoundly influenced in my mind when I was before this committee the last time by what seemed to me a general opinion that tended toward this sort of a solution. I was given special impetus to study the matter by the opinions you expressed—not at the hearing, but afterwards—outlining almost exactly the plan that I have tried to explain—not in detail, but in a general form. It was the interest of yourself and of other members of this committee that has led me to put almost continuous study on this idea for nearly all of the time since I was last before this committee.

Senator Bristow. Do you believe that such an institution as has been outlined here would preserve the independence of our country banks—the 25,000 banks that are now doing an independent business?

Mr. Vanderlip. I do.

Senator Bristow. Do you not think it is a very desirable thing that it should?

Mr. Vanderlip. Extremely so.

Senator Bristow. Well, you say "loan only banks." Why not loan to individuals in order to establish the rate?

Mr. Vanderlip. And then, after a while, have the Government issuing notes to individuals. There you go. [Laughter.]
Senator Nelson. And would not that, Senator Bristow, compete with your little country banks?

Senator Reed. I suggest that the Senator from Kansas and Mr. Vanderlip have another private conference, so that we may derive still more benefit. [Laughter.]

Senator Bristow. Well, now, tell me the danger. I would like to know the danger of this bank discounting paper in the open market?

Mr. Vanderlip. I can hardly conceive a greater danger to our whole Government than the creation of a Government organization which might loan directly to individuals. I can hardly conceive of there ever having been thought of such a machine for the control of politics or for the aggrandizement of a body of men than to put in their power such a great aggregation of capital as this and allow them to deal directly with individuals and to extend them credit.

Senator O'Gorman. Do you think that bank would be overwhelmed with applications if that was done? [Laughter.]

Mr. Vanderlip. I am quite sure it would. And there would be no relation of credit and deposit balance between the borrower and the bank such as we are establishing by law here—between the depositing banks and the central bank. Here we are requiring that the reserves shall be kept within the vaults of the banks themselves and in the vault of the central reserve bank. That is the very sinew that the central reserve bank has to loan. It is inconceivable to my mind that there could be safely created such a machine as this that would be permitted to deal directly with individuals.

Senator Bristow. You think, then, as I understand, that it would be very dangerous for a reserve bank, a bank created to serve that purpose, and thereby strengthen the independent banking system of the country—for it to go and loan that money to individuals; you think that would destroy the very purpose for which it was created?

Mr. Vanderlip. Yes, sir.

Senator Bristow. And make it impossible to serve it?

Mr. Vanderlip. Yes, sir; and be filled with collateral dangers.

Senator O'Gorman. And discourage banks from entering the system if the accommodations of the central bank were to be extended to the public at large?

Mr. Vanderlip. I have no conception of government that would permit the Government to enter into business in this way.

Senator O'Gorman. I do not understand that Senator Bristow recommends this. He only wanted to get your views.

Senator Bristow. Well, I wanted to understand its dangers. It has been urged, you know, that it would be necessary or ought to be.

Now, I do not know whether I got a very clear notion as to the requirements that would be necessary for a bank to have in order to avail itself of the benefits of this central reserve bank. It would become a part of the Federal system and be under its protection and entitled to the aid which this bank could give. You would extend it first to national banks, then to State banks and trust companies, if I understood properly, provided that the requirements of the national bank and of the trust companies and of the State banks should be the same, so that they would all be on an equality.

Mr. Vanderlip. The requirements as to capital, examinations, and reserves.
Senator Bristow. Yes; and you would modify the national banking law so as to enable the national bank so as to enlarge their activities in certain States so as to compete with certain State institutions and be on an equality with State institutions?

Mr. Vanderlip. I would, so as to prevent national banks from going out of the national system, taking out State charters, and then joining this new organization.

Senator O'Gorman. Right there, if you will permit me one question, that bears on what was asked by Senator Bristow: What would be done by the national banks that, for any reason would not care to come into the system, if it should be optional?

Mr. Vanderlip. Any bank that refused to keep its reserves according to law would have to get out of the system.

Senator O'Gorman. Then you would make it compulsory that every national bank would have to keep part of its reserves in this Federal bank?

Mr. Vanderlip. I certainly would.

Senator O'Gorman. So that, to that extent, it would be compulsory?

Mr. Vanderlip. No more compulsory than the present reserve requirements.

Senator Reed. Just about as much.

Mr. Vanderlip. No; not nearly so much in amount as the present requirement.

Senator Shafroth. Mr. Vanderlip, how much money, under the system you have proposed do you think it would be safe to issue?

Mr. Vanderlip. Just as much as you could cover with the proper sort of rediscounted paper and with a 50 per cent gold reserve; and always have, really, something more than 50 per cent reserve, because that would be the minimum permitted by law as a general reserve of the bank.

Senator Shafroth. Can you estimate about what, in your judgment, that would be—the maximum?

Mr. Vanderlip. If the whole plan were adopted, there would first be $350,000,000, which would replace an equal amount of national-bank notes. At the present time I think there would not be over $200,000,000 in addition to that, and that much only at the season of the year when there was a demand for the largest amount of circulation. With the growth of the country, with the development that would surely follow such a sound banking scheme, I can imagine that amount might grow to a very considerably larger volume. I would hope to live long enough to see it 1,000 millions.

Senator Reed. Have you consulted or talked with other bankers or financiers about this plan of yours?

Mr. Vanderlip. I have.

Senator Reed. How have they received it?

Mr. Vanderlip. With great favor. I have talked with very few.

Senator Reed. How do you believe it would be received by the banks? Do you think they would accept it, or do you think we would have another "Boston convention"—I do not speak of that unkindly; but it was an opposition convention.

Mr. Vanderlip. It is difficult for me to say how they would receive it at first. I think they would be somewhat shocked at the idea of
complete Government control. When they came to understand the safeguards that it is proposed to throw about that, the character of the control which would flow from the method of its appointment, its term of service, and so on, I believe that they would accept it with great favor. They certainly would be relieved from the compulsory features of the bill that is now before you. They would be relieved from this extremely unsatisfactory but necessary provision for forced loaning by one Federal bank to another. And, more than everything else, they would be relieved, I believe, to find that the circulation was to be bank-note money and not a fiat obligation of the Government.

Senator Reed. You spoke about requiring the banks to underwrite a portion or all of the stock, except such portion as the Federal Government might take. How would that be worked out, in a practical way?

Mr. Vanderlip. In a practical way, the banks would be compelled to underwrite a prorata proportion, based upon the relation of an individual bank's capital to the total capitalization of all national banks.

Senator Reed. How compelled?

Mr. Vanderlip. By the act.

Senator Reed. And then if they did not?

Mr. Vanderlip. If they did not, they would have to get out of the system. Now, I do not recommend that plan, if you think you can float the stock to the public without it or if you are willing to have the Government stand in the gap and take any stock that the public should fail to subscribe for. There is no desire at all to have the banks do this. They would not regard it as a desirable thing to do. They would not want to retain the stock. And the only reason whatever for proposing such a scheme would be to insure the success of the public subscription.

Senator Reed. As I understand your plan, you would first open the subscriptions to the public?

Mr. Vanderlip. Yes, sir.

Senator Reed. On a competitive basis, giving the preference to the smaller subscribers?

Mr. Vanderlip. Yes, sir.

Senator Reed. If, then, there was, by a given date, not enough offered you would then have a provision in the bill that at that time it would become the duty to take a certain proportion of these bonds?

Mr. Vanderlip. Yes, sir.

Senator Reed. And to pay for them at their face. Now, you spoke of underwriting.

Mr. Vanderlip. I would not do it quite that way, because, if it became obvious that it was going to be a failure—if that subscription ran for 30 days and on the twentieth day it became evident that the public was not going to take stock and that the banks would have to do so—you might have a scramble right then to get out of the national system. I would compel them to make the underwriting obligation.

Senator Reed. In the first instance?

Mr. Vanderlip. In the first instance. I would compel them to agree to take all of that stock, provided the public did not take it; but they would get none of it that the public was willing to take.

Senator Reed. Then you would provide, in this bill, that by a given date the national banks of this country must file with the Federal
Government an obligation binding each of them to underwrite—to accept that portion of these bonds which their stock bore to the entire amount of the capital stock——

Senator O'GORMAN. In the national banks.

Senator REED. In the national banks. And that in the event of their failure so to do, their charter should be arrested and their business wound up.

Mr. VANDERLIP. It would be equal to that.

Senator REED. If they did that, then you would further provide that the banks had so underwritten the Government would offer this stock to the general public, and so forth—we need not go into the details.

Mr. VANDERLIP. Yes, sir.

Senator NELSON. And that the banks could then only get what the public did not take.

Mr. VANDERLIP. That would be all.

Senator NELSON. I suppose in this plan you would adopt the same quality or the same rules as to the paper that could be discounted as there are in the bill before the committee, substantially.

Mr. VANDERLIP. Substantially the same.

Senator NELSON. The same quality of paper?

Mr. VANDERLIP. Yes, sir; self-liquidating paper—that is, paper arising out of commercial transactions.

Senator O'GORMAN. Mr. Vanderlip, Senator Weeks has a question or two he would like to ask you.

Senator WEEKS. Suppose we provided for the engraving on the notes of this reserve bank something like this—I am led to ask this question on account of your discussion of issuing a bank note rather than a Treasury note:

United States of America. National reserve bank note. This note is secured by a gold reserve equal to 50 per cent of its face value by Government bonds or commercial paper equal to its face value by a first lien on all of the assets of the reserve bank and will be redeemed on presentation at the reserve banks, or any branch thereof, or at the Treasury of the United States.

Would that be a bank note or would it be a bank note with the Government guaranty?

Mr. VANDERLIP. It would be a bank note with a Government guaranty of redemption.

Senator WEEKS. Do you think it would be unfair to arrange the guaranty of redemption—including that we provide in the law that the bank shall keep the Treasury properly supplied with funds to guarantee the payment of any notes that may be presented at the Treasury.

Mr. VANDERLIP. I do; unnecessary and involving the Government in a possibly dangerous obligation.

Senator WEEKS. Well, do you think that would be sufficient as I have written it?

Mr. VANDERLIP. If the Government redeems them, it is as great a danger as it would be if they were the obligations of the Government.

Senator WEEKS. Of course, we are going to provide that the banks shall provide the means for the Government redeeming the notes.
Mr. Vanderlip. Very well, if you will so state on the face of the note.
Senator O’Gorman. It would be stated in the bill that we pass.
Senator Weeks. Yes; it would be stated in the law.
Mr. Vanderlip. You ought then to state on the note that they will be redeemable by the Government, if the Government is in funds provided by the banks for the purpose. Then that would be all right. [Laughter.]
Senator Reed. That would be worse than saying nothing.
[Laughter.]
Senator O’Gorman. Is there any other question any Senator desires to ask of Mr. Vanderlip?
Senator Hitchcock. I do not quite see yet, Mr. Vanderlip, where you are going to get your gold reserve.
Mr. Vanderlip. I would like to figure that out with you.
Senator Hitchcock. I wish you would put in writing in the record the statement of how a bank would start in business when it had $150,000,000 of Government deposits, bank deposits of $300,000,000, and outstanding notes of $300,000,000.
Mr. Vanderlip. I should like to do that. I should like to ask if it will be helpful to put in the record the plan as I have it, very briefly outlined?
Senator O’Gorman. If there is no objection, the paper now in Mr. Vanderlip’s hands will be incorporated in the record. And when will you be able to send the memorandum desired by Senator Hitchcock, Mr. Vanderlip?
Mr. Vanderlip. I shall hope to do so within 24 hours.
Senator Hitchcock. Mr. Vanderlip, the only means this bank would have for securing additional gold for a reserve as its business grew would be the use of these Treasury notes, would it not?
Mr. Vanderlip. Or its obligations; it could sell its own obligations.
Senator Hitchcock. To whom?
Mr. Vanderlip. To anybody who would buy them—any foreign money market. It could sell its obligations secured by rediscounted paper.
Senator O’Gorman. I think that will be all, Mr. Vanderlip.
(The statement or plan referred to by Mr. Vanderlip is as follows:)

The Government is to grant a charter to the Federal reserve bank of the United States, with capital stock of $100,000,000, the charter to extend for a period of 50 years.
The head office is to be located in Washington, and 12 branches to be located in the cities selected by an organization committee, and subbranches wherever designated by the board of the Federal reserve bank.
As soon as practicable after the passage of the act the President is to appoint a committee of five, to be designated as the “Federal reserve bank organization committee.” This committee will divide the country into 12 commercial districts, and designate one city in each district as the seat of a branch of the Federal reserve bank, and generally be charged with the responsibility of organization.
The stock of the Federal reserve bank may either be subscribed for entirely by the Government, with funds raised by the sale of bonds or offered for public subscription, the success of such subscription to be insured by requiring all national banks to be liable for the purchase of their pro rata proportion of any stock not taken by the public.
The stock shall have no voting power, and no rights of any kind shall attach to it except to receive dividends. There need, therefore, be no restriction on its purchase or sale or accumulation, either by banks or individuals.

The Federal reserve bank will be wholly under the management of a board of seven directors, to be appointed by the President, with the advice and consent of the Senate, with terms of 14 years, but the first board to be classified and the term of one director to expire each two years.

The bill should provide that the President will select men qualified by experience and training for the proper discharge of the duties imposed and make no appointments in order to confer political rewards. At least three of the members should be recognized to have had wide financial and banking experience. Appointments are to be distributed geographically so as to give due weight to the commercial sections of the country.

The President, with the advice and consent of the Senate, will designate one director as governor and another as deputy governor, and the governor, or in his absence the deputy governor, shall act as chairman of the board and be the chief executive officer of the bank.

Members of the board to automatically retire at the age of 70.

The board of the Federal reserve bank shall appoint for each branch an executive committee of seven members. The bill will contain the same general directive clauses as to their character as in the case of the board itself, including the provision that at least three of the members of the executive committee shall be recognized to have had wide banking and financial experience. The term of office of the members of the executive committee will be seven years, but in the case of the first members appointed they shall be classified so that one director shall retire each year. One member of the executive committee will be designated chairman and one vice chairman, and the chairman, or, in his absence, the vice chairman, will act as chairman of the committee.

All actions of the executive committees will be subject to the approval of the board of the bank. Each executive committee will elect a president and other executive officers to conduct the business of the branch, the men filling these offices to have no official or financial relation with any other bank.

The earnings of the bank shall, in case the Government subscribes to all the stock, be first devoted to an accumulation of a surplus of 20 per cent, and thereafter one-half of the earnings will be devoted to a further increase of the surplus until it reaches 50 per cent, and the other one-half go to the Government. After the surplus has reached 50 per cent all the earnings will go to the Government.

In case the public subscribes to the stock the net earnings will first be devoted to paying a 6 per cent cumulative dividend, then to an accumulation of a surplus equal to 20 per cent of the capital, after which one-half of the earnings will go to the Government and one-half be devoted to the accumulation of a further surplus until the surplus reaches 50 per cent of the capital, and thereafter all the earnings beyond the dividend requirement will go to the Government.

All earnings received by the Government will be devoted to the retirement of the Government debt.

The customers of the bank shall be the Government and qualified member banks, which will include all national banks and may include State banks and trust companies.

The Government shall deposit all of its general fund with the bank and constitute the bank its fiscal agent.

The reserve requirement for national banks will be so changed as gradually to transfer all reserves away from correspondent banks now acting as reserve agents, and after this gradual transfer has been fully accomplished all reserves will be held in the vaults of the member banks and with the Federal reserve bank. The reserve requirement will be the same for all member banks and shall be ultimately 12 per cent.

The reserve to be held by the Federal reserve bank shall never be less than 50 per cent of its demand liabilities, including note issue, in gold or lawful money.

The board of the Federal reserve bank may, in an emergency, suspend all reserve requirements for 30 days, and continue such suspension for periods of 15 days.

The Federal reserve bank may rediscount for member banks paper self-liquidating in character, to be defined by the act. It shall not rediscount for any one bank an amount exceeding the capital and surplus of such bank.

The bank may buy in the domestic market from member banks, nonmember banks, and individual self-liquidating paper under conditions to be defined in it.
the act, bearing the indorsement of a member bank, and may buy in the foreign
markets prime banker's bills.

The bank may also deal in gold coin and bullion and in obligations of the
United States Government and its insular possessions.

The board of the Federal reserve bank shall establish a minimum rate of
discount, which shall be uniform at all branches and subbranches, and which
shall be changed from time to time as conditions demand.

While the minimum discount rate shall be the same at all branches and to
all banks, that minimum rate will only apply to the rediscounts of a bank
up to an amount equal to a fixed percentage of its capital and surplus; thereafter
such bank shall be charged a uniform progressively increasing rate upon
discounts until said discounts shall have amounted to a maximum permitted
by the act, fully equal to the capital and surplus of said bank.

As fiscal agent of the Government the Federal reserve bank shall be charged
with the duties now imposed upon the Treasurer of the United States and the
Bureau of Redemption in the Office of the Comptroller of the Treasury in re­
spect to the custody of bonds securing national-bank notes and the redemption
of such notes. The 5 per cent redemption fund now in the general fund of the
Treasury shall be transferred to the Federal reserve bank as a special trust
fund and shall be held intact and shall not count as a part of the reserve of
the bank.

The Federal reserve bank shall be authorized to issue its circulating notes.
Such notes shall be secured by the segregation of rediscounted paper, as de­
dcribed in the act, equal to 100 per cent of such notes outstanding or one
year exchequer notes of the United States Government hereinafter provided
for, outstanding the Federal reserve bank at par and up to an amount equal to one-half of such bonds deposited with the Treasurer of the
United States as security for national-bank note circulation. It shall pay for
these bonds by assuming the responsibility for the redemption and retirement
of the national-bank notes secured by them. Upon acquiring these bonds the
Federal reserve bank shall receive from the Government of the United States
in exchange for the 2 per cent bonds an equal amount of one-year exchequer
notes bearing 3 per cent interest. The Federal reserve bank shall give an
undertaking to the United States Government that it will renew such one-year
exchequer notes each year at maturity for 20 years. These notes will be made
to mature at various periods during a calendar year. So long as these notes
are outstanding the Federal reserve bank shall pay to the United States, out of
its earnings and before any dividends are paid upon the stock, a tax of 1½ per
cent on an amount of circulating notes equal to the amount of exchequer notes
outstanding.

The bill should provide for a national clearing house.

The charter rights of national banks should be so enlarged as to permit banks
to have branches within the city in which they are located, to establish branches
abroad and to exercise general trust company functions to be defined in the act.
National banks shall have the right to accept drafts of a character to be
defined up to an amount equal to one-half of their capital.
State banks and trust companies may be admitted to membership by conform­
ing to the same capital, reserve, and inspection requirements that natural banks
are obliged to meet in similar localities. The Federal reserve board shall have
power to examine any member bank.

The circulating notes of the Federal reserve bank shall be a first lien on all
the assets of the bank.

The Federal reserve bank shall have a first lien upon the assets of member
banks for any indebtedness due from them.

As far as feasible the Federal reserve bank shall be exempt from the payment
of all Federal and State taxes except taxes upon real estate. As far as feasible
the stock of the Federal reserve bank and the dividends thereon shall likewise
be free from all Federal and State taxes.
(Mr. Vanderlip, at the request of the committee, also submitted the following:)

WASHINGTON, D. C., October 21, 1913.

Hon. ROBERT L. OWEN,
Chairman Committee on Banking and Currency,
United States Senate, Washington, D. C.

Sir: In compliance with the request made by the members of the committee at my hearing yesterday, I am sending you a statement of the Federal reserve bank after a transfer of reserves from correspondent banks.

Such a statement, of course, can not be made with accuracy, nor can any figures be compiled with accuracy that will show the effect upon the reserves and upon the deposits of national banks, as there are too many variable elements to be considered.

The statement of the Federal reserve bank might be as follows:

<table>
<thead>
<tr>
<th>ASSETS</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash from stock</td>
<td>$100,000,000</td>
</tr>
<tr>
<td>Cash from banks</td>
<td>356,000,000</td>
</tr>
<tr>
<td>Cash from United States</td>
<td>150,000,000</td>
</tr>
<tr>
<td>Total</td>
<td>606,000,000</td>
</tr>
<tr>
<td>Exchequer notes</td>
<td>350,000,000</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>LIABILITIES</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Capital</td>
<td>100,000,000</td>
</tr>
<tr>
<td>Government deposits</td>
<td>150,000,000</td>
</tr>
<tr>
<td>Reserve deposits</td>
<td>356,000,000</td>
</tr>
<tr>
<td>Total</td>
<td>606,000,000</td>
</tr>
<tr>
<td>Circulating notes</td>
<td>350,000,000</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>RESERVE REQUIRED</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Against deposits</td>
<td>253,000,000</td>
</tr>
<tr>
<td>Against notes</td>
<td>175,000,000</td>
</tr>
<tr>
<td>Total</td>
<td>428,000,000</td>
</tr>
<tr>
<td>Excess</td>
<td>178,000,000</td>
</tr>
</tbody>
</table>

It will be observed that the bank’s holdings of cash will be sufficient to provide the minimum reserve of $253,000,000 against its total deposit liabilities, a minimum reserve of 50 per cent against $350,000,000 of notes issued in retirement of an equal amount of national-bank notes, and still have in excess of $178,000,000.

It is probable that banks in central-reserve cities and, perhaps to some extent, banks in reserve cities would find it necessary to rediscount at the Federal reserve bank in order to meet the drafts made upon them by correspondent banks removing their reserve balances. I would estimate that rediscounts of $100,000,000 would permit that to be done without undue strain upon the banks of reserve and central-reserve cities. It is obvious that the transition from the present system to any new system which would impound reserves in the vaults of member banks and in the Federal reserve bank should necessarily be made slowly and with great caution, and it would seem to me desirable that the board of the Federal reserve bank should be given latitude as to the various periods during which this transition should be made.

The figures that I have used are based on the abstract of the condition of national banks in answer to the call of June 4, 1913, as I did not have the later abstract at hand. Figures made up from the later abstract would vary slightly, but in a general way the foregoing will indicate the possible position of the reserve bank.

Respectfully,

F. A. VANDERLIP.

STATEMENT OF JACOB S. COXEY, OF MASSILLON, OHIO.

Senator O’GORMAN. Mr. Coxey, will you state your name, your residence, and your business activity?

Mr. COXEY. My name is Jacob S. Coxey.

Senator O’GORMAN. And what is your residence, Mr. Coxey?
Mr. Coxey. Massillon, Ohio.
Senator O'Gorman. And your business activity?
Mr. Coxey. I am in the stone-quarry business.
Senator O'Gorman. Have you read the pending bill?
Mr. Coxey. I have, sir.
Senator O'Gorman. Kindly state to the committee your views in regard to it.
Mr. Coxey. As I view this bill, I take it, you are trying to arrange a currency system that will transact the commerce of this country. But I think you should take into consideration the burden under the present system and under the proposed system that will be placed upon the producers of this country in obtaining the funds to exchange their products.

There are three Government functions, and this, the means of exchange, is the greatest of the three, that are necessary for the exchange of the commerce of the country. The first one is the means of communication. This one the Government has retained; that is, the postal system, and is operating that system at cost to the people. They engrave and print the postage stamps and furnish them at cost to the people. John D. Rockefeller, with all his corporations, if he needs 10,000 postage stamps for the use of those corporations has no advantage over the man who is tearing that brick building down over across the street when he needs only 1 postage stamp.

That the postal is a Government function, and that is being furnished at cost to the people, and when I say the stamps are being furnished at cost to the people the stamp simply represents the cost of the transmission of the mail that it is put upon. After it has done that it is canceled and has performed its functions.

Now, when we come to the second one, the means of exchange, you have granted franchises to private corporations. You have been creating, and do propose to create, under this bill the money at cost to these corporations, and then when even you, the creator, the Federal Government, needed or will need any of this money, as, for instance, you needed it in the building of the Panama Canal, you issued several hundred millions of dollars of interest-bearing bonds that were nontaxable, sold them to the banks, and the Government borrowed from the banks its own money and is now paying interest for the use of its own money. This system seems to me to be absurd.

When we come to the producers of the country, let us examine their burden. Last year President Taft called the governors of the various States together and he stated to the governors the necessity of establishing State banking institutions in order to lessen the burden that was placed upon the American farmer. He said to the governors that there were 12,000,000 American farmers, and that they were producing annually $9,000,000,000 of products upon a borrowed capital of $6,040,000,000, for which they were paying in interest and commissions in order to obtain that money 8½ per cent. This makes a total burden of $513,000,000 annually, taken from the statement of Mr. Taft, which burden is placed upon the tiller of the soil, who produces the products we are consuming in this country.

Senator Weeks. Do you think those figures as you have given them to us are accurate as to the rate of interest?
Mr. Coxey. Yes, sir; the average rate of interest is 8½ per cent.
Senator Weeks. I have heard those figures, and I do not know a single State, even in the South, where that rate was charged.

Mr. Coxey. There are Senators here from Western States where rates as high as that are charged, and I think they will bear me out in that statement.

Senator Reed. The average rate in my State of Missouri is about 5½ per cent.

Senator Bristow. It runs from 6 to 7 per cent in my State of Kansas.

Senator Shafroth. In mining sections of my State of Colorado it runs as high as 1 per cent a month.

Mr. Coxey. In the State of Ohio it is from 6 to 8 per cent; 8 per cent is the average.

Senator O'Gorman. What changes would you propose in the pending bill?

Mr. Coxey. I want to show you first where the burden lies under the present system and will not be lightened under the pending bill. President Taft called attention to the burden upon the tiller of the soil of $513,000,000 annually. I see from the bank statements that the other producers outside of the farmers are paying for the use of that money and bankers' credit which the Government is creating at cost to the banking institutions, besides legalizing 85 per cent of the banks' credit, which they, the bankers, are levying a toll upon to exchange the products, because the bank credits are exchanging the products from the producer to the consumer, exactly the same as the real money. I find from the bank statements that there are about $17,000,000,000 of deposits and $13,500,000,000 of loans out of those deposits, and one billion and a half of real money in the banks as a foundation for those loans. That is nine of bankers' legalized credit to one of real money. Now, an average of 6 per cent upon that $13,500,000,000 is nearly $800,000,000 annually for the use of those banks' credits and money to exchange the products from the producer to the consumer.

Now, the banks, in order to inflate their credits higher do as one bank president from Columbus, Ohio, told me last spring, that he wanted to use his bank reserves and he went to New York—he told me this in New York at the Waldorf-Astoria Hotel—he said, "Our daily balance of legal reserves in New York amounts to about $100,-000," and he went to four different banking institutions and tried to get it through their noodle—that is the expression he used—that they would make more money by carrying out his plan, and his bank would make more money if they would make a loan to his bank of $100,000, upon which they would pay 4 per cent, and the New York bank agreeing to make the loan, but the proceeds of that loan should be held there with the New York bank as their, the Columbus bank's, legal reserve, and then that the New York bank should pay them 2 per cent upon their daily balance. That would be making a profit to the New York bank of 2 per cent and make it cost the Columbus bank 2 per cent, and it would allow the New York bank to loan out 75 per cent of that loan to their customers there at the market rates and then redeposit 9 per cent of the reserves of the 25 per cent in the reserve bank, they to receive 2 per cent on this reserve. That allowed the Columbus bank to withdraw the $100,000 of their cash reserves from New York, which the Columbus bank did loan at Co-
lumbus at 6 per cent. The Columbus banker got that through, and
that is the way he is doing to-day, utilizing his reserves and extend­
ing his bank credits in that manner.

Now, the question comes as to the remedy I will suggest here. You
must arrange under this bill to not only furnish the money necessary
for the exchange of the products and the commerce of this country;
but to furnish the money for all public improvements and for the
building and equipping of our railroads. It will take over a billion
doors annually for the equipment for our railroads.

Under the present system those railroads must issue bonds bearing
interest and sell those bonds to the banks in order to borrow this
money. Under the present system we must do the same so far as
public improvements are concerned. Take, for instance, the public
highways. At a road convention last fall, at Atlantic City, I spoke
up on that question, and I said the most important thing is the
financing of the highways; and that Atlantic City road congress
was inclined to ask the Government for Federal aid. I said it is not
Federal aid we need, but it is a Federal duty. When this Govern­
ment imposes a tax of 10 per cent on State issues of currency, it pro­
hibits its different subdivisions—the States, cities, counties, and town­
ships—from issuing a currency in order to relieve any stringency and
to make any public improvements. When they do that, then it is the
duty of the Federal Government to furnish this money at cost for all
public improvements by allowing the States to issue their noninterest­
bearing bonds to run for 25 years, and then deposit these bonds with
the Secretary of the Treasury, when it shall be mandatory upon the
Secretary of the Treasury to issue the face value of the bonds in full
legal-tender money.

Senator Nelson. Notes of the Government?

Mr. Coxey. Real money. I contend that the only real money is
the fiat of the Government. Money is simply an idea of Congress
enacted into law. It is a representative of value, and should never
have a value of or in itself. And as it passes from the Government
under this system, if these bonds were deposited with the Government
and the face value of them would be issued in full legal-tender
money, the cost of the engraving and distributing of this money
would be charged against this issue, and that would not exceed over
1 per cent. Ninety-nine per cent would be forwarded to its subdi­
visions, which they would have to use for the purpose of making pub­
lic improvements.

Now, under this plan you have the State, county, township, or
municipal noninterest bonds deposited as security for this issue of
legal-tender money. Then they start the people to work to make
improvements, and as the service is rendered or the material is fur­
nished this money is turned out, and it then represents that service
or that material and that value created.

As to the redemption or repayment of this money, levy a tax as
you do now, and instead of paying 4 per cent interest return 4 per
cent annually to the Government, and as it is returned and retired
annually it can be canceled. It has performed its function, and in
25 years you will have paid off the noninterest-bearing debt of all the
subdivisions of this General Government and there is no bonded
debt left at all, as the money has been furnished at cost, the same as
postage stamps are now.
Senator Reed. Suppose the people do not take that money?

Mr. Coxey. They would be very glad to take it when it is made legal tender for debt. There should be no money issued that would not be a full legal tender for all debts.

Senator O'Gorman. You may proceed, Mr. Coxey. You were speaking of the city of New York, and I was somewhat interested in that.

Mr. Coxey. The city of New York has a bonded indebtedness of about 1,100 millions of dollars. They are not paying off the principal; they are simply levying a tax rate in order to pay the interest, and they are pyramiding the principal.

There was an issue within the last year in regard to the building of the subway. They needed $200,000,000 to do that. They should have passed this law, and if this law were put into effect the city of New York could have issued its noninterest-bearing bonds for $200,000,000, running for 25 years, and could have forwarded those bonds to Washington and have had the face value of those bonds issued in full legal-tender money, deducting 1 per cent to pay for the engraving and printing and distributing by the Government. They would have had $198,000,000 to pay for all these subways, and then out of the revenues of the subways they could return to the Government annually $8,000,000, and in 25 years the entire bonded indebtedness would be paid off. Now, then, they propose issuing, and are now issuing, $200,000,000 of 5 per cent bonds, which they will sell or have sold to the banking syndicate, and they will pay interest for 50 years and still owe the principal.

I claim that this is a correct principle, Mr. Chairman. It is the duty of the Government, I contend, this being a Government function, that all money necessary for all public improvements and utilities should be furnished at cost to the people, the same as the postage stamps are now.

Now, I have illustrated to you the plan of public improvements. When it comes to the plan of furnishing the money at cost to the producers to exchange their products there should be a Government bank established in every municipality of over 1,000 population. In towns under 1,000 and over 500 population this money should be handled through the post office. These banking institutions—take, for instance, in the town where I live. We have five banking institutions. The economical way of handling that would be to have one Government bank, with a sufficient volume of money on hand there for the needs of the community. It should be the same in every municipality of over 1,000 population. That money should be furnished to the people at a tax of 2 per cent. It will cost one-half of 1 per cent to pay for the operating expenses of the bank, the furnishing of the money, insuring the property pledged, and all necessary expenses. That deducted from the 2 per cent will leave a net revenue to the Government of 1½ per cent. That means for the total amount of money loaned by the Government a total revenue to the Government, after deducting expenses of operation, of $15,000,000 upon every billion dollars of loans.

You can see from the statement of President Taft and from the bank statements that there are about $20,000,000,000 now being loaned by the banking institutions to the people in the shape of $9 of bank credits to $1 of real money for the exchange of our commerce. If
we take and gradually substitute this $20,000,000,000 of legal-tender money that should be full legal tender for all debts and substitute it in place of the same amount of bank credits being used now this would establish a banking system which would give a revenue of $300,000,000 annually from this source, besides saving to the producers $1,200,000,000 annually in interest charges.

Senator SHAFROTH. What security would you have for the obtaining of money under those circumstances?

Mr. COXEY. The same as the banks now take. I will illustrate with my own business. I quarry stone and grind it into sand. I supply some of the principal steel works of the country, and have been supplying the steel works of the country for 32 years. When I ship out a carload of sand to-day we get the railroad weight to-morrow, and we make an invoice against the party to whom we have shipped the sand. We attach a draft and bill of lading to the invoice, take it into the bank, and the banker takes his rake-off of 8 per cent and credits me with the balance. I make that draft due and payable on the 20th of the month following the month of shipment. If it is shipped to-day, that account will be due on the 20th of next month, and I make that draft for that number of days and they discount it and place the balance, after deducting the discount, to my credit.

When they remit for this—they may remit direct to the bank or they may remit to me, but in every case that remittance is taken in and the draft taken out. If it is not paid on the day that it is due, it runs on and the interest is charged up to me. That is one system.

Under that system the banks are furnishing the means to exchange the products; they are furnishing in this case the working capital—the money with which to do business—because we have first the money for the investment in the enterprise which is necessary. In a case of this kind the bank furnishes the working capital, but they get their interest in Ohio of 8 per cent for doing it. That is one means.

Another means would be for the people to bring in their tax duplicate or tax receipt and loan direct to all people upon their taxable real and chattel property.

This Government fixes a value upon your property and levies a tax upon that property, and compels you to pay it, and therefore the Government ought to be compelled to furnish you the money at cost upon it in case you needed it for the exchange of your commerce.

Take, for instance, the farmer in the West. There comes a time when he wants to turn his corn into beef or turn his corn into pork, and he can go into the bank and put up his tax receipts to the bank and borrow enough money to purchase the cattle or the pigs to turn that corn into beef or into pork, and then as he ships it out he can cancel his obligation to the bank.

Senator NELSON. Mr. Chairman, I would like to suggest that we are running pretty late. It is now 10 minutes of 6.

Senator O'GORMAN. How much longer will you be likely to take?

Mr. COXEY. If there are no questions from the committee, there is nothing further that I desire to say.

Senator NELSON. Now, what have you to say about this bill?

Mr. COXEY. I think it should be made to take into consideration and lessen the burdens of the borrower. You do not propose to readjust the interest rate in this bill at all. Here is an interest rate of at least 6½ per cent all over the country.
Senator Nelson. Do you approve this bill?
Mr. Coxey. No, sir.
Senator Nelson. What are its radical defects?
Mr. Coxey. In the first place, I do not believe that any money should be issued unless it is made a full legal tender for all debts, and issued direct by the Federal Government.
Senator Nelson. What next?
Mr. Coxey. And that it should be taken out of the control of the bankers, who control the commerce of this country.

There is a little item that I have in my vest pocket here that I cut out of the New York Times last Sunday, which shows that there is very little car buying. Now, the average man reading that probably would not see much in it. It shows what the railroads purchased last year in cars. They purchased last year 235,000 cars. This year they have purchased for the first nine months only 88,000, a falling off of over 60 per cent.

Senator O'Gorman. Why is that?
Mr. Coxey. I have an idea what it is. I can give you my own reason for it.

Senator O'Gorman. Of course that is all we want.
Mr. Coxey. The gamblers in New York had gotten last year's stocks up to a high point, and then they commenced to unload, and they have sold and sold and sold them out at the high prices. Now, then, they are commencing to break the market, and my contention is that the people that control the money volume also control the transportation of this land and control its commerce in the palm of their hand. They can make times good or they can make times bad, because they have the interlocking system of directors in all the railroads and banking institutions, so that they can order the railroads to buy cars and other equipment, and this makes times good, or they can order those railroads to stop buying, and when they stop buying it simply stagnates the great manufacturing plants of the country. They cut off the orders from the steel plants, and that throws hundreds of thousands of people out of employment. My business in the last four months has been cut in two. It is only 50 per cent of what it was last year at the same time, and simply from this fact. Now, the railroads of the country need the cars, but the railroad directors and the money interests have ordered the railroads to stop placing further contracts for material, and in doing that it is bringing on a stagnation of business all over the country, and there will be hundreds of thousands of people out of work just through that fact. Now, that should not be allowed to go on, and therefore, while it is not germane to this bill, yet I am of the opinion that we should own, operate, and control the railroads.

Senator O'Gorman. The same as we ought to own and control the banks?
Mr. Coxey. Yes, sir.
Senator Nelson. You think the Government should control all banks?
Mr. Coxey. Yes.
Senator Nelson. You think all banks should be controlled and run by the Government?
Mr. Coxey. Yes.
Senator Nelson. Wouldn't that make a pretty big army of officeholders?

Mr. Coxey. I am not afraid of an army of officeholders. We have a pretty large army now. They have never scared me any.

Senator Nelson. Now, what other defects are there in the bill here?

Mr. Coxey. The main defects are simply these: That you are not going to reduce the interest rate. That is the principal thing. It is the burden that is placed upon the producer's back that should be lightened, and this will not lighten it.

Senator Nelson. Would you have these notes redeemable in gold?

Mr. Coxey. No, sir.

Senator Nelson. What would you have them redeemable in?

Mr. Coxey. I would have them redeemable in the products of labor and through taxation.

Senator Nelson. What would be the basis of issue for these notes?

Mr. Coxey. The basis of issue of the notes should be legal-tender money issued, based upon State, county, township, and municipal bonds, and for the commerce of the country the notes would be issued upon the collateral that the people would put up.

Senator McLean. What would the total reach?

Mr. Coxey. Whatever the necessities of the people would be.

Senator McLean. You say there are about $20,000,000,000 of obligations out now.

Mr. Coxey. And my idea is that instead of having the bankers do this for us and charging an exorbitant toll we should utilize our own credit and get it at cost.

Senator Nelson. Your scheme is very interesting, and I would suggest that you prepare a skeleton bill giving us an idea of the legislation that you think ought to be enacted and leave it with the committee. I understand that you believe the Government should take over all the banks?

Mr. Coxey. No; I believe that the Government should establish banks itself.

Senator Nelson. You believe that the Government should establish its own banks?

Mr. Coxey. Yes. The first thing the Government should do would be to build a bank in every town, the same as the post office, and they should issue to pay for them legal-tender money. I told President Roosevelt——

Senator Nelson (interposing). You would not have that money redeemable at all?

Mr. Coxey. Only through taxation, as it comes in through the revenues of the Government.

Senator Nelson. You would not issue Government bonds, then?

Mr. Coxey. No; no bonds at all. There never should have been a single interest-bearing bond issued by the Government.

Senator Nelson. Well, now, your scheme is very interesting, and I wish you would prepare a skeleton bill and file it with the committee. That is what other gentlemen have done who have come here with plans of their own, and we can judge of it better when you put it into concrete form. You are a man of a good deal of business experience and I can see that you look at it from the standpoint of the borrower.
Mr. Coxey. Yes; I belong to that side. I have been paying 8 per cent interest for the last 35 years.

Senator Nelson. Then you are the class of man that we want to hear from, rather than the bankers.

Mr. Coxey. Senator, that is the position that I took when I tried to get a hearing here.

Senator Norris, of Nebraska, requests that I state how goods purchased in foreign countries would be paid for in case the Government issue full legal-tender money under my proposed plan.

Just the same as goods are paid for under the present system, viz, if goods are bought abroad and shipped to this country, usually they have drafts attached to invoice and bill of lading, which is sent through some bank to the purchaser, who then pays the draft either by his check or cash. This releases the bill of lading and he obtains the goods. The bank then remits to the foreign banker that which he, the foreign banker, desires. It may be foreign exchange or it may be gold or silver bullion or other American products or securities. Money between countries has no particular significance. It can only go to the United States line. If the banker desires gold or any other product it must be purchased at the market price, just the same as if you want a draft to pay £100 in London.

That which most concerns us is to arrange a system to exchange our own products at cost and we will have to settle foreign trade balances as we have been doing for the last 50 years, with commodities such as gold, silver, steel, cotton, and other American products and securities.

Senator Nelson. I think, Mr. Chairman, if he will file with us a skeleton form of his bill we can then go over it.

Senator Shafroth. And put in any suggestions that you want to make.

Senator O'Gorman. Without objection, that will be done. We will now adjourn until 10.30 to-morrow morning.

(The witness furnished the following for insertion in the record in response to the above request:)

Mr. Chairman and Gentlemen of the Committee: A request was made of me by Mr. Nelson and the chairman that I incorporate my ideas in a skeleton bill, which you will find attached. The first one is to furnish a money medium to all of the people at cost through a system of Federal banks established in all municipalities, towns, and villages over 1,000 population and through post offices under 1,000 and over 500 population; these loans to be made upon their real and chattel property, evidenced by the tax receipt and duplicates in the various localities to the amount of the assessed value thereon; also on cattle, hogs, sheep, horses, all farm products, and lumber, ore, minerals, coal, stone, sand, and all raw materials of every nature and description, as well as all manufactured products and plants, the charge or tax for these loans to be at the rate of 2 per cent per annum, payable semiannually. In case of long time, 25-year loans, which should be made so as to enable the farms to be occupied and tilled and the workers in our cities to obtain homes and an opportunity given the farmers and workers to live decently and pay for their farms and homes, and allow the enterprising citizens of the United States an opportunity to develop the resources of this country, therefore the rate of return of the principal of such loans should be no less than 4 per cent per annum, the principal, in whole or in part, to be payable on or before 25 years. Such reasonable safeguards should be taken by the Government officials granting such loans as to insure the return of the principal of such loans as well as the tax of 2 per cent upon the same. The amount to be loaned upon the raw and unfinished material should be determined by the amount of the actual cost in labor and material expended upon the same, and upon the finished products, if in transit,
the invoice value thereof. In case of wheat, cotton, corn, and other farm products and all finished and raw products in warehouses loans should be made to the face market value thereof.

The second one is to provide for public improvements and employment of the citizens of the United States, to encourage industry and produce prosperity, and to procure money to purchase and pay for public utilities, and for the redemption of such money.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever any State, Territory, county, township, municipality, or incorporated town or village deeming it necessary to make any public improvements and give employment to unemployed citizens of the United States, or to procure money for the purchase of or construction and operation of State capitols and all State institutions, railroads, ship canals, waterways, harbors, levees, bridges, ditches, tunnels, telegraphs, telephones, public roads or highways, court houses, street car lines, waterworks, gas and electric-light plants, schoolhouses, public halls, libraries, market houses, sewing and paving streets, public parks, or any other public utility so as to furnish employment for all surplus or unemployed citizens in beautifying and improving the country when there is a surplus production or no demand for labor in production at living wages, they shall deposit with the Secretary of the Treasury of the United States a non-interest-bearing 25-year bond and not to exceed one-half of the assessed valuation of the taxable real estate, exclusive of all improvements thereon, less all outstanding and existing indebtedness in said State, Territory, county, township, municipality, or incorporated town or village, and said bond or bonds to be retired at the rate of 4 per cent per annum.

Sec. 2. That whenever the foregoing section of this act shall have been complied with it shall be mandatory upon the Secretary of the Treasury of the United States to have engraved and printed Treasury notes in the denominations of $1, $2, $5, $10, and $50 each, which shall be a full legal tender for all debts, public and private, to the full value of said bond, and deliver to said State, Territory, county, township, municipality, or incorporated town or village 99 per cent of said notes and retain 1 per cent for the expense of engraving, printing, bookkeeping, disbursing, and taking care of this department.

Sec. 3. That on and after the passage of this act every State, Territory, county, township, municipality, or incorporated town or village may deposit their non-interest-bearing bonds in compliance with this act in order to give employment to any idle man or woman applying for work, and the rate shall be not less than $1.50 per day for common labor, and not less than $3.50 per day for team and labor, and that eight hours per day shall constitute a day's labor under the provisions of this act, the same rate to be paid to both men and women.

Sec. 4. That any State, Territory, county, township, municipality, incorporated town or village issuing non-interest-bearing bonds under the provisions of this act shall levy and collect an annual tax on all taxable real estate, exclusive of all improvements thereon, of the State, Territory, county, township, municipality, incorporated town or village depositing non-interest-bearing bonds sufficient to pay into the United States Treasury each year not less than 4 per cent of the total amount received from the United States Treasury until the whole amount shall have been paid, and that whenever these Treasury notes are returned to the Secretary of the Treasury at the annual payments of 4 per cent they shall be retired, canceled, destroyed, and not again reissued. In case either gold, silver, or any other lawful money shall or may be sent in lieu of the Treasury notes issued on any non-interest-bearing bond deposited under the provisions of this act the Secretary of the Treasury shall hold or retain such lawful money aforementioned until the Treasury notes issued on non-interest-bearing bonds deposited by State, Territory, county, township, municipality, incorporated town or village shall come in or be presented through the regular channels of business with the Secretary of the Treasury when he shall release the lawful money so held and retire, cancel, and destroy as hereinbefore mentioned.

Sec. 5. That this act shall be in full force and effect from and after its passage and all acts and parts of acts in conflict herewith be and they are hereby repealed.

(Whereupon, at 5.55 p. m., the committee adjourned to meet at 10.30 o'clock a. m. Friday, October 24, 1913.)
Mr. Kent. My name is Fred I. Kent.

Senator O'Gorman. And your banking experience and activities?

Mr. Kent. I was connected with the First National Bank of Chicago until 1909, since which time I have been one of the vice presidents of the Bankers' Trust Co. of New York.

Senator O'Gorman. Where do you reside?

Mr. Kent. In New York City.

Senator O'Gorman. And you have been engaged how many years in banking activities?

Mr. Kent. About 27 or 28 years.

Senator O'Gorman. You have been asked to come here to give any views you care to offer with respect, particularly, to the subject of foreign exchange and any kindred subjects. Are you familiar with the bill now before the committee?

Mr. Kent. Yes, sir.

Senator O'Gorman. What general observations do you care to make on the subject to-day?

Mr. Kent. Understanding that that was what you desired, I desire to make a preliminary statement that I think will serve as a foundation upon which the committee may ask me questions, if they so desire.

Senator O'Gorman. Yes.

Mr. Kent. One very important and principal reason why it is necessary that a proper banking system be established in the United States is our present lack of properly concentrated effort to protect or gold supply in times of need.

In the fall of 1907 the banks engaged in the foreign-exchange business imported, including arrivals in January, about $107,000,000 in gold. But there was a period of time extending a little over 48 hours during which there was hesitation upon the part of the bankers as to how to act. This uncertainty resulted in the stoppage of the purchase of foreign bills for a sufficient number of hours to multiply the uneasiness that was spreading throughout the country.

If there had never been a refusal or hesitation on the part of any banker in the country to purchase drafts drawn against cotton, grain, meat, etc., the great congestion that occurred in the credits drawn against such commodities would never have happened. If we had had a central bank in the United States at that time empowered to do a foreign-exchange business and purchase gold and bullion and
rediscount for bankers, the panic would unquestionably never have developed.

In the first place, the banks themselves would not have been afraid to purchase the exchange, as they would have known that they could sell it to the central bank if unable to use it, or, in the case of domestic shipments, that they could have rediscounted the bills at the central bank.

In the second place, the central bank itself would have been in active operation making purchases of bills either from the banks, if it had only had power to buy bills from them, or otherwise in the market, and from the banks.

The strained conditions that were developing could have been recognized and anticipated, and there would never have been one moment during which any dealer in our commodities would have been at a loss to know whether he was going to be able to finance his sales.

With a system of 12 regional banks, such as are contemplated in the present bill under consideration, there is considerable doubt as to whether conditions would not have been worse rather than better, for the expansion would undoubtedly have gone further before a break came, and it is doubtful whether divided regional banks could operate with any greater certainty and security in the foreign market than the regular banks which were then dealing in foreign exchange.

If, instead of 12 regional banks there had been 4, it is also doubtful whether they could have accomplished anything more than was done by the foreign exchange banks which imported the $107,000,000. There is a possibility, however, that the momentary hesitation in the purchase of bills which vitalized the under current of fear might have been avoided. One reason why four regional banks would not have been as effective as a central institution would lie in the fact that there would of necessity be competition between them, and questions of profit and loss would inevitably come up when it came to the point of buying gold.

Supposing these four regional banks were situated in New York, Chicago, New Orleans, and San Francisco, we should probably find that the New York regional bank would purchase foreign exchange in the New York market, which would cover commodities of many descriptions; we should find that the New Orleans regional bank would purchase cotton bills; that the Chicago regional bank would purchase meat bills; and that the San Francisco regional bank would purchase Oriental exchange. The New York institution, because of its situation in the principal import and export city of the country, would be the natural one to import gold. In order to be effective in its undertaking, it might be necessary to take off of the hands of the New Orleans and Chicago regional banks the exchange that they were carrying. If this were true the question of rate might become a cause of considerable friction between them.

For instance, if the New Orleans and Chicago regional banks purchased, say, 60-day sight bills on London at 4.84 1/2, and carried them for, say, for 30 days, and the market demand exchange dropped in the meantime, because of the conditions that had developed to, say, 4.84, the New Orleans and Chicago banks would meet with a heavy loss if they turned their 60-day sight bills purchased under such circum-

Federal Reserve Bank of St. Louis
stances over to the New York regional banks at the market rate of the day. This would have represented a rate of 4.84, less 30 days' interest at the prevailing London rate, which might easily have made the value of the bills only 4.81\(^{\text{1/2}}\). If therefore the New Orleans and Chicago banks turned their bills over to the New York regional bank, they would have lost the use of the money for 30 days, and in addition 3 cents a pound, or $3,000 for every £100,000 delivered by them. They might argue that if they could hold these bills until maturity, the demand rate might recover and that consequently they might receive a proper interest on their investment. The New York regional bank would not, of course, be willing to pay any more for the bills than the market warranted, and if the Federal reserve board in Washington attempted to straighten out the squabble, valuable time would be lost that might endanger the whole position.

If the Federal bank ruled against the New Orleans and Chicago banks and forced them to sell their exchange at a loss, it would unquestionably make them feel as though the New York regional bank had been favored, which might prevent a proper desire to cooperate in the future. If the New York institution were forced to pay a higher rate for the bills than the market warranted, it would naturally feel abused, and its managers could properly say that there was no reason why the New York bank should bear the burden of bringing in gold, which was of value and necessary for the good of the whole country.

In the case of a central bank, the purchase of foreign exchange could be made anywhere in the United States and could be handled as the needs of the moment seemed to require. The credits for all bills purchased could be passed through the New York branch of the central bank at once. This institution would then be in a position to operate as the market seemed to require and would undoubtedly be able to protect itself from being caught with quantities of bills that would represent a large loss if turned into gold. The same conditions would be true in the case of balances held abroad. If four separate regional institutions carried their own balances, they would not be worth as much to any one of them in case of necessity, and if the gold operations were to be carried on by the New York bank and it required the balances of the other three regional banks in order to properly protect the country, friction might again develop, as the regional banks outside of New York might refuse to sell their exchange at the low rates that might prevail, unless forced to do so. In the case of one central bank such balances would all be under the control of one manager and could be used to the best advantage.

Balances in account with foreign banks might at times be the principal asset that the regional banks in this country would have to purchase gold, for they could not carry sufficient time bills in their portfolio at all times of the year to give them very much power if trouble should develop at certain seasons. This is true because a very large percentage of the exports from this country from, say, the middle of August on to, say, the middle of February are in 60 and 90 day sight bills, whereas the balance of the year the percentage is very much smaller. The lightest months of export are those of May, June, July, and August, and practically the only 60 and 90 day sight bills that are purchaseable during those months are finance bills issued...
by bankers who expect to cover them with shipments against grain and cotton which mature in the fall. The same reasons which would cause the issue of the finance bills by other bankers might make them unprofitable for regional banks to purchase and carry to maturity.

If the regional banks pay no interest on deposits, they could well afford to carry large balances with European banks and accept the rates of interest that such banks pay upon balances. These rates would probably vary from 1 per cent to, say, 4 per cent at different periods of the year in different years. Such balances could be used to buy bills of exchange in the foreign bill markets, when the return could be improved by so doing. Buying of this nature would not in any way compete or conflict with the business of the ordinary American foreign exchange bank.

If we had had a central bank in 1907, we unquestionably could have borrowed gold of the Bank of France against the deposits of bills or other security in the same manner that the Bank of England did, and so have directly relieved our situation, and much sooner than was otherwise possible. Foreign interests at that time would have been very glad, indeed, to have advanced gold under such circumstances, if they had had any bank of great responsibility to deal with that represented this country. The individual banks all did their part, but they could not operate with the same effectiveness that a central bank could have done had it been in existence, as their power was divided, and each proposition had to be based largely on the question of profit, even though it is true that the banks of New York paid out at that time many thousands of dollars in order to obtain gold and currency which they shipped to country institutions without such costs.

If we have 12 regional banks, no one of them could have sufficient capital and power to command the credit that would be necessary in order to have direct dealing with the European central banks, whereas in the case of a central bank it would command such respect that it could take part with the great European banks in protecting each other. Even one of four regional banks might not be large enough to meet the requirements. This might be true even if such bank were larger in capital and deposits than the European central banks, for those managing the foreign institutions would always recognize the fact that the four regional banks were only as strong as the power of the Federal board to hold them together, because they would know that in case of crisis in this country such board would require the New York regional bank, for instance, to loan to any of the other regional banks, and if this were done because of inflation in some other portion of this country, the foreign banks would be the first to take fright. With a great central bank, properly managed, the United States, in being able to take part with the great European banks in relieving strained situations that might occur in different localities, would be in position to command help for this country when it might need it and other countries did not.

In the case of world stringency every country would, of course, have to look out for itself, and the question of where gold went would depend largely on trade balances and relative financial conditions. It would seem wiser for this country to maintain the free-gold position that prevails in England rather than the close position of France or Germany.
Senator Hitchcock. Will you explain what you mean by the “free-gold position” in England and the contrary position in France?

Mr. Kent. Banks throughout the world and investors realize that when the Bank of England rate goes up high enough for it to make it profitable for them to invest in bills on the English market, if it is necessary for them to ship gold in order to obtain credits to use for that purpose, they can get it back whenever they may wish. In the case of France, they could not do so, because the Bank of France might pay out in silver instead of in gold. And in Germany that would not be true, because if the Reichsbank should give the hint to the other German banks that it did not desire to have gold shipped out of Germany it would be almost impossible to get it.

Senator Hitchcock. And for that reason, then, they are more ready to respond to an increased rate of discount in England and ship their gold in there, because they know it can be secured back again?

Mr. Kent. Yes.

Senator Hitchcock. Upon proper commercial action.

Mr. Kent. Exactly. And I think this country should be on the same basis.

Senator Hitchcock. I want to get you to put in the record that process which results in bringing additional gold to England as soon as the rate is raised. Now, suppose the Bank of England raises its rate from 4 per cent to 4 1/2 per cent, does that mean that a large capitalist on the Continent can get a better return on his money in London than he could before the action of the Bank of England?

Mr. Kent. Yes; and I have that explained a little further on in my statement in a way that I think will answer your question.

Senator Hitchcock. Let me put this further question: Then, if he has a credit in a London bank, all he has to do is to notify them to buy paper for him?

Mr. Kent. Yes.

Senator Hitchcock. But if he has not a credit there he must ship gold to London in order to make the loan?

Mr. Kent. Yes; unless exchange can be purchased in his country.

Senator Hitchcock. At better rates than it would cost to ship gold.

Senator Hitchcock. And that is the method by which the Bank of England attracts gold to the country, is it?

Mr. Kent. Yes.

Senator Hitchcock. Now, can that same proceeding be made possible in this country?

Mr. Kent. It can; and I will endeavor to explain how.

England profits through its position because it can command gold from all parts of the world when required, as those who ship it know that they can get it back when occasion demands; whereas, in France and Germany there is no such freedom. We do not wish to place ourselves in a position where gold can not be obtained from us if others have the right to it, for it is one that carries essential weaknesses. We could not, of course, do this in any event without default, if the exchanges were going against us.

Senator Hitchcock. Let me interrupt you once more. Nevertheless, the fact is that the rate of the Bank of France is lower than the rate of the Bank of England, and more steadily maintained.
Mr. Kent. Oh, it is only taken advantage of in France.

Senator Hitchcock. But borrowers get money at a lower rate in France than they do in England.

Mr. Kent. Yes; that is true. But it applies more to the commercial business of France; it does not attract gold. If the Bank of France wanted to attract gold it would either have to raise its rate or pay for gold as it has done in the past.

Senator Hitchcock. Well, the Bank of France has more gold than the Bank of England.

Mr. Kent. Yes. But it is probably considered that it has enough gold or it would raise its rate. But of course it can maintain its gold reserve, because it can pay out in silver.

There might be times that it would be advisable to delay such shipments when we could not do so without injury to our credit, but there might be other times when we might prefer not to ship gold, that it would be most inadvisable not to do so. In other words, we should not establish a central bank or regional banks with any expectation of fighting for gold, but more with the idea of being in position to cooperate with the other nations and to use our own resources to the best advantage.

It must not be expected that our bank rate will be as effective internationally when our new banking system is established, nor for many years after, as is the case at present with that of the Bank of England. One reason for this is because our exports and imports, as well as those of many other countries, are financed by drawings upon English banks.

For example, take our exports. We will say that $10,000,000 in 60 and 90 day sight bills are purchased by the foreign exchange banks in New York during a certain day; that the Bank of England rate is 4 per cent, and that the rate for money in New York is 4 per cent, and for the purpose of explanation will consider the demand rate of English exchange at a low enough point to justify the proposition.

Now, if the Bank of England raises its rate from 4 to 5 per cent, and the private rate of discount, which is the one that would be applied to the $10,000,000 in export bills referred to, followed the Bank of England rate and was raised from 3½ to 4½ per cent, the banks which purchased the bills instead of discounting them at 4½ per cent might prefer to hold them until maturity, as they could expect a better interest earning than would be possible if the money were invested in this country.

Senator Hitchcock. Well, now, just explain that a little further, will you please? What bank would purchase those bill—New York banks?

Mr. Kent. New York banks, Chicago banks, New Orleans banks, Philadelphia banks, one or two banks in Pittsburgh——

Senator Hitchcock (interposing). Those bills consist of credits in London, do they?

Mr. Nelson. No.

Mr. Kent. I can describe it better, possibly, by telling you of an actual bill. Suppose a seller of cotton in Dallas, Tex., has a credit opened by a buyer in Liverpool for cotton the equivalent of about £10,000.

The Liverpool buyer authorizes the seller in Dallas to draw upon, say, the Bank of Liverpool (Ltd.), at 60 days sight to cover the cost
of the cotton. The Dallas seller draws such a bill, takes it to the bank in Dallas, and attaches to it bills of lading for the cotton and such other papers as are necessary.

Now that seller of the cotton becomes also a seller of foreign exchange, because he has his bills drawn at 60 days' sight on the Bank of Liverpool (Ltd.) for £10,000.

Senator Nelson. With a bill of lading attached?

Mr. Kent. With a bill of lading attached.

Senator Nelson. A commercial bill?

Mr. Kent. Yes. He wishes to obtain his money at once. In order to get the best rate he usually applies to brokers. Those brokers go to all the New York banks, the Philadelphia, Chicago, or New Orleans banks, possibly, that are buyers of exchange and ask them for the best rate that they will pay for this £10,000 bill of exchange drawn at 60 days' sight on the Bank of Liverpool (Ltd.). The seller of the exchange will accept the best rate.

Senator Hitchcock. Well, then, the lower the rate of interest in London at that time the higher the price they could get for the bill?

Mr. Kent. Of course, it would also depend upon the price of demand exchange, other things being equal. I think if I go on a little further I can explain it more fully.

Senator Nelson. Right here I want to ask you this question, if it is not true that there are only three ways in which we can import gold here. One is by commercial bills, another is by finance bills, and the other is by actual shipment. Is not that true?

Mr. Kent. Well, actual shipments must be paid for by something.

Senator Nelson. I know; but I mean gold is brought here either on finance bills, commercial bills, or shipped.

Mr. Kent. Or, you may say, by balances abroad.

Senator Nelson. Well, that comes through bills of exchange, unless the gold is actually shipped.

Mr. Kent. Originally; yes. That is, balances may be built up by banks in this country with their correspondents abroad by means of commercial bills that they may use to purchase gold.

Senator Nelson. Yes.

Mr. Kent. And I will take that question up also.

Now, if these same banks required demand exchange in order to keep their balances good, it might be profitable for them to ship gold to make such balances rather than discount the bills.

Senator Hitchcock. That is another reason, then, why raising the discount rate in London draws gold there.

Mr. Kent. Yes.

Senator Nelson. Let me ask you this question here: Before you can discount that bill that must be accepted by the drawee, must it not?

Mr. Kent. Yes, sir.

Senator Nelson. That is, the London bank.
Mr. Kent. The bank in Liverpool would have to accept the bill. But you can secure discount upon it before its arrival; that is, the bank which purchases that bill of exchange might arrange with a discount company in London by cable for a rate at which the bill would be discounted upon arrival. Then the bill will be sent for acceptance and immediately turned over to the discount company, and they would deposit the proceeds with the London correspondent of the bank that had purchased the bill.

Senator Nelson. Yes. But where a bill of lading is attached to the bill of exchange it is not necessary to deposit any security. The bill of lading pays for the bill of exchange.

Mr. Kent. Yes. But the bill of lading is given up to the acceptor bank.

Senator Nelson. Why, of course; and that is where it gets the money out of it.

Mr. Kent. That is its security to protect it from the party for whom it accepts the bill?

Senator Nelson. Certainly.

Mr. Kent. Some bills at 60 days sight are drawn upon merchants, and then it is the custom not to deliver the bill of lading upon acceptance, but only upon payment.

Senator Nelson. Yes.

Mr. Kent. Now, if the bank rate were raised by a central bank in New York City, foreign bankers would not have any bills drawn upon us at 60 and 90 days that they would be tempted to hold to maturity.

The result would be that the rise in our bank rate, in so far as it changed the international situation in our favor, would apply only to stop the withdrawals of bank balances that foreign banks might have in this country, provided their arrangements enabled them to obtain a higher interest rate on such balances in case of a rise in the bank rate and such moneys as they might wish to loan upon securities in this market, if the security rate were affected, or purchase bills in our bill market, should such a market be successfully established.

Foreign banks, however, would not be sufficiently conversant with the bills in this market for some time to warrant them in making purchases to any large extent, but they might be glad to buy domestic bills from the central or regional bank with its indorsement, provided its standing were sufficiently high to warrant them in doing so.

Some of the banks might borrow funds from foreign banks, paying them special rates of interest, because they might be able to use such funds themselves in the purchase of commercial paper, leaving a profit in between. This would be the reverse of some of the transactions that have been made in Germany, more particularly since French funds were withdrawn from that country after the crisis in Morocco.

Under the new bill it is contemplated that American banks will be authorized to accept drafts drawn upon them against import of commodities drawn at 60 or 90 days' sight. It will unquestionably take some years to change a sufficient amount of drawings from sterling drafts to New York drafts to be of any appreciable value in making our bank rate effective, for foreign shippers will undoubtedly fight it more or less.
On the other hand, Germany and France have succeeded in having quite a large total of drafts drawn upon their banks, even though their markets for gold have not the freedom that would be true in this country. Such being the case, it will probably depend more upon whether our importers are willing to cooperate and demand New York acceptances than upon any real feeling abroad, for the whole proposition will come down to one of competition, and the foreign seller will be inclined to take New York acceptances if it means a loss of his sale otherwise.

Senator Hitchcock. Now, will you explain what you mean by "New York acceptances"?

Mr. Kent. I mean acceptances that might be drawn on New York banks to pay for imports in place of acceptances which are at present drawn on European banks. For instance, suppose we import $10,000 worth of coffee from Brazil. When that coffee is shipped the seller there demands of the buyer in this country that he furnish a letter of credit. That letter of credit is issued in favor of the seller in Brazil, and it is drawn upon a bank in London. The bank in London, in effect, is authorized to accept that bill at 60 days' sight and pay it out of the funds of the bank in this country which issues the credit for the buyer—that is, at maturity.

Now, a large proportion of our imports are brought in under credits drawn upon London in that manner.

Senator Hitchcock. And accepted by London banks?

Mr. Kent. Yes; accepted by London banks and charged by the London bank to the American banks when the acceptances mature.

Senator Hitchcock. How does an American bank come into that?

Mr. Kent. Yes.

Senator Hitchcock. Well, how do you bring the American bank into the transaction?

Senator Nelson. By the letter of credit.

Mr. Kent. The letter of credit. The American bank authorizes the London bank to accept it and charge it to the account of the American bank at maturity.

Senator O'Gorman. Right there, will you also indicate why, in this transaction affecting Brazil and the United States, resource must be had to the aid of the English banking system?

Mr. Kent. The banks in Brazil and the people in Brazil are familiar with the London banks. They have also a use for London exchange. And it is a custom that has grown through a series of years, that is based partly on the fact that the English gold market is a free market and partly on the fact that British trade is the largest trade in the world.

And what we wish to accomplish in authorizing American banks to accept is to give them an opportunity to do their part—that is, to take one side of it. At present the English banks finance the exports, or they accept against the exports, and they also accept against the imports. We are willing that they should accept against the exports but we think we should be in a position to accept against the imports.

Senator Hitchcock. When you speak of "exports" you mean exports from that country?
Mr. Kent. No; from this country.
Mr. O'Gorman. And imports to this country.

Senator Nelson. Now, there is a letter in the record from an im­porter of coffee at Minneapolis, which I introduced, describing just exactly this thing as Mr. Kent describes it.

Senator Hitchcock. Is it a fact that there are no banking interests in New York now that give acceptances or sell acceptances?
Mr. Kent. I do not know of any.

Senator Hitchcock. Well, there are very large banking houses there that have a world-wide reputation.
Mr. Kent. It is rather against the policy of American banks to accept, even when they seem to have the authority, because——

Senator O'Gorman (interposing). How about the large private bankers that we have in New York and throughout the country? Do not they do it?
Mr. Kent. They have never been able to work up American ex­change to a point where they could do it to any great extent. They would need the cooperation of all the banking interests in this coun­try in order to do it.

Senator Hitchcock. Well, take the London houses that accept. They are not banks of deposit, are they?
Mr. Kent. Some of them are. The Bank of Liverpool is an ac­cepting bank; the London City and Midland Bank (Ltd.) is an acceptance bank. Those are both banks of deposit. There are many private banks that accept also.

Senator Nelson. The joint-stock banks there have authority to accept?
Mr. Kent. Yes; they can accept.

Senator Hitchcock. But, as a matter of fact, that is not their practice. They buy and sell them; they do not give them.

Mr. Kent. Oh, yes; the London City and Midland Bank (Ltd.) and also the Lloyds bank, and the Parrs Bank and many others do it.

Senator Nelson. There are three classes of acceptors: These joint­stock banks; then merchants accept, and then there are what they call private accepting houses.

Mr. Kent. Yes.

Senator Hitchcock. Well, I was told by a London banker, who visited this country recently in connection with the peace movement with Lord Alverstone, that it was not the custom of any bank of de­posit in England to sell acceptances or give acceptances.

Mr. Kent. That is a mistake.

Senator Hitchcock. But that it was largely done by private houses, and by men of known wealth, and that banks of deposit were more apt to give those acceptances than they were to sell them.

Mr. Kent. They buy them and sell them. I have acceptances now in my portfolio, given by all of those banks I have mentioned.

Senator Hitchcock. Well, are those acceptances a source of con­siderable profit?

Mr. Kent. The question of profit does not seem to me to have much bearing upon it. That profit might be on an average of three­sixteenths of 1 per cent on the total, taking into consideration those acceptances that are issued for prime concerns, and those that are issued for others.
Senator Hitchcock. When a bank issues acceptances, does it take security?

Mr. Kent. Often; that is an arrangement that it has with its own customer; that is based upon the standing of that customer.

Senator Hitchcock. It may or may not take security?

Mr. Kent. Yes; in case of drafts drawn against cotton, the bills of lading are delivered to the accepting bank. Now, if the accepting bank wishes to deliver these bills of lading against trust receipts, to the party for whom it is accepted, it can do so if it satisfied to do so. Otherwise it might hold the bills.

Senator Nelson. You see when a bill of lading accompanies a draft, that is the security for the draft.

Senator Hitchcock. Yes; I understand. I want to get at the fact whether an accepting bank receives security as a rule; whether there is any practice of that kind.

Mr. Kent. No; that is all a private arrangement between the foreign bank and its customer; and it undoubtedly is handled both ways, exactly as it is in this country. In this country we have shipments come in that are delivered to the party for whom the letter of credit is issued, before the draft matures. And those goods are delivered under trust receipt. But in other cases the goods are not delivered before payment. Of course all of those credits at present are drawn upon London banks, and the London banks are the acceptors.

Senator O'Gorman. Mr. Kent, let me ask you a question here: Is the importance of the English banks with respect to foreign exchange promoted largely by the regular mail service between this country and England?

Mr. Kent. Unquestionably, to a large extent.

Of course that commission profit is not so much. But that is not the principal value of being able to accept. The principal value to England in being able to have its banks accept those bills is due to the fact that payment must be made in London for all of those bills. Consequently, they are attracting money to London, and that money will come to London before the bills mature, if the interest rate is a more profitable one to the banks that have to meet the bills from foreign countries than it is in their own country, and I consider the principal value of that acceptance power to lie in causing the money to go toward the centers, rather than the commission charge, which is really small.

Senator Nelson. Does it not arise, too, from the fact that the party primarily holden on a bill of exchange, the acceptor, resides in that country? The party primarily liable on the bill, in case you have to enforce its collection, resides in England. Is not that of some consequence?

Senator O'Gorman. That is not the case in the coffee proposition that Mr. Kent was telling about.

Senator Nelson. Oh, yes; the acceptor on the bill resides there.

Senator O'Gorman. Oh, yes; you are right.

Mr. Kent. You can see what that would mean in the case of this Brazil matter. This draft is drawn in Brazil at 60 days' sight, on a London bank, for the account of an American bank. The American bank must arrange to meet that bill at maturity. Consequently
it must have funds in London. That makes a demand for London exchange, and that is a help toward making England the great financial market it is.

Senator Hitchcock. Your judgment is that, no matter what we do in this country, it will only be by a gradual process that we can build up such a system in New York as exists in England?

Mr. Kent. Yes. And, as I say, it would be a matter of competition; and the foreign seller would be inclined to take New York acceptances, if it means the loss of a sale otherwise, provided, of course, that the acceptance is drawn upon a bank whose standing is sufficiently high to warrant his banker in negotiating the bill of exchange.

That is, an acceptance issued by some small bank in a small town or city that was unknown abroad would probably not be accepted.

Senator Weeks. Could you make an estimate of the amount of commissions paid by American importers to London banks on account of these acceptances which otherwise would not be paid at all or would be paid to American banks?

Mr. Kent. I question if that would be much more than a million dollars. It is a little difficult to get a basis from which to figure, because part of our imports are not handled by commercial letters of credit. Some of them are handled direct. And when it comes to dividing up our total imports of over a billion dollars into those which are accepted and those which are not, and then figure, say, an average percentage that you might think was being charged by London for the whole, it would be merely a guess estimate, you see. But it is not such a large amount. I do not think it is worthy of consideration.

Senator Weeks. How much do American banks keep on deposit in London in order to maintain this policy?

