BANKING AND CURRENCY

HEARINGS

BEFORE THE

COMMITTEE ON BANKING AND CURRENCY

UNITED STATES SENATE

SIXTY-THIRD CONGRESS
FIRST SESSION

ON

H. R. 7837 (S. 2639)

A BILL TO PROVIDE FOR THE ESTABLISHMENT OF FEDERAL RESERVE BANKS, FOR FURNISHING AN ELASTIC CURRENCY, AFFORDING MEANS OF REDISCOUNTING COMMERCIAL PAPER, AND TO ESTABLISH A MORE EFFECTIVE SUPERVISION OF BANKING IN THE UNITED STATES, AND FOR OTHER PURPOSES

IN THREE VOLUMES

VOL. III

(INDEX AT END OF VOLUME)

WASHINGTON
GOVERNMENT PRINTING OFFICE
1913
RESOLUTION BY MR. OWEN.

In the Senate of the United States, November 6, 1913.

Resolved, That the Committee on Banking and Currency is hereby authorized to have printed the indexed hearings by the Banking and Currency Committee of the Senate on the pending banking and currency bills (S. 2639 and H. R. 7837), bound in paper, as a Senate document, * * *.

Attest:

James M. Baker,
Secretary.
COMMITTEE ON BANKING AND CURRENCY.
UNITED STATES SENATE.

ROBERT L. OWEN, Chairman . . Oklahoma.
GILBERT M. HITCHCOCK . . . Nebraska.
JAMES A. O'GORMAN . . . New York.
JAMES A. REED . . . . . . Missouri.
ATLEE POMERENE . . . . . Ohio.
JOHN F. SHAFFOOTH . . . . . Colorado.
KNUTE NELSON . . . . Minnesota.
JOSEPH L. BRISTOW . . . . Kansas.
COE I. CRAWFORD . . . . South Dakota.
JOHN W. WEEKS . . . . Massachusetts.

JAMES W. BELLER, Clerk.
LIST OF WITNESSES.

[Roman numerals indicate volume of hearings.]

Aisthorpe, J. S. (vice president, Illinois Bankers' Association, Cairo, Ill.)------------------------------------ iii, 2194-2202
Allen, William H. (New York, N. Y.)-------------------------------------------------------- i, 375-382
Alling, Newton D. (vice president, National Nassau Bank, New York City)------------------------ i, 406-456
Baldwin, W. W. (vice president, Chicago, Burlington & Quincy Railroad Co., Burlington, Iowa)------ iii, 2131-2137
Banfield, N. F. (vice president, First National Bank, Austin, Minn.)------------------------------ iii, 2449-2452
Barry, David (cashier, First National Bank, Johnstown, Pa.)---------------------------------- iii, 2221-2334
Bassett, J. C. (president, Aberdeen National Bank, Aberdeen, S. Dak.)------------------------- ii, 1067-1682
Berry, William H. (Chester, Pa.)--------------------------------------------------------------- i, 560-582, 586-635
Blinn, Charles P. (president, Massachusetts Bankers' Association, Boston, Mass.)--------------- ii, 1178-1220
Bowman, Henry H. (president, Springfield National Bank, Springfield, Mass.)------------------- ii, 1225-1248
Bucholz, W. H. (vice president, Omaha National Bank, Omaha, Nebr.)--------------------------- iii, 2419-2432
Cannon, J. G. (president, Fifth National Bank, New York, N. Y.)----------------------------- iii, 2133-2191
Chapman, Joseph (vice president, Northwestern National Bank, Minneapolis, Minn.)---------- i, 187-192
Claflin, John (H. B. Claflin Co., New York City)---------------------------------------------- i, 543-550
Clark, Hovey C. (Minneapolis, Minn.)----------------------------------------------------------- ii, 1059-1068
Comstock, A. H. (vice president, Marshall-Wells Hardware Co., Duluth, Minn.)---------------- ii, 1059-1059
Conant, Charles A. (New York, N. Y.)---------------------------------------------------------- ii, 1578-1513
Coxey, Jacob S. (Massillon, Ohio)--------------------------------------------------------------- iii, 2967-2976
Crebs, John N. (Carmi, III.)------------------------------------------------------------------ iii, 2229-2232
Crozier, Alfred Owen (College Hill, Cincinnati, Ohio)----------------------------------------- iii, 2886-2905
Daniel, T. Cushing (Virginia)--------------------------------------------------------------- ii, 1159-1174; iii, 3140-3152
Dawson, A. F. (president, First National Bank, Davenport, Iowa)------------------------------- iii, 2082-2131
Dickson, T. H. (secretary, Mississippi Bankers' Association, Jackson, Miss.)------------------- ii, 1645
Dos Passos, John R. (New York, N. Y.)---------------------------------------------------------- i, 491-497
Fisher, Edmund D. (deputy comptroller, New York City)------------------------------------- iii, 2487-2513, 3138-3140
Fisher, Irving (Yale University)--------------------------------------------------------------- ii, 1129-1159
Flannagan, William W. (Montclair, N. J.)--------------------------------------------------- i, 738-808; iii, 2726-2729
LIST OF WITNESSES.

Foote, Francis W. (vice president, First National Bank of Commerce, Hattiesburg, Miss.) ........................................... II, 1514-1532, 1613-1621

Fowler, C. A. N. (Elizabeth, N. J.) ..................................... II, 1563-1931

Frame, Andrew Jay (president, Waukesha National Bank, Waukesha, Wis.) .... I, 674-738

French, Nathaniel (Davenport, Iowa) ..................................... II, 2069-2082

Frenzel, John P. (vice president, Merchants' National Bank, Indianapolis, Ind.) ...................................................... II, 1533-1539

Frenzel, J. P. ........................................................................ II, 1610-1613, 1628-1639

HEARINGS ON H. R. 7837.

WEDNESDAY, OCTOBER 8, 1913.

COMMITTEE ON BANKING AND CURRENCY,
UNITED STATES SENATE,
WASHINGTON, D. C.

The committee assembled at 11:05 o'clock a. m.
Present: Senators Owen (chairman), Hitchcock, O'Gorman, Reed, Pomerene, Shafroth, Hollis, Nelson, Bristow, McLean, and Weeks.

The Chairman. Mr. Vanderlip, the committee will be glad to hear from you in regard to this bill, and I will ask that you give the stenographer your banking affiliations.

STATEMENT OF FRANK A. VANDERLIP, PRESIDENT OF THE NATIONAL CITY BANK, OF NEW YORK, N. Y.

Mr. Vanderlip. I am president of the National City Bank, of New York. I have other banking affiliations as director. I suppose you only mean my official position?

The Chairman. I think that will suffice, unless the committee care to have the other affiliations. We will be glad to have your views on this bill.

Mr. Vanderlip. I feel that there are two important things to be accomplished by any legislation—the mobilization of reserve and the creation of an elastic currency. I think this measure has gone a long way toward that, but has failed of accomplishing both of those things. I feel that the mobilization of the reserve has got to come about by what is practically a single reserve reservoir, and that the 12 reserve reservoirs which have been provided in the bill will not practically bring that about. I believe a single reservoir would be best, and any reduction from 12 will be an improvement. I think if you could reduce it to 4, it would probably work pretty nearly as well as 1, and would perhaps have some advantages over 1.

The Chairman. Is your reason for that because you think that if the regions were small the demands upon a particular region at seasonal periods would be too exacting on the local reserve bank?

Mr. Vanderlip. Yes. There is no spreading of the conditions in the small regional reserve center. If the demands on all banks were of the same character and came at the same time there would be no object in having such an arrangement as we are here providing. The advantage of this comes through one bank having a strain on it at a time when another bank is flush, and an averaging of those conditions. It follows from that that if you establish a regional center in a geographical location, where all of the trade conditions in that circle are the same, where all the demands are coming upon the banks at the same time, and is of largely the same character, you will defeat your purpose. You will have a condition where there will be great danger of exhausting the resources of that bank, because conditions are the same throughout the territory of the bank.

1933
Senator Hitchcock. Do you care to be interrupted as you go along, or do you prefer to complete your statement?

Mr. Vanderlip. I am perfectly willing to be interrupted.

Senator Hitchcock. Then I would like to ask you whether it is not true that in all European systems—take, for instance, France—the conditions are practically the same throughout that country in which that central bank is the central reservoir. There is no diversity of interest there, where they have a very small geographical extent of territory.

Mr. Vanderlip. There is diversity over the whole nation there, whatever it is, and it must be considerable. You cannot say that France, speaking from the point of demands for borrowing at the bank, is an absolutely homogeneous country. There is the wine-producing district, the agricultural districts, the manufacturing districts, and their demands all come at different times and are of a different character. The one central bank there covers all those demands and has the advantage of a flush condition at one point and a strained condition at another and equalizes those conditions.

Senator Hitchcock. But geographically France is not larger than some of our States.

Mr. Vanderlip. But in its business requirements it is certainly larger than any of them, and those requirements are very seasonal. With us, however, the seasonal variation is very pronounced according to geographical location.

Take the central bank established in the territory around New Orleans. The borrowing there will come from cotton raisers very largely. It will all come at the same time. The pressure on New Orleans comes at one season of the year. Now, if that can be equalized by including in the territory of the New Orleans bank territory that is not similar in its climatic conditions or in its industrial or manufacturing conditions, so that the pressure for loans in one part of that territory comes at one season and in another part at another, you will have a far sounder situation and a situation that a reserve bank can stand up under; whereas if you make these areas too small, in that they are too similar in condition, you will endanger the bank and make it almost certain that it will have to go to the larger banks for help.

Senator Hitchcock. The reserve bank still has the resource of procuring currency.

Mr. Vanderlip. But it may be credit, not currency, that it wants, and it must have the reserve of gold to support the currency. If the bank loans down to 33 per cent it can not get any more currency until it gets some more gold.

It seems to me there are many impressive reasons why there should be a fewer number of reserve districts.

The Chairman. If there is a certain number, would you think it advisable to have a Federal reserve board with power to require one branch to accommodate another?

Mr. Vanderlip. The power of the Federal reserve bank to force one bank to rediscount for another is obnoxious, but it is absolutely necessary if we are to have the benefits of the central reservoir and if you are to have a number of regional banks. A central reservoir is the desideratum. That is what we must have. You have planned here to organize 12 banks, and recognizing that after all 12 reser-
voirs will not do—that there must be one—then you undertake to pipe those 12 reservoirs together, and properly so. You must pipe them together. You undertake to pipe them together by giving control to this Federal board to force loans. I think the Federal board must have that authority, obnoxious as it is. The obnoxious character of it would disappear entirely with one central bank. It will disappear in a measure as you reduce the number of central banks. I believe that with four banks the management of those four banks would get together with a sufficient understanding of mutual conditions so that there would not have to be any arbitrary use of that power, but power must be lodged with the Federal board, because you must pipe the banks together, and you must make, in effect, one central reserve reservoir.

Senator Hitchcock. Would not that same argument go to show, really, there ought to be one central reservoir for all Europe, and that all those countries should unite?

Mr. Vanderlip. It possibly might be better; but there are conditions of language and conditions of government which would prevent that. It would perhaps be better to have one government in Europe; but we would hardly undertake that.

Senator Hitchcock. Is it not a fact, however, that funds flow from one bank to another, according to the demands of trade and local conditions? If there is a stronger demand for money or credit in one country than another, is there not a tendency for the flow to go in that direction?

Mr. Vanderlip. There is a tendency and it is a pretty free flow.

Senator Hitchcock. If that is the case in Europe, why would not that flow naturally result between these 12 banks if it is made voluntary instead of compulsory?

Mr. Vanderlip. I think there would be very little likelihood of a voluntary flow for this reason: Let us say the condition at New Orleans, as we have been using that town as an illustration, becomes close, while in New York it is comparatively easy. The individual banks in New Orleans would then probably borrow from the individual banks in New York. I think the management of the Federal reserve bank in New York would say that that is the natural way for New York to relieve New Orleans; that is the natural channel through which credit should flow, from a community where the rate is low to a community where it is high, through individual banks. They would say, if the individual banks in their judgment did not think it wise to loan to the individual banks where the rate is higher, “then probably it is not wise for us, holding the reserves of the individual banks, so to loan.” The individual banks would be perfectly free to loan to the individual banks in a high-rate community, if all the conditions of credit and business outlook were such as to warrant their doing so! Therefore the managers of the reserve bank in New York, or wherever a low-interest rate was prevailing, would feel, so far as it was wise, that the individual banks, members of their association, should make the loans to individual banks, members of the other association. But it would not be wise as a common practice for the managers of the reserve bank themselves to loan those funds and deplete its reserves for that purpose.

Senator Hitchcock. But you would empower a body to order it to do so?
Mr. Vanderlip. I would; yes. I would do it with great regret. It is obnoxious to think of forced credit, but you have got to obtain, in effect, a central reservoir, and you can not obtain it unless you can bring the water level of the supply reservoirs together.

There are other reasons why I think there should be a fewer number of reserve banks. Some of the gentlemen here regret to see the importance of New York emphasized. To anyone holding that view I would like to call attention to the fact that the more reserve banks you have the more you will emphasize the importance of New York. New York has a fixed minimum of size. You can not very well divide New York into two central reserve banks, and the greater the number the smaller will be all the banks outside of New York and the more pronounced will be the predominance of New York. Then, I think there is this further argument: The Federal reserve board will presumably be subjected to some political pressure—not political pressure; I do not mean political pressure, I mean local pressure, pressure arising from local conditions. That pressure would be very much relieved if the Federal reserve bank covered a wide territory, and thus became subject to the pressure of diverse local conditions and harmonized that pressure. If there is a reserve bank, let us say, in New Orleans, with a territory in which conditions are uniform, the pressure from that locality upon the Federal reserve board to compel loans from other banks would be governed simply by their view of their own local conditions. Therefore, if that Federal reserve bank in which New Orleans is located took in a very large territory where there were varied conditions, the reserve bank instead of the reserve board would be subject to the pressure from these different localities, and they would be harmonized in the bank, and the reserve board here in Washington would only have to consider the larger and in a less degree these local conditions.

Senator Hitchcock. Now, Mr. Vanderlip, as it is now, the bankers of the central reserve cities, and especially the bankers of New York City, respond voluntarily to these various seasonal needs in various parts of the country. Why, by the same argument would not the reserve bank of New York City respond voluntarily, by analogy?

Mr. Vanderlip. They respond now voluntarily, and they will continue to respond voluntarily to as great a degree as it is wise for New York to be depleted. But the managers of the New York bank, I believe, would feel that the judgment of how much New York should loan to other places should rest with the individual bankers. If these bankers reached a point where they would not loan any more, it would be hardly the part of the organization holding their reserves to deplete these reserves by loaning.

Senator Hitchcock. If it is the custom of the banks in New York City now to make these advances to the various parts of the country when the seasonal demands arise, it seems to me when these New York banks are united in a reserve bank, holding the stock in that reserve bank, they would have then, jointly, naturally the same power that they have now individually.

Mr. Vanderlip. They are not united to do a general business; they are united to hold their joint reserves. General business will still be done by the individual banks. It is, I trust, no part of this plan that general business is to be done by these Federal banks. In normal times the Federal reserve banks ought not to have any large
amount of rediscounts. Their power should be conserved. They should run with very high reserves under normal conditions, and they should never have money making as a factor in their conduct. That point, by the way, I think is very important and if I may digress a moment, I believe the plan for dividing the earnings, after 5 per cent is paid upon the stock, in the proportion of 60 per cent to the Government and 40 per cent to the depositors of the bank, is absolutely wrong. There should be no division of earnings after the stock has received a proper dividend. It may be, and I believe it is, wise to give the stock 6 per cent instead of 5, but it should have no further participation in the profits. There should never be that factor in the management to make it endeavor to earn profits. The profits should all go to the Government after the interest has been earned on the capital stock for which the banks have subscribed. If there were to be a division, this method of division is wrong. It amounts to a payment of interest on deposits. The division is to be made of profits on the basis of the average deposit which a bank maintains. That is merely another way of saying we will give interest on deposits. You might find a bank under a strong incentive to work for profit in order to pay interest on its balances. The theory of the division is wrong, and any division at all is wrong.

Senator Reed. You think, then, that after there has been a reasonable interest paid upon the money contributed by the banks, in the way of capital or reserves, all of the money should go to the Government?

Mr. Vanderlip. I am perfectly clear on that. I believe a great element of danger will enter in the management of the banks if any other course is adopted.

Senator Shafroth. Do you believe that these reserve banks will earn anything above the 5 or 6 per cent?

Mr. Vanderlip. I think it is impossible to calculate that. From such calculation as I have been able to make, I would rather doubt—well, no; let me say it is impossible to state. There are too many unknown elements. The Federal board is permitted to charge the banks interest on the Government deposits. How do we know what they will charge? They will pay it into the profits, whatever it is. The Federal board is permitted to charge so-called interest on the notes. What will the charge be? I do not know; nobody knows. It is impossible to figure the profits of these banks.

Senator Shafroth. It can be made profitable, or make really a very little profit, depending upon the administration they have?

Mr. Vanderlip. Yes, sir.

Senator Shafroth. One person here the other day said it was impossible for any of these banks to make any money whatever, even to make the 5 per cent.

Mr. Vanderlip. Well, that, of course, is hardly a correct view.

Senator Shafroth. Yes; it can not be, from the fact that the Government alone will have an account there, at the present time, of $285,000,000. Then the reserves of the banks amount to $400,000,000 or $500,000,000, and then this capital which is paid in amounts to $105,000,000. It is impossible to conceive that with $700,000,000 or $800,000,000 no return whatever can be made from them. But I would like to have your view; and, of course, as you said, it is a factor.
Mr. Vanderlip. There ought to be no difficulty in earning the 5 per cent. It is conceivable that the earnings might be very much more than that.

Senator Shafroth. Would not the tendency to have a division of 60 and 40 per cent, as indicated in the bill, be to make these banks do business with the regional or reserve banks?

Mr. Vanderlip. It will have the tendency to put the whole management on a money-making basis. Rather than have them stand in the attitude of conservation, it will put them into the open market for investments at times when they ought to be carrying a very large reserve. Suppose the country bank to-day finds it is in an easy money market. If its customers are not able to absorb its loanable funds it goes into the commercial-paper market and buys commercial paper. In a little while conditions change, and they come around with their hat in their hand and say, "We are sorry; we made a mistake. We ought not to have bought this paper, and we want you to take it off of our hands." Now, we do not want the reserve banks to get into that situation. We do not want them, in case they have 70 or 80 per cent reserve and are under a compulsion to make earnings, to feel they must invest that money, and therefore go into the market, and then, if a change comes, find themselves unable to meet the responsibilities that are really on their shoulders. I am very much opposed to the banks being run for profit.

Senator Shafroth. Now, Mr. Vanderlip, one of the great desires of this bank is to provide for the raising and the lowering of the discount in order to influence the flow of gold. Will you give us your opinion as to whether that is practicable under this bill, and whether it is not necessary for a bank to go out into the market and attempt to corral securities or corral money in order to establish a condition of that kind?

Mr. Vanderlip. The bill is not clear in its definition of the power of the bank to go into the open market. I find two opinions as to what the power of the bank is in that respect. One holds that the bank may go into the open market and buy prime commercial paper, although I believe it says "banker's bill" in the law.

Senator Shafroth. What is a "banker's bill"?

Mr. Vanderlip. "Banker's bill" is really an English term—a bill that has been accepted by a bank, a bill that is drawn against a bank and has been stamped with its acceptance, or a piece of commercial paper that has been indorsed by the bank.

Senator Shafroth. Is there much of that paper in this country?

Mr. Vanderlip. There is none of it in just that form. We have not anything in this country that we could properly designate, I think, as a "banker's bill."

Senator Hitchcock. Is an acceptance a banker’s bill in Europe?

Mr. Vanderlip. If it is an acceptance by a bank.

Senator Shafroth. You New York bankers ought to know about the way to get this gold into this country better than anybody else, and I would like just to have your views as to how that ought to be done.

Mr. Vanderlip. In the first place, I would like to see the law made clear as to what the powers are that are given to this bank. It will be very obnoxious to the member banks to have the reserve banks competitors in the open market with them. Possibly that is
necessary. I do not think it is myself, but, as I read the law, I have supposed that the banks could not go in the market and buy paper, except such paper as was indorsed by a member bank. But I am inclined to think I am in error on that point, as I find a good many other people who think the law provides that they could go into the market and buy your notes or anybody's note.

Senator Shafter. I think the bill as originally framed did not take into consideration the necessity for going into the market in order to raise or lower the discount, and I think when attention was called to it they thought they could not establish a rate without that power.

Mr. Vanderlip. The best way of doing that, in my opinion, has been suggested by Mr. Paul Warburg. He believes that a portion of the present 2 per cent bonds in circulation should be purchased by the Federal reserve banks, and the circulation retired; that these bonds should be converted into one-year notes of the Government, the banks agreeing always to renew those notes for 20 years on each maturity.

Senator Reed. What banks do you mean?

Mr. Vanderlip. I mean the Federal reserve banks. This would give the Federal reserve banks a large amount of one-year Government notes that would employ their money in times when otherwise they might have to compete in the market with member banks thus depleting their reserves, with the result that they would be able to meet their responsibilities properly when a strain did come. But it would give them this power: If they wanted to raise the discount rate, if they believed we were facing a dangerous situation, and that money rates were too easy and that a check ought to be put upon affairs and the discount rate raised, they would be able to sell those notes in the open market and deplete the open market of the reserves, drawing the reserve strength to themselves and disposing of those short-time notes. The effect would be immediate, and the discount rate would of necessity advance.

These notes would also be of great value in the period when gold exports were imminent or were going on and we did not want to lose gold. Such notes as these would be available in any market of the world at the very lowest possible discount rate, and if we were in a position where Europe could demand gold from us and we could not with ease part with the gold at the time, then the banks could sell these notes abroad and liquidate the pressing adverse balance, and in that way retain our gold and bridge over the strain. I believe something can be worked out in that direction which will give the banks the opportunity and the power to control the discount market to an extent. Of course it is only to a limited extent that the banks ever could control the discount market, but it will greatly assist them in controlling the gold movement.

Senator Hitchcock. That is a little after the English custom?

Mr. Vanderlip. Yes; after the "exchequer bill" of the English Government.

Senator Hitchcock. Has the Imperial Bank of Germany that same method?

Mr. Vanderlip. I can not answer positively. I think it has. I know the German Government issues short-term notes.
Senator Hitchcock. In the sale of those notes would not the re­serve bank always suffer loss?

Mr. Vanderlip. It would apparently suffer loss, but it would be able to recoup itself by the loans that it would be able to make at a higher rate on the basis of the increasing reserve which it would have. It would sell the notes and bring in the reserve. The result of that action would be the depletion of the reserves of the outside banks and the increase in the rate, and probably this would later compel the outside banks to borrow. The reserve bank would not have to borrow, because it had largely increased its reserve by the sale of the notes, and, I think, in the double operation would recoup itself for the apparent loss of interest on the notes it sold.

Senator Nelson. What rate of interest would you have on those notes?

Mr. Vanderlip. Three per cent.

Senator Reed. Mr. Vanderlip, at the risk of repetition, I want to be sure that I understand you. Your proposition is that the present 2 per cent bonds running now for 20 years should be converted into bonds running for one year—short-time bonds? That is the first proposition?

Mr. Vanderlip. My proposition is that a portion of them should be converted; some two or three hundred millions should prob­ably be.

Senator Reed. Then you doubt that the banks would agree to re­convert them into long-time bonds?

Mr. Vanderlip. No, sir; that they, equally with the Federal reserve banks, should agree to accept the one-year notes at each ma­turity, not to demand payment, but accept in payment the new one­year notes.

Senator Reed. That would be all right, as long as the Federal reserve banks hold these notes. But when they sold these notes in Europe to get gold, of course, the notes would then go into the hands of outside parties. What sort of plan would be devised then to avoid compelling the Federal Government, at the maturity of this bond, this one-year bond, from having to go into its Treasury to pay them?

Mr. Vanderlip. The Federal reserve banks must be under contract to protect the Government from that. They must always stand ready to take new one-year notes to the amount which is necessary to redeem those maturing.

Senator Reed. Then, the plan amounts to nothing more than this, that the Federal Government would issue these one-year notes and give them to the banks as a matter of accommodation, to be used by the banks, and the banks be, in turn, compelled to protect the notes at maturity and renew them indefinitely, so long as the Government desired?

Mr. Vanderlip. Yes. The advantage of that to the bank is that the one-year note of that character would be the very highest type of banking security, whereas the 20-year bond would be an invest­ment security, not a banking security.

Senator Reed. I see. Now, how would you first get these bonds into the possession of the banks? The Federal Government now has 2 per cent 20 year bonds out; most of them are held by the banks, and most of them have been utilized for currency issues. What would be the method you would suggest?
Mr. Vanderlip. The Federal banks would buy at par a certain amount of these 2 per cent bonds that are now owned by the national banks and are at the Treasury as security for national-bank-note circulation.

Senator Reed. Would they then retire the national-bank circulation?

Mr. Vanderlip. They would probably substitute the new notes that are provided under this law.

Senator Reed. I will call them asset notes.

Mr. Vanderlip. Very good. They will substitute those notes. At first they might not have any commercial paper to secure such an issue of notes and they would put these new one-year Government notes under the——

Senator Reed (interposing). But we still have not got the one-year Government notes; that is the first step.

Mr. Vanderlip. Let me see if I can trace the matter. The Federal bank will buy from the national banks some of those 2 per cent bonds.

Senator Reed. You mean the National Government?

Mr. Vanderlip. No; the Federal reserve bank will buy some of the 2 per cent bonds the national bank now holds and has deposited with the Treasury to secure national-bank circulation.

Senator Reed. Instantly, then, the currency that was issued upon that bond will have to be retired?

Mr. Vanderlip. At that moment; yes. It might also be provided at that moment that the Federal reserve bank can take out these new notes, using either the 2 per cent bonds it has just bought as a basis to secure them or a new one-year note, into which it, at the moment, exchanges the 2 per cent bond—the one-year note of the Government.

Senator Reed. That goes into the custody of the Government?

Mr. Vanderlip. Goes into the custody of the Federal agent in the same way as commercial paper.

Senator Reed. The one-year Government bonds or the old 20-year Government bonds into the custody of the Federal agent?

Mr. Vanderlip. Yes. Now, as fast as the Federal reserve bank accumulates commercial paper it could substitute it in the hands of the Federal reserve agent for these one-year notes, leaving the one-year notes free in its hands, where it would be in a position to put them out when it wanted to raise the discount rate.

Senator Reed. I am coming to that next step.

I have cleared up in my own mind this method. We have your suggestions on that. Now, the gold is flowing out of the country; we will assume the gold reserves are getting low here. Then you would simply take these one-year notes and send them to Europe and sell them, getting gold and bringing it back in?

Mr. Vanderlip. Gold, but more probably exchange, which would amount to the same thing, and would stop the flow of gold.

Senator Reed. And, then, you would put money in your bank, in the reserve bank, and the reserve bank would raise its rate of interest to the member banks desiring to borrow from it to a point that would recoup any such loss it had suffered by reason of purchasing this gold?

Mr. Vanderlip. In that particular case it might or might not have a loss. It might be able to sell those on a 3 per cent basis, or it might
not. If Europe was strong and was importing gold it is possible it
could sell those notes for less. It would recoup just as you suggest.

Senator Reed. You have got the Government one-year bond—
that is the proper name by which to call it, I suppose—bearing 3 per
cent interest, and it is now sold to a banking house in London, and it
draws 3 per cent interest. It is simply the credit of the Government
loaned to the Federal banks, extended to it.

Mr. Vanderlip. Yes, sir; instead of a 2 per cent bond that the
Government formerly was obligated to pay.

Senator Reed. Yes. Now, does the Government pay that 3 per
cent interest or does the bank pay it?

Mr. Vanderlip. The Government would pay it.

Senator Reed. Then the Government would have to stand the ad-
ditional rate of interest under that plan. Do you think that would
be just and equitable to the Government?

Mr. Vanderlip. It does not make any difference whether the Gov-
ernment or the bank pays it. Let the bank pay it, if you prefer,
because it comes out of the Government. I mean it only reduces the
profits the bank will eventually turn in to the Government. Let the
bank pay it, if you like.

Senator Reed. Your plan would involve the banks taking care of
the principal of that bond at its maturity and also taking care of its
interest?

Mr. Vanderlip. And the bank would be in a position to make a
profit because it was able to lend the notes it had secured upon these
new one-year Government notes, and receive interest on those notes.
It would therefore be in a position to recoup the Government.

Senator Shafroth. Mr. Vanderlip, would the withdrawal or the
refusal of the reserve banks to renew the 90, 60, and 30 days paper
upon which they had advanced money or loans, have a tendency to
control the flow of gold?

Mr. Vanderlip. I do not think I quite comprehend your question.

Senator Shafroth. We will suppose there is a flow of gold to
Europe, and there are notes that have been presented by the in-
dividual banks or drafts which have been discounted, and the regional
banks desire to stop the flow of gold. Would there be a tendency to
stop that flow by the banks saying they would not issue any more
currency?

Mr. Vanderlip. Anything that will raise the interest rate will tend
to check the flow of gold.

Senator Shafroth. Well, will not the tendency to stop having so
much circulating medium have that effect?

Mr. Vanderlip. Any reduction of the circulating medium other
than the normal redemption of bank notes would raise the rate of
interest and would tend to check the flow of gold.

Senator Shafroth. Could it become effective, do you think, by the
exercise of that power alone, on the part of the reserve banks?

Mr. Vanderlip. No. The interest rate would have to be advanced
too violently. It would have to be advanced too far, and even within
any reasonable limits might not check the flow of gold. If European
nations are in an exchange position to demand gold, even though the
rate were very high here, they might still demand it, and the ability
of the bank here to sell something abroad and produce a credit to
meet exchange demands which the European nations hold against us
is the effective way to stop the flow of gold. You can not stop a flow of gold permanently. If we buy more than we sell we have to pay for it some time. For a season, for a brief time, we can prevent that flow of gold. Or at a time when a depletion of our reserves is going to come with great severity upon us, we may be warranted in going to unusual measures to check the flow of gold at that moment. But we can not check the flow of gold for a long period if balances are against us.

Senator Hitchcock. Will you explain the exact method which the bankers in New York now adopt to check the flow of gold?

Mr. Vanderlip. They have absolutely no method, Senator. We can advance the rate of interest a little, but we have no joint way of doing that. We may not legally even confer on the subject. New York City is the greatest free-gold market in the world. Anybody with credit in New York can get gold, and there is no way at all of effectively checking it.

Senator Hitchcock. You do adopt some methods occasionally?

Mr. Vanderlip. No; we really adopt no method. If gold is going out and our reserves become impaired, if they fall below the legal limit, naturally, the interest rates will rise and the rise in interest rate tends to check the gold movement.

Senator Hitchcock. Can you explain how it tends to check the gold movement? What is the exact operation by which the movement is checked?

Mr. Vanderlip. If funds are worth much more in New York than they are in London the banks, or the individual with funds, which they can have in either place, will choose to keep some part of their funds in the higher interest community. There would be the tendency to draw from New York, if the exchange situation warrants Europe in drawing, but to some extent this would be counteracted by the attractiveness of the rates in New York. If a bank can loan money in New York at a very high rate it will not draw it home at a low rate.

Senator Nelson. You mean a foreign bank?

Mr. Vanderlip. A foreign bank; yes, sir. I mean if an English bank finds money at 6 per cent in New York and 3 per cent at home, and has a credit in New York, and believes the New York loan is secure, it will leave at least some portion of the money it could draw at the New York bank there in order to take advantage of that high rate.

Senator Hitchcock. What I want to find out is how the London bank maintains those funds in New York. Are they on deposit with the New York bank?

Mr. Vanderlip. They are on deposit in the New York banks, and the New York banks have a fluctuating rate of interest, according to the call-loan rate. A London bank may also loan in the call-loan market in New York through its New York correspondent.

Senator Hitchcock. How many banks, international banks of that character, are there that use New York as a loaning market?

Mr. Vanderlip. I am unable to say exactly, but a large number.

Senator Hitchcock. A large number?

Mr. Vanderlip. Yes. Nearly every important European bank has a New York correspondent.
Senator Hitchcock. Is that merely for the purpose of exchange, or for the purpose of taking advantage of the high rate in the New York market?

Mr. Vanderbilt. It is more for the purpose of exchange. They do, however, permit exchange to accumulate during a period of high-interest rates.

Senator Shafroth. You say that this is a fluctuating rate. Is your payment of interest to outside parties a fluctuating rate?

Mr. Vanderbilt. Not to domestic banks; it is to European banks.

Senator Shafroth. So that your rates may be 2, 2\(\frac{1}{2}\), or 1 per cent, varying each day?

Mr. Vanderbilt. Hardly each day. We would vary it, perhaps, fortnightly.

Senator Hitchcock. Can you give us any idea of the amount of European capital that is in use at any one time in that way?

Mr. Vanderbilt. I could not say exactly the amount.

Senator Hitchcock. Does it vary?

Mr. Vanderbilt. Undoubtedly.

Senator Hitchcock. It is varying with the exigencies of trade?

Mr. Vanderbilt. It varies with the exigencies of trade and the demands for money. If there is not a keen demand for money abroad, and if there is a keen demand for money in New York, a portion of the funds will stay in New York and be loaned there, and vice versa. We have in New York frequently loaned very large amounts to Germany in the last two or three years. Germany has paid 7 or 8 per cent—that is, the first-class banks there—and we have permitted funds to accumulate there and made loans because we could get a higher rate of interest there.

Senator Hitchcock. Are those funds in the shape of deposits?

Mr. Vanderbilt. Sometimes, and sometimes in actual collateral loans.

Senator Hitchcock. Do you think a regional bank located in New York would have a better opportunity to control that international situation than the New York banks now have?

Mr. Vanderbilt. Undoubtedly.

Senator Hitchcock. It would unify them?

Mr. Vanderbilt. Yes.

Senator Hitchcock. Why are they not united now in that matter?

Mr. Vanderbilt. The Sherman antitrust law may be one reason. I know of no business whatever where the competition is keener or more complete than it is in the banking business to-day. We are as keen to compete in order to get the other man’s customer and secure the deposits as you will find in any business whatever.

Senator Hitchcock. There has been some testimony here and before other committees in Washington to the effect that there really was no competition on a large transaction in New York; that there was a combination among the great New York houses, by which if one named a rate or terms the others abided by it, and the man or a concern was unable to get credit elsewhere.

Mr. Vanderbilt. I think that is wholly without foundation. It is true that a banking house which has been doing the financing for a corporation, and has carried that corporation along through bad years and good years, furnished them money when they could not sell
bonds, and generally fathered them in a financial way—such a banking house feels that the financing of that corporation is its business and that other banking houses or banks ought not to interfere with it. To an extent that is respected. Your statement in regard to credits, however, I do not think holds good at all, because there is the keenest sort of competition, perfectly open competition, among the banks to gain deposits and credit.

Senator Hitchcock. There is a system of interlocking directors to some extent?

Mr. Vanderlip. To some extent.

Senator Hitchcock. And a joint ownership in some other cases?

Mr. Vanderlip. Yes.

Senator Hitchcock. Now, surely that would result in rather a community of interest among those banks.

Mr. Vanderlip. Even in those cases the keenness of the competition is surprising, as I have pretty good personal knowledge. I am on the boards of some other banks, but I know that the National City Bank will go after the business, and the other banks will go after the same business. Competition is very keen, and while there may be some community of ownership and some interchange of directors, it does not extend to the officials of the banks. They are working for the banks by which they are employed, and working very hard and very keenly.

Senator Hitchcock. Is there a standard rate of interest in New York as there is in London, fluctuating from time to time?

Mr. Vanderlip. No, sir. There is a standard rate of interest that is paid by banks on the balances of other banks—the reserve deposits of other banks. That is 2 per cent. There is another rate of interest; that is the call-loan rate. That is the rate that money is loaned at on the stock exchange to the members of the stock exchange on stock-exchange collateral.

Senator Hitchcock. How is that rate fixed?

Mr. Vanderlip. By competition, just as the price of stock is fixed. Brokers go in there and offer money to brokers who want to borrow it, and they compete for it.

Senator Hitchcock. Then, there are other rates besides that?

Mr. Vanderlip. That rate fluctuates daily. Then there is the time rate on stock-exchange collateral, and the commercial-paper rate, the rate to commercial borrowers. Of course one of the great things for legislation to accomplish is to make it unnecessary for us to have to go into the call-loan market.

At the present time the one place that we have in this country to loan money to-day and get it back to-morrow, if you want it, is in the New York call-loan market. Call loan means a call loan in New York. Practically it does not mean a call loan anywhere else. In New York it means a call loan repayable at the option of the lender. If you make a call loan in New York to-day, you can call it to-morrow without any compunction.

Senator Weeks. It is equally true that it is payable at the option of the borrower if he sees fit?

Mr. Vanderlip. I mean that in New York a loan is payable at the option of the lender; elsewhere payment is theoretically at the option of the lender, but practically at the option of the borrower. It is the
one place you can lend money and be certain you will get it back, and you can not always be absolutely sure then, because there are certain times when you can only get it back where the loan is shifted, and the loan can not be shifted.

Senator Reed. Why is that system in existence in New York and not elsewhere?

Mr. Vanderlip. Because the New York Stock Exchange offers the one great market for collateral security. If we loan on a stock actively traded in on the New York Stock Exchange, we know that the borrower can be forced to pay the money, because he can sell. We demand a margin of 20 per cent between the market price and what we loan, and under almost any conceivable conditions there will not be a drop of 20 per cent before you could compel the borrower to sell the collateral.

Senator Reed. Do you regard that system of loaning large sums of money upon that class of security as an element of safety or of danger in the banking system?

Mr. Vanderlip. An element of danger and unsound banking, but the soundest banking we can do under our present system.

Senator Reed. If it is unsound, it ought to be stopped?

Mr. Vanderlip. It ought to be, and no one is more anxious than the great banks of New York to aid in that situation.

Senator Reed. Why do they not voluntarily stop it?

Mr. Vanderlip. Because they have nothing to take its place. We have got to have a large amount of loans that we can certainly get when we want the money.

Senator Reed. In other words, you feel that in order to make money that you must keep your capital employed up to a certain limit, and here is a place where you can employ more of it because you can demand it back quickly; is that the thought?

Mr. Vanderlip. The bank of which I am president has $200,000,000 of net deposits; it must keep 25 per cent of that in cash. It pays interest on a large amount of deposits and upon all deposits obtained from other banks. It must therefore employ those funds in order to get an interest return. It keeps 25 per cent in cash, and it keeps a secondary line of reserve, amounting to 60 or 70 or 75 millions of dollars in demand loans, in loans that we can get back, unless the whole machinery of doing business on the stock exchange is clogged.

Senator Reed. Now, Mr. Vanderlip, you say this is bad banking, but that it is necessary, however, under our present system, but that it ought to be done away with, and that implies, of course, something substituted in lieu of it. What is the system that could be substituted in lieu of it?

Mr. Vanderlip. It implies a bank of rediscount, where banks can be certain that under any conditions they can rediscount their paper. That converts commercial paper into a quick asset, and permits it to take the place of call loans. If such a bank can be had, it will turn several hundred millions of dollars that are now employed in call loans and other stock exchange loans, into commercial channels. It will be of vast benefit to the commerce of the country.

Senator Reed. Then, if I am not interrupting you?

Mr. Vanderlip. Not at all.

Senator Reed. I thought you had completed your answer.
Mr. Vanderlip. Yes; I had.

Senator Reed. Then, if you had a place where you could take paper and get money on demand, you would loan your money out on 30, 60, and 90 days, and in that way use that part of your funds which you now loan on call loans?

Mr. Vanderlip. Exactly.

Senator Reed. And the thing that is necessary is some machinery whereby you can certainly turn a 30, 60, or 90 day piece of paper into cash at once?

Mr. Vanderlip. That is the thing that is necessary.

Senator Reed. Before I ask you as to the method, I want to have you tell us just what element of danger there is in the banking system, in your judgment, arising out of the present method of loaning money on call, and having it used on the exchange?

Mr. Vanderlip. There is a disadvantage in that a very great sum of money, several hundred million dollars that ought to be devoted to the commerce of the country, is employed in carrying securities. That is a disadvantage and not a danger. The danger is that we are depending solely upon these call loans as our secondary line of reserve. Everything works all right so long as those loans can be liquidated, and they can be liquidated as long as they can be shifted from one bank to another, but there is nothing of a liquidating character about a loan on stock exchange collateral.

The ideal security for a bank is a self-liquidating loan. A loan to a merchant for goods that can be sold is a self-liquidating loan. Making self-liquidating loans is the business a bank ought to do. It ought not to loan on real estate, and it ought not to loan an undue amount of its funds on the securities of corporations, for they will not liquidate themselves; the only way the bank can get the money is to shift that loan to some other bank or have the owner of the security sell that security to somebody else.

Senator Reed. Then, when trouble comes what happens to the bank which has a large amount of money loaned upon these call loans, the proceeds of which have been utilized upon the exchange?

Mr. Vanderlip. When trouble comes the bank forces the borrower to sell. He must sell, perhaps at considerable sacrifice. All investors are disconcerted by this fall of borrowing needs; all investors are upset because the price of the securities has declined, and there is a general demoralization of the security market, which involves many people who have had nothing at all to do with the original loan.

Senator Reed. It becomes a center of disturbance which may develop into a financial cyclone?

Mr. Vanderlip. Yes, sir; and it is certain to extend to the commercial borrower.

Senator Reed. And to what extent do you think that factor contributed to the trouble of 1907?

Mr. Vanderlip. It was undoubtedly a considerable factor. Of course, the trouble in 1907 was occasioned by the banks, but really caused by our system of disconnected reserves which forced the banks to seek, properly enough, to protect themselves—for no one else was going to protect them—and they drew to themselves undue reserves. I am speaking of the country banks. They drew to themselves more reserves than were necessary, because they became alarmed. They
put an impossible burden on the central reserve city banks, a burden that could not be borne under our system. The central reserve city banks did deplete their reserves; they did everything that was humanely possible under the system, but the system broke down and there was general suspension.

Senator Reed. Then, of course, if there had not been this deposit by one bank with another, a large part of it finally terminating in New York City; if the money had not been there to have gone down, of course you would not have had that money to loan, you would not have had it out on call, and therefore, if the reserves had not been there in the first place——

Mr. Vanderlip (interposing). You think the trouble would have been avoided? No, sir; it would not have been avoided unless you had had a central reserve reservoir; if you had had a law——

Senator Reed (interposing). Would you not have avoided at least a part of it? Would it not have been minimized?

Mr. Vanderlip. It would have been minimized. But if you had had a law requiring every bank to keep all its reserve in its own vault, the same sort of trouble might have occurred. That is, every bank would still have drawn to itself an undue amount of reserves at the expense of its neighbors, and would still have created—might largely have created—just the same situation.

Senator Reed. You said "reserves." You mean it might have drawn to itself an undue amount of money?

Mr. Vanderlip. Yes, sir.

Senator Reed. Over and above the reserve?

Mr. Vanderlip. Over and above the legal reserve; yes, sir.

Senator Reed. But to the extent that the banks had their reserves in New York, to that extent this trouble was increased, because they had that much more money there to pull away from you at the very hour when you needed it? That is correct, is it?

Mr. Vanderlip. That is correct. And I will say that I believe the reserve system provided for in this measure is superior to the existing system.

Senator Nelson. I am glad to hear you say so; that is my view.

Mr. Vanderlip. I will say that although it means the loss of $50,000,000 deposits to the bank I represent, I believe it is sounder economically than the existing system, and I would be glad to see it in force.

The reduction of reserve which is provided, from 25 to 18 per cent, is essential and is not too much.

Senator Reed. Why is that essential?

Mr. Vanderlip. The reserve of 25 per cent has been carried because we carried the reserves of larger banks. If we are no longer to carry the reserves of larger banks, there is no longer the necessity for us to carry that excess reserve. As a matter of fact, if we no longer carry the reserves of larger banks I can see no reason why a city bank should carry more reserve than a country bank.

Senator Bristow. That is what was in my mind.

Mr. Vanderlip. A city bank has more liquid assets than a country bank. It is in a position to recoup itself for any loss of cash more quickly. It has far more facilities, and why there should be any classification into country banks and central reserve city banks if
the central reserve city bank is to carry no country bank reserves, I am unable to see.

Senator Hitchcock. While you may not have the reserves of these banks under the new system, you still have large country balances subject to withdrawal.

Mr. Vanderlip. I doubt it, sir. I can see no reason, if the national clearing-house feature works, why one bank need keep a balance with another bank.

Senator Hitchcock. You still continue to pay the 2 per cent interest on balances?

Mr. Vanderlip. Yes; but they will not keep it for that alone.

Senator Hitchcock. Is it not a fact that they have in New York all the time a much larger amount of money than in country banks and larger than the law calls for?

Mr. Vanderlip. Yes, sir; because of the collection system. If you have a national collection system, a national clearing house, there will be very little, if any, need for one bank to keep a deposit with another. I believe that for a good while the small borrowing banks will prefer to do business with their old friends, and banking relations rather than go to the new reserve bank to rediscount, and there will be a tendency to continue the old relationship. And there may be, therefore, some considerable balances, but I look for the almost complete elimination of national bank balances with other banks.

Senator Hitchcock. Now, Mr. Vanderlip, is it not a fact that you pay 2 per cent on country balances?

Mr. Vanderlip. Yes, sir.

Senator Hitchcock. If the law prohibited you from paying 2 per cent on country balances, would there not be a very material reduction in the amount of balances that the country banks would keep in New York?

Mr. Vanderlip. With the existing reserve provision?

Senator Hitchcock. Under the existing law; yes, sir.

Mr. Vanderlip. There would be a considerable reduction.

Senator Hitchcock. Can you estimate how much that would be? What per cent it would be?

Mr. Vanderlip. I would hardly want to venture a guess without giving it more consideration.

Senator Hitchcock. Does not that fact prove it is to secure the 2 per cent interest that the large balances are kept and that the New York banks give the 2 per cent in order to get the balances to use in New York?

Mr. Vanderlip. No; it does not prove that, I think. It proves that the country bank is doing with its balance just what we are doing in the call market; it is providing a secondary reserve upon which it gets a low rate of interest, but which it can call and turn into money at any time it wants to. That is what we do with call loans; we sacrifice the interest rate to immediate availability, and the country bank keeps a balance at a lower rate than it could get otherwise, and even a higher balance than is made necessary by the legal requirements in order that it may get it quickly if it should want it.

Senator Reed. Mr. Vanderlip, this bill provides for these reserve banks. It is safe to assume that one of them would be located in New York.
Mr. Vanderlip. I have not known whether it was safe to assume that or not. I am glad to hear it.

Senator Reed. I think it is a reasonably safe assumption. Now, if that were done and this bill were enacted into law and that bank established, do you think, after a study of the bill, that that would provide a safe means, practical working means by which the banks of New York and that region could obtain money in time of necessity, so that it would take the place of your call loans and the system which is now in vogue? Would a bank have enough money? Would it have enough facilities?

Mr. Vanderlip. There are two fundamental shortcomings in the bill that will prevent it working successfully to accomplish what you outline. The one is—a subject I have referred to—the fact that you have not got a central reservoir; you have 12 reservoirs. I believe that will work very much against its successful operation. The other is that you have not provided an elastic note issue. That is just a question of mathematics. Not to go into the subject of whether the Government or the bank should issue the note, I will say parenthetically I am perfectly clear in my mind that the bank and not the Government should issue the note. But passing that, you have provided that the 2 per cent bonds now in circulation can be redeemed, 5 per cent a year, into threes, and there has been a presumption that the bonds would be so redeemed and the $741,000,000 of national-bank notes would be retired.

I challenge that assumption. The 2 per cent bonds with the circulation privilege will be worth more than the 3 per cent bonds without the circulation privilege. A bank buying 2 per cent bonds at par, taking out circulation and losing from its reserve the 5 per cent redemption fund as the bill provides, will still make a profit of 1.18 per cent if it can keep the circulating notes out. That, with the 2 per cent the bank gets as interest on the bond, makes a return of 3.18 from the 2 per cent bonds, whereas the return from the 3 per cent bond is only 3 per cent. It is just a question of mathematics. The twos will sell higher than the threes. If the twos will sell higher than the threes they will not be exchanged; they will continue as a basis for the existing national-bank-note circulation. That existing circulation of nearly $750,000,000 is irreducible, and you will have no room for an elastic note issue. You will have to reduce the present national-bank notes in order to make room for elasticity. We have circulation enough now for any ordinary conditions. It is only under extraordinary conditions, or at least under the conditions of special claims of crop-moving periods, that we need any more than we have now. We probably have really a redundancy, and there will be no room for expanding and contracting currency until we retire some of the present national-bank notes and replace them with the note issue that will respond to the demands of commerce. Therefore, I say you have not provided an elastic currency, which is one of the essentials of a good measure.

Senator Reed. I am not sure that I followed your mathematics on the 2 per cent and 3 per cent bond question. The present 2 per cent bond, of course, pays its 2 per cent, and then currency is issued upon it. Then the currency can be loaned out——

Mr. Vanderlip (interposing). And we pay a tax on the currency of half of 1 per cent and we pay certain expenses of the comp-
troller's office, and we have to put up, under this law, a 5 per cent redemption fund, which will not count as reserve. Therefore, on $100,000 of twos we would get $95,000 of loanable currency. The result of taking out the currency and loaning it in that way is a profit of 1.18. A bank buying twos at par, taking out circulation, depositing a 5 per cent redemption fund with the Treasury and not counting that in its reserves will make a total equivalent of 3.18 per cent on the bond.

Senator Shafroth. You deduct also the one-half per cent tax?
Mr. Vanderlip. I am deducting also the one-half per cent tax.
Senator Hollis. What rate do you assume you will loan at?
Mr. Vanderlip. Five per cent.
Senator Reed. Following that suggestion of Senator Shafroth's, the interest rate, of course, varies?
Mr. Vanderlip. I am assuming a 5 per cent interest rate.
Senator Reed. If you take the 3 per cent bond, of course, you do not get any currency upon it?
Mr. Vanderlip. You just get your straight 3 per cent.
Senator Reed. So, you say, the present 2 per cent bond, with the circulation privilege, is a more valuable investment than the 3 per cent bond without it?
Mr. Vanderlip. Yes, sir.
Senator Reed. By 0.18 of 1 per cent?
Mr. Vanderlip. Yes, sir.
Senator Weeks. That is, to the bank?
Mr. Vanderlip. To a bank; yes, sir.
Senator Reed. Of course, that would indicate then—your objection is that this plan retires the national-bank note?
Senator Nelson. No; that it does not.
Mr. Vanderlip. My objection is that it does not retire the national-bank note, which should be retired.
Senator Reed. In other words, you mean the national-bank note should be issued upon the 3 per cent bonds?
Mr. Vanderlip. No, sir.
Senator Reed. Issued upon what?
Mr. Vanderlip. I mean that at least some portion of the present mass of national-bank circulation should be retired. To do that you must refund or buy some portion of the 2 per cent bonds that are now under the national-bank note circulation.
Senator Reed. This bill provides for the retirement of those bonds—
Mr. Vanderlip (interposing). In 20 years. That is not soon enough.
Senator Reed. Five per cent a year.
Mr. Vanderlip. But the banks will not retire 5 per cent a year. If the bank finds the 2 per cent bond more valuable, it will not voluntarily give up the 2 per cent bond for the 3 per cent bond, and therefore I say that during the 20 years you will not get the retirement.
Senator Reed. So this claim that these 2 per cent bonds are not worth their face would not seem to be very well taken, would it?
Mr. Vanderlip. The bonds are worth their face to any bank that will hold them to maturity and that is certain to be able to keep out the circulation.
Senator Reed. Suppose that we keep out this $750,000,000 of bank circulation and that there is no change in the amount which we now have. Still is there not an element of elasticity provided in this bill when it is stipulated that promissory notes indorsed by regional banks can be turned into money? Is not that an element of elasticity?

Mr. Vanderlip. It is an element of elasticity if people want more currency. There is no thing that the law has less to do with than the amount of money you carry in your pocket, and the amount of money that the people of this country carry in their pockets will not be influenced by your legislation. They will determine that, and the surplus they will redeposit in banks. If they want an increasing amount of currency they will get it. If they do not get it in the form of a bank note—which is the form in which they ought scientifically to have it—they will have it in gold. They will carry in their pockets what they need. They are the ones to determine the volume of currency circulation. They alone will determine it; the regional banks will not determine it nor will any Federal board. It will be the people themselves. And any surplus will always be deposited in the banks, and any demand for more will come out of the banks' reserves. You can not help that; you have got to start with that as something that is fixed outside of your deliberations.

Senator Reed. I understand, of course, that the people are always going to carry around some money. They always have. But the question I am asking—and I am not sure I made myself plain; perhaps I did not grasp your answer—is this: If it is provided that any national bank or any member—I will use that term—desires money it can bring up its securities and turn them into money, and that would provide a means when that bank needed money for it to get it, would it not?

Mr. Vanderlip. Let me ask you, what does a bank need with money? It has two needs: One is for reserve money and one is for money to pay out. The people will determine whether the bank is paying out money or receiving money. The bank will not determine that. For reserves under this bill it does not need all money; it only needs part money and part balances with a Federal reserve bank. These notes, of course, would not count as reserve in any event, so the bank will only need notes if the people need more of them. If the people do not need more notes the bank can not make any use of them. It can not go and get these notes and put them in its reserve. They will not count there. The bank can only get rid of them if people want more money in their pockets.

Senator Reed. That is the one time it needs them.

Mr. Vanderlip. They have money enough in their pockets now, so it is only in the exceptional case that we will be using these new notes unless we retire some of the present notes.

Senator Reed. Yes; but, of course, if we cut down our currency that is now out one-half it would follow that immediately they would begin using a large amount of this new money.

Mr. Vanderlip. Yes.

Senator Reed. I grant you that. But suppose we do not cut it down, still if we had a plan by which in the event of a demand for money that demand could be satisfied this bill would be elastic, or would provide an elastic system to that extent?
Mr. Vanderlip. For the peak of the load; yes.
Senator Reed. It would not be elastic for all times, but for all abnormal times——

Mr. Vanderlip (interposing). It performs about the same thing that the Aldrich-Vreeland bill would perform were the taxes there imposed not so heavy.

Senator Reed. What you would prefer would be to retire a part of our present circulating medium and, having cut it down, to at once create a necessity for some of this other money, and then that banks should issue——your preference would be that the banks should issue that additional amount of money?

Mr. Vanderlip. My preference would be to retire a considerable amount of the present national-bank notes, to replace them with new notes, such as provided in this bill, and replace the 2 per cent bonds that secure these present notes with one-year Treasury exchequer bills.

Senator Nelson. Three per cent?
Mr. Vanderlip. Three per cent.
Senator Reed. And I believe you mentioned about $300,000,000?
Mr. Vanderlip. That would be ample.

Senator Hitchcock. What is your ground for saying that, in your opinion, the present currency is redundant?

Mr. Vanderlip. There is a constant redemption, of course, of the present bank notes, at certain seasons of the year. In the springtime they pile up on us in New York; they pile up everywhere. We all have too much money. The interest rate drops too low. There is not a proper redemption of them, and, if they are redeemed, they are put right out again.

Senator Hitchcock. Is there not a very well-known cause why those national-bank notes pile up on you in New York? Is it not because the banks of the interior are unable to use them in their reserves and the only way they can make a proper use of them is to send them to you, where they would count as reserves? And when they reach you you can not count them as reserves and you send them to the Treasury to get something that will count as reserves?

Mr. Vanderlip. And then the Treasury sends them out and they are at once paid out by the banks, and the circle goes on.

Senator Hitchcock. Yes; but it is because they do not count as reserves, and the bank is constantly striving to maintain a reserve that they send them to you?

Mr. Vanderlip. Yes; that is an important factor in their redemption——

Senator Hitchcock (interposing). My point is this, that redemption does not necessarily indicate redundancy, but merely indicates a scarcity of reserve money.

Mr. Vanderlip. That is true.

Senator Hitchcock. It seems to me that that does away with your statement——

Mr. Vanderlip (interposing). I do not think it necessarily indicates a scarcity of reserve money, and it may indicate a redundancy.

Senator Hitchcock. Why otherwise would a bank, say, in my town, Omaha, send national-bank notes to you instead of gold certificates?

Mr. Vanderlip. Because we will pay 2 per cent interest. The gold certificates do count as reserve.

Senator Hitchcock. That is the reason they keep them in Omaha?
Mr. Vanderlip. Yes.

Senator Hitchcock. And, therefore, the redemption of these national-bank notes—$300,000,000 a year, right from New York City—indicates no redundancy of currency, it seems to me, but a lack of reserve money; a struggle to get hold of reserve money. Is not that true?

Mr. Vanderlip. It indicates a disposition to retain reserve money in their own vaults and get rid of money that will not count as reserve.

Senator Hitchcock. Before you proceed, do not the statements of all the national banks combined show that the actual amount of reserve money in all those banks during the past year has been down to a minimum?

Mr. Vanderlip. Yes; almost at the lowest in our history.

Senator Hitchcock. Does not that indicate a lack of money, instead of a condition of redundant currency?

Mr. Vanderlip. It may indicate a very expanded state of loans.

Senator Hitchcock. Have you any other reason for saying that, in your opinion, the currency is redundant?

Mr. Vanderlip. I do not state that the currency is redundant, except at certain seasons. As we stand now, the volume of bank notes remains about the same, in spite of these redemptions, from month to month. It is no larger in October than it is in April. The need for currency is probably $800,000,000 less in the spring than it is in the fall, so it is either very redundant in the spring or lacking in the fall, one or the other. I presume we are about at an average balance, that we are lacking in the fall to some extent and redundant in the spring to some extent, but we have no conformity of volume to our needs.

Senator Hitchcock. Now, have you any estimate as to what degree of elasticity should be given to our whole volume of currency?

Mr. Vanderlip. Why, really, it ought to be just the degree that the people want a bank note instead of a bank balance. The thing ought to be interchangeable. Anybody with a credit in a bank ought to be able to take that credit in the form of a balance on the deposit books of the bank or in the form of a circulating note. That is the ideal elasticity—the same elasticity as there is with a check. You write a check when you need it, and it is returned when you are through with it, when it is paid.

Senator Hitchcock. Assuming we have gold and currency combined of something like $3,000,000,000, gold currency and silver combined of $3,000,000,000, what per cent of that should be subject to contraction and expansion?

Mr. Vanderlip. My estimate is—but I will say there is no way I know of making a very accurate estimate—that we need $300,000,000 more currency in the crop-moving season than we do in the springtime.

Is that about right, Senator?

Senator Weeks. I did not understand that.

Mr. Vanderlip. We need $300,000,000 more currency in the crop-moving season than we do in the springtime.

Senator Weeks. We know about what the East, commencing with Chicago, ships South for that purpose, and I suppose $200,000,000 to $250,000,000. I am not quite sure.
Senator Hitchcock. Do you mean by that, in the season when we need the least we have an excess now of $300,000,000?

Mr. Vanderlip. We have an excess now of some part of $300,000,000. In seasons when we need it most we have a deficiency of some part of $300,000,000. I will not undertake to say just where the line is.

Senator Hitchcock. Let us divide it between the two and say $150,000,000. Then, why do you favor the tearing up of the whole bank-note system as it now exists in order to secure an excess of $150,000,000 at certain seasons of the year?

Mr. Vanderlip. It is just as important to secure the redemption of that $150,000,000 at the other season of the year.

Senator Hitchcock. Because it piles it up in New York?

Mr. Vanderlip. Yes.

Senator Hitchcock. Suppose the law prohibited the piling of it up in New York?

Mr. Vanderlip. The law can not prohibit all the things it undertakes to.

Senator Hitchcock. The law can direct where the national banks shall keep their reserves.

Senator Nelson. Where they pile it up somewhere in the country; it does not do any harm where it accumulates in the country bank.

Mr. Vanderlip. Would not the country banks have the same motives as the city banks if it finds it is very flush in funds? Would it not be apt to make loans it otherwise would not?

Senator Hitchcock. It is not the experience. The trouble always originates in New York.

Mr. Vanderlip. The trouble rarely originates in New York, but is always exhibited there, because it come up along the line. The country bank calls on the reserve correspondent, and the reserve correspondent calls on New York. It is merely exhibited there as a culmination of the pressure.

Senator Hitchcock. The experience of France, even with their very expansive currency—the aggregate of the expansion and contraction, as I recall it, is something like only 8 or 10 per cent. Maybe it is only 6 or 8. The expansion occurs in January or February, and the contraction occurs in August, almost with a uniformity. The great mass of the banking currency of France remains always outside.

If the great body of our currency must be always outside, why have that part elastic? Why not allow the permanent part to remain as it is now and only provide an elastic cushion on top of it?

Mr. Vanderlip. That is all you have done in this bill. The cushion is extremely thin—so thin it won't save you from jars.

Senator Hitchcock. You think it would not be taken up to any great extent?

Mr. Vanderlip. Yes.

Senator Hitchcock. Would not, in a short time, the growing needs of the country demand another increase of bonds, and would not increased needs of the currency arise and cause an elastic demand for this provision?

Mr. Vanderlip. They will in time, if you want to legislate for the future instead of for the present. In this connection there is one great danger to which I want to call your attention.
Senator Shafroth. Just before you leave that, you indicated this currency would not be taken up. How much paper do you estimate there is now of the kind specified in this bill as being required in order to issue currency upon?

Mr. Vanderlip. I would not undertake to estimate it in dollars. I believe the supply is ample, or at least would soon become ample as we adjust our business practices to the needs for creating this type of paper. I think the discount provisions are wise and well considered.

Senator Shafroth. How much call money is there used in New York City, if you can give a rough estimate of it?

Mr. Vanderlip. I have not the figures in my mind. I have one interesting figure in that connection. At the moment there happens to be $180,000,000 of outside bank money loaned on call in New York City, and I have known it to be as high as $300,000,000.

Senator Shafroth. It varies and fluctuates?

Mr. Vanderlip. Yes. That is outside money loaned on commercial discounts.

Senator Shafroth. There would be, in addition to that, some New York discounts, would there?

Mr. Vanderlip. Many millions.

Senator Shafroth. Do you think it is as much as a hundred million dollars?

Mr. Vanderlip. More than that.

The Chairman. In the hearing, on page 773, is a table of those outside loans, Senator, which were gathered together by the comptroller's office.

Senator Shafroth. Yes; I will be glad to look at that; but I want to ask one more question in this connection: When your banks make a call for a loan—that is, a call loan—where does the man get his money from to pay you?

Mr. Vanderlip. From another bank.

Senator Nelson. If he can get it?

Mr. Vanderlip. Yes; if he can get it, or by selling the security. There is no other way. There are just two ways of getting it, either by shifting the loan or selling the securities.

Senator Shafroth. And then he has to sell at a sacrifice when he has to sell his securities?

Mr. Vanderlip. Yes.

Senator Weeks. Mr. Vanderlip, I would like to clear up something you have just stated. You say at present there are $180,000,000 of money loaned by New York for country banks on call loans. Does that include loans made for foreign banks as well?

Mr. Vanderlip. I presume it does. That amount would not be an important part of it, however.

Senator Weeks. You have stated that at times there is a considerable amount of money loaned for foreign banks, varying, of course, with rates.

Mr. Vanderlip. Yes.

Senator Weeks. Three or four years ago I was on a committee to look into the Canadian system, and the Canadian banks were very free to tell us how their loans were made and where they were made, and I was amazed at the amount of money they loaned to New York, or were loaning at that time. I do not remember the definite figures,
but it would be a very large per cent of $180,000,000, loaned by banks of New York on stock-exchange collateral. I know it impressed me with the idea if the Canadian banks on some one day called all of their loans it would create a very serious condition in the New York market.

Mr. Vanderlip. That condition is very serious. There is no reserve held against the possibility of those demands from the outside. If a New York bank loans on call, it loans a deposit and it keeps a reserve against that deposit, so that it has something there against that liability. But the outside banker knowing it can demand the whole of the loan and take it right out of New York, and it is a factor of very great danger and one that in time of trouble has several times been shown to be of great danger.

Senator Bristow. Mr. Vanderlip, I was interested in your statement to Senator Reed, that the 2 per cent bonds were worth par for circulation purposes. Why are they now selling below par?

Mr. Vanderlip. Because the bankers, I suppose, do not know just what legislation we are going to have. They have seen a bill started without a provision for these bonds. This bill may now pass without any provision for the bonds. I, as one banker, do not want to accumulate bonds until I know something about the future legislation that will protect their value. I said, too, that they would be worth par for that purpose. They are worth par if a Government obligation paying 3.18 is worth par. If a Government obligation paying that was not worth par, these bonds would not be. They are worth more than par if a 3 per cent bond is worth par. Of course when a 3 per cent bond is not worth par, this new issue of bonds would not sell at par. The present 3 per cent bonds, without the circulation privilege, are quoted just under par now, and with any large addition to the volume of such bonds, I am certain they would go further below par. No foreign Government ever floats a bond at anything like that basis.

Senator Bristow. New York is the market place for these bonds, is it not?

Mr. Vanderlip. Yes.

Senator Bristow. Are many of them being put on the market there now?

Mr. Vanderlip. Not very many, because there is no one who is willing to buy them and there is no increase in circulation. The tendency now is to decrease circulation. The thing that always held up the bonds has been a constant demand for increase in circulation. Now that demand has ceased, and certainly no one wants to buy them for investment. The only market for the 2 per cent bond is made by the banks, and the banks not being clear as to the future are not disposed to buy. On the other hand, there is not a large disposition to sell at a sacrifice. The tendency is to hedge, and there is very little doing.

Senator Hitchcock. Suppose the bill provided that all of the national banks having circulation should continue to have circulation on a bond-secured basis, would there be a market?

Mr. Vanderlip. The bill does provide for that.

Senator Hitchcock. There is no provision for retirement?

Mr. Vanderlip. No forced retirement; only voluntary.

Senator Hitchcock. At the end of 20 years it is forced?
Mr. Vanderlip. Yes.

Senator Bristow. I can hardly understand your statement, then, that these bonds are profitable to the bankers if they retain the circulation privilege.

Mr. Vanderlip. That is, you do not see, then, why the banks do not buy them?

Senator Bristow. I do not see why they want to sell them if they are profitable—more profitable than any other Government bonds will be.

Mr. Vanderlip. Because they are not sure what this legislation is going to do.

Senator Bristow. Suppose the circulation privilege is going to continue for all these bonds?

Mr. Vanderlip. They may, then, have in mind to retire from the national-bank system, and these bonds in the hands of any other holder than a national bank would not be worth par; they would be worth less than par.

Senator Bristow. Do you think the indication, then, is that the national banks expect to leave the system or fear others will?

Mr. Vanderlip. Undoubtedly.

Senator Bristow. It is an indication of the unpopularity of the bill?

Mr. Vanderlip. There are many indications of that.

Senator Weeks. Would not you say "uncertainty relating to the bill" rather than "unpopularity"?

Mr. Vanderlip. I think there is both among bankers.

Senator Bristow. Do I understand you then, Mr. Vanderlip, that, in your opinion, the reason the 2 per cent bonds are now sold for 95 is that country banks or national banks are contemplating the sale of these bonds and offering them for sale with a view of getting out of the national banking system?

Mr. Vanderlip. Or fear other banks may go out of the national system and there will be more of these bonds for sale than the banks can absorb, and in the hands of holders other than banks they are worth very much less than the present price.

Senator Bristow. Of course, I suppose you will come to that, but I would like to follow that up now or at some other time, as to why these banks expect to go out of the national-banking system.

Mr. Vanderlip. They object to forced subscription of capital; they object to the risk that that capital will perhaps not earn 5 per cent, or if it earns 5 per cent it will pay less than their other investments. They object to joining a bank if it may be forced against its will to loan to another bank. The country bank objects to the national clearing-house measure, which I believe will be of great economic advantage to the country, but which I recognize will cost the country bank some profits in its collection business, just as I believe that the new reserve requirements are superior to the present reserve requirements, although the change will cost my bank $50,000,000 of deposits.

Senator Nelson. Do you mean $50,000,000 of deposits or $50,000,000 of profits?

Mr. Vanderlip. Oh, deposits. It takes us a long time to make $50,000,000 of profits. [Laughter.]

The Chairman. You recognize the difference?
Mr. Vanderlip. It is a class of deposits, too, Senator, that is the least profitable of any we have. I believe we will make up for those in various ways, some ways, perhaps, that will not be altogether to the satisfaction of those who want to see the importance of New York reduced as a financial center. I do not believe this measure will so reduce New York.

Senator Reed. What are those ways? I am interested right now.

[Laughter.]

Senator Nelson. He wants it out at Kansas City.

Senator Reed. No; I want to be frank, because when a man jests here, he is liable to be misunderstood. I would not make war on New York. I would like to know what might happen under this bill, and, incidentally, if I could move it to Kansas City, I would, if Senator Nelson did not keep it from us and take it up to St. Paul.

Mr. Vanderlip. To-day the National City Bank keeps $70,000,000 of demand loans. Under this new requirement I do not see that it would have to keep any, or at least a very much smaller amount. That will release, then, some considerable portion of that $70,000,000, which we can devote to other purposes. We can use it for commercial loans, and that will be one field where the city banks will become more active. I believe we will go out in the country for commercial business.

The Chairman. And it is a much more profitable business, is it not?

Mr. Vanderlip. It is a very much more profitable business. And I think, too, that the city banks would come in competition with the country banks for this commercial business. We are restrained from coming in competition with the country banks now, for two reasons: We do not want to interfere with our correspondent, our client who keeps his money with us, and we do not want to go into his field and take business away from him. Furthermore, we can not offer quite equal terms to the borrower, because we have to charge for the collection of all of his checks. Under the new arrangement, having no relations with our correspondent bank, his deposit having been withdrawn and placed in his own vault or the Federal reserve bank, we would have no compunctions, certainly, against invading his field and going after commercial business. Further than that, we can offer to the country commercial borrower the same terms for collecting his checks as his local bank could offer. So I think we will become competitors for business in a much wider circle.

Then, this will release some part of this $70,000,000, which we can use for financial operations. I do not look upon this measure as a blow at the size and the future of New York banks, providing you will fix up some of these things which, as I am trying to indicate, will, I believe, keep it from working and fulfilling the mission you want it to fulfill.

Senator Reed. If your bank to-day wanted to buy paper in the country, there are plenty of places it could go to buy paper that you need not conflict with any of his customers, are there not?

Mr. Vanderlip. Buying paper is one thing and having deposit relations with the borrower is another. Of course we buy paper by the millions, right along. We buy that from the commercial-paper brokers and have no relations with the maker of the paper. With our customer, we loan in return for his keeping a balance.

S. Doc. 232, 63-1—vol 3—3
Senator Reed. You mean, then, that the result of the bill may be you will have more money to loan on commercial paper?

Mr. Vanderlip. Yes.

Senator Reed. That, after having known a merchant, we will say, in Pittsburgh, who desires, at times, large accommodations, he would deposit perhaps in your bank a portion of your own funds. Instead of putting them in his bank and having his bank carry them over there, he would carry them there himself?

Mr. Vanderlip. Yes.

Senator Reed. And thereby would establish banking relations with you, and when he needed an accommodation he would come to you for it?

Mr. Vanderlip. That is exactly what will happen, I believe. And it will be an advantage to the merchant. One of the aims of this bill, as I understand it, is an equalizing of the interest rates. It will raise the rates in the cities and lower them in the country, and we will get a higher average interest rate than we do now. We have had to take a low interest rate on the great mass of call loans. We will be able to devote that to commercial purposes and get a higher average rate than we do now, and I welcome the change.

Senator Reed. Just in proportion as your bank will do business with individuals through the country, and comes thereby in competition with the local bank, the borrower will get a benefit in that competition?

Mr. Vanderlip. Yes.

Senator Reed. And he is the most numerous class.

Senator Weeks. Do you know what the average interest you get on stock-exchange loans is, and what would be the average you got on commercial loans for the past year, or a period of years?

Mr. Vanderlip. I do not believe I could give you the commercial loans.

The Chairman. I put a table of those interest charges in the record, running through from 1906 to date.

Senator Weeks. You mean on different classes of loans?

The Chairman. Yes.

Senator Weeks. I would like to have Mr. Vanderlip give it to us.

Mr. Vanderlip. In 1909 the average was 2.74; 1910 the average was 2.95.

Senator Reed. What is that on?

Mr. Vanderlip. Call loans.

Senator Nelson. Par money?

Mr. Vanderlip. Par money. In 1911 the average rate was 2.60, and in 1812 the average rate was 3.70, and for 9 months of this year the average was 2.92. The average for the 4 years and 9 months has been 2.98.

Senator Weeks. Without figuring the cost of doing business, just what do you have to get to break even?

Mr. Vanderlip. 2.66. You are speaking of bank deposits?

Senator Weeks. Yes.

Mr. Vanderlip. We pay 2 per cent on bank deposits. We can only loan 75 per cent of these deposits. We must loan at 2.66 in order just to break even, to say nothing whatever of expenses.
Senator Weeks. Then, eliminating the cost of doing business, you have made a profit during the years which figures in that of 0.32 of 1 per cent?

Mr. Vanderlip. That would be so if we had loaned all of our bank balances on call. We loaned a large part of them on call, but not all, and the average rate would be higher.

Senator Reed. How is the ordinary commercial rate in New York City? What does it run?

Mr. Vanderlip. Four to five and one-half per cent, I would call an ordinary rate. When it reaches 6 it is considered very high. When it reaches 4 it is pretty low. That is about the range for the commercial borrower.

Senator Nelson. That is the time borrower?

Mr. Vanderlip. Yes.

Senator Bristow. Do you now handle a great deal of commercial paper from the country?

Mr. Vanderlip. Yes.

Senator Bristow. A gentleman in my town complained to me, referring to a personal incident for illustration, that last fall, while he had been getting money in New York (he was a wholesale merchant) at certain seasons of the year at from $3$ to $4\frac{1}{2}$ per cent, they were now charging him 6. Do I understand you to mean that if you did not have these reserve deposits and were not loaning on time loans you would handle more of that kind of business?

Mr. Vanderlip. You understand me to say that if we have a central bank, at which we can rediscount commercial paper, making commercial paper a liquid asset, we will then have no necessity for devoting a large amount of our funds to call loans on stock exchange collateral, and can divert the funds now used for that purpose to commercial loans.

Senator Bristow. Yes; I understand now, I think. That is, this commercial paper you can turn into cash at any time?

Mr. Vanderlip. Yes; under the proposed plan, if it works.

Senator Bristow. By going to the Federal bank?

Mr. Vanderlip. Yes.

Senator Bristow. And that makes that valuable because it will carry a higher rate of interest than you have been getting on stock-exchange loans?

Mr. Vanderlip. Exactly.

Senator Bristow. Suppose the farm mortgage could be cashed in at those Federal reserve banks just the same at any time you wanted to. Would that be desirable?

Mr. Vanderlip. It would be most undesirable, just as it is most undesirable to permit those banks to rediscount loans made on stock-exchange collateral. The liquidating character is different. There is nothing liquidating about a farm loan.

Senator Bristow. But if the Federal bank will discount the farm mortgage for you, just as it rediscounts a piece of paper, it would not make any difference to you?

Mr. Vanderlip. Not until the bank got involved. It might then.

Senator Bristow. You think the Federal bank might get involved?

Mr. Vanderlip. I know it would.
Senator Nelson. There is this difference, Senator, that I want to call to your attention, although I am in favor of farm loans. They have in New York a market for stocks and bonds, and I know of no market equivalent to that for farm mortgages.

Mr. Vanderlip. That is exactly the difference.

Senator Nelson. If you had that same market for farm mortgages as you have for stocks and bonds on the New York Stock Exchange, then I should regard farm mortgages as liquid as those others.

Mr. Vanderlip. Neither should be acceptable for rediscount.

Senator Nelson. In times of stringency, the only liquid loans are bills drawn upon products—bills of lading drawn upon products that are salable.

Mr. Vanderlip. Yes; that is substantially so.

Senator Nelson. The product pays your bill.

Senator Bristow. The commercial paper, however, is not exactly that kind of security.

Mr. Vanderlip. It should be a self-liquidating loan that is made to a person who will receive the money to pay it off as a result of the completion of the cycle of the trade he is engaged in.

Senator Bristow. That takes in a very small part of our business, does it not, as a country?

Mr. Vanderlip. No; I think it takes in a very large part. It is true the borrowings of the manufacturer for an extension of his plant would not come within that definition. If he borrows to build a new building, you might just as well loan a farmer on his real estate mortgage. That is capital invested. If he borrows to buy raw material, if he borrows to pay labor, all of which is going to work out in the manufacturing product, so that when that product is sold he can repay his loan, that is the proper type of security to put in the rediscounts of the reserve bank.

Senator Bristow. Suppose he borrows to buy a herd of cattle, which he expects to feed and turn off.

Mr. Vanderlip. An ideal loan.

Senator Bristow. But under this bill, under the 90-day provision, it is not available, because you cannot make 90-day notes for that purpose.

Senator Shafroth. Oh, yes you can. That is perfectly available.

Senator Bristow. No. They make their notes for six to nine months, as a rule.

Senator Shafroth. Oh, well, they can cash them after the expiration of three months.

Senator Bristow. Oh, yes; but it is not available at the time it is made.

Senator Nelson. The same rule, Mr. Vanderlip, would apply to a merchant in the interior who buys a big bill of goods in New York from the wholesaler, and he expects to retail those goods, and he expects to pay for the goods out of the proceeds of his retail sales; would it not?

Mr. Vanderlip. That is a typical example of a bank loan.

Senator Nelson. That would be like the other case you put, of the manufacturer?

Mr. Vanderlip. Yes.

Senator Shafroth. Mr. Chairman, I suggest the hour of 1 o’clock has arrived when, according to our resolution, we are to recess.
Senator Nelson. I would like, Mr. Chairman, to have Mr. Vanderlip permitted to go through and indicate what he thinks are the defects in this bill, and what he thinks ought to be the proper form of the bill.

Senator Hitchcock. You mean instead of having the questions?

Senator Nelson. Yes. Let him make one clear statement, and then ask the questions afterwards.

The Chairman. If that is the pleasure of the committee, when the committee reassembles after the recess, we will do that. The committee will now take a recess until 2.30 o'clock p.m.

(Thereupon, at 1.05 o'clock p.m., the committee took a recess until 2.30 o'clock p.m.)

AFTER RECESS.

STATEMENT OF FRANK A. VANDERLIP—Continued.

The Chairman. You may proceed, Mr. Vanderlip.

Mr. Vanderlip. I will adopt the method of taking the bill up section by section.

I object to the number of reserve districts. I explained this morning the reason for that. I believe that one would be the ideal thing. If that is not possible, any reduction below 12 is better than 12. I believe it would work much more satisfactorily with no more than 4.

There would be a more intimate relation and better understanding between the managements, and with the four city centers, their geographical extent would be sufficient to express varying conditions, and for many reasons they would be preferable to 12. I still think that 1 would be preferable to 4.

I note that the bill says that—

No Federal reserve district shall be abolished or the location of a Federal reserve bank change except upon the application of three-fourths of the member banks of such district.

I think it would be an improvement to say one-half. It would be very difficult to get three-fourths to agree to a change which a majority might clearly see would be an improvement.

I am not going to confine myself entirely to offering objections to the bill, but discuss it generally. There is a very general objection, on the part of many bankers, to being required to subscribe to the stock. That is not pleasant, but I believe it is necessary in order ever to get a bill into operation. I think one bank would be waiting for another, and without the required subscription to the stock it would be very difficult ever to get the reserve bank started. The amount of the stock issue subscription seems to me correct.

Senator Reed. What page are you dealing with?

Mr. Vanderlip. Page 3. There certainly should be no bank organized with less than $5,000,000 capital, and I believe it is desirable to increase that amount and not have too small Federal reserve banks.

Senator Nelson. If we had four we could easily increase that?

Mr. Vanderlip. If you had four you could have a capital of $25,000,000, if all the national banks came in.

Senator Pomerene. When you speak of the amount, you mean the amount of the capital stock of the original bank, and not the amount which the member bank is required to subscribe?
Mr. Vanderlip. I referred to the amount that each member bank is required to subscribe when I said the amount seemed correct. I have no objection to the 20 per cent of the stock of a member bank being the amount it must subscribe. There is, of course, objection to that on the part of the banks that feel that that is a forced use of their capital at a lower rate than they are in the habit of earning.

Senator Hitchcock. What would you think about organizing one or two at the present time on a voluntary basis, allowing the others to come along naturally?

Mr. Vanderlip. I am afraid that on a voluntary basis you would have every bank waiting to see what would happen, and you would not get anywhere. This is not a house that you can build a story at a time. The principles which must be involved in correct legislation are so interrelated that you must recognize and embody practically all of them to have a workable system.

Senator Hitchcock. What would you think about making it obligatory upon banks of a certain capital, say, $250,000, and optional with smaller ones?

Mr. Vanderlip. That would probably save the national banking system from a great depletion of national banks. I believe if the bill passed in its present form a great number of small banks would certainly go out of the national banking system, and possibly a great many large banks would also. In some States there would undoubtedly be a tendency to turn national banks into State banks and then take time to consider whether they would join or not.

The bill leaves it optional with State banks. It is therefore quite possible for a national bank to convert to a State bank charter and take its time to see how this thing works.

There is no longer left any reason why a bank should be a national bank instead of a State bank, except a small profit that it can make during the next 20 years on note circulation. That is almost a negligible thing. But there is no other reason that I see where there is an advantage in a national charter over a State charter.

There are many reasons why a State charter is more advantageous than a national charter, and I should think there were likely to be many banks which would surrender their national charters and take out State charters, some, perhaps, immediately, and join the Federal reserve banks and others which wait and see how the thing works.

The Chairman. Mr. Vanderlip, if the country banks were to withdraw their reserves and not send them to New York, would they not have their money at home to lend at a higher rate and therefore make a profit out of it?

Mr. Vanderlip. I do not quite comprehend your question.

The Chairman. You stated that from your own bank $50,000,000 would be withdrawn?

Mr. Vanderlip. Yes.

The Chairman. Where they now get 2 per cent. Since they would have a place where they could get money if necessary—out of the reserve bank—would they not be able to use the money they have now tied up at 2 per cent and lend it in their own neighborhood at a higher rate?
Mr. Vanderlip. With the reduction in the reserve requirement the country banks could extend their loans a good deal. That reduction would lead the country banks to extend their loans.

The Chairman. Then it would be beneficial for them, would it not?

Mr. Vanderlip. I think in a reduction in the reserve requirement down to a point that is safe for the bank to run on so that it may extend its loans would be beneficial for them.

The Chairman. And if the country banks had a place from which they could get money instead of, as now, relying upon the central reserve cities, they would rely upon the central reserve bank and in that way could lend the money which they now have tied up at 2 per cent.

Mr. Vanderlip. Yes; the country banks would undoubtedly be pretty well situated and satisfied if the Senator's suggestion that banks of $250,000 be compelled to come in and the smaller banks not be compelled to come in.

Senator Weeks. All of that $50,000,000 to which you referred would not be available to loan, because the country bank would have to transfer a certain part of it to the reserve bank.

Mr. Vanderlip. There is only 3 per cent; the difference between 15 and 12 per cent.

I was going to say that the country bank would probably welcome the organization of such a system which would be imposed only on the larger banks, leaving them to operate outside the system, and with the assurance that the larger banks, through the facilities of the system, would always be in a position to rediscount for them. The average country banker would rather do this business with his old correspondents than take the chances of having to rediscount with the new Government organization, which will impose a good many regulations that might be trying to the borrower.

Senator Hitchcock. Would not there be another advantage in that—that a country bank in a western State, doing business through a correspondent, would rediscount paper with the correspondent, and that correspondent, if necessary could rediscount that paper with the reserve bank. The reserve bank would naturally discount a good deal of paper for the larger western banks that would in turn discount for the smaller banks?

Mr. Vanderlip. Undoubtedly.

The Chairman. The country banks would get the benefit of the system without bearing any of its burdens?

Senator Reed. Not all of the benefits.

The Chairman. They could get the accommodation they wanted from the reserve city banks.

Senator Reed. They still would be required to keep in their own vaults their full reserve when this system was working. They could not put it into the central bank or the regional bank and have it earning anything.

The Chairman. The suggestion of Senator Hitchcock, as I understand it, would involve the keeping of the reserves as they are at present if those banks did not come in?

Senator Hitchcock. Yes.

Senator Reed. Of course they lose some advantage. But they would have this advantage: They would get relief through the relief
which could be given to the larger banks, the larger banks in turn accommodating them.

Senator Hitchcock. I do not see why they should not be permitted to keep their reserves with the regional reserve banks as well as with a member bank.

Senator Bristow. A number of country bankers who have appeared before us say that 5 per cent reserve is not enough for them to keep in their vaults; that they require more than that. Most of them say they carry from 8 to 10 per cent.

Mr. Vanderlip. Under the new conditions they probably would find that they would not need as much in their vault as they need now; that is, if they were close to a reserve bank or a branch of a reserve bank where they could quickly get additional currency. There might be banks where 5 per cent would not be enough. On the other hand I think there are many banks where 5 per cent is more than necessary, and when I come to the section about reserves I should strongly recommend that the banks be not compelled to keep 5 per cent in the vaults, but to keep as small an amount as they choose, and that they ought to have an option as to where they keep it.

Senator Weeks. If that option were given to banks in a center like New York, they would keep substantially all the reserve in a reserve bank?

Mr. Vanderlip. Substantially all of it; only keep till money. We would prefer to carry a bank credit than the actual cash.

Senator Shafroth. You could borrow part of it back, also?

Mr. Vanderlip. Yes; that is, the member banks could borrow it back and use it in other transactions. Two-thirds of the deposited reserves the reserve banks could use in the ordinary transactions of their business.

The Chairman. His suggestion was as to the country banks, which are required to carry 5 per cent with the reserve bank, 5 per cent in their own vaults, and 2 per cent optional; that they have practically 7 per cent optional, so that they could use that without its being a violation of the rules, and 5 per cent could be loaned.