Mr. Kent. Their deposits vary according to the interest rates in London and the interest rates in New York, to a certain extent. For instance, take it now: The Bank of England rate is 5 per cent, and the London joint-stock rate that they pay upon balances is 1% per cent under the Bank of England rate. That would mean 3½ per cent. Now, if the bank could get 3½ per cent upon its balances in London, and it had money it did not care to loan on time, but wished to have in its control, it would receive more for that money in London than it could on the New York Stock Exchange—for instance, upon a 3 per cent basis—always providing, of course, that the demand rate of exchange is such that there will be no loss in exchange. For instance, suppose a bank in New York purchased £100,000 at 4.87 to increase its balance in London. That means $487,000. Suppose it has that balance in London for, say, 10 or 15 days, and the demand market drops to 4.86, and then it needs its money back in New York, it will lose $1,000, less the interest it received. So when it comes to putting money on demand interest, the demand rate of exchange must be considered very closely.

Senator Weeks. If there were American exchange in South America, so that the South American bank could draw direct on New York, the American importer would be able to save the commission which he pays to the London bank, would he not?

Mr. Kent. I hope not. He should pay the New York bank.
Senator Weeks. Does not the New York bank charge a commission anyway?

Mr. Kent. Yes.

Senator Weeks. It would not charge any larger commission, would it?

Mr. Kent. It would if it could, naturally. It would be a question of competition.

Senator Hitchcock. Let me ask you. I do not quite understand the case you cited of a New York bank having put $1,000,000 on deposit in a London joint-stock bank. It would receive, you say, 3½ per cent interest on that deposit at the London joint-stock bank, and the London joint-stock bank would be lending that money out at a higher rate?

Mr. Kent. Oh, yes; undoubtedly; it could not be paying 3½ per cent if it did not.

Senator Hitchcock. At what rate would it lend it?

Mr. Kent. At present, 4½.

Senator Hitchcock. And that is based on the Bank of England rate of 5 per cent?

Mr. Kent. Yes; that is the private rate of discount. It is the rate that is applied to prime bankers' bills in the London market. It follows the Bank of England rate up and down. Sometimes it is a little over the Bank of England rate, but very seldom. Usually it is something under the Bank of England rate. And when it comes down 1 per cent under the Bank of England rate that rate is usually reduced unless the Bank of England feels it is not a safe situation and does not wish to reduce its rate. Then it may go out into the market and borrow itself in order to make its rate good.

Senator Hitchcock. So one of the effects, when the Bank of England raises its rate, is to increase the deposits of banks on the Continent and in New York in the various joint-stock banks?

Mr. Kent. Yes. And even if it did not actually increase those deposits, it might be the means of retaining them.

Senator Hitchcock. Holding them?

Mr. Kent. Yes; holding them.

One important question that must be decided before the bill is passed is whether the regional bank can go out into the market and purchase foreign bills of exchange or whether it must buy them of member banks with the indorsement of the member banks. If the regional bank is allowed to go into the market, it will have a great advantage over other banks, because its money will not cost it anything as it will pay no interest on its deposits. This being true, an unfair competitor would be placed in the market that is already drawn too fine for the sake of safety. Competition has reduced the profit to bankers buying foreign bills which bear a contingent liability even after they are discounted from nothing to one-sixteenth of 1 per cent. It does not seem a proper transaction for a banker to assume a 60-day liability with an average insurance profit of one-thirty-second of 1 per cent and with the possibility of that being turned into a loss if the exchange rate goes against him.

The market having been cut in such a manner, the regional bank, if compelled to buy its exchange from member banks, or with their indorsements, could do so with such small difference over what it
would have to pay direct in the market that it could more than afford it in order to secure the cooperation of the outside banks, and also to have their indorsement and not to be required to look into the standing of the individuals and firms who were drawing the bills. The value of this cooperation must not be underestimated. There is no doubt whatever that neither the Bank of England, the Bank of France, nor the Bank of Germany could make its discount rate effective if the other banks in those countries did not cooperate with them. For instance, the amount of money in the London market is so many times the resources of the Bank of England that it could not borrow sufficient in the market of itself to make its rate effective, if it did not have the cooperation of the other London banks. As soon as the Bank of England rate is raised, or as soon as other London bankers realize that the Bank of England wishes to obtain control of the market, because the private rate of discount may have dropped too far below the bank rate, they at once raise their rate.

Again, take the Reichsbank, in Berlin. It unquestionably could not have increased its gold holding by $100,000,000 during the last few months without the aid of the other German banks. A portion of such increase was undoubtedly obtained through the issuance of small notes (20 and 50 mark notes), but that only took gold out of the pockets of the German people, whereas a large part of the increase came from importations, mostly from London. There is every possibility that the Reichsbank purchased finance bills of numbers of German banks, probably indirectly, in order to obtain the credit to purchase the gold, and if it expects to be able to hold gold with the knowledge that the foreign trade of Germany was working around in such manner as to enable them to meet the borrowings at maturity.

Senator Hitchcock. You say the Reichsbank undoubtedly purchased finance bills?

Mr. Kent. Yes; or may have had some other German bank operate for it, possibly the Deutsche Bank.

Senator Hitchcock. Will you explain what you mean by "finance bill"?

Mr. Kent. A finance bill in this case would be a draft of, say, the Bank for Handel and Industry, in Berlin, drawn upon its London bank, say, at 90 days' sight, and against the credit the German bank had established with the English bank. If the Deutsche Bank acted for the Reichsbank, and the Reichsbank did not wish to buy this finance bill itself, the Deutsche Bank could go in the market and buy these finance bills from the German banks.

Senator Hitchcock. What motive would the Reichsbank have in having the Deutsche Bank act as an intermediary?

Mr. Kent. I do not know. They might have preferred to have some other bank handle it for them.

Senator Hitchcock. The chairman inquires what reason could the Reichsbank possibly have for not desiring to appear in the open market as the purchaser?

Mr. Kent. Well, if they purchased a bill of a German bank drawn upon a London bank, it would be single-name paper until it was accepted by the London bank.

Senator Hitchcock. Or until it had indorsement. I see. That is very reasonable. Now, then, when the Reichsbank buys those accept-
ances or those finance bills from the Deutsche Bank, what does it pay the Deutsche Bank for it?

Mr. Kent. In a credit on its books.

Senator Hitchcock. What benefit does the Deutsche Bank get from that credit?

Mr. Kent. The Deutsche Bank may use that credit in the market.

Senator Hitchcock. In procuring notes from the Reichsbank—currency?

Mr. Kent. They probably would not secure notes, except for such amount as they might desire actual currency. It is the credit they would probably use.

Senator Hitchcock. Of course they use the credits either in the shape of notes or gold.

Mr. Kent. Or drafts upon it.

Senator Hitchcock. Yes. Now, then, up to that time the Reichsbank has given the credit upon its books and received a draft on London which is due in 90 days.

Mr. Kent. Yes.

Senator Hitchcock. In what way does the Reichsbank use that finance bill or draft?

Mr. Kent. If the Reichsbank used it itself, and I question whether it did—I think very likely it handled it through some other bank—it would use that to build up a credit with its London correspondent. It would send the bill to London and discount it in the London market.

Senator Hitchcock. For gold?

Mr. Kent. Discount it in the London market and have the proceeds of that discount credited to the deposit with the correspondent in London until the correspondent had a sufficient cash balance so that it could purchase gold in the market and pay for it from that cash balance.

Senator Hitchcock. By which it would either enable the Reichsbank to draw gold from London or enable it to avoid sending gold to London if the balance is against it.

Mr. Kent. Yes.

Senator Hitchcock. I do not see that that brings any more gold to Germany than would be brought to Germany if the Deutsche or the Industrielle Haendlung Bank, you referred to, had done that same thing.

Mr. Kent. No; it would not, but the Reichsbank is the protector of the gold reserve, and it takes the initiative when it is considered wise to increase its gold reserve. The manager of the Reichsbank gave notice, I think, something like a year ago, maybe in December, that he was going to increase the gold reserve and he started out to do it in every way he could, but I am not sure that this is one of the ways.

Senator Nelson. The deposit of gold in London to the credit of the Reichsbank in Germany is the same as though the Reichsbank had it in its vault.

Senator Hitchcock. Yes; but it would not bring any more gold to Germany, than if the Deutsche Bank had done the same thing.

Mr. Kent. The Deutsche Bank does not have to keep gold; it does not have to keep a reserve. Enough reserve is provided by the
Reichsbank. The Deutsche Bank would not care for gold, except as it wanted to have credit in Germany at the Reichsbank.

Senator Hitchcock. There is cooperation, as I understand, between the 30 or 40 banks of Germany and the Reichsbank.

Mr. Kent. Yes.

Senator Hitchcock. They cooperate with it and acknowledge its leadership.

Mr. Kent. Yes. They have to do it to a certain extent, because if they wish to rediscount their bills they have to go to the Reichsbank for their credit, the same as any London banks take their bills to the Bank of England when they have to have money.

Senator O'Gorman. Mr. Kent, if the London market learned that the Reichsbank was trying to increase its gold reserve, would the London market be able to take advantage of that knowledge and increase its rates in London?

Mr. Kent. Why, it did so. The Bank of England raised its rate to 5 per cent just a short time ago, probably to protect itself from Germany.

Senator O'Gorman. Now, instead of the Reichsbank indicating its desire to increase its gold reserve, would the London market attach any importance to an apparent effort on the part of some of the smaller German banks to secure gold?

Mr. Kent. The London market would realize at once that gold was being obtained in Germany.

Senator O'Gorman. I do not fully understand, yet, why the Reichsbank undertakes some of these movements to procure gold through what we may describe in an American phrase—through the use of a dummy bank.

Mr. Kent. The Deutsche Bank, for instance, has a London office and is consequently in a much better position to operate in the London market than the Reichsbank would be.

Senator O'Gorman. I see. And just as soon as the London market ascertained that the Deutsche Bank was trying to get gold—

Mr. Kent (interposing). They would realize it was for the Reichsbank in Germany.

Senator O'Gorman (continuing). It would realize it was for the Reichsbank?

Mr. Kent. Certainly. So that it is not used to cover it up. The gold purchased in the market, when it comes from South Africa, is sold to the highest bidder.

Senator Hitchcock. Mr. Kent, a few moments ago you spoke of French funds being withdrawn from German banks at the time of the trouble in Morocco, and relations between France and Germany were strained.

Mr. Kent. Yes.

Senator Hitchcock. Were those French funds on deposit in the German banks at interest?

Mr. Kent. Unquestionably so, to a certain extent. These German banks have a system under which they pay a higher rate for deposits that are placed with them on the last day of the month and left with them until the last day of the following month, or the second or third month following, than they do on deposits that are in use. And the reason is that under their industrial system, they are able to turn those over to the industrial concerns at higher rates than they pay.
For instance, just now the German banks are paying about 4½ and 4⅛ per cent for money left with them from the 31st day of October to the 30th day of November, whereas on other deposits they are paying probably only about 3 per cent.

Senator Nelson. Demand deposits?
Mr. Kent. Demand deposits.
Senator Hitchcock. You are not speaking of the Reichsbank?
Mr. Kent. No; that has nothing to do with the Reichsbank.
Senator Hitchcock. It is the 30 or 40 other banks?
Mr. Kent. Yes.
Senator Hitchcock. Now, what French institutions made those deposits?
Mr. Kent. Probably banks like the Credit Lyonnais and the Comptoir d'Escompte and others of that nature, and it may have been money of the smaller banks. It was all a question of interest, and when the money was withdrawn by France, Switzerland stepped in and loaned and America stepped in and loaned.

Senator O'Gorman. Loaned to whom?
Mr. Kent. Loaned to Germany, and those funds took the place of the funds withdrawn by France.

Senator Hitchcock. I remember at that time of hearing that the French institutions when withdrawing those funds did not want to produce a crisis, and so when they withdrew from Germany they deposited in Switzerland with a view of having Switzerland transfer funds to Germany.

Mr. Kent. That might possibly have been done, but I do not know that it was. Of course, the German banks had notice these funds would be withdrawn—that is, in this way: Suppose that about anywhere from the 19th to the 22d or 23d of the month the German banks had advised the French banks that had deposits with them that they would pay them a certain rate of interest on money that was maturing at the end of that month. If the French banks refused to accept that rate, then the German banks would know that that money would probably be withdrawn on the last day of the month. They would therefore see if they could obtain it from some other source, and in this case they made direct offers to New York.

Senator Hitchcock. What would be the method of withdrawal?
Mr. Kent. Checking on the account.

Senator Hitchcock. French banks would draw checks on the German banks and then what would they do with them?
Mr. Kent. They might sell them in London. If exchange between Paris and Berlin were such that they could not sell them there, they might sell these checks in London; that is, they would sell marks on Germany to the English banks.

Senator Hitchcock. Or they probably did sell in Switzerland, very largely?
Mr. Kent. They may have done so. Probably they sold some to Holland.

Senator Hitchcock. But they would not send them with a demand for shipment of gold?
Mr. Kent. They did not demand shipment of the gold, because they knew they would not get it.

Senator O'Gorman. Why not?
Mr. Kent. Sir?
Senator O'Gorman. You say they knew they could not receive the gold if they asked for its shipment. Why?

Mr. Kent. If the Reichsbank gave the impression to the other German banks that it did not want gold to go out, it would be pretty difficult to get it, and therefore the French banks would not want to insist upon it.

Senator O'Gorman. Let me ask here. Would the German banks repudiate their obligations to the French banks?

Mr. Kent. No; they would not. It would not have to go to the point of repudiation. The exchange would be used by France where it could best sell it. For instance, if it could sell part of it in London and part of it in Amsterdam and part in Switzerland at a better rate than it could obtain the gold—that is to say, suppose the German banks say, “We will ship you gold, but we will charge you 1 per cent for it.”

Senator Hitchcock. The fact is, then, that the deposits of the French banks with the German banks were withdrawn from Germany?

Mr. Kent. Yes.

Senator Hitchcock. And the French banks, in order to get it, had to draw a draft and sell it in the market?

Mr. Kent. Yes.

Senator Hitchcock. And take whatever discount was involved?

Mr. Kent. Of course, I do not know exactly the amount that was handled in this way, because the French banks do not give that out, and neither do the German banks. I could see how it could have been done, but I do not know the actual operation in this case.

It will be just as necessary in this country for the bankers to cooperate with a regional bank in order to make its rate internationally effective as it is abroad. With a number of regional banks, instead of a central bank, this feature would also become more difficult to control, for the bankers in, say, Chicago and New Orleans, under circumstances previously recited, might be as much opposed to seeing their local regional bank lose money or be compelled to operate against its will as the managers of the local regional banks themselves.

Taking all of these matters into consideration, it would seem, first, that a central bank is what we require for every reason in connection with the protection of our gold supply, and, second, that such bank should purchase foreign exchange only of member banks or with the indorsement of member banks, in order to have their complete cooperation, which would be necessary. It must be appreciated and understood that the effectiveness of the bank rate and of the operations of the central bank or regional banks can only be gradual and that the height of power for good can not be reached until the banks of the world understand that it is being and will continue to be conservatively managed and that it can be trusted not to endeavor to force its way too strongly against the natural currents of trade.

Senator Shafroth. Now, I would like to ask you a question or two with relation to this rate of discount that is fixed or is to be fixed by these banks or by the Federal reserve board. As I understand it, in order to get gold into the country they raise the rate of interest?

Mr. Kent. Yes.
Senator Shafroth. Now, that, of course, does an injury to the people who want to borrow at a low rate, does it not?

Mr. Kent. It is always a tax on the trade of the country to have the rate put up.

Senator Shafroth. Isn't there any way by which it would be cheaper to get this gold into our country than by raising the rate of interest?

Mr. Kent. I think not.

Senator Shafroth. We have been getting our full share of gold in the last 40 years, haven't we? And we have had no bank that can fix the rate of discount.

Mr. Kent. That is true, except that with the system we have at present, or the lack of system, it is impossible for us to look ahead and prevent gold going out, maybe, when we might otherwise be able to. If we had a central bank, the question of the cost to the public, then, would be represented by this: That with a central bank, using this rate to attract the gold when it seemed necessary, the higher interest rates would probably prevail for a shorter time than they have done under our past system. In raising the rate at times you may prevent a high rate being carried for a long period. The Bank of England, for instance, raised its rate to 5 per cent recently, apparently because it was thought in England that that would prevent enough more gold going out so that the bank might not be required to raise its rate to the point where gold would be attracted. That is, if by raising its rate to 5 per cent it stopped the outward flow of gold, it would be cheaper for the country to pay that 5 per cent for a time than to let the gold go and then have the country have to pay 7 per cent to get it back.

Senator Shafroth. How much paper is affected, in your judgment, in this country, or would be affected if we had a raising of the rate of discount?

Mr. Kent. Only the paper that was discounted after the raise of the rate and until it was lowered again.

Senator Shafroth. How much do you think that would be?

Mr. Kent. Well, it would depend partly on the length of time the rate had to be maintained at the higher point and partly on the time of year.

Senator Shafroth. Would it be as much as on a billion of dollars?

Mr. Kent. It might be, but it would depend something on the time of year. At certain periods of the year 60 and 90 day bills are drawn more largely than at other times of the year.

Senator Shafroth. Then wouldn't that make a very expensive method of getting gold into the country?

Mr. Kent. It does not if the discount rate is handled properly.

Senator Shafroth. That is, if it goes down promptly.

Mr. Kent. Yes, sir.

Senator Shafroth. I can very easily see how all banks would cooperate with the central bank or central power in raising the rate of discount, but I should think the banks would feel, if the higher authority would say, "The rate must go down," that they would begin to try to hold the rate up. It is human nature.

Mr. Kent. How could they if the central bank were loaning at 4 per cent and had sufficient power, was a large enough bank, to loan a
large amount of money—how could the other banks be loaning at four and one-half?

Senator Shafroth. But this operates only when there are discounts, as I understand—the loaning of money of the Federal reserve bank. But it seems to me that the banks could say, "Well, now, they have raised this rate, why can not we get our interest at this rate?" It seems to me it would have a tendency to make them cooperate with each other to prevent a lowering of discounts, all of which would be a detriment to the people who have to borrow money from the various banks in the country.

Mr. Kent. On the other side, if we had a central bank we would become, in time, a world financial power, and our bank rate would have to be based partly on conditions in other parts of the world. If we reduced our bank rate because the managers of the bank were familiar enough with all the conditions in the world to think it was desirable, if the banks in this country endeavored to hold for a higher rate, money would come in from Europe and take the place of the money the banks here would have to loan.

Senator Shafroth. Do you think that the power to control the discount rate would become effective unless the Federal reserve banks had the right to go out in the market and power to deal with the public?

Mr. Kent. I think it could be. It might be possible that it would be better for the Federal reserve bank to be able to go into the market for domestic bills. It would easily develop after the banks were established, and in a very short time, and whatever conditions seemed necessary could be met. You must always remember, and I want to emphasize what I just said about becoming a world financial power, just as soon as we have a bank that the other banks in foreign countries can look to as an institution that has proper power and proper standing that they can deal with, then we are going to be in a position to command foreign money, and if our rates get too high here then foreign money will come in. In time we are going to have acceptances outstanding, and foreign banks are going to be in the position then that our banks are now. When they have 60 and 90 day acceptances they can discount them or not, as they wish, and foreign banks will hold them when profitable if our acceptance proposition is made effective.

Senator Shafroth. The only time I remember when the Government attempted to get gold or prevent the outflow of gold was during the Cleveland administration in 1895 or 1896.

Mr. Kent. Yes.

Senator Shafroth. And at that time they sold bonds. Of course there were two objects in view, one was to replenish the deficit in the Treasury and the other was to maintain the gold reserve. Now, do you regard that was more expensive or less expensive to the entire people?

Mr. Kent. It was more expensive for this reason: The gold had gone out of the Treasury through the presentation of greenbacks, and then the greenbacks were put out by the Government again and used once more to withdraw gold, so that the original issue of bonds which brought in $50,000,000 of gold, as I remember it, did not accomplish anything because gold went right out again. And when Mr. Morgan went to New York and conferred with Mr. Cleveland on the matter
he was able to show conclusively that we must have foreign gold come in to fill up the Treasury rather than to have American gold.

Senator Nelson. And that bond sale to Morgan & Co. covered not only gold coin but gold bullion?

Mr. Kent. Yes.

Senator Shafroth. That contract was made in gold bullion—so many ounces?

Mr. Kent. Yes. And Mr. Morgan, as I understand—I was not in New York at that time—was able to stop shipments that were already tagged for Europe, because he sold some of these bonds to these people at a price that made it more profitable to invest their money in that way than to ship their gold to Europe.

Senator Shafroth. I can readily see that is some expense, although this money was taken down to the Federal Treasury. But its principal reason for going out was because the general expenses of the Government had been more than the income.

Mr. Kent. Yes.

Senator Shafroth. But the question I want to direct your attention to (and your testimony is very enlightening to me), is the relative cost—whether it is better for the Government to stand this expense and thereby save to the people the increased rate that would be established by reason of the decree of the bank or decree of the Government that the rate should be high.

Mr. Kent. The expense to the people was very great at that time, if I recall correctly, and money rates were up very high.

Senator Nelson. It is estimated J. P. Morgan & Co. cleared between $9,000,000 and $10,000,000 on it.

Mr. Kent. So that the people had a greater expense then than probably would be necessary with a central bank that had the respect of the world.

Senator Shafroth. You know that even a little raise in the interest rate on more than a billion dollars would make an enormous amount of money coming out of the people.

Mr. Kent. That rate would not affect anything that had been already discounted.

Senator Shafroth. No; that is true, but the discounts every day are enormous.

Mr. Kent. Do you not think, for instance, if a 5 per cent discount rate held, say, for a month, and by having put the rate up to that point the bank was able to put it down again to 4½ at the end of the month, it would cost the people less than if gold were allowed to go out until the people were paying 6 or 7 per cent for two or three months?

Senator Shafroth. But there is no certainty that they would pay 6 or 7 per cent, because that would check enterprise itself.

Mr. Kent. But that is the way it has worked in the past, as I recall it.

Senator Shafroth. Yes. But here is one feature about it that does not seem to me exactly perfect, and that is that there may be a consultation of interests in keeping this rate up instead of down. I can see that the banks want to get just as much interest as they can legitimately and properly, and to loan a person who would pay a higher rate of interest. For that reason, it would seem to me, it is
not absolutely where the borrower is upon the same footing as the lender.

Mr. Kent. In reply, I repeat again that money would come in from foreign countries if our banks try to make the rate higher than it normally should be.

Senator Shafroth. I just wanted to get a little light on the subject.
Senator Nelson. You have not finished your statement, have you?
Mr. Kent. Yes; I have finished it. I do not know whether there are any other questions you would like to ask.

Senator Nelson. The international balances of trade have to be settled in gold, do they not?
Mr. Kent. If you will include the invisible balance of trade also, they do; yes.

Senator Nelson. I mean the commercial balance of trade.
Mr. Kent. No; it does not necessarily have to be settled in gold.
Senator Nelson. I did not mean in actual coin, but I mean on a gold basis. You understand that?
Mr. Kent. Certainly.
Senator Nelson. That is the same, isn’t it?
Mr. Kent. Yes.
Senator Nelson. That is the same thing; that is, what we sell to Europe they pay for on a gold basis.
Mr. Kent. Yes.
Senator Nelson. And what we buy from Europe we pay for on a gold basis, do we not?
Mr. Kent. Yes, sir.
Senator Nelson. Now, then, if the value of an acceptance—the value of an American acceptance either of a central bank or any bank in this country—was, in commercial value, equal to a London acceptance, we would be in this condition, would we not, that drafts drawn on our houses would circulate with as great facility as drafts drawn on London houses?
Mr. Kent. Yes; provided that American exchange was as desirable as London exchange.
Senator Nelson. Now, let us look at the question: Suppose our New York acceptances were as valuable in the commercial world as London acceptances, the people of Europe, shipping goods to America, would draw on the American banks, would they not?
Mr. Kent. Yes.
Senator Nelson. And it would be accepted?
Mr. Kent. Yes.
Senator Nelson. And when we ship our goods to Europe we would draw on the London bank, say, and it would be accepted?
Mr. Kent. Yes.
Senator Nelson. So you have two sets of acceptances—for our imports you have American acceptances and for our exports you have London acceptances?
Mr. Kent. Yes.
Senator Nelson. Now, those acceptances would be like commercial paper in the clearing house, would they not?
Mr. Kent. Yes.
Senator Nelson. One would offset the other in the gold market?
Mr. Kent. Yes; as far as they were equivalent.
Senator Nelson. Yes. Those acceptances, pro and con, one would offset the other?

Mr. Kent. Yes.

Senator Nelson. So that the balance of gold to be settled is the difference between those bills of acceptance?

Mr. Kent. Yes. And that balance would be settled in many ways.

Senator Nelson. And it is that fluctuating balance of trade that makes the rate of exchange to some extent?

Mr. Kent. Yes; that is true.

Senator Nelson. If upon that settlement of balances, if upon that clearing of these bills of exchange, pro and con, it turns out they owe us a balance, the exchange is in our favor, is it not?

Mr. Kent. Yes. Of course, you understand, Senator, that there is what is called the invisible balance of trade that sometimes might offset the commercial balance of trade?

Senator Nelson. Oh, I understand that. But, for the sake of the illustration, I do not refer to the invisible balance. What has made the flow of gold here, given us such a power of gold, is that in all these series of years as a rule the balance of trade has been in our favor.

Mr. Kent. Yes; about $500,000,000 a year.

Senator Nelson. And that, taken in the whole series of years, has brought the gold here and operated to keep it here?

Mr. Kent. It has operated to keep it here, certainly.

Senator Nelson. So that we only had to settle with Europe to make up the balance they had against us in gold.

Mr. Kent. Yes. Now that you are only speaking about the commercial balances of trade——

Senator Nelson. The point we have to make in our system by legislation and practice is to make the value of an American acceptance, I will call it, an acceptance of a central bank or our banks here——make the value of our acceptance as good as the London acceptance?

Mr. Kent. Yes.

Senator Nelson. That would solve the problem, would it not?

Mr. Kent. That would help very materially.

Senator Nelson. Would not that be the solution of it?

Mr. Kent. I do not think it would, because those acceptances would not be as good as London acceptances unless other things had been accomplished.

Senator Nelson. But if a coffee merchant in Brazil knew an acceptance on New York was as good as an acceptance on London, he would take it just as quickly on New York?

Mr. Kent. Yes.

Senator Shapiroth. I want to ask you whether you have any statistics showing the amount of this invisible balance of trade?

Mr. Kent. Yes. Those statistics are very hard to get, and various estimates have been made by foreign-exchange men and students. For instance, in the first place we pay Europe a large amount in dividends and interest. It has been estimated that Europe carries from $2,000,000,000 to $6,000,000,000 in our securities. Say the average is about $4,000,000,000. Now, if you figure the average rate we pay on that $4,000,000,000 as 5 per cent, that would mean $200,000,000 we would have to pay annually. Then, of course, we would undoubtedly be receiving from foreign countries dividends and interest on foreign
securities which our people held, but that would probably be very much less than the payments.

Senator Shafroth. Have you seen any estimate of what they are?
Mr. Kent. Possibly $50,000,000.

Senator Shafroth. Then there is the tourist travel.
Mr. Kent. The tourist travel has been variously estimated at $100,000,000 to $500,000,000; I think probably it is nearer $250,000,000.

Then there is the question of freights. A large portion of our foreign trade is carried in British vessels and also a large portion in German and French vessels.

Senator Nelson. There, again, is a question that confronts us. The stocks of a good many of these foreign lines are owned by Americans.
Mr. Kent. Yes; but probably a very small percentage.

Senator Nelson. In some lines there is very much.
Mr. Kent. Yes; take the International Mercantile Marine. If you make the proper deductions there I think the total may possibly come to $50,000,000. It has been estimated as being very much higher, but I think it would be about $50,000,000.

Then there is the money that is sent abroad by immigrants that come to this country. For several years after they arrive they usually send home money to pay for land over there or settle debts or send to friends and relatives, and that amount has been estimated variously at from $150,000,000 to $400,000,000. I think likely it comes to about $250,000,000 or $300,000,000.

Senator O'Gorman. Within what period?
Mr. Kent. Within a year.

Senator Hitchcock. How can that estimate be correct? That seems to be a tremendous sum.
Mr. Kent. $300,000,000?

Senator Hitchcock. Yes; that is $1,000,000 a day.
Mr. Kent. We have about a million immigrants come over every year, and if 1,000,000 people are combining to send a very little it mounts up very fast. You must remember that many of them continue to send money after they have been here two, three, four, five, six, or seven years.

Senator Hitchcock. On an average, what amount of money do they bring with them?
Mr. Kent. That, we know, of course, is at least $30 each, but they send back that $30 ordinarily the first year, I think. Those amounts are really very large. Of course, they are in small remittances, but I think they come very nearly to $300,000,000. Of course, that is an estimate to a certain extent, because the remittances are made in so many different ways. Some go through the United States post office, some through the express companies, some through the national banks, and some through the State banks, and some through private banks.

Senator Hitchcock. It was $50,000,000 on dividends and interest.
Mr. Kent. That is the other way; that is coming to us, so that would make a net of maybe $150,000,000.

Senator Shafroth. Against us?
Mr. Kent. Yes. You see those figures can not yet be ascertained with any degree of exactitude. Suppose you take the fluctuation of American securities back and forth between Europe and this country.
durin e a year. There is no one that is able to tell whether Europe holds more of our securities at the end of a given year than at the beginning of that year. Those things change. For instance, I think it was in March, 1907, if I remember correctly, Europe sold us a large amount of securities and we were obliged to remit for them. I think that in the latter part of that year they also sold securities here. That is always a danger in a way. If foreign countries become afraid of our monetary system and begin to sell their securities to us, we shall have to pay for them. That is another reason, it seems to me, why we must be very, very careful about changing our banking system, and be as certain we are right as possible before we do so. If we put in any system here that is going to cause fear on the part of foreign investors, they are going to sell our securities, and there is not any question about it.

Senator O'Gorman. Let me ask you this, Mr. Kent. Is not the comment of the foreign financial papers respecting our proposed legislation favorable?

Mr. Kent. I do not know whether you would call it favorable or not, because it is so mixed. They approve some things and others they do not. They all seem to recognize the fact that many changes may take place. The Economist, in London, has been publishing a series of articles on the proposal, but they are more or less academic, and I am not sure but what they are taking the opinions of people on this side.

Senator Hitchcock. What comment have they made on the decline in value of United States bonds?

Mr. Kent. That has been merely academic. I have noticed articles about it in a number of those papers, but they do not seem to consider it of much moment at the present time.

Senator Shafroth. They have not declined nearly as much in price as the British consol, from 142 to 76.

Mr. Kent. Yes. Of course, they have not the circulating privilege in connection with them——

Senator Shafroth (interposing). Except that $90,000,000 which the Bank of England issues upon uncovered gold.

Mr. Kent. Yes. But the Bank of England is able to use those consols that it holds effectively, because if it wants to make its bank rate effective it will borrow on those consols in the London market, and in that way absorbs the funds that are there.

Senator Shafroth. The usual rate in the United States—I do not mean in New York City, but the usual rate throughout the United States—is higher than in Europe generally, is it not?

Mr. Kent. Yes.

Senator Shafroth. And that always attracts investments from Europe here?

Mr. Kent. Undoubtedly; yes.

Senator Shafroth. And consequently that has a tendency to regulate the inflow of gold toward us?

Mr. Kent. Certainly; and that is one reason why Europe has purchased our securities. That is, of course, the rate is higher to a large extent because our country is a newer country and is not as well settled, and the risks are greater in an unsettled country than they are in other countries.

Senator Shafroth. And the rate must be higher?
Mr. Kent. Yes; as an insurance against the risk. Now, some of the foreign countries lend money upon land in Argentina, and others are lending it upon land in Canada, but it is very difficult to get any of their money for land in the United States, because our rates are lower than they can obtain in those places.

Senator Weeks. Mr. Kent, can you tell us what we can put in this bill that will create American exchange in South America and enable us to finance our South American business direct through New York?

Mr. Kent. It seems to me that if you established a central bank and authorized national banks, under proper conditions, to accept 60 and 90 day sight drafts, and also authorized the establishment of branches of banks in foreign countries, that it will all right itself naturally. I do not think it is necessary or advisable to include in the bill establishing a bank regulation for the operations that are going to take place. The simpler you can make it the better. Then those that are managing the bank will meet each condition as it arises, and they will be in a position to meet each condition as it arises, and they will not have to break any law to do it. We do not want any banking system that will necessitate our breaking a law every once in a while if some condition arises that we must protect. I am therefore in favor of the simplest possible form of a banking law, with as few regulations as is consistent with safety and conservatism, and with full power to the managers of the bank to do their business along conservative lines. I think that situation would be taken care of as it went on.

Senator Weeks. You think the provision in the pending bill which enables national banks to establish branches would be a long step in advance?

Mr. Kent. That would help; but in the case of South America it would take longer, probably, to bring it about than in some other parts of the world, because our shipments to South America are very much less than their shipments to us. You see, we bring in about $80,000,000 or $90,000,000 worth of coffee from Brazil, and an immense amount of rubber from Brazil, and also sugar and other things, whereas they take very little in value in return, comparatively speaking. That is, there is a large difference in our balances of trade. And it is all handled through London and Germany now, partly because the German banks have branches there, and the London banks have branches there, and they are consequently in a position to obtain that business.

Senator O'Gorman. Do you believe that closer banking relations between the United States and South America would inevitably tend to an extension of our commercial relations with South America?

Mr. Kent. Oh, unquestionably. There may be little extension for a time. I believe the German banks lost considerable money when they first opened their branches there, and also the English banks, because they had to become familiar with the credits; but I think it would work out very nicely as time went on.

Senator O'Gorman. Have you concluded your observations, Mr. Kent?

Mr. Kent. Yes, sir.

Senator O'Gorman. The committee is very much indebted to you.
Senator O'GORMAN. Mr. Rhodes, what has been your banking experience?

Mr. RHODES. Besides being president of the First National Bank, of Mamaroneck, N. Y., I am chairman of the board of trustees of the Union Savings Bank, of Westchester County, and was the organizer and for 25 years president of this institution. The national bank has a capital and surplus of $150,000. The savings bank is a mutual institution having no capital, the net earnings all belonging to depositors. I was also for many years editor and publisher of Rhodes Journal of Banking, and in 1893 purchased the Bankers' Magazine, consolidating the two publications. Shortly afterwards I disposed of my interest in this field. For three consecutive terms I served as a member of the assembly in the New York Legislature, being chairman of the banking committee each term.

Senator O'GORMAN. Have you read the pending bill as it passed the House?

Mr. RHODES. Yes; I have read the bill.

Senator O'GORMAN. You may make any observations you desire to make respecting it.

Mr. RHODES. I wish to say, Mr. Chairman and gentlemen, that these preliminary statements are made solely for the purpose of indicating my interest in banking matters, embracing both the theoretical and practical sides. With your permission I should like to first present briefly my views on the pending banking bill, and shall then be glad to answer any questions you may wish to ask. That our existing system of banking needs overhauling, I think is too obvious to require discussion; that the bill now before your committee attempts to meet the problem in a comprehensive and statesmanlike manner is also, I think, equally clear.

In Boston, some weeks ago, at the session of the American Bankers' Association, of which I was New York City's vice president, I made that statement about the first hour after I arrived there to the editor of a paper, and he thought I must be somewhat of an advanced thinker on banking lines. I said, "No; I am a country banker, and I believe that the foundation of this Federal reserve system is to our advantage."

The independence of our separate banking units has been one of the most powerful factors aiding in the agricultural, industrial, and commercial development of the United States. No other system of banking, in my judgment, whatever may be its special excellences, tends so strongly to promote the growth of business as does the independent American bank, intensely interested in the upbuilding of the enterprises of its own community and many of whose officers and directors are themselves engaged in carrying on those enterprises.

To preserve the independence of our banking units should be one aim of whatever legislation may finally meet the approval of the Congress.

But it is not enough to preserve such independence, for we have learned by repeated experience—some of it costly and bitter—that for the separate banking unit as well as for the individual member of society there come times when collective action is indispensable. In
society this is an age of wise cooperation, and it must become so in banking if our really admirable financial institutions are to be efficient servants of American commerce and industry.

The familiar story of the bundle of twigs that could not be broken when bound together, but readily snapped when separated, aptly illustrates the vital defect in our banking as conducted for many years.

In fact, we have been extricated from the difficulties incident to our financial panics through resort to the principle of cooperative action, but invariably have resorted to it too late to do more than check the final destruction, instead of invoking this remedy in the incipient stages of the disaster, or employing it in a manner that might have checked at the outset the tendencies that lead to panic.

When the conflagration was raging the banks have united, through their clearing-house associations, to stay its ravages, and their action when thus taken has proved beneficial. But we need some method upon which surer reliance may be placed, a cooperative system carefully and deliberately planned and operative at all times. Such a system, I believe, is provided for in the pending bill, which unites all the banks for their own defense in time of danger and for the protection of those who deal with them.

Banking is a quasipublic function, its operations vitally affecting all business activities. The power of the banks as grantors of credit is so large that sound public policy demands that it be subject to the watchful oversight of the Government and to wise and just control. It seems to me that bankers who fail to recognize this fact are not sufficiently alive to the tendencies of the times.

The adherence to Government bonds as a basis of bank circulation has heretofore rendered it impossible to impart any marked degree of elasticity to the note circulation. The bill now before you wisely departs from this policy.

Those familiar with banking problems through long study and experience have perceived the substantial identity between a bank note and a bank deposit, agreeing that when a bank grants a credit it is of little moment to the bank whether the person receiving such credit shall receive the evidence of it merely in the form of a credit in a pass book against which checks may be drawn or in the form of obligations of the bank printed as circulating notes, the matter to be determined by the convenience of the person obtaining the credit. The further fact has been perceived by experts, namely, that if all bank credits, including notes, were daily redeemed through the clearings, banks might be freely intrusted with the privilege of issuing their notes, even without lodged security of any kind, the precaution of a moderate safety fund, a first lien on assets, and other simple requirements being ample to assure the safety of the notes.

Of course, under the modern system of deposits and checks, the volume of bank notes will always be vastly inferior to the volume of checks employed in the transfer of credits.

But while the facts just cited in reference to bank circulation are commonplaces to experts, they are unknown to the public at large. For more than 50 years the American people have been familiar with no other kind of currency except that bearing the stamp or guaranty of their Government. They have come to regard this
guaranty as an essential element of the quality of the paper circulation. Business habits long established are not easily altered by statute.

Few calamities would be greater than to have our people suspect the goodness of their currency. It would result in universal distrust, a feeling equivalent to that which comes during an earthquake, when even the solid earth seems slipping away beneath one's feet. We can not run the risk of having our currency open to suspicion, and this risk can be avoided in no practical way except by a Government guaranty such as this bill provides.

Sentiment may play an important part in popularizing a new currency system, and it is often stated that sentiment is simply an expression of the common sense of the common people.

But while these notes are obligations of the Government, they are issuable only to the banks, upon the deposit of approved collateral and the setting aside of an adequate reserve against them. These provisions and others guard against the inflation which often accompanies the free issue of notes by governmental authority, and confer upon the new currency the substantial advantages of a carefully guarded asset bank note, plus the responsibility of the United States Government, thus combining the chief desiderata of a bank-note circulation—safety and flexibility.

I would suggest that the notes be made redeemable in gold rather than in lawful money. Since "lawful money" is substantially exchangeable for gold, we gain nothing by putting this intermediate step between the notes and gold, and I think we should gain much by declaring the notes themselves to be gold obligations. It is, in fact, an evidence of our good faith and our ability to pay when we put all our circulating medium on a gold basis.

The principle of massing our bank reserves in a series of regional banks is bound, I think, to work a vast improvement in our banking situation. That we need reserve banks more adequately equipped than those now existing is strikingly evident. The Federal reserve banks, with large capital, with the power to rediscount and to procure notes as needed, will be in a position to render services of vast importance to the banks of the country.

By creating a rediscount market this bill releases the banks of the country from restrictions which have frequently rendered it impossible for them to furnish adequate credit facilities, and have made it necessary for their own protection to curtail loans, thus entailing hardship upon the business community. It should not be forgotten, also, that this bill reverses our present policy of basing our banking system upon stock-and-bond collateral whose value shrinks frightfully in the face of unusual calls for money and links it with commercial paper whose value is more stable and whose volume more fairly corresponds to the fluctuations of business.

The rediscount privilege will make it practically possible for banks to supply all demands for legitimate commercial loans and at the same time will enable a solvent bank always to convert its liquid assets into currency, thus avoiding the necessity of suspending cash payments. Should this bill become a law and be accepted in good faith by the banks, with a determination on the part of the Government to deal justly with the banks, it is inconceivable that the
country should again experience such bank panics as marked the years 1893 and 1907. To avoid the distress which these disturbances occasioned seems to me worthy of the efforts of all the bankers of the United States, even if we have to give up some of our prejudices and long-cherished notions about banking legislation.

As a savings-bank officer for a quarter of a century and one to whom the utility and beneficence of the savings banks strongly appeal, I wish to make a special plea in behalf of these institutions. They are the bedrock of our financial system, inculcating habits of thrift among their depositors, who by absolute self-denial not only provide the means of protecting themselves against the encroachment of disease and the oncoming of age, but gradually to take the steps leading from dependence to a competence, if not to affluence. The savings of these depositors, averaging less than $450 each, comprise in the aggregate a sum vast enough to be of immense importance in carrying on that part of the country's industry which is dependent upon the safe investment of capital in mortgages, public-utility securities, and the obligations of States and municipalities.

Savings deposits represent usually the small balances between income and outgo which individuals are enabled to accumulate by the practice of economy, and justice to these individuals no less than sound state policy should impel us to see that the investments of these savings are religiously safeguarded from the hazards of commercial ventures, and treated as a separate fund, to be carefully invested in accordance with well-defined principles.

The savings banks of New York and of the Eastern States generally, operated on what is known as the mutual plan, have established a record for safety, economy, and efficiency that gives them a unique position among the financial institutions of the country. There are 630 of them in the United States, with aggregate deposits of $3,608,657,828.11 divided among 7,851,377 depositors, giving them an average of $459.62 each.

For many years the losses incurred by these banks have been so small as to be almost negligible, and they have established a record for safety hardly surpassed by banks anywhere.

This result has been due to the careful provisions made by the State legislatures respecting the character of the investments and to the further fact that the officers of these banks have complied strictly with the law and have been faithful to their trusts.

It is questionable whether the mutual savings bank system is adaptable to all parts of the country. The slow growth of the system west of the Alleghenies leads to the conclusion that it is not; but of one thing there can be no doubt, namely, that the same rules which have been found necessary to the safe handling of savings deposits are universally applicable—indeed, that they are indispensable to the security of this class of deposits.

I should like later on to refer to the provision of the bill in regard to savings departments in national banks, contenting myself for the present by expressing the hope that Congress may never consent to the lowering of the standard fixed by the successful mutual savings bank system. I wish to state that I see no objection to the establishment of savings departments in national banks in those States, or even in the towns not having savings banks already established, but that in all cases where national banks are permitted to establish sav-
ings departments the savings deposits shall be separated from the ordinary commercial deposits and invested in precisely the same manner as such deposits are now invested by the regularly constituted savings banks.

It must not be forgotten that savings deposits in commercial banks, unless surrounded by adequate safeguards, are liable to be a source of grave danger, especially in times when banks are subject to unusual demands, for at such times the savings depositors are apt to show apprehension and demand their money, thus subjecting the bank to a general "run."

In concluding this general statement, I wish to say that while the pending bill may not be ideal, it does fulfill the reasonable expectations of the people for a wise coordination of the banks of the country under such governmental control as will assure the protection of the public without injustice toward the banks. The bill does not attempt to carry out impracticable theories, but takes careful note of conditions as they are, including the institutions of the country, the habits and predispositions of the people, and mindful of all these complex elements which have made banking legislation so difficult, it seeks to weld our disjointed banking units into a harmonious system, embracing many of the principles tested by world-wide trial. The enactment of this measure, after such amendment as may be agreed on as a result of wise deliberation, will, in my judgment, immeasurably strengthen our banking system and immensely contribute to the welfare and prosperity of all our people.

I desire, Mr. Chairman, to submit, in connection with this general statement which I have made, a very few suggestions in regard to the bill itself, which I have read with some degree of care.

At the outset it may be well enough to have the Federal reserve board constituted as now provided for in the bill; but later on it will probably be found that the duties of their positions will be so onerous that the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency will not have time to attend to their duties as members of the board.

I would suggest that after the first year of their existence the Federal reserve banks send to the President a list of 12 names, out of which he shall select three members of the Federal reserve board in place of the two Cabinet officers and the Comptroller of the Currency.

The reserve requirements of the Federal reserve banks should call for gold instead of "gold or lawful money."

Redemption of notes should be in gold.

Reserves against the notes should be kept in gold.

I would favor making the capital requirements $5,000,000 for banks desiring to establish foreign branches. Generally banks operating abroad have a capital much in excess of $1,000,000. There are also doubts as to the propriety of allowing banks with such small capital to engage in branch banking, particularly in a foreign country. Branches result in expansion, and if the branch is situated abroad it is less easy to keep it under supervision than if located in the country where the parent bank is domiciled.

The making of real estate loans by national banks is of doubtful propriety, since it tends to put in fixed form investment funds that
should be kept in liquid shape. Most bank deposits are payable either on demand or after short periods. Farm loans, while good in themselves when carefully selected, even at 12 months hardly mature quickly enough to make them a desirable and quick bank asset.

If, however, the national banks are permitted to establish savings bank departments, segregating their savings deposits, real estate mortgages would be a highly satisfactory form of investment. This would make it possible for the national banks to perform an additional service in communities where there are no regularly constituted savings banks. The creation of a department for local investments would also tend to keep deposits employed at home instead of sending them away to the large cities for temporary employment.

I wish to commend the provision for the separation of the assets of the commercial and savings departments of national banks, and to emphasize the necessity of a high standard of investment of savings deposits being prescribed by the Federal reserve board; also that the creation of savings departments in national banks be limited to those places where savings banks do not already exist. On the ground of comity alone, the Federal Government would perhaps refrain from setting up a new institution to compete with others already operating satisfactorily under State laws and meeting the demands of the people. I feel sure that those who are familiar with the success of the mutual savings banks would regard it as unfortunate if the national banks should be empowered to compete with them. But a useful purpose would be served by authorizing savings departments in national banks in those communities now lacking adequate savings facilities, with the proviso always that the savings deposits shall be segregated and as carefully invested as are those of the regular savings banks.

You gentlemen probably know that only about 17 per cent of our people save money. Out of our 90,000,000 people, only about 17 per cent save anything, while over in Germany, or even in little Switzerland, they are better savers than we are. And even in debt-ridden Japan their folks are better savers than we are, and a larger number of them save than the people of the United States. That is a matter of record.

Refunding of the 2 per cent bonds should be on such basis as will save the banks from loss on their investments. Purchase of the bonds by the banks has been a leading factor in keeping up their prices. Now that the Government is to deprive the bonds of one of their chief advantages—the sole right to be used as a basis of bank-note circulation—it should see that no loss falls upon the banks by this action.

The outstanding bank notes should be retired more speedily than is provided for in the bill, so that the country may sooner get the benefit of the elastic note circulation which the bill authorizes.

Gentlemen, that is all I have to say in a formal way. I have here some memoranda in regard to banks of all sorts.

The number of savings banks in the United States in 1892 was 1,059; in 1902, 1,036; and in 1912, 1,922. The number of depositors in 1892 was 4,781,605; the number of depositors in 1902 was 6,866,672, and the number of depositors in 1912 was 10,010,304.
The amount of savings deposits in 1892 was $1,712,769,026; the amount of savings deposits in 1902 was $2,750,177,290; and the amount of savings deposits in 1912 was $4,451,818,522.

And this is an interesting fact, that the average due each depositor in 1892 was $358.20; in 1902 it was $412.53, and in 1912 it was $444.72. That is the amount which was due each depositor.

I have some other figures here, Mr. Chairman, which, with your permission, I would like to have inserted in the record.

Senator O'Gorman. Without objection, they may be inserted in the record.

1 Comptroller's report, 1912.

Senator Nelson. You must not overlook this fact, Mr. Rhodes, that out in the West the farmers and small merchants have use for their money in the development and improvement of their farms and all that sort of thing. They are not like the people in the East, who are more limited in scope, and they have no opportunity to save their money except by putting it in savings banks. The people in the West put that money in active use in improving their farms, putting up more buildings, and doing all that sort of thing; and that is why we do not make the showing of savings deposits. We save it and realize much more out of it than you do in the savings banks.

Mr. Rhodes. Do you not think if you had savings banks in Minnesota you would learn to save money? The school children, the working people, the housemaids—would they not learn to save money if they had savings banks to put it in?

Senator Shafroth. They do have banks out there to put it in.

Mr. Rhodes. Savings banks?

Senator Shafroth. Oh, yes; savings banks all over the West.

Mr. Rhodes. There is only one in Minnesota that I know anything about.

Senator Nelson. We have one good mutual bank in Minneapolis.

Mr. Rhodes. I know it well. I knew Mr. Moulton before he died.

Senator Bristow. Why should not a boy who wants to save his money save it and buy a calf or a horse? I think he would use more judgment about that.

Mr. Rhodes. I think so; much depends on the boy.

Senator Nelson. Is it not an ethical question? Is it a wise thing to teach children so much of the spirit of Mammon—get them to feel that this is only a world in which to make money?

Mr. Rhodes. I believe the only way to make a good citizen is to make a good saver. If he is a good saver, he will make a better father and a much better citizen than otherwise.

Senator Nelson. Is there not the danger that he will make Mammon his only god?

Mr. Rhodes. I do not believe that.

Senator Shafroth. You think this money should all be made redeemable in gold and not in gold or lawful money?

Mr. Rhodes. That is my belief.

Senator Shafroth. If we should not pass this bill, would you believe in our enacting a law requiring the national banks to redeem the bank notes in gold?

Mr. Rhodes. No.
Senator Shafroth. Did you ever hear of a banker who was willing that the national-bank notes should be made redeemable in gold?

Mr. Rhodes. That is what they want to do.

Senator Shafroth. National-bank notes?

Mr. Rhodes. They are practically based on a United States bond, which represents gold money.

Senator Shafroth. The national-bank notes are redeemable in lawful money, are they not?

Mr. Rhodes. Yes.

Senator Shafroth. The Aldrich bill was perfectly satisfactory to the bankers, was it not?

Mr. Rhodes. Fairly so.

Senator Shafroth. They made their notes redeemable in lawful money?

Mr. Rhodes. Yes.

Senator Shafroth. Do you not think there is a good purpose to be served in having this money redeemable in lawful money when that lawful money is redeemable in gold, less the reserves required, and therefore the greater ability of the Government to maintain the gold standard?

Mr. Rhodes. It is about as broad as it is long, anyway, because we are all on a gold basis. I recollect that a few years ago there was a Secretary of the Treasury here in Washington who redeemed the silver certificates in gold in the Treasury Department here—paid gold for them over the counter—and technically they are redeemable in gold.

Senator Nelson. Would it not be so with the currency? The reserve-national-bank note is redeemable in lawful money, and then is not that lawful money redeemable in gold? Does that not keep us on the gold standard?

Mr. Rhodes. It is an intermediate step.

Senator Nelson. Is not that intermediate step necessary in order to prevent large gold reserves. If we are going to have 12 competing points, we are going to require three or four times the amount of gold that is to be hoarded.

Mr. Rhodes. Why not?

Senator Shafroth. Because the reserves have got to be so much more.

Mr. Rhodes. Each pool by itself, as it were, in a separate place?

Senator Shafroth. That may be, but it is also redeemable at the Treasury, all of it at the Treasury, and when you make this currency redeemable at the bank in gold and then also at the Federal Treasury of the United States, you can readily see that it will take a great deal more money. Then, again, take the Government’s reserve. We have been upholding in gold about $346,000,000 of greenbacks and $740,000,000 of bank notes, and it has only taken $150,000,000 of gold, and if you scattered this gold reserve through these centers you are making a competition against the Government itself.

Mr. Rhodes. That is possible, but we must remember the sentiment of the people. Everybody in the United States, all of us, think we are on a gold basis.

Senator Shafroth. We are.

Mr. Rhodes. We ought to keep up our gold standard in good faith.
Senator Shafroth. Why do not the bankers want the same thing when they have a bank currency out?

They have a bank currency—that is, $740,000,000 of currency—but none of them would consent that those notes would be redeemable in gold, because they have to keep the gold there to meet them. When the Aldrich bill came in, the bank provided there being a bank of bankers, they provided that it must be paid in lawful money; they did not mention gold. They made it payable in lawful money alone, and they did it, why? Because they know it is easier to maintain the gold standard. They know if you make too much pressure on a limited quantity of gold in this country it is going to have a tendency to keep gold in our vaults.

Mr. Rhodes. That is true, in large measure; but, as I said before, the best illustration——

Senator Shafroth (interposing). Let me ask you this question: Of course we had no trouble in paying gold, except when there is a run on the Treasury for gold?

Mr. Rhodes. I do not want any gold in my pockets.

Senator Shafroth. Now, in case of panic, by the cooperation of these Federal reserve banks and the United States Treasury, can not the redemption take place in such a way that it would be a great advantage in having the gold currency redeemable in the other currency and the other redeemable in gold?

Suppose I have a Federal reserve note of $1,000, and we find there is a run upon gold, and the Federal reserve board says we must cooperate with the reserve banks, and a man comes to a Federal reserve bank in New York and he says, "I have a Federal reserve note of $1,000, and I want gold." The board says, "We have not got gold, or, if we have, we do not choose to pay it, because that is payable in lawful money, but we will give you the lawful money, and you can send it to Washington and you can get gold." So he takes the lawful money, and the bank of New York says, "If there is going to be a run on gold, we will lock that $1,000 note up in our vaults so we can not get any more on that money."

So the man sends it to Washington, and he demands his gold on that lawful money, and the Government says, "Certainly, here is your gold." The Secretary of the Treasury says, "If we are going to have a run on gold we will take that $1,000 in lawful money and lock it up."

You have by means of $1,000 practically redeemed, or at least temporarily, $2,000, and you could not do that if all of it was made payable in gold, because the man who had $2,000 would get it, and the man who had $1,000 in lawful money would get it. Is it not an advantage when there is a run for gold in this country to have that means, not of disturbing the gold standard, but of strengthening the gold standard?

Mr. Rhodes. The discretionary power?

Senator Shafroth. Upon the part of the bank.

Mr. Rhodes. Of course, they exercise the same in principle in some foreign countries. It is an arbitrary matter. It is purely arbitrary on the part of the reserve board in Washington.

Senator Shafroth. Of course, if they have plenty of gold they pay gold, and it would be only in times of stringency when there is so much hoarding that this would be invoked.
Mr. Rhodes. It is not very likely. The people of the country have more money in their pockets than we think—the common people—and this system you are endeavoring so faithfully to perfect here will make banks so popular that the hoarding of money will never be resorted to by any people, no matter how ignorant they may be.

Senator Hitchcock. The next witness, I suppose, will be Mr. Willis.

Senator Bristow. There is one question I want to ask. I want to inquire whether Mr. Conant has yet submitted to the committee his suggestions for a Federal reserve bank? When he appeared before the committee some two or three weeks ago we asked him to submit a plan for a Federal reserve bank, and we also asked Mr. Vanderlip, Prof. Jenks, and Mr. Dawson to submit such a plan. If Mr. Conant has not yet sent the committee his plan in writing, I would like to ask that when it is received it be printed in the hearings along with the plans submitted by Mr. Vanderlip, Prof. Jenks, and Mr. Dawson, so that we may have them all together. I think that would be a great assistance to the committee.

Senator Hitchcock. That can be done, and I am sure it would be very helpful to the committee to have them all together.

Senator Bristow. This question has been handed to me to propound to you, Mr. Rhodes: What is the specific new feature of the pending bill that you deem most valuable?

Mr. Rhodes. Well, Senator, that is a very difficult question to answer. Of course, I am not a big banker. I am a country banker, although I associate much with big bankers in my territory, but I verily believe, from my standpoint, that the meat of this bill to the average country banker is its attempt to allow country bankers to get money quickly.

Senator Bristow. The discount provision?

Mr. Rhodes. The discount provision. I think that is about the best of it. I am not afraid of the Government supervision. I say the more supervision the better. A good bank is not afraid of supervision; it wants supervision. Uncle Sam can come to see us every day of the week and charge what he pleases. I am speaking on behalf of my own bank now. Personally, I would like to have a Government bank with the circulating medium.

Senator Hitchcock. I think it is so nearly 1 o'clock now that we had better not try to start with Mr. Willis until after recess, and we will meet again at 2 o'clock this afternoon.

(Thereupon, at 12.45 o'clock p.m., the committee took a recess until 2 o'clock p.m.)

AFTER RECESS.

Senator Hitchcock. Mr. Willis, we will hear you now.

STATEMENT OF HENRY PARKER WILLIS, OF NEW YORK, N. Y.

Senator Hitchcock. State for the record, Mr. Willis, your name, occupation, and residence.

Mr. Willis. My name is Henry Parker Willis; I am a newspaper writer in New York City.

Senator Hitchcock. Mr. Willis, you are employed upon a financial journal, are you not?

S. Doc. 232, 63-1—vol 3——60
Mr. Willis. Yes, sir; the Journal of Commerce of New York.

Senator Hitchcock. You have been a student of banking and currency subjects for some time?

Mr. Willis. Yes, sir; for about 15 years or so.

Senator Hitchcock. You have had something to do with the genesis of this bill, have you not?

Mr. Willis. About 18 months ago, Mr. Chairman, that is to say, about the 1st of April, 1912, a subcommittee of the House Banking and Currency Committee, of which Hon. Carter Glass was chairman, asked me to cooperate with them as an expert adviser, and I was appointed in that capacity. I continued working with them during the last session of Congress, and then was reappointed at this session of Congress in the same relation to the full committee, and am acting in that capacity now.

Senator Reed. I did not understand the last part of your statement.

Mr. Willis. I say I was appointed about 18 months ago in an advisory capacity to the subcommittee of the House Committee on Banking and Currency and then was reappointed in the same capacity by the full committee at this session, and am occupying that relation to the House Committee on Banking and Currency at the present time.

Senator Hitchcock. Have you had any practical experience as a banker, Mr. Willis?

Mr. Willis. None whatever.

Senator Hitchcock. You have not been in business at all?

Mr. Willis. No, sir.

Senator Hitchcock. Have you ever held any chair in a college or university?

Mr. Willis. I was some years ago professor of economics in Washington and Lee University, later professor of finance in George Washington University, and still later dean of the college of political science there. I did my post-graduate work at the University of Chicago, and took my doctorate at that institution, presenting a thesis on a financial question, "The history of the Latin monetary union," which I had prepared after study in European universities. After that I was secretary or expert assistant to the Indianapolis Monetary Commission and had general charge, in conjunction with Mr. L. Carroll Root, of the preparation of their report and of the bill which they recommended to Congress.

Senator Hitchcock. What, in substance, was that bill? Can you briefly outline it?

Mr. Willis. Yes.

Senator Reed. Did you say you were secretary to the monetary commission?

Mr. Willis. I did; yes, sir.

Perhaps, Mr. Chairman, I could get at your question better by telling you what this commission was. The Indianapolis Monetary Commission was a voluntary body organized by a convention of boards of trade, which met for the purpose of recommending legislation designed to correct the district evils in the currency and banking system, I think, in 1897. That commission was appointed at the instance of this general convention of boards of trade.
Senator Reed. Did you mean 1897 or 1907?

Mr. Willis. 1897. This commission was created as a result of this general union of boards of trade, and did its work during 1897 and 1898. It finally recommended a bill to Congress, it having, however, as I have said, no official quality. The substance of that bill was this, I should say: First of all, the creation of an elastic banking currency; second, a definite declaration in favor of the gold standard of value; and third, the introduction of certain changes into the Treasury organization, calculated to bring about a segregation of the trust funds which were held behind the greenbacks; that is, to take them out of the general fund of the Treasury; and various other relatively minor modifications. Nothing was done with this bill at the time, as you are aware.

Senator Reed. When was that bill reported to Congress?

Mr. Willis. As I said, the commission was an unofficial body, but the bill was placed before Congress, probably in the autumn of 1898.

Senator Nelson. Where was it introduced, in the House or the Senate?

Mr. Willis. I think more attention was given to it in the House than in the Senate.

Senator Hitchcock. Did it provide for a banking currency?

Mr. Willis. It provided for an elastic-note currency, with provision for getting rid of the bonds, and basing the issues on commercial paper.

Senator Hitchcock. It was an asset currency?

Mr. Willis. An asset currency; yes, sir.

Senator Reed. Do you know who introduced that bill in the House of Representatives?

Mr. Willis. My recollection is that it was introduced by Representative Jesse Overstreet, of Indiana.

Senator Reed. It was known as the Overstreet bill?

Mr. Willis. I think it was. That is my recollection. As I left Washington after the work of the commission was done, I did not follow the legislative details.

Senator Hitchcock. You had something to do with the drafting of that bill?

Mr. Willis. Yes, sir; I had expert charge of the work.

Senator Hitchcock. You have had, therefore, considerable experience in the work of preparing legislative matters?

Mr. Willis. I think I might fairly say so; yes, sir.

Senator Hitchcock. Referring to your present connection with the House Committee on Banking and Currency, you took up your work in 1912, and are still employed by the committee?

Mr. Willis. Just so; yes, sir.

Senator Hitchcock. Have you a copy of the draft of the bill as first made by you?

Mr. Willis. The bill presented by the committee was prepared under the direction of the chairman, Mr. Glass, and such work as I have done has been that of an advisor and investigator, cooperating at each stage and carrying out the directions that were conveyed to me by the chairman. Whatever authentic drafts of the different stages through which the bill passed there are, are in the possession,
so far as I know, of Mr. Glass. There were a good many successive drafts on various points.

Senator Hitchcock. Can you give the committee an idea of what the first draft provided?

Mr. Willis. I think, substantially, the same as the present bill, except that many minor details were changed, of course, perfected, as we went along.

Senator Hitchcock. Were there 12 regional banks?

Mr. Willis. Yes, sir.

Senator Hitchcock. With a Federal board of control?

Mr. Willis. I am not sure that that name was given to the board.

Senator Hitchcock. A board to be appointed by the President?

Mr. Willis. A board of control; yes.

Senator Hitchcock. A board that was a board of public officials, appointed by the President?

Mr. Willis. There were also banking representatives in the earlier draft of this bill, some banking representatives.

Senator Reed. On what?

Mr. Willis. On the board of control.

Senator Hitchcock. How many banks were provided for?

Mr. Willis. I do not know that I recall exactly. The first draft of the bill, in any perfected form, became public at some time during last June. It was given out then to the newspapers from some source, and the data are all given there. I think it would be better, probably, to refer to that.

Senator Hitchcock. In the newspapers?

Mr. Willis. It was given out and was printed by them.

Senator Hitchcock. Some of the members of this committee want to get an idea of how this bill had developed.

Mr. Willis. The bill has been developed, as I have said, Senator, with the cooperation of the Committee on Banking and Currency, by a gradual process of study, extending over about 18 months; and as far as my relation to it is concerned it has been, as I have said, that of an advisor and investigator. I have done what I could to advance the work, doing what ordinarily falls to one acting in that capacity, carrying out the instructions of the chairman at each stage of the process, consulting with him and doing what I was instructed to do.

Senator Hitchcock. What was the size of the board, Mr. Willis?

Mr. Willis. It seems to me—I dislike, Senator, to give this data simply from memory, and can speak only subject to the qualification that I am speaking merely from memory, because there have been so many different changes and drafts—that in this draft which became public, and which was the first perfected draft, there was provision for two representatives from each of the regional banks; that is, a so-called commission was appointed, or elected, rather, and then a given number of Government executive officers were ex officio members of that body. That made a rather large body of, perhaps, 25 or 30 men.

Senator Hitchcock. If there were two from each regional bank, there would be 24 of them.

Mr. Willis. Well, in this bill I speak of, I think the number of banks may have been 15. That was the first number hit upon.
Senator Reed. That would be, then, 30 men directly representing the banks?

Mr. Willis. Yes.

Senator Reed. Then you added to that bank representation of 30 the Secretary of the Treasury and who else?

Mr. Willis. I think the same officers who are mentioned in the present bill, the Comptroller of the Currency and the Secretary of Agriculture.

Senator Reed. So the Government would have three representatives and the banks would have 30 representatives?

Mr. Willis. May I continue there?

Senator Reed. Yes.

Mr. Willis. This board was merely an advisory or consultative body which elected an executive committee, and that committee was vested with all the powers of the advisory body. In the executive committee, which, I think, consisted of nine members, there were three ex officio Government officers, and I think three who were chosen by the banks, and three who were designated by the President of the United States either from this commission or outside of it. A provision was made, however, that bankers who became members of the executive committee should resign all banking connections. The effort was to get a board which fairly represented the business interests of the country and the Government to act jointly.

Senator Reed. Was that the stage in which this bill was before it was submitted to Senator Owen?

Mr. Willis. I beg your pardon?

Senator Reed. Was that the stage in which this bill was when the draft of it was submitted to Senator Owen?

Mr. Willis. I can not recall in detail, as I say, the exact stages through which the bill went. Senator Owen went over different drafts of the measure as we went along, and cooperated in shaping the terms of it.

Senator Reed. At one time was there not a discussion or argument between Senator Owen and yourself in regard to the proposition as to whether the Government was to have the ultimate control or whether the banks were to have the ultimate control?

Mr. Willis. I do not recall such a discussion, Senator. Let me say at this point, however, that my feeling at that time was that it would be desirable to have certain banking representation on this board. I thought that by so doing we could get into closer touch with the banks of the country, and would have their advice, etc.; that if the membership of the board were partly selected from the best bankers, then called upon to resign their banking connections, their connections with banking institutions, so that they would become the servants of the public, you would have a stronger board for practical purposes than otherwise you would have. That was the view of Mr. Glass, as I understood it, and was a view in which I concurred.

As he worked further on the subject, I think he came to feel that the board should consist entirely of public appointees. When that idea was suggested to me, Mr. Glass and I had some discussion of the matter, I recall. I do not remember in detail what it was. I think I said to him that it seemed to me that the entire elimination
of bankers from the board would tend to lose us a good deal of sup-
port for the bill, and might result in weakening the plan in practical
operation.
That view was not accepted; but the form of the commission or
board was made what it is. And since then I have devoted a good
deal more of study to the thing, particularly in view of the rather
extensive public criticism that has been visited upon the mode of
control; and I think that the board, as now provided, consisting ex-
clusively of public officials, as it does, is a good one and one that
can be trusted.
Senator O'Gorman. Are you still of the opinion that Cabinet
officers should be members of the reserve board?
Mr. Willis. I think, Senator O'Gorman, that the Secretary of the
Treasury, by all means, should be, even if his connection with the
board were merely pro forma, in order to give him an active connec-
tion with this board; for although it is true that the form of the bill
as now presented contemplates the taking of the general funds of
the Treasury, the commercial funds of the Treasury, out of the
Treasury and the placing of them in the banks, it is a fact that the
disassociation of the funds from the Treasury would not be com-
pletely effected for a good while, and the immediate cooperation of
the Secretary of the Treasury would be very necessary at every
point. I therefore——
Senator O'Gorman (interposing). Well, would not the board, con-
sisting of public officials, always have the cooperation of the Secretary
of the Treasury?
Mr. Willis. Yes.
Senator O'Gorman. Even though he were not a member ex officio
of the board?
Mr. Willis. I think that is perfectly true. At the same time, per-
haps partly for sentimental reasons, I should prefer myself to see the
Secretary of the Treasury a member. As to the other two officers——
Senator O'Gorman (interposing). Right there, if you will permit
me to ask another question: It has been suggested to us at different
times, as a reason for the exclusion even of the Secretary of the
Treasury, that this board should not be what we describe as a political
board, but as far as possible it should be divorced.
Mr. Willis. Yes.
Senator O'Gorman. From partisan suspicion or activity.
Mr. Willis. Yes.
Senator O'Gorman. And it has been said, in that connection, that
a President usually selects for Cabinet positions men who have been
active politically.
Mr. Willis. Yes.
Senator O'Gorman. And that we may not always have as valuable
a Secretary of the Treasury as we have at the present time.
Mr. Willis. Well, I agree fully with that view in general. But I
believe from what I have seen of our Secretaries of the Treasury dur-
ing a series of some years observation here, that the Secretary of the
Treasury is usually able to disassociate himself from purely commer-
cial considerations; and I do rather strongly feel that he should be a
member of this board. I see no reason why the Secretary of Agricul-
ture should be a member of it.
Senator O'Gorman. Why did you suggest that the Secretary of Agriculture should be a member in the first place?

Mr. Willis. Well, I do not know that I did, Senator O'Gorman.

Senator O'Gorman. Oh, I beg your pardon.

Mr. Willis. Senator Hitchcock also spoke of my having suggested various things—as if I had necessarily suggested or favored every point in this bill. Let me say at this point, right here, that I believe it to be a good one, recommend its enactment, and am heartily in sympathy with it; but that there are a good many things in the bill that I do not agree with.

Senator O'Gorman. Well, now, it is in that connection that I want to ask a few questions. I am not much concerned about the genesis of this bill.

Mr. Willis. Yes, sir.

Senator O'Gorman. I am not concerned about the authorship of it, but as you are a student of banking and currency I would be glad to know whether you would make any suggestions at this time looking to the modification of the bill?

Mr. Willis. I should be glad to do so; and I had intended to take that up when I was diverted to the early work on the bill, etc. If it be your pleasure and that of the chairman, I will take that up now.

Senator O'Gorman. Very good.

Mr. Willis. I said a moment ago that it seemed to me that this bill was a good one, and that I heartily recommended its enactment. I repeat that, and I also repeat that I think there are some serious defects in the bill at the present time, and that there are some technical defects in it; and I believe further that there are certain concessions or changes that might well be made in the measure for the purpose of meeting criticisms that have developed, and for the purpose of strengthening it before the public without materially interfering with its general objects.

I will now turn, with your permission, to the points that strike me as rather serious defects in the bill.

In getting this bill into successful operation I think it will be necessary to have the banks which are engaged in operating the system act harmoniously, and so far as possible, in strong sympathy with the plan. I say, if it be feasible to get that under reasonable conditions.

In the second place, I think it is very desirable, in order to get that cooperation from the commercial banks of the country, that they should be in a measure protected to an extent that will enable them to continue as active commercial banks.

Now, in this bill as it stands to-day provision is made for allowing State banks and other banking institutions to become members of the organization upon practically the same terms as national banks. That means that instead of measuring up to the strongest unit in your system you are rather inclined to measure down to the weakest. In other words, the bank which is organized under the least stringent and the least satisfactory laws is the one that can come into the system, get the advantage of what it holds out, and at the same time extend its business broadly under the less stringent laws to which it is subjected.
Now, the national banking system, as you are all aware, has to-day as its striking characteristic the note-issue function.

Under this bill it is to be expected that that note-issue function will be gradually eliminated, and that at the end of 20 years it will disappear.

Under those conditions what would be the reason why a bank should organize as a national bank, rather than as a State bank? It seems to me that there will be no such reason, except the mere prestige of the name "national," and the somewhat closer relationship, possibly, between the national bank and the Treasury and the Government, than would exist between the State bank and the Government.

It has been stated by not a few critics of this bill that it would probably tend to extinguish the national system, so that in the last analysis you would have a corps of 12 reserve banks, or as many as you decide upon, presiding over groups of member banks organized under the laws of the States. I think that that, like all extreme or general statements, is probably pretty far from the truth; but I also think that the tendency would be quite strongly in that direction. I do not think that should be allowed to occur.

Senator O'GORMAN. Do I understand you to say that, in your judgment, the adoption of this bill as it now stands would be likely to induce a number of the national banks to surrender their charters?

Mr. WILLIS. No, sir; I did not say just that. What I meant to say, Senator O'Gorman, was that I thought that new banks—men who were contemplating going into the national banking system—would be more likely under this bill to organize with State charters than they would with national charters; certainly in many parts of the country.

Senator O'GORMAN. Well, would not the same reasons that would induce men embarking in banking enterprises to take out State charters also be likely to induce some of those who held national charters to surrender them and change into State banks?