Mr. Vanderlip. Now, Mr. Chairman, passing on to the election of the directors of Federal reserve banks, it is provided that all the banks shall be divided into three groups of equal number, and as nearly as may be of similar capitalization in each group. Taking the country as a whole that would result in groups of 2,464. The first group would represent $67,000,000 of capital; the second group, $142,000,000 in capital; and the third group, $836,000,000 in capital. You therefore propose to give the same voting power to representatives of $67,000,000 in capital that you give to representatives of $836,000,000 in capital. I question whether that is fair or not. In any event I see no permanent purpose in this division into groups.

In the first election each group is to elect one director, as I understand it, and thereafter only one director is elected at a time, because the terms eventually become three-year terms and all the groups will be voting for one candidate. As I read the bill this division will only apply to the first directors elected.

The power of the Federal reserve board to remove, at its discretion, the directors of class B is objectionable. It is declared that they may remove if it appears at any time that any such director does
not fairly represent the commercial, agricultural, or industrial interests of his district. I do not see exactly how a Federal reserve board is to be a good judge of whether the director fairly represents those interests or not. In any event, it is obvious that the control which the Federal reserve board will have over the local Federal reserve banks might be subject to bad use, as long as it can remove the three directors that it appoints, and can also remove three other directors that have been elected. It is true that the removal of those directors would be followed by the election of other directors by the stockholders, but it seems to me an unnecessary power, and I know that bankers generally regard it as one of the distinctly unsatisfactory features of the bill.

Senator Shafroth. Would not the fact that the three directors had to be reelected by the stockholders act as a deterrent on the part of the Government or the administration in removing them unless there was good cause?

Mr. Vanderlip. I can imagine a Federal board telling those three men to shape their views to coincide with the views of the Federal reserve board or they would be removed, and rather than be removed they would shape their views that way. I think this might allow a malign influence.

Senator Shafroth. That would not be a removal on the ground that they did not represent the commercial, agricultural, and industrial interests of the districts they represented.

Senator Nelson. It is discretionary; it would be simply their judgment that they did not represent them.

Mr. Vanderlip. And there is no appeal from that.

Senator Nelson. There is no trial of that issue. They could simply assign that as a reason, as a ground, without any foundation in fact.

Senator Shafroth. I do not believe they would do that.

Mr. Vanderlip. Section 7 provides for the division of earnings. It tends to make the bank managers run the banks for profit, as I understand that the way the earnings are to be divided is that they are proportionate to the deposits.

Senator Hitchcock. Does not that tend to the mobilization of reserves?

Mr. Vanderlip. I do not comprehend that it does in the least.

Senator Hitchcock. If you offer an inducement for the banks to keep substantial deposits there, that certainly intensifies mobilization. A bank might keep its required reserve and nothing more, but if it has an inducement to keep more, if there is any virtue in mobilization, this encourages mobilization.

Mr. Vanderlip. I think that this reserve might better be employed as a basis for commercial loans in its community.

Senator Hitchcock. That is assuming that the reserve has been fixed at the ideal point, and it is assuming that it can make the loans in its own community. Suppose it has a surplus. Instead of lending that surplus and that deposit, it has an inducement to put that in the reserve bank.

Mr. Vanderlip. It would no longer deposit it in other banks.

Senator Reed. One of the arguments which has been made for this or some similar measure has been that there is a shortage, at times,
of money in one section of the country and a surplus in another, or a shortage in one community and a surplus in another, and it has been argued that if this surplus, wherever it existed, went into a center, then it would be in a position to be loaned out to the part of the country that wanted that money. You do not think there is much in that argument, I take it?

Mr. Vanderlip. No; that is not exactly the correct theory in this bill, as I see it. The surplus will not be put in as a reserve, but in the discount market, to buy commercial paper, where the interest rate is high and the need is great.

Senator Reed. Not as a reserve, but the idea, to express it a little more fully, as it has been urged here with persistence, has been that there is always enough money in the country to do the business of the country, but that it piles up in some one city, we will say, in New York City, at a given period of the year and that at the same time they need money in some other part of the country. It has been said that if a proper bill were drawn it would make that money available at all times where it was needed.

Now, assuming that the reserve bank has in it simply legal deposits, that is, legal reserves, and that there was a profit to be realized from the operations of that bank, and that there was a surplus of money in the banks of some section of the country, the question is whether they would then be deposited and the reserve bank be put in a position to discount paper which came in from other banks and relieve the situation of that community?

Mr. Vanderlip. The situation would be relieved in two ways. A bank in a community where there is a plethora of funds would keep its reserve with a reserve bank, but would use its surplus of loanable funds to buy in the discount market, paper that originated in a community where there was a deficiency of funds. The bank in the community where there was a deficiency of funds would be able to re-discount at the reserve bank, and make good any depletion that that demand for funds had caused in this reserve. So that a proper measure will operate in those two ways, the creation of a discount market, and the creation of a central reserve reservoir; and the institution that can re-discount for the banks whose reserves are depleted, having all the reserves in this reservoir, has a basis for this power so to re-discount.

Senator Reed. You would apply that simply to the reserves and not to the surplus over the reserves?

Mr. Vanderlip. The banks in the district where there is easy money will probably not keep any more than their legal reserve with the reserve bank. They will employ that in the discount market. If they can not loan it in their own community they will go where they can get a higher rate.

Senator Reed. That would be true to-day. Now, the question is——

Mr. Vanderlip (interposing). It is not altogether true to-day, Senator.

Senator Reed. If we apply this system, is there any advantage in having the reserve bank always in a position to receive surplus moneys from one community and buy the paper of another community where they need that money?

Mr. Vanderlip. That is not the business of the reserve bank. The surplus moneys of one community should be invested in the discount
market in the purchase of paper originating in the other communities. The business of the reserve banks is to hold the reserves and to rediscount for reserve purposes the paper of member banks, but not to invest here and there, according to whether money is easy or not.

Senator Reed. Then we come to the proposition that you do not think there is very much in the argument that the central bank, the reserve bank, would become the market place in which the surplus of one community would be transferred to the other place?

Mr. Vanderlip. I think it would be very bad banking, and if it did become the market place, the market place would be the discount market, and that you can not create without a central bank. In order to have a discount market you have got to make liquid the commodity you sell there; that is, commercial paper. You can only do that by having a central bank, to which the purchaser can go to rediscount. A central bank is necessary for the creation of a discount market, and the discount market is the place where surplus funds will be invested.

Senator Weeks. Let me ask you if you do not think the greatest difficulty in our situation in the past has been that under our law New York and the central reserve cities have really been put in a position of creating central banks, and that those banks have been given the power to recoup their resources in case of a strain, so that New York has really been the clearing house of all their troubles?

Mr. Vanderlip. We have a one-armed central bank. We have held the reserves and had no power to issue notes, and the moment circulation was diminished we have had to give up our reserves. It has been an impossible rôle to play. It has been like creating a central bank without creating a note-issue privilege.

The Chairman. It also compelled you to lend on the stock market, did it not, on call loans?

Mr. Vanderlip. We are absolutely compelled to do it. There is no desire whatever for the banks of New York to loan upon stock-exchange collateral. Why should they want to loan at 3 per cent when they could otherwise get 4 or 5 per cent? They are compelled to do it, because they are compelled to have this secondary line of reserve. They are compelled to place their funds where they can get them back quickly.

When a New York bank buys a piece of commercial paper, that paper has got to lie in its portfolio until it matures. There is nothing the New York bank can do with it. It will not do to invest its funds in commercial paper. It must invest in something it can turn back into money if its country correspondents demand money. So we have hundreds of millions of dollars invested in call loans.

Senator Weeks. Do you believe, Mr. Vanderlip, that you express the views of New York bankers generally on that subject?

Mr. Vanderlip. In just what particular?

Senator Weeks. I mean in the particular that it is undesirable to loan so much money on stock-exchange collateral.

Mr. Vanderlip. I think so.

Senator Bristow. Mr. Vanderlip, if you did not pay interest on these reserve deposits, you would not have to make these loans in orders to keep even, would you?
Mr. Vanderlip. Well, we are doing business for profit. That is the object of running a bank.

The Chairman. You have to do that in any event in order to have quick assets; in order to have a quick reserve you have to do that?

Mr. Vanderlip. Yes. I do not care whether it is bank deposits or anything else; you have got to have a quick reserve. Our legal limit is 25 per cent. If we get a call that takes us below it, we are in an illegal position and we have got to be able to recoup ourselves. We can not sit still and wait for a commercial note to mature. We have got to get money. In order to do that we must have some of our funds in call loans.

Under the new plan our commercial paper is available for money. Now when we make a commercial loan it must mature. Under the new plan we will have two ways of converting it into money—one to sell it in a discount market and the other to take it to the reserve bank and rediscount it.

Senator Bristow. Having these millions upon which you are paying 2 per cent, it becomes imperative that you get some return, does it not?

Mr. Vanderlip. It is imperative, anyway, Senator, that we have invested some of our funds that we can quickly realize on. Suppose the New York banks had no bank deposits, but merely commercial deposits, and suppose the reserve was fixed at 25 per cent, or any other amount. The desire to make money will tend to make us loan down to the legal minimum of 25 per cent. If we have any sudden call from any customers and get below our limit, it is necessary to recoup ourselves. In order to do that we have to have some investment we can dispose of. We can not dispose of commercial paper.

All we can do is to sit and wait for the commercial paper to mature. So we must either carry an investment or make a loan on call that we can get back. You get commercial paper which has the quality of being turned into cash and you do away with this necessity, and there is no motive but necessity for investing in call loans.

Senator Reed. You could carry a sum much larger than your legal reserve and use that, but that would cut into your profits very materially?

Mr. Vanderlip. Yes, sir. If you are running a bank for profit, you would run with as low a reserve as permissible.

Senator Nelson. The other alternative would be that these $180,000,000 that you have in call loans—the other alternative would be to keep that money in your vaults?

Mr. Vanderlip. Exactly; and the figure is much larger than $180,000,000. That figure is what out-of-town banks are loaning in the call-loan market at the moment.

Senator Nelson. If you could not have a secondary reserve, you would have to have an immense primary reserve?

Mr. Vanderlip. You have got to have it in one or the other.

Senator Hitchcock. I think you testified that the average rate was 2.96.

Mr. Vanderlip. The average for the last five years.

Senator Hitchcock. And your own deposits cost you 2.66?

Mr. Vanderlip. Yes, sir.

Senator Hitchcock. So that your net earnings are one-third of 1 per cent?
Mr. Vanderlip. That would be the case if we invested all our bank deposits in call loans.

Senator Hitchcock. Just take it for illustration; there is a margin of one-third of 1 per cent?

Mr. Vanderlip. Yes.

Senator Hitchcock. Suppose you stop paying interest and simply invested these country bank deposits in perfectly good bonds which fluctuate very slightly. Why would not the country be better off, and you be better off?

Mr. Vanderlip. Bonds fluctuate very slightly, unless they are forced upon the market at a time when there are no buyers. Suppose we are in the position of having invested the reserves of the country in bonds, and the country wanted those reserves from all New York banks that had done that. Our position would be very precarious. We would have to sell the bonds in order to get money, and there would be no buyers. We would have to take losses.

Senator Hitchcock. Suppose you invested only one-half of your reserves in 4 per cent bonds; you would be better off, as far as interest was concerned; you would have a larger amount of cash.

Mr. Vanderlip. We do invest some part of the bank surplus in bonds. The National City Bank carries about $30,000,000. I regard that as a proper investment for a portion of a bank's capital. I do not regard it as a proper investment for any considerable amount of a bank's deposits.

Senator Hitchcock. What would be the effect if the law prohibited you from paying interest on reserves?

Mr. Vanderlip. It would be rather a happy effect for the New York banks, I should think. If the reserve law were the same as it is at present, we would hold less of the money of the country banks.

Senator Hitchcock. More would be kept at home, would it not?

Mr. Vanderlip. Not very much more. They keep at home all they need. It is as I have said. In the event of the establishment of this central reserve bank, a New York bank would keep about all of its cash with the central reserve bank. A bank would rather have a sound-bank credit than to be burdened with cash, if it does not need the cash. I do not believe that a country bank would keep any more cash than it needs.

Senator Hitchcock. Is there not an inconsistency in arguing against a reserve bank dividing its earnings, as a party at interest, on country bank balances, and yet advocating the paying of interest on country bank balances by New York banks?

Mr. Vanderlip. The function of the two is entirely different. The New York banks are run for profit; that is why they are there. If conditions are such that they can not make profits, they will not be there. The Federal reserve banks ought to be run for the conservation of the resources of the country.

Senator Hitchcock. Because the New York banks are run for the purpose of making money it has been deemed disadvantageous to have the large balances pile up there under the form of investment, but because the reserve banks are run for the benefit of the country it seems to be desirable to pile up reserves there and mobilize the balances of the other banks. So it seems to me your arguments ought to be reversed, and you ought to be in favor of not allowing the New
York banks to pay interest, and you ought to be in favor of having the reserve banks pay interest.

Mr. Vanderlip. I would prefer to have the surplus funds invested in the discount market, so that the money will find its way into some other channel, in fact, where the demand is greater and the interest rate higher.

Senator Reed. How would you reach this stock-exchange call loan proposition? Would you do it by prohibiting the loaning of money upon stocks as collateral?

Mr. Vanderlip. I think nothing could be more foolish.

Senator Reed. How would you do it?

Mr. Vanderlip. I would do it by providing a place to rediscount commercial paper, so that banks can have their commercial paper liquidable, and they will then need no prohibition. They will loan where they will get the highest rate. As long as commercial paper will pay a higher rate than a stock-exchange loan they will loan through buying commercial paper.

Senator Reed. Suppose the stock-exchange rate went up, would they not be in danger of going there and investing their money unless they were prohibited from doing it?

Mr. Vanderlip. Is there anything criminal in a man's owning security and borrowing on it?

Senator Reed. Not the least; but we are speaking of the objection which you described as dangerous this morning, namely, the loaning of money on call upon stock-exchange securities, which you said was an element of danger. We want to avoid that. I am asking you to tell us, as a practical man, how that can be avoided. We have already spoken now of the plan for providing a place where banks can cash their commercial paper, which removes a part of the temptation that now is before the bank; indeed, we might say the necessity which is now before the bank.

I want to know how we can absolutely prohibit that kind of business. Is there any way you can do it? A moment ago you characterized my suggestion as a very foolish one.

Mr. Vanderlip. Oh, no; I did not know you made that suggestion. I characterized as foolish a suggestion that would prohibit any loaning upon corporate securities. It would not only be foolish; I think it would be disastrous.

Senator Reed. I did not make that suggestion. I asked you a question.

Mr. Vanderlip. Yes.

Senator Reed. Then you leave the banks free——

Mr. Vanderlip (interposing). I leave the banks free. Now, they are under necessity to do this, but under the new condition they will not be under a necessity. And they never will do it unless the stock-exchange loan pays more than the commercial loan.

Senator Nelson. And, as a rule, they do not?

Mr. Vanderlip. As a universal rule they do not now.

Senator Reed. But you see no objection, if a man wanted to borrow money of a bank and came down and wanted to give his note for 1 day or 30 days presenting as collateral the stock of the Steel company or a railroad company——

Mr. Vanderlip (interposing). I see no objection to that form of loan. I see great objection to it becoming the predominant thing
and the only basis for the secondary reserves which is our present situation, but I see no objection to that type of loan.

Senator Reed. In other words, if a bank had some of that, but had some place to go and cash its commercial paper when it needed money no danger would exist beyond the short time call loans?

Mr. Vanderlip. That is the exact statement of it.

Senator Brustow. Now, Mr. Vanderlip, in answering Senator Hitchcock when he suggested that if you had this money that you have in call loans invested in good 4 per cent bonds, it would be more profitable than carrying, as you do now—when you get only about one-third of 1 per cent—your objection was that you could not realize cash on the bonds?

Mr. Vanderlip. Yes, sir.

Senator Brustow. Now, if you could take those bonds to the Federal reserve bank and get cash would it not answer the same purpose?

Mr. Vanderlip. I would consider that absolutely wrong in principle.

Senator Brustow. Now, why?

Mr. Vanderlip. For this reason: It is simply a shifting of the loan, and there is no way of immediately liquidating that loan. The only way holders of such a loan can get their money is by shifting it from one place to another. The thing that should be the basis of all loans at the central bank should be their inherent self-liquidating quality.

Senator Brustow. You expect the central bank to collect this loan and you be relieved entirely—the Federal bank collects this paper which you rediscount there, does it not?

Mr. Vanderlip. Practically, yes.

Senator Brustow. And you have nothing more to do with it?

Mr. Vanderlip. No; we have rediscounted it. It is in their portfolio, and when it becomes due it will be paid at whatever point has been provided in the note, supposing there was no intervention on the part of the discounting bank. It might be that the bank discounting the note would want to have the note in its possession and get it paid and would substitute some other note of a longer maturity a few days before its own maturity.

Senator Brustow. How is that? The bank that discounted it would take another note, and they would take that other note up.

Mr. Vanderlip. It would be quite likely, if it wanted to take up its loan at the central bank. It would then substitute a new note for a maturing note, and it is to be presumed it would do that a day or two before the maturity, so as to have the note in its own hands when it matured.

Senator Brustow. And then, if it wanted to extend that note, or collect it—

Mr. Vanderlip (interposing). It would be free to do what it chose.

Senator Brustow. That would be very convenient for the bank that was in the same city where the Federal bank was, but it would be very inconvenient for a bank that was 1,000 miles away from that city.

Mr. Vanderlip. There never ought to be that distance intervening. There should be many branches. I have no objection to multiplying branches as much as you choose, within reason. I think no banks should be more than overnight from a branch, and in the practical
working out, it should probably never be but a few hours away from a branch. It would be with the branch that this paper would be lodged.

Senator Bristow. Now, in the country a vast amount of this bankable paper is not expected to be paid, and is not paid; it is renewed from month to month. I think that is not true in the cities so much. But would not this system put that country bank that does not have this three-months’ paper under a very great disadvantage as compared to the city branch?

Mr. Vanderlip. Yes, sir; it would put that country bank at some disadvantage as compared with a State bank doing business in that city, because the State bank would say to the customer, “We will make a nine-months’ loan to you.” The national bank would say, “We will make a three-months’ loan, and we will renew it.” The customer would say, “Maybe they will renew it and maybe they won’t. Perhaps it would be better to make this for nine months, and I will go to the State bank.” There is going to be that disadvantage, and that is one of the reasons why there will be a change of small banks into State banks.

Senator Nelson. In that connection, would there be any harm in extending this paper from 90 days’ to 6 months’ maturity—not all of it, but a certain proportion of it, I mean. Would there be any harm in allowing the bank to take a certain proportion, say 25 per cent. of 6-months’ paper—

Mr. Vanderlip (interposing). In principle I should rather be against that. I believe there is enough 90-day paper for all the needs. Take a bank that makes all of its loans for 6 months. Naturally half of that bank’s portfolio is always 90-day paper, if it does a business that is the same the year around, a business that is continuous. I believe there will be ample 90-day paper.

The Chairman. I remind the committee that the table I put in the record shows there is over $36,000,000 of 90-day paper available.

Mr. Vanderlip. You must remember that the rediscounts of national banks now are comparatively small. I believe the figures show $109,000,000 as the highest they have been in a long time. The average country bank never borrows; it is only the exceptional bank that borrows. I think there will be no shortage of 90-day paper.

Senator Weeks. Well, under the present system the reserve banks have discouraged borrowing, which has kept the natural borrowings down to a minimum.

Mr. Vanderlip. The borrowings will naturally be much larger under this system. It is not considered very good practice for a bank to borrow except in the South, where it is the general practice.

To go on with the detailed suggestions, on page 13 it is provided that there shall be—

a sinking fund to be held for the reduction of the outstanding bonded indebtedness of the United States, said reduction to be accomplished under regulations to be prescribed by the Secretary of the Treasury.

That is leaving very broad discretion with the Secretary of the Treasury. It seems to me it might be better to amplify what the ideas of Congress are in regard to the reduction of the debt. I would rather see it made more definite as to just what the ideas of Congress are with reference to the reduction of the debt.
Senator Reed. You would want the law to prescribe?

Mr. Vanderlip. Yes, sir.

Senator Weeks. What would you say, Mr. Vanderlip, to a proposition to try to pay the national debt in connection with this legislation?

Mr. Vanderlip. I think it very desirable to pay the national debt. The objection which some have raised to this, that there would no longer be any basis for note circulation, disappears with this measure, and it would seem a most appropriate time to consider the ultimate retirement of the national debt.

Senator Weeks. Is not that basis of note circulation the only reason the sinking funds have not been made applicable to the payment of the debt, and has there been any other single reason why the debt has not been paid?

Mr. Vanderlip. I think there is no other single reason, and I think there has been a good deal of neglect on the part of the Treasury Department in not keeping up the sinking fund.

Senator Nelson. It would be a good plan to devote the whole of this sinking fund to the retirement of our national debt?

Mr. Vanderlip. Admirable.

Senator Nelson. And put it in specific terms in the bill?

Mr. Vanderlip. Yes, sir; rather than leave it to the discretion of a bank. We already have laws providing for sinking funds, but for years they have not been very carefully observed.

Senator Reed. Would you use any means of retiring the debt except the employment of a sinking fund?

Mr. Vanderlip. I think it is always an admirable thing for a country with a surplus revenue to devote that to the retirement of its debt, rather than incur unnecessary expenditures.

Senator Nelson. There ought to be a provision in the bill that when the surplus exceeds a certain amount it shall be devoted to the payment of the debt.

Mr. Vanderlip. That would be a wise provision.

Senator Nelson. Would not $100,000,000 be ample? I mean, whenever it exceeded $100,000,000——

Mr. Vanderlip (interposing). $100,000,000 is less than the Treasury has usually had as a free asset.

Senator Nelson. What would you put the figure at?

Mr. Vanderlip. Making a very offhand guess, without any study of the subject, I think $125,000,000 would be an ample Treasury free asset.

Senator Nelson. Or, put it a little higher and say $150,000,000. Whenever the surplus exceeded $150,000,000 the overplus should be devoted to the retirement of the national debt from time to time. Would not that be a good plan to put into the bill?

Mr. Vanderlip. I think it would.

Section 10 of the bill provides for State banks being converted into national banks, or for State banks becoming members of the Federal reserve bank without being converted. They are permitted to do this upon a regulation provided for——

Senator Reed (interposing). You refer to the last three lines on page 15, "under such rules and regulations as it may prescribe"?

Senator Nelson. It is lines 21 and 22 on page 15.
Mr. Vanderlip. I am now looking on page 16 at line 16. It reads:

Such by-laws shall require applying banks not organized under Federal law to comply with the reserve requirements and submit to the inspection and regulation provided for in this and other laws relating to national banks.

That word "regulation" needs more definition, it seems to me. It is going to become very important under what terms you will admit State banks to membership in the central reserve banks. If they are to have all the regulations that apply to a national bank, they might as well be converted into national banks and there is no need of permitting them to become members.

Senator Nelson. Let me interrupt you by stating that one of the bankers here—I do not recall his name—made an objection to that word "regulation." He held the effect of it was to compel them to do just what the national banks did in every respect, and on that account he objected to the word.

Mr. Vanderlip. That would be my own opinion. If they are to be regulated so that in every respect they must do just as a national bank, then they might as well be a national bank and there is no point in permitting a State bank to become a member. I think that ought not to be left to the Federal board to determine either. I think the law ought to be pretty specific, so we will know what a State bank can do and under what terms it may become a member.

Senator Reed. Then, too, if there were a regulation made by the Secretary of the Treasury, I presume there is nothing in this bill—I see nothing—to keep the next Secretary of the Treasury from changing the regulation.

Mr. Vanderlip. Nothing.

Senator Reed. There would be rather an uncertain tenure?

Mr. Vanderlip. Yes.

Senator Nelson. How would it do to substitute the words "submit to the inspection and supervision"; substitute the word "supervision" for the word "regulation"?

Mr. Vanderlip. As I remember it, Mr. Glass in his exposition of the bill said that the reserve requirement, the capital requirement, and the examination requirement were all that this meant. If that is so, it ought to say so. It does not say so in the bill.

Senator Hitchcock. Then, a State bank, like a foreign exchange bank in New York City having branches, could become a member under this system?

Mr. Vanderlip. Yes, sir.

Senator Hitchcock. That would be a considerable advantage over a national bank?

Mr. Vanderlip. Very much. And the thing you are in danger of doing here, is passing a bill that will make all national banks turn State banks, and, instead of consolidating the banking business under the national charter, you are going to disperse it. If there were some way of attracting State banks into this scheme rather than putting a premium on national banks going out of it, the ultimate success would be very much more probable.

Senator Weeks. If you were managing a State bank and this bill were put up to you as the law, you probably would hesitate about going in until you had seen how it was working?

Mr. Vanderlip. Being in the fortunate position of having an option whether to go in or not, I would wait. I would take advan-
tage of my position and see how it worked. I would see what this word “regulation” meant. I would see what the success of the measure was likely to be.

Senator Weeks. Naturally, if other men felt in the same way, we need not expect to see State banks go into the system at once?

Mr. Vanderlip. Not at once.

Senator Reed. You said that the foreign exchange bank which has branches would have an advantage over the national bank?

Mr. Vanderlip. Yes, sir.

Senator Reed. If you let it come in?

Mr. Vanderlip. So will any State bank organized under the laws of New York, because they have much more liberal privileges than national banks.

Senator Reed. How are we to equalize that so that the national bank will not suffer by virtue of that situation?

Mr. Vanderlip. By seeing if you can not extend some privileges instead of putting all your attention on new prohibitions. That seems to me to be one direction that the committee's thought ought to take, so as to undertake to attract State banks into this system.

Senator Reed. Yes; but what I am speaking of is this: Here is a bank with a lot of branches. That gives it an advantage. Now, we bring that bank into the system and give it the advantages of this system. Now, we have created an institution that is empowered to do the very thing that all national banks are denied the right to do. Would you suggest extending to national banks the right to have branches?

Mr. Vanderlip. I certainly would suggest it, in the cities in which they are located. There is no conceivable reason, to my mind, why that should be prohibited. As a matter of fact, the act does not at present prohibit it. There has been a ruling of the comptroller; there has never been a court decision on the subject. But it would be highly desirable if the national banks could have branches within the city where they are located.

Senator Reed. And you would limit it to their city?

Mr. Vanderlip. I would.

Senator Hollis. Why limit it?

Mr. Vanderlip. It is a question on which there are certainly two points of view. The strength of an institution that is practically under one control, is very much greater than that of an institution with branches all over the country. There would be this on the other side: There is such political prejudice—a prejudice that seems to me very unreasoning—against it that I have almost ceased to think it possible to talk about having general branches for a bank.

Senator Reid. But you think that if they were limited to the city in which the principal bank exists, that would be placing such a limitation upon their extent as to meet, at least in a measure, the objection that they might grow too large and their influence become too commanding? Is that the thought?

Mr. Vanderlip. That is my thought; and it would come as a surprise to the national bankers, because it would be the first advantage they had been offered since the creation of the system, I think. It would be a most happy thing to offer the national banks something in addition—
Senator Reed (interposing). Would you limit the number they could maintain?

Mr. Vanderlip. Not at all.

Senator Reed. You would just limit it territorially?

Mr. Vanderlip. There is one bank in London that has 100 branches in the city of London.

Senator Shafroth. Would that be satisfactory to the other banker?

Mr. Vanderlip. You are legislating for the national banks, and it would be very satisfactory to them.

Senator Shafroth. All of them? Or would there be a rivalry against the one bank that had so many branches?

Mr. Vanderlip. Then they would have to do better banking and compete successfully. No; I think that, on the whole, national banks would be glad to have that privilege.

Senator Brister. It would reduce the number materially, would it not?

Mr. Vanderlip. Yes.

Senator Reed. Is there not a control which the Federal Government exercises over these banks which meets some of the objections which ordinarily pertain to combinations, namely, that the Federal Government can limit the amount of capital of a bank if it wants to, and it otherwise has a very complete control over it? That would be an offset.

Mr. Vanderlip. Yes.

Senator Reed. I am not committing myself to that, but I am suggesting the thought.

Senator Nelson. Now, Mr. Vanderlip, Canada has some 18 or 19 chartered banks, my recollection is, and they probably have over a thousand branch banks.

Mr. Vanderlip. Yes.

Senator Nelson. Scattered all over. I do not know, but they have 2,000. I have heard the criticism made that those branch banks—for instance, out in the prairie Provinces in Alberta, Saskatchewan, and Manitoba—that they pull in the money in that country and send it down to the head banks at Toronto and Montreal, and drain the country. Then if they apply for loans to those branch banks, as a rule, they can not get any satisfaction, especially if money is a little tight, until they hear from the head bank at Toronto or Winnipeg. In other words, the system, as developed in Canada to that extreme, I do not think has worked as well as it might. What is your information on that?

Mr. Vanderlip. I fancy a true analysis of that situation would show that those complaints were not well founded. We have heard the same complaints made that in certain Southern States they deposit money in New York and can not borrow any when they want it. I have looked up the record and find that they borrow five or six or seven times as much as they deposit. I presume you will find that these small western communities borrow very much more from the reserve city banks than they actually deposit in the banks.

The action of a bank with many branches is to equalize the supply of loanable funds, and the funds will flow where the interest rate is the highest. The interest rate will be highest in the smallest community, and I expect you will find that the Canadian banks have worked to the benefit of those few small communities rather than taken their funds and loaned them to the centers.
Banking and Currency.

Senator Hitchcock. How do you interpret this paragraph now in relation to branch banks? Can a State bank having branches come in?

Mr. Vanderlip. I am unable to interpret it and no one can interpret it until he can interpret the meaning of the word "regulation," and that must lie in the mind of the Secretary of the Treasury or the Federal reserve board.

Senator Reed. You think, I take it from your remarks in regard to this section and the preceding one, that when a man comes to invest his money or go into a great system that involves his money, he ought to have fixed rules of law which prescribe his rights and specify his obligations that he should not be required to depend upon the individual opinion of some man, however good that man may be.

Mr. Vanderlip. I wish I had the power to state my views as precisely as that. That is exactly what I think.

Senator Reed. And you would apply that to the entire currency system, would you not, except where you come to the point of passing upon the question of whether a particular piece of paper is good or bad?

Mr. Vanderlip. That is making the statement a little too sweeping. In general, however, wherever it is possible to put the specific thing in this bill, I would do so rather than leave it discretionary upon a board.

Senator Pomerene. What have you in mind as proper conditions or regulations upon which the State banks should be admitted into this system?

Mr. Vanderlip. If you want to get the State banks into the system, then I would say have the capital the same as a national bank under similar conditions. Have the same examinations and the same reserve requirements. If you stop there, you must recognize that there will be more advantages under the State charter than under the national charter. If you impose all the conditions of the national charter on the State bank it would not accept them and would not come in. You have your choice.

Senator Reed. That leaves us with the question still unsolved?

Senator Nelson. No; he has put in the limitations there. Capital—this provides for reserves—

Mr. Vanderlip (interposing). Capital, reserve, and examination.

Senator Nelson. As to capital you would include an exception?

Senator Reed. You said if you made their requirements too stringent on them and cut them off from their present rights they would not come in; if you made it too liberal, as I understood, Mr. Vanderlip, then the national banks might go in—

Mr. Vanderlip (interposing). That is exactly what they will do.

Senator Reed. Now, that leaves the question unsolved. The question is how we can keep the national banks in, and induces the State banks also to come into this system?

Mr. Vanderlip. By liberalizing the terms of the national charter and the regulations under which national banks are operated so that they can compete fairly with the State bank.

Senator Pomerene. In what respect?
Mr. Vanderlip. In respect to branches, in one particular; in respect to doing a trust business in another. I do not know that I would undertake to enumerate the advantages that a State bank has over a national bank, but those are different in various States.

Senator Bristow. But not loaning on real estate?

Mr. Vanderlip. Never.

Senator Nelson. Nearly all the State banks can do that.

Senator Reed. You are giving some very interesting testimony here, but we have come to a point now that is very greatly troubling me, whether this bill is not going to send all the national banks out of the system and into the State bank system, or else so limit the rights of State banks coming in that they will not want to come in. Now, I do not know if you are prepared to make your suggestions as to what advantages could be given to the national banks that are of a practicable and reasonable character, but I wish before you leave you would try to give us those suggestions.

Mr. Vanderlip. I shall be very glad to submit those in detail.

Senator Weeks. And at the same time the provisions which you think would induce State banks to come into the system.

Mr. Vanderlip. Yes.

Senator Hollis. Do you not think, Mr. Vanderlip, that the mere name of national bank is of some value to them?

Mr. Vanderlip. It is of some value in a small community. It is of no value in New York City, for instance, or any of the great cities.

To take up section 11, relative to the Federal reserve board: Here is the point, I suppose, that most bankers raise as the principal objection to the bill. It is a pretty general feeling that the bankers contribute capital for these reserve banks, should have representation on the Federal reserve board. I, myself, believe it would be very good, if they had a minority representation on the board. However, if that is impossible I particularly object to the constitution of the board in its present form.

I believe it is bad to have ex officio members on that board and to have ex officio members whose duties are already sufficient to engross their time fully. This will be a very important board; it will be a man's size job to be a member of this board. He ought to be devoting all his time to it. He ought to have experience. He should have continuity. If you put Cabinet officers on that board they will of necessity go out with each change of administration, and may go much more frequently than that. They are fully engrossed, if they are properly looking after their other duties, and they can not, I believe, perform in a creditable manner the duties of this Federal reserve board.

If it is going to be constituted entirely by Government appointment, I would increase the salaries, I would have longer terms, and I would have the men appointed devote their time to this work exclusively. Continuity of management is a great thing. You might have a change of the majority of the board on the change of a President. You make the thing the toy of politics in this way. It ought to be removed from politics as far as is the Supreme Court. I think it would be about as proper to appoint the Attorney General to the Supreme Court, because he happens to be in the Cabinet, as it is to put the Secretary of Agriculture on this board.
Senator Reed. But don’t you think the experience of the Secretary of Agriculture ought to be of value in handling a financial proposition of this sort? [Laughter.] But, Mr. Vanderlip, seriously, under the plan you suggest would you exclude the Secretary of the Treasury?

Mr. Vanderlip. That is debatable. I should prefer to see a board of inspection created that was headed by the Secretary of the Treasury and that embraced the comptroller and any other Government officials you chose, which had the power of inspection anywhere down the line to see that the law was being obeyed. There are some reasons for putting the Secretary of the Treasury on, because he has the depositing of the Government moneys. There are other reasons; but this makes the whole board rather subservient to the Secretary of the Treasury.

The bill frequently says that things shall be done by the board under direction of the Secretary of the Treasury. This board ought to be superior to any Cabinet officer. It is not an appendage of the Treasury; it is a great organization. Members should be of the highest caliber; men that were paid salaries sufficient to attract and keep able men. Now, keep men; there is the point. You develop a good man here at $10,000 a year and I will hire him at $25,000. You want to pay men so you can keep them here. You want continuity of management.

Senator Reed. It is true that this bill as drawn does frequently, as you say, say that certain things shall be under the direction of the Secretary of the Treasury. But I call your attention to the fact that this bill requires that every dollar that is now in the Federal Treasury, except that held on special deposit, shall at once go into the banks, and every dollar hereafter gathered in by the Federal Treasury must at once go into the banks. And, of course, the special deposits, most of them, can speedily be removed there by using the gold and silver certificates to withdraw them. Now, if the Secretary of the Treasury is not to have a broad discretion, do you not think that provision ought to be changed so that the discretion would be vested in the Government to put all or part of its money in?

Mr. Vanderlip. That would be much more desirable than to give the Secretary of the Treasury the power that is given here, where it says that the manager of the Federal reserve board shall be subject to the supervision of the Secretary of the Treasury and that the manager of the Federal reserve board shall be the active executive officer of the Federal reserve board.

The Chairman. You would strike out “Secretary of the Treasury” in that line?

Mr. Vanderlip. I certainly would.

Senator Reed. And you would modify the other section allowing the Secretary of the Treasury to have some discretion about putting the people’s money into this institution?

Mr. Vanderlip. I would not expressly object to that. I think non-partisanship is not accomplished when you say that not more than two shall be of the same political party; it rather emphasizes that the other two shall be of the same political party. I do not believe that helps the measure much.

Senator Bristow. Is not that an invitation to put partisans on the board?
Mr. Vanderlip. Why, it is almost a command.
Senator Hitchcock. Would not the board be a good place to put our ex-Presidents? [Laughter.]
Senator Reed. Barring one, you would answer "Yes," would you not?
Mr. Vanderlip. I was thinking of that one. [Laughter.]
Senator Bristow. Some of us might think he was the very man to put there.
Senator Weeks. Seriously, Mr. Vanderlip, you refer to paying the members of this board large salaries. Now, there is a standard of salaries in connection with the Government service which must be maintained, and it would probably be impossible to compete with the National City Bank in paying salaries to a board like that. Don't you think the honor of being a member of that board coming to a man who is fit to be a member would be sufficient so that he would accept such a place and serve, notwithstanding the fact the salary was not commensurate with the kind of service?
Mr. Vanderlip. Undoubtedly there would be a tendency that way. The Government has a great advantage in that respect.
Senator Nelson. Would you not get superior men in that way?
Mr. Vanderlip. Superior men at a smaller salary than at a larger one?
Senator Nelson. Than if you just made it a question of salary?
Mr. Vanderlip. I should not make it just a question of salary by any means; I would make it so that the salary from somewhere else would not counterbalance the salary and the honor together.
Senator Hitchcock. A Cabinet salary?
Mr. Vanderlip. It ought to be as high as a Cabinet salary, I should think. You want men for this position who are capable of earning large salaries. You want men who have earned large salaries, or who have been successful. You do not want unsuccessful men, financially speaking, in this business. You want men who have been successful.
Senator Bristow. Now, Mr. Vanderlip, do you think political appointments are made with a view to whether a man has been successful or not?
Mr. Vanderlip. I do. I think they are frequently made with a view to the fact that he has not been successful.
Senator Bristow. That he has failed in the last campaign and needs a job. [Laughter.]
Senator Reed. We can call them political appointments if we please, but the Supreme Court of the United States and all the Federal judiciary are appointed by a political power and confirmed by another branch of political power. And yet, speaking of the question at large, we have a very superior class of men in those positions, and that is because the position is regarded as one of great honor and not a position of profit, is it not?
Mr. Vanderlip. Undoubtedly.
Senator Reed. We have got to go to one source or the other for these guardians of this contemplated system. Either we must go to the banks, which may have a selfish interest, or we must go to the Government, or we must go to both.
Senator Nelson. The great business men are merchants?
Senator Reed. Yes.
Mr. Vanderlip. I am not nearly so much afraid of malign political influence as I am of lack of wisdom. I want to establish a continuity of management here. I want to see men qualified by experience. I am not so much afraid of the political side of this thing. I am very much afraid of the inexperience side of it.

Senator Reed. And therefore willing to have always at least a majority of men on this board who are connected with banks and who are familiar with it?

Mr. Vanderlip. Certainly, a majority; and I would say, as far as possible, men of long experience. Of course, some new men might get on.

Senator Pomerene. I am glad to hear you say you have faith in your Government.

Mr. Vanderlip. Thank you.

Senator Reed. Generally speaking, there has been a good deal of loose talk about politics, just as there has been a good deal of talk about banks. Sometimes it is justifiable and sometimes it is not justifiable. Do you think that any President of the United States would be likely to make these appointments without having a proper regard for the importance of the place that he is charged with the responsibility of filling?

Mr. Vanderlip. When I look ahead I have a good deal of faith. When I look back, and see some of the appointments that have been made, my faith is shaken a little. I do not mean recent appointments; I mean looking back historically at men who have filled important places.

Senator Reed. Let us take the position of the Secretary of the Treasury. Some of us have differed with the policies of the Secretary of the Treasury, but as a general rule they have been a pretty sincere type of men, have they not?

Mr. Vanderlip. Yes; as a general rule.

Senator Reed. And, making allowances for inexperience, they have done pretty well as a general proposition, have they not?

Mr. Vanderlip. Yes.

Senator Reed. Now, do you know any other way by which these men could be selected except by the banks or by the country?

Mr. Vanderlip. No. We do not want to return to the old Spartan way of selecting by lot, I suppose. They should be selected one way or the other—by the banks or by the Government.

Senator Reed. Are there not objections to banks selecting, which would be an objection to the bankers themselves? That is to say, if your bank had a friendly representative upon this board might it not be of great advantage to your bank? Pardon me for using your bank for illustration, but I was using it as an illustration of a class.

Mr. Vanderlip. I think it might. But I shall hope it shall have a friendly representative upon this board, and that all banks will have a friendly representative upon the board.

Senator Reed. I meant more than that. I meant a representative who might be specially interested in the bank. That woud not be right, of course, but are not there just as many objections on that side as there are on the other when you come down seriously to talk about it, and that is what we are trying to do this afternoon?

Mr. Vanderlip. I do not think there are quite as many, but personally I shall be satisfied with a political board if I am assured of its
continuity—that the members will be devoting their entire time to it and that every precaution is taken to make it of the highest possible type.

Senator Reed. I think I agree with you on that, that the board ought to devote its entire time, unless it is the Secretary of the Treasury.

Senator Hitchcock. What discretionary power do you think that board should have to regulate the volume of currency?

Mr. Vanderlip. I think it should have none. I will come to that point later, when I come to that part of the bill. But it seems to me completely wrong that it might refuse a bank the privilege of taking out currency. Personally I think there should be no tax on that currency. So far as the Government is concerned, it is merely taking it from one pocket and putting it into the other. The people are the ones to determine the volume of currency. No one else can determine it. They will use bank notes, or they will use gold reserve; it does not make any difference to them. They will have in their pockets a given amount, and they will determine that amount. A bank note that does not count in the reserve is of no value whatever to the bank. It is only of value to the person who can use it in his pocket. I think there is no danger in giving these central banks the power to issue all the currency that the people will use. The banks can not use that currency. The people will use the currency. The currency is of no value in the hands of the banks, as it does not count as reserve.

Of course, to digress a moment, there is the trouble with your dual system of State banks and national banks, concerning the question of reserves with the State bank, and that is a trouble that you want to find some way, if you possibly can, to eliminate. I think the best way would be to construct a system so that it would be attractive to all State banks to come in. There is grave danger to the whole system; there is grave danger to the Treasury Department and to the Government in permitting a large amount of these notes to find their way into the reserves of State banks.

Senator Hitchcock. That is permissible in Germany now?

Mr. Vanderlip. Suppose such a situation exists here. We have many millions of these new notes held in the reserves of the State banks, and suppose something happens that alarms the holders of those notes to an extent where they think it will be wiser to convert them into other forms of reserve money, into gold and lawful money. You might get a presentation of the whole mass within a short time. The redemption of them would be an almost impossible thing, for the amount would be so large. And in proportion to the size of it the danger is great. I know of no way you can prevent a State bank holding those bank notes in its reserve except to induce the bank to come into the national system, where you can properly bar them from the reserves.

Senator Hitchcock. I suppose it could be prevented in those banks, where they were subjected to the same laws which the national banks are subjected to.

Mr. Vanderlip. That will apply to those who come in, but remember that there are $12,000,000,000 of deposits in State banks now, against $8,000,000,000 in national banks. Under this bill, I believe State banks will increase and national banks will decrease,
BANKING AND CURRENCY.

as it stands, so that the chance of getting a very great mass of these
bank notes into the reserves, for the support of this $12,000,000,000
of deposits, is serious.

Senator Hitchcock. Under this bill, as it stands now, how con­
siderable do you interpret the power of the reserve board to be, as
to the contracting or expanding of currency?

Mr. Vanderlip. The bill is not clear as to whether this rate of
interest, so-called, could be changed after notes were outstanding.
I think there is a good deal of confusion about the rate of interest.
It is not clear whether the Federal board could charge a different
rate in different sections of the country or a different rate at differ­
tent times to the same bank, or change the rates after notes were out­
standing. I do not believe they should have either the power to
refuse the notes or the power to tax them.

Senator Hitchcock. You think that whenever securities were pre­
sented to the reserve bank and it had the necessary gold reserve it
should issue them?

Mr. Vanderlip. The gold reserve is the limit.

Senator Hitchcock. Now, has not Germany, with practically that
same law, rather gotten into difficulties?

Mr. Vanderlip. Germany has saved itself from the greatest diffi­
culties. The Reichsbank management is a monument to what can
be done with a scientific banking system.

Senator Hitchcock. The Reichsbank notes are made reserve for
the other banks in Germany?

Mr. Vanderlip. That I am not familiar with.

The Chairman. And they are also made legal tender.

Senator Hitchcock. Yes; they are also made legal tender.

Senator Reed. How much reserve in gold should there be held as
against notes issued?

Mr. Vanderlip. I think the reserve provided for of $33\frac{1}{3}$ per cent
is ample.

Senator Reed. You think that is much safer than now?

Mr. Vanderlip. Yes.

Senator Reed. And if made a little higher the system would be a
little safer, would it not?

Mr. Vanderlip. Undoubtedly. And if you will put a tax on de­
cency of reserve instead of taxing the notes you will control the
issue. There is the place to put the governor—a tax on the deficiency
of the reserve?

Senator Hitchcock. That would be better; it would be permanent.

Senator Reed. Make it graduated, though.

Mr. Vanderlip. Yes; make it a graduated tax.

Senator Hitchcock. It would not be left to the option of some
board?

Mr. Vanderlip. No; and it ought not to be.

Senator Hitchcock. I agree with you there.

Mr. Vanderlip. Now we come to this much-debated clause of the
power to compel loans. I believe that is a necessary power as long
as you have more than one central bank. The power to permit loans
I do not consider is a necessary power to give to the Federal board.
If these banks choose to loan to one another, very good. As a
matter of fact, they will not choose so to loan. The management of
the bank will leave it to the members of that bank to deal with the
members of another bank where the interest rate is high, thus hav­
ing individual banks discount for individual banks rather than for
the central bank to discount for the central bank in the high interest
rate community.

Senator Reed. There has been a matter, and your answer suggests
the thought again, that has been bothering me a good deal. There
have been a number of bankers here who have objected most strenu­
ously to the provision that one of these reserve banks should advance
moneys to another reserve bank, and they have said that is very
wicked and very wrong, and yet in the same breath those gentlemen
will advocate one central bank. Now, if all the money was put into
one central bank, then that management would necessarily have to
loan money to all of the member banks all over the country. And if
there are 12 of these banks and the idea of one bank is so admirable,
it seems to me the closer we draw the twelve banks together the
nearer we are approaching the idea of one bank.

Mr. Vanderlip. Certainly. The greater the decentralization here,
by making numerous reserve centers, the more arbitrary the power
you must give to the reserve board. If you make one reserve center
you have to give no power to the Federal board at all, because the
thing is accomplished. But with numerous centers arbitrary power,
obnoxious as it is, must be given to the reserve boards in order to
pipe those reserves together.

Senator Reed. The more cooperation you have, the nearer you come
to the strength that lies in one central institution?

Mr. Vanderlip. And that is what you really are all after. You
may not quite know it, but I think that is what you really all want.

Senator Nelson. That provision there, in effect, makes one central
bank?

Mr. Vanderlip. Certainly; except that in practical operation it
will never work. Now, instead of saying that this is an obnoxious
provisions and ought to be taken out, I am forced to admit I do not
believe it is strong enough. It will never work. Why won't it
work? Because loans can only be made at from 1 to 3 per cent above
the highest rate prevailing. That, in the first place, is not very clear.
I suppose it means above the highest rate prevailing in the com­
munity that is going to borrow. Why should a New Orleans bank
borrow from New York at 3 per cent higher than it is loaning? It
won't work; they won't do it.

Senator Hitchcock. Maybe that means 3 per cent higher than the
reserve board is charging for currency.

Mr. Vanderlip. Well, you have to look a long ways to read that
meaning into it. At any rate it is not a clear law.

Senator Nelson. It has to be an interest charge to accommodate
the banker. It is to accommodate the banker who has to pay it.

Senator Reed. What is the highest rate at which he pays the in­
terest?

Senator Nelson. Not less than 1 or above 3 per cent of the highest
rate prevailing in the districts immediately affected.

Mr. Vanderlip. But what does "rates prevailing" mean? Is it
the rates charged by the central banks?

Senator Reed. Manifestly, then, if New Orleans had a 6 per cent rate
and New York had a 4 per cent rate and New Orleans wanted money
from New York, under that provision the rate would at least have to
be 7 per cent to New Orleans, which is a rate higher than anybody pays down there. Now, why in the name of common sense would anybody want to borrow money under those terms? It was just as Mr. Vanderlip said.

Mr. Vanderlip. They won't; the thing will not work.

Senator Reed. All of which leads to the conclusion we ought not to look to this bill any further?

Senator Weeks. Are you going to discuss the desirability of the same discount rate in all regional banks?

Mr. Vanderlip. I will discuss it.

Senator Weeks. Let me ask you a definite question: Why should not a bank in Oklahoma, having a piece of paper that comes within the requirements of the law, get a rediscount of that piece of paper on exactly the same terms that the New York bank would do with the same quality of paper?

Mr. Vanderlip. As a matter of abstract right, I think it should. As a matter of prevailing interest rates in those two communities a similar piece of paper will bear a higher rate in an Oklahoma community than it will in New York, because of many reasons I do not need to go into.

Senator Weeks. If we are going to make a national law, should it not be country-wide in its provisions?

Mr. Vanderlip. I do not think it should necessarily be country-wide as regards the same discount rate for all of these banks.

Senator Hitchcock. Is not the present divergence of interest rate due to our peculiar system, which we are now proposing to abandon?

Mr. Vanderlip. Not altogether. The more settled communities will have the lower rates in any banking system.

Senator Nelson. In that connection, we must not overlook the fact that paper discounted from Oklahoma might bear interest at 7 per cent, while paper discounted up in New York might only draw 4 or 5 per cent.

Mr. Vanderlip. That is perfectly true.

Senator Weeks. Is not that true to-day? But would it not equalize those rates in years to come if the discount rate should be made the same?

Mr. Vanderlip. Never entirely.

Senator Weeks. I agree with you never entirely, because developing sections would always carry a higher rate of interest.

Senator Reed. Mr. Vanderlip, how are we going to adjust this proposition: Let us say that the prevailing rate for commercial paper in New York is 4 per cent; that the prevailing rate in my part of the country is 6 per cent. Now, the New York banker wants money, and he brings up 4 per cent paper and gets $100,000 on $100,000 worth of 4 per cent paper. The banker in Kansas City wants $100,000 and he brings up 6 per cent paper and just gets $100,000, yet his paper draws a greater rate of interest.

How is that to be adjusted in this law?

Mr. Vanderlip. Why, he gets the interest on his paper.

Senator Reed. He collects it himself.

Mr. Vanderlip. He collects it himself. He has discounted the note and has gotten that.

Senator Reed. Then the central bank has to collect this interest for him if they collect the securities. On the other hand, he can take
money there and take up his own securities. Now, is not that the way it will practically be done, instead of the central bank collecting the securities? Will not the bank secure the money and pay the note and take back the collateral while it has not matured?

Mr. Vanderlip. Very likely. The average bank will dislike to have a customer know that it has rediscounted his note, and they will be glad to get the notes back before the day of maturity, in order to have the customer pay it over its own counter and hand the note to him.

Senator Hitchcock. Would he not know it has been rediscounted?

Mr. Vanderlip. Yes, he will; because it will have to be indorsed; that is true.

Senator Nelson. But if you place the circulation on the discount value of the paper, would not that be a fairer basis than to take it on the mere face value of the paper?

Mr. Vanderlip. That is what you will do, sir. It will operate that way. The amount of money you get is the discount value of the paper.

Senator Nelson. Yes; but it is not clear in the bill, if you will notice.

Mr. Vanderlip. I had presumed that would be the way it would work. In any event, it is a rather insignificant difference.

Senator Nelson. I know it is a small difference, but would not that be the principle applied?

Mr. Vanderlip. I think it would.

Senator Bristow. Let me get that clearly in my mind. I do not know whether I comprehend that fully. Take Senator Reed's illustration: What is the value of that paper? They are both good, one is as good as the other, but the Kansas City paper bears 6 per cent and the New York paper 4. It is taken to the Federal bank for discount. What is to be the discount value of the two papers? Is the one drawing 6 to be more than the one drawing 4?

Mr. Vanderlip. If those were discounted notes they are both worth, at the date of maturity, $1,000 each, if they are $1,000 notes. The man who has discounted them got less than $1,000—the one by 4 per cent the other by 6. That is where the variation came in. The $1,000 note that was discounted at 6 per cent produced less than the $1,000 note discounted at 4 per cent.

Senator Nelson. That is exactly the way it will work.

Senator Bristow. Yes; I can see that. I can see no objection to that system, provided that the value of the note given it by the increased rate the interest is taken into consideration.
Mr. Vanderlip. It certainly would be.

Senator Bristow. Otherwise it would be very unjust to a certain part of the country.

Mr. Vanderlip. It would be taken into consideration.

Senator Hitchcock. That raises another question, Mr. Vanderlip. You said, and I entirely agree with you, you should not only include 90-day paper, as stated in the bill, but out West and down in the South 6 months and perhaps 9 months paper, which is commercial paper to the same extent, growing out of certain transactions. But up in those countries where 6 and 9 months paper is given the interest is not deducted in advance, and how are these notes to be discounted under those circumstances? The interest is generally payable at maturity.

Mr. Vanderlip. Just as I say. If it is a nine-months note at 6 per cent, and you are disposing of it on a 5 per cent basis, you will get more than the face of the note for it.

Senator Reed. What you mean, in a word, is this, that the bank will do just what your bank will do. If the interest has been paid, it will take that out of the note. If the note is still drawing interest, it will take that fact into consideration and arrive at the actual value.

Mr. Vanderlip. And that value will be either above the face or below it, as the basis upon which it is being discounted varies from the rate the note bears.

Senator Hitchcock. Then some of the notes taken in that way may have the interest already paid, and on the other notes the interest may be payable at maturity.

Mr. Vanderlip. Yes. Now, on page 22, section E, it is provided that the Federal board may reclassify—

Senator Hitchcock (interposing). You did not say anything about those reserve requirements. You are passing that over. Do you think the Federal board should have the power of suspending the reserve requirements?

Mr. Vanderlip. I passed that over because I am doubtful; I have a feeling it should not. But I have heard some arguments lately in favor of it. The balance of the opinion, in my mind, is that it should not have that power, but I see some rather impressive reasons why it should have it.

Senator Hitchcock. This means they have the power not only to suspend the reserve requirements as far as the 12 banks are concerned, but to suspend the reserve requirements of the national banks and even the reserve requirements of State banks.

Mr. Vanderlip. Yes.

Senator Bristow. Unless I am interrupting Senator Hitchcock, what is the use of any such power as that, when we are supposed to have a system that can bring relief in any kind of an emergency?

Mr. Vanderlip. I do not believe it is necessary. Of course it is not necessary now, as bad as our present system is. But in reality we sometimes disobey the law now. We do invade our reserves. It would be wiser, perhaps, to have somebody with power to suspend that reserve requirement rather than have all of the banks more or less break the law. But even that I am not sure of. On the whole, I should be opposed to that, but I can see some reasons on the other side.
Senator Bristow. And are you not providing, or endeavoring to provide, at least, facilities here by which it is never going to be necessary for you to break the law?

Mr. Vanderlip. It do not think it would be necessary. I think it is positively unnecessary to have this provision on that score alone.

Senator Weeks. Do you recall the arguments which you have referred to which were in favor of this provision, why it should be in the bill—by whom they were made?

Mr. Vanderlip. They rather take this form, that a reserve that is fixed by law is simply an irreducible amount of money. It is of no value at all for paying the depositors, and you have no leeway whatever between the minimum that you are probably going to loan out and the legal point that you must not go below—that the suspension of reserve requirements under pressure would permit you to pay out a certain amount of your reserve to relieve the situation around a bad corner. I do not think that is very much of an argument, and, perhaps, I have not presented it very well.

Senator Weeks. Do you agree that under this system, if it is established, or the system that is contemplated, we can practically eliminate the amount of reserve which would be required of banks, permitting them to follow, practically, the policy that is followed in European banks?

Mr. Vanderlip. In the end, I think you could. There ought really to be no legal-reserve requirement, but in this country we have grown so accustomed to it I think it is dangerous to abandon it all at once.

Senator Weeks. That is, in the course of 5, 10, or 15 years we can greatly change the reserve requirements of this law?

Mr. Vanderlip. I think so, undoubtedly.

Senator Hitchcock. What would be the effect on the public mind if the reserve board should announce the suspension of the requirements of the reserve banks when they come down to 33\(\frac{1}{3}\) per cent?

Mr. Vanderlip. That depends upon what the condition of the public mind was before they announced that. I could imagine circumstances under which it would produce a feeling of relief to the public mind.

Senator Hitchcock. The whole world has reached the conclusion that central banks should have a larger reserve than 33\(\frac{1}{3}\) per cent. All the central banks of Europe have a much larger reserve, and this bill has adopted a smaller one than at present need be. Now, take a condition where they have reached the limit. The reserve board lets down the bars altogether. What would be the effect on the public mind?

Mr. Vanderlip. It would have to be a very serious situation when they did that, and, generally speaking, whenever they did it confidence in the whole system would be pretty well destroyed and would have been destroyed when they did it.

Senator Hitchcock. It would tend to confirm the fear and really aggravate it?

Mr. Vanderlip. Yes.

Senator Reed. What was the effect in 1907, when the Comptroller of the Currency notified the banks they need not keep any reserve against the Government deposits?
Mr. Vanderlip. It did not have any effect, because the banks thought they knew at what points they ought to keep reserves, and they kept them there.

Senator Reed. There never was a proclamation of the right to do so?

Mr. Vanderlip. There was a proclamation of the right that they need not keep reserves against the Government deposits. Of course the comptroller has no more right than you to change the law.

Senator Reed. No; I understand.

Mr. Vanderlip. His proclamation was that they need not keep reserves against the Government deposits.

Senator Nelson. They need not keep that money over their deposits?

Mr. Vanderlip. No.

Senator Reed. That did not affect the public mind at that time?

Mr. Vanderlip. No; it was rather a technical matter that the public mind did not grasp.

Senator Hitchcock. Was there any reason to keep a reserve against them?

Mr. Vanderlip. There is the same reason, so far as the Government is concerned, but no reason so far as the bank is concerned. The reserve is to help pay deposits, and the fact that you have secured the deposits does not change the reserve.

Senator Nelson. It does not relieve their paying?

Mr. Vanderlip. No, sir.

The Chairman. Did not the suspension of the reserve in the English system in 1847, 1857, and 1866 abate the panic on those three great occasions?

Mr. Vanderlip. Undoubtedly. I presume that the drawing of some parallel between them and the present conditions was what led to putting this in, but I doubt the wisdom of the parallel. I would rather say not.

Senator Reed. Do you think really it is a good thing to have a reserve you do not use, that you do not invade?

Mr. Vanderlip. I think it would be a better thing to have no regular limits on your reserve at all, but I believe it would be dangerous now. We have grown too accustomed to a regular limit to remove that altogether.

Senator Nelson. And, besides, Mr. Vanderlip, under this new system, without a reserve requirement you would not have capital enough for these banks?

Mr. Vanderlip. No.

Senator Nelson. That is just part of their capital that comes from this reserve provision?

Senator Pomerene. The reserves here are 12 and 18 per cent. What would you say as to the wisdom of providing that this board might, by unanimous vote, reduce or raise those reserves?

Mr. Vanderlip. By no means. I would not give to that board the discretion to change the whole basis of the banking system. We would not know where we stood at all.

Senator Pomerene. The thought is these figures are fixed and, to a certain extent, it is problematical as to whether they are fixed at...
the proper point. Now, that being so, if the experience of future years should indicate that the reserves were too high or too low, for that matter, then they might be raised or lowered?

Mr. Vanderlip. I would rather let the board make representations to Congress and have Congress handle it.

Senator Nelson. I want to call your attention to an ambiguity in this paragraph, to suspend for a period not exceeding 30 days, and to renew, and so forth, any and every reserve requirement specified in this act. Now, there are two distinct reserve requirements: One is the requirement of the member banks, and then there is the other reserve requirement of the regional banks of 33 per cent. So that this would cover both classes of reserves, both the reserves for member banks and the reserves required of the regional banks, the issuing bank. In the case of the regional bank it is 33 per cent, and in the case of these others, so far as the reserve is concerned, it would be 5 per cent at the end of 36 months. So you see this would cover both.

Mr. Vanderlip. Yes.

Senator Hitchcock. Yes; or the gold reserve—that the bill does not require but probably will—it may change that.

Senator Nelson. Of course. It is ambiguous. It would cover both classes of reserve.

Senator Weeks. You do not keep reserves on Government deposits now?

Mr. Vanderlip. Yes, we do.

Senator Weeks. Are you required to by order of the comptroller?

Mr. Vanderlip. No.

Senator Weeks. That order has never been rescinded, that they need not keep reserves against Government deposits?

Mr. Vanderlip. I think not.

Senator Weeks. Then, the comptroller's order was a permanent one, rather than a temporary one to meet that contingency?

Mr. Vanderlip. I believe so.

Senator Nelson. Further, in that connection I call your attention—commencing on line 21, it is provided that “it shall establish a graduated tax upon the amounts by which the reserve requirements of this act may be permitted to fall below the level hereinafter specified,” etc. What do you think about that provision?

Mr. Vanderlip. I believe that is a correct theory of the control of the situation—the taxing of deficient reserves, rather than the taxing of notes.

Senator Nelson. And you would apply that to the 33 per cent required, and not to the reserves that member banks put in?

Mr. Vanderlip. Oh, yes. The member banks I would leave alone.

Senator Nelson. That is what I mean.

Senator Bristow. This puts a tax on the deficiency of the gold reserve in the Federal reserve banks?

Mr. Vanderlip. Yes; the reserve carried by the Federal reserve banks.

Senator Reed. What would be the use of levying a tax on that? If you had a system here that was paying, say, 5 per cent to member banks on their capital investments and the balance of it went to the Government, and then there was a profit, and we levy a tax on going below 33 per cent gold reserve, we collect it from our own pockets.
Mr. Vanderlip. If you endanger the 5 per cent dividends, you would find the management of those banks very keen.

Senator Reed. Yes; if you endangered the 5 per cent dividends. When you reach that point, and up to the time you reach that point, it would be taking money out of your own pockets.

Mr. Vanderlip. Yes.

Senator Reed. Would it not be well, in that case, if it went below, to collect that tax out of the 5 per cent—commencing there?

Mr. Vanderlip. Possibly. That is an ingenious suggestion. Section E, on page 22, gives the board power "to add to the number of cities classified as reserve and central reserve cities under existing law," etc. I can not see what the distinction between reserve and central reserve cities will be under this act. None of the banks hold reserve deposits, and I see no force in such a distinction. Then it goes on further and says that they have the power to designate the banks therein situated as country banks, at its discretion. That is, they could go into a central reserve city and designate a particular bank as a country bank, as I read this. That is certainly a power they never should have.

Senator Hitchcock. If they made it optional for the national banks to come into the system and a number stayed out it might be necessary in central reserve cities?

Mr. Vanderlip. Those that stayed out would have to surrender their charters.

Senator Hitchcock. I say, if it is made optional.

Mr. Vanderlip. Oh, yes; if it is made optional, that is true. But it is not made optional, and if you made it optional you never would get anywhere with the system. That is the unfortunate part of it.

Senator O'Gorman. What is that last statement?

Mr. Vanderlip. If you made it optional whether or not a bank should come into the system you would never get the system started.

Senator O'Gorman. What is your judgment, as a citizen, not as a banker, as to whether it ought to be optional or compulsory?

Mr. Vanderlip. It would be vastly better to have it optional, if there were any hope of making it work. Looking at it as a citizen, and not as a banker, I see that bankers are very conservative and unimaginative people. They would like to wait and see. You give them permission to join when they choose and they will all wait for the other man to start it. They will wait to see how it works.

Senator O'Gorman. Suppose it was compulsory, what do you think would happen?

Mr. Vanderlip. I fear that a great number of the national banks would be converted into State banks.

Senator O'Gorman. About what percentage of the national banks do you think may surrender their charters?

Mr. Vanderlip. That is very difficult to say until the law is in completed form. I think many of the small banks would, and I can see very distinct advantages in the large banks surrendering their national charters, taking out State charters, and then joining the system as a State bank.

Senator O'Gorman. That is upon the assumption that this bill would be enacted as it is now?

Mr. Vanderlip. Yes, sir.
Senator O'Gorman. I suppose I do not exaggerate the situation when I state that there is no member of this committee, no single member, who favors enacting this bill as it stands to-day.

Mr. Vanderlip. I have directed my remarks to the bill as it stands.

Senator Weeks. What do you think of the proposition which has been made to the committee, to reduce the period from one year to three months during which the national banks should have the privilege of deciding whether they are coming in or forfeit their charters?

Mr. Vanderlip. I should say that would be a very short time.

You found the national bankers very slow to comprehend the provisions of the bill, I understand, from many of them who have been before you, and I think the national bankers as a rule would not comprehend the thing sufficiently to arrive at an intelligent decision.

Senator Weeks. In your opinion what would be the effect of shortening the time; would it force more out or force more in?

Mr. Vanderlip. That is hard to say; I do not know.

Senator Weeks. You think it would not be wise or just?

Mr. Vanderlip. It would not be just. They ought to have time in which to digest this thing.

The Chairman. They ought to have time to read it?

Mr. Vanderlip. Yes.

The Chairman. They have not read it yet?

Mr. Vanderlip. So I understand.

Senator Weeks. Your fear that the banks will come in unless it is made compulsory is justified by the experience under the Aldrich-Vreeland bill? The currency associations were not formed until the Treasury Department brought pressure to bear, and as a result of that pressure the associations were formed?

Mr. Vanderlip. Yes.

Senator Weeks. There was no proper reason why they should not have been formed, but there was no initiative about it?

Mr. Vanderlip. Yes.

Senator Nelson. What would you think of making it optional with the small country banks having a capital, say, of $100,000 or less—making it optional with them? Would that mar the plan?

Mr. Vanderlip. If you reduce that to $50,000 or less, I do not know that it would seriously mar the plan. But just where would these banks that would not come in keep their reserves?

Senator Nelson. I do not know. You would have to have some plan for that. You would have to make——

Mr. Vanderlip (interposing). The very small banks are not essential to the working of this plan.

Senator Nelson. The $25,000 bank?

Mr. Vanderlip. Yes; and even the $50,000 banks.

Senator Nelson. We have about 2,000 of them, I think.

Mr. Vanderlip. We have more than that, I believe.

Senator Hitchcock. Suppose you provided that a small bank which had subscribed no capital might have the right to discount paper at a regional reserve bank, provided it has kept its reserve there and has otherwise complied with the law?
Mr. Vanderlip. That would be, perhaps, unfair to the banks which had been compelled to subscribe capital, but it would be workable.

Senator Weeks. In that event you would be conferring a benefit upon the country banks without exacting any return?

Mr. Vanderlip. Exactly.

Senator Reed. Mr. Vanderlip, suppose the law required these banks engaged in interstate commerce to keep a certain reserve in these reserve banks and did not require any bank to put up any part of its capital stock; what do you think would be the result of that?

Senator O'Gorman. Where would you get the capital?

Senator Reed. They would have reserves there mighty quick. As far as capital is concerned, to-day capital is almost a mere bagatelle. We are talking about compelling people to come into this system. The Government does have one power that is tremendous, and that is its control over interstate commerce. Suppose you established a system and simply said that any institution that engaged in interstate commerce in the banking business must put a certain amount of its deposits in these central banks to be established by the Government for the purpose of rendering secure our financial system.

Mr. Vanderlip. Have not the courts decided that banking is not interstate commerce?

Senator Reed. I do not know. I am asking you that, as the thought occurred to me here. It was not matured.

Mr. Vanderlip. I am not a lawyer, but I think that is true.

Senator Reed. My opinion is that whenever notes go from one place to another, or checks, that that is interstate commerce. Senator Nelson would know, I think.

Senator Hollis. They could compel them in the way of——

Senator Nelson (interposing). I think the courts have held that insurance policies are not interstate commerce.

Senator Reed. I know they have held that.

Senator Nelson. Insurance policies written in one State and payable in another.

Senator Bristow. Mr. Vanderlip, do you not think that any system which we may have devised, which would have to resort to such drastic measures as that, would not last very long, and would soon be superseded by another?

Mr. Vanderlip. I think it would be very indefinite.

Senator Bristow. Do you think such a system would last very long?

Mr. Vanderlip. It would be started under very poor auspices, at least. I should object to the provision——

Senator Reed (interposing). We are asserting here now our rights, at least our desire, to control the banking system of this country within certain limitations, and we are talking about saying to all the national banks that have been organized and had their charters for 20 years, that they must come into this system or they must go out of the national-banking system. That is tolerably radical, but I am not saying the other thing could be done. That is the thought which occurs to me here.

Senator Nelson. There is a grave question, a very serious question, where a bank has a charter that has run for 10 years, say, a charter which they took out for 20 years, and the bank has not
violated any law; there is a grave question whether you can have
that charter forfeited simply because they will not go up to this
new trough and drink water out of it.

Mr. Vanderlip. I object to the power given to the Federal re­
serve board, as stated at the bottom of page 22, to perform the
duties, functions, or services specified or implied in this act. That
word "implied" might be made to cover almost anything we have
ever thought of.

The Chairman. What page?

Mr. Vanderlip. Page 22, the last line on the page. I will take
up now the Federal advisory council, as referred to on page 23.

Senator Bristol. What do you suppose that means, in that last
paragraph on page 22, "to perform the duties, functions, or services,
specified or implied, in this act"?

Mr. Vanderlip. I suppose it means that the Federal reserve board
would be able to demonstrate that they had almost any powers they
were of a mind to conceive.

Senator Pomerene. That would be given a legal significance,
meaning such powers as are legally implied for the purpose of carry­
ning out the provisions of the act.

Mr. Vanderlip. This is a pretty broad, blanket power, I believe.
I do not like it.

Taking up now the question of the Federal advisory council, if
bankers are not to be permitted to have any representation on the
Federal board, then I should emphasize in every way possible the
importance of this Federal advisory council. For instance, it is
provided here that they shall receive no compensation for their serv­
cices. I can see no reason whatever for that. Why should they not
receive compensation if the banks choose to give it to them?

It is provided that they will meet four times a year or oftener if
called together by the Federal board not if called together by them­
selves. I think if you make a Federal board that is composed en­
tirely of Government representatives and permit the members of this
advisory council to sit at all the deliberations of the board, to take
part in the discussions and debates—not to have any votes, but
to give the Federal board the advantage of close, intimate touch in
the discussion of all questions with the advisory council—it will be
a very good thing.

Senator Weeks. Should its hearings be public?

Mr. Vanderlip. Not necessarily. They are not exactly hearings;
they are general discussions which the Federal board may have; I
mean, they are official meetings. I would empower this council to
call for any sort of information. I would give them the power to call
for any sort of information that the Federal board itself might call
for. I would put them on a parity with the Federal board—almost
make them a part of it—but give them no vote. Give the Federal
board the advantage of that relationship.

Senator Weeks. What do you think of the value of an advisory
board—a volunteer board, practically so—which has no ultimate
responsibility?

Mr. Vanderlip. I think it of very little value as this section is
drawn. I think it could be made of considerable value.

Senator Pomerene. Without any provision of that kind, do you
not feel that if there is any matter that comes up which seriously
affected the banks, that they would have their representatives wait upon this board for the purpose of presenting their views?

Mr. Vanderlip. It is very different having a representative waiting on the board from having a representative with full rights sit at the table where the meeting is going on.

Senator Pomerene. That is true if they are to sit and take part in the final deliberation. They would be like Delegates in the House of Representatives.

Senator Nelson. Delegates from the Territories, without a vote.

The Chairman. Would you give them unlimited debate?

[Laughter.]

Mr. Vanderlip. No; I think there should be a cloture rule.

[Laughter.]

I now come to a very important and somewhat technical matter. Section 14 provides that the Federal reserve banks may receive for collection all sorts of checks and drafts drawn upon solvent banks.

The national-bank act at present says a reserve shall be kept upon the deposits. There is no definition there of gross deposits and net deposits, but the distinction which has grown up not by law, but by regulation, is very important. Gross deposits are the total deposits to the credit of the depositors in the bank. Net deposits are the deposits after certain deductions, among which are all items that are in the process of collection. For instance, if a bank in New York has $10,000,000 of deposits, and a bank in Pittsburgh deposits a million-dollar check drawn on a Chicago bank, the gross deposits of the New York bank would be $11,000,000, but in figuring the reserves we would deduct that $1,000,000 check until it had been collected, and we would figure reserve on $10,000,000, which is the amount of net deposits.

Under the present practice the reserve of the Pittsburgh bank is increased a million dollars, although the New York bank is not keeping any reserve against that deposit, and that constitutes a reserve for the Pittsburgh bank until it collects the money.

There is nothing said in this bill about gross deposits and net deposits. If reserves were figured on gross deposits, and these Federal reserve banks undertook all the collection business of the country, as they certainly will under these provisions, there would be a mass of deposits with them which would, in fact, only be items in process of collection but against which they would have to keep reserves. That mass of items in process of collection would be so great that it would use up a large part of the reserve bank's available funds to keep a reserve against it. I think the reserve banks should be permitted to deduct from their deposits items in process of collection, just the same as national banks now deduct in that way, and it would be more nearly correct and not permit the depositing bank to count uncollected items in its reserve until they are collected, although at the present time the depositing bank does count in its reserve all deposits created by the uncollected items, although the bank receiving them on deposit keeps no reserve against this amount but deducts it from gross deposits.

This point is very important, because if reserves were to be figured on the gross deposits of Federal reserve banks it would swamp the Federal reserve bank.
Senator Hitchcock. On the other hand, is it not permissible under this bill for the Federal reserve bank to charge to a member bank having deposits checks when they are received in the Federal reserve bank?

Mr. Vanderlip. It must, without charge, credit at par checks drawn by member banks on it, checks drawn on member banks that are members of its region, or checks drawn by member banks of any other region upon the central reserve bank of that region. Those must all be credited at par. It can charge for checks drawn on member banks of other regions, checks drawn by member banks upon member banks of any other region, or checks drawn upon any solvent bank. The charge for the collection does not cure the thing. If these are counted as deposits they have to keep a reserve against them; it will consume a large part of the reserve if they have to keep a reserve against these uncollected items.

Senator Hitchcock. I think that while it is true that checks would come in constantly, in large volume, which would go to the credit of a member bank, yet the same member bank would be charged with checks that came in the same mail. That would reduce the deposits?

Mr. Vanderlip. Certainly it will. Just as fast as collection is made of the deposit, the deposit is reduced.

Senator Hitchcock. No; I think you misunderstood me. The checks coming into the reserve bank, drawn on a member bank, when cashed by the reserve bank would be charged to the account of the member bank.

Mr. Vanderlip. That is true, but what about checks coming in drawn by members on other banks? Suppose there is deposited by a New York bank in the central reserve bank in New York a check drawn by a San Francisco bank on another member of the San Francisco Federal reserve bank? That is going to take some time to collect.

Senator Hitchcock. That would be a different situation?

Mr. Vanderlip. Yes.

Senator Hitchcock. As far as the member banks of the central reserve banks are concerned——

Mr. Vanderlip (interposing). They ought to clear every day.

Senator Hitchcock. And it ought to be counted in their deposits?

Mr. Vanderlip. Yes.

Senator Hitchcock. It ought to be counted in the reserve in the deposit also.

Senator Weeks. It will be necessary to give prompt notice to the banks that certain charges have been made against its account, otherwise it might overdraw very frequently?

Mr. Vanderlip. Exactly. Section 15 is translated in different ways by different people. I have supposed that it meant that the Federal reserve bank could go into the market and buy paper that had the indorsement of a member bank somewhere in the system. I have been told that is not what it means; that it can go into the market and buy any paper.

Senator Nelson. Anywhere.

Mr. Vanderlip. Anybody's paper.

Senator O'Gorman. That is for the purpose of regulating the discount rate?

Mr. Vanderlip. Yes; to flatten rates or to accumulate bills to sell at a time of threatened gold exports.
Senator O'Gorman. Can you suggest any better way of regulating the discount rate?

Mr. Vanderlip. I suggested this morning, at some length, the idea of converting part of the 2 per cent bonds into one-year Treasury notes, which should be renewed, as often as they matured, by the Federal reserve banks that would hold them. They would have in their possession 200 or 300 million dollars' worth of such notes that they could offer in the market whenever they wanted to control the rate and that could be used to great advantage in the gold situation.

Senator O'Gorman. Just as the Government has done in the past in that respect.

Mr. Vanderlip. Yes, sir.

Senator Bristow. Why should not the Government do that direct?

It seems to me that is a very cumbersome way to secure gold.

Mr. Vanderlip. How would the Government secure gold?

Senator Bristow. Sell bonds direct.

Mr. Vanderlip. The Government would have no machinery for that. It would not want to sell bonds. Of course it might sell short-time notes, but it is not the special concern of the Government whether gold is exported at a certain time or not. It is of concern to the banking situation, and not a concern of such moment that the Government ought to take action. These bankers, however, ought to have the power so that they could in some measure check the outflow of gold. You can not check it to any great extent; you can only damp it up a little; you can hold it up for a while, possibly until a crop movement brings you credits so you do not have to have any gold movement. That is only a slight, but it is a very important power.

Senator Weeks. If the reserve banks were given the power to invest in foreign bills and made a practice of doing it to a considerable extent, could not they regulate the flow of gold by purchasing or selling foreign bills?

Mr. Vanderlip. That is provided for in here. It is extremely important, but of the 12 regional banks that would probably only be done by the one in New York. There might be two or three which would engage in the purchase and sale of foreign bills, but it is rather doubtful if banks operated by people who were not familiar with foreign exchange would trade in foreign bills.

Senator Weeks. That is still another argument in favor of reducing the number of banks?

Mr. Vanderlip. Yes; they are almost numberless.

Senator Shafroth. Mr. Vanderlip, I want to ask you about the raising of the discount rate. I have not gotten it clear in my mind whether this would be to the advantage of the people to do that or not. Of course, there is a certain amount of benefit that comes to a nation in getting gold into it, but if you raise the discount rate and make the people pay higher interest for accommodations it is a dilemma that has two features to it, one a bad feature and one a good feature.

Mr. Vanderlip. You may be rendering a great service to the people by checking too great expansion and free loaning.

Senator Shafroth. You mean by the increased discount rate?

Mr. Vanderlip. By the increased discount rate.

Senator Shafroth. But the man who wants money never goes there.
Mr. Vanderlip. Therefore he is not the correct man——
Senator Shafroth (interposing). You say the rate can not be controlled absolutely, anyway?
Mr. Vanderlip. Oh, no; only slightly.
Senator Shafroth. I agree with you that whatever is absolutely needed in foreign countries is going to get there if they willing to bid for it more than we are, and for that reason I do not see but what there is almost as much loss to the people by reason of attempting to regulate the discount rate as there is benefit
Senator Nelson. Mr. Vanderlip, I want to call your attention to line 6 on page 27. What do you understand by the term "prime bankers' bills," as distinguished from bills of exchange, the words below? What is a prime bankers' bill?
Mr. Vanderlip. A prime bankers' bill has the indorsement of a banker.
Senator Nelson. You mean acceptance?
Mr. Vanderlip. Acceptance or indorsement.
Senator Nelson. And a bill of exchange is a bill that has not been accepted yet?
Mr. Vanderlip. Yes, sir.
Senator Nelson. Now, would this include what I call finance bills, as distinguished from commercial bills? You know the difference?
Mr. Vanderlip. A finance bill is drawn against securities, not drawn against commercial transactions.
Senator Nelson. But it has an acceptor?
Mr. Vanderlip. Oh, yes; it has an acceptor, just as a commercial bill.
Senator Nelson. Would this include a finance bill as well as a commercial bill?
Mr. Vanderlip. I should think not.
Senator Nelson. You do not think so?
Mr. Vanderlip. No, sir.
Senator Nelson. It would not do to include that, would it?
Mr. Vanderlip. I think not.
Senator Bristow. Do you think that section 15 offers the regional banks an opportunity to go out and transact a general banking business?
Mr. Vanderlip. I do not know, but I am very sure it ought to be made perfectly clear whether or not it is permitted to do so.
Senator Bristow. What do you think; should it or should it not?
Mr. Vanderlip. I think it should not be. Of course, it has to have something to make its discount rate effective. If you do not adopt this one-year Treasury note plan, I am not certain but what it is necessary for the bank to do this open-market business to make its rate effective. It must have some power to do that. It is obnoxious to be creating an institution with our own capital which is going into a market to compete with us.
Senator O'Gorman. You will observe by the language of section 15 that it is not designed that that power will be used always. It is only to be used in the contingencies which will be governed by the rules and regulations of the Federal reserve board. Can you not confide the exercise of that power to the judgment and discretion of the Federal reserve board?
Mr. Vanderlip. We would first confide it to our own representatives and directors in the Federal reserve bank, and I should say we
would be willing to confide it to them rather more than to the Federal reserve board. We create a majority of the directors of the Federal reserve bank, and we ought to be able to control the competition of the bank.

Senator O'Gorman. Suppose a provision substantially similar to the first paragraph of section 15 were in this act, you would advise the elimination of this reference to the reserve board establishing rules and regulations?

Mr. Vanderlip. I do not see any reason why it should establish rules and regulations.

Senator O'Gorman. Except that it is in keeping with the general tenor of the entire bill that they will exercise a supervision and control over all reserve banks.

Mr. Vanderlip. I have not especially found fault with the powers given to the Federal reserve board there. I have merely voiced the objection that is very common among bankers, to the Federal reserve bank competing with existing banks. The feeling on the part of many bankers is that the Federal reserve board should never buy any paper that did not have the indorsement of some member bank of the system. Then you are not in direct competition with the banks.

To come to the note issue, I believe it is fundamentally wrong to have the Government issue the notes. I think they should be an obligation of the Federal reserve banks. While I am perfectly clear that it is improper and unscientific, I will admit that I believe it will work in this form. There is danger that this guaranty of the Government will sometimes embarrass the Government. That is the chief practical objection to the working of this thing. It is unsound in theory for the Government to issue these notes, but I think the only really serious trouble that could ever come out of it would be that the Government might be embarrassed in carrying out the responsibilities here imposed upon it.

Senator Pomerene. Under what conditions have you in mind?

Mr. Vanderlip. Under conditions where the Federal banks are down to the limit of their reserves, a large amount of notes coming in for redemption because of some fear of the inability of the banks to redeem them, and the fact that there is not gold enough to cover the notes, the only cover for them being a loan upon commercial paper.

Senator Hitchcock. Five per cent?

Mr. Vanderlip. They have 5 per cent reserve deposited with the Government. That is an insufficient reserve.

Senator Pomerene. If these are in fact Government notes, it would reduce to a minimum such conditions as you have described?

Mr. Vanderlip. I think so.

Senator Pomerene. Assume for the time being that this bill was so changed as to make them obligations of the member bank instead of the Government; it is true the provisions of this bill are sufficient for the protection of those notes, so as to insure their redemption?

Mr. Vanderlip. Probably. I presume you meant the obligation of the Federal reserve bank instead of a member bank.

Senator Pomerene. The regional reserve bank.

Mr. Vanderlip. I can imagine, with a large number of regional banks, instances of mismanagement—perhaps the exercise of too
optimistic views by the board of some bank—so that it would be in a position of difficulty in redeeming these notes. The community where these notes were circulated, even though it knew the bank that issued them was rather weak, would not be concerned with that bank at all if the Government were guaranteeing the notes. I think the community ought to be concerned if the bank issuing the notes becomes weak enough so as to raise some question as to its ability to redeem these notes promptly. I certainly can imagine a condition where one of these banks would not be able to redeem these notes promptly. It is very probable. The risk of the guaranty is very small, but if it is nothing there is need for it. If there is any risk, the Government ought not to assume it. There is no more reason why the Government should be liable for notes than for deposits.

Senator Pomerene. You have here the security of the reserves, the double liability, the capital of the bank, and the fact that there is a first lien upon the assets of the bank. That ought to make it pretty secure.

Mr. Vanderlip. It ought to make it quite secure enough for the note holder. It makes it absolutely secure, I believe. Therefore, why add the guaranty of the Government to it?

Senator Pomerene. If it is absolutely secure, what risk is the Government taking?

Mr. Vanderlip. It is not taking any risk, if it is absolutely secure. It is probably secure, and, therefore, a guaranty is wholly unnecessary.

Senator Weeks. Suppose we got into a serious war and it were necessary for the Government to issue its Treasury notes, as it did in the sixties, do you not think that having these notes at that time with practically a Government guaranty, would be an important consideration?

Mr. Vanderlip. Very important; yes; important to the Government in that it would make it difficult for them to issue notes as they did in the sixties with a guaranty. It would be much better for the Government to let the bank notes stand by themselves.

Senator Shafroth. Would it be any worse than to have bonds issued to carry on a war?

Mr. Vanderlip. Very much worse; inexpressibly worse.

Senator Shafroth. You mean because the rate at which they would buy the bonds would be above par?

Mr. Vanderlip. No; I mean because an emission of fiat money entails for the country that issues it instead of selling bonds to pay the expenses of the war a burden of rising prices and increased expenses.

Senator Shafroth. That depends on whether they can maintain the gold reserve.

Senator Reed. Mr. Vanderlip, you say that if this currency is secure, it needs no Government back of it. If it is not secure, it should not have the Government back of it. Now, is not one of the great elements in floating any currency the confidence that the people have in the ultimate redemption of that currency?

Mr. Vanderlip. Yes, sir.

Senator Reed. And just in proportion as you increase that confidence you decrease the likelihood of the currency being attacked or raided or beaten down in the market. Therefore, if the Government of the United States puts its indorsement upon all currency
that is issued, does it not add to that currency a great element of stability and value?

Mr. Vanderlip. I do not believe in this case that it does add very much. And I do not believe that it is desirable to add any. I believe that these banks ought to be under the compulsion of so conducting themselves that the public would have absolute confidence in this currency.

Senator Reed. Do you not think that in establishing any financial system that the confidence of the public is, after all, one of the very great elements?

Mr. Vanderlip. Yes, sir.

Senator Reed. Now, do you not believe, Mr. Vanderlip, that taking the average citizen of the United States he regards anything that the Government stands back of as the safest and best security on earth?

Mr. Vanderlip. Yes.

Senator Reed. Well, if that is true, then why not give to this system that added stability, particularly when you say it can be done without really jeopardizing the Government?

Mr. Vanderlip. I say it can probably be done without jeopardizing the Government, but if it ever did jeopardize the Government it would be a very serious matter.

Senator Reed. Why, certainly. And if we are going to enact a bill here that is so bad that the structure will fall so heavily as to bear down the Government or greatly injure the Government, then we are embarking upon a most hazardous undertaking.

Mr. Vanderlip. I do not think you are going to do that. And I do not think this bill, in all human probability, if enacted, would ever involve the Government; but the principle of having the Government issue these notes is wrong. The guaranty of the Government is an unnecessary and illogical thing. The notes will float perfectly well without any guaranty.

Now, practically, I tell you my opinion is that the thing will work. It is wrong, it is unscientific, it is not a correct way of approaching this subject, but I think, it will work, and the strong probability is that the Nation's credit will never become involved. But I can readily conceive of circumstances under which it will become involved, and I think you would be doing the wrong thing to issue the notes in this form.

Senator Nelson. One question there, Mr. Vanderlip. I think, as a matter of general principle, you are right, but don't you think that in time of financial stress and disturbance, where the holders of these bills knew that the Government was back of them, there would be a less disposition among them to make a run and try to obtain gold for their paper?

Mr. Vanderlip. There might be.

Senator Nelson. Would there not be less likelihood of a rush to the bank or the Government vaults, saying, "I want gold for this paper," if the holders knew the Government was back of it?

Mr. Vanderlip. If they were to rush to the vaults and get gold, they ought to rush to the vaults and get gold. That is the position this bank ought to keep itself in.

Senator Nelson. No; I mean would not the people when they got frightened, as they were in 1907, when they got scared and ran for their deposits—suppose they got scared in the same manner about
this new currency; wouldn't they be less likely to make a run for the gold if the Government were back of the bills than if it were simply a bank?

Mr. Vanderlip. They would be somewhat less likely to. On the other hand, the banks would be much less likely to get in a position that would cause such a run if the whole responsibility was upon them.

Senator Hitchcock. Mr. Vanderlip, the very fact that men sit around a table seriously discussing the safety of these notes seems to me a reason why we should not issue any more of them than necessary for the purpose of elasticity, and leave that bank currency which we already have and which is beyond any question.

Mr. Vanderlip. It is beyond any question of security, but it has disabilities that are very serious and which should cause its removal.

Senator Hitchcock. Its disabilities relate only to its inelasticity, and that can we provide for in the future.

Senator Shafroth. And the fact they can not act as reserves.

Senator Reed. We can make them act as reserves in this bill.

Senator Pomerene. Mr. Vanderlip, I do not share your views as to the risks to be run by the Government issuing these notes, but I do want to make them as absolutely secure as it is possible to make them— if there is any thing more secure than absolutely secure. I have this thought in mind: You suggested a few moments ago that the earnings of the regional reserve bank over and above the dividend should be converted into sinking fund for the redemption of the bonds. Now, why would it not be wise to set apart a portion of those earnings as a security or guaranty fund against possible loss upon any of these notes which might be issued by the banks?

Mr. Vanderlip. That would be rather an unnecessary tying up of gold, because it would be set aside in gold if it were set aside at all.

Senator Pomerene. That is, you think these notes are so absolutely secure it would not be necessary to have that additional guaranty?

Mr. Vanderlip. I do not believe it would.

Senator Nelson. Would you have these notes redeemable in gold, or gold and lawful money?

Mr. Vanderlip. I should think they ought to be redeemable in gold. And, by the way, the bill is out of harmony in that respect, in that the banks—

Senator Nelson (interposing). What page are you referring to, please?

Mr. Vanderlip. On page 32 it is provided that the Federal reserve banks must "maintain on deposit in the Treasury of the United States a sum in gold equal to 5 per cent of such amount of Federal reserve notes," etc. On the preceding page it says, line 20, "shall be exchanged for lawful money out of the 5 per cent redemption fund hereinafter provided."

The redemption fund is provided to be in gold, and the responsibility on the Treasury for redemption out of this fund is stated to be in lawful money. If the words "lawful money" were changed to "gold," in line 20 page 31—

Senator O'Gorman (interposing). Mr. Vanderlip, the relation there is so close that there would be no room to doubt that the expression "lawful money" on page 31 would mean gold, because it has to be taken out of that 5 per cent.
Mr. Vanderlip. If there is no room to doubt it, then these notes are redeemable in gold at the treasury.

Senator Nelson. Should not the banks who issue this currency provide the necessary gold, and not cast the burden upon the Federal Government in any event?

Mr. Vanderlip. They are providing it.

Senator Nelson. No; they are not; if you leave the words "lawful money" in it, because the banks can redeem in lawful money, and that throws the burden on the Government. The regional bank redeems in greenbacks, and the man who gets the greenbacks would walk up to the Treasury and demand the gold.

Mr. Vanderlip. Gold is the proper money for ultimate redemption.

Senator Nelson. And as long as you leave the words "lawful money" in there you ultimately cast the gold burden on the National Government, do you not?

Mr. Vanderlip. You do, if "lawful money," as Senator O'Gorman says, means gold here.

The Chairman. It lacks two minutes of half-past 5, the hour at which the committee adjourns, under a previous resolution. The chairman would like to know what the wish of the committee is with regard to meeting to-morrow morning.

Mr. Vanderlip. I am at the service of the committee.

Senator Nelson. We should like to have you with us.

Senator Reed. I move, with a view to expediting the hearings, that we meet at 10 o'clock.

The Chairman. The Iowa bankers were invited to be here to-morrow.

Senator Nelson. The Senate meets at 12, so we had better meet at 10.

Senator Weeks. Mr. Dawson of the Iowa bankers is here, and the other two representatives will be here to-morrow, but I am inclined to think they will subordinate their wishes to the desires of the committee about appearing to-morrow or the next day.

Senator Bristow. I think it is very important we have Mr. Vanderlip with us to-morrow. I have a lot of questions I want to ask him.

The Chairman. With that understanding then, the committee when it adjourns, will adjourn till 10 o'clock.

But before the committee adjourns I should like to have it noted on the record that the statement of the Senator from New York, that not a single member of this committee was in favor of this bill in its present form, must not be understood to mean more. Some members of this committee think the bill should be amended; it must not be construed to mean more than that.

Senator Weeks. Haven't you a large number of amendments yourself?

The Chairman. I have several amendments myself.

Senator Weeks. That is what the Senator from New York said as I understood it.

The Chairman. I thought there might be some other inference drawn from it.

(Thereupon at 5.30 o'clock p. m. the committee proceeded to the consideration of executive business, and afterwards adjourned to meet to-morrow, Thursday, October 9, 1913, at 10 o'clock a. m.)
The committee assembled at 10.30 o'clock a. m.

Present: Senators Owen (chairman), Hitchcock, O'Gorman, Reed, Pomerene, Shafroth, Hollis, Nelson, Bristow, and Weeks.

The CHAIRMAN. Gentlemen, the time is so short that I think that even although the members are not present we had better proceed.

Senator Nelson. Yes; Mr. Vanderlip's statements are so important we want to be sure to get them.

The CHAIRMAN. We ought to have them, but we have only two hours until 12 o'clock, when the Senate meets, and this afternoon the Iowa people will be here expecting to be heard. So if we do not let Mr. Vanderlip go ahead we may not get his views at all. There are a number of other gentlemen who have been notified to appear.

Mr. Vanderlip. Is it your wish that I should proceed?

The CHAIRMAN. Yes.

STATEMENT OF FRANK A. VANDERLIP—Resumed.

Mr. Vanderlip. The provision for a national clearing house, on page 34, I believe can be of great economic value to the country and a great economy in the conduct of the business of the country. I believe it is a feasible thing, always remembering what I said yesterday about figuring net deposits, for if the reserve banks undertake these collections and keep a reserve against the items in process of collection they will be swamped.

The CHAIRMAN. It would be necessary to have the banks, then, keep a margin to cover their own exchanges—the special exchanges on them—would it not? Do you think that would be necessary in addition to the reserve?

Mr. Vanderlip. I think uncollected exchange items ought not to count in a reserve, and no reserve ought to be carried against them. You ought to be able to reduce your gross deposits by the amount of uncollected exchanges. That rule ought to apply right down the line, and uncollected exchanges ought not to constitute balances that could be counted as reserves.

I think that a full comprehension of the working of this national clearing house would clear up, in the minds of many bankers, some objections that they see to the bill. Bankers are inclined to feel that they will have to keep accounts for exchange purposes, and object to the removal of their reserve balances from central reserve city banks, because they feel that they will still have to keep balances there for exchange purposes. I suspect they do not fully appreciate the function of this national clearing house and the method by which that will supply them with exchange without the necessity of keeping central reserve city balances.

If a Kansas City banker wants to remit to New York it can be done with a check on the central reserve bank of which the Kansas City bank is a member. It does not need to have a balance——

The CHAIRMAN (interposing). You mean the Federal reserve bank, do you not?
Mr. Vanderlip. Yes; I mean the Federal reserve bank. It does not need to have a balance in New York with another bank that it can draw a draft upon, because its check on the Federal reserve bank of which it is a member is at par in New York. It will be credited at once. Presumably there will be telegraphic clearances between the several Federal reserve banks, so that everything that is provided to be deposited at par—that is, checks or drafts of member banks on their Federal reserve bank, checks of member banks on other member banks, any checks on member banks or checks drawn by member banks of another region on their reserve bank—will all clear in one day. Those items that are to be deposited at par will clear in one day by the aid of telegraphic clearances between the several Federal reserve banks, and the result will be some small balance to be remitted one way or the other between the Federal reserve banks, in the same way that a city clearing house operates.

I do not, therefore, see the necessity of banks having to keep bank balances with other member banks in order to remit exchange. The clearing-house feature seems to me very important. It follows the lines of the best practice in Europe. I believe it is feasible. I think it will work a great economy in the commerce of the country and a great saving in the cost of doing that class of business.

Senator Weeks. Do you think that country banks will be able to carry on all of their domestic exchange business through the reserve banks so that it will not be necessary for them to keep any deposit in the larger centers?

Mr. Vanderlip. There is a certain class of business that is not provided for in the functions of the Federal reserve banks. The collection of a due promissory note, the collection of coupons, drafts drawn upon individuals, and items of that character, would still have to be made through a bank. The bank will do that either for a correspondent who keeps a balance with it to recompense it for the work, which is the present system; or it would do it for a fee, which is the European system, and which would in the end be quite as satisfactory probably, if the fees were properly adjusted. The Federal reserve banks, through their clearing-house function, will collect any check drawn on any solvent banker. That takes in all bank paper, but promissory notes, coupons, due bonds, and matters of that character would still have to be collected through a bank in the locality where they were payable.

Senator Weeks. Could you make any estimate of the amount of that business—of what it would cost or how much of a deposit would be necessary in order to continue it under the present arrangement?

Mr. Vanderlip. For the average country bank it would be very little. The only thing that I think of that would be of importance to the country banks would be that if the country bank entered the discount market and bought notes that were payable elsewhere it would have to have some arrangement for having remitted or deposited to its credit the proceeds of those notes at maturity.

Senator Weeks. Now, there is this one facility of the larger banks which the country banks make use of now very largely, and that is the use of the credit department of the large banks. I presume it is your experience and the experience of the managers of all large banks that their country correspondents ask them to O. K. commercial paper whenever they buy it, unless they are very familiar
with it. Now, it has always seemed to me that that was of material advantage to the country bank, and that he would not want to give up that facility entirely and would necessarily keep more or less money in such banks as he has been doing that kind of business with.

Mr. Vanderlip. Undoubtedly the country bank will keep deposits with certain city banks for that and other reasons. I believe that it will be the disposition of the average country bank, which seldom borrows, to look to its old-time friend—the bank—that it has been with for a long time as a place to borrow rather than the Federal reserve bank—for a time, at least.

I believe that there will be the advantage that you speak of, an advantage in getting credit information, which will lead to at least one balance with whatever bank the country bank regards highest in the line of obtaining credit information. I do not believe that these balances of country banks will disappear altogether, but, of course, they will be on quite a different basis. At the present time country banks maintain balances for the purpose of having collections made and for the purpose of securing collections to be made by them. That is a very important element in securing bank accounts. For instance, Philadelphia, adopting a practice of collecting free, or at least with very small charges, has accumulated a great amount of country balances, although those balances do not count as reserves, for reserve city banks. Still Philadelphia collects so cheaply as against the charge made in New York, that large balances have accumulated there. Under this arrangement there would be no need of a balance there for the purpose of collection or with the object of securing collections upon which the depositing bank could make a profit. There would still be some reasons for balances, and the one you mention of credit information will be an important one.

Senator Weeks. I think you place those reasons at a lower estimate than any witness that has been before the committee, and it is something the committee will have to consider, because I think many members of the committee—I have myself—have had in mind that it will be necessary for the country banks to keep considerable deposits in the large centers, or certainly in one large center. And whether it would be desirable to allow any part of that to be used as reserve, at least temporarily until they had acquired new habits and new methods—

Mr. Vanderlip (interposing). That is permitted temporarily by the bill.

Senator Nelson. Three years. Now, I want to get at one point there. In the part of the bill referring to the reserve on deposits, would the phrase that checks, drafts, bills, etc., in process of collection shall be deducted from the—

Mr. Vanderlip (interposing). Gross deposits?

Senator Nelson. Gross deposits—something of that kind—

Mr. Vanderlip (interposing). That will do it.

The clause in regard to refunding bonds I have already discussed pretty fully. I have said that I do not believe it will work in the way that has been anticipated, because the 2 per cent bonds will have greater value in the hands of a banker taking out circulation than the 3 per cent bonds. A suggestion that has occurred to me would be to convert all the twos at once into threes with the circulation
privilege and with a tax of 1\frac{1}{2} per cent instead of one-half per cent. That would leave the result the same to the Government in so far as the bonds were used for circulation purposes, and it would give the banks the option of using the bond for circulation on the same basis that a 2 per cent can be used, or of selling it as a 3 per cent straight investment bond, if there were a market.

There would be a disadvantage to the Government if the banks did sell them and there ceased to be circulation. There would be a compensation for that disadvantage in that, so far as the national-bank notes were reduced, there would be room for the new notes to be issued, and the Federal reserve banks would make a profit on the new notes, which profit would in turn go back into the Government's pocket.

Senator Weeks. I assume you would agree that the circulation tax should be increased if they should issue circulation on these new bonds, so that the net return would be exactly the same as on the twos?

Mr. Vanderlip. That is what I said, that the circulation tax would be 1\frac{1}{2} per cent instead of one-half per cent. But the Government would in the end be compensated for any loss through the earnings of the bank.

In taking up the section in regard to bank reserves, I will say that my general calculation has shown that there will be a pretty sharp contraction in the central reserve cities at the end of the first 60 days. It would not be so sharp, however—

Senator O'Gorman (interposing). What do you mean by the first 60 days?

Mr. Vanderlip. The first 60 days after—

Senator O'Gorman. After the new system is in operation?

Mr. Vanderlip. After the new system is in operation and reserves can be transferred.

That contraction, although sharp, will not be so sharp but that it can be met. I think, without exceptional difficulty. At the end of three years there will be a possible expansion of $1,300,000,000 to $1,700,000,000. To reach such an expansion means that all the Federal reserve banks will have loaned down to the full limit so that they have only 33 per cent reserve, and that member banks would have loaned down to the legal minimum. It is not at all presumable that such a condition would arise.

That figure looks very large, but as we look back and note that in the last three years national-bank loans have expanded $700,000,000, I do not regard the possibilities of expansion as excessive. I see no reason to anticipate that the expansion would be to the limit, that banks would not still be managed conservatively as they have been, and I should say that the possibilities of expansion were not dangerous, but, on the other hand, were ample.

With respect to the reserve requirement, the law says that banks shall keep a certain minimum in their vaults—

Senator Pomerene (interposing). Before going to that would you object to a question? You say there would be a contraction within the 60 days. Now, for what reason?

Mr. Vanderlip. For the reason that the central reserve city banks have to repay balances to both the reserve city banks and the country
banks, and the contraction will come from the great reduction of central reserve city balances, which have to be paid out in full in cash. That will be compensated for in part by the reduction of the reserve requirements in the central reserve cities, but it is not fully compensated for.

In this connection, I fail to see, as I said yesterday, why a central reserve city bank need keep any more reserve than a country bank after the time has past that it keeps any reserve for a country bank. I do not see why the reserve requirements should not be the same all around. As a matter of fact, the city bank is more liquid than the country bank, and why it should have to keep 50 per cent more reserve—18 per cent instead of 12 per cent—although it has no reserve responsibilities whatever to the other banks in the system, is not clear to me.

Senator Nelson. It is on exactly the same footing as the country banks after the 36 months; it is no longer the reserve agent for any country banks.

Mr. Vanderlip. Exactly.

Senator Pomerene. That is one of the thoughts I had in mind when I suggested yesterday the propriety of giving to this board, subject, perhaps, to the approval of the President, the right to reduce or to increase these reserves, realizing all the while that when we fix a reserve arbitrarily, without practical experience under the new system, it is necessarily somewhat problematical.

Mr. Vanderlip. There is certainly force in that view. It is problematical whether we can hit on the right reserve. I believe we may sometimes come to the point where we will not have to have any reserve requirement at all, but leave that to the judgment of the banker.

The Chairman. But you are very clear that the reserve which is to be kept in the vaults of the bank may be left optional, either to be kept in the vault or with the Federal reserve board.

Mr. Vanderlip. There can be no doubt about that. Why should you force a bank to keep in its vault money which it does not need and which it would prefer to keep with the central reserve bank?

The Chairman. There is a variable requirement in regard to banks, is there not?

Mr. Vanderlip. There is; and it occurs to me that there might be some banks with deposits fluctuating so rapidly that the amount you say must be kept in their vaults may not be sufficient.

The Chairman. And in some cases it may be much larger than necessary?

Mr. Vanderlip. Yes; that would particularly be so with the large city banks.

The Chairman. The banks which are in immediate proximity to the reserve banks?

Mr. Vanderlip. Yes.

Senator O'Gorman. Do you think this matter might very well be provided for by having a minimum figure mentioned, or contained in the bill, but conferring upon the reserve board a discretion to modify that requirement in a given case?

Mr. Vanderlip. Personally I dislike too much discretion to be given to this reserve board, at least for the present. Banks like to know what it is they are facing; they like a definite law rather than
a regulation which may be changed without discussion or notification.

Senator O'GORMAN. But you have rather intimated that it would be well to have such a discretionary power lodged somewhere to cover a given situation.

MR. VANDERLIP. It would be well to look forward to a time when we can change these requirements if we have discovered they are not right. Whether that had best be left to the discretion of the Federal reserve board or whether it is a question to be brought back to Congress is a matter for a difference of opinion.

I should have said, Senator, in speaking of the reason for the contraction in central reserve cities, that those banks also, in common with all other banks, must pay in capital to the central reserve bank. That is another reason for contraction.

Senator POMERENE. My thought as to that was that perhaps this bill should be so amended as to permit of the taking of the commercial paper at once and rediscounting it for the time being so as to avoid the necessity of paying so much cash into a vault and keeping it there as dead capital.

MR. VANDERLIP. The language of the bill leaves it open to question whether a central reserve city bank could discount before it began to deposit.

Senator POMERENE. I think that is true, but it seems to me it ought to be modified.

MR. VANDERLIP. I think a central reserve city bank should be able to discount before it begins to deposit, because it has to meet drafts immediately on the law becoming effective.

In section 22, which fixes the reserve which Federal reserve banks must keep, it is declared to be 33 1/3 per cent of its outstanding demand liabilities. I have already spoken of the necessity of calculating net deposits, but I think demand liabilities ought to be more fully defined. For instance, a bank might have borrowed abroad; it is perhaps hardly presumable that it would have borrowed on demand, but it might. You would not want it to keep a reserve against such a liability. I would rather see that section expanded to indicate what the total is upon which reserves are to be calculated.

Senator NELSON. Suppose you put into this "from circulating notes and net deposits"?

MR. VANDERLIP. That covers the case.

Senator NELSON. In lieu of the language in the bill.

MR. VANDERLIP. Yes, sir.

Senator NELSON. And then somewhere in the bill define what net deposits are.

MR. VANDERLIP. Yes, sir.

Senator WEEKS. Why do you think it ought not to be necessary to keep a reserve against a liability made abroad?

MR. VANDERLIP. I think it ought not to be necessary; I am afraid it might be necessary here.

Senator WEEKS. Why do you think it ought not to be necessary?

MR. VANDERLIP. It is true that if it were a demand liability there perhaps might be a necessity for a reserve.

The CHAIRMAN. But the assets against a foreign demand of that kind are of such a character that that in reality is a species of reserve against it; it not that true?
Mr. Vanderlip. I think so—the collateral that probably would be lodged against such a loan.

The Chairman. The collateral is of such a character that it is really a liquid collateral, and for that reason you do not think a reserve necessary?

Mr. Vanderlip. Yes.

Senator Weeks. Why do you think there would necessarily be collateral against such a loan?

Mr. Vanderlip. It might be either way. If there were no collateral and it were a demand obligation, I suppose it is fair to say that there should be a reserve against it.

Senator Pomerene. What is the fact from a practical standpoint; is there usually collateral against these obligations?

Mr. Vanderlip. From a practical standpoint I doubt if there would be a demand obligation of this sort. But I think I should say that if the bank borrowed abroad it would probably not borrow on demand.

Senator O'Gorman. But if you would exclude the foreign demand liability you would afford a ready means to bankers to evade this requirement. If they had reached their limit here in this country, they could then transcend it by securing this accommodation abroad.

Mr. Vanderlip. That would be possible.

Senator O'Gorman. And there would be no limitation.

Mr. Vanderlip. I think, on further consideration, that demand liability in the form of foreign borrowing, at least without collateral, ought to have a reserve against it.

I have no fault to find with regard to the clause concerning bank examinations, except that I feel that central reserve city banks seem to be regarded as needing more careful supervision than country banks, and more numerous examinations are provided.

Senator O'Gorman. Let me ask you this, Mr. Vanderlip: You have several times spoken of central reserve banks; you mean the Federal reserve bank?

Mr. Vanderlip. No, sir; I mean the banks in designated central reserve cities.

Senator O'Gorman. The existing banks?

Mr. Vanderlip. Yes, sir.

Senator Nelson. Under existing law?

Mr. Vanderlip. Yes, sir. That law is, curiously, continued without any reason for it.

Senator Nelson. Yes; they keep up the distinction in this law, as I think, unnecessarily.

Senator Pomerene. And you see no reason at all for that distinction in this bill?

Mr. Vanderlip. No reason for it.

Senator O'Gorman. If you have the one system?

Mr. Vanderlip. Yes, sir.

Senator O'Gorman. And if we do not, as suggested yesterday, provide for the national banks that may not want to come into this system?

Mr. Vanderlip. Yes.

Senator O'Gorman. On that point, Mr. Vanderlip, if I get your idea, if this change in our banking law is to accomplish any good, it ought to mean the creation of a uniform and a single system.
Mr. Vanderlip. Undoubtedly; that is the ideal to be worked for.

Senator O'Gorman. We can not have half the banking system under this plan and half under some other plan.

Mr. Vanderlip. You can not so have it and have it anything like a success; and I fear this plan will emphasize the difference rather than draw the banks together.

Senator O'Gorman. So, then, assuming we have one plan operating upon all national banks, at least, you see no particular reason why the central reserve banks should be continued?

Mr. Vanderlip. If the plan of reserves herein provided—that these reserves shall be either in the vault or in the Federal reserve bank—is carried out, then there is no reason for the distinction between a country bank, a reserve city bank, and a central reserve city bank. If you change this so as to permit some of the reserve deposits to be left with national banks, then there would be reason for the distinction.

Senator Nelson. And this bill obliterates that?

Mr. Vanderlip. As the bill stands; absolutely.

The national banks do not object to examinations; they object to continuous examination. We do not want so many that we have to keep open nights in order to be examined; and I think a good many examinations are being provided here for the present reserve city banks.

We have, in addition to the examinations provided here, an examination by the clearing house, which might or might not be continued. It has been, I believe, the most effective and thoroughgoing examination that the banks have ever had. We also have examinations by our directors.

There is this thought also in connection with the examination of banks doing a large foreign business: Foreign bankers will refuse to reconcile for examination purposes as many as nine times a year, which might be necessary under this bill.

The Chairman. They will refuse to do what?

Mr. Vanderlip. To reconcile their accounts; that is, to O. K. the account up to a definite date. It is too complicated. It is usually done every six months, and you can not get foreign bankers to meet this new condition. They simply won't do it, so your examination, in that particular, might be ineffective in spite of anything either the examiner or the bank could do. There are rather too many examinations provided here, I think, although I am making no plea whatever for scant examination.

Senator O'Gorman. Mr. Vanderlip, as I read this provision, the minimum number of examinations is two, the power being confided to the reserve board to order others if necessary.

Mr. Vanderlip. There are examinations by the comptroller, examinations by the board, and there may be examinations even by the Secretary of the Treasury.

Senator O'Gorman. Is there any reason to apprehend that there will be an unnecessarily large number of examinations each year? Will it not depend upon the view that the reserve board and the Secretary of the Treasury may take as to the necessities of a given situation?

Mr. Vanderlip. I think that is possible. I think, however, there are too many examinations actually provided for. It says here that
the Federal reserve board as often as it deems best, and in any case not less frequently than four times each year, shall order examinations of national banking associations in reserve cities. Why discriminate against reserve cities?

Senator O'Gorman. What line are you reading from now?

Mr. Vanderlip. Page 41, line 14.

Senator O'Gorman. That relates to reserve cities. But, from the view that has been expressed lately, we may abandon these reserve-city definitions entirely if this plan or any similar plan is adopted. I had in mind a moment ago a provision in the first few lines on page 40 which speaks of examinations of national-bank associations at least twice a year.

Mr. Vanderlip. It is distinctly desirable that there should be power to have a special examination of any bank concerning which there is any doubt. But to have regularly at least four, as is provided here, and possibly more, I think is bad.

Senator Weeks. How much does it cost the national banks for the examinations that are now made?

Mr. Vanderlip. I think it costs our bank about $3,300.

Senator Weeks. A year?

Mr. Vanderlip. For each examination; and I believe the fees of the New York examiner are something like $35,000.

Senator Bristow. How many examiners are there?

Mr. Vanderlip. Only one; he has assistants, of course. There is one examiner in New York.

Senator Bristow. Only one, and he pays his assistants?

Mr. Vanderlip. He pays his assistants. I think his net fees are about $35,000.

Senator Bristow. Is he made an exception?

Mr. Vanderlip. No; it is the Secretary of the Treasury.

Senator Bristow. Upon the recommendation of the comptroller?

Mr. Vanderlip. Upon the recommendation of the comptroller.

Senator Bristow. Is that accurate—the Secretary of the Treasury or the comptroller?

Mr. Vanderlip. I am informed he is appointed by the Comptroller of the Currency, with the approval of the Secretary of the Treasury.

Senator O'Gorman. We are probably getting away from the features of this bill, but it is instructive. What charges are made to the banks for these examinations?

Mr. Vanderlip. A charge on the percentage of the bank's business. I can not give you the exact percentage, but my recollection is that the fee the National City Bank pays is in the neighborhood of $3,200.

Senator Pomerene. A year?

Mr. Vanderlip. For each examination.

Senator O'Gorman. Can you roughly estimate about how much is paid annually by all the city banks in the city of New York for these examinations?
Mr. Vanderlip. If my information is correct that the examiner receives net in the neighborhood of $35,000, it would be that plus what he pays to a half dozen other men that he employs at more moderate salaries. It would be in the neighborhood, then, of $45,000 or $50,000.

Senator O'Gorman. Does he fix the salaries of his subordinates?

Mr. Vanderlip. He employs them and pays them out of his gross receipts.

Senator O'Gorman. Are his gross receipts affected by his activities in examining and reexamining?

Mr. Vanderlip. His gross receipts are based upon the number of examinations, but the number of examinations is provided by law to be two a year.

Senator O'Gorman. Arbitrarily fixed at that?

Mr. Vanderlip. Yes, sir.

Senator O'Gorman. So he could not, if he wished, enlarge the number of examinations?

Mr. Vanderlip. He sometimes gets in three a year; we have had three in a year, but I think that is a lapping over. We have had three in a calendar year, but I think the average is two a year.

Senator O'Gorman. What is the average compensation of his assistants?

Mr. Vanderlip. I do not know, but I would presume from $1,200 to $1,800.

Senator O'Gorman. And they are fairly well-equipped accountants?

Mr. Vanderlip. Fairly well-equipped accountants. There may be one or two that would get $2,500. I know nothing about that personally.

Senator O'Gorman. What does the chief examiner do for his $35,000?

Mr. Vanderlip. He superintends the work and is responsible for the reports.

Senator O'Gorman. Then it is a sort of farming-out process?

Mr. Vanderlip. Hardly that.

Senator O'Gorman. The examiner is compensated by the various banks whose accounts he examines, and he in turn employs such assistants as he may require?

Mr. Vanderlip. Yes, sir.

Senator Nelson. In a big bank, you know, the chief examiner has to go there with his assistants, and it practically, for the time being, suspends the business, does it not?

Mr. Vanderlip. It does not suspend, but it interferes with it greatly. We walk into the bank some morning and find all of our cash sealed, and we can not open anything except with the consent of the examiner or some one who is in charge. And if we have that happen four or six times a year it gets to be rather trying. That is not necessary.

I want all the examination necessary to insure the soundest banking and the most complete observation of the law; I have no objection whatever to that, but I do not want to hamper business unduly to accomplish that.

Senator Weeks. You have an auditor in your bank?

Mr. Vanderlip. Yes, sir.

Senator Weeks. Who is examining all the time?
Mr. Vanderlip. All the time, unexpectedly taking departments; he is working all the time with a force.

Senator Nelson. I have always thought, Mr. Chairman, that this was an anomaly in our law, for bank examiners to be paid by the respective banks. It seems to me that they ought to be paid a regular salary by the Government and not have the banks pay for these examinations. The pay is based upon the size of the bank and the volume of business, and the disposition has been—take it out in the West—for these examiners to get over the ground as rapidly as possible.

The Chairman. Some of them have as high as 200 banks to examine.

Senator Nelson. Yes; and the disposition is to go over these banks as rapidly as possible, and instances have occurred where they have done it in a very perfunctory and reckless manner. I think it would be a most wholesome reform to have these men on a salary.

Senator Shafroth. Is there not something in this bill on that?

The Chairman. Yes. Mr. Vanderlip, I wanted to ask you something about the examinations by the clearing-house examiners. How often do they make these examinations?

Mr. Vanderlip. Once a year, and they are extremely thorough. They are very ably done. We have taken great care to secure there the best possible staff. The examiners are highly paid, and are a very capable class of men.

The Chairman. How many men are employed by that force?

Mr. Vanderlip. About 10 men.

The Chairman. About 10 men under one man?

Mr. Vanderlip. Yes, sir; and a number of them are fairly highly salaried men, too.

The Chairman. What is paid the chief examiner?

Mr. Vanderlip. I do not know that there is any objection to making that public. It is $20,000.

The Chairman. And are his subordinates paid as the subordinates of the national-bank examiner—$1,200 to $1,800?

Mr. Vanderlip. Much more.

Senator O'Gorman. What is their average pay?

Mr. Vanderlip. There are men who get around $5,000.

The Chairman. And they act in concert with the chief examiner?

Mr. Vanderlip. Yes, sir.

Senator Pomerene. Are those examinations made on his own motion or at the suggestion of members of the clearing house?

Mr. Vanderlip. On his own motion entirely, and the result of the examination is never revealed to members of the clearing house unless there is cause for criticism. There is the utmost secrecy maintained in regard to those examinations until there is cause for criticism. If there is cause for criticism, that criticism is made to the clearing-house committee, and in that case it is most confidentially treated. I have been chairman of the clearing-house committee, and I am familiar with that. This year I am not chairman, and I have not heard a lisp of any criticism. Nothing whatever has leaked from that committee to me, although I was chairman of it last year. I do not know of a single criticism that a clearing-house bank examiner has made.
The Chairman. Then those clearing-house examinations are not open to the review of the different member banks?

Mr. Vanderlip. By no means.

The Chairman. They do not know, from those examinations, where stocks were located?

Mr. Vanderlip. They have not the slightest knowledge. They do not hear anything except the report that the bank is in a sound condition and being properly conducted, if that is the case. If there were ground for criticism, it would first be taken up with the bank to see if the bank would itself correct it upon the complaint of the examiner. Frequently that has been done and great good has been worked. It is only after the examiner has been unable to harmonize his views with the views of the management of the bank that the matter comes to the clearing-house committee. It is treated in the utmost confidence by the clearing-house committee.

Senator Pomerene. Suppose a man were a borrower in excess of what was a proper amount at two or three different banks, would that fact be made known to those several banks?

Mr. Vanderlip. It would be made known to those banks, probably by the bank examiner. That is, in the case of the bank he was examining, if he found a loan there from some one who had loans in numerous banks he would explain that to the bank under examination. Whether or not he would also go to a bank not under examination and call their attention to the fact I am not certain.

Senator Brustow. In regard to these examinations; of course, you were in the Treasury Department, and you had a very wide experience. Do you not think the present system of paying bank examiners inevitably tends to haste and inefficient examinations?

Mr. Vanderlip. Undoubtedly a bank examiner is desirous of completing as many examinations in a year as he can, since his compensation depends upon the number he completes.

Senator Nelson. That has been apparent to me for a great many years, out in the West.

Senator Pomerene. I was going to ask one more question along the line I was interrogating you upon. Suppose that the cashier of bank A would have reason to believe or have curiosity to learn whether a certain particular borrower did not have large amounts borrowed at other banks in the city. Would he be privileged to inquire of the bank examiner as to whether or not this borrower had accommodations at other banks; and if so, where and to what amount?

Mr. Vanderlip. He would be privileged, I think, to make the first part of that inquiry; has the borrower unduly expanded his loans. I do not think he would be privileged to ask where. I do not believe that the bank examiner would give him any information as to the condition of any other bank, even though the inquiry were based on the desire to learn the condition of one of his customers.

Senator O'Gorman. Would such information be acquired through your clearing-house association?

Mr. Vanderlip. No, sir.

Senator Pomerene. I had reference to the examiner employed by the clearing house, and from him you could get the information to the extent you have indicated?
Mr. Vanderlip. Yes, sir.

Senator Weeks. Did you, as chairman of the clearing-house committee, know or have knowledge of what other banks were loaning, unless there was complaint that there was an overloan?

Mr. Vanderlip. I had no more knowledge of the business of any other bank after the examination was completed than you have at this moment, if the examiner certified that the bank was solvent and being conducted on sound lines.

Senator Weeks. And you did not know what particular stocks and bonds they were loaning?

Mr. Vanderlip. I had not the slightest information. The only report the examiner makes in the case of a sound bank is that he has examined the bank under such a date and found the condition satisfactory.

Senator Pomerene. Is this examiner under bond?

Mr. Vanderlip. I should not think so; he has no fiscal responsibility.

Senator Nelson. You mean the clearing-house examiner?

Senator Pomerene. Yes.

Senator Nelson. He does not handle any funds.

Senator Hitchcock. The United States examiners are bonded.

Senator Nelson. Yes; they give bonds. They are appointed as quasi public officials, and then the public does not pay them. They are paid by the banks.

Senator Pomerene. The secrecy of a borrower's business would depend entirely upon the honor of the man who was employed in the position of examiner?

Mr. Vanderlip. Yes. I have, after large experience with them, the utmost confidence in their honor and in the fact that these examiners would regard as absolutely confidential any information that came to them.

Senator Bristow. Who have usually been appointed as bank examiners in New York by the comptroller?

Mr. Vanderlip. They have usually been of good experience; perhaps not of very wide banking experience. As I think back, I do not recollect that examiners have usually had a very large banking experience. Our present examiner there is an excellent accountant. He had no banking experience, I think, up to a year or two ago, when he was for a time employed by the First National Bank. He later left that employment and returned to the position of examiner.

Senator O'Gorman. Is that the official examiner?

Mr. Vanderlip. Yes, sir; Mr. Starek.

Senator Pomerene. Give his full name.

Mr. Vanderlip. Charles Starek.

Senator Bristow. Whom did he succeed?

Mr. Vanderlip. I am not sure.

Senator O'Gorman. What was his position in this bank?

Mr. Vanderlip. No official position.

Senator O'Gorman. What was the character of his employment?

Mr. Vanderlip. I am not aware as to what his duties were.

Senator O'Gorman. Clerical work or the work of an accountant?

Mr. Vanderlip. I think the work of auditor and accountant.

Senator O'Gorman. What is the usual pay of an auditor and accountant in a bank?
Mr. Vanderlip. An auditor would probably, in a large bank, receive as much as $10,000.

Mr. O'Gorman. Is this a large bank?

Mr. Vanderlip. The First National Bank of New York. Let me say that the fee in New York has always until rather recently been divided between two examiners. Recently one of the examiners, Mr. Rorebeck, has been dropped and we have now only one examiner there.

Senator Nelson. And he gets $35,000 a year in fees, less what he pays out for his help?

Mr. Vanderlip. I think plus what he pays out. As to that fee I have no accurate information. That is what I have been told.

Senator O'Gorman. When you speak of that figure you have in mind the net income of the present auditor and examiner?

Mr. Vanderlip. Yes. If there were two examiners——

Senator O'Gorman (interposing). That would be divided?

Mr. Vanderlip (continuing). It would be divided between the two. There have hitherto been two examiners; there is now only one.

Senator O'Gorman. Why, if you know, was this change made. Why was Mr. Rorebeck dropped?

Mr. Vanderlip. I have no knowledge.

Senator O'Gorman. When did that take place?

Mr. Vanderlip. Since the beginning of the present administration.

Senator Hitchcock. When the examiner comes to your bank, how many assistants does he bring?

Mr. Vanderlip. About six.

Senator Hitchcock. Do they all have a knowledge of the affairs of your bank, when they have completed the examination?

Mr. Vanderlip. Everything we have is opened to them; under present day conditions our correspondence is given to them.

Senator Hitchcock. Do they have a knowledge, for instance, of your loans and collateral?

Mr. Vanderlip. Absolutely.

Senator Hitchcock. All of the men?

Mr. Vanderlip. All of them; yes, sir.

Senator Hitchcock. So that the knowledge of the affairs of the bank is not entrusted simply to a United States examiner and the clearing-house examiner, but to all of these assistants?

Mr. Vanderlip. All of these assistants have access to the affairs. Whether or not the work may happen to be so divided that one man counts the cash and another checks collateral, I can not say. There is no reason, so far as the bank is concerned, why every one of the bank examiner's staff should not have information about anything in the bank.

Senator O'Gorman. Have you ever known a case where any of these assistants to the bank examiner have made any improper use of the information they acquired in the examination of a bank?

Mr. Vanderlip. I never have.

Senator Pomerene. Under the present national banking law, as I understand it, the examiners make their reports to the Comptroller of the Currency, and I assume that under your State banking laws
in New York the examiners there would make reports of their examination of the State banks to the State banking department?

Mr. Vanderlip. Yes, sir.

Senator Pomerene. Neither one of them would have any means of knowing what the condition of the other set of banks was?

Mr. Vanderlip. As a matter of fact I think they do cooperate.

Senator Pomerene. What I was thinking to get at was this, that the examiner employed by the clearing-house association would have the means of knowing the condition of all the banks, both State and national, while, primarily at least, the examiner of the national banks would only know the condition of the national banks, and the State examiners of the State banks.

Mr. Vanderlip. That is quite true.

Senator O'Gorman. Mr. Vanderlip, from your knowledge of banking conditions in New York, do you think the examinations can be conducted efficiently with one bank examiner?

Mr. Vanderlip. I think almost any piece of business can be conducted efficiently with one head, if he properly organizes his business.

Senator O'Gorman. Is it usual for the examiners to participate in the examination of each bank?

Mr. Vanderlip. It is usual, yes, sir; and I should think it was practical.

Senator O'Gorman. So that each examination requires his personal presence?

Mr. Vanderlip. Theoretically it does, and I think practically he is there.

Senator O'Gorman. Is it possible for one examiner to be present at the examinations being conducted at each bank in the city of New York in a year?

Mr. Vanderlip. I am very certain that that has been possible in the examination of the National City Bank, and that he has been present.

Senator O'Gorman. How many national banks are there in the city of New York?

Mr. Vanderlip. There are 52 central reserve banks in New York, Chicago, and St. Louis.

Senator Weeks. There has been a recent order of the comptroller which prevents bank examiners from engaging in any other examinations and doing any other work. Do you think that is desirable, as far as the examinations of banks other than national banks is concerned?

Mr. Vanderlip. Before I answer that question I will answer Senator O'Gorman. There are 36 national banks in New York.

Senator O'Gorman. In the city of New York?

Mr. Vanderlip. Yes, sir.

The Chairman. How many days does it take to examine your bank?

Mr. Vanderlip. Ordinarily, about a week. We have had an examination recently, however, that has extended over two or three weeks.

Senator Nelson. Your bank?

Mr. Vanderlip. In our bank; yes, sir.

Senator O'Gorman. And that occurs twice a year?
Mr. Vanderlip. Yes. Now, I will answer Senator Weeks’s question. I suppose a bank examiner would naturally be pretty busy conducting the duties of his position. Banks have found it rather desirable sometimes to have a bank examiner come in to make a special examination at the instance of directors, and directors have chosen national-bank examiners to do that work because they believed they would do it more efficiently.

Senator Weeks. You mean directors of State banks?

Mr. Vanderlip. Yes, sir. I see no great harm in it.

Senator O’Gorman. Would you find that directors of State banks were also directors of national banks?

Mr. Vanderlip. I was thinking of directors of State banks who had need for the national-bank examiners.

Senator O’Gorman. Even there it is necessary, where, at the instance of the directors of a national bank, an examination has been conducted?

Mr. Vanderlip. Yes; and that independent examination conducted by the national-bank examiner. Of course, it is the practice of New York banks to make at least one and sometimes two examinations a year by the directors. Sometimes it is done in person by the directors and sometimes they delegate it to a chartered accountant or others who will make a very thorough examination.

Senator Weeks. What I am trying to get at is this, without any criticism of the department. There is a recent order, which, I understand, prevents a national-bank examiner from examining State banks, trust companies, or other institutions. He has to devote his entire time to the examination of national banks. In a community like New York, where there are a great many trust companies, it seems to me you are only getting a partial statement of the conditions of the banks in the community, unless the same man is going to be privileged to examine all the banks.

Mr. Vanderlip. That is an advantage we gain from the clearing-house examination.

Senator Weeks. From the Government’s standpoint it is somewhat important and advantageous to have some man who will be familiar with the affairs of State banks and trust companies as well as national banks.

Mr. Vanderlip. I think it would be very advantageous.

Senator Weeks. Then if that is so the recent change made probably would bring less net knowledge out of the result of those examinations?

Mr. Vanderlip. I should think so.

Senator Hitchcock. Mr. Vanderlip, do you think that the interlocking of directors in those 36 national banks is a source of complaint?

Mr. Vanderlip. I think it is a source of strength, a source of good management, a source of a better understanding of the credit situation.

Senator Hitchcock. Then they have a knowledge of each other’s affairs?

Mr. Vanderlip. They have, to some extent.

Senator Hitchcock. That has been charged as one of the serious things in New York which has tended to establish a banking monopoly to the detriment of those who were seeking credit.
Mr. Vanderlip. It has been so charged, but I do not believe there has been a single instance cited of harm having been done. I will challenge anyone to show an instance where interlocking directorates has led to unfairness to a borrower.

Senator Hitchcock. Then it has been charged, too, that it was practically impossible to finance a new railroad company, for instance, for the reason that the sources of credit in New York are so largely controlled by the great owners of the railroads. You have, for instance, as an illustration, the case of Mr. Dave Moffit, out in Denver.

Mr. Vanderlip. We have had the illustration of the Western Pacific, which was built paralleling the Central Pacific. Money for that was found in New York.

Senator Hitchcock. But afterwards the Western Pacific was forced to a compromise and a settlement with the Central Pacific, was it not?

Mr. Vanderlip. No, sir; there never has been a compromise or settlement.

Senator Hitchcock. Was that the Gould line you are referring to?

Mr. Vanderlip. Yes, sir.

Senator Hitchcock. Did it happen that Gould had one such bank, and that he was able in some independent way to finance the system?

Mr. Vanderlip. I would not say an independent way. That was financed, I believe, through Blair & Co. They are very important bankers. There is no trouble whatever in getting a sound thing financed in New York if there is money there to finance a sound enterprise.

Mr. Stillwell complained that his Oriental road could not be financed there. It could not. It could not have been financed anywhere, in my estimation, if anybody had sound judgment about the building of such a road.

Senator Nelson. Where was that road to be built—in China?

Mr. Vanderlip. From Kansas City to Mexico, generally speaking.

Senator Hitchcock. There was a time when some very unsound railroads were financed in New York, because there was apparently no combination of banking interests. What new development is this that has enabled the banking interests to discriminate and to exclude some propositions when they come to them?

Mr. Vanderlip. I should not think there ever was a time that unsound business could be done in New York because there was no combination. If there are people in New York with capital which they are ready to put into an unsound enterprise they can be found to-day as readily as they could any other time.

I believe there is no such discrimination, or no such combination. The charge can not be sustained that a sound commercial enterprise, a sound proposition for railroad building, can not be put through in New York because it might compete with some existing business.

If it will so compete as to endanger its own success, certainly it can not be done if the people in control of the capital have sound judgment. But the fact that it would compete with some existing enterprise, which enterprise was financed by the strongest house in New York, would not be a barrier against finding capital for it if it is essentially sound in itself and will not have its own future endangered by the competition which it will encounter.
Senator Reed. You mean if there is room for two?
Mr. Vanderlip. Yes, sir.

Senator Hitchcock. Suppose a project was undertaken to finance a railroad to compete with the Jim Hill system and such a project came to the attention of what we will call the Morgan banks. Would not those banks inevitably feel interested in discouraging that project?
Mr. Vanderlip. I can say that the National City Bank has financed a railroad project in the Southern Railway field, the Southern Railway Co. being a Morgan enterprise, and this project being directly in competition with the Southern Railway Co.

Senator Hitchcock. How lately was that?
Mr. Vanderlip. It is now in process of building.
Senator Hitchcock. About how large a project is it?
Mr. Vanderlip. $10,000,000 or $12,000,000.

Senator Nelson. It is not long ago since the New York banks financed the extension of the St. Paul road to the coast, in competition with the Northern Pacific and the Great Northern, which are commonly called Morgan roads?
Mr. Vanderlip. The National City Bank financed that extension.
Senator Reed. As I understand you, Mr. Vanderlip, the test is this—as you put it—whether there is room for two enterprises. If there is room for two enterprises, then you claim that there would be no barrier; if there is not room for two enterprises, then nobody but a foolish person would put his money into a competing line when the competing line would never pay?
Mr. Vanderlip. That is exactly what I mean. There is no such thing as a strong interest putting out a ban on the financing of a new railroad proposition and saying to New York financiers that this new road must not be financed because it is going to compete with an existing railroad that has been financed by this strong interest. The thing is not done. It does not exist. It is not true.

Senator Hitchcock. You mean the heavy railroad owners are interested in the banks of New York?
Mr. Vanderlip. They are interested in the banks; yes. But the banks are run primarily by themselves. The bank officers solely are in charge of the conduct of the bank.

Senator Bristow. That is, you claim that a railroad may be interested in a bank, and be a most important factor in the management of that bank, and still that bank would pay no attention to the affairs of that road as far as financing its competitors is concerned?
Mr. Vanderlip. No such condition exists. There is no bank that I am aware of in which a railroad is an important factor in the management of the bank. The relation is the other way around.

Senator Nelson. It is the railroads which need the banks?
Mr. Vanderlip. Yes, sir.

Senator Hitchcock. Take the firm of Kuhn, Loeb & Co., they are heavily interested in the Union Pacific?
Mr. Vanderlip. Yes, sir.

Senator Hitchcock. Would it not be natural that they would discourage a system competing against the Union Pacific?
Mr. Vanderlip. Naturally they would discourage any competitive system, but Speyer & Co. would not, and Morgan & Co. would not.
Senator Hitchcock. Would not Kuhn, Loeb & Co. have such large interests in banking institutions as to make their influence potent?

Mr. Vanderlip. That is exactly the thing that does not exist. I do not think there would be the slightest hesitation on the part of other firms perfectly competent financially to finance a road in competition with another road that was financed by another institution, if the sound judgment of the firm was that the road would be successful in spite of the competition.

Senator Hitchcock. Then if Speyer & Co. would finance something that would seriously endanger a great interest of Kuhn, Loeb & Co., Kuhn, Loeb & Co. would retaliate, would they not?

Mr. Vanderlip. Undoubtedly. But not for the purpose of retaliation. They would not retaliate in that way. If there were some territory in which Speyer & Co. were interested, and if there were sufficient business to make the new road successful, I do not doubt but what Kuhn, Loeb & Co. would finance that, and they would do it now or after such a situation as we have outlined. That is not retaliation; that is good business. There is plenty of banking capital, there are plenty of individual banking houses to finance good business.

Senator Hitchcock. Then when witnesses come before this committee and say that there is a combination in New York they are mistaken?

Mr. Vanderlip. They are mistaken. It is a figment of their imagination. They probably have read newspaper headlines and heard statements, and they do not know the truth.

Senator Hitchcock. When they come and testify of their own knowledge and experience?

Mr. Vanderlip. Then I advise you to analyze very carefully that experience and check it up, because the combination does not exist.

Senator Bristow. Now, Mr. Vanderlip, you claim that the men who run the New York banks, and who control them, are different in the moral and mental make-up than the average banker of the country?

Mr. Vanderlip. I make no such claim whatever. Nothing can be further from my mind.

Senator Bristow. Do you think the average banker would finance a proposition if it was detrimental to his largest stockholder and the most important depositor?

Mr. Vanderlip. To his largest stockholder; no. To his most important depositor, perhaps, yes. It would be then a case of weighing the advantage between the deposit and the advantage of financing that enterprise.

Senator Bristow. And if the advantage of the deposit was greater than the advantage of the enterprise, he would not finance it?

Mr. Vanderlip. Probably not. But in no case, sir, is a deposit of sufficient importance to prevent any banker from financing an important enterprise, a very important enterprise.

Senator O'Gorman. In that connection, let me ask you this question. At the present time, perhaps during the memory of those now engaged in the banking business, is there not a keen competition for business between banking interests in the city of New York?
Mr. Vanderlip. I believe there is no line of business in the country where competition is more keen.

Senator O'Gorman. Would not that competition be keener in New York to-day than in any other part of the United States?

Mr. Vanderlip. I think so.

Senator O'Gorman. Because of the great volume of money in New York?

Mr. Vanderlip. Yes, sir.

Senator Reed. How much money does your clearing house carry?

Mr. Vanderlip. The clearing house carries no money, sir.

Senator Reed. They have no deposits of any kind?

Mr. Vanderlip. They have no deposits of any kind; that is not the function of the clearing house. The clearing house does have in its vault a certain amount of gold which is merely there in the nature of being in a warehouse, so that we do not have to move gold about. There are never any deposits.

Senator Reed. Who puts up that gold?

Mr. Vanderlip. Any banker who would prefer to have a piece of paper, a clearing-house certificate, for $10,000 instead of $10,000 in cash.

Senator Reed. Really, the bankers put up a central deposit of gold?

Mr. Vanderlip. No, sir. There is no deposit at all. That is purely a warehouse function for banking purposes, to aid us in paying balances between the banks, and permitting us to give an order on this warehouse instead of carting the gold about the streets.

Senator Reed. Where is the gold kept?

Mr. Vanderlip. In a vault in the clearing-house building.

Senator Reed. Where does the gold come from to get into that vault?

Mr. Vanderlip. From any banker who chooses to deposit gold there and take up certificates to represent it.

Senator Reed. In settling your balances you use these certificates?

Mr. Vanderlip. Yes, sir.

Senator Reed. I inquired about the amount that was kept.

Mr. Vanderlip. My recollection is that there is about $90,000,000. That figure will not be exactly correct.

Senator Reed. Now, I want to come back to matters that concern this bill, and I asked that question simply for the purpose of knowing how much gold there might be in the one place.

Mr. Vanderlip. That has no relation whatever to the reserves of the banks, or the money market. That is only a physical convenience.

Senator Reed. In settling your balances, instead of counting out gold to each other, you simply check against this gold?

Mr. Vanderlip. Yes, sir.

Senator Reed. And settle it in that way?

Mr. Vanderlip. Yes, sir.

Senator Nelson. It is simply a warehouse where you can keep gold on which you can draw, instead of keeping it in your vault?

Mr. Vanderlip. Yes, sir.

Senator Reed. You do not have to draw gold from there; you send the certificates around and have a little balance left?
Mr. Vanderlip. Yes, sir.

Senator Reed. I want to ask you about a matter of great importance in this bill concerning which I do not think you have been questioned before. How much gold reserve do you think ought to be kept in the regional banks?

Mr. Vanderlip. In normal times perhaps as much as 80 per cent.

Senator O'Gorman. How much?

Mr. Vanderlip. Eighty per cent. That is a very difficult question to answer, and my reply is a sort of shot in the dark. In normal times these banks ought not to be used for conducting the current business of the country. They ought to run with very strong reserves. They ought to be under no compulsion to earn money, and they ought to conserve reserves in order that they may be enabled to make these rediscounts when necessary.

Senator O'Gorman. The larger the gold reserve the safer the whole structure would be, in your opinion?

Mr. Vanderlip. The larger the gold reserve carried, the safer. I can not say the larger legal minimum.

Senator O'Gorman. Where do you think the law ought to put the minimum?

Mr. Vanderlip. I think the law as it is drawn, with a minimum of 33⅓ per cent is all right. As a matter of fact, I do not believe in legal minimums, anyway. I believe that should be left to the conservative conduct of good managers of banks.

Senator O'Gorman. Do you not think there ought to be a sentence of penalization for going below a certain point, in order to encourage keeping above that point?

Mr. Vanderlip. A penalization in this case is not a very effective sentence. You penalize the earnings that come out of the Government.

Senator O'Gorman. That is what we discussed yesterday. Now, you have examined this bill with reference to the possibility of inflation, have you not?

Mr. Vanderlip. Yes, sir.

Senator O'Gorman. I believe you said you thought there was a great power of inflation in it. Of course, a 33⅓ per cent gold reserve would be some check on paper inflation, and the larger the gold reserve the greater the check; is that not true?

Mr. Vanderlip. Just what do you mean by paper inflation?

Senator O'Gorman. I mean this money that is to be issued from time to time upon collateral, notes, etc.

Mr. Vanderlip. Please do not confuse inflation of credit with inflation of currency. You can not have an inflation of currency if you have ample redemption facilities. Gold will not be held in people's pockets; the currency can not be held in reserves. It will be deposited in banks by the men who do not want it in their pockets, and it will be retired. There will be in the way of the correct operating of that principle the fact that these notes may find their way into the reserves of State banks. Were it not for that, there would be as great conformance to business needs in note issue as in deposit balances. And deposit balances ought to be readily interchangeable with notes according as the customer wants credit as a deposit balance, or wants it as a note. There is no more reason for the Govern-
ment charging interest on these notes or guaranteeing these notes than there would be for the Government to guarantee the deposits in these banks.

Senator Reed. I know that is a favorite theory with bankers, but nevertheless I hardly think that it is practical at this time to expect that sort of theory to be carried out.

Now, I want to direct your attention to this thought as bearing upon that theory. You say that if a man has a bank credit of $10,000, he has the right to issue his check against that credit, and that that is simply a method by which he uses that bank's credit, makes it available, and if the bank, instead of giving him a bank credit and check against it, was to issue to him bank bills and let him put them in his pocket and carry them away, that that is only a bank credit. That is the argument. Now, in the practical operation is there not a tremendous difference?

I get a credit with your bank for $10,000, and I put my check book in my pocket, and I draw checks. There is only one place in the world to redeem those checks, and they do not pass current from hand to hand. They may pass to one man that I happen to know and will accept my check because he happens to know me, but to all practical purposes those checks go back into the bank within 2-1 hours after they are issued, on the average, and the transaction is closed. But if you give me $10,000 of your bank notes, and I put them in my pocket, they may travel all around the United States and be in circulation six months or a year before they get back to your bank. Is that not true?

Mr. Vanderlip. That is not true unless there is need for them for just that purpose.

Senator Reed. Let us see if that is sound. I question the soundness of it most emphatically, although I do not want to get into a financial argument with you, for I would be on very doubtful ground. Do you not confuse the term "need" with the man? A man is engaged in a lot of wild-cat circulation. He is booming railroads that may never develop into paying propositions. He is buying acre property and laying it out into town lots and building houses, for which there will never be a real demand, and he needs money mighty badly.

Mr. Vanderlip. He needs credit, not money.

Senator Reed. He needs something that will pass for money, and therefore if he got hold of these notes he would be engaged in transactions in which he could constantly be using them; and yet, is it not true that as a matter of fact, the very existence of that money tends to promote this wildcat speculation, and is that not the trouble with all inflation, and is it not true of a bank note, as it is true with any kind of other money that circulates?

Mr. Vanderlip. Let me see if I can not make this very simple and clear. Let us suppose a community has no outside financial connections. This community is doing its business with the exact amount of currency in its pockets that it wants and a certain amount of reserve in its banks. A wildcat real estate operator buys some outlying land and cuts it up into lots and builds houses on them that will not sell. At no time during this process has that community got any more money in its pockets than it had before, no matter how much money in the form of circulating notes this man might have succeeded in
drawing from a bank on sound collateral. He could not get the
notes without sound credit. He has bought a piece of land and paid
for it, we will say, with $10,000 of notes. What will any man who
receives the notes do with them? Will he carry them around with
him? Not at all. You know what he will do with them. He will
take them to his bank and deposit them. They are of no value to the
bank's reserve, and therefore they will be redeemed.

Senator Reed. You see the trouble with that illustration is that
you leave out of it, I think, two important propositions. In the first
place, you have not got a circumscribed community. You have got
an enormous country, and the note starts on its course. Then, I
think, that you leave out of your argument another very important
consideration, and that is that while there may be no more money,
but there is something that performs all the functions and uses of
money.

Mr. Vanderlip. Oh, but these notes do not.

Senator Reed. They do, while they are out passing from hand to
hand; and, as long as they are out, they might just as well be in
money. And then I think you leave out of consideration the fact
that when that man begins to build those houses he has bought from
the lumberman an unnecessary amount of lumber, and he has boomed
the lumberman's business. The lumberman who sold his lumber
buys from the sawmill, and he has boomed the sawmill man's busi-
ness. The sawmill man goes out to buy more timber land, and he
has boomed the land business. He hires a lot of men to cut down
trees, and they have boomed the lumber-camp business. All these
things have boomed the grocery business, the dry-goods business, and
the wholesale business, and you have, after all, a vast structure of
business and credits based upon an original bad investment, and all
of it carried on because there is plenty of this stuff circulating around
that they call money.

Mr. Vanderlip. Based exactly as you say, on an original bad in-
vestment—not based on the issue of notes. The bad investment could
have gone on exactly the same with the plan of deposit credits
instead of notes.

Senator Reed. There is just the point I raised. This man comes
down with security to the bank, with his own note, and he puts it
up and the bank issues this thing that circulates as money. If the
banker did not have the right to do that, he would have to look in
his till, and if he did not have good hard money there the transaction
would stop. And I can not see why—because we all admit that wild
inflation brings wild results—why the bank note that goes and circu-
lates three months, six months, or a year and gets out in almost un-
limited quantities can not produce exactly the same result that it
would if the Government could issue wildcat money.

Mr. Vanderlip. That is because you believe men will carry more
money in their pockets if there is facility for turning a bank credit
into a bank note. I hold they will not. That is an absolutely fixed
quantity, determined by the habits of the people. There will be no
more money in the people's pockets under any scheme of note issue
where there is an adequate redemption facility back of it. Those
notes will come right back into the bank—right back for redemp-
tion—the moment there is any redundancy of them. I think you
confuse an issue of notes with an overissue of credit.
Senator Reed. Perhaps I do. I wanted to suggest the idea to you with a view to perhaps modifying yours, but I see I am not going to be able to do that.

Mr. Vanderlip. I am very earnest and honest in my opinion.

Senator Reed. I know you are, and I am just as earnest in mine; and I will pass on to something else, where, whether we can agree or not, I can get your view. I want to ask you about the value of the currency system to the whole financial structure, to this large reserve which the Government now has, against which it issues gold certificates and which it holds back from the banks.

Mr. Vanderlip. I do not regard the gold back of gold certificates as a gold reserve at all. The Government is acting as a warehouseman.

Senator Reed. Well, call the Government a warehouseman. Is it of value to our financial system? Does it add to its stability?

Mr. Vanderlip. Certainly it does, because it represents the gold certificates that are in the bank reserves. It is also true that there are many in the hands of the people. They are there to a much larger extent than they should be, because you have reduced the size of the gold certificate, which, in my opinion, was quite a wrong thing to do. The $10 gold certificate is now largely in the hands of the people, when it ought to be in the reserves.

Senator Reed. The mere fact, I take it, that there is piled up an immense amount of gold, although there are gold certificates out against it, has a very steadying effect upon our financial system.

Mr. Vanderlip. Not the slightest in that sense.

Senator Reed. In what sense?

Mr. Vanderlip. It is the fact that these certificates are in the hands of the banks, are in the reserves of the banks, that has the steadying effect, and the knowledge that the certificate is backed by gold. The function of the Government is merely one of physical convenience, just as I said in discussing the warehousing function of a clearing house, with its clearing-house certificates issued against the gold. It is thus possible to have this gold in the form of convenient paper instead of actual coin, and that is the only function the Government is performing.

Senator Reed. I am just trying to get one question settled—whether it is a good thing in our financial system to have that gold piled up in the vaults of the Treasury of the United States.

Mr. Vanderlip. It is neither good nor bad.

Senator Reed. It is utterly useless?

Mr. Vanderlip. No; it is not utterly useless, because it is a great convenience to the business of the country. We could not do business freely with actual money. Of course we could do it, but it would be an annoying thing.

Senator Reed. I think this: I think that in view of the fact that gold is the ultimate money of redemption the world over, the mere fact there was a large amount of it in the vaults of the Treasury of the United States, although there were gold certificates that were out against it, would have a tendency to inspire confidence in our ability to take care of ourselves.

Mr. Vanderlip. It would have a tendency to inspire great fear if they thought you were going to use that gold for any purpose.
other than the purpose of placing it in a warehouse for the redemption of the certificates out against it.

Senator O’GORMAN. Right there, Mr. Vanderlip, is it not of great importance, in considering the security of our credit, that in the United States, whether in the Government vault or in the vaults of our banks, we should have the actual physical possession of a large quantity of the gold of the world?

Mr. Vanderlip. Certainly it is, but it is not of importance whether that gold is in the bank or whether it is in the Treasury and the representative of it, the gold certificate, is in the bank. It is not the fact that that gold has been collected in the Treasury that is important, but it is important that in this country, in the reserves of the banks, and elsewhere, there is either the gold or the representative of it—the gold certificate.

Senator REED. It is important that you have it in the country.

Mr. Vanderlip. Very important; tremendously so.

The CHAIRMAN. Mr. Vanderlip, I want to ask you a question: Suppose the Government were to take the gold which is now in the Treasury as a current fund and place it in the redemption division as a reserve fund, and issue against that the Treasury gold notes, payable in gold at Washington, and put them out in small denominations as legal tender, would it not have a beneficial effect on the gold reserve of the United States?

Mr. Vanderlip. Well, of course, you are presuming the calling in of the gold certificates.

The CHAIRMAN. No.

Mr. Vanderlip. Why, it would have a most disastrous effect, for you to take the gold that is back of the gold certificates out of the Treasury.

The CHAIRMAN. I am not proposing anything of the kind; I made no such suggestion. What I said was that suppose the current gold that is there as a part of the general fund we have now in the Treasury, as part of the current fund, over $100,000,000 of gold, and I was suggesting that the Treasury issue in lieu of that a Treasury gold note of small denomination, payable in Washington City, but taking the gold itself and putting it in the redemption division as against those notes issued in that way.

Mr. Vanderlip. I can see no essential difference between that note and the gold certificate, but in making them payable in small denominations you encourage their use in the hands of the people instead of retention in the reserves of the banks. That is where the gold should lodge. The money in the hands of the people should be bank notes, and the gold certificates should lodge in the banks. Your plan would merely give a Treasury note dollar for dollar, payable in gold, instead of a gold certificate dollar for dollar.

The CHAIRMAN. It would have the effect, would it not, of putting these notes out in the hands of the people, where they would not come back for redemption, and in that way leave this additional gold as an additional reserve against the outstanding greenbacks?

Mr. Vanderlip. It would have that effect; yes.

The CHAIRMAN. And in that way it would strengthen the position of the Government as far as redeeming those notes is concerned?

Mr. Vanderlip. The position of the Government would be strengthened, so far as redeeming the greenback was concerned.
Senator Reed. How could you redeem the greenback? That is gold put away and gold certificates issued against it.

Mr. Vanderlip. He does not propose to issue gold certificates against it.

The Chairman. It is not to be a warehouse receipt, but simply an issue, dollar for dollar for gold, payable at the Treasury in Washington, in gold.

Mr. Vanderlip. Yes.

Senator Nelson. The volume would be measured in the volume of the gold?

The Chairman. But the gold would belong to the United States, and not belong to the holder of the notes, unless he would come in and bring them for redemption. They would not be a warehouse receipt.

Mr. Vanderlip. No. But the notes you issued would be on a parity with the greenback—that is, they would have a claim of the same nature as the greenbacks against the total fund, dollar for dollar, of gold, to be represented by Treasury notes, plus $150,000,000 now back of the greenbacks and plus the free gold.

The Chairman. Yes; a claim against assets or funds of the United States.

Mr. Vanderlip. Yes.

Senator Shafroth. Mr. Vanderlip, I read an interview with you in the newspaper four or five weeks ago, in which you stated in New York there was a demand, in your judgment, for $2,000,000,000 for the purpose of developing water power in the United States. Can you tell what, in your judgment, is the legitimate demand for development of all kinds in the United States?

Mr. Vanderlip. In the first place, I would like to correct the impression as to what my exact statement was. You probably read an address I made in regard to the development of the electrical industry of the country.

Senator Shafroth. Yes.

Mr. Vanderlip. I stated that in the next five years I believed the total electrical development, power stations, water power, railway electrification—all things incidental to the electrical business—might properly consume $2,000,000,000 capital. I believe that is a conservative estimate. I do not say they will, because I doubt if that amount of capital is readily available for that purpose.

Senator Shafroth. What, in your judgment, is the total demand for all enterprises that could legitimately be considered as good enterprises in the United States in the next five years?

Mr. Vanderlip. I would not want to make an offhand estimate of that. I do know that the needs for railroad development are perfectly tremendous. I believe so great an authority as Mr. Hill stated they would equal $1,000,000,000 a year. That would seem to me to be a pretty high estimate. Certainly it is more than they are likely to get, but there will certainly be several hundred millions a year, right along, necessary for railroad development.

Senator Shafroth. Well, in other lines do you think that there will be in fact a great deal?

Mr. Vanderlip. We are now spending a vast amount the country over on building good roads. There is need for a large sum for municipal loans and other loans of that character. All sorts of in-
industrial development will go on and will require capital. It is quite impossible to say, with such information as I have at hand, what would be a fair estimate of the total.

Senator Shafroth. Now, Mr. Vanderlip, the difficulty with the national-bank notes at the present time in seeking redemption at Washington is due to the fact that it is not constituted a legal reserve of the bank, is it not?

Mr. Vanderlip. Yes.

Senator Shafroth. That is the reason it comes to Washington?

Mr. Vanderlip. Yes.

Senator Shafroth. And that redemption now amounts to pretty near the total issue every year?

Mr. Vanderlip. Yes.

Senator Shafroth. If this bill goes into effect and all the State banks come into operation under it, the State banks would no longer use the national-bank notes as reserve.

Mr. Vanderlip. No; the State bank which would become a member bank, presumably, could no longer use these notes as reserve, though it is not specifically so stated in the bill. There is merely the word "regulation," which is open to any construction you may choose to put upon it.

Senator Shafroth. What is required of the reserves here in this bill is that it shall be the same as that now required for the national banks to keep in their vaults.

Mr. Vanderlip. Yes.

Senator Shafroth. Which, I take it, would not include the notes that are issued in this system here.

Mr. Vanderlip. That is certainly presumable, and would surely be desirable.

Senator Shafroth. Then, if State banks come in there will be an enormous demand for more reserve money, will there not?

Mr. Vanderlip. No; not a very enormous demand for more reserve money, because part of the reserves, which they now presumably keep in cash, could be kept as balances with reserve banks. I am not aware, and I think no statistics are available, as to how many national-bank notes are in the reserves of State banks. I think it is not considerable.

The Chairman. That is reported.

Mr. Vanderlip. That is reported? I was not aware of that. At any event, I do not believe it is large.

The Chairman. That is not large.

Mr. Vanderlip. No. That, as you say, would not make an enormous new demand for reserves.

The Chairman. The national-bank notes in State banks and national banks combined would not exceed $75,000,000. That is the reason why I was asking you about building up this reserve, because I thought it would prove to be an expedient to retire that amount of national-bank notes, taking up the 2 per cents, and putting the 2 per cent bonds then in the redemption division as 3 per cents, and issuing a legal-tender note in lieu of these national-bank notes, payable in gold at the Treasury, which might be used as reserves by the member banks.

Mr. Vanderlip. I have two or three rather important suggestions I want to make before the hearing closes.
The Chairman. It is 20 minutes to 12 now, and I think we had better proceed.

Senator Reed. Mr. Chairman, Mr. Swinney is here, and I wanted him to have at least 30 minutes.

Senator Bristow. We will meet this afternoon.

Senator Reed. But he is leaving on the 3 o’clock train.

The Chairman. The committee can meet at any time it wishes, or might continue the session.

Senator Nelson. We might meet at half past 1 o’clock.

Senator Reed. I was going to suggest that in view of the fact that he does have to leave, and I think has a short message to deliver, possibly we might hear him now.

Mr. Vanderlip is not going to be able to get through, and as Mr. Swinney will only take a few minutes, I was going to suggest we hear him now, if that will be satisfactory to Mr. Vanderlip.

Mr. Vanderlip. It is perfectly satisfactory.

Senator Nelson. You can be with us this afternoon?

Mr. Vanderlip. I am entirely at your service.

Senator Reed. However, as it has been suggested that we meet at half past 1 o’clock, suppose we let Mr. Vanderlip go on for the present.

The Chairman. I remind the committee that there are some gentlemen here from Iowa, bankers or business men from that State, who have been advised they could be heard to-day.

If it is agreeable to the committee, we will hear Mr. Swinney now.

Senator Reed. The final suggestion was that we meet at half past 1 o’clock and hear him then.

The Chairman. Very well; that will be the order if there is no objection.

Mr. Vanderlip. I can finish in five minutes myself, unless you have questions to ask me.

The Chairman. All right; proceed, Mr. Vanderlip.

Mr. Vanderlip. In regard to the section on farm loans, I do not believe in a commercial bank having real estate mortgages. Practically, however, the limitation in here, that no bank shall use more than 25 per cent of its capital and surplus for this purpose, makes it safe. I recognize the competition that national banks are under with State banks in the West, and the fact that these loans are perfectly secure, as a rule. They may be perfectly secure, but they are also perfectly unliquid. I do not believe in encouraging that type of business for commercial banks, but even with that view, I do not think that the clause as here drawn will lead to any disaster, and the limitation is a proper one.

Senator Weeks. Won’t you add to the suggestion also that it limits the commercial bank on demand deposits?

Mr. Vanderlip. Of course that is what I mean. A commercial bank having demand deposits ought not to devote any considerable amount of its resources, at least, to investment in unliquid assets in making unliquid loans. Taking up the savings-bank feature, I have paid no great attention to that, because in any event it probably would not interest the large city banks. In one particular it is so drawn that it could not interest the large city banks. It states that the amount segregated as the capital of the savings departments shall in no case be less than $15,000 or a sum equal to 20 per cent of
the paid-up capital and surplus of the national bank. That would
mean that the National City Bank, in order to establish a savings
department, would have to segregate $11,400,000 of its capital to
do so. This 20 per cent ought to be changed, if you desire at all to
courage the large banks to have savings-bank departments. It
means a segregation of too much. A $15,000 limitation is probably
wise, and perhaps at the other end you might have a $200,000 or
$500,000 limitation. But to say that the bank, no matter how large,
if it desires to start a savings department, must segregate 20 per cent
of its capital and surplus is equivalent to saying a large bank never
will do it.

Senator Bristow. Your suggestion would be, after “$15,000,” in
line 6, to strike out “or than a sum equal to 20 per cent of the
paid-up capital and surplus of the said national bank,” in the
next two lines, and then make it read “not less than $15,000 or more
than $200,000”?

Mr. Vanderlip. No; I would let it be as much as any one wants
it to be, but if you feel that a large banker should not be governed
by the $15,000 limit, then I would say that banks of a million capital
should segregate 5 or 10 per cent. But to make them segregate 20
per cent practically prohibits them from ever undertaking the
business.

Senator Reed. What is the use of making any limitation at all?

Mr. Vanderlip. None at all that I see.

Senator Reed. What is the use of saying a bank should set aside
20 per cent in the savings-bank business? Why not prohibit them
from doing it at all?

Mr. Vanderlip. Oh, but it is done, to a very large degree. Every
report of the comptroller shows that.

The Chairman. There is now $820,000,000 invested in savings-
bank departments.

Mr. Vanderlip. $820,000,000, according to the last call?

Senator Reed. What is the amount held on deposit?

Mr. Vanderlip. That is the same thing.

Senator Hollis. Half of them have savings-banks departments.

Mr. Vanderlip. Oh, but it is done, to a very large degree. Every
report of the comptroller shows that.

Senator Reed. I do not believe they have any legal right to estab-
lish a savings-bank department.

Mr. Vanderlip. The comptroller winks at it.

Senator Reed. Then, he is not following the law.

Senator Nelson. I do not believe the small country banks would
avail themselves at all of this. They prefer the present system. It
has worked well.

Mr. Vanderlip. On page 45, line 11, the power is given national
banks to act as trustee for mortgage loans. Taking that in connec-
tion with this section, I presume that means farm-mortgage loans.
It ought to be cleared up. I should be glad to see it extended, so
that a national bank may act as trustee for any mortgage loan—that
is, corporate mortgages. That is one of the things that a trust
company does that a national bank can not do, and it is very profit-
able to the trust companies. I see no reason why a national bank
should not act as trustee in such cases. The language is not clear,
however.
The provision in regard to foreign branches is a very desirable thing. It is impossible for any national bank to engage in foreign business now. I have given careful consideration to the subject of banking in South America, and have found it was quite impossible for us to engage in business as the laws now stand. There are other reasons, too, that make the development of this business difficult. I think the law is not clear where it says a certain amount of capital shall be set aside. I do not know just what that means—set aside.

Senator Nelson. What page are you on?

Mr. Vanderlip. Page 50, line 4; whether there shall be the complete segregation that is provided for in the savings-bank clause, where all capital segregated shall be used to pay all deposits of the particular department where it has been segregated, before any of it is used to pay other deposits or not. That is not fully enough explained; it does not tell exactly what is meant.

Senator Nelson. Would you weaken the foreign department if you limited it?

Mr. Vanderlip. Very much. And if you do not limit it, the "setting aside" means nothing.

Senator Nelson. Ought not that to be left optional with the banks?

Mr. Vanderlip. I think it ought; yes. As a matter of fact, if you have a foreign branch, your whole credit is really involved in its success or failure.

Senator Nelson. And ought to be involved?

Mr. Vanderlip. And ought to be involved. There ought to be no setting aside whatever. The Aldrich bill permitted the formation of a specific foreign bank, the stock of which could be owned by the parent bank. That made the two somewhat distinct, but did not involve the capital of the national bank any more than to the amount of the capital held in the foreign bank. I do not recommend that particularly as the course to be followed; at any event, I call your attention to this as not being clear.

Senator Nelson. It seems to me the foreign branch bank should be on exactly the same basis as the domestic bank.

Mr. Vanderlip. I should think so.

Senator Reed. And then they ought to have some means of inspecting that foreign branch bank.

Mr. Vanderlip. That is provided and should exist, of course. The Federal reserve board is given power to refuse the application for a foreign branch if there are reasons—that is, for any reasons it sees fit. All those grants of power when you do not know how a board is going to act or what may be intended are uncertainties in the minds of the business men. You do not know what to think of the law when you do not know just what the law means.

Senator Shafroth. It can not be worse than it is now, where they have no law.

Mr. Vanderlip. Oh, yes. A very unsound banking system, I suppose, could be worse.

Senator Shafroth. I means as to the discretion given to the board.
Mr. Vanderlip. That is perfectly true, although it might permit one of our competitors to have a foreign branch and to say to us that we could not, and we would not like that.

Senator Shafroth. There is no authority now to establish a foreign bank?

Mr. Vanderlip. None whatever.

Senator Hitchcock. Can you not accomplish the same thing through a correspondent there?

Mr. Vanderlip. By no means.

Senator Hitchcock. Suppose those interested in your bank organize a private bank in London; can you not do business with each other, practically?

Mr. Vanderlip. Let us think about that. Those interested in our bank. That means a good many hundred people, interested in different relations. Say we attach the ownership of a foreign bank to the stock of our bank, in some way. What shall we do? There would at once arise a complicated situation. You have got to have the interest of the foreign branch on all fours with the interest in the parent institution. You must not make it possible for a few insiders to own the foreign branch and juggle the United States bank for their benefit. That would not be wise or desirable. The interests of the two must be on all fours; they must, in some way, be part of one another. It may be either by a branch, provided here, with a clear understanding as to what “setting aside the capital” means, or by the establishing of an entirely distinct foreign bank, all of the capital stock of which is owned by the national bank that considers it a branch.

Senator Hitchcock. Can a State bank in New York have a branch in London?

Mr. Vanderlip. It can and does. Several of them now have; also in Berlin and Paris.

Senator Hitchcock. That is one of the advantages they have, the State bank, in New York City?

Mr. Vanderlip. Yes.

Senator Nelson. It seems to me, Mr. Vanderlip, in order to help our foreign commerce, our branch banks in foreign countries, for instance, in London, ought to be of such a character that the acceptance of that bank which would represent the foreign bank in this country, should be of such value that their acceptance would be as good as the acceptances of the foreign bank.

Mr. Vanderlip. And to have it of value, you must have all of the capital stock back of that acceptance—the whole strength of the bank must be back of it.

Senator Nelson. Yes; the whole strength of the bank must be back of it. For instance, I had a case here of importing coffee—

Senator O'Gorman (interposing). Senator Nelson, I call your attention to the fact that it is now nearing 12 o'clock, when the Senate meets, and you want to be there.

Senator Nelson. Yes; I will not ask any further questions now.

The Chairman. The committee will stand adjourned until half past 1 o'clock.

Thereupon, at 11.55 o'clock, a. m., a recess was taken until 1.30 o'clock p. m.
Senator Reed. Gentlemen of the committee, you all know Mr. Swinney, the president of the First National Bank of Kansas City. Will you permit me to ask Mr. Swinney one or two questions in order to put certain facts in the record?

Senator Weeks. Before you begin will you let me refer a matter to the committee?

Senator Reed. Certainly.

Senator Weeks. Mr. Wilson Gilbert, who was president of the New York Clearing House in 1907, has indicated that he would come before the committee if he were invited. He is an old man and in somewhat infirm health and does not feel like making the trip unless he is wanted. I suggested the other day to the chairman that perhaps he was a man from whom we could get valuable information. If the committee desires it and wishes to secure him I think it might be well.

The Chairman. You might bring that up when we have a quorum.

Senator Weeks. I have to go away early, and will ask you to bring it up.

Senator Reed. Personally I am in favor of hearing him.

Senator Bromwell. Yes; I am very much in favor of hearing him. I think we ought to get all the information we can.

STATEMENT OF EDWARD F. SWINNEY, PRESIDENT OF THE FIRST NATIONAL BANK, KANSAS CITY, MO.

Senator Reed. Mr. Swinney, you are president of the First National Bank of Kansas City, Mo.?

Mr. Swinney. Yes, sir.

Senator Reed. And what is its capital stock?

Mr. Swinney. $1,000,000.

Senator Reed. What is its surplus?

Mr. Swinney. $1,000,000; and undivided profits, $1,000,000.

Senator Reed. What do its deposits ordinarily amount to?

Mr. Swinney. About $27,000,000.

Senator Reed. They run very much higher than that, I think, at times?

Mr. Swinney. Yes.

Senator Reed. How many country banks are depositors with you?

Mr. Swinney. Between 700 and 800.

Senator Reed. And, generally speaking, over what section of territory are they spread?

Mr. Swinney. We cover the West largely—Kansas, Missouri, Nebraska, Texas, and Oklahoma, principally.

Senator Reed. What amount of deposits do you keep in eastern banks, or in other banks, and where? I do not mean all the time, but as a general proposition.

Mr. Swinney. Well, we keep our reserves, of course, in the three central reserve cities.

Senator Reed. St. Louis, Chicago, and New York.

Mr. Swinney. Yes. Our reserves with those reserve banks will run from $5,000,000 to $7,000,000.
Senator Reed. Now, Mr. Swinney, you told me there were one or two matters about this bill to which you would like to call the attention of the committee.

Mr. Swinney. Well, Mr. Vanderlip has covered the proposition so thoroughly that it hardly leaves anything for me to say.

The Chairman. Do you substantially agree with Mr. Vanderlip in his views?

Mr. Swinney. Largely; yes, sir. But what I am going to say on one or two matters—one especially—shows that men in the same business look at matters from a different standpoint on account of the fact that they do business in different localities.

I wanted especially to speak of these country banks having to keep their entire reserve either in their vaults or in the regional bank. As it is to-day we use our reserve as working cash, and are able to manipulate it from one city to the other as we need it. Mr. Vanderlip, though, in his talk this morning, seemed to think that would all be done away with, on account of the regional banks being general clearing houses for all of the national banks doing business with them. If that is the case, perhaps it could be worked, but it strikes me that when they got started on it they would find that the national banks doing business with these regional banks would have such an enormous amount of business it would simply flood the institution.

I did not bring this memorandum with me for the purpose, but happened to have it, and will refer to it just to give you a little idea of that. In our institution alone we in one day handled 25,518 country checks—checks on country banks. Now, that is not an unusual day, but we take it off once a year. We do not take it off on the largest day, but any day in the week. Now, if every bank in Kansas City piled that into the regional bank, and the banks all around the country in the same proportion, you see they never could get through the business.

Senator Reed. Mr. Swinney, you have a tabulation that you showed me of that one day's business, which you say you took off merely as a bank record?

Mr. Swinney. Yes, sir.

Senator Reed. And it was not a selected day, but just a day that you took an account of your business, and that was done some months ago?

Mr. Swinney. December 18, 1912.

Senator Reed. Will you put into the record that day's business, in order that we may have some gauge to go by?

Mr. Swinney. The entire thing?

Senator Reed. The entire day's business.

Mr. Swinney. Well, through the mail that morning we received on ourselves 1,707 checks, amounting to $900,000. I won't give you the odd figures.

Senator Reed. You will put the tabulation in later, will you?

Mr. Swinney. Yes. On other Kansas City banks there were 2,826 checks, amounting to $1,000,000. Of out-of-town checks—those from the country—there were 15,119, amounting to $1,600,000. Total checks received in the mail, 19,654; total amount, $3,500,000.

We received over the counters 1,651 checks on ourselves, amounting to $1,500,000. On other banks we received 9,413 checks, amount-
BANKING AND CURRENCY.

Outgoing to $1,000,000. Out-of-town checks, 8,865, amounting to $1,000,000. Total checks over the city, 19,929, amounting to $3,600,000. The total business for the day was $9,098,000. The total number of checks handled that day was 45,454, and the total amount of cash handled was $353,127.85.

Senator Reed. What was the amount of business you did through the bank that day by checks?

Mr. Swinney. $9,098,000.

Senator Reed. And how much was cash?

Mr. Swinney. $353,000. The cash decrease that day was $150,000.

Senator Reed. Does that complete the tabulation you have?

Mr. Swinney. There are a lot of other matters there. It shows the changes in various items, how much was eastern and how much was western. We sent to the East 2,568 checks, amounting to $817,000. Indirectly we sent 1,451 checks amounting to $166,000.

Senator Reed. I should like to have that tabulation printed in the record.

(The Chairman. Let it go in the record. (The statement referred to is as follows:)

Checks handled Wednesday, Dec. 18, 1912.

</table>

S. Doc. 232, 63-1—Vol 3—8
Senator Weeks. How much of that business would go through the reserve bank, Mr. Swinney? What part of it?

Mr. Swinney. As I understand it, all of it except what was on ourselves.

Senator Weeks. What would be the relation between that amount of business and the total business of Kansas City?

Mr. Swinney. Well, I would say we do perhaps a fifth of the business of the town.

Senator Weeks. You naturally assume that there would be branches in every considerable city of these reserve banks anyway, and, of course, one in Kansas City, so that one bank would be doing the whole exchange business of Kansas City if this bill becomes a law?

Mr. Swinney. Yes, sir.

Senator Weeks. And not necessarily the exchange business of any other locality?

Mr. Swinney. They would have to do all tributary to Kansas City.

Senator Weeks. You are doing that, are you not?

Mr. Swinney. But under this bill we would not do it.

The Chairman. How many employees do you have to handle those checks?

Mr. Swinney. We have about 135 employees.

The Chairman. Handling those checks?

Mr. Swinney. In the bank, all told.

The Chairman. I mean handling those exchanges.

Mr. Swinney. I could not say about that. Of course, it is divided among the different departments. I could not tell you.

Senator Hitchcock. You have only 135 altogether?

Mr. Swinney. That is all, sir.

Senator Hitchcock. Is not that a very small number for the size of the bank you have?

Mr. Swinney. I expect it is the smallest in the United States in proportion to the business.

Senator Hitchcock. There is one bank in Missouri, much smaller than yours, with 200 employees. Can you explain that?
Mr. Swinney. No; I can not. We manage to take care of the business.

Senator Reed. I can explain it. Mr. Swinney knows how to establish a system. He is too modest to say.