Mr. WILLIS. There would be that tendency; but, of course, it would be held in check by the existing situation as to bonds.

Senator O'GORMAN. Well, what is your suggestion?

Mr. WILLIS. I will come to that more fully later. Now, to sum up my first objection, I think that in this bill State banks in order to be eligible for membership in the system ought to conform to the same limitations upon business as national banks.

Senator REED. Now, let me understand you on that point—

Senator NELSON (interposing). Then they would not come in at all.

Mr. WILLIS. The State banks would not?

Senator NELSON. No.

Senator REED. Let me understand this, because it is a matter of very great importance. Would you, then, add to the powers of the national banks a provision making them broad enough so that they could exercise substantially the functions now exercised by State banks and trust companies, or would you let the present national act stand substantially as it does and prescribe the character of business which could be done by the State banks and trust companies upon coming into the system?

Mr. WILLIS. I was just coming to that point, Senator Reed.

Senator REED. Very well.
Mr. Willis. That is my second point. I mentioned two very serious defects in the bill. May I just take that up in my own way?

Senator Reed. Certainly.

Mr. Willis. Secondly, I recommend the entire elimination of the savings-bank section as now given in this bill, so that a national bank would be restricted to its present line of business.

Senator Reed. Well, that was not in your bill when it was introduced?

Mr. Willis. In what bill, Senator Reed?

Senator Reed. It was not in the bill when it was first introduced, was it?

Mr. Willis. The savings section was introduced shortly before the bill was reported to the House.

Senator Reed. I say, it was not in the bill when the bill was introduced in the House?

Mr. Willis. No; I think it was not.

Senator Reed. It was added by the caucus, was it not?

Mr. Willis. My memory, Senator, is that that was done while I was not present. But I am speaking merely from memory. My memory is that it was added in the committee, during the preliminary work in the committee, and then ratified by the caucus.

Senator Reed. Yes. Very well.

Mr. Willis. Now, those two changes, I think, should be made in the bill with a view to making this corps of banks a strong body of institutions, organized for the purpose of doing a strictly short-term banking business.

Senator Nelson. Would you limit the statement to that also?

Mr. Willis. I should make them conform, Senator, in every respect, so far as it could be legally done, to the restrictions upon the national banks.

Senator Nelson. Of course we could provide as to that, that they could not come in except under that condition.

Mr. Willis. That is what I have in mind.

Senator Nelson. And you think we ought to do that?

Mr. Willis. I do.

Senator Nelson. Then you would fence them out pretty effectually from the system?

Mr. Willis. Well, I do not undertake to pass judgment on that. I think a good many of them would come in just the same, because the strongest State banks are, of course, to-day just as strong as many of the national banks. But that is a matter of opinion wholly, and I would not attempt to hazard anything more than a conjecture about it.

Senator O'Gorman. Let me ask you a question right here. If we are attempting to improve and extend our national banking system, why should we attempt to make a provision which will relate to State banks? Why should we not confine our effort to an improvement of our national banking system—if it be sufficiently attractive? And after we accomplish the improvement, it may induce State banks to surrender their State charters and come into the system. I would like to know why we should attempt in this measure, with the constitutional limitations on our power, to legislate for State banks?
Mr. Willis. Well, that is practically the idea that I have sought to express.

Senator O'Gorman. Well, do you mean we ought to eliminate what is now in the pending bill with respect to State banks and trust companies coming into the system?

Mr. Willis. No; I think they should be permitted to come in, if they are willing to conform in every reasonable respect to the national banking act.

Senator O'Gorman. Well, you encounter the difficulty, then, suggested by Senator Nelson, that a State bank is permitted to enjoy functions which you would curtail and limit in the case of a national bank.

Mr. Willis. I should say to the State banks that they should stay out of the system if they are not willing, in every respect, to come up to the national banking standard. To sum this up, my feeling about the proposed plan is that it should provide a strong, select corps of commercial banks, bound by the most rigid requirements of modern banking practice, to keep their assets in a fluid condition and to live up to stringent examination and investment standards.

Senator O'Gorman. Yes. You may proceed.

Mr. Willis. Now, I said I thought there were technical defects or blemishes in this bill.

Senator O'Gorman. Pardon me; before you proceed to technical defects, have you now exhausted what you conceive to be the serious and substantial defects?

Mr. Willis. Those are, to my mind, the points in which the bill is seriously at fault; yes, sir.

Senator O'Gorman. Well, then, will you briefly recapitulate the serious, substantial defects?

Mr. Willis. First, the admission of State banks subject to their existing conditions of law and operation.

Second, the weakening of the national system by the introduction of a savings section which would enable the national banks to compete, in a way, with State banks, and to tie up a considerable part of their capital in other than purely fluid funds.

I might add there—and this I do with much less certainty—that it has occurred to me that there might be some purpose served in permitting the organization of national trust companies, the same to be organized by the stockholders of national banks, and by them only, and to be operated for the purpose of taking over such business as did not properly fall within the sphere of a national bank, upon condition——

Senator O'Gorman (interposing). You mean that would not fall within the sphere of a commercial bank?

Mr. Willis. Yes, sir; upon condition that such banks should there-upon disassociate themselves from the present relations they bear to State trust companies organized in the same way—a kind of joint ownership of stock plan——

Senator Nelson (interposing). Would you have them related?

Mr. Willis (continuing). Of which there are, I understand, about 300 cases in the country.

Senator Nelson. Would you have these trust companies, then, as appendages of national banks?
Mr. Willis. They would be that; yes, sir.

Senator Nelson. Well, what is the difference between appending a trust company to a national bank and appending a savings bank to it?

Mr. Willis. The difference is, as I understand it, that in this savings question there is no sufficient segregation or differentiation between the savings department and the commercial, but they are simply departments of the same corporation. My feeling in the matter is that a banking corporation organized under the national law should be solely devoted to commercial business, and should be organized for the purpose of carrying on that business in such a way as to make it a suitable member of this system.

Senator Nelson. But would you allow the same set of men that run the national bank to organize a company in the next room to that, or in the building close by, a trust department as an attachment to it?

Mr. Willis. But organize it under a separate charter, with different liability, and with a different kind of inspection, subject to complete differentiation of assets and possibly not allowed to have any direct dealings in the way of deposits or discounts with the bank itself.

Senator Nelson. Would you allow the same set of officers and directors?

Mr. Willis. I think I should allow the same set of directors, possibly. I would not say with certainty about that. As I stated in the first place, I mean that merely as a means of meeting the apparently widespread demand for a provision enabling national banks to do in some way the business which at present is either driven away from them by the stringent requirements of the national-bank act or else is carried on by them under the fiction of separate organization of trust companies under State laws.

Senator Shafroth. In the State from which I come, Colorado, a savings bank can do a general mercantile business.

Mr. Willis. Yes.

Senator Shafroth. But when the bank fails the savings deposits are reserved in toto, and the depositors have a first lien upon all the assets.

Mr. Willis. I see. That is, they are preferred creditors.

Senator Shafroth. Yes; preferred creditors. That complicates very much the affairs of a failing bank.

Mr. Willis. Yes; I see.

Senator Shafroth. Because one side contends that the giving of interest on their deposits really ought to make them deferred; whereas, upon the other side, they say that these savings depositors are poor people that are putting their money in, and that therefore they should be preferred. I have generally favored segregation, myself.

Mr. Willis. Well, I believe in that—the complete segregation of liability.

Senator Hitchcock. Mr. Willis, had you finished your enumeration of the chief defects of the bill?

Mr. Willis. I have, sir.
Senator Hitchcock. Then, I want to draw attention to the fact that after this bill was reported in the House there was a very decided change in the market for United States 2 per cent bonds.

Mr. Willis. Yes; I know.

Senator Hitchcock. And I want to ask you whether you think that the bill adequately provides for our national credit?

Mr. Willis. Well, Senator Hitchcock, may I reserve that point until later? That is a topic that I thought of taking up fully a little later on. With your permission I should like to deal with that later.

Senator Hitchcock. But I would like to ask you at this time whether you think that result was due to a defective condition in the bill.

Mr. Willis. Do you mean the decline in the Government bonds?

Senator Hitchcock. Yes.

Mr. Willis. I have thought somewhat upon that question. I do not think that it was. But I do think this, that the 2 per cent bonds are in an artificial condition. Their market is largely artificial, and always has been. I think that any great change in legislation that does not make an absolute, unmistakable, positive provision for the redemption of those bonds at par—that is, I mean in the near future—may lead timid holders of those bonds to throw them on the market and thereby bring about a depression in their price; and while I, of course, can only advance an opinion on the subject I think that is what occurred in this instance.

Senator Hitchcock. Well, you do not believe, do you, that national banks that intended to stay in the system as proposed in this bill would market their bonds?

Mr. Willis. Very few bonds in actual volume were marketed, Senator Hitchcock.

Senator Hitchcock. No. But you believe, certainly, that the only bonds which were marketed were marketed by banks which were going to denationalize themselves, because they could not accept the terms of this bill, do you not?

Mr. Willis. Not necessarily, I should say. There are always banks that are getting rid of their bonds, selling them; and it might easily have been the case at that time that the banks were disposing of bonds for the purpose of retiring circulation.

Senator Hitchcock. Well, under the existing law they are not permitted to retire more than a very small proportion of their circulation.

Mr. Willis. Certainly; that is true.

Senator Hitchcock. But if they denationalize themselves they will naturally retire it all?

Mr. Willis. Yes; they would retire all their circulation, and they would sell their bonds if they could get a good price for them. I can conceive of the bonds being at a price where it would be better worth their while for the holders of them to continue to hold them, rather than sell them on the market, as an investment security. Have I answered your question?

Senator Hitchcock. In part you have. But I wanted to ask whether you felt when you finally approved the House bill—as I believe you did—whether you felt that it took into account the fact that there were some 4,000 national banks in the country which prac-
tically derived no benefit from this bill at all, although they were
required to give up one-tenth of their capital under it.

Mr. WILLIS. Well, I did not feel then, and do not feel now, that
those banks derive no benefit.

Senator HITCHCOCK. Well, do you know of any bank having less
than $100,000 in capital, doing business in a country community,
which is not able to get all the rediscounts it desires under the pres­
et system?

Mr. WILLIS. I should not like to name any individual bank of that
kind. I do not think I could.

Senator HITCHCOCK. No; but you are aware that throughout the
West and the South there are thousands of banks which at certain
seasons of the year already rediscount their paper with their reserve
agents?

Mr. WILLIS. Certainly.

Senator HITCHCOCK. And, of course, this bill gives them nothing
they have not already got.

Mr. WILLIS. I can not agree with that.

Senator SHAPROTH. In times of panic it does.

Mr. WILLIS. I could not take that view of it.

Senator HITCHCOCK. Well, are you familiar with the condition of
these small banks in the country towns as they are at the present
time?

Mr. WILLIS. I have devoted as much attention to that as I reason­
ably could. As I told you, however, I have not had a technical bank­
ing experience and would not pretend to——

Senator NELSON (interposing). Do you know the character of
deposits of these small country banks?

Mr. WILLIS. I think so.

Senator NELSON. What are they?

Mr. WILLIS. Let me see if I understand your question.

Senator NELSON. Do you know the character of the deposits of
these small country banks in a rural community—the nature of their
deposits?

Mr. WILLIS. Well, I presume that they are made there in part by
persons who have funds that they want taken care of and in part by
local tradesmen and farmers going there to obtain discounts on their
notes.

Senator NELSON. Are you aware of the fact that the bulk of the
deposits in these small country banks are time deposits drawing
interest?

Mr. WILLIS. I know a very large volume of such deposits exists.

Senator HITCHCOCK. You are familiar with the fact, now, that
through the West, at the present time, and in the South there are
possibly thousands of national banks which perhaps would dena­
tionalize in case this bill passes as it has come from the House?

Mr. WILLIS. I have heard that stated, Senator, without knowing
exactly how much basis there was for it. Personally, I may say at
this point that I do not think it would be physically possible for
these banks to do that in any considerable number—any large number.

Senator HITCHCOCK. Will you state the reasons?

Mr. WILLIS. The reasons why they would not denationalize?

Senator HITCHCOCK. Yes.
Mr. Willis. In the first place, an effort on the part of such a bank to go out of the national system would cause it a rather heavy loss on its bonds.

Senator Hitchcock. Now, is not that fact what has caused the depreciation of the bonds?

Mr. Willis. I do not think so, Senator. I do not think that has been the cause of it; but, of course, I merely am expressing an opinion.

Senator Hitchcock. Suppose I told you I had received letters from 130 national banks in the State of Nebraska, outside of Omaha, most small national banks, and that 70 of them advised me they would denationalize if the bill passed as it came from the House?

Mr. Willis. Yes?

Senator Hitchcock. Taking that as a standard, how many small national banks do you think would denationalize throughout the United States?

Mr. Willis. Well, I should say unquestionably that that number of letters represented a very strong disposition on the part of the banks to denationalize. I should add, however, to what I said a moment ago, in addition to the question of the loss on bonds, there is this further idea——

Senator Hitchcock (interposing). Let me stop you right there. Do you assume that Congress will pass a bill which will permit the 2 per cent bonds to go below par?

Mr. Willis. I do not assume anything at all.

Senator Hitchcock. Do you think it would be right for Congress to do that?

Mr. Willis. I think it is right for the Government to make proper provision for its debts, whatever that may be.

Senator Hitchcock. Suppose those banks did denationalize and retire their currency, would not that produce a stringency in the circulat­ing medium?

Mr. Willis. That is the point I wanted to speak of a moment ago.

Senator Hitchcock. Was that danger taken into account in framing this bill?

Mr. Willis. Fully.

Senator Hitchcock. Was it felt any banks would denationalize?

Mr. Willis. Under this bill, Senator, the bank, of course, which wishes to denationalize is subject to the same conditions as at present; that is, it has to leave currency—lawful money—with the Treasury to the amount of its outstanding circulation. Now, under this bill provision is made for the depositing of those amounts in the Federal reserve banks. The Government, presumably, then would deposit all of those funds now classed as general assets in such banks. Now, let us assume for the sake of the argument that all national banks left the system. Assume, further, that these banks have $750,000,000 of bonds or of currency based on bonds. I think that is a little large, but we may use it as a round number.

Senator Shaproth. $735,000,000.

Mr. Willis. $735,000,000. It is evident, then, that the banks would have to leave with the Government $735,000,000 of lawful money, except in so far as they might have their own notes, which they would turn in. Now, the banks have to-day, say, in round numbers, $950,000,000 of reserve money. In other words, an effort to do that would
be out of the question. The banks could not do it, because they would be turning over to the new reserve banks the great bulk of their cash, if it be assumed that any banks at all went into the reserve system, so as to permit the organization of the reserve banks. Answering your question in another way, it was recognized, Senator, when the bill was framed that if it appeared that the banks were not willing to enter the system in large numbers, so as to make it effective and workable, it would practically be necessary to provide for the taking up of the stock of these reserve banks, to some extent at least, by the public at large, in order to get them organized and set them going promptly.

Senator Hitchcock. That was provided for in the bill?

Mr. Willis. It was not; no, sir. But it was considered—fully considered. You asked me if that was gone over, and I said "yes."

Senator Hitchcock. The matter I wanted to have you discuss was whether any account was taken of the effect upon circulation by the denationalization, possibly, of 7,000 banks.

Mr. Willis. The conclusion we reached, Senator, was if the reserve banks were organized, as it was supposed they would be, on some basis, such retirements of circulation as might be effected by the deposit of lawful money would be offset, as the funds would be put back into circulation immediately through the redeposit of that lawful money in the reserve banks, where it would at once constitute a basis for rediscount. Do I make plain what I mean?

Senator Hitchcock. How could you have organized 12 reserve systems, with a minimum of $5,000,000 capital each, if any considerable number of banks denationalize?

Mr. Willis. As I said a moment ago, Senator, it was thought then, in case any reason appeared for thinking many national banks would go out of the system—which I personally did not feel and have never been convinced of—that if that did occur it would be necessary to have the stock of the reserve banks thrown open to subscription by the public in order to do just what you indicate—that is, to get them started with a generous capital. Have I covered the point?

Senator Hitchcock. You have; but I do not see, then, that the retirement of perhaps $100,000,000 of national-bank notes would be provided for. It seems to me there would be a violent shrinkage of the currency and possibly a panic resulting through the refusal of many banks to join the system.

Mr. Willis. I will say this, Senator: In my opinion it would be an exceedingly unfortunate thing to have a great many banks leave the system. If by any reasonable means that can be avoided, it should be avoided, because the success of this system will depend in very large measure upon the existing banks, or a considerable number of them, joining and loyally helping to put the thing into operation. This bill is not a central-bank bill in the ordinary sense of the term, but it is a bill creating a series of reserve holding agencies. That is the distinguishing feature of the bill.

Senator Nelson. But why do you propose this discrimination in the matter of bank reserves? In the country banks, as defined here, they must immediately deposit a portion of their reserves with the reserve bank.

Mr. Willis. Yes.

Senator Nelson. Country banks?
Mr. WILLIS. Yes.
Senator NELSON. Other banks have 60 days in which to do it. Why do you make that discrimination, that country banks must deposit the reserve immediately in these regional banks, while all the banks in the reserve cities and central reserve cities have 60 days in which to do it?
Mr. WILLIS. I do not so understand the bill.
Senator NELSON. You read it and see.
Senator SHAFFROTH. Even in that case, Senator, the bank has a year to determine whether it will come in, and it can be getting ready.
Senator NELSON. To come in?
Senator SHAFFROTH. Yes; to come in.
Mr. WILLIS. May I finish my statement? I was saying that the bill provided for a series of reserve-holding institutions. Now, it will be successful in large measure according to the degree in which it gets the reserves of the bank. If they do not come in, but leave the national system and become State banks, then, of course, there will be no obligation on them to deposit their reserves there. In other words, if you then threw open the subscription of the stock of those banks to the general public you would then be creating a system of Government banks—public banks. Now, I do not think that would be a desirable thing to do, unless you are driven to it.
Senator HITCHCOCK. You do not favor the idea of a Government bank?
Mr. WILLIS. I do not mean to say that in this connection. If you want me to take that up now—I am getting involved in a good many broad questions—I will; but I was going to defer that until later. May I do that?
Senator HITCHCOCK. Certainly.
Mr. WILLIS. I think, then, it is highly desirable to get as many banks as can reasonably be induced to do so to come into this system at the start, in order that the system may begin business with an adequate volume of reserves in the banks, ready for use in cooperative work for the maintenance of their credit.
Senator HITCHCOCK. I had a question or two I wanted to ask you that I omitted formerly. I wanted to ask whether you were the only expert who assisted the committee in framing the bill?
Mr. WILLIS. I think I am the only man who occupied an official status in that way. We called in before the committee a good many men of very high expert authority, who testified upon different points as they came up, and told what they thought about given subjects.
Senator HITCHCOCK. Would you object to telling the committee whether Prof. Laughlin, of Chicago, approved the substance of this bill, in its fundamentals?
Mr. WILLIS. I do not know anything about that. I have never heard him say.
Senator O'GORMAN. Were there any hearings before any committee at the time this bill was formulated?
Mr. WILLIS. Not so far as I know, Senator, except those of last winter. You mean in the House?
Senator O'GORMAN. Yes. The first time hearings were had with regard to this bill, and its provisions, were the hearings before the Senate committee?
Mr. Willis. I so understand it.

Senator O'Gorman. During the last five weeks?

Mr. Willis. I so understand.

Senator Hitchcock. You do not know that Prof. Laughlin had assisted the committee in any way?

Mr. Willis. I am quite sure he did not. At least, if he did so, it was not within my knowledge.

Senator Nelson. You said you were the only official expert. Who were the nonofficial experts that appeared before you when you were framing the bill?

Mr. Willis. Their names are given in the hearings. I could hardly give them all. Senator, but some of the principal ones were Mr. A. B. Hepburn, of New York, who I think was chairman of the American Bankers' Association Commission; Mr. Paul M. Warburg; Prof. Laughlin, of the University of Chicago; Sir Edmund Walker, a Canadian banker, from Toronto; and a considerable number of other well-known bankers. Their names are all of record in the hearings. Then, in addition to that, the chairman of the committee sent out a large number of lists of questions and inquiries, and so forth, to capable men, and their answers were at his disposal in making up his mind on what ought to go into the bill. So that I think a pretty full attempt was made to find out what the community thought on each important point as the work was done.

Senator O'Gorman. In passing, I want to ask if I understand you correctly. The bill as prepared, as I understand it, was the result really of a collaboration of a number of people. Did you regard it as the best plan that could be devised at the time it was presented to the House?

Mr. Willis. Under all the circumstances, Senator, of every kind, I felt then and I feel now, in all sincerity, that this plan is probably as good, subject to reasonable changes and improvements, and so on, as could be obtained.

Senator Nelson. You admit it could be improved?

Mr. Willis. I have already pointed out, Senator, two or three points which call for change, and I am going to indicate others.

Senator O'Gorman. I understood you a while since to say that after further study and consideration, and as a result of the public criticism of the bill as offered in the House, you now see where the bill could be materially improved and you are proceeding to give some of the suggestions along those lines?

Mr. Willis. No; not that. Senator. I think I said that as a result of further study, and so forth, I had come to feel that the placing of the reserve board entirely in the hands of Government appointees was a safe thing to do, and, on the whole, a way of handling the situation that was not open to criticism, all things considered. With reference to these other matters I am mentioning now, a number of them are points that I have felt for years ought to be included in any such bill.

Senator O'Gorman. Were they included in the bill as offered in the House?

Mr. Willis. Certainly not, and they are not there now.

Senator O'Gorman. Did you advise their insertion at that time?

Mr. Willis. I did; yes, sir.

Senator O'Gorman. Your advice was not accepted?
Mr. Willis. They were not included in the bill.
Senator O'Gorman. They were not acted upon?
Mr. Willis. They are not in the bill, as a matter of fact. Now, as to the technical defects or blemishes in this bill, while a number of these might be mentioned, the only ones I think pressing are these:
First, as to the redemption feature. I have thought all along that redemption should be made in gold, or the equivalent of gold, such as gold certificates, and that the language "gold or lawful money" was probably not wise. This country is now on a gold basis, and I think it is best to make the redemption direct in gold or gold certificates for those notes.
Senator O'Gorman. You would strike out "or lawful money"?
Mr. Willis. I should; yes. That language strikes me as being likely, possibly, to lead to some trouble. In a sense the difficulty is not serious; certainly not under ordinary conditions, because I believe that lawful money redemption—which was accepted by the bankers in the monetary commission's bill, by the way—would ordinarily be sufficient.
Senator O'Gorman. In passing, if you will permit an interruption, it is apparent the bankers have learned something with respect to improving the banking system, even since the recommendations of the monetary commission.
Mr. Willis. I always thought that feature of the Aldrich bill, along with many other features, was open to serious objection. Now, if you put that in there, and probably whether you put it in or not, I think the Government should be given the power to get gold for redemption purposes by selling bonds, as it does now in connection with the greenbacks.
Senator Nelson. There is no such direct power in the bill now?
Mr. Willis. There is not; no, sir.
Senator Nelson. And no other law by which they could sell bonds for this purpose?
Mr. Willis. I think that it is a question whether they might not sell them under the existing law.
Senator Nelson. Under the law of 1900?
Mr. Willis. Yes; because ultimately, Senator, the redemption would fall back on the fund behind the greenbacks, for which they are authorized to sell bonds.
Senator Nelson. They could sell to redeem them, but not to redeem these?
Mr. Willis. But these would be redeemed in lawful money, and lawful money means greenbacks. In other words, they would redeem in lawful money, which would be redeemed in gold, which would mean it was redeemed by the $150,000,000 gold fund, which would mean that the Government had power to reconstitute that fund by selling bonds, which would mean, in the last analysis, it had power to provide for the notes under this bill if it had to. Under ordinary circumstances I do not think such a situation would ever come about, but I think it is better to avoid that criticism, since you practically have gold redemption there now, and simplify that provision by requiring their direct redemption in gold.
Senator Hitchcock. What objection was there to having a simple provision for a gold redemption in the House discussion?
Mr. Willis. I think that was discussed a good deal on the floor, Senator. I do not remember all of the arguments, but as nearly as I remember the only argument that impressed me seriously in that connection was this, that if you are going to do that, sincerity would dictate that you go further and retire the greenbacks, and it was supposed that was a thing Congress was not supposed to be ready to do. There was a multitude of arguments on the subject, but I can not recall them all now.

Senator Hitchcock. Why would it be necessary to go further and redeem the greenbacks if you made an arrangement to redeem these notes in gold?

Mr. Willis. If you will pardon me, I did not say it, was, but you asked me what argument was mentioned, and I said that was the one that impressed my mind chiefly. I do not think it is a conclusive argument, as you see from the recommendation I have made.

Senator Hitchcock. The present greenbacks are redeemable in gold.

Mr. Willis. Yes.

Senator Hitchcock. Why were not these new notes made redeemable in gold? I am referring now to your consultation on the bill.

Mr. Willis. I think they should be.

Senator Hitchcock. Did the bill originally provide for that?

Mr. Willis. I think not. I would not be positive on that point, but I think the lawful-money redemption was put in there on the ground that it was in the Monetary Commission bill and therefore represented something that had been indorsed by the banking interests and to which they certainly would not object.

Senator Hitchcock. That is one thing I wanted to draw your attention to. The statement has been made before this committee by one of the witnesses that the banking interests largely influenced the original make-up of that bill.

Mr. Willis. What bill do you mean?

Senator Hitchcock. Of the bill in the House, with which you were connected.

Mr. Willis. Yes?

Senator Hitchcock. And that Prof. Laughlin, president of the Citizens' League, which was composed of bankers, was consulted, along with yourself, and the bill was finally made to his approval.

Mr. Willis. Now, Senator, may I ask for the name of that witness?

Senator Hitchcock. Yes; that is Mr. Shibley.

Mr. Willis. I thought so. And I would like to say something about that. Prof. Laughlin was called before the committee just as others were called.

Senator Hitchcock. Let us first get the facts. Is he president of the Citizens' League?

Mr. Willis. No; I do not think he has any connection with it now. He never was president, so far as I know. He was a kind of representative, or perhaps had the position of chairman of the executive committee. I do not remember as to that.

Senator Hitchcock. You mean he represented the Citizens' League?

Mr. Willis. I do; yes.

Senator Hitchcock. And the Citizens' League was an organization of bankers for the promotion of banking and currency reform?
Mr. Willis. It was an organization, nominally at least, of everybody who wanted banking and currency reform.

Senator Hitchcock. The bankers put up the money for it?

Mr. Willis. I have heard so a good many times.

Senator Hitchcock. It was stated they spent some several hundred thousand dollars in this agitation which resulted in this bill.

Mr. Willis. I think that was testified to by Prof. Laughlin himself before the Pujo subcommittee.

Senator Hitchcock. On January 8 of this year Prof. Laughlin appeared before the subcommittee of the Democratic House Committee on Banking and Currency?

Mr. Willis. Yes.

Senator Hitchcock. That was the subcommittee for which you were the expert?

Mr. Willis. Yes.

Senator Hitchcock. He described himself as "at the present time chairman of the Citizens' League for the Promotion of a Sound Banking System."

Mr. Willis. Yes? Do you want me to continue that a little further, Senator?

Senator Hitchcock. If you care to. Inasmuch as it has already been testified to before the committee——

Mr. Willis. I read that testimony, and I felt it was very unfair.

Senator Hitchcock. Unfair to whom?

Mr. Willis. To everybody. And, if you will allow me, I will state the facts about that. When the hearings were held, I think it was the wish of the chairman to have as many national groups represented in the hearings as possible; and to that end a good many were invited, but some of them never, I am sorry to say, put in an appearance. That is to say, the presidents of various organizations, manufacturers and so on, were invited to come. Some came and some did not. I remember the president of the Federation of Labor was invited to come, as were others in like position, but did not. Among the organizations that were to be represented was the American Bankers' Association and the National Citizens' League. The National Citizens' League was represented by Prof. Laughlin, I think, and Mr. J. V. Farwell, if my memory serves me right. Prof. Laughlin urged a plan of his own, and then subsequently placed in the hands of the committee a draft of a bill which he said represented his views. Now, in order to test the statement of Mr. Shibley, all that is necessary is to take Prof. Laughlin's testimony and read it and then take the bill that the committee finally reported and compare it with Prof. Laughlin's bill—that is, the bill he prepared. I think you will find there was no resemblance whatever between the two, except the same family resemblance there is in all bills on banking reform in their general features. For instance, it has been repeatedly stated that this House bill resembles the Aldrich bill. It does do that, so far as it contains certain fundamental ideas which are found in all these bills. It also resembles the Fowler banking bill and various others. Now, as I recall the Laughlin bill, it was a bill of the same general type as all of these others, but, of course, it had its own special features. I do not recall that any of those were adopted or incorporated. The bill has never been made a secret of,
so far as I know, and I have here a copy of it, which I would be glad
to place at your disposal.

Senator Hitchcock. Would you please place that in the record?

Mr. Willis. I should prefer not to do that, if you have no objec-
tion, Senator. The chairman of the House committee might allow
that, but it was filed in the House committee and I do not think I
would have the authority to do it. But my copy of it is at your serv-
ice, if you wish to see it—you and the other members of the com-
mittee.

Senator Hitchcock. The reason I suggested that is because of Mr.
Shibley's testimony.

Mr. Willis. Let me say, most emphatically, that the statements
referred to have no foundation whatever, but are unjust to everyone,
as I said before. Prof. Laughlin is a known expert and authoritative
writer on these subjects. He represented a pretty large organization
and was therefore given a suitable hearing before the committee.
That was his only connection with it.

Senator O'Gorman. Did not he approve of the Aldrich bill?

Mr. Willis. I think he approved a great many ideas in it, if I
remember correctly.

Senator O'Gorman. Did not he give the entire bill approval?

Mr. Willis. I should not say so.

Senator O'Gorman. I have the impression he did.

Mr. Willis. It may be so.

Senator Hitchcock. Let me quote Mr. Shibley's statement in a
few lines, as a text for you to discuss. He says, "he outlined," that
is, Prof. Laughlin, "a proposal for a currency and banking system
that is almost exactly what became the administration bill."

Mr. Willis. Right there, Mr. Chairman, may I repeat that the out-
line of almost any one of these bills is similar to the outline of every
other, just as there is a general resemblance between human skeletons.
The differences come in when you begin to deal with the actual cloth-
ing of them with flesh and blood.

Senator O'Gorman. Is it possible Mr. Shibley had in mind that as
the Aldrich bill provided for an organization controlled by the bank-
ers, that your initial bill provided for an organization in which the
bankers would have a very substantial representation?

Mr. Willis. Well, I do not know what was in his mind, of course.
What I do know is that it is not a fact that any one organization, or
outside individual more than any other, was instrumental in outlin-
ing or framing this bill, so far as I have any knowledge or belief.

Senator O'Gorman. I think it is fair to say to you that none of the
committee, so far as I am aware, disagrees with you on that proposi-
tion.

Mr. Willis. And, in further support of that, I offer to place at the
disposal of the committee my own copy of the bill that was suggested
by Prof. Laughlin.

Senator Hitchcock. That will hardly be necessary, and your
statement might be enlightening, somewhat.

Mr. Willis. Do you care to have me go on now with the technical
defects?

Senator O'Gorman. Yes: we want the benefit of your criticism of
this bill.
Mr. Willis. I think the language in this bill relating to the redemption fund for Federal reserve notes, which is to be held in the Treasury, ought to be clarified and strengthened, and I think that the redemption fund should always be held in the Treasury in sufficient quantity to insure the regular redemption of any notes that may come in there. At present it is 5 per cent. I have been uncertain, from the start, and I should think that everyone would feel more or less uncertain, as to the adequacy of that 5 per cent. Now, to remove that, I believe that the Federal reserve board, if you should enact this bill or something like it—the Federal reserve board should be given power to require reserve banks to maintain such proportion of their 33 1/3 per cent reserve as may be necessary in the Treasury. That is, instead of having it a flat 5 per cent, to have it whatever experience may dictate. It might run as high as 10. Experience would be necessary in order to find out, I think, exactly how much of that should be kept in the Treasury. Experience would indicate about how many of these notes came to the Treasury instead of going straight home. That, I think, is a somewhat important matter, in order that the Government might never be embarrassed through unnecessary delay in redeeming these notes. It is the more important in view of the fact that under the bill all commercial funds of the Government are to go into the reserve banks, so that it is thrown back upon this fund and must have enough of that to make the redemption successfully and promptly.

In the next place—a matter I think is probably more important than any of the other defects—the language of section 14, which relates to rediscounts, is unsatisfactory. It provides that—

Upon the indorsement of any member bank any Federal reserve bank may discount notes and bills of exchange arising out of commercial transactions; that is, notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used, or may be used, for such purposes, etc.

I can not help feeling that the language “or the proceeds of which have been used, or may be used, for such purposes” opens a door of danger that perhaps would not be availed of but might be, and I should like to see that language stricken out and the rediscount section strengthened correspondingly.

Senator Weeks. Let me ask you a question about the rediscount of notes. Why should any of these notes in the ordinary course be presented at the Treasury for redemption?

Mr. Willis. Well, Senator Weeks, I think it is doubtful, as I said. I think it would be a matter of experience to find out how many would be. May I answer that indirectly? Why need any national bank notes be presented to the Treasury for redemption?

Senator Weeks. Because that is the only place you could redeem them.

Mr. Willis. You could send them directly home. Now, I have heard of a bank’s making up a bundle of notes for redemption and, out of “banking comity,” including in that bundle a number of notes issued by a bank across the street. It sends them to Washington and has them redeemed there, and the Washington authorities send them back to the bank across the street. Of course, I have no personal knowledge of such a case, but I have heard such stories told.
Senator Weeks. I do not think that is a remarkable story. There are bundles of bills coming back to the Treasury that have never been opened—new bills.

What I wanted to call your attention to was that there will be branches of the reserve bank or reserve banks all over the country. The member banks, if there are such, will do business directly with the branch with which they are connected, or with the bank with which they are connected, and they naturally would send their bills to those banks for redemption. I do not see why they should send them to the Treasury.

Mr. Willis. Senator, I do not see any very serious or important reason why they should, but I think it is very hard to predict absolutely the course of commercial events, and I think it would be unfortunate if we should find ourselves with a law that did not provide a definite gold fund there, although there was plenty of gold somewhere.

Senator Weeks. I think you are quite right about that.

Senator Pomerene. I am not sure that I understand. What is the particular vice you complain of in the phrase "or the proceeds of which have been used, or may be used, for such purposes"?

Mr. Willis. Because that introduces, Senator, an element of doubt or uncertainty into the judging of this paper.

Senator Nelson. It is pure guesswork, is it not?

Mr. Willis. Yes; I think it is too hazardous. I think the rediscounted paper, Senator—in line with my former statement about the necessity of making the banks strictly commercial institutions—should be only the cream of the paper; that is, paper growing out of bona fide commercial transactions.

Senator O'Gorman. Would that be a sufficient description of commercial paper—paper that has grown out of commercial transactions?

Mr. Willis. I have had great difficulty, Senator, in framing a description of commercial paper, and I suppose everybody recognizes that difficulty. You will notice that in this bill the provision was made that the Federal reserve board shall have the right to determine or define the character of the paper.

If you happen to recall, after the Aldrich-Vreeland bill was adopted there was found to be in that bill a provision about two-name paper, I think, the idea being to get the cream of the paper. Experience speedily showed that in some parts of the West the best paper was single-name paper, so that Secretary MacVeagh, if I recall, gave out a rule that two-name paper was paper one of whose names was that of an indorsing bank; which I never felt was the real intent of the law, as I understood it. Now, I think that was a country as big as this, and with business interests as variable as they are, it is a pretty hazardous thing to try to introduce a definition of commercial paper into a law, and if you do not have that, then one would suppose it should be left to some proper administrative authority to settle. Hence the provision referred to here.

Senator Hitchcock. Let me ask you a question. Suppose a general merchant in a western town of 4,000 population goes into a bank and borrows $2,000 in order to discount a bill of goods that he is buying and get the cash discount. He draws his note for 90 days
so that he will be able to make his sales of the merchandise purchased before the note matures. Is that commercial paper?

Mr. Willis. Will you kindly state that again?

Senator Hitchcock. A merchant in a small town, purchasing a bill of goods, desires to get the cash discount. He goes to his bank and borrows $2,000 for 90 days—

Mr. Willis (interposing). Securing it how?

Senator Hitchcock. Without security; it is his note.

Mr. Willis. Yes.

Senator Hitchcock. Is that commercial paper?

Mr. Willis. It is in the ordinary acceptance of the term.

Senator Hitchcock. Is it under the terms of this bill?

Mr. Willis. I think the language as used could be interpreted to cover that.

Senator Hitchcock. It is intended to cover that kind of paper?

Senator Nelson. The merchant is substituting the bank in place of the seller of the goods.

Mr. Willis. Certainly. It is undoubtedly paper that he can use in that way.

Senator Hitchcock. Now, suppose a man in a town goes into a bank and borrows $2,000 for five months in order to help pay for some cattle he is buying to fatten. He makes the maturity of his note five months because before that time he will sell his cattle. Is that commercial paper?

Mr. Willis. That is another question of definition.

Senator Hitchcock. Did you intend to have that covered by this bill?

Mr. Willis. I think that the introduction of this language here was intended to cover that, without doubt, and a good many other classes of transactions of even broader scope.

Senator Pomerene. Senator, allow me to suggest this language here: “Notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes.”

Senator Hitchcock. Yes. Now then, if that is intended to cover it, why did you limit it to 90 days when many of the transactions out West and down South cover from four to five months?

Mr. Willis. I think I can say without violation of any confidence that that was a matter of very serious consideration and of a good deal of difference of opinion. After looking over all the data that could be had and consulting with the Treasury Department, I think those who were in charge came to the opinion that there would be an abundant supply of this 90-day paper in the country. Secretary McAdoo sent out certain blanks to banks more recently, asking them how much there would be—

Senator Hitchcock (interposing). That was not done at that time?

Mr. Willis. Certainly not; but we did at that time get all the data there were, and the later investigation has borne out our conclusion.

Senator Hitchcock. Did you call in country bankers to find out what paper they actually handled?

Mr. Willis. Country bankers were before the House committee; yes, sir.

Senator Hitchcock. Who were they?
Mr. Willis. I can not remember their names now. May I add that there was a large correspondence with country bankers?

Senator Hitchcock. We have had a number of country bankers here, and I have had a large personal correspondence with country banks in my own State, and the almost universal testimony is that the demand they have for rediscounts is at the time they are making five and six months' loans, and that that paper is unacceptable under the terms of this bill.

Mr. Willis. May I add one thing right there? As I said a moment ago the conclusion was reached that there was a sufficient supply of the 90-day paper in the country. For that reason it was believed that enough of a vehicle was provided for letting out the funds of these Federal reserve banks into general use, and the conclusion was reached that if there were a sufficient medium for letting out those funds everybody that was entitled to discount, whether his paper was technically rediscountable at the Federal reserve bank or not, would get the benefit of it. Do you follow what I mean?

Senator Hitchcock. He would get it indirectly from his city correspondent?

Mr. Willis. Yes.

Senator Hitchcock. Does this bill contemplate that a country bank will still have its city correspondents?

Mr. Willis. It does not distinctly say that it will have its city correspondents, but there is nothing in it to prevent that, and my own opinion is that in some cases that would continue to be the practice.

Senator Hitchcock. What has developed, as a matter of fact, Mr. Willis, is that the country bankers almost with one voice say that they get no benefit out of this bill, that 10 per cent of their capital is taken and their reserves impounded and taken away from the banks where they can get discounts, and that is the reason they propose to denationalize unless the terms of the bill are changed.

Mr. Willis. Well, as I said before, Senator, if you reach the conclusion as a positive fact that the terms of this bill are such that the banks can not come in and do their service to the community, then, of course, the bill is not going to perform its work and ought to be altered to such extent as to bring about participation on the part of the banks.

Senator Shafroth. Do you not think, however, that many of these statements and declarations are made for the purpose of obtaining concessions in this bill, and that they will come into the system?

Mr. Willis. I think that is human nature; just as, in the case of previous legislation, we have had statements and predictions of absolute panic and disaster contingent upon the adoption of some piece of legislation. In this case—without meaning to be in any way insincere or unfair—I think the attitude of a man who is going to be subjected to business inconvenience—and any great measure of this kind is likely to produce a great deal of business inconvenience—is to take a dark view of the situation.

Senator Shafroth. And to make threats as to what he will do.

Mr. Willis. To look pessimistically at the future. I think anybody is prone to do that—the banker no more than anybody else.

Senator Hitchcock. Perhaps you had better proceed, Mr. Willis.
Mr. Willis. I think those are all the technical defects I care to mention. Of course, scattered through the bill there are places where the language could be improved.

Senator McLean. Have you had your attention called to the plan suggested by Mr. Vanderlip before this committee yesterday?

Mr. Willis. I have only read what the newspapers said this morning.

Senator McLean. Have you read enough about it so that you are in a position to criticize it?

Mr. Willis. I should not like to do that upon a mere reading of an outline. In a moment, if you will allow me, I shall speak of that general type of plan.

Senator McLean. Yes.

Mr. Willis. Now, I think there is a third group of changes that might well be made in this bill. They are changes that are not necessarily an improvement from an abstract standpoint, in my judgment, but they are changes that are likely to render it easier to get the system started, perhaps, and make it less burdensome.

The first is in regard to the subscription to the stock. It seems to me that the present subscription required—that is, 10 per cent paid up—has been complained of quite a good deal. I think perhaps it may be more than is absolutely necessary. If it is desired to make a reduction in that and cut it down somewhat, I think that could reasonably be done.

Then the question has been raised whether the subscription to the stock should be absolutely compulsory, and whether it should be confined to banks. If there is danger of a good many banks leaving the system at first, or not coming into the system, then it seems to me that the public might well be allowed to participate in the subscriptions. That is, it might be stated that if within a reasonable length of time the total capital stock had not been subscribed—that is, enough to bring it up to the required minimum capital—by banks, the remainder should be open to general public subscription.

Senator Hitchcock. Mr. Willis, why should these banks own the stock at all?

Mr. Willis. Why should the member banks own it?

Senator Hitchcock. Yes.

Mr. Willis. I think there is no good reason for having them do so, except to interest them in the scheme and get them to take a more active part in running it.

Senator Hitchcock. The banks are not to be run for profit.

Mr. Willis. You mean these reserve banks?

Senator Hitchcock. Yes.

Mr. Willis. No.

Senator Hitchcock. Why should these other banks that are organized for profit be permitted to take any interest in it? They do not do it in any European country.

Mr. Willis. I do not think you can give any abstract reason why they should not.

Senator Hitchcock. Can you give a concrete reason?

Mr. Willis. Concretely, it has been supposed in all these plans, I think, that by letting the banks control their own reserves in this way you would get them to take a more immediate and active interest in
the starting of the system. I might say that was the practical reason.

Senator Hitchcock. As a matter of fact, would there not be a great advantage to the American system of banking if we could add $100,000,000 to the banking capital of the country, instead of simply taking it off at one place and putting it in at another?

Mr. Willis. That is a matter I intended to speak of. The private subscribers, of course, would have to get their money somewhere. They will get it by drawing on their deposits in banks, so it will come to about the same thing—the banks will have to provide the money.

Senator Hitchcock. There is a vast difference between their taking their own funds and having their customers withdraw theirs.

Mr. Willis. Does it not come to about the same thing in its effect on the reserves of the banks?

Senator Hitchcock. I want to ask you this: Suppose there is a community which has three banks of $1,000,000 capital each and another bank of $1,000,000 capital is established there. Does not that add $1,000,000 to the banking capital of that community?

Mr. Willis. It has to be obtained from some source.

Senator Hitchcock. But does not that add $1,000,000 to the banking capital of that community?

Mr. Willis. It does, if it is drawn from some outside community.

Senator Hitchcock. Regardless of where it is drawn from. It may be taken out of building operations or safety deposit vaults—

Mr. Willis (interposing). If that is done it adds to the banking capital.

Senator Hitchcock. Would it not be a good thing if we could add $100,000,000 to the banking capital of the United States?

Mr. Willis. Certainly, if you could be absolutely sure of getting new capital.

Senator Weeks. Let me suggest this, too, Mr. Willis: If the banks subscribe to the stock themselves they are reducing their capital that amount. If their customers draw money out of the bank and subscribe for the stock the bank is reducing its liabilities that much.

Senator Shafroth. But if you had outside capital come in the directors would have to be changed. It would not be right for the banks to name them. There would have to be a different system of electing directors.

Senator Weeks. That is easy enough.

Senator Shafroth. This whole system is intended for the benefit of the banks, and that being the case, it seems to me the theory—

Senator Hitchcock (interposing). We have been led to believe this was not for the benefit of the banks, but for the benefit of the people.

Senator Shafroth. It is for the benefit of both, but at the same time there is not any question that the right of a bank to go and cash its paper at any time is a great advantage to the bank, and inasmuch as it does relieve them in their banking situation and make it more safe for them, and at the same time make it more safe for the people, it seems to me the bankers are the ones that ought to put up the money.
Mr. Willis. Now, there is another suggestion that I make with some hesitation, but in view of all that has been said I believe it would be a desirable change. Under this bill a bank can have a year to decide whether it is going to join or not. In view of the apparent unfriendliness of a good many banks toward the system, I believe that is rather too long. A bank can decide a good deal more quickly than that what it wants to do, and I incline to the opinion that that period—that is, the period in which it must decide—should be shortened a great deal in order to enable those who are charged with the organization of this scheme to know as early as possible how much they can count on. I do not mean I would shorten the time within which a bank has to give up its charter, but I think I should materially shorten the time within which the bank had to reach a conclusion. Just how short that period should be is a matter of opinion.

Senator Nelson. You mean by that that they may decide within a short time whether they will come into the system or not, but they will have a year to go into liquidation?

Mr. Willis. A year before they will be compelled to change their charters.

These, gentlemen, are the principal changes or concessions, if you call them so, that I thought of suggesting.

Senator Nelson. I called your attention a moment, perhaps out of place, to the fact of the discrimination in the deposit of reserves of the member banks with the regional banks. The country banks are required to deposit their proportion of the reserves immediately in the regional reserve bank, while the banks in the reserve cities and central reserve cities have 60 days in which to do it. That is, the country banks must plank down their share immediately, while the other banks, the big banks, have 60 days. Do you not think that is an unjust and unfair discrimination against the country banks?

Mr. Willis. If that is the meaning of it, I do.

Senator Shaffroth. I think, Senator, the reason there was a discrimination made there is because the country banks usually carry a higher percentage of reserves in their own vaults; and the city banks having to be drawn on for such a large amount it was contended, I think, that they should have a little more time to replace the amounts that are withdrawn.

Senator Nelson. I call your attention there to the three-twelfths; for a period of 14 months from the date aforesaid they are to keep that.

Mr. Willis. Yes.

Senator Nelson. Now, turn to the next page and you will find in line 22: "After 60 days from the date aforesaid, and for a period of one year, at least three-eighteenths and permanently thereafter," etc.

Mr. Willis. Yes.
Senator Nelson. Now, you see in the one case the big banks have 60 days in which to deposit three-eighteenths, while the others must deposit three-twelfths immediately.

Mr. Willis. I see what you mean, Senator; I did not understand when you first spoke of it. The idea was this: You notice that the country bank is let down at once from 15 to 12 per cent. You see, its reserve then is released instantly.

Senator Nelson. But the city banks are released from 25 per cent.

Mr. Willis. At that time, but they have to provide this 3 per cent; they have to furnish it right away.

Senator Nelson. That is not true as to all country banks.

Mr. Willis. What is not true?

Senator Nelson. That they are assuming they furnish it to the country banks.

Mr. Willis. The natural course of events under that provision, Senator, would be this: A is a country banker with $100,000 of deposits outstanding. Under existing law he has to keep 15 per cent reserve. Now, we will assume he is down to the legal minimum; he has $6,000 in cash in his vaults, and he has $9,000 on deposit in Pittsburgh, we will say. Now, this bill is passed. Under this law he has to keep 12 per cent, of which 3 per cent has to be in the reserve bank. Now, the natural thing for him to do would be to sit down and draw a check on his Pittsburgh correspondent and forward it to the reserve bank.

Senator Nelson. But you overlook the fact that a great many country banks keep most of their reserves at home. You are assuming that they keep everything above the 6 per cent in other banks.

Mr. Willis. Yes, sir; but the figures show that the great majority of them do do that. I have no doubt, Senator, that in this case and a great many other cases throughout the bill there would be individual instances of hardship and injustice.

Senator Nelson. Why should not these country banks have 60 days in which to deposit the three-twelfths as well as the big banks have 60 days to deposit their three-eighteenths?

Mr. Willis. You have to make a start in your shifting of funds at some time.

Senator Nelson. But you should not make a start by making the little banks the victims.

Mr. Willis. As I said before, Senator, if that is true in any considerable number of cases——

Senator Nelson (interrupting). Did you observe this when you framed the bill?

Mr. Willis. This section was changed more or less in committee, and I think there is no harm in saying that the language here used is not precisely the language that I myself would have used. I do honestly say, however, that there is, so far as I can see, no general hardship inflicted on the country banks that is not inflicted on others.

Senator Reed. Now, let us say the country bank, having already a portion of its funds in the reserve bank, will draw those funds out. That will impose a burden upon the reserve bank, and therefore the reserve bank ought to be allowed an additional time in which to pay its own reserves?

Mr. Willis. Yes, sir.
Senator Reed. Did it ever occur to you that if you required the country banks to deposit at once, that that simply hastens the hour when the reserve bank would have to produce that money, and, therefore, that you did not help the reserve bank a bit by that process?

Mr. Willis. You mean when the present correspondents would have to produce the money?

Senator Reed. Yes. In other words, to use an illustration, it is going to be required that you contribute $50,000 to a certain fund, and that I shall contribute $25,000, and I have $10,000 of my $25,000 with you.

Mr. Willis. Yes.

Senator Reed. Therefore, the assumption is that I will draw on you immediately. Now, if you say to me I must contribute that immediately, I must therefore demand from you immediately?

Mr. Willis. Yes.

Senator Reed. And just in proportion as you make me pay quick, I make you pay quick. I do not see what you gain.

Mr. Willis. I see what you mean. It is quite possible that the language there is not satisfactory.

Senator Reed. It is true that the country banks do deposit, in the aggregate, a considerable portion of their reserves with the ordinary reserve banks of reserve cities, is it not?

Mr. Willis. Yes.

Senator Reed. And it is true that the reserve banks in the reserve cities keep large deposits in the central reserve cities?

Mr. Willis. Yes.

Senator Reed. This bill—it is also true that each dollar of bank money—money that is in banks, carries, on the average, about $8 of credits, is it not?

Mr. Willis. I think so; yes, sir.

Senator Reed. Now, if the country national banks have in their vaults $1,160,000,000 of the money of other banks, which is largely the reserves of other banks, and they are required to suddenly remove those moneys from those banks, where are the banks going to get that vast sum of money?

Mr. Willis. Senator, that is a very pertinent question, and I think if there is one thing in a great piece of legislation like this which is more important than another, it is this—that this is probably the most important question in the whole bill.

If you have looked into the report made by the House Committee on Banking and Currency on this subject, under the head of reserves, you may have noticed there the computations which are made there. To sum those up briefly, it seems to me that the whole problem comes down to this: Is the total amount of cash needed under the new legislation greater or less than the total amount of cash needed to-day? The cash has got to come from somewhere, and if it is not available, it would have to be imported or else drawn out of ordinary circulation. The computations there seem to me to show that, allowing for the release of Government funds which would be deposited in the banks, although they are now tied up in the Treasury, the banking community would find itself about where it started, after it is put through.

Senator Reed. After it is put through?
Mr. Willis. Yes.
Senator Reed. I am not talking about after it is put through. I
undertand perfectly well that if this $1,160,000,000 of money that is
now deposited with the national banks was safely transferred to the
vaults of the Federal reserve banks there would be just as much
banking capital available then as there is now, because after that had
been done the banks of the system could rediscount their paper and
secure cash.

I am talking about the process of formation. Let me illustrate
it. I think these figures which I am going to quote are substantially
correct, although they may be very far from the exact figures. I may
be confused about them in my memory, but I am not going to wait to
hunt them up, but they will serve for the purpose of illustration.

I think the banks in Kansas City alone have of country bank de­
posit $52,000,000. Of that sum, I think about $35,000,000
represents the reserves of country banks, and of that $35,000,000,
under the provisions of this bill, there would have to be transferred
about $22,000,000 into the Federal reserve bank by the country banks.
That would necessarily imply a withdrawal by the country banks
from the banks of Kansas City alone of that $22,000,000, in order that
they might be prepared to send it on to the regional reserve banks.

Mr. Willis. Will you allow me to interpose there?
Senator Reed. Yes.

Mr. Willis. Your regional bank would probably be located in or
close to Kansas City?
Senator Reed. The probabilities are—I just guess that there will
be one at St. Louis.
Mr. Willis. Yes.
Senator Reed. And not closer. Of course, it ought to be in Kansas
City, because it is close to Kansas, and because it does more business
than any other town of its size in the world.

Senator Hitchcock. Except Salina, Kans. [Laughter.]
Mr. Willis. I quite agree with you, Senator Reed.
Senator Reed. Those are the cold features, too. But this $22,000,-
000 now is loaned out to business men in Kansas City.

Mr. Willis. Yes.
Senator Reed. It is loaned to business men in Kansas, in Oklahoma,
and in all that section of the country, to cattle men, to merchants, and
to every class of people. And it carries, as I understand, this bank­
ing capital carries a vast amount of credits.

Mr. Willis. Yes.
Senator Reed. Now, if there is no place for the banks of Kansas
City to get that money from except two sources, and one is to contract
their loans and the other is to withdraw a part of the money from
eastern banks, which, of course, bring trouble to them—if that was to
go on over the entire country, taking in Cleveland, Cincinnati,
Omaha, San Francisco, and Los Angeles—and there is no use naming
the list, because your mind will grasp it—what do you think would
happen?

Mr. Willis. Senator, I think the conditions produced in that way
would be so inconceivably worse than any business disaster we have
ever had in this country that they could not be spoken of in the same
breath.
Senator Shafroth. If it all had to be done at one time?

Mr. Willis. Precisely.

Senator Reed. I am coming to what has to be done.

Mr. Willis. May I make a comment right there?

Senator Reed. Yes.

Mr. Willis. I think you said they could look for aid from two sources, first, the curtailment of loans, and second, by withdrawing it from eastern banks.

Senator Reed. Yes.

Mr. Willis. I would suggest a third source, and the one which I believe if one were an active banker he would avail himself of. The banker would probably go to the regional reserve bank, or the Federal reserve bank—I prefer the latter term—and secure from it a rediscount of paper in his possession to such an extent as conditions would warrant. He would then retain such cash as he had as a basis for further operations.

Senator Reed. You have not made any provisions in this bill for the rediscounting of paper until the bank is organized and ready to do business, and as a condition precedent to the opening of its doors for business you have required the deposit of this money with it.

Mr. Willis. You mean to say that the deposit has to be in hand before the bank can do business?

Senator Reed. You require, first, payment of the money. You do not say the payment of the money or deposit of securities?

Senator Nelson. Your theory would lead to allowing them in depositing their reserves to deposit commercial paper instead of cash?

Mr. Willis. To such an extent as the reserve bank thought it wise to permit.

Senator Nelson. Does the bill permit that?

Mr. Willis. Yes; it does.

Senator Nelson. Instead of putting in the cash they can discount paper for that?

Mr. Willis. In so far as the reserve bank chooses to permit that.

Senator Reed. You say the bill permits that? Will you cite me to the clause?

Mr. Willis. I can not cite any one clause, but the provisions are these: A bank has to keep a specified amount of reserve—call it 12 per cent in the case of the country bank. That reserve is to consist to the extent of five-twelfths of actual cash, which under existing law may be counted as legal reserve held actually in the bank's own vault (you will find that provision on page 36, beginning at line 20). Then the bill is specific, and it says:

and for a period of 14 months from the date aforesaid at least three-twelfths, and thereafter at least five-twelfths, of such reserve shall consist of a credit balance with the Federal reserve bank of its district.

Senator Reed. That is another question. I am talking about the primary organization.

Mr. Willis. May I just finish that?

Senator Reed. Certainly.

Mr. Willis. The words "the date aforesaid" refer back to the first line or two of section 20, where it says:

That from and after the date when the Secretary of the Treasury shall have officially announced, in such manner as he may elect, the fact that a Federal
BANKING AND CURRENCY.

reserve bank has been established in any designated district, every banking association within said district which shall have subscribed for stock in such Federal reserve bank shall be required—

And so forth.

My interpretation of that language is this: The banks must first put up the capital necessary to organize this Federal reserve bank. When the capital is in hand and the institution is ready to open its doors the Secretary of the Treasury announces the fact that it is ready to do business. And then, and from that time forward, the country bank must have five-twelfths of its reserve on hand in cash in its own vaults and three-twelfths on hand in the form of a credit balance on the books of a Federal reserve bank, we will say, at Kansas City.

The Federal reserve bank in Kansas City is opened, and the country banker somewhere near has taken stock in the Federal reserve bank. He has received his certificate of stock and has contributed, we will say, $10,000 to pay for it. On the 1st of October, 1914, let us say, he receives a notice from the Secretary of the Treasury that the Federal reserve bank is ready to do business. It is necessary for him then to comply with the law. I should think that would mean that by return mail, or as soon as reasonably convenient, he would do one of two things—send to the Federal reserve bank a certified or a satisfactory check or would otherwise remit, or else he would see the Federal reserve bank and get it to give him a rediscount of satisfactory paper to the amount he needed.

Senator Reed. How would you do it under this bill? Here is the language, Mr. Willis:

That from and after the date when the Secretary of the Treasury shall have officially announced, in such manner as he may elect, the fact that a Federal reserve bank has been established in any designated district, every banking association within said district which shall have subscribed for stock in such Federal reserve bank shall be required to establish and maintain reserves as follows:

(a) If a country bank as defined by existing law, it shall hold and maintain a reserve equal to 12 per cent of the aggregate amount of its deposits, not including savings deposits hereinafter provided for.

That 12 per cent is certainly the legal reserve now referred to and is of the same character of the legal reserve now referred to, to wit, it must be cash on hand, and that cash must be gold.

Senator Nelson. Or lawful money?

Senator Reed. Or lawful money. Now, it says:

Five-twelfths of such reserve shall consist of money which national banks may under existing law count as legal reserve, held actually in the bank's own vaults; and for a period of 14 months from the date aforesaid at least three-twelfths and thereafter at least five-twelfths of such reserve shall consist of a credit balance with the Federal reserve bank of its district. The remainder of the 12 per cent hereinafore required may, for a period of 36 months from and after the date fixed by the Secretary of the Treasury as hereinafore provided, consist of balances due from national banks in reserve or central reserve cities as now defined by law.

Now, we have a law and it requires the bank to keep a certain per cent of cash in its own vaults, or in the vaults of reserve banks, and now it requires the deposit with the Federal reserve bank of a portion of the reserve, which it says must be a credit balance. It also uses the same term “credit balance” with reference to the money now
deposited with other banks, and that has never been construed to mean that they could put up notes. It is also construed to mean that they must have that much cash to their credit, and I do not think there is any question that this has to be cashed.

Mr. Willis. I feel very sure that that latter point is in accord with existing practice.

Let us imagine to-day that a bank is notified by the comptroller that it is $10,000 short in its reserve. Let us suppose that bank has the necessary amount of cash in its vaults—that is, 6 per cent—but its reserve balance with its reserve agent is below the necessary amount, so that its return to the comptroller is insufficient. There is nothing to prevent, in my understanding, subject to correction—that is nothing to prevent this bank, under this bill, from getting that reserve in this way if it desires. It goes to its city correspondent and asks for a loan, say of $10,000. The city correspondent asks it to supply satisfactory collateral, which is furnished, and thereupon the correspondent credits it with $10,000 on its books. In that case it has a deposit with its city correspondent, and has filled up its reserve to the required amount. The Federal reserve bank would do just the same thing, as I understand it, that is now done in that way by the city correspondent. You see what I mean?

Senator Reed. Of course the city correspondent, being a regular bank for all purposes, can loan to another bank a certain amount of money, but when it has so loaned, the money becomes the money of that other bank, and is held as cash.

Mr. Willis. And the same would be true of these banks.

Senator Reed. But you have not gotten past the difficulty at all of the contraction which occurs during the primary organization of these banks. Do you not think this bill ought to be amended so that that money is paid in more gradually?

Mr. Willis. That is a point I have gone over many times with a great deal of care, and here again I think there is no harm in stating that at one time the bill contained a provision for the gradual payment of deposits into the Federal reserve banks. It should also be stated, however, that at that time the amount of the total reserves required was larger than it is now. The reserve was released later down to the level where it now stands, and intermediate stages were eliminated.

Answering your question specifically, I think there would be no serious harm, and there might be some benefit in spreading this operation gradually over a longer period in just the way you suggest; but I do honestly believe, from the computations that have been made, that the reserve provisions as given here now would not cause a contraction, unless the banks became overanxious and attempted to hoard money for some unexplained reason so that there was a shortening of credit. That might occur, Senator, under any condition, if the banks took it into their heads to do that.

Senator Reed. We are making a reason for it. We do not want to make one of the conditions.

Senator Hitchcock. I would like to ask you, Mr. Willis, how the Federal reserve bank would be able to maintain a 33\(\frac{1}{3}\) per cent reserve if its deposits were paid in paper?

Mr. Willis. Of course, Senator Hitchcock, the bank under this plan would start off with its capital. It has to maintain a 33\(\frac{1}{3}\) per
cent reserve. Assuming that the total capital of all these banks was $100,000,000—and it would be a little more than that if all the national banks went in—then they could grant discounts of $200,-000,000. It would also have very shortly Government deposits which would be in cash, and would enable it to extend its discounts somewhat further.

Of course I do not want to say anything to indicate a belief that all its holdings would simply consist of these rediscounts. I say it might do that, and I think it should do it in all those cases where it was necessary to lighten the requirements in any given section in order to enable the banks to comply with the law without contracting the supply of loans in that district. Just how much that would be no one can state absolutely.

But what is very important, Senator, is to make absolutely sure that the total amount of money called for at any one time in the process of putting this into effect is not greater than the total amount of money required to comply with the reserve requirements to-day.

I have said to Senator Reed that I do believe that that condition is fulfilled by the existing provisions. If, however, on further evidence or additional study, this committee feels that the period of transfer would cause a hardship in the form of contraction of loans, I am absolutely in accord with what has been suggested—that is, that the process should be spread out over a longer period and be carried through more gradually.

Senator Reed. What do you say about 10 per cent of the capital of banks which shall be contributed in order to get a billion dollars of credits? Does not that necessarily involve a contraction on the part of the banks in order to transfer that fund over?

Mr. Willis. Senator Reed, of course every investment of capital involves the application of that capital to a specified purpose. A hundred million dollars, taking the general capital commitments of the country as a whole, is not a large sum. If you take the total capital issues of the country for a year, $100,000,000 is not a great sum, and I think that considering the provisions for the release of reserves it could be effected without any hardship upon the country. I am fully in accord with the statement made by bankers, that they will get less money—that is, their income will be less on the investment which they make in this way, even if they get fully 6 per cent thereon, than it would be if they were allowed to go on using this money in loans at the rate at which they are now lending.

Senator O'Gorman. Would it be practicable to reduce this 10 to 5 per cent?

Mr. Willis. Senator O'Gorman, I suggested a few moments ago—I think you were out of the room—Senator O'Gorman (interposing.) I was present, but I did not hear your suggestion.

Mr. Willis. I suggested that while I thought the 10 per cent was not too much, that I did not think it would do serious harm to cut it down somewhat.

Senator O'Gorman. Let me ask you what would be the objection to having the public furnish the capital for these regional banks?

Mr. Willis. That question was raised before, and I will answer that very frankly. That question is one which has given me a good deal of concern, also.
These banks are not central banks, in the sense in which that term is rightly used. They are organizations of reserve holders. Now, the more you let the public in and the more you let the banks out, the more these reserve banks approximate to the status of ordinary banks, and the more they get away from the status of reserve-holding associations of banks. In my judgment, it is very desirable, absolutely desirable, if possible, if you can do it, by any reasonable arrangement that conforms to public opinion, to get the banks to go in and take up the stock, because they will be, I think, more interested in the situation, and will come in more freely and will cooperate in the operation of the institution afterwards.

Senator O'Gorman: Do you not think it would be more attractive if the banks were able to get the benefits without contributing anything except the deposit of their reserves?

Mr. Willis. It might be; but the system would lose its purpose in part as a reserve banking system.

Senator O'Gorman. Let me suggest this, and I would like to have your opinion on it. We have reason to doubt, in view of evidence that has been presented before us, whether a sufficient number of national banks would in certain regions enter the system in order to enable the regional banks to have a $5,000,000 capital, as required by the pending bills. Suppose the public in those and in all other regions be invited to subscribe to the required stock for each regional bank, and then the benefits of rediscounts will be extended to the national banks, they, on their part, being required to deposit perhaps half of their reserves in the regional banks?

Mr. Willis. Yes. Senator, if that places their reserve in the regional bank so that it gets the reserve and is a reserve holder, I should see no harm in the plan; but I think it is a very desirable change, and I think it would bring about what has been sought by a good many people who have worked on banking bills—and was sought by the Aldrich bill, although in a very clumsy way—namely, the bringing in of the outside business community as a factor in the control of these banks, so that I am entirely in sympathy with the general suggestion you make.

Senator O'Gorman. Roughly, we will assume that these 12 regional banks might require a capital of $60,000,000 to $70,000,000. What is your judgment as to the probability of the public contributing this money, with a 5 per cent dividend return, without any privilege of voting the stock?

Mr. Willis. May I ask you there whether you mean what would be the probability of their contributing if they were allowed to borrow at the bank?

Senator O'Gorman. No; I leave that out.

Mr. Willis. Simply as a flat investment, you mean?

Senator O'Gorman. Yes.

Mr. Willis. Of course, my opinion on that is not worth much. That is an investment question. From what I have seen of the situation, I believe the stock would be promptly taken up, because it would undoubtedly be what is called a gilt-edged investment of the very highest type. My opinion is that it would be taken up without any trouble at all.

Senator O'Gorman. Then, if I understand you, your judgment is that this bill might be improved by allowing the public to furnish
the capital of these regional banks rather than requiring the individual national banks to supply it?

Mr. Willis. Provided that the banks were to keep their reserves with the reserve banks.

Senator O'Gorman. Yes; that is part of the proposition.

Mr. Willis. I do think so.

Senator O'Gorman. Well, would not the danger of the contraction to which reference has already been made be lessened if the money was furnished by the public rather than by these national banks?

Mr. Willis. I do not feel at all certain of that, because, as I said before, it seems to me that the funds will, in the last analysis, be drawn out of the banks.

Senator O'Gorman. Out of circulation, in some way?

Mr. Willis. I do think so. Although it might be that a good deal would be drawn from State banks that would not come in anyhow. So I will answer your question specifically, by saying that I think there will be a little less danger.

Senator O'Gorman. Well, now, having your opinion respecting that proposed change, what would be your view regarding a further change in the personnel of the officers of the regional banks, and instead of allowing the member banks within a region to really name six of the nine officers of a regional bank—and that suggestion was based upon the fact that they were to contribute the capital; under the suggestion I now convey to you they do not contribute the capital; that is contributed by the people—instead of having the member banks name those officers, why should not the reserve board here in Washington name the entire number of officers of the regional bank?

Mr. Willis. Name the entire nine directors, so that they would be under complete Government control?

Senator O'Gorman. Absolutely a Government board.

Mr. Willis. And with the stock largely owned—

Senator O'Gorman (interposing). Entirely owned by the people.

Mr. Willis. Entirely owned by the people?

Senator O'Gorman. Yes.

Mr. Willis. Well, my feeling in that matter may be founded in part on sentiment, I suppose——

Senator O'Gorman. What sentiment—charity?

Mr. Willis. I beg your pardon?

Senator O'Gorman. What is the sentiment in your mind?

Mr. Willis. The sentiment that I think a man becomes more interested when he is responsible for doing something than when the Government does it for him. And I think if the public owned the stock in the way you speak of, that it would be very desirable that the public—that is, the stockholders—should directly elect at least a good many of the directors.

Senator O'Gorman. Well, they would be, practically, through the Government naming the entire nine.

Mr. Willis. But the Government is a far distant entity; it is not very close to the ordinary man.

Senator O'Gorman. Well, I hope it is a little closer to him than you seem to think it is.

Mr. Willis. I think the ordinary man would take more interest in these banks, and that the banks would be better run, if he has
something to do with the appointment of the directors, than if the Government simply names a set of directors for him.

Senator O'GORMAN. Do you not think the public will be induced to place greater confidence in the regional bank if the Government reserve board in Washington should name the nine officers of the regional banks?

Mr. WILLIS. Well, I think that depends entirely upon how the officers manage them. If they do well, it might be so. But I think that is a matter of experience.

Senator O'GORMAN. Well, you do not see any particular objection to that then, do you?

Mr. WILLIS. The objection that I spoke of before, that I would personally rather see the people who own the stock and are directly concerned in the matter elect a due proportion of them—a fair proportion.

Senator Nelson. Would not that be getting dangerously near to the money power?

Mr. WILLIS. Would what be getting dangerously near to the money power?

Senator Nelson. To allow the bankers, or the men who have the stock, to elect the managers of the regional banks?

Mr. WILLIS. Well, I assume that Senator O'Gorman does not intend to allow these subscriptions to stock, if there were voting power with them——

Senator O'GORMAN (interposing). They would have no voting power at all.

Mr. WILLIS (continuing). To be held in a few hands, but that they should be more or less widely distributed.

Senator O'GORMAN. It is the idea that the stock be widely distributed throughout the various regions.

Mr. WILLIS. Yes.

Senator O'GORMAN. And that the ownership of the stock carries with it no voting power; that the owner will be confined, probably, to his 5 per cent cumulative dividend.

Mr. WILLIS. Yes. Well, I like the plan whereunder a man is called on directly to participate in the operation of the thing better.

Senator O'GORMAN. You approve now—I do not know whether you have always approved—of the idea that the Federal reserve board should consist exclusively of Government officials?

Mr. WILLIS. Yes.

Senator O'GORMAN. Well, if that be a good plan for the Federal board, why would it not be a good plan for the 12 regional banks?

Mr. WILLIS. Well, Senator, that is a very incisive question; and it is one that I want to speak of.

Senator O'GORMAN. Then, will you speak of it now?

Mr. WILLIS. Yes; if I may. It seems to me that the peculiar feature, or one of the peculiar features, of this bill, and one that commends the plan to me especially, is the fact that it keeps the control of the broad banking powers in the hands of the Government, while it leaves the actual transaction of banking operations to practical bankers in the district.

If you had a large central bank, as some have proposed, wholly under Government control, or even largely under Government con-
trol, then you would have the Government directly "in the banking business," as the statement is. Now, I am aware that there are many people who do not look on that idea with any aversion. Personally I do not like it, and it does not seem to me to be in harmony with the general drift of things in this country. I prefer the idea of having the banking operations carried on by bankers, and controlled, within reasonable limits, by the people who have put up the cash with which to carry on the business; and to have the Government exercise such large, general banking powers as are necessary in the public interest to safeguard the welfare of the whole people.

The Aldrich plan, so called—the National Monetary Commission plan—would have had a central machinery, as well as the actual banking operations, very largely in the hands of the bankers, with what I thought was a too moderate degree of public control.

The proposed Government bank, operated by Government directors, seems to me to go too far in the opposite direction, since it vests the Government with the function of banking—doing actual banking, through its officers of course. I do not like that, and I do not believe that you will get as good results in that way as you will in the other way.

This bill has been criticized, I notice, in a good many quarters, as putting the Government into the banking business. It seems to me that it takes the Government out of the banking business. That is, it puts the funds of the Government into commercial use, and then lets the actual process of banking be carried on in these country districts by trained bankers, and it keeps Government supervision in the hands of Government officers.

As I stated before, I have felt in the past that a certain representation of bankers—perhaps without votes on the Federal board—was not objectionable. But I do think that, however you make up the Federal board, it should be predominantly under the control of the Government.

Senator O'Gorman. Yes.

Mr. Willis. It should be an organization for the exercise of large powers of supervision and control; while I think that the individual banks should be narrowly confined to business operations, going ahead on their own initiative, so far as that does not conflict with the general welfare. That strikes me as the distinguishing feature of this bill.

Senator O'Gorman. Do you not think that the people in a regional district who contribute the money under the plan I suggest to supply the capital for the regional bank would have the right to have the President of their country, or his representatives in the reserve board, select the managers for the regional bank?

Mr. Willis. You use the word "right"—

Senator O'Gorman. Well, would not it be a fair expectation?

Mr. Willis. It is not an arrangement that I—

Senator O'Gorman (interposing). Heretofore—if you will pardon me for completing my question—one reason principally, if not exclusively, given for having a banking representation in the regional institutions, was that the bankers would furnish all the capital, and that they were entitled to representation in its control—

Mr. Willis (interposing). Yes.
Senator O'Gorman. And for that reason, under the pending bill, they would receive a two-thirds control.

Mr. Willis. Yes.

Senator O'Gorman. Now, if the other plan should be adopted, that the bankers will not furnish the money, and therefore they will be relieved from that embarrassment—and as I view it this would make the whole plan more popular with them than if it was the other way—the only people furnishing the money being the public, it would seem to be a very consistent and reasonable expectation that public officials should be in charge of such banks?

Mr. Willis. Well, the public officials would represent in that case the whole public.

Senator O'Gorman. Yes.

Mr. Willis. Whereas the stock would be owned only by a part of the public.

My feeling about that is that it is fairer and better to have the directors elected by that part of the public which owns the stock—that is to say, to have the work of technical banking carried on by men representing that part of the public which owns the stock.

And if you ask me why, then I can only answer that that question is a broad matter of point of view, which runs through a great many things, and is not peculiar to this at all. I believe, myself, that you get better results through private enterprise.

Senator O'Gorman. Then what excuse is there for this reserve board, organized as the bill organizes it?

Mr. Willis. The same excuse, it seems to me, that there is elsewhere, that unrestrained private enterprise goes to excess.

I do not regard the reserve board provided in the bill, as many people do, as an organization vested with enormous powers that are likely to be constantly used. It seems to me that the reserve board is little more, in ordinary times, than a sort of expanded or glorified Comptroller of the Currency. It has larger powers than he has. But this scheme is larger; and the scheme involves a good many activities that the national banks can not now engage in.

In my conception of the reserve board, when once it has been organized and put into operation, its activities would be very largely those of supervision, routine, comparison of conditions of credit here and there, and consultation with bankers from different parts of the country—and especially from the reserve banks—and the general working out of policies, smoothing out of wrinkles and securing a unification of work.

In times of panic or special stress, the reserve board has some reserved powers of a large nature, such as are given by the compulsory rediscount feature. But of course that is surrounded by so many restrictions in this bill that it could not be used, and would not be used except under very stern pressure, so that the reserve board, in time of panic or stringency, would be a very different organization from what it would be ordinarily.

Senator O'Gorman. Do you not think, if the public furnished all the capital to regional banks, that the country banks, particularly, would be likely to be thoroughly satisfied with the system, instead of objecting as they do now?
Mr. Willis. Well, I think it is awfully difficult to find out what a country bank will be satisfied with. [Laughter.] I have given it up.

Senator O'Gorman. Do you not think the plan would be more popular with the country banks than the plan in the pending bill?

Mr. Willis. Honestly, I do not know. I suppose, when this bill was formulated—seriously, I suppose that the fact that the banks had to come in, and that when they got in had control of their own funds and reserves, was going to appeal to them. But now, as a matter of fact—

Senator O'Gorman (interposing). Well, you understand, Mr. Willis, that the country banks lay great stress on two objections, which they urge very strongly: First, that because of the long maturities of the paper which they handle in their business, they will have but a modified advantage under the rediscount feature of this system.

Mr. Willis. Yes.

Senator O'Gorman. And, in the second place, that you are going to deprive them of their right to exact exchange charges.

Mr. Willis. Yes.

Senator O'Gorman. And those exchange charges, according to the testimony before us, amount in some cases to one-half of their net earnings?

Mr. Willis. With reference to that, I understand, first, what you say; I think that is a very concise and pointed statement of their objections. But, with all due respect to the country banks, and with all due allowance to the business inconvenience which this bill will inflict upon them, and which, in my judgment, any large plan of banking reform will inflict—we can not get any great thing without suffering—in spite of that, I do not believe that those two considerations are very good ones. The exchange feature of the bill we have not mentioned before—

Senator O'Gorman. Well, the relieving of the country banks, and incidentally of other national banks, of the necessity of supplying the capital, will it not, to that extent, relieve the country banks of some of the burdens which this particular plan is intended to place upon them?

Mr. Willis. Well, that may be. I think you will find, however—this is merely an opinion, you understand, and I do not intend it in any invidious sense at all—but I do think that by the time you formulated that plan and got it before the country, there would be a new crop of objections to it springing up, and there would be some fearful flaw in it that would be found when you began to discuss it.

Senator Reed. Let me ask you another question: You have never had any practical banking experience, have you?

Mr. Willis. In the sense of actually engaging in banking, no.

Senator Reed. And among the men that were connected with the committee that made the draft of the bill was there an actual, practical banker?

Mr. Willis. Was there such?

Senator Reed. Yes.
Mr. Willis. Some of the members of the committee were bank directors.

Senator Reed. Well, I mean a real banker?

Mr. Willis. What is a real banker?

Senator Reed. When I say a "real banker" I mean a man that goes into a bank and manages that bank or helps to manage that bank.

Mr. Willis. The actual daily business?

Senator Reed. Yes.

Mr. Willis. There was no man of that kind on the committee, so far as I know.

Senator Reed. Has it occurred to you that these complaints of the bankers, which you say spring up constantly, may have sprung up not because of the stubbornness or meanness of the bankers but because the shoe that had been made for a No. 7 foot was required to be put upon a No. 10 foot, for instance, and therefore pinched?

Mr. Willis. With reference to that-------

Senator Reed (interposing). Now, I do not say that to reflect on you at all; but you say there is no way to satisfy them.

Mr. Willis. And nothing I say is intended to reflect; very far from it. But with reference to the work of the committee, Senator, let me say this: As we worked along—as the chairman of the committee worked along on this bill, technical points came up, you understand, from time to time. And I sincerely think that no technical point was acted upon without solving all reasonable doubts, so far as that could be done, by communicating with practical men. I can say to you, perfectly honestly, Senator, that I would not have been willing to be connected with this bill and with the work of getting it up, and would not have done so if I had not felt that the greatest care was being exercised at every point in getting it into as good shape as possible, and harmonizing it, so far as possible, with the views of practical men.

When practical questions came up of exchange, etc., the chairman of the committee did not hesitate to get the best advice that he could to the given provisions and as to how they would work; the views of the practical banker, then, were not ignored in getting this up.

As to the attitude of the banks toward it, you use a striking figure of speech. There are a great many feet in this country; some of them are sevens, and some other sizes. We can not fit them all; and yet we have to pass legislation that is uniform. And I do think that any great bill that is passed in this way will pinch some feet and let others have more room than they need. The question is whether, on the average, the great bulk of the feet will be comfortable.

Senator Reed. Oh, no; I do not think so, I think that if I was in the shoe business I would try to make a shoe that would fit everything from babies to giants; or else I would advertise myself as limiting myself to one class of people.

I do not think that we have any right to draw a banking bill here for the purpose of benefiting a banking system and the country at the same time which will crush out of existence any class of banks.

Mr. Willis. Neither do I.

Senator Reed. You say that the chairman of the committee, or somebody on the committee, obtained the views of practical bankers upon different phases of the measure. I have no doubt that was done.
Mr. Willis. Yes.

Senator Reed. And I am criticizing nobody.

Mr. Willis. I understand that perfectly.

Senator Reed. But I am asking you now this question: Whether you got the views of the distinctly country banker—by which I mean the man running a very small bank in a small community—and if so, which one of those bankers said that the bank could live and thrive and get along without any exchange?

Mr. Willis. Well, Senator, that question was gone into fully, and I know there was a large correspondence about it. If you want me to discuss the working of that exchange feature of the bill, I will do the best I can in showing how it would operate. That is a point we have not touched upon thus far.

Senator Nelson. Over half of our banks—yes; two-thirds of them—are banks with a capital of $100,000 and less.

Mr. Willis. Yes, sir.

Senator Nelson. And we have over 2,000 banks of $25,000 capital.

Mr. Willis. Yes.

Senator Pomerene. How many banks of $25,000 capital?

Senator Nelson. We have over 2,000 with $25,000 capital, and those little banks are pinched worse than anybody else under this law; and they are the ones that have brought the banking facilities near to the people and gathered up the money from the stockings and bureaus, and everywhere else, and got into those little reservoirs. And they are the little reservoirs that have furnished capital for the big reservoirs.

And yet a good many of the features of this bill—and I call your attention here to the reserves—are a discrimination against them. It is a king of a "freeze out." And I do not wonder at it; you are not to blame; you have never been among those country banks; you do not even know the character of their deposits.

Mr. Willis. Senator Nelson, may I assure you that very special attention was given to the needs of the country banks and that every effort was made to get at their views and, so far as possible, to consider them? You have been kind enough to say that you do not blame me for it. A  Veil. I am not responsible for it in any case. But those who were------

Senator Nelson (interposing). Oh, no; I do not blame you.

Mr. Willis (continuing). But those who were—the chairman of the committee and his coworkers—I do know gave very earnest thought to the needs of the country banker.

I believe that this bill, as I said before, is not going to be an easy thing altogether for all banks to put into effect, and there will be some hardship, I think. And I think the same thing is true of any other bill of similar scope. I do not believe you can get one that will change our somewhat antiquated and unsatisfactory system without doing that. The question is whether in so doing you are inflicting an unmerited hardship upon the banks; whether you are doing something you have no right to do and are taking away from them property rights which they have honestly and legitimately acquired and in which they ought to be protected.
Senator Nelson. Do you know, Mr. Willis, as a matter of fact, that in the panic of 1907 a large proportion of these little country banks kept open shop and never suspended for a minute?

Mr. Willis. Yes; I do know that.

Senator Nelson. It was the big banks that suspended.

Mr. Willis. Yes; I know.

Senator Nelson. The little country banks kept open shop. And why did they keep open shop? Because they dealt with the people in their community; they had their money and they patronized the people that furnished them the money. Now, you are inflicting great hardships on them in this bill. And you do it for what you call the general good. You make those country banks a sort of sacrifice for your system.

Mr. Willis. Well, of course I do not think that. I do not mean to be dogmatic in the matter or to adhere too strongly to my views, but I honestly do not think that is the case. I have been trying to show you why I do not think so.

Senator O'Gorman. Mr. Willis, have you expressed your individual views—your view as a student of banking and currency—as to whether the notes should be issued by the Government or by the banks?

Mr. Willis. I have not spoken of that yet, but if you desire it I shall be very glad to do so.

Senator O'Gorman. We will be very glad to have your views upon that question.

Mr. Willis. My feeling about that is that as the bill is now framed—

Senator O'Gorman (interposing). Oh, no; I am not asking about the bill as drawn, and I do not wish you to be influenced—if I may make a suggestion—by any part you may have had in its formation. I am only asking your judgment upon the question as a student of banking and currency.

Mr. Willis. Yes; in everything I have said I am speaking as an individual. I could not act, under the circumstances, in any other way.

Senator O'Gorman. Do you think the Government should issue the notes?

Mr. Willis. If I were speaking in my confidential relation to the bill, I could not have made any criticism on this bill, but I assume you want me to say what I think as an individual.

Senator O'Gorman. Yes: entirely.

Mr. Willis. And, speaking in that way, I do honestly think it is better to have the notes issued on the sole responsibility of the banks and without the Government participating in them, provided the notes are so amply and unmistakably protected that there can be no question whatever about their goodness.

In other words, I think the functions of the Government in connection with these notes, or with any other notes, is to make it absolutely sure, so far as it is humanly possible, that a note which is issued and goes into the hands of the public shall be good. If there is no other way to do that except by having the Government guarantee it, very well. But I think there are plenty of other ways. I
think these notes, for example, would stand just as high in credit without the Government guaranty.

Senator O'Gorman. Well, relatively, should the Government perform any greater function with respect to these things than it performs with respect to the pure-food law?

Mr. Willis. Well, that is a pretty broad statement. I mean that I do not think it ought to perform any greater——

Senator O'Gorman (interposing). I understood you to say a moment ago—and I rather was disposed to accept the statement as substantially correct—that a government's function ought to be limited to seeing that the notes that are circulated are going to be paid—represent good security.

Mr. Willis. I will put it this way: I do not think its function is any greater than it is in connection with a properly administered pure-food law.

Senator Reed. What would you do with the Constitution of the United States?

Mr. Willis. I would leave it where it is.

Senator Reed. What do you do with it under the statement you have just made? There is something said in the Constitution of the United States about——

Mr. Willis (interposing). Coining money and regulating the value thereof?

Senator Reed. Yes; and it does not say anything about the Government manufacturing food.

Senator O'Gorman. Congress regulates that under other provisions of the Constitution; otherwise it could not do it at all.

Senator Reed. Yes; under the "general-welfare" clause.

Mr. Willis. You come down to a general question now of "money" as distinguished from "currency." My feeling is that the notes are not money, but that they are a form of bank credit; and inasmuch as the notes are a form of bank credit, they should be manufactured and put out by banks under absolutely guaranteed and known conditions, with the most stringent kind of protection for those conditions and the most absolute guaranty that legislation can give that those provisions are honestly lived up to.

Senator Nelson. Would you not think 40 or 50 per cent reserves for the notes would be better than 33\(\frac{1}{3}\) per cent—for the circulating notes?

Mr. Willis. You are asking me from an abstract standpoint?

Senator Nelson. Certainly.

Mr. Willis. Well, from a purely abstract standpoint, I think a well-managed bank ought to be left to regulate its own reserves.

Senator Nelson. I mean reserves for the notes; I do not mean for the discounted paper.

Mr. Willis. I think that if these banks are what we hope they will be and expect them to be, the amount of reserves they will hold will be greatly larger than 33\(\frac{1}{3}\) per cent. But as human nature is fallible, and as the people of this country are accustomed to fixed reserves, I think 33\(\frac{1}{3}\) per cent is a good minimum requirement.

Senator Nelson. That is for the deposits; but I am speaking of the reserves for the redemption of the notes—the gold redemption.
Mr. Willis. So am I. I think in practice, on a good many occasions, it will get to be much higher than that, probably 50 per cent. I think the kind of men you are going to have in charge of these reserve banks will be men of such conservative nature that they will put the brakes on, just as the Bank of France does, and that the reserves will be larger than required.

Senator O'Gorman. Then you do not approve of the Government-note provisions of this bill?

Mr. Willis. Well, Senator, I do not know that I would like to answer the question in just that form.

Senator O'Gorman. Well, you need not do so. You have stated your preference for the banks issuing the notes.

Mr. Willis. Yes.

Senator Hitchcock. Some time ago, when Senator O'Gorman was asking you some questions concerning a plan to have the Government operate and control a great reserve bank, you objected to it upon the idea that that was the function of private enterprise. Do you think it is properly a function of private enterprise to care for and control the reserves of the banking system of a country, and to control the volume of currency of a country?

Mr. Willis. Well, I look on those as funds that are held in trust for the country. That is, the use of wealth, like the use of other things, is to be fulfilled and carried on in a way that is up to prevailing standards. If it is not good, some change should be made.

Senator Hitchcock. Well, agreeing that an individual bank is a private enterprise, subject to regulation——

Mr. Willis (interposing). I will say this, that that is a question of good results. If human experience and the operations of banking elsewhere give reasonable ground for thinking that you will have better results in the way that you speak of, then I think that ought to be done.

Senator Hitchcock. Well, that is not my question. We have in this country 25,000 banks and trust companies.

Mr. Willis. Yes.

Senator Hitchcock. Some are State banks; some are national banks. They are all organized under law, and they are private enterprises. We find by experience that it is necessary to in some way provide a system and compel those banks to keep their reserves in a certain way, under certain circumstances, and to connect with the care of those reserves the discount of paper for those banks, and the issuance of currency against that paper.

Mr. Willis. Yes.

Senator Hitchcock. Do you really think that that is a private enterprise which should be farmed out to private individuals and placed under their control; or is not that very act a governmental function?

Mr. Willis. No; I do not think so. in the way in which you put it. Put it that way and I shall have to answer no.

Senator Hitchcock. Yes.

Mr. Willis. Put it in the way I have expressed it—and it is my way of looking at it, whether correct or not—and I take a different point of view with respect to it.
Senator Hitchcock. Well, I stated the fact merely. Take these banks; they will have their reserves, and they all have the need of placing somewhere those reserves and issuing against them the loans to the banks in time of need for the public benefit. Now, it certainly can not be denied that that is a public function. It can not be asserted that it is a private enterprise that should be farmed out to individuals to make money out of.

Mr. Willis. I would not farm it out to them, and this bill does not do so. In fact, it limits the amount of earnings which they can make in that way.

Senator Hitchcock. It creates 12 great corporations.

Mr. Willis. It is not right to criticize this bill on the ground, on the one hand, that it is so very severe on the banks and then, on the other hand, that it farms out to them a tremendous privilege out of which they are going to profit.

Senator Reed. Nobody has said the bill was severe on the banks as a whole. They have spoken about it reaching certain banks; and then the question has been, in the formation, whether there was not a hardship to the country growing out of the formation.

Mr. Willis. I may have misstated that condition. My feeling is that that is a question of the best way to do things, the best way to get results. I believe you can get them best by having the technical operations carried on in the several districts by bankers.

Senator Hitchcock. It has been said, for instance, that the business of the Post Office Department could be carried on more economically and efficiently under private enterprise than under Government operation; but you would not think of giving up that function to private enterprise, would you?

Mr. Willis. That is a special thing, provided for in the Constitution.

Senator Hitchcock. There is not any doubt about this under the constitutional powers; the question is whether it is a public or private enterprise, and I understood you to say that in your opinion it is a private enterprise.

Mr. Willis. Not quite that, Senator Hitchcock, if I may modify the idea. I mean that the best results in the performance of the function may be obtained by committing the details to private individuals, which is, I think, a somewhat different point.

Senator Nelson. Mr. Willis, would not this system, in the case of an emergency—this reserve system of the bill in the case of a financial stringency or emergency—absolutely break down if you did not give the central board the power to compel one regional bank to discount for another?

Mr. Willis. Absolutely break down.

Senator Nelson. It would? Then, after all, have you not a single central system by virtue of that?

Mr. Willis. No, sir; I do not think so. What you have in that case is the exceptional use of certain essential powers of the central system when they are specially needed, as distinguished from the continual use, the regular use, of those powers as a matter of everyday business right along.
Senator Nelson. There is another question I want to ask you. As I understood you a while ago, you intimated substantially, in answer to questions, that you thought that when it came to the matter of paying in these reserves by the banks who entered the system, instead of paying the cash they could come there and discount their paper and do it in that way?

Mr. Willis. To some extent, yes.

Senator Nelson. Yes; and you said the bank was completely organized when the stock had been subscribed?

Mr. Willis. Ready for business.

Senator Nelson. Yes. But how would the bank with that stock subscription have any gold to start with, unless you made a part of that subscription payable in gold? The banks might pay it in any kind of lawful money.

Mr. Willis. And that would be immediately convertible into gold. That is a very pertinent question; and I would like to say that, in my opinion, the contribution of capital for this stock will constitute a direct draft on the lawful money of the country and, if they choose to make it so, a direct draft on the gold of the country.

Senator Nelson. Well, then, if the banks—we will assume now that all of the subscribing banks pay in their stock subscriptions in Treasury notes, in what we call "greenbacks"—

Mr. Willis. Yes, sir.

Senator Nelson. How, then, could the bank have any gold to start with? It would have to turn around to Uncle Sam's Treasury and say, "I want the gold on these."

Mr. Willis. That is theoretically possible; not practically. I do not believe any such thing would occur.

Senator Nelson. Why?

Mr. Willis. Because the reserve banks would get their cash from existing banks.

Senator Nelson. Well, how would they pay it in? In what currency would they pay it in?

Mr. Willis. Under the bill now they could pay it in lawful money.

Senator Nelson. They could pay it in silver dollars, could they not?

Mr. Willis. I had not thought of that; but I should think they could.

Senator Nelson. They could pay it in silver dollars, or in greenbacks. And they could not even pay it in gold certificates, could they?

Mr. Willis. Well, it may be that theoretically they could not, but in practice they would get it in in the same kind of money as any other enterprise.

Senator Nelson. Gold certificates are not money; they are not legal tender in the sense that greenbacks are.

Senator Reed. Have you finished, Senator Nelson?

Senator Nelson. Yes.

Senator Reed. Then I want to ask Mr. Willis a question. Mr. Willis, you recognize the fact, do you not, that this entire plan is somewhat theoretical; it has never been put into practice, in just
this shape, at least, in any country, and therefore there is some chance for difficulties to arise that cannot be anticipated?

Mr. Willis. I will answer that by saying that I do not think that anybody, or all the bankers of the country, could get up a plan whose actual working could be absolutely forecast. And let me add that, in my opinion, this plan contains no element that has not been tested in experience and indorsed by the best judgment of bankers—experienced bankers—and found to be both theoretically and practically applicable.

Senator Reed. Well, I do not care to argue that. I just wanted to ask that one question. I was only asking it preliminary to another question.

Now, I will take your answer as far as it has gone—and I do not mean to cut you off, but we are getting along toward adjourning time.

Mr. Willis. Yes; that is all right.

Senator Reed. It being true that no such system has ever been established—there are kindred systems?

Mr. Willis. Yes.

Senator Reed. There are similar systems. But no kindred system has ever been established upon a basis such as we have in this country.

Mr. Willis. Yes; I understand.

Senator Reed. Do you think there would be any impropriety in starting with two or three banks instead of the whole twelve?

Mr. Willis. Well, I have thought a good deal about that, and that is one point I wanted to speak of—the number of the reserve banks. I think the essential thing there is to have the number flexible, so that it can be increased or diminished as experience dictates. In the bill as it now stands a provision is contained that there may be an increase of banks whenever a certain number of member banks apply for it. If you could cut down the number considerably below its present level, I think that provision ought to be made a little more flexible, so that if the banks of this country desired, they could, without any material difficulty, upon manifesting a real disposition for it, secure the creation of another of these reserve banks in any part of the country.

I will go further than that, Senator: While this number of 12 was put in here after very careful consideration, after the drawing of maps covering the whole of the country and dividing it tentatively into districts, and after the compilation of careful statistics to see how it would work, I fully agree with you that the number is more or less a matter of judgment, and that time will be required to show whether it is the correct number or not.

Senator Reed. There is nothing magic about the number 12, is there?

Mr. Willis. Not at all. I have thought this, that it might be fair to leave the number blank; that is to say, leave it to the organization committee to find out, after careful study and investigation, just what the number ought to be. That is a matter I have been working on for some time.
Senator Nelson. Just one question here before you go on: Would it not be safer to start in a small way, with a very few banks, and then work up to a greater number than to start with a large number and have to work down?

Mr. Willis. I should not like to agree to that in such a broad form, Senator. But may I just finish that statement of mine?

Senator Reed. Certainly.

Mr. Willis. As to this number, I would go further than that and say I believe the banks of the country, taking them as a whole and ascertaining really the general banking sentiment, can be trusted as to the number of these banks that are actually desired—taking the banking and business sentiment of the country as a whole. Now, this organization committee which is provided for in the bill has a tremendously important function. There are no statistics now—no data—upon which these districts can be reasonably laid off. Of course, the problem of laying them off is essentially a problem of finding out the exchange relations between the several banks now existing and putting them into the same district in direct relation with one another, so that there will be as little break in the business conditions as possible.

Senator Nelson. Is it not a question of ascertaining the seasonal demands for currency?

Mr. Willis. That is one of the elements in it.

Senator Nelson. Is not that the most important?

Mr. Willis. Only in one way. Now, this organization committee has that function to perform, and it is an exceedingly difficult one, calling for very careful scientific work, and it is one that has to be done, unfortunately, rather rapidly. It would have to be done in any case. I believe that a strong, capable organization committee, properly advised by skilled exchange experts, could best do that.

Senator O'Gorman. Let me ask, are you contemplating an organization committee outside of the reserve board?

Mr. Willis. That is provided for in the bill.

Senator O'Gorman. Is that outside of the reserve board?

Mr. Willis. Entirely so; yes.

Senator O'Gorman. Why should not the members of the reserve board be all that is necessary to create this?

Senator Shafroth. Three of them are the same.

Mr. Willis. Senator Shafroth reminds me that three of them are the same.

Senator Shafroth. The Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency.

Senator O'Gorman. Do you see any objection to having authority to create the regional banks vested in the reserve board of seven men, whoever they may be?

Mr. Willis. It is vested there now.

Senator O'Gorman. I gathered from your statement that a part of the committee on organization——

Mr. Willis (interposing). No; I am recommending that it should be allowed to——

Senator Nelson. The committee is to be composed of those three officials of the reserve board.
Mr. Willis. Yes. I would like to get that connected thought out, if I might. May I go ahead?

Senator O'GORMAN. Yes.

Mr. Willis. This organization committee will have an exceedingly important piece of investigation and work to do. Now, in the course of that work, laying off the districts, it would be desirable, if you had a perfectly unbiased scientific judgment at your service, that it should be left to that organization committee, on the strength of the information it gets, to say just how many of these banks are actually needed by the country—just how many of them can be properly provided for. Whether Congress would want to leave so great a power as that in the hands of this organization committee is not for me to attempt to conjecture. I think, personally, it would be safe to do that if a way were open for subsequent increases or decreases of the number of banks, upon suitable and proper application. I firmly believe that the best judges of the number of banks that are needed are the business and banking communities throughout the country, and I think that when their sentiment has been properly and thoroughly ascertained—by the way, it never can be thus ascertained through resolutions that are passed in a hurry and in the course of an afternoon by some organization—but when it has been ascertained I think it will be the ultimate criterion as to just how many of these are wanted. And I believe you will find that the business and banking interests in the different sections of the country will want to have a reserve bank of their own in every district within which there is enough banking capital and enough banking reserve to give the requisite strength.

Do I make that fairly clear?

Senator REED. I think your idea is perfectly clear as you have expressed it.

Mr. Willis. Yes.

Senator REED. I take it, then, it is a matter to be worked out and to be developed in your mind if we are to get the best results?

Mr. Willis. That would be the ideal thing. But because it was deemed necessary to put in the bill some number of reserve banks, that number was set at 12, after the most fair consideration that we could give to it.

Senator REED. I understand. Now, why not, Mr. Willis, provide that a system of reserve banks shall be established and start out by creating a reserve bank, and when you have that job done, or well under way, and have developed the situation, to start another reserve bank? In other words, if you are going to build a number of houses and do not know just how many you need, and do not know whether you need 1, 2, or 3, or 25 or 30, why not build 2 or 3 at a time and add to it?

Mr. Willis. Yes; I think that is a good idea, but I think a better one is to find out exactly how many are needed, how many there are demands for, after a careful survey, and then buy the material in wholesale lots and build all at once.

Senator REED. That is all right if you know how many we are going to have. But the first thing we have to do is to find how many are coming in. You have an indefinite number of banks. Is it not
necessary to vest the power in this organization committee to work that problem out, and, as sensible and reasonable men, to proceed conservatively in the construction of this system instead of trying to do it all at once?

Mr. Willis. You have asked for an expression of opinion or judgment, Senator, on a legislative matter, which is outside of my ken.

Senator Reed. No, it is not a legislative matter, but an opinion as to how that system could be best worked out. I am asking you, in justice to the present condition, would you then undertake to start 12 banks at once, or start in a different way?

Mr. Willis. I will answer your question by saying I think it would be safe to have this organization committee report to Congress the result of its finding within such length of time as necessary, say 60 or 90 days, and then for Congress to decide.

Senator Nelson. That could be done easily if we remain in perpetual session. [Laughter.]

Senator Reed. We will undoubtedly be here for 60 or 90 days, anyhow.

Mr. Willis. Undoubtedly, and Congress could pass upon the exact number of these reserve banks.

Senator Weeks. What would you say to start one, with the hope that there never would be any more?

Mr. Willis. I should not like it, Senator, to be perfectly frank; no, sir.

Senator Weeks. Do you know a first-class banker in the United States who is in favor of more than one reserve bank?

Mr. Willis. You say "first-class banker." That draws an invidious distinction.

Senator Weeks. Can you name a single man, whose judgment is worth anything, who is a practical banker, who is in favor of more than one bank?

Mr. Willis. I should not like to do it offhand, Senator, and not unless I had permission to quote men; but I know there are.

Senator Weeks. This committee has not been able to find any such man, and if you know of a man I wish you would give his name to the chairman.

Mr. Willis. I will say this now, Senator: I believe it is true that all kinds of production, theoretically, could best be carried on by a great central association. I say that if we had one bank for the whole world, for the economy of the reserves and looking at credits, and to do everything in due proportion, it would be best; but that is like getting universal money and general peace.

Senator O'Gorman. You do not think universal peace improbable?

Mr. Willis. I am afraid I shall have to confess I do.

Senator Nelson. We could settle it at The Hague. [Laughter.]

Mr. Willis. I will go as far as this: I say I think in banking, as in everything else, the ideal thing would be to have one single central bank, assuming it was properly controlled and carried on in the best way for the public welfare, just as it should be. I think it would be well if we could have one single central bank for the whole world.
Senator Weeks. Let us talk about the United States.

Senator Pomerene. And one railway system for the United States?

Mr. Willis. Yes.

Senator Pomerene. And one telegraph system and one steel company. [Laughter.]

Senator O'Gorman. Speaking of your last suggestion, regarding your central bank—and we hear some reference to a central bank occasionally—Senator McLean, I think, some time ago asked your opinion as to the central bank proposed here yesterday.

Mr. Willis. As I said, Senator, anything I say on that must be said with extreme hesitation, because I have not read the plan fully. I would rather turn in a memorandum on that.

Senator O'Gorman. What would be your general impression about it?

Mr. Willis. My general impression is adverse to it, for the same reason I have been discussing with Senator Weeks and some of the members of the committee. It ultimately all comes back to my feeling that is not a good way to do things.

Senator Weeks. I do not know how many banks we will have when we get through with this bill, but if we could start with one bank, my judgment is the people of the United States would never tolerate another, and you would wonder that you had ever expressed such an opinion.

Mr. Willis. In the past, Senator, I have felt the greatest deference for your opinion and valued it most highly, sir. I say that not as a matter of compliment but because it is a fact. But I do not quite agree with that view.

Senator Nelson. You said a while ago the plan of this bill corresponded in many respects with the systems of other countries.

Mr. Willis. Yes.

Senator Nelson. Do you know a system there where they have 12 regional banks?

Mr. Willis. Yes; I do.

Senator Nelson. Banks established under one head?

Mr. Willis. We have in Europe a central bank for each of the countries there.

Senator Nelson. Yes; each country; but I mean in any one country, any one Government.

Mr. Willis. There is no country in the world that has the extent of territory and breadth of business interests that ours has.

Senator Weeks. How about Russia?

Mr. Willis. I do not want to put this country on a Russian basis, Senator. [Laughter.]

Senator Hitchcock. We have been trying to put the bill on a Russian basis.

Mr. Willis. That is beyond me. [Laughter.]

Senator Reed. You would not hardly like to put it on a German basis either, would you?

Mr. Willis. I do not think I would, Senator. There is one thing I would like to say about this central-bank matter. While everybody admits in a general sort of a way that a central bank is a splendid
thing, and so forth, I would answer Senator Weeks in this way: There is no argument in favor of a central bank that can not be adduced with just the same force in favor of any other centralized bank that covers enough territory and capital to furnish the necessary strength that grows out of cooperation.

Senator Weeks. Absolutely; and that is just our trouble, too. Our laws have brought about a centralized system which is concentrated in New York. It is under private ownership and private control, and that is what we are trying to get rid of.

Mr. Willis. But now you want Government control.

Senator Weeks. It is not that our present system has always worked badly, but we are trying to change that centralized system in New York.

Mr. Willis. Yes, sir; I believe that this system will do that. I may be wrong about it.

Senator Bristow. Mr. Willis, as I understood, your principal objection to a bank owned by the people of the United States by voluntary purchase of stock and controlled by the Government was that it put the Government in the banking business?

Mr. Willis. Yes.

Senator Bristow. And you objected to the Government engaging in business?

Mr. Willis. I do not like it.

Senator Bristow. In that connection you have been, in my opinion, confusing the central-bank idea with the idea that has been advanced here in the committee and which was indorsed yesterday by Mr. Vanderlip of a Federal reserve bank.

Mr. Willis. Yes.

Senator Bristow. Now, a Federal reserve bank, as some members of the committee have been advocating, is not a central bank that is operated and owned and controlled by the banks of the United States.

Mr. Willis. I think that is a very excellent point, Senator, and I quite agree with you.

Senator Bristow. It is a Federal reserve bank that is to supplement the banking system of the United States.

Mr. Willis. That is absolutely true. I made that same point awhile ago, if you remember, in conversation with one of the other members of the committee. I agree with you.

Senator Bristow. It is to aid the banking business of the United States.

Mr. Willis. It is; yes.

Senator Bristow. It is not to absorb the banks themselves——

Mr. Willis. Not at all.

Senator Bristow. It is to be a reserve bank, a great reservoir, where any bank, whether the stock is $25,000 or $25,000,000, if it complies with the legal requirements, may come and secure help when it needs it.

Mr. Willis. Yes; but in doing that it has to carry on banking operations—it has to judge the paper.

Senator Hitchcock. The Treasury Department is doing that now, you realize.
Senator Bristow. Yes; it is taking commercial paper now for deposits.

Senator Hitchcock. And not only that, but it is sending experts in every one of those national banks to judge of their commercial paper—to say whether it is good.

Senator Weeks. Yes; not only doing that, but sending men who are not experts. [Laughter.]

Mr. Willis. Senator, I think those points are well taken, but I do not think that necessarily means the process is one we want to continue and perpetuate.

Senator Bristow. Now, I want to call your attention to the fact, and tell me if it is not somewhat a parallel: The Government owns a railroad—the Panama Railroad; the Government owns and operates it, and it is a Government institution. Do you not think it was necessary for the construction of the canal that the Government should own and control that railroad and steamship line?

Mr. Willis. You are an expert on the Panama Canal; I am not. I have heard it said it was.

Senator Bristow. In the connection with the operation of this railroad company and steamship line, the Government is running a steam laundry and an ice-cream factory, 30 eating houses, and 3 or 4 big hotels, as big as the Raleigh down here, and it is also running 40 or 50 grocery stores. Now, that has been found necessary in the construction of the Panama Canal.

Mr. Willis. My answer to that, Senator, is that if that is necessary, and there is no other way to do it, then I am prepared to subscribe to it. But I believe there is another and better way.

Senator Bristow. Won't you modify that by saying: "If this is the better way to do it?"

Mr. Willis. No, sir; I cannot believe that.

Senator Bristow. You said there is no other way. Now, there are other ways.

Senator Reed. There is no other way to do it down there.

Senator Nelson. Yes; they could have done it on the regional plan. [Laughter.]

Senator Shafter. As a matter of fact, because of the cost and the probable losses, you would find that private enterprise never would have undertaken that.

Senator Bristow. No; I beg your pardon. The Government did that because it was afraid that private enterprise, in control of its construction, without any competitor, would take advantage of that and charge the people excessive rates. Now, it is proposed here, in order to break up the monopoly of the credit of the country, which this bill is undertaking to do, to let the Government establish a bank of a hundred million capital, invite the people of the United States to buy the stock and operate that bank, so as to preserve the independence of this democratic system we now have.

Senator Reed. As soon as the argument between the Senator from Kansas and the Senator from Colorado is over, I move that we adjourn until to-morrow morning.
Mr. Willis. I would like very much to be permitted to conclude this.

Senator Reed. So far as I am concerned, I would be forced to leave at this time.

Mr. Willis. May I continue this?
Senator O'Gorman. Yes.

Mr. Willis. Gentlemen, I will add this one point, if I may: A great deal has been said about the necessity of having the banks take up the Government bonds, refund them into 3 per cents or into short-time notes, and then use those notes for the purpose of getting gold on occasion. In my opinion, there is no necessity for any such plan as that, and I do not think it is a courageous way of dealing with the bond question. It would have the effect of tying up the funds of a regional or central bank, if the latter were organized, and keeping them from being placed in commercial loans. I think that is not in the bill now, and I think it would not be a good thing to do.

Senator O'Gorman. What would be your suggestion?

Mr. Willis. Well, sir, my suggestion would be, if the committee does not think the banks have been sufficiently generously treated under this bill,—that is, if they do not think justice has been done them—then to do justice by having the Treasury get whatever money is necessary in refunding and refund at such a rate as may be desired. I do not like the roundabout way of dealing with such questions.

Senator O'Gorman. I think earlier during the day you stated those 2 per cent bonds should be refunded at par at a reasonably early date.

Mr. Willis. I did not say they should.
Senator O'Gorman. You thought it would be just?

Mr. Willis. I think I said that that was about the only thing I felt would absolutely certainly maintain them at par. That is what I think I said.

Senator Hitchcock. I want to say right here I think it is not the idea of members of this committee that the bonds must be maintained at par as a matter of justice or generosity to the banks, but as a matter of protection of the national credit.

Mr. Willis. I think that is a very reasonable distinction.

Senator O'Gorman asked me awhile ago, I believe, whether I approved of the note features in this bill, and then that question was withdrawn. I would like to say with further reference to that, Senator, that I think in the form in which the note section is now stated any objection that might come to us from those who hold the ideas that I have expressed is largely a theoretical objection and has not very much practical force, although personally I hold the theory of note issue that I explained.

That is all.

Senator Hitchcock. We will now adjourn until to-morrow morning at 10.30 o'clock.

(Thereupon, at 5.22 o'clock p. m., the committee adjourned until to-morrow, Saturday, October 25, 1913, at 10.30 o'clock a. m.)
The committee met at 10:55 o'clock a. m.
Present: Senators Hitchcock, O'Gorman, Pomerene (presiding), Shafrroth, Hollis, Nelson, Bristow, Crawford, McLean, and Weeks.

Senator Bristow. I have a letter here from Mr. Larrabee, who appeared before the committee, and I would like to read it so as to have it incorporated in the record.

Senator Pomerene. Was he a former witness?

Senator Bristow. Yes; he appeared here, and this is a letter to supplement his statement, which he wrote after he arrived home, written from Stafford, Kans. He says, "I have been home several days," etc., and speaks of his enjoyable trip, and adds:

I am afraid that I did not make a strong enough impression on the committee in respect to the open-market operations of the regional banks. In the morning of the day I was there you will remember that a banker from Denver testified that he increased the reserve of his bank 12 per cent during the panic of 1907 by collecting outside commercial paper; and unless the new banks are permitted to go in the open market the business interests will be up against a violent liquidation in the event of financial disturbance. This was what happened in the panic of 1907, and concerns which sold their paper through brokers were compelled to liquidate heavily. Bankers will not buy paper when they have to discount it at once, and during the panic of 1907, owing to forced liquidation, wheat declined 10 cents a bushel, and there was a heavy decline in all lines of production. I have a suggested method to offer in handling the 2 per cent bonds. It is this: It amounts little to the Government who holds these bonds, whether it is the national banks or whether it is the new reserve banks, and I believe the national banks should be permitted to present their bonds to the reserve banks and receive in payment therefor the notes of the reserve banks, retiring their note circulation. This, of course, can be made optional to the present holders.

You can provide that the Federal reserve bank need keep no gold reserve for the notes then outstanding secured by 2 per cent bonds, which they should be obliged to deposit with the Secretary of the Treasury. There is no gold reserve behind these notes now, so there would be no more occasion, it seems to me, for the regional banks keeping a gold reserve behind national-bank notes that are based on United States bonds than there is of the national bank, under the present law, keeping a gold reserve behind such bonds.

They should, however, be required as are the present banks to keep a 5 per cent fund with the Treasury Department. With the bonds with the reserve banks the Government could refund them at the rate of 5 per cent annually, retiring that amount of bank notes. The only difference there would be is the reserve banks would issue the circulation instead of the national banks as at present. The Government would be left in the same position as though the national banks were compelled to keep the bonds. If additional currency at the reserve banks was issued above the amount secured by the 2 per cent bonds, they should be required to hold a gold reserve as the bill now provides.

In relation to the savings-bank section I notice—now, Senator Nelson, this point I would like your attention to see if you think there is anything to it—

In relation to the savings bank section I notice the law makes an establishment in the savings section optional, and if it is left optional in the bill the
objection passed by Mr. Tilton, of Pell City, Ala., falls to the ground. And if such section is made optional with each individual bank, it can not be objectionable and may be of some benefit to some banks.

That is all he says in regard to this. Now, is it optional, and if optional and the bank did not see fit to establish a savings department, could they go ahead with the time certificates as they do now or would they be forbidden?

Senator Nelson. I think they could go on unless we changed the law. There is nothing in the law that directly prohibits it, and it is a practice that has grown up.

Senator Bristow. Suppose the Comptroller of the Currency should decide that was a savings bank—that is, a savings account.

Senator Nelson. Then it might lead to trouble, but it is a practice that has been universal for years.

Senator Pomerene. My thought about that matter had been this: It seemed to be some question as to whether or not, under the national-banking law there was an authority to establish these savings departments, but it has been done by leave of the Comptroller of the Currency. Now, if you wanted to make certain that provision we could simply incorporate a section in this bill legalizing that which they had been doing.

Senator Nelson. Simply a provision in the bill that they shall continue to do as they have been doing.

Senator Pomerene. Yes.

Senator Nelson. And they ought to have the right.

Senator Pomerene. I think so.

Senator Crawford. Mr. Bristow, in what way will his scheme for having these 2 per cents deposited with the regional reserve bank make matters either better or worse?

Senator Bristow. Why, it would save a contraction of the currency.

Senator Crawford. But, supposing you leave these national-bank notes out just as they are, and not touch them at all. Why would not that accomplish just the same thing?

Senator Bristow. Oh, yes; certainly. But this bill proposes to retire them and then if the national bank does not come in under the provisions of the bill, there is a forced retirement.

Senator Crawford. Yes; but we could change the bill so as to permit them to remain out. That would amount to the same thing.

Senator Bristow. Oh, yes; that would amount to the same thing; but this gentleman does not intend to come in unless the bill is very materially changed, and of course he wants to get rid of his bonds, but he won't sell them at a sacrifice. He said to me after he testified here he intended to keep his bonds. He says:

I will hold them. The United States Government, I do not believe, will repudiate its obligations, and I do not intend to sell below par, but I am going out of the system.

Senator Nelson. As the plan is, as I understand it, Senator Bristow, it is to have the new banks, the regional banks, take over these bonds bodily and issue this new currency on them?

Senator Bristow. Whenever a bank wants to get rid of its bonds, the regional bank, his idea is, shall take those bonds and issue to the banks——
Senator Nelson (interposing). These new notes.
Senator Bristow (continuing). Currency.
Senator Nelson. That would still make that currency bond-secured currency.
Senator Bristow. It would still make the currency bond-secured currency, except it would be carried to the regional bank.
Senator Weeks. Mr. Chairman, may I suggest to these gentlemen who are discussing this matter, that this is a matter they can discuss during the month of November, and that we take up these witnesses here who are waiting.
Senator Bristow. That is a good suggestion. I have a letter here from Senator Catron. He has written out to a number of bankers in his State, and sent them a copy of the bill and asked their views, and he writes and asks me if I will not have their views incorporated in the record. He sends me the replies of four banks. I do not know what they are, but I have them here.
(The letters referred to will be found at the end of the day's proceedings.)
Senator Pomerene. I presume there would not be any objection, and it is so ordered unless there is objection.
Senator Weeks. Mr. Chairman, I have a letter from a Massachusetts banker making some suggestions. I have not been over them, and I do not know whether they should be included in the record, but if I find some new suggestions, I would like to have his letter incorporated in the record.
Senator Pomerene. If there is no objection, that will be granted.
Senator Nelson. I was going to suggest, Mr. Chairman, that inasmuch as Mr. Willis was asked to remain over for the benefit of Senator Reed, we take up some other witness until the Senator arrives.
Senator Pomerene. Have you any additional statement, Mr. Willis, that you wanted to make?
Mr. Willis. I have nothing, Senator, that I think is absolutely necessary. It did occur to me that before closing I would give the committee, with its permission, a brief statement of the points in this bill that I think should be absolutely retained in any bill that the committee, in its wisdom, may determine upon, if you care for them. I do not care to volunteer them.
Senator Pomerene. Yes. The witness will proceed.

STATEMENT OF PROF. H. PARKER WILLIS—Resumed.

Mr. Willis. This bill, gentlemen, as other bills of the same kind, is a bill which may be changed in a great many details, and good argument can be put up on either side; that is, in favor of one set of details as against another. That is largely a matter of business judgment and of adjustment to conditions.
As I said yesterday, the effort was earnestly made in the House to get what seemed like the best arrangement, but if subsequent developments or additional evidence which is adduced show that what was done was not the best, and that in certain particulars alterations should be introduced, then obviously those alterations it is the duty of the committee to make. There are, however, certain fundamental
ideas in the bill that it seems to me should be held firmly in mind in the process of acting upon it, if it be acted upon, and that these can be stated pretty simply as a series of brief propositions. I think the first one is the idea that was elaborated upon yesterday to a considerable extent, namely, that of providing for a number of these banks.

Senator Nelson. Why is that fundamental? Instead of having one reservoir for reserves and for the issuance of bills, why is that fundamental? You did not explain that yesterday.

Mr. Willis. I tried to do so, Senator.

Senator Nelson. I do not recall any reason you gave for that.

Mr. Willis. I may not have done it perfectly. My discussion was broken a good deal by question, but my feeling about that is this——

Senator Nelson (interrupting). Before you go into that I want to call your attention to this: The two fundamental things, I think, in the bill are the conservation of the reserves, gathering those together, instead of having them in the condition they are now, and making them available, and the other is the issuance of currency based upon the commercial needs of the country founded on commercial paper with a sufficient gold reserve for their redemption. Now, those are the two fundamental propositions.

Mr. Willis. Yes.

Senator Nelson. The other proposition of regional banks or whether you make this a compound currency make it absolutely a promise of the banks with or without the guaranty of the Government I regard as nonessentials.

Mr. Willis. Yes.

Senator Nelson. The other two, the gathering up of the reserves and utilizing them, and the issuance of currency on the commercial needs of the country—they are the two fundamentals. Now, I would like to hear why 12 regional banks are fundamental.

Mr. Willis. May I first say, Senator, that I did not intend to say and do not go on record now as having said that I thought 12 were fundamental. I tried to insist yesterday and I do say now, with the greatest strength that I am capable of, that I think the number to be established is a matter that is worthy of very careful investigation and that while we did give—the House committee did give—as full and thoughtful study to that as it was capable of, did have maps drawn dividing the country into tentative districts, did compile statistics——

Senator Nelson (interposing). But that does not go to the root of the matter.

Mr. Willis. May I be permitted, Senator, just to finish that matter, with your permission?

Senator Nelson. Go on.

Mr. Willis. While the committee did do all that and did, as a result, come to the opinion that so far as it could reasonably and humanly conclude, 12 was about the right number, if additional information showing that is not the right number is in the possession of the committee, then the number should be changed. In other words, as I said yesterday, there is nothing sacrosanct or positive about the number 12.

Senator Nelson. But don’t you see, Mr. Willis, you have not gotten at the fundamental reason?
Mr. Willis. Because I have not been allowed to develop my statement.

Senator Nelson. It is not the question of numbers but why should it be a regional system instead of a single system, that you have not touched upon yet.

Mr. Willis. I tried to just a moment ago. I went over that yesterday. The question in the last analysis comes to this: What is the desirable unit of banking concentration? That is the real problem. Now, if it can be shown that it takes a country of just about the size of the United States and of just about the total amount of capital our banks have to provide the United States a desirable quantity of banking concentration or degree of banking concentration, then we ought to have only one bank. If, on the other hand, the evidence shows that such a bank as that would be unwieldy, overcentralized, in danger of subordinating the interests of one part of the country, possibly, to the interests of another, or, if it be found that in any area over which such a bank presides there are a number of business districts reasonably separate one from the other in their affiliations, in their type of credits, in their seasonal variations of crops and the like, then the argument is strong for giving each of those districts a separate banking organization which shall manage its affairs and provide the necessary cooperation to guard against depressions and panics and provide banks regularly with rediscounts.

Now, do I make that a sufficiently plain statement, Senator?

Senator Nelson. No; I do not think you reach the fundamentals.

Mr. Willis. Then tell me where I fail and I will try to do better.

Senator Nelson. The point is this: Why is a regional system safer and better than a main, central reservoir? I do not care what you call it, but why not have one reservoir instead of having 12? The bill admits that 12 is not good because it provides, as Mr. Vanderlip expressed it, for the piping of funds from one reserve to the other. Without that you admit your system would break down. You admitted yesterday without that provision compelling one regional bank to discount for another, your system would break down.

Mr. Willis. No, Senator. Some one asked me if I did not admit that, and I said that "With due regard to everybody else's opinion, I could not admit that," and I can not now admit it.

Senator Nelson. Then we might eliminate that from the bill with safety to the system?

Senator Reed. You did put in, you or somebody put in the bill for some reason, a provision that the central board could order one bank to come to the rescue of another.

Mr. Willis. I think that is desirable, Senator, as an emergency proposition.

Senator Reed. Now, let us see: If the system will stand without it, it certainly is a very radical thing to do. If we have 12 separate corporations, each owning their own capital, every dollar of their assets being their own, and you put in a requirement that without their volition or consent they may be compelled each to transfer their funds to the other, that of course is a very tremendous power and a very radical power. Now, is there any justification for it except necessity?
Mr. Willis. I will answer perfectly frankly as to that, Senator. The justification for it is the same as the justification for the use of the police power, the same as the justification that gives the Government power to seize private property in time of war, the same as creates eminent domain on the part of the Government, the same as enables human society, as organized, to do any of the things which violate or run counter to the ordinary course of affairs for the safety of the whole of the community. It is the same thing that has led the clearing house, a purely private organization, in time of panic to get together and pool reserves, practically putting pressure—I do not say in any illegitimate way—but practically putting pressure upon every member of the organization to join with the others.

Senator Reed. Your illustrations admit the whole of the argument—the right of eminent domain.

Mr. Willis. That is an analogy, Senator, of course.

Senator Reed. The right of eminent domain is the greatest power the Government has.

Mr. Willis. Yes.

Senator Reed. It is a life and death power, in fact.

Mr. Willis. Yes.

Senator Reed. It has no justification, except supreme necessity.

Mr. Willis. Yes.

Senator Reed. And never has been justified by a court except upon the ground of public necessity. Now, if you admit, therefore, that this provision is analogous to the right of eminent domain, you bottom it upon necessity; and when you bottom it upon necessity you admit Senator Nelson's hypothesis.

Senator Nelson. My hypothesis is that that very fact admits that under certain financial stress these regional banks can not stand alone. That is, each one of these regional banks is helpless; they must hie to the others to get help.

Mr. Willis. It would likewise be a fact if you had a central bank in this country—one single central bank. In time of stress conditions might become such, and indeed have become such, that such a bank is obliged to look to others unless the financial system is to break down and go to pieces. That has been the case in European countries—the banks of France and England have been friendly to one another and have stood together and have aided one another, although there was no power that could force it. Now, in this case, I do not like to speak of myself as admitting that such conditions are probable. I do not object to stating that they may exist. I say frankly that I think this is an emergency power, and I think the bill makes it evident it is to be used and can be used only in emergency. I fully agree with Senator Nelson that there are conditions which this was intended to meet under which difficulty might arise in some one part of the country, serious difficulty, in which it would be desirable to get help from other parts of the country. But I believe that with this power in the bill that help will come voluntarily.

Senator Reed. Very well. I do not think we are very far apart. The amount of it is, you think, one of these regional banks might be weakened and might need help, and therefore you have put in the power to give that help; and you admit, of course, that necessity may arise (and we all hope it will arise very seldom and may even
hope it will never arise), and the fact you put the power in is an admission of a possible danger.

Mr. Willis. Yes.

Senator Reed. Now, I want to ask you this question: I wish you would tell us the difference there is, after all, between 12 separate banks tied together by a central organization and united by a power of that central organization to compel each to transfer its funds to the other and calling that central organization a bank and giving it 12 branches. What is the real difference?

Mr. Willis. That is a very pertinent question and goes to the heart of the matter. The difference I conceive would be simply like that between a centralized empire like Russia and, on the other hand, a nation like our own, in which local powers are lodged in local governments. The difference now, coming down to a business analysis, lies in the fact that whereas under a central bank plan the central body ordinarily normally and constantly interferes in, shares in, and directs the ordinary banking business operations of each one of its branches, under a plan such as is proposed in this bill, each business unit carries on its own affairs, provides for the conservation of its own reserves, and directs its own interests, referring to the others only in case of exceptional necessity and being governed by the central power only in those broader and more general ways that are deemed necessary to bring about a certain general unity in policy. To sum up that answer, then, in a word, the difference is that between central and local control, in either case there being a general unity of policies.

Senator Reed. Now, nobody can go farther than I will go for the right of local self-government in all these matters that can be controlled by the people locally; but when you come to establishing a think like a post office, local control would be ruinous.

Mr. Willis. Yes.

Senator Reed. And it is conceded here that it is our duty to provide a currency not for each State, but in the exercise of the Federal function to provide a currency and banking system for the entire country.

Mr. Willis. May I interrupt there?

Senator Reed. Yes; just when I finish my question. Don't you weaken that system, that plan, when you interpose and mix up with it the idea of local self-government?

Mr. Willis. Answering that directly, Senator, I do not think so. Further, you notice we have provided with some elaborate care in this bill for exactly that unification of currency as distinct from the purely banking operations which involve the passing upon paper. The chief idea in this bill, the main idea, is just that of keeping within every district the power of passing upon its own paper—deciding what shall constitute the basis of credit—instead of having that decided somewhere else.

Under a central bank plan, as I understand such plans, the central bank would have the power to withdraw funds from one part of the country or to dispatch them there, and through its appointees to impose the stringent requirements of one part of the country as to commercial paper upon another. Now, we all know that human nature is about the same everywhere, and, in the last analysis, the
goodness of our commercial system depends upon the goodness and reliability of the men who are behind it.

Senator Nelson. May I ask a question right there—I want to ask right here, in order to bring it to your attention: Under the currency provided for in this act, it is not issued on the order of the regional bank, it is only issued on the order of the central board. The regional bank must apply to the central board, to this central board here, and it says whether the currency can issue or not.

Senator Reed. And whether the securities are satisfactory?

Senator Nelson. Yes.

Mr. Willis. The central board passes upon the question whether the securities that have been O. K.'d by the district authority—that is, have been examined by it, approved by it—are or are not worthy to stand behind a national currency to which the Government gives its indorsement and the central board further reserves to itself the power, if absolutely necessary, to say to a bank, "No more of this currency shall come out," and this currency, under the bill, issues only on the request of the regional bank, and that implies that it will issue only on the request of member banks and their customers who make application to it.

Senator Crawford. Right there: I do not want to break in on your thought, but is it not sound that the issuing of currency should be controlled by the Federal board rather than by these banks that are engaged in discounting paper?

Mr. Willis. For the sake, Senator, of getting uniform currency.

Senator Crawford. And for the purpose of controlling the volume and preventing inflation should not this Federal board control that issue?

Mr. Willis. It is desirable to prevent inflation; and to have that done by every means and at every point in the whole process here, has been earnestly sought. I believe this bill is infinitely ahead of the monetary commission's bill in its safeguards against inflation, and I believe it fully and thoroughly prevents such inflation, while, at the same time, enabling the business community to get what it needs when it has the backing for it.

Senator Reed. Now, Mr. Willis, we are drifting away from the one thing I want to talk about for a moment.

Mr. Willis. Yes.

Senator Reed. You believe, I take it, that the nearer we have local control and yet have a strong system, the better.

Mr. Willis. I do.

Senator Reed. Now, let us see. Here is a system proposed by which there is a regional bank organized, and every bank within that district must become a member, and then that bank can get no relief until it has secured the approval of that regional board.

Mr. Willis. Yes.

Senator Reed. And after it has the approval of the regional board the regional board must get an approval from the central board. Thus each bank's fate is made to rest not upon the security it is able to offer, but upon the volition of the bankers who happen to control the regional bank. Now, is that not a much less degree of independence in each bank than it would be if each bank had the right, under the law, to have discounted its paper, provided it came up to a standard and acted as an independent thing—not as an adjunct?
Mr. Willis. Senator, answering the main point of your question first, which is the last point—that question has been discussed a good deal in the House committee, and I have devoted a good deal of attention to it. I think there is argument for giving the bank the right to have a certain amount of its paper discounted under limited conditions. I think, also, that the putting of that into the bill would create another outcry of opposition to it from bankers; and as I believe that all reasonable discounts will be granted under this bill, for the reason that it is to the interest of the banks to do it, and they themselves are operating the regional banks, I think it is not necessary, or on the whole wise, to put that in; although, if there were danger that any bank would be discriminated against and its life endangered in that way, I should want to see it in. Now, then, I do not believe there is any such danger as that, but I believe that the business interests of the banking community are strongly in favor of seeing to it that every bank that has good paper shall get accommodation and that there shall be no friction in the working of the plan. That situation has existed already under our very imperfect system and would exist in a much higher degree here, where, if there was the slightest injustice done to a bank, that bank could bring it to the attention of the Federal authorities and an immediate rebuke would result.

Senator Nelson. I want to call your attention to this fact, in the matter of discounts: Do these regional banks act as a sort of middleman? There has got to be a double discount.

Mr. Willis. Yes.

Senator Nelson. I come to you, a regional bank, and want to make a loan.

Mr. Willis. Yes.

Senator Nelson. You discount my paper.

Mr. Willis. Yes.

Senator Nelson. Now, you have to go, if you are short of funds, to the reserve bank?

Mr. Willis. Yes.

Senator Nelson. And you have to discount, so there are two steps in the operation.

Mr. Willis. Yes; that is true.

Senator Nelson. And each of those systems has to have a rake-off.

Mr. Willis. Yes.

Senator Nelson. That is, instead of the borrower getting the whole thing through his local bank, he gets it through the local bank as an intermediary of the regional bank. So there are two steps in the discount program. Your member bank borrows it from the regional bank, and then the member bank loans it to the individual.

Mr. Willis. Yes; your point is very forceful and well taken, Senator.

Senator Nelson. Now you have a middleman. Would it not be better to abolish that middleman in the matter of discount and let the local bank do the business direct—to get discounts direct?

Mr. Willis. I would rather put it the other way. If you can induce the bankers to have the regional bank deal direct with the public, so as to compete with them right along every day, it would be well. There is a great deal of argument for that.

S. Doc. 232, 63-1—vol 3——73
Now, as to this question of profit or "rake-off," what you say is absolutely true. My own opinion about it is, however, that the combined payment of profit or "rake-off" will, by competition, be kept down to the ordinary level for the use of capital, and that the member bank which makes a loan, knowing it has to meet that loan itself or go to the regional bank, will simply charge enough for its indorsement (for that is what it amounts to) to cover its expenses and the risk of loss in performing the transactions. I think the competition, which is to be perfect under this bill, because any new bank that organizes can come in, will keep that rate of interest down to a fair return upon capital, and I am firm in that belief because of the fact that under the existing system our banks, on the whole, have not had an unreasonable rate of return. The comptroller places it, I believe, at less than 10 per cent as the average rate of return on capital, which is not an unfair return, as such things go, allowing for business hazard and failure and all that sort of thing. That is my answer. I do not think it would be unreasonable, and I believe competition would keep it down. At the same time, I do think if you could persuade the banks and business interests, which have sprung up and are opposed to doing that, to let those regional banks do some business, at their discretion, with the public, thereby giving a very powerful whip hand over the member banks, you will tend to keep the rate of interest down. To get them to do that, I think, would be a difficult thing, and I doubt whether it could be accomplished.

Senator Reed. Now, Mr. Willis, I want to get your idea about this matter: Suppose we were to organize this system along this line, that we are to provide 12 regional banks—

Mr. Willis (interposing). Or some other number.

Senator Reed. I will take 12 as an arbitrary number.

Mr. Willis. Yes.

Senator Reed (continuing). We would require the banks in these districts to underwrite the stock and then sell the stock of each of these regional banks to whomsoever would buy it, the Government of the United States taking a portion, so that the banks in the end would not necessarily have the capital invested. Then require the banks to keep their reserves either in their own vaults or in these banks?

Mr. Willis. At their own discretion?

Senator Reed. Well, leaving a discretion, but perhaps not as to the entire fund. And then provide that these 12 banks should be governed by a board of directors selected, not by the banks but by the Federal Government?

Mr. Willis. Yes, sir.

Senator Reed. So that there was no selfish interest controlling those 12 banks. What would be the objection to that system?

Mr. Willis. Well, that was the question that was asked me last night—I think by Senator O'Gorman. I think perhaps you were not here at the time.

Senator Reed. If so, I did not hear it.

Mr. Willis. My answer to it was this: I firmly believe, perhaps wrongly, but I believe that the use of selfish interests under proper control in human life, in business relations, is a pretty desirable thing; and I think you will get better results in the operation of these banks by having them carried on subject to proper Govern-
ment control in the interest of the public by the people who own them—who own the stock in them—and who are directly concerned in their operation, then you would in having it done entirely by public officials. You may say——

Senator Reed (interposing). Well, suppose we were to have the banks have a minority representation on account of their deposits, the Government maintaining the majority; what would you think of that?

Mr. Willis. That would be less objectionable to me than the other.

Senator Reed. I just want to get your opinion, because you want to get away and I do not want to keep you here very long.

Mr. Willis, have you any idea that the banks to-day—the great banks of the country—exercise a somewhat dominating influence over the financial market?

Mr. Willis. I do, of course, think so.

Senator Reed. Have you any idea that that influence extends out throughout the country and reaches the large banks of the country?

Mr. Willis. I can not help thinking so.

Senator Reed. Well, have you any remote or nebulous notion in your head that the banks are not going to control this system?

Mr. Willis. This system we have now?

Senator Reed. Absolutely.

Mr. Willis. I have not only a remote and nebulous notion but a very distinct conviction, which may be nothing more than a conviction, but which I hold just as firmly as a man can hold a conviction based entirely on study, and so on, that under this system the banks of the several districts will be able to control their reserve funds and to keep them invested in the fluid securities of their own district, and not in stocks and bonds issued at a great distance from them, doubtless under proper control in many cases, but whose fluidity and soundness is in no way related to the fluidity and soundness of the paper of the district to which these reserves belong.

Senator Reed. That, to my mind, is an utterly different question, and it is one that can be reached in an entirely different way.

Mr. Willis. Very likely.

Senator Reed. They have got the right in this bill to prescribe the kind of securities that can be used by these banks or can be invested in—all of them.

Mr. Willis. Yes, sir.

Senator Reed. And that is a different question. But I am talking now just about control. I will take, for illustration, the district in which I live. There is one bank in the district that is the banker for 720 other banks.

Mr. Willis. Yes.

Senator Reed. There is another bank that I know of that is the banker for 600 other banks. Both of those happen to be in my town. In the city of St. Louis there are various large banks and trust companies that probably do business for and are the depositaries of more country banks than those I have named.

Senator Crawford. Well, those are trust companies and State banks, as well as national banks?

Senator Reed. Yes. Now, when these men come to a banker—when these bankers come to a great bank in a city—they come to
him, first, because they have confidence in him as a banker; they come to him, second, because he is able to render them certain aid.

We have been told that there was a convention of bankers in Chicago that a few men absolutely dominated. We have been told that there was a convention of 2,000 or 3,000 bankers in Boston and that a few men mapped out the program for that convention and carried it through.

And everywhere power and influence works its way to success. I do not know what you think; but I have not the slightest doubt that I could pick out 12 men in the district that is to be established in the section in which I live and that 6 of those men at least will constitute the directors of the regional bank.

Mr. Willis. Well, I think, Senator——

Senator Reed (interposing). And if that is true, who are they? They are going to be the great bankers of that district; they are going to be the very men that you say are now under the influence of the great financial powers.

Mr. Willis. May be, Senator, under that influence.

Senator Reed. Well, men that you say are now probably under it.

Mr. Willis. Probably; yes.

Senator Reed. Then, have you not made a machinery or devised a plan by which all of the bankers are to be united into 12 banks; so that it is therefore easier to control 12 banks than it was originally to control 7,000 banks?

Mr. Willis. With reference to that, I can only say that I do not think so and that I think the machinery of public control—the Federal board and the arrangement for Government participation in the directorates of these banks—is enough to prevent. But as I am perfectly free to admit, that is a question that is open to discussion. It is not really a banking question at all. It is the kind of question that you have so clearly outlined; and if, in your opinion, not enough has been done to guard against that danger of control then more should be done.

Senator Reed. If we are not to require the banks to put up any capital: if we simply require them to aid in forming this system, then the Government would be perfectly justified in retaining the control of these regional banks, would it not?

Mr. Willis. I think, without reference to justification—because I think anything is justified in order to get the best results for the public welfare—that the best results—business results—are obtained either in the way indicated in this bill, or in some similar way. Understand me clearly; I am not a bigoted advocate of the details of this bill. As I tried to convince you yesterday, I think there are many places at which it can be improved, and I have indicated some of the most important ones on my own responsibility.

Senator Reed. Well, do you think the plan I suggested would be workable? I will not ask you whether it is as good as this one.

Mr. Willis. Theoretically, I think it would be workable.

Senator Reed. Do you know of any reason why it would not be practically workable?

Mr. Willis. Practically—that means the kind of men you get to operate it?
Senator Reed. No; I mean the formation of it. So far as running it is concerned, I can dismiss from my mind, because I think that can be accomplished.

Mr. Willis. Equally frankly, then, I think practically the success of it would depend a good deal on the way in which it was worked out, and the skill with which the details of the plan are developed.

Senator Reed. Please let me ask you one further question. You have provided in this bill for the retirement, gradually, of the national-bank notes. Will you tell me how we now get the gold into our Treasury, which we have been enabled to pile up here as a reserve back of the—

Mr. Willis (interposing). The way in which the country gets gold—

Senator Reed (interposing). Well, how do we get that into the Treasury?

Mr. Willis. Just in this way, I think—of course, that is a large theoretical question of international balance of trade—

Senator Reed (interposing). No; I mean the practical way it gets into the Treasury.

Mr. Willis. Well, the way it gets in, I should say, is that the use of the paper currency, the certificates, is a good deal more convenient to people with our habits of using money, than the use of the gold—

Senator Reed. (interposing). But we have to get the gold in the Treasury before we use the certificates, how do we get that gold in there?

Mr. Willis. A man takes the gold out of the ground. He takes it to the assay office, and then it goes to the Treasury to be coined. The man who is going to use it would rather have paper currency than gold. He therefore asks the Government to take the gold and give him paper currency for it. They hand out the gold certificates to him and the gold stays in the Treasury, and the gold certificates go into circulation.

Senator Reed. Well, that is not the sole source of the gold supply of the Treasury.

Mr. Willis. Of course, we import gold from abroad, and we do not want to use it as money, as the English and the French do, and we get certificates for it.

Senator Reed. Who imports it?

Mr. Willis. Anybody who has a claim—

Senator Reed. Of course, we all know that that is one of the sources by which money gets into the Treasury. The miner goes to the assay office and says I want this gold coined; and then he takes the gold and says I want to get gold certificates for this instead of the coin.

Mr. Willis. Yes.

Senator Reed. We understand that. But there is another source of it.

Mr. Willis. We get it through international balances of trade.

Senator Reed. But how does that get into the Treasury?

Mr. Willis. Just in this way, I should say: The balance of trade in favor of this country is created through the purchase and sale of goods.
Senator Reed. But I am just assuming that gold is in this country. How does it get into the Treasury?

Mr. Willis. Just as I say: A bank or an individual has possession of the gold, and prefers the currency to the gold, takes the gold to the Treasury, leaves it there, and gets the currency for it.

Senator Reed. Now, has that ever been done?

Mr. Willis. Do you mean an actual transaction?

Senator Reed. Yes.

Mr. Willis. I could not point to an actual specific transaction, of course.

Senator Reed. Well, Mr. Willis, is not this the way it is done: The Government collects vast sums of money at its ports; and it collects an excise tax?

Mr. Willis. Yes.

Senator Reed. And that tax can not be paid in national-bank notes. The national-bank notes, therefore, are forced out of that use, and something must take their place; and, therefore, it must be gold or the equivalent of gold. So that there is being poured into the Federal Treasury because of that fact a stream of gold.

Mr. Willis. Yes.

Senator Reed. And when it once reaches there it can be laid aside and gold certificates issued. Is not that the way it gets there?

Mr. Willis. Well, gold undoubtedly gets into the Treasury in that way; but I do not think that accounts for the bulk of the increase in the trust funds behind the gold certificates.

Senator Reed. Would not that flow of gold be greatly retarded if we were to retire the national-bank issue of $700,000,000——

Mr. Willis. I do not think so; not in the slightest degree.

Senator Reed. And we were to issue a Treasury note that was payable for duties and imposts?

Mr. Willis. I honestly do not think so.

Senator Reed. Have you ever gone to ascertain the practical workings of this system we are now living under? One of the great sources of our gold supply has been due to the circulation of the bank notes.

Mr. Willis. Why, certainly, it is undoubtedly true that the bank notes circulate as they do because we have not cared for gold instead of them. We have had to supply the place of the pure gold currency which we would have had had bank notes been entirely absent; and we have supplied that by the use of the bank notes. That is certainly the case.

Senator Reed. And the bank notes—is not this the practical operation of it: A banker, knowing that the gold has certain uses that the bank note does not have, in paying the money out over his counter will pay out the bank notes, and they circulate in the pockets of the people very largely?

Mr. Willis. Yes.

Senator Reed. Consequently, when you want to pay the United States $10,000 in the way of duties, you go down to the bank. The bank has already gathered up the gold, and you say you want $10,000 in gold, and you carry that over to the customhouse, and you pay it into the customhouse, and the customhouse sends it into the Treasury and the Treasurer takes it and puts it over here in a pile and issues against it $10,000 of gold certificates; and thus we im-
pound the actual gold. Now, is not that one great function that has been performed by the national-bank note?

Mr. Willis. I should not be inclined to attribute that function to the national-bank notes. Indeed, my feeling has been that the national-bank notes have driven gold out of the country. I feel that very strongly—that they have been at times very redundant in circulation—and that they have actually prevented the gold from being paid to the Government, when it otherwise would have been and should have been paid to the Government.

Senator Reed. What do you think the circulation per capita ought to be in this country?

Mr. Willis. That is a question I do not think anyone can reasonably pass upon. It varies a good deal, and because it varies we need elasticity in the currency.

Senator Reed. Would you think that in 1896 it was too little, or too much?

Mr. Willis. Well, that is a good while ago. I do not know what I thought at that time.

Senator Nelson. You mean 1906, do you not, Senator Reed?

Senator Reed. No; I mean 1896.

Mr. Willis. I do not know what I thought at that time.

Senator Reed. Did you at that time advocate the theory—the quantitative theory of money?

Mr. Willis. I never have believed in the quantitative theory of money.

Senator Reed. You do not believe that the amount of money has anything to do with prices?

Mr. Willis. That is a little too strong a statement. It has something to do with it, but I do not believe it to be the sole regulator of prices.

Senator Reed. Not the sole regulator, but is it not a great factor?

Mr. Willis. It is doubtless an important factor, but not the greatest.