The Chairman. Perhaps Missourians are about twice as efficient, too, as Nebraskans.

Senator Reed. No; I would not say that. I might say that if it were not for my regard for Senator Hitchcock.

Mr. Swinney. Regarding the capital of the proposed regional banks, I will say in the first place that I am thoroughly in hopes you gentlemen can get to some kind of proposition that will be workable regarding the regional banks. We all realize, perhaps, to start with, there will have to be many changes. There never was a business in the world, no matter how long you worked on the proposition, that when you got it started you did not have to make changes. And I am sure some of you gentlemen have seen, even since I have been here, that it is advisable to make changes; things have come up that you had not suspected before.

The matter I was getting at is this, that the small country bank has no use whatever for the regional bank. Their paper is not of a class that could be used for that, and really I believe it would be better if banks of say less than $50,000 were not required to take stock in this regional bank.

And right there I will say also that, while no man wants to be forced, to be told he must do a thing, at the same time I believe that in this bill you will have to use the word "must" to ever get it through. I am free to say that I would not go into it if I did not have to until I found out how it worked.

Senator Bristow. Mr. Swinney, don't you think it would be very much better for us to provide a remedy for the things complained of, without having to resort to a system of coercion, compelling men to do things they do not think they ought to do?

Mr. Swinney. That is exactly what I say, Senator; but still, at the same time, how would you ever get it started if you did not do it?

Senator Bristow. Suppose we had a Federal reserve bank established here in Washington, governed, if need be, by a board similar to this board that is created in this bill. Let that be a bank of discount, and a bank of issue, and perform the functions that are intended to be performed very largely by these regional banks. Let it have branches out through the country. Then suppose we let any bank that wants to have its paper discounted transact business with that bank without having to put up any capital stock or be a member of anything.

Mr. Swinney. I do not think there is anything in the world the matter with our banking system regarding the banking part of it; it is only the currency part of it.

But I really believe, to make and have a safe currency proposition and a credit proposition which would be elastic, that you must have something of this kind. I really do not believe, Senator, that would work. I do not believe it could work successfully where the Government has to deal directly with the individual.

Senator Bristow. Well, suppose the bank dealt through its branch banks with the individual banks?

Mr. Swinney. Oh, I see. That simply gets to a Federal bank.
Senator Bristow. A Federal bank, yes; a Federal reserve bank.

Mr. Swinney. Well, if the Government wants to go into the banking business that is a different proposition.

Senator Bristow. Is it not in the banking business when this bill passes?

Mr. Swinney. Well, indirectly, but not directly.

Senator Reed. I wanted to ask you about obtaining the capital for these banks. Let us assume that the 12-bank idea is accepted, or four banks or six banks. In any event this bill provides for each bank paying in 10 per cent of its capital stock. Assuming that 10 per cent is to be paid in, when and how, in your opinion, should it be paid in to least disturb the financial market and still permit this plan to be carried into effect?

Mr. Swinney. I do not believe I have expressed myself on that subject, but I think that 12 banks would make the proposition unwieldy. I believe that, to begin with, anywhere from 3 to 5 banks would be plenty, and if we should need any more we could add to the system. I think that 4 or 5 banks, new institutions, could be handled in a better way than could 12.

As to the payment, if there should be, say, 5 banks, you would put into those banks, say, 25 per cent to start with—

Senator Reed (interposing). Twenty-five per cent of the 10 per cent?

Mr. Swinney. Yes; 25 of the 10; and then, as the national bank does now, pay in so much monthly. As you know, a national bank now pays in, I believe, 50 per cent and then 10 per cent every month.

Senator Reed. And would that furnish money, do you think, rapidly enough, so that the bank would have plenty of money on hand to transact the business and increase the capital as the business increased?

Mr. Swinney. I think it would prevent them having too much money, perhaps.

Senator Reed. And that would be done in that way, by the banks paying in a part at a time on their capital stock, with less disturbance to financial conditions than would result if you paid it in all at once?

Mr. Swinney. Of course it would. Some banks, I suppose, to pay their reserve in would be required immediately to discount paper. There is no doubt but what some of them would—perhaps not a great many of them.

Senator Reed. Or contract loans?

Mr. Swinney. Yes.

Senator Reed. Now, Mr. Swinney, there is one matter here that has been much discussed, and you have referred to it—I will say to the committee frankly that I was talking to Mr. Swinney the other night and he mentioned this matter to me—and that is the use of your present reserves. There has been a prevalent idea that a bank when it carried its reserve over to another national bank was not able to check that reserve out, utilizing it as an absolute balance, and at the same time maintain the reserve and comply with the law.

Now, you stated to me that that was done every day, and I wish you would tell the committee how it is done and the law complied with.

Mr. Swinney. Well, by transfer of reserves. As it is, under this law you make your reserve just as inelastic as our national currency
is to-day. It specifies that you must have so much reserve in your bank and it must remain there. What I was saying to you, Senator, was that if we have money in the three reserve centers and we want to transfer from St. Louis to Chicago or New York, we can do so by checking from one to the other. But, as I said, Mr. Vanderlip's proposition does away with all of that, if such a thing should go through.

Senator Reed. As I understood you in that conversation—and I am more anxious to get the point than I am about the way I get it—assuming you had to have as a reserve under the law in other banks $6,000,000, just for an arbitrary figure, and you had $2,000,000 in Chicago, $2,000,000 in New York, and $2,000,000 in St. Louis. You would just have your reserve. As I understood you, if you wanted to draw on St. Louis for the entire $2,000,000, drawing it all out, you could do so; and then that same day, by increasing your fund in Chicago or New York to an equal amount, you would still have complied with the law, and nevertheless you would have been able to use that money.

Mr. Swinney. Yes; simply transferring your reserve from one point to another.

Senator Reed. So that, as a matter of fact, you do, to a large extent, get the use of your reserve under present conditions?

Mr. Swinney. Yes, sir; it is a working reserve that we can transfer from one point to another.

Senator Hitchcock. I just want to ask you a question right there, Mr. Swinney. The provisions in the bill which make checks of member banks upon the reserve bank go at par would probably enable you to draw your check upon the reserve bank and have it accepted at par in New York, although your reserve bank was located in St. Louis, would it not?

Mr. Swinney. I will say this, that if that proposition goes through it would be a mighty good one for the banks.

Senator Hitchcock. Would there be any need of your carrying the balances in New York if your check on the St. Louis regional bank were taken at par in New York?

Mr. Swinney. None whatever. To give you an idea of that, in 1911 we had to ship $10,000,000 East to make our transfers good. In 1912 we shipped $10,300,000. In 1913, up to October 1, we shipped $8,200,000. We would get rid of all that expense if this proposition should go through.

Senator Reed. You have a table there, have you not, showing how much money you have shipped during certain years?

Mr. Swinney. Yes.

Senator Reed. How is that table expressed? Are the figures carried out?

Mr. Swinney. They are in thousands.

Senator Reed. So that if that table were printed, and it were understood that these figures represented thousands, it would express the right idea?

Mr. Swinney. I will say also that this table not only gives the money we have shipped to the East and from the East, but it gives the amounts by months that we have shipped to the country and received from the country.
Banking and Currency.

Senator Reed. I should like to have that printed.
The Chairman. Let it go in the record.
(The statement referred to is as follows:)

Currency shipments.

[Note.—The amounts given in the following statement are expressed in thousands of dollars.]

</table>

Senator Hitchcock. You would not be compelled to ship that currency to New York?

Mr. Swinney. It would fall to the lot of the regional bank.

Senator Hitchcock. You would not be under any necessity of having an account in New York at all, would you?

Mr. Swinney. No, sir; not under this proposition, as I understand it.

Senator Hitchcock. Would not that be a great benefit to the country?

Mr. Swinney. Well, I do not know. I am a sort of old-fashioned banker, and we have had these associations for a great many years, and there may be a great deal of sentimentality about it, but I should hate to destroy all those connections.

Senator Hitchcock. Now, would the regional bank be put to a similar expense in making shipments?

Mr. Swinney. More or less; yes, sir. The trend from our country is to the East for money.

Senator Hitchcock. It must come back some time; it can not always be going in that direction.

Mr. Swinney. The trend is in that direction pretty much all the time.

Senator Hitchcock. Where do we get it from? Where does the West get it from?
Mr. Swinney. Oh, it comes through the pockets of the people into the banks.

Senator Reed. Senator, you have evidently entirely overlooked Senator Tillman's picture of the cow that was printed in the Record. You notice the money all goes in one direction through that cow.

Senator Hitchcock. I am not an expert on cows, but I wanted to ask whether you thought the regional banks would be put to a considerable expense in making a shipment of currency for members.

Mr. Swinney. In shipments of currency and collections—yes, sir; to a very large expense, but still, I think, they could afford to do it for the free deposit which they would get.

Senator Hitchcock. It would not be really as large an expense as that which is now borne by the members?

Mr. Swinney. No; you would simply transfer the debtor and creditor balance.

Senator Hitchcock. So Mr. Vanderlip was correct when he said that the banks of the United States would no longer keep their balances in New York, for the reason that customers would be satisfied with a check upon the regional reserve bank?

Mr. Swinney. No; they would have no use for New York then.

Senator Nelson. But the country banks complain of this clearing-house paragraph. They say that it deprives them of a great deal of their source of revenue.

Mr. Swinney. It would be very unpopular with the country banks, Senator.

Senator Hitchcock. Have you any estimate of the proportion of national banks in Kansas which would come into the system?

Mr. Swinney. Well, I can not say. I think that, with some changes in the bill, pretty much all of them would.

Senator Hitchcock. Take the bill as it is now.

Mr. Swinney. No; they would not come in.

Senator Hitchcock. Would half of them come in?

Mr. Swinney. I do not believe half of them would. Of course, Kansas has a very good State law, and so has Missouri.

Senator Hitchcock. How would those banks which stayed out of the system conduct their exchanges and care for their reserves?

Mr. Swinney. Exactly as they do to-day.

Senator Hitchcock. So that they would continue to deposit their reserves in the reserve centers, but they would only be State banks?

Mr. Swinney. Yes.

Senator Nelson. They would be guided by State laws in each case as to the amount of reserves and where to keep them.

Senator Hitchcock. Well, they would not have the privilege of using the regional bank for exchange, and they would have to draw New York drafts just as they do now—

Mr. Swinney. You mean those who were not members of the regional bank?

Senator Hitchcock. Yes.

Mr. Swinney. Now, my proposition—I want to be understood on that. When I said that I did not believe smaller banks should be required to take stock in the regional bank I did not mean to give the impression that they should not be required to do business with it
and keep their reserve there. I believe they should keep their re­serve there just the same as if they held stock.

Senator Hitchcock. I do not think you have discussed this yet, but I should like to ask you, as a practical proposition, if you join this new organization and subscribe for 20 per cent of your capital and pay one-tenth of it and transfer to the reserve centers the proper proportion of the country-bank balances which you now have, where are you going to procure that money?

Mr. Swinney. We would have to draw it out of New York.

Senator Hitchcock. What do your country-bank deposits amount to of your national banks?

Mr. Swinney. About $8,000,000.

Senator Reed. All together?

Mr. Swinney. All the national banks.

Senator Hitchcock. How much of that $8,000,000 would you be required to turn over to the reserve bank, probably?

Mr. Swinney. Oh, I figure—I thought I had the figures, but I have not—that we would have to pay over to the regional bank somewhere between $3,500,000 and $4,000,000.

Senator Hitchcock. In what length of time?

Mr. Swinney. At the end of the working season—36 months.

Senator Hitchcock. How much would it be in 60 days after the banks formed?

Mr. Swinney. Well, not to any great extent would you have to check on banks, because we could take our excess currency out of our vaults to start with.

Senator Hitchcock. You keep a large surplus over your reserve?

Mr. Swinney. No. Your required reserve in the vault would be less, and therefore you could take the cash out of the vault first and put it in the regional bank.

Senator Hitchcock. Now, to what extent do you think you would be under the necessity of contracting your loans?

Mr. Swinney. Why, that is very hard to say. It would just depend upon whether we have any business from national banks. If the entire $8,000,000 would go out, you can see we would have to contract our loans very largely.

Senator Hitchcock. What are the total country bank deposits in the other national banks of Kansas City?

Mr. Swinney. $32,000,000; that is the total.

Senator Nelson. Is that in your bank?

Mr. Swinney. No; that is the total of country national bank deposits in Kansas City.

Senator Reed. You say the country national banks. Now, what are the total deposits of all banks in Kansas City? Can you give that?

Mr. Swinney. What do you mean by that?

Senator Reed. The State banks and trust companies that deposit with the banks of Kansas City.

Mr. Swinney. I have not that.

Senator Hitchcock. Now, assuming that your national banks in Kansas City would be required to turn over the full $32,000,000 of country bank deposits to the reserve bank of that district; where would that $32,000,000 come from?
Mr. Swinney. It would have to come out of the eastern exchanges which we have, and the cash out of our vaults, and quite a reduction of loans.

Senator Hitchcock. What would the borrowers do when those loans were called?

Mr. Swinney. Well, the banks would either have to go to the regional bank and borrow or have them to pay.

Senator Hitchcock. To what extent do you estimate that would contract the loans in Kansas City?

Mr. Swinney. I have some figures that were made by our clearing-house manager, but I do not know that they are correct. He estimates that for the first 60 days in Kansas City the loss of deposits would be $11,000,000.

Senator Hitchcock. Does he say anything about the contraction of loans?

Mr. Swinney. No; he could not figure on that at all, because he was figuring on the amount of money that would have to be paid out.

Senator Hitchcock. Now, assuming that the contraction of loans occurs not only in Kansas City, but in Omaha, St. Paul, Minneapolis, Cincinnati, and all the other 40 or 50 reserve cities of the country; what would be the effect on business of that in the aggregate?

Mr. Swinney. Just as I said in the beginning, Senator; I do not agree with Mr. Vanderlip. I think it would be a serious proposition to the country to have to withdraw from the business the amount of money that would be required. To a certain extent you eliminate the national banking system, which would make greatly against business, I believe. I do not believe that anybody cares to go and put himself on record as having to borrow money right away to start this proposition, which would be done, unless you cut loans.

Senator Hitchcock. Now, have you any recommendation to make as to any amendment to this bill so as to mitigate that possible contraction?

Mr. Swinney. Well, we hear that there is a pyramiding of deposits, and that it finally gets into New York. I would suggest that banks in reserve cities be allowed to keep one-third of their reserve with central reserve cities, but in no central reserve city to exceed 2 per cent. For instance, we have 18 per cent—6 per cent in the vault, 6 per cent with the regional bank, 2 per cent in St. Louis, 2 per cent in Chicago, and 2 per cent in New York.

Senator Hitchcock. And yet you said you would have no use for New York exchange, possibly.

Mr. Swinney. Under this other proposition is what I spoke of.

Senator Hitchcock. But it would be kept there simply for the purpose of not disturbing the banking business of the country unnecessarily?

Mr. Swinney. Yes, sir.

Senator Hitchcock. That would give relief to the central reserve cities, but it would not relieve the 48 or 49 reserve cities?

Mr. Swinney. Well, let the country banker do the same thing on exactly the same proposition. He could keep 4 per cent of his deposits there, 4 per cent with the reserve agent, 4 with the regional bank, and 4 in his safe, which would be 12 per cent.
Senator Nelson. That would keep up the volume of reserves to some extent that we have now?

Mr. Swinney. It cuts it down considerably.

Senator Nelson. But it would perpetuate the system.

Mr. Swinney. Yes, sir.

Senator Reed. If I understand, now, Mr. Swinney, speaking about the immediate contraction, the first thing the banks of Kansas City would have to do would be to take an amount equal to 10 per cent of their capital stock and transfer that to a regional bank which, let us say, is located in St. Louis——

Mr. Swinney. Which would be $875,000.

Senator Reed. From what bank?

Mr. Swinney. The national banks; the capital of the national banks.

Senator Reed. If the State banks and trust companies came in it would be a very much larger sum?

Mr. Swinney. Yes, sir.

Senator Reed. Now, that you would have to take out of your vaults or you would have to call loans in order to get it. Then the next proposition would be you would have to take an amount equal to 6 per cent of your deposits, and that you would either have to take out of your vaults or withdraw from New York, St. Louis, or Chicago. And if you withdrew from them, of course, it would contract their currency to that extent and they would have to contract loans to get the money. Now, you have in these banks in Kansas City $38,000,000, did you say?

Mr. Swinney. $32,000,000.

Senator Reed. $32,000,000 of country bank deposits, and that largely represents their reserves, does it not?

Mr. Swinney. Largely; yes.

Senator Reed. So that if those country banks were to be required to put up their reserve, not with you, but with the regional reserve bank, they would have to draw that money away from you?

Mr. Swinney. Yes, sir.

Senator Reed. And the result would be that whatever amount was taken away in the aggregate would have to be deducted from the loans that are made by the Kansas City banks?

Mr. Swinney. Or borrow from the regional bank.

Senator Reed. Or else they would have to discount at the regional bank. That would look like a very radical contraction if it were put into effect at once.

Mr. Swinney. Yes, sir; it certainly would, and it would cause quite an upheaval in the credits of the country in my opinion.

Senator Reed. Now, if this system were put into effect gradually, and you were required to put in only, say, 2 per cent of your capital at first, adding 2 per cent of your deposits and the amounts thereafter to be gradually increased, that would at least give more time for readjustment?

Mr. Swinney. Oh, yes; the more gradual you could make it the better it would be.

Senator Reed. Now, Mr. Swinney, I want to ask you one other question, and that is one I asked Mr. Vanderlip and which he has not yet answered. What inducement or reason is there for a bank re-
maining a national bank after this bill is enacted, if it goes through in its present form?

Mr. Swinney. None whatever, except to get credit—a place to use credit; that is all.

Senator Reed. That is, with the regional bank?

Mr. Swinney. Yes.

Senator Reed. But that is now opened by this bill to every bank and trust company in the country that has a certain amount of capital and which conforms to certain conditions.

Mr. Swinney. Oh, with the bill as it stands at the present time I am confident it would be to the interest of the banks to go into the State system.

Senator Reed. To go into the State system?

Mr. Swinney. Yes; because they could get so many more privileges.

Senator Reed. Can you suggest to us any improvement that might be made to this bill which would keep the national banks in the national banking system?

Mr. Swinney. Well, just as I have said, this reserve proposition, to a country bank, of which I am one, is one of the main points of the contention with us, and one which would come nearer driving them out of the system than anything else. That is the way they feel about it.

Senator Reed. Well, if we modify that, still the advantage would be with the State bank and trust company, because they have a wider range of business, and of course if we modified as to one we probably would as to all. What is there in the way of an advantage which could be given justly to a national bank in order to have it maintain its charter and continue as a national bank? Do you think of anything that could be done? He used to have an advantage on the matter of currency.

Mr. Swinney. At one time he had that advantage.

Senator Reed. What is there left, and what can be done?

Mr. Swinney. Nothing except that the only advantage they would have is that there had always been just a little sentiment in favor of a national bank, considering it, you might say, as a Government institution, especially in a new country.

Senator Hitchcock. What is the total of capital of national banks in Kansas City?

Mr. Swinney. $8,750,000.

Senator Hitchcock. Suppose a subtreasury were located in Kansas City, with the provision that the national banks there might procure currency at any time at a reasonable rate of interest from the Government, to the extent of 75 per cent of their capital, which, in that case, would be something like $6,000,000, would it not?

Mr. Swinney. Yes, sir.

Senator Hitchcock. Possibly a little more. Would that facility afford to the banks of Kansas City a means, in seasons of extra demand, for something to accommodate their customers?

Mr. Swinney. You open up there a very wide subject, Senator. I have not time to take the matter up, but it is only in one season of the year that we need credit, and that is only for about six or eight weeks in the fall of the year, and a clearing-house proposition
whereby they could join together and get currency, in my opinion, is as good as anything we could have. Take, for instance, in 1907 when we banded together in Kansas City, as they did in other places. We issued, against the law there, I might say, a currency, and in two weeks that currency was going as good as a national-bank bill. There was no question raised about it. Senator Reed will tell you the same thing. It passed there, and we had occasion to make up a pay roll for the Sante Fe Railroad of $100,000, and we used $50,000 of that and sent it out into Kansas, and it went right straight through.

Senator Bristow. It circulated all over the State?

Mr. Swinney. Yes, sir.

Senator Hitchcock. We had the same experience in Omaha, but there seems to be an objection that I can hardly appreciate, which is made by some bank, to being compelled to show their hands to each other in forming a currency association to guarantee others' obligations.

Mr. Swinney. There is nothing in it, I think. It is simply a supposition. We might take the same thing right here on this money that the Treasury is putting out now. You might say the banks did not care to show their hands. We met in Kansas City and agreed what each one would ask for, submitted our collateral one to the other, and it never caused any trouble. Nobody thought anything about it. If they would get that proposition to working, there would not be any question about it.

Senator Hitchcock. That is the Vreeland-Aldrich Act?

Mr. Swinney. Partly; only partly.

Senator Hitchcock. Under that Vreeland-Aldrich Act banks in any community or neighborhood having an aggregate of $5,000,000 of capital, and numbering 10, can form a currency association, guarantee each other's paper and secure this additional bank note circulation.

Senator Reed. These were not bank notes; they got Government money.

Senator Hitchcock. That was a direct loan of the fund of the Treasury, and the Treasury might or might not have a balance to its credit. I am talking about a permanent arrangement for procuring, direct from the Treasury, from the United States, notes, which this bill provides shall be furnished to the banks through the machinery of regional banks. I am wiping out the regional banks, and suggesting to you an arrangement whereby the Treasury can furnish this currency direct to the individual national banks in, say, 50 cities of the United States where subtreasuries might be located.

Mr. Swinney. Well, if such a thing could be worked, Senator, I think, as I say, I would believe it a good proposition. But we could never work it. I do not think you could work it here in Washington.

Senator Hitchcock. Will you explain why?

Mr. Swinney. I do not think you could ever get a proposition of that kind through here.

Senator Hitchcock. I am assuming that it would go through.

Mr. Swinney. Assuming it could go through, as I said in the beginning, the main thing we are after is to try to get an elastic currency, or a currency that we can use a few months in the year, and
a proposition of that kind, to my mind, if it could be put through, would be as good as you could ask for.

Senator Hitchcock. It is only a few months in the year when your banks would borrow that currency, and that particular season is in the fall?

Mr. Swinney. Yes.

Senator Hitchcock. In New Orleans it would be another season, and in the San Francisco region it might be another, so that in the aggregate the Government would not be advancing at any particular time a very tremendous sum of money, but the currency would be elastic in the neighborhood where it was called for. At the end of the particular period the banks would take up their securities, pay back, either in gold or United States notes, and you would pay the interest, and that would end the transaction. Do you think that would work?

Mr. Swinney. It would suit me exactly.

I have only a few moments, gentlemen, and there are just one or two other things I desire to call to your attention.

I am going to suggest a change, on page 40, in regard to bank examinations. It says:

The Comptroller of the Currency shall so arrange the duties of national-bank examiners that no two successive examinations of any association shall be made by the same examiner.

That is different from our present form, and really I do not think it is a good proposition. I believe a man who examines a bank once and then comes to examine it again in six months is much more capable of doing it than if he had never been in the bank before. He becomes familiar with the credits and workings of the bank.

I go now to page 41, beginning at line 14, where it says:

The Federal reserve board shall, as often as it deems best, and in any case not less frequently than four times each year, order an examination of national banking associations in reserve cities.

With our clearing-house examinations which we have in Kansas City, and which they have in other places, I think that is out of reason. Two examinations are ample, and the comptroller can have as many more as he wishes. That is the law now.

Here is another proposition in regard to the Federal board. We all talk about the power of the board, but here is one place where they should be given discretion which they are not given. It says:

The Federal reserve board shall, at least once each year, order an examination of each Federal reserve bank, and upon joint application of 10 member banks the Federal reserve board shall order a special examination and report of the condition of any Federal reserve bank.

Now, if you take 10 banks in the country and they should get to a place where they did not like something a regional bank had done, they could make that application and the Federal reserve board would have to make the examination. Why not use the word "may" instead of "shall"?

Senator Reed. You think a few fellows might be disgruntled and make an unnecessary disturbance?

Mr. Swinney. Ten men could make a request for an examination of a Federal bank, and then in three or four weeks make another
request, and keep on examining that bank right along. The Federal board does not seem to have any discretion whatever there. By changing that word from "shall" to "may," I think you would cover that point.

Senator Reed. On what page is that?

Mr. Swinney. On page 41.

Senator Shafrroth. Will you read the language of it again?

Mr. Swinney (reading):

The Federal reserve board shall at least once each year order an examination of each Federal reserve bank, and upon joint application of 10 member banks the Federal reserve board shall order a special examination and report of the condition of any Federal reserve bank.

Senator Nelson. It is peremptory; there is no doubt about that.

Senator Shafrroth. The only thing is if 10 large banks want an examination, why is it not proper that it should be done, and that it should not be left discretionary?

Senator Nelson. It says 10 banks; it does not say 10 large banks.

Senator Shafrroth. Or 10 small banks.

Mr. Swinney. If they were doing it to annoy a bank, it strikes me the Federal reserve board ought to be given discretion as to whether they should order an examination or not.

Senator Nelson. It would depend upon what the application presented. If it presented facts that would warrant the board to go ahead and make an examination, they would undoubtedly make it, and if the application was simply a matter of pure cussedness they ought not to be compelled to make the examination. I think Mr. Swinney is right on that subject.

Senator Reed. At least that ought to be limited in some way.

Mr. Swinney. That is all I have to suggest, Mr. Chairman, and I thank you for giving me the privilege of appearing before you.

The Chairman. We are much obliged to you for coming before us, Mr. Swinney.

STATEMENT OF FRANK A. VANDERLIP—Continued.

Senator Bristow. Mr. Vanderlip, I understood you to say that you believed national banks ought to be permitted to establish branches. You limited it to the cities where they were located, but I inferred that in your judgment you thought that limitation was not really necessary, but probably you thought you could not get more than that because of the prejudice against it. Do you believe there ought to be such a limitation?

Mr. Vanderlip. I would not use the word "ought." There is no inherent right of a national bank to have branches. I think it would be desirable for the bank to have branches in the city in which it is located, and desirable not altogether from the bank’s point of view, but desirable from the point of view of the citizens of the city, from the point of view of properly conducting the bank’s business, and of giving to all the citizens of a large city the facilities of a large bank.

In regard to branches elsewhere than in the city where the bank is located I think, from the bank’s point of view, the weight of evidence would be that it would react in its favor if it had a right to
have branches anywhere. I think there are some factors of weakness on the side of a bank having branches, but on the whole I think many large banks would welcome the opportunity to have branches. I do not regard it as their right.

Senator Bristow. That would reduce the number of national banks, would it not?

Mr. Vanderlip. I should think it would very much reduce the number of fly-by-night private banking institutions in a city like New York, where we have banks started that get the money of rather ignorant depositors and frequently fail to pay it back.

Senator Bristow. Why would it reduce that kind of banking especially?

Mr. Vanderlip. Because it would bring the branch of a well-known bank in competition with a little private bank, or with a little State bank, or even with a small national bank, and it would give the strength of a great institution to that branch, just as much as to the parent bank.

Senator Bristow. Do not your State laws protect the people from these spurious banks?

Mr. Vanderlip. No, sir; they do not protect the people from a private bank.

Senator Nelson. You have private banks in New York?

Mr. Vanderlip. There are a great many private banks on the East Side of New York City.

Senator Nelson. Protected under your State law?

Mr. Vanderlip. Yes, sir.

Senator Nelson. We have abolished them in Minnesota.

Senator Bristow. It would add to the power and strength of the large banks, would it not?

Mr. Vanderlip. It would add to their size; I am not certain it would add to their power and strength. There is great strength in having all your resources under one roof.

Senator Bristow. Is not a big bank more powerful than a small one; does it not control vaster resources?

Mr. Vanderlip. Yes; but a bank is not so very powerful, except to do the right thing, because, no matter how big you are, you are not powerful enough to make a bad loan.

Senator Reed. And make it into a good one.

Mr. Vanderlip. You could make the loan, but you could not collect it.

Senator Silfroth. I have known banks to make loans to parties who would pay nobody else but the bank. I have known of that frequently. Is that not a good influence, a good power to exercise?

Mr. Vanderlip. The bank probably had collateral which made that necessary.

Senator Silfroth. I have seen them do it without collateral.

Mr. Vanderlip. They probably wanted to establish some connections in the future. Of course, there was probably some hope of reward in it.

Senator Bristow. Do you think that the democratic system of banking that we now have—that is, where it is so widely diversified, where there are so many different individuals engaged in it, is it desirable or undesirable?
Mr. Vanderlip. The whole question of the respective merits of a general branch banking system, and the present democratic principle, is a clearly debatable one, with some excellent reasons on each side.

The branch system will tend to equalize rates. It will take the funds of a low-interest community into a high-interest community. It tends toward stability. It gives to a new community a sound bank. It gives to the managers of branches experience that would be valuable in a new community, where otherwise a bank might be organized by people without banking experience.

The Democratic principle gives a local interest in the bank, gives the management to people who thoroughly understand local conditions and local character, and keeps the money of the community in the community where it originates, which may be good for the particular community, but is not, I would say, for the best good of the whole country if there is a surplus of funds there. Those, I think, are the chief arguments on each side.

Senator Bristow. Do you think it is desirable, especially in the banking business, that the bank should have the local friendship and good will of the people with whom it comes in daily contact in the management of its business?

Mr. Vanderlip. It is always desirable for a bank to have the friendship and good will of the community where it is doing business. It is not at all impossible for a branch of a great bank to have that friendship and good will if that branch has been conducted in a broad-minded way.

Senator Bristow. But it would rob that bank largely of the individuality which it now has, would it not?

Mr. Vanderlip. Undoubtedly. It makes it a part of that great bank.

Senator Bristow. It would be more mechanical in its operations than it is now and have less personality in it?

Mr. Vanderlip. I would say, perhaps, it would be less sentimental.

Senator Bristow. Do you not think it would take from a great many men the opportunity of initiative in the building up of a business of their own?

Mr. Vanderlip. I do. I think there is a distinct advantage on the Democratic side in interesting the best men in the local community in the conduct of the bank. That, perhaps, is the great argument for our present system as against the branch-bank system, and it is an argument of weight.

Senator Bristow. The branch banking system existing in European countries will result in very large banks?

Mr. Vanderlip. There is one bank in England with 600 branches.

Senator Bristow. And how much in deposits?

Mr. Vanderlip. About $400,000,000. That is the London City and Midland, which is now the largest bank in the world.

Senator Bristow. And there are other banks that approach that bank?

Mr. Vanderlip. Yes, sir; both in England and on the Continent.

Senator Bristow. What are the deposits of your bank?

Mr. Vanderlip. Recently it has been running about $250,000,000 gross and around $200,000,000 net.

Senator Bristow. You have the largest bank in the United States?
Mr. Vanderlip. Yes, sir.

Senator Bristow. If the branch banking system that prevails in England prevailed here, it is fair to presume that your bank would be very much larger than it is now, would it not?

Mr. Vanderlip. If we had embraced the branch-bank idea, I should say it is fair to presume it would be larger. You see, the banking resources of the country have grown very much more rapidly in percentage outside of New York City than in New York City.

Senator Bristow. There is another matter that I am interested in having your views on, Mr. Vanderlip. I have observed that the gentlemen who have been before us so far—the bankers—are very tenacious for commercial paper to be made a basis for currency, additional currency that is issued, and rediscount, etc. It seemed to me that they have more interest in the enactment of legislation that preserves or maintains or promotes the branch of the business which is conducted in that way, by short-time loans. Now, we have got just so much currency and money. Most of you gentlemen seem to resent the idea of long-time paper, mortgages, or securities of that kind from being used in this way, which is a distinct advantage to the security. It makes it more desirable and therefore will have a tendency to lower the rate of interest. The more of the country's resources or its money that is used in handling commercial paper, the smaller amount of it there will be used in these investment loans, will there not?

Mr. Vanderlip. Yes, sir.

Senator Bristow. England is pointed to principally as a model country by some people. Now, in a country like ours, where we are a producing Nation more than a commercial Nation, do you think it is to the best interests of the country as a whole to favor the commercial end of our affairs more than the productive part of our affairs?

Mr. Vanderlip. No question that has been asked would permit me to make an answer that I am clearer about or that I feel more certain that my answer will be right.

Any other conception than a conception that you say the bankers have generally given here, that commercial paper should be favored, is a misconception of the function of a bank. It is no part of the function of a bank holding deposits repayable on demand to use those deposits in any form that will tie them up in an unliquid shape. The test of a proper bank loan is the self-liquidating character of that loan within a reasonable period. I have already explained my view of a self-liquidating loan, and I think you are familiar with that. That is the test of sound banking. You can vary it to some extent by employing some of your capital in the purchase of real-estate mortgages, and, as I have said, the section that will permit a country bank to employ half of its capital in the purchase of such mortgages is not altogether sound, judged on a scientific basis, but I believe is not dangerous. A city bank can use some of its funds in investing in corporate securities. They are better for the purpose of investment than some real-estate mortgages, not because they are more liquid—in that respect they are exactly the same as a real-estate mortgage—but because they have a larger market. But neither is the ideal investment for a bank.
Banks are the great debtors of the country, not the creditors. You asked me what our deposits are, and my answer means that we have subject to demand between $200,000,000 and $250,000,000. We are the great debtor of this country. No institution in America owes so much money on demand as the National City Bank. Therefore the National City Bank must keep its investments in liquid form in order to meet that demand obligation. It is not because of any discrimination against the character of a real-estate mortgage that we do not take it, in so far as the safety of that mortgage goes. The discrimination comes entirely from the lack of liquidity, the fact that it can only be turned into money by selling it to somebody else; that it will not in course of manufacture or transportation or consumption or the distribution of goods in any form liquidate itself. That is the ideal loan, and when a bank gets away from that it is getting on dangerous ground. It can get away from that by putting some modest percentage of its capital into real-estate loans or by taking a note of a railroad corporation or some large industrial corporation, but any loan that will not liquidate itself is not ideal, and if it is taken to a large extent is a dangerous element in the assets of a bank.

Senator Bristow. Now, Mr. Vanderlip, I can see the force of your argument, if the bank's business is confined to these deposits due on demand. But, contrary to the law, as Senator Reed suggests, national banks have gone into the savings-bank business, and the money which is deposited in the savings department of these banks is used in the commercial business, and objection has been made here that to deprive them of the savings-bank department would be unjust, and that the provisions of this bill would take out of the commercial business the deposits in the savings department of the national bank.

Mr. Vanderlip. You have raised a fair point there, and it is proper to take out of the commercial deposits deposits that are held on time and devote them to some other class of business. We have, of course, great savings banks in New York. Their loans are wholly of the type of business that I am describing as undesirable business for a bank.

Senator Weeks. For a commercial bank?

Mr. Vanderlip. For a commercial bank; yes, sir. A savings bank in New York never invests in commercial paper; it always invests in real-estate mortgages or the bonds of corporations.

Senator Nelson. There is another thing, Senator Bristow. You seemed to make a distinction a while ago between what you call commerce and trade and production. Now, we must not overlook the fact that commerce is the handmaid of production. The moment the farmer takes his wheat to the elevator and sells it and it is shipped that moment it enters the field of commerce, so that commerce is the necessary handmaid and appendage of production. It would not do a manufacturer any good to manufacture goods and leave them in the warehouse. He has got to put them into trade, so that production and commerce must go together, hand in hand.

Senator Bristow. I understand that, Senator, but in a country as vast as ours is, with undeveloped resources, it seems to me, with my limited experience and observation and study of the subject, that we can not shape our financial legislation after that of a country like England, whose business is commerce and very little production.
We have, it seems to me, got to take that into consideration and give great weight and encouragement to that line of investments that will result in production. If you do not have production here you will not have commerce, because we are not situated as England is. And that is why I have, in the questions I have been asking, given more consideration to these investment securities than others, because it seems to me, when the national banks, which are commercial banks, which are supposed to deal in commercial paper and credits that relate to commerce, are permitted to draw from the normal and natural resources which would go to the banks that handle this other kind of security, then you have got to give an opportunity for the national banks to invest in those securities, or you will discriminate against those securities. It is proposed here to permit trust companies and State banks, which can invest their funds in this other kind of securities, to become a part of this system. And they go into the commercial business. It seems to me that if we are going to merge all of these banks into this system so that they are all in commerce, then they ought to be permitted to go into the other line of investments, or you discriminate against the one and encourage the other. Do you think, Mr. Vanderlip, considering this from the standpoint of commerce and the handling of commercial paper, that a trust company or savings bank ought to be permitted to become a member of it?

Mr. Vanderlip. I think it is extremely desirable to have all banks doing a commercial business become members. If trust companies do a commercial business in addition to their trust business they should, if possible, be induced to become members. There is no reason why a savings bank should be a member.

Senator O'Gorman. There is no likelihood of a State savings bank seeking membership?

Mr. Vanderlip. I should see no reason why they should, at all.

Senator O'Gorman. Do you think it would be a wise policy to confer the benefits proposed in the new banking system upon the State banks and trust companies which are denied the national banks?

Mr. Vanderlip. The corollary of that proposition is that national banks will surrender their charters and take out the more liberal State charters.

Senator O'Gorman. What would you think of enlarging the present functions of the national banks in order to create some uniformity with respect to the functions of the two classes of banks that come in under this system?

Mr. Vanderlip. I think that will be necessary if the national banking system is to be saved.

The Chairman. I would like to put in there at the end of Mr. Vanderlip's remarks an abstract of the powers exercised by each of the State banks under the 48 States, which will give the committee access to the precise powers which they enjoy.

Senator O'Gorman. Suppose we should enlarge the power of the national banks and yet not confer all the powers now enjoyed by State institutions in order to bring about this uniformity that I speak of, do you think it would be practicable to have the reserve board establish by resolution certain restrictions and limitations upon the powers now given State institutions under State law?
Mr. Vanderlip. It would be perfectly practicable, but the nature of those restrictions established by the board would determine whether or not the State banks joined the system. This particular matter should be covered by specific statute as completely as possible.

Senator O'Gorman. I understand you would have to make it fairly attractive to the State banks.

Mr. Vanderlip. If there were any practicable way of separating the functions of a commercial bank from those of a trust company, it would be desirable. I see no way in which you can do that. I think there are pretty sound arguments why those functions should not be united in the same institutions—not determining reasons why they should not, but there are some reasons why the functions of a trust company and a commercial bank should not be united. You are, however, facing the problem of driving your national banks to surrender their charters and take out State charters where those functions are united, and I am inclined to think you will have to liberalize the charter of the national banks to approximate the powers of the State bank or you will lose the national banks from the system.

Senator O'Gorman. Other things being equal, what, in your judgment, is the advantage in having a national bank charter now instead of a State bank charter?

Mr. Vanderlip. Do you mean now or under a provision of such a nature?

Senator O'Gorman. Now; ignoring the pending bill.

Mr. Vanderlip. There is some profit in taking out national-bank notes, and there is considerable profit in holding the deposits of other banks. There is some small sentimental reason in the confidence that the examination gives to a bank holding a national charter. Those are the principal reasons.

Senator O'Gorman. Then, among other reasons, you think there is some prestige attached to the national charter?

Mr. Vanderlip. I think there is in a small place. I do not think there is in a great city like New York. There was formerly some profit for banks in Government deposits, and there is now a little, with the interest rate charged, but not much.

Senator Nelson. There is one thing, if you will allow me, Senator, to call your attention to, in this connection and that is while scientifically it may be proper enough, it may be the right thing, to separate a savings bank and a trust company from a commercial bank, it is utterly impossible in these small country towns, towns of 1,000 to 10,000 people. A bank there, in order to be successful, and to accommodate the wants of the people, must be prepared to do all kinds of that business—commercial business, savings business, and in some form a trust business—and a bank cannot exist without doing it. There is not enough business in these towns to keep a bank alive doing just one kind of business. It has got to be done altogether. You realize that fact, do you not, Mr. Vanderlip?

Mr. Vanderlip. Perfectly.

Senator O'Gorman. Now, Mr. Vanderlip, what would you suggest, in your judgment, ought to be the modifications in the charter of the national bank with respect to the increased functions that might be conferred on national banks?
Mr. Vanderlip. Senator Reed has already asked me that question, and I have suggested I would like to consider it carefully and communicate promptly with the committee my views.

Senator O'Gorman. I would be very glad to have you do it.

Mr. Vanderlip. I will do that promptly, after having given it careful consideration.

Senator O'Gorman. I think, in the same connection, if you will give your views as to what powers now enjoyed by State banks and not conferred on national banks might be curtailed without making this system unattractive to the State banks, it would be beneficial to the committee.

Mr. Vanderlip. Yes; I thing I comprehend the point.

Senator O'Gorman. Of course, the general idea is, as I have already suggested, that if these two systems of banks are to come in under this new system, we must, as far as possible, have uniform privileges and rights enjoyed by State as well as by national banks.

Mr. Vanderlip. Yes.

Senator Bristow. We have asked a number of witnesses to prepare amendments to the bill which they would recommend and furnish them to us for our consideration when we take the bill up. Why would it not be well, in connection with these requests, for Mr. Vanderlip to submit a modified bill as he thinks it ought to be.

Senator O'Gorman. If you will take the time to do it, it will aid the committee.

Mr. Vanderlip. I know of nothing so important for me to do. I will do it with great pleasure.

Senator Nelson. I want to suggest to you, Mr. Vanderlip, about the number of regional banks. If you do not have one, it seems to me if you have more than one it ought to be five; it ought to be one for each of the central reserve cities we now have, and one for New Orleans and one for San Francisco. That, it seems to me, ought to be the plan, if you have more than one. I think one is best, as you do, but it seems to me if you do not have one, then you ought to have that distribution.

Mr. Vanderlip. It would be vastly better than 12.

Senator O'Gorman. I did not get that last question of yours, Senator Nelson.

Senator Nelson. I said if you limited the number of national banks, reduced it from 12 to a minor number——

Senator O'Gorman (interposing). You mean regional banks?

Senator Nelson. Regional banks. I think the reduction should be to five, and I put it on this ground: We have three central reserve cities, New York, Chicago, and St. Louis. They should undoubtedly be regional bank centers. Now, in addition to that, I think New Orleans ought to be one place and San Francisco, on the coast, the other. That is my notion about it.

Senator O'Gorman. In your judgment, Mr. Vanderlip, would five regional banks, under the general features of this system, be preferred to one national discounting reserve bank here in Washington, with branches throughout the country?

Mr. Vanderlip. No; I would much prefer one.

Senator O'Gorman. Why?

Mr. Vanderlip. I think there are profound reasons.
Senator O'Gorman. Will you state them, if you have not already done so?
Mr. Vanderlip. I have already gone into that pretty fully.
Senator O'Gorman. Then I will not ask you to state it again.
Senator Bristow. As I understand, I think, having your question in mind, Senator O'Gorman, Mr. Vanderlip suggested that one would be preferable, but he did not understand fully just the kind of Federal reserve and discount bank that you suggested to one or two other witnesses. Senator O'Gorman suggested on another occasion, as I remember it, that we have one Federal reserve and rediscount bank, supervised by this board.
Senator O'Gorman. By a Government board, with a supervisory council for the bank.
Mr. Vanderlip. That brings a new element into the matter. That makes the Government officials judges of the paper that is being rediscounted, and I would disapprove of that.
Senator Bristow. How is that?
Mr. Vanderlip. I say that brings a new element into the situation, that makes the Government officials judges of the paper that is to be rediscounted. In the system that is built up in this bill there is a board of nine men, three of whom are bankers, directly elected by bankers, and three of whom are business men, directly elected by bankers, to pass on the paper that the central reserve banks are to rediscount. That I regard as a very important feature, that you shall have bankers pass on this paper. I think there would be grave objections to having Governmental officials passing on the paper offered for rediscount. Those objections are on the ground of the training and the experience of the officials.
Senator Bristow. Well, I can see the force of that suggestion. But suppose these Government officials are bankers that managed the central banks; that it is their business to run that bank, and the branches are conducted by men who are bankers and whose business it is to pass upon the paper which they discount.
Senator O'Gorman. And are familiar with the conditions of the several localities.
Senator Bristow. And must be familiar with the conditions. Do you not believe that if this board has the responsibility of the managing of the Federal reserve bank, and comes in relation with the banks of the country, with which it is doing business, that you will get better service out of them than if they are simply a board here supervising at a distance, which they necessarily would, the operations of the 12 banks, and to whom complaints are made and controversies are taken up and discussed? They necessarily would not be familiar, as they should be, with the questions that will come before them.
Mr. Vanderlip. You will get better service out of your Federal reserve board; yes; but the total of service you get out of the Federal reserve board and out of the board of the regional banks, as it is provided to elect them, by the bankers, six out of nine, at least, would be greater than the service you would get out of such a board as you suggest.
Senator Bristow. What part of the service which these gentleman would render would be more efficient, do you think—the duties that they would perform? There would be, we will say, a branch at
Kansas City, this Federal reserve and discount bank, and probably one at Wichita, Kans., and one at Omaha, where the reserve banks are now. The business of these men in charge of these Federal branches would be to accommodate the banks in the community, whether they were members or not.

Mr. Vanderlip. You have very well outlined the objections to the branch banking system in the earlier questions that you asked. Could you not apply those same objections to such a proposal as you now make?

Senator Bristow. No; it is not a banking institution, except it deals with banks and banks only, and it is there to help the banks when they need help upon their application.

Mr. Vanderlip. And to be a judge of the credits of those banks and of the collateral they offer. I think a board selected from among bankers—made up of practical bankers in part—will render that service and will execute that judgment better than will a board of Government officials.

Senator Bristow. Even if those officials were the same bankers?

Mr. Vanderlip. Yes; even if the officials were the same bankers, because they will become dissociated from the active work. Of course, if they were the same bankers, certainly for a time they would probably perform the functions in the same way, but they would not be the same bankers. You can be pretty certain of that.

Senator Nelson. Let me suggest what I think would be a solution to the matter suggested by Senator O'Gorman: Have one central reserve bank, under control of the Government boards, and have a discount committee; have provision made for a discount committee, consisting of nine, appointed in the same manner as these managers of the regional banks, and let that committee pass upon discounts, subject, as the regional banks are now, to the supervision of the central board. Could it not be solved in that way?

Mr. Vanderlip. That seems a very sound and practical suggestion, to meet the particular point.

Senator O'Gorman. What would be the difference in the judgment of those nine men, constituting the so-called discount committee, sitting here in Washington, and the judgment of seven men, constituting the officers of the Federal reserve board?

Mr. Vanderlip. I do not think you have understood the suggestion as I understood it at least. The suggestion is that this discount committee is composed of bankers, elected by bankers, but its function is only to pass on the question of credit, and the Federal board would be constituted as you suggest, and would be the power operating the bank.

Senator Nelson. The discount committee would be constituted in the same number as the managers of the regional banks. That is, there would be three of the discount committee Government appointees and six would be bank appointees.

Mr. Vanderlip. And the duty of that discount committee would be to pass on the character of the collateral offered, and the Federal board would then take up the question of loans.

Senator Bristow. Now, Mr. Vanderlip, I am going to be perfectly frank with you as you have been with the committee. What I am trying to get away from is the power which certain great dominating
interests in this country have to veto security that I think is good but which interferes with their business and their interests, and I do not believe there would be any objection to a central bank in the United States if there was not a belief that I think well-grounded and wholly justified, with all due respect to your opinion, that there are certain interests in this country that do control credits and can veto a legitimate and proper loan, if that loan will interfere with their interests. I may be mistaken, but I believe that nine-tenths of those who are studying the question believe a central bank with branches, that would not interfere with the legitimate conduct of the banking business we have, but supplement and strengthen it, would be very desirable; and if it could be gotten away from any possibility of such control, so that no doubt can rest in the mind of one of suspicious mind, I think we would all be for it.

Senator Nelson. Now, you see under this plan, Senator Bristow, of a central institution, the discount committee would pass on the quality of the paper, but whether the loan should be granted by the bank and currency issued, would be under the control of this general board.

Senator Hitchcock. Senator Bristow, let me ask you a question. In referring to the loans that you have in mind there, are you not forgetting that those loans are generally for the purpose of big enterprises, and are in the form of a permanent advance on bonds, whereas the only paper that can be put up with the reserve bank, whether a regional bank or a central bank, is commercial paper which is liqui-

Senator Bristow. Yes; but you know I have very pronounced objections to the plan that is outlined here in limiting the paper that is to be given advantages under this system to this commercial paper. I think that is unjust and discriminatory against other investments.

Senator Hitchcock. What I object to is the 90-day paper, which is specified in this bill.

Senator Bristow. Yes.

Senator Hitchcock. You feel and I feel, as we both live in the West, that we have commercial paper out in our region which I might say is indigenous, which is characteristic of our region. It is much longer than 90 days. It is 4, 5, or 6 months paper—

Senator Nelson (interposing). Or for a year.

Senator Hitchcock. Or it may be for a longer time. But it is to all intents and purposes commercial paper, by reason of the fact that it liquidates itself out of the transaction from which it arises—that is, paper which represents loans to men who have cattle and feed those cattle during the winter and market them in the spring, and the funds thus received liquidate the paper.

I think if the bill is so extended as to cover that class of paper it would be an improvement.

Senator Bristow. That would be a very great improvement. I admit that. I will not take up the matter of the substreasuries, because that is Senator Hitchcock's special notion, and I think a very good one, and he can present that very much better than I can.

I am very much interested in the statements made by Mr. Fowler before the committee the other day, and the statement which he suggested, if it were practicable, would seem to me to be a very good one—that is, of leaving the banking situation just as it is, so far as
the organization of the banks goes, and permitting a bank to issue currency.

Senator Nelson. On its assets.

Senator Bristow. On its assets, when it is needed. And he illustrated it, when being interrogated by Senator Nelson. His idea was in this way, that if a customer came to a bank and wanted to borrow $10,000, he gave his note for the $10,000. That was a loan which the bank was perfectly willing to make.

Senator Nelson. A good loan.

Senator Bristow. A good loan. He wanted a part of it in cash and a part of it to leave subject to check. He took $5,000 in currency and left $5,000 subject to check, and he took a check book to check against his account, and the currency he took was the bank’s notes which, according to Mr. Fowler’s system, were secured by a 5 per cent deposit with the Government—a lien on the assets of the bank and on its assets, the capital stock and so forth, and which he pronounced would be perfectly good. This 5 per cent fund that was collected was to be a guaranty fund against these notes collected in the Treasury, and his idea was that only so much currency would be used as the commerce of the country demanded, and that it would be automatic—if a man wanted currency he could get it. What would you think of a system like that?

Mr. Vanderlip. The last proposition is so perfectly true that I wish you could all recognize it, that there would be only so much currency used as is wanted. I have referred to it a number of times, and I just want to emphasize that point. The most important thing that we need, however, the thing I referred to when I began this examination yesterday, is the mobilization of the reserves. Such a plan as you outline there makes no reference to it. The next thing is the elasticity of currency—an important thing, but not so important as mobility of reserves—the amassing of reserves in a single reservoir. That is what you must get in some form into a bill if it is to be correct. That expression makes me think that I heard myself severely criticized in the Senate during recess for having said in an interview that you must do this or that. Of course you know when I say you must do a thing, I mean you must do it to make the bill harmonize with what my views are of correct legislation. I do not sit here or talk to newspaper reporters, and say that the Senate of the United States must do this or that. I have a little sense left, and certainly enough to guard me from such a foolish position.

Senator Bristow. I was interested in the suggestion you made yesterday, which conveyed the idea to me that we ought to reduce the amount of national-bank notes that are now out, if this system is adopted, because any additional notes would make too much currency.

Mr. Vanderlip. We certainly have currency enough for a normal period. It is only in the exigencies of a crop-moving period that we need any more currency. Unless you will reduce the bank-note currency we now have, you will not be able to provide true and complete elasticity by means of your new note issue.

Senator Bristow. You think the new note issue would not be taken out?

Mr. Vanderlip. Yes; it would not be taken out, except for the peak of the load, except for that season where an excess is needed.
Senator Bristow. What harm comes—you say you would take it out for the peak and drop it after the work it does is ended. What harm is there in stopping there?

Mr. Vanderlip. One of the harms is that these several reserve banks ought to have the earnings that would come from such ability to issue currency. Another of the harms is, I am inclined to believe, that we have a redundant currency at certain seasons. You might challenge me to prove that, and I might have some difficulty in proving it. Certainly if there is a variation of $200,000,000 to $300,000,000 in our notes, then we are either redundant at one season or very scant at another. Now, we are going through the crop-moving season without any strain whatever for currency. Apparently we have ample currency to go through this crop-moving season. We have had some addition to it by the deposits which the Secretary of the Treasury has made, but if we had currency enough to conduct business at this season of the year, we have altogether too much currency to conduct business next March. We can not get away from that. There is where the harm comes. That is where you would fail to get true elasticity unless you took away some notes and made room for new notes.

Senator Hitchcock. If the currency is redundant next month, will not the inevitable result be the exportation of gold?

Mr. Vanderlip. That is certainly the tendency.

Senator Hitchcock. Will not that relieve the situation?

Mr. Vanderlip. It will relieve it; yes.

Senator Hitchcock. And will not that gold come back to us again, when the stress on the currency is there?

Mr. Vanderlip. Yes; except that it does not flow with perfect freedom. There is harm done to the trade in the exporting and importing movement. It would be so much better for trade to have you retire the notes than to have a movement of the gold, and then have the difficult conditions which attend the bringing of that gold back. We can issue a bank note very easily; we can not always import gold easily. We can retire that note very easily, and it is expensive to export gold. Expansion and contraction should be provided for in the notes, and not in the expansion and contraction of the volume of gold.

Senator Hitchcock. With the volume of currency depending wholly on the commercial paper, what would guarantee that against inflation?

Mr. Vanderlip. The guaranty of redemption, the fact that the note does not count in reserves, but will be turned in for redemption by the bank as soon as it comes in and the certainty that there is a no more fixed thing, no quantity that you can influence less by your legislative acts than the amount of money people will carry in their pockets. You might start with that as a fixed thing, but you really haven't anything to do with it.

Senator Hitchcock. You have already stated to the committee these notes will be accepted by 17,000 State banks as reserves.

Mr. Vanderlip. There is one of the troubles and weaknesses which I have no suggestion for removing, unless you can bring State banks into the system.

Senator Hitchcock. Some even advocate making them available for national banks as reserves.
Mr. Vanderlip. I cannot agree with that view.

Senator Hitchcock. And is there not some danger, in a currency based on commercial paper, that at certain times the country will become very venturesome and the demands for loans extensive?

Mr. Vanderlip. It is not money in the hands of the people that makes the country more venturesome; it is the ability to obtain credit. If this bill were drawn so as to be dangerous on the side of the expansion of credit, then I would say, "Beware." Now, it is so drawn that there can be a great expansion of credit, but I do not believe it will be too great, because I do not believe the bankers will permit this power to be unwisely exercised any more than at the present moment. The national banks have 60 or 70 millions in excess reserves, but they do not loan because they have that excess reserve.

Senator Hitchcock. Is it a matter of caution, of timidity, that now restrains the bank, often, from loaning money when there is quite an urgent demand? And if you take away that timidity, by giving a bank a resort it can go to with commercial paper, won't you remove the restraint and throw down the bars and permit a bank to lend money to borrowers to whom it would not lend if watching its reserves?

Mr. Vanderlip. Undoubtedly a bank will feel freer if it has a central reserve bank to go to to rediscount than it does now. You have to depend on the good judgment and conservativeness of that banker. If he feels he can rediscount any time, anything he has, and he is a reckless man, he will loan too much. But you will have as a governor the power of control of your regional reserve bank board, and of the Federal board. That is why I said that there is not an authority given to this Federal reserve board which it ought not to have. My objection is to the constitution of the board and not to the authority. If the bankers in a locality are getting reckless, if they are loaning more because they can rediscount than is wise for them to loan, there ought to be some authority higher up which can put a restraint on them.

Senator Hitchcock. Would you have it in the reserve bank?

Mr. Vanderlip. It will be in the reserve bank, and I would have it all the way up. I can well imagine, with as many as 12 reserve banks, you might find one with the territory represented getting less conservative than it should be and you might need a power higher up to control that.

Senator Hitchcock. Do you think there ought to be embedded in this law any guaranty to the individual bank that it can get discounts to any given limit?

Mr. Vanderlip. It is impracticable. You have got to leave that discretionary.

Senator Hitchcock. You would allow, then, the Federal reserve bank the full discretionary power to say to one man from a certain town, "We won't discount any of your paper," and to another man across the street, "We will discount half of your portfolio."

Mr. Vanderlip. You have got to leave that power to the reserve board, I think. You may say it will treat one banker unfairly. On the other hand, you might say if a bank knows, under any conditions, it can get rediscounts, it will act unwisely. Of the two, I will take the chance of unfairness, because I do not believe there will be any unfairness. I am a great believer in the fairness and honesty of
people in general, and certainly the fairness of people in responsible positions.

Senator Hitchcock. I want to give you an illustration of the unfairness of persons holding a responsible position. I suppose the character of the men that run the railroads of the country is as high as the men who run the banks of the country, and yet one of the most outrageous discriminations grew up in the railroad world, in which the States and Congress had to take a hand. They were saying to one shipper, "We will charge you one rate," and to another shipper, "We will charge you another rate." They would say to one passenger, "You pay full rates," and to another passenger, "You go free." The law had to step in for the protection of the men and compel equal treatment. So should not the law step in and say to these banks that they shall give equal treatment?

Mr. Vanderlip. You have provided for the law to step in by creating this Federal reserve board. Of course, back of the law that you speak of, there first had really to grow up a new body of ethics. They were new problems. We had gone on a great many years supposing when we sold wholesale we sold cheaper, and men's minds did not grasp the ethics of that situation, and that is one of the troubles to-day. We have developed industry and we have gotten many new elements in our social system. We are developing new ethics, and that is part of this radicalism we are talking about. We are developing a new code of ethics that did not exist before our time, and we ought to have patience with one another about that.

Senator Hitchcock. Do you think any injury would come if the law provided that the reserve bank should rediscount the notes of a bank in any community to an extent, say, of its capital stock, providing the notes were good?

Mr. Vanderlip. Right there—providing the notes are good. Who is to be the judge?

Senator Hitchcock. I will say, without that provision, discount the notes.

Mr. Vanderlip. I would certainly think a loan under compulsion, where you could not scan the credit, would be an impossible thing.

Senator Hitchcock. These banks are all under constant inspection, and the law provides an inspection of these regional reserve banks.

Mr. Vanderlip. Nevertheless, you can not trust to inspection. Anybody who ran a bank recklessly might get bad paper in its portfolio, which could be offered for rediscount.

Senator Reed. Would not that leave a bank in dire straits, in this sort of condition: It could take, say, $100,000 of its absolutely worthless paper and bring it up to the Federal reserve bank, and compel the Federal reserve board to cash that absolutely worthless paper, where the bank itself was tottering to its fall?

Mr. Vanderlip. Oh, yes. There must be the right of discretion by the loaners of money.

Senator Hitchcock. In the first place, a bank has one tenth of capital already invested.

Mr. Vanderlip. Yes.
Mr. Vanderlip. Practically I can not conceive that there would ever be a time a properly run bank would not be able to borrow. I think the reserve banks will be run with wisdom, discretion, and fairness and any bank will be able to rediscount. They must hold themselves in such a position so they will have the power to rediscount.

Senator Hitchcock. Now, let me ask you this question, Mr. Vanderlip: Suppose the reserve bank rediscounts half of the portfolio of the bank. Say it discounts half a million dollars of its portfolio and it gives it that line of discount. A bank across the street, of the same size, it gives one-tenth of the portfolio, worth $100,000. What advantage does this give to the favored bank? Is not it a very large advantage? Would not it result in enabling it to get control of the business?

Mr. Vanderlip. It would be a great advantage for one bank to be able to discount half of its portfolio while the other was permitted to discount only one-tenth. There certainly would be just grounds for complaint. If the two institutions were on all fours, a complaint to the Federal board would certainly bring action, but I do not believe any board of directors elected to the Federal reserve bank would discriminate in that way. They would be fair-minded men. That would be a rank, gross discrimination if the two banks were on all fours. Nevertheless, I think they ought to have the power to permit one bank to discount half its portfolio and another bank to be restricted to one-tenth if the other bank was being run in a way not to warrant the discount.

Senator Hitchcock. Then you would place no limit at all on the amount of discount that might be made for a single bank?

Mr. Vanderlip. No, sir.

Senator Hitchcock. You would leave that discretionary with the board?

Mr. Vanderlip. I think it can well be left to the board.

Senator Hitchcock. What is the motive for that? What is the reason for having any limit to the amount of discount?

Mr. Vanderlip. If you want to have some limit, I would put that on for fear there might be inflation. That would be the motive. I would limit it to twice the capital and surplus—something like that—which would be a point that no bank ought to reach, and probably would not.

Senator Hitchcock. I am glad to hear you say so. I think there ought to be some limit.

Mr. Vanderlip. I think it would be a desirable thing to put a limit that was large enough.

Senator Reed. Put a limit on the extent of credit, but not upon the right to refuse to grant the credit?

Mr. Vanderlip. No; I should leave the right to refuse with the board.

Senator Reed. That is what I say.

Senator O'Gorman. You would feel satisfied that if the power of the officer of the reserve bank was improperly used that the Federal reserve board, on appeal, would correct the injustice?

Mr. Vanderlip. Yes, sir.
Senator O'Gorman. And perhaps remove the offending officer of the regional bank?

Mr. Vanderlip. I should think it would be very proper.

Senator Pomerene. There has got to be a discretion lodged somewhere.

Mr. Vanderlip. I think so.

Senator O'Gorman. I have only one question further to put to you, Mr. Vanderlip. Yesterday you said, I think, that the plan contained in this bill, to issue Government notes, is unscientific. I do not know whether you amplified that viewpoint or not. If you have not, I should be glad to hear from you further, why it is unscientific.

Mr. Vanderlip. The note is really the obligation of the bank. It is secured by segregation of the bank's assets, in the form of commercial paper. It ought to have almost the same relation to the bank that a deposit balance of the bank has. It is a demand obligation of the bank. It is not a Government note; it does not pretend to be that, although it is issued and bears the name of the Government. Its whole security lies in the bank, in the segregated assets, in the reserve held against it, and in the superior lien which it has upon all the assets. I see no reason why the Government should have any relation to that note in the way of a guarantor. The Government will have an outstanding obligation with no gold cover back of it. Except for the 5 per cent redemption fund which the bank deposits, the only resource which the Government has is by turning to the bank, and the enforcement of the lien on its assets. And it seems to me entirely improper that the Government should be the maker of this note, or the guarantor of it. Indeed, I think it improper that it should receive so-called interest for it, as all of the profits of this bank are to come in the hands of the Government eventually.

Senator O'Gorman. It is not anticipated under the system planned that there will be a profit beyond 5 per cent. As Senator Owen has very properly phrased it on other occasions, it is really to be an eleemosynary institution, and there is to be no motive to earn anything beyond the guaranteed 5 or 6 per cent.

Mr. Vanderlip. I can see no more reason for the Government to guarantee one of these liabilities of a bank, in the form of a note, than to guarantee a deposit. The note is fully guaranteed, I believe.

Senator O'Gorman. In other words, you would not expect the Government, even under this plan, to take the risk?

Mr. Vanderlip. No. If it is not safe I think the Government ought not to take a risk, and I think if it is safe it need not take the risk.

Senator O'Gorman. And you feel if it is safe, the person dealing with the regional bank, ought to be satisfied with it?

Mr. Vanderlip. Certainly.

The Chairman. I think it my duty to remind the committee that only an hour and a half remains, and there are some gentlemen here from Iowa whom we promised to hear this afternoon.

Senator Hitchcock. There is one more question I would like to ask. I see under section 6 of this bill when a bank becomes insolvent and a receiver is appointed, the stock held by it shall be canceled and the balance, after deducting from the amount of its cash paid subscriptions all debts due by such insolvent bank, shall be paid to the receiver of the insolvent bank.
Mr. Vanderlip. That would seem to be a proper provision.
Senator Hitchcock. So that the bank would have some security—the reserve bank would have some security.
Mr. Vanderlip. Yes; for a forced loan you speak of it would have to depend on the stock value and the security of whatever reserves are held.
Senator Nelson. And whatever the subscription will be.
Mr. Vanderlip. And whatever the subscription will be also.
Senator Hitchcock. Now, I want to ask you whether you do not think it better for the reserve bank occasionally to suffer a possible loss, as a result of a certain commercial paper turning out to be deficient, than to leave the banks absolutely without any assurance that they will get relief even to the extent of their capital?
Senator Nelson. You mean the member banks?
Senator Hitchcock. The member banks.
Mr. Vanderlip. It would probably be safe enough to say that the reserve bank shall loan to an amount equal to the stock subscription and the reserves which they hold. I do not consider it at all necessary. I do not believe any bank would be afraid it would receive no consideration at the hands of the board at the Federal reserve bank—that there would be such discrimination as you indicate there might possibly exist. I can not conceive that.
Senator Hitchcock. You mentioned a moment ago in such a case the bank might appeal to the Federal board. But what chance do you think there would be, after a bank had perhaps suffered a loss and it had gone to the reserve bank for relief, appealing to Washington under those circumstances?
Mr. Vanderlip. The appeal would be in the nature of a post-mortem communication.
Senator Hitchcock. Not only that, but the very fact that the bank had been turned down at the reserve bank would intensify the fear in the community, and might result in greater loss.
Mr. Vanderlip. It would not be turned down under those circumstances if it had any proper collateral.
Senator Hitchcock. Why not say so in the act?
Mr. Vanderlip. Because it might not have proper collateral, and if you leave it discretionary as to whether or not the collateral is proper, you leave the whole thing discretionary.
Senator Hitchcock. I do not know. I think, as I said formerly, you ought to specify the whole thing in the bill and leave as little as possible to the discretion of the officers.
Mr. Vanderlip. May I be excused?
The Chairman. Yes; we are much obliged to you.
Mr. Vanderlip. I thank you.
The Chairman. Judge French, we will be glad to hear you now and we will be glad to have you state to the reporter your business and your point of view from which you speak.

STATEMENT OF NATHANIEL FRENCH, OF THE FIRM OF FRENCH & HECHT, MANUFACTURERS, DAVENPORT, IOWA.

Mr. French. I reside at Davenport, Iowa; and I am a member of the firm of French & Hecht, which is engaged in manufacturing. I am here as a business man who, unfortunately, at times has to borrow. For that reason, in common with all the business men of
the country, I am very much interested in having a banking system which will be both safe and yet able to accommodate the solvent business men of the country when increased business needs compel them or make it desirable for them to borrow money from the banks.

My experience from 1803 to 1806 was that our present system at that time—owing largely to the uncertainty in regard to the standard of value, and also to its inelasticity and the rigidity of reserves—did not take care of the business man. In 1907 I had the same experience. While not a personal sufferer, I saw a great many business men suffer who had ample means, plenty of collateral, and yet could not obtain currency from the banks.

The business men of the country sincerely hope that Congress will succeed in passing some law which will make our currency elastic and which will mobilize our reserves. We are of the opinion that, as a practical proposition, we have about the worst banking and currency law that was ever enacted in any country. We have heard of the Bank of England, which is cursed with an inelastic currency, but which mobilizes its reserves in such a wonderful manner that the business man in that country can get accommodations if he is solvent and has good collateral, even in times of financial stress. In Germany there is not only the mobilization of reserves, but there is elasticity to the currency. In France there is the greatest elasticity and also mobilization. In this country alone we have neither mobilization nor elasticity. This looks wrong to us business men, and we hope you will bring about better conditions.

Now, as regards this bill, I want to look at it from a plain, business standpoint. I think that if you enact the bill, even as it stands now, it will create a great reform; you will have gone a long way in the right direction. But I do not think the bill as it stands now could easily be put into successful operation. It would be difficult to get all the national banks, particularly the country banks, to go into it. Many of the State banks, perhaps nearly all of them, would refuse to go into it.

It does not do much good to enact an admirable law if you cannot put it into working operation, and you gentlemen are confronted with the problem of how to make this law acceptable to the national banks and also to the State banks which do commercial business. As a business man I have had occasion to talk with my fellow businessmen on this subject and have been impressed by certain objections which seemed to be prominent in the minds of all of them.

One objection is that they are afraid that through the power of the administration or the President to appoint the Federal reserve board—the dominant authority over the whole system—it may possibly drift into politics. They do not think it will, but they are afraid it might. And they also think that the banks which furnish the capital and the deposits to a large extent should have something to do with this board of control which will really manage the whole system. Now, I for one—and I think I represent the average business man—would not be willing to have the banks have control of the system. We do not believe the bankers are any better or any worse than men generally, but we believe it would be entrusting too much power to people whose sole business is to make money.

For that reason we should like to see the Government control it, but we naturally want it kept out of politics. We should not like to
see the President have the power to appoint the entire board of control during his administration. The provision in the bill that no more than two or three, whichever it is, shall belong to one political party is excellent so far as it goes, but the bill would be greatly improved if you provided that two or three of those members should be chosen by the banks; not directly chosen by a vote, but by making out a list of men experienced in banking, not at the time actively connected with any bank or who would sever their banking connections, and having the President choose from this list of names.

Senator O'Gorman. Do you not think the President will select competent and probably experienced men for the board?

Mr. French. I think the President will. The present President I am sure will; I am not sure that every President always will. I think there is a good deal of scare that is not warranted, perhaps, but still it is there, and a great many people feel it. I know some people have named a certain ex-President and said they would be afraid of him. I would not be, but a great many are.

And then I think, as a measure of justice, it is only fair that if you tell the banks they must put into the new bank a portion of their capital and deposits—and I think you have a right to do it as a matter of law—

Senator Nelson (interposing). You mean their reserves?

Mr. French. Yes; if they must put in their reserves as well as a certain portion of their capital, they will have the natural feeling, and I think the business men of the country agree with them, that they ought to have something to say as to the make up of the board of control which will dominate the whole system. If we want to get the banks to enter the new system, we must make it acceptable to them. By not giving any representation to the banks on the board of control, we prevent the bill from being acceptable to the banks and also to many people (whether interested in banks or not) who fear that some President at some future time might misuse his power to control the board. This fear may have little basis, but exists in the minds of many.

Senator O'Gorman. Do I understand you to say there might be a President who would remain forever?

Mr. French. No; who would like to remain forever.

The next objection to the act is in regard to the constitution of the directors of the regional banks. The banks select six of the nine. This Federal board of control, the dominating influence, selects three, one of whom has to be the agent of the Government and have certain large powers. Of the three selected by the banks, denominated directors of class A, there is no provision for arbitrary removal. As to the three denominated directors of class B, who are to represent commercial and agricultural interests, there is a very general provision that the board of control may remove them when they think they do not fairly represent those interests. There is no provision for accusation or hearing or trial or anything. It is absolutely arbitrary power.

So you see this board of control, on which the banks are not even to have a minority representation, can also control the regional bank through its arbitrary power of removal. You may say the board of control does not appoint the three in class B, but it has the power of removal, which is something a great deal more powerful than the
power of appointment. Men, after they are appointed, sometimes become independent, but men who can be removed by the arbitrary action of some superior power are apt to be very subservient to that power.

Senator Pomerene. Do you think the banks would elect somebody who could be subservient?

Mr. French. They select the names, and I think these men, when they found they were subject to decapitation at any moment if they did not comply with the wishes of the board of control, would be subservient at some time or other.

Senator O'Gorman. Subservient to whom?

Mr. French. The board of control.

Senator O'Gorman. It is to be expected that that would be the dominating influence in this system. You must have a dominating influence. On the other hand, the members of the board of control would be under the influence of the power of the President, and the people should have confidence that the power would be wisely and judiciously exercised.

Senator Shafroth. The power of the board would not likely be exercised. When they have not the power to reappoint—

Mr. French (interposing). I know, but if they have the power of removal I think those men would be very likely to comply with their wishes rather than be removed.

Senator Shafroth. Not so much so as if they had the power of reappointment.

Mr. French. No; that would be an even greater power.

Now, another suggestion. The Federal board of control is to appoint three members of that board. I think it would be sufficient to appoint one and let him be paid by the Government of the United States and be absolutely independent. He is the one who is to receive this collateral to secure the notes.

I am mentioning these things as things I have heard in common talk.

Now, as regards the country banks, from what little I know about them, I should judge they feel that 5 per cent is altogether too small a return upon the capital which they invest in the bank; that they ought to get at least 6. Then there is a strong feeling that they ought to get interest on their deposits. In these respects it is not made, I believe, sufficiently attractive to them.

Senator Shafroth. Suppose they could borrow this amount which they put in—borrow it back at 2 per cent? Would not that be an inducement for them to go in, get 5 per cent on it, borrow it back, and have that to loan out at 2 per cent?

Mr. French. They do not figure in that way. I was talking to a gentleman the other day and he said he hoped the bill would be passed. I said, "Will you go into the new system?" He said, "No; we would be under certain disadvantages; we can get the benefit of the rediscounting feature through our correspondents without going in ourselves."

Senator O'Gorman. Suppose there should be a prohibition in the act preventing any bank from securing the benefits of the system through a correspondent. That particular bank, then, I suppose, would go into the system?
Mr. French. I think likely. I think perhaps such a provision might become necessary.

Senator Hitchcock. You can not make it work. If this imaginary country bank comes to a city bank for a rediscount, the city bank can rediscount for it, and then present other commercial paper with the regional bank, and accommodate its country depositor very easily.

Senator Shafter. Do you think a national bank would undertake that if it were a penal offense?

Senator Hitchcock. It would not be a penal offense.

Senator Shafter. You could make it a penal offense. Of course, it might be difficult to find it out.

Senator O'Gorman. That would be altogether too drastic a provision. We might have a provision that no national bank should attempt to rediscount accommodation paper of that character that it had received from a bank not in the system.

Mr. French. Is not the real solution of the question to make it an advantage to the banks to go in?

Senator O'Gorman. Surely.

Mr. French. I very much fear that if the national banks find that after this law is passed they are at a disadvantage with the State banks they will drop their charters, become State banks, and then take advantage of the law by entering the system as a State bank. Well, from one point of view that may not be so objectionable, but the transition stage, I am afraid, would be bad for the business of the country; it would be unsettling.

There is another thing in the bill I wish to call your attention to, and that is this: You have a very wise provision that the reserve against deposits may be suspended on payment of a progressive tax. That is a very wise provision, but in the same paragraph you add, but you shall not suspend the reserve requirement as regards notes. Now, to an ordinary business man who does not pretend to be a banker, a reserve that you can not use is worse than useless. The only country in the world, so far as I know, that ever required a bank reserve and then prohibited its use, is this country. And it seems to me that reserve against the notes should be utilized when made necessary by some great emergency.

In England, where they have not any currency to speak of at all, where the notes issued by the Bank of England are practically warehouse receipts for so much gold lying in the other division of the bank, with the exception of $90,000,000 which has been always outstanding and secured by the public debt—in that country when there is a great need for money, when, despite the admirable mobilization, they are near a state of panic, the Government says: "We will suspend the provisions of the banking act and allow you to issue uncovered notes," and it always stops the panic. In Germany they go on issuing notes, but pay a certain tax: as the reserve goes down the tax goes up. As regards the Bank of France, there is no limitation at all.

Senator Hitchcock. I think in France there is a limitation upon the amount of notes the bank can issue.

Mr. French. There has been a limitation, but placed very much beyond its needs, and every time it has asked for a change that limit has been pushed further off. It is believed by all the banks, by the
French people, and by every writer on the subject, that that limitation is a mere matter of form rather than of substance.

Senator Hitchcock. Why is it kept?

Mr. French. I do not know why they have put it there.

Senator Hitchcock. Is it not just kept for emergencies?

Mr. French. Why, whenever an emergency comes they change the limit.

Senator Hitchcock. But is it not kept as against an emergency, so they would have that margin to go upon?

Mr. French. No; I should not say so, because in ordinary times they would never issue anywhere near that limit.

Senator Hitchcock. That is true, but I understand the change has come that the growth of the Bank of France has never been met in an emergency. It is to accommodate the increasing business of the bank and add in part to the increased reserves which the bank holds.

Mr. French. They have always put it ahead in times of prosperity and made it so much beyond the notes they were issuing that there could be added enough note issue to take care of the emergency.

Senator Shafroth. Do I understand you to say the national banks are prohibited from using their reserves?

Mr. French. Yes.

Senator Shafroth. I understand the law to be that they can use them and can cut into them to any extent, except that the comptroller can notify them to replace them in 30 days.

Mr. French. If they obey the law they will never cut into the legal reserve. A bank usually carries a bigger reserve than the legal reserve. The excess over the legal reserve, of course, they use to suit themselves. The legal reserve, if they obey the banking law, they have no right to cut into.

Senator Hitchcock. Don't you mean that they can not continue loans after they get down to the legal limit; they can pay depositors, but they can not continue loans.

Mr. French. No; they can not make additional loans. They have to stop and make that good.

Senator Hitchcock. But they can continue paying depositors.

Mr. French. They might continue paying depositors. I do not doubt that part of it; that is discharging a liability.

Senator Hitchcock. And they can continue to take deposits if they are in a solvent condition, but the reserve might be down to 10 per cent.

Mr. French. Oh, it can go still lower than that.

Senator Hitchcock. They could still pay depositors and continue taking deposits.

Mr. French. But for an institution performing the functions of a bank, one of which is to lend money, it seems to me that a reserve is utterly useless, as regards this function, if you are not allowed to use any part of it for that purpose.

Senator Shafroth. But you still have the use of it in paying out to persons who demand it at the counter on their checks.

Mr. French. Yes; but that alone would not stop a panic. The panic usually comes from the fact that solvent business men are unable to get the money at banks to pay their current bills, whether it be for labor or for merchandise or for other things. The foreign systems stop the panic by loans to solvent business men.
Senator Shafron. They can get it if they have it in the bank, but cannot borrow it.

Mr. French. They can get it until the bank closes its doors. The system is so bad that in 1907 the banks of the country had to go to work and devise some way outside of the law to issue money when they got down to their reserves. They issued what might be called clearing-house checks.

Senator Shafron. What would you suggest as a remedy?

Mr. French. Why, to loan the reserves.

Senator Shafron. And put no limitation on it?

Mr. French. It is under the control of the Federal board of control. They would fix the limitations. It would be well to increase the tax, as is done in Germany, when the reserve goes down, and as is required by this bill with respect to the reserve for deposits.

While we are talking on this subject of loaning reserves I wish to be understood as expressing the opinion that this will often help to prevent panics, but not as saying that we will never have commercial crises and industrial depressions which grow out of the unwise actions of business men. We can prevent such a panic as occurred in 1907—through the breaking down of our banking system—by provisions for an elastic note issue, the mobilization of reserves, and their use in time of need.

There is another thing that occurred to me in reading this act. After reading it carefully I could not make out what became of these Federal reserve notes after they had been redeemed, either at the counter of the bank or at the Treasury of the United States. I asked a banker what he understood, and told him I would put a case. Suppose that bank A, a national bank in Davenport, Iowa, has called upon a regional bank to rediscount its paper to the extent of $100,000, in order to get $100,000 of these new notes, saying, "We have here for your inspection the collateral, 60-day business paper." The answer is, "Yes; we believe that the conditions warrant the issuing of that much additional money; business demands require it. You shall have it. Here it is."

That same day that bank A pays out $50,000 of that money to different people who borrow it. On that same day some one who has come into possession of these notes takes $50,000 of them to the regional bank for redemption. The notes are redeemed. What becomes of these notes? Are they to be canceled or is the bank to pay them out again?

Senator Hitchcock. It is prohibited from paying them out under heavy penalty.

Mr. French. No; another regional bank is prohibited from paying out notes not its own. I am now asking you—

Senator Nelson. Here is the point about it. If the notes come into the bank and are redeemed by the bank they can not go out again unless there is a demand for them and they are loaned out again. If a regional bank redeems its notes in gold and retains the notes they can loan them out again upon proper security.

Mr. French. The collateral of $100,000 to secure the notes is still in existence, held by the bank, to secure $100,000 of notes, the issue of which was required by business needs. Some one who happened to want to send gold abroad has presented $50,000 of them at once.
What I ask is whether it is necessary for the regional bank to make application to the board of control, perhaps the next morning, and say, "The power which you gave us yesterday to issue $100,000 of these notes has become nugatory through force of circumstances as to $50,000; $50,000 of these notes have been redeemed by us. We hold collateral for $100,000 of these notes and wish to reissue the $50,000 of notes we have redeemed.

Senator Shafroth. But he has already got it, and he has loaned his money out that he got from the regional reserve bank, and no demand can be made upon it until the 60-day paper matures and then it comes in automatically.

Mr. French. You understand, then, he would not be required to redeem that paper; that is, the member bank that has deposited it for collateral?

Senator Shafroth. Of course he would be required to pay his paper that he has hypothecated. There is a confusion as between the redemption feature of the notes and the credit system which he exercises by reason of going there and hypothecating his collateral. He may get new notes issued to him, or he may get notes that are in the bank already, consisting of these reserves or consisting of the capital stock. For that reason, it seems to me, when they are redeemed and he gets his gold, the bank holds them there until there is some kind of demand for them, and when this 60-day paper matures it also pays back, and consequently they have gotten into their hands, of course, a large amount of money, but they can give it out again if anybody presents paper.

Mr. French. How are they going to hold them out? They may come into the regional reserve bank, exhausting its gold. How is that to get out again?

Senator Hitchcock. I do not think there is any doubt of this proposition that if a note belonging to one regional bank goes to another, that other bank can either charge it to the Government of the United States and send it to the Treasury, or it can send it to the regional reserve bank which issued it. If a note issued by a regional reserve bank comes in it can be paid out again—

Mr. French (interposing). By the same bank?

Senator Hitchcock. By the same bank; but it is not valid as a part of its reserves.

Mr. French. I understand that, but whether it can be paid out by the same bank—

Senator Hitchcock (interposing). Undoubtedly; the same bank can either present it to the Government—

Mr. French (interposing). What is the object, if I may ask the question, of the provision requiring one regional reserve bank to send for redemption the notes of another regional reserve bank, irrespective of whether the collateral put up to secure the note is still there or not? The Federal board of control has decided that business requires the expansion of the currency by so much. By mere chance a large part of this money issued by one regional reserve bank drifts into another regional reserve bank. Now, that bank is required not to issue it, but it is sent off by train to the other bank. It becomes dead from that minute, notwithstanding the decision of the Federal board of control that that much increase of currency was needed and notwithstanding the collateral is up to secure it and notwithstanding...
the gold reserve is up. It seems to me they have provided for a lot of unnecessary machinery.

Senator Shafroth. It is done, no doubt, for the purpose of retiring this currency in some form and thereby getting over the exigency of its issue. I do not know that it is a wise provision.

Mr. French. Let me suggest why it was done. That provision was taken from the rules governing the Suffolk bank, where they depended entirely upon constant redemption to keep the notes on a parity with gold. In this case we have a deposit of commercial paper and also a gold reserve. And when you say that when a regional reserve bank gets the note of another reserve bank it must withdraw it from circulation, you have then come into direct opposition to the decision of the Federal board, which has decided that the needs of the country for currency were such that this currency ought to be outstanding.

Now, you cannot say that it is the policy to have each regional reserve bank in the country redeem all its own notes, because you will find another provision in the law which says that any regional reserve bank may at any time decrease its liability on account of its notes by paying into the Government of the United States or to any Federal reserve agent lawful money of the United States, recognizing that when this note is once out it may never be redeemed, and recognizing also the principle that, although you do not redeem the particular note, yet, when the time for contraction has arrived, if you decrease some part of the currency, whether it be greenbacks, national-bank notes, or gold coin, and lay that aside, you have accomplished exactly the same purpose as if you hunted up these notes and canceled them to the extent of the money laid aside.

Senator Shafroth. But will not this provision have a tendency to cluster that bank currency, or this reserve note, and thereby place it so they can retire that absolutely and let loose these United States notes which have been taken up and which you say have been set aside? Is it not a means of clustering the paper issued under this bill?

Mr. French (interposing). It would help them to get it, but is there any object in their doing that?

Senator Shafroth. Some people think when you once issue money it is only needed for a short time, and thereafter should be retired.

Mr. French. When you set aside gold coin or greenbacks against these notes, do they not occupy the position of the gold certificate? There is gold set aside for the gold certificate in Washington; you might as well provide that every two or three months it should be sent on and redeemed in gold.

Senator Hitchcock. Judge, following up this hypothetical case that you state, suppose a regional reserve bank receives a bundle of notes that have been issued through another regional reserve bank, and it sends them to the Treasury of the United States for redemption. They are then redeemed out of the 5 per cent gold fund belonging to that particular regional bank, and then forwarded to the regional bank. Now, the regional bank can then issue that again.

Mr. French. That is just the proposition I started out with. I asked two gentlemen and I got opposite answers from the two; one said they could not reissue it and the other said they could.
Senator Hitchcock. Now, if, instead of that process, this first regional reserve bank sends these notes to the regional reserve bank through which they were issued, it will get a credit in return on the books of that bank, or a remittance of gold, and the bank receiving these notes will then have the option of paying them out again to those who may come for money.

Mr. French. If that is the fact, it will carry out the spirit of the act. The act will then keep in existence the money until the need for it has passed by. But unfortunately a great many people understand it just the other way. They tell me they are to be canceled whenever they are redeemed.

Senator Hitchcock. But that would not be possible because of the provision that the Treasury, when it redeems those notes in gold out of the reserve fund, immediately sends them to the bank through which they were issued, giving that bank the privilege of retiring them.

Mr. French. It should have it. But, as I said before, people understand the act differently. It should be made plain. You can only have such expansion as the board of control desires, and one regional bank ought to have an option whether it will pay out the notes of another regional reserve bank or send them in for redemption. The moment the collateral which secures them is paid off, then the currency should be decreased by the amount of the collateral, either by retirement of that amount of these notes, if at hand, or the deposit of a like amount of lawful money with the Government.

Senator Hitchcock. Of course, it is true the regional reserve bank which has received these notes must either pay them out or ship them for redemption, because it can not count them in its reserve.

Mr. French. Why should it not pay them out? But the law does not permit them to pay them out; it says they must ship them for redemption.

Senator Shafroth. It will take some little time to send them to Washington and get United States notes, but it seems to me it is not any more than right.