Senator Reed. Is it not the greatest single factor?

Mr. Willis. I do not think so. That is a very much controverted scientific question, Senator Reed.

Senator Reed. Well, did you ever follow the fluctuation of prices and compare them with the amount of money in circulation?

Mr. Willis. Yes; I have made, I think, a pretty elaborate study of that.

Senator Reed. Well, is it not true, as a matter of financial law, that, taking prices in the aggregate and not picking out a particular year, but taking a period of time great enough so that you can strike a fair general average, that the rise of prices has always followed the increase of per capita circulation?

Mr. Willis. I honestly do not think so. You ask me for an opinion, and it is my duty to tell you just what I think.

Senator Reed. Certainly.

Mr. Willis. I do not think so. But I also add to that there is scientific opinion in favor of the view that you have expressed, but that, in my judgment, the weight of scientific opinion is against it—closing, then, with the statement that, while there is a great deal of evidence on behalf of both sides, my own studies of the
subject have led me personally to the conclusion that the quantitative theory of money is not a sound, is not a tenable, one.

Senator Reed. Then, if that is true, it will not make any difference how much per capita circulation we have out; as long as it is good money it will not affect prices.

Mr. Willis. Provided it is good money, and instantly redeemable, I do not think the mere quantity in circulation makes any difference.

Senator Reed. One further question and I am through. Why do you provide in this bill that the Secretary of the Treasury must turn over all the money in the Federal Treasury, except the 5 per cent, and the moneys held on special deposit and must hereafter turn over all moneys acquired, to this system of privately owned, privately controlled banks?

Mr. Willis. Well, eliminating the latter part of that question, which I do not think is quite fair—that is, it would commit me, you know, to the belief that it was a privately operated system, which I do not think I can admit——

Senator Reed (interposing). Well, not entirely; there is some control of it.

Mr. Willis. But answering the main branch of your question about the Government deposits I would say this: I believe that there is really no feature of our existing system that is so open to criticism and is so unique among the fiscal systems of the world as that by which the Government segregates its current receipts in money and withdraws them from use.

And I believe that in times past very serious hardships and wrong have been done to the country by withdrawing large sums in that way and then depositing them back in banks at other points. For, even with the best intentions in the world, under the most favorable possible conditions, it is not practicable to put the funds back exactly where they came from.

So that for those reasons I think it is better to have the funds remain steadily in commercial use instead of being drawn out.

Senator Reed. Well, now, do you not argue too much on that?

Mr. Willis. Perhaps so.

Senator Reed. You have a bill here that provides that these regional banks, under the direction of the central power of the Government, shall do identically that thing not only with the Government money but with the private moneys of the banks?

Mr. Willis. Certainly it was not believed that it would do that.

Senator Reed. Well, the Federal Treasurer has collected the money that is due to the Government and belongs to the Government. He sees fit, because he believes it ought to be done, to deposit $10,000,000 with the banks of Chicago, and recently $50,000,000 with the banks of the West. It is his money—or it is our money; it is the people's money, and he deposits it. It is an arbitrary transfer of one's own funds from one place to another. And you say that is bad, because the money does not go back to the place where it originated?

Mr. Willis. Yes.

Senator Reed. Very well, let us take this 12-bank system. The banks of New York, we will say, pay into the Federal Treasury a large sum of money. There is $100,000,000 there. There is a bank—a western regional bank, somewhere out in the West, that is in need
of funds. A Government board orders the bank in New York to send $50,000,000 to that bank.

Will you tell me why that does not have every single vice that is in the system that now exists?

Mr. Willis. I will answer that perfectly frankly——

Senator Reed (continuing). With the additional vice that you are taking private money against the will of the owners of that private money, whereas under the present system you are only taking Federal moneys and depositing them, exercising the right of a proprietor to put his money wherever he pleases?

Mr. Willis. I will answer that perfectly frankly, Senator Reed. In one view of the case I think your criticism is an absolutely just one; and I would be inclined to defend that power just as I did defend it before on the ground that it is an exceptional power, to be used only under exceptional and unusual conditions when all else has failed.

But I would make this one limitation, if you will permit, upon your statement, that the withdrawal that occurs in the latter case, you understand, under this bill is from commercial use and from one commercial district to another commercial use and to another commercial district, the funds being in continuous use at the service of the business community all the time, whereas now the funds are paid to the Government, a noncommercial body, are segregated in the Treasury, oftentimes to the extent of hundreds of millions of dollars, the surplus within recent years, I think, having run as high as $260,000,000, and they are held out of use there for indefinite periods.

Senator Reed. Has there ever been a time when $262,000,000 has been in the Treasury? Has it not been in the banks of the country?

Mr. Willis. Under the Shaw administration, I think, the surplus ran up to about that figure, the funds being distributed between the Treasury and the various subtreasuries, but being out of commercial use. That is, the total surplus; but there was, of course, a certain part of it in the banks.

Senator Reed. Yes; the major part of it was in banks, was it not?

Mr. Willis. I do not think so; not at one time, Senator Reed.

Senator Bristow. Excuse me for interrupting you; but did not Secretary Shaw distribute that surplus all over the country?

Mr. Willis. He kept distributing it, and calling it back again.

Senator Bristow. Well, he called it back as he needed it, did he not?

Mr. Willis. No; he often called it back when he did not need it; that is a matter of opinion, of course; I am not criticising anybody. But I think he often called it back when he did not need it.

Senator Bristow. To my certain knowledge, he sent thousands and hundreds of thousands of dollars out to the small country banks.

Mr. Willis. Oh, certainly he did that; and a good many of those banks deposited it in New York and other centers. But that is another question. I think, Senator Reed, in all frankness, that your criticism of that power is a perfectly fair one, with the limitation I have made.

Senator Reed. Now, I have in mind another thing. I have in mind the stability of this Government. I am going to assume, for the sake
of argument, that we came to a crisis when we were threatened with a great war. I am utterly opposed to passing any law under which the Federal Treasurer can not conserve in the vaults of the Government any money, no matter what the emergency is; no matter if this whole chain of banks was tottering to its fall; no matter what the condition that he must put that money in the banks; do you not think that power is too broad?

Mr. Willis. That is the matter that you mentioned yesterday. I am glad you recalled that to my memory. I think we might very well modify that so as to leave it discretionary with the Secretary of the Treasury. I see no objection to that.

Senator Reed. Would you draw the provision, then, something like this? Would you express it—not in this language, but substantially like this:

That it is the policy of the Government to keep these moneys in the banks—

Mr. Willis (interposing). Certainly, that is right.

Senator Reed (continuing):

But with a discretion vested in the Secretary of the Treasury, whenever for the public good he desires to retain it in the vaults?

Mr. Willis. Exactly so.

Senator Reed. I do not mean that that would be written in the law in that way.

Mr. Willis. I understand; that is the thought.

Senator Crawford. Then you would repeal the Independent Treasury act?

Mr. Willis. This bill does not repeal that.

Senator Reed. I am obliged to go, now, Mr. Willis; but I am very much obliged to you.

Mr. Willis. I thank you, Senator Reed, for your courtesy.

Senator Crawford. But it practically destroys it, does it not?

Mr. Willis. It destroys the working of it in ordinary business operations; yes.

Senator Crawford. Mr. Willis, the member banks who subscribe to stock in the regional reserve bank and who want to rediscount paper, it is not contemplated that in all cases that they shall get currency for this paper, is it? Will they not, in a great many cases, take their assets over there and get a credit in that bank?

Mr. Willis. Certainly; yes.

Senator Crawford. Well, unless this Federal reserve board has this absolute control over the issuing of currency, how in the world can the temptation be withstood of getting currency on all the commercial assets that these member banks want to lug over there, and in that way inflate the currency of the country?

Mr. Willis. Well, in a great many cases the banks would not want currency; they would rather have the credit and would draw checks.

Senator Crawford. Well, there is a temptation, always, to get currency when there is any chance to loan it out and get interest on it.

Mr. Willis. The bank would just as soon loan out its credit.

Senator Crawford. Then you think it is not necessary to have this check in the hands of the Federal reserve board on the tendency to issue too much currency?

Mr. Willis. Personally, as I explained yesterday afternoon, my theory is that the issue of currency, if it is amply protected, and if
it is absolutely and unquestionably solvent and good, will take care of itself. But, for the sake of safeguarding it still further, because it is so important a matter, we ought to make assurance doubly sure; and I think it is well to leave a general oversight in the hands of the Federal reserve board.

Senator Crawford. Well, the volume of this prime commercial paper, these liquid assets, is so enormous that if they could lug it to the reserve bank and get currency for it without limit it certainly would inflate the currency, under certain circumstances.

Mr. Willis. I do not think that is a danger.

Senator Hitchcock. Mr. Chairman, is there anything further?

Senator Pomerene. I think there is nothing further.

Mr. Willis. May I be excused, then?

Senator Pomerene. Have the Senators any further questions to ask? If not, Mr. Willis will be excused.

Mr. Willis. I thank the committee for its courtesy to me.

Senator Pomerene. We are obliged to you.

Senator Hitchcock. Yes; the committee is obliged to you.

Mr. Willis. If I can serve the committee in any way in passing upon any further point of doubt I will be glad to do so by letter. Have I the privilege of reading my testimony and correcting formal errors?

Senator Pomerene. Yes; you can arrange with the reporter about that.

Mr. Willis. In closing, I should like to add to my testimony a very brief statement of the points in which I believe that the bill should not be changed, no matter what alterations of detail may be introduced into it. When I began my testimony this morning I suggested that such a condensed review might be worth while by way of completing what I had to say, but since then the discussion has taken a wide range, and I have not been able to furnish the enumeration of the essential points spoken of. May I say in conclusion, then, that I believe the vital points to be retained in the legislation are as follows:

(1) First of all, it is necessary to have a number of reserve banks, and, above all else, to keep the way clear for increasing this number if necessary as different sections of the country desire. As I have said, I do not feel a positive certainty as to any given number, but I am positive that the number should be a reasonable one, corresponding to the general business and commercial division of the country.

(2) Secondly, I am earnestly desirous to see the autonomy and independence of each of these banks absolutely maintained, and to that end I think that extensive business between them, involving the keeping of large funds with one another, should not be permitted, and that the general course of their operations with one another should be closely supervised by the Federal reserve board.

(3) Thirdly, I esteem it absolutely essential to retain in the bill the provisions for open market operations upon at least their present scale of development. Otherwise the banks will not be able to make their rate of discount effective.

(4) Fourthly, it is absolutely and fundamentally essential that the banks shall keep their reserves either in cash in their own vaults
or else in the form of credits with the Federal reserve banks in whose districts they are situated. The present system of pyramiding reserves, keeping balances with other banks which are counted as a part of the reserves of the banks to which they belong is wholly vicious, and should be terminated at as early a date as conditions will permit.

(5) Fifthly, the Federal reserve board should have enough power to make it a genuine force, particularly in cases of emergencies, and should always be in position to exercise within reasonable limits a powerful control over broad banking policy.

(6) Sixthly, the bill should provide for a uniform system of domestic exchange without any question or doubt. If possible, to effect this without undue hardship it should be based upon par collection of checks within reasonable limits.

(7) Seventhly, there should be no provision tending to overload the Federal reserve banks with Government bonds through any system of purchase or absorption or transfer. Such a provision would inevitably result in tying up the funds of the banks to a corresponding degree, thereby crippling them and preventing them from furnishing sufficiently effective or active assistance in the granting of rediscounts.

There are other essential and highly important provisions which should appear in any bill, but I regard the foregoing as so preponderating in importance that I have thought it worth while to segregate them for special attention.

Senator Hitchcock. I would like to read this telegram into the record; it is addressed to Hon. Robert L. Owen, the chairman of this committee, and it is signed by some 30 of the leading wholesale houses of Omaha, Nebr. It is as follows:

OMAHA, NEBR., October 24, 1913.

Hon. ROBT. L. OWEN,
Chairman Senate Committee on Banking and Currency,
Washington, D. C.:

The leading business of Omaha, in a called meeting here to-day, expressed their alarm at some of the provisions of the Glass-Owen currency bill, believing that it will have a blighting effect upon the business of jobbers, manufacturers, packers, stockmen, grain men, retailers, other lines of business, and farmers. They are actuated in making this earnest protest by the absolute certainty that the bill if enacted will bring about a very serious contraction of credits, not only in the West, but throughout the whole country. This is a vital effect of the bill, which cannot fail to work hardships upon business concerns large and small. For instance, the banks of Omaha, under the operation of the proposed law, will lose from $7,000,000 to $8,000,000 of their deposits. In order to make up for this loss they must ask for a corresponding reduction in their loans, say about $5,000,000. This means that the business men of this section must reduce their lines of credit in their local banks all the way from 20 to 30 per cent. It is well known that the large business houses of the West carry lines of credit in Chicago, St. Louis, Boston, New York, and in other large financial centers. Under the operation of the pending bill these lines of credit will be reduced for the same reasons that will impulse their local banks to reduce such lines of credit. In all this vast region probably we would have but two regional reserve banks, leaving this section of the country very much handicapped for banking facilities. In the territory outlined there are now 17 reserve cities, which have been created by the Comptroller of Currency.

In response to the actual needs of business in the midwest the proposed law would seriously disturb the trade relations which have been built up through the natural growth and evolution of trade and traffic, a result which the West could not tolerate. These ill effects would, in the very nature of the case, have a secondary effect upon the retail merchants as well as stock growers, farmers, mechanics, and others. The wholesale contraction of credits which the bill would entail will inevitably work a hardship to the business men of all grades
and the widespread retrenchment which must follow in consequence will also affect interests of the mechanic and laborer to a very serious degree. Kindly have clerk read this telegram to the committee.

Senator Hitchcock (continuing). I will say that those men who signed that telegram are the leading business men of the city of Omaha and represent very large interests.

Senator Pomerene. There has been given to me a letter from a committee of the New York Credit Men's Association, under date of October 23, 1913, voicing certain criticisms of the bill, and if there is no objection I will ask that this be incorporated in the hearings.

Senator Nelson. That is all right.

(The letter referred to is as follows:)

The New York Credit Men's Association,
New York, October 23, 1913.

Hon. Robert L. Owen,
Chairman Committee on Finance and Currency,
United States Senate, Washington, D. C.

My Dear Sir: Inclosed herewith I hand you copy of certain suggestions formulated by the banking and currency committee of this association with respect to "the Federal reserve act" now pending before your committee. I commend the same to the thoughtful consideration of the Senate Committee on Finance and Currency.

Respectfully yours,

A. H. Alexander, Secretary.

[Inclosure.]

The New York Credit Men's Association,
New York, October 23, 1913.

To the Committee of the United States Senate on Banking and Currency.

Gentlemen: The committee on banking and currency of the New York Credit Men's Association, which association comprises 1,400 of the leading merchants, manufacturers, and bankers of New York City, expresses its conviction that the Federal reserve act now in the hands of the Senate Committee, when perfected, will prove of great value to the country. The committee takes the liberty of suggesting some modifications of several of the provisions of the bill, which it believes would not impair its efficiency but would render it more popular and useful.

First. The committee would be glad to see a smaller number of Federal reserve banks than 32, as named in the bill. We believe that a smaller number, with necessarily larger capital, would be quite adequate to properly carry out the objects of the act, and that the greater concentration of reserves would better meet the needs of the country.

Second. We see no unfairness in the request of the banks who furnish the capital of the reserve banks, that they should have some representation on the Federal reserve board or a voice in the selection of the members of the board, and recommend that the powers of the advisory committee should be enlarged.

Third. The notes of the Federal reserve banks, secured by a gold reserve of 33$ per cent and by good commercial paper, we believe will be an acceptable currency without the Government guaranty, and further believe that they should be payable in gold and not as provided—in gold or lawful money.

Fourth. If interest is paid by Federal reserve banks to any depositors it should be paid at the same rate to all depositors.

The committee commends to the favorable consideration of the Senate Committee on Banking and Currency the above suggestions. It further approves the report of the committee on finance and currency of the Chamber of Com-
merce of the State of New York, and the brief submitted by the committee on banking and currency of the National Association of Credit Men, both of which documents we believe are in the hands of the Senate committee.

Respectfully submitted.

RICHARD P. MESSITER,
J. HERBERT CASE,
W. E. THATCHER,
B. S. HASKINS,
OTIS EVERETT,

Committee.

Attest:

A. H. ALEXANDER, Secretary.

Senator Pomerene. I also have here some resolutions passed by the Richmond Chamber of Commerce, and, if there is no objection, I will have them incorporated in the record.

(The resolutions referred to are as follows:)

COPY OF PREAMBLE AND RESOLUTIONS ADOPTED BY THE BOARD OF DIRECTORS OF THE RICHMOND CHAMBER OF COMMERCE, OCTOBER 21, 1913.

THE RICHMOND CHAMBER OF COMMERCE,
Richmond, Va., October 22, 1913.

Whereas the Richmond Chamber of Commerce has for some time past urged upon Congress the necessity for a revision of the currency and banking system of the country, it wishes to express its recognition of the importance of the recent action of Congress in formulating the pending bill, believing that the commercial and manufacturing interests are more directly interested in this measure than any other class of the people; and further, that the prosperity of the banks, not only in their soundness and strength, but also in their pronounced success, is a most important factor in the development of every industrial interest. It is, however, confidently thought that the bill now proposed will meet the requirements sought by the commercial and manufacturing interests much more efficiently if certain amendments or changes could be incorporated. The effect, in its opinion, of these amendments or changes will be that the banks would see their way clear to most heartily take advantage of all the good features of this bill, with the result that the country will be helped, especially in the South, which is so rapidly developing and must have more elasticity in its banking facilities to meet its requirements:

Therefore be it

Resolved, by the Richmond Chamber of Commerce, That it most earnestly requests the Congress to adopt the following amendments or changes in the bill now under consideration:

First. That the number of the Federal reserve board shall be seven, three of whom shall be proposed by the reserve or regional banks.

Second. That the amount of stock that each bank shall subscribe to its respective regional bank shall be reduced from 20 to 10 per cent, and that the number of regional banks be reduced to not more than five.

Third. That the currency issued by the reserve or regional banks should be under Government supervision, but should be the obligation only of the reserve bank issuing the same and the member bank to which it is issued, and not a Government obligation or guarantee by the Government; also, that this currency, namely, the notes issued by the regional banks, should be redeemable in gold alone.

Finally, it is suggested that the provision for the segregation of savings-bank deposits and the use of these funds in certain specified forms of investment, might work a great hardship upon the commercial interests of this section, and for that reason this provision of the bill should be made optional or entirely eliminated.

W. T. REED, First Vice President.

Attest:

R. A. DUNLOP, Secretary.

Senator Pomerene. I will also say, in a preliminary way, that one week ago to-day Senators Martin and Swanson, of Virginia, were waited upon by a delegation of bankers from Virginia, and the
Senators got in touch with Senator Hitchcock and Senator Weeks and myself, and they were informally heard before us; and it was suggested to them that they present any objections they might have, or any amendments they might propose, in the form of a brief to the committee. I have that brief here and if there is no objection that will be incorporated in the record of this day.

(The papers referred to are as follows:)

WASHINGTON, D. C., October 18, 1913.

The Senate Committee on Banking and Currency.

Gentlemen: Pursuant to a suggestion made at an informal conference today between Senators Hitchcock, Pomerene, and Weeks of your committee, and Senators Martin and Swanson, of Virginia, and a committee representing the Virginia Bankers' Association, we respectfully submit for your consideration the accompanying memorandum of the amendments and modifications of the pending currency bill which we believe to be desirable.

In making these recommendations we have not endeavored to cover every section of the bill, our idea being to emphasize those portions of the measure that we feel especially affect our Virginia institutions.

Yours, respectfully,

Geo. R. B. Michie, Secretary.

A Brief Summary of Modifications in the Currency Bill Suggested by the Committee of the Virginia Banking Association.

Stock subscriptions.—The stock requirements should not exceed 10 per cent of the capital of member banks. A larger subscription would, in the case of many small banks, cause embarrassment and injuriously restrict their operations. A suspended stock liability would create a feeling of uneasiness and anxiety.

United States bonds.—The Government created a market for low-rate bonds by giving them the currency privilege. Nearly all national banks purchased the 2 per cents at a considerable premium on account of this privilege. A change in the currency system, which contemplates the withdrawal of this privilege, should carry a provision which will substitute for these bonds some security that will sell for 100 cents on the dollar. The credit of the nation requires it. Good faith demands it.

Savings departments.—The provision in the pending bill for the segregation of the savings deposits would lead to enormous contraction in commercial loans in sections like Virginia, besides placing on the banks the burden of heavy additional expenses, incident to the proposed segregation of capital, deposits, funds, and investments. These requirements, fraught with so much peril to our commercial, industrial, and agricultural interests, should be eliminated or so modified as to apply only to such banks as may elect to avail themselves of the 5 per cent reserve requirement for savings departments.

Dividends.—The first charge on the earnings of the regional reserve banks should be a fair dividend on the capital stock. The member banks furnish all the capital and are further liable for a sum equal to said capital. A reasonable dividend on this capital should not be jeopardized by interest on deposits by the Government or member banks.

Division of earnings.—On the basis of fair dealing, it would be difficult to defend any division of earnings, after the payment of dividends and the accumulation of the desired surplus, other than by apportionment among member banks and the Government, in proportion to the average credit balance maintained by each with the regional reserve banks. Any other plan would, in a measure, defeat the purposes of the bill, for while the earning capacity of the regional reserve banks should be secondary to the important functions to be performed by them, the active support and cooperation of the member banks are essential to the highest degree of efficiency; and member banks will certainly limit their deposits in regional reserve banks to the minimum legal reserves, unless they receive an equitable proportion of the profits. Conditions vary in different sections. While member banks, in some localities, will require rediscounts at certain periods, other member banks will, at the same periods, have funds in excess of the legal reserves. They should be encouraged to deposit
this idle money in the regional reserve banks, enabling the latter to meet demands for rediscounts.

Maximum limit necessary.—If the principle of paying no interest on deposits should not prevail, it is most important that there be a fixed maximum limit to the interest that may be paid. An abuse of the discretion given the Federal reserve board in this particular might be disastrous. Excessive interest on Government deposits would tend to increase the rates of rediscount or might, to take an extreme view, amount to confiscation of the earnings and even the assets of the regional reserve banks.

Powers of the Federal reserve board.—The functions of the Federal reserve board should be well defined and its discretionary powers reduced to the narrow limits requisite for safety in emergencies and unforeseen conditions.

Respectfully submitted.

**Senator Pomerene.** I believe Mr. Edward E. Shields, representing a group of Pennsylvania bankers, is to be heard.

**Senator Reed.** I have here a telegram from Mr. Festus J. Wade, president of the Mercantile Trust Co., of St. Louis, which I should like to read to the committee.

**Senator Bristow.** I think it ought to be printed in the record.

**Senator Reed.** It will be remembered that Mr. Wade is one of the bankers who came here from the Chicago conference of bankers. It is addressed to the chairman, and not to me. It is as follows:

```
ST. LOUIS, Mo., October 25, 1913

Senator R. L. OWEN, Washington, D. C.:

Serious consideration of any new bill at this late date will, in my judgment, be fatal mistake and injure banking and currency reform for years to come. I am quite certain, after the exhaustive inquiry of your committee and the advice and counsel that have been given you by various business men and bankers who appeared before your committee, you can amend Glass-Owen bill in such a way as to make it workable and practicable as well as acceptable to great majority of banks and trust companies throughout the United States. If you desire to delay banking and currency reform until another panic, I know of no better way you can do so than by advocating a new measure at this late date.

I sincerely hope you will rapidly bring in a unanimous report recommending proper amendments to Owen-Glass bill, and pass same as amended at present session.
```

**Festus J. Wade.**

**STATEMENT OF EDWARD E. SHIELDS, SECRETARY GROUP 2, PENNSYLVANIA BANKERS' ASSOCIATION, WEST CHESTER, PA.**

**Senator Pomerene.** Will you give your full name, address, and business?

**Mr. Shields.** Edward E. Shields, secretary group 2, Pennsylvania Bankers' Association, West Chester, Pa.

**Senator Pomerene.** With what bank are you connected?
Mr. Shields. I am one of the officers of the Franklin National Bank, of Philadelphia; I am an assistant cashier of the Franklin National Bank, of Philadelphia; most of my adult life was spent with the First National Bank of West Chester.

Senator Pomerene. Will you please give the capital stock, surplus, and deposits of your bank?

Mr. Shields. My present bank?

Senator Pomerene. The one you are now connected with.

Mr. Shields. The capital stock is $1,000,000, the surplus is $3,000,000, and the deposits approximate $38,000,000.

Senator Pomerene. How long have you been actively in the banking business?

Mr. Shields. By "actively," do you mean as an officer? My whole adult life has been spent in the banking business.

Senator Pomerene. That answers the question sufficiently. You may proceed.

Mr. Shields. I thank you, gentlemen, for the opportunity of appearing before you.

It is not my purpose to give you my own views as to the proposed Federal reserve act. I have no thought of doing that, and I am not expected to do it.

My position is that of secretary to group 2 of the Pennsylvania Bankers' Association. I will explain about that association in just a word. The Pennsylvania Bankers' Association is divided into eight groups. Group 2 is composed of six counties in the southeastern part of the State, and, perhaps, is typical of the whole State, because of the diversified interests in its territory. It has commercial interests, as the city of Chester, being a city of much commerce. It has mining industries, such as the coal industries in Schuylkill County. It has large manufacturing industries, such as the iron industries of Coatsville, Pottsville, Reading, and Pottstown, and it has large farming interests, so that its activities are typical of the whole State.

I am sure you will want to know just why I am here and why I say to you what I am to say.

There came to me as secretary of group 2 an appeal to have a meeting of the members of the group, so that the members might have recorded their expressions in regard to this proposed act. The request came too late to have a meeting, and so the executive committee met and authorized me to issue the following telegram, which I did, night before last, in the shape of a night letter, to the members of the group, the total number of which is 138, I think. The telegram was as follows:

Executive committee, group 2, Pennsylvania Bankers' Association, instructs me to ask prepaid telegraphic reply Friday from an officer of your bank to following:

"Do you approve or disapprove proposed currency bill? Name principal objection, if any. Dependent upon answer committee may have hearing at Washington Saturday before Committee on Banking and Currency."

C. E. Shields, Secretary.

Now, I have here a number of telegrams in answer to that telegram, which I would like to read. I will read as many of them as you may desire. They are from trust companies and national banks.

Senator Pomerene. Let me ask you what was your reason for asking for the objections to the bill and not asking for an expression of opinion as to the merits of the bill?
Mr. Shields. The executive committee of the association instructed me to send this telegram. I had no option in the matter. It says, "Do you approve or disapprove proposed currency bill?"

Senator Pomerene. I know; but later on you ask them to name their principal objections to the bill. Why would it not have been fairer if you had asked them to designate the merits of the bill as well as to state their objections?

Mr. Shields. It might have been so, but I believe no harm has been done the bill because of the fact that they express in the telegrams both their approval and disapproval.

Senator Weeks. Is it not fair to assume that they approve of those features to which they do not offer objections?

Senator Pomerene. That is possibly true.

Mr. Shields. I am awaiting your pleasure in the matter of reading these, gentlemen.

Senator Shafroth. We have heretofore in cases of this kind, instead of encumbering the record with full copies of all telegrams, let the gentlemen select a few and put them in, and then state that you have so many more of the same tenor. I think we had one case in which a gentleman said that there were 315 who disapproved of the bill and the same number who practically approved of it, but the exact language of each one of those telegrams would, I think, unnecessarily encumber the record. Can you not classify them?

Mr. Shields. I have them classified, and I can read a few which will be typical of all.

Senator Bristow. Let us hear some of them.

Senator Pomerene. I suggest you read those which are typical and not take the time of the committee to read them all.

Senator Bristow. Where they contain practically the same language, it would not be necessary to read them.

Mr. Shields. They are much the same. I hope I will not do any injustice to any of them in making the selections. I have 13 telegrams from trust companies and 57 from national banks. Of the trust company telegrams, 2 give unqualified approval of the bill and 11 name their objections to the bill. Of the 57 telegrams from national banks—

Senator Pomerene (interposing). While dwelling on the trust company telegrams will you not read us two or three of them, in order to give us the objections which they raise?

Mr. Shields. Here is one from the Chester County Trust Co.:

WEST CHESTER, PA., October 24, 1913.

E. E. Shields, Secretary Group 2, Pennsylvania Bankers' Association, Philadelphia, Pa.:

We are opposed to Glass-Owen bill for various reasons; our two main reasons because it segregates savings deposits and does not provide one central bank with branches. Regard favorably Vanderlip Senate bill.

J. E. Ramsey, President Chester County Trust Co.

Here is a telegram from the Lansdowne & Darby Saving Fund & Trust Co.:

LANSDOWNE, PA., October 24, 1913.

E. E. Shields, Secretary Group 2, Pennsylvania Bankers' Association, Philadelphia, Pa.:

This company is not fully in favor of the proposed banking law.

The Lansdowne & Darby Saving Fund & Trust Co.
The Merion Title and Trust Co., of Ardmore, Pa., through its president, says:

_E. E. SHIELDS,_
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:
Disapprove any bill tending to increase Government control of everything.

Merion Title & Trust Co. of Ardmore,
Josiah S. Pearce, President.

This is a short telegram from the Phoenixville Trust Co.:

_E. E. SHIELDS,_
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:
We disapprove proposed currency bill in its present form.

Phoenixville Trust Co.

The treasurer of the Bristol Trust Co., of Bristol, Pa., telegraphed as follows:

_E. E. SHIELDS,_
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:
We disapprove of proposed currency bill unless amended in several particulars.

Bristol Trust Co.,
Wm. P. McCoy, Treasurer.

Then I have here a telegram from the president of the Shenandoah Trust Co., of Shenandoah, Pa.:

_E. E. SHIELDS,_
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:
We disapprove proposed currency bill; favor Vanderlip's new plan.

H. M. BRADEGAN,
President Shenandoah Trust Co.

The next is from the president of the Quakertown Trust Co.:

_E. E. SHIELDS,_
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:
I foresee great danger should present currency bill pass.

J. S. HABLEY,
President Quakertown Trust Co.

The treasurer of the Bucks County Trust Co., of Doylestown, Pa., says:

_E. E. SHIELDS,_
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:
This company disapproves the proposed currency bill; we disapprove of it generally; it is not a thoroughly well-considered bill.

Bucks County Trust Co.,
T. O. ATKINSON, Treasurer.
BANKING AND CURRENCY.

From the treasurer of the Kennett Trust Co., of Kennett Square, Pa., I received the following:

KENNETT SQUARE, PA., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

We disapprove the proposed currency bill. Principal objection compulsory subscription to regional banks; would favor the Vanderlip plan.

THE KENNETT TRUST CO.,
J. W. JEFFERIS, Treasurer.

The Delaware County Trust Co., of Chester, Pa., sent the following:

CHESTER, PA., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

We approve of currency legislation; we object to the small number of bankers in the management. Men of financial experience should have a majority representation.

DELWARE COUNTY TRUST CO.

This one is from the Cambridge Trust Co., also of Chester:

CHESTER, PA., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Object to currency bill principally because it places absolute control of finances in hands of seven men, five of same politicians—only one of whom need be banker or business man.

CAMPBELL TRUST CO.

From the secretary-treasurer of the Coatesville Trust Co. I received the following:

COATESVILLE, PA., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Difficult to speak for the company; higher officers absent and subject not been discussed; personally I favor bill; think, however, any new legislation should be subject to liberal initiative and referendum provisions to insure genuine popular control, and Federal board should be subject to recall.

ARTHUR HOOYES,
Secretary-treasurer Coatesville Trust Co.

Senator Hitchcock. Is that from Pennsylvania?
Mr. Shields. That is from Pennsylvania; yes, sir.
Senator Weeks. Where is that company located?
Mr. Shields. At Coatesville.
Senator Weeks. Where is Coatesville?
Mr. Shields. In Chester County, sir.
Senator Crawford. Is that from a banker?
Mr. Shields. He signs himself secretary-treasurer of the Coatesville Trust Co.
Senator Nelson. He is certainly a progressive.
Mr. Shields. It sounds very much like it.
The last of the trust company telegrams is from the secretary of the Schuylkill Trust Co., and says:

POTTSTOWN, PA., October 24, 1918.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Approve, but generally we prefer one outlined yesterday by Vanderlip.

N. S. FARQUHAR,
Secretary Schuylkill Trust Co.

Now, I come to the replies from the national banks. I have a number of telegrams and some letters from the national banks in our group of the Pennsylvania Bankers' Association.

Here is a telegram from the Citizens Bank, of St. Clair, Pa.:

ST. CLAIR, PA., October 24, 1918.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

We disapprove as it stands. Objections: Do not believe Government should assume absolute control without giving members contributing capital representation on the Federal reserve board; do not believe it wise and safe to place such vast powers in the hands of the appointed Federal reserve board where the personnel need not necessarily be composed of either bankers or business men; not satisfied with the rediscount provision, the time limit being too short for country bankers; not satisfied with the provision that all reserve be carried in regional banks as it would work a hardship to the country bankers.

CITIZENS BANK.

I have also a telegram from the cashier of the Chester National Bank, which says:

CHESTER, PA., October 24, 1918.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Disapprove currency bill in present shape as to requirement of banks to subscribe to capital stock; also character of securities permitted for rediscount; think supervising control should be in hands of experienced bankers.

S. H. SEEES,
Cashier Chester National Bank.

From the Merchants National Bank of Quakertown I have this:

QUAKERTOWN, PA., October 24, 1918.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

We oppose compulsory subscription to stock of regional banks. We oppose limiting dividend to 5 per cent. We oppose the reserve requirements. We oppose alternating examiners. We oppose the intention of segregating savings accounts with investments in specific securities.

MERCHANTS NATIONAL BANK OF QUAKERTOWN.

This telegram is from the cashier of the Grange National Bank, at Downingtown:

DOWNINGTOWN, PA., October 24, 1918.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Have prospered with present system and under now existing national-bank act; we are decidedly opposed to the Glass-Owen currency bill.

GRANGE NATIONAL BANK,
U. S. BRODT, Cashier.
I received this letter from the cashier of the National Bank of Malvern:

Malvern, Pa., October 24, 1918.

Mr. E. E. Shields,
Secretary Group 2, Pennsylvania Bankers' Association,

Dear Sir: Answering, we disapprove of the proposed currency bill. We believe that, should it become a law, among many objections which will arise will be the fact that banks in accommodating their patrons and in working for good welfare of the community, will be more handicapped in this mutually good line, because of the investigations and criticisms as to local accommodations; and also in the fact of the proposed necessity of separating the savings-fund deposits assets from the general assets, thus taking practically the saving fund part out of the loans made in general accommodations of customers—thus perhaps crippling them and impairing the bank's profits. We fear a political central reserve bank and the evil of its control. Our present currency system is good.

Most respectfully,

Chas. C. Highley.

I also received the following telegram from the cashier of the Downingtown National Bank:

Downingtown, October 24, 1918.

E. E. Shields,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

We disapprove Owen-Glass currency bill generally; particularly segregation of savings deposits and collecting items without exchange. Approve Vanderlip plan.

T. W. Towning.  
Cashier Downingtown National Bank.

This telegram is from the cashier of the Union National Bank at Minersville, Pa.:

Minersville, Pa., October 24, 1918.

E. E. Shields,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Opposed to new currency bill because no provision for redemption 2 per cent bonds at par, compulsory membership regional banks, and reserve requirements.

Chas. E. Steel,  
Cashier Minersville National Bank.

From the cashier of the Yardley National Bank I received this telegram:

Yardley, Pa., October 24, 1918.

E. E. Shields,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Urge committee to oppose proposed currency bill. Favor Vanderlip plan. Avoid radical legislation affecting credits.

Jesse E. Harper,  
Cashier Yardley National Bank.

The next telegram is from the cashier of the Wernersville National Bank:

Wernersville, Pa., October 24, 1918.

E. E. Shields,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Opposed to currency bill, especially nature of Federal reserve board.

Leonard M. Ruth,  
Cashier Wernersville National Bank.
The Pine Grove National Bank telegraphed as follows:

PINE GROVE, Pa., October 24, 1918.

E. E. SHIELDS,  
Secretary Group 2, Pennsylvania Bankers' Association,  
Philadelphia, Pa.:  
The Hon. E. A. Hayes's address; see Pennsylvania bankers' convention 1913. Book shows how we stand on currency.  
PINE GROVE NATIONAL BANK.

The president of the First National Bank of Darby sent the following telegram:

DARBY, Pa., October 24, 1918.

E. E. SHIELDS,  
Secretary Group 2, Pennsylvania Bankers' Association,  
Philadelphia, Pa.:  
The First National Bank of Darby disapproves of the proposed currency bill now pending at Washington.  
W. LANE VERLENDEN, President.

This telegram is from the cashier of the National Bank of Avondale:

AVONDALE, Pa., October 24, 1918.

E. E. SHIELDS,  
Secretary Group 2, Pennsylvania Bankers' Association,  
Philadelphia, Pa.:  
Approve general purposes of bill; object to savings-department clause.  
J. HOWARD BROSius,  
Cashier National Bank of Avondale.

Robert Fussell, cashier of the First National Bank of Media, Pa., sent the following telegram:

MEDIA, Pa., October 24, 1918.

E. E. SHIELDS,  
Secretary Group 2, Pennsylvania Bankers' Association,  
Philadelphia, Pa.:  
We do not approve proposed currency bill; too much power if concentrated in a few, possibly politically controlled, hands.  
ROBERT FUSSELL,  
Cashier First National Bank.

The First National Bank of Birdsboro sent the following response to my inquiry:

BIRDSBORO, Pa., October 24, 1918.

E. E. SHIELDS,  
Secretary Group 2, Pennsylvania Bankers' Association,  
Philadelphia, Pa.:  
We object to the proposed currency bill for the following reasons: Central reserve bank should be owned by United States Government; the segregation of bank deposits should not be compulsory.  
FIRST NATIONAL BANK OF BIRDSBORO,  
WM. LINCOLN, Cashier.

This telegram is from the First National Bank of Auburn, Pa.:

AUBURN, Pa., October 24, 1918.

E. E. SHIELDS,  
Secretary Group 2, Pennsylvania Bankers' Association,  
Philadelphia, Pa.:  
Do not approve proposed currency bill, especially clauses concerning circulation and Federal reserve board; would prefer Vanderlip plan in morning paper.  
F. J. VESS,  
Cashier First National Bank, Auburn, Pa.
Then I received this telegram from the Bridgeport National Bank:

**E. E. SHIELDS,**
Secretary Group 2, Pennsylvania Bankers’ Association,
Philadelphia, Pa.:
We disapprove currency bill, believing it means ruination for country banks.
W. H. KNEEDLER,
Cashier Bridgeport National Bank.

The First National Bank of Mahanoy City telegraphed as follows:

**E. E. SHIELDS,**
Secretary Group 2, Pennsylvania Bankers’ Association,
Philadelphia, Pa.:
Disapprove bill; opposed to make-up of Federal reserve board, refunding of twos, and proposed compulsory rediscounting, and some more.

**WALTER K. TERRY,**
Cashier First National Bank.

From the First National Bank of Perkasie I received the following:

**E. E. SHIELDS,**
Secretary Group 2, Pennsylvania Bankers’ Association,
Philadelphia, Pa.:
Opposed to reserve and board of control features of bill.

**WALTER K. TERRY,**
Cashier First National Bank.

The Parkesburg National Bank telegraphed as follows:

**E. E. SHIELDS,**
Secretary Group 2, Pennsylvania Bankers’ Association,
Philadelphia, Pa.:
We disapprove proposed currency bill.

**M. F. HAMIL,**
Cashier Parkesburg National Bank.

I received the following from the First National Bank of Newtown:

**E. E. SHIELDS,**
Secretary Group 2, Pennsylvania Bankers’ Association,
Philadelphia, Pa.:
We disapprove of the proposed currency bill in general, as it has many objectionable features. Believe it would be a serious thing for the country if passed.

**H. B. HOGELAND,**
Cashier First National Bank.

The following telegram was received from the Swarthmore National Bank:

**E. E. SHIELDS,**
Secretary Group 2, Pennsylvania Bankers’ Association,
Philadelphia, Pa.:
We are opposed to the Glass-Owen bill for various reasons. Our main reason is because it segregates savings deposits.

**C. PERCY WEBSTER,**
Cashier Swarthmore National Bank.

The First National Bank of Frackville sent the following:

**E. E. SHIELDS,**
Secretary Group 2, Pennsylvania Bankers’ Association,
Philadelphia, Pa.:
Do not approve bill as a whole; commission should be appointed to draft necessary currency legislation. If present bill passes, would not care to continue as national bank.

**ROBERT G. GABRETT,**
Cashier First National Bank.
The president of the National Bank of Oxford sent this telegram:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers’ Association,
Philadelphia, Pa.:
Disapprove proposed bill. Too many reasons to specify in telegram.

S. R. DICKEY,
President National Bank of Oxford.

From the First National Bank of West Chester I received the following:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers’ Association,
Philadelphia, Pa.:
We are opposed to new currency bill. It is too radical and will make the readjustment of present methods too disturbing.

FIRST NATIONAL BANK,
S. P. CLOUD, Assistant Cashier.

This telegram is from the First National Bank of Cressona:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers’ Association, Philadelphia, Pa.:
Disapprove compulsory subscription to stock constitution Federal reserve board segregation savings departments.

E. D. METXELL,
Cashier First National Bank.

The following telegram is from the Farmers & Mechanics’ National Bank, of Phoenixville:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers’ Association, Philadelphia, Pa.:
Opposed to bill in present form.

FARMERS & MECHANICS’ NATIONAL BANK.

From the Tower City National Bank, I received the following:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers’ Association, Philadelphia, Pa.:
We approve plan opposing the currency bill.

TOWER CITY NATIONAL BANK.

I received this letter from the cashier of the Hatboro National Bank:

Mr. E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers’ Association.

DEAR SIR: We disapprove of the following features of the proposed currency bill:
Rate of dividends to be paid stockholders by the Federal reserve banks.
Elimination of exchange charges on country checks.
Five per cent reserve required with Federal reserve banks without interest.

Yours, truly,

HATBORO NATIONAL BANK,
Wm. E. WILSON, Cashier.
This telegram came from the Peoples' National Bank, of Langhorne, Pa.:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association, Philadelphia, Pa.:
We are opposed to present currency bill; one of several objections is the segregation of our savings deposits.
The Peoples' National Bank of Langhorne,
Horace G. Mitchell, Cashier.

The First National Bank of Reading telegraphed as follows:

Reading, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association, Philadelphia, Pa.:
Do not approve. Principal objection segregation savings deposits.
First National Bank.

The Atglen National Bank sent the following:

Atglen, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association, Philadelphia, Pa.:
Disapprove currency bill; political features are objectionable; opposed to refunding 2 per cent bonds with 3 per cent; circulation privilege should be extended until bonds are paid; reserves should be withdrawn from depositories gradually, covering a period of, say, five years.
Horace L. Skiles,
Cashier the Atglen National Bank.

The Farmers' Bank of Kutztown sent the following:

Kutztown, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association, Philadelphia, Pa.:
We favor proposed currency bill modified to some extent.
Farmers' Bank,
A. A. Fister, Cashier.

From the Reading National Bank I received this telegram:

Reading, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association, Philadelphia, Pa.:
Our principal objection to bill is segregation of savings deposits.
Reading National Bank,
Henry J. Harrison.

The First National Bank of Honeybrook sent the following:

Honeybrook, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association, Philadelphia, Pa.:
We approve of the present currency bill now before Congress.
The First National Bank,
P. G. Hartman, Cashier.

The First National Bank of Coaldale sent the following:

Coaldale, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association, Philadelphia, Pa.:
We approve of proposed currency bill.
H. F. Blaney,
Cashier First National Bank.
I also received the following telegram from the president of the Chester Clearing House Association:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.: 

The Chester Clearing House Association this day unanimously adopted resolution disapproving currency bill in its present shape.

J. HOWARD ROOP, President.

The Farmers' National Bank of Bucks County, Bristol, telegraphed as follows:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.: 

This bank resents compulsion to subscribe to Federal reserve bank under conditions imposed, and if compelled to segregate assets for savings department, constituting two-thirds our deposits, will be forced to relinquish national charter as means of self-preservation and serving community properly. The proposed bill aims death blow at country banks that have prospered for 50 years under the old system, and is menace to safe banking everywhere.

CHARLES E. SCOTT,
Cashier Farmers' National Bank of Bucks County, Bristol, Pa.

This telegram came from the National Bank of Chester County:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.: 

Disapprove of present bill; more time needed to thoroughly digest. Stockholders of reserve should have representation. Refunding of twos and threes should be optional. Object to saving-fund section.

THE NATIONAL BANK OF CHESTER COUNTY.

From the Delaware County National Bank I received the following:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.: 

We are opposed to currency bill in present form, particularly compulsory feature of section 2 and segregation of saving-bank deposits.

THE DELAWARE COUNTY NATIONAL BANK.

From the National Bank of West Grove, Pa., I received the following telegram:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.: 

The present bill with the changes recommended by the conference of country bankers at Boston on October 2, 1913, would be agreeable to us, though Vanderlip's latest plan of a central bank with branches would probably work out better.

MILTON C. PYLE,
Vice President West Grove National Bank.

The following telegram came from the Charter National Bank of Media, Pa.:

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.: 

We object to many features of the currency bill, especially to latter part of section 8, part of section 11, relating to Federal reserve board, and all of section 27.

J. LORD RIGBY,
Vice President Charter National Bank, Media, Pa.
I received the following telegram from the Farmers' National Bank of Reading:

**Reading, Pa., October 24, 1913.**

E. E. Shields,
*Secretary Group 2, Pennsylvania Bankers' Association,*
Philadelphia, Pa.;

Urged reduction of regional banks to five if central bank with branches is unattainable. Curtail powers of Federal reserve board, especially its power to require one reserve bank to rediscount another's papers. Provide a fixed tax on note issues. Change compulsory subscription of 20 per cent to voluntary subscription of 10 per cent. Change section which describes note issues as obligations of the United States incurred for the purpose of making advances to Federal reserve banks. Drop savings bank section, enlarge powers of advisory council. Reserve against notes must be gold, not gold or lawful money.

**The Farmers National Bank.**

The Jenkintown National Bank telegraphed as follows:

**Ogontz (via Philadelphia, Pa.), October 24, 1913.**

E. E. Shields,
*Secretary Group 2, Pennsylvania Bankers' Association,*
Philadelphia, Pa.;

We are opposed to currency bill in its present shape, principally on account of political control reserve requirement and segregation of saving-fund deposit.

**Jenkintown National Bank.**

The Telford National Bank sent the following:

**Telford, Pa., October 24, 1913.**

E. E. Shields,
*Secretary Group 2, Pennsylvania Bankers' Association,*
Philadelphia, Pa.;

I disapprove of the proposed currency bill; principal objections, locking up a portion of our funds in reserve banks; the unfair treatment of United States twos, which we were obliged to buy above par; segregation of savings deposits; the great amount of securities now held by banks which will be forced upon the market.

**Vincent B. Kulp,**
Cashier, *Telford National Bank.*

I received the following telegram from the National Bank of Coatesville:

**Coatesville, Pa., October 24, 1913.**

E. E. Shields,
*Secretary Group 2, Pennsylvania Bankers' Association,*
Philadelphia, Pa.;

This bank most emphatically disapproves of the currency bill now before the Senate. We are opposed to Government control feature, and section 27, pertaining to savings deposits, should be stricken out.

**M. W. Pownall,**

I received the following telegram from the Sellersville National Bank:

**Sellersville, Pa., October 24, 1913.**

E. E. Shields,
*Secretary Group 2, Pennsylvania Bankers' Association,*
Philadelphia, Pa.;

Our principal objections to the currency bill are the following: Failing to protect the 2 per cent bonds under all conditions, segregation of savings-fund deposits, setting apart 20 per cent of capital and surplus of savings-fund department, and the transfer of all reserve held in reserve city to regional bank; a reasonable part should be continued in present reserve city banks.

**Sellersville National Bank.**
This letter came from the president of the National Bank of Chester Valley, Pa., located at Coatesville, Pa.:

**THE NATIONAL BANK OF CHESTER VALLEY.**

Coatesville, Pa., October 24, 1913.

Mr. E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Dear Sir: Replying to your telegram of the 23d instant relative to my approval or disapproval of the proposed currency bill, have to say that I disapprove and think that there should be no action taken until the new administration at Washington takes time to examine into the proposed changes thoroughly so that there may be no mistake. This can only be done by intelligent investigation.

My idea as a country banker is that our present law is good enough. It has stood the trial of half a century, and we think we know its defects. Why not remedy them without changing it for a system that changes everything and will have to be tried out before anyone can tell what the result will be? We want an elastic currency on special occasions, which is the most vital defect.

Yours, very truly,

H. J. BRANSON, President.

The president of the Perkiomen National Bank sent the following telegram:

East Greenville, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

We strongly disapprove proposed currency bill.

F. L. FLUCK,
President Perkiomen National Bank.

I received the following telegram from the First National Bank of Orwigsburg:

Orwigsburg, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

This bank disapproves proposed currency bill; objections against proposed compulsory subscription to regional banks, segregation of savings deposits, exchange and reserve features.

First National Bank of Orwigsburg.

From the Keystone National Bank of Reading, Pa., I received this telegram:

Reading, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Do not approve currency bill as drawn at present. Objections, political control, furnishing excessive capital, and small remuneration, and authorizing regional reserves to lend our hard-earned money to other parts of the country not so well off.

JNO. H. MALTZBERGER,

The following telegram came from the president of the Union National Bank of Souderton:

Souderton, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Group 2, Pennsylvania Bankers' Association,
Philadelphia, Pa.:

Do not favor bill as it now stands; should be amended; principal objections segregation of funds, to place vast powers in hands of Federal reserve board, refunding 2 per cent bonds without circulating privileges; reserve banks should pay interest on deposits.

A. G. REIFF,
President Union National Bank.
The cashier of the Farmers' National Bank of Boyertown, Pa., sent this telegram:

**Boyertown, Pa., October 24, 1913.**

**E. E. Shields,**
**Secretary Group 2, Pennsylvania Bankers' Association,**
**Philadelphia, Pa.:**

Disapprove any currency legislation at this time.

**Wm. D. Dchoenly,**
**Cashier Farmers' National Bank.**

The National Bank of Boyertown sent the following telegram:

**Boyertown, Pa., October 24, 1913.**

**E. E. Shields,**
**Secretary Group 2, Pennsylvania Bankers' Association,**
**Philadelphia, Pa.:**

Disapprove currency bill. Reasons, compulsory membership regional bank, method retiring 2 per cent bonds, segregation savings in national banks.

**M. H. Schealer,**
**National Bank of Boyertown.**

The president of the National Bank of Kennett Square telegraphed as follows:

**Kennett Square, Pa., October 24, 1913.**

**E. E. Shields,**
**Secretary Group 2, Pennsylvania Bankers' Association,**
**Philadelphia, Pa.:**

We disapprove the proposed currency bill.

**E. B. Darlington,**
**President National Bank of Kennett Square, Pa.**

From the Farmers' National of Oxford, Pa., I received this telegram:

**Oxford, Pa., October 24, 1913.**

**E. E. Shields,**
**Secretary Group 2, Pennsylvania Bankers' Association,**
**Philadelphia, Pa.:**

We disapprove of proposed currency bill as it now stands.

**R. A. Walker,**
**President Farmers' National Bank.**

This is a telegram received from the cashier of the Ashland National Bank:

**Ashland, Pa., October 24, 1913.**

**E. E. Shields,**
**Secretary Group 2, Pennsylvania Bankers' Association,**
**Philadelphia, Pa.:**

Opposed to currency bill. Principal objection, board of managers rediscount privileges and carrying of reserves.

**Geo. F. Rentz,**
**Cashier Ashland National Bank.**

The last of the national-bank telegrams is from the First National Bank of Hegins, and is as follows:

**Hegins, Pa. (via Tower City, Pa.), October 24, 1913.**

**E. E. Shields,**
**Secretary Group 2, Pennsylvania Bankers' Association,**
**Philadelphia, Pa.:**

We disapprove. Government will be charging us out of our premium on bonds even though no guaranty will get par; we furnish capital and no voice.

**Valentine W. Quigel,**
**First National Bank.**
(The witness at a later date filed the following additional telegrams for insertion in the record:)

**Reading, Pa., October 24, 1918.**

Mr. E. E. Shields,  
Secretary, care Franklin National Bank, Philadelphia:

The Penn National Bank, at Reading, Pa., disapproves of the currency bill in general. We disapprove of the segregation of savings and commercial deposits. We disapprove of banks being coerced to owning stock in a reserve bank. We suggest the Vanderlip plan.

A. J. Brumbach,  
President Penn National Bank.

**Lansdale, Pa., October 24, 1918.**

E. E. Shields, Secretary:

Principal objections to currency bill: Opposed to segregation of savings department; opposed to reserve funds being placed with regional reserve banks without interest; opposed to subscribe up to 20 per cent of our capital.

E. R. Musselman,  
Cashier First National Bank.

**October 24, 1918.**

E. E. Shields, Secretary Group 2, Pennsylvania Bankers' Association:

Disapprove of the Government having whole control of regional banks, the circulation change, and restricting investments as to savings deposits.

Byrn Mawr National Bank.  
J. W. Matlack, Cashier.

**Shenandoah, Pa., October 24.**

E. E. Shields, Secretary Group 2:

Disapprove currency bill in present form for following reasons: Exchange two 2 per cent bonds for three 3 per cent bonds with no circulation privilege. Banks are not allowed enough return for the money they are compelled to furnish to capitalize reserve bonds. Banks are not allowed to draw from reserve banks below a minimum reserve amount. They should be allowed to draw all their reserve when they need it, as they can do now from reserve agents. Banks have not enough representation on the boards of reserve banks. Political appointments on the reserve boards should be cut down. One district can compel another district to rediscount paper. This should be optional with each district to a certain extent.

J. S. Kistler,  
President Merchants' National Bank.

**Atglen National Bank, Atglen, Pa., October 24, 1918.**

Mr. E. E. Shields, Secretary Group No. 2.

Dear Sir: Small local bank like ours is not interested in many of the features affecting a reserve bank. But we are unalterably opposed to surrendering the circulation privilege and exchanging United States twos, 1930, unless they be for 4 per cent or selling at par. We favor central reserve bank with branches. Stock owned by the public. It would seem fair to the reserve banks that their reserve accounts should be withdrawn gradually, say, a limit of three or four years.

Yours, very respectfully,  
T. J. Philips.

**The National Bank of Topton, Topton, Pa., October 24, 1918.**

Mr. E. E. Shields,  

My Dear Sir: Complying with your request for an opinion regarding the proposed currency law now before Congress, I beg to say:

I am in favor of the bill now under consideration not because of its obviously objectionable features, but in spite of them. I believe the small country banks—
the kind you find in small cities, country towns, and villages—would fare better under a law such as this than they would under the Aldrich plan, which, with its process of elimination in the election of officers for the central reserve board, would be more responsive to the requirements of Wall Street than to banking interests and the needs of business generally. It seems apparent that if we do not accept the Owen-Glass plan we will some day be obliged to accept the Aldrich plan or something similar, and, as for me, I prefer the one now before Congress.

Very respectfully,

A. H. Smith, Cashier.

E. E. Shields,
Secretary Bankers' Association.

Dear Sir: In answer to telegram received asking to approve or disapprove the currency bill. In reply will say:

We object to the currency bill for the following reasons:

We do not approve of the feature requiring or compelling national banks to purchase a certain amount of stock; it should be optional.

We do not approve of the feature limiting the holders of such stock to a 5 per cent dividend.

We are opposed to requiring the deposit of a certain portion of the reserve without interest.

We favor 1 bank instead of 12, and think a fair representation on the board of directors should be given the stockholders.

We beg to remain, yours, truly,

MERCHANTS' NATIONAL BANK OF POTTSVILLE, PA., Pottsville, Pa., October 24, 1913.

E. E. SHIELDS,
Secretary Bankers' Association.

Dear Sirs: We are in receipt of your telegram, and in reply would state that we disapprove of the proposed currency bill as it stands to-day. One of the most objectionable features that we think is not just is that the banks should hold those United States Government bonds, 2 per cent, without the circulation privilege. The Government should redeem those bonds at par if they want to remove that privilege. There are other objectionable features which have been referred to so often that we suppose you have.

Hoping this bill may be amended so as to meet the approval of all concerned, we remain, respectfully, yours,

W. G. HARTMAN, Cashier.

Mr. E. E. Shields,
Secretary Group 2, Pennsylvania Bankers' Association.

Dear Sir: In reply to your telegram wish to say that being a State institution we have no decided objection to the currency bill, and have therefore no particular suggestion to offer whereby it should be amended.

It does seem on the face of it as if the banking interests would not be benefited by it and some suffer an injury if this bill should be passed, but we believe that the general purpose of the bill will be such a benefit to the commercial interests of the country at large, that it should be passed and any defects corrected later, rather than insisting upon certain desirable amendments being added at the risk of the bill not passing.

Yours, very truly,

C. H. ALDERFER, Vice President.

Mr. E. E. Shields,
Secretary Franklin National Bank, Philadelphia, Pa.

Senator Nelson. How many telegrams did you say were from banks and how many from trust companies?

Senator Pomerene. He stated that at the beginning of his testimony.
Mr. Shields. I think I have 70 of them altogether. I classified them when I began my statement. I have no further desire to take up your time, Mr. Chairman.

Senator Pomerene. Have you anything further you desire to say?

Mr. Shields. I have not, sir.

Senator Weeks. Did you say that only two of the 70 replies were in favor of the bill?

Mr. Shields. I said there were 2 favorable replies from trust companies and 2 favorable replies from the national banks out of a total of 70.

Senator Hitchcock. Are those country banks, so-called?

Mr. Shields. I have not, sir.

Senator Weeks. Did you say that only two of the 70 replies were in favor of the bill?

Mr. Shields. I said there were 2 favorable replies from trust companies and 2 favorable replies from the national banks out of a total of 70.

Senator Hitchcock. Are those country banks, so-called?

Mr. Shields. I have not, sir.

Senator Weeks. Did you say that only two of the 70 replies were in favor of the bill?

Mr. Shields. I said there were 2 favorable replies from trust companies and 2 favorable replies from the national banks out of a total of 70.

Senator Hitchcock. Are those country banks, so-called?

Mr. Shields. Yes, sir.

Senator Weeks. Did you say that only two of the 70 replies were in favor of the bill?

Mr. Shields. I have not, sir.

Senator Nelson. I call the attention of the committee to the fact that these telegrams disclose that these banks are doing what our banks are doing—a savings bank business.

Mr. Shields. I recently took a trip in western Pennsylvania and observed the banking conditions very carefully, and I find that in nearly all the banks and trust companies they have savings accounts, on which they pay 4 per cent interest, while the banks and trust companies of eastern Pennsylvania have savings accounts on which they pay 3 per cent interest.

It has been a matter of surmise to me as to what would happen to them if this bill should become a law, for I assume that the investments which would be designated by the board would be high-class investments, yielding a low return in normal times. I was very much interested in noting the conditions in the western and eastern parts of the State.

Senator Nelson. Do they do this savings bank business through bank books or do they give certificates of deposits?

Mr. Shields. Largely through bank books, I believe. That is the custom in eastern Pennsylvania. In some of the towns in eastern Pennsylvania and in many of the towns of western Pennsylvania the entire loanable funds in the banks do not at times supply the local requirements; and if more than 50 per cent of their available funds—that is, the approximate percentage of savings funds in these banks—if more than 50 per cent are segregated, just what the local conditions will be is rather a guess, because the savings funds will not be available under the law for commercial local requirements.

Senator Nelson. Under your present system, while you do a savings bank business in these banks, you are all governed by the same reserves, and the funds are all pooled in the bank, are they not?

Mr. Shields. Yes, sir.

Senator Nelson. And used for commercial purposes?

Mr. Shields. Yes, sir.

Senator Nelson. Whether you get them in the shape of saving deposits or call deposits or check deposits?

Mr. Shields. Just the same, sir.

Senator Nelson. So that they all become one general fund?

Mr. Shields. Yes, sir.

Senator Nelson. We have the same thing out West; only I think we use more certificates of deposit.

S. Doc. 232, 63-1—vol 3—75
Mr. Shields. Those are used to some extent in Pennsylvania.

Senator Reed. What do you mean by a savings department? Do you simply refer to money that is put in on time, or do you refer to the conduct of the ordinary savings bank business?

Mr. Shields. What I had in mind was the discrimination that some country banks make between their checking accounts on which they pay 2 per cent and the other accounts on which they pay 3 per cent?

Senator Reed. Now, assuming that a bank has gone no further than to receive the deposits of customers on time, and is paying interest upon those deposits, but is not conducting a regular savings bank business as distinguished from the other, if this bill were to provide that banks should have a right to receive time deposits——

Senator Nelson (interposing). And pay interest?

Senator Reed. And pay interest thereon, would that injure these banks? Would the bill injure the banks you refer to?

Mr. Shields. Well, I presume it would; if you will allow me to assume that the trust companies are going to continue in the same community with the privilege of giving to the local requirements their savings funds, where the national banks would be denied the same privilege——

Senator Reed (interposing). What do you mean by local requirements?

Mr. Shields. The loans to manufacturer, merchant, and the farmer.

Senator Reed. You did not understand my question.

Mr. Shields. Perhaps not, sir.

Senator Reed. Of course, you have such things as regular savings banks?

Mr. Shields. Certainly.

Senator Reed. They take in money, agree to pay it back at some period of time in the future. They loan it upon real estate; they invest it in a great many ways in which savings banks may and do invest their money. That is a savings bank, as I am using the term in this question.

Mr. Shields. Certainly; you do not mean a trust company?

Senator Reed. A trust company may do the same thing.

Mr. Shields. It does.

Senator Reed. In other words, the trust company conducts a regular savings bank business in some of its departments, frequently.

But these national banks you have been talking about have been doing nothing more, as I understand you, than to receive money on time deposits.

If we were to provide in this bill that banks could continue to receive money upon time deposits, paying interest thereon, and permit them to use it as they use demand deposits, would that avoid the difficulty you speak of?

Mr. Shields. Would that still permit them to use any part of their savings funds?

Senator Nelson. Permit you to do what you are doing now.

Mr. Shields. If it will permit us to do what we are doing now, I can not see how it would change the conditions very materially.

Senator Reed. What you are doing now is this: Say I take $1,000 to you; you agree to pay it back in 90 days and pay me interest,
and you would pay me a larger rate of interest for six months, and you use that money just the same as you use $1,000 Senator Nelson might put in on demand?

Mr. Shields. Yes, sir.

Senator Nelson. Subject to check?

Mr. Shields. Subject to check; yes, sir.

Senator Reed. You are not loaning it upon real estate, are you?

Mr. Shields. No; the national banking act does not permit that.

Senator Reed. I understand that. If you are permitted to go on and do that, you will not have any complaint?

Mr. Shields. I can not see that the conditions would be changed at all. I have entirely assumed that that was not going to be permissible.

Senator Nelson. I think the bill is not compulsory in regard to establishing a savings department. You may do it: that is my recollection.

Mr. Shields. It says:

That any national banking association may, subsequent to a date one year after the organization of the Federal reserve board, make application to the Comptroller of the Currency for permission to open a savings department.

Senator Nelson. So that unless you make application for it, if we allow you to keep on doing what you are doing now you would not suffer?

Mr. Shields. I can not see how it would change the conditions at all.

Senator Nelson. What struck me was this: We had the impression that the banks in the East were not doing it, at least to any extent. But it seems they are doing the same business which our banks in the West are doing.

Senator Pomerene. I have here a letter presented by Hon. Howard Sutherland, a Member of the House of Representatives from West Virginia, written by Mr. George M. Jacobs, president of the Peoples National Bank, of Fairmont, W. Va., relating to the bill under consideration, which he would like to have incorporated in the record. If there is no objection, it will be so ordered.

(The letter referred to is as follows:).

THE PEOPLES NATIONAL BANK OF FAIRMONT,
Fairmont, W. Va., October 15, 1913.

Hon. Howard Sutherland,
Washington, D. C.

My Dear Sir: We are writing you to give our opinion of the effect the proposed currency bill will have upon the national banks of this State and to ask your advice and support in their behalf. We believe that there are three very damaging provisions in this bill which will be detrimental, not only to the banks but to the business interests of this State.

First. The requirement to set aside 20 per cent of our capital for the savings department would very seriously impair or tie up the capital of the banks, as the profits on savings accounts will not justify the extra expense of conducting a separate department by an additional organization which will be required.

Second. The national banks will also entail a very heavy loss in being required to deposit their reserve fund in the reserve bank without interest.

Third. Also the requirement of the national banks to invest 20 per cent of their stock in the reserve banks at a dividend of 5 per cent, as we pay 4 per cent interest on a very large amount of deposits, and could not afford to take stock in another bank paying only 5 per cent.
We believe that these three features of the proposed law would very seriously handicap the national banks of this community. They would not only sustain a very heavy loss in earnings but their usefulness to the business interest of the community would be very seriously curtailed.

The result of such legislation would no doubt compel many of the national banks to surrender their charters and revert to State banks, and if the national banks would take this step and surrender their United States bonds, for which they paid above par, at the present market price, which is 94\% per cent, you can readily see that a direct loss of many thousand dollars would be sustained by the banks of this State.

Frankly speaking, it is my opinion that the passage of this bill will practically ruin the national banks of this State. If we are forced to revert back to State banks, it means that the banks of every State will be operated under such divergent State laws as to make the banking business a very haphazard affair. Every State would have its own peculiar form of banking laws. We think a national uniform system of banking would be much more preferable if a law could be passed which would not be so disastrous in its effects.

Yours, very truly,

Geo. M. Jacobs.

Senator Pomerene. Mr. Starek, I believe, is the next witness on the calendar.

Senator Hitchcock. Mr. Chairman, Mr. Starek tells me that he feels there are some very important questions which may be asked him which he feels had better be discussed in executive session. It is now 20 minutes to 1 o'clock, and I want to suggest a recess until 2 o'clock.

Senator Reed. I suggest that it would be better to hear Mr. Starek in executive session. There are no facts which he may have which I can imagine this committee is not entitled to hear in executive session.

Senator Pomerene. Shall we recess until 2 o'clock?

Senator Reed. I move that, if there is no other witness to be heard, with the hearing of Mr. Starek's testimony these hearings do close.

Senator Shafroth. There is one more witness here.

Senator Reed. Then let us hear him now and take up Mr. Starek's testimony this afternoon.

Senator Pomerene. Who is the other witness?

Senator Shafroth. Mr. Lassen.

STATEMENT OF ALEX. C. LASSEN, PRESIDENT OF THE LASSEN REALTY CO., OF NEW YORK.

Senator Shafroth. Will you please state your name and business?

Mr. Lassen. I am president of the Lassen Realty Co., of New York. Formerly I was in the banking business, having entered it as early as 1879 as exchange clerk of the Bank of San Francisco. Since then I have been for 20 years editor and publisher of the Daily Financial News, of New York.

Yesterday I heard some queries addressed to Mr. Kent, and I thought I would give a little information along the same line that might be of use to the committee. Mr. Kent explained foreign exchange, but I think he failed to state the real reason why South American countries transact their business through London and not through the United States. Exchange operations, as a rule, are based on the rate of money. European markets are steady and low. The greatest of all industries abroad is the trade in money. The general rate abroad has averaged for some hundred years about 3 per cent. As soon as the United States can supply a money steadily at a
rate as low as a foreign exchange will provide it, then we can get the trade of all of South America or any other country in competition with European countries.

The raising of the Bank of England interest rate is a lever to bring gold from abroad and also increase the income of English capitalists. England, France, Belgium, and Holland are all creditor nations—they have vast sums due them. The United States is a debtor nation. If the bank rate is raised abroad or in this country it tends to increase the cost of money.

The commerce of the United States is increasing at a tremendous rate. The value of property in the United States is estimated to represent a value of from 120 to 140 billions of dollars. The corporate 1 per cent income tax in the district of New York last year showed an increase of 31 per cent over the former year and the tax for the entire country showed an increase of 21 per cent.

If the development of the general country was at this same rate, the value of property increased 25 billions of dollars. This increase in one year was over one-third of all the value of property in the United States in 1865. The development and increase of business in the United States has been far more rapid than abroad. Clearances of London banks and branches in 1890 aggregated £8,960,170,000, and in 1909 £13,525,446,000, equal to an increase of about 63 per cent. In the same period clearances in the banks of the United States increased 272 per cent. Taxes and the many other uses for money have been increasing. Money is the dish that carries produce. It is a great measure of value.

As a merchant's business grows he provides more measures. If he does not, his business is retarded, embarrassed, and his measures are worked overtime. The dollars of this country are worked overtime. The American dollars are as good or better than any other dollars in any other part of the world, but there are not enough.

The experts, as a rule, that come here before you represent a special interest, who want to substitute a new form of money to be issued to them without cost and which they can loan at interest to the people of the United States. These special-interest bankers want to have impounded or retired the greenbacks, the best, the cheapest money ever issued. The greenback has saved the people of the United States, since it was issued some 50 years ago, as compared with the cost of national-bank notes, $4,000,000,000.

The issue is plain: Does this Congress want a money that will save the people as availed of not alone $4,000,000,000 but $40,000,000,000 the coming 50 years, or a Federal reserve money that is going to cost the Nation $40,000,000,000?

The value of money is in the stamp of the Government. Gold, silver, and paper have value as products, but the stamp of the Government gives them value as money. Centuries ago shells and wampum were used as money, but have since been relegated to the rear.

England has shown what can be done by simple legislation. It demonetized silver, and it has to a certain extent also been relegated to the rear. England has legislated against silver to her great advantage. The United States can legislate against gold to equal advantage.

The most of the men who have come before your committee have recommended a new money system. Where is there a single new,
good proposition in the entire measure that can not be made in a
more direct and better manner by simply adding to—amending—the
present national-bank act? If, though, you deem you need a new sys-
tem, then build on a good foundation. You need additional accom-
modations for the housing of growing departments of the Govern-
ment. If an architect would come before you and say, “I can give
you a splendid plan; will build a new system, an ideal Government
building, a splendid section for each Government department. Each
Senator will have a magnificent suite of apartments. We will tear
down the present Government buildings in Washington. All present-
established Government business will be housed in the new building.
The Government will supply the money to do it, and when the build-
ing is done the Government will pay us rent for the building.”

Such a proposition would not be any more absurd than the plan
offered in the Glass-Owen measure. The cost to the Nation would not
begin to represent a fraction of the cost to the people of the United
States if you approve a measure like the Federal reserve bill recently
passed by the House.

The foundation of a fiscal measure should rest upon a right prin-
ciple. The Glass-Owen bill is wrong in principle. The Government
should not enter any partnership with a baker, a lawyer, or a banker.
No Government partnerships, especially a bank partnership. Don’t
let the tiniest seed of a Government partnership get into any measure
that passes from the Senate. If you do it will grow, and awful
rapidly. The bankers have a remarkable way of making people see
just as they want them to see.

Some people who claim to be great champions of the people have
come before you and told you the principle of this bill was good. It
is bad, and would be so even if ten times as many said it was good.

There are many claims made by friends of the proposed Glass-
Owen measure, such as holding out promises of “gigantic benefit to
the country,” “commercial stability,” “preventing possibility of
panic,” “uniform low rate of interest,” “serving equally well the
people of the country and the banks.”

Such statements sound well, but I challenge anyone to show a sin-
gle good proposal in the measure that can not be made by amending
the present national-bank act. The promises held out will not stand
analysis; as a rule they are based upon a false premise. The present
fiscal ills—if they may be called ills—are due to an inadequacy of the
currency. We have not enough money.

It will destroy the good market for United States 2 per cent bonds
and other United States bonds. The bill proposes to exempt all na-
tional bank property except real estate from taxation.

It will build up a partisan institution; a system of favor rather
than of right; subserviency instead of independence.

The national banks of the country are to be forced to provide
capital for the reserve banks, which in time are predestined to fall
under the control of the great influential powers that have sponsored
the Aldrich bill and are now back—concealed—behind the present
measure. The great influence and audacity of these people is indi-
cated when a Government partnership measure like the Glass-Owen
reserve act is brought forward in the face of a positive declaration
against such a measure by the people at the last presidential election.
In addition to the gift, or, in modern vernacular, graft, heretofore mentioned, the Federal reserve act would lose 40 per cent of the tax upon present circulation and the benefit of a legitimate percentage upon future money issues, which should be secured without any partnership appendage.

The statements reflecting upon the national-bank system have, I believe, been made for the purpose of creating a sentiment against our present system, and to educate the people to the idea that it is bad and that a new measure is necessary.

I challenge anyone to show me a banking system that in any way equals that of our national bank. The system is magnificent; it can be amplified, improved, and made still more useful. Some of the national bank laws have become obsolete and the banking act should be amended, but properly and in the real interest of the people. Many new independent national banks would then be organized and grow up with the country, and State banks would rush to avail of its charter privileges.

Every desirable feature that is proposed in the Glass-Owen bill can be adopted in the national-bank act—in a simple, direct manner.

Senator Reed. Are you going to tell us how?

Mr. Lassen. Yes, sir.

Senator Reed. Very well.

Mr. Lassen. The need of the hour is a safe, ample currency. The first requisite is to determine how much it should reasonably be increased, and then how much should it be reasonably increased per year.

Then how to do it with the least disturbance to business in the most advantageous manner to the people of the United States—the best and cheapest manner.

At present our money consists of gold, silver, Treasury, greenbacks, gold and silver certificates, and national-bank notes. We coin all the gold we can secure; free coinage, beyond increase of money from this source, we are dependent upon national banks taking out circulation. The only way they can emit it is to deposit United States bonds against issues. The banks have availed of all bonds they could procure, therefore the field has to be extended or a new base of money provided.

The Glass-Owen measure proposes a "commercial paper" instead of a bond-secured currency.

This translated simply means that the banks are to use the notes, etc., discounted by them for their customers as collateral for loans of money from the Government and deposits of United States bonds dispensed with.

If this collateral is considered good, the Government can loan the money directly to present national banks—

Senator Nelson (interposing). You mean by that that we can authorize national banks, in addition to the currency they have now—bond-secured currency—to issue currency on paper money as this bill proposes?

Mr. Lassen. Yes, sir.

Senator Nelson. I want to say there is a bill before the committee now that I introduced, carrying out your idea.

Mr. Lassen. If this collateral is considered good, the Government can loan the money directly to present national banks, banks to guar-
antee paper discounted and all the advantages and safety as is now
proposed and absolutely in the control of the Government. The
Government to charge a regular fixed tax upon such circulation—
lawful money loaned.

The Secretary of the Treasury is doing practically this at present.
He deposits money with the banks against collateral loans, United
States bonds, and commercial paper, etc., and a fair interest charge
is made for such “deposits.”

This character of depositing might be extended. A Federal
treasury board, maintained as part of United States Treasury, as
proposed in article 11 of the Glass-Owen bill, could probably serve
the Government profitably.

That is the one good thing you can use out of the Glass-Owen bill,
gentlemen—that and some of the amendments.

What legitimate reason is there why the present mode of securing
circulation by deposit of United States bonds should be discon­
tinued? Certainly United States bonds are a better basis than com­
mercial paper, acceptances, etc.

Senator POMERENE. Will the witness kindly suspend for a mo­
ment? It is now the hour for recess.

Senator SHAFROTH. I think we had better adjourn until 2 o’clock.
Mr. Lassen, how much longer will it take you to finish?
Mr. LASSEN. About 10 minutes.
Senator CRAWFORD. Let us give Mr. Lassen time to conclude.
Mr. LASSEN. Why should the present national-bank notes be re­
tired or the present banks in any way disturbed? The present na­
tional banking system, with a few changes, simple enactments, can
be made the best in the world.

United States bond-secured currency should not be discontinued.
In the first place, money issued therefor is based upon the honor and
integrity of the Government. There can be no question of its safety.
The Government collects a tax of one-half of 1 per cent per annum
upon such circulation. If the right to deposit United States bonds
for circulation is taken away, the United States 2 per cent bonds,
unless redeemed or otherwise cared for, will decline to 50 cents on the
dollar. Without the circulation right, it would be impracticable for
the United States to float new bonds on less than a 4 per cent basis.
This would mean the loss of hundreds of millions of dollars to the
United States.

Instead of retiring United States bonds as a basis for circulation,
why should not the field be extended and State, county, municipal,
and other public securities which have been approved on a high
standard as savings-bank investments and which have also been ap­
proved and recorded by the Secretary of the Treasury, or, say, a
Federal Treasury board, be made the basis for national-bank circu­
lation? There are some billions of dollars of such good bonds. They
are an excellent basis for a national-bank circulation. With such
privileges such securities would advance in price and the present
interest costs could be cut in half. Good public securities would soon
be placed on a 2½ to 3 per cent per annum basis instead of 4½ to 7
per cent as at present. The general country would benefit and then
enjoy a safe currency, predicated on a sound foundation.

Commercial paper should only be taken at emergency periods, and
then only as the basis for Government deposits. Commercial paper
is far different from a properly issued bond. A note may be “gilt-edged” to-day and worthless to-morrow. To authorize a “lawful money,” as is proposed in the Glass-Owen measure, for hundreds of millions of dollars is the wildest money legislation ever heard of. Every dollar of our present legal-tender money can be put in as a basis for two additional dollars and it means $6,000,000,000 additional money.

Senator Reed. What do you say it ought to be? Gold? If this were to be adopted, would changing the phraseology so that nothing but gold could be treated as reserve be a strengthening feature?

Mr. Lassen. Senator, if you will allow me to take up gold after I am through with this, I shall take pleasure in treating that separately.

Senator Reed. Very well.

Mr. Lassen. Just think. But this act proposes to issue billions—practically the only limit is six or seven billion dollars of this “butter-and-egg secured money.” Just think, this is to be “lawful money,” and to be issued, but is not to inflate? To be guaranteed by the United States and redeemable in gold.

This money is to be a new kind of money. The banks are going to issue this money just as they issue the present moneys, but when we get a million dollars in the bank it is not going to inflate. Just think of it. It is a new style of money. If it is issued by the United States it is going to inflate, but if it is issued by the banks it is not going to inflate.

Rediscant money—generally representing an inadequate bank capital—is the most dangerous character of money inflation. In other words, if I were in New York and I heard a bank was rediscounting its paper, I should say it was overtrading upon its capital, that it was doing too big a business with too small an amount of capital, and I should want to withdraw any money I had in that bank, or put in a very small amount.

But the whole scheme of a Federal reserve bank, with its commercial paper basis money, is an impractical, cumbersome machinery, is simply a cover, to find a way to secure the privilege of issuing money and evade payment of as much tax upon circulation as possible, and then control the issue and maintain, instead of reduce, interest rates.

It is a system that if inaugurated will prove to the advantage of the few and the detriment of the people of the United States.

It will mean continued shortage of actual money and further extension of credits; for when there is a lack of real money people have to borrow credit to their cost.

It is not a good measure; it is a bad measure. It is said that it will avert panics. But if it is enacted the “big interests” can get up a panic with less preparation than ever before.

Senator Reed. Do you think the “big interests” have ever gotten up a panic?

Mr. Lassen. I have a copy of one of the last editorials I ever wrote for my daily paper, which I sent to President Roosevelt, with the request that he take some steps toward admonishing the national banks and the interests in the East, which I thought were then combining for bringing about that very panic which they did afterwards bring about.
The new Federal reserve money is to be based on $\frac{33}{4}$ per cent of gold or lawful money. The Federal banks to have the right to issue three for one against present issues of gold and silver and legal tender notes. Say there is issued $3,000,000,000 additional lawful money and the “big interests” want to have another 1907; they will simply withdraw gold and legal tenders, and the reserve banks will have to call in circulation three for one. They will not be able to renew commercial notes, and the “crop failure” will be duly harvested.

The Federal reserve plan holds out many promises of the things it is to accomplish, but they are made without warrant. Primarily, it is based upon a false premise.

A firm foundation is the first essential for a banking measure. Then you can build a structure, put in your rooms, partition them off to suit the needs of the situation.

Some of the amendments proposed, mostly defeated, are good, but the measure as originally proposed is simply an impracticable, theoretical plan, seemingly devised to conceal the feature of Government-bank partnership in the issue of money.

There is no doubt that there is need of a great increase in the permanent money of the country. It has been the great need for 20 years. Had it been adequately and properly increased there would have been no panic in 1893 or 1897. The great immense fortunes that have been piled up, not as a matter of industry, but largely as profits from “reorganizing” wrecked corporations and manipulating the stock and other markets, would never have been brought to the proportions that now exist.

At the present time the deposits in the national banks aggregate about $7,000,000,000 and in State and private banks and trust companies $18,000,000,000, making an aggregate of $20,000,000,000. The national banks have to keep on hand in reserve cities 25 per cent, country banks 15 per cent, and State banks and trust companies have generally some similar regulation. If all banks and trust companies only kept a reserve of 10 per cent it would equal $2,000,000,000. If they kept on hand an additional amount to do general business with of 5 per cent it would equal $1,000,000,000. This would make a total of $3,000,000,000.

There is in the country, of all kinds of money only $3,700,000,000, and of this there is tied up in the United States Treasury some $350,000,000. Deducting this and the $3,000,000,000 the banks have to keep as reserve and to do business with and there remains only $350,000,000—equal to $3.50 per capita—for the people of this country to do business with.

Owing to the scarcity of money, money is doing 20 times as much work at present, relatively, in this country as it is in any other country in the world. Money naturally flows like water, it is liquid; it flows where it can do the most work, be safest, and get the best pay.

In New York it does the general business of the country. The money Texas sends to New York is working for its Texas owners carrying the products of Texas. In New York it representatively does 10 times as much work caring for Texas cotton and other products as if simply held and loaned in Galveston or other cities. It pays for the merchandise going to Texas.
It is the same with the balance of the country. New York is a vast clearing house for merchandise. As you restrict it you restrict the ability of New York to help the country. The percentage of speculative stock business and its bad effects are exaggerated. There may be some five or six hundred brokers interested in speculative stock business. There are 30,000 brokers in New York interested in caring for the purchase and sale of investment securities, cotton, wheat, corn, copper, silks, oils, gums, paper, fruits, nuts, exchange money, and the thousand other products and things that the people of the United States have to sell or want to have bought for them. Handicap these men, and the great sufferers thereby will be the South and West.

The great thing, the important thing, in the United States is to have more money.

Utilize what has been proved good. The country needs a fair increase in its currency—an ample currency issued on a safe, good security. It does not want a deluge of money resting upon the individual notes—promises to pay—of its citizens.

The present national-bank system is good. Continue to utilize United States bonds as a basis; amend the national-bank act so that approved savings-bank investments can also be deposited to, say, 75 per cent of their market values, not to exceed par. This will leave a margin of 25 per cent as safety. There are many billions of dollars of good State, county, and municipal bonds, and it is reasonable to believe that an adequate number would be gradually registered, approved, and deposited for circulation. With the right to issue circulation on such bonds, many national banks would avail of it. With proper basis, circulation issued by a small bank is as good as that issued by a large bank. A combination of large banks in no-wise improves the situation. Reserve associations should not be necessary with an adequate measure.

Not alone is there basis for a good, ample currency which can be profitably taken out and circulated by the banks, but a large, substantial income made by the Government by a graduated charge of 1, 2, and 3 per cent per annum upon such circulation. National banks at present pay 2 per cent upon deposits of Government money, which are secured by deposit of approved bonds. Is it not reasonable to believe they will take out circulation when they can secure it upon even more advantageous terms?

The 7,500 national banks would compete and improve the market for public bond offerings. A demand would then be assured for all the Panama Canal bonds the Government desires to offer upon a 2 per cent basis. The Government on June 3, 1913, held $176,097,700.95 to be placed upon the market. In the United States there are some 25,000 banks. Every one of these banks can be made relatively as valuable and useful in its territory as the Bank of France is to France.

We need independent banks conducted on behalf of good business interests; no chain of banks; no "unification." The more independent a bank is, the less dependent upon another bank, the better it is; the more able it is to serve its constituency.

None of the present United States bond issues and legal-tender notes, silver and gold certificates, national-bank notes, need be in-
terfered with; all continued as at present, without change. Furthermore, there is assurance that the rate of money will continue reasonable and stable. If the rate advances the banks can even take out circulation at a cost of up to 3 per cent. It can be retired as demand declines—elastic. The present commercial-money rate of 5 or 6 per cent would probably soon drop to a steady 3 per cent rate, the same as in France. Do you representatives of the people understand what this means? Do you know that it will cut the great burden that bears down on enterprise and industry?

Do you appreciate what this white man's burden is? It is interest. The yearly interest paid by the people of the United States is over five times the value of all the gold produced in the world in the same period. This interest, calculated at only 5 per cent per annum, is equal in value to all the wheat and corn and other grains raised in the country each year. It is one of the great factors in the high cost of living.

The Glass-Owen bill means a perpetuation—an extension of this burden. Amend the present national-bank act properly and United States bonds will immediately go above par again. Good State and county and city bonds will sell on a 2 to 3 per cent basis instead of as at present, 4½ to 8 per cent. Industry and enterprise will thrive. The measure will be for all, not for the benefit of a special few.

Do not inflict the Glass-Owen measure upon the country. If this terrible Government-bank partnership is once inocculated into our system it will first disorganize, then inflate, then ruin, then subjugate. Does any Senator desire to ask me any question about the subject of which I have spoke?

Senator Reed. Well, I suggest it is 20 minutes past adjourning time.

Senator Crawford. Have you concluded your statement?
Mr. Lassen. One of the Senators desired to ask me a question concerning gold. I have prepared a paper on that subject, and I shall be glad to answer any questions you may ask me.

Senator Crawford. What is the pleasure of the committee?
Senator Nelson. Let us adjourn until 2.30 o'clock.
(Thereupon, at 1.20 o'clock p. m. the committee took a recess until 2.30 o'clock p. m.)

AFTER RECESS.

Senator Hitchcock. You may resume your statement, Mr. Lassen.

STATEMENT OF ALEXANDER C. LASSEN—Resumed.

Mr. Lassen. Mr. Chairman, a little over 100 years ago, English capitalists who had due them large sums, payable in pounds sterling, decided they could enhance the value of their obligations by demonetizing silver and make such obligations rest upon gold alone.

In 1873 they had a similar law enacted in the United States which demonetized silver then quoted at $1.32 per ounce, which was practically on a basis of 15½ ounces of silver to one of gold.

Silver from that time until about 1897 declined and relatively gold advanced, to the great advantage of English capitalists and to the cost of the people of the United States, India, and other debtor countries. It was good for creditors, bad for debtors.
BANKING AND CURRENCY.

Senator Hitchcock. Is this matter in reference to pending legislation?

Mr. Lassen. I think it covers about the most important feature you have in your present measure.

Senator Hitchcock. I do not know how it is with other members of the committee, but I feel very anxious that we should confine ourselves distinctly to the pending legislation.

Senator Crawford. What are you steering toward—the demonetization of gold?

Mr. Lassen. I am steering toward the most important point in this bill.

Senator Nelson. We had better let him go on.

Senator Hitchcock. You may proceed, but make it as brief as possible.

Mr. Lassen. England, it is estimated, has over $30,000,000,000 (£6,000,000,000) loaned out all over the world. The scarcer and dearer gold the better interest rates, tribute, or the more produce she can get for a pound sterling.

The United States owes, including investments, to Europe, including England, upward of $5,000,000,000.

As England's policy is to multiply use of gold, ours is to minimize. England's plan to enhance gold by demonetizing silver has redounded to her great advantage. Our true policy is to use as little gold as possible, get as independent of gold as possible.

England has shown us what great results can be secured by simple legislation. Let us benefit by her great lesson.

England has minimized the use of silver; the United States should minimize the use of gold.

The world owes England pounds sterling, which means gold. The world is in an English gold trap. There is due England directly over four times all the money gold in the world, and it is impossible for the debtors to pay the interest, not alone the principal, which continues to mount steadily upward, to her great commercial advantage and profit.

Europe's and the world's moneys have to a certain extent been made redeemable in gold. Notes, mortgages, bonds likewise, as far as possible, also have been made payable in gold.

Each country that adopts the gold standard and each additional contract that calls for payment in gold tends to enhance the value of gold and ultimately benefit the owners thereof.

Governmental bonds issued by European countries are estimated to aggregate over $30,000,000,000. The interest at 5 per cent alone is $1,500,000,000 per year. Only a portion is being paid, balance refunded, and the principal is steadily increasing at a tremendous rate.

The total amount of money gold in the world is estimated at $10,000,000,000. The total world's production is estimated at $480,000,000 per year. Of this amount nearly four-fifths is used in arts, etc. It is estimated that less than $100,000,000 is available for coinage into money.

It should therefore be understood that England has the world short of gold, that it is in a gold trap, and that all legislation or promises to pay in gold tend to enslave the obligators.
Senator Crawford. What is the reason, if there is $480,000,000 of gold stock, and increasing every year, and is worth so much in the form of money, that four-fifths of it goes into other channels?

Mr. Lassen. Two-fifths goes to India every year.

Senator Crawford. Why does it not go where it is most profitable?

Mr. Lassen. It does.

Senator Crawford. If it is so profitable to use it for money, why is it not all coined into money instead of so much of it going into something else?

Mr. Lassen. India’s people have a religious desire to acquire gold and they absorb $200,000,000 of it a year. If you doubt my figures in regard to this——

Senator Crawford (interposing). Oh, I do not doubt them at all.

Mr. Lassen. I would refer you to Mr. Blumenthal’s testimony in your record. He is one of the best authorities in the United States. You have his testimony in one of your earlier hearings.

Senator Crawford. The fact that four-fifths of it goes into other channels must be evidence of the fact that it is worth more for these other uses than for money.

Mr. Lassen. Yes; it is very valuable to fill teeth and an enormous quantity of it is used in that direction, and a great deal of it is used in the fine arts. So, finally, you have only $100,000,000 left for money.

Senator Hitchcock. Is it not a fact that money is becoming cheaper every year?

Mr. Lassen. Pardon me?

Senator Hitchcock. Is it not a fact that money is becoming cheaper every year and prices are rising every year? It takes more money to buy the same thing.

Mr. Lassen. That is not the result of your having more money, but that comes from a number of other reasons. Your taxation is a great deal larger and that is one of the great points. Your interest rates are very large. In this country you are paying to-day the highest rates you have paid in 20 years. I was in California last spring, and the State of California has $5,000,000 worth of bonds which it can not sell; $5,000,000 for public improvements.

Senator Hitchcock. You may proceed, Mr. Lassen.

Mr. Lassen. The people of the United States at present have a means to cut away the net that would further bind them in this gold trap. Their obligations as a rule are payable in dollars and not in pounds sterling. We can legitimately legislate ourselves into freedom. We can go back to the same position we had in 1900, make all our legal-tender notes redeemable in gold or silver, or suspend payment in either when deemed to the interest of the Government. France and Germany have similar rights. The outlook is that with this provision all classes of our outstanding moneys will continue as heretofore. All interchangeable; notes into gold or silver as desired, but the Government protected against raids upon gold reserves.

Many hundred years ago shells and wampum were used as money, and there is equally as good reason, with a clear insight, why both gold and silver should also be relegated, as they have been, and money simply based, as our greenbacks, as legal tender, token, or “lawful money,” irredeemable. “Greenback” money when good for custom-house duties and full legal tender passed currently with gold. It is
the "legal tender" quality that gives value, and resting without being redeemable in gold or silver would prove as valuable in the future as a money as in the past 50 years. During this period the $346,000,000 legal tenders or greenbacks have saved the people (computed at 5 per cent per annum, which is far less than the cost of national-bank notes), the enormous sum of nearly $4,000,000,000, which is equal to probably nearly half the money gold in the world.

There is no advantage, commercial or otherwise, in making our money redeemable. It would rest as honorably and safely simply as token, "legal tender," or "lawful money."

Notes redeemable in gold when not backed up by actual gold place the issuer in the same position as the short seller of stocks or any other cornered commodity. A person that would knowingly sell or promise to deliver a stock or commodity that was already sold short to a far greater amount than existed would generally be looked upon as a reckless, irresponsible individual. It is far more idiotic for a nation to legislate, promise to pay in gold, when it is understood that that commodity has been cornered not alone to five times the amount in existence but to many times five times. In fact, the principal of the obligation is so great that the annual interest alone would absorb all the actual $10,000,000,000 money gold of the world; of course, this interest is not being paid off, but is mostly being refunded, added to the principal of the debt.

It may be claimed that our contract calls for us to redeem our outstanding moneys in gold. With a clause "redeemable in either gold or silver" or suspended at the discretion of the Secretary of the Treasury, all legitimate business requirements can be served the same as in France and Germany and we can keep faith and maintain parity of all our moneys. Our gold when taken abroad simply goes as bullion.

Should the United States adopt the above suggestion, France and Germany would probably soon awake to the great advantage of such a course and endeavor to unload their gold holdings, instead of hoarding as at present, with the result that England would have to absorb it to her personal cost; gold would naturally depreciate as silver has through demonetization.

While population, taxes, and commerce of the United States are increasing by leaps and bounds, the production of gold is relatively very small. There is a common error in the belief that the production of gold is increasing at a greater ratio than population and wealth. The entire yearly production of the world, if it could be secured to the people of the United States and was all converted into money, would only amount to $4.80 per capita. The entire product of the United States does not amount to 90 cents per capita. There is little prospect of any material increase. Therefore it can be readily understood that it is unreasonable to base any calculation or predicate an increase of currency upon gold coinage or paper money based upon gold reserve. Such enactment would result in a subsidence of development until gold production relatively increased.

Our per capita circulation, which is about $34, should be increased gradually in accordance with national development. Last year United States corporate income tax increased 21 per cent. It is not unreasonable to believe that this development has likewise extended in all lines of business throughout the country. If our money has
increased proportionately, it should have increased $600,000,000. Instead of this there was really a decrease in the money per capita the last year.

Values largely depend upon quantity of money in circulation. Increased circulation, as a rule, means expansion and development; contraction, uncertainty and depression. The lack of money at present is causing a terrible strain upon all business, except where credit or money is loaned at interest.

The estimated property wealth of the United States is $120,000,000,000. The great handicap of the Nation has been an inadequate supply of money; it has resulted in a great Nation of debtors, tribute-interest payers. There is owed by the people of the United States to bankers the gigantic sum of upward of $30,000,000,000. The interest upon this amount at only 5 per cent aggregates upward of $1,500,000,000, or equal to twice the value of all the wheat raised in the United States within the same period—a year—or over three times the value of all the gold produced in the world the past year.

The lack of an adequate currency entails fearful tribute on commercial business and labor. The great prosperity of France is based upon a liberal currency, it having the equivalent of $30 gold, $11 silver, etc., equal to $41 per capita. This has resulted in practically a steady 3 per cent per annum interest rate for almost 100 years.

Sovereign money never hurt any nation; it has proved financial blood. We can secure it safely and honorably by reversing England's policy.

Senator Hitchcock. If that is all——

Senator Reed (interposing). I just want to ask one question, Mr. Lassen, and that is in regard to your figures concerning the amount of deposits in the banks and the amount of reserves required by this bill. I would like to have you state that again. And I would add to my question the amount of money which you say would remain to circulate among the people.

Mr. Lassen. The amount of deposits in the national banks is $7,000,000,000; the amount of deposits in the outside banks is estimated to be $13,000,000,000 more. That makes $20,000,000,000.

Senator Reed. Whose estimate is that?

Mr. Lassen. That is an estimate of Alexander Delmar. I have since read it in reports before your commission.

Senator Nelson. You are referring to deposits?

Mr. Lassen. Yes.

Senator Nelson. Which do not represent actual money?

Mr. Lassen. Oh, no; they are only deposits; they are payable in money, but they are only credits.

Senator Reed. You stated the amount of money which is on deposit in the national banks and the amount of money which is on deposit in other banks. You did not state the amount of money, but the amount of deposits?

Mr. Lassen. Yes, sir.

Senator Reed. Of course, that money may have been deposited several times and represent credits.

Mr. Lassen. When the national banks' total deposits call for $7,000,000,000, they are supposed to keep in cities 25 per cent reserve, and country banks 15 per cent reserve.

Senator Reed. I understand.
Mr. Lassen. If you have only 10 per cent of it—that is, $700,000,000 and then you take an additional 5 per cent—you have $1,500,000,000. If you do the same thing with the State savings banks and trust companies, you relatively get an aggregate of $2,000,000,000. That is, the State banks and trust companies and the other institutions have to have at least 10 per cent cash on hand, whether they keep it as reserve or not, to provide for a contingency in the case of a call. Now, they have to have on hand, in addition to that, about 5 per cent, which fluctuates in the towns they are in, and it comes back to them at 3 o'clock every day.

Senator Reed. That makes an aggregate of how much actual money to be consumed by the reserves and by this additional 5 per cent which you say they keep? How much actual money does that make?

Mr. Lassen. $3,000,000,000.

Senator Reed. What is the present currency?

Mr. Lassen. $3,700,000,000, not including $350,000,000 held in the United States Treasury which is not in circulation.

Senator Reed. Your argument is, then, that if all the banks came into this system and all of them complied with the conditions of this bill it would lock up in the reserves practically all of the money of the United States?

Mr. Lassen. You could not begin to bring about your banking system at all. Before you have even inaugurated it, you would have broken half the banks of the United States.

Senator Reed. I wanted simply to get your point. Would it relieve against that any if this was done gradually and rediscounting permitted so as to allow the money that would be held in the way of reserves to be reloaned to the banks?

Mr. Lassen. I would say this, that unless you adequately increase your permanent money you are absolutely in such a strained condition now that your southern bankers, who were here a few days ago almost begging upon their knees to get help—and your western bankers were in the same position——

Senator Nelson. Oh, no. They were not in a bad position.

Mr. Lassen. They were begging for money.

Senator Nelson. Oh, no. Minnesota was assigned $3,000,000 out of that amount. They took only $500,000. They did not ask for any, but they were assigned $3,000,000.

Mr. Lassen. Owing to the very wise act of the Secretary of the Treasury in stating that he would give them relief, it relieved them from the need of calling this money, but had it not been for the wise provision of the Secretary of the Treasury there would have been a scramble among them for the little money furnished, and you would have had very hard times.

Senator Nelson. We would have taken care of ourselves out in the West.

Senator Crawford. I think the bank examiner has been waiting here for some time.

Mr. Lassen. I am through.

Senator Bristow. Before the committee goes into executive session, I have a letter here from Prof. Jenks, which I desire to read [reading]:

NEW YORK CITY, October 24, 1913.

MY DEAR SENATOR: I have been at work on the amendments to the currency bill providing for a central bank. Inasmuch as this involves to a considerable

S. Doc. 232, 63-1—vol 3——76

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis
extent the rewriting of the whole bill, and I have had my university work on hand, it is not quite completed. But I shall be able to complete these amendments so as to get them into the hands of Senator Owen not later than Tuesday, quite probably on Monday.

I notice in the morning papers that Mr. Vanderlip has presented a bill along somewhat similar lines. A number of points, judging from the sketch in the paper, will be in agreement, but a number are quite materially different. When I first saw the announcement of this bill I had thought it might not be worth while for me to complete this work, but I think the points of difference are essential, enough so that it may be suggestive.

Very sincerely, yours,

J. W. Jenks.

Hon. Joseph L. Bristow,
United States Senate, Washington, D. C.

I have this in mind, that on Monday or Tuesday we will have these proposed amendments of Prof. Jenks, and I thought we could probably have him come before us and explain the provisions in his amendments and the relation of these provisions to other suggestions that have been made, and while we close the hearings to-day, I do not think we ought to forbid ourselves from talking with him.

Senator Reed. I think the committee can at any time call for any expert it desires to call for, and I move, with that understanding, that the hearings be now closed, except to hear from Mr. Starek, the bank examiner, and that he be heard in executive session this afternoon.

(The motion was carried.)

Senator Hitchcock. Without objection, I desire to insert in the record a telegram addressed to the chairman from Mr. Charles N. Dietz, of Omaha, Nebr.

(The telegram referred to is as follows:)

Omaha, Nebr., October 25, 1913.

Hon. Robert L. Owen, United States Senate, Washington, D. C.:

Noting newspaper account of meeting in Omaha and telegram sent you by 30 Omaha men, it was a case of the fox having charge of the chicken coop. Your currency bill is all right, and with it the greater good will come to the greater number of people. We hope you can put it through.

Chas. N. Dietz.

(The letters offered for the record by Senator Bristow are as follows:)

The First National Bank,
Las Vegas, N. Mex., October 2, 1913.

Hon. T. B. Catron,
United States Senate, Washington, D. C.

Dear Mr. Catron: Thanks for a copy of the currency bill (H. R. 7837), and for your request for my opinion as to its merits.

Well, my dear friend, in all seriousness, I do not believe our friends of the Democratic Party are capable of handling this country's business. While everyone feels that the so-called "interests," as generally expressed under the head of Wall Street, should be curbed in some way, it does not appeal to me that the whole business of the country should be upset in doing so.

As to the currency bill, it seems to me that to make the regional reserve banks a success, all of the national banks should come into it in a friendly way rather than be forced to do so, which may cause the whole thing to fall flat of its own weight. One central reserve bank, rightly constructed, could do the business between the Government and the people, in my opinion. The present bill makes it illegal to issue clearing-house certificates. This seems wrong to me as, in event the change does cause financial troubles, a provision granting this privilege for at least one year should be included in the present bill.
It must be recognized that every crossroads, village, town, and city from Maine to California and from Duluth to New Orleans is obliged to keep a New York City account for the accommodation of its business. This naturally makes a large accumulation of funds in New York that grows in proportion to the increasing development of the country's business, and to attempt to legislate these conditions out of existence is fundamentally wrong and impossible.

Yours, very truly,

JEFFERSON REYNOLDS.

SAN MIGUEL NATIONAL BANK,
Las Vegas, N. Mex., October 1, 1913.

Hon. T. B. CATHRON, Washington, D. C.

MY DEAR SENATOR: I received from you an act to provide for the establishment of Federal reserve banks, etc., which I have carefully read.

In my opinion State banks, before being allowed to join and take stock in a Federal reserve bank, should be examined by a national-bank examiner with the same care that national banks are examined. State-bank examiners are frequently incompetent for the position that they hold, often being appointed on account of their political pull. It would hardly be fair to force a national bank to take stock in a Federal reserve bank, as this bill does, with a State bank which has been improperly examined and allowed to come in at their own discretion without any danger of losing their charter unless they do so. This possibly may be covered by the section on State banks as members, but I hardly think it is explicit enough. It might be a very unfair and unjust partnership. Furthermore, the western banks are forced to join in the organization of the Federal reserve banks and are to receive no more than 5 per cent on the stock unless—in a very remote contingency provided for in the bill—when it is a well-known fact that they can get a higher rate of interest for all the money they have to loan in their own locality. In all fairness this should be 6 per cent instead of 5 per cent. Why should a national bank, operating under a charter from the Government, be forced to do this; and being forced to do so, should they not have more say in the management of this Federal reserve bank than this law gives them? The powers and duties of a Federal reserve bank should be more restricted, else national banks in the vicinity of the Federal reserve bank will be handicapped in the community in which they are doing business by the prestige that the Federal reserve bank may have. If allowed to do even a limited amount of general business they should pay taxes as a national bank does. The board should be composed of bankers and business men of the highest character and ability. The Secretary of the Treasury and the Comptroller of the Currency may be good selections, but why the Secretary of Agriculture, who may know nothing of finance? All other large business is, as a rule, managed by men selected for their knowledge of the duties required in their special line. If managed by men selected on account of their political pull, this power at times might be used to further the interests of some of the political bosses. In the final analysis, what the country needs is an elastic currency, something that will legally do what, in the panic of 1907, was illegally done but acquiesced in on account of the great urgency to prevent nation-wide disaster, viz, the issuing of clearing-house certificates. No matter what kind of a currency bill is passed it will meet the objection of a great many people, and whether it is good, bad, or indifferent, until the business community has become accustomed to its workings the careful and conservative banker will feel his way and be more careful in his loans. This probably in the end will result in great good. In the meantime we must all go slow.

Thanking you for sending me this bill, and with kindest regards, I am,

Very truly, yours,

J. M. CUNNINGHAM.

MCKINLEY COUNTY BANK,
Gallup, N. Mex., October 8, 1913.

Hon. T. B. CATRON, Washington, D. C.

DEAR SIR: We wish to thank you for sending us copy of the currency bill as it passed the House.

While the bill is not the best bill possible, still we can get along under it and think it much better than our present system.
It appears to us that the greatest hardship imposed on the banks of New Mexico will be the elimination of exchange charges. In a small bank the size of ours—and our bank is a fair average—the exchange account is an important source of income. We would appreciate your efforts to try to have our present exchange arrangements undisturbed by the currency bill when passed. I am also quite sure that the other New Mexico bankers feel the same on this subject.

Very truly, yours,

T. M. Quebedeaux,
Vice President.

First National Bank,
Santa Fe, N. Mex., September 24, 1913.

Hon. T. B. Catron,
United States Senate, Washington, D. C.

My Dear Senator: I have the copy of the currency bill, and in accordance with the request contained in your note I submit the following:

As to the organization of the Federal reserve banks and the Federal reserve board, I hardly feel equal to offering any suggestions on those sections beyond noting the possibility of political control of the latter under the provisions of the bill, which might cause an improper exercise of its extensive functions.

I think the existing national banks should be permitted to join the Federal reserve district organizations, and not be compelled to do so. Their action should be voluntary, not compulsory.

It occurs to me that the authority to the Federal reserve banks to establish branches within their districts to the possible number of 10 might be inimical to the interests of the member banks in the district, inasmuch as the powers of such branches do not appear to be defined in the act, unless it be held that they can not have any greater powers than the parent bank.

It seems to me that inasmuch as the member banks contribute the entire capital of these several reserve banks that instead of being limited to a 5 per cent cumulative dividend on their stock and 40 per cent of the net profits after the accumulation of a 20 per cent surplus should be entitled to the entire net profits thought advisable to distribute instead of having 60 per cent of such net profits go to the Government to be used in the extinction of its bonded debt. This seems to me to be calling on the member banks for too large a contribution to the payment of the Government debt proportionately.

The Federal advisory council does not appear to me to have such powers or functions as to make it desirable for bankers of great ability and experience to serve thereon. Its powers should be enlarged or the provision cut out. The class of paper discountable by the Federal reserve banks for the member banks is not found to any large extent in this State, and in order for the banks here to be in position to avail themselves of this rediscount privilege they would have to buy this kind of paper from note brokers or from correspondents. This would pro tanto lessen their loanable funds for local borrowers, and the funds derived from such rediscounts would be practically offset by such purchases. In this connection it seems to me that "commercial paper" as defined in the act can hardly be considered such. The commercial paper largely purchased by the banks at present is, in fact, the direct borrowings of individuals, firms, and corporations, whereas genuine commercial paper is the notes or acceptances taken by manufacturers and dealers for sales of goods and materials, running 30, 60, or 90 days, to be paid off on the turning of such materials and goods by sale and payment. The funds of the Government are to be deposited in the Federal reserve banks apparently without other security than their general capital and credit.

The note issues, in my opinion, should be the obligations of the issuing Federal reserve banks and not of the United States, and their redemption should be in gold and not in "gold or lawful money," and the reserve for their redemption should also be in gold alone.

The provision that "no two successive examinations should be made by the same examiner" if interpreted to have a change of examiners at every examination would be a mistake, in my opinion, as an examiner making repeated examinations of a bank becomes much more familiar with the character and strength or weakness of its assets than from a single examination at long intervals. There seems to me to be possible under this bill altogether too frequent examinations.
The shareholders' liability "at the par value thereof in addition to the amount invested in such stock"—section 25. This seems to me somewhat ambiguous. Does it mean by the amount invested the price paid by a shareholder? If so, in many cases this might create a quadruple liability instead of what is now a double liability.

I do not approve of the proposed loans on farm lands by national banking associations. I believe another distinct and separate bank organization should be intrusted with this class of loans.

I do not approve of savings departments for these banks. A national bank could hardly set a period of notice for the withdrawal of savings deposits without exciting the apprehension of its regular demand depositors.

I have given a few suggestions herein. It is quite a profound subject and I hardly feel that my own experience is quite equal to throwing much light on just what would be the most desirable substitute for the bill. I must acquiesce in large measure in the recommendations of the bankers' conference, held at Chicago last month, and formulated in a pamphlet and widely distributed.

It seems to me that the measure should be made acceptable to the reasonable requirements of the banks, as without their acceptance of the bill and organization under it the act will be merely a shell without any body, a skeleton without any flesh.

Yours, very truly, 

R. J. Palen, President.

(The chairman of the committee presented the following, with the request that they be placed in the record:)

THE NATIONAL SHAWMUT BANK, 
Boston, October 25, 1913.

Hon. Robert L. Owen, 
Boston City Club, Boston, Mass.

Dear Senator Owen: Confirming our oral conversation to-day, I beg to give you the following figures regarding the Boston Clearing House as reported to me by Mr. Ruggles, the manager:

The annual total cost of operation is $60,000, and the number of employees 18. The foreign department handles $600,000,000 of business a year, and the city department $8,800,000,000. The foreign department is charged out of the total of $60,000 with two-thirds, or $40,000, which makes the cost something under 7 cents a thousand. The city being charged with the balance of $20,000, making the city items cost 24 mills a thousand.

You will see from the above that the cost of handling the foreign or out-of-the-city business is 30 times the cost of handling the usual clearing-house exchanges. Of course, these figures are, as I understand it, an approximate average, but they form a very fair estimate of the cost of our doing business under the Boston system.

Yours, very truly, 

Benjamin Joy, Cashier.

TREASURY DEPARTMENT, 
Office of Comptroller of the Currency, 
Washington, October 25, 1913.

Hon. Robert L. Owen, 
United States Senate, Washington, D. C.

Dear Sir: In compliance with your request of September 26, transmitted through the clerk of the Committee on Banking and Currency, there are enclosed a computation by the Government actuary relating to the probable gain or loss in earning power of banks, as indicated, under the proposed currency bill compared with existing law, and a table indicating probable changes in reserves, including the additional information requested in letter of September 26.

Respectfully,

T. P. Kane, 
Acting Comptroller

(Inclosures.)
Comparison of a typical central reserve city bank as to earning capacity under the present law and under the provisions of H. R. 7837 after these provisions are in full effect.

<table>
<thead>
<tr>
<th>Item</th>
<th>Under present law</th>
<th>Under proposed law</th>
</tr>
</thead>
<tbody>
<tr>
<td>Net deposits</td>
<td>$28,110,000</td>
<td>$23,770,000</td>
</tr>
<tr>
<td>Reserve, in own vaults</td>
<td>7,027,500</td>
<td>2,138,300</td>
</tr>
<tr>
<td>Reserve, with Federal reserve bank</td>
<td>120,000</td>
<td>2,138,300</td>
</tr>
<tr>
<td>National bank notes outstanding</td>
<td>37,500</td>
<td>470,000</td>
</tr>
<tr>
<td>United States deposits</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bonds deposited with United States</td>
<td>470,000</td>
<td></td>
</tr>
<tr>
<td>Capital stock of Federal reserve bank</td>
<td></td>
<td>100,000</td>
</tr>
</tbody>
</table>

The above changes would have the following effect:

- **Decrease**: $4,597,500
- **Increase**: $3,218,900

Upon loanable funds:
- **Decrease in net deposits**: $4,340,000
- **Decrease in reserves**: $2,748,900
- **Withdrawal of deposits**: $120,000
- **Sale of bonds**: $470,000
- **Total decrease**: $4,597,500

Upon income:
- **Loss of profit upon circulation and deposits, about 1.2 per cent**: $1,890
- **Profit on balance with Federal reserve bank, about 3 per cent**: $64,179
- **Total**: $66,069

Net change in earning power: In 4 per cent locality, $12,145 gain; in 6 per cent locality, $15,427 loss; in 8 per cent locality, $42,999 loss.

The cause of the loss in earning power is the large decrease in deposits by the withdrawal of the reserves deposited by other national banks with this bank.

The total amount of reserve deposited, as required by law, which will be withdrawn from all the central reserve city banks will be about $243,000,000. These banks now have net deposits of about $1,568,000,000. This bank has net deposits of about $28,000,000; therefore its proportionate loss in deposits caused by the withdrawal of this reserve will be something over $4,000,000. The probabilities are, although not provided for in the bill, that this bank will be able to obtain all the funds that it can profitably use from its Federal reserve bank in the shape of Federal reserve notes at no greater interest charge than it now pays for its deposits of reserve.

The amount of these notes to be issued will be measured by the amount that can be profitably used as modified by the opinion of the Federal reserve board. Thus a bank could obtain these notes from its Federal reserve bank when needed upon the deposit of collateral security and upon the payment of interest, the rate of which should depend upon the rate paid by the reserve bank to the Government, and which probably would have to be fixed by the Federal reserve board. When the use of these notes ceased to be profitable they could readily be retired.
Comparison of a typical reserve city bank as to earning capacity under the present law and under the provisions of H. R. 7837 after these provisions are in full force.

<tr>
<td>Net loss in income</td>
<td>7,960</td>
<td></td>
</tr>
</tbody>
</table>

Net change in earning power: In a 4 per cent locality, $63,880 loss; in a 6 per cent locality, $91,840 loss; in an 8 per cent locality, $119,800 loss.

The net deposits of all the reserve city banks is now about $1,946,000,000; the deposit of reserves with them by other national banks is about $325,000,000. This bank’s deposits are about $23,000,000; therefore it is probable that its proportionate part of the reserves withdrawn will be about $3,840,000.

The remarks made in connection with the Federal reserve notes and the central reserve city banks and the Federal reserve banks apply also to these banks.

Comparison of the earning capacity of a country bank under the present law and under the provisions of H. R. 7837 after these provisions are in full effect.

Note.—The above data for State banks and for loan and trust companies is as of June 14, 1912, the latest available.
BANKING AND CURRENCY.

Under the provisions of the proposed law, the conditions will be, upon a percentage basis, as follows:

<table>
<thead>
<tr>
<th>Banks</th>
<th>Reserve required.</th>
<th></th>
<th></th>
<th>Free net deposits.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>In own vaults.</td>
<td>With reserve agent.</td>
<td>With federal reserve bank.</td>
<td>Per cent.</td>
</tr>
<tr>
<td>Last 60 days:</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Central reserve city banks</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Reserve city banks</td>
<td>20</td>
<td></td>
<td></td>
<td>80</td>
</tr>
<tr>
<td>Country banks</td>
<td>10</td>
<td></td>
<td></td>
<td>80</td>
</tr>
<tr>
<td>After 60 days to 1 year:</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Central reserve city banks</td>
<td>5</td>
<td></td>
<td></td>
<td>3</td>
</tr>
<tr>
<td>Reserve city banks</td>
<td>4</td>
<td></td>
<td></td>
<td>3</td>
</tr>
<tr>
<td>Country banks</td>
<td>3</td>
<td></td>
<td></td>
<td>3</td>
</tr>
<tr>
<td>After 14 months to 36 months:</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>

<td>3</td>
<td></td>
<td></td>
<td>2</td>
</tr>
<tr>
<td>Country banks</td>
<td>2</td>
<td></td>
<td></td>
<td>1</td>
</tr>
</tbody>
</table>

Upon million-dollar basis (first 60 days): The country banks would withdraw from the reserve city banks $181 during this period, their required reserve being that much reduced. This would reduce the net deposits of the reserve city banks to $1,765. These banks would in turn withdraw $67 from the central reserve city banks, leaving only 10 per cent of their net deposit there. This would leave only $1,501 for the net deposits of these banks, as shown below:

<table>
<thead>
<tr>
<th></th>

<td>587.5</td>
<td>320.5</td>
<td>5,791</td>
<td></td>
<td>5,791</td>
<td>$36</td>
</tr>
</tbody>
</table>

Total reserves in vaults:

Cash: $692.5
Credits: 320.5
Total: 1,014

Total free: 5,983

After 60 days to 1 year: The reserve city banks would during this period reduce their deposits with the central reserve city banks to 6 per cent, thus reducing the deposits of the latter banks by $71 to $1,430.
### BANKING AND CURRENCY.

#### Banks.

</tr>
</tbody>
</table>

### After 14 and 36 months:

The country banks reduce their reserve with the reserve city banks to 2 per cent. This reduces the deposits of those banks by $72 or to $1,098. These banks in turn reduce their reserve with the central reserve city banks to 4 per cent. This results in a reduction of the deposits of those banks by $38 or to $1,392.

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis
The State banks had $657, and the loan and trust companies $911 in savings deposits included in their total deposits as shown above. Against these deposits the new law requires only 5 per cent reserve. Treating these institutions as country banks, the following would be the result:

For the first 60 days, and afterwards:

<table>
<thead>
<tr>
<th>Banks</th>
<th>Reserve required.</th>
<th>Federal reserve banks.</th>
</tr>
</thead>
<tbody>
<tr>
<td>State banks</td>
<td>$110</td>
<td>$154</td>
</tr>
<tr>

<td>33</td>
<td>100</td>
</tr>
<tr>
<td>Loan and trust</td>
<td>156</td>
<td>46</td>
</tr>
<tr>
<td>Savings</td>
<td>46</td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>325</td>
<td>344</td>
</tr>
</tbody>
</table>

Total reserve in vaults (cash) $440
Total free $6,050

For the first 60 days (treated as a reserve city bank):

<table>
<thead>
<tr>
<th>Banks</th>
<th>Reserve required.</th>
<th>Federal reserve banks.</th>
</tr>
</thead>
<tbody>
<tr>
<td>State banks</td>
<td>$440</td>
<td></td>
</tr>
<tr>
<td>(Savings)</td>
<td>33</td>
<td></td>
</tr>
<tr>
<td>Loan and trust</td>
<td>544</td>
<td>46</td>
</tr>
<tr>
<td>(Savings)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>1,063</td>
<td>5,427</td>
</tr>
</tbody>
</table>

Total reserve in vaults (cash) $1,063
Total free 5,427

After 60 days:

<table>
<thead>
<tr>
<th>Banks</th>
<th>Reserve required.</th>
<th>Federal reserve banks.</th>
</tr>
</thead>
<tbody>
<tr>
<td>State banks</td>
<td>$198</td>
<td>$198</td>
</tr>
<tr>
<td>Savings</td>
<td>53</td>
<td>245</td>
</tr>
<tr>
<td>Loan and trust</td>
<td>245</td>
<td>245</td>
</tr>
<tr>
<td>Savings</td>
<td>46</td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>522</td>
<td>443</td>
</tr>
</tbody>
</table>

Total reserve (cash) $670
Total free 5,820
Taking the average of the above—that is, by treating one-half of these institu­tions as country banks and the other half as reserve city banks—the following will be the result:

First 60 days: Total reserve in vaults, cash, $752; total free, $5,738. After 60 days: Total reserve in vaults, cash, $555; total free, $5,935. After 60 days: Reserve in own vaults, $424; with Federal reserve bank, $393; free, $5,673. Federal reserve banks: Reserve in vaults, $131; free, $292.

By summarizing all the above, we have the table below, which shows at a glance the total reserves and free net deposits as required by the present law and by H. R. 7837 for all the national banks and State banks and loan and trust companies of the United States:

<table>
<thead>
<tr>
<th>Period</th>
<th>Reserve required</th>
<th>Free net deposits</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Present</td>
<td>Proposed</td>
</tr>
<tr>
<td>First 60 days</td>
<td>$1,944</td>
<td>$1,706</td>
</tr>
<tr>
<td>After 60 days to 1 year</td>
<td>$1,944</td>
<td>$1,371</td>
</tr>
<tr>
<td>After 14 months to 36 months</td>
<td>$1,944</td>
<td>$1,283</td>
</tr>
<tr>
<td>After 36 months</td>
<td>$1,944</td>
<td>$1,174</td>
</tr>
</tbody>
</table>

The deposit of the currency carried in the general fund of the United States with the Federal reserve banks will increase the deposits held by these banks by about $125. The savings deposits held by the national banks as of June 4, 1913, were $829. Making allowances for these items, after the first 36 months, the above table would be modified so as to show the following results:

Present total reserve required in banks................................................ $1,944
Proposed total reserve required in banks............................................. 1,158

Reduction in required reserve............................................................... 786

Present allowable free net deposits.................................................... 11,671
Proposed allowable free net deposits.................................................. 12,013

Increase in allowable free net deposits............................................... 342

Cash reserve required.

<td></td>
</tr>
<tr>
<td>Expansion</td>
<td>202</td>
<td></td>
</tr>
</tbody>
</table>

The only contraction shown in the above table is for the first 60 days. This is caused by the fact that the State banks and the loan and trust companies will be required to add materially to their cash reserves. This contraction, however, is more than met by the $53 of free cash deposited with the Federal reserve banks by the United States and by the $58 reduction of reserves required because of the savings deposits of the national banks. From this it
is evident that there can be no contraction of currency even in the transition period when the new law is going into force and while the member banks are purchasing the capital stock of the Federal reserve banks. After the first 36 months the net expansion in currency, because of the cash reserve released under the provisions of the new law, will be about $313.

GENERAL DISCUSSION.

The capital stock of the Federal reserve banks that is to be purchased by the member banks is as follows: An amount equal to 5 per cent of the capital stock of said member bank, payable in cash at once, and another 5 per cent, payable in cash within 60 days. This stock should not be purchased with the deposits of the banks, but with their surplus or other funds. The Federal reserve bank can loan these amounts immediately upon their receipt. From this fact it is evident that this provision of the new law will not affect the net reserves nor the loanable funds. It will, however, modify the location of these funds. The purchase of this 10 per cent in value of their own capital stock is in the nature of a reserve deposit of cash with the Federal reserve banks, for this stock can not be transferred nor hypothecated and is to be refunded at the withdrawal of the member bank, for any cause, from the national-banking system.

The amount of these de facto deposits is as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Amount</th>
</tr>
</thead>

</tr>
</tbody>
</table>

This means a total reserve for the banks, after 36 months, of $871 in their own vaults, $911 with the Federal reserve banks, and $193 of capital stock reserve with said Federal reserve banks, a total reserve of $1,974. Of this reserve the Federal reserve banks can use $500, holding $304 in its vaults. This shows a total reserve in vaults, as shown before, of $1,174, as against $1,944 as now required.

The location of the savings deposits with the national banks is not known to me, so they are treated as being with country banks, thus freeing 7 per cent of the required reserve. If they were with reserve city banks, 13 per cent of their required deposits would be released; that is, of the reserve required for their savings deposits. Making allowance for this reduction in reserve required, $55, and for the free United States deposits, $83, we will have, as shown above, a total net decrease in reserve of $786 and a total net increase in free deposits of $342.

In all the above computations no allowance has been made for the withdrawal of the national-bank notes from circulation nor of the probable issue of the Federal reserve notes. The proposed law provides for the annual retirement of the 2 per cent bonds of the United States deposited with the Government by any national-banking corporation, by refunding them with 3 per cent bonds without the circulation privilege. This is, however, optional upon the part of these associations. At the end of 20 years all the 2 per cent bonds outstanding, of the present issues, will be retired at par. All the national-bank notes then still outstanding will also be retired.

The amount of Federal reserve notes to be issued will depend upon the demand for currency, as modified by the opinion of the Federal reserve board. With the consent of this board, the Federal reserve banks can have as much or as little of these notes as they will find profitable to use. This they can have by depositing with the Federal reserve agent collateral security, as determined and defined by the Federal reserve board, equal in value to the notes issued to them, and by paying interest to the Government upon said notes as fixed by the Federal reserve board, but not less than one-half per cent per annum.

As soon as the profitable demand for these notes shall have passed, any Federal reserve bank can reduce its liability for said notes then in circulation
at pleasure. This is the feature that makes for the element of elasticity in the
proposed law and why no allowance was made in the foregoing computations
for the retirement of the present national-bank notes.

Treasury Department, October 17, 1918.

(The following additional statement of Edmund D. Fisher, of New
York, was filed with the committee for insertion in the record:)

In response to the request of the committee to frame a section covering re­
funding bonds and their conversion into short-term obligations of the United
States, I herewith submit my suggestions, which are premised upon the follow­
ing general principles:
(1) That so far as practicable section 19 of the Owen-Glass bill remain as it
stands.
(2) That the Federal reserve banks buy gradually a sufficient number of 2
per cent bonds for conversion later into 3 per cent bonds to provide the desired
element of flexibility in the present inert volume of circulation of the national
banks; to make additional purchases of 2 per cent bonds now held to secure
Government deposits or held by the public, all such purchases in the aggregate,
however, not to be of so great a volume as to weaken the banking power of
the Federal reserve banks.
(3) That such purchases will maintain the 2 per cent bonds at par, which
should be done as a matter of good faith to the banks and the public on the
part of the Government.
(4) That all of the 2 per cent bonds purchased be converted into 3 per cent
bonds.
(5) That the 2 per cent bonds thus purchased and converted be in an amount
equal to 15 per cent of the bonds now held for circulation, and, with those ex­
changed through other purchases, be interchangeable with 3 per cent notes of
the United States. All of these will approximate $150,000,000. Notes are more
salable, for banking purposes, than bonds, having shorter maturities, and may
be used to protect the position of Federal reserve banks in the open money
market and in international relations.
(6) That the purchases by Federal reserve banks provided for in No. 5
hereof be compulsory during a 3-year period on the part of the Federal reserve
bank if offered. That any further purchases by Federal reserve banks be op­
tional, and if purchased, be convertible into 3 per cent bonds or notes.
(7) That purchases under the provisions of No. 5 hereof bear the privilege of
being used to secure Federal reserve notes for a period of 10 years, with a
gradual reduction after the tenth year of 10 per cent annually. That use as
such security should be secondary to the use of commercial paper, which
means, in effect, that it is not likely to be used at all, but may be used in
emergencies. That any additional purchases should not have the circulation
privilege.
(8) That the Government should make some progressive attempt to redeem
short-term notes and Government bonds, as from the surplus earnings of Federal
reserve banks, to be paid into the Treasury, or from the action of sinking funds.

Suggested Amendments to H. R. 7837, Mainly Covering Question of United
States 2 Per Cent Bonds.

Amend section 7 (p. 13, line 13) : Insert, after the words "United States," the
words " or notes into which bonds may have been converted as provided in
section 19a of this act," and eliminating, in lines 13 and 14, the following
phrase: " Said reduction to be accomplished under regulations to be prescribed
by the Secretary of the Treasury."
Amend section 12: The following should be incorporated among the powers
of the Federal reserve board: "To supervise and regulate the purchase, sale,
and conversion of the obligations of the United States as provided in sections 15
and 19a of this act."
Amend section 17, page 30, line 10, by inserting after the word "act" the fol­
lowing: " or obligations of the United States bearing the circulation privilege, as
provided by section 19a of this act." By inserting on page 31, lines 3 and 4, in

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis
place of the words "notes so paid out" the following: "all Federal reserve notes." By inserting on the same page, line 10, after the word "notes," the words: "except such as may be secured by the obligations of the United States, as provided in section 19a of this act."

Amend section 19 by inserting on page 35, line 5, after the word "purposes," the words: "such 5 per cent to include such bonds previously deposited by such bank as may have been purchased by a Federal reserve bank under the provisions of section 19a of this act."

Insert a new section to be known as "19a" or "20," if renumbered, worded as follows:

SEC. 19a. INVESTMENTS IN OBLIGATIONS OF THE UNITED STATES.—In consideration of the privileges granted to them under this act all Federal reserve banks under direction of the Federal reserve board and in proportion to their capital shall offer to purchase from national banks 2 per cent bonds of the United States, except as may have been funded, as provided in section 19 of this act, as follows:

"During the first year following the establishment of any Federal reserve bank any of the Federal reserve banks that may have been organized under this act shall offer to purchase under direction of the Federal reserve board from national banks at par an amount of 2 per cent bonds of the United States deposited by said national banks as security for circulating notes equal to 5 per cent of the total amount of bonds on deposit with the Treasurer of the United States by said banks for circulation purposes. Such Federal reserve banks shall in like manner offer to purchase an equal amount of said bonds, successively, during the second and third years following until an amount equal to 15 per cent shall have been purchased: Provided, however, That to the extent that the total volume of bonds provided to be purchased shall not have been offered, and to the extent that national banks, because of the conversion of 2 per cent bonds into 3 per cent bonds, shall be unable to supply the full 5 per cent each year the said purchases shall be extended from year to year until the full 15 per cent shall have been purchased.

"After the full 15 per cent of 2 per cent bonds of the United States shall have been purchased, as hereinbefore provided, the Federal reserve banks may purchase, from time to time, under the direction and with the consent of the Federal reserve board, such 2 per cent bonds as may seem desirable at a price not exceeding par, but national banks shall not be compelled in any event to sell bonds unless they shall so desire. Such additional bonds as may be purchased in such manner shall be used as security for circulating notes, but may be exchanged for 3 per cent obligations of the United States, as hereinafter provided.

"It shall also be the duty of all Federal reserve banks, under the direction of the Federal reserve board, to purchase in proportion to their capital, at such times and in such amounts as said board may direct, 2 per cent bonds of the United States not deposited by any national bank to secure circulating notes upon tenders and at a price not to exceed par. The total amount of such purchases, however, shall in no event exceed the aggregate amount of bonds not deposited to secure circulating notes at the time of the passage of this act.

"All 2 per cent bonds of the United States, purchased by any Federal reserve bank from any national bank under the 15 per cent limitation, or from other holders without regard to said limit, as hereinbefore provided, or notes of the United States into which said bonds may have been exchanged, as hereinafter provided, shall be received at par as security for the issue of Federal reserve notes when presented by a Federal reserve bank for a period of 10 years after the establishment of any Federal reserve bank. After the expiration of such period such bonds or notes of the United States shall be received as security for Federal reserve notes on a basis of 10 per cent less each year until the 20th year, after which they shall no longer be accepted as such security: Provided, however, That for a period not to exceed 90 days and upon a three-quarter vote of the Federal reserve board on the application of any Federal reserve bank, the obligations of the United States shall be taken to secure the issue of Federal reserve notes; and further provided that when issued and secured in such manner the amount of such notes in circulation shall bear an interest charge of 6 per cent per annum, to be paid into the Treasury of the United States.

"The foregoing provisions under which the obligations of the United States shall be accepted from any Federal reserve bank as collateral security for the issue of Federal reserve notes shall be limited to the extent that, so long as
they may be available, preference shall be given to notes and bills accepted for rediscount under the provisions of section 14 of this act.

"The Treasurer of the United States, upon application of any Federal reserve bank and under the direction of the Federal reserve board, shall exchange all 2 per cent bonds purchased, as hereinafter provided, for 3 per cent bonds or notes of the United States of such maturities not exceeding one year, as may be determined upon by the Federal reserve board. The Treasurer shall also exchange 3 per cent notes for 3 per cent bonds, and 3 per cent bonds for 3 per cent notes, upon the application of any Federal reserve bank, and by and with the consent of the Federal reserve board. Any surplus earnings of Federal reserve banks, payable into the Treasury of the United States, as provided in section 7 of this act, shall be used, as available, to retire notes or bonds of the United States, or both, as may be determined by the Federal reserve board. Any or all of the 3 per cent notes of the United States, created by the conversion of bonds, as hereinafter provided, shall be renewed by Federal reserve banks at their respective maturities for a period of 20 years after the organization of any Federal reserve bank. All such notes which may be outstanding at the expiration of said 20-year period, and which shall thereafter mature, shall be paid by the United States, when due, at par and accrued interest.

"All Federal reserve banks shall, under direction of the Federal reserve board, buy or sell from or to each other, as may from time to time be necessary, obligations of the United States for the purpose of equalizing their holdings of such obligations in proportion to their capital."

In addition to the foregoing, and pursuant to the request of the committee, the following suggestions covering State and municipal investments are submitted:

Amend section 15, page 27, lines 14 and 15, by eliminating the phrase "and bonds issued by any State, county, district, or municipality" and substituting therefor the following: "and bills, notes, revenue bonds, and warrants with a maturity from date of purchase of not exceeding six months, issued in anticipation of the collection of taxes or in anticipation of the receipt of assured revenues by any State, county, district, or municipality of the United States; such purchases to be made in accordance with the rules and regulations prescribed by the Federal reserve board."

It is important that the power of Federal reserve banks under subdivision B to invest in United States bonds and other securities be subject to the supervision and regulation of the Federal reserve board. It is important to have a check on the aggregate volume of such investments and a plan for their correlation with the provisions of section 19a.

(The following additional statement of Mr. T. Cushing Daniel, of Virginia, was filed with the committee for insertion in the record:)

Mr. Chairman, before giving a digest of the testimony presented to your committee upon the pending bill I deem it only proper to state my qualifications for so doing.

I am the author of Daniel on Real Money, published in 1911, and The High Cost of Living—Cause; Remedy, published in 1913. The author brings to the solution of this important economic subject years of experience in commercial life, the study of law, familiarity with all the financial legislation of Congress on money, the debates and records of all international conferences on money since 1867, and the study of the leading economists on the subject, supplementing these advantages in recent years by a personal investigation of the monetary systems of foreign countries.

The question of money is approached in two ways—by the banker on the one side as the loaner of money and creator of debts earning interest and by the much larger class of borrowers and users of money as a circulating medium with which they transact business. The latter class are the real workers and producers, that build up the national wealth of the country. Money to circulate and not money to loan is what the industrial well-being of the world needs.

The people are always at a great disadvantage when legislation on money is being considered and testimony being taken before the Banking and Currency Committee of Congress, as they are entirely unorganized and therefore not properly represented.

On the other hand, the banking interests of the country are thoroughly organized, having back of them the power of money and all that that means as an
intelligent force to influence legislation. It will be readily seen from the records of the Banking and Currency Committee of the Senate that 95 per cent of the testimony has been presented from the standpoint, directly or indirectly, of the banking interests. It will also be seen from a careful review of all legislation on money in this country that the banking interests have successfully opposed the issuing of real money by the Government in order that they could loan a substitute created by themselves.

They all want the gold basis, for this will always restrict real money to gold only and enables banking corporations to loan their credit substitutes for money to the people and thereby manufacture debts upon the borrowers upon which they draw interest, and require the principal paid back in money.

I will now take up the testimony of the committee appointed by the American Bankers’ Association in Chicago, August 22 and 23, 1913, to represent said association before the Banking and Currency Committee of the United States Senate. I will first refer to the statement made by Mr. James B. Forgan, president of the First National Bank of Chicago, Ill., page 26:

“Hence, as the chosen representatives of the banks, we claim that in a very real sense we represent the interests of all whose patronage the banks rely on for success, and especially the interests of the innumerable hosts of thrifty and desirable citizens who manifest their confidence in the banks by trusting them with deposits aggregating more than $20,000,000,000. Individually bankers do not experience the much-talked-of distrust of the banks. Rather they duly appreciate the confidence evinced by the public by placing such an enormous line of deposits with the banks under their management, and they are keenly impressed with the responsibility such a trust imposes upon them.”

This statement is altogether misleading, as most of this amount is made up of debts created by the loaning of the banks’ credit to the borrowers, the amount being put to their credit as if it was actual cash deposited in the banks, when as a matter of fact they are debts owed by the borrowers to the banks. In other words, over $15,000,000,000 of these bank deposits were created by loans, without the deposit of any cash. The total amount of cash held by the 25,195 banks June 14, 1912, was only $1,572,953,479.

It is therefore plain that while the people have a comparatively small amount of money deposited in the banks, they are really hopelessly in debt to the banks for over $15,000,000,000.

Mr. Forgan, Mr. Wexler and Mr. Wade were the main spokesmen, and represented the 114 clearing-house associations and the 50 State bankers’ associations at the conference of the currency commission, American Bankers’ Association. As Mr. Wexler was designated to give most of the testimony, as is shown by the following statement:

“Mr. Reynolds, Mr. Wexler, who is going to remain here, can answer these questions as well or better than any of the rest of us.”

It is therefore only necessary to give a digest of the testimony of Mr. Wexler, as the rest would only be a repetition, he having covered all the points and stated in detail the position of the banking interests. I quote as follows from the statements of Mr. Wexler:

“All I desired to do was to make the suggestion on behalf of ourselves that you ask the men who have prepared themselves to answer on these special topics, because we do not wish to give our own individual opinions. I want you to understand that we are here, appointed by the conference held here and under the resolutions adopted by that conference.

“Mr. Wexler. Might I be permitted to say a word? There are a number of gentlemen who have been designated to study and speak upon the points which Senator Reed and others are asking me about, and I feel that I am monopolizing the opportunity, and I feel very much as if I might be excused. There are others present who can answer these questions as well or better than I can, and who have written and studied a great deal upon the very point you are raising now.

“Senator HITCHCOCK. One trouble is that we do not know in advance what the subjects are—if they could be given to us we would know.

“Senator POMERENE. Mr. Chairman, I want to suggest that it is possible there may be a difference of opinion among these gentlemen on the different subjects.

“Mr. Wexler. I am glad to say we are a unit.”

It will be seen that the main object of the banking interests is to restrict the issue of Government money to gold. This enables them to issue and loan to the people their cheap credit substitutes for money. And as they can control the gold through the credit substitutes for money issued by the Govern-

S. Doc. 232, 63-1—vol.3—77
ment, redeemable in gold, the official management of the proposed banking and currency system when established will be merely nominal.

Those familiar with the working of any banking system know that the men who own and control the money eventually manage the system. This has been well known by all lenders of money, even before the House of Rothschild reduced it to the broad maxim, “Let us control the money of a country and we care not who makes the laws.”

“Senator Nelson. I notice in the bill that provision is made for the redemption of these notes in gold or lawful money. That would mean, under our present system of currency, silver and greenbacks as well as gold, would it not?”

“Mr. Wexler. Yes.

“Senator Nelson. Do you think they ought to be redeemable in anything but gold?”

“Mr. Wexler. I do not. I think that we should maintain religiously the gold standard that has been established in this country.

“Senator Nelson. And then you would have these reserve banks provide for a gold redemption?”

“Mr. Wexler. Gold reserve.

“Senator Nelson. Gold reserve. Well, do you think 33 per cent is sufficient?”

“Mr. Wexler. I think 33 per cent would be sufficient; yes. We have suggested that there should be 40 per cent.

“Senator Nelson. Yes.

“Mr. Wexler. We have raised it, because we believe that it would be better to make the notes so absolutely good and impregnable that we would rather err on the side of too much reserve than too little reserve.”

“Mr. Wexler (interposing). Well, Senator, there have been some accurate calculations made on that particular subject by some of the gentlemen who are going to follow me, from which you may be astonished to see that there will not be any expansion at all; in fact, we are in considerable doubt, and we rather lean to the belief that it is going to bring about contraction if we do not have considerable amendment to this bill. In other words, we have not been able to find where we are going to get gold enough to carry the reserves that are necessary.”

“Mr. Wexler. You can have all the power granted to you by law that you want, but when it comes to the exercise of that power the man you put the exercising of it upon has got something to say. Suppose that you had been required to sell $100,000,000 of bonds in the last six months for the purpose of bringing gold into this country. You could not have sold them in any civilized country in the world, except at a tremendous discount, because all of the commercial nations of the world were begging each other for gold.”

“Senator Reed. Yes; I understand that.

“Mr. Wexler. You could not take a silver note, for instance, and do it.

“Senator Reed. I want to know how you can get that gold into the central bank; that is what I want to find out; how it gets there.

“Mr. Wexler. I will tell you how it gets there: The circulating medium that would be carried around in the pockets of the people, and so on, would be these bank notes; and the gold would gradually find its way into the vault of the central bank, because it would never pay out any gold. Nobody would ever pay out a gold note. We would never pay out any, nor would any bank anywhere, nor would the Federal reserve bank ever pay it out, except in the circulation of the world where a note holder came and said, “I want this note paid in gold.” He might have some particular reason for wanting gold in that case.”

“Senator Reed. Now, if the faith and credit of this big institution ever became seriously impaired, it might have to get up gold very quickly, might it not?

“Mr. Wexler. Well, of course, if the people lost confidence in the note issue and everybody came to the window and demanded the amount in gold, it would require a general liquidation of credit of all the notes of everybody which the bank had, and the system would break down.”

“Senator Hitchcock. I am asking for enlightenment on a different line. You propose to inject perhaps $100,000,000 of credit currency into the money of the country. Is there any danger that the injection of that debased currency would tend to drive gold abroad?

“Mr. Wexler. Just the contrary.”

“Senator Hitchcock. You propose using these bank notes which you want to issue for the purpose of withdrawing the gold from the people and getting that gold into the banks?”
"Mr. Wexler. Exactly. I think that with this system in vogue you would not see any more gold certificates and very few greenbacks. They would be the basis upon which the credit would rest."

"Mr. Wexler. Senator, can you suggest a single individual outside of the Halls of Congress and the Senate—I ask you, is there one in Europe or America—who believes that a Government note is better for the purposes of the people than a bank note?"

"Senator Reed. A single individual?"

"Mr. Wexler. Yes."

"Senator Reed. My dear friend, I would like to make a wager, if we could test it, that if you submitted it to a vote of the American people to-morrow, that 90 per cent of them would vote for the Government note."

"Mr. Shafroth. 90 per cent."

"Senator Reed. And take it every time."

"Mr. Wexler. It is fundamentally unsound for the Government to issue a circulating medium."

Restricting money to gold is the only hope of the banks to continue to loan their credit substitutes for money—hence their firm and unalterable belief in gold.

As further evidence of the opposition of the banking interest to the Government issuing the currency of the country, I quote the following:

"Senator Nelson. This Government in paying out money—the only way the Government pays out any of its money it pays out for running expenses, its liabilities, and its interest, whether in greenbacks or anything else. In no other way can the Government put its money into circulation, can it?"

"Mr. Wexler. None that I know of."

"Senator Nelson. If the Government wants to issue its money and get its money out into circulation, beyond what is necessary to pay its current expenses, it can only be done by allowing borrowers to deposit their commercial paper with the Government."

"Mr. Wexler. Yes; and get currency for it."

"Senator Nelson. And the moment they do that has the Government not gone into the banking business?"

"Mr. Wexler. Absolutely."

"Senator Nelson. And you cannot get the Government's money into circulation any other way?"

"Mr. Wexler. No, sir; none in the world."

"Senator Nelson. Is it not also true that the Government can issue any amount of legal paper money, but the question will always arise, How are you going to get that money into circulation?"

"Mr. Wexler. Yes, sir."

"Senator Nelson. And the only way the Government can legitimately put its money into circulation is by the payment of its current expenses, of its running expenses and obligations; if anything more is paid out by the Government it has to be done by a system of credits, by banking. I can go to the Government and get my salary paid every month—that money goes into circulation—so can every other employee of the Government; so does the bondholder get his interest. But if any more Government money is wanted in circulation it can only come by application of the borrower to get that currency, and he must put up some security for it."

"Mr. Wexler. It can be done in no other way."

"Senator Nelson. Because it stands to reason that the Government would not issue its currency without some consideration; and the moment it does that—the moment the Government does that—it would perform one of the functions that is implied in this regional reserve bill."

"Mr. Wexler. Absolutely."

"Mr. Wexler. You have put out $700,000,000 of this 'fiat' money and taken back your bonds and retired $700,000,000 of bank-note circulation. The next questions are: What kind of a note have you given me, how are you going to meet it, when are you going to meet it, are you going to pay it in gold, will we get it when we want it? If you will say what you are to pay for it, can you pay it? You have to provide all that kind of machinery."

"Senator Hitchcock. Well, it impresses me that there is some powerful reason why the banks of the country want to own this bank.
"Mr. Wexler. The only reason is because they believe that they are the proper people to own it. They believe they are the proper people to manage it.

"Senator Hitchcock. Certainly they can not be attracted by the 5 or 6 per cent interest.