Mr. French. The point I make is that to the extent that the redemption does take place you are contracting the currency in violation of the spirit of the act, and you are incurring a needless expense in doing it.

Senator Hitchcock. That contraction is only momentary.

Mr. French. It may be only for a day or two, but why have even temporary contraction when not warranted by needs of business? Why not give the regional bank the option to pay them out or send them to the other bank for redemption?

Senator Shafroth. The national banks which get hold of the national-bank notes of another bank could reissue those to the people, but they do not do it because they need some money for reserve money and consequently they send it to the Treasury.

Mr. French. They do not have to.

Senator Shafroth. No; they do not have to except to get more money.

Mr. French. They do it when it will serve their purposes. In the case of the regional reserve notes they have to send the notes in for redemption.
Senator Shafroth. Do you think there ought to be more money that will act as reserves than we have at the present time?

Mr. French. Do you mean to let all reserves be increased?

Senator Shafroth. No; I do not mean that. I am referring to the character of the money that can act as reserves.

Mr. French. No; I would have a reserve of nothing but gold.

There is another thing that I have heard often discussed. Business men think from 1863 to 1896 we suffered, and it was because the people of this country had not fully made up their minds as to whether we were to be on a gold or some other standard. Now that it is decided we are on a gold standard, there should not be anything in this bill that will throw any possible doubt on the standard, but there should be everything in it that can appropriately be put in to maintain the standard. Instead of requiring the regional reserve bank to redeem in gold or lawful money it should be in gold.

Senator Shafroth. Do you not think that would have a tendency to deplete the gold reserves instead of fostering the gold standard?

Mr. French. No; I think it would be the other way.

Senator Shafroth. Take, for instance, $100,000,000 issued by the Government, and they have $100,000,000 of greenbacks payable in gold and then $100,000,000 of this currency payable in lawful money. Suppose a man who had $1,000 of this currency goes to the regional reserve bank and says, “I want gold,” and the regional bank says, “No, we can not give you gold, we will give you lawful money, and we will send them to Washington. If you want to get gold for that you can take it down there.” Suppose he takes it to Washington and he gets $1,000 in gold in Washington, according to the terms of the bill. So the Government, by this operation, has practically redeemed $2,000 in currency by $1,000 in gold. The regional bank says, “If there is going to be plenty of gold I will lock this regional money up.” When they come down to the National Treasury he says, “I will lock those United States notes up,” and by the payment of $1,000 in gold you have practically put out of power and out of the existing gold reserve $2,000, and is that not an advantage to the gold reserve instead of a disadvantage?

Mr. French. I have not been able to follow you, but I think I can answer your question.

Senator Shafroth. Let us take it this way, then. Do you not see that the moment you have 12 places where a man can go and demand gold it is going to make 12 competing points for gold, each of them competing against the Treasury of the United States, because the United States has to have a reserve to redeem these very things that come in from other banks, and each one of these banks has to have a gold reserve, and they can not limit it to a certain amount. They have to have sufficient to protect them, and thus it will take a great deal more gold under those circumstances than if you make them redeemable in gold or lawful money.

Mr. French. I should think the amount required to supply the demand for gold would be exactly the same whether you had it scattered in 40 places or only had it in one place. It would be only a little more inconvenient.

Senator Reed. I would like to ask how the Government of the United States is going to have a single dollar of gold. It also says
that every dollar shall be taken out of the Treasury and put in the reserve banks, on special deposit.

Senator Shafroth. There ought to be a central place.

Senator Reed. I am suggesting if you had your idea in operation it would involve a somewhat radical change in the other statute.

Senator Shafroth. It might do that, but it involves a radical change now. In fact, you have created a gold reserve in Washington for the redemption of those notes.

Senator Nelson. The bill provides for 5 per cent of the capital and a 33\(\frac{1}{3}\) per cent reserve should be kept on deposit.

Senator Reed. That is inadequate.

Senator Nelson. I think it ought to be 10 per cent.

Senator Shafroth. Do you not think the national-bank notes, by reason of being payable in lawful money, has relieved the national banks very largely from holding gold?

Mr. French. It has not relieved the amount of gold that had to be held either by the Government or the national banks—one or the other. One or the other of them has to hold, to maintain the gold standard, that gold so that there will be a sufficient amount of it, or you cannot maintain it.

Senator Shafroth. Was that not put in the national-bank act for the very purpose of relieving that strain, and letting a large amount of money flow, which would ultimately be redeemable in gold, but which, by reason of the difficulties that exist in getting it there, would not be the case except with a person who wanted it for foreign shipment?

Mr. French. I do not think the character of the money you can ship can affect the demand for gold or the amount necessary to keep your currency safe. The point I make here is that at the present time there is an ample supply here of gold for these reserves. If, through any cause or other, our currency should ever become redundant, the money which would leave this country would be the gold. If we require a certain amount to be kept for our reserves in gold, it is not so likely to leave the country.

Senator Nelson. What about these bills? The bill provides they shall be a promise of the Government and issued by the Government.

Mr. French. I would either leave off the promise of the Government or I would put it on and make them legal tender. I would not have a halfway thing. I do not believe it is necessary to have any promise of the Government. I believe they will be strong enough without it. It can not hurt them. I am not afraid of having the Government help to maintain the banking system.

Senator Shafroth. What objection is there to making them a legal tender?

Mr. French. I do not think there is any, as far as I am concerned.

Senator Shafroth. Would it not strengthen the currency to make them legal tender?

Mr. French. Then it would strengthen something that would be perfectly good. The objection made by some to the Government making the promise to pay the notes and the objection to making them legal tender comes from the idea held by these persons that the Government should not go into the banking business, and that there-
fore it ought not to promise to pay the notes or make them legal tender.

Senator Nelson. And it ought not to do it?

Mr. French. It ought not to do it according to this conception of those who object to having the Government connected with the banking business. Personally I do not think the banks should be allowed to manage the whole thing themselves. The Government should be in control, and, on principle, I see no objection to making the notes legal tender. I think it would be unwise to have the Government redeem in the first instance, and the banks should do this.

Senator Reed. I want to say that the statement I made about the money coming out of the Treasury ought to have been made with a qualification, and I intended to make it, was the qualification in regard to the 5 per cent fund for redemption, which is left there.

Senator Nelson. It is a question there whether it would not take the $150,000,000 gold in the Treasury that is left there as redemption fund for the greenbacks.

Senator Reed. The section reads:

That all moneys now held in the general fund of the Treasury except the 5 per cent fund for the redemption of outstanding national-bank notes shall, upon the direction of the Secretary of the Treasury, within 12 months after the passage of this act, be deposited in Federal reserve banks, which banks shall act as fiscal agents of the United States; and thereafter the revenues of the Government shall be regularly deposited in such banks and disbursements shall be made by checks drawn against such deposits.

Senator Nelson. I think, Senator Reed, that $150,000,000 under the act of 1900 is a special fund.

Senator Reed. It is; and any man who wants to can take the greenbacks and have them redeemed and get it, and in that way it can be defeated. Banks could take the gold certificates and take that fund up, and, as far as I see, there would be practically nothing left except this 5 per cent fund. However, that is a matter which can be easily fixed in the bill, and I am calling attention to it because I think it is a matter that should be considered.

Senator Shafroth. Under the bill as it is, it is redeemable in gold or lawful money, which contemplates that these bills, if the banks are short of gold, will be redeemed in lawful money, and that as they find their way into other banks or come into the National Treasury for redemption that only 5 per cent will be necessary to redeem them all in gold—all that come in.

Senator Nelson. That has been the theory we have acted upon, but it has not been sufficient.

Senator Shafroth. No; it is still 10 per cent.

Senator Reed. To redeem?

Senator Shafroth. Yes; and the experience with national-bank notes—

Senator Reed (interposing). Ten per cent there and 33 per cent at the banks might do it.

Senator Shafroth. Ten per cent there would do it, without any gold in the banks at all.

Senator Nelson. Here is the point: If we require the banks to keep 10 per cent, we will always have a supply of gold in the country.
Senator SHAFROTH. I suppose it is impossible to prevent gold from going out of the country if it is demanded in a foreign country and if the demand there is worse than in our own.

Senator REED. When it is taken away it stops the issuance of paper to that extent.

Senator NELSON. It would put up the rate of interest at once and call it back.

(Thereupon, at 4.50 o'clock p. m., the committee adjourned, to meet at 10 o'clock a. m. to-morrow, Friday, October 10, 1913.)

FRIDAY, OCTOBER 10, 1913.

COMMITTEE ON BANKING AND CURRENCY,
UNITED STATES SENATE,
WASHINGTON, D. C.

The committee assembled at 10.10 o'clock a. m.
Present: Senators Owen (chairman), Hitchcock, O'Gorman, Reed, Pomerene, Nelson, Bristow, and Weeks.

The CHAIRMAN. We will hear first, this morning, from Mr. Dawson, of Iowa.

STATEMENT OF A. F. DAWSON, PRESIDENT FIRST NATIONAL BANK, DAVENPORT, IOWA.

Senator POMERENE. Will you give us some particulars about your bank, as to the capital stock, deposits, and so forth?

Mr. DAWSON. The capital stock of the bank of which I am president is $200,000; its surplus is $200,000, and its deposits are about two and a half million.

I want to say to the committee at the very start that I did not come here to discuss this matter from the standpoint of the individual bank with which I happen to be connected. I think I can say to the committee at the very beginning, without regard to what this committee does in the way of legislation, that the bank with which I am connected will become a member of your new system. There are certain sentimental as well as other reasons which make that statement possible. The First National Bank of Davenport, Iowa, was the first national bank in operation in the United States. The bank which first began operations under the system 50 years ago is the bank with which I happen to be connected at this time. Having been the first one to go into the present system, we are going to be the last one to ever go out of the system, no matter what changes may take place in the meantime.

I came here to represent, primarily, the small country banker. Ours is a country bank. But it is not that class of banks that I expect to represent in what I have to say to the committee. I want to speak for the banks in Iowa, the banks of $25,000 capital, and of $50,000 capital, and of $100,000 capital.

As soon as it was announced that we were to come to Washington—and I cite this only as an evidence of the interest which our people have taken in this legislation—I was called up by the chairman of the group organization in the group in which we reside, Mr. Wyman,
the president, stating that they had been considering the advisability of sending someone here to represent the 118 banks in the group of the Iowa State Bankers' Association. So he insisted on sending on to me my credentials and asking me to represent the banks of that group before the committee. And the same thing was true with regard to the Davenport Clearing House. We have in Davenport eight banks represented in the clearing-house association, with total deposits of about $30,000,000. Along with the Commercial Club of Davenport, representing 1,100 of the business men of that city, they asked me to take a letter showing that I was authorized, along with Judge French, who spoke yesterday, to speak for the business interests of that city.

It seems to me that the country banker is entitled to very great consideration in the matter of the formation of the new system. I regard him as the backbone of the system which we have now. And I ought to say at the outset that I have great respect and great admiration for the system which we have now, and the average national banker in Iowa and in the Middle West, and I think it is true of the whole country, the average man who is now connected with a national bank feels a pride in the system that we have at this time. He appreciates that for 50 years it has been serving a very useful purpose in the country; that it has been of material assistance to the Government in a great many ways, both at its inception and during the 50 years that it has been in operation.

The bank with which I am connected, at its very inception, in addition to the purchase of bonds to secure the circulation, sold over its counter during the Civil War several million of bonds direct to the investors out in that western community. So that we regard the national banks as having been more or less of a prominent prop to the national credit from the time of its establishment down to the present day.

I had some familiarity with the act of 1900, the gold-standard act, under which the national banks became subscribers, practically in whole, of the issue of 2 per cent bonds called the consols of 1930. I happened at that time to be associated with the gentleman who wrote that refunding provision, Senator Allison, of this body. Some of you who were here at that time may remember that the Secretary of the Treasury, then a distinguished Illinois gentleman, thought that it was utterly impossible for the Government of the United States to float its debt at the 2 per cent rate. That was from 1 to 1½ per cent less than any of the nations of the world were able to float their obligations at that time. And yet the author of the refunding provision was wise enough to see that there was a market for those bonds at 2 per cent, that the national banks were virtually obliged to take these new consols of 1930, no matter what rate of interest they carried.

Senator Nelson. Therefore they were really the instrumentality of saving us from 1 cent to a cent and a half a year interest?

Mr. Dawson. Yes, sir. The members of the committee are, perhaps, familiar with the fact that some of the mathematicians of the Treasury Department at the time of that refunding transaction prepared a public document, which was a document of the Treasury Department not of Congress, which sets forth in dollars and cents the
exact saving to the Federal Government by reason of the refunding transaction of 1900.

Senator Nelson. Mr. Chairman, I wish you would take steps to get that document for the members of the committee.

Mr. Dawson. You will find that in that document it is made plain that by that transaction the Government of the United States saved or made a profit of upward of $17,000,000. Those are some of the things that are matters of pride to men who are in the national banking system. They have felt that as they went along they have not only served the communities well in which they have been located, but they have had that connection with the Federal Government that gives them some dignity and some standing.

Senator Weeks. Mr. Dawson, would it not be fair to add, in that connection, that if the refunding was done on a 1 per cent lower basis than could otherwise have been the case the Government has been saving 1 per cent interest on those 2 per cent bonds every year since that time?

Mr. Dawson. All these 13 years.

Senator Weeks. Which means a saving of about $100,000,000.

Mr. Dawson. Then there is one other large fact in connection with the national banking system that should entitle them to the friendly consideration, it seems to me, of the Congress of the United States, and that is found in a statement of the report of the Comptroller of the Currency last year. In examining that report you ought at least to observe the statement he made, and I put it down so that I might have it accurate. He said:

The national banks have paid into the Government in taxes more than $198,000,000, or more than thirteen times the amount appropriated by the Government for the business of the currency bureau during its entire existence.

In other words, Congress, during the existence of the national-banking system has appropriated $15,000,000 and the national banks have paid in in taxes $198,000,000, making $183,000,000 and odd of taxes which the banks have paid to the Federal Government. But I think there is no difference of opinion among men who have respect and admiration for this system; there is no difference of opinion among students of this question that it is a defective system.

Senator Reed. You are not laboring under the impression that this committee or Congress is inclined to make any war on the national banks, are you?

Mr. Dawson. Not at all. And yet I find among the bankers out in the country the feeling, after reading some of the provisions of this bill—I would not say that they are punitive in their character and any of its provisions—at the same time some of them feel that the provisions are not as liberal as the banks are fairly entitled to have.

Senator Reed. I thought we were trying to do so, to help save the banks from the disasters which occasionally fall upon them, instead of having any desire to punish them, and in that connection, while it is almost irrelevant to the issue, it strikes me that if both sides approach this question in that spirit, instead of passing denunciatory resolutions and calling people various names, complimentary or otherwise, we would be much nearer a solution.

Mr. Dawson. I agree with you thoroughly in that last statement, and while men may get together in conventions and do certain things,
I think what this committee wants to know is the sober opinion of the men back at home, and I think I can say to you with perfect frankness and with entire truth, that the people of the country are considering this matter in a calm manner and from a nonpartisan standpoint. I think they are approaching it with the hope of a solution, and that it will be the best solution we can have at this time. I am sure that is the attitude of most of the bankers out in our country.

Of course, bankers are no different from any other class of men, but if a man is a successful banker he is at least broad-minded enough to see and appreciate that his only hope of success lies in the success of his community. It is along that path that his success lies. He can not hope for any advantage that is going to accrue to him at the expense of his community, and the things which will build up and best serve the community in which he is located is what is going to be best for him.

This system that we have now, there is general concurrence that it is a fair-weather system; when times are all right it operates to the satisfaction of nearly everyone; it handles the business of the country effectively.

So, as Senator Reed has said, I conceive it to be the duty of this committee—and in what I have to say I am only endeavoring to contribute a few observations in that direction—to create a system that will not break down in the days of financial stress and of financial stringency. This one has broken down four times since it was put into operation. My study of it leads me to believe that the first three times that it broke down we did not know what was the matter with us.

Senator Nelson. To what three times do you refer?

Mr. Dawson. First, in 1884.

Senator Nelson. No; 1873 was the first panic growing out of the Jay Cooke failure; that was the first and most unnecessary up to that time.

Mr. Dawson. The four that I have in mind, Senator, are the four times in most recent history when the banks were obliged to suspend specie payments. Of course, 1873 came before the resumption act. That was in 1884, and then again in 1890, in 1893, and in 1907. Those first three disturbances or breakdowns of the system, as you will remember, were complicated with commercial and political conditions.

Senator Nelson. Yes; and economic conditions.

Mr. Dawson. So that the public was not enabled to see clearly that that breakdown was not the fault of the system. But when the disturbance of 1907 came along that made it clear to the business interests generally and to students generally just what the defects were in the present system. And, as I see it now, there is practical concurrence as to what the defects are. They all fall, it seems to me, under two heads, one the lack of elasticity and the other the reserve requirements, with no opportunity to unify the reserve.

So it is along those two lines that the banks of the country and the business men of the country are expecting relief. And at that point may I offer an explanation why there has not appeared before
this committee more business men instead of the men appearing here being practically all bankers?

Those of you who live in the smaller communities, or who have knowledge of conditions in the smaller communities, know that the business man in that community regards the banker as the credit merchant of the community. When he wants credit for the conduct of his business, he goes to the banker, and when it comes to considering a system whereby the business man can obtain his credit he has not the time nor the disposition to go into that. He naturally looks to the banker to provide or to at least look out and see that a system is in vogue under which the banker can supply the business man with his needs as he goes along.

There being now a practical concurrence, it seems to me, as to the defects of the present system, I have great hopes that Congress will apply the remedy. When we are able to diagnose a case, then the application of the remedy becomes much more simple.

For many years nobody could agree on what the trouble was with the present system, bankers or legislators, or anybody else. I remember that for many years it was a common saying in the House of Representatives that the Committee on Banking and Currency—that no two of the members of that committee could agree on anything.

But now the time seems to me propitious for the creation of a system that will measure up to the present needs of business and commerce throughout the United States. Being in substantial agreement upon the fundamentals, upon the fact that what we need in a system now is one that will introduce this element of elasticity and one that will provide for the mobilization and the unification of the reserves of the country; being in agreement upon that point, I think there is a very strong feeling among the people in my section of the country that the fundamental purposes of this bill are sound and good.

Now, there is not such a concurrence in regard to the details of the manner in which these principles are sought to be applied in this bill. But as to the fundamentals I believe the people are of the opinion that those fundamentals in the bill as it now stands are sound, and that they are the basis for a bill that will handle the business of the country successfully and efficiently.

Senator Reed. Do you think that is also the opinion of the bankers of your State? You said that was the opinion of the people. Do you think that is also the opinion of the bankers?

Mr. Dawson. I think it is. I have been in rather close contact with many of the bankers in my State. I have discussed the subject before group meetings and before State conventions of bankers. They have passed resolutions time and time again in concurrence as to what we need at the present time. And I am going to put that summary, with the consent of the committee, into the record.

The Chairman. We will be glad to have it.

Mr. Dawson. I do not care to burden you by reading it, although it is very short. It is my idea of what a currency system ought to be.

Senator Bristow. You say that is your idea?

Mr. Dawson. It is my idea, and I believe it thoroughly represents the ideas of the bankers in our section.

The Chairman. I think you had better read it.
Mr. Dawson. It says, to summarize: What the country stands in need of is a banking and currency system, embracing these salient features.

That will give that element of elasticity to the currency which will respond to the varying needs of business at different seasons of the year, and as carefully safeguarded against inflation as against stringency.

The association of all banks into a national system, rather than one of scattered units, to obtain unity and cooperation in sustaining the commercial and public credit, but which should be absolutely secure against political domination or the control of concentrated wealth and which must preserve the individual independence of each bank.

Our people are very strong on that point.

The unification and mobilization of bank reserves, so that they can be concentrated and made available wherever most needed in times of trouble, and the machinery to strengthen bank reserves or increase their loaning power when necessary to avert danger.

To these three principal features there should be other additions to provide an acceptable standard for commercial paper and a well-organized market for the same, to secure more uniformity in discount rates in all parts of the country, permission to American banks to do business in foreign countries, and an agency which can deal effectively with the course of foreign exchange and the international movements of gold.

Now, it seems to me that the underlying purpose of this bill goes directly to those three fundamental necessities of the present situation, and I undertake to say that there is substantial agreement among all the bankers of our State as to the soundness and as to the necessity for those three things. Time and again at the State convention of the bankers' association there have been passed resolutions along those very lines.

The Chairman. Your statement seems to be very clear, and I believe really is pretty nearly in accord with the views of the members of this committee. If it is not, I will be very glad to hear to that effect from any member of the committee.

Senator Hitchcock. It is the most succinct statement I have heard. I am especially pleased to hear you emphasize what you said in regard to the maintenance of the independence of the banks.

Mr. Dawson. That is vital.

The Chairman. That is the very basis of the system.

Senator Hitchcock. I have been afraid that this bill did not provide for that; did not guarantee to the individual bank the things which it ought to have as a matter of right, but left it too much to the discretion of men intrusted with power.

Mr. Dawson. The integrity of the independent banker, it seems to me, is vital to the influence and advancement of our country as a whole. The branch banking system, it seems to me, would do more to retard the progress of our country out in our section. As it is now, an independent bank is owned by the people of the community, the stockholders all live in the community, and the little cashier who runs that country bank has at heart the welfare and upbuilding of that community. If it was simply a branch of a great institution in Chicago or New York, they would simply be skimming these
communities instead of building them up. So that the question of the integrity and independence is a vital question.

Senator Hitchcock. It is the only way to maintain competition between them. If you do not have competition between them you do not have facilities which you need.

Mr. Dawson. You do not when you do not build up the community.

Senator Reed. You do not retain in the community the wealth which the community creates.

Mr. Dawson. That is true, also. The profits would go to some concern outside.

Senator Nelson. These big banks, Mr. Dawson, do not appreciate how much those little country banks do in a community. I have seen poor fellows come in and get money, mortgaging their last cow, and they could not get it from these big banks.

Mr. Dawson. No; nor could they obtain it if the man who was running that bank was a representative or a clerk sent out from New York to run that bank.

The Chairman. That is really the basis of the American system, distinguishing it from the system of other nations?

Mr. Dawson. Unquestionably; and that must be preserved in any system in the future, in my opinion.

Senator Reed. I think we all agree to that. I think the most interesting question you will have to discuss would be whether this system does preserve the independence of the individual bankers.

Senator Hitchcock. I want to say to Mr. Dawson, as one member of this committee, that the question that most troubles me is the very question as to whether the banks' independence is preserved under this bill, and I make that suggestion in the hope that when you reach that topic you will discuss it fully.

Mr. Dawson. I will be very glad to. There is practical concurrence, in my opinion, among the bankers of the West as to the value of the rediscount machinery which is created in this bill. Of the two defects—nonelasticity and reserve requirements—the one relating to reserves is of vastly greater importance than the one relating to elasticity. That is vital in time of stress. They have seen in the past a condition arise—a condition over which they had no control, a condition for which they were in no way responsible, the smaller banks of the West—they have seen a condition arise where this system of ours would break down and not perform the natural functions for which it was created.

Senator Nelson. Their reserves would be tied up?

Mr. Dawson. Yes; when they could not get money that belonged to them.

The Chairman. They had less additional accommodation.

Mr. Dawson. Yes, sir; so that I believe this reserve matter is of vastly greater importance than the element regarding elasticity.

You know how it works now. The banks are all put into a scramble the minute any trouble appears. Each one becomes a competitor of every other bank in its struggle to mass a sufficient amount of reserves to take care of any trouble which may come to its doors. This rediscount provision will unquestionably enable the country, as a whole, to increase the reserves when it is necessary to increase them. Under the present system, in the days of disturbance and panic banks
are not only embarrassed with respect to their reserve requirements, but they are obliged to slam the door in the face of the borrower at the time when he needs it the most.

Now, it is well understood that losses growing out of such conditions fall with greatest severity upon those who are least able to bear them. When hard times come it is the men of limited resources who are hit the hardest.

I think the interest of the general public, the interest of the farmer and the wage earner, in this legislation is much greater than the banker's.

The Chairman. There is no doubt about that.

Mr. Dawson. Because the banker can trim his sails to the breeze; he can adjust his operations to the conditions as they exist.

The Chairman. He can force the sale of collateral and ruin the borrower, and is obliged to do it at times in order to save himself, is he not?

Mr. Dawson. That is true; to sacrifice it. But what is the small business man going to do who is fairly entitled to credit? If he is unable to use his credit he goes to the wall. There is no escape for the wage earner if he is thrown out of a job. Nor is there for the farmer if there is a tremendous slump in the value of his products, by reason of a financial panic, such as occurred in 1907. There is no escape for him.

So this question of reserves is really the vital question. If banks are enabled to replenish their reserves in time of need—if you please, if they are permitted to use their reserves in time of need, for the purpose for which the reserves were created—they can undoubtedly do much to allay fear and to allay panics. As it is, men get scared, they are filled with fear; and fear is the stuff of which a panic is made.

Senator Nelson. Excuse me for breaking in, but I think it becomes necessary: Is not that one beauty of the system here, that the reserves put in the reserve bank can be utilized, as it never could under the old system?

Mr. Dawson. Yes; and now it is scattered all through 25,000 little banks in the United States.

The Chairman. You regard that as a good feature of this bill?

Mr. Dawson. The mobilization feature in this bill?

The Chairman. Yes.

Mr. Dawson. Yes; I do. I am going to suggest some changes in the manner in which you propose to mobilize them.

The Chairman. I hope you do so, when you get to that point.

Mr. Dawson. Yes. As it is now, some one, it seems to me, put it very forcefully: If you had a water system in your town, whereby each citizen had a cistern of water, only to be used to put a fire out on his own premises and could not be used to put out a fire on his neighbors' premises, and a fire breaks out, his neighbors could render him no assistance. There is no mechanism in this present system whereby to induce cooperation and unity in the 25,000 banks.

Senator Pomerene. In the present law, you mean?

Mr. Dawson. Yes.

Senator Hitchcock. Of course, now, you are quoting from the Aldrich report. Do you approve of the Aldrich report?
Mr. Dawson. I was not aware I was quoting from that. I have read that report. You refer to the report of the National Monetary Commission?

Senator Hitchcock. Yes. That was the illustration used there, and I wanted to know if you approved of it.

The Chairman. It has been used many times; it is an old simile.

Mr. Dawson. I would not want to make a blanket approval of all the things in that report.

Senator Nelson. I think the president of the National City Bank, yesterday or the day before, used a term I do not know as I have heard before, but it was a very good one. He spoke about "piping" the reserves from one regional reserve bank to another, as I recall it. I think that was a new phrase, and a very apt and effective one.

Senator Shafroth. Oh, they have been using that a good deal— "reservoir."

Senator Nelson. Oh, no; he said "piping" the reserves from one bank to the other.

Mr. Dawson. I recall some one in the House used that phrase in connection with this bill.

I do not think I shall inflict my individual views on this committee with regard to the character of the notes you have provided for in this bill. I do not believe the people of the United States care very much about the different schools of financial thought with regard to the bank notes.

Senator Nelson. That is, you mean whether they are the mere promise of the banks or the mere promise of the Government.

Mr. Dawson. Yes.

Senator Nelson. Or whether they are legal tender or not.

Mr. Dawson. Yes. The main thing that the average citizen of the United States wants to know when he receives a piece of paper money is that it is just as good as gold. That is the condition that prevails to-day. He does not care; he does not look to see whether it is a note of a national bank, a greenback, a silver certificate, or a gold certificate. He knows one is just as good as the other and can be exchanged for gold. So that in this new currency you create all that he wants to know is that it is sound; it has the assets behind it. A true bank note should embrace these three principles—security, convertability, and elasticity. That is my conception of the three fundamental principles of a bank note.

If you provide a note that he feels is sound and upon which he believes he can get the gold any time he wants it, I do not think he is going to care much whether it is a bank note or whether it is a Government obligation. So far as I myself am concerned, I do not agree to the principles which underlie the note that is created in this bill. I can not find anything like it in any of the systems of the world. It seems to me like a departure from what has generally been regarded as a scientific bank note. It is issued with the assets of banks primarily, along with other security, behind it. Then the Government steps in and makes it a direct obligation of theirs. It seems to combine the three principles that divide the bank notes of the world into the classes where they are now.

Senator Hitchcock. After all, is it not only another way of putting Government credit behind the paper? The Government credit is already behind the national-bank notes in the shape of bonds.
Mr. Dawso. The systems of the world are based on one of three principles, as I understand it. They are the currency principle, the banking principle, and the bond-secured principle. The banking principle holds that the total assets of the bank are the proper security for its note issues. The currency principle is that of issuing notes against a reserve; and, of course, the bond-secured principle is the one we have with the national-bank note, where long-time bonds, good bonds, are the basis for the note issues. This new money which the bill provides combines the banking principle and the currency principle in that it puts behind it not only the total assets of the bank, but also puts behind it a gold reserve of 33\(\frac{1}{3}\) per cent, besides also dollar for dollar of commercial paper. So that it seems to me that the question of doubt will never arise in the mind of the average person who takes one of these notes as to its security.

The Chairman. If the bank were to fail, and if the 2 per cent bonds were to go down to 75, do you think the notes of such a bank would ever reach a discount?

Mr. Dawso. I can see where a condition of that sort might lead to——

The Chairman (interposing). Does not our statute at present compel the United States to maintain at parity the national-bank notes and the other forms of notes issued by the Government?

Mr. Dawso. That is true.

Senator Nelson. Not the national-bank notes?

The Chairman. Yes; I think so, Senator.

Senator Nelson. Not directly?

Senator Shafroth. It says "all forms of money."

The Chairman. Yes; all forms of money.

Mr. Dawso. You can trade one for the other and get gold.

The Chairman. What I am calling attention to is that the United States, in addition to these bonds, is putting its credit behind the national-bank notes. Therefore, the national-bank note, at present, has not only the bonds and the credit of the individual bank but also the credit of the United States, as such, behind it; and for that reason no citizen need examine a national-bank note to ascertain whether there is a possibility of a discount on it.

Mr. Dawso. I think this new currency will have the same virtue, only in an added degree, I would say.

The Chairman. I only refer to that to show there was a precedent.

Senator Shafroth. Mr. Dawso, these notes are issued or made redeemable in gold or lawful money, and I want to see whether you can subscribe to my view on that.

Mr. Dawso. I shall be very glad to have your view.

Senator Shafroth. My view is this, that where a currency of this kind is redeemable in lawful money, and the lawful money redeemable at the Treasury in gold, it presents a strain on gold where there is a run on the gold reserve. In other words, it is like the national-bank notes in that respect. The national-bank notes are redeemable in lawful money. A man who holds \$1,000 in national-bank notes can go to the bank and say, "Give me lawful money for this"; and they can give him a greenback. If it is in these regional banks that are to act with the Government they take that, if there is an apparent run, and lock it up in the vault, and say, "We will stop that run to
that extent.” The man then takes the greenback, and takes it down to the Treasury of the United States, or presents it there, and says, “Give me gold for it.” The Treasury says, “We don’t want this endless chain going on, and we want this run stopped, and we will put this away.” By that process the Government has redeemed $2,000 of notes by $1,000 of gold; whereas if that money is redeemable in every instance in gold the result will be $1,000 in gold will redeem only $1,000 in notes. Is not that sound?

Mr. Dawson. I am not quite able to see how $1,000 has performed a double function—a double duty.

Senator Shafroth. The note circulates just like the national-bank note circulates. Nobody, because he knows he can get gold for it, hesitates to take it.

Mr. Dawson. Certainly not.

Senator Shafroth. And if a man took $1,000 of regional bank currency to a national bank and said “I want you to give me gold, or give me lawful money,” and the bank gives him greenbacks. And so, being allied with the Government, it does not want this run on the Treasury, and it will say “We will lock this up,” that $1,000 they have taken in and for which they have given you $1,000 in lawful money. So that $1,000 is locked up there and can not get into circulation again, and won’t make a run on the Treasury for gold. The man takes down to the Treasury of the United States the greenbacks or United States notes, or lawful money or legal tender, and presents it to the United States Government, and the United States Government gives gold for it. The Treasury says “We will lock that up if there is a run on us,” and we always have in the Treasury a good many millions of legal tender on hand and do not issue it, notwithstanding there may be provisions in the law it should be issued.

Mr. Dawson. The law requires it to be reissued.

Senator Shafroth. And it means in time of normal conditions. Thereby you have gotten $2,000 of currency that is ultimately redeemable in gold and have redeemed it by $1,000 in gold in the United States Treasury.

Now, why does not that relieve the strain on gold if there is a run on gold? Of course it does not make any difference if there is no run on gold.

Mr. Dawson. My own opinion is that any man who has a piece of paper money is entitled to exchange that for gold whenever he wants to, and your thought of impounding these notes after they have been redeemed in gold only emphasizes what has been in my mind in regard to this particular currency. Your statement of facts presupposes that there is a danger of dragging an endless chain through the Treasury of the United States under such conditions. We all saw how that worked during Cleveland’s second term.

Senator Nelson. I want to call your attention, Mr. Dawson, how, at the time of Cleveland’s second term, there was a firm of Jews in New York—whether they operated on their own account or others I do not know—who made a business of going to the Government with greenbacks and drawing out the gold and shipping it to Europe. There was a shipment regularly every week. I recall that very well. They used those greenbacks to draw out the actual gold, and the more you have of that in this bill the more you equip that kind of men, who want to get more for gold when it is at a premium, to call
on the Treasury for gold—the more you put in the hands of those men paper that is payable in gold.

Senator Shafroth. Unless you lock it up.

Mr. Dawson. Certainly. But eventually the currency of the United States becomes the currency in these regional banks. That is, they are to displace the national-bank notes, and they are to be issued for seasonal expansion, etc. If it only displaces the national-bank notes and supplies this seasonal deficiency, there would be $1,000,000,000 of that outstanding, not taking into account any natural increase in the necessities as time goes on.

Senator Pomerene. I want to remind the committee that every one of them is violating the rule which was formally adopted here some days ago. And, with all due respect, it seems to me it is going to be more satisfactory both to the committee as a whole and to the witnesses as well should they be permitted to complete their statement first and let the examination or cross-examination come afterwards.

Senator Shafroth. I thought he was through his statement.

Senator Reed. I have always regarded it as a great impoliteness, Mr. Chairman, for any other member of the committee to interrogate the witness. [Laughter.]

Mr. Dawson. So far as I am concerned I am perfectly willing to be interrupted at any time and answer any questions which the members of the committee may desire to ask.

The Chairman. That is the rule of the committee, Mr. Dawson. Had you completed your statement?

Mr. Dawson. No, sir.

The Chairman. Then we will permit you to proceed.

Mr. Dawson. I have been at both ends of the congressional interrogation point, and it does not matter to me when it appears.

So much for the character of the currency provided in this bill.

The fear that is lurking in my mind is that you are creating there a species of greenbacks by making it a direct obligation of the Government, and imposing on the Government the necessity for redemption in gold, or, at least, giving permission to the note holder to take it to the Treasury and ask for its redemption in gold; that you are adding to the system of credit money in the United States another billion of notes which might at some future time, either in time of war or even in time of peace when the receipts of the Government should happen to be less than its expenditures, embarrass the Government. My fear is that there will be a billion dollars of these new notes, which we might call a denatured or modified greenback, if you please. My fear is that there will be a billion dollars which can be dragged through the Treasury, the same as $346,000,000 were dragged through during the second administration of Cleveland. So I have not been able to see why it was necessary to superimpose—I think the security which is behind these notes is ample—why you should superimpose the credit of the Government—why you should make it a direct obligation of the Government. That is not a true bank note. A true bank note is an obligation of the bank, based on the assets of the bank.

If there is any increase in the note issue it should be increased with due regard to the increase and decrease of business. That question of elasticity is another question that is one of great im-
importance. It seems to me that this certainty of elasticity is not quite sufficiently provided for in this bill. I may be wrong; it may be in here some place where I have not discovered it, but it ought to be so clear and so plain no one could misunderstand it, or no two men might differ in regard to it. We all understand that at certain seasons of the year there is necessity for an expansion of credit currency, or at least an expansion of credit. Just how much this is, men differ about, but substantially it is about $200,000,000. We want the machinery whereby that additional currency can be obtained when it is needed; but it is just as important, in my opinion, to have the machinery so adjusted that when the need of that has passed, that additional currency will not become a permanent part of the circulation of the country. It wants to expand and contract, and the question of the contraction is just as important as the question of the expansion.

Now, I assume that the purpose of this bill is to do that very thing; that is, to create a currency that is based on the business of the country and which, therefore, expands and contracts with the business of the country. That is why you base it on short-time commercial paper. It seems to me there should be no doubt left at all that the commercial paper that is deposited with the regional reserve bank, as collateral for those notes—that when this collateral is paid off, that then the amount of notes or the same amount of some other sort of money ought to be taken out of the permanent circulation of the United States.

That can be done, it seems to me, with one provision, and while it is not in the bill, it may be implied, and that is this: That the parity should be maintained between the collateral held by the regional reserve bank and the amount of these notes outstanding that were issued against that collateral. For instance, suppose the First National Bank of Davenport should take to the regional reserve bank $100,000 of its bills receivable and deposit them as collateral and receive $100,000 of these Government notes provided in this bill. When those commercial notes are paid, those bills receivable are paid, and the circulation ought to be reduced by that amount, unquestionably. So, it seems to me, the principle can be established in here, without any chance of wavering one way or the other, if a provision is included whereby the parity will be maintained between the collateral held by the regional reserve bank and the amount of notes which they have issued against that collateral.

Senator Reed. By parity you mean equality in amount?

Mr. Dawson. Yes; one should go up and down with the other.

Senator Nelson. Let me ask you a question for information right at that point. I want to clear my mind on it. You mean that would be reached by retiring the note when it is finally presented to the issuing regional bank for redemption?

Senator Weeks. Where is the watchdog? [Laughter.]

Senator Nelson. Well, I wanted this step cleared up as I went along. [Laughter.]

The Chairman. The witness will proceed.

Senator Hitchcock. I move a special watchdog be set over the member from Minnesota.
The **Chairman.** The members will hereafter observe the rule which the committee has adopted, not to interrupt the witness.

**Senator Reed.** There is an obvious difference between an interruption and a question that is asked for the purpose of elucidating some point which a witness presents. [Laughter.]

**The Chairman.** Well, Mr. Dawson, we will proceed.

**Mr. Dawson.** I want to say, Mr. Chairman, so far as the witness is concerned. I am perfectly willing to be interrupted at any time.

**Senator Nelson.** I will withdraw my question.

**Mr. Dawson.** I say there ought to be in this bill an exact statement of policy with regard to the maintenance of equality in amount of the collateral and the outstanding notes. The country will naturally assume that that is the policy of this bill, and yet there is no positive statement that it is the case.

One other question with relation to this bill, and one in which the smaller country bank feels a proportionate interest with the larger banks, perhaps in a lesser degree, is the one of organization and control. With regard to the manner in which the new system is to be organized and the control which is to be provided for it, my own opinion is that some changes could wisely be made. It seems to me it would be wise to initiate this system with a less number of regional reserve banks than 12. There are many reasons that commend that to my mind. I think the system should start out with about 5 and with power reposed in the Federal reserve board, if you please, to increase that number as the system gets into operation.

This is a rather violent change from what we have now, and violent changes in currency or financial matters are not in accord with the spirit which guides or which controls financial transactions. The more conservative we can be in anything relating to so complex and so sensitive a subject as the finances and business of this great Nation of ours the better it is going to be, especially after we have determined in our own minds the end which it is sought to attain. The best way, in my opinion, to attain that end is by a most gradual process. So if I had my way I would start this system with five reserve banks, with power in the reserve board to increase them as necessity for it arose. With 12 banks, under the terms of the law, each bank subscribing 10 per cent of its capital, if all of the national banks of the United States were to come in, you might have regional reserve banks which would be smaller in capital than some of its constituent members, and that, it does not seem to me, would comport with the dignity of a great Federal bank—for instance, a Federal bank in the city of New York that in itself was smaller in capital than one of the members of the association.

**Senator Reed.** Would that be the case in New York?

**Mr. Dawson.** I have not gone into the exact figures of it, but it might. Of course, it would depend upon how the regions were arranged. It might occur in Chicago, where one bank has a capital of over $30,000,000. That is one reason why we should start with a lesser number. Then if any considerable portion of the banks did not come into the new system, if 1 out of 5 of the national banks decline to enter the new system, then it would be impossible to organize 12 Government banks, each one with a capital of not less than $5,000,000. Therefore my thought would be to start with five,
and then extend gradually as the needs of the country develop, and as we gather experience and knowledge of the workings of the new system, which is a wide departure from what we have now. So much for the question of organization.

On the question of control, I was glad that the committee agreed with me in the fundamentals I laid down at the beginning of the hearing, that a system which would meet the needs of the people of the United States ought to be free, on the one hand, from any possible political control, and on the other from its domination by the concentrated wealth of the United States. In the question of the make-up of this central board there is a feeling among the bankers and many of the business men that there is a possibility of political considerations entering into it. That, it seems to me, can be obviated.

The question of Government control is one, I think, that is fairly accepted by the banks and the people of the United States. We have been moving on, in the last few years, and I think there is a consensus of opinion, at least among the people, if there is not among certain classes of bankers, that there is no objection to Government control of this system. Some complain, and, indeed, attempt to draw a distinction between control and actual management, but Government supervision is generally accepted by all the people. So that there is no question in anybody's mind on that, but they do want, if the Government is going to control, to have machinery which will make it absolutely certain it will be divorced from politics. Politics and banking do not mix at all, and I speak with some knowledge of the subject, because I have been in both.

Senator Hitchcock. You finally preferred banking?

Mr. Dawson. I find it much more comfortable to be in a bank to-day in Iowa than to be in public life in Washington now, being a Republican. [Laughter.]

The bill proposes to put on three members of the President's official family. I can not see any justification for that. My view is that these seven men will have in their hands greater financial responsibility than any seven men in the world. It will require the undivided time and attention of the best men you can obtain in the United States to master the broad questions that will have to be handled by that board, to say nothing of the other almost autocratic powers which they exercise. So that it seems to me a Cabinet officer sitting as a member of that board must, in the very nature of things, be, to a large extent, a figurehead. I would except, however, the Secretary of the Treasury. I believe he should be a member of that board on account of the intimate connection between the Treasury Department and the finances of the United States. But I have not been able to understand why it is necessary to put on that board not only the Secretary of the Treasury, but the Comptroller of the Currency, who is a subordinate of the Secretary of the Treasury. You put on one man who is subordinate to the other, and in ordinary affairs that would simply mean that the superior officer would have two votes instead of one.

Nor can I see the reason for including the Secretary of Agriculture on that board, who has his hands full in the problems that are confronting him, the problems he has to solve in American agriculture, the great basic industry of our whole Nation. His advice would be
valuable, in my opinion, but instead of being on that board in an ac-
tive executive capacity, if you want his advice, create the machinery
that would enable you to obtain it, or enable him to act with the
board in an advisory capacity. But as I see the duties of this board
in the future, no man who has to perform the multitudinous duties of
a department of the Government, or a Cabinet office, is going to
have time to perform efficiently the services on this board. So I can
not agree it is wise to put on either the Secretary of Agriculture or
the Comptroller of the Currency. Of the other four members of
that committee I want to discuss this in a practical way. The bill
proposes to make their terms two, four, six, and eight years. That
makes the terms of the members of this board, five out of seven, coin-
cident with the term of a President. Every presidential term that
comes along (and I want to state right here that I have no fear of
anything in that direction under this administration; but no man can
tell what the future holds in store for us), as the bill is drawn now,
that President would have the appointment at the very beginning of
his administration of five of these seven members. There is the
machinery there, if any President sought to use it, whereby he could
easily have control of this board from the very beginning of his
administration.

Senator Shafroth. Four, you mean, do you not?

Mr. Dawson. As it stands now he would appoint three members
of his official family—the Secretary of Agriculture, the Secretary of
the Treasury, and the Comptroller of the Currency.

Senator Shafroth. And one member immediately of the other
board?

Mr. Dawson. Yes; one member. That would be four of the seven,
instead of five of the seven. I think that it should be so arranged,
and I believe that it is the purpose of the framers of this bill, so as to
have that board stand on the same high plane that the Supreme Court
of the United States stands on or that the Interstate Commerce
Commission stands on, and if that is so, would it not be wise to take
out of the hands of the President, whoever he is, as he comes along
down the years—take out of his hands the power, in his first term—
to absolutely control the majority of the members of that board?

Senator Reed. The first term? You know, there will not be but
one term.

Mr. Dawson. Well, one party will take care of that all right.

[Laughter.]

Senator Shafroth. Where is the watchman? [Laughter.]

Mr. Dawson. Then there is no doubt but what it is a source of
great complaint, and it is a question in which there is a principle
involved, whether or not the men, a class of men, if you please, that
are selected to put all of the capital in this institution are to be de-
nied any representation at all in its control. That is a pretty big
question; that is a pretty broad question. I should say that if the
Government supplied the capital to this bank, or if the people gen-
erally supplied the capital to this bank—

Senator Bristow (interposing). Voluntarily.

Mr. Dawson. Yes; then the Government should select the men for
the control and management of it. But this bill picks out a limited
class of citizens of the United States, the stockholders in the national
banks scattered over the country, and requires them to pay a proportion of their capital to make up the capital stock of this bank, and yet it denies them any representation on the controlling board. Now, my thought is, and I am sure it is in exact accord with the thought of the committee, that that board should be made the most efficient board possible. And I believe it would produce an element of efficiency in that board, and I believe it would make it stronger, and I believe it would be better for the commercial interests and the business interests of the country and the successful operation of this new system, if the banks select a minority representation on that board—if they select two members, if you please.

Senator Nelson. Out of seven?

Mr. Dawson. Yes; out of seven. I would not select those men and permit them to have active connections with any bank, of course. I would stipulate that these men should sever all active banking connections. But by permitting the stockholders to select two members of this board, a minority representation on this board, it will minimize the opportunity for political control of the board and would obviate a feeling of injustice that does prevail to a considerable extent among the men who supply the capital for the institution.

But the real test of this system, gentlemen, is whether the banks are going to come in. I do not care how perfect a system may be devised around a committee table or anywhere else, if you can not put it into operation of course it is useless. So that the principal question, and the question from which I want to speak, is that practical question of whether the banks—all of the national banks and a majority of the other banks, if you please—whether they are going to come into the system as it stands in the bill now before you. We have in the national-banking system now about 7,500 banks, and 7,000 of those banks, as you know, are the country banks. I maintain that the small bank is the backbone of the national-banking system, and if you create a system here that is only going to take the banks in the reserve cities and central reserve cities, then you have destroyed the system we have now instead of giving us a greater system.

Now, it may be well, in order to understand what I have to say, for me to call attention to the percentage of banks of various size in the present national-bank system—of these 7,000 country banks. Banks with a capital of less than $50,000 comprise almost one-third of the system—and when I say less than $50,000, that means banks of $25,000 and $40,000 capital. They comprise 32.34 per cent of the national banks of the United States.

Senator Weeks. In number?

Mr. Dawson. In number. The banks of more than $50,000 and less than $100,000 capital comprise 31.38 per cent. Banks with a capital of $100,000—and out in the county-seat towns of Iowa a great many of the national banks have $100,000 capital; that is, a strictly country national bank in the truest sense of that term. The banks of $100,000 and less than $250,000 comprise 27.12 per cent more. Therefore all the banks of less than $250,000 capital make up almost 91 per cent of the national banks of the United States, while those of a capital of $250,000 and up comprise only 9.26 per cent. My conception is that those little banks must be in the new system if we are to have some-
thing as good as, to say nothing of being greater, than the system we have now.

Now, I have my own idea of what a great national banking and currency system should be. I expressed it somewhat briefly at the beginning of my statement. It has always seemed to me a source of some humiliation as an American to contemplate that here is the United States possessing the greatest banking power of any nation in the world and yet helpless to exercise that power. It hurts my pride to contemplate the fact that we have a foreign trade of $3,000,000,000 a year, going and coming, and yet that trade is not financed under an American system of banking and currency.

The value of the merchandise exported and imported is not expressed in dollars and cents, as it ought to be; it is expressed in pounds and pence. I can see no reason why the United States should not have a system that would enable us to take our proper place among the financial powers of the world. You have all been engaged in reading the views of foreign writers on financial subjects, and you find running through them constantly a spirit of derision and contempt for the system as it is in the United States. And it is fairly well merited, gentlemen, when you stop to consider it from the broader aspects of the national and international sides of it.

Another thing that is rather humiliating to Americans is that in the panic of 1907, you remember, we were obliged to send abroad for gold. We imported from Europe a considerable amount of gold to allay the panic of 1907.

Senator Nelson. Nearly $100,000,000.

Mr. Dawson. Nearly $100,000,000. How did we get that gold? Of course, we had no machinery under our system whereby we could induce that gold to come here. We had simply to take our securities to the foreign markets and dump them in the foreign bourses for what they would bring.

Senator Nelson. I want to correct you, if I may. We obtained that gold—and I have Mr. Vanderlip's authority for it—on American bills of lading for American products—wheat, cotton, etc.—in that instance, and not on finance bills. It was obtained strictly on commercial bills.

Mr. Dawson. Which makes it all the worse, it seems to me, from the standpoint from which I am speaking. We obtained that $100,000,000 of gold finally from Europe. Most of it came from England, and the humiliating part was that right here in the Treasury of the United States at that very moment was twelve times as much gold as England possesses in her entire system.

Here was the United States, with the greatest gold supply of any nation in the world, with the greatest banking power of any nation in the world, and yet sitting helpless among the nations of the world so far as cutting any figure in international finance is concerned, not to say our own foreign trade.

So it seems to me what we ought to have here is a system that will bring together—that will knit together, if you please—not only these national banks, but all the banks of the United States—bring in the 25,000 banks and associate them together in such a way that the United States can exercise this great banking power.

In my judgment such a system can never be constructed on compulsory membership. I do not believe you can ever hope to attain the
kind of system that I think the United States ought to have by compelling banks to go into it. It seems to me that the broad view would contemplate a system such that all would delight to go into it, because the small banker wants to be a part of these great movements. He would be glad to become a part without destroying his independence of activity in his own community; he would be delighted, I think, to become a part of such a system. He would have a better appreciation of his citizenship.

We started out with a national banking system and 20 years ago it was the paramount system in the United States; it was the commanding system. The figures show—it was really only 19 years ago, in 1894—that there were more national banks in the United States than there were State banks. I have the figures before me. In 1894 there were 3,770 national banks and 3,705 State banks. In 1912 there were—these figures were taken from the report of the comptroller and consequently they are for 1912—there were 7,372 national banks and 17,823 State banks.

Senator Nelson. That included trust companies, did it not? I think so.

Mr. Dawson. Of which there are not a very large number. Here are the deposits. In 1912 the deposits of the national banks were $5,825,000,000, while the deposits of the State banks amounted to $11,198,000,000. Of the banking power between the State and the national banks—and when I speak of banking power my understanding of it is that power represented by the capital, the surplus, the undivided profits, the circulation, and the deposits of the bank. That represents banking power, as I understand the term.

Senator Nelson. You include the deposits in that?

Mr. Dawson. Capital, surplus, deposits, and circulation; those four items. The national banks possess $8,500,000,000 of banking power in the United States and the State banks $14,000,000,000 of banking power.

Senator Bristow. Have you those comparisons for 1894 also? You gave figures for 1894 and 1912 as to the number of banks. Have you the corresponding figures—

Mr. Dawson. On the deposits? No; I have not those, Senator; but my recollection is—and it is fairly clear—that in the year 1900 the national banks possessed above 50 per cent of the deposits and the State banks below 50 per cent; that is, that 12 years ago the national banks held more than half the deposits.

Senator Weeks. Mr. Dawson, will you, in looking over your figures, be sure you are making a proper comparison of deposits in 1912? The deposits which you have quoted there are the individual deposits in national banks, and I suspect that the deposits of the State banks are the total deposits, are they not?

Mr. Dawson. No; the comparison is on the same character of deposits. I wanted to eliminate bank deposits, because I did not want to bring into this any element of the pyramiding of deposits that we have under the present system.

Senator Nelson. Will you file your tables with your remarks?

Mr. Dawson. Thank you; I will do so.

The parting of the ways came about 18 years ago when the State banks began to draw away from the national banks, and the national-bank system became the system of lesser importance.
Senator Bristow. Would it be possible without too much trouble for you to give the figures for 1894 and make the comparison on the same basis in the tables you submit?

Mr. Dawson. Very little trouble. You want a comparison of the deposits in those two years and a comparison of banking power in those two years?

Senator Bristow. Yes.

Mr. Dawson. These are the figures: In 1894 national banks held $1,742,000,000 of individual deposits, and all other banks $2,973,000,000. Now, what was the reason the State banks drew away from the national banks? You will find in one of the reports of the National Monetary Commission a chart showing how they have gone up and down. It is a very interesting chart, and it shows that from that time, in 1894, the State banks have increased more rapidly than the national banks. Why is that so? It seems to me it is for just one great reason, and that is that the State banks are enjoying greater privileges than the national banks are enjoying.

That leads us up to the question whether or not the Congress of the United States wants to give to the people of the United States a well-rounded banking system or a system that is only going to serve one portion of the country? Should we have a system simply to serve the commerce of the United States, simply to serve the business of the United States, and let agriculture and labor take the incidental benefits that result? Or should we have a system, and have the people of the Nation a right to expect that Congress will create a system, that will not only take care of business but which will also serve the needs of the wage earner, the farmer, and all of the people?

My conception of a bank, I confess, may not be in accord with the committee's conception of a bank. I have not been in the banking business very long—about three years. On leaving the House of Representatives I entered the bank without any previous banking experience. We had a fine old bank out there. In the spring of 1911 that bank had deposits of $1,500,000.

Senator Nelson. What was the capital?

Mr. Dawson. $200,000 and a surplus of $200,000. It had been in operation for 50 years on the same corner in the same city. But it had grown to be to what seemed to me to be a rich man's bank. Its facilities were not being as widely enjoyed by all classes of people as it seemed they should be.

My conception of a national bank is that it should serve every class of people—just like the post office does; that it ought to be a place not only where the business man would come, but where the man who wanted to deposit his savings would come. They are a class of people that should be encouraged to visit the national bank. And so that has been the policy that has been pursued by that particular bank from that time until this. That is what gives the national banker an opportunity to make his bank greater—the adoption of a broad policy of service. The deposits of that bank have increased almost a million dollars since the spring of 1911.

Senator Reed. How much of that is country banks?

Mr. Dawson. How much of that increase?

Senator Reed. Yes.

Mr. Dawson. Very little. We have made no effort to extend our business in that direction very greatly, for reasons which I shall be
glad to explain in connection with this phase of the subject relating to privileges of banks.

The State banks have outrun the national banks because they have enjoyed greater privileges, and it seems to me that in drafting this bill the fact ought not to be lost sight of that the national bank out in the average town of Iowa or Missouri is competing with the State bank. They are in the same block or just around the corner. The banker has only one object to attain aside from the making of money, and that is service to the community, and he hopes to make his money through that service. If he finds he can serve his community better under a State charter than under a national charter, of course there is no room for argument as to what he is going to do. So you must apply the supreme test to this bill: Will the country banker go into it? He will go into it if you will fairly equalize his privileges with those of his competitors.

Senator Nelson. Will the committee allow me to ask a question at this point?

Senator Reed. Certainly.

Senator Hitchcock. The present chairman has no objection, but refers it to the attention of the Senator from Ohio, who is the watchdog of order.

Senator Nelson. I take it consent is given. [Laughter.] How would it do to say that the national banks in any given State should have the same privileges for doing local business as State banks have in that State? Would not that be a sufficient inducement?

Mr. Dawson. Yes, it would; but that would not square with my idea of what ought to be done. That would make a Federal law contingent upon a State law, and I can not subscribe to that.

Senator Reed. And some States have practically no banking law.

Mr. Dawson. What would meet my ideas in the matter would be to ascertain what is the sound practice generally throughout the country and accord them those privileges that would square with some banking practices. I think there are some loose banking laws throughout the United States. We do not want a national law that is loose anywhere, in any State or Territory of the Union.

Now, let us get down to the actual, practical questions that confront the cashier in a bank in a town of 3,000 people out in Iowa or Missouri or Ohio or Colorado or any other State. Let us take a bank of $50,000 capital—and, as I pointed out, 90 per cent of your present national-banking system is made up of these smaller banks.

Senator Nelson. I understand there are 2,000 of the $25,000 banks.

Mr. Dawson. I have not the numbers.

Senator Nelson. I wish you would put that in your table.

Mr. Dawson. The number of banks of the various capitalizations?

Senator Nelson. Yes; of the $25,000 banks.

Mr. Dawson. I find the exact number of $25,000 national banks is 2,004. The average $25,000 bank consists of one man, so far as the actual operations of the institution are concerned. The cashier performs that service. He is bookkeeper, janitor, and cashier; he is receiving teller and paying teller, and he performs all the duties of conducting the bank. It is up to him how much his institution is going to earn. The men who have subscribed the stock for that little bank have put their money in it with the expectation of getting some return upon it. It rests upon the shoulders of the cashier whether
that bank is safe and whether that bank is profitable. So you must take into account his present condition and in what respect this new bill would curtail his present sources of revenue.

The first thing that confronts him is the fact that he must subscribe one-fifth of his capital stock to this new institution. It should be remembered that the capital stock in that $25,000 bank—and I think we should take him into account, because Congress encouraged him to incorporate. In 1900 Congress reduced the limit to $25,000 as the capital on which a national bank could be organized. Congress then adopted the policy of encouraging him and carrying the privileges of the national system down to more people than it ever reached before. He is confronted with the fact that he must take one-fifth of the capital that these farmers and business men in his community have gotten together there. He must subscribe one-fifth of that to an institution away off somewhere else. He sees that 10 per cent of his capital at least which has been gathered together for business in that community must be taken out of that community and sent to another place, and at a low rate of interest for him, 5 per cent. That is a little disturbing to him, though I think the least disturbing of anything there is in the bill. I do not think the average country banker would have any objection to subscribing 10 per cent of his capital stock. I would make it 10 per cent instead of 20, I think, because if you can get a large percentage of all the banks to go in at 10 per cent you will have ample capital in your new institution.

Senator O'Gorman. May I ask a question there? If there be no objection, I understand the rule is waived.

Mr. Dawson. The witness is entirely willing to waive the rule at any time.

Senator O'Gorman. It is an important matter. I do not know who adopted this rule. I was not here when it was adopted, and I therefore feel at liberty to disregard it.

Senator Pomerene. This will be no precedent.

Senator O'Gorman. There has been fear expressed from time to time that if this 12-region feature of the bill were retained in some of the regions a sufficiently large number of the national banks would not come in to make up the required capital of $5,000,000.

Mr. Dawson. I expressed that same fear to the committee shortly before you arrived.

Senator O'Gorman. Very good. Now, what is your view regarding the possible modification of the bill in that respect by permitting the reserve board to invite individual subscriptions to the stock from the citizens residing within those regions after a certain period, if there be a deficit in the $5,000,000 contributions from the banks?

Mr. Dawson. My opinion, Senator, is that if certain changes are made in this bill there would be no question that the necessary capital will be subscribed to these regional banks of rediscount. It seems to me that, without any great change in the fundamentals of this bill and only some changes in detail it will be made sufficiently attractive, not only to the national banks, but to State banks as well, that they would be pleased to come into it. If they did not, I could see no reason why you should not go on and take the next step—provide the capital in some other way.

S. Doc. 232. 63-1 —vol 3——12
Senator O'Gorman. Then, whether we have a system providing for one bank of reserve and rediscount in Washington, or whether we have a system of four or five regional banks plus the reserve board, or whether we attempt to carry out this system which contemplates 12 regional banks, you think that the power might be confided to the reserve board to invite contributions to the capital from the people of the country after a certain period in the event of the requisite capital not being provided by the national banks?

Mr. Dawson. I could see no objection to that. I think if you reduce this capital stock subscription to 10 per cent—

Senator O'Gorman (interposing). To payments of 5 per cent each?

Mr. Dawson. To payments of 5 per cent each; and then increase the dividend rate and, possibly, make it 6 per cent—I think that is a very small matter, so far as the average bank is concerned, although he is in the habit of obtaining 6 and 7 per cent on his money—after you have built the surplus of this new bank up to your required 20 per cent; 6 per cent would then only be 5 per cent on the book value of the stock.

Senator O'Gorman. Do I understand you to express the opinion that if the contribution from the national banks should be reduced to 10 per cent instead of 20 per cent, and the 10 per cent to come in in two payments of 5 per cent each, sufficient would be subscribed by the national banks to make up the required capital in each regional bank?

Mr. Dawson. Well, I could not answer that question directly, Senator, because I do not know what the regions are to be.

Senator O'Gorman. I have reference in this question to the 12 regional banks. Of course, as I see it, this particular element of danger and uncertainty would be completely eliminated if we had but a single reserve bank where the contributions from the country would come. The danger would be more or less minimized if we had four or five regional banks.

Mr. Dawson. I advocated that a moment ago.

Senator O'Gorman. But with 12 banks there must necessarily be some uncertainty as to whether all of them can secure, in the manner indicated in this bill, the required capital of $5,000,000.

Mr. Dawson. I feel greatly honored to find that my views and yours are almost in accord on this particular subject. I expressed them to the committee a few moments ago, but I think it was perhaps during your absence from the table.

Senator Nelson. Will you allow me to interrupt? It seems to me that there has been a confounding here of the subscription. The subscription is 20 per cent, but the payment within the 60 days is not to be more than 10 per cent. It is only a matter for call; the balance is—

Mr. Dawson (interposing). It seems to me this way: Suppose the bill should go through in its present form, which is not entirely satisfactory. Suppose the call should be made for the first 10 per cent under the provisions of the bill. The very situation arises that the Senator from New York has just called attention to—enough of the banks stay out so you can not organize each of these 12 regional banks. Then, of course, the Federal reserve board would call for the other 10 at once. They have that power; there is no limitation as to when they may call for it. So the average manager of the small
bank, for whom I am undertaking to speak, sees before him all the
time that he will at once have to take 10 per cent of his capital——

Senator Reed (interposing). Do you think they would hesitate to
ante in the first instance if they did not know what the limit was
going to be?

Senator, Pomerene. You are talking about a subject we do not
know anything about. I insist on the regular order.

Senator Reed. It seems to me that the Senator protests rather
quickly. [Laughter.]

Mr. Dawson. The average country banker objects to this in that
way, particularly when it comes to him somewhat in the nature of
an act of violence. He does not relish the idea of the Federal
Government saying to him, “You must do this; you must take one-
tenth of your capital out of your community and invest it in this
institution, and you must later take another 10 per cent and invest
that.” So I say the feature of the subscription is somewhat objec-
tionable to the smaller banker at this time.

But a subject of more concern than that is the shifting of his
reserves. That means more to him in the way of financial returns
than the difference in interest on his stock subscription to the regional
bank.

As I recall the terms of the bill, the country banker does not have
60 days as the central reserve city banker has. He has to produce
instantly, and he must shift 3 per cent of his total deposits from their
present location over to the regional reserve bank.

Now, it may seem like an anomaly, but it is true nevertheless in
actual banking practice, that those reserves to-day are a part of active
checking accounts, and so it is entirely exact to say that the reserves
of the country national banks are now in the active channels of busi-
ess. It seems like a contradiction in terms that a reserve should be
part of the regular currents of everyday business, and yet I shall
endeavor to explain how that is so.

The First National Bank, of Davenport, Iowa, is required to keep
its reserve in either Chicago, St. Louis, New York, or some other
reserve city. Along with the question of reserves, there is the question
of daily exchange. I asked the boys in the bank to figure up how
active our New York and Chicago accounts were. Most of the
financial relations of our portion of Iowa are in the direction of
Chicago, rather than in the direction of St. Louis, although we have
considerable business in that direction also. I found that our Chicago
balance turned over every 2 days in the matter of exchange. In
other words, we were writing a sufficient number of drafts on Chi-
cago banks every two days to wipe out our balance there, and that
balance was larger than the reserve which we were required by law
to carry.

Senator Hitchcock. What methods do you adopt to restore that
balance? What proportion is in currency?

Mr. Dawson. There is no currency; they are items of credit.

Senator Hitchcock. No currency?

Mr. Dawson. No currency at all; we never ship currency to
Chicago.

Our New York account shows the activity of the relations be-
tween the mid-West and the financial metropolis. Our New York
account turns over once in every three days. We sell enough New
York exchange every three days to wipe out the balances we carry in New York.

Senator Reed. You would have to have that much money there, whether you had a reserve or not?

Mr. Dawson. Very nearly so, unless there would be some change in the existing practices in the world of banking.

So, when you reduce the reserve requirements of the country banks from 15 to 12 per cent. I do not think it is fair to say that the 3 per cent reduction is immediately available, and that he can take it from where it is and put it in the regional reserve bank without embarrassment to him and without disturbing business as it is carried on to-day. I say the average country banker would not do it. He would not feel safe in taking that 3 per cent by which you reduce his reserve requirements——

Senator O’Gorman (interposing). Do you think that is a safe reduction—from 15 to 12—for the country bank reserve?

Mr. Dawson. With the provisions embodied in this bill, I should say yes.

Senator O’Gorman. Do you think the country bankers would not consider it safe to avail themselves of the reduction in the reserve?

Mr. Dawson. The country banker possesses some caution and some conservatism—a considerable amount. I do not think he would want to reduce his balances, either in New York or in Chicago, until he saw how this bill was going to operate. He must put this money up at once. He is not going to change the experience of years overnight. He is going to be cautious and await the developments in the new system.

So, in my judgment the average country banker in Iowa, if he is required to send that 3 per cent instantly away to the regional reserve bank, will have to do one of two things—he will either have to go out and borrow that money or he will have to contract credits or call some loans to get it.

Senator Shafroth. Why can he not borrow from the reserve bank immediately?

Mr. Dawson. I regard that as a very important matter, Senator, and yet I cannot find in this bill where the machinery for rediscount is going to be ready to be put in operation the minute you call upon the country banker for that subscription.

Senator Hitchcock. How soon afterwards do you think it will be ready for operation, from your study of the bill? You say you think the machinery for rediscount would not be ready at the time the country banker is required to shift his reserves, and I agree with you; but I have been unable to figure out how soon afterwards it would be ready.

Mr. Dawson. I do not know. It seems to me that what should be done would be to have that machinery of rediscount all ready before the shifting of reserves began.

Senator Reed. Why not shift it in the form of good notes? Why not let your bank take down $100,000 of good paper and deposit that instead of cash?

Mr. Dawson. Make it a simultaneous transaction?

Senator Reed. Instead of taking your money down and then putting up your note and collateral notes from your bank, and then borrowing back the money you had taken down with you, why not
deposit in the first instance part of your securities with the guaranty of your bank, and let that stand at once as your contribution and your rediscount?

Mr. Dawson. That would be going straight to your destination without any of the circumlocution that seems to be in this machinery as it stands.

Senator Reed. Would that help that difficulty?

Mr. Dawson. It seems to me it would, in part, but it would not provide the gold reserve required by the regional banks.

Senator Bristow. Nevertheless, unless you utilized the money you now have with your reserve agents, you would have to curtail your business just to that amount. You would not have to force contraction, but you turn over these securities and the regional bank collects them, so that you take out of your community that much credit, do you not?

Mr. Dawson. Well, I would not say you take out that much credit. You can yet bring the level back through a rediscount.

Senator Hitchcock. A reserve bank is required to keep a reserve of $5 per cent. If the reserves were paid in commercial paper how would it affect the gold reserve?

Senator Shafroth. You do not hold any reserve against capital. You can loan that to the full extent. I am talking about a proposition of turning the reserves into commercial paper. The reserves count as deposits. Where would the gold reserves come from?

Mr. Dawson. Of course that is essential. That is vital. These regional reserve banks should have this gold reserve against its note issues.

Senator Nelson. It would not give them any money; it would simply give them commercial paper.

Senator Shafroth. Yes; it would. They would issue this paper, and if they would issue the paper immediately, it would give them paper currency.

Senator Bristow. Where would they get the gold?

Senator Reed. That is easily provided because any bank—I was not trying to suggest a perfected system, but the idea I was trying to meet was the one that there would be an interval when the bank would be obliged to carry that money down, and let it remain idle, and they get it back at some future time in the way of rediscount.

Now, leaving out for the moment the gold-reserve proposition. We would, by the suggestion which I made, accomplish by one act that which is contemplated shall be accomplished under the bill by two acts.

Senator Pomerene. And a delay.

Senator Reed. Involving a necessary delay, because under the present proposition a bank would send down a million dollars of money and deposit it with the Federal reserve board, and if it were short of money it would bring down the necessary million dollars of notes, and, guaranteeing those notes, deposit them and borrow back the $1,000,000 it had put in.

Now, if that is to be the ultimate result it might as well, in the first instance, bring down the notes, and, guaranteeing them, turn them in and use that as its contribution. Now, of course the $5 per cent of gold required on deposits would necessitate that the banks bring
down enough gold, if the plan should be worked out by which the bank making this transaction should contribute a certain amount of gold, and that would have to remain in the vaults. Further than that, after all is said and done, what has been claimed for this system is that it does enable the banks to use this capital, and if they use it they might as well do it in one transaction as in two. I only made the suggestion to see whether it would agree with the facts.

Senator Nelson. I think this hardship, so-called, is unduly accentuated, for the reason that this bill relieves them of 3 per cent of their reserves.

Senator Shafroth. According to this system, only 1 per cent would have to be put up immediately.

Senator Reed. I want to say in this connection that the suggestion which I made first came to me in conversation with Senator Pomerene. If there is any virtue in it the credit should go to him and not to me.

Senator Nelson. Of course, the reduction which the bill makes of reserves of country banks from 15 to 12 per cent after the bill gets in operation would take care of that 3 per cent which they must put over at once; but, Senator, in my judgment the average country banker would not feel that he could take 3 per cent out of his balance that he has now in the channels of trade and business and put it into a regional reserve bank without some disturbance to the machinery.

Now, let us see what it would mean to a State. Iowa is a purely agricultural State, with no city of more than 100,000 people. We have 340 national banks in Iowa.

Senator Hitchcock. Will you permit me to interrupt you there? Mr. Cannon was scheduled for this morning, and he tells me that he would like to get back to New York to-night. There will be some time required for your cross-examination, and I wanted to ask whether it is important for you to get away to-night?

Mr. Dawson. It is not absolutely essential, although I had hoped to start West this evening at about 6 o'clock. I am almost through, so far as my general statement is concerned.

Senator Hitchcock. Well, we will sit until 1 o'clock, anyway, and I think you can probably finish your general statement by that time, and then we can let Mr. Cannon go on immediately following recess.

Mr. Dawson. It would be entirely agreeable to me, however, to give way for Mr. Cannon at this time, if that is the committee's pleasure.

Senator Hitchcock. Very well, then; we will hear you until you complete your general statement.

Mr. Dawson. As I said, we have in the State of Iowa 340 national banks. They have a capital of $23,000,000. The national-banking system is not as powerful out there as we would like to see it. The 10 per cent of capital-stock subscription for us would be $2,300,000. The deposits in the country national banks of Iowa are $121,000,000, and 3 per cent of that must go over. That would be $3,630,000. So that the total would be almost $6,000,000, or $5,930,000, which would be Iowa's contribution to the Federal reserve banks the next day after it went into operation—approximately $6,000,000.

Senator Reed. From all the banks, or from the national banks?
Mr. Dawson. The national banks only; I am speaking of the country national banks.

Then the reserve cities, of which we have four in Iowa, would have to make their additional contribution of 3 per cent in 60 days. They have 60 days more in which to gather together their 3 per cent on the $41,000,000 which they hold, which would be $1,230,000. But the country bankers in Iowa must produce $6,000,000 at once and put it into this system and those national bankers in the reserve cities in Iowa, 60 days thereafter, must produce $1,230,000 more.

Senator Reed. Are you not mistaken about that? [Reading:]

Every national bank located within a given district shall be required to subscribe to the capital stock of the Federal reserve bank of that district a sum equal to 20 per cent of the capital stock of such national bank, fully paid and unimpaired, one-fourth of such subscription to be paid in cash and one-fourth within 60 days after said subscription is made. The remainder of the subscription, or any part thereof, shall become a liability of the member bank, subject to call and payment thereof whenever necessary to meet the obligations of the Federal reserve bank under such terms and in accordance with such regulations as the board of directors of said Federal reserve bank may prescribe.

Mr. Dawson. They pay in 5 per cent of the capital at once; but the payments with regard to the reserves were stated correctly.

Senator Shafroth. Here is another provision in regard to that matter:

and for a period of 14 months from the date aforesaid at least three-twelfths, and thereafter at least five-twelfths, of such reserve shall consist of a credit balance with the reserve bank of its district—

that gives them 14 months in which to put in this 3 per cent.

The Chairman. What section is that?

Senator Shafroth. Section 20. [Reading:]

Five-twelfths of such reserve shall consist of money which national banks may under existing law count as legal reserve, held actually in the bank's own vaults; and for a period of 14 months from the date aforesaid at least three-twelfths, and thereafter five-twelfths, of such reserve shall consist of a credit balance with the Federal reserve bank of its district.

Mr. Dawson. Certainly; he must at once put 3 per cent with the Federal reserve, and the remainder of the 12 per cent may for 36 months consist of balances due from national banks in reserve or central reserve cities.

Senator Shafroth. It gives them 14 months to get that in the Federal reserve bank.

Senator Bristow. That is the second payment.

Senator Shafroth. Five per cent—that is cash—and then 3 per cent, and thereafter five-twelfths of such reserve shall consist of a credit balance with the Federal reserve bank of the district.

Senator Nelson. What it means is this, that during 14 months he must maintain 3 per cent.

Mr. Dawson. Certainly; and then raise it to 5 per cent.

Senator Nelson. And then, after that, it must be 5.

Mr. Dawson. Now, in my judgment, the country banks in Iowa— Senator Shafroth. He does not have to put it in until a year.

Mr. Dawson. The country national banks in Iowa could not take $6,000,000 right out of the everyday transactions of their banks and put it in this regional reserve bank without some disturbance of credits in that State.
Senator O'Gorman. It would be a contraction of credits?
Mr. Dawson. Yes.
Senator O'Gorman. Would that not be a continuous contraction of credit for the year?
Mr. Dawson. Gradual.
Senator O'Gorman. Diverting it from commercial activities?
Mr. Dawson. Yes; it would undoubtedly be some curtailment of credit.
Senator Hitchcock. What would the effect of the curtailment of credit be on business in Iowa?
Mr. Dawson. Of course there is no telling. It would not hurt us so much out there. Iowa is practically financially independent of the rest of the country.
Senator Reed. If you had to divert $6,000,000 in the State of Iowa from actual business that would mean a contraction of credit of about $48,000,000?
Mr. Dawson. It would mean that——
Senator Reed (interposing). Now, if that was done, the only way you could do it would be to either go closer to the danger line in your reserves or to begin to gradually make loans as generously as you had before?
Mr. Dawson. Yes.
Senator Reed. There would be a gradual pinching in the financial condition.
Senator Pomerene. The very thing that a banker would do would be to go to that bank and borrow it back again.
Senator Shafroth. The reserve banks?
Senator Pomerene. Yes.
Senator Reed. I am thinking now of the illustration on that same occasion of the bank getting ready for a year in advance to make its contribution.
Senator Pomerene. There is not any necessity for the contraction of the currency to that extent, with the privilege of borrowing it back.
Senator Reed. Provided, you mean, you could make the loan back immediately.
Mr. Dawson. And provided, also, you had the collateral to get the loans.
Senator Nelson. I want to call your attention, Senators, to the discrimination here and ask you to turn to the bill on page 36, line 23, where it says, "and for a period of 14 months from the date aforesaid, at least three-twelfths"; that is, the country bank. Now, turn to the next page, where it says, "after 60 days from the date aforesaid, and for a period of one year." Now, in order to put them on an equal footing, you ought to have the words "after 60 days" in line 23 on page 36. In one case it reads "after 60 days from the date of aforesaid, and for a period of one year, at least three-eighteenths and permanently thereafter at least five-eighteenths." In order to make that exactly fair and equal you ought to have the same wording, "after 60 days from the date aforesaid, and for a period of 14 months."
Mr. Dawson. That emphasizes——
Senator Nelson (interposing). It is clear that there is a discrimi-
nation.

Senator Hitchcock. Is that not due to the fact that the reserve
banks hold deposits in banks and the country banks take those de-
posits out, and for that reason an additional limit is given the reserve
banks? Is that not the logic of the situation?

Mr. Dawson. That is one viewpoint, and yet, take it from the
viewpoint of the banks the reserve requirements of this bill bear with
greater severity on the country banker than they do upon the reserve
city banker, because he has 60 days. Of course he is going to lose
some of his country-bank deposits.

Senator Hitchcock. When the country banker draws upon his re-
serves he calls upon the reserve city banker, and the reserve city banks
will have to carry the burden of the reserve city bank as well as the
country bank, and I think there is logic in giving him more time for
that reason.

Mr. Dawson. I think so, and that is one reason why you have re-
duced his reserve from 25 to 18 per cent, the central reserve city
bank; the bill reduces the reserve from 25 to 18 per cent.

Senator Hitchcock. When does that reduction occur for the re-
serve city bank?

Mr. Dawson. From 25 to 18 per cent?

Senator Hitchcock. Yes.

Mr. Dawson. When it gets in full operation.

Senator Nelson. It has a period of 60 days.

Mr. Dawson. From what?

Senator Nelson (reading): If a reserve city bank as defined by existing law it shall hold and maintain
for a period of 60 days from the date fixed by the Secretary of the Treasury
as hereinbefore provided, a reserve equal to 20 per cent of the aggregate
amount of its deposits, not including savings deposits hereinafter provided for,
and permanently thereafter 18 per cent.

Senator Hitchcock. Does that mean 60 days after the new system
is in operation?

Senator Nelson. From the date fixed by the Secretary of the Treasury;
from the time the bank goes into operation, I suppose.

Senator Hitchcock. Then the reserve city bank gets no reduction
in reserves until two months after the new system is in operation?

Mr. Dawson. From 25 to 20 the first thing; 5 per cent of it in-
stantly; and 2 more in 60 days.

I want to draw this down one step further. I want to draw it
down to the condition of the little bank itself, and what it is going
to do to it. I have taken a bank of $50,000 capital and $500,000
deposits. That is a bank like the First National Bank of Maquoketa,
Iowa, or the First National Bank of Marengo, Iowa—county seat
town—an average county seat town in the middle western country.
What is the bill going to mean to such a banker? You want him to
go into the system. He must at once subscribe 20 per cent of his
capital and pay 10 per cent of it, one half at once and the other half
in 60 days. Then he must shift to this new bank 3 per cent of his
deposits, so that his initial contribution for the reserve bank would
be $20,000. And eventually, if he were called on for the other stock
subscription, and carried to the regional bank the balance of his 7
per cent of reserves, or even call it 6, then he would have in the
regional bank $40,000. That $20,000 at the start is a pretty large
sum of money on $50,000 capital. In a bank of $50,000 the largest line
of credit he can give to any individual is $5,000. That is the biggest
note he will have in his portfolio, and there will be comparatively
few of them in towns of that size. So that he must produce $20,000
out of this $50,000 bank in order to comply with the initial require­
ments.

Senator Nelson. But $15,000 comes by way of transfer from his
reserves. It is a shifting of reserves.

Mr. Dawson. Yes, sir; and I have felt, Senators——

Senator Nelson (interposing). It is not a direct contribution; it
is just a shifting of reserves to that extent from other reserve places
to this central bank.

Mr. Dawson. But my opinion is, Senator—and that opinion is
based on what I know of actual banking transactions in the country—
that at the beginning the country banker would not shift his balances
which he has now, because he feels that the balances which he main­
tains now are none too much to take care of his needs for exchange.
At least he could not shift them until he begins to see how this new
plan works. You are going to change somewhat the currents of
business. He is going to be very slow to take any step which will
endanger his business until he finds out how it works.

Senator Nelson. He can sell his exchange on the regional reserve
bank instead of these other banks?

Mr. Dawson. I want to discuss that when I reach the point. So a
country bank of $50,000 capital, with half a million dollars of de­
posits, will have to put up $20,000. That would not be so serious for
him if you had the machinery for rediscounting ready to put in op­
eration as soon as he sent that up there, and it would not be so serious
if he had the class of paper that would be eligible for rediscount un­
der this bill. Those are the two things that confront the country
banker. In that connection I desire to say that I have met many
smaller bankers of Iowa, and among them there is a considerable
unanimity of opinion that the banks of $50,000 and $100,000 capital
in Iowa, or any other State for that matter, will not have the kind of
paper that will be eligible for rediscount under this bill. Those are the two things that confront the country
banker. In that connection I desire to say that I have met many
smaller bankers of Iowa, and among them there is a considerable
unanimity of opinion that the banks of $50,000 and $100,000 capital
in Iowa, or any other State for that matter, will not have the kind of
paper that will be eligible for rediscount under this bill. Of course, the standard of the paper is not fixed in the bill; that is,
the exact standard. That is to be left to the discretion of the Fed­
eral reserve board. The average country banker does not know just
what the standard is going to be, what requirements are going to be
exacted by the reserve board; and, as a matter of fact, in reading the
testimony before this committee I have seen no witness who seemed
to be entirely clear in his mind as to just what the standard that
would be eligible for rediscount by the regional reserve banks
would be.

Senator Hitchcock. Do you think that is to be fixed by the Federal
board?

Mr. Dawson. In part, and in part fixed by statute.

Senator Hitchcock. Would not the Federal regional reserve banks
pass upon that question?

Mr. Dawson. They may also. That only emphasizes what I was
trying to say, that there is a great deal of doubt in men’s minds as to
how the lines are going to be drawn.
Senator Hitchcock. You think it should be expressed more clearly in the bill?

Mr. Dawson. I think it should be.

Senator Reed. You say they are not likely to have this class of paper?

Mr. Dawson. Yes, sir.

Senator Reed. Assuming that, that might be commercial paper, as a 60 or 90 day note signed by two people, and I think that is just where we are. I do not think anybody can place that.

Mr. Dawson. That is on an actual business transaction?

Senator Reed. I am leaving that out, because I do not think any board can go back of a piece of paper that is presented. You have that class of paper, do you not?

Senator Nelson. The difficulty which comes, Mr. Dawson, with the paper of these country banks is not so much the question of time as it is the quality of the paper; that is, commercial paper in the strict sense, as understood by some. The bulk of their paper is not commercial paper?

Mr. Dawson. No.

Senator Nelson. It is not paper that they say will liquidate itself?

That is one of the radical troubles.

Mr. Dawson. But I think the committee understands pretty thoroughly that a great majority of the paper held by the average country bank is paper that matures when the farmer produces his crop. It matures at a certain time of the year. It may be based on cattle or other things, but it is only liquidated when the community has produced agricultural wealth. In other seasons there would be very little eligible.

Senator Reed. If that kind of paper was excluded from the benefits of this bill and certain other paper had all the benefits of the bill, would that not necessarily result in an additional interest charge and a discrimination against that class of paper which is longer in time and which is to be liquidated by the farmer marketing his cattle, and things of that sort?

Mr. Dawson. That would be my view.

Senator Hitchcock. Have you any figures showing what percentage of the farmers' paper is actually liquidated and what per cent is renewed?

Mr. Dawson. No; I have no figures on that point.

Senator Hitchcock. Why is it that there is not a wider variation in the amount of loans as reported in the bank reports?

Mr. Dawson. During the other portions of the year the way the country banker loans out his money is in small notes, which under no circumstances could he use as collateral with a regional reserve bank. Then there is an additional embarrassment to the country banker. There is a question whether or not—

Senator Pomerene (interposing). You say under no circumstances could he use that. Why?

Mr. Dawson. I could conceive of no practical way whereby a country banker could; we will say he wanted a rediscount of $10,000 or $5,000; say he wanted a rediscount of $5,000. He takes his portfolio and he gathers up notes of $25, $50, $60, or $75, small notes. It does not seem to me it would be practicable for him to rediscount a bunch of such small notes as these.
Senator Pomerene. There is nothing in the bill preventing it; nothing saying that that could not be received.

Senator Brisow. It is not a commercial transaction in any sense; it is simply a personal loan.

Mr. Dawson. Then if the bank were to send those small notes to a bank outside of their own institution they would lose customers by it. The average man in the little towns does not want his note outside the hands of the banker from whom he obtains the loan. He does not want it sent to Chicago. He may want to come in and pay it. If the man came in and he went to the banker from whom he got the money and said he wanted to pay the note and the banker said "I have your note at the regional reserve bank as collateral," the next morning that particular customer would be over at the State bank doing business and not with the national bank.

I think this 3 per cent of reserve which you propose to shift from its present place to the regional banks, if you do that a little more gradually, take 1 per cent in the first three months and the next in quarterly periods, you would get it all over there in the same period of time, practically which you have in the bill, but it would be so gradual as to permit the banks to readjust themselves.

Senator Hitchcock. But you would not send it over there by the time the regional reserve bank had any use for it.

Mr. Dawson. But these things are not of the largest concern to the country banker. They are not the things that are going to keep him out or put him in. The present every-day question with the country national banker is the question of the equality of opportunity, or the equality of privileges with the man with whom he is in direct competition. That is the vital question with him every day. If he is to be invited into a system or to remain in a national system he went in with certain privileges, and the only real privilege he had under that system is to be taken away from him, and he is to stand in this new system deprived of any advantage he ever did have, and denied those additional privileges that he has all these years had reason to expect from the Congress of the United States, then I can not see, and no one could see, any excuse for his going into that system. He will go into the State bank system. The question of the equality of privilege and equality of opportunity or the equalization of the privileges of the national banks is a most important proposition, and goes to the section of the bill in relation to the farm loans and savings department.

Senator Brisow. I am more interested in Mr. Dawson's analysis of this bill, probably, than anybody else, or at least as much as anybody else, because he is dealing with the very things which touch my constituents, and I would like him to be here just as long as he can stay. If we are to hear Mr. Cannon, I think we may have to ask Mr. Dawson, if he can, to stay over.

Mr. Dawson. I should be very glad to give way at any moment to Mr. Cannon.

Senator Hitchcock. I think you had better proceed.

Mr. Dawson. This question of farm loans and the savings-bank provision is a vital question.

Senator Brisow. That is going to take a good deal of time.

Senator Nelson. Tell us about the farm loans.
Mr. Dawson. The provision of this bill is of no practical benefit to the national banks in the Middle West, where there are the highest class of farm-mortgage loans, and where agriculture is in the highest state of development, and where the loans there are regarded as the choicest security which a bank can obtain for a loan—a farm mortgage not to exceed 50 per cent of the value of highly improved farms of that section of the country. It is the best security any bank can lay its hands on. It is not the custom to make loans of that character for 1 year. The country bank will make them for 5 or 10 years. With the provision in here that they may only be made for 1 year, no one would ever approach a national bank on the subject of trying to negotiate a farm mortgage with that 1-year provision. He would do business with the State bank.

There were certain reasons when the national banking law was enacted why farm mortgages should not be taken by national banks. At that time there was a question as to its security, and there was a question as to its liquidity—its power to be converted, the power to liquidate it. The class of those securities is very much higher now than it was then. The security upon the loan is improved.

Senator Nelson. And they can be easily liquidated?

Mr. Dawson. There is a fairly well organized market for the farm mortgage. The great insurance companies are now seeking first-class mortgages on highly improved real estate. There is a broader market now.

Senator Reed. As a practical question, if your bank had a $10,000 mortgage on a good farm in the State of Iowa, running for five years, and drawing a reasonable rate of interest, would you have any difficulty in getting that money in one or two days' time; I mean the money on that mortgage?

Mr. Dawson. Not under ordinary times. I can see, of course, that in the face of a panic you might not be able to do that.

Senator Reed. In the face of a panic we could not get our money out of the banks.

Mr. Dawson. If the machinery of this bill works as its authors think it will work, we are going to be panic proof by the rediscount feature of it. Certainly there is no choicer security than this particular kind of mortgage that you described.

Senator Nelson. I have known runs on banks to be stopped by the tender of mortgages over the counter instead of cash.

Mr. Dawson. There is some difference of opinion among men as to just what the provisions of this bill mean with regard to farm loans. I have had men who have analyzed it say that the provision on page 44, speaking of loans on farm lands, and putting limitations on them, of which the country banker complains, that that is simply applied to the commercial departments of any national bank anywhere, whereas, in the very next section of the bill, section 27, relating to the savings department, you gave to that department the power to loan on real estate, without the limitations. Whether or not the limitations in the preceding section would apply to that, I am not sure.

Senator Nelson. Would it not be a better limitation, instead of limiting it upon the capital, to gauge it by the time deposits?
Mr. Dawson. That would be my solution of it, and I want to make my suggestion jointly with relation to farm loans and the savings department. The savings department provision in this bill is very objectionable to national banks who now have a savings department and small country banks.

Senator Nelson. They are all practically doing a savings-bank business now?

Mr. Dawson. Very nearly, and under the demands of this bill it would actually compel them to go out of the savings-department business in a large measure.

Senator Reed. Why? That is what we want to know. Tell us why, so that we may know how to remedy it, if we agree with you.

Mr. Dawson. In the first place—I only refer to that now because I want to try to get through by 1 o'clock so than Mr. Cannon can go on. Would it be just as agreeable for me to answer that later on?

Senator Reed. Yes; but do not forget it.

Mr. Dawson. Country banks do not like this segregation of capital, segregation of assets, segregation of cash. It is absurd, and we come to a $25,000 bank where everything goes into one window, and everything is done by one man. He would be the subject of derision in that community if he were compelled to run two banks—segregate his capital into savings business and commercial business. That would be the case in a $25,000 bank out in Nebraska and Kansas, and in Iowa also.

Senator Nelson. It would be.

Mr. Dawson. My general suggestion with regard to the savings department and the farm-loan department is this: The national banks have been encouraged to open savings departments. A savings department in our bank was started about a year before I went there; that is, in 1910. I have inquired into the circumstances under which they started that department in that bank. They wrote the comptroller and asked him for the regulations respecting the establishment of a savings department in a national bank. They received a letter from him, and it was on the basis of that correspondence that they proceeded to establish their savings department.

Senator Reed. The comptroller gave permission?

Mr. Dawson. He did not deny us. I will put the letter into the record if desired. It is practically the same reason he gave in his last annual report.

It seems to me that it could be done with perfect safety, to permit a national bank to accept savings deposits and then loan a percentage of its savings deposits on first-class farm mortgages.

I know the complaint is made you do not want to confuse investment banking and commercial banking, but there is not a State bank in the State of Iowa, with 1,300 State banks and 300 national banks—there is not a bank in that entire State but what is doing investment banking and commercial banking all through one window, and it is done safely. It is serving the interests of those little communities, and their security—the security of the State bank out in our country—is as good as the national bank. They are just as well conducted, and they are serving the people in a wider capacity.

Senator Reed. And thoroughly inspected?

Mr. Dawson. I think their inspection is not quite as rigid as the national-bank inspection.
Senator Bristow. In our State I think it is better.
Mr. Dawson. That may be so.
Senator Reed. The State government of Kansas has always been understood to be superior to any other government.
Senator Nelson. Except the government of Minnesota. [Laughter.]
Mr. Dawson, I know the question has been asked this committee by some of the large bankers, What situation the national banks would be in if at one window you are paying out demand deposits and at another window you are enforcing the 60-day rule? It seemed like a question that had no answer. But yet it has an answer. There is a difference between a demand deposit and a time deposit. There is a difference in the contract between the depositor with the bank. The man who comes in with a savings deposit—a time deposit, if you please—says to Mr. Banker, “I want to leave this here a certain length of time, a considerable length of time. I will leave it here, say, three months or seven months,” or he need not specify. Mr. Banker says, “Very well. If this is a time deposit, we can afford to pay you interest on that in consideration of your allowing it to remain here. We will pay you 3 per cent interest on it.”
Senator Nelson. And give you a certificate.
Mr. Dawson. One or the other. He may be either given a certificate or it may be entered in his pass book. There is a contract between the depositor and a banker on a time deposit. That is not true between the banker and the man who comes in to make a demand deposit. The business man who comes in and lays down his deposit, he says to the banker, “I want you to take care of this for me, but I expect you to pay it to me the minute I want it. I am not going to leave it here any specified length of time; you can not count on that.” Our banker says, “I can not afford to pay you any interest on that.” There is not the same contract. Now, if there is a different contract between the depositor and the banker on those different classes of accounts, then there should be a way by which they could be handled differently and with entire justice to all concerned.
Senator Nelson. And safety.
Mr. Dawson. And with safety as well. So I can not see why a country national bank should not be given the privilege under proper restrictions, of course, to do a commercial business and this investment banking.
Senator Nelson. And, as a matter of fact, are not the bulk of those deposits in the small country banks time deposits?
Mr. Dawson. They are. I have a letter here from one of the country banks on that very subject which I hope will be of service to the committee.
Senator Hitchcock. What size bank would you limit that to?
Mr. Dawson. I do not believe I would limit any national bank. Let it be a national bank up in New York or Chicago, I do not care. If it is necessary in serving the interests of their community to have a savings department if they wanted one, I would give them the same privilege as a bank in the smaller town.
Senator Nelson. I will tell you, Mr. Dawson, what they do. They organize a loan and trust company as an appendix and work together.
Mr. Dawson. Yes. Within a radius of 50 miles from where I live and I think I can count 10 or a dozen national banks, in their endeavor to meet the needs of the community where they are situated, have been obliged to take out a State charter and run the two banks together. There are many national banks operating as a savings bank under the laws of the State of Iowa, with the same stockholders and the same directors as the national bank.

Senator Nelson. You will find, if you want to prove it, a trust company in the country with small branches in the national banks.

Mr. Dawson. The country banks have been obliged to resort to that expedient in order to serve the needs of their communities.

Senator Reed. Yes; and do not some trust companies organize to get hold of the stock and control of the national banks?

Mr. Dawson. I am not familiar with that. Now, that is about all the notations I have here with respect to my statement, except one thing, the refunding of the 2 per cent bonds. The country bank is very vitally interested in that question, of what you are going to do with the 2 per cent bonds.

Senator Nelson. And for this reason, he has taken out circulation more up to his capital than the city bank.

Mr. Dawson. Indeed he has.

Senator Reed. Suppose he may keep that circulation.

Mr. Dawson. I think he would be satisfied with that provision.

Senator Reed. We only propose to retire one-twentieth of it each year, and suppose that proposition of retirement was put in the alternative, that the Government could retire it and substitute for it a certain other kinds of money, in which event they could take up his bonds; would they then have any objection?

Mr. Dawson. No; I think not.

Senator Reed. All he wants is to be certain he is going to get 100 cents on the dollar for every 2 per cent bond which he paid 100 cents on the dollar for?

Mr. Dawson. Yes; and some paid more; but par is all they could expect.

Senator Reed. And as long as he held the 2 per cent bonds, that he be allowed to have the circulation privilege?

Mr. Dawson. That is the contract under which he took the 2 per cent bonds at par.

Senator Reed. And therefore the Government of the United States ought to make its obligation good, and if it cancels the arrangement, it ought to put the man back in status quo?

Mr. Dawson. That is all; and that is all the average country banker asks.

Senator Reed. I think so, too.

Mr. Dawson. The way the bill stands now, the country banker is in fear if he does not come into the system, then the 2 per cent bonds will go down to the level they would have without the circulation privilege. He bought those bonds under a contract, whether implied or otherwise, with the Government that he should have the circulation privilege, and if the circulation privilege is taken away and no provision made for maintaining them at par he is going to suffer a loss.
Senator Reed. Suppose we provide that the circulation privilege should continue as to those banks coming into the system, and not as to the others. Would that have some tendency to get them in?

Mr. Dawson. I am not quite sure that I caught the question, Senator.

Senator Reed. Well, I will think that over myself. It sounds a little like coercion.

Mr. Dawson. What they are concerned about is what is going to happen; that is, they are a little bit fearful this system is not going to be constructed so that it will be to their advantage to come in. If that should prove to be the case, and they do not care to come into this new system, then they want to know what is going to become of the 2 per cent bonds if they do not come in.

Senator Hitchcock. Suppose the profits of the reserve bank should be invested in the 2 per cent bonds from time to time?

Mr. Dawson. That would take care of it in the course of time. I do not think it is entirely satisfactory with this provision in the bill, which says they shall be redeemed at the end of the 20 years, because they understand the present Congress can not bind a Congress 20 years from now.

Senator Hitchcock. I mean profits over the dividend which is provided for on the stock.

Mr. Dawson. In the form of a sinking fund. Now, Mr. Chairman, that completes, in a general way, the statement I wish to make in regard to this bill.

Senator Bristow. I wanted to ask you, Mr. Dawson, about savings banks.

Mr. Dawson. I should be very glad to conclude this afternoon if I could.

Senator Bristow. You have a savings bank department in your bank?

Mr. Dawson. Yes, sir; established three years ago.

Senator Bristow. What do you do with the money you take in in your savings-bank department?

Mr. Dawson. You mean in the way of investing it?

Senator Bristow. Yes.

Mr. Dawson. It is invested the same as the other demand funds of the bank.

Senator Bristow. That is, it is handled in commercial business the same as any other deposits?

Mr. Dawson. To be sure. We have increased somewhat what we call the secondary reserve of the bank by reason of these deposits. The secondary reserve of a national bank in actual operation being the purchase of bonds—State bonds, municipal bonds, and some other investment bonds—which are held in the vaults of the bank and which we can convert into cash practically at any time to meet the demands of depositors. The First National Bank of Davenport carried $252,000 worth of such bonds, and carries them to-day in its vaults, while our total deposit liabilities are $2,500,000—about 10 per cent of our total deposit liability.

Senator Bristow. What per cent of your deposits are through your savings-bank department?
Mr. Dawson. Of this $2,500,000 of total deposits, a little over $700,000 is savings deposits that have accumulated there in three years.

Senator Bristow. A savings bank would loan that on investments, would it not?
Mr. Dawson. Yes, sir.
Senator Bristow. This being a commercial bank, you are presumed to loan that on commercial paper? You are carrying these bonds. You are permitted to carry bonds, are you——
Mr. Dawson. Under the national banking act? I understand so. We have never been criticized by the comptroller for that.
Senator Bristow. Why should you not carry real estate mortgages as well as municipal bonds?
Mr. Dawson. Of course we are prevented by law from doing it now.
Senator Bristow. Is there any reason why you should not?
Mr. Dawson. I can see no reason why a first-mortgage farm loan on an improved Iowa farm would not be just as good, if not superior, as a security, to a municipal bond or a timber bond or a railroad bond or any other class of bonds that the bank invests in.
Senator Bristow. Isn't it just as liquid?
Mr. Dawson. I would not say that it was quite as liquid. I have found, on making inquiry in the East with a view of locating a market for first-mortgage real estate loans, that a good many investors in the East have not forgotten an unpleasant experience they had in the western country a good many years ago. They do not seem to appreciate the transition that has occurred out there in the Middle West with regard to values of real estate. It is true that there is a large market for first-mortgage real estate loans on the part of the insurance companies, who purchase them in very large quantities and on the part of the investor. Any Iowa savings bank or a State bank which loans on real estate, may not only sell the mortgages to investors, but they also issue a debenture bond on them, and those are very much prized by investors. They pay a rate of 5 per cent as against the savings-bank rate of 4 per cent. Of course a national bank is prohibited from entering the field at all.
Senator Bristow. Have you many savings banks in Iowa?
Mr. Dawson. A great many. The commercial banks in Iowa are called savings banks, outside of the national banks. Take the city of Davenport, a city of 45,000 people; it has upward of $30,000,000 of deposits, a very creditable line of deposits considering the population of the city. There are two national banks there. There are four savings banks, which are as large or larger than the national banks. These savings banks are doing a commercial business, doing a savings business, and doing a bank business; that is, receiving deposits of country banks, State and others. Only one of these four has gone into the country bank field very extensively. That is the German Savings Bank, which holds the largest deposits of any bank in Iowa.
Senator Hitchcock. Has Davenport any deposits from country banks?
Mr. Dawson. Oh, yes.
Senator Hitchcock. What do they amount to?
Mr. Dawson. I should say about $3,000,000, all told. The eastern idea of a savings bank, of course, is entirely different from our idea.
of a savings bank. This is a stock savings bank, organized under State laws, permitted to do a commercial business, a savings-bank business, or any other class of banking; permitted also to exercise the functions of a trust company, to act in a fiduciary capacity, to act as administrator, and all that sort of thing.

So that under this liberal State law this German Savings Bank has grown up in the town of Davenport with the largest deposits of any town in the State of Iowa. They have upward of $6,000,000 of bank deposits of banks round about, most of them State banks.

Senator Weeks. Do you not think, then, it is a misnomer to call such a bank a savings bank?

Mr. Dawson. It is, from the New England point of view, and I think it is a misnomer.

Senator Weeks. Of course, we do not expect other States to be as progressive as Massachusetts in such matters.

Mr. Dawson. We have none of the mutual savings banks in the West.

Senator Bristow. Now, the testimony that has been given here is to the effect that a savings bank could not possibly desire to become a member of this system, because the nature of its business is such that it would be of no use to it. Do you think the savings banks in Iowa would want to come into this?

Mr. Dawson. These four savings banks that I speak of that we are in direct competition with are all engaged in commercial business. They handle a very considerable line of commercial accounts for manufacturers, merchants, etc. Their necessity for rediscounting at certain times of the year is identical with ours. When we are compelled to borrow money to take care of our commercial customers I have observed from their statements that they are practically in the same condition. They are usually borrowing when we are, so the necessity for their rediscounting is practically the same as ours.

That is the way matters run in Iowa as between a national bank and the so-called savings banks.

Senator Pomerene. What is the legal reserve under the Iowa law?

Mr. Dawson. It varies. It is 5 per cent on savings deposits, and from that up to 20.

Senator Pomerene. On commercial deposits, you mean?

Mr. Dawson. Yes, sir.

Senator Bristow. How do these savings banks that are doing that kind of business—do they segregate their deposits?

Mr. Dawson. Not at all.

Senator Bristow. How do they fix the reserves then?

Mr. Dawson. The State law specifies—of course, in the actual transaction of the business of the bank there is a set of books kept for savings deposits and a set for checking accounts. The law prescribes that on the savings accounts they shall carry a reserve of a certain per cent, 5 per cent. On these other classes of accounts the law provides a different reserve, so it is a mere matter of mathematics what the reserve is that they shall have at any time.

Senator Bristow. Mr. Dawson, out there in Iowa, as I understand, the change in our present system which you want is something which will make the currency more elastic and mobilize the reserves; those two matters?

Mr. Dawson. Yes; those are the fundamentals, it seems to me.
Senator Bristow. Now, if that could be done by the establishment of a Federal reserve bank, a local bank owned by private subscription; let it be managed by this Federal board directly; let it have branches out through the country; make it a bank of issue, a bank of rediscount, and a bank of reserve, so that these reserves that are required in the bill will be deposited in this Federal bank. Then when you wanted to rediscount any paper you could rediscount it; when you wanted currency you could get it in a manner similar to that by which you would obtain it through the regional bank. Would that perform all the functions which you need out there?

Mr. Dawson. I think it would. I think that would perform the functions mainly.

Senator Bristow. Would that be more satisfactory to the community—they would not have to put up any stock unless they wanted to—

Mr. Dawson (interposing). Yes; but I do not think that disturbs them much. That is not the main objection to this bill.

Senator Bristow. The main objection as I understood you just before you finished this morning—what was the main objection?

Mr. Dawson. I started with the foundation that if this system is to be a success the country banks must go into it. If the country banks do go into it they should not be penalized; they should not have taken from them any considerable portion of the earnings which are now reserved under the national banking act. Then, in addition to that, that now is the opportune time for the Congress of the United States to equalize the privileges of the national banks. Those of you who have been in Congress for many years know that it has been under discussion; it has been recommended repeatedly by comptrollers of the currency; it has been recommended repeatedly by Presidents; that the national law needed some amendment. It is 50 years old, and 50 years have wrought a tremendous change in the handling of this business, and yet there that old law stands. The men who are running the national banks feel that their hands have been tied, and they feel that now is the time for the Congress of the United States to unshackle them.

Senator Hitchcock. The law of England and the law of France are much older.

Mr. Dawson. Yes; but they are hardly comparable to this.

Just before I left I took occasion to write out to a few intelligent national bankers that I knew well and personally, the banks of $50,000 and $100,000 capital, men that had given some thought to this, as I supposed. I asked them how they thought this bill would affect their banks and their communities. I received one answer that seemed to cover the ground most thoroughly, and I am going to take the liberty of reading it to the committee if you care to hear it. This is from the cashier of the Washington National Bank of Washington, Iowa, a town of perhaps 4,000 or 5,000 people.

This from the Washington National Bank, Washington, Iowa.

October 2, 1913. Capital, $100,000; deposits, $1,000,000.

Mr. A. F. Dawson, President First National Bank, Davenport, Iowa.

Dear Sir: I have your favor of September 30 requesting by early mail our views on the pending currency bill as it would affect our bank and our community. While we believe that some currency legislation is needed and that in
the main this bill will create more healthy conditions and prevent money stringencies such as we have experienced in the past, we feel that if the bill is passed in its present condition it will do our bank and our community more harm than good.

We believe in the idea of Government supervision and regional banks, but do not like the idea of being forced to subscribe from 10 to 20 per cent of the amount of our capital or else forfeit our charter. In fact, I am free to confess that if the bill goes through in its present form it is very likely that we would be forced, in justice to our stockholders, to forfeit our national charter and become a State bank, much as we would regret to do so.

Inasmuch as the bill promises that our income from the stock subscribed will in no case exceed 5 per cent, and also that we would not be allowed any interest for reserve carried with them, this would in itself cost us from $1,500 to $2,000 a year. The loss of exchange charges on checks would also be an item of some consequence to us.

The savings feature of the bill would work a great hardship on us and give the local State banks a big advantage. At present 70 per cent of our deposits are in time certificates and savings accounts, and in order to hold these we would be forced to become a State bank.

The farm-loan feature of the bill would have no advantage to us, inasmuch as none of our farmer customers would consider mortgage loans maturing in one year.

While the rediscounting feature of the bill may work to the advantage of the larger banks, it will amount to nothing to us, as we carry practically no paper which we could rediscount. The majority of our notes are made for a period of six months and are made by our farmer customers and our merchants, and they expect to take care of their obligations as they sell their farm produce or turn their stock of goods, and we could not without safety rediscount such notes as this without serious trouble to ourselves and loss of customers to the bank.

We are greatly in hopes that the objectionable features of the bill, which can not help but result in great hardship for small banks like ours, will be eliminated, and that a bill will be passed which will be generally acceptable to the national banks.

I personally am very glad to know that you have been asked to go to Washington and appear before the Banking and Currency Committee of the Senate. I believe you are in every way the right person to handle this matter for us, and I feel that you will accomplish great good.

Very truly, yours,

W. F. Wilson, Cashier.

This from the First National Bank, Brooklyn, Iowa; capital stock, $50,000:

With our deposits of $450,000 and the capital we would have to invest in the Federal bank, I figure that we would have a loss of $1,000 a year, as follows:

Our reserve, counting on the reduction to 7 per cent of deposits, would average $32,000. This now brings us 2½ per cent interest, which we would lose, or $800. As we are getting an average of 7 per cent on loans, there would be a loss of 2 per cent on the $10,000 capital we put in, or $200. This would make the $1,000 loss right in sight, and there is another loss which many do not take into consideration. In drawing out the $32,000 from our reserve banks it would make our deposits so low that we would have to borrow money to replace it, or lessen our loans, in order to have sufficient funds to draw drafts on and handle our foreign checks.

To sum up my views, as the bill now looks to us, I think that there will be an application for another State bank.

I would say that we might have about $20,000 of rediscount paper in our bills receivable.

This from the First National Bank, Maquoketa, Iowa; capital, $50,000; deposits, $650,000:

I think it would be much better for the ordinary country bank if the time limit of acceptable paper was 6 months instead of 90 days.

It seems to me that the Federal bank should pay 2 per cent interest on the reserve required to be kept with them—the same rate as banks get now from reserve agents. If they pay no interest on this fund, it places national banks at
a disadvantage with State banks, and would certainly deter State banks from becoming members.

I am strongly in favor of allowing country banks to loan a part of their time deposits on real estate security, but to limit the time to one year would practically prohibit any such loans being made here.

With these exceptions, I am rather favorable to the bill.

Senator Reed. I should like to ask a question right there: If he does not have 90-day paper and does have 6-months' paper that he could use, I understand then how he might want a bill which permits him to cash 6-months' paper. But he adds a clause there that they could not discount this paper. I take it that their customers would leave them. That is what that clause means. Then he is in a position where he has nothing and can not get anything. He says: "First, I have not any 90-day paper; and, secondly, I have 6-months' paper, but I would not dare use it; and, third, the clause that permits the use of real-estate loans is of no value."

How are you going to help a man situated that way?

Mr. Dawson. I can grasp your idea from that answer.

Senator Reed. Now, how? I mean, with reference to this one feature of getting notes?

Mr. Dawson. How are you going to make it attractive to him?

Senator Reed. Yes; on that one feature. How are you going to permit him to discount when he has not anything he dare discount?

Mr. Dawson. One reason why he dare not discount it, in my opinion, is the present prejudice among his customers against having notes sent out of town, or out of his bank. With a proper system in the United States, based on rediscounts, it would only be a question of time before the views of the people in that regard would change. That would be a matter of educating his customers. He could not do it the first day or the first month, but in time the prejudice his customers have in that particular would be eliminated, in my judgment.

Senator Reed. I can grasp your idea from that answer.

Mr. Dawson. That is the thought I would like to leave with the committee. I offer this as a possible solution. If there was put into a regional reserve bank every month a certain volume of paper of the country banks for rediscount, and if that paper was 6-months' paper, then some part of it would be maturing every month, would it not, and would that not be just as liquid as your 30-day paper?

Senator Reed. But it would not be, according to the idea of some bankers here, of this character, namely, that it would all pay itself off quickly, if they had to have the money.

Mr. Dawson. Now, I agree that it would not be wise to issue currency on that class of paper entirely; but would it endanger the liquidity of the entire mass, or a certain small percentage of it which was liquidating itself each month, as the months rolled by, say 60 instead of 90 day paper?

Senator Reed. You would advocate or suggest, then, that a certain percentage of this paper be allowed?

Mr. Dawson. That is the thought I would like to leave with the committee. I do not recommend it, but it seems to me it is worth considering.

Senator Pomerene. In that connection I would like to ask you this question: You are familiar with the country banks in Iowa, generally; do they loan substantially the same amount each month?
Mr. Dawson. No; they do not. If they did, then they would have in their own vaults a certain amount which would mature every 90 days; but that is not the way the business of the country is handled.

Senator Pomerene. That is what I am trying to get. When do they borrow the most money?

Mr. Dawson. If it is in a country where they are feeding cattle, and that is a considerable industry in Minnesota and Nebraska.

Senator Pomerene. I am speaking of Iowa.

Mr. Dawson. I am speaking of Iowa also. Most of the cattle loans are made in the spring or summer, and they are liquidated when the cattle are sent to market.

Senator Brustow. If they are corn fed, it would be in January or February.

Mr. Dawson. The cattle would be marketed in the winter.

Senator Pomerene. The farmers borrow for other purposes than for the buying of cattle, do they not?

Mr. Dawson. Not unless it is a permanent loan. Then they put that in the form of a real estate mortgage.

Senator Pomerene. Do they not deal in hogs and horses?

Mr. Dawson. Oh, to be sure.

Senator Pomerene. They do not do that at any particular season of the year?

Mr. Dawson. It is largely a seasonal business.

Senator Pomerene. I know, but the seasons for hogs and cattle is not the same. Hogs are usually marketed within six or eight months from the time they are pigs.

Mr. Dawson. In Iowa we do not borrow any money to go and buy pigs. We raise them ourselves out there. We do not have loans based on the basis of pork on the hoof. We do not buy pigs and then fatten them and sell them. We raise them.

Senator Reed. Mr. Dawson, have you any other suggestions that you think would make it easier for the country bank to come in—that is, the country bank of the character you have been describing?

Mr. Dawson. If I were to sum it all up as to my opinion of what would make this sufficiently attractive for the country banker to make him wish to remain in the national system, and I believe it would also be attractive enough to create a desire on the part of the city banks to come into the system, I would adopt some suggestion that has been made as to the subscription to the capital stock, perhaps reduce that one-half, and make it 6 per cent. The shifting of reserves I would make a little more gradual, and instead of shifting 3 per cent at the very start I would move that gradually. As I understand, this regional bank is not to be run for profit primarily. The country banker can not understand why this bank should pay the Government 2 per cent or more on its deposits and not pay him anything on his deposits when he is supplying the capital as well. There may be some good reason why the country banker—who impounds his reserve over in this bank, and those reserves are used by the regional banks as a basis for credit—why he should not receive 3 per cent from the regional bank the same as he is receiving now.

Senator Reed. On that point, because I am so favorably impressed with your remarks—and I do not say that as flattery—I want to give you an idea to take home on this question of the capital of this bank. Every banker who has come here has talked about the banks
furnishing all the capital for these regional banks. Let us see if they do. One requirement of this bill, in section 16, is that the Government of the United States must put every single penny it has, except the 5 per cent reserve, in this bank and except also the moneys held as special deposits, all of which, as we know, can be speedily drained into a bank.

Mr. Dawson. But that is deposits rather than the capital, Senator. I have endeavored to state that accurately.

Senator Reed. It deposits it, and immediately after it has deposited it it begins earning money and the banks get the benefit of it.

Now, the provision of the bill is that before the Government takes down a single penny from its contribution the banks shall get 5 per cent, and it may ultimately be 6 per cent, on their capital. The next proposition is that the Government furnishes the credit and backs up all of this paper that is to be issued by the banks, and if it does not furnish its credit it creates and loans the power at least. Now, it looks to me like a copartnership in which the Government was contributing most of the capital and the banks the experience. I hope it will not result as those copartnerships generally do.

Mr. Dawson. I was only seeking to state the proposition accurately. There is no desire in my mind to minimize the benefits that are to come to the banks from the Government. But it is still an accurate statement when I say that the banks supply all the capital stock of this new bank. The Government supplies deposits; it is not capital stock. While it is used for the benefit of the system, still it seems to me I am accurate in my statement.

Senator Reed. You are accurate technically, but I am talking about this matter, treating this matter as a matter of equity. Now, I want to call your attention to another thing. When these banks are put in operation they are supposed to perform certain very important functions for the various banks coming in. Then I call your attention to the fact that they constitute and are a method of insurance of banks against failure.

Mr. Dawson. That is a great feature.

Senator Reed. And taking all those things into consideration is there anything wrong in asking the banks to contribute some part of the insurance?

Mr. Dawson. Not at all.

Senator Reed. So I do not think the banks ought to treat this as though they were going into their pockets, creating an institution and running it at their own expense, the Government contributing nothing, and the Government demanding a share of the profits. I think you ought to get that out of your head. I do not think you yourself have that idea very strong.

Mr. Dawson. No; I have not. But you take a little banker in the country who is now deriving from these reserves, we will say, $1,500 income; that is one and a half per cent on his capital stock. You take that away from him by force, as it were, as he thinks, and he don't like it.

Senator Reed. I understand that. At the same time when we talk about force I want to give you another idea. The national-bank system has utterly broken down two or three times within a few years, comparatively speaking. When that happened every national
bank was subjected to the forfeiture of its charter because it could not perform the functions it was required to perform under the law. But when the Government comes in to aid them in avoiding that thing the Government ought not to be treated as coercing them because it says you must do this thing now which is necessary now to avoid danger, but it ought to be treated as a friend, coming in to aid a system, and I want to say, while I am talking, that the whole attitude of every man I have heard express himself on this committee or in the Senate has been one of trying to avoid these dangers and assist the banks and at the same time be just to the country, and I make that remark because there has been so much adverse criticism of Congress and everybody connected with it.

Mr. Dawson. The public generally throughout the country does not share that spirit of criticizing. The impression prevails in our country that Congress is making an effort, in the best of good faith, to solve this problem, not in the interest of the bankers, but in the interest of the transaction—the orderly transaction of the business of the whole country, because when it does break down, the burden falls on the people and not on the banks.

Senator Reed. They come in for part of it. Let me ask you this—and by asking this I am by no means committing myself to the theory, but every man who has appeared here, and indeed it must be a patent fact to all the people, has asserted that if the bill is passed, permitting State banks and trust companies to come in and retain their powers, that the national banks would naturally go into one of those organizations.

Mr. Dawson. Go around a corner to come in.

Senator Reed. Now, the national banks will have a right of circulation based upon these 2 per cent bonds, and the bonds are now in trouble in the market because of conditions we need not go into. If the Government of the United States was to permit this bank circulation to stand unimpaired, at least for the present, and if the Government of the United States was to not tax that circulation, would that not be a strong inducement to national banks to stay in the system?

Mr. Dawson. Yes; they would have all that they have now. I can see no reason why a national bank—

Senator Reed (interposing). They would have more than they have now.

Mr. Dawson. As I was going to say, they would have in addition to that this broad discount market which you provide for.

Senator Reed. Do you see any real reason for the retirement of the national-bank notes?

Mr. Dawson. There is an academic reason.

Senator Reed. Let us consider it from a practical standpoint; I am not much of an academician.

Mr. Dawson. No; I am not either. I can see no practical reason for their immediate retirement except that I have a feeling that the national debt ought to be paid off some time. I would like to see the national debt paid off, and I would like to see us begin on it tomorrow.

Senator Reed. How does the retirement of this $700,000,000 necessarily involve the question of the payment of the debt?
Mr. Dawson. It depends on how long we are going to remain out.

Senator Reed. If you have to have any money to pay the debt with, would it not be better to retire some of the other bonds?

Mr. Dawson. The others all draw a higher rate of interest; it would be good business for the Government to retire these.

Senator Reed. Is there any economic reason? I mean is there any weakness in the banking system of such a character to the substantial arising out of these bank notes?

Mr. Dawson. If you can create a system here that will introduce this element of elasticity; that is, provide that at certain seasons of the year you can get currency to meet the needs, and when the needs are over they would be retired—if you could do that, and if you make the system panic proof by providing a broad rediscount market, so that in the face of a panic the bank can use the reserves for the purposes for which they were created and can replenish those reserves by the rediscounting of paper in their own portfolios, I can see no possibility of breakdown for purely financial reasons.

Senator Reed. What would you say to a provision to this effect, that after the banks had received their 5 per cent interest upon their stock contributions that a portion of the profits, if there were profits, should be set aside in a fund held by the Government for the purpose of liquidating the deposits of any national bank the doors of which were closed?

Mr. Dawson. That had failed? That works very well in other countries. It works very well in Canada—too well up there, in fact. In Canada as soon as a bank fails the notes of the failed bank go to a premium.

Senator Reed. We do not want to do that. If every man who puts his money in a bank knew if the bank closed its doors there would be a Government officer there to pay his deposits within two or three days, would that not have a tendency to stop runs upon banks?

Mr. Dawson. Yes; I think that would have a tendency to increase confidence, and it is all based on confidence, after all, gentlemen.

Senator Reed. Is it not, in your opinion, an entirely practical thing to put some provision of the kind I have indicated in this bill?

Mr. Dawson. I can see no objection to it, and I can see many virtues in it.

Senator Reed. There is one other matter to which I wanted to call your attention.

Mr. Dawson. You asked a question a moment ago which I did not quite finish answering. You asked how we could liberalize this, whether it would be agreeable to the country banks. I started to give you my opinion as to how it could be made entirely agreeable to the country banks. My first suggestion was the stock subscriptions, and then the reserve requirements. The third, which is of still more importance, is to equalize their privileges with those with whom they are competing.

Senator Pomerene. These banks, you mean?

Mr. Dawson. Yes, sir.

Senator Reed. You refer to the profits of the national banks?

Mr. Dawson. I refer to their privileges and opportunities to serve their communities.
Senator Pomerene. I wish you would submit to us in concrete form what your views are along that line as to how that should be done; what profits should be given the national banks which they do not now have; what restrictions, if any, should be placed upon the State banks which may come in?

Mr. Dawson. I would be very glad to do that.

Senator Brustow. I would like, Mr. Dawson, if you will—we have asked a number of witnesses here to prepare amendments to the bill—and I would like you, if you will, to prepare amendments covering what you think are necessarily important and let us have a sample of a bill.

Mr. Dawson. I shall be very glad to do that. I assume these amendments are to be used by the committee in executive session. I hardly feel myself competent to draft a bill.

Senator Reed. I think you are competent, at least, to make suggestions.

Mr. Dawson. I would be very glad to put in writing any suggestions that the committee might wish.

Senator Reed. There is another matter I want to draw your attention to. This morning when you were testifying you stated, as nearly as I can recollect, that it was desirable for the banks in ordinary times to use the reserves which they would place in the reserve banks; that one of the benefits of this bill was that it would be possible in ordinary times to use these reserves and make them work. Of course, at the end of 36 months all the reserves required to be kept will be in these banks.

Mr. Dawson. In one place or the other.

Senator Reed. Now, if the banks use those reserves, which, of course, can only be used by way of discount in ordinary times, then they have nothing left to draw upon in extraordinary times except the currency issue, have they?

Mr. Dawson. No, sir.

Senator Reed. Do you not think it would be very wise if those reserves were not all used in ordinary times?

Mr. Dawson. I do not quite follow your suggestion. As I understand it, under the operations of this bill—and we will say it is in full operation—5 per cent of the reserves can be carried in the vaults in cash, 5 per cent of the reserves must be carried in the Federal reserve bank, and the other 2 per cent can be carried in either one place or the other. I do not understand that a member bank can encroach upon that 5 per cent that they have deposited in the Federal reserve bank at any time any more than we can under present conditions.

A national bank is not permitted to go below its legal reserve. That 5 per cent you have put into the Federal reserve bank, it seems to me, is impounded there. It is taken out of the channels of business. The member bank will not be permitted to use that. If he rediscounts with the regional reserve bank, it will be on funds above that amount; it will be on his balance above 5 per cent.

Senator Pomerene. Is it your understanding that under this bill, if a bank should have a run upon it, or something of that character, and the depositors are demanding their money, they could not get this 5 per cent out of the regional reserve bank?
Mr. Dawson. No; I think they could. That would be an emergency.

Senator Pomerene. They could not loan it or anything of that kind, but they could use it for the purpose of paying the depositors just the same as national banks do now?

Mr. Dawson. Sure; there is no need of mobilization, if you can not use them in an emergency.

Senator Nelson. Do you not recall Vanderlip said yesterday that it was well for the regional reserve banks to conserve their reserve as much as possible and hold them in ordinary times when there was no demand, even letting them run up to 70 or 80 per cent in order to have a big fund in case of emergency? Do you not recall that?

Mr. Dawson. I did not hear that.

Senator Nelson. You do not agree with that?

Mr. Dawson. I think that what you need to get into these regional reserve banks—all the capital that you need in those banks is sufficient to take care of the ordinary emergency that would arise. The history of the past I think indicates to us how much of an expansion would be necessary to take care of the ordinary financial disturbance that comes along. It seems to me that if the regional banks were in a position whereby they could extend credit to the amount of $200,000,000 at any time, that would allay any panic that might be in its incipient stages. When the country understands that a law is on the statute books that can cope with any panic which may come along the panic is not coming along.

Senator Nelson. Do you not think it is idle to talk about the point that this 5 per cent is left in the banks? Your idea is that this 5 per cent should be constantly in use, and your grievance is that this amount is not in use, and that it is tied up there and does not draw interest.

Mr. Dawson. No; that 5 per cent constitutes the insurance which the bank has against panics. The 5 per cent is reserve.

Senator Nelson. Is not that fund—what other fund outside of the bills it issues upon commercial paper, what other funds has the regional bank except its capital and its 5 per cent on the deposits. Is not that the fund that would really help to maintain this gold reserve?

Mr. Dawson. Yes, sir.

Senator Nelson. Then is it not idle to complain because this 5 per cent is idle in the bank? Your idea is that it should be constantly out in the shape of discount paper?

Mr. Dawson. No; it is idle in comparison with the function it is performing. My conception of an act is one that will—if you must make a change from present conditions to other conditions that are better, it is better to do that gradually rather than to do it violently.

Senator Nelson. Do you now know, Mr. Dawson, that one of the most faulty things of the present reserve system is first of the reserve and the necessary payment of interest, the payment of 2 per cent interest, which has piled up money in the big banks of New York? They have all that money sent in from the country banks, and the temptation has been the 2 per cent interest, and the New York banks could not let that money lie idle, and so they invested it in call loans, and when a panic comes, as the panic of 1907 did, this kind of loans were not liquidated.
Mr. Dawson. I agree with you absolutely on that.

Senator Nelson. The best part of this whole bill is the reserve system, first in limiting the amount as it does, wiping out the objectionable features of the reserve and stopping the payment of interest.

Mr. Dawson. There has been some change in actual practice since the panic of 1907. I agree with you about the panic of 1907. It taught a lesson to the bankers out West. It was a sad and costly lesson, but they learned it. Since that panic they are not keeping those large balances in New York which they used to keep there. They are keeping those surplus balances in the little banks around about. Instead of sending them to New York they are keeping them in Omaha, Kansas City, or St. Louis, or Minneapolis, or St. Paul, or Denver, or even in the banks in cities of 15,000 or 20,000 population, and the smallest country banker will carry his balances there. He gets 2 per cent interest up there.

Senator Nelson. Do you not recognize that the reserve system provided for in this bill is much superior to the present system?

Mr. Dawson. I think it is.

Senator Nelson. And would prove a great blessing to the country?

Mr. Dawson. I think in shifting it to where it is now and where it is expected to be, that shifting process should be gradual.

Senator Nelson. It is gradual.

Mr. Dawson. And in writing a law that is going to reduce the income of a bank, as it is now, that should be made as gradual as possible, if you are going to take away his income.

Mr. Chairman, Mr. William W. Baldwin, one of my colleagues on the committee representing the Iowa bankers was compelled to leave the city early this afternoon, and asked me to read his statement.

The Chairman. You may do so.

Mr. Dawson. The statement is as follows:

STATEMENT OF W. W. BALDWIN, OF BURLINGTON, IOWA.

My name is William W. Baldwin; residence, Burlington, Iowa; occupation, attorney at law and vice president of the Chicago, Burlington & Quincy Railroad Co.

I am not a banker nor bank director, nor stockholder in any bank, and never have been. My interest in this subject is solely as a citizen in business, who has had some very keen experiences under the existing inefficient and menacing banking system, as demonstrated whenever its efficiency has been put to real tests.

The people of the country have been led to expect, and they do expect, the present Congress to provide at least the beginnings of a better financial system.

There could not be a more opportune time for undertaking this reform. General business is good, and no such threatening conditions confront us as led to the makeshift Vreeland law.

Both Houses of Congress and the President are of the same party, my party—the Congress by good majorities—and the administration is pledged and the party is pledged, as strong as words can pledge men, to provide an adequate currency system.

Best of all, there is a strong healthy sentiment among the people upon the subject; a process of education has been going on for three
years and the minds of the best students and the best bankers have been interested in the question.

This demand for a reform of the currency is not, according to my view, a banker's demand. The bankers can get along without it. The widespread losses that were part of the experience of 1907 were not the losses of bankers so much as the losses of their customers. The banks are prosperous enough now; they are making money enough; there are no strong financial reasons for them to demand this legislation that I can see. What is the fundamental difficulty, and what are the remedies which the reform should seek to provide?

The fundamental trouble is that while we have a splendid collection of strong money-making banks, managed by shrewd and resourceful bankers, their strength, their resources, their reserves, and their ability to meet conditions of stress and bad weather are scattered units, and our power to provide currency to the people in an emergency is pitiably weak.

In 1907 factories and merchants and railroad companies in Iowa in numberless cases could not get their own money, which they had deposited in their own banks, with which to meet their own pay rolls.

We understand the general purpose of this bill, by a safe and sane process, to be to combine, to unify, to mobilize the credit strength of all the banks, and to provide machinery through which may be issued in any time of stress an adequate supply of bank-note currency based upon their credit strength as represented in their assets, and absolutely secured by ample reserves and redeemable in gold.

Nobody wants a loose law; nobody wants it in the interest of bankers primarily. But the misfortune of no law at all would be less than a law which the banks can not and will not accept. Where shall we be, in that contingency, with the Vreeland act expiring in June?

What features proposed may tend to prevent the banks from cooperating to make the system a success?

One is the fear of a political control in the central board.

It seems to me impossible that you will enact a law for combining thus the entire banking resources of the country, under the control of a central board or governing power, and not give to the banks which provide the capital some adequate representation of this governing board. This is necessary for real efficiency. You will urgently need the talent and the experience and the self-interest of practical bankers to make this thing a success, and a frank avowal of this need would help to incline the banks to cooperate, it seems to my mind, and would please the business public which does not look with favor upon either political or bureaucratic control in business affairs.

In the prosperous city where I live the national banks are not the principal banks, but are the savings banks, which under State law exercise banking privileges, except the issuing of currency.

Besides, they act as trustees and loan upon real estate. Taking the West throughout, especially outside of cities, I have no doubt that the banks not chartered as national banks are the more important and more profitable to their owners.

It is going to be a comparatively easy matter for national banks to refuse to accept your law and slide over into State banks, and then what will become of your law?
Another cause for distrust has been the fear that this bill will do injustice to the banks in the matter of their 2 per cent bonds.

Then there is the requirement that the smaller banks tie up too large a percentage of their capital and are allowed too small a profit compared to what they can earn as State banks.

As one wishing to see this law, modified and improved, put into successful operation before next June, I sincerely hope you can consent to such changes as will make it to the interest not only of the small national banks but of State banks as well, to enter the system.

What to yield and how to yield on important measures such as this are the trials and tests of statesmanship.

Better far make this measure so attractive and workable that all banks will desire to cooperate than any feature of coercion.

Regarding a proper basis for a paper currency to meet the demands of business, I heartily indorse the view that a currency issued by the banks, with proper safeguards and based upon the assets and resources and credit of the associated banks, can be made equally safe and be a sounder and better currency than bond-secured issues.

(The witness filed the following paper, which he read before the Contemporary Club February 29, 1912:)

**Currency Reform.**

When Congress, by the act of May 30, 1908, created the National Monetary Commission and directed it to "inquire into and report at the earliest date practicable what changes are necessary or desirable in the monetary system of the United States or in the laws relating to banking and currency," it gave recognition to the fact that one of the greatest needs of the times is an intelligent and comprehensive reform of the banking and currency laws of the Nation.

My own opinion is that, of greater importance to the continued prosperity and development of the country than either tariff or trust legislation, is the creation of a monetary system that will measure up to the demands of modern business and which will automatically adjust itself to the needs of trade and commerce in its seasons of variation.

There is much that deserves to be said in commendation of the present system of banking and currency. The banks of the country, both national and State, are sound, honestly conducted and capably managed, and the almost universal public confidence in them is well merited. What is true of the integrity and stability of the banks applies with equal force to the currency. Our consideration of the subject, however, does not go to the banks or the currency per se, but rather to the system.

The national banking system, created in the midst of the Civil War, gave the country a uniform and stable national currency to take the place of nondescript and worthless State-bank notes, which had resulted in such heavy losses and infinite vexation to business. It was a source of strength to the Union in providing a market for large quantities of Government bonds, which were bought by the banks to secure their note issues. It has been a permanent prop to the national credit, enabling the Government in 1900 to float its obligations at a rate at least 1 per cent less than any country in the world. In that year the 3 and 4 per cent bonds were funded into bonds bearing only 2 per cent interest, and this was possible largely because the national banks were virtually compelled to take the new twos as a basis for circulation.

But since that system was established almost 50 years ago there has been such a tremendous advance in business that we have outgrown it, and it is inadequate to meet the needs of to-day. It is hardly to be expected that the vast and complex business of the twentieth century can be handled properly with a credit organization created about the middle of the nineteenth century. The present system performs its functions well under normal conditions of trade and commerce, but it fails completely when any unusual demand is made upon it. We can not be satisfied with a fair-weather system. Would anyone patronize a trans-Atlantic liner that could make the trip only in good weather, but which would be certain to go to the bottom if a storm arose? Is not the United
States, which boasts of its commercial enterprise and supremacy, entitled to
the same immunity from financial disturbances and panics that is enjoyed by
all the other great commercial nations of the earth?

What is the matter with the present system? It is not in the soundness of
the currency, because every dollar of it is as good as gold, and this virtue must
be maintained in any change which is contemplated. No man stops to examine
the paper money he receives to see whether he is getting a gold certificate, a
silver certificate, a greenback, or a national-bank note. He knows that one
is as good as the other, and all of them as good as gold. Neither does the
fault lie in the quantity. We have a circulation in the United States of more
than three and one-half billion dollars—more money than that of England and
Germany combined. It is well for a thorough understanding of this question
to recall that this immense stock of money consists, in round numbers, of
$350,000,000 of greenbacks, $740,000,000 of national-bank notes, $1,800,000,000
of gold in the form of coin and gold certificates, and $740,000,000 of silver, also
in the form of coin and silver certificates. Let us keep in mind also that na­
tional-bank notes comprise less than one-fifth of the circulating medium, and
that they are the only part of our currency that can be expanded or contracted
to meet the varying needs of business at different seasons of the year. We
should remember also that the business of this great Nation, which amounts
annually to the staggering total of $450,000,000,000, is largely transacted with
credit instead of money. Only about 5 per cent of it is done with money; the
other 95 per cent with credits in one form or another.

The trouble with the system is in its organization. Nowhere in it is there
any reserve power with which to meet an emergency, and as a result it fails
completely when any unusual demand is made upon it. No less than four
times during the past three decades has the system failed under severe financial
strain. The panic of May, 1884, though of brief duration, was attended by a
suspension of cash payments and the issue of clearing-house loan certificates,
as was also the case in 1890. The panic of 1893 was still more severe, not
only resulting in suspension of cash payments, but currency actually went to a
premium. But in each of these instances the situation was complicated by
abnormal commercial and political conditions which obscured in large measure
the elements of weakness in our credit organization. But the crisis of 1907,
which was wholly financial, rather than industrial or commercial, has enabled
us to measure the shortcomings of the present system, and has directed pub­
lic attention to the pressing need for a remedy that will protect the country
from these recurring disturbances, with their enormous losses to every line of
industry.

The country has suffered incalculable losses from these failures of our bank­
ing and currency system to perform its natural functions, and these losses fall
with the greatest severity upon the wage earner and the producer. It is axi­
omatic that people of limited means suffer more in hard times than those of
large resources. In every one of these instances where there has been a
paralysis of credit operations, with the resulting lack of confidence, business is
halted, commerce retarded, and production curtailed, with the consequent re­
duction in employment and wages, and a tremendous shrinkage in values.

The panic of 1907 came upon the country almost without warning. The
underlying conditions of trade and industry were never more sound, and the
country was enjoying a high degree of prosperity. We had harvested an
enormous agricultural crop, factories were busy, labor fully employed at good
wages, and business generally was at high tide. It seems almost incredible
that with such conditions prevailing throughout the Nation one or two inci­
dents in a single city could precipitate such widespread disaster and losses.
And yet a gamble in copper stocks and the exposure of the crookedness of one
New York banker created such alarm in that city as to precipitate a run on
the banks which could not be stopped until the banks of the metropolis were
forced to suspend cash payments and resort to the use of clearing-house cer­
tificates. It does not speak well for our present system when nation-wide
prosperity can be halted by unrest or alarm in a single locality, and yet it is
wholly within the truth to say that the panic of 1907 would not have occurred
at all if our monetary system had been what it should be.

A careful study of that disastrous experience has resulted in a general agree­
ment as to the defects of the present system, which may be summarized thus:

(1) **Lack of elasticity in the currency supply.**—It is well understood that at
certain seasons of the year, particularly at crop-moving time, a considerable in­
crease in the volume of currency and credit is required. The annual production
BANKING AND CURRENCY.

on the farms exceeds $9,000,000,000, and a large percentage of this is marketed within a few months. It has been found by experience that an expansion of the currency approximating $200,000,000 is necessary to meet this annual need under normal production. A satisfactory system would provide for such expansion when needed and a reduction when the necessity had passed. What is the present machinery for meeting this requirement?

With a fixed supply of gold, silver, and greenbacks, the only part of our currency that can be expanded or contracted is the issue of national-bank notes. These notes being based on United States bonds, it is impossible to increase their issue by $200,000,000, because the total amount of such bonds with the circulation privilege not now owned and used by the banks does not exceed that sum. Then, again, any increase in the volume of these notes must result from the individual action of 7,000 national banks, scattered from one end of the country to the other, with no machinery for concerted action to meet more than a local situation. Besides, the market price of these bonds is an important factor in determining the action of banks in increasing or reducing circulation. It is too much to expect that a bank will purchase bonds to secure circulation if the price of bonds is such that their money could be more profitably employed in other channels. Experience has proved that under this plan the measure of the public need is not always met by the personal profit to each bank in this regard.

It ought to be stated, in passing, that the so-called emergency currency act of 1908 made temporary provision for elasticity of the currency. It permits the formation of national currency associations which may deposit in the Treasury securities other than Government bonds and receive currency up to 75 per cent of their cash value under certain restrictions and conditions. Several such associations are now in existence, and one of the large vaults in the Treasury is filled with currency printed under the terms of this act, which can be supplied on short notice to such associations should an emergency arise. But this is only a temporary measure, which expires by limitation June 30, 1914.

(2) Lack of effective cooperation among the banks.—We have already seen how the absence of coordination among the national banks makes it difficult to secure that unity so necessary to expand or contract the volume of bank notes so as to maintain efficient credit conditions nationally. And of course the banks under State laws, which equal the national banks in total capital and greatly exceed them in number, are practically helpless to render effective aid in this direction. The banking power of the United States is estimated at over $21,000,000,000; it is equal to the combined banking power of Great Britain, France, and Germany. What a powerful factor it would be in any situation which might arise if all the banks of the United States, both National and State, were organized in an association which would secure unity and cooperation, especially in times of stress. United they would be able to cope with any emergency; divided into scattered units, as they now are, they are helpless and ineffective. There is a total lack of cooperation among banks outside the clearing-house cities, and even these clearing-house associations have never been able to prevent the suspension of cash payments in times of panic.

As it is now, in time of stress the law of self-preservation puts each individual bank into a scramble with every other bank in the matter of reserves. Under the present rigid laws, as soon as alarm is felt each bank immediately begins to strengthen its reserves. Cash is drawn from every available source and locked up in the vaults, many times in excess of their needs or requirements, in order that each may prepare itself to weather the storm. So we will find that the defects of inelasticity and lack of unity are insignificant in comparison with the fundamental defect of the present laws relating to bank reserves. With the business of the country resting so largely on credit transactions and bank loans, with bank loans dependent on reserve requirements, the present laws relating to bank reserves operate to aggravate and intensify conditions in times of financial stress. The most vital defect in our present system is:

(3) The rigid and obsolete laws regarding bank reserves.—Banks are required to hold a cash reserve in proportion to their deposit liabilities. There is no difference of opinion as to the wisdom of a bank keeping a portion of its assets in liquid form so that its demand obligations may be met promptly. Every competent banker will do this, law or no law. Under the present law, national banks in reserve and central reserve cities are required to hold a reserve equal to 25 per cent of their deposits. National banks in all other places must carry a reserve of 15 per cent, two-thirds of which may be kept on deposit
in banks of reserve cities. State and savings banks in our State must keep 8
to 20 per cent of reserve.

The reserve must be held in “lawful money,” which consists of all forms of
legal-tender money. It is important to keep in mind that the law makes each
individual bank responsible for obtaining and holding fast to its proportion of
lawful money.

The present reserve requirements are defective in at least five important
particulars. (a) The cash reserves are scattered among 25,000 widely separated banks,
with no provision whereby they can be mobilized to allay or cope with danger.
When signs of trouble appear each bank strives to amass the cash reserve
necessary for its individual protection. To do this it draws funds standing to
its credit in other banks, thus weakening the reserves of those banks. If con­

fidence is being shaken, every banker has visions of a run on his institution by
alarmed depositors, and he becomes a competitor of every other bank in an
eager struggle to secure cash enough to withstand it. A more effective panic
breeder than this could hardly be devised, when if these reserves were properly
controlled and mobilized, as they are in other countries, they could be made
effective to prevent trouble. Concentrated, they would afford protection to all; scat­
ctered as they are, they prove useless.

(b) It is impossible to determine by law how large a reserve any bank should
carry. This can only be determined by experience. It varies in different banks
and depends largely upon the character of its deposits. A reserve that might
be ample for a bank at Walcott might be altogether too small for a bank in
Davenport, while a proper reserve for a Davenport bank would be wholly in­
adequate for a bank in New York which is subject to heavy withdrawals from
 correspondent banks. In other countries the reserve requirements are not
arbitrarily fixed by law, but are determined by the judgment of managers of
banks.

(c) The present law prohibits a bank from using its reserve in time of stress.
The very purpose of a reserve is to provide a resource in times of stringency
and yet the national-bank law—and most of the State laws are patterned after
it—prevents their use for the purposes for which they were created. The im­
exorable legal reserve must be maintained, and when the ratio of reserves to
deposits is reached, no more loans can be made. Our reserve law has taught
the public to believe that a bank is in peril if its cash reserve falls below the
legal limit; hence it dare not intrench upon its reserve at any time. In times
of panic inestimable losses would be prevented if the banks had power to make
loans and grant extensions of credit. Under the operation of present reserve
requirements the lending power of the bank is paralyzed, and instead the bank
must curtail credits and compel payment of loans falling due. In the great
commercial countries of Europe when an emergency arises the banks increase
their loans and at the same time pay out their reserves, thus avoiding panics.
Here, as some one has said, “We slam the door in the face of the borrower just
when he is in the greatest need.”

(d) There is no provision in the law for replenishing the reserves. When
reserves become depleted in the United States, our banks have been able to
find relief only through the slow, clumsy, and expensive practice of drawing
gold from Europe. This is accomplished by throwing securities into the Euro­
pean bourses and selling them for the best cash prices obtainable. In 1907 we
drew $100,000,000 in gold from Europe in this way, most of which came from
England. It is a sad commentary on our system that England could relieve us
from her limited gold reserve, when there was locked up in the Treasury at
Washington seven times as much gold as she possessed.

(e) They have caused a dangerous concentration of risks in the central reserve
cities, particularly in New York. The operation of the law has resulted in
making New York City banks the depositories of a large part of the reserves
of banks throughout the country. These banks pay 2 per cent interest on such
deposits, and in the spring and summer large sums of idle money from the
interior piles up in New York. In order to pay this interest the New York
banks must loan this money, and this is done largely to stock speculators.
There is nothing else they can do with it. As a result speculation is stimu­
lated and prices inflated. When the time comes that the country banks need
their funds to move the crops, the New York banks have difficulty in calling
their loans without bringing on a stock-market panic. We have already seen
that the stability of the whole country is so dependent upon the stability of
New York banks that a flurry there precipitated the panic of 1907.
To summarize: What the country stands in need of is a banking and currency system embracing these salient features:

That will give that element of elasticity to the currency which will respond to the varying needs of business at different seasons of the year, and as carefully safeguarded against inflation as against stringency.

The association of all banks into a national system, rather than one of scattered units, to obtain unity and cooperation in sustaining the commercial and public credit, but which should be absolutely secure against political domination or the control of concentrated wealth, and which must preserve the individual independence of each bank.

The unification and mobilization of bank reserves, so that they can be concentrated and made available wherever most needed in times of trouble, and the machinery to strengthen bank reserves or increase their loaning power when necessary to avert danger.

To these three principal features there should be other additions to provide an acceptable standard for commercial paper and a well-organized market for the same, to secure more uniformity in discount rates in all parts of the country, permission to American banks to do business in foreign countries, and an agency which can deal effectively with the course of foreign exchange and the international movements of gold.

Senator Weeks. Mr. Chairman, I have here a letter from the First National Bank of Gardner, Mass., which I would like to have inserted in the record.

The Chairman. Without objection, that will be done.

(The letter referred to is as follows:)

[Amasa B. Bryant, president; C. Leslie Bent, vice president; Frederic S. Pope, cashier; Marcus N. Wright, assistant cashier.]

Hon. John W. Weeks, Washington, D. C.

Dear Sir: In common, I imagine, with most of the bankers in the country, I am watching with great concern the progress of the currency bill now before the Senate.

I notice that great stress is being placed upon the opinions of country bankers and it is being urged that this measure will surely redound to their advantage. I can not expect to add anything to what has already been said regarding the theoretical possibilities of the bill. I would like merely to set forth just about how it will affect us in this institution. Assuming that the measure goes through in practically its present form there would be required of us in the form of subscription to the stock of the new bank and for credit balance therein approximately $70,000. I can not see why we would not be obliged to maintain our present reserve accounts with approximately the same balances as now. The only manner in which this sum—considerable for us—could be raised would be by a contraction of our loans. For several years we have found it difficult to supply our local demand and if we are forced to consider an addition of $70,000 I see but one thing to do, namely, to withdraw from the national banking system even though such action entails a serious loss on our Government bonds.

The rediscount feature of the new bill would hardly work in our case because it is too cumbersome and because the vast majority of our paper is not bills receivable, but loans made for the accommodation of our customers. If we are to retain our business we must keep all such paper in our own hands until maturity and not sell it to other institutions to provide for our temporary needs.

This view of the currency bill can not be considered a partisan one inasmuch as three of the four officers of this bank voted for Mr. Wilson at the fall election and the one who did not is not now in the service of the institution.

I believe that it should be the duty of all banks to enter into any feasible scheme looking toward the improvement in our currency and banking system and I trust that the efforts of yourself and others similarly minded will avail to secure such amendments to the pending measure as will make it advantageous to all the national banks of the country.

Yours, very truly,

A. B. Bryant, President.
The Chairman. Mr. Cannon, we will be glad to hear you now, and I will be glad to have you state your banking connections so that our reporter will have them.

STATEMENT OF JAMES G. CANNON, PRESIDENT OF THE FIFTH NATIONAL BANK, OF NEW YORK, N. Y.

Mr. Cannon. I am president of the Fifth National Bank, of New York.

The Chairman. What is its capital?

Mr. Cannon. Its capital is $5,000,000; surplus, $5,000,000, and undivided profits about $1,000,000.

The Chairman. And its deposits?

Mr. Cannon. Its deposits are about $30,000,000. It is not one of the largest institutions in New York, but it is a fairly good-sized one.

The Chairman. How many years have you been in the banking business?

Mr. Cannon. Since I was 17 years old.

The Chairman. You were Comptroller of the Currency at one time?

Mr. Cannon. No; that was my brother.

The Chairman. That was your brother?

Mr. Cannon. Yes; I have always been in the banking business in New York.

The Chairman. You have made a special study of this question of banking reform, have you not?

Mr. Cannon. I have tried to for many years, and also tried to make a study of this bill during the past summer.

The Chairman. You have been a lecturer on this subject?

Mr. Cannon. Oh, yes; I have been at it a good many years.

The Chairman. We will be glad to have you proceed in your own way to comment on the bill, and the committee will not interrupt you until you have concluded.

Mr. Cannon. I have only made a few notes. They are not very numerous, and as I go along I shall be glad to endeavor to answer any questions the committee may desire to ask.

The Chairman. The committee has thought it better to wait until the witness concludes before interrupting with questions, because otherwise you will not conclude.

Mr. Cannon. I see. That is right. I want to say this, Mr. Chairman and gentlemen: I believe we are nearer solving the big question of currency reform than we have been for 20 years. I realize how easy it is to criticize and tear down, and how difficult it is to create, and I feel that those who have brought this bill forward to its present state are entitled to be warmly congratulated on what they have accomplished to date. I do not regard this as a political measure myself, but as a question entirely above politics, affecting, as it does, the welfare of the people of the entire country. If it were a political question, I might not be able to say anything in favor of the bill, as I am one of those that are not fortunate enough to be numbered among the majority party, having been for life a consistent old-line Republican. And I recognize another thing, too, in connection with
this bill. I recognize that legislation is more or less a matter of compromise, and I hope that this bill, which has received such a fine start, can be adjusted so that it will become a law.

I have gone over the bill carefully, and I want to make a few suggestions. I do not know whether they will be worth anything to you, but, such as they are, I will be glad to give them.

The CHAIRMAN. The committee will be very glad to hear your suggestions and your reasons for them.

Mr. CANNON. The storm center of the bill has been the opposition to the Federal reserve board. Now, I am not one of those who oppose giving authority in banking matters to officials named by the President and confirmed by the Senate. I believe the President of the United States and the Senate can be trusted to exercise this power for the country's welfare and the country's good, and this is the system applied to the choice of all Federal officers all over the country. But I do feel that the men who are to manage the financial affairs should be selected with a special view to their qualifications, and I believe it is most desirable, in making a choice, that there should be no opportunity for objection and suspicion that it is governed by any political equation. I have been some in politics myself, and happened to be treasurer of the Republican national committee during the first McKinley administration, and I speak in this way for that reason. Accordingly, I feel that the provision in this bill making certain Cabinet officers and the Comptroller of the Currency members of this reserve board should be omitted, and that the entire board should be nominated by the President—seven members—and the nominations to be submitted to the confirmation of the Senate.

I have no disrespect for Cabinet officers, nor does it detract from their position to say in their position political considerations enter always. Moreover, I believe they should not be members of this board, for the reason that the performance of their duties as Cabinet officers will not permit them to give to the duties of the reserve board the necessary time and attention for their proper performance.

Gentlemen, it is not going to be any small job for any body of men, no matter who they are, to change our entire banking system in this country and organize these regional-reserve banks as you have laid them out. It is going to take the very best energy and the very best brains in at least seven men, working night and day, to put such a system as you have outlined here into the hands of the people, without any jar, without any friction, or without anything of that kind.

The bill calls for three members, two members of the Cabinet and the Comptroller of the Currency, as ex officio members. I have been an ex officio member of a great many committees and gave mighty little time to those committees myself, and I believe the Secretary of the Treasury, the Comptroller of the Currency, and the Secretary of Agriculture—we may not always have as good a Secretary of Agriculture as we have now in years to come—can secure all the information they want with reference to anything that is to be done in this reserve association without being members ex officio. And I think the provision with respect to the composition of the reserve board is defective in another particular. I would like to see, where now only one of the members is to be experienced in
banking, there should be provided that three of the members shall be so experienced, but all to be appointed by the President by and with the advice and consent of the Senate and subject to your confirmation.

I merely offer this suggestion, perhaps, to meet some of the criticisms directed at this section of the bill. It seems to me that that might help and do away, perhaps, with some of the objections which have been made. I may be mistaken, and I may be taking a somewhat radical ground myself when I state I am not at all alarmed at the method to be employed in selecting these seven men, so far as I am concerned—my own personal view.

Now, for a moment, in regard to the bank-note issues. My position in the matter of the issue of notes of this character I do not think can be better stated than in the language I used in an address on this very subject immediately after the panic of 1907 at Columbia University. I then made this statement:

I venture the prediction that the people of this country will never permit its circulating medium to be monopolized by one institution, no matter how good it may be, but they will always demand a circulating medium issued by the Government or under careful Government supervision and control.

The proposed Federal notes would appear to have most of the qualities of our present national bank notes. As I understand it, no notes could be issued except under regulations of the Federal reserve bank, the ultimate security back of the notes being a 33\(\frac{1}{3}\) per cent reserve in gold and lawful money and short-time commercial paper selected by the bank and approved by a Government agent, and further that it is a first lien on all the assets of the issuing bank.

There appears to be a great controversy raging around this section of the law. In my opinion, it can be met by making these notes redeemable in gold and guaranteed by the United States Government in such a manner that the Government could never be embarrassed when called upon to redeem them. As I said to some of you gentlemen to-day at noon, everybody has a different opinion, and all of the bankers have a different idea of currency reform. These notes that come into the hands of the people, whenever you pay them at the national bank to-day, have the United States of America upon them. The silver certificate has it. They all have United States of America on them. I think it will be with very great difficulty, to my mind, in putting out a lot of these reserve bank notes and having them acceptable to the people. You pay them out to the darkies in South Carolina in the cotton fields, or you pay them out in Maine to the potato diggers up there, and they will look at them for United States of America, and they will feel the United States of America is responsible—that is, the Government is responsible for every dollar of money which they have in their hands which they receive for their pay.

And I feel this, possibly, might meet the exigency here, because I believe that they should be guaranteed by the United States Government, but in such a manner that the Government would not be embarrassed and called upon to redeem them.

Senator HITCHCOCK. You mean they should be notes of the reserve banks?

Mr. CANNON. Guaranteed by the Government. My bank is across the street from the subtreasury in New York, and I saw the trouble
in Cleveland's administration, when they presented legal tender for gold across the street at one window and paid it out at another, and that endless chain of getting gold at the Treasury, and the troubles we had there.

But it seems to me all the objections could be met here on both sides if you make them notes of the bank guaranteed by the Government and fix it in such a way that when the Government is called upon to redeem them there can be no question of embarrassment to the United States Government. That would be my idea in regard to that.

Another thing, a possible thing to do—I do not know whether it could be—that is, the rate which is to be charged to the Federal reserve banks applying for these notes should be distinctly named in the act, the charge being graded according to the length of time the notes are kept outstanding. Now, I say that for this reason: This would enable the bank, if it applied to the Federal reserve bank, and enable the mercantile community, whose notes these notes discount, which they put up as an obligation for these, to gauge somewhat what it is going to cost them for the circulation they have taken out. Under the present act it can not be less than one-half of 1 per cent, but they never would know exactly where they stood as to the cost of this bank-note issue. I think you would be performing a service, therefore, to the mercantile community and the customers of the banks, as well as the banks themselves, if, in some way—I do not know whether it can be done or not—you could arrange so that it can know the cost to them if they keep it out for 30 days, 60 days, 90 days, 4 months, or whatever time it was, so that they could gauge their arrangements to the cost of their money which they are going to put in goods, merchandise and things of that kind, which those notes are put up for, or to meet their pay rolls—whatever use it is. I think it would be a help to the bank and the mercantile community, who are the borrowers, to gauge the cost to them of these reserve notes.

This whole section—I have made a considerable study of it—seems somewhat ambiguous, and I believe it can be rewritten with some advantage to the act, as I read it, and I have read it very carefully a great many times. I may be wrong about it, but these are two or three suggestions I have to make in that connection.

As to the number of regional reserve banks, the act provides for 12. Some people, I understand, have advocated many more and others have advocated less. In my opinion it would be very much easier to adjust the relations between these reserve banks if you start them with six or seven and increase the number from time to time as seems desirable, just as you have provided for in the act. You are organizing here an enormous business enterprise, which will require extreme care in its handling at the outset, so as not to disturb seriously the business interests of this country. You have got to go forward with the utmost care—the utmost thought and extreme care. An experienced business man who starts out on a great enterprise would not go too rapidly, but would create new branches of his business as necessity for them developed. And I believe this act would be more sure of meeting success, from a business standpoint, if you start out with a less number of reserve banks and add to them as necessity arises, allowing them to be increased as occasion may justify. My
reason for having a smaller number is that it is desirable for confidence and getting together an adjustment between the managers of these banks, so that they can be operated along similar lines in all parts of the country. I have had an analysis made here—I have been at work on it all summer with a very careful auditor—which you gentlemen have probably seen and read, showing the capital these banks of deposit are likely to have and the transfers that are likely to be made to them, and it is going to be a very serious piece of business.

Senator Nelson. Have you that statement here?

Mr. Cannon. Yes.

Senator Nelson. I wish you would have it incorporated in the record, Mr. Chairman.

The Chairman. That may be incorporated in the record as an exhibit.

Mr. Cannon. I will be very glad to do so. It is going to be a serious business to change the entire banking system of the country and the entire methods of doing the banking business, and if we spread out too far, all over the country, the managers of the different banks can not get together and consult. They are all in the same business and ought to consult together as to the methods to be pursued in handling commercial paper. In fact, this would give an opportunity for doing a splendid piece of work along banking lines, and of course there are a great many reasons which I will advance in connection with it, but I feel, as a business reason, looking at it from a business standpoint, if you can start out with five or six you will be apt to be more successful in handling the proposition than if you get it away out of reach, where it is difficult to get men who are thoroughly familiar with a great project of this kind to handle it in accord. Of course, as I say, other people have given other reasons. That would be one of my reasons for thinking you might be able to reduce the number, the same as any prudent business man, as I said a moment ago, starting out a great business all over the country, would start it gradually and then expand as his business expanded. Then, as time went on, you would be able to increase the number.

Senator Hitchcock. Have you any special reason in mind for suggesting five or six rather than three or four?

Mr. Cannon. No. Just about half of the number. Three or four or five or six. My only object is that in starting this thing you want to make it a success, and you want to do everything in your power to make it a success. Three or four would answer just as well; but whatever you do, do it so it will not disturb the business interests of the country.

In the transfer of the very large amount of funds, which is bound to be transferred from the reserve cities into these new regional banks, it should be done with as little friction as possible all the way through. In New York City (I happen to have my table here, which I was looking over)—

Senator Nelson (interposing). Let that go into the record, too.

Mr. Cannon. Yes; I will let that table go in. I was just going to give the figures. My figures show that the central reserve banks, when this transfer is made from the money which the banks have with them to the Federal reserve banks, they will be required pretty
nearly to borrow $225,000,000 from the Federal reserve banks in making this transfer.

Senator Hitchcock. That is, banks in central reserve cities?

Mr. Cannon. Banks in central reserve cities; yes.

Senator Hitchcock. How about banks in reserve cities?

Mr. Cannon. Reserve cities? Let me see.

Senator Hitchcock. You mean they will have to do that in order to avoid contracting loans?

Mr. Cannon. In order to avoid contracting loans; yes. I think the reserve cities will not be as much. I think the bulk of it will fall on New York. I have figured out here—my impression is—that New York alone in making this transfer, at the end of three years (I have a table here, but I will not bother you to read it, because it is full of figures), we have now in New York, due to national banks, net, on June 4, $390,000,000.

Senator Nelson. Of bank deposits?

Mr. Cannon. Of bank deposits; yes. Now, of course, if you transfer that to your Federal reserve association, you are obliged to keep this reserve yourself, and your reserve falls in a certain proportion, and therefore you will not have to borrow all of it—I beg your pardon, I was looking at the wrong table. In New York City we had $262,000,000 on June 4, net deposits. I figure that New York City would be obliged to borrow from the Federal reserve association at the end of the three years, if they took down their deposits and transferred them, about $137,000,000. That is, we will be required to borrow that to take care of the existing deposits to be transferred over to the Federal reserve association.

Senator Hitchcock. Could not you provide to get money by calling loans?

Mr. Cannon. It could be done in various ways, but my own thought is a large amount of it would be reborrowed from the Federal reserve association. Of course, gentlemen, the whole thing is predicated on something new in American banking. That is, the banks are allowed to borrow. Heretofore, the banks throughout the country felt a little adverse to borrowing. They felt it was a kind of a sin to borrow. The time has come, however, when we are going to change over. It would depend largely on the bank's situation, whether it would call in loans or would borrow; but I assumed it would not call in anything and had the figures drawn up that way. I assumed it would borrow direct from the Federal reserve association, and I figured that New York would have to borrow $137,000,000.

Senator O'Gorman. I think, Mr. Cannon, that this new departure, having these regional banks as banks of rediscount, has been likened to a pawnshop, where a bank can go with its paper and get accommodation.

Mr. Cannon. Well, of course, that is just a rough way of putting it, but we might say that. That is a joke more than anything else.

Senator O'Gorman. You do not mean the question was a joke?

Mr. Cannon. No. What we needed for a long time in our banking business in the whole country is some place where we can run, when our deposits begin to recede, and there comes along a time for active use for money. And then, on the other hand, when the
deposits recede, with no place to take paper and rediscount it, we have got immediately to call in the loans of the borrower.

Senator Hitchcock. What would they pay for rediscount?

Mr. Cannon. I take it for granted the rediscount—of course, you could not state what the rate would be, but I take it the rate for rediscount for paper bearing the indorsement of a New York bank, rediscounted at the Federal reserve association, would be very much less in New York than we are charging our customers.

Senator Hitchcock. Less than the call-loan rate?

Mr. Cannon. No; it would not be less than the call-loan rate. As far as the call-loan rate, I venture to state the call-loan market would disappear; we would not be obliged to keep out so much as we do now on the call-loan rate.

Senator Nelson. And would not that be a blessing, if you did not have to loan so much on stock collaterals?

Mr. Cannon. I would like to see the money I have on call loans on time just now, as far as that is concerned.

Senator Bristow. Mr. Cannon, you say you think the rediscount rate would be very much less than their paper bears?

Mr. Cannon. I think it would, because the risk of the Federal reserve bank, with the indorsement of a strong national bank, would be A1. It would not only have the obligation of the borrower, but the indorsement of the bank.

Senator Bristow. To illustrate, say the paper bore a rate of 5 per cent and you discount it for 3.

Mr. Cannon. I do not know what the rate would be.

Senator Bristow. To illustrate, say the rate was 3.

Mr. Cannon. It would be entirely according to the money market. I would not gauge the rate except according to the money market, myself. That rate, for prime commercial paper, varies in the market. That is to say, you will always have certain communities that will get a lower rate than other communities. You would consider the banks, in discounting notes. A bank in New York, with a strong capital and surplus behind it—paper with its indorsement—would be considered prime commercial paper. Of course, the rate of interest would be fixed by the board of governors.

Senator Bristow. If you could borrow money from the Government at, say, 3 per cent, and loan it at 5, you would want to do all the business you could, at that rate, would you not?

Mr. Cannon. You would want to do all you prudently could.

Senator Bristow. That would be the only limitation?

Mr. Cannon. You see, you do not get any security. The mercantile business of the country is done on single-name paper; it is not done upon security. The merchant who buys goods does not give an indorsed note, as he used to in the old-fashioned days. It is done on a single-name basis. He buys goods, and, on the 10th of October, for instance, which is the settlement day for the dry-goods people, he comes to us and says, "I would like to borrow $200,000 or $300,000." He has nothing to give except his own plain note, without a dollar of collateral behind it. We have to take the risk. We take the risk of loaning this merchant $200,000 or $300,000 on his own promise to pay. It is his own note, payable to our order, with nothing behind it.
Senator Hitchcock. Can you do that now, in national banks?

Mr. Cannon. Oh, yes; it is done very largely. The whole business of the country is done on single-name commercial paper.

Of course in the States—I am not speaking outside of the national bank—it may be different. The large mercantile interests insist upon borrowing on single-name commercial paper, and we are obliged to assume that risk. The small bank does not have the same risk. We have it, and we are obliged to assume that risk. We have got to look to the merchant's responsibility, business capacity, and the nature of his business; and we take, in the banking business, a very large risk in handling single-name commercial paper.

Senator Bristow. Now, Mr. Cannon, do you not think if the banks of the country can loan money at 5 or 6 per cent, and then discount it at a much less rate at the Government bank, and get currency, the tendency will be to hunt for all of the loans you can get, on which you think you will not lose?

Mr. Cannon. Oh, no; the prudent banker would not go to that extent at all. I do not think so, sir. No; there is prudence in banking the same as there is in any other line of business. He could not afford to do that, because the ultimate result would be the Government bank would fall back upon your bank, and you would lose in case that paper was not good.

Senator Bristow. As I say, it must be well secured by the responsibility of the borrower.

Mr. Cannon. I know; but I do not think you would find them around hunting up all sorts of paper.

Senator Shafroth. Do you think it is contemplated by this act that notes of merchants shall be taken as rediscount paper?

Mr. Cannon. I think so.

Senator Shafroth. Commercial paper, as we have had it explained to us here—commercial paper is a matter in course of expanding.

Mr. Cannon. That is what a merchant does with his money to-day.

Senator Shafroth. Yes; but generally in the form of drafts.

Mr. Cannon. No; not at all. Never in the form of drafts at all. All the business of the country is done on single-name paper.

Senator Shafroth. The business of the country is done on single-name paper?

Mr. Cannon. On single-name paper, and the 10th of October is the great pay day for the dry-goods people of the country.

Senator Shafroth. It means the transaction in process of execution, and that is the way it has been explained to us here—if I sell to you 1,000 bushels of wheat and I draw a draft on you, you accept it and tell me to take it to your bank and it will cash it; that is the paper which is in the course of the transaction in business. Now how do you make the note that you get from the merchant as a transaction in business?

Mr. Cannon. Absolutely. He comes in to us and says, "I have got to pay various jobbing people around New York." Your bill expressly provides for it. He comes in to me and says, "I have got to pay the jobbers I bought my goods from on the 10th of October $500,000, and those goods are on my shelves now." That is business; he has got the goods. He says, "I have got to borrow $500,000, and I want to borrow $250,000 from you, and I am going over to the
Bank of Commerce and borrow $250,000. That money is to be used in payment of goods on the 10th of October, and I have received the merchandise.

Senator Shafroth. How is that bank going to determine who the transaction is with? The man is going to have a promissory note.

Mr. Cannon. He is going to have a promissory note.

Senator Shafroth. How would you distinguish that transaction from the transaction of a man who goes on the exchange and buys stock?

Mr. Cannon. Because we do not loan to that class of men on single-name paper.

Senator Shafroth. Then the reserve bank will simply have to take your representation?

Mr. Cannon. The national banks who are members of the reserve association—the officers of that association, who are conversant with the business of the neighborhood where that reserve association is located, will know and can easily find out. It is a matter of common knowledge in the banking business that it can easily be ascertained whether paper they rediscount is all right, and if they find they have paper of that kind they can turn it back at any time if it was not properly received.

Senator Bristerow. I do not think I would criticize that necessarily, because I think an enlargement is better than a curtailment. In fact, in the whole country if the banks relied on drafts drawn there would not be enough drawn to transact the business of the country.

Mr. Cannon. The business of the country is not done that way. That is the old-fashioned way, where the merchant came down to New York and went to the dry-goods district, or to the hardware district, or somewhere else and bought a bill of goods for $10,000 and turned around and gave his note, and then the dry-goods man indorsed the note and put it in his bank. That is not the method now. All good men have credit, and use their credit, and they will borrow from the banks and pay their bills until they make their collections.

Senator Shafroth. You think the paper he gives will come within the definition of this bill?

Mr. Cannon. Oh, I do. I feel that is where the helpfulness in this bill is going to come in, it seems to me, in handling that matter.

Senator Hitchcock. Do you believe that the reserve bank in New York should be permitted to charge a lower rate on discounts to the New York banks than other reserve banks charge to their member banks?

Mr. Cannon. As I was saying at the outset, I think that is a matter that is to be adjusted. I do not believe you can establish the rate in any law you work out. I am not speaking especially of New York, Chicago, St. Louis, or anywhere else, but the flow of money will always affect the Federal reserve banks, and the rate for discounts will be according to the amount of money which they have on hand. Or, if money is very tight and they desire to have the loans paid off, they will put up the rate of discount.

Senator Hitchcock. You emphasize the New York banks. Do you mean by reason of their great resources they should have a lower rate of discount?

Mr. Cannon. No; I am only speaking in a general way.
Senator Hitchcock. You would not have any discrimination between them?

Mr. Cannon. None whatever between them or the Chicago banks and any other banks. The ebb and flow of money in and out of the reserve banks would justify the change of rate. You may have to raise your rate to bring the money in or lower it in order to put the money out. You want to use it; you do not want to keep it in. I suppose that is one of the reasons why in this bill you have provided that one Federal reserve bank can discount for another, to keep the equilibrium between the two.

The Chairman. You think that necessary?

Mr. Cannon. Oh, I think so; in fact, I do not see how you can run it without that, because one would grab all there was in sight and there would be a scramble——

Senator Hitchcock (interposing). Will you describe the process by which one reserve bank would be able to gather funds to that extent?

Mr. Cannon. It could simply raise the rate to such an extent that the banks would not borrow anything from them. The money would return right in.

Senator Hitchcock. It would simply accumulate——

Mr. Cannon (interposing). Accumulate their resources.

Senator Hitchcock. And reduce their profits?

Mr. Cannon. Reduce their profits and reduce the amount of bills discounted on hand.

Senator Hitchcock. What would they have to gain by that?

Mr. Cannon. I do not know that they would have anything to gain by that, but they would simply feel they were not restrained by anybody else.

At the time of the panic in 1907 a gentleman came in to see me. He said, "Now, if you will only lend me $10,000 I will have all my deposits in the bank in cash." [Laughter.] He went away very much discouraged because I would not give him the $10,000 in cash and enable him to go back up into the country and arrange to have all his deposits in cash.

Senator Hitchcock. In this case, however, the reserve bank has the reserves of its member banks impounded. It can not withdraw them, so there is no danger of any run so far as they are concerned. And I can not see any motive on the part of a reserve bank, with that security on the one side and ability to secure currency on the other, to accumulate reserves in any manner.

Mr. Cannon. It would only be in the question of management. I am looking at the question of human nature.

Senator Hitchcock. As it is now, the bank in the reserve city is forced to scramble for money, because they may be withdrawn in whole or in part, and it has no resources——

Mr. Cannon (interposing). Outside of this.

Senator Hitchcock. And if those are renewed, what possible motive would a reserve bank have to pile up a surplus?

Mr. Cannon. I should think only the object of scrambling for everything, as has been done in the past. That is why I say you want a balance of power to stop that practice that would arise in various sections of the country.
Senator Bristow. Mr. Cannon, following up Senator Hitchcock's suggestion, the country banks that have their reserves deposited in this Federal reserve bank can not withdraw them. They can be taken out of your bank now and put some place else, but this regional bank faces an entirely different proposition. They can not take them out; they can not be withdrawn.

Mr. Cannon. Well, they keep very much less, do they not, under the bill?

Senator Bristow. Yes; but that is a fixed quantity that can not be taken out.

Mr. Cannon. I know, but they are obliged always to keep a fixed reserve.

The Chairman. But that is available for your depositors, is it not?

Mr. Cannon. Oh, it is available for the depositors, but you have a fixed reserve. Is not that available for their depositors in the Federal reserve bank?

Senator Hitchcock. We think not; we think a bank is not allowed to reduce its reserve.

Mr. Cannon. But it can go and deposit paper—

Senator Shafroth. But can go and deposit paper—

Senator Hitchcock (interposing). Under the present law a country bank can take out all of its reserve and keep it in its own vaults, but under this bill it can not take out any more than would leave its reserve equal to a certain per cent. It is impounded permanently and inaccessible.

Mr. Cannon. I do not read the law so; I may be mistaken about it.

Senator Hitchcock. I wish you would just refer to that section and see if you put any other construction on it.

Mr. Cannon. You have to have the utilization of your reserves for the payment of depositors, either for drawing it out or issuing currency against it.

Senator Bristow. As I understand, there is 5 per cent left in the reserve bank, 5 per cent in its own vaults, and 2 per cent optional. But 5 per cent can not be withdrawn; it is there, and the country bank can not take it away.

Mr. Cannon. Is there not a process for getting currency out on that in some way?

Senator Bristow. That is to lie with the bank as to whether they will lend that money, but its reserve can not be disturbed.

The Chairman. That is not the intention of the draft.

Mr. Cannon. I do not read the bill so.

The Chairman. I do not think anybody would approve that. The reserves are required to be 12 per cent, 8 per cent to be kept either in their own vaults or with the Federal reserve bank in that district.

Mr. Cannon. That is what I thought; I thought your reserve provisions were very good. Of course, that says "a period of 36 months from and after the date fixed." I do not read that clause to mean that they are not able to draw that out.

Senator Bristow. That is to be kept there as a balance.

Mr. Cannon. I know, but you can fluctuate your balance up and down as much as you like.

Senator Hitchcock. Yes; you can under the present law.

Mr. Cannon. I should say you could here; I do not see where that specifically states that.
Senator Bristow. If five-twelfths of it is kept there as a balance, when that is drawn out it is not there.

Mr. Cannon. But everybody has to make his reserve good nowadays. If these country banks pay it out over the counter the law compels them to restrict their loans or call in loans.

Senator Nelson. Suppose the bank had it in its own vault; it would still be of no use. You would have to keep it there.

Senator O'Gorman. It would be available for the use of depositors in certain contingencies.

Mr. Cannon. Yes.

Senator Nelson. The only difference is that part of the reserve is kept in the bank's own vault, and a part in this reserve bank, but neither can be utilized directly. There must always be that fixed amount, and whether you take that 5 per cent from the regional bank and require it all to be put in the particular bank does not make any difference. It is still, in a sense, idle money. But in the regional reserve bank it can not be made the basis of any issue; there is the value of it. It operates there as a part of the capital of the bank.