"Mr. Wexler. No. The only thing that attracts them is the sense of safety in having a central reservoir of credit.

"The Chairman. You mean giving stability to the banking system?

"Mr. Wexler. Yes.

"I want to say this to you: That the banking business of to-day is one of the hardest, most trying businesses that a man can be engaged in, for the reason that the banker has a tremendous demand liability with absolutely nothing to meet it with except 25 cents on the dollar. All that the banker wants is the opportunity, the privilege of being able to go somewhere with these time obligations he has and rediscount them so that he can meet the demand obligations when the public wants their money.

"Senator Nelson. He wants a reservoir of credit to go to?

"Mr. Wexler. That is all we ask.

"Senator Hitchcock. But he does not want to go to the Treasury?

"Mr. Wexler. We do not care; but why don't you go into the meat-packing business or the farming business? It would be just as legitimate as going into the banking business.

"Senator Nelson. Allow me to make another suggestion to you right there. You bankers are nothing but middlemen; you do not add anything to the capital of the country. All additions to the capital of the country come from the farmers, who produce the crops, and from the manufacturers, who take the raw products, the material, and increase its value. That is the only way in which capital is increased, and you are simply the instrument to place that capital.

"Mr. Wexler. We are merchants; dealers in credit.

"Senator Nelson. It is the farmers and manufacturers who make the capital of the country, who add to it, and increase it. The bankers themselves do not add a single dollar to the capital."

"Mr. Wexler. Senator, let us see if we can not get this thought directly in the minds of the committee: It is recognized that the gold is the standard of ultimate redemption and the yardstick of measurement for the whole world. It is recognized that that is the best money.

"Senator Reed. Yes.

"Mr. Wexler. And it is the basis of credit.

"Senator Reed. Yes.

"Mr. Wexler. If it is the basis of credit, then credit can exist only so far as that gold rests in a certain mass in a certain place, sustaining that credit.

"Senator Reed. Is that correct?

"Mr. Wexler. Yes, sir.

"Silver ought to be a subsidiary coin. If you have this bank note your silver certificates would not be necessary at all. This bank note can supply the place of the silver certificate and of the greenback, and then you have nothing but gold, the ultimate money of redemption, and that would be ideal."

Under the operation of section 29, the parity clause, this condition would be brought about: The banks, by controlling the gold money and creating artificial currency—"bank credits"—would not only control the so-called Government banks, but by controlling the credits of the country would have control of all its affairs.

J. P. Morgan stated the whole case in a few words. He said, "Credit is an evidence of banking, but it is not the money itself; money is gold, and nothing else."

"Question. If a man controls the credit of a country, he would have control of all its affairs?"

"Mr. Morgan. He might have that, but he would not have the money. If he had the credit and I had the money—the gold—his customers would be badly off."

Under operation of the bill that passed the House of Representatives and now being considered by the committee, the banks would control both the gold and the credits. The people would be the customers, and, as Morgan admits, would be badly off. The bankers would control not only the foundation—gold—but the superstructure of credit and own the system.

Banks desire all Government notes retired in order that they may be replaced by the cheap substitutes of bank credits which the people are compelled to borrow.
"Mr. Wexler. If the bill is so amended that it will strike favorably that great number of banks throughout the country, it may never become necessary to call for more than the original 5 per cent, which would be a distinct advantage, as it would enable the bank to accumulate much more rapidly the 20 per cent surplus required under the bill; it would enable them to make a distribution of the surplus earnings of the various contributing banks over and above the dividends which you have named to be paid upon the stock, which in itself is not deemed to be adequate, but it would enable a larger distribution to the Government as its share of the profits to be applied to the retirement of the greenbacks."

"Senator Reed. I am speaking about fixing that part of it, assuming that it can be fixed."

"Mr. Wexler. A number of experienced bankers might be able to set down a figure exactly by which some system could be evolved of that kind, but it is so contrary, in our opinion, to sound finance, that we never conceived the idea of having the Government in any way mixed up in the banking business. We have no other machinery for helping ourselves. I will state our case right now. We borrowed such money as the law allows us, and we are using it to move our cotton crops, our rice and our corn and the various business that comes through our port. I can not get any more; I have not the right.

"Senator Reed. Suppose you were given the right. I do not want you, in answering my questions, to answer whether you think that the present system just as it stands would be adequate, but whether, since you gentlemen all, thus far, seem to want a central bank—one power—how would you like to have the Government of the United States, under a plan similar to the one now existing, simply to furnish money when it was needed to the groups of banks?

"Mr. Wexler. I would be very much opposed to it, Senator."

"Senator Reed. You want to issue the money?"

"Mr. Wexler. Sure! We want to issue the paper, the circulating medium; we do not want to issue money.

"Senator Reed. You want to issue paper. Commercially we call it money and it goes as money.

"Mr. Wexler. Certainly. It is highly advantageous."

"Mr. Wexler. Absolutely. The Government has absolutely no money except what it takes away from the people; and under the principles of our party they ought not to take one cent more than they actually need. That is the principle of the Democratic Party, with which I am affiliated. Consequently the Government has no business with a lot of money to be scattered around. If it takes any more by taxation than is just and proper for running the Government, it is a wrong principle. But we have gone along many years without any trouble. You can have a war any time that will cost this country a thousand million dollars. Where will you get the money? You would have to go around and get the bankers to buy your bonds. Do you want to be behind another thousand million of notes, with the possibility of having to sell a thousand million of bonds? Would you bring the whole structure down at one time? You must look to the future."

"Senator Reed. But I think that is aside. If you had this great central bank and the Government was liable to go down, do you think that bank would stand?

"Mr. Wexler. Absolutely, like a rock.

"Senator Reed. But you think now, if the banks were to put this money into the hands of the Government, that both banks and the Government would go down together?

"Mr. Wexler. I do, emphatically; just as certain as that the sun rises.

"Senator Reed. What do you think about the creation of these enormous financial powers outside of the Government, in times of peace?"

"Mr. Wexler. That is all right. We should dominate the financial business of the world.

"Senator Reed. Would not they fix the discount and the rates of interest for the entire country?

"Mr. Wexler. Yes, sir.

"Senator Reed. Would not that be a powerful factor?"

"Mr. Wexler. Yes; to that extent.

"Senator Reed. And you think that ought to be the case in the Republic?

"Mr. Wexler. Yes, sir.

"Senator Reed. If it puts its power in behind a great railroad—
"Mr. Wexler (interrupting). If the business of the country was going too fast, and everybody was expending too much, and buying too many automobiles, and every man wanted to buy his neighbor's land and build houses, then, they raise the discount rate and cause a slowing up. On the other hand, if business got dormant and dull and needed stimulation put the rate down and stimulate business.

"Senator Reed. In other words, they would be the great regulator of all the commerce of the country?

"Mr. Wexler. Absolutely.

"Senator Reed. They could make business prosperous, or they could shut down on it?

"Mr. Wexler. They could, yes, to some extent they could do that.

"Senator Hitchcock. You came here to-day practically with the banking interests of the United States united, represented by a small body?

"Mr. Wexler. Precisely.

As these gentlemen, when asked by members of the committee for reasons to substantiate the banking system that they advocated, would invariably refer to the European banking systems as a precedent, in order that the committee may fairly weigh these statements, I will refer to page 103 of the hearings, where Mr. Wexler stated: "However, I have not made a study of the European systems lately, and I am hardly in a position to make any definite statements in regard to them." Also the statement of Mr. Reynolds, on page 314: "We gentlemen who have appeared here before you appear more in the attitude of bankers than we do in the attitude of experts from the standpoint of currency or of money."

BANKS WILL CONTROL ADMITTED.

"Senator Reed. Do you mean to tell me that you or any other man, not more selfish than the average man, but just using the ordinary business sense, will not get three men that are going to side with the banks rather than with the Government in these matters?

"Mr. Wexler. I certainly do not, unless the Government were endeavoring to impose something that we did not believe was right.

"Senator Reed. I do not mean that they are going to be bad men, but I am talking about who is going to control in that board of directors. Who is going to control?

"Mr. Wexler. The people that have put the money in the bank, who have invested their money, are going to control, and they ought to control.

"Senator Reed. The banks are going to control?

"Mr. Wexler. Yes, sir; there is no question about that."

GOVERNMENT NOTE NOT AS GOOD AS A BANK NOTE.

"Senator Shawcroft. Oh, yes; you had an enormous amount issued, and they had been issued during war times, and the stability of the Government was then questioned—a good many reasons.

"Mr. Wexler. Senator, that can happen again. What has happened can happen; and, Senator, a Government note, however strong the Government may be, and however confident the public may be that the note will ultimately be paid, it is not as good as a bank note. Why? Because the holder of the note wants to know, not that the man is good and can ultimately pay, but that he can pay upon demand; that is the fundamental thing.

Mr. Chairman, if a digest of the hundreds of pages of testimony presented by those directly or indirectly representing the bankers of this country before your committee were made, no more correct summing up of their position could be had than here given by the men representing practically every bank of any size in the United States. Most of the time of your committee has been occupied and the attention of its members diverted by the discussion of the relative merits of a regional or a central bank and who shall control them. This does not really concern them. They know full well by owning and controlling the money they will eventually control the management and consolidate these regional banks into a central bank by bringing about conditions that will make it necessary. I therefore consider 90 per cent of this testimony a cloak of concealment of their real purpose and plan to control the money system.

First of all, they demand the so-called gold standard shall be maintained.
Second, the issuing of an asset currency redeemable in gold.

Upon this basis the bankers can force their credit substitutes for money on the people and control the currency system. They will have little trouble in getting the officials of these so-called Government banks to fall in line with their policies.

It is therefore useless to discuss the relative merits of a regional or a central bank, or who shall appoint their officers.

The issue now joined is whether the Government will exercise its sovereign power and issue real money or a credit currency redeemable in gold.

If it issues full legal-tender money, it can regulate the quantity thereof in the interest of all the people and absolutely control the money system of this country.

If it issues debts redeemable in gold as a currency to be loaned banks at one rate of interest in order that banks may charge a higher rate to the people, it becomes an indefensible outrage, and the voters will soon repudiate the whole system.

In the name of the people I desire to enter a protest against an asset currency of any kind. Under this system a bank can create a debt against a borrower by simply loaning the bank's credit. It can then take this debt and rediscount it for another credit substitute for money issued by the Government; and there has not been one real dollar created in which the debts can be paid.

Under the operation of this so-called gold standard and the loaning of bank credits as a substitute for money 90 per cent of the people are now in debt, and as soon as they realize a system has been established still further pyramid­ing debt upon them by the loaning of another credit substitute for money furn­ished by themselves—the Government—it will become a political issue, and the people will soon settle it.

The following section of the bill turns dollars into debts, restricts real money to gold, and puts the money system of the United States absolutely in the power of the banks, money lenders, and manufacturers of debts.

This last section in the bill was offered as an amendment on the floor of the House of Representatives and a large majority voted for it and attempted thereby to pledge the 90,000,000 people of this country to a pernicious economic fallacy and a thing that does not exist—the so-called gold standard of value.

I quote section 29 (H. R. 7837), passed the House of Representatives September 18, 1913:

"Sect. 29. That all provisions of law inconsistent with or superseded by any of the provisions of this act be, and the same are hereby, repealed: Provided, That nothing in this act contained shall be construed to repeal the parity provision or provisions contained in an act approved March fourteenth, nineteen hundred and twelve hundred, entitled 'An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, and for other purposes.'"

**PARITY FRAUD THE LAST ATTEMPT TO FOOL THE PEOPLE.**

In the careful investigation I have made for 30 years of the money question I find that the people have been imposed upon by those constructing and de­veloping the money system by assuming false premises and clothing them in technical words and sophistry, and then having them indorsed by men in high official positions and with the prestige of so-called financial authorities. There is no more conspicuous example of this than is found in the injection of the metal gold into our money unit or dollar, trying to make the people believe that gold, the metal, is the unit of value instead of the dollar. The 25.8 grains of gold is not the money unit of the United States, nor is it in any sense the standard of value for the purchasing power of our money unit, the dollar. This false assumption is based upon the exploded theory that there is intrinsic value in gold, and denies the universally recognized fact that the value of the dollar, like everything else, is regulated by the law of demand and supply. Therefore it is the number of dollars or money units in the monetary system that fixes the value or purchasing power of each unit and constitutes the standard of value.

The United States mint was established by the act of Congress April 2, 1792, and it provides in section 9 "That there shall be from time to time struck and coined at the said mint coins of gold, silver, and copper of the following den­ominations, values, and descriptions, viz, eagle, each to be of the value of 10 dollars or units and to contain 247 4/8 grains of pure standard gold."
"Dollars or units each to be of the value of a Spanish mill dollar as the same as now current.

Sec. 20. *And be it further enacted.*, That the money of account of the United States shall be expressed in dollars or units, dimes or tenths, cents or hundredths, and mills or thousandths."

The dollar or money unit is the creation of the sovereign power of the people and binds them and their property to protect its value and to redeem it at par.

In other words, it is a legal tender for all things on sale, all services for hire, and all debts, public and private. This means that 94,000,000 people in the United States stand ready to receive it and redeem it at 100 cents on the dollar. In fact, its money value, which is its purchasing and debt-paying power, would be the same if it did not have one grain of gold in it.

To say that the equality, validity, or purchasing power of the full legal-tender dollar of the United States redeemable all alike in $134,000,000,000 of the national wealth, including all the gold and silver that we now have in the United States or will ever have, and the service of 94,000,000 of the most enterprising and productive people in the world, depends for its equality or parity upon the gold in the dollar is an absurdity only surpassed by the miserable subterfuge that $150,000,000 held as a reserve in the United States Treasury maintains the parity or equality of all our dollars. So long as it is a money unit or dollar the value (purchasing power) must necessarily be the same. It is equivalent to saying if these $150,000,000 set aside in the Treasury were to go into circulation and take the place of bank notes there would be a different purchasing power in our money units or dollars.

Is the 25.8 grains of gold or the dollar the unit of value?

A simple answer uncovers and exposes their sophistry and deceit.

In order to annihilate this parity fraud, which has exploited the people of this country out of untold millions and is now being used by the promoters of the Money Trust to fasten upon the United States the most infamous money system ever conceived to ruin this Republic, and to expose this damnable heresy, it is only necessary to ask, "What constitutes the standard?" Is it the 25.8 grains of gold that constitutes the dollar, or money unit, or the act of sovereignty which creates the money, and says $1 is the unit of value? If our mints were closed to the coining of gold you could weigh out 25.8 grains of gold and six months later it would not be worth 50 cents; yet the purchasing power or value of the dollar, or money unit, would be unchanged. But when the sovereign power of the United States says this is $1, the money unit of the United States, and pledges $134,000,000,000 of national wealth and the resources of 94,000,000 people for its redemption at par, or 100 cents in the dollar, you have the best and soundest money unit in the world without one grain of gold in it.

These money schemers would make this country continue to believe that the 25.8 grains of gold was the money unit and standard of value in order to make permanent their gold-basis scheme and use their credit substitutes for money.

To make it more explicit and so plain that no man can refute it:

The lawful money of the United States is created by the sovereign power of its people, each dollar, or unit, is complete in itself, each has the same value, the same purchasing and debt-paying power—their equality or parity is necessarily the same, as each has its redemption in all the property and service of the people without discrimination.

The parity or equality is cemented together by an unlimited and universal demand for dollars, because they do the work of dollars.

How can there be any difference between the lawful dollars of the United States, all doing the same work, and having the same purchasing and debt-paying power?

The demand for the dollar of the United States is the greatest ever known in the world, bringing a premium over gold in Europe.

Ninety-four million people in this country place an incessant and unending demand upon them for their services and support. Over 60,000,000,000 of debts demand them for payment. The perpetual call for interest demands them without end. Twenty-five billions of internal commerce demands their services. Europe demands hundreds of millions of our dollars to settle her balance of trade with the United States.

I would ask these jugglers of words, "Is not this demand sufficient to preserve the parity or equality of our dollars?"

For men of average intelligence, claiming to be the representatives of the people, to deal in such unmeaning nonsense and transparent sophistry upon this vital question, hoping that their high official positions will induce the
honest credulity of the people to accept it, is nothing short of criminal. There is no such thing as intrinsic value of gold, and the value of gold, like everything else, depends upon its quality and the demand for it, which, under economic laws and conditions, should be a legitimate demand. There is to-day nothing which is so supported in its artificial and unjustifiable value as gold.

There is a legitimate demand in the arts for only one-third of the supply of gold. This leaves an annual surplus of two-thirds, the value of which, when demonetized, would shrink 50 per cent of its present value. In addition to this, there is an accumulated stock of over $7,000,000,000 of gold held stored away in the vaults and banking institutions of the world, a dead and useless economic waste and burden upon the people. It is about time for the people of the United States to have a lucid interval and close the mints of this country, forever destroying the metallic basis of redemption for credit money—the economic curse of this Republic.

Section 29 is the most consummate fraud in the bill. It is an attempt on the part of this incorporated Money Trust to perpetuate in its own interest the attempt to establish the so-called gold standard in the act of February 12, 1873, to which this act of March 14, 1900, referred. Since the words "intrinsic value of gold" and the "ratio of gold and silver" can no longer be used to divert and mislead the people; the advocates of "banks of issue" have made their last play to protect the false basis of gold redemption by the misuse of the word "parity." I therefore hope the reader will see the vital importance of exposing this attempted fraud upon the people. It should be first impressed upon the mind that a dollar is not a debt, but a redeeming coin—gold dollar should not be redeemed in another dollar. This idea is an invention of the money lender—a reversal of all sound ideas of finance that ever existed. It is based upon the absurdity that a dollar is a debt.

"A dollar has never been a debt. It is not made for redemption, but is made to be a redeemer." It has been well said, "If the paper dollar is treated as a debt, then also the gold dollar must be treated as a debt, else the one dollar is not at a parity of function with the other dollars, then one has a quality that the other does not possess, and the two dollars are not treated on equal terms.

Then, there is no sound and stable money unless every unit is legally equivalent to every other unit. A perfect money unit or dollar can be created only by an act of sovereignty impressing upon it the great law of a legal tender.

Gold bullion, when denied the right of coinage and legal tender, will be more useless property unless used in the arts. I ask the people of the United States how much longer will they allow themselves to be fooled and impoverished by this money power making them believe that dollars are debts, redeemable and convertible into each other?

When the money power is herein spoken of, it means the European moneyed interests as led by the Bank of England, the Rothschilds and their American agents, J. P. Morgan & Co. and their Hebrew associates in the United States, the Clearing House Association of New York, established in 1853, and the American Bankers' Association, an organization of practically every bank of any size in the United States.

This is the money power that controls the circulating medium and money system of this country and the business future of the American people.

This money power dominates the United States Treasury, influences the appointment of its most important officials, and those who are efficient rarely fail to receive more lucrative appointments in banking corporations.

Senator John T. Morgan, of Alabama, after many years of honorable service in the United States Senate, made the following statement: "Never in the history of any government has such treatment of laws been found as in the despotism of the Secretaries of the Treasury, in conjunction with the national banks to trample out every law that stood in the way of their peculiar and pet theories and their peculiar monopolistic advantage. They pay no regard to the statutes. Construction will do anything with the rights of any man who will submit to it.

The worst tyrannies that have ever been in this world were the results of false construction, eating, like a cancer, from point to point and step by step, sapping nerve after nerve of vitality, until it finally attacks the citadel and destroys the victim. Let us have the truth, the honest truth. If constructions are to be made, let them be made in favor of the people and not against them; in favor of right and life and liberty, and not in the direction of tyranny.
BANKING AND CURRENCY.

TURNING DOLLARS INTO DEBTS.

Up to this time all legislation on money had been dominated by the banking interest, but the money interest realized that there was a large majority in Congress which was opposed to discontinuing entirely the further use of silver by the Government as money; so they determined to make the Democratic Party their scapegoat and tool in order to put over the next financial conspiracy upon the people of the United States and still further strengthen the hold and control of banks of issue over the circulating medium of the country. There never was a more comprehensive plan put in operation by the banking associations to coerce Congress to pass this bill.

In this fight for the unconditional repeal of the silver act the organized banking interests made a direct attack on the silver and silver certificates in order to discredit them, the object of the bankers being to stop any further addition of money issued by the Government in order that banks of issue might substitute their notes and strengthen their monopoly over the money system of the United States. Space will not permit me to describe the loss and suffering brought upon the people, which covered a period of about six years.

I will now come to the next step taken by this association of the banking interests to absolutely discredit and convert into debts $350,000,000 of money that had already been issued by the Government. In order to do this I would call attention to the law of 1890, which provides:

"SEC. 1. That the Secretary of the Treasury is hereby directed to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, at the market price thereof * * * and to issue, in payment for such purchases of silver bullion Treasury notes of the United States.

"SEC. 2. That the Treasury notes issued in accordance with the provisions of this act shall be redeemable on demand, in coin, at the Treasury of the United States, and when so redeemed may be reissued."

After forcing through Congress the act stopping the coinage of silver, they put into operation what has been aptly termed "the endless-chain process." John G. Carlisle, who had been Speaker of the House of Representatives and a life-long opponent of the so-called gold standard, had stated (I quote him):

"According to my views of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world."

Cleveland appointed Carlisle Secretary of the Treasury, and the administration, through influence brought to bear by the money interest, determined to increase the public debt by the issue of bonds, and simultaneously to discredit and turn into debts $350,000,000 of United States Treasury notes and silver certificates, and use them to force a bond issue for the benefit of the banks as a basis for the increased issue of national-bank notes. The writer has in his possession conclusive evidence of the following statement: Although the law provided that Treasury notes should be redeemed in coin at the discretion of the Secretary of the Treasury, the whole object of the law being that the Secretary should use the option in the interest of the people and redeem the Treasury notes in either gold or silver, using that which was most convenient at the time, the Bank of France without exception has so exercised this option. President Cleveland used his influence over Carlisle to get him to construe the law so that he should redeem these United States Treasury notes in gold. Carlisle was an able lawyer and familiar with all the statutes bearing on the subject of money, was also aware of the motives of those who were demanding such an illegal construction of this law; he was so much exercised and concerned in the importance of such action that he requested two United States Senators, his closest friends, to confer with him. One was Senator Blackburn, of Kentucky; the other Senator Daniel, of Virginia. The conference was held at Secretary Carlisle's K Street residence, he having an appointment to see President Cleveland at the White House that night. These two Senators urged Carlisle to adhere to the law that plainly stated that the Treasury notes issued in payment for silver bullion should be redeemed in coin, either silver or gold, at the option of the Secretary of the Treasury, and that for him to do otherwise would leave the United States Treasury, the fiduciary department intrusted with the people's money, at the mercy of the moneyed interest. Carlisle left
the house, saying that he would not relinquish the option to redeem these Treasury notes as provided in the law and allow the holder of these notes to demand gold in payment for them, which would leave the Treasury of the United States in an absolutely defenseless condition and enable the holders of these notes to raid the gold reserve of the Treasury. Senators Blackburn and Daniel waited for him to return from his interview with Cleveland at the White House. He had evidently had a long and trying conference, and it was midnight before he returned. He met his friends, evidencing the greatest humiliation, and said that Cleveland had induced him against his own convictions to redeem these Treasury notes in gold. Carlisle looked as if he had sold his birthright.

The unthinking can not realize the far-reaching significance of this decision. It was the first time in the history of the money of the world that a dollar was decided to be a debt redeemable in another dollar. The direct result was the conversion of 350,000,000 Treasury notes, or dollars, into debts redeemable in gold. It opened the door of the United States Treasury to the planned attack on its gold reserve and forced an issue of 262,000,000 of bonds on the taxpayers in a time of profound peace.

I would impress upon this committee the vital importance of this action, as it is the absolutely false and indefensible premise upon which the banking interest of this country, in section 20 of this bill (H. R. 7837), that passed the House of Representatives September 18, 1913, predicates the baseless and fraudulent assumption that it is necessary, in order to maintain the equality, or, as they term it, the parity of our dollars, that we should construe all other dollars in our currency system to be debts redeemable in gold, and, in order to deceive the people, they have created a gold reserve of $150,000,000 in Treasury to be used in maintaining, as they claim, the equality or parity of our dollars.

Is there a sane, honest man who will contend for one moment that the integrity of our currency system and the equality, parity, or purchasing power of the American dollar are maintained in their value by $150,000,000 of gold (ostensibly held as a reserve, yet which can be raided and withdrawn by the money interest at any time), and not by the $134,000,000,000 of national wealth and the services of 96,000,000 people in the United States pledged for its redemption.

Apply the universal law of demand and supply to gold as a test and the so-called "gold standard" of value is destroyed. The tables of the Report of the Director of the Mint, 1912, show for the gold in the world an annual increase from 1900 to 1912 of only 6 per cent, while the demand created by the increase of population and wealth in the world has run far ahead of this percentage, that of the United States being 17 per cent for population and 42 per cent in wealth.

This demonstrates that although the demand has so greatly increased the value of gold itself, as measured by other things, has decreased 40 per cent to 50 per cent in value at purchasing power.

ISSUING OF CREDIT SUBSTITUTES FOR MONEY AND THE RISE IN PRICES.

Up to a very recent period the leading economists in the great endowed colleges of the country were holding that the increase of gold was the cause of the rise in prices. President Taft was misled by the statement, and said in his speech before the Republican club in New York, February, 1910: "The reason for the rise in the cost of necessities can easily be traced to the increase in our measure of value, the precious metal gold."

The advocates of the so-called gold standard of value can no longer conceal or deny the fact that the enormous inflation of bank credits has caused a much greater rise in the general level of prices.

This inflation is conclusively shown in the report of the Comptroller of the Currency, 1912. The so-called banking power of the United States, chiefly loans of bank credit, shows an inflation of $19,000,000,000 of bank credits since 1890, while the total increase of all kinds of money, including gold, in our monetary system has increased only $1,200,000,000. It is now estimated that the banking corporations of the world have issued about $90,000,000,000 of these bank credits as a substitute for money. With only $7,000,000,000 of gold in the monetary systems of the world, the absurdity of contending that gold is the standard of value is now too apparent to be concealed any longer from the people.
"I would ask these gentlemen who say they believe that 25.8 grains of gold fixes the purchasing power of the dollar and constitutes the standard of value in the United States to answer the following questions:

"First. If the $750,523,267 of nonlegal-tender bank notes—credit money—were withdrawn from the money system of the United States, what would be the effect upon values? There is only one answer: Any man of average intelligence knows there would be a great contraction of the circulating medium, a consequent fall in prices, a tremendous increase in the purchasing power of the dollar, ending in a money panic.

"Second. If the $727,886,731 of silver currency now debts redeemable in gold, and the $344,221,741 of nonlegal-tender greenbacks were withdrawn, what would be the result? A money panic would follow sufficient to create financial ruin and repudiation throughout the country and the present standard of values would be absolutely destroyed.

"Is there a man who still believes that if the silver currency, greenbacks, national-bank notes, all nonlegal-tender currency, were taken out of the money system of the United States there would be no fall in prices of other things, and that 25.8 grains of gold would still fix the purchasing power of the dollar or money unit? If so, no other term would describe him than a 'gold monomaniac.'"

It is conclusively shown in Daniel on Real Money that gold is an extra burden and a handicap on international trade and is not necessary in the settlement of trade balances. Lord Goschen admits it, and states: "Trade balances and exports are not paid for in gold, but the money of the country adjusted to the currency of the debtor country, or settled by the interest-bearing securities of same."

Present condition of the gold supply (Report Director of Mint, 1912, p. 689):

"THE MOVEMENT TO INDIA.

"The persistent absorption of gold by India which began to occasion comment in the early part of 1911 has become decidedly the largest factor in the question of future banking reserves. The annual production in the world has increased since 1908 from approximately $442,500,000 in that year to perhaps $470,000,000 in 1912, or somewhat less than $30,000,000. The economists of the world have been busy tracing the effects of these increasing supplies upon prices and forecasting the influence of future supplies. Meanwhile the net imports of gold by India have risen from $56,346,699 during the British fiscal year ended March 30, 1908, to $134,409,087 during the fiscal year ended March 30, 1912. For five years they have been as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>1907-8</td>
<td>$56,346,699</td>
</tr>
<tr>
<td>1908-9</td>
<td>14,130,583</td>
</tr>
<tr>
<td>1909-10</td>
<td>81,017,584</td>
</tr>
<tr>
<td>1910-11</td>
<td>$90,270,816</td>
</tr>
<tr>
<td>1911-12</td>
<td>134,409,087</td>
</tr>
</tbody>
</table>

"The importations of India last year plus the world's industrial consumption equaled fully one-half of the world's production, leaving perhaps $210,000,000 or $220,000,000 for monetary use. At that rate bank reserves would scarcely gain more than 50 per cent in the next 10 years."

"The annual increase of gold during the last three years has been only $9,088,400 for the whole world. Pyramiding more debts and currency issues redeemable in gold as the money of ultimate redemption is the monumental fraud and absurdity of the century.

(Thereupon, at 3 o'clock p. m., the committee adjourned its hearings sine die, and proceeded in executive session.)
SUPPLEMENTAL HEARING.

MONDAY, OCTOBER 27, 1913.

COMMITTEE ON BANKING AND CURRENCY,
UNITED STATES SENATE,
Washington, D. C.

The committee assembled at 11.40 a. m.
Present: Senators Owen (chairman), Hitchcock, O'Gorman, Reed, Pomerene, Shafroth, Nelson, Bristow, Crawford, McLean, and Weeks.

The CHAIRMAN. Prof. Jenks, the committee desire you to explain the principles of the proposals that you have concerning a banking and currency measure.

Senator Nelson. And you might give us a synopsis of each section of your proposed bill.

FURTHER STATEMENT OF PROF. JEREMIAH W. JENKS, OF NEW YORK UNIVERSITY.

Prof. Jenks. That is, the changes that I had suggested?
Senator Nelson. Yes; and you may go on in your own way.

The CHAIRMAN. Senator Bristow, you might suggest what you had in mind with reference to Prof. Jenks.

Senator Bristow. Yes. As I understood, Prof. Jenks, from the conversation I had with you this morning, you have, in compliance with our request to submit your suggestions as to a Federal reserve bank with branches, taken the pending bill and amended it so as to conform to your notion.

Prof. Jenks. Yes; that is it.

Senator Bristow. Instead of submitting a separate and independent bill.

Prof. Jenks. Yes.

Senator Bristow. And I think it would be well for you to first proceed to explain the changes you recommend, and then make whatever comment you think would be desirable upon them.

Senator Nelson. Would it not be better for Prof. Jenks to give an outline of his plan first, and then go into the details?

Senator Reed. By all means; that will give it to us in plainer form.

Senator Nelson. Yes; give us your plan in outline first.

Prof. Jenks. It seems to me that there are two or three principles that ought to be considered as fundamental in preparing legislation for any type of a monetary system of the United States. If we are going to have anything like a system, it is essential that there should

3153
be a unified interest of the different banks that make up the system, in order that there should not be competitive bidding for business, one against the other, and competitive bidding for reserves in times of emergency, such as we have had under our present system.

It has ordinarily been supposed that the chief weakness of our present system is the fact that there is no unified interest, but that there is this continual bidding against one another. On that account I have thought it wise to provide for a central bank.

Furthermore, if we are going to have this central interest, we need some unified management of the reserves; at any rate, these two provisions—a unified interest and unified management of the reserves.

Then, on the other hand, if the system is to do its work well throughout the country, there ought to be as wide a distribution as possible of loans and of credits, and in order that those credits may be granted wisely and that the loans may be issued to those that really need them and at the same time can give good security, the persons that have the immediate oversight of those loans ought to be persons who have lived and have done business in the different localities.

So that, on the whole, it has seemed wise that there should be one central bank, or, at any rate, one central power, with sufficient control to handle the reserves practically as one, and also that the different Federal reserve banks, if we are going to follow the system of the bill [indicating], should have their interests unified, so that there would not be any competitive bidding; furthermore, that the Federal reserve banks situated in different parts of the country should have full control of the making of the loans, subject to the general rules that would be laid down by a central Federal bank or by a Federal reserve board.

One should take into consideration also the fact that any bill of this kind must of necessity before it becomes a law be a matter of considerable compromise of different opinions. Inasmuch as this bill as it has been passed by the House forms a basis, I have tried to make just as few changes in it as I could and at the same time give to the central bank that was suggested the other day, especially by Senator Bristow, but by others also, sufficient control.

With this preliminary statement I may call attention to the main changes.

The first change, and the one that really involves practically all of the others, is in the second section of the bill, where, instead of providing for the Federal reserve districts, I have made a provision for a somewhat changed Federal reserve board and for the organization under that Federal reserve board of a Federal reserve bank—one central bank.

Perhaps I had better read this change.

Senator Nelson. Yes; we will be glad to hear that.

Prof. Jenks (reading):

SEC. 2. That within 30 days after the passage of this act, or as soon——

Senator Crawford (interposing). Are you now reading the section as you have changed it?

Prof. Jenks. Yes; as amended. Perhaps I should also say as preliminary that, in accord with the statement made the other day, I have provided in this bill that the Federal reserve board drop off
from its membership the ex-officio members; that it should consist of
nine members, six to be appointed without any restriction what­
ever by the President, subject to the confirmation of the Senate, and
the other three to be appointed by the President, subject to the con­
firmation of the Senate, from a list furnished, one from each one of
the various Federal reserve districts, by the people that choose the
directors of the Federal reserve banks. That I speak of now, be­
cause that will come out in this section.

Senator Crawford. Before you commence to read your proposed
amendment, would you prefer at this time to give a reason for this
last suggestion?

Prof. Jenks. It would be just as well; yes.

Senator O'Gorman. In other words, that gives a method by which
there may be some banking representation upon the reserve board?

Prof. Jenks. There are two things to be said, the first with ref­
terence to the dropping of the ex-officio members. It does not seem
to me that either the Secretary of the Treasury or the Secretary of
Agriculture have any time which they could give, in any efficient
way, to the management of a monetary system such as this.

In the second place, there is no reason to think that the Secretary
of Agriculture, anyway, and quite possibly also the Secretary of
the Treasury, would be experts in banking; but the essential point
is that they could not possibly have time to devote to it.

As regards the Comptroller of the Currency, he also has a great
deal to do in his present position; his work would not be lessened
by this bill—I mean his present functions—and there might be con­
lict between his new duties and his present duties. If he still re­
 mains as the Comptroller of the Currency and then becomes also a
member of this board, he is in quite a different position from any
other member of this board, and his relations to the national banks
are such that it seems to me it would not be wise to have him a
member.

Senator O'Gorman. Suppose you provide, Prof. Jenks, in this
connection, that the knowledge that the Secretary of the Treasury
may possess regarding the financial conditions, or the knowledge
that may be possessed by the Comptroller of the Currency will
always be available to the board?

Prof. Jenks. Surely.

Senator O'Gorman (continuing). Because they will both be public
bodies working in coordination and cooperation?

Prof. Jenks. Surely. And I should expect that the Federal re­
serve board would need to call upon both of them frequently for in­
formation; and, of course, it would be given by them.

Senator O'Gorman. Yes. I did not intend, really, to invite your
views with respect to that particular suggestion, but rather with
respect to the other one, which seemed to contemplate a modified rep­
resentation by the bankers, or the banking interests, in the Federal
reserve board.

Prof. Jenks. Yes. The special reason for that is this: It has
seemed to me, on the whole, wise that the capital for this Federal
reserve bank should be furnished, as under this bill, by the national
banks and the other banks that would be admitted to the system.

Senator O'Gorman. Why would that be preferable to having the
public furnish the money?
Prof. Jenks. Because I do not believe at the present time it is desirable to have this Federal reserve bank go into competition in the banking business with the national banks throughout the country. If this is to be a bank for banks, instead of a bank competing with the other banks for service to the corporations and to the individuals throughout the country—to be a bank for banks and in their interest—I think they should put up the capital.

Senator O'Gorman. Well, if the public subscribes $50,000,000 or $100,000,000, as might be required, for this central institution, would it necessarily follow that the people contributing that money would put this Federal institution in competition with the national banks?

Prof. Jenks. Not necessarily. But it might well be expected that, if the capital is to be provided by private individuals, the banks should do as does the Bank of Germany, the Reichsbank, or the Bank of France—i.e., it should do business directly with individuals and corporations, and not solely with banks. Situated as we are, it seems preferable that this be a bank for banks, and for banks alone. Now, I have made provision in this bill that, in case the banks do not subscribe a sufficient amount, then subscriptions should be opened to private individuals to supply what is necessary.

Senator Crawford. Prof. Jenks, right there may I ask you a question—

Senator Reed (interposing). I will make the suggestion here—

Senator Crawford (interposing). Just let me finish this, will you please, Senator Reed? I want to get this in the record here, because, to my mind, it is a very vital point.

Prof. Jenks. Yes.

Senator Crawford. Is it your theory that this is to be a reserve bank exclusively for the member banks and in their interests, as you put it?

Prof. Jenks. Well, no—

Senator Crawford (interposing). Because I think there is a very great question before the American public as to whether this really should not be a system to promote the general welfare of the American people, rather than a system for the benefit of the banks and, as you put it, in their interests.

Prof. Jenks. Well, I would like to say—

Senator Crawford (interposing). Now, if we are simply creating a law here for the banks and in their interests, and on that grounds alone, we are coming far short of extending the scope of this bill as I think the public mind believes it ought to be extended.

Prof. Jenks. I should not like to be understood as advocating any bill in the interests of the banks regardless of the public interests; and I probably misspoke myself or spoke hastily in using that expression. I think that the bill should guard very particularly against the measure being used, or this central bank being used, against the interests of the people. It should be so organized that it will be used in the interests of the people. Notwithstanding, I think that can be secured better by having this bank do its business with the banks of the country, and with the banks only.

Senator Reed. Now, Mr. Chairman, I would like to get into my mind Prof. Jenks's theory, and I think I will get it much better if he is allowed to proceed without interruption; and as he has full memoranda there I suggest that he take that up first and give us his
suggestions, and we can ask him questions afterwards. That is not said in the way of criticism of anybody. I have been guilty of this thing as much as anybody else.

Senator Weeks. Mr. Chairman, what time will the committee adjourn to? I want to be over in the Senate at the opening to-day, and I will have to leave the committee very soon.

Senator Hitchcock. I move that at noon we take a recess until 2 o'clock. Will that be time enough?

Senator Bristow. I think so.

Senator Weeks. Yes; I think so.

Senator Hitchcock. At 2 o'clock, I think that would be the best time.

The Chairman. Then it is so ordered.

Prof. Jenks. I think I can probably give the substantial changes which I suggest, Mr. Chairman, in 15 or 20 minutes.

The Chairman. Shall the Professor proceed without interruption?

Senator Bristow. I think he should.

Senator Hitchcock. I think we ought to have him start with his suggestions when we reassemble at 2 o'clock.

Senator Shafrath. I move that Prof. Jenks be permitted to proceed at 2 o'clock without interruption.

The Chairman. Is that the wish of the committee?

Senator Bristow. I think that would be well.

The Chairman. Then it is so ordered.

(Thereupon, at 11.55 a. m., the committee took a recess until 2 o'clock. p. m.)

AFTER RECESS.

The Chairman. Prof. Jenks, will you resume your statement?

Prof. Jenks. Perhaps it would be best if I simply read the main provisions, wherein this bill differs from the bill as it passed the House. Section 2 I have headed “The Federal reserve board.” It includes the powers also to organize the Federal reserve bank instead of the Federal reserve districts, and the section as amended would read in this way:

That within 30 days after the passage of this act, or as soon thereafter as may be practicable, the President of the United States shall appoint, by and with the advice and consent of the Senate, six persons who, with three additional persons to be appointed later by the President from a list of names submitted by member banks in the manner hereinafter provided, shall constitute the Federal reserve board. Until these three members last named shall have been duly appointed and shall have taken the constitutional oath of office the six members first appointed by the President shall constitute the Federal reserve board and shall have all the rights and powers conferred upon the Federal reserve board by this act.

It had seemed to me that it was wise to have this system organized and incorporated by the same people that are going to administer it, and I see no reason why there should be a separate organization committee, because if the board is to be constituted and appointed by the president, he can appoint, at any rate, a quorum and a sufficient number to organize at the beginning.

S. Doc. 232, 63-1—vol 3—78
Now, with reference to the bank [reading]:

The Federal reserve board within 30 days after its appointment shall proceed to organize the Federal reserve bank, with head offices in Washington, by offering to the national banking associations and to such banks and trust companies as shall be eligible for membership under the regulations hereinafter specified, to the amount of 10 per cent of their paid-up and unimpaired capital, shares of stock in the Federal bank, at par, payable in gold or gold certificates. If at the expiration of 60 days after the offer by the Federal reserve board $100,000,000 of stock has not been subscribed by the above-named banks and trust companies——

Senator Crawford. How many days?

Prof. Jenks. Sixty days after the offer. [Continues reading:]

$100,000,000 of stock has not been subscribed by the above-named banks and trust companies, the Federal reserve board shall extend the offer to the public to an amount equal to the difference between the amount actually subscribed by the banks and $100,000,000. No individual shall be allotted more than $10,000. Twenty-five per cent of the subscriptions, par value, shall be paid in gold or gold certificates by the subscriber within 10 days after the allotment has been made, and thereafter not less than 10 per cent per month until the entire subscription shall have been paid.

On completion of the subscription of $100,000,000 the said Federal reserve bank shall be duly incorporated under Federal law, in accordance with the usual legal procedure. As soon as incorporated the Federal reserve bank shall have power to perform such acts, to enjoy such privileges, and to exercise all those powers prescribed in section 5136 of the Revised Statutes, save in so far as the same shall be limited by the provisions of this act.

It is authorized to commence business when there shall have been paid in $25,000,000 in gold on its stock subscription.

The Federal reserve bank so incorporated shall have succession for a period of 20 years from its organization, and for further periods of 20 years, unless sooner dissolved by act of Congress.

Just a word of comment on this. It is desirable, if we are going to admit State banks and trust companies to this system, that they should be allowed to come in at the beginning, and so they are authorized to subscribe, under the rules that are laid down here and that may be prepared by the Federal reserve board when it offers the stock.

It may be worth while to say also that I think it politically inexpedient to have the charter of the corporation automatically expire at the end of 20 years and require affirmative action by Congress to carry it on. Any bank that is established now, or any system that is established now, ought to be established on the assumption that it is to be permanent, and that provision should be made for its charter to be renewed automatically at the end of 20 years, unless previously stopped by Congress. Of course, if anything should make it desirable to change the system or to repeal the charter, that can be done, naturally. But it should be necessary that affirmative action should be taken to stop the bank, rather than to continue it, because no matter how good the system may be, it is perfectly certain that if at the end of 20 years the question comes up of renewing its charter it will be made more or less a political issue, and that would be unfortunate.

Senator Crawford. That was true of the First and Second United States Banks.

Prof. Jenks. Yes. We may expect that to be true in this case. We are in the position, if we make the provision here, to abrogate
the charter of the bank if there is any need of doing so; but other­wise let it go on; I think it should be planned on the assumption that
it is to go on.

All of the rest of the bill is practically shaped, so far as changes
are made, with reference to this first change. There are only two
or three other unrelated provisions.

I may pass over, perhaps, the sections that remain the same. The
next important change is this regarding the stock issue:

The capital stock shall be divided into shares of $100 each, as now. It may
be increased from time to time as member banks increase their capital stock
or as additional banks become members, and shall be decreased as member
banks reduce their stock or cease to be members.

I see no reason why we should not follow the plan of the present
bill in that respect.

As regards the separate banks and their branch offices, I have
stricken that provision out, because that power would be given to the
central bank instead.

Section 4 is also largely rewritten, in this way:

The Federal reserve board shall divide the continental United States into
not less than 12 districts, which shall be apportioned with due regard to the
convenience and customary course of business of the community, and shall not
necessarily coincide with the area of such State or States as may be wholly
or in part included in any given district. The districts thus created may be
readjusted, different districts may be consolidated, and new districts may from
time to time be created by the Federal reserve board. The Federal reserve
board shall establish a branch of the Federal reserve bank in the chief com­
mercial center in each of the Federal reserve districts so created: Provided,
That the total number of branches shall not exceed one for each $1,000,000 of
capital stock of said reserve bank.

There is a material difference between that provision and the cor­
responding provision of the pending bill, and it is a difference that
seemed to me might appeal to those who were inclined to emphasize
the idea that the locality should have a good deal of control, and that
there should be a large number of member banks.

The chief objection—and I consider it a vital objection to the bill
as it stands—is that there are 12 of these Federal reserve banks. If
we consolidate them into one, then I should say that it is perfectly
practicable and on the whole rather desirable that instead of 12 dis­
tricts the number be two or three times that from the beginning,
because the banks are simply branches of the central bank, and it is
desirable that the directors of the branches in the different localities
be made up of local men who will understand local business condi­
tions, local credit conditions, and things of that kind. Those who
are opposed to a central bank may well feel that there is a fair equiva­
 lent offered them by providing, instead of 12 branches to begin with,
25 branches to begin with, and perhaps more.

Then, you will notice the provision that was made that the total
branches could not exceed one for each $1,000,000 capital; that is,
you can have a branch for every $1,000,000 stock instead of having
each regional reserve bank have a capital of $5,000,000. So that we
might begin with 100 branch banks, if that seemed desirable.

With reference to the boards of directors of these branch banks it
seemed desirable to make as few changes as possible, and I have left
the provision as to the boards of directors of the branch banks just
as they are with reference to the local Federal reserve banks, with
one exception, and that exception is this:
If the Federal reserve board, as the head of the Federal reserve
bank, has really the absolute disposal of the reserves, it would be
desirable in the different localities for the boards of directors of the
local branches to be so constituted that they would be pretty sure to
work harmoniously.
So I suggest that the chairman of the board of directors of the
branch, instead of being appointed by the Federal reserve board, be
elected by the board of directors of the Federal reserve branches
from class C; that is, the Federal reserve board would have the right
to appoint the three members of class C, as you will recall it is now,
and from those three the board of directors should elect the chair­
man. The Federal reserve board would be sure that all of those
three were thoroughly competent men, men whom they could trust,
any one of whom they would be glad to have act as Federal reserve
agent. There might be a considerable difference in the feeling of
the local district board as to which man they wanted as the chair­
man and as the Federal reserve agent. That is the only change there.
The next change is with reference to the increase and decrease of
the capital, and there is only one slight amendment. [Reading:] That the shares of the capital stock of the Federal reserve bank shall not
be transferred nor be hypothecated—
when such stock is registered in the name of a regularly incorporated banking
association, bank, or trust company. Nothing herein contained shall prohibit
shareholders other than banking associations, banks, and trust companies from
transferring or hypothecating their shares; but when such shares shall become
the property of banks they shall no longer be transferred or hypothecated.
If we are going to have the national banks, in the main, supply this
stock; it is desirable that they hold their 10 per cent, and that the
regulations be as provided in the House bill. But if an individual,
who would have no say in the management of the banks, puts up his
money for the stock with the idea of getting 5 or 6 per cent interest
in return, and perhaps also for patriotic reasons, there is no reason
why he should not transfer his stock to somebody else.
Senator Nelson. Would you not have a provision in connection
with that containing a limitation as to the amount that anyone could
own of that stock?
Prof. Jenks. I had a $10,000 limitation in it.
Senator Nelson. But that applied to the individual subscriptions?
Prof. Jenks. Yes; that applies to individual subscriptions.
Senator Nelson. Would you not have a similar provision there as
to the banks?
Prof. Jenks. Yes; they are limited to 10 per cent of their capital
stock.
Senator Pomerene. The individuals are without voting power?
Prof. Jenks. Yes; they are without voting power; there is no rea­
son why they should vote under the bill as it is.
With reference to the division of earnings, I had left that the same
as in the House bill, with the exception that the wording is changed a
little. When it comes to the division of the surplus above 5 per cent,
40 per cent shall be paid to the shareholders as extra dividends. Then some is stricken out, and then comes this:

All earnings derived by the United States from the Federal reserve bank shall constitute a sinking fund to be held for the redemption of the outstanding indebtedness of the United States.

I struck out the word "bonded." It seems to me to be desirable to leave some discretion there.

With reference to the national banking associations, also, I had suggested this change in the latter part of section 8:

That any national banking association now organized which shall not, within one year after the passage of this act, become a national banking association under the provisions hereinafore stated, or which shall fail to comply with any of the provisions of this act applicable thereto——

Now, the bill says: “Shall be dissolved,” and so on. And I put it as follows:

shall be allowed to continue business as under present law, but shall not be allowed to enjoy any of the privileges conferred by this act upon member banks.

I am inclined to think that if there is a central bank created with the provisions that are incorporated in the proposed bill, the national banks will almost all of them want to join; but in case they should not—and there is a good deal of conscientious objection on the part of some of them, who claim that they have the right to hold their present bonds—I should let them do business under the present law, without making any fuss. This would take away, at any rate, every excuse that they have for attacking the bill. You can say to them: “You may either stay out or come in, just as you please.” The more that stay out, the more private subscriptions will come in. I see no objection to it.

Senator Crawford. That removes the coercion?

Prof. Jenks. That removes it entirely.

Now, as regards the Federal reserve board, and this applies particularly to the last three members, of course——

That there shall be created a Federal reserve board, which shall consist of nine members, appointed by the President of the United States, by and with the advice and consent of the Senate, of whom six shall be selected with due regard to a fair representation of different geographical divisions of the country. The other three members of the Federal reserve board shall be selected by the President from among the candidates chosen by the member banks, in the same manner as the members of boards of directors of class A are chosen. Each Federal reserve district shall name one candidate upon the list, and the President shall appoint three for terms of two, five, and eight years, respectively, not more than one of whom shall reside in any one Federal reserve district.

That is, I think, clear on the face of it. The banks have the choice of a list of anywhere from 12 to 50 or 100, from whom the President shall select 3 at his will. It seems to me that will give the banks all of the power that they ought to have under the circumstances. They can be perfectly sure, then, that three men put on the board will be bankers, and especially skilled men, and at the same time it does not give them control, as I think they should not have control.

And if I may add a word further with reference to that, objection is made very strongly to having any interference at all with the President in making these appointments—any further, at any rate, than that one shall be a banker. And the case of the Interstate Commerce Commission and other commissions is cited. But it seems to me
that the situation is quite different. In the case of the Interstate Commerce Commission, until very lately, it had no real administrative functions at all. It was simply a supervisory board, though it did have power to declare that rates were unreasonable. Later, of course, it was given power to declare what rates were reasonable, and even to take the initiative. But this board is distinctly an administrative body, this Federal reserve board. It is really going to manage the banking business of the country; and it makes the situation quite different if you are appointing an administrative board from the case that you have when you appoint a merely supervisory board.

I think, also, that not merely the bankers but the people of the country at large would not object to that; in fact, I think they would be glad to be assured beforehand in the law that there was a minority that was sure to be trained men in the special field of business that is under consideration.

I should not favor their having any controlling voice.

With reference to the powers granted the Federal reserve board: Naturally, if the Federal reserve board is controlling a Federal reserve bank, as a matter of course it will examine the books and accounts of all of its branches. So that section is simply superfluous, and I have stricken it out.

So with reference to the permitting or requiring of a Federal reserve bank to rediscount paper. Of course, as they are all branches of a single bank, this discounting of paper in different sections of the country is absolutely under their control, and we do not need to say so.

So with reference to requiring one bank to rediscount the prime paper of another. That is understood. That goes out.

With reference to the suspension of the reserve requirement, I had provided for that in a different way, and that also goes out.

And with reference to the supervision and regulation of the issue and retirement of Federal reserve notes, and to prescribe the form and tenor of such notes, to add to or reclassify the reserve and central reserve cities, and performing the general duties and functions provided by the act, and making reports, all of that remains.

That is to say, I have stricken out only the provisions that would be understood, as a matter of course, from the Federal reserve board being in control of the central bank and of these other banks being simply branches. Everything else remains.

So, also, if this provision, or a similar one, with reference to the appointment of the Federal reserve board, is followed you do not need any Federal advisory council, and I have stricken that section out entirely.

With reference to the powers of the Federal reserve banks, with respect to the open-market operations, there is one amendment that seems to me important. The earlier parts of the section all remain, but paragraph d would read in this way:

To establish each week, or as much oftener as required, subject to review and determination of the Federal reserve board, a rate of discount to be charged by such bank for each class of paper—

and so on. I have changed that to read in this way:

The Federal reserve bank (the central one) has power to establish each week, or as much oftener as required, a rate of discount to be charged by the central bank and its branches for each class of paper, which shall be fixed with a view of aiding the commerce and business of the country.
Then, I add this:

It may upon special request of the board of directors of any branch permit such branch, for special reasons, to fix a rate of discount different from the general rate.

The intention of that is, that under ordinary circumstances this central bank shall have a uniform rate of discount fixed for the country as a whole, but that in case of special need in certain localities, upon request of the local branch, it may change it temporarily for that local branch.

It is, on the whole, extremely desirable that there should be as nearly a uniform rate as the business of the country will permit, a uniform rate of discount throughout the country. I am inclined to think that any provision of this kind, without doing any damage in all ordinary times and under ordinary circumstances, would tend to lower rather decidedly the rate of interest through the West and South; and, on the other hand, it would tend, probably, to raise slightly the general rate of interest—I am not speaking of call loans, of course—but the general rate of interest and of discount in the East. I think that unless that rise were very considerable the uniformity would more than offset any danger that could come. And provision is made for exception in certain special cases.

As regards the section on note issues there are two rather important changes. One is that the notes shall be redeemed in gold or gold certificates, which I assume are equivalent to gold, and the provision regarding lawful money is stricken out.

That this redemption shall be at the main office of the Federal reserve bank, at any branch of the Federal reserve bank, or at other redemption agencies which the Federal reserve board may, at its discretion, establish.

I think it is extremely desirable that the redemption of notes be made pretty easy, and that every effort be made to have them redeemed. If you abolish the separate reserve banks and have only one bank, you almost of necessity have only one kind of notes, and on that account I think measures should be taken to make the redemption easy.

Now, the second important change is with reference to the reserve against these notes.

Whenever any Federal reserve branch shall pay out or disburse Federal reserve notes issued to it as hereinbefore provided, it shall carry a reserve in gold or gold certificates equal in amount to 35 per cent of the reserve notes so paid out by it, such reserve to be used for the redemption of such reserve notes as are presented.

And then this is added:

If at any time the reserve of gold and gold certificates falls below 35 per cent face value of the notes issued, for each 1 per cent or fraction thereof that the reserve falls below 35 per cent there shall be a 1 per cent tax levied until the reserve has reached 30 per cent of the amount of the notes issued; for each 1 per cent deficiency of reserve below 30 per cent a tax of 2 per cent shall be levied.

That means, of course, that it will not be necessary to say there shall be a reserve of 33 1/3 per cent, and that the Federal reserve board may suspend that provision in case of need; but we put the amount of reserve at 35 per cent and then the bank will be able to accommodate people without any interference on the part of the Federal
reserve board by paying the tax. The tax will amount, as you see, to 5 per cent when the reserves get down to 30 per cent; and when the reserve comes down to 29 per cent, the tax will be 7 per cent; and when the reserve is 28 per cent, the tax will be 9 per cent; at 27 per cent it will be 11 per cent; and the pressure would become so severe before there was any danger of the exhaustion of the reserve that there would be no doubt at all about the reserve always being sufficient to meet any demands.

Then another point in connection with that is this: That when the pressure was real, as it is likely to be from time to time, the local borrowers can afford to pay and ought to pay and would be willing to pay a good rate of interest for the notes that are issued to them. There is no question that in 1907 and other times of crisis borrowers, in order to save their business, could easily have afforded to pay even as high as 20 per cent rather than not get the money. It is a temporary matter for a short time, and this provision puts the pressure on, and at the same times does not require that there shall be any suspension of the law, which, I think, is in itself decidedly wrong in principle.

All the provisions with reference to changing collateral and matters of that kind to remain the same.

With reference to bank reserves, I had put in the same provision that there is with reference to the reserve against circulating notes, excepting that instead of the reserve of necessity be held in gold it may be held in gold or lawful money. But with reference to the percentage tax which should be levied the provision is the same.

The provision with reference to bank examinations is the same.

There is one slight change with reference to the loans on farm lands near the close of the section:

Any such bank may make such loans in an aggregate sum equal to 25 per cent of its capital and surplus—

And then I add this:

But in no case in excess of 50 per cent of its time deposits.

It seems to me that loans that are made on mortgage ought to be made solely with reference to time deposits and not with reference to call loans—

Senator Bristow. Call deposits you mean, do you not?

Prof. Jenks. Call deposits, I should say; yes.

So also with reference to the savings-bank provision. If that is to stay in at all, and I have no serious objection to it that I know of, I think that should remain practically as it is. The banks that are doing business of that kind, I see no particular objection to their continuing to do so; although, as I said the other day, with reference to many of these provisions, I think it would be better to confine this bill pretty largely to the one special topic and take care of those matters under separate bills.

That covers the main points, Mr. Chairman, and I should be glad to do what I can in the way of answering questions and explaining any particular provisions of the bill.

Senator Reed. Prof. Jenks, you spoke about having banks nominate three members of the central board. Now, let us assume this case, that when we come to organize this bank the national banks or
other banks all combine to take only a part of this stock, or after having taken it dispose of a large part of it to private parties.

Prof. Jenks. They are not allowed to do that under this bill.

Senator Reed. Well, there would be no objection to permitting them to do it, in my opinion, if you allow private parties to hold the stock. But suppose when you went to organize the bank the banks took one-third of it and the outside people took two-thirds. Do you think, in that event, the banks ought to be allowed this same representation, or should there be a provision made to allow the holders of the stock outside of the banks some representation on the board?

Prof. Jenks. I should be entirely willing to have it changed in such a way that if the banks did not take, we will say, as much as half or more than half of the stock, their representation shall be in proportion cut down. I think that will be fair. Might I add just one word?

Senator Reed. Yes.

Prof. Jenks. My impression is that under the provisions of the bill as it stands with the central bank, there would not be much question that the banks and the trust companies would subscribe all of this $100,000,000, and it was practically upon that assumption that I had made this provision.

Senator Reed. You changed one of the clauses of one section. The substance of it was, as you changed it, that the rate of discount should be such as to accommodate "the commerce of the country." I think I am correct on that. It is back some distance in your manuscript.

Prof. Jenks. I will look for it in a moment. I will read the words in this bill as regards that.

Senator Reed. Well, I want to suggest to you that if your plan was adopted here as the basis of legislation it would be well to put in something besides "to accommodate the commerce of the country." I think the business of the country, "the business and the commerce of the country," would be better. In other words, the bank ought not to exist alone for the commercial classes.

Prof. Jenks. Oh, I quite agree with that. Unless it is here in some general form, I quite agree with you.

Senator Reed. With regard to your interest rate, where the reserve falls below a given point, you provide there for an interest rate of, first, 1 per cent—

Prof. Jenks (interposing). I said 1 per cent for each 1 per cent deficiency.

Senator Reed. And, of course, it might get to be 20 per cent, and your suggestion was that the bank could recoup itself by charging its borrowers. Now, it might charge a borrowing bank, possibly, but the borrowing bank could not recoup itself from its borrowers, because of the usury laws of the various States. What would you do about that? For instance, in my State, if they took a note with more than 8 per cent it would be a void note; the whole note is void.

Prof. Jenks. I suppose, Senator Reed, that under present conditions in many of our States where there are usury laws, which I do not believe in, there is such a thing as charging a commission for the loan, which is different from the interest, is there not?

Senator Nelson. The courts have decided, of course, that with respect to national banks the usury laws of the States do not apply.
It is the usury law that is contained in the national banking act which applies.

Senator REED. Have they held that if, for instance, I go to a bank in my State and want to borrow money and the bank charges me more than the legal rate there, that that is not usury?

Senator NELSON. Yes; a national bank is governed by the usury law contained in the national-bank act.

Senator REED. That settles the whole question, then, Senator Nelson, if you are correct.

Senator NELSON. Oh, yes; that has has been decided time and again.

Senator REED. Well, it entirely escaped me.

Senator NELSON. We have a usury law by which they forfeit the principal and interest; the national banking act, as I recall it, provides only for the forfeiture of three times the interest in certain cases; that is all. And the courts have decided that that law applies to a national bank, and not the State law; so that we would have a right to regulate that under this law.

Senator REED. I have never looked that up.

Senator O'GORMAN. Then, again, Senator Reed, I have always understood that it was always easy in all the States to circumvent the usury law with respect to banking transactions, because the usury law only applies to the persons immediately concerned with the transaction; as between the maker of the note and the person to whom it is delivered, there could be usury up to that point. A bank or any individual, however, can thereafter buy that paper at anything they can procure it for without usury.

Senator REED. That can be done, unless it is merely a subterfuge.

Senator O'GORMAN. They can buy it for 60 per cent, 90 per cent, or even 25 per cent of its par value.

Senator REED. That is a question of fact in my State. I think the decision Senator Nelson speaks of, if he is correct—and I have no doubt of his correctness—would end the matter.

Senator NELSON. Yes; it is true; there are a great many decisions as to that. I had occasion to look up the question while I was in practice, and I know it is true.

The CHAIRMAN. That is the law; and the banks get around it by simply buying paper.

Senator SHAFROTH. You can contract for $100 for 100 per cent a month, if you want to.

Senator BRISTOW. Now, Professor, this plan of yours is a modification of the present bill so as, in substance, to authorize this central board to administer a bank and regulate the operations and activities of the branch banks through a central bank instead of through executive orders. That is the substance of it?

Prof. JENKS. Yes; that is the substance.

Senator BRISTOW. While it seems to me that that would be an improvement from the administrative point of view, my objection is fundamental. First I should like to see, and I want to know what objections you see to it, a Federal bank, the stock of which is owned by the people of the United States and not by the banks; the subscription to the stock to be as widely disseminated as possible, so that when the invitation for subscriptions is issued, in the accepting of these bids those bidding for the smaller amounts would be first
accepted, thereby guaranteeing a very wide distribution of the stock. Let that bank be administered by a Federal board appointed by the President; let its purpose be to fortify the present banking system of the country, not to change or demoralize or break up or take from the capital stock of the present banking system of the country, but to create this independent Federal reserve bank, which shall be a bank of reserve, a bank of discount, a bank of deposit, possibly, and a bank of issue.

Now, what objection have you to the organization of a bank with such a stockholding and such a control?

Prof. Jenks. May I ask also whether the bank, as you have it in mind, would engage in discounting or making loans to private parties?

Senator Bristow. Personally, I think, yes; but there is some objection to that from other people that believe in this general system, and I have left that open. I see no reason why it should not, for the purpose of establishing its rate, go into the open market, as this bill provides, but I do not think it is desirable or necessary in this country for it to go into the general banking business.

Senator Crawford. I should like to have the professor state what objection there is to it. I understand the Bank of England and the Bank of France deal with the public, and the Reichsbank deals with the public; what is the objection to this bank doing the same? That is, Professor, when you get ready to discuss the proposition of Senator Bristow's, I should like to hear you on that line also.

Senator Nelson. I suppose one of the main objections would be that it would be a competitor of the other banks.

Senator Crawford. So are those banks over there.

Senator Bristow. I should be glad for you to advise the committee what objection there is to such ownership of stock and such control of a bank; and, first, have it a bank for the purpose of fortifying the banking system, and not for the purpose of doing a general banking business, and then discuss the suggestion of Senator Crawford later.

Prof. Jenks. To be perfectly frank about the matter, the chief reason why this was put in as it is was really that it was considered a matter of expediency to make as few changes as possible in the present bill. But I think there are other good reasons. I do not think that at the present time there is any need of increasing the banking capital of the country along the line you have suggested and to the extent you suggest. I think that if the present national banks and State banks and trust companies are getting the advantages of the rediscount, of the management of the reserves, etc., that will be provided under this system, they can very well afford and will be very glad to furnish the capital, and we had better leave the capital of private individuals for other investments unless it is needed. I do not see that it is.

Then, in the second place, it is desirable that the banks as such be directly interested in the ownership and the management of this bank. The banks now, in my judgment, taking them as a whole, are doing their business to the great advantage of the people of the country; they are rendering them good service—a very great service,
in fact—and it seems to me what we wish to do is to put them in a position to render a still greater service; and we do not need to fear as long as we have them under proper control. If they furnish the capital stock, and if they, by furnishing the capital stock, have the right to choose these local boards of directors, it will, after all, be giving us continually in this new system the skilled management that we should expect to get. Moreover, I think the people would be more certain they were getting skilled management and would therefore have greater confidence in the system.

Then, if we were to have the money subscribed by individuals, if we were to have a board appointed by the President, and that board to appoint all the local managers throughout the country, there would be a third objection, which, I think, is really a very serious one. If we were to have this central board, appointed by the President, given all that power of appointing individually all of the branch managers throughout the country, there would be a good deal more danger of politics in the bad sense of the word than if we leave the appointment under the present system where the local boards of control are practically chosen, to a very great extent, by the managers of the local banks. Does that cover the points you raised?

Senator Bristow. That covers the points.

Prof. Jenks. I do not mean to ask if you agree with me.

Senator Bristow. I disagree very much.

Senator Reed. I want to challenge your thought and the thought of the Senator from Kansas and all the members of the committee on one proposition. It was suggested here the other day by Mr. Vanderlip that we organize a bank along the lines which have been designated by the Senator from Kansas; that is, a bank to have a gold reserve of 50 per cent back of all its issues, and to be charged practically with the business of maintaining the gold reserve. Now, no bank was necessarily to have any stock in it; it was to be an institution set up by the people of the United States and managed by the Government, charged with the duty of maintaining the gold reserve, $2 being out against each dollar of gold.

Now, it occurred to me, and I am suggesting it to you for your consideration, that it would be a very delightful situation for the banks to find themselves in. If, then, Mr. Vanderlip wanted $100,000,000 of gold or $50,000,000 or any other amount, he could gather up these notes of this bank and come over to Washington and say, “I want that much gold; I want to ship it to Europe.” And it would be the business of that bank to furnish that gold, and in failing to do so it would be defaulting in the chief obligation it was created to fulfill. If, on the other hand, the bank itself and all other banks were the owners and themselves charged, as owners, with the maintenance of that gold reserve, a very different condition would be presented.

Now, I am not sure I am correct, but I should like to know what you think about it.

Prof. Jenks. That is rather a big question for an offhand answer, but I should say this: Barring completely the implication of any intention that might be an evil one on the part of the individual bank, I should be glad to agree in the main with your statement.

Senator Reed. I expressly repudiate any thought of reflecting upon anyone. I am talking about the possibilities of the system.
Prof. Jenks. I should be inclined to agree with your suggestion. Let me say, in the first place, I do not think the calling in of individual capital is necessary; and, in the second place, as I said before, I think if we have the responsibility of the banks in the system it would be better for the management of the system. I think your suggestion simply emphasizes my thought, that if they are interested and must take the responsibilities, they would take the responsibilities, and it would remove the danger of any one of them that might be in a critical position really threatening the stability of the system.

Senator Reed. It occurred to me this way: If I were running a great bank, frequently finding that I was endangered in some way, as through a lack of gold, it would be a most desirable thing for me if the Government of the United States or the people of the United States had to give it to me every time I wanted it. I think I should be in a very different position if I had to go to myself and other men similarly situated and really injure myself when I asked for gold that could not be given.

Senator Bristow. But, Senator, what is to hinder the banks from doing that now?

Senator Reed. Under the system that is proposed—answering you myself—the banks own—assume the banks own the central bank—

Senator Bristow. I mean the present banking system. Why can not you do it to-day?

Senator Reed. Well, there is no way for them to do it, except by bringing in national-bank notes, and the minute they bring in the national-bank notes, of course they curtail the currency issued by the banks. I am not sure I am right.

Senator Bristow. They do the same in the other case, Senator, exactly. Professor, suppose that Mr. Vanderlip should get a million dollars' worth of national-bank notes and go to the Treasury and say, "I want the gold on this," he could do it.

Senator Shafroth. They do not usually do it unless they have a genuine order from Europe for gold.

Senator Reed. Then comes the question of the bonds only drawing 2 per cent.

Prof. Jenks. There is this other point, I think, in Senator Reed's statement that is worthy of consideration. If the banks themselves are stockholders, charged to a large degree with the administration of the system, they will take a more direct daily interest in the success of the system all the way through, and that is quite worth while, I think.

Senator Reed. Let me apply that. There is a regional reserve bank established at New York, or will be under this bill. All the banks of New York City will be members of it. They will be the people who contribute the capital. Their reserves will be in there. They have thereby given hostages for good behavior and not to make a run on their own bank; and any bank that tried it, if it did it for selfish or improper purposes, would meet with the condemnation of the other banks. Take Mr. Vanderlip—and I use his name respectfully. The moment his bank came in and made a demand of that kind he would raise a hornet's nest around his own ears; whereas if he came over to Washington to a wholly independent concern, it would present an entirely different situation.
Senator O'Gorman. Will you allow me to make an observation here bearing on that whole situation?

Senator Reed. Yes.

Senator O'Gorman. If an individual banker felt greater liberty in drawing out gold reserves from a bank operated with the people's money than he would from a bank operated in part by his own money and the money of other bankers, do you not think the consequences in the one case would be just as serious as in the other to the stability of the banking interests generally of the country? In other words, if, without any restraint, he availed himself up to the limit, or a number of bankers did, of the opportunity to deplete the Government Treasury or the reserve national bank of its gold reserve, and thereby menaced the stability of the banking interests of the country, would not he bring down upon his own head the same condemnation as if he had taken it from a bank in which he had a personal interest? In other words, to answer my own question, it seems to me that the same influences would restrain him in the one case as in the other.

Senator Shafroth. The banks have always been very loyal to the gold reserve. Denver gave to the United States Treasury more than $1,000,000 of gold coin in the panic of 1893.

Senator Reed. Not impugning the motives of anybody, I have no patience with those who picture bankers as a selfish class and as a dishonest class any more than other men are selfish or dishonest, but it seems to me that a very different proposition would be presented to a man who wanted gold who could come over to an independent institution at Washington, for which the Government was entirely responsible, and get it, than would be if he had to go to a bank in the city of New York that was composed practically altogether of the banks of New York, that had to have its capital maintained by the banks of New York, and that if it fell would crush the banks of New York directly, including the man who brought about the disturbance; that that presents a different question to that man's mind than it would if he were going to get it from the Government at Washington, as if he might send to the Bank of England to get it. I agree there is great force in the suggestion of Senator O'Gorman, but is it not a different question?

Senator Weeks. Let me make another suggestion about that. Why would the bank want the gold?

Senator McLean. That is the point?

Senator Weeks. What is it going to do? You suggest that gold is going to be withdrawn for purposes of export. Now, if you are going to export the gold there must be a demand for gold, or we must be owing the other side some gold, and it must be exported, or the debt has to be paid in some other way.

The Chairman. And pay freight on it.

Senator Shafroth. And the loss from abrasion.

Senator Weeks. If you are going to withdraw the gold and ship it, it must be profitable to do it. But suppose it is; what are we going to do under this plan? We are presumably going to establish a bank or system which will at once take cognizance of the fact that gold is being shipped out and change the interest rate, or take some other means of replenishing its gold supply.
Senator O'Gorman. Let me ask you a question, Professor, to get your view. Suppose the general features of the pending bill were observed with regard to the creation of a system, namely, that you have a reserve board and five or more regional banks, and you provide, as the pending bill does provide, in part at least, that the national banks within the several regions will contribute the capital for that regional bank by a 10 or 5 per cent contribution of their capital stock, with a provision such as you now suggest that if within 60 days the national banks within those regions do not subscribe or contribute the requisite capital the public may be invited to subscribe the remainder. Would you confine the "public" to people residing within the territory covered by that regional bank, or would you invite the public of the country, giving preference to the residents of the particular region?

Prof. Jenks. I do not see any reason why there should be any restriction as regards residence at all, as long as the people are citizens of the United States, giving preference simply to those who come in first, or possibly, as the Senator suggested, the smallest subscribers first. I do not see any reason why, because these people would not have any particular voice—would have no voice, in accordance with the provision made here—in the management of the bank; they would simply be drawing their dividends. I do not see any reason why there should be a restriction.