The Chairman. The inquiry if the Senator from Kansas was whether or not this reserve put into the reserve bank was objectionable for any reason. He construes the bill to leave it impounded there so as to be available for any purpose. Now, it comes under the rule of section 5191 of the national banking act, which provides that these reserves may be used for deposits but not for loans, and if it goes below that for any purpose it is to be made good within a limited number of days. If that is ambiguous it ought to be corrected.

Senator Shafroth. Section 22 seems to me to clear that up—

The Federal reserve board may notify any Federal reserve bank whose lawful reserve may be below the amount required to be kept on hand, to make good such reserve; and if such bank shall fail for 30 days thereafter so to make good its lawful reserve, the Federal reserve board may appoint a receiver to wind up the business of said bank.

Senator Nelson. That is covered by the present national-bank law.

Senator Hitchcock. That verifies what I say, that it is impounded there, and if checks come in against it the reserve bank notifies the member bank and it must make it good.

Mr. Cannon. Does it not have to make it good now? Suppose they overdraw their account with us and it is down to their re-reserve. We are not reducing their reserve—

Senator Hitchcock (interposing). As the law is now, any bank can pay out its reserve to its depositors until it gets down to the last dollar, if it is still solvent. But, under this law, the minute its reserves, by reason of the payment of checks or drafts, drops below the legal reserve the reserve bank notifies the member bank to make it good.

Senator Shafroth. Yes; but these reserves that are put in by the member bank being, say, $300,000, the bank has a right to lend out or to in any manner utilize in commerce two-thirds of it, according to this first paragraph of section 22.
Senator Hitchcock. There is no question about that. The question is whether a member bank is bound, under the law, to keep a certain proportion of its reserve impounded permanently.

Mr. Cannon. Not for use, you mean?
Senator Hitchcock. Yes.
Mr. Cannon. To pay its depositors?
Senator Hitchcock. Yes.
Mr. Cannon. I do not read it that way.

Senator Hitchcock. The Senator from Colorado has just read the paragraph which gives the reserve bank the right to order the member bank to make that reserve good or be dissolved.

Mr. Cannon. That is a quotation from the national banking act to-day.
Senator Hitchcock. That only applies when a bank is insolvent.
Mr. Cannon. Oh, no.

Senator Nelson. No; under the national banking act to-day the moment the reserves fall below the legal requirement the Comptroller of the Currency notifies the bank, and it is not allowed to make any loans——

Senator Hitchcock (interposing). That only stops it from making loans. It does not dissolve the bank. It only stops it from making loans until the reserve is restored.

Senator Nelson. And if it is not restored in 30 days the bank goes out.

Senator Hitchcock. Not if it is still solvent.
Senator Shafroth. That depends upon whether the Comptroller of the Currency gives the notice. He can let it run for six months.

Senator Hitchcock. This reserve bank is not allowed to let it run. It must notify the bank and the member bank must make it good. That verifies what I have said, that the reserve is impounded.

Senator Nelson. No more impounded than it is to-day under our national banking system.

Mr. Cannon. Now, in regard to these stock subscriptions, this seems to be a storm center of the discussion. Why could you not continue this provision just as it is, and add a clause providing that within three years the member banks would be at liberty to dispose, if they so desired, of at least 75 per cent of such stock as they held, the purchasers to be approved by the board of directors, or the executive committee of the Federal reserve bank, before any transfer could be made? It could be provided that the stock so disposed of should not have any voting power. The stock should show plainly on its face that such transfers could only be effected with the approval of the Federal reserve bank.

This would seem to meet the objections raised by many country banks, as well as the large city banks, that section 19 would cause them to lock up a large sum of money in unavailable assets. The passing on stockholders by boards of directors is not an unheard of thing. The stock of the Federal reserve bank would certainly make a splendid investment for any individual. I think that would remove many of the objections to this section, and certainly cause the bankers to be more contented with their investment.

Now, it may be out of order to make that suggestion, but it occurred to me that it might be done. We have in New York a situation that is somewhat similar. Our clearing-house building in New
York was built by a clearing-house building company. The stock of that clearing-house building company is owned by the banks who are members of the association. The building was put up. The stock carries a fixed rate of interest, and we are not allowed to sell it to anyone else at all, to any individual or outside person; we can only turn the stock back into the clearing-house association, or they can redeem it from us. There is something akin to that in that section.

I simply make that suggestion as perhaps meeting some of the objections that have been made to the stock subscription matter.

Senator Weeks. Of course, you recognize, Mr. Cannon, the necessity of keeping this stock from being accumulated in the hands of any particular interest?

Mr. Cannon. Oh; surely.

Senator Weeks. One way of doing that would be to require that the member banks, as a condition of membership, should own a certain percentage of this stock as required in this bill. But if any of that stock is going to the public in any form, some method of restricted transfers must be provided which would prevent its falling into the hands of a set of individuals.

Mr. Cannon. Yes; it would have no voting power——

Senator Weeks (interposing). Do you think it is wise to deny voting power?

Mr. Cannon. Lots of preferred stocks now have no voting power.

Senator Weeks. Not very many.

Mr. Cannon. Quite a good many. Yes; there are quite a good many preferred stocks without any voting power.

Senator Weeks. There may be quite a good many; I do not recall any.

Mr. Cannon. A good many industrial preferred stocks. The thought I suggested was that the purchases would have to be approved by the board of directors or the executive committee of the Federal reserve bank before the transfer could be made. I simply throw that out as a suggestion that might, perhaps, be helpful. I do not know whether it would be at all useful in any way. Now, in the matter of the retirement of circulation based on the 2 per cent bonds, I have no remedy for that and I have thought over it a great deal. The way I feel about it is that the Government can afford to treat the banks with these 2 per cent bonds very liberally. They came to the assistance of the Government when this bond issue was put out, taking them over, and some remedy should be devised to provide against the great loss which would be entailed on the banks and the large amount of money which would necessarily be locked up. I confess that is a subject for solution, and I presume that your committee has, in its combined wisdom, some plans devised to protect the Government and do some justice to the banking community, which I suppose the sponsors for the bill always desired to do.

We need banks in handling Government bonds. We need them as the years go by. At times they become buyers of Government bonds, and there ought to be some way provided whereby this loss which is hanging over them on account of the 2 per cent bonds could be done away with.

Senator Weeks. Do you see any objection to applying the surplus earnings of the regional banks to the retirement of the national debt
and making other provisions which would, in a term of years, entirely eliminate our national debt?

Mr. Cannon. Not a bit. Your earnings are going to be large.

Senator Weeks. How large do you estimate they will be?

Mr. Cannon. I have the figures here if you will allow me a moment to look them up.

Senator Nelson. If we allow them 6 per cent on their stock would it not be wise to have all the residue of the revenue go to the Federal Government?

Mr. Cannon. Yes, sir.

Senator Nelson. And provide a sinking fund?

Mr. Cannon. I would do that. I think it would be better to do that anyway than to attempt to divide the residue in the way you have in the bill, because then you are trying hard all the time to push your earnings.

The Chairman. You mean these banks should not be mere money-making banks; they ought to be public-utility banks?

Mr. Cannon. Yes; and at the same time safe.

The Chairman. Did you answer Senator Weeks’ question?

Mr. Cannon. I am looking up the figures; I have them somewhere here. I had this estimate made of the Federal reserve bank in New York, running over a period of three years, using 4 per cent for loans and 3 per cent for investments, taking a very low figure, and providing for 2 per cent interest on the general fund. I think the Government should, perhaps, forego that 2 per cent interest if it were necessary to do so. I also took the tax on notes at one-half of 1 per cent. On that basis I would figure the gross income the first year to be $6,123,100, the second year, $6,815,000, and the third year, $6,885,200 gross. I figure the expenses of interest and taxes and the expense of maintaining the Federal reserve bank in New York at about $300,000 a year.

Senator Pomereé. What do you make the capital stock and probable holdings of depositors?

Mr. Cannon. The capital stock, with 10 per cent paid in the first year, I figure would be about $19,500,000. The general fund that New York would be entitled to transfer from the Government deposits to that general fund in New York—you will apportion it throughout the country, according to the bill—would be about $75,000,000. The required deposits of subscribing banks would be about $51,000,000, and then I put an arbitrary note issue or deposit of credit at $100,000,000. So they would have approximately the first year about $246,000,000 to use, the second year about $280,000,000, and the third year about $284,000,000 to use.

Senator Weeks. What do you mean by the general fund?

Mr. Cannon. The Government deposits. You would put all your Government deposits, Senator, according to this bill, into a pot and apportion it out.

Senator Weeks. Are you figuring the reserve bank would pay interest on that?

Mr. Cannon. I am; yes, sir. I figured here in my expenses $1,500,000 from New York alone.

Senator Weeks. Why do you do that?

Mr. Cannon. I really do not know why you should.
BACKING AND CURRENCY.

The CHAIRMAN. It would not be necessary if all the surplus went back to the United States Government.

Mr. CANNON. No; if all the surplus went to the Government it would not be necessary. On that basis I would figure the net income for the first year—of course, this is only approximate—at about $3,823,100, with a dividend at 5 per cent of $995,400. The available surplus the first year would be $2,827,700. The second year the net income would be $4,515,000. Deducting the dividend of 5 per cent, the surplus would be $3,519,600 net. The third year the net income would be about $4,585,200, and with the dividend out the surplus would be about $3,589,800 net.

Now, if you do not pay the Government interest, the New York Federal reserve bank alone ought to show a net profit to the Government, before putting on 6 per cent interest on these certificates, of pretty close to $5,500,000.

Senator NELSON. Is not your table there based on the assumption that all these funds are out and actively at work?

Mr. CANNON. No; that is on a proportional amount.

The CHAIRMAN. I should like to have that statement go in the record.

Mr. CANNON. With great pleasure.

(The statement referred to is as follows:)

**Tentative income and expense, Federal reserve bank of New York.**

Mr. CANNON. I think that plan would be about the right thing. If New York could earn for the Government over and above the 6 per cent interest on these certificates, say, $4,000,000, why, you would have a very substantial fund, Senator, every year for the retirement of the twos and the retirement of the Government debt.

The CHAIRMAN. You assume the bank would carry part of these twos in its own vault and have them so they might be issued as one-year notes?

Mr. CANNON. That could be done.

The CHAIRMAN. Would not that make a quick asset that would serve for a reserve?

Mr. CANNON. Something of that kind might be done. I have thought about a great many plans, but I have not given the matter
as careful study as I might. I should expect that something should be done. I think the country banks would appreciate that being done for them. And we want the banks; the Government wants the banks. We have to put out Government issues again, and we want them to stand behind the Government always.

The Chairman. I think there is perfect unanimity of opinion about the Government protecting its obligations, as well as the banks protecting those twos.

Mr. Cannon. Now, in the matter of the savings bank departments, that has been another storm center. We have now the postal savings bank law, and it seems to me it would be hardly necessary for this section to appear in the law with reference to savings bank departments. While, no doubt, in the minds of the framers of the act this is put in looking forward to the new savings bank departments which may be established in the national banks, its effect has been disturbing to the old savings bank departments which they have had so many years. If this section should remain in the act, should it not be made to apply only to such departments as may be established under the act? Then you would have no trouble with the present savings bank departments. I believe that would help very materially in discussing that question. It seems so to me. I think the country bankers would feel very much better about it.

Now, there is one other thing in the act that I want to commend heartily, and that is with respect to domestic exchange facilities. I think this method of permitting the Federal reserve banks to handle the domestic exchange problem is going to solve one of the greatest banking problems you have in the country to-day. It certainly is one that a great many bankers have been working on for a great many years.

I have always been from the start a consistent advocate of taxing these things out of existence; I thought it was my duty, and I introduced in the Cleveland convention of the American Bankers' Association a great many years ago a resolution which made it the duty of every banker to charge on country checks. I spent six months as a member of the committee of the New York Clearing House Association last year studying this subject, and I want to say, Senator Weeks, that I think Boston has us all beaten to a frazzle.

I have changed my attitude in regard to this country-check proposition. I believe the country check is here to stay; it is a part of the business of this country. It is a part of its circulating medium to a certain extent, and the thing to do with it is to collect it as soon as possible at the least expense to the banks. In this bill, I think, you provide that, and I think that will be a great boon to the merchants and manufacturers—in fact, to the whole country—when that thing is once organized. I think our friends in the country banks do not quite clearly understand the situation. I understand they feel the exchange part of their business is very large. Well, the exchange on checks is not very large. The exchange they get in the country banks is more on drafts—grain drafts, cotton drafts, and odd things which naturally would not go into the Federal reserve bank. The Federal reserve bank would not undertake to collect those things.

Senator Weeks. When you speak of exchange, do you mean earnings?
Mr. Cannon, I mean the amount deducted from a check drawn on a bank. That is where many of us are at sea. I do not believe the earnings of the country banks themselves, if they took them out from the aggregate amount of money they received for handling checks, would be very large.

The Chairman. Will you explain how those cotton drafts are handled?

Mr. Cannon. Yes. Cotton drafts are handled in the South in a different way. There they come in, and, as I understand it, the buyer goes around and buys a lot of cotton. He then goes to the bank, and often attaches bills of lading to that draft, and asks the bank to advance the money so that he may pay for it on the following day. The bank sends that draft on to their New York correspondent to collect for them. The bank in the South makes a very substantial charge for doing that business, and they call that exchange.

The Chairman. That will not be denied by this bill.

Mr. Cannon. That will not be denied by this bill at all. In fact, in this bill you do not deny to the country bank for one minute the privilege they had of charging the Federal reserve bank if they sent any items to it. You do not deny that to the member; he has a perfect right to charge.

Senator Hitchcock. Mr. Cannon, I have before me a statement of a small national bank in the South, with a capital of $100,000, surplus of $66,000, and deposits of $618,000. This bank estimates its loss from exchanges at about $4,300, which has to come out of its earnings if the terms of this bill are lived up to, and I am sure that its exchanges are upon checks.

Mr. Cannon. They are upon cotton drafts? They are not upon drafts for merchandise of any character? They are entirely upon checks?

Senator Hitchcock. I am not able to say, but I believe they are.

Mr. Cannon. I wish you would look into that. I have before me a report of our committee on inland exchange, which we had a lot of—

The Chairman (interposing). You may put that in the record.

(The report referred to is as follows:)

REPORT OF THE COMMITTEE ON INLAND EXCHANGE TO THE CLEARING HOUSE COMMITTEE, NOVEMBER 4, 1912.

NEW YORK, NOVEMBER 4, 1912.

To the Clearing House Committee, New York Clearing House Association.

Gentlemen: Your subcommittee on inland exchange, appointed in accordance with the terms of the following resolution:

"Whereas there were adopted on the 3d day of April, 1899, rules and regulations of this association regarding collections outside of the city of New York, which, with the exception of special interpretations put upon certain clauses of the same by the clearing house committee, have never been altered or amended. In view of the fact that the volume of collections during the past 13 years has increased very largely, and also the fact that since those rules and regulations were established there have been various methods pursued in the handling of collections by the different clearing house associations throughout the country, it would seem as if the time had arrived when a careful investigation should again be made of this matter: Therefore, be it

"Resolved, That a special committee of five be appointed by the chairman for the purpose of making a thorough investigation of the subject of inland exchange and collections, and the methods pursued by other clearing house associations, and
to report to this committee such changes in the rules or regulations of the New York Clearing House Association as in its judgment may be deemed best; and be it further

"Resolved, That this committee be authorized to invite to appear before it managers of other associations and members of this association for the purpose of procuring any necessary information, and that any expenses incurred by the committee shall be borne by the clearing house association," which was adopted by the clearing house committee on April 1, 1912, begs to submit herewith a résumé of its activities, which began as soon as practicable after its appointment, and continued without intermission until quite recently.

Your committee approached this investigation with an entirely unprejudiced mind and has maintained an attitude of strict impartiality throughout. It has given careful consideration to the facts it has gathered and feels that it is now in a position to report its conclusions and the findings upon which these conclusions are based.

Under its direction two forms were prepared. A copy of one of these forms was sent to each bank and trust company member of the New York Clearing House Association, the purpose being to place the committee in possession of information with respect to what, if any, changes they felt should be made in our existing rules and regulations affecting the collection of country checks. In furtherance of your committee's desire to receive as many different points of view as possible on this most important subject, it met frequently at the clearing house during the spring and summer months for the purpose of discussing it in a frank and unbiased way with the president, or such officer as he elected to represent him, of each clearing house institution.

The second form prepared under the committee's supervision was designed for use in conveying to it certain information for statistical purposes, in respect of the amount, source of receipt, disposition and cost of collection, as well as time consumed in collecting foreign items received by each individual institution during the month of May, 1912. A copy of this form was handed to each member's representative at the time he appeared before the committee, with a careful explanation of its purpose and confidential nature.

The figures compiled from the data contained in these reports indicate that the gross income of the members of the clearing house association from collection of exchange during the year 1911 was...

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exchange cost</td>
<td>$1,176,162.00</td>
</tr>
<tr>
<td>Proportionate share of postage, rent, stationery, and salaries for 1911</td>
<td>569,461.78</td>
</tr>
<tr>
<td>Estimated loss of interest on interest-bearing accounts where immediate credit is given for foreign checks, based upon figures submitted by eight of the largest institutions in the clearing house</td>
<td>296,460.00</td>
</tr>
<tr>
<td>Net income</td>
<td>97,467.22</td>
</tr>
</tbody>
</table>

It should be borne in mind that this net income is the result of handling a volume of business based on the figures gathered for the year 1911 of approximately $4,859,187,900, and when distributed between the 64 active members of the clearing house association represents an annual increment of income to each of about $1,500.

The figures gathered by your committee for the month of May, 1912, show a daily average amount of foreign checks received of $16,284,346. As to the discretionary and charge points, this volume was distributed as follows:

<table>
<thead>
<tr>
<th>Points Type</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Discretionary points</td>
<td>$11,404,363</td>
</tr>
<tr>
<td>One-tenth points</td>
<td>3,938,198</td>
</tr>
<tr>
<td>One-fourth points</td>
<td>865,755</td>
</tr>
</tbody>
</table>

It will be observed from these figures that of our daily volume of out-of-town business for May, 1912, 71 per cent was on the discretionary points, 24 per cent was on the one-tenth points, and only 5 per cent was on the one-fourth points.

The daily average amount of cash items outstanding during the same period was $68,215,628, indicating that the average time consumed in the collection of our country checks was 4.19 days.
BANKING AND CURRENCY.

Your committee also procured from the members of the clearing house association the data with reference to the average daily outstandings of cash items during the year 1911 which amounted to $67,866,038. Considerable labor was involved to the banks in providing this information, but as a medium for comparison with the same figures for May, 1912, which, as previously stated, totaled $68,215,328, the committee was enabled to confirm its impressions that the month of May, upon which its principal figures were based, was an excellent average month.

The succeeding table shows the average daily amount, the average time consumed, and the average cost of collecting checks on the discretionary points, and also on a number of the other more important nondiscretionary cities of the United States:

<table>
<thead>
<tr>

Subsequent to the appointment of this committee on inland exchange by the clearing-house committee of the New York Clearing House Association, the bankers' associations of New York, New Jersey, Connecticut, and Massachusetts took similar action. These committees in due course communicated to your committee their desire to discuss this subject fully with it. Their requests were gladly granted, and at appointed times your committee has had the pleasure of entertaining the representatives of each of these associations.

In view of the foregoing résumé of the scope and detail of the work of your committee and of the facts thus ascertained, and because your committee is convinced that the operation of the present rules and regulations of the New York Clearing House Association in respect of charges on inland exchange, results in barely making good to the banks and trust companies making their exchanges through the clearing house, their actual outlay in handling such business, including the amounts of exchange charged on or deducted from return remittances, without substantial return for the enormous volume of the business thus undertaken and its risks, your committee feels itself compelled in the interest of the conservative business methods—which are required in good banking, respectfully to recommend that the main body of the existing rules and regulations of the New York Clearing House Association, regarding collections outside of the city of New York, shall remain unchanged.

In the judgment of your committee, however, within certain restricted territories, and for reasons which are in each instance peculiar to the areas involved, the rules should be modified with advantage alike to ourselves and to the inland banks and business interests affected by them.

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis
After a careful consideration of all the questions involved, it furthermore respectfully recommends that all banks and trust companies in the States of Massachusetts, Rhode Island, Connecticut, New Jersey, and New York, which will engage themselves in writing to the manager of the New York clearing house, over the signature of the president, cashier, or treasurer to remit to the members of the New York Clearing House Association at par, in New York funds, on the day of receipt, the charge shall in all cases be discretionary with the collecting bank.

It is not proposed that the foregoing recommendations shall in any way disturb the relations now existing between our members and the banks located in the present discretionary cities.

In the opinion of your committee this proposed modification of the rule respecting discretionary places so as to include the entire region mentioned, provided the local banks themselves in any community wish it, rather than extending the privilege of a few specially designated cities or towns in that territory, will, if adopted, do much toward relieving the irritation and dissatisfaction which have heretofore existed among many near-by banks not situated in a discretionary city. This proposal affords opportunity to the banks in each locality to determine for themselves and for their customers whether or not they wish to enjoy the benefits and share the burdens of a discretionary or free collection point.

All of which is respectfully submitted.

(Signed)

James G. Cannon,
Walter E. Frew,
Joseph T. Talbert,
Edward Townsend,
John W. Platten,

Committee on Inland Exchange.

Senator Hitchcock. We had before us the other day a witness who said that the earnings of small banks in Mississippi in the exchange of checks amounted to over $600,000 a year, which the banks of Mississippi would lose.

Mr. Cannon. I think that must include drafts.

Senator Nelson. I understood him to include both checks and drafts. I think, if you will look up his remarks in the record, you will find that to be so. And that gentleman who appeared with the Chicago delegation, too; I understood in both cases, they included checks and drafts.

Senator Shafroth. He said his own losses would be $20,000.

Mr. Cannon. It could not possibly be that. They could not possibly charge that much on checks drawn upon them. Now, the gentleman also forgets, I think, that under this act they are going to be able to secure a very much larger amount of business in their own neighborhood than they had before, and a good many other things will accrue to their interest that they have not thought of probably.

I am very much interested in that statement because all the investigations we have made over a period of years I have never seen anything like that. What are his deposits?

Senator Hitchcock. $618,000.

Mr. Cannon. And how large a city is it?

Senator Hitchcock. It is a small town, the town of Bessemer.

Mr. Cannon. From my investigations which I have made over a period of years, I do not believe that the exchange on checks will be much. But I think the general good to the country from being able to have these Federal reserve association act, as you might say, as clearing houses for this entire matter, will certainly be to the great good of the mercantile interests and banking interests of the country, as far as I can see.
Senator Hitchcock. The population of the town I spoke of is 10,800.

Mr. Cannon. I do not believe that could be on checks then. I think a large amount of that would be on time deposits, which do not draw checks. Will you kindly have that analyzed as a personal matter and let me know?

Senator Hitchcock. But other witnesses who came from other States, I remember, were very positive that the losses to country banks would be a large proportion of their total earnings if they lost these collection charges.

Mr. Cannon. There is nothing in the act; they can charge just the same, if they want to. The amendment to the House bill specifically states that they can charge, if they want to, the Federal reserve bank for collecting those checks.

Senator Hitchcock. Suppose they undertake to charge the Federal reserve bank. What would they do?

Mr. Cannon. They would stand the charge, I suppose.

Senator Hitchcock. They would charge the member bank?

Mr. Cannon. No; they could not do that, because you would have taken them for nothing. That would be a part of the business of the bank.

Senator Bristow. How much could they charge?

Mr. Cannon. How much could who charge?

Senator Bristow. Why, the country bank.

Mr. Cannon. That would vary according to the town.

Senator Bristow. How much could it charge the Federal reserve bank, if it could charge?

Mr. Cannon. It can only, according to the act, make a reasonable charge; that is, it would be according to whether their exchange is at a premium or at a discount, what the situation was, and the time of the year in which the checks were drawn.

Senator Hitchcock. These charges made by small country banks, I understand, are not so much for exchange; they are really such a charge as a lawyer would make for making such a collection.

Mr. Cannon. This must be on drafts; it would not be on checks, because a check is drawn absolutely on a country bank, and we send it directly to them now, and they remit to us, deducting 5 cents or 3 cents, and some deduct only the postage.

Senator Hitchcock. Is it not a fact that many of them deduct a tenth of 1 per cent?

Mr. Cannon. Yes.

Senator Hitchcock. And one-quarter of 1 per cent?

Mr. Cannon. I will read you the figures we gathered through our committee from the New York banks during the month of May, 1912. The daily average amount of these foreign checks we received then was $16,000,000; on points where no charge was made at all there was $11,400,000. On quarter points it was only $365,000, which is very small in proportion.

Senator Bristow. Now, to get this clearly in my mind, suppose I, living at Salina, Kans., pay a bill that I may have in Chicago for $1,000 by sending to my Chicago creditor a check for $1,000—

Mr. Cannon (interposing). On your local bank?
Senator Bristow. On my local bank. That settles my account with him. I am given credit for that $1,000. Now, that comes back to the bank where my account is, and is charged to me. What charge is made on that check in that process?

Mr. Cannon. You can not tell. There may not be any charge. It may be a question of reciprocal balances. It may be something that nobody knows except your bank and the Chicago bank.

Senator Bristow. What interest has the local bank in that check?

Mr. Cannon. All the interest he has is to pay it and charge it to your account.

Senator Bristow. So he gets nothing out of that?

Mr. Cannon. Well, you draw your check to-day, for instance, and send it to Chicago, on Salina, Kans. Now, if you are out there in Salina, Kans., you may go in there and draw that money and send it to Chicago and he gets the use of that money a longer time than he would ordinarily.

Senator Bristow. Now, the Chicago banker might charge my creditor for the collection of that check, or he might not.

Mr. Cannon. Or he might not.

Senator Bristow. Now, a man at Plainville, Kans., owes me $100, we will say, and he sends me a check and I deposit that in my local bank. Now, the local bank may charge me for the collection of that——

Mr. Cannon (interposing). According to your balance in the bank. If your balance is a good balance, and you only put in these out-of-town checks once in awhile it would not charge you a cent, because your balance would be ample to cover any exchange charge there might be.

Senator Bristow. The interchange of these checks is what you call domestic exchange?

Mr. Cannon. Yes, sir; that is it—checks.

Senator Bristow. Now, in some communities they charge for these collections, and in others they do not?

Mr. Cannon. But gradually extending throughout the country is the Boston system. As I said a moment ago to Senator Weeks, we take off our hat to Boston, because they originated the Boston system of exchanging these checks without charge. Kansas City has a plan now which is gradually being extended to collections throughout the country. So these checks pass quickly from the maker of the check back to their redemption without any charge and they pass as the circulating medium of the country to a great extent.

Senator Bristow. To carry this illustration further, suppose my creditor at Chicago deposited that check with the Chicago bank that is a member of this national organization. That bank would not charge him?

Mr. Cannon. It would not charge him; no, sir.

Senator Bristow. Because the Federal reserve bank would not charge him anything?

Mr. Cannon. It would not charge him anything; that is it. And you can see that the merchantile interests would be greatly benefited by that all over the country.

Senator Weeks. Can you see any objection to transferring that business to the Federal reserve banks, unless it is the possibility of preventing all loss in earnings accruing to the country banks?
Mr. Cannon. I can not see any at all. I think it is an advantage to the country generally.

Senator Weeks. What do you enumerate as the advantages?

Mr. Cannon. The advantages?

Senator Weeks. Yes.

Mr. Cannon. I would enumerate the quick returns, the same as we have in the clearing house to-day. We have this large volume of business throughout the country, and these entries would be made, as I look at it—the transfers would be made upon the books of the Federal reserve banks. I feel that the amount of money that would be saved to all concerned would be very considerable.

Senator Hitchcock. Would it amount to an expansion of credits?

Mr. Cannon. No, sir; it would amount to a quick payment.

Senator Hitchcock. Let me take an illustration. Suppose Senator Bristow’s check, to which reference has been made, is in the hands of a Chicago merchant, and that is deposited in the bank to its credit on that day instead of waiting four or five days. Would they not receive that much additional credit?

Mr. Cannon. Now it extends credit in more ways than one. What would happen to the Senator’s check would be that that bank in Chicago would say that I do not want to send that check out to Salina, Kans., and so I will send that to Kiowa. So the bank in Chicago sends that to Kiowa and gets a credit of $1,000 at Kiowa, and the banker at Kiowa says “I will send that to Uncle John Mulvane, at Topeka”; and so he sends that to Uncle John, and Uncle John sends it to Salina to see whether the Senator’s check is good. And there is where the expansion of credit is now.

Senator Weeks. Uncle John would not have to do that; he knows it is good. [Laughter.]

Senator Hitchcock. Is that done now?

Mr. Cannon. Yes; it is constantly done now. We do that in our own bank. We have checks we send to points up in Connecticut, and the bank in Connecticut sends them to another bank in Albany, N. Y., and they come back to us from Albany. We had one like that the other day. Under this scheme everything would be handled directly and quickly and with greater safety to everybody.

Senator Bristow. Tell me why the bank at Chicago would send it to Decatur.

Mr. Cannon. Because they think probably they may get an account out of Decatur. There are all sorts of by-arrangements. The bank at Decatur thinks they will send it to Uncle John, because they want to do something with him. That thing is coming up constantly in all sorts of ways.

Senator Bristow. In the meantime has the person who deposited the check originally still got a credit?

Mr. Cannon. Oh, yes; but they never know for a long time whether it has been paid. Those checks go all around, and finally it comes back to the bank in which it was originally deposited.

Senator Weeks. As a matter of fact, if that merchant in New York, instead of Chicago, deposited Senator Bristow’s check with you and you were paying him interest on his deposit, you would not pay him on that check until it had been collected?

Mr. Cannon. We would not now. We would deduct so much from his interest account. Under this scheme he would not be a
loser, because it would be done very quickly. We do not pay mer-
cantile accounts any interest in our house. Many banks do, how-
ever.

Senator Weeks. Many banks pay interest on certain kinds of indi-
vidual accounts.

Mr. Cannon. Yes.

Senator Hitchcock. Would it not be a balance that could be checked against?

Mr. Cannon. According to whether the account was good, bad, or indifferent, depending upon the depositor.

Senator Hitchcock. If the depositor is a man of good credit it would increase his credit with you?

Mr. Cannon. Yes.

Senator Hitchcock. He might put out 100 checks of that sort and his credit would be increased?

Mr. Cannon. Yes. I believe this will be very helpful in doing away with these notes current all over the country, having these Federal reserve banks acting as clearing houses in this matter. I do not know that I have been very helpful to you, but such suggestions as I have had I have been very glad to give to you.

Senator O'Gorman. What is your idea, generally, of this proposed change in our currency system?

Mr. Cannon. How is that?

Senator O'Gorman. What is your idea generally regarding the proposed changes in our currency system?

Mr. Cannon. I think if you can make some of these changes in your bill, and make it so it will be acceptable to a large number of people, I think it will be very advantageous to the country, with these changes incorporated in.

Senator Weeks. What is the relative importance of the mobiliza-
tion of reserves and the elasticity of currency; which do you regard as the more important?

Mr. Cannon. I would have to differentiate between them. I think they are both quite important.

Senator Weeks. England has mobilization of resources and prac-
tically not an elastic currency.

Mr. Cannon. Our country is large, scattered over such a tremen-
dous district; we do our business in such an entirely different way from what they do their business over there that I do not believe you can take England as an example.

Senator Nelson. They do their business on bills of exchange in drafts; we do ours on promissory notes.

Mr. Cannon. That is true.

Senator Pomerene. I want to ask you a question right there. In the earlier part of your statement, in speaking about having these notes guaranteed by the Government, you used an expression something like this, that you would fix the notes so as not to embarrass the Government in their redemption. What did you have in mind?

Mr. Cannon. To make those redeemable in gold you must have some arrangement whereby they could not in any way embarrass the Government by a great amount of them coming in upon the Gov-
ernment, as was the case in Mr. Cleveland's time.

Senator Pomerene. How would you do it?
Mr. Cannon. I am not clear in my own mind about that. It is a very difficult question. The question is whether they shall be redeemed in Washington—

Senator Bristow. Suppose—these notes are not good for reserves, and of course they will accumulate in New York, just like national bank notes.

Mr. Cannon. Where will they accumulate?

Senator Bristow. In the banks at New York.

Mr. Cannon. Outside those who are not members?

Senator Bristow. In the general transaction of business, will not this money which can not be used for reserves in the banks finally get back to the place of redemption, just like national bank notes do?

Mr. Cannon. That is what the act provides for—prompt redemption of the notes.

Senator Bristow. They will come to the Treasury Department, large amounts of them, would they not, in the operation of business, just like the national bank notes do now?

Mr. Cannon. I do not believe they would under this act, because, you see, here we would be members of the Federal reserve bank, and we would deposit those notes immediately in our own Federal reserve banks.

Senator Nelson. They must be sent to the bank which issues them.

Mr. Cannon. Yes. The amended section provides what shall be done with them. They are to be sent to the bank upon which they are issued, not to be paid out again.

Senator Bristow. Does it say not to be paid out again?

Senator Nelson. I call your attention to line 6 on page 31 of the bill, where it says:

Whenever Federal reserve notes issued through one Federal reserve bank shall be received by another Federal reserve bank they shall be returned for redemption to the Federal reserve bank through which they were originally issued, or shall be charged off against Government deposits and returned to the Treasury of the United States, or shall be presented to the said Treasury for redemption.

Mr. Cannon. That is it; yes.

Senator Nelson. But the question is, if they are presented to the issuing bank—that was the question submitted yesterday.

Mr. Cannon. You do not think that is quite clear in the act?

Senator Nelson. If they are presented to the issuing bank for redemption and the issuing bank redeems them, what becomes of them? Are they retired, or can they be put into circulation again?

Mr. Cannon. That is not clearly stated here.

Senator Nelson. Ought it not to be clearly stated?

Mr. Cannon. I think it should.

Senator Nelson. And inasmuch as they are based upon this asset currency ought they not to retire the notes, if they come back, after they have been redeemed by the bank?

Mr. Cannon. I do not see why they should not.

Senator Nelson. That is, the bank ought not to have the right to issue that note again? It has gone its rounds. It was issued on commercial paper with that reserve. It has performed its functions and come back and been redeemed. If the bank issued it again without having additional paper for security, there is no security back of it, nothing but the redemption fund. Ought it not to be retired?

Mr. Cannon. I should think so.
Senator Hitchcock. Senator Nelson, the bank has security up for that loan; it has segregated a certain amount of that loan which is not yet due.

Senator Nelson. I know, but it has paid gold for it.

Senator Hitchcock. The accident of its coming back is like the accident of another deposit made in the bank.

Mr. Cannon. The bank pays a tax upon it until it comes back.

Senator Weeks. What have you to say about paying a tax on circulation?

Senator Nelson. I want to get clear on your opinion as to that one point. Ought that note to be retired after it has gone the round and been redeemed?

Mr. Cannon. I believe it should.

Senator Nelson. Redeemed by the issuing bank?

Mr. Cannon. Redeemed by the issuing bank and a tax paid on it until it comes back.

Senator Nelson. Now, ought not the regional reserve banks that issue this currency provide this gold reserve, this 33\(\frac{1}{3}\) per cent gold reserve, instead of the Government?

Mr. Cannon. I think so; generally; yes.

Senator Nelson. They ought to provide it?

Mr. Cannon. Sure.

Senator Nelson. And relieve the Government entirely of the burden?

Mr. Cannon. That is what I say.

Senator Nelson. Would it not be wise to require, instead of 5 per cent in gold for that reserve, that they should deposit 10 per cent?

Mr. Cannon. You mean for the redemption fund?

Senator Nelson. Yes.

Mr. Cannon. I do not believe that redemption fund would do; I would have the whole 33\(\frac{1}{3}\) per cent, too.

Senator Nelson. In the vaults of the Government?

Mr. Cannon. No; 5 per cent in the Government vaults and the other 28 per cent in the banks.

Senator Nelson. Would it not be better to have 10 per cent of that gold reserve?

Mr. Cannon. I do not believe so, Senator. Because the history of the past in redemption of national-bank notes would show that. I do not know what the average has been.

Senator Nelson. Do you not think that redemption ought to be in gold and not in lawful money?

Mr. Cannon. That is what I said.

Senator Shafroth. You say you desire that the Government should be saved from any run upon its Treasury?

Mr. Cannon. Yes.

Senator Shafroth. Does not the system of having the United States notes redeemable in gold and this currency issued under this bill redeemable in lawful money have a tendency to relieve this in this way: If I am a holder of $1,000 of this currency and I take it to the reserve bank, and the reserve bank says, “I can not give you gold, but I can give you lawful money,” and then it says, “If there is going to be a run for gold we will just simply hold this and keep it in the vault.” The man gets his $1,000 in United States notes and goes to Washington, and he says, “I want my gold”; and the Gov-
ernment says, "If there is going to be a run on this thing we will hold this United States note." Now, by the process of putting out $1,000 in gold you have practically retired $2,000 of notes that are ultimately redeemable in gold, and by reason of one of them being redeemable in lawful money there has been a redemption of $2,000 of obligations; and does not that save the Government?

Mr. CANNON. No; I think you have injured the standard of the Government.

Senator SHAFROTH. The national-bank notes are not redeemable in gold.

Mr. CANNON. No; they are not redeemable in gold.

Senator SHAFROTH. And the person having these notes goes to the bank and says, "I want legal tender," and he sends the legal tender to the United States Government and gets this gold. All the functions of the parity of the money are complied with. Now, if you have the other system, you are going to make a great drain on the gold of the country, and I think that provision allowing the bankers to pay in lawful money simply narrows the gold reserve it is necessary to keep in Washington. We have $150,000,000, which supports a currency of $356,000 in United States notes and, on top of that, $750,000,000 of bank notes, and it is done by $130,000,000, and if you make those notes so redeemable you would have to keep something like $250,000,000 in gold in addition to the $150,000,000 now there in order to redeem $356,000,000 of greenbacks, and that makes a greater drain and demand upon gold for that purpose. Inasmuch as the blanket is a little short, it seems to me it would induce much more criticism.

Mr. CANNON. I think the credit of the country is at stake in this matter.

Senator SHAFROTH. One objection made to that was that the foreign countries would be discouraged, but these notes are not supposed to go to foreign countries.

Mr. CANNON. I think in establishing any new system you want to take great pains to see that we never let down on anything we have already, and I think it would be a great mistake——

Senator SHAFROTH (interposing). The national-bank notes are not redeemable in gold?

Mr. CANNON. These notes ought to be. You would get a better note out of it in that way.

Senator SHAFROTH. If you have 12 distinct districts in the United States, each one competing for gold, and you are going to have 12 competing points, and thus it will require a good deal more to redeem these obligations than if one is payable in lawful money and that lawful money is redeemable in gold.

Mr. CANNON. That is what I said; I hope you would not have 12.

Senator POMERENE. Mr. Cannon, several witnesses have discussed before us the propriety of giving additional charter powers to the national banks in order to induce them to come into this scheme, and also, perhaps, to curtail some of the powers now enjoyed by State banks which might come in. I would like to have your views on that.

Mr. CANNON. I had not given that point any thought. It is a new thought to me. I have not even heard it mentioned. I should think that might require considerable thought, because the State banks and the national banks are so intertwined together that it might be difficult
to act. Your idea is to make this more attractive and give the national banks new powers?

Senator Pomerene. Yes; and not to discriminate between the two classes of banks. I can understand why a State bank with certain powers might desire to come in here and get additional powers, and if it came in and enjoyed all the powers the national bank would now have it might discourage the national banks from going into the scheme.

Mr. Cannon. That is important, and it is quite a big thought, and I would not care to answer the question until I had given it some consideration.

Senator Pomerene. I would be pleased if you would send us the result of your thought on that matter.

Mr. Cannon. I would be very glad to think it over and communicate with you about it.

Senator Pomerene. Now, another matter. There has been considerable difference of opinion as to whether or not a sufficient number of banks might come into this scheme to organize the number of regional banks which may be determined upon. Of course, we understand it is to some extent problematical. Would there be any objection to providing, for instance, that these banks should have a given length of time within which to subscribe, and if a sufficient number did not come in to organize the requisite number of regional banks, then to open up the stock books to the public and permit the public to subscribe?

Mr. Cannon. I should be a little afraid of that.

Senator Pomerene. For what reason?

Mr. Cannon. I think these banks would come in. I would prefer something of the kind which I outlined and laid before you here. If the banks felt that by their coming in they were not going to be tied up, if they were able to sell their stocks to people who were acceptable as stockholders to the directors in a Federal reserve bank and sell it for investment where it could be watched; otherwise you would get a miscellaneous lot of stockholders, and the stock would be thrown upon the street, and it would see-saw up and down, and like everything else of that kind, you would have more or less speculation in it all the time, and it does not strike me as a good thing to do. I would rather remove in some way the conditions which these banks have in that matter in coming in and get them to come in and take the stock and throw it open to the public.

Senator Pomerene. The fact is that some banks may object to it, because in their judgment it ties up a certain amount of their funds?

Mr. Cannon. I think you could work out a plan which will meet that objection by permitting the sale of that stock at the proper time to investors, who would not have a vote, and who would not have a right of transfer, except, as I said, to people who were approved by the board.

Senator Pomerene. You were speaking about the call loans in New York. What portion of the loans are call loans?

Mr. Cannon. We had the annual meeting of the clearing house on Tuesday. The clearing house sent out just before this meeting to 20 banks, members of the association who have $20,000,000 and over of deposits.

Senator Pomerene. Each bank?
Mr. Cannon. Each bank; and they asked each bank a question as to how much they were loaning out on call for out-of-town customers, and how much they were loaning out themselves on call loans. In round figures these 20 banks were loaning out for their own customers $175,000,000, for their out-of-town customers. For themselves they were loaning $265,000,000. That was out of a total of loans and discounts of $1,226,000,000 that those banks reported.

Senator Pomerene. A little over one-third of the loans are call loans?

Mr. Cannon. Yes.

Senator Weeks. Is that right? Were they loans for themselves?

Mr. Cannon. For out-of-town banks.

Senator Weeks. Would they be loaning for themselves $1,200,000,000?

Mr. Cannon. Let me see if those figures are right. They were loaning for themselves $265,000,000.

Senator Weeks. What was their total loan?

Mr. Cannon. The total amount was $1,226,000,000. I can tell very quickly whether that total is correct. I think the clearing-house people added into that total what they were loaning to the out-of-town banks. The total in the New York banks was $1,324,000,000, of which they were loaning on call $265,000,000. I may possibly be mistaken in saying that was all money. It may have been what was loaned out to Wall Street, on what I understood was call money—$85,000,000 and $1,324,000,000—and they were loaning for their out-of-town correspondents $175,000,000.

Senator Weeks. Does that include foreign banks?

Mr. Cannon. I think it does; I think it must include foreign banks as well.

Senator Weeks. Is it not true that the Canadian banks loan in New York from $25,000,000 to $50,000,000 all the time?

Mr. Cannon. But they loan through bankers.

Senator Weeks. They do not use very many local bankers?

Mr. Cannon. Quite a good many. They lend money to their bankers, but we do not keep track of it.

Senator Weeks. You are giving the figures here, as I understand it, for 20 national banks?

Mr. Cannon. Twenty banks which are members of the clearing-house association, who have deposits of $20,000,000.

Senator Weeks. There are some 66 banks in the city?

Mr. Cannon. Yes.

Senator Weeks. And would the other banks have about the same proportion of call loans?

Mr. Cannon. I do not know. The Fifth Avenue Bank, of which I am a director, I think has $2,000,000 or $3,000,000. I do not know what that proportion would be.

Senator Weeks. Is this about the average proportion?

Mr. Cannon. I should think that would be about the average proportion.

Senator Weeks. Now, from your experience as a banker, what, in your judgment, would be the proper discount rates to start with if this regional bank was organized?

Mr. Cannon. I could not tell you. You are a practical banker.
Senator Weeks. I have not any idea on the subject.

Mr. Cannon. All that I can say—all that I did in my calculations was to take 4 and 3 per cent. I just took it as a rough calculation. It would depend upon the state of the money market. It would depend upon what changes are being made in the banking system; whether money would be very active or anything of that kind. It will be very difficult to tell until after the thing was settled down for a year or so.

Senator Weeks. Have you any preference as between four or six banks over one?

Mr. Cannon. Of course, I would like to have one bank, but we can not have it.

Senator Weeks. What makes you say that?

Mr. Cannon. Politically it is impossible ever to have a single central bank in this country.

Senator Weeks. You think, from the economical standpoint, it would be better to have one than any additional number?

Mr. Cannon. Well, I would have to answer that yes and no. Some ways it would be an advantage and some ways it would not.

Senator Weeks. What would be the disadvantage, from an economic standpoint, that would arise in having one rather than four?

Mr. Cannon. I think the centralization in one place; I do not know that you would serve the whole country as well.

Senator Weeks. Are you not going to serve the country through branches anyway, whether you have 1 or 10?

Mr. Cannon. To an extent only. The central reserve banks are going to be of very great service to the country at large.

Senator Weeks. Undoubtedly; each of these Federal banks is going to have numerous branches.

Mr. Cannon. Yes.

Senator Weeks. Would it be any advantage to have branches extend from four rather than from one?

Mr. Cannon. I do not know, Senator Weeks; I would not like to say on that.

Senator Weeks. If it were possible to provide for 1 bank instead of 12, you would prefer it?

Mr. Cannon. One instead of 12? Yes.

Senator Weeks. If it were possible to provide one rather than six, would you prefer it?

Mr. Cannon. I do not know. I should want to consider that very carefully.

Senator Weeks. You referred to issuing circulation. My recollection is that in the early nineties, when people drew money out of the banks for hoarding purposes, they to a considerable extent asked for gold or gold certificates, and that in 1907 they asked for circulation, without much regard for what it was. Is that your experience?

Mr. Cannon. I think you are right; yes.

Senator Weeks. Is that not due to the fact that in the meantime we had established a gold standard and people knew that they could get redeemed whatever circulation they may have in gold?

Mr. Cannon. The people in the country know we are on a gold standard.

Senator Weeks. If we issue these notes, in whatever form they may be, and make provision for their redemption in gold, do you not think
the people would take them without any regard to whether they were
bank notes or some other kind of notes?

Mr. Cannon. It would make a difference if they had the name of
the United States Government on them.

Senator Weeks. Mr. Cannon, you know that in the panic of 1907
in several places there were large quantities of clearing-house cer-
tificates issued?

Mr. Cannon. Oh, yes.

Senator Weeks. And they went into circulation?

Mr. Cannon. Yes

Senator Weeks. They were used for pay rolls, and there never was
an instance where anybody refused to take them.

Mr. Cannon. I do not know about that. When they issued those
checks in Chicago they had to call all the employees in and show them
a check and tell them that the checks were perfectly good. When
they issued the checks in Pittsburgh they had to put them in four
different languages to get those fellows to take them.

Senator Weeks. Quite likely.

Mr. Cannon. There was trouble also in Harrisburg. I have here
a picture of the Harrisburg certificate, which says it may be deposited
and will not be paid in cash.

Senator Weeks. I made considerable effort to look into that at one
time, and I could not find any instance where those certificates had
not passed current without any serious question.

Mr. Cannon. The employers had to take a lot of them.

Senator Weeks. Undoubtedly.

Mr. Cannon. They had to get their men together and explain them.

Senator Weeks. Yes.

Mr. Cannon. They had to get their men together and explain the
certificates.

Senator Weeks. Undoubtedly they explained to their employees
what they were doing. But was there any instance where the em-
ployees refused to take them?

Mr. Cannon. I think they had a hard time in a good many cases.
I think you will find in Chicago and in Pittsburgh they had a pretty
hard time with those certificates. I do not believe you could pay out
a note of a regional reserve bank and have it circulate freely among
certain classes without the guaranty of the Government.

Senator Weeks. I do not believe anybody would know or care what
they had if they had a note and felt sure that it could be redeemed
on presentation.

Senator Pomerene. This is a case where bankers seem to differ.

Mr. Cannon. Oh, yes; on various points.

Senator Weeks. What do you mean by prime commercial paper?

Mr. Cannon. Notes.

Senator Weeks. The reason I ask that question is that we have got
to define it, and we have got to define it with great definiteness, I
think. Otherwise we are going to have paper purchased as commer-
cial paper which really is not commercial paper. I would like your
definition of what you would call prime commercial bills.

Mr. Cannon. I should say, Senator, prime commercial bills would
be notes issued for money either at a bank or other commercial
house, which money is to be used in the handling of legitimate mer-
cantile business. Notes issued in the ordinary course. I do not know as you could specify the line of business.

Senator Weeks. I do not think you have gotten that definite enough to be of any use to us. I wish you would think that over and let us know what your conclusion is.

Mr. Cannon. I will be glad to do that and give you a definition.

Senator Bristow. Mr. Cannon, what do you regard as the defects in our present system?

Mr. Cannon. I should hate to start in and go through all the things. I think our currency is not elastic enough. That is only one thing.

Senator Bristow. What else?

Mr. Cannon. I would not want to enumerate them in full. There are a great number.

Senator Bristow. We have only heard two objections that I remember—that is, with regard to the inelasticity of the currency and to the inability to mobilize reserves. Those two terms have been used, but I have not heard any other objection to it, any other practical objections. There have been some theoretical objections. You think there are many other defects?

Mr. Cannon. I think I could point out some others to you. I will be very glad to do so.

Senator Bristow. What I was getting at was what were the defects that had to be cured, and I had supposed those were the two principal defects we are seeking to remedy.

Mr. Cannon. Those are the two, but I think there are a good many others.

Senator Bristow. Others that this bill seeks to remedy?

Mr. Cannon. Others that this bill seeks to remedy; yes. I will be very glad to include them.

Senator Bristow. I am interested to know what they are, because I have not heard any others, except some theoretical objections to basing currency on debts, but that is the whole proposition, so that that could not be suggested as a defect that is to be remedied. You said that you would prefer a single bank, but it was politically impossible to get it. What made you say it was politically impossible?

Mr. Cannon. I do not think the people of the country would favor a single bank.

Senator Bristow. Why do they not favor a single bank?

Mr. Cannon. I think they think there would be too much concentration in the hands of the men who are running the single bank.

Senator Bristow. You think they would believe there would be too much concentration in the hands of the men who were managing the single bank. Would that place any greater power, to have 1 bank in the hands of this Federal board, than we are placing in it now, over the 12?

Mr. Cannon. I do not think it would.

Senator Bristow. Is not the objection which the people have to one central bank, not to the system but to the ownership and control of the bank?

Mr. Cannon. I know there is an objection. What is in their own minds I could not answer.

Senator Bristow. The objection which I have understood—and I am as much opposed to it as any one; I am one of the people as far
as that is concerned—I am opposed to any central bank that is owned by the banks, controlled by the banks, and managed by them, because I think it would result in one set of financiers, or a combination of a few interests getting control, more than they have now, of the banking system of the country and the credit business of the country. Do you not think that is the cause of the prejudice against the central bank?

Mr. Cannon. I could not answer that. I know a prejudice exists. I would not want to say whether that was the cause unless I was pretty clear in my own mind about it.

Senator Bristow. What objection other than the power that would be centered in the management of this bank do you see against the central bank?

Mr. Cannon. I do not see any objection further than that, except, as I said a moment ago, whether one bank could serve the whole country. The vast area of this country is all I have ever had in my mind. Of course you could start branches, but whether the one institution could serve the whole country——

Senator Bristow. I believe that 1 bank located in one city could not serve the purposes of this country. It is a big country, and it is proposed here to create 12 and then establish branches in the cities. It is not proposed here that 1 bank shall serve a twelfth of the country, because, as has been pointed out by witnesses, we have had before us in the northwest part of the country, with a regional bank at St. Paul or Minneapolis, it would have to take in, in order to get the required capital, a territory 600 miles wide and 1,400 miles long. I do not believe anybody would suggest that 1 reserve bank serving a territory reaching from St. Paul to the Pacific Ocean would be enough to serve the region up there without branches. Now, if the 12 banks are to establish branches, and the purpose of organizing this association is to mobilize the reserves, could not they be more efficiently mobilized if we had 1 with branches than 12 with branches?

Mr. Cannon. I have no doubt it could.

Senator Bristow. Then, if the same powers that are placed in the hands of this board over the 12 were given the board in the management of the 1, would it not simplify the mechanical operation of the institution?

Mr. Cannon. If it could serve the country, if that 1 bank could serve the country?

Senator Bristow. Yes; by the establishment of these various branches?

Mr. Cannon. Yes; if that service could be done. As I said a moment ago, I want to think about that pretty carefully, to see if it can. Of course, as I stated at the beginning, the act provides for 12, and I thought it should be less than that number, because of the necessity for not having any disturbance when you are making this great change.

Senator Bristow. I think we will agree it will be better to have it that way if it can be done successfully. I was going to suggest the possibility of the concentration of control under the present system. I think it is just as easy for the great interests that we are trying to render as harmless as possible and the monopolization of certain
credits—or not just as easy, but I think it is entirely possible—for them to get control of these regional banks organized as they are. And the thing which a good many regard as the most desirable feature in this legislation is to break up what they call the Money Trust; and the bill may fail in that respect, and those influences would control a Federal board. Although they might do it, it is not probable; but they will control the local boards that control the regional banks.

Do you believe—or have you given that phase any consideration—do you believe it would be as easy for these interests to get control and dominate the credits of the country if we had the Federal bank managed by a Federal board?

Mr. Cannon. I have not given any consideration to that at all.

Senator Bristow. You have not?

Mr. Cannon. No.

Senator Bristow. There is another feature of this I would like to invite your attention to. A country bank under the present law has a 15 per cent reserve requirement. It keeps 6 per cent of it in its vaults, and has the 9 per cent—we will say 3 per cent in St. Louis, 3 per cent in Chicago, and 3 per cent in New York. In the handling of its business, it may check out the entire reserve in one city and increase it in another the same day. It might be convenient for it to carry, for a day, in the handling of its business, a reserve of 33 per cent—6 per cent in Chicago, and practically check out its balance at St. Louis, or the same between Chicago and New York. So that, as a matter of fact, in the practical operation of its business, it utilizes these reserves. That is a fact, is it not, and that under this system that will be impossible?

Mr. Cannon. I do not know. After I heard your discussion here I did not suppose it would be impossible. I thought you were going to be able to utilize the reserves in the Federal reserve banks.

Senator Bristow. You could not check them out. It could not use it for transfer from one city to the other, as it does now, to suit its convenience. They are there, and it can not take them out of that bank and check them to Chicago, or some other place, where it does business.

Mr. Cannon. Perhaps I do not get your clear meaning on this point. Will you repeat that once more? Do you mean to say their reserves are changed from one city to another?

Senator Bristow. Yes; from day to day. The reserve requirements, for instance, in one city, varies very greatly, and it can use its entire reserve on deposit in one city one day if, in the operation of its business, it becomes convenient to do so, while it increases the amount of that reserve in another city; and then in another city it might check out, and so on, if it is a usable fund, where it is divided up between three or four cities.

Mr. Cannon. Does that reserve which you speak of—is that what you mean in the items they are sending from one bank to the other? Are they to be in transit, or to be actually on deposit? In my opinion, in the running of a national bank, for instance, they have a lot of checks coming on New York to-day, and they separate them to-day and charge them off. They are not counted as reserve, notwithstanding the fact they will not reach New York for two or three days.

Senator Bristow. I supposed they were; that is my understanding, at least.
Mr. Cannon. I am not familiar with that practice, at all. I understand a reserve must be in a bank before they can count it as reserve. They can not count items in transit as reserve.

Senator Nelson. I do not believe they can.

Senator Shafroth. If they can not, I do not see what advantage it is to have them shift around in other banks?

Senator Bristow. I think they do.

Mr. Cannon. For instance, if a bank in New York City received to-day a lot of checks on Chicago and St. Louis, you think it could send them out in the mail to-night, and charge them up to this bank, and charge them to reserve whether they have arrived or not?

Senator Bristow. Yes; I think so.

Mr. Cannon. If may be possible, Senator; but I do not know.

Senator Bristow. We will clear up that point before we get through. I understood it was a fact.

Mr. Cannon. I would like to know about that.

Senator Nelson. At any rate, Senator Bristow, you claim it was only a momentary change. They still have to keep it. It is only while those checks are in transit; that is all.

Senator Bristow. But they use it.

Senator Nelson. They use it for that time.

Senator Bristow. Yes,

Mr. Cannon. I do not believe they can count checks in transit as reserve. I do not understand you can count it as a reserve on any- I get the money back on it. I do not believe the country

Senator Nelson. I think you are right.

Mr. Cannon. Because those checks and shifting matters of that kind are mere matters of detail in the bank, all the time. I do not believe that is reserve in the bank, Senator. Will you look that up and let me know? I would not want to answer the question until I knew about that.

Senator Bristow. Now, I suppose you are like all these other commercial bankers: You do not believe real estate mortgages ought to be used as the basis for currency?

Mr. Cannon. Oh, no; I do not think so.

Senator Bristow. Why not?

Mr. Cannon. I do not see how you would turn them into a fund for redeeming that currency; how you could redeem currency issued on a real estate mortgage. Of course, you would have to sell it; there are times when it would pile up on your hands. They are long-period loans are they not?

Senator Bristow. Do you expect this currency to be redeemed by the maturing securities that are deposited for it?

Mr. Cannon. A good deal of it would be paid off when their notes are paid off.

Senator Bristow. Do you not expect other notes would be substituted?

Mr. Cannon. Oh, at times, certainly. But you want to keep your source pure and clean and have it the very best there is. Of course, I am not saying anything about real estate mortgages, because I am a firm believer in real estate mortgages, farm mortgages, and things of that kind.
Senator Bristow. We will take a bank, speaking about the region with which I am familiar, at Salina, Kans. As you define it, it would have some commercial paper—that is, the notes, the one-name notes, as a rule?

Mr. Cannon. Or two-name notes of merchants in Salina, Kans.

Senator Bristow. The merchants in Salina, Kans., do not get two-name notes.

Mr. Cannon. Well, one-name notes. The merchants in Salina, Kans., I have been there, and they are a good crowd.

Senator Bristow. The two-name paper is not as good, as a rule, as the one-name paper?

Mr. Cannon. That is right.

Senator Bristow. Because when you ask for the second name, it is an indication you are afraid of the first?

Senator Shafroth. And because people have quit going security on notes?

Mr. Cannon. It is out of fashion in this country to indorse notes now.

Senator Bristow. And it ought to be.

Mr. Cannon. Yes; that is right.

Senator Bristow. They take the paper of various individuals, many of them leading farmers there, the people of that community, and they take it to the Federal bank for discount. It is discounted. They get some of this money. Now, when that bank collects in and the pressure is over it takes up these notes. They do not have to take up those notes with the security that it deposited there.

Mr. Cannon. Oh, not always; no.

Senator Bristow. Then what is the purpose of that security? It is for the purpose of making the Government securer or the regional bank securer in the issue of that paper, is it not?

Mr. Cannon. Yes.

Senator Bristow. If that security is abandoned and the bank is a commercial bank, why is not a real-estate mortgage, which is better than those notes, as far as security goes, just as good a basis for that as anything else?

Mr. Cannon. I do not think there should be anything except a liquid security behind these notes.

Senator Bristow. The commercial bank has what is called liquid security. Do you believe that the notes, the circulating medium of the country, should be based upon commercial business only?

Mr. Cannon. Is not that what you say in the act here?

Senator Bristow. The act may say that, but that is not what I say.

Mr. Cannon. Yes.

Senator Bristow. Why should not an investment security have as much consideration at the hands of the Government in making a currency law as a commercial security?

Mr. Cannon. Because I suppose it is not liquid, and these are inclined to be liquid and take care of themselves.

Senator Bristow. But, as a matter of fact, they do not do it. You are a practical man; you know that the banker at Salina, Kans., does not enforce the payment of those notes. I know it mighty well, when they are due. They may be given for 90 days, but very often,
because it is not convenient, they are given for 6 months, and sometimes they will be paid and sometimes they will be increased.

Mr. Cannon. Like the fellow who said "If you want to have a winter go fast, you want to give a six months' note." Is that the idea? [Laughter.]

Senator Bristow. I think that is very good; yes. Those notes are to be renewed; the bankers know they are to be renewed. This year cut in our country they are all renewed; they have to be renewed. Now, I cannot understand why a note that has a mortgage security, upon which there can not be a loss, for there never was a man in the section of the country where I live who lost money on a farm mortgage if he knew enough to keep it—or if he took the farm, he would be a good deal better off, because he could make money on it.

Mr. Cannon. That is the point. They do not take farm mortgages, because they might have to take the security, the real estate back of it, and it could not handle the real estate.

Senator Bristow. Suppose it was the local bank?

Mr. Cannon. Suppose something happened that the local bank could not redeem those notes?

Senator Bristow. Do you not think to have a farm mortgage would be better rather than your note that sometimes the people can not pay at all?

Mr. Cannon. You would not want to get the bank loaded up with a lot of real estate?

Senator Bristow. Would it not be better than to load up with the notes of merchants?

Mr. Cannon. I do not think it should be either way; I do not think it should load up with either thing.

Senator Bristow. If something happens to the bank, if some of the notes would not be paid, if there is a catastrophe in that community, why is the paper which is not as good preferred over paper that is better—has better security? That is what I want to know.

Mr. Cannon. Because, as I have just said, you are likely to have to foreclose on the security that is behind those notes, and you are liable to have a lot of real estate on your hands, and it is not a liquid asset.

Senator Bristow. You think it is better to have a liquid asset, then, even if the man could not pay it?

Mr. Cannon. As I said, in the first place, I have no objection to either, but I would not be in favor of making real-estate notes the basis for circulation, or real-estate mortgages.

Senator Nelson. It might have five years to run?

Mr. Cannon. Yes.

The Chairman. Mr. Cannon, I was requested to ask you about one point affected by this bill whether, in your opinion, the United States should retire the national-bank notes, and, if so, why?

Mr. Cannon. You mean as secured by the twos?

The Chairman. Yes.

Mr. Cannon. Well, that would depend upon whether the issue of bank notes under this Federal reserve scheme would become too redundant at any time. It would seem better to get those old bank notes out of the way, so as not to have, finally, to go out and get that
cleared up, and have the bank notes of the country issued through these Federal reserve banks. That would be my reason for doing it.

Senator Nelson. Then it would be better to have one kind of currency?

Mr. Cannon. Yes; it would be better to have one kind of currency. And you are liable to have a redundancy of currency if you are going to keep the old paper outstanding—you are liable to have the Federal bank currency on top of it. I should say yes it would be a good thing to retire the old bank notes, if it can be done without loss on the old 2 per cent bonds.

Senator Bristow. How would you retire it without loss on the 2 per cent bonds?

Mr. Cannon. I do not know; I have no remedy for that. As I say, I have not given that consideration.

Senator Bristow. You do not believe they ought to be retired and these bonds thrown on the market, and let the banks get what they could?

Mr. Cannon. No. I have stated here I have no remedy to suggest. I think the committee might suggest something that would meet the situation.

Senator Pomerene. Mr. Cannon, there seems to be a good deal of objection to some provisions of this bill on the part of the small country banker. I mean those with a capitalization of $25,000 or $50,000.

Mr. Cannon. Yes.

Senator Pomerene. And that objection is made for this reason, that they handle very little so-called commercial paper, as ordinarily understood. They have paper that runs for six months or nine months. Now, can you suggest any amendment to this bill which would recognize the different methods of doing business as between, for instance, a city bank like yours and one of these country banks which would, at the same time, give him the privilege of discount, etc., provided for in this bill?

Mr. Cannon. I suppose by that time the notes have matured, as a rule, because they are all the time maturing where they have a lot of paper. That is the thing; they have a lot of paper that is short of time.

Senator Pomerene. If that is true, it would avoid the objection largely. But they contend, for instance, in the wheat-growing belt that the borrowing is done at one time, and the notes are redeemed, say, late in the fall, when the crop is harvested?

Mr. Cannon. I do not know enough about interior country banks to go into that. But here is a country banker, we will say, who has six-months paper. That will become 90-day paper within a very short time. Every banker has part of his paper coming out of his portfolio all the time. You have 90-day paper right ahead of you all the time, besides your four, five, and six months paper; and I should think that would work out itself in the ordinary course of events.

Senator Pomerene. That is certainly true where the industries of the community are diversified, but it seems to be contended that is not the case; for instance, with the wheat-growing belt.

Senator Nelson. If you will allow me to interrupt you, on that point—

Senator Pomerene (interposing). Yes.

Senator Nelson. For instance, in our country, which is largely a wheat-growing country, the notes are usually given early in the
spring. The farmer has been unable to pay all of his debts out of the last year’s crop. The merchant is crowding him; the agricultural implement dealer or his help is crowding him. In the spring he gives a six months’ note payable in the fall. The strain for currency for moving our crops does not come until in September and October, and by that time that paper is a 90-day paper.

Mr. CANNON. That is what I had in mind.

Senator NELSON. So that it can be utilized in that way. I can see how that can be covered in that way.

Senator POMERENE. That avoids the objection that has been raised here by many of our western friends.

Mr. CANNON. Yes; I should think that would cover the occasion. Well, gentlemen, am I to be relieved from further questions?

Senator NELSON. Suppose where they issue notes that are given for a year the strain did not come until the last part of the year, the farmers generally give a note payable just after they are thrashing, and when they commence to haul wheat to the railroad station and to the elevator.

Mr. CANNON. That is the very idea.

Senator POMERENE. And the demand is made on New York, for instance, later in the season?

Mr. CANNON. Yes.

Senator POMERENE. But that only covers a period of two or three months I take it?

Mr. CANNON. Just about 60 days.

Senator POMERENE. So that these small western banks could go to the regional bank and get their accommodations?

Senator BRISTOW. They have got to carry it, however, for three months or six months, while the city bank does not have to carry it a day, unless it wants to.

Mr. CANNON. Oh, we take six-months notes, lots of them. We give credit for six months. We have a large amount of commercial paper sold on the market which is six-months paper. There is very little four-months paper sold on the open market. Every good banker provides his pocketbook and portfolio with paper which he keeps ahead of him all the time; and most of the paper sold on the market in New York, and most of the paper sold in Chicago, and most all the notes we get from merchants, except in special cases, runs from four to six months’ time. And, as I said a moment ago, he will always have in his portfolio ample paper maturing this month, next month, and the next month. Every banker ought to do that, and if he is a careful banker he will keep the maturity of his paper shifting all the time, so that he will get paper maturing all down the line.

Senator POMERENE. I wanted to direct your attention to the cotton section. Is it not true that the larger banks in the cotton States make their principal pressure upon New York for loans within 90 days of the time that the cotton crop begins to mature?

Mr. CANNON. Yes; I should say so.
money until within about 90 days, and must then call upon their cor-
respondents to help?

Mr. Cannon. That is right. And I think as soon as that provision
is thoroughly known it can be handled.

Senator Shafroth. Mr. Cannon, I want to ask you what you think
of this scheme or proposition for the retirement of the national-bank
notes in a separate bill which I introduced?

Mr. Cannon. I have not seen the bill.

Senator Shafroth. I will read it to you and see what you think
about it:

That as gold certificates are received into the Treasury or any subtreasury of
the United States they shall be canceled and the gold represented by such cer-
tificates transferred to the reserve fund in the Division of Redemption of the
Treasury, and in lieu of such canceled gold certificates there shall be issued
United States notes of like denominations, redeemable in gold coin at the Trea-
sury or any subtreasury or mint of the United States which may be designated
by order of the Secretary of the Treasury, which notes shall be a legal tender
in payment of all debts, public and private, within the United States and its
possessions. And there shall also be issued at the same time a like amount of
such United States notes for substitution for all national-bank notes and for
the cancellation of the bonds of the United States securing the same until all of
said national-bank notes are retired.

Sec. 2. That upon the request of any national bank the Secretary of the Treas-
ury is authorized, at his discretion, to assume the redemption of its national-
bank notes, to pay to such national bank in cash the difference between the
amount due at that date on the United States bonds securing said notes and said
notes, and to cancel said bonds. When national-bank notes, assumed as afore-
said, shall be received into the Treasury or any subtreasury of the United States
they shall be canceled and retired, and in lieu thereof United States notes au-
thorized by this act to the same amount and like denominations shall be issued,
paid out, and kept in circulation.

Sec. 3. That as the United States notes heretofore issued are received into the
Treasury or any Subtreasury the Secretary of the Treasury is directed to cancel
the same and issue in lieu thereof United States notes authorized by this act.
and to transfer to the redemption fund herein created a proper proportion of the
$150,000,000 of gold now held to redeem the same

Sec. 4. That a gold reserve of 50 per cent of all United States notes issued
and put in circulation under the provisions of this act shall be maintained in
the reserve fund of the Division of Redemption of the Treasury for the purpose
of redeeming the same, and the Secretary of the Treasury is authorized for
that purpose to purchase gold and exercise all of the powers granted to him by
section 2 of the act of Congress entitled "An act to define and fix the standard
of values, to maintain the parity of all forms of money issued or coined by the
United States, to refund the public debt, and for other purposes," approved
March 14, 1900, and he is further authorized by general orders to require all
national banks to keep in their vaults as their lawful money reserve such kinds
of United States money as he may deem to the best interest of the Government.

Mr. Cannon. Good gracious! You do not ask me to pass on that
right off the bat?

Senator Shafroth. Perhaps not. The only thing is, it is a scheme
by which the money would be uniform. The gold reserve would be
increased, and it would be so self-acting nobody would discover it
while it was going on, and at the same time it would be sounder
money than our greenback is now.

Mr. Cannon. I will read that with very great pleasure.

Senator Shafroth. It would save the Government $14,000,000 in
interest, which it pays now on 2 per cent bonds, and it would obviate
the necessity of the issuing of the 3 per cents that were spoken of.

Mr. Cannon. I will take that with me and read it with great
pleasure.

Mr. Chairman, is that all you want of me to-day?
BANKING AND CURRENCY.

Senator Pomerene. There are a couple of matters we will hear from Mr. Cannon on later.

Senator Weeks. If Mr. Cannon has any tables or other matter which he might have referred to or did refer to, I would suggest that he put those tables in the record.

The CHAIRMAN. There are one or two questions I wanted to ask you. We should be glad to have placed in the record the tables which you have read.

Mr. Cannon. I will have some copies made and send them to you, with great pleasure.

(The tables referred to by the witness follow:)

#### Assets

- Cash reserve required on deposits: $246,402,000
- Cash reserve required on note liability: $33,334,000
- Rediscounts: $100,000,000
- Investments: $70,770,000

Total: $246,402,000

#### Liabilities

- Capital 10 per cent paid in: $19,508,000
- General fund: $75,000,000
- Required deposit of subscribing banks: $51,894,000
- Note issue or deposit credit arbitrary: $100,000,000

Total: $246,402,000

---

1 If the general fund is distributed on the basis of capital New York would get about 18.5 per cent or $55,500,000. I have arbitrarily raised this figure to $75,000,000 assuming that New York would be favored to that extent because of the larger amount of work it would be called upon to do as fiscal agent.

The CHAIRMAN. I wanted to ask you what you would think of allowing the stock subscriptions by the proposed member banks to be lowered to this point: Six per cent against the amount of the capital stock and the surplus with one-half paid in? That would make above $51,000,000 for the whole national-bank system, which would be about half the present requirement.

Mr. CANNON. That is to say, your regional fund would be about half the size?

The CHAIRMAN. No; their reserves would be about the same and the Government deposits would be about the same, but the capital would be about one-half.

Mr. CANNON. It had looked that up a little bit—
Senator Nelson. Would you mean to have 3 per cent paid in cash and 3 per cent—

The Chairman (interposing). Subject to call.

Senator Nelson. In 60 days?

The Chairman. Oh, no; 3 per cent paid in in cash during such period of time as may be convenient and 3 per cent subject to call.

Senator Nelson. So the amount would be only 6 per cent instead of 20 per cent?

The Chairman. Yes; I thought perhaps that would be more agreeable to the banks.

Mr. Cannon. Could they still handle the business and at the same time come in competition with the large banks?

The Chairman. They would not be in competition with the large banks, because they have the opportunity to issue currency, which the large banks have not.

Mr. Cannon. For instance, the First National Bank of New York has a total capital with undivided profits of $31,600,000; the National Bank of Commerce, $41,200,000; the National City Bank, $51,500,000; National Park Bank, $15,000,000; Continental Commercial, $80,600,000; St. Louis Bank of Commerce, $12,700,000. I just noted those down as the sizes of the other large banks of the country.

The Chairman. The total of the system would be $720,000,000, with $1,056,000,000 of capital. That would make somewhere near $1,800,000,000 of total capital, surplus, and undivided profits.

Mr. Cannon. You think that would be more likely to meet with the approval of the national banks than having such a large contribution? As far as we are concerned, we would like that. We would have to put up under this bill $1,000,000. If you could finance the system on that basis I think it would be acceptable to the banks.

Senator Nelson. Would you include the surplus, too?

The Chairman. Oh, yes; the surplus, too.

Mr. Cannon. We would certainly look with favor upon that if it would finance the system properly.

Senator Nelson. Your capital and surplus is how much?

Mr. Cannon. $10,000,000.

The Chairman. I understand you would be content with the present requirements?

Mr. Cannon. This would certainly be very much better. We would be content if we could get out of it some way at the proper time.

The Chairman. You would prefer this?

Mr. Cannon. Yes, sir; I would, if it would finance the system properly.

The Chairman. A good many of the country banks have been rather timid at the idea of subscribing an amount equal to 20 per cent, whereas I think they would not mind at all subscribing an amount equal to 6 per cent of their capital and surplus. Some of the banks which have a large surplus would be getting corresponding benefits in excess of what others would get, and it seemed to me it might be more equitable to arrange it on capital and surplus. You think, that being smaller, it would not seem—

Mr. Cannon (interposing). It would not seem quite as if you were putting your hand in their pockets too much.

The Chairman. I just thought I would ask you what you thought of it.
Mr. Cannon. I should think that would meet with the approval of the banks.

Senator Nelson. But the regional bank in New York ought to have a bigger capital than any of the local banks.

Mr. Cannon. It would not anyway under the present scheme.

Senator Nelson. It would depend upon what territory you took in. I mean, counting the capital and the deposit account.

Mr. Cannon. Oh, yes.

The Chairman. What would you think of allowing the banks the privilege of placing with the Federal reserve bank the amount which now they are compelled by this bill to keep in their own vaults, leaving it optional with them to leave it with the Federal reserve bank or not, as they please?

Mr. Cannon. Would not that weaken your reserve system a little bit? I am afraid that would weaken your reserve system.

The Chairman. Why?

Mr. Cannon. Here is a bank that is some distance off from your Federal reserve bank. Something comes up in that town, some man drops dead, and you have a run on the bank. If all the reserve is off at the Federal reserve bank you might have difficulty in handling that crowd. They ought to have a substantial amount in their own vaults.

The Chairman. They would exercise their option as to that. If they were far removed from the reserve bank they would carry more money, but if they were in the same city they would do as they pleased about it. They themselves would consult their own convenience——

Mr. Cannon. I should be afraid it might weaken your reserve.

Senator Nelson. And then, Senator, as long as they do not get any interest on their deposit with the Federal reserve bank, what is the object of putting it there?

The Chairman. The object would be that you would have a larger gold reserve, and therefore a greater power in the Federal reserve bank.

Mr. Cannon. You want to consider a little bit the effect it would have upon the general reserves. How could you give that privilege to a bank in a city where the Federal reserve bank is situated and not give it to all the banks?

The Chairman. It is not proposed to give it to all the banks, but those in one city would exercise that right.

Mr. Cannon. Would not they consider that a kind of favoritism? They can not do as they please, because they might please to put it in and could not.

The Chairman. If the city banks should put this money in, it would give the reserve bank greater power to accommodate other banks.

Mr. Cannon. I should want to give further consideration to that.

Senator Weeks. You do not think any country banker would deposit any such large percentage of reserve with a reserve bank that he would be embarrassed in his daily business?

Mr. Cannon. It does not seem to me that he would, but you can not tell what bankers would do.

The Chairman. We are very much obliged to you, Mr. Cannon.

Mr. Cannon. Not at all, sir. I hope I have been of some service.

(Senator Reed presented the table facing this page for insertion in the record.)

1861 to 1867.

Surplus of national banks.

Total of all State banks June 14, 1892, and all mutual savings banks, stock savings banks, private banks, loan and trust companies:

- Capital.......................... $3,443,321
- Surplus of national banks........ $13,854,000
- Total circulation per capita of national bank notes............................ $40,000,000

Federal Reserve Bank of St. Louis
Digitized for FRASER
http://fraser.stlouisfed.org/

In case all banks and trust companies in the United States and the island possessions of the United States would join the different Federal reserve banks and take out their 20 per cent capital stock as provided in the act they would deposit in these regional banks the sum of $40,000,000.00.

Note: Since 1873 the Comptroller of the Currency has collected and published statistics of State banks, but complete data for compiling these statistics for a number of years thereafter were available only for those States in which the banks were required to report to some State official. For recent years the statistics are practically complete.

(Thereupon, at 5.45 o'clock p.m., the committee adjourned to meet at 10.30 o'clock a.m. to-morrow, Saturday, October 11, 1913.)
The committee met at 10.38 o'clock a. m.

Present: Senators Owen (chairman), Hitchcock, O'Gorman, Reed, Pomerene, Shafroth, Hollis, Nelson, Bristow, and Weeks.

The CHAIRMAN. Judge Montgomery, we will hear you now, if you please.

STATEMENT OF S. B. MONTGOMERY, OF QUINCY, ILL.

Mr. Montgomery. It was suggested that I should be called first, because I was appointed chairman of this committee and in view of the fact that I was president of the Illinois Bankers' Association, and not because I was expected to do much of the talking. This morning I dictated a little statement, and if it is not objectionable I will just read it.

The CHAIRMAN. That will be all right.

Mr. Montgomery. The committee appearing here was authorized at the meeting of the Illinois Bankers' Association on October 26, 1913. That convention was the largest ever held in Illinois. In fact, double as large as the largest State convention that was ever held. There is no doubt that interest in the pending legislation in Congress is responsible for so large an attendance.

Senator Shafroth. What date did you say it was?

Mr. Montgomery. October 26.

Senator Shafroth. October?

Mr. Montgomery. Oh, I do not mean October; September 26.

Senator Shafroth. I thought we had not arrived at that date.

Mr. Montgomery. No; as president of that association I was authorized to appoint this committee. In doing this I thought it best to confine myself to down-State bankers. Those selected I think represent the various sections and localities of the State and the different systems of banking. The resolution adopted at Chicago provided that we indorsed and approved the Chicago conference report, but that has largely been modified, and I think we are here not for the purpose of urging any part of that now. It is only the different items we think of interest to what we call ourselves—country bankers. The names of the members of this committee and their banks, and location of the same, are as follows: William George, president of the Old Second National Bank of Aurora; B. F. Harris, vice president of the First National Bank of Champaign (both of these gentlemen are ex-presidents of the Illinois Bankers' Association); John M. Crebs, president National Bank of Carmi; H. D. Sexton, president Southern Illinois National Bank; Ashe V. Cox, Xenia, president of Orchard City Bank (a private bank); William C. White, president Illinois National Bank, Peoria; and J. S. Aisthorpe, president First Bank & Trust Co., Cairo, Ill.

In reference to Mr. Crebs, I want to say one word. He has been for a long time in the southeastern part of the State, and for a long time has been president of the State fair association, and is quite
well acquainted in the State. Mr. Harris is one of the ex-presidents of the Illinois Bankers' Association, and is right here by me, and he is just as big an apostle of the farmer.

The CHAIRMAN. Yes; I have had the pleasure of meeting Mr. Harris a number of times.

Mr. Montgomery. The organization in Illinois is made up of 10 groups, covering the State, one in the city of Chicago and counties adjoining it, and nine others down State. I was only made chairman of the committee because I happened to be president of the Illinois Bankers' Association, and not on account of my fitness. I practiced law a good part of my life and, besides, being a State banker, we are not so vitally interested at present, at least, as are the national banks.

You have heard this bill discussed from so many angles and by so many experts that I do not feel we should consume much of your time. We are not experts. I think the entire committee comes here with the feeling that your committee is working conscientiously and faithfully to make a banking and currency law that will be a credit and help to all the people, and that includes the bankers.

We are not here attempting or wishing to defeat this bill. We are favoring many parts of it, especially that which provides the banks a place to go for credit when they need it. That is the greatest need of the American banking system to-day. Under the present system at the first appearance of trouble we at once become selfish and try to strengthen ourselves at the expense of everyone else, and thus accentuate, precipitate, and bring on the very trouble we were fearing. It would appear that this bill if enacted into law would cure that trouble. At the same time we are compelled to say to you that there exists among country bankers a very widespread and almost universal sentiment unfavorable to some of the features of the proposed law.

For the past month I have talked with, I might say, hundreds of bankers, and while they are favorable to the law in the main, it is always with the qualification that it be modified in many of its features. I shall mention only a few of these points and then ask other members of the committee who are real bankers to express their views to you.

First. There is a wish among country bankers that the amount they should be required to subscribe to the Federal reserve bank, should be reduced from 20 to 10 per cent, 5 per cent of the same to be paid in.

Second. Bankers have suggested that the Federal reserve board be composed of seven men to be appointed by the President. The suggestion I am about to make, I saw in the paper yesterday, Mr. Cannon has already made to the committee. As I say, bankers have suggested that the Federal reserve board be composed of seven men to be appointed by the President, but instead of the Secretary of the Treasury, the Secretary of Agriculture and the Comptroller of the Currency being members of the Federal reserve board, our suggestion is that they be left off, and that the President appoint three bankers to be selected by him.

I think that the Comptroller of the Currency would be very properly one of this board, but he is so extremely busy it seems to me it would be hard for him to perform the duties that would be required.
Third. It seems unnecessary that there should be a requirement for 12 regional Federal reserve banks. It would be easier to put the law in operation with half that number.

Fourth. Another thing that would be popular with the bankers would be that the stock should pay 6 per cent cumulative instead of 5 per cent cumulative interest.

Fifth. Another objection is the proposition to transfer items at par without exchange. Bankers would hope that this might be changed so that it would only be items “drawn by” one member bank instead of “drawn on” member banks.

Sixth. The savings bank feature seems unnecessary. Many small country banks are in the habit of accepting savings and yet the business done does not develop very largely, and it would be extremely burdensome to them to segregate their capital and their investments and be compelled to carry on this small savings part of their business separately.

Seventh. Bankers in our section do not understand the proposition of allowing real estate loans to be made for a period of one year only. I understand that is hardly sufficient to cover that feature and other legislation may follow it, and that it had reference to some particular locality. No loans on real estate are made for one year in that section. The maturity is almost invariably 5 or 10 years, and so far as that section is concerned it would be utterly useless. My colleagues on this committee will elaborate on these objections, and others of which they may speak.

The Chairman. I think most of those objections are recognized by the members of the committee as having force, and that the committee will take some steps toward granting relief along the lines of those objections. I will not go into the details about it, but I think that is really the attitude of the committee.

Mr. Montgomery. Now, shall I introduce the other speakers?

The Chairman. If you please.

Mr. Montgomery. Mr. Aisthorpe is the next speaker.

STATEMENT OF J. S. AISTHORPE, VICE-PRESIDENT OF THE ILLINOIS BANKERS' ASSOCIATION, CAIRO, ILL.

Mr. Aisthorpe. Gentlemen, I represent perhaps what is known as the country banker. While in some respects not occupying the position directly of the country banker, I am in a small city surrounded by what are termed country banks. They object to the fact that this law really makes a clearing house through the reserve bank of country checks, as we term them.

The Chairman. Checks of your depositors, you mean?

Mr. Aisthorpe. Checks of our depositors—individual checks. Now, as you know, the country banker, or at least a large per cent of them, charge for remitting those checks.

The Chairman. That is, for remitting the proceeds of those checks?

Mr. Aisthorpe. Yes; the proceeds of those checks. And in some respects it is a burden upon them to do that.

The Chairman. It costs you money to run that business?

Mr. Aisthorpe. Certainly.
The Chairman. And you have to have men employed for that express purpose?

Mr. Aisthorpe. Yes. This section is not quite understood, if it applies to individual checks; that is, depositors' checks drawn on the member bank.

The Chairman. I think that is a fair interpretation of it.

Mr. Aisthorpe. They object to that check being collected at par or deposited at par and collected at par through the reserve or regional bank, whatever you may call it.

The Chairman. There is a net profit to the country bank on that business?

Mr. Aisthorpe. Yes.

The Chairman. And that net profit is what they wish to retain. That is right, is it not?

Mr. Aisthorpe. Yes. I do not know whether the committee really understands the fact that that is an item of profit to the small country bank, and it is one of the things they exist upon; while, taking it in my city, we kick against it all the time. We do not like the charges the way they do. At the same time it is fair that should be retained. It does not seem fair that the city banker, the large city banker, the reserve banks of the cities at the present time, should be allowed to deposit in the regional bank or the reserve bank those checks and receive credit at par.

The Chairman. It was thought, I think, that the depositors of the country banks who remitted to their wholesale merchants, for instance, while they do not pay directly it is believed that the wholesalers in reality charge them more for their goods in order to meet any incidental expenses of that kind.

Mr. Aisthorpe. I do not know whether they do that, because they take it for granted it can be collected at very little expense. The clearing houses in some of the reserve cities, of course, have a fixed charge on collecting country checks of $1 a thousand. They do that; but the individual merchant, the wholesaler, or jobber in the town, or even a retail merchant, rather than go to a bank and buy his exchange, or get a post-office order, or an express order, he will send his own individual check.

The Chairman. That is a thing that may be illustrated by the popular song, "Everybody’s doing it." [Laughter.]

Mr. Aisthorpe. Everybody’s doing it; that is true. And he does that not only because it does not cost him anything to do it, but it also gives him time to meet that check when it is presented at the bank. Now, if this law gives the right to the depositing bank that is a member of the reserve bank to deposit that check at par, then it will be sent to the member bank on whom it is drawn, and they will have to remit at par or, rather, it is charged to their account, whichever way you put it.

The Chairman. That is the way it is to be done under this bill. They would not remit at all, but simply charge it to their account. And, in like manner, their checks would be credited to them.