Senator Weeks. Let me ask you one more question——

Senator O'Gorman (interposing). Pardon me; just one question more. Coupling with this last suggestion of mine a similar observation of your own, previously given, I see how one of the two objections tendered by the country banks may be obviated. In passing, I have been more concerned in this entire hearing about the attitude of the country banks than about the so-called large banks, because I look upon the two particular objections the country banks make as objections quite well founded. The second objection they offer relates to the diminution of their return from exchange charges. Have you made any suggestion regarding the feature of the pending bill on that subject?

Prof. Jenks. I think this amendment that was made in the bill itself just before it came over from the House—that they may make charges covering their actual expenses—covers part of that. I think, however, there is still more that might be said. At the present time when collections are made by country banks there is very frequently a sending of the check and the collections through three or four or five different banks; it is a circular, irregular process. Under the plan proposed in this bill, so far as I can see, every national bank would have only two transfers. It would go direct to the regional bank and back again. It seems to me that that saving in the actual expense of collection is going to offset the objection to a considerable extent.

On the other hand, I think this should be said: Unless I am decidedly misinformed—I have made some inquiry, but I wanted to make more, from country bankers in whom I have confidence—a considerable part of the profits the banks make now in collecting checks on their own banks is a profit they ought not really to be allowed to make. Take, for example, an illustration that I think I used the other day. Suppose when I was living at Ithaca, in order to pay
a bill in Wilkes Barre I sent my Ithaca check down to a dealer in Wilkes Barre. He would deposit that check in his bank and that bank would send it to Philadelphia. That Philadelphia bank possibly would send it direct to Ithaca, or perhaps to Ithaca through Syracuse.

Moreover, I understand that the custom is—I am not speaking of the Ithaca bank specially, but of any local bank—a common custom is to have an arrangement made with the Philadelphia bank, so that when the Philadelphia bank sent that check in for collection they would charge the Philadelphia bank with 2 or 3 cents of the 10 cents, we will say. They insist that if it comes in in that way they will make a charge, and they do get some part of their profits out of that. Moreover, I am told it is usual in a small town, where there are only two or three national banks and trust companies, for the banks to combine and agree that none of them will do that work short of a similar charge, and the charge is high enough to give them a profit. I think this bill should stop that kind of thing. I think it is perfectly proper, as provided in this bill, that the actual expenses of collection should be covered. Beyond that I do not think they ought to be allowed to make profits on the checks on their own banks.

Senator Crawford. Let me break in there to say that in the Pujo committee they made a special investigation of the matter of charging on out-of-town checks, and it amounted to a great deal of money and became the subject of more or less abuse, and it is one of the things regarding which the Pujo committee makes a specific report. We ought to keep that in mind in dealing with the question here.

Senator O'Gorman. I think it is said that $6,000,000 is charged on the commerce of the country.

The Chairman. That is not really true, however.

Prof. Jenks. May I make another suggestion? I think this bill as it is, providing that the regional reserve bank shall act as a clearing house under this law, will, to a very great extent, lessen the actual expenses, as I intimated before.

Senator O'Gorman. I know; but it will diminish the opportunity of the small bank to increase its earnings.

Prof. Jenks. Exactly; but it seems to me that while that is true, so far as the small bank's profit is dependent upon collecting checks drawn upon itself, it ought not to have that profit. It does, however, under the present circumstances.

Senator Hitchcock. Let me put another suggestion to you right there. Suppose there are 1,500 towns in the United States, and I believe there are many more, where a bank of $10,000 capital could not exist by the simple process of loaning 80 or 85 per cent of its deposits to the borrowers in the community, and if it were compelled to confine itself to the interest on 85 per cent of its deposits it would go out of existence and the community would be thereby deprived of a place to deposit its little savings and would have to go back to stockings and hiding places under carpets, in bedticks, etc., and lose that little public utility. What will that bank do if it be not permitted to eke out an existence by this method of charging just enough, as the evidence shows it does, to pay the reasonable salaries of a couple of officers and a very moderate income on the capital invested?
Prof. Jenks. I think I would answer that question by asking another. Is it not entirely possible, and in fact probable, that in those cases where a bank needs some extra advantage in order that it may carry on its business it can get it in some other way than by interfering with the course of commerce along those lines?

Senator Hitchcock. It is absolutely not——

Prof. Jenks (interposing). Just one moment. If we go back into commercial history a little, we shall find that there are a good many cases where the banks actually charged for the receipt of deposits. I may say, along that line, that if it became a case of necessity it might be better that that town should pay enough for the privilege of making deposits and the other work the bank did, and pay for the transmission of drafts and services of that kind than to interfere with the general commerce of the country by this roundabout system of collections you have now.

Senator Hitchcock. Of course, that is a very good theory, Prof. Jenks, but the fact is the people would not do it. The people of that community would not pay for that, and it is only by this indirect way that it is possible to build that bank up. Those little banks eke out an existence by doing a little collecting, by writing insurance, by one of the officers acting as notary, and in that way they furnish a very valuable little utility. The great difference between one of our western towns of a few thousand population and a town of Europe of a few thousand population is that ours is a little town and there it is a village, because they have not this facility which we have in the United States.

Prof. Jenks. May I make another observation? I happen to have had some experience in the small towns of the Middle West, towns of 1,000 and 2,000 population. My own observation is that the local banks by doing this notary business, and particularly by shaving notes and doing other local business that it has a chance to do along monetary lines, not merely ekes out an existence, but a very good existence. As a rule, they are making very high profits; hardly anybody else in the community is making so good profits. This collection business that you speak of is often done, and may just as well be done by some lawyer or other person who sets up a collection agency. I do not believe there are very many cases in the Middle West in these smaller towns of 1,000 or 1,500 inhabitants where the bank needs this special exchange charge in order to live. I think they will be able to get their living in other ways that are perfectly proper and much easier for the community and that will not interfere with the general course of business.

Senator Shafroth. Is not this charge very irksome to the people, and resented by them very largely?

Prof. Jenks. I think it is. Take, for example, my own case. When New York City is charging 10 cents for the collection of out-of-town checks, and I send down to New York for $10 or $15 worth of books and have to write a check for $15.10, I do not like it. It seems to me that the provision to allow them to make a reasonable charge covering their cost is reasonable.

Senator Crawford. The New York Clearing House has a regulation that these banks must make this charge, and if they do not do it they are subject to discipline.
Prof. Jenks. I know that is true, but when this bill is put into effect I think it will not be true.

Senator Shaffroth. In the Pujo report there was a good deal of criticism on that, too.

Senator Crawford. Oh, it was the subject of special inquiry. Mr. Untermyer claims that the agreement is in restraint of trade and in violation of the antitrust law.

Senator Reed. I think Mr. Untermyer claimed a good many things in that hearing.

Senator Crawford. That may be, but I wanted to call attention to it as one of the matters upon which they made a special report.

Senator Shaffroth. The report, as I remember it, was to the effect that the compensation the bank got by holding the money in the meantime was sufficient to reimburse it for the expense of collection.

Senator O'Gorman. I should like, Professor, to put another question to you.

Prof. Jenks. Will you pardon me a moment until I answer a question that was put earlier? That was the question raised by Senator Reed with reference to the personal ownership of the capital of the central bank. I agree with the general position that Senator O'Gorman took on that, because I do not see that there is any essential difference between the two, excepting this: I think, if the national banks in New York or any other locality are themselves putting in their capital, and—what is still more important—are themselves selecting the managers of the local Federal reserve banks, they will take an immediate interest in that work and will look after the workings of the Federal reserve bank in a way that will tend to increase very decidedly the security of the whole system as compared with what would be the case if the subscription, as has been suggested, were to come from private individuals all over the country with preference given to smaller contributors.

One word further. I think also that with this added confidence and the added skill we could get in that way, presumably, we should have the confidence of the people throughout the country a great deal more. Now, a good deal has been said—and, I think, with justice in part, but in part only—to the effect that this Federal reserve banking system and the Federal reserve bank ought to be run not simply for profit, but for patriotic reasons—the good of the country. I quite agree with that, and I think we ought to prevent their making too much money; but at the same time we all know, as a matter of fact, that any one of us takes a good deal more interest in any work if we do have some little financial interest there also. We do look after our own money affairs. I think, myself, that on that account it is desirable to have the skilled bankers, as long as they have not the power to harm, given enough interest in this system so they will be watching it carefully all the time.

And it is for that reason also that I favor the proposition that they should have a share in the profits above 5 per cent, because I do not think they can get any exorbitant profits and it will give them the opportunity and put upon them the necessity of watching and seeing how the work is done. I do not think there is any likelihood of abuse under the provisions of the bill, and their interest, I think, is very desirable.
Moreover, I may say another thing with reference to the appointment of the boards of directors of the Federal reserve banks. It is a fact, speaking generally, that if you have a great institution that is a Government institution pure and simple, with the people appointed by the Government to run its business, it is likely to be more expensively run and not to be run so scientifically or carefully as a private institution. I think we ought to guard against any such abuses, and in the system before us, as I think is fully provided in this plan, so far as we can get skilled supervision of a private nature with a small amount of private interest in it we shall get a better system than if we depend entirely upon the Government.

Senator Bristow. Now, Professor, I suppose you and I have very different opinions as to the control of the banking system of the country by a few men in New York. I think they practically will control it under the system that is proposed in this bill much more than they do now, and I think they control it too much now. I am perfectly willing to say this: That I do not propose to favor any reserve bank system that permits the banks of the country to control it. If we are going to have an independent banking system and preserve it now is the time to do it. And if it is insisted that we are to have these regional banks instead of a bank of the people, which has been suggested, then I think the Government should appoint the officers that administer the reserve banks. There is no more reason for appointing the Federal board by the President than appointing the administration of the regional bank by the President, because that is actually the operating force that does the business.

Now, do you think it would be better to have the regional banks, or the branch banks—whichever system may be adopted—governed by appointees of the President, or the board, regardless of the stock—that is, would you prefer to have the banks own the stock and have nothing to do with its management, or to have the people own the stock and have the management. I will put that differently. Would you prefer that the banks own the stock and the Government manage it, the branches as well as the central bank; or would you prefer that the people own the stock and the Government manage it? Which would be the best?

Prof. Jenks. I should prefer in any case that the banks own the stock.

May I comment a little upon what you suggest? I do not believe that under this system as it stands the banks in New York are going to control the system. As a matter of fact, the Federal reserve board is entirely appointed by the President, so there is no question about that. So far as the Federal reserve banks are concerned, the regional banks or the branch banks under the system proposed here, two-thirds of the directors are really absolutely under the control of the Federal reserve bank; so that while, as I say, under the system that is proposed in this bill as it passed the House, we can be sure of skilled supervision, we can also be sure that the Government prevents any abuse by private bankers. Now, I do think that the bankers in New York and the other bankers throughout the country are going to have a good deal to say about the management of the system, not because they have any power, not because they will be permitted to exploit the system for their own ends, but because they are men of training, men of character, men of weight in the community, and men that people
would be glad to consult with because they are persons of that type. But, in either case, I should prefer they own the stock.

Senator Bristow. Of course, I differ with you very radically as to that. Now, in connection with Senator Reed's question that he asked a while ago as to maintaining the gold reserve, I can not see why Mr. Vanderlip, and I simply carry on the illustration which he gives, could not now come down here and demand $10,000,000 in gold for national-bank notes, and the Government would have to give it, because we are pledged to maintain the gold standard. But it is not done. To my mind there is no more danger of it being done under the new system of notes than under the present system. We have no gold reserve at all now except against national-bank notes, and we have a reserve against the greenbacks. Now, they could deplete that gold reserve any day if they wanted to, but the banks do not do it. But to avoid the danger, as suggested by Senator Reed, should we not provide that the banks that were the beneficiaries of this system should maintain a gold reserve and replenish it whenever it is depleted?

Prof. Jenks. I do not quite see what you mean, Senator. We could make the provision now, of course, if we wanted to, that a certain proportion of this reserve that the banks are required to keep shall be held in gold. Is that what you mean?

Senator Bristow. Say we had a 50 per cent gold reserve behind the notes that are issued, and there should be a run on that gold reserve through these notes. Now, of course, if they could get enough notes together they could run the gold reserve out, but can we not make a provision that as these notes are redeemed the banks that are the beneficiaries of the system shall maintain a certain gold reserve in the Treasury and put the burden on the entire banking system of the country to maintain the gold reserve?

Prof. Jenks. As I understand the matter, that is done now under our present law, and it is provided in this bill. It is provided in this bill that each bank shall keep 5 per cent of its note issue in gold in the Treasury, and as fast as that is taken out it shall be renewed. The consequence is that under the present circumstances. supposing they present $100,000,000 of these new bank notes, as fast as they come in the Government would itself provide that the amount be supplied by the banks by calling upon them to make good the sums paid out.

Senator Bristow. Why could not the same provision be carried in here to protect the gold reserve of this Federal reserve bank?

Prof. Jenks. I understand it is carried.

Senator Bristow. That being the case, the suggestion of Senator Reed, it seems to me, falls to the ground.

Senator Reed. I am talking about the Vanderlip plan, which was a central bank owned by the people, the gold reserve to be maintained in that bank, without any provision in the bill, as I recall it, that the banks of the United States should in any way contribute.

Senator Bristow. But we can put such a provision in the bill as will remedy that defect.

Senator Reed. In other words, your idea would be that the banks should keep on deposit in this Federal bank a certain percentage of gold?

Senator Bristow. Yes.
Senator Reed. And when they drop below a certain amount they must replenish it? And if they do not replenish it, what then?

Senator Bristow. Then there would be penalties. I do not know what penalties we have now, but we could fix a penalty.

Prof. Jenks. You could put them into liquidation.

Senator Bristow. Yes.

Senator Reed. It is perfectly clear to me that we have to impose upon the member banks the duty of helping to maintain this reserve.

Senator Bristow. I agree to that. Perhaps they are——

Senator O’Gorman (interposing). I do not want to interrupt this conversation, but a good deal of this talk is naturally what will very often come up at our executive conferences, and perhaps if Prof. Jenks has concluded his observations we may resume the work we intended to take up.

Senator Crawford. He has not answered this question I brought up in connection with these questions by Senator Bristow. Now, I want——

The Chairman (interposing). I think the questions ought to be put to the witness and he be allowed to answer them.

Senator Crawford. The question I had in mind is, What objection is there to letting this bank, under the system provided in this bill, or any other that may be created, discount for individuals as well as for member banks?

Now, this whole propaganda has been put before the people as adopting banking practices of the old country, on the ground that our system is not up to date and is inefficient and all that, and every one of these banking systems after which we are copying, or from which we are expecting to take the best, contains a provision that this Government bank, or central bank, can do business with individuals, and it does. Now, I do not see why, in building up a system here, we should rest it alone upon the theory that it is to be an accommodation to the member banks. It may be a very great accommodation to an American citizen that has prime commercial paper of the class described here that he can go to this reserve bank or central bank and discount his paper; it may be a mighty wholesome check upon the banks of the country to give him that privilege as they have done it in the other countries. What objection is there to allowing him that privilege?

Prof. Jenks. I think there are two objections that can be made. In the first place, unless I am entirely misinformed, in none of these European countries where the central national bank does this work have they anything like so widely developed a system of local banks all through the country as we have here. We have built up a system of something like 25,000 small national banks all through the country, to say nothing of the private banks. At any rate, we have enough of them so that the business is pretty well looked after now. They are rendering a good service to the country as a whole, and there is not the need for it that there is there where they have not any such system as that developed. Our present local banks, in my judgment, are serving the people, and serving them fairly well. I think that with the control that is put in this bill, there is no danger of their abusing their powers, and it is a much wiser policy for the managers of these reserve banks to devote their energies strictly to seeing to it
that the paper which comes in from these different banks is of the right type. As a matter of fact, if we gave that privilege of discounting for individuals to our reserve banks, it would mean that the only persons who would go to the reserve banks to get accommodations directly would be the large corporations that wanted large sums; and the other people would be more likely to go to their small banks, anyway, for the small banks are really the only ones that can look into the individual credit of the small borrower.

Senator Crawford. I do not suppose if the reserve bank had that power it would, to any great extent, rediscount paper, and I do not think they have in the other case of which you speak, but it seems to me that it might be a wise thing to let them have that power for use in emergencies, as we are linking together all the banks of the country—that seems to be the purpose of this bill—practically bringing savings banks, and State banks, and trust companies, and national banks into one system, and tying them all together.

Prof. Jenks. That is right.

Senator Crawford. And if this system becomes unified, they are practically going to be one big banking trust.

Prof. Jenks. That is right.

Senator Crawford. It may be a good thing for the country, but it may also be a good thing for the country to allow this reserve bank to have the power, in emergencies, to discount the paper of individuals. How would it hurt them if this bank had such power?

Prof. Jenks. I think the being hurt would be in the public sentiment in connection with the matter.

Senator Crawford. Would it not be better for the public?

Prof. Jenks. I question if it would. Under the system provided by this bill the public can get its accommodation directly from their local banks, and the rate it can charge can be practically controlled by the central bank anyway. I do not see that there would be any very special harm done, to be frank about the matter, but on the whole I think it would not help the system to turn public sentiment against it.

Senator Crawford. It seems to me it is difficult to find a parallel.

Prof. Jenks. I think there is no exact parallel.

Senator Crawford. Because when we created the first bank in Philadelphia, and the Bank of North America was created a State bank, and those two banks competed with each other, they got along very well together?

Prof. Jenks. Yes.

Senator Crawford. We are creating this big combination of banks and giving them exclusive control over rediscounts in taking that power away.

Senator Weeks. I think you will find that that statement is not quite justified, that they got along well together.

Senator Crawford. The Bank of North America and the First Bank in Philadelphia got along well together, although there were disputes, political disputes. They got along well together.

Senator Pomerene. There was mismanagement.

Senator Crawford. There was mismanagement, but I am speaking of the reciprocal relations.

Senator Hitchcock. Congress is very probably justified in going in and organizing a great concern for the purpose of caring for the re-
serves of the banks it has created to distribute currency to the people, but Congress has no more business to go in and establish a bank any more than it has to start a railroad or start a bakery or undertake any other line of private enterprise.

Prof. Jenks. You are referring in your remarks to the fact that it is not politically expedient?

Senator Hitchcock. It is not desirable, but it is the function of Congress to provide a means of safeguarding the reserves of the banks it has authorized. It is legitimate for it to provide against panics and to provide a means of supplying currency to the banks which it has recognized.

Senator Crawford. But we have a novel proposition here, not of the Government or Congress establishing a purely governmental bank; it is creating a bank through the capital stock of other banks. It is taking no stock in it itself; it is excluding the public from having any stock in it; it is securing its capital from member banks and limiting its business to the business it transacts with those banks. That is unique.

Senator Hitchcock. That is not the point I was referring to.

Senator Crawford. No; I suggested that as distinguished from the statement made by Senator Hitchcock.

Senator McLean. Did you, Prof. Jenks, retain in your amended bill the provision in the Glass-Owen bill that these notes shall be the obligation of the Government?

Prof. Jenks. Yes; the obligation of the Government. But, as I understand it, under the provisions of this bill the Government, after all, is so little likely to be called upon that it is only practically a guar­anty that is certain never to be asked to meet.

Senator McLean. In your opinion there is no objection to that?

Prof. Jenks. In my opinion there is no practical objection to that, though I would prefer to see bank notes. I think it is a good deal a matter of sentiment.

Senator McLean. Do you look upon it as a matter of sentiment, purely?

Prof. Jenks. Practically so; yes.

Senator Nelson. I call your attention to a section of the bill on page 31, and I will read to you the paragraph upon which I want light. You have not touched upon it in your amended bill. [Reading:]

Whenever Federal reserve notes issued through one Federal reserve bank shall be received by another Federal reserve bank they shall be returned for redemption to the Federal reserve bank to which they were originally issued, or shall be charged off against Government deposits and returned to the Treasury of the United States, or shall be presented to the said Treasury for redemption. No Federal reserve bank shall pay out notes issued through another under penalty of a tax of 10 per cent upon the face value of notes so paid out. Notes presented for redemption at the Treasury of the United States shall be paid and returned as hereinbefore provided to the reserve bank through which they were originally issued, and Federal reserve notes received by the Treasury otherwise than for redemption shall be exchanged for lawful money out of the 5 per cent redemption fund hereinafter provided and returned as hereinbefore provided to the reserve bank through which they were originally issued, etc.

Now, the point that has been troubling me is this: After these notes have been returned to the bank that issues them and have been redeemed, after they are redeemed have they a right to put those
notes into circulation again, and if they had such a right would it not lead to endless inflation? Ought not those notes to be canceled when they are redeemed?

Prof. Jenks. As I understand the bill, when the notes are brought in and redeemed they are legally canceled.

Now, if they are paid out again, they are paid out just as if a new note was issued, and it is simply a question as to whether you shall reprint the notes and put other numbers on them.

Senator Nelson. Have they not got to, based upon new security?

Prof. Jenks. They have to be based upon new security; that is why I say when they are redeemed I should consider them canceled. If, instead of tearing them up, the Federal reserve agent puts them aside into a separate pile, and when there comes in some more security he takes those same notes instead of asking for newly printed notes; it is really a new issue.

Senator Nelson. It is really a new issue. That is, after they have been returned and redeemed their function is ended. Unless you take that course it would lead to an endless inflation of currency?

Senator Pomerene. And the collateral was surrendered.

Senator Nelson. If they are issued, they must be issued as new notes, and the mere cost of printing would be a mere bagatelle in relation to the question of safety. Those notes ought to be destroyed and those new notes printed.

Prof. Jenks. May I add a word there? If the suggestion you make is carried out, it would also be practically an absolute bar against counterfeiting them.

Senator Nelson. And the mere cost of printing would be a bagatelle compared with the question of safety. We would be sure that there could not be any inflation of the currency. To get new currency they will have to put up new securities, and they will have to go through the process again. If you leave that the other way, there is great danger of inflation.

Now, another question, and then I will have finished.

Senator Hitchcock. I want to ask another question on that same line.

Senator Nelson. I would like to ask one more question, and then I will be through.

Senator Hitchcock. The question I would like to ask is in line with the very questions you have been asking, Senator Nelson.

Senator Nelson. Very well.

Senator Hitchcock. Suppose, Prof. Jenks, a bank in your town discounts paper with a reserve bank in New York and receives notes, currency, and these notes are put up as collateral security or segregated as collateral security for the other notes; I believe that is the process.

Prof. Jenks. Did I understand you to say that the bank in my town puts up personal notes?

Senator Hitchcock. We will say it rediscounts $100,000 of commercial paper with the reserve bank in New York City. It receives notes, currency of the Government, through the reserve bank?

Prof. Jenks. Yes.

Senator Hitchcock. The notes which it has discounted and which have been, as a matter of fact, due for 90 days, have been segregated
and turned over to the Government. The bank in your town takes this currency home, and within 10 days they get back to the reserve bank in New York City. Must those notes be retired 80 days before the collateral security matures?

Senator Nelson. Your proposition involves this: You assume the notes come back to the reserve bank in New York City, and it is the duty of the reserve bank to present them for redemption; they must not hold them.

Senator Hitchcock. The collateral is there.

Senator Nelson. They would not hold those notes.

Senator Hitchcock. The reserve bank has invested its funds in these notes, which do not mature for 90 days, but the currency may come back in 10 days.

Senator Nelson. Come back where?

Senator Hitchcock. To the reserve bank.

Senator Nelson. The bank that issued them?

Senator Hitchcock. Yes.

Senator Nelson. That is all right.

Senator Hitchcock. The collateral security of $100,000 which the reserve bank has invested in the 90-day notes will not remain in those notes for 80 days.

Prof. Jenks. I should say, so far as that matter is concerned, that that example which you cite will never happen in actual practice. If it should happen, what you say will be true.

This would be the situation: These notes—that is, the personal notes that have been put up as collateral—represent loans to private individuals. They have had the use of the money, and those notes, when they are collected, would be collected by the Federal reserve bank through the local bank that took them to begin with.

The chances are 100 to 1 that before the 90-day notes are paid off finally, the local bank that has taken them and deposited them in the Federal reserve bank will have made a good many more loans, and have others it can substitute for these if it wishes. The process will thus go on indefinitely. But in case, we will say, at the end of the 90 days the local bank, instead of loaning $100,000 more, has loaned, we will say, $80,000, and then when the commercial paper is paid off the currency will be contracted by that $20,000.

If, however, it has been able to loan $120,000, when it substitutes the new commercial paper for the $100,000, it will probably ask for more circulating notes.

And in this continuous process of the substitution of these local personal notes the collateral, continuously, the Federal reserve bank will adjust itself and the currency to the needs of the country. Whenever the amount of circulating notes which come back to the Federal reserve bank from its district in the course of any 90 days is less than it issued 90 days before, it means there has been a slackening of business and the currency has been contracted as much as it ought to contract.

Senator Hitchcock. Suppose, instead of coming back in 90 days they do not come back for six months?

Prof. Jenks. That is all right. The implication would be that the business demands have been enough to keep those out, and,
quite likely, still more. Under those circumstances there will be more commercial paper deposited, and there would have been a call for more notes.

As I understand it, that is one of the most valuable features in the entire bill—that by depositing securities in the form of commercial paper with the reserve bank we can expand the currency to meet the demand, whenever the business demand increases, and it will, of itself, normally contract as the demand lessens.

Just along that line, I would like to suggest——

Senator Hitchcock (interposing). The reserve bank has really no control over its outstanding currency?

Prof. Jenks. The only control the Federal reserve bank has is this: It has the right to determine whether the commercial paper offered is good or not. It has also the right to determine, subject to the review of the Federal reserve board, what rate it shall charge to the local bank. If it feels that the local bank, when it comes and asks for this $100,000, is trying to push out more than the demand warrants, it will put up its rate of discount.

Senator Nelson. Note this expression in the bill——

Senator Pomerene (interposing). I was going to offer this suggestion. Assume that there is $100,000 of new notes issued. That means, of course, that $100,000 of commercial paper has been hypothecated. Now, assume that that $100,000 of notes was sent to the reserve bank and canceled before any of the collateral was matured. Necessarily, it would seem to me, the collateral would all be returned, if part of it is——

Senator Hitchcock (interposing). The Senator from Ohio misunderstands the situation. That is the loan to the bank; that is the paper that is rediscounted, and those notes are now owned by the reserve bank absolutely, and the bank can not get the money on the notes until they mature.

Senator O’Gorman. Then, what difference does it make whether they are redeemed in 10 days or not?

Senator Nelson. The bill says:

Notes presented for redemption at the Treasury of the United States shall be paid and returned to the Federal reserve banks through which they were originally issued, and Federal reserve notes received by the Treasury otherwise than for redemption shall be exchanged for lawful money out of the 5 per cent redemption fund hereinafter provided, and returned as hereinafter provided to the reserve bank through which they were originally issued.

Why should they not be canceled? What right have they to issue them? Would that not be a most dangerous power?

Prof. Jenks. I think they are canceled under the law. Whether they should be reprinted or not is another matter. My own judgment is that——

Senator Hitchcock (interposing). I misunderstood Senator Pomerene’s question. What he meant was that when the notes came in the reserve bank would then take down the notes which it had placed as collateral. I did not understand what he meant.

Senator Nelson. The country banks at the Boston meeting adopted some resolutions, and among others they recommended this substitute for the clearing-house provision of the bill—I call it the clearing-
house provision. Here is what they recommend as a substitute for that provision:

It shall be the duty of every Federal reserve bank to receive the deposits at par and without charge for exchange or collection of checks and drafts drawn by any of its depositors upon any other depositor and checks and drafts drawn by any depositor in any other Federal reserve bank upon funds to the credit of such depositors in said reserve bank last mentioned.

That is what the country bankers want as a substitute for what is in the bill. Can you see any objection to that matter?

Prof. Jenks. My impression is they have left out of this the collection of the local checks of one bank upon the bank of another region. I think the clearing-house provision ought to be broader than it is put in here.

Senator Nelson. You do not favor this?

Prof. Jenks. No.

Senator Hitchcock. I wanted to ask you what provision you make in your substitute for the retirement of national-bank currency.

Prof. Jenks. I made no change beyond the provision that is made in here.

Senator Hitchcock. You have left the bill as it is?

Prof. Jenks. Yes.

Senator Hitchcock. Then, I want to ask you what you would think of the idea, in addition, of having a standard rate of discount charged from day to day, available to the banks of the country, equal in all parts of the country? What would you think of a provision providing that any bank, as a matter of right, should be entitled to discount paper up to the amount of its capital stock at the minimum rate of interest?

Prof. Jenks. What do you mean by the minimum rate of interest?

Senator Hitchcock. The lowest rate established. And also a provision that any bank requesting more than the amount of its capital stock should be subject to a higher rate of interest, in order to equalize, to some extent, at least, the volume of discount available to each bank?

Prof. Jenks. I think, as regards the discount rate, that that should be made dependent only upon the reserve. I think that by making it dependent upon the reserve only you would give the elasticity that the system would not have otherwise.

Senator Hitchcock. You mean the reserves of the reserve banks?

Prof. Jenks. Yes.

Senator Hitchcock. That is all right, so far as the total volume of discount is concerned, but it makes no provision for equalizing the discount among the various applying banks. The reserve bank might discriminate against one bank, and my object was to try to devise this as a means of equalizing the discount, to put the brake on against their getting an excessive amount.

Prof. Jenks. I had understood by the bill that the directors of the Federal reserve banks were to make a uniform rate of discount in their own district.

Senator Hitchcock. Exactly.

Prof. Jenks. And the Federal reserve board had a right to recognize the fact that it was different in different districts, but otherwise they had the right to change it under the bill. As I have seen it, the
Federal reserve board would not make only one uniform rate of discount throughout the country unless the local Federal reserve board could give some valid reasons for so doing.

The Chairman. I think the Senator from Nebraska intends to make this suggestion, that in extending accommodations to member banks, that when a member bank has received a certain amount of accommodation at the lowest rate of interest, then if it desires additional accommodation a rule might be imposed to increase the rate of interest upon such paper, to keep one bank from being too greedily disposed to get accommodation at the expense of other banks.

Prof. Jenks. My opinion on that is that is not necessary. I think it is within the power of the board of this Federal reserve bank to say whether a bank shall have accommodation or not, and I think also it has the power to pass upon the quality of the paper. It seems to me that it might very well happen that, within one Federal district, there would be very large demands in some one region—say, perhaps, some farming region—while in another region 100 miles from there the demand would be less. It would be desirable, if the demand came in that way, that the loans be made in the region where the demand was greater, at just as low rates, or even lower rates than in the other place, and I do not think the amount of loans there should be fixed rigidly according to the amount of capital.

I think you had better leave that to the districts competing.

Senator Hitchcock. Take two men in the banking business on opposite sides of the street; they have the same amount of capital and practically the same volume of deposits. One man wishes to swell his business, and he makes loans with the idea that he can discount a large amount of paper with the reserve bank, and the other man across the street is more conservative in his disposition and more careful with his loans, and he may, when he applies for rediscounts, find that the reserve bank is not disposed to rediscount his paper. He may get none.

Prof. Jenks. I think, so far as that is concerned, we shall have to trust the board of directors of the Federal reserve bank. The chances are, I should say, that if one bank is enterprising enough so that it wants to discount more of its paper, as long as it can satisfy the board as to the quality of its security, it ought to be given the privilege. Why shall we say that one man shall be penalized for his enterprise?

Senator Hitchcock. Is that not going to tend to inflation?

Prof. Jenks. No; I do not think so. It depends upon the quality of his paper. If the quality of the paper is right, there is no danger of issuing too much.

Senator Hitchcock. That is a matter of judgment?

Prof. Jenks. Yes.

Senator Hitchcock. It seems to me a bank should be guaranteed equal treatment.

Prof. Jenks. Surely, if we do not make any further provisions.

Senator Hitchcock. One bank may be refused discount. One bank may come in for rediscounts after another has discounted a large volume of paper and the rate may have been raised, and the conservative man is discriminated against because he has been conservative and careful.

Prof. Jenks. That is, I should think, a condition of affairs that we ought to encourage.
If a man who is a business man chooses to be rather overconservative and go a little more slowly than his competitor, he ought to take a penalty for his conservatism. The other man, as long as he can keep up the quality of his paper—and that can be inspected by the Federal reserve bank—ought to have the benefit that comes from that enterprise. I do not think it is necessary to penalize him. It seems to me the principle is wrong.

If you say the more enterprising a man is, as long as he keeps up the quality of his paper, the more he shall be compelled to pay as he asks for more discount, I think the principle is wrong. I think the test ought to be the quality of the paper.

Senator Hitchcock. That is a mere matter of judgment, and there is no standard. I am thinking that something ought to be put in there to avoid favoritism. You propose a plan by which it is left to the judgment of the reserve board.

Prof. Jenks. That is the way it is in the bill.

Senator Hitchcock. What is the objection to having a provision in there guaranteeing equal treatment?

Prof. Jenks. The objection is this: I do not think it is equal treatment, because I think the people who could ask for the loans are people of the same type.

Senator Hitchcock. Do you not think it would be safe to say that any bank entering this system shall at all times be entitled to discount good paper to the extent of its stock?

Prof. Jenks. I should have no objection to putting that minimum. I should say I would have an objection to putting on a penalty.

Senator Hitchcock. What other brake are you going to put on the expansion of bank credits except by raising the interest rate?

Prof. Jenks. That is all, except the quality of the paper.

Senator Reed. If you do not put any provision in there, he might get $100,000,000.

Prof. Jenks. If the board would let him.

Senator Reed. I would allow him the amount he would get, and give everybody an equal chance, and if the demand is strong the rate of interest will rise.

Prof. Jenks. That is already provided for as regards the reserves.

Senator Crawford. Do you think there will be always available in this banking system money enough to give to each member bank an amount equal to its capital stock?

Senator Hitchcock. No; that would be 1,000 million dollars if all the national banks came in, but it is unthinkable that all the banks would want it at the same time. The demands are seasonable and they are regionable, but I think a bank must be assured that if it goes into this system it is going to get something; that it has something definite, and that it is sure, in time, to get a certain amount, and there is no power to refuse it. I do not want to give discretionary power to a board of directors anywhere to say to a country bank that they can not have discounts.

Prof. Jenks. As regards the minimum rate, I am inclined to agree with that, but I do not think I would agree in regard to the maximum.

Senator Crawford. Would you have a minimum as large as that suggested by the Senator?
Prof. Jenks. His suggestion was that any bank making a demand would get loans equal to its capital at a minimum rate.

Senator Crawford. Equal to its capital.

Senator Hitchcock. To discount paper equal to its capital.

Prof. Jenks. I do not see any objection to that. If the demand is too strong the rate of discount will have gone up.

Senator Hitchcock. What do you think about making the notes legal tender?

Prof. Jenks. I think they should not be legal tender.

Senator Hitchcock. Why?

Prof. Jenks. Because if they are made legal tender it is going to be a very strong influence toward preventing their rapid redemption. If you make them full legal tender it would be difficult to exclude them from the right to be held as reserves.

Senator Hitchcock. Suppose we did that arbitrarily and made them legal tender?

Prof. Jenks. I think it is better not to have them legal tender, because it is a very desirable thing that there be a prompt and ready redemption continually. Unless you can secure that promptly you are almost sure to get an expansion of your currency system, so that it will expel gold from the country. In fact, I should be inclined to make them poorer in desirability than they are now, in the provisions of this bill, by putting other penalties on them.

The principle of Gresham's law is one that always works. The poorer you keep the quality of the notes, as long as they are good enough so that people will take them, the more certain you are of getting a prompt and ready redemption, and that, I think, is a very desirable thing.

Senator Reed. Now, about the matter of retirement; that is the main thing with you. The method now is that when the notes of one region get into the Federal reserve bank of another region they are retired. What is the matter with this proposition? I will ask you about this.

Prof. Jenks. I believe you questioned me in regard to this before, and I did not give you a very satisfactory answer in regard to that plan.

Senator Reed. My plan was that when a bank came to a regional bank and rediscounted paper, that it had to pay within a certain time, and that it must then bring gold, greenbacks, national-bank notes, or its paper at the end of that time and absolutely wipe out its obligations.

Prof. Jenks. I should add this: "Unless it can substitute other commercial paper that is equally as good in the minds of the directors of the Federal reserve bank."

Senator Reed. Would that work the retirement?

Prof. Jenks. That would make no difference as regards the retirement, I think.

Senator Reed. That would be a new loan?

Prof. Jenks. That would be a new loan.

Senator Reed. Then there is no use in using this substitute paper, because it has the right to rediscount again.

Prof. Jenks. If it substitutes other paper it amounts to the same thing. The objection I see to this—I should say it need not pay off its obligations as they come due in cash, as has been suggested, if it
can substitute satisfactory paper or a substitute. Your proposition
the other day, I think, was this: That the Federal reserve bank itself
must turn over to the Federal reserve agent either the notes them­

selves or the lawful money to an equal amount.

Senator Reed. That is the other end of it.

Prof. Jenks. The objection to that is this, that it is not going to
be possible, if the business of that region is going on continuously
in a normal way, with new loans made from day to day for the
Federal reserve bank to turn back from day to day in cash or in
those circulating notes all its obligations that are due, without call­
ing loans; that would be a very undesirable thing to do. I should
say here is the situation: You are loaning out through this regional
reserve bank, an amount, possibly, three times the amount it is hold­
ing in a gold reserve. It holds a certain amount in gold in reserve,
and it loans three times as much in notes. And when you do that, if
there comes a day when there is rather more due than the usual
amount it has to return either an equivalent amount of those notes
or the gold, and it must contract the circulation, and it must contract
credit by so doing.

Senator Reed. That is the very thing you propose.

Let us assume that a Federal reserve bank gives to the First Na­
tional Bank of Omaha, we will say, $100,000 of money it issues upon
the securities of that bank. That money is applied for and issued
for 90 days. Thereupon the First National Bank of Omaha deposits
with the Federal reserve bank of that region $100,000 of promissory
notes, due on or before 90 days. The president of the reserve bank
goes across the aisle to the Federal reserve agent and secures from
him $100,000 in currency and loans it to the First National Bank of
Omaha. Ninety days come around. The money is due.

The First National Bank of Omaha must pay that money. I
would make it its duty first to pay it. At the end of that 90 days
the reserve bank pays the reserve agent $100,000. I would provide
that they should pay it out of these notes, and if they did not have
enough of these notes on hand I would provide that then they should
pay it in lawful money, and further provide that as rapidly as pos­
able it should substitute the circulation for lawful money. That
makes an absolute retirement, I think.

Prof. Jenks. As a matter of practical business, it is impossible
for them to do it. That is for this reason: When the regional reserve
bank turns over this $100,000 in circulating notes it sets aside a part
of that amount in lawful money as reserve so those notes are covered,
in the first place, by the full amount of collateral and by the one­
third reserve in gold. At the end of 90 days the bank has been doing
business, and it has other commercial paper, and when this com­
mercial paper becomes due, it ought to be allowed to substitute other
paper and keep those first circulating notes out in circulation.

If it has to pay those circulating notes off, either in gold or by the
full amount of notes, then it has got to stop its loaning process, be­
cause what it has is simply the $100,000 in commercial paper, and a
third or a half in gold. It can not pay it all off without contracting
loans, and if business is going on regularly, it must not contract
loans.

Senator Reed. Of course, if they wanted to substitute new paper,
it would all be merely a matter of bookkeeping.
Prof. Jenks. That is it exactly.
Senator Reed. In that event the purpose is to keep $100,000 out——
Prof. Jenks (interposing). Yes.
Senator Reed. In that event, the process would be this: At the end
of 30 days they would send down $100,000 of new commercial paper,
and thereupon the entry upon the books would be that this first
$100,000 was paid. The entry upon the books would be also that the
$100,000 had been paid through a reserve agent and paid in money
of this character, and that another $100,000 had been issued, and you
would simply keep your books, and in that event you do not want
to retire that $100,000 of circulation at all?
Prof. Jenks. Of course, you do not.
Senator Reed. And that provides a circulation, certain and abso­
lute. This other method provides a currency which circulates from
Omaha and finally gets to Kansas City. Ordinarily, that bank must
not pay that, but send it for redemption. I do not see any reason for
that. I confess I may be very dull, but I can not see the reason for
that.
Prof. Jenks. The objection to your plan is this, that it is abso­
lutely a business impossibility for the regional reserve bank to turn
over to the Federal reserve agent at the end of that period either the
notes or the cash, provided business is going on.
Senator Reed. Provided the notes are renewed, and their obli­
gations——
Prof. Jenks (interposing). Of course, if they renew their obli­
gations, and do it by bookkeeping, then I agree with you; I agree
with that fully. If, however, you say they have to pay in actual
circulating notes, or else in gold, then I should say you can not do it
without contracting the credits, and that would hurt——
Senator Reed (interposing). Then suppose you said as often as
any member bank shall pay to the regional bank the moneys it has
obtained by way of discounts or advancement, the regional bank shall
retire out of its own vaults an equal amount of the circulation?
Prof. Jenks. That, I understand, is provided in the bill now.
It will do that, as a matter of fact, in order to keep its books
straight with the Federal reserve agent.
Now, the other point is with reference to their sending back the
notes which come in from other regions. Under those circum­
cstances, if you have one central bank, as I have provided in this
bill, that would have to be eliminated, I should think.
Senator Reed. What is the use of it, anyway?
Prof. Jenks. The use of it is this, I think: I do not think it is
absolutely essential, but it would tend to encourage the different
banks to call those notes in. The reason is this: Under the present
bill there is a possibility of one regional reserve bank making more
profit than another regional reserve bank, and it will be making
those profits, to a considerable extent, by the circulation of its own
notes.
Now, if it follows that it can make more profit by getting its
rivals' notes out of the way and getting more of its own notes out­
standing, it will, of course, do that.
Senator Reed. And that will be not because you demand it, but
because they want to do it?
Prof. Jenks. Yes; because they want to do it. It is more desirable, so far as you can, to make the banks want to do what you want them to do. On the other hand, if you make a central bank like this I have suggested, it will not make the slightest difference to them what notes are out.

Then, I think, along that line it is more important that you leave the legal-tender feature out, and make these notes less desirable than lawful money—I should not allow the bank to hold them as reserves; and I think you should do everything that you can to encourage the State banks and the trust companies to come into this system, so that they will not be using these notes for their reserves, and make those notes relatively more undesirable than "lawful money." Then the bank will put these notes out, to be returned if it wants to contract its circulation, and it will hold in its own vaults always the gold and the lawful money and the greenbacks or the silver certificates, and things of that kind, and these will be sent back—and that is desirable.

Senator Reed. You would not provide for some legal tender besides gold?

Prof. Jenks. We have now. The silver certificates are legal tender; the gold and the gold certificates and the silver and silver certificates.

Senator Reed. Well, gold certificates are not legal tender.

Prof. Jenks. Oh, yes; that is true. I spoke carelessly. I could put in here [indicating] a provision allowing the gold certificates to stand for gold.

Senator Nelson. Gold certificates are not legal tender. The only legal-tender money we have now is the gold and greenbacks and national-bank notes.

Prof. Jenks. And silver dollars. Yes; I think you are quite right.

Senator Hitchcock. Is the silver dollar a legal tender to an unlimited amount?

Prof. Jenks. I believe it is at the present time.

Senator Reed. Here is what it says on one of these gold certificates:

This certifies that there has been deposited in the Treasury of the United States twenty dollars in gold coin, payable to the bearer on demand.

Prof. Jenks. Well, that is not legal tender. I would make them available for reserves in these banks.

Senator Reed. You would?

Prof. Jenks. The gold certificates; I would accept them instead of gold, surely. I think that in drafting this bill I did not cut out, as I should have done, the provision with reference to the different banks, and I will do that to-night.

Senator Weeks. There is every reason for doing that.

Senator Reed. Yes. Now, suppose we set up a system: we are anxious to get all of the banks of the country into it. We provide a currency which is not receivable as reserves in our system of banks; but the States allow it to be used as reserves in the State banks. Now, is there not a reason for a bank not to come in?

Prof. Jenks. I do not think that is a material thing at all. I think that the additional safety and the additional excellence would
far more than offset any disadvantage that might be in the minds of the good bankers that are expected to come into the system.

Senator Reed. I want to ask if there would be anything done under this bill that would make it impossible or impracticable for this system to go to the aid of another system, thus forcing the banks that are not in—or preventing them from getting the aid of this system through a member bank?

Prof. Jenks. I do not know of any way by which that can be absolutely done; no. As a matter of fact, I think that the feeling that they had to do it secondhand and through a member bank—I think a member bank would hesitate a little, in many cases, to give the accommodation like that to those who are not in the system.

Senator Reed. Perhaps the fact that there would be an additional "rake-off" to member banks would make a difference.

Prof. Jenks. Yes; I think so.

Senator Nelson. Prof. Jenks, you understand that the Bank of England intends to regulate the inflow and outflow of gold by its rate of discount, do you not?

Prof. Jenks. Yes.

Senator Nelson. Now, do you think we could do the same thing in a measure in this country?

Prof. Jenks. Yes; I think so.

Senator Nelson. But could we not do it better—could we not regulate the inflow and outflow of gold better if we had one central institution?

Prof. Jenks. I think so. I think we could do it much better.

Senator Nelson. By one central bank we could come nearer regulating the inflow and outflow of gold, could we not?

Prof. Jenks. Much better, I think.

Senator Nelson. That is the way it looks to me.

Senator Hitchcock. Prof. Jenks, under the plan you propose, what would be the size of the New York branch, say?

Senator Nelson. He proposes one bank only.

Senator Hitchcock. I know; but there are different branches. I want to get some idea of the relative size of these different branches.

Prof. Jenks. I think I have the figures made out in my portfolio that I could look up and give to you.

Senator Nelson. These branches would have no capital.

Prof. Jenks. No; not necessarily.

Senator Nelson. Not under your plan.

Prof. Jenks. Well, in the plan I propose it will be left to the Federal reserve board to determine how much of the reserves should be in every one of these regional banks, and of course none of those branches would have any separate capital.

Senator Hitchcock. Your Federal reserve board would order currency shipped from branch to branch or gold shipped from branch to branch, would it not?

Prof. Jenks. If necessary; or it would, in most cases, simply arrange by a matter of bookkeeping, giving credit and charging. But, whenever necessary, they would actually transfer the gold.

Senator Hitchcock. It would be necessary to make actual transfers from time to time, would it not?

Prof. Jenks. From time to time, it would; yes.
Senator Hitchcock. For instance, the New York branch might be required to redeem many of these notes outstanding?

Prof. Jenks. Probably it would.

Senator Hitchcock. And when it made a redemption it would use the gold in its own vaults to do so, I suppose?

Prof. Jenks. Yes.

Senator Hitchcock. And then it would send those notes to Washington, would it not?

Prof. Jenks. It would send those notes to Washington, or wherever the Federal board directed it to send them, if those notes were redeemed the country over at the same time, so that it would not contract the currency. The probability is that, in most cases, it would depend upon whether they followed Senator Nelson's suggestion as to the absolute destruction of those notes. If so, those notes would be sent to Washington, to the Federal reserve board, and then be destroyed. Otherwise they would be required to report from day to day how many of the notes they had redeemed; and those would be set aside and they would be credited accordingly. If they used up their gold reserve to a certain extent in that way that would have to be replenished, either from Washington or from other banks that were not redeeming notes to so great an extent.

Senator Hitchcock. The Federal reserve board would have telegraphic reports each evening from all of the branches all over the country indicating the condition of the branch, would it not?

Prof. Jenks. Presumably it would.

Senator Hitchcock. And it would itself be advised of the ebb and flow of exchange in various parts of the country, would it not?

Prof. Jenks. Yes.

Senator Hitchcock. And the number of notes redeemed at any branch?

Prof. Jenks. Absolutely.

Senator Hitchcock. And the amount of cash on hand at any branch, and the character of that?

Prof. Jenks. Yes.

Senator Hitchcock. So that it would have under its control the absolute disposition of the exchanges of the country and the money of redemption?

Prof. Jenks. Absolutely; yes.

Senator Hitchcock. I understand that you advocate the idea that the capital of this bank should be subscribed for by the various banks?

Prof. Jenks. That is, they should be given the first choice. If they did not take $100,000,000 of the stock I would open it up to private subscriptions.

Senator Hitchcock. Would it be of advantage to this country to prohibit banks from subscribing to this capital and having it subscribed outside of the banks, so that $100,000,000 would actually be added to the banking capital of the country?

Prof. Jenks. I have heard that suggested, but I do not think that is necessary or desirable.
Senator HITCHCOCK. Would it not actually strengthen the banking situation of the United States and improve the security of every depositor if we added one-tenth to the banking capital of the United States?

Prof. JENKS. I do not think it would do so materially. I think there is plenty of capital now to secure those deposits. I think what secures deposits is not the amount of capital that might be subscribed that way, which would be money taken out of other banks, and money taken out of other business. What secures deposits is good management and the proper disposition and handling of the reserves.

Senator HITCHCOCK. Well, if you take, say, $5,000 in capital out of a small community, where it is earning perhaps 10 per cent, and send it to a center, where it would earn 5 per cent, have you not destroyed or impaired the efficiency of that $5,000 capital to that extent?

Prof. JENKS. I do not think so; because, in putting it into the central bank in this way you are giving that small locality certain advantages which it does not have—enough to offset any disadvantages that might result.

Senator HITCHCOCK. But suppose you give that small community those advantages by bringing that money from some other place where there is a surplus. The small community does not make the sacrifice and it gets just as much advantage as if the money came from there.

Prof. JENKS. But if that bank in that small community subscribes to the central bank, the presumption is that that bank is now large enough to do its business fairly well, and do it well enough, and there is no reason why you should ask people in that community or elsewhere to draw money out of that bank and send it in to subscribe to the capital of this central bank, or draw money out of other lines of business when you can give that bank advantages enough to make it afford that subscription. If you can not do that, the bank will not subscribe to the central bank.

Senator HITCHCOCK. Well, if you allowed the $100,000,000 to be subscribed outside of the banks, would it not follow that that $100,000,000 would come from other sources, where there is an excess of capital, and where the money is now earning a small rate of interest, and thus, instead of taking it from a place where it is earning a high rate of interest, you would draw it from those sources where it is earning only a small return? You would be getting it from comparatively poor people, who now have no good means of making a good investment, instead of taking it from people who have their capital all actively employed.

Prof. JENKS. It might come very well from that source. I think if you opened it to public subscription it would be to a considerable extent a matter of sentiment that would bring it into the subscription; and I do not believe that any great proportion of it would be taken from poor people who desired to invest small amounts. It might be that some persons would sell Government bonds and put the money into the capital of this bank.

Senator HITCHCOCK. Personally I know a good many people who have a little money to invest; and where a man has only $1,000 or
$2,000 to invest he is afraid to invest in some securities; and he
would be the one that would be likely to go into it.

Senator Reed. I think it would be snapped up by people who were
afraid of banks and by people who have no means of investing; and
they have $1,000 that they put in a bank and get 2 or 3 or 4 per cent
interest on it. That, of course, would come out of the banks. I be-
lieve that $100,000,000 would be subscribed in 30 days by the public.

Senator Hitchcock. I think so, too, from the very class of people
that we want to get interested in the Government.

Prof. Jenks. My personal opinion of that I have already given.
I think it would affect the efficiency of your system materially.

Senator Nelson. It would give a better rate of interest than rail-
road bonds, which do not pay 5 per cent sometimes.

Prof. Jenks. That is true.

Senator Reed. I have not felt satisfied. Prof. Jenks, that anybody
yet has answered the objection that I raised, that it is the creation of
a bank charged with the duty of maintaining the reserves for the
other banks in the vaults of that bank; and the Vanderlip plan was
to permit the obligations of the United States to be thrown upon the
market for the purpose of maintaining that reserve.

Now, I do not want that burden shifted onto the United States. I
do not want the banks of New York to say, or the banks of Kansas
City or any other place to say. "We need $10,000,000 of gold." If
we do deplete this over there, the Government bonds are there, and
under the law this board must put them upon the market. It would
be a condition whereby a great bank—and I would like Senator Bris-
tow particularly to listen to this—whereby a great bank that wanted
to act in a selfish and mean way could force Government bonds on the
market at any time that it wanted to do so.

Senator Bristow. Well, if that danger is in the bill, let us take
it out.

Senator Reed. I am talking this proposed Vanderlip plan.
Senator Bristow. I know. If that is there, let us provide against it.

Senator Reed. I do not know how you will do it.

Senator Bristow. We will do that. We will require the banks
to provide the reserves.

Senator Reed. In one case you will compel them to tear down their
own house if they do this unjust thing and to tear down a reserve
which they themselves must help maintain. But in the Vanderlip
plan, just as surely as the sun rises, there is this thought:

The Government creates a bank out of the Government's money and the
peoples' money, and they put into that bank Government bonds, and every time
the gold gets low those bonds must be used to reinstate that reserve. Therefore
any bank can go on and do business to suit itself, and a combination of banks,
if they wanted to, could force the issuance of bonds at any minute.

Senator Bristow. Well, Senator Reed, of course I do not think
there is any danger. But to remove any possibility of it we can put
a provision in the bill requiring the banks to maintain the gold
reserve under conditions similar to those you describe just the same as—

Senator Nelson (interposing). Mr. Chairman—

The Chairman. The Senator from Minnesota.
Senator Nelson. I ask that the bill, with the amendments Prof. Jenks has suggested, be printed confidentially for the use of the committee.

Senator Hitchcock. It need not be in confidence, need it?

Senator Reed. With the parts he has added and the changes he has made indicated in the printing by different type.

Senator Nelson. Yes; in different type. The provisions of the original text of the bill can be printed in roman, and his suggestions can be printed in italics, and what is eliminated can be stricken out.

The Chairman. Is it the pleasure of the committee that his amendments to the bill be printed in the hearings, or separately for the use of those who desire to have it as a separate bill? The latter would seem to be better.

Senator Bristow. That is all right.

Senator Nelson. And that the changes be shown by different type, as I have indicated.

Senator Reed. Let us also have the Vanderlip draft printed in the same way.

Senator Nelson. Mr. Vanderlip has not submitted a form of bill.

Senator Reed. That is true.

Prof. Jenks. Mr. Chairman, if I may keep this bill with my amendments indicated until to-morrow morning, I should like to put it in better shape.

The Chairman. Very well, the committee will have it printed when you have corrected it.

Senator Nelson. That bill is imperfect. It does not provide directly the steps by which the corporation is formed.

Prof. Jenks. Mr. Chairman, if there are no further questions by members of the committee, I should like to take five minutes more to suggest one other point that is a little different from this bill as I have read it here.

The Chairman. What is the pleasure of the committee? In the absence of objection, you may proceed, Prof. Jenks.

Prof. Jenks. What I was going to suggest was this: If, as a practical matter, it should not seem possible or desirable to establish a central bank, I think that many of the same results could be accomplished by increasing the powers of the Federal reserve board in simply two sections of the House bill, with here and there a few verbal changes in other places. There is often a great deal of difference shown in our own mental attitude, even by the use of the terms we use.

Now, I am not proposing to put on a central Federal reserve bank here and simply disguising the name; but we can really accomplish many of the results desired by making a few changes in the House bill.

I would suggest, for example, in section 7, where provision is made for the division of earnings, that this be inserted:

In the calculation of surplus and profits the total capital and business of all the Federal reserve banks shall be reckoned by the Federal reserve board as united into one fund, and such surplus and profits shall be distributed among the Federal reserve banks in proportion to their capital stock.

We would then practically unite all of the interests of the different Federal reserve banks as regards their profit. Then in the section that provides the powers of the Federal reserve board, sec-
tion 12, I would amend paragraph (b) so that it would read in this way. The powers of the Federal reserve would be:

To direct, at their discretion, the administration of the reserves of the Federal reserve banks, all such reserves to be considered as one fund, and to be distributed among the Federal reserve banks by the Federal reserve board so as best to promote the safety of the banking system and the interests of the whole country.

To this end, they may also require the Federal reserve banks to rediscount the discounted prime paper of other Federal reserve banks. The exercise of this compulsory rediscount power by the Federal reserve board shall be subject to such interest charge to the accommodated bank as the board determines.

Then I would add, at the end of section 12, as follows:

The Federal reserve board shall have no dealings with the public or with the member banks except through the supervision and control of Federal reserve banks.

Then add, at the end of section 13, the following:

4. The chairman of said advisory council, or, in his absence, the vice chairman, may attend any and all meetings of the Federal reserve board and take part in its proceedings, but without vote.

The first two amendments I have just suggested would give the Federal reserve board the two powers that seem to me most essential. It gives to them the absolute immediate control of the reserves, just as the central bank would have. And it would also unite the interests of all the different Federal reserve banks as regards the handling of the capital and as regards the profits.

Those two things would in themselves go a long way toward the central-bank idea. I should prefer the central-bank idea, other things being equal. But if that should be impracticable, I think these amendments would be desirable.

Senator Reed. Will you, Prof. Jenks, add at the end of the amended bill which you have first suggested, these amendments?

Prof. Jenks. I will put these in also.

The Chairman. You can put that in as an alternative suggestion at the end of the bill you first suggested.

Prof. Jenks. Yes; as an alternative suggestion.

The Chairman. And when you have finished your copy showing your proposed amendment, we will have it printed.

Senator Hitchcock. I move that we adjourn until 10.30 o'clock to-morrow morning.

Senator Bristow. Mr. Chairman, Senator Shafroth, Senator Reed, and myself have a very important committee meeting to-morrow morning, which we have postponed for a month now, and it is necessary for that committee to meet in order to provide funds to run this committee. It is the Committee on Audit and Control of Contingent Expenses of the Senate.

Senator Pomerene. Prof. Jenks, we were discussing the question of a graduated discount rate, and in answer to a question by Senator Hitchcock you made a statement somewhat to the effect that you would make the discount rate dependent upon the reserves?

Prof. Jenks. Yes.

Senator Pomerene. What do you mean by that; by what rule?

Prof. Jenks. As the reserves grow lower—for example, suppose your reserves have been running at 50 per cent and there has been not so much call for money from these different banks.
Senator Pomerene. Do you mean, now, the cash reserves?

Prof. Jenks. The reserves in the regional reserve bank, yes; and, of course, they know what the conditions of all of the other banks are—the member banks. Suppose now their reserves have been running at 50 per cent, there has not been much demand for money, and the banks that come in for rediscounts have not demanded much. So they let them have rediscounts for 3 per cent. Then business gets stimulated. The reserves drop to 40 per cent; they are getting toward 33 per cent; and the business demands of the country are such that the banks are eager to get accommodations and the regional bank has lower reserves; it would then push up the discount rate to 4 and 5 per cent and even more.

Senator Pomerene. That is, making your discount rate depend upon the amount of money you have on hand, rather than the demand there may be for money?

Prof. Jenks. No; it amounts to this: The amount of money you have on hand is dependent almost entirely on the demand outside for it. If a bank wants to strengthen its reserves, what does it do? It discourages people from taking loans, and it "salts" its reserves down in its vaults.

Senator Pomerene. Oh, yes; I think I catch your point on that now.

(The chairman of the committee presented the following documents for insertion in the record:)

Hon. Robert L. Owen.

Dear Sir: I attended the monetary conference at Earl Hall, Columbia College, October 15, and heard Mr. Joseph T. Talbert, vice president of the National City Bank, talk about the receipt and collection of bank checks. He said that it cost the New York City banks more than $2,000,000 a year to collect country bank checks, and that it was honest, just, and fair to make a charge to the holders of these checks—at least as much as it cost the banks; that these checks were generally sent out to avoid the premium charged by country banks for drafts on city banks; that if the drawers of said checks wanted to make remittances they should go to their country bank and buy drafts on city banks. That the charge for exchange on drafts and checks and for collecting country checks, was as just and fair as the charge for interest on money loaned. That there was just as much reason to say that banks should loan money without interest, as that they should collect country checks without charge.

Now, I don't doubt, but Mr. Talbert believes what he said. He has been trained that way, he has expressed his opinion that way so often that he really believes it is the truth. It is the same old song, but it is a very poor one. It seems to me that anyone who looks at the check business with an unbiased mind from all sides, will see that Mr. Talbert is wrong.

Delphi, Ind., is my native town, where my father had been transacting a banking and other business for 53 years prior to his death in 1890. I came to New York in 1892, but still continue the banking business at Delphi.

Soon after coming to New York I was in the Ninth National Bank and conversing with H. H. Nazro, the cashier. He said: "Why, people come in here with $10,000, $15,000, and $20,000 worth of country-bank checks and want us to give them credit for them; no bank can afford to run that way; why, we have $500,000 of our money in country-bank checks all the time." I said, "You just look at that from one side, Mr. Nazro; you have some $8,000,000 or $9,000,000 of the people's money on deposit all the time, perhaps one-half of it drawing no interest and the other half not to exceed 2 per cent; why is that money kept on deposit with you for so little interest when it could readily be loaned at 5 to 6 per cent? It is because the depositors can draw their checks against such deposits and send them all over the United States and pay..."
their bills with them without cost or expense or friction, and these checks are taken up by the banks throughout the United States with their own money, usually at par, and sent back to New York and deposited. Now, if it were not for the bankers and the people receiving your checks, instead of demanding the money due them, and keeping the checks afloat, you would not have half the deposits you now have. Now, out in Indiana we have been taking checks on New York banks at par for more than 40 years and sending them back to New York for deposit, and the New York banks have never furnished us one dollar of money to help do such business." He replied, "Well, you find your New York exchange when you get it very available, don't you?" I answered, "Well, we find it about this available: We have sold New York exchange to our customers at par for more than 20 years. Whenever there is a large corn, wheat, oats, or hog crop to be sold it is largely paid for in New York exchange, for a large part of which the money is wanted by the holders of the New York exchange, and we soon run out of money and have to send New York exchange away and have money shipped in by express at not less than 40 cents per $1,000. Then, after losing our time, trouble, interest on our money, and express charges, we are just back where we started from. Then when our checks are presented (in volume less than one-fourth of the New York checks handled by us without charge) to New York banks, instead of treating them in the same courteous manner, they tell the holders they can not afford to handle them without pay, although we are at all times willing to pay them in New York exchange at par on presentation." He made no reply.

Now, Mr. Talbert estimates that the banks in the United States having $17,000,000,000 on deposit would have $850,000,000 of checks constantly outstanding. He estimates it costs the banks $8,675,000 a year to handle these checks, which he thinks would be a great burden unless they got paid for it. Now, what does $850,000,000 of checks constantly outstanding mean? It means that the banks, at least, have constantly the use of $850,000,000 of the people's money (worth 5 per cent interest, or $42,000,000 per year) on which they pay little or no interest. It really means they have the use of a much larger amount at a very small rate of interest. Paying and collecting the checks and keeping account of same is the principal part of the work the banks do for the depositors. If it costs $8,675,000, or even twice that sum, to get the constant use of $850,000,000, worth even, say, 4 per cent, or $32,000,000 a year, is it not a good paying business? But it means much more profit than that; it means that the banks have $17,000,000,000 of deposits, on which (if I remember correctly the statement compiled by the Comptroller of the Currency a few years ago for the Monetary Commission, which report I have in Indiana, but not here) they pay interest to the depositors averaging less than 1½ per cent. Can not the banks well afford to do $8,675,000 worth of work for said depositors in handling their checks for two or three thousand amounts that amount to but $32,000,000 a year? I believe debts should be paid at 100 cents on the dollar and not at 99½ cents, or any other fraction of a cent less than 100 cents. If debts are to be paid at 100 cents on the dollar, then the medium of exchange in which they are paid, whether it be currency and coin or checks, must be handled by the banks and the people without charge or immediate profit. Checks can be handled by the banks at par at less expense and with more profit in the way of increased deposits and interest on same than currency or coin. All checks can be paid by banks in New York exchange at par with less expense and less liability of making mistakes, and more chance of getting same corrected when made, and with more profit than with currency or coin. I believe banks have the right to charge a premium for New York exchange if they so desire; I believe banks have a right to receive money on deposit and charge exchange or discount or a premium for paying checks drawn on same, providing there is a clear understanding to that effect when the deposit is made, but I do not believe it is an honorable business for a bank to receive money on deposit and inform the depositor that his checks are worth par or can be used any place, and then when presented by mail refuse to pay them at par in exchange which the holder can use at par. I believe that whenever the banker receives deposits and makes such representations to the depositor he is in honor bound to see that the party or parties receiving such checks lose nothing in so doing.

About 9 or 10 years ago we got all our certificates of deposits and checks for the bank at Delphi printed payable in New York exchange and a contract printed on the pass books that the deposit should be paid in New York exchange, giving
no option to the depositor to demand payment in money. There were then two other banks in Delphi and they both refused to take New York exchange for the checks they received on our bank or to give New York exchange for the checks received by us on them. I tried various methods to try to give and receive New York exchange instead of money for several months. I had talked with several bankers before as to whether it would hurt the business to get obligations printed payable in New York exchange and then refuse to pay money for them; some thought it would, others that if we did we would lose a lot of deposits, and others didn't know. Well, after trying it for several months and making no headway, both the cashier and the assistant cashier of our bank said, "Well, you might as well give that up; you will never get either of those banks to either give or take New York exchange, as they are too stubborn." But I said, "Well, it don't look very encouraging, but I will try it a little longer." It was but a few months longer when they were both giving and receiving exchange with but little friction. That greatly reduced the amount of money necessary to be kept in our safe. We have kept up the practice ever since, and for the past 7 or 8 years have generally carried less than 1 per cent of our deposits in idle cash in our safe, instead of about 8 or 9 per cent carried by the average country national bank.

We have given our depositors what we have saved by the more economical use of idle money, in the way of increased interest on deposits. Our deposits have increased in the past 8 years as much as those of all the other 12 banks and trust companies in the county combined.

Our deposits now (in a town of a population of 2,161) are larger than those of any other private bank in Indiana, larger than any private, national, State, or savings bank or trust company in any town in Indiana with not more than twice the population of Delphi.

I believe the part of section 17 of the proposed new bank law requiring Federal reserve banks to receive checks on deposit at par will, if it becomes a law, do much good, and if it brings about the result of inducing all banks in the United States to receive at par all checks which can fairly be used at par and refuse to receive at any price those which can not be fairly used at par, in a few years those bankers who met in Boston a few days ago will have their deposits so increased that they will be well satisfied with the change.

If you read this letter and are interested in it, please let me know and, if you desire it, I can give you many more details in the same line, and if you think these ideas are of no value, please also let me know by return mail, and oblige,

Very truly, yours,

Abner T. Bowen.

[Extracts from the Boston Journal, October, 1913.]

THE CURRENCY BILL.

To the Editor of the Boston Journal:

Senator Owen, at the City Club last evening, presented the spectacle of a magnificent, splendidly magnetic, and supremely skillful avoider of issues. His side-stepping was superb. When he was asked where the gold was to be found to secure the proposed currency he not only confused gold reserve with gold certificates and asserted that the existing gold reserve constitutes an idle and useless fund, but made the astonishing statement that there is on deposit in the banks of the United States 1,100 million dollars in gold. When one of the most eminent, if not the most eminent, of New England financiers, a man whose advancing years only add to his already amazing record of public service and testimony to his great mental and moral equipment, asked the Senator from Oklahoma why it would not add to the admitted value of the currency measure to put the Federal reserve board on a plane similar to that of the Supreme Court, the members of which are appointed by the President for life, Mr. Owen replied with deplorable flippancy, "Men live too long." He elaborated this remark by a fatuous statement that age brings infirmity, and each failing that he mentioned in his enumeration was only saved from being an insult because it was ludicrous in contrast with the brilliancy of the venerable questioner. He did not specify which of the mature minds which do honor to the Supreme Bench is so afflicted. He admitted with be-
coming humility the excellence of that body for its purpose, without calling
attention to the interesting fact that the Supreme Court is composed of lawyers
to interpret law, whereas the proposed reserve board is to present the edifying
spectacle of supreme power in American finance administered by political ap­
pointees who may or may not have had, with one exception in seven, any pre­
vious experience in the intricate and delicate business.

Mr. Owen cogently deposed that although one bank may and does handle
with reasonable efficiency the business of a Germany, a Great Britain, or a
France, yet any of these nations could be set into the Empire State of Texas
without causing a tightening of its boundaries. There was, of course, no men­
tion of the comparative volume of business handled.

It is small wonder that the sober business minds of America are brought to
a pause when matters of so great and vital importance are intrusted to men
who bring to their stupendous task flippancy when they see, charged with the
mission of defense and explanation, an artful dodger.

Boston, October 24, 1918.

THE CURRENCY BILL.

TO THE EDITOR OF THE BOSTON JOURNAL:

Perhaps I may be permitted to illumine the subject of the currency discussion
at the City Club and the issue raised by your correspondent in Saturday’s paper
who signs X. Y. Z.

While statements can not be made too strong in protest against political con­
control of all our commercial credits and banking and currency issues. I think it is
due to Senator Owen to say that the question I presented to him at the City
Club as to where the gold was to come from to back up the proposed currency
scheme was more embarrassing than would appear on the surface.

Gold discount markets are very little understood. England has maintained
her financial supremacy and her gold base by an international discount market,
in which between 2,000 and 3,000 millions in short-term bills are always in Lon­
don as the financial center of the world, and these can command gold, or the
cotton, coffee, and other merchandise behind them can be sold right out of the
warehouse for gold, in any quarter of the world.

It is this gold base in the international bill market that gives London com­
mand of the gold without having it either in the Bank of England or even in
the island of Great Britain. In the past few years Berlin, Paris, and Vienna
have started to set up discount markets of their own to rival England, but alto­
gether, outside of London, they can not get in Europe one-half, and possibly
not one-third, the strength of England. Indeed, the Reichsbank of Germany is
continually buying bills in London in the vain hope of being able to command the
London supply. But she makes little progress in getting the gold into her own
country, for the moment she calls for gold in payment of bills London demands
the gold from South America or some other quarter doing business with Ger­
many, and there is an immediate offset.

Now, the question I put at the City Club to Senator Owen was: “Where are
you to get your gold upon which to bank your currency legislation? You do
not command it of the banks. The United States Treasury has not more than
$100,000,000 of free gold and the discount market from which you expect to get
it is yet to be established. Whence, therefore, will come your gold basis?”

Senator Owen responded most eloquently that there was a billion of gold in
the United States Treasury. Of course, everybody knew that this was ware­
house gold, but most people do not know that $700,000,000 of the warehouse
certificates are in the pockets of the people. In fact, anybody carrying $25 and
$50 in his pocketbook will usually find a majority of it gold certificates. Not
one person in a hundred ever notices that the majority of his pocket money
is in reality gold, title to which he holds through a warehouse certificate in­
stead of a banking certificate.

Senator Owen further claimed that the banks will put in gold and that the
ability of the Government to command gold should not be questioned.
This is what your correspondent calls “side-stepping.”

Senator Owen could not, of course, explain from that platform that he has
in mind a plan for the issue of Treasury gold notes to take up both the green­
backs and the gold certificates, which he later explained to me and which, if it
were inaugurated by the Congress of the United States in connection with its currency legislation, would put a back-log of gold under our banking discount and currency system that would make the United States invincible before all the world in any expansion that might be projected from such a gold base, for under Senator Owen's plan more than one-sixth of all the money gold in the world might find free lodgment in the United States Treasury to be used only in stress or necessity, when the Treasury might have to come, in the form of gold notes or gold metal, to the support of the national banking system.

In England the first thing the governor of the bank does in time of financial peril is to get the authority of the prime minister to suspend the bank act, which means power to issue unlimited Bank of England notes upon the existing reserve, to stay the hand of panic or financial fright.

I write this in justice to Senator Owen, to whom the members of the City Club should be doubly grateful for his acceptance of Mr. Winship's invitation to address them and discuss any problems in connection with the proposed currency legislation they might present.

Very truly, yours,

CLARENCE W. BARRON.

BOSTON, October 27, 1913.

(Thereupon, at 4:35 p. m., the committee adjourned until to-morrow, Tuesday, October 28, 1913, at 10:30 o'clock a.m.)

(The further proceedings of the committee were had in executive session.)