Mr. Aisthorpe. I presume it would be charged at the reserve bank as of the date of its receipt.

The Chairman. Oh, yes; there is no waiting. But in the same way the member bank would be given credit when it sent in its own checks on other banks.
Mr. Aisthorpe. That does not seem to be fair to the country banker. In the first place, it opens the gateway for check discounting.

The Chairman. The country bank, of course, would get credit immediately for all its checks sent in in the same way.

Mr. Aisthorpe. Yes; but the country bank does not get as many checks in proportion as the large city banks do. Of course, there are no jobbing houses in the country towns, and they do not have checks to handle at their end of the line like the banks in the towns where the large retail houses and wholesale houses are located. Therefore they would get no remuneration in that respect.

Senator Nelson. I want to call your attention to this phraseology in the bill on page 33. After referring to the other matter, it says:

Nothing herein contained to be construed as prohibiting member banks from making reasonable charges to cover actual expenses incurred in collecting and remitting funds for their patrons.

Mr. Aisthorpe. Yes; that is true that it does contain that. But I take it for granted that will be largely in the control of the managers of the reserve bank as to what shall be done in that respect. If they say, "Why, no; we credit you at par on any items you send to us, and therefore we charge you direct the items we send you," it is a little bit misunderstood—the language there—and I think it should be made plain. My idea is, taking it from the small country bank, that its check—the bank's check—drawn on another bank should be charged to him at par in the regional bank or the reserve bank, but his depositor's checks should not be permitted to be charged to his account at all. In other words, I think the committee should amend that section there and let it stop.

Senator Nelson. You would distinguish between individual checks and bank checks?

Mr. Aisthorpe. And the bank's checks; yes.

Senator Nelson. The check of one bank on another would be within the rule?

Mr. Aisthorpe. Yes; within the rule.

Senator Nelson. And the individual check you would exclude?

Mr. Aisthorpe. I would exclude that entirely. When you stop to think about it, gentlemen—for instance, take a retail man who buys a bill of goods in New Orleans. I am in Cairo, Ill., and he buys a bill of goods from New Orleans. Now, instead of going into the bank and buying a New Orleans exchange he sends his own individual check.

Senator Nelson. On his local bank.

Mr. Aisthorpe. On his local bank. Now, that check is deposited in the regional bank in New Orleans and is deposited at par. That regional bank sends it, of course, to me as a member of the association—the reserve bank—and I have to remit at par or, rather, it is charged to my account. It is not a question of remitting, exactly; it is charged to my account. Now, the bank has made no profit and has had nothing to do with the transaction whatever.

The Chairman. It would save you from the expense of keeping these extra accounts.

Mr. Aisthorpe. You mean with the reserve agents in different cities?

The Chairman. Yes; keeping accounts with banks in different cities.
Mr. Aisthorpe. I take it for granted, as far as that is concerned, the bank will have to keep what we might call our individual accounts with another bank, even were this banking law in effect.

The Chairman. Doubtless they would keep accounts anyway for the purpose of obtaining rediscounts, in case they need it.

Mr. Aisthorpe. Certainly. But here is the point: You are imposing on the bank at Cairo, through the transfer of funds at New Orleans, where the wholesaler there made a profit on his sale of goods to the merchant in my town—you are imposing that burden on the bank. It does not seem that burden ought to be imposed. Between the banks that is a different proposition.

The Chairman. The proposal is that your bank should be allowed to send all of its checks at par to the Federal reserve bank, and you would immediately get credit for those checks, and it would save you from carrying on the miscellaneous correspondence incident to sending checks to the various parts of the country for collection.

Mr. Aisthorpe. That is true.

The Chairman. And save you time and expense, and you get immediate credit, which is a positive advantage. Another advantage is, as far as the exchange is concerned, you will not be compelled to carry accounts in banks in various parts of the country upon which your customers may desire exchange, but you can give them exchange on any part of the country by your own checks.

Mr. Aisthorpe. I agree with you in that; but the volume of business which is transacted is so much larger against the country bank that the country bank can not remunerate itself from its end of the line.

The Chairman. You mean to say the income and outgo do not balance each other?

Mr. Aisthorpe. The checks do not. In our country banks, you know, the farmer does not come in, as a rule, and deposit a check. He generally has the money, or if it is a check it is a local check in the part of the town in which he lives.

Senator Nelson. Pardon me for interrupting you, but would it not be fair for the local bank to charge the local customer for it? The local customer instead of buying his draft, as he should do, to send to New Orleans gives his check.

Mr. Aisthorpe. Yes; he ought to do that; I admit that.

Senator Nelson. It is up to him. Now, the store merchant in Cairo could go to the bank and buy New Orleans exchange instead of sending his check on the Cairo bank, and that is what he should do.

Mr. Aisthorpe. That is what he ought to do, but what he don't do and won't do.

Senator Nelson. If he neglects that he should bear that burden.

Mr. Aisthorpe. Not the banks; that is what I am trying to eliminate.

Senator Shafroth. But he does it that way in order to have a receipt right on the back of his check.

The Chairman. And it is so convenient to enclose a check in a letter, rather than to go out and buy a draft, and be bothered in that way, and that is why it has grown to be a universal custom. It has been estimated that there are 15,000,000 checks in circulation in this country daily in process of collection. It has become the habit of the citizen, who consults his own convenience when he wants to pay
an account in a distant place, to slip his own check in a letter and send it through the mail, and that saves his time.

Senator Shafroth. Some times he has to wait in line in order to get a draft.

The Chairman. It is not convenient to him. It may take 15 or 20 minutes, or it may take an hour to send his boy down to get a draft. It is a matter of convenience all around and obtains in the whole country.

Mr. Aisthorpe. The wholesaler and jobber are benefited, and the banks have been trying to break up that practice.

The Chairman. The depositor is benefited, because it saves him the expense of sending a man down to the bank with his check to exchange for a bank check on that center to which he wants to remit, and he might send a boy down there and have to wait half an hour or an hour, and it may be necessary to do that, perhaps, three or four times a day, and he sends his own check as a matter of convenience.

Mr. Aisthorpe. I admit what you say, that it is an accommodation to the customer in that respect, but the individual bank, with this method that the committee proposes here, is absolutely placing those checks at a premium, in a sense. That is, it is allowing the merchants to run their checks out, and the regional bank that is at the point where they are received—they will be deposited there by the bank which will get credit for them at par immediately, and they will be charged to the country bank against its account, before it has had an opportunity to know whether that check is good or whether, really, any check has been drawn or not.

The Chairman. I think an item should be placed in this bill that would bar checks of any persons who have sent through the bank a check that is not good at the time it was made. I think there should be a barrier placed on that.

Mr. Aisthorpe. I do not think individual checks ought to be charged to the account of the bank on which they are drawn at the time they are deposited.

The Chairman. When they are drawn, of course, they go to the wholesaler, and then he underwrites that check, puts his name on it, and he is good for it. Then it goes to his bank and his bank underwrites it, and so there are two additional parties underwriting that check before it goes to the reserve bank. Therefore there is no reasonable doubt about that check. Yet, there will occur a time when some check will be found wrongfully drawn, perhaps.

Senator Nelson. If you will allow me, I do not think such a check as we have referred to, a check by a merchant in Cairo upon the local bank there, comes within the scope of this bill, if you will read it. I call your attention to the language—

It shall be the duty of every Federal reserve bank to receive on deposit, at par and without charge for exchange or collection, checks and drafts drawn upon any of its depositors or by any of its depositors upon any other depositor—

Now, the depositors of the regional bank are not individuals; they are the banks.

The Chairman. And the checks drawn upon a depositor would be drawn upon a member bank.

Senator Nelson. The depositors of the regional banks are only member banks, not individuals.
The Chairman. That is right.

Senator Nelson. Therefore this check that he describes would not come within the provisions of this bill—

It shall be the duty of every Federal reserve bank to receive on deposit, at par and without charge for exchange or collection, checks and drafts drawn upon any of its depositors.

Who are its depositors? The member banks.

Mr. Aisthorpe. If you stop right there, that is true.

Senator Nelson. "Or by any of its depositors upon any other depositor." If you make that clear, so as to apply to the member banks, there can not be any doubt about it.

Mr. Aisthorpe. No; that is the point exactly, sir.

The Chairman. If you would read that checks and drafts drawn upon any of its "depositors" or "member banks," it would mean the same.

Senator Nelson. "Or by any of its depositors upon any other depositor."

Senator Pomerene. That is, drawn by one member bank upon another bank.

Mr. Aisthorpe. That is just the point I am trying to make.

Mr. Montgomery. That suggestion is in my paper there, just what the gentleman said, "drawn by," one member bank, instead of "drawn on," member banks.

The Chairman. Yes; but a check drawn upon any of its depositors means drawn upon any of its member banks, and does not mean anything but that.

Senator Nelson. I do not think such checks as you describe here, checks drawn by your local merchant, on your local bank, would come within the scope of this bill at all.

The Chairman. I do not understand how you interpret it, Senator; I think, however, we are depriving the witness of an opportunity to give his views.

Senator Weeks. I was going to suggest that we might take this up among ourselves later.

Mr. Aisthorpe. But here, Senator, it reads this way, "checks and drafts drawn upon any of its depositors or by any of its depositors upon any other depositor." There is too much there in the language. I can be misconstrued. If you would eliminate all of this "depositor" business, after you get down to "it shall be the duty of every Federal reserve bank to receive on deposit, at par and without charge for exchange or collection, checks and drafts drawn upon any of its depositors," and put a period in there, then you are applying it directly to the member banks of the reserve bank.

The Chairman. That is not the intention of the section; it is intended to cover private checks.

Mr. Aisthorpe. I am taking for granted it is.

The Chairman. You are objecting to that, and your reason is that it deprives the country bank of its revenue.

Mr. Aisthorpe. That is true.

The Chairman. And the question is, How much revenue?

Mr. Aisthorpe. In my bank it does not make so much difference. I am talking to you particularly for the small banks, where I know a large proportion of their income is derived from these charges.

The Chairman. You mean their net income?
Mr. Aisthorpe. Net income, derived from the charges they make in remitting for checks drawn on them.

The Chairman. Could they charge their depositors for checks sent to outside parties, which come in that way, without causing unfriendly comment from their depositors?

Mr. Aisthorpe. Yes, sir. That has been discussed a number of times among the bankers.

The Chairman. Could they not, through the banking associations, agree they would charge a depositor a reasonable fee for checks sent outside and which they collect for the Federal reserve bank?

Mr. Aisthorpe. That was taken up in the Illinois Bankers’ Association.

The Chairman. Would not that really be right?

Mr. Aisthorpe. They could not get any concerted action on it at all.

The Chairman. You have no such system?

Mr. Aisthorpe. Yes; we tried.

The Chairman. Not an adequate system, because you would have to deal with so many clearing places, so many different clearing banks and reserve agents.

Mr. Aisthorpe. The idea was to get a charge by all banks in the State on checks drawn on them that came through other sources.

The Chairman. It seems to me the country banks could easily, through group arrangements, agree to make a reasonable charge upon checks sent outside and collected at foreign points against the bank, that that could be easily obtained and would compensate them for their trouble in the matter, and of course return a reasonable profit.

Mr. Aisthorpe. If you will just stop and think a moment, I do not believe that could be enforced, for the reason it is a question left entirely in the hands of the reserve bank or the regional bank.

The Chairman. The local deposits of the member banks could be arranged by group arrangements.

Mr. Aisthorpe. It says it shall not prohibit. It is just the same now.

The Chairman. Where two banks are in competition with one another, and the one gives free exchange and the other will not, of course you have difficulty with the depositors. But if that is adjusted by group arrangement, I should think it might be provided for without violating the antitrust law.

Mr. Aisthorpe. I will ask you this question: Why is it that these checks, these individual checks, should be handled at par, and that forced on the bank?

The Chairman. For economic conditions; for economy, to save in handling credit.

Mr. Aisthorpe. That is simply between the bank.

The Chairman. I am not talking about clearing personal checks, but the matter of transferring more quickly and at less expense to the country, including the banks. I believe the banks have a right to charge their customers for sending checks out in that way. I think that would be a reasonable change to make.

Mr. Aisthorpe. Would it be the intention of the committee in framing up this section that the reserve bank shall permit that to be done?
The Chairman. Yes; that is obviously done in this, because exception is made in here. I think that is perfectly right, and I think the country banks ought to have a right to do that if they want to. I do not see why it can not be adjusted by group arrangement.

Mr. Aisthorpe. All I am asking for, gentlemen, is that I think you ought to stop at bank checks, bank drafts.

The Chairman. Yes; we have heard the argument, of course, and we understand and appreciate the point of view you have.

Senator Weeks. Let me ask you this question: If there is going to be a great economic saving by the clearing of all checks—private checks and otherwise—through the reserve banks, could it be arranged so that the country banks could, as they should, as the chairman has stated, make a charge for collecting individual checks? Do you not think this committee ought to recommend some kind of legislation which would provide for that?

Mr. Aisthorpe. That is true.

Senator Weeks. You and I agree, undoubtedly, that there is a great economic waste in the collections on domestic exchange in this country. I recall a case some years ago which was brought to my attention, where a concern kept an account of $20,000 in a bank. The bank was paying interest on $10,000 of it, and $10,000 was a free deposit. They had not made a careful examination of the cost of collections on that account until one day somebody did make that investigation, and it was found that the firm only had an actual balance of $4,000, $16,000 being in the process of collection all the time. In other words, the bank had been paying interest on $6,000 which was not in the bank at all, and the concern had no free balance at any time during the year. Now, that is occurring everywhere, all over the United States, and if some method can be developed to produce a more prompt collection agency and to prevent what is an abuse, in my judgment—that is, drawing a private check on a bank in Cairo to pay a bill in New Orleans and requiring that check to be sent to New Orleans and then sent back for collection to you and then sending it to a little bank of a town near Cairo—if that can be prevented it ought to be done.

Mr. Aisthorpe. I agree with you on that absolutely; but I think you want to make it plain in that section, so that when it comes to the individual checks there shall be a charge, and let the reserve bank fix what that charge shall be.

Senator Shafroth. Mr. Weeks, I do not understand why there would not be a balance there of $20,000, because when the individual check is given it does not come back to be charged on the debit side of the account until after it reaches there, and the bank, in the meantime, has had the full use of that money.

Senator Weeks. I do not think we ought to take this witness's time to discuss it; but let us suppose you deposited five checks of $4,000 each in your bank. One is to pay a bill in Boston, one is to pay a bill in San Francisco, another in New Orleans, and another in Atlanta, and the other is local. Those four checks that are going to foreign places are going to be in process of collection several days.

Senator Shafroth. Yes; but my balance remains at the bank all the time.

Senator Weeks. But, as far as your checks are concerned, you have not $20,000 in the bank.
Senator Shafroth. The bank gets the benefit of the $20,000. It does not know what my books show.

Senator Weeks. Yes; but those checks are outstanding against your account.

Senator Shafroth. That is true; but that money remains in the bank until the checks come in.

Senator Weeks. I do not think we should discuss that now, but we ought to let the witness proceed.

Mr. Aisthorpe. You are charging up the individual checks of the member bank to the reserve bank. Suppose, now, a customer of mine has drawn a check of $25,000. I am not advised of it at all. His account is good for it. He sends that check to Cleveland, Ohio, in some transaction. That check is deposited in the reserve or regional bank, and the regional bank charges it to my account and sends it down to me. I have not had any notice of the check at all, but my balance has been reduced. I won't know of that check, and I may have to remit in some way or other to make that balance good. Suppose that is all I have in excess of the reserve requirements of the law, which says I shall keep there a reserve balance?

The Chairman. The effect of that is that if he were to draw that check immediately on you you would have to remit earlier than you would under this arrangement, and therefore you get the benefit of the use of the money a few days longer, until you are notified to make good your deficit?

Mr. Aisthorpe. I do not think so; not in this present way.

Senator Hitchcock. The provision of the law is that a regional bank may notify a member bank to make good whenever its balance falls below the legal reserve. If it goes below the legal requirement all the reserve bank could do would be to notify the member bank to make good its deficit. As the chairman says, it seems to me it would not be any worse plight than if the individual had come in to draw out the cash.

Mr. Aisthorpe, we are using up your time in discussing this matter. I think you ought to give some attention to this section, distinguishing very clearly as to what it shall apply to. We will let the matter rest.

It is your view a bank should not be charged with a check drawn by one of its depositors; it should simply be sent out for collection?

Mr. Aisthorpe. Yes.

Mr. Harris. I think that Senator Weeks, as he expressed himself a few moments ago, expressed our view, and we are willing to take his statement and save the committee’s time by passing on.

Mr. Montgomery. I should like Mr. Harris to be heard next, if you please.

STATEMENT OF B. F. HARRIS, VICE PRESIDENT FIRST NATIONAL BANK, CHAMPAIGN, ILL.

Mr. Harris. Our chairman has told you that we are not experts, and I want to emphasize that in my case. I am not a banking expert, but, as he said, I have devoted most of my time to agriculture, especially with respect to the banker’s relation to the subject.

Senator Hitchcock. Will you please state the size of your town and the size of your bank?
Mr. Harris. The town has a population of 15,000. The bank has a capital of $100,000, a surplus of $130,000, and deposits of about $1,300,000. It is the First National Bank.

Senator Pomerene. Your position?

Mr. Harris. Vice president, although I am not active in the bank in any way.

In the second place, I do not know of any way in which this bill as it passed the House would hurt or help our bank, unless it might affect our 2 per cents, of which we have $65,000. On the other hand, I want you to feel that anything I have to say is in no way influenced by the personal side, although the personal side has a right to come in, every man speaking for the effect the bill might have on him or his bank. So I want you to get my point of view as trying to be of service and understand that any comments I make are entirely with reference to the general public aspect of the bill.

Senator Hitchcock. The committee would like to know the effect this will have upon the bank, because the witness can testify to that, and can give the committee a clear idea.

Mr. Harris. Well, I was asked to talk on one or two points, more especially concerning control, and I think some time will be saved if you will let me run over that. I want to say for the bankers in general, so far as I can speak for them, that I believe the banker understands and appreciates better than anybody else the need, the urgent need, for this legislation. I have not seen any bankers who want to delay this legislation if there is any opportunity to get a bill along reasonable lines, and I think I can say I have not seen any banker who thinks that the bill as it passed the House is what it should be. Further than that, I believe every good banker and every good business man believes in supervision and regulation, but the further we go in that direction, especially toward more or less absolute control—which some have said comes within the definition of socialism—the more careful we should be.

That brings up the point on which I am supposed to talk. We are to have a Federal board of seven men. Only one of those men is supposed to know or is required to know anything about banking. It would seem to me, from the economic point of view, you ought to have experienced men on the board, and, further, that the bankers who contribute the capital and reserves to this bank ought to have a reasonable minority voice; in other words, three out of seven. There is an unfair reflection on the banker, which he resents, when the bill says, in effect, that the President, who has the selection of all these men, can not find, or is not to find, more than one man among the banking fraternity who is morally fit to fill the position. That is a thing that goes against the grain more than any other feature of the bill.

Senator Hitchcock. The bill, as I recall it, does not exclude bankers from his choice.

Mr. Harris. No; it does not, but the inference is that he shall not; and when you think of the possible political effect and all that, the President might not be inclined to go further than he is expected to go, because the people, to whom some of us “appeal,” would say that the President was favoring too many bankers.

Senator Shafroth. You know, there is not a banker on the board of directors of the Bank of England or the Bank of France?
Mr. Harris. I have heard that statement made many times, but I think that is hardly correct in this respect, that several large banking houses are indirectly represented——

Senator Shafroth (interposing). Not check-paying houses; they are investment houses.

Mr. Harris. Of course, that is a matter of information.

Senator Weeks. You would not imagine that any one would advocate, and you would not advocate, I presume, that any man should be put on that board who continued to be actively connected with a bank?

Mr. Harris. Not for one moment.

Senator Weeks. I do not understand that anyone would advocate having a man connected with a private bank a member of that board.

Mr. Harris. He should have no banking connections in any way that would challenge his action.

Senator Weeks. What you are advocating is that the board shall have the benefit of the experience of men who have been connected with the banking business?

Mr. Harris. I consider this absolutely necessary, to have at least a minority of the board—and, from a business standpoint, they should be the majority of the board—men of more or less wide financial experience, because they are to exercise the greatest power that has ever been given, in my opinion, to any board.

Senator Pomerene. Do you imagine any President would put men on that board who were not able men, of wide experience?

Mr. Harris. I do not imagine that any man we elect President, in so far as his own ability or knowledge is concerned, would deliberately appoint any such men, but those accidents do happen. What I should say is this, three of the seven men the bill provides to be appointed by the President—the Secretary of the Treasury, the Comptroller of the Currency, and the Secretary of Agriculture—should be left off, because they have all they can do if they run their departments as they should run them; and the bill should be so drawn that no President in his first term should appoint more than three of those seven men. This would prevent a change in practice with each presidential administration. I should say that three out of the seven men should be bankers, but not connected in any way with banking institutions.

Senator Nelson. Either as stockholders or officers?

Mr. Harris. Not in any way, nor in any measure.

Senator Shafroth. I think all four of them could be, under this bill.

Mr. Harris. I do not imagine, when the bill reads as it does, that any President would feel like going so far. I do not think that President Wilson would, from the attitude he seems to hold and the expressions he has made on the subject. I think, as President Wilson was quoted as saying the other day, that the power to control the credits of this country is the power to absolutely shape and control the direction in which all our industries and all our development, financially and commercially, shall go. That is what this tremendous power means; and, as I have said, it is a reflection upon the bankers that even when the President himself has the choice he is not supposed or required to select more than one man of banking experience,
and the rest are merely political appointees. It seems to me that the mobilization of credit is the one thing that we should have uppermost, and that we should reduce the number of banks from 12 to not more than 5 and 3 would be better.

Then our people feel that the subscription to the stock should be reduced from 20 per cent to 10 per cent—

Senator Hitchcock (interposing). Why do you feel that, Mr. Harris? Will you state your reason?

Mr. Harris. When I say our people feel that, I am telling you what they tell me, without having all their reasons at hand.

Senator Hitchcock. Is it because you would estimate the higher amount too heavy a drain on the banks?

Mr. Harris. Yes. I think when a bank is compelled to tie up, in the first instance, at 5 per cent interest, 10 per cent of its capital, subject to a demand for another 10 per cent, and then tie up at least 5 per cent, and possibly 7 per cent of its reserves without interest, that infringes on the earning capacity of the bank. Now, that does not apply in my case, because in the case of my bank we do not use rediscounts; we probably would not use them under the new bill. Our circumstances and conservative practices are such that we would not. On the other hand, we keep about 12 to 15 per cent cash on hand, and we keep about 20 to 25 per cent with our reserve banks. In other words, we have from 40 to 45 per cent cash and exchange.

Senator Hitchcock. What benefits would you get out of the bill?

Mr. Harris. No benefit, as I said when I began. As a matter of fact, in the last few years I consider we have been at a great disadvantage in being a national bank. We have 42 banks in our county, which is an agricultural county, and the State banks take mortgages and may do many things that we may not do. And I will say to you frankly that, for a number of reasons, I think we should become a State bank; and under the House bill, even if we should have to take a loss on our 2 per cents, we would reorganize as a State bank. You might provide that the member banks could pay for their regional-bank stock with 2 per cent Government bonds.

Senator Shafroth. This bill is presumed to give you a reservoir from which you may draw, so you do not have to keep as large a reserve. That being true, it would release to you 18 per cent—

Mr. Harris. I understand the purpose of the bill, but we do not release now half of what we could release.

Senator Shafroth. That is because you have not got this reservoir, but if you had this reservoir to draw upon you could release it.

Mr. Harris. My bank is more conservative, perhaps, than it ought to be, because we like to be on the safe side. I know there is the danger, under some conditions, of a little too much expansion.

Senator Shafroth. If that 18 per cent, which you have been in the habit of using, were released so you could use it, it would be a great thing, would it not?

Mr. Harris. Yes; for banks and the people generally; but why am I compelled under the bill to go into this whether I want to or not? The State banks have the privilege of going in or not as they please. I think that is one of the worst and most un-American features of the bill.

Senator Weeks. Don't you think that legislation which will promote commerce and create stability in banking and in business
generally ought to be encouraged, even if the personal equation does not seem to be benefited?

Mr. Harris. Yes, sir; I do. That is my whole attitude. I am not speaking from the personal point of view, because the general interest is the banker's interest.

Senator Weeks. Of course, we can not make any progress in this world without seeming to affect individual and personal interests.

Mr. Harris. Exactly.

Senator Weeks. That must be taken into consideration. But if it is going to be of marked benefit to the whole country and the commerce of the country, without wantonly endangering private and vested interests, you would agree that we ought to take some action, I think.

Mr. Harris. There is no question about it. There is no direct way of arriving at the percentage, but I think you would be amazed to find how few national banks would go into the scheme on the basis of the bill as it passed the House.

Senator Hitchcock. How many national banks have you in Illinois?

Mr. Harris. We have about 600. We have about 1,800 banks of all kinds, and they are almost equally divided. There is a larger percentage of State banks than private and national banks. Statistics we have gathered show that in Illinois, outside of Chicago, 65 per cent of bank stockholders are farmers directly or indirectly interested in farming.

Senator Hitchcock. Have you any estimate of the number of national banks that would denationalize if the bill should be passed as it came from the House?

Mr. Harris. It is mere guesswork, but I should imagine that the proportion would be very large.

Senator Hitchcock. Half of them?

Mr. Harris. Yes; 80 per cent of them; perhaps 90 per cent.

Senator Hitchcock. Do you think any State banks would come into the organization?

Mr. Harris. I have not seen any State banks that would come in.

Senator Weeks. Were you present at the Boston meeting?

Mr. Harris. Yes, sir.

Senator Weeks. Do you think the country bankers were embarrassed by the influence of others in the conclusion which they came to?

Mr. Harris. Not in the slightest. It was a splendidly attended meeting. I do not think any city banker embarrasses any country banker, or that the country bankers are affected by the views of the city bankers.

Senator Weeks. Do you not think it is a reflection upon the character and ability of country bankers to assume even that their action in such matters would be influenced by anyone?

Mr. Harris. I do, most emphatically, and I think the several statements that have been made with reference to that very point are unfair, to say the least. I was in the meeting and I made only one sug-
gestion—that the bankers be polled on this subject—because I thought in that way Congress would get information that it needs and that it could not get otherwise with reference to the percentage of banks that would come in. But I am as sure of the statement I made as I am of anything undetermined, that the percentage of national banks and State banks that would come in would be so small you would not accomplish anything at all. And even if all national banks came in, you would have only 30 or 35 per cent of the total banking resources of the country at that, and any system which proposes to make a successful currency system is not a success if you can only get one-third of the banking fraternity into it.

Senator Hitchcock. Do you personally indorse the recommendations made by this bankers' convention in Boston?

Mr. Harris. I personally indorse the recommendations and the action they took. And, personally, I think the recommendations made at the Chicago conference, at which I was present, were admirable and remarkably conciliatory, considering all the facts in the case.

Senator Hitchcock. Will you distinguish between the two?

Mr. Harris. The Chicago conference, if I keep the details fairly well in mind—I have not read the action of either conference lately—comprehend practically the action of the country bankers in Boston, but went further and referred to other matters in the bill. The country bankers in Boston had this viewpoint; I did not go into the little meeting of the men that issued the call. Their feeling was that they must only state before this committee the things that directly concern the country bank or that would affect it on its personal side. They said, "We do not like the way in which this control is affected; we do not like the compulsory feature, but we are not going to go into that. In order to save time, we will just refer to four or five points," which you have seen in their resolution.

Senator Hitchcock. You were present at this meeting?

Mr. Harris. I was.

Senator Hitchcock. Of the 2,000 estimated to be present, what number do you think objected to the conclusions?

Mr. Harris. I do not think any of them, and I can give you the test of that. I was present at the best-attended session of the convention, the best-attended session I have ever seen of an American bankers' meeting, when the whole matter was subdivided into five resolutions, and on four of those there was not even a dissenting vote.

Senator Hitchcock. Have you a copy of the resolutions here?

Mr. Harris. The general purport of that resolution was to indorse the Chicago conference. Mr. O'Neil had a resolution; Mr. Hill had a resolution—there was only one dissenting voice on any of those, and that was from Mr. McRae, of Arkansas.

Senator Hitchcock. Was there any attempt to railroad resolutions through?

Mr. Harris. On the contrary, Mr. George M. Reynolds and several other prominent members of the association came forward on the platform and said that every man who had a word to say, especially those opposed to the action, should be given ample opportunity to speak; and this received large applause, and to help that matter along
they adjourned for luncheon before voting on the resolution and
had an hour's recess, and afterwards every man who wanted to say
a word had an opportunity to say it.

Senator Hitchcock. What was the purpose of that recess?

Mr. Harris. They took a recess from half past 1 to half past 2.
They had not had luncheon, and the whole purpose, as stated, was to
stop any idle talk that they were trying to railroad the matter
through. Mr. McRae made statements that the facts did not justify,
and there were cries from the house of "No," and hissing and "Ques­
tion," because Mr. McRae was not fair in his statements.

Senator Hitchcock. Was Mr. McRae given a fair hearing?

Mr. Harris. Yes; Mr. McRae was invited to the platform and
talked for 15 or 20 minutes, and once or twice when he said he was
through and the crowd said, "Good," that started him off again.
The chairman said, "Mr. McRae, you may have all the time you
please."

Senator Hitchcock. Did he have any sympathizers?

Mr. Harris. He voted by himself. He called for a division on the
resolutions. He said, "I have the right to call for a division on
this resolution; it can really be divided into five parts." So he called
for the question on the five different features.

Senator Hitchcock. A viva voce vote?

Mr. Montgomery. Finally it was by a rising vote.

Mr. Harris. They first had a viva voce vote, and then they had
a rising vote, too.

Senator Hitchcock. How many voted against the resolution?

Mr. Harris. Only Mr. McRae, of Arkansas.

Senator Hitchcock. Out of 2,000 people?

Mr. Harris. There were probably 2,500 or 3,000 at the convention;
the 2,000 were at the separate country bankers' meeting Monday.

Senator Hitchcock. The committee wanted to talk with some one
who had personally been at the convention.

Mr. Harris. That committee, I understand, is to be here Monday.

Senator Reed. I have not heard all the testimony, but I am curious
about one matter. Is it true that the bankers applauded the state­
ment that Congress was being run by Socialists, etc.?

Mr. Harris. No; the statement was not made in that way. If
I can repeat the language correctly, Mr. Hepburn made this state­
ment; he defined very briefly what socialism was, and said, "If this
definition is correct, then this bill approaches socialism." You can
find the exact language.

Senator Reed. You spoke in innuendo, and gently insinuated that
most of the people down here were cranks?

Mr. Harris. No; he read this statement, which you may get, and
you may draw your own inference. But he defined socialism and
then said that this bill amounted to socialism.

Senator Weeks. What inference did you draw from his statement?

Mr. Harris. Well, having told you how I feel—that I believe
thoroughly in supervision and regulation for every form of public
or quasi-public business whatever it may be—I do feel that the bill as
passed in the House is just what Mr. Hepburn said it was. And yet
that bill would not affect me in my individual banking business; but,
as a whole, taking the make-up of the board, the fact that the Presi­
dent, in one administration could control that whole board by appointment——

Senator Reed (interposing). Let me ask your view on this question——

Mr. Harris (interposing). I will say to you this is not a political matter. In reaching my conclusions I should remove myself from the banking field, just as I believe you gentlemen should remove yourselves from the political field——

Senator Nelson (interposing). Allow me to make a suggestion at this point, which, I think, would clear up this matter a little. Socialism is divided into what they call state socialism and private or personal socialism. State socialism is simply where the State undertakes to do a thing that many people believe ought to be done by private parties. For instance, we are doing a lot of Government work here in this country that comes under the head of state socialism. The Post Office Department, the Interstate Commerce Commission, and the meat inspection, the pure-food law, all come under the head of state socialism, and that was the great fad of Bismarck. He was a state socialist, but socialism in its odious sense is not state socialism; it is that other species of socialism.

Mr. Harris. Mr. Hepburn, I think, had the state socialism sense in mind.

Senator Nelson. The work done by the Government, which I have referred to, is what I would call state socialism, and in that sense it is not an odious term, as it is when used in the other sense.

Senator Reed. I do not know in what sense he used it. I find that bankers, like other people, have their limitations.

Mr. Harris. There is no question about it.

Senator Reed. A banker, not more than other people, and I am inclined to think not less, and they sometimes go off at a tangent.

I want to suggest two or three things to you, because you are a banker.

Mr. Harris. One moment, please. I would like to be here as long as you want me, but I am only one member of our committee, and I do not want to take up any unnecessary time.

Senator Reed. I am taking the time, not you.

Mr. Harris. I am glad to be at your service.

Senator Reed. That the board under this bill does not possess in any particular, or in all particulars together, as much power as the Secretary of the Treasury now exercises as one man.

Mr. Harris. Personally I do not object to control—or, rather, supervision and regulation, though it is control in this bill—but I do object, as I said, perhaps before you came in, to the way in which the board is constituted.

Senator Reed. The general board. I am calling your attention just to this one thought, that there is a more arbitrary power vested to-day in the Secretary of the Treasury than is vested in this board by this bill.

Mr. Harris. Without being familiar with all the details, there can be no question, it seems to me, but that you are wrong in that, because the Secretary of the Treasury can not control credits, can not control rates of interest, and all that sort of thing. It would be a very easy matter, Senator, it seems to me, for a President from the West or a President from the South, for instance, as we saw it re-
cently. There was a great demand for more money when Secretary McAdoo—

Senator Reed (interposing). You are talking about the bill?

Mr. Harris. I am talking about what the board can do. You say that the Secretary of the Treasury has more power to-day, more arbitrary power, than the board would have?

Senator Reed. Yes; that is, more than this board will have when this committee gets through with this bill.

Mr. Harris. That is an unknown quantity. If this committee—

Senator Reed (interposing). What I mean is this: This bill permits certain things that are not now permitted to any department of the Government. The question of how the bill will come out of this committee, whether there will be legal restrictions placed upon the whole matter, is a question; but I am speaking now just about this exercise of arbitrary power that the Secretary of the Treasury has under the Aldrich-Vreeland Act. He can issue $500,000,000 worth of currency or he can refuse to issue it. He is vested with the arbitrary power, in the case of a panic, to sit here and let the country suffer under it, or he is vested with the power, of course, upon application and in conformity with the measure, of issuing this vast sum of money. I am only suggesting this; I do not say it in the way of antagonism.

Mr. Harris. I understand that. There is not any antagonism, sir, from either of us.

Senator Reed. This charge of so-called socialism, of which our friend spoke with the same temperance of expression that some people use when they call bankers scalawags and pickpockets and things of that sort, is not true, and let me say to you and all other bankers that abuse of the character that Mr. Hepburn indulges in very seldom convinces a man.

Mr. Harris. If I get the sentiment of the bankers correctly, the only hope the bankers have is in this committee, and if I did not believe that this committee was going to do what I think they are going to do after they have had information from all parts of the country, I would not take my time and pay my expenses to come down here and talk to you. I think the only hope is in this committee.

Senator Pomerene. You have spoken here of the position of the bankers generally. Have you not been impressed with the idea that the bankers themselves can not agree among themselves as to what ought to be done?

Mr. Harris. No; I have not been so impressed. You have a splendid example that they are agreed by the action that was taken at the Chicago conference.

Senator Pomerene. Have you kept in touch with the hearings before this committee? We had such men as Mr. Vanderlip and Mr. Cannon, who both said the bankers could not agree among themselves as to what should be done.

Mr. Harris. We have that with the tariff and with every other matter of large importance, and some men come here representing interests of one kind or another, and some with a selfish idea. I do not think that means anything because the real thing you want to get is not what Mr. Vanderlip or Mr. Cannon or I may tell you, but what you get from a conference like the Chicago conference,
which comes down to specific recommendations from all sections and from all classes of bankers.

Senator Shafroth. What do you think of the action of the State Bankers' Association of Virginia, which indorsed this bill the other day, passing resolutions indorsing it, and then two or three weeks afterwards condemned it?

Mr. Harris. I was present at the Virginia bankers' convention, and addressed that convention, and Senator Owen made the first public address that was made after the bill was introduced into the House. The Virginia bankers' convention was held before the bill was passed. It was held at the time the bill was introduced by the House committee.

Senator Shafroth. That was the first convention?

Mr. Harris. The Virginia bankers have only had one convention this year that I know anything about.

Senator Shafroth. Was there a reversal of former action?

Mr. Harris. Probably, and very properly so, I should say, for the reason that the bill had just been introduced, and the convention had had no opportunity to consider it aside from comments made to them by Senator Owen. Senator Owen made his talk before the bankers and it was made plain that Senator Owen was a Virginian, and that Congressman Glass was a Virginian, and President Wilson was a Virginian.

Senator Weeks. That the authors of the bill were Virginians?

Mr. Harris. Yes; that Congressman Glass, Senator Owen, and President Wilson were all Virginians, and it would therefore be a very proper compliment to indorse the action because originating from Virginians.

Senator Shafroth. The present bill is very much more favorable to the bankers than the first one.

Senator Reed. Do you think that the fact which you mentioned a while ago in reference to the nativity of the gentlemen you named carried the day—that sentiment?

Mr. Harris. Yes. I tell you, Senator, you can go into a large gathering of people, where everything goes along smoothly and nicely and in good spirit, and you can get resolutions of that sort passed.

Senator Reed. That is what I think about your convention in Boston. I think that is the way it was run.

Mr. Harris. No; the banker went there, having in mind the discussion of the bill and having looked into and studied the provisions of the bill and the effects of the bill. The bankers at the Virginia convention knew nothing about the bill until they received knowledge at first hand and for the first time, as Senator Owen presented it, and his address created a favorable impression.

Senator Pomerene. Did he misrepresent anything?

Mr. Harris. Not that I know of. I told the Senator that I had heard a good many progressive talks, but that he had made the most progressive talk I had heard, because he referred to the initiative, referendum, and recall and other progressive principles, and that it was a first-class progressive talk, and he impressed his audience.

Senator Pomerene. I am referring to his discussion of the banking and currency matter. Did any of them take issue with any of his proposals, so far as the banking question was concerned?
Mr. Harris. It was not much of an argument; they were trying to get information. I suppose an hour and a half was used in interrogating him.

Senator Reed. After all that they passed a resolution favoring the bill, and about three weeks afterwards they took it all back.

Mr. Harris. That would not be wrong. Do you not sometimes change your mind?

Senator Reed. That is why I have been suggesting these things to you, because I believe you will change your mind; that this bill, while it may have some imperfections, which we are trying to discover, was not passed upon as a final proposition by this convention, in which one of the prominent men characterized Congress as a pack of Socialists.

Mr. Harris. Do not put it that way. I do not think Mr. Hepburn's statement permits that conclusion.

Senator Hitchcock. I think what Mr. Hepburn said, Senator Reed, was that the bill was socialistic, and gave as a reason for that statement that it took 10 per cent of the capital away from some banks and put it under the control of others, and if they could take 10 per cent they could take 30 per cent or 40 per cent or take it all, and that, therefore, it amounted to a socialistic measure. I do not think he referred to Members of Congress as being socialistic, but to the measure as being directed toward socialism.

Mr. Harris. I think you should read Mr. Hepburn's statement in justice to yourself and Mr. Hepburn, and the worst impression that you may get from reading an account of the proceedings, I think, would be more from what Mr. Hill, of Connecticut, said. He did not represent anybody, simply speaking individually. He offered a resolution, which was voted on, and that was an entirely separate matter.

Senator Reed. Is that Mr. James J. Hill, of the Great Northern Railroad?

Mr. Harris. No; Mr. Hill, of Connecticut, a former Member of the House, who was on the Banking and Currency Committee of the House for many years.

Senator Reed. I just wanted to get you convinced that the Members of Congress were not such a bad lot. That sort of talk about Congress is exactly on a par with the talk of the man who says the bankers are the enemies of the public and all that sort of stuff. We are trying to act on a different basis from that.

Mr. Harris. I am satisfied of that.

Senator Pomerene. After that Chicago meeting the papers announced that it was the sense at least of some of the bankers that this bill should be so amended as that the action of the reserve board would be subject to a veto by the bankers. Did you see that?

Mr. Harris. No; I did not see that.

Senator Pomerene. You saw a statement in the papers?

Mr. Harris. Oh, yes. There was so much in the papers—— Senator Pomerene (interposing). Did it occur?

Mr. Harris. No; it did not. Mr. Reynolds had made a suggestion and, I think, he has made it to your committee, that there should be an advisory committee. I think that has been passed up. I do not think that is necessary, taking the seven men and giving them the power you have given them now, but make a change as suggested, in the selection of the seven men.
Senator Pomerene. Does that feeling prevail that there should be a power of veto for the bankers?

Mr. Harris. I do not think so.

Senator Pomerene. I should hope not, in this Republic.

Mr. Harris. I do not believe it. I belong to the banking fraternity, but, more than that, I belong to the agricultural fraternity. Eighty per cent of my worldly goods is in agriculture, and I have been devoting my time to this agricultural work among the bankers, getting the bankers interested in these welfare matters. I think the bankers are just as selfish and just as unselfish as any other class of men, it's not a question of the business, but of human nature.

Senator Nelson. I would like to hear the substance of the resolution that was adopted.

Senator Hitchcock. Yes; I think that would be desirable. Could you not give us the substance of the resolutions of the Boston conference?

Mr. Harris. The Boston conference simply indorsed the action of the Chicago conference. Mr. Hepburn in his report told the story of his committees, and made this reference to socialism. This was simply his report.

Senator Pomerene. Was that all?

Mr. Harris. That was all there was to it. Mr. Hill had an individual resolution of his own.

Senator Nelson. What I was after, if you will allow, Mr. Chairman, I want to know what the country bankers' resolution was.

Mr. Harris. Senator Reed has the resolutions there. You will have the whole committee here on Monday.

Senator O'Gorman. Mr. Harris, I am going to ask you a question——

Mr. Harris (interposing). Mr. Crampton reminds me that the American Bankers' Association is not going to send a committee down here. They simply indorsed the action of the Chicago conference.

Senator O'Gorman. As I understand, you have been a banker in Illinois?

Mr. Harris. Yes.

Senator O'Gorman. And you have been a banker for some years?

Mr. Harris. Yes, sir.

Senator O'Gorman. You have been active in a movement to encourage the development of agriculture?

Mr. Harris. And roads and education, and so forth.

Senator O'Gorman. It has been stated from time to time that the attitude of the country bankers regarding the pending legislation have been dictated by the so-called money power of New York and Chicago and St. Louis. I would like to know whether that is true or not.

Mr. Harris. Well, I resent that personally, and I resent it on the part of the country bankers. I think that any suggestion toward dictation by the city bankers would be resented even if what they stated had some merit. I think it is entirely unfounded. There are so many large city banks competing for country bank business that the country banker has many opportunities to do the dictating himself.
Senator O'Gorman. You state that claim is entirely unfounded and groundless, and based on invention and ignorance?

Mr. Harris. Without any question, and the two meetings at Boston, the meeting of the country bankers and then the general meeting, where every voice indorsed the Chicago conference, would refute that.

Senator O'Gorman. A witness came before us about a week ago, who was the president of the bankers' association of the State of Wisconsin, and he stated, in substance, that everything done at the Chicago conference was the result of a program enforced upon the conference by influential bankers from the large cities.

Mr. Harris. I could not find terms strong enough to resent that.

Senator Nelson. Was not that man present at Boston?

Mr. Harris. Yes; he was one of those present at Boston. I heard him at Chicago and at Boston. I believe it was Mr. Moehlenpah. Mr. Moehlenpah does not know what he is talking about. Mr. Frame, in his own State of Wisconsin, is the only person I know of who conducted a canvass of the situation, and only found three or four bankers in the State who would come in under the House bill.

Senator O'Gorman. That is not an answer to my question. My inquiry is why those who like to indulge in inflated speech say that this agitation by the bankers who are anxious to see salutary and wise banking and currency measures adopted is the result of a conspiracy, and every time the word "conspiracy" is used by these gentlemen you can imagine it is in large capitals. What have you to say in regard to that?

Mr. Harris. If I am not misunderstood, I have to say to that charge that it seems to me that when any interest—and every interest has a right to have its day----

Senator O'Gorman (interposing). Undoubtedly.

Mr. Harris. When any interest takes action or comes down here we get the "Stop thief" or the "Wolf" cry. I read in the Post yesterday a statement credited to the chairman of this committee, in which he said:

I think this Boston meeting had for its obvious purpose to work up opposition to this bill and either to force the bankers' views or to delay or to defeat this bill.

That is not so, for one moment. The bankers, better than anybody else, know the urgent need, more important than any other legislation that can take place, for legislation on the matter of currency. They are willing to make many personal sacrifices, both financial and in principle, to get some workable bill on the books before this Congress adjourns, if possible.

Senator O'Gorman. But they tremble at the prospect of a dangerous and unscientific system being imposed upon the people of the country?

Mr. Harris. They do.

Senator O'Gorman. That is all I care to ask.

Senator Weeks. You stated you were present at both the Boston and Chicago meetings?

Mr. Harris. I was not present during the last half day at Chicago. There was a two-day session there. There has been a strong attempt on the part of some bankers—bankers like Mr. Reynolds—to go to the
extreme to prevent pronounced opposition to this bill wherever they could, and yet, as citizens, maintain their property rights, at the same time leaving out of the question the fact that they were bankers.

Mr. Aisthorpe. I attended that Chicago conference and I can assure you there was nothing anywhere at all in the shape of the influence of the large bankers. Everybody had a right to discuss the sections as they were taken up, and to discuss them fully. I want to disabuse the minds of the members of this committee of the idea that there was any preconcerted program to get certain resolutions passed.

Senator Reed. Could you tell us why it was that all the leading members of that committee happened to be men who believed in the central banks, privately owned and controlled, issuing the currency of the country. How did it happen that the leading spirits on that committee were men of that class?

Mr. Aisthorpe. I do not understand that was the way. Probably they were put on there because they are prominent bankers of the United States.

Senator Reed. Bankers generally are not committed to that theory, are they?

Mr. Aisthorpe. The general attendance there was not of that class of bankers.

Senator Reed. I say bankers generally are not committed to the theory of a central bank privately controlled and owned.

Mr. Harris. Not at all. That was not even discussed.

Senator Hitchcock. Who is your next witness, Mr. Montgomery?

Mr. Montgomery. Mr. Sexton will be our next witness.

STATEMENT OF HENRY D. SEXTON, PRESIDENT SOUTHERN ILLINOIS NATIONAL BANK, EAST ST. LOUIS, ILL.

Senator Hitchcock. Will you state your name and banking connections?

Mr. Sexton. Henry D. Sexton, president of the Southern Illinois National Bank, at East St. Louis, Ill.

Senator Hitchcock. What is the population of East St. Louis?

Mr. Sexton. About 75,000 population, a very large and growing city in that State, largely built up through industrial developments. I believe the way the town is growing we are satisfied it is going to be one of the industrial centers of the country. It is the second city now in the State of Illinois in population.

I have discussed the question, and I want to make a statement as to the position of country bankers on that question.

Under the national bank law in recent years we have had a great number of very small country banks established, particularly in southern Illinois. Now, a large part of their revenue is derived from the exchange from their checks which they give to their customers and forward to St. Louis and Chicago in payment of their bills. If they would draw their personal checks their customers in Cincinnati or Chicago will not take them and charge for the collection of that check, and they prefer to make the payment that way instead of to the merchant in the other city. In addition to that, because they get their accommodations there, a lot of them feel that your proposed method of collection or payment through the regional reserve bank is going to affect their own power.
Senator Pomerene. You mean that is general throughout the section?

Mr. Sexton. The majority of those I have spoken to feel that way about it.

Senator Pomerene. I mean general; that they send exchange rather than send individual checks?

Mr. Sexton. Naturally so, because the bank is after that little fee, and naturally they serve the man who favors them.

Senator O'Gorman. Do they appreciate the benefits that will come to them under this system?

Mr. Sexton. The banker feels that the local fellow can send his check to the merchant in the other city; he deposits it in the reserve bank, and the reserve bank pays it without cost, and he avoids that cost, and in that way he will not go to his local banker and get his exchange.

Senator Pomerene. At the same time, the other man goes and buys his exchange?

Mr. Sexton. He won't do that, then.

Senator Pomerene. You say he does it now?

Mr. Sexton. He does it now; yes.

Senator Pomerene. And the bank is out that deposit?

Mr. Sexton. We are out that fee.

Senator Pomerene. And the deposit also?

Mr. Sexton. We will always be out the deposit.

Senator Pomerene. If a check is sent from East St. Louis to Cincinnati, it takes one day to go and another day to come back, and the bank has not the use of that money.

Mr. Sexton. It would be the same with a draft. A draft is drawn upon a Cincinnati bank, and the Cincinnati bank is paying him interest until they pay it.

Senator Nelson. Say I have an account with this gentleman here, in his bank, and I want to remit to New York, and give my check to him for $1,000, on my account, and he draws a draft on New York and forwards it and charges me a moderate fee for that draft. That is the modus operandi, is it not?

Mr. Sexton. Yes, sir.

Senator Nelson. And that charge varies according to the state of exchange?

Mr. Sexton. That is right.

Senator O'Gorman. Apart from the inconvenience that the country bank may experience, do you not think this proposed change is an improvement on the existing practice?

Mr. Sexton. It is, to the larger fellows.

Senator O'Gorman. Will it not be a benefit to the people who support the bank?

Mr. Sexton. Not if the little fellow can not make money enough to allow him to continue in his business at a profit, if that profit is necessary for him to continue in business——

Senator O'Gorman (interposing). As a matter of fact, do you not think that when a banker is vitally dependent upon the income derived from this practice, that there is little excuse for this bank being in business at all?

Mr. Sexton. I would not go into business if I could the day after, but there are a lot of men in such places who will.
Senator Hitchcock. What places?
Mr. Sexton. Banks of $25,000 capital.
Senator Hitchcock. I mean the size of the town.
Mr. Sexton. The smaller towns.
Senator Hitchcock. Of about what population?
Mr. Sexton. About 1,000 people and under.
Senator Hitchcock. They need banking facilities of some kind?
Mr. Sexton. I do not think so, because personally I am selfish enough to think the less country banks there are of that kind the more in the larger cities. We do not get active accounts, we get inactive accounts in many of those localities.
Senator Hitchcock. Where would the people in such a town go if they had no bank? Would they just keep their cash and have no place of safety for it?
Mr. Sexton. Yes; if they had no bank.
Senator Hitchcock. They would have to keep it in stockings?
Mr. Sexton. Yes; I guess they would.
Senator Hitchcock. That is the practice in Europe, and that is one reason why I justify the country bank in making these charges.
Mr. Sexton. That does not apply to my bank. My bank has a capital of $150,000, and we have about $2,000,000 deposits. We are practically a suburban bank in a big city, because East St. Louis is, I might say, the manufacturing district of the city of St. Louis.
Senator Pomerene. Right across the river?
Mr. Sexton. Yes.
Senator Nelson. I think, as a rule, if a merchant keeps an account of any consequence with a local bank, and has occasion to buy a moderate-sized draft, they never charge him anything.
Mr. Sexton. That is practically the case in these places where there is only one bank.
Senator Nelson. Where they have a monopoly?
Mr. Sexton. Where a man does not interfere with another man’s profits. You will find it to be the case in a great many towns. I simply made that statement because you are endeavoring under this bill to ask these gentlemen to come in and become members of those regional reserve banks, and that is one of the objections that they are making at this time. I submit it for your consideration, as a member of this committee, and as representing those men. That is the reason for my statement.
Senator Nelson. Here is one thing I want to suggest. As Senator O’Gorman has said, this would be a great saving to the public at large. Is there not anything we could do for those banks to compensate them for this in some way, and give them some advantage that they have not now?
Mr. Sexton. I am not prepared to answer that now.
Senator Hitchcock. If they remain under the State banking system they can still continue to make their charges.
Mr. Sexton. They can make any charges they want.
Senator Shapiro. State banks would lose their customers when the national banks would clear free?
Mr. Sexton. Not in all instances. You are taking away the earning power, and it is up to you gentlemen to determine whether or not it is going to induce these men to come in. There are twice as many State banks in our section as national banks.
Senator Hitchcock. Do you recommend that the provision be changed?

Mr. Sexton. No; I do not do that. I am not prepared to say that. I do think it ought to be modified in some way so as not to destroy these little banks or to prevent them from becoming members of the regional bank.

Senator Hitchcock. What is the charge for a Chicago draft?

Mr. Montgomery. It depends upon what territory a man is located in. The average in Illinois is between 75 cents and $1 a thousand. Some make a practice of charging 10 cents an item on small items, but the average in Illinois will be from 75 cents to $1 a thousand. As it gets to the more southern points the rate is higher.

Senator O'Gorman. Has not this practice led to some exactions on a draft coming through banks that have exposed the system to severe criticism?

Mr. Montgomery. Here and there there are banks that do make excessive charges, but it is not general, and those bad features are being reached now to some extent, so that the inordinate charges do not prevail so much as they did even three or four years ago.

Senator Reed. You understand that this system will lead to the absolute taking away of the profits from exchange?

Mr. Montgomery. I am not clear as to the exact meaning of that clause.

Senator Reed. Would there not be still a considerable amount of local exchange; I mean local in the sense that it would not go to one of these large regional reserve banks, but would go directly from one bank to another, or within a radius of 100 miles?

Mr. Montgomery. The practice is—

Senator Hitchcock (interposing). Do you always sell on Chicago? You have been a banker for a number of years. Are you not a banker?

Mr. Montgomery. No; I am not a banker.

Senator Hitchcock. If I wanted a draft, of course, I might say I wanted Chicago or New York exchange, but are there not a lot of checks passing from bank to bank that would not necessarily go through the regional bank, upon which these banks would still be enabled to make a collection? That is what I am trying to get at.

Mr. Sexton. Every bank is going to shoot it into a reserve bank unless you make a clearing house out of it, so that you get that credit. Take our bank. Our bank will have to keep a good deal of money in the regional bank to take care of the checks that will flow in there that now go to the St. Louis clearing house, which we check up before 2 o'clock every day.

Senator Reed. You mean to say, then, that in the case of the notes you have this system will just simply absorb all the exchange business, by which I mean the checks. What I had in mind was whether there would not be a source of income still on checks that would be gathered in by these smaller banks, checks that would not go through this method of clearing and out of which they could still get a revenue under this bill?

Mr. Sexton. I do not see how. Suppose the customer has a check and the regional bank does not pay it, it would go back to the bank and the bank would send it to the other fellow to make a collection.
If you send it to the other fellow he makes you a charge, which you must charge your customer.

Senator Reed. Take this sort of a case, and I am asking the question because there have been a number of bankers before us who have said that if this bill passes they will lose the money they make on exchange, and the question with me is whether they would lose. I am not very familiar with the actual workings of a bank. Suppose a man in a small town, say 50 or 100 miles from your city, having a bank in his own town, was to send a check to a merchant in your town to pay a bill, and he would bring that down and deposit it in your bank. Do you think under this bill you would invariably send this check to the regional bank?

Mr. Sexton. Yes, certainly; because we get a credit there and that takes care of the checks that come in against me.

Senator Reed. You could not do that as against a nonmember bank?

Mr. Sexton. That is just the question I was going to ask this committee. I am not clear, after reading that section—and bankers I have talked with are not clear upon it—whether or not I could send a check through them on a nonmember bank.

Senator Reed. If the nonmember bank was not entitled to this benefit there would still remain to the country bank a profit on that business?

Mr. Sexton. Sure.

Senator Reed. The tendency, then, would be to turn all that kind of business he possibly could into the nonmember banks?

Mr. Sexton. I think it would. We would send them——

Senator Reed (interposing). I wish some practical banker like, yourself would think about that with reference to this bill. I would like to know if there is not a source of profit left.

Senator Shafroth. Let me ask you a question. Suppose there was a regional bank in Chicago and St. Louis, and the check was drawn on some bank in St. Louis. You would not send that to Chicago through the reserve bank, would you? You would have it cleared by the clearing house?

Mr. Sexton. The clearing house?

Senator Shafroth. In St. Louis.

Mr. Sexton. No.

Senator Shafroth. What would you do?

Mr. Sexton. I would send it to Chicago, because that is where my checks are going to come against my account.

Senator Shafroth. Notwithstanding St. Louis is just across the river, you would send it to Chicago?

Mr. Sexton. I would have to, because I have a balance there and my checks would go there. Because there is no charge on them, all the other banks would forward them there to get a credit and avoid the charge.

Senator Shafroth. Would that dissolve the clearing houses?

Mr. Sexton. It looks that to me, to a large extent.

Senator Reed. You now clear through St. Louis?

Mr. Sexton. We have to, in order to protect our customers. We are not members of the St. Louis clearing house; we can not be under their present rules, because we are outside the State, but they permit
their members to clear them through banks located as we are, and we have made a clearing arrangement with the St. Louis clearing house by which we can clear our checks.

Senator Reed. I think Senator Shafroth must be right in regard to local clearings. I can not imagine banks in Kansas City, which now meet and in two hours settle their balances for the day through their clearing house, sending those checks to St. Louis to be cleared.

Senator O'Gorman. Except for the reason suggested by the witness, that the local bank will find it necessary to keep money in the reserve bank to meet checks coming in.

Senator Reed. I know; but they can not afford to hold off their daily settlements to adjust them.

Mr. Sexton. They will not do that.

Mr. White. May I interpose a word there? I do not think this would interfere at all with the local clearing houses.

Senator Reed. I do not, either.

Mr. White. The checks between Kansas City banks would be cleared between the Kansas City banks.

Senator Shafroth. Oh, yes. But how about the Wichita and Topeka banks?

Mr. White. Those drafts and checks would go outside. I want to make this statement in reference to the number of regional reserve banks. I gather from my talks with other bankers in our neighborhood that they feel that the less regional reserve banks you have the better, realizing that there must be five or six, or something like that, covering the entire country, for this reason: That it will leave this rediscouting between the regional banks; one will not rediscount for the other. That seems to be an objection on the part of a great many, which will be removed to a great extent.

Senator Reed. I want to spend a minute on that. Let us see about that. Most bankers have said that 1 central bank would be an ideal thing—just 1 bank instead of 12. That is a combination of all these powers and all this capital into one place. Then they say if you are going to divide it, do it as little as possible; have 4 and not over 5. If you have 12, they say you have got too many, and you have weakened yourself, and yet the way we propose to tie those 12 banks together and make each mutually of help to the other is practically welding them into one system under one central control; but they object. I can not see the logic of that. It seems to me, if it is right to have a central bank with innumerable branches in the way which has been spoken of, or to have 12 regional banks, and yet to have a means by which each must aid the other, you are illogical when you say that the one central bank when it is all under one power, that is a good thing, but if you have 12 banks, each mutually helpful to the other, that is a bad thing.

Mr. Sexton. My statement is—I want to say my opinion is, you lessen the need of aid with fewer banks. You have got to take care of certain territory, because the people in the different territory need aid at different times.

Senator Reed. That is very true. Suppose you had a central bank with 12 branches in the country.

Senator Reed. Yes; or 24. Here is the heart and center—the central bank. It has a branch out here in St. Paul. If St. Paul wants
money, St. Paul, through its branch, calls on the central bank for some aid. And if you have one in New Orleans, New Orleans calls for some aid.

Mr. Sexton. Yes; I say that would be an ideal system.

Senator Reed. Now, suppose you had 12 banks with 12 separate organizations and an arrangement by which a central board could direct funds to be sent from one point to another. Has not that in it the same elements as the central bank?

Mr. Sexton. The branches are different from these regional banks, in my opinion. They would not have the same power as a central bank. It is simply to receive applications, make examinations of securities, and things of that kind. You are dividing up this power into 12 different places. My opinion is now you will need in the neighborhood of 5. And in addition to that, I want to say this: You are going to lessen the expense of it; you are going to minimize—

Senator Reed (interposing). I do not know whether you are or not.

Mr. Sexton. That is my opinion about it.

Senator Reed. The power, after all, to direct where the money goes is the same power. If you have a central bank with innumerable branches, these seven men sitting there as the board of directors say where the money shall go. If you have 12 regional banks and those regional banks have rather broad powers themselves, but this central board can direct the money to be sent from one to the other, they are doing exactly the same thing there as they would if they had a branch-bank system. Now, it seems to me that brings us down to the question whether the organization of a regional bank is a sound one, and not the question of numbers; and yet there has been constant talk about the numbers.

Senator Pomerene. This thought was presented here the other day, that there ought not to be more than a night's distance from any member bank to the regional bank in that region, because if they did need accommodations they would need them. Ought not that to be considered when you are determining the number of regional banks?

Mr. Sexton. No; for this reason: When this act goes into effect, my opinion is, it is going to restore financial confidence in this country; it is going to wipe out just that very thing you are speaking of. It is going to establish confidence in the financial situation in this country.

Senator Pomerene. I am glad to hear you say that.

Mr. Sexton. I make that at a personal statement. I do not think you are going to have the need of all these regional banks; and, in addition to that, for the very same reason I want to say to you that I believe that 5 per cent paid in with 5 per cent on call is going to give your regional reserve board all the money they will need.

Senator Reed. You think the central idea of this bill is all right, but you want to suggest changes in the way of working it out?

Mr. Sexton. I want to say this to you now. This is personal. I am, like every other banker, in favor of this currency proposition—what I might call this asset currency. But this banking system, starting with clearing houses, collecting checks, and all that sort of thing—I think the banks could arrange that among the groups much
better, and they ought to do it. There is not any question that that ought to be done. It ought to be done without any law to compel them to do it. But you are establishing banks of discount, and things of that kind.

Senator Pomerene. Are you in love with the present system of reserves we have in this country?

Mr. Sexton. Absolutely not.

Senator Shafroth. Don't you think this opportunity to go to a central bank and cash your paper in case of a run would be of inestimable advantage to every member bank?

Mr. Sexton. Not to every member bank. I will say this: You will find that unless they change a great number of their present loans, they won't have that kind of paper. They can get enough, however.

Senator Reed. Let us see how that works out——

Mr. Sexton (interposing). That can be taken care of. You can exchange paper with any bank that has it.

Senator Reed. Suppose your bank has $100,000 of absolutely good paper——

Mr. Sexton (interposing). I have good bonds——

Senator Reed (interposing). And as long as the bank over in St. Louis with which you do business has paper of the kind required, and it can go down to the regional bank and get all the money it needs, it will take care of you, won't it?

Mr. Sexton. Surely, there is no question about that.

There is one other thing I should like to say a few words about, and that is the question of savings banks. The question of savings in this bill is not understood at all. As the clause in the present bill refers to bankers, it is not well understood by the bankers. You see, they are conducting a business to-day so entirely different from that, I do not know what is going to happen to them. It is going to disturb their investments and everything of that kind. The majority of those investments are too old; they are not the kind mentioned in the bill. I would much prefer to see that eliminated from the bill. It does not, however, apply to me.

Senator Reed. Suppose the bill gave you the right to establish a savings bank upon broad and generous lines, and you were given the option to exercise it or not. You would not object to that? You are a national bank?

Mr. Sexton. Yes; sir; and I am also connected with a savings bank, which is a State bank.

Senator Reed. You do not object to the savings-bank proposition being incorporated if it is optional with you to have it or not to have it as a national bank?

Mr. Sexton. No; because it does not affect me; but how is it going to affect the man who has a savings department in his bank now?

Senator Reed. If there were broad principles laid down, as broad as they can safely be made, he would not have any objection, would he?

Mr. Sexton. Speaking of an amendment?

Senator Reed. That is what we are here for, to see whether it needs amendment.

Mr. Sexton. In my opinion it does.
Senator Reed. Is there anybody here that can give us complete information about what is necessary to put into this bill in order to make the savings-bank feature workable and safe?

Mr. Sexton. I think Judge Montgomery, the president of our State association, who is president of the largest savings bank in our State, outside of Chicago, is eminently qualified. Whether or not he is prepared to do that I do not know.

**FURTHER STATEMENT OF S. B. MONTGOMERY.**

Senator Hitchcock. Judge Montgomery, have you already been on the stand?

Mr. Montgomery. Yes, sir.

Senator Hitchcock. Senator Reed wanted to ask some questions about how the law should be amended in order to make the bill acceptable. Did you refer to that in your statement?

Mr. Montgomery. I did not make a statement at all; I handed a written statement to the chairman of the committee. I just said with reference to that that a great many small country banks have some savings. They attempt to get deposits, and they do get them, but they do not get enough to justify the segregation. I think I said that in my paper; I have forgotten now.

Senator Pomerene. Did you in your paper suggest what changes you thought should be made?

Mr. Montgomery. I suggested that the savings-bank section be left out altogether.

Senator Hitchcock. Where would that leave the national banks that now have savings departments?

Senator Nelson. It would leave them just as they are.

Mr. Montgomery. I was just about to answer that. They have been taking savings right along.

Senator Hitchcock. How do they invest them?

Mr. Montgomery. As they please.

Senator Hitchcock. There is no limit?

Mr. Montgomery. No, sir.

Senator Pomerene. The most of them carry the same reserves against their savings accounts now as they do against others.

Senator Reed. Are they not proceeding in violation of law now?

Mr. Montgomery. Ours is a State bank. There is nothing against it in our law. I have always felt that it was simply winked at.

Senator Reed. Nothing ought to be winked at in a great financial system.

Mr. Montgomery. I do not know; I may be wrong—

Senator Reed (interposing). Now let us assume that we are going to try to create a system here that will invite into it your State bank. You have a State bank, you say?

Mr. Montgomery. Yes, sir.

Senator Reed. And you have a trust department?

Mr. Montgomery. Yes, sir.

Senator Reed. And a savings department?

Mr. Montgomery. Yes, sir.

Senator Reed. Now, if we were to try and make this bill so that your bank could come in, and all similar banks in the State of Illinois,
and so that you could legitimately carry on this business under this system and a national bank could have the same privileges, what would be necessary to write into this bill to accomplish that?

Mr. Montgomery. That is a pretty hard question.

Senator Reed. That is the question we have to solve, and you people are here to help us.

Mr. Montgomery. You mean you are going to solve the problem of how to make this law so satisfactory that a State bank will come into the system?

Senator Reed. We want to make it so that all banks can come in that desire to come in.

Mr. Montgomery. That brings up all the objections that are mentioned. I mentioned, I think, seven in my paper.

Senator Reed. You mentioned objections to this bill. What I want is suggestions as to what ought to go into the bill.

Mr. Montgomery. We have a capital of $1,000,000. If we have to put up 10 per cent and subscribe another 10 per cent to this organization, it will take $100,000 from us, in the first place, and I have not yet seen anything in the bill that tells how we will ever get it back. We subscribe another 10 per cent, and I do not know whether we would have to pay that or not. We have not much regulation in our State with reference to reserves. We carry a good reserve always, and we carry a great many demand loans, so as to keep ourselves safe. But we are not now under anything like as rigid laws as we would be under this system.

Senator Reed. And therefore you would hesitate to come in?

Mr. Montgomery. We are running as we please, very much.

Senator Reed. You do not think that is a wise thing to do in a banking system? You do not think that a banker ought to be allowed to do just as he pleases?

Mr. Montgomery. I do not think I should say we are running as we please; that is too broad.

Senator Hitchcock. You are running according to your judgment?

Mr. Montgomery. We are running according to our judgment and according to the law of the State of Illinois.

Senator Reed. But that law is—

Mr. Montgomery (interposing). That is a very liberal law.

Senator Reed. I do not speak for anybody but myself, but I should like to know what suggestions the State bankers have to make by way of amendment to this bill which would enable them to come into the system with all their various departments and continue to prosper and at the same time have the system safe. Now, some of you practical gentlemen ought to be able to tell us, and if you are not prepared to do it now, Judge, I wish you would write it out in the form of suggested amendments and send it to us within the next 8 or 10 days at least.

Mr. Montgomery. Well, I should be glad to write anything I can that will help. I am as anxious to see this law made satisfactory and adopted as anybody.

Senator Shafroth. Mr. Montgomery, this amount that is called for here is identically the same as that provided by the Aldrich bill, which seemed to be very satisfactory to the bankers, was it not—10 per cent in cash on a subscription of 20 per cent?
Mr. Montgomery. I confess I do not remember. I am afraid we are trespassing on your time. Mr. White wanted to say something, I think.

STATEMENT OF WILLIAM C. WHITE, PRESIDENT ILLINOIS NATIONAL BANK, PEORIA, ILL.

Senator Hitchcock. Where do you live, Mr. White?
Mr. White. Peoria.
Senator Hitchcock. Your bank?
Mr. White. The Illinois National Bank.
Senator Hitchcock. What is your capital?
Mr. White. $200,000.
Senator Pomerene. Will you give the surplus and your deposits?
Mr. White. We have a surplus and undivided profits of $130,000 and deposits of about $2,000,000.

I just want to say a word in regard to this matter of a savings department. We have about $400,000 of savings in our savings department. We are a commercial bank. Our funds are largely loaned out to local business houses, jobbers, and manufacturers.

I think there is a matter of principle involved there that possibly you gentlemen have not thought of. I think the logical place for a man to keep his savings deposits is in a bank that furnishes money to the concern by which he is employed.

Senator Hitchcock. You do it by time certificates of deposit?
Mr. White. We have savings books and certificates of deposit both.
Senator Hitchcock. Are the savings deposits withdrawable on demand?
Mr. White. Yes.
Senator Hitchcock. Does the State law permit you to require that a notice shall be given?
Mr. White. We are a national bank. I do not know just what the State law is. We have followed the regular savings bank's books, that we can give a notice—

Senator Hitchcock (interposing). That is by individual arrangement with the depositor?
Mr. White. Yes. The idea I mean to convey is this: Say there were a thousand men working for one of the Peoria manufacturers. If we are restricted to their deposits we have to loan those possibly on real estate or some investment designated by this bill. We might possibly find it hard to take care of the manufacturer that employs these men. I think there ought to be a good deal of latitude and room for discretion on the part of the bank officers in loaning those funds and not just be restricted to some narrow investment.

Senator Reed. There ought to be some restriction, ought there not, to insure safety?
Mr. White. Possibly some restriction, but I would not know what percentage to say, or anything of that sort.
Senator Reed. You recognize the fact that there are two things every banker has to consider, I take it; one is, he wants to make money, and the other is that his bank must be regarded as sound and be kept sound in order for him to be successful in making money.
Mr. White. That is very essential.
Senator Reed. And the whole system, as a system, must be protected so that the confidence of the people will not be shaken in the system and thus a run produced.

Mr. White. It is largely a matter of confidence.

Senator Reed. Taking these two things into consideration, what suggestions have you to make as to amendments to this bill which will make it a better bill along those lines?

Mr. White. Well, I really think the matter of investment of savings funds ought to be left largely to the executive officers of the banks.

Senator Hitchcock. What do you mean by "largely"?

Mr. White. Altogether, in fact.

Senator Hitchcock. Altogether. What reserve do you think ought to be kept against those deposits?

Senator Nelson. Now, Mr. Chairman [Senator Hitchcock], if you will allow me, I want to see the witness on that point. I think I can clear the matter up. As a matter of fact, these national banks are not doing a savings-bank business in the full sense of the term. The only part of the savings-bank business they do is to pay interest on time deposits of their depositors, either by book or by certificate of deposit. When it comes to the matter of reserves and the investment of this money it is not segregated from the other moneys of the bank, but is subject to all the conditions of the national-bank law. They can no more invest those savings deposits in other securities than they can their commercial deposits. It is only to that extent the national banks have been doing a savings business. It has grown up of itself. Depositors come in and say, "We want to deposit this and we want to get interest on it." This interest is paid either on certificates of deposit or upon books, as you say. After the money comes in it is kept with the other money of the bank, and is invested in just the same manner as its other money. It is only to that extent they are doing a savings business. Is not that correct?

Mr. White. That is right.

Senator Reed. I understand, Senator, that this bill proposes to legalize that form of business, and, secondly, to enlarge it and to make it a true savings-bank department, and give it the power to take the money not only on time deposits but give them whatever other advantages there are.

Senator Nelson. The point here is, Senator Reed, that the bill proposes to create a full-fledged savings bank, and the limitations under that are distinguished from the other. In the first place, they only require a reserve of 5 per cent. In the next place, they can invest the money they get in almost any kind of security—in stocks and bonds, real-estate mortgages, and permanent investments—instead of using it for commercial and trade purposes. That is the trouble. You can see in the small country town how difficult it is to keep up such an institution as a part of a national bank.

Senator Hitchcock. Now, I would like to ask the witness this question: Suppose they have the alternative—suppose the law permitted you to have a savings-bank department on a reserve of only 5 per cent, but limited your investment strictly to savings-bank business. Suppose it also permitted you to do a savings-bank business on the present commercial basis that you are now doing it on, provided you kept the legal reserve.
Which alternative would you take?
Mr. White. I would take the one allowing us to make the investments in a commercial way.

Senator Hitchcock. Then what you object to is being compelled to go into the savings investment, practically?
Mr. White. Yes; to segregate it as a separate fund.

Senator Hitchcock. Rather than do that, you would prefer to keep a larger reserve?
Mr. White. To keep a larger reserve; yes.

Senator Pomerene. That is due, I take it, to the fact that it is what your community requires?
Mr. White. That is the commercial business generally which the banks are doing.

Senator Reed. Then you would be content if this bill provided, in express terms, that any national bank could receive time deposits and pay interest thereon, provided further it may, if it so desires, establish a savings-bank department, in which event it shall have certain rights and privileges but shall not have to keep its funds segregated.

Mr. White. Yes; without having to segregate its funds.

Senator Reed. And you would go on as you now are. But if you undertake to establish a separate department and have an opportunity to do all of the savings-bank business, then you recognize the justice of the savings-department provision?
Mr. White. Oh, yes.

Senator Reed. So, if it were left optional, and you had all the rights you have been heretofore exercising and had it legalized, you would be content?
Mr. White. We would be content.

Senator Nelson. You would prefer that system?
Mr. White. Yes; if you do not segregate the funds.

Senator Hitchcock. Do you call it a savings department?
Mr. White. A savings department of the national bank.

Senator Hitchcock. Is there any value to you in calling it a savings department?

Mr. White. Yes.

Senator Hitchcock. Would you still want that privilege and maintain a commercial reserve?

Mr. White. Yes.

Senator Pomerene. It attracts the small depositor?

Mr. White. Yes.

Senator Bristow. Do you not think it would be desirable to have permission to lend a certain percentage of those funds on real estate, if you desired?

Mr. White. I think it would be a good provision for national banks. That is what we have been waiting for all these years, to have some provision for making loans on real estate.

Senator Nelson. And measured by the percentage that the time deposits run to the percentage of commercial, would not that be fairer?

Mr. White. Yes; that would be fairer. I think it ought to be left largely in the discretion of the bank officials.

Mr. Harris. Mr. Chairman, may I say just a word on that question? It seems to me that the purposed permitting of these savings
departments is another thing that helps to defeat the purpose you want to accomplish. In other words, the whole purpose is to mobilize everything you can. The minute you begin to segregate, then you help to defeat the purpose you have in mind.

Another thought is this, that this is a currency measure, and the provision for making 12 months' farm loans represents a savings-bank feature.

Would it not be expedient to consider leaving both of these features out of the bill and then go ahead and modify the national-bank act, and, as I understand you will perhaps do, later give the banks all the powers you think they ought to have? But let this bill stand purely as a currency measure without the savings measure or anything of that kind. The national-bank act must be modernized, because we will not have any national banks in this country unless it is, aside from this bill, one way or the other.

Senator Reed. In view of the national banks saying they do not want to come into this system, anyway, what some of us have in mind is trying to make a bill that will take care of the national banks, the State banks, and the loan and trust companies, and the idea now is to create a system which will. I do not much like the idea of dividing the load, because sometimes it is hard to get the load through Congress even if you take it there at once and have everybody pushing.

Mr. Harris. The fact that most of the national banks have a feeling that they will have to segregate their savings capital might be another reason why they would not want to come in.

Senator Reed. That is just why I suggested leaving that in the alternative in the bill.

Senator Nelson. I want to add just one word, and that is this: The deposits of these small country banks of $25,000, etc., in farming communities—practically one-half to two-thirds of their deposits are time deposits paying interest. They are practically savings deposits. Now, I live in a town where we have three banks, one of $60,000, one of $100,000 capital, both national banks, and a State bank with $50,000 capital. The average amount of deposits of those three banks is about $1,000,000, and one-half to two-thirds of the deposits in both the National and State banks are time deposits—deposits of the farmers, on which they get interest. They are practically savings deposits. But when the moneys come into the bank they are treated like all the other funds of the bank and used for the same purposes. Is not that practically true?

Mr. White. That is the condition.

Senator Nelson. And if you segregate those savings deposits in the little country banks the commercial end of it will be the small end, and there will not be anything left of it.

Mr. Montgomery. There is a provision here that the capital thus set apart for uses of the savings department aforesaid shall in no case be less than $15,000, or than a sum equal to 20 per cent of the paid-up capital and surplus of the said national bank. Now, I do not know exactly what that means. Does it mean 20 per cent of the capital of $25,000 banks?

Senator Hitchcock. Capital and surplus, it says.

Mr. Montgomery. Assume it has no surplus, for the sake of the argument.
Senator Reed. That language is very vague and ought to be changed.

Mr. White. It is very vague, and I do not know what it means. I do not know whether it means $5,000 or $15,000.

Senator Hitchcock. Have you any others who desire to make statements?

Mr. Montgomery. Mr. Crebs is the only other speaker.

Senator Hitchcock. Please state your name and place of business.

STATEMENT OF JOHN N. CREBS, OF CARMI, ILL.

The Chairman. How large is Carmi?

Mr. Crebs. It is a town of 3,000 inhabitants.

Senator Hitchcock. What bank are you connected with?

Mr. Crebs. The national bank.

Senator Hitchcock. And what is the size of your bank?

Mr. Crebs. $40,000 capital.

Senator Hitchcock. Is it the only national bank there?

Mr. Crebs. No; there is the First National.

Senator Shafroth. What are the deposits and surplus?

Mr. Crebs. Surplus $10,000 and deposits now about $200,000.

Senator Hitchcock. Proceed.

Mr. Crebs. Judge Montgomery asked me to say a word about the amount that the national banks were expected to contribute toward the capital stock of the reserve banks. I told him I believed I was better able to speak on that than any other subject, possibly because it is the smallest part of the whole matter.

I have heard, in talking with those I have met in our section, more on this point than any other, and I am convinced, in my own mind, that it would be better for the banks—I do not want to put it that we are only interested in what is better for the banks, but I can not help but believe you would get more banks interested if the amount required was 10 per cent instead of 20.

Senator Nelson. The subscription?

Mr. Crebs. Yes; the subscription.

Senator Nelson. Five cash and five subject to call?

Mr. Crebs. Yes.

Senator Hitchcock. I want to ask you a question there: Suppose the small country banks were permitted to pay their part of the capital in 2 per cent United States bonds instead of cash, and retire their currency to that extent?

Mr. Crebs. On first thought, it seems to me, as that now stands under the present arrangement, they might fall over themselves to get in. [Laughter.]

Senator Nelson. I guess they would.

Senator Reed. Now, let me ask you a question. Suppose the bill was amended so that the forced retirement of national-bank notes was stricken out and suppose the tax upon the national-bank circulation was cut down, then you would want to hang on to those bonds, would you not?

Mr. Crebs. Well, I can not answer that, because I am not familiar enough with the situation. It is not a big enough matter with us.

Senator Hitchcock. How many United States bonds have you for circulation purposes?
Mr. Crebs. $40,000.
Senator Hitchcock. The full amount of your capital?
Mr. Crebs. Yes.
Senator Hitchcock. You issue the full amount of your currency, then, I suppose?
Mr. Crebs. Yes.
Senator Reed. How much tax did you pay on those last year; do you remember?
Mr. Crebs. No, sir; I do not remember.
Senator Shafroth. $200.
Mr. Crebs. I presume it would be.
Senator Hitchcock. You think, then, that more banks would want to come in if they were permitted to subscribe 10 per cent of their capital?
Mr. Crebs. I think so, for the reason the small banks think it is taking too much of their capital away from them to enable them to feel satisfied in coming into the regional bank.
Senator Pomerene. How old is your bank?
Mr. Crebs. About 15 years.
Senator Pomerene. What advantages do you have now in being a national bank from what you would have if you surrendered your charter and reincorporated under the State laws?
Mr. Crebs. The main advantage I see is the fact of being a national bank—the name.
Senator Nelson. And the circulation privilege at present?
Mr. Crebs. I can not feel myself that there is for the individual bank an advantage in that. It is an advantage in a general way to the many banks collectively, but to the individual small bank I do not see where it is an advantage, except raising the total amount of the figures of the bank for advertising purposes.
Senator Bristow. You think you do not make much money on your circulation?
Mr. Crebs. I do not know how we do.
Senator Nelson. What rate of interest do you get where you are?
Mr. Crebs. Six per cent is the prevailing rate.
Senator Nelson. You would have more advantages under the State law, then—that is, if you became a State bank?
Mr. Crebs. The stronger the bank the more the advantage it would be, Senator, because of the privilege of loaning as a State bank that you do not enjoy as a national bank.
Senator Bristow. Do you have all your funds in demand there that you can supply?
Mr. Crebs. Indeed we do, always.
Senator Nelson. What class of people are your borrowers?
Mr. Crebs. Farmers, altogether. It is an agricultural district.
Senator Nelson. Your loans are on farm paper?
Mr. Crebs. Yes; altogether.
Senator Bristow. What time do you usually make your notes?
Mr. Crebs. We try to make them on short time—90 days; but with us it makes no difference. When we loan our money we have to wait until the farmer gets ready to pay it back.
Senator Bristow. You renew your loans?
Mr. Crebs. Yes.
Senator Reed. How would Mr. Farmer like it for you to take his note and discount it with another bank, and when he comes in to settle for you to say it is in another bank?

Mr. Crebs. I presume you have reference to the reserve bank. Conditions are changing so rapidly that it would make no difference whatever.

Senator Reed. Provided you took care of his loan when he wanted to renew it?

Mr. Crebs. Yes.

Senator Reed. What dividend did you make last year—what do you generally make?

Mr. Crebs. We generally make about 10 per cent.

Senator Reed. Are you laying aside any surplus?

Mr. Crebs. We organized our bank for $25,000, and have accumulated $10,000 and had an extra $15,000 surplus earnings.

Senator Hitchcock. In how many years?

Mr. Crebs. Just since the act enabling banks to organize at $25,000.

Senator Reed. You have $25,000 capital now?

Mr. Crebs. No; $40,000.

Senator Reed. And you made the extra $15,000 out of earnings, did you?

Mr. Crebs. Yes. I do not think we should take this bank of mine as a general rule, however, because it was a family affair. We have made good earnings and paid a good deal out for clerk hire.

Senator Reed. You pay pretty liberal salaries to yourselves?

Mr. Crebs. Well; no, sir—

Senator Reed (interposing). There is no objection to that. I am just trying to get at the facts. It being a sort of a family affair, you in that respect have not gotten down to cold business, but have a family consideration introduced into it.

Mr. Crebs. That is true.

Senator Reed. So that your bank has done pretty well?

Mr. Crebs. It has, yes; and will continue to do well, too, we expect.

Senator Reed. Did you suspend payments in 1907 for the time being—limit the payments?

Mr. Crebs. No, sir.

Senator Reed. You went right along?

Mr. Crebs. Yes.

Senator Reed. I find a great many of the smaller banks did that. They did in my county. The big fellow is the man you are afraid of, are you not, in this equation?

Mr. Crebs. I am not afraid of him. I think it is all right.

Senator Nelson. You do not want to assume, Senator Reed, that we little fellows in the country are afraid of the big fellows of the city?

Senator Reed. I mean afraid he will make the disturbance, make the trouble. I do not mean afraid of them personally.

Mr. Crebs. No: I am not afraid of them.

Senator Reed. But really, seriously speaking, you recognize there is a danger from our banking system at present that ought to be obviated, coming from various causes and culminating in a shortage of currency at times through business fear?
Mr. Crebs. Yes.
Senator Reed. And feel that that ought to be obviated?
Mr. Crebs. Indeed, I do. I gladly welcome the prospect we have before us.
Senator Nelson. Could you get your reserve in 1907? Could you draw on other banks freely?
Mr. Crebs. We were advised we could in the event we needed it.
Senator Reed. You deposit principally in Chicago, I suppose?
Mr. Crebs. Chicago and St. Louis.
Senator Hitchcock. If there are no further questions, you may be excused.
Mr. Montgomery. Gentlemen, we want to thank you for our treatment here.
Senator Nelson. We want to thank you for coming; you have helped the committee.
Senator Hitchcock. The committee will now stand adjourned until Monday morning at 11 o'clock.
(Thereupon, at 1 o'clock p.m., the committee adjourned until Monday, October 13, 1913, at 11 o'clock a.m.)

MONDAY, OCTOBER 13, 1913.
COMMITTEE ON BANKING AND CURRENCY,
UNITED STATES SENATE,
WASHINGTON, D. C.

The committee assembled at 11 o'clock a.m.
Present: Senators Owen (chairman), Hitchcock, O'Gorman, Reed, Pomerene, Shafroth, Hollis, Nelson, Bristow, and Weeks.
The Chairman. Mr. Scudder, we will give you an opportunity to appear now.

STATEMENT OF S. D. SCUDDER, VICE PRESIDENT RICHMOND
TRUST & SAVINGS CO., RICHMOND, VA.

Mr. Scudder. Mr. Chairman and Senators, I had the pleasure and privilege of attending the country bankers' conference on Monday at Boston, and I believe that their action was most sane and safe.
Senator Reed. Just a moment, Mr. Scudder.
Senator O'Gorman. Will you state your residence, occupation, and the bank with which you are connected?
Mr. Scudder. My name is S. D. Scudder, vice president Richmond Trust & Savings Co., Richmond, Va.
Senator O'Gorman. Have you been connected with that bank for many years?
Mr. Scudder. I have been in the banking business about 20 years.
Senator O'Gorman. What is the capital of your bank?
Mr. Scudder. $1,000,000.
Senator O'Gorman. And surplus?
Mr. Scudder. We have only recently established. We have about $50,000 surplus. We established the bank about eight months ago.
Senator Weeks. You were selected as chairman of this delegation?
Mr. Scudder. No, sir. Senator Owen simply asked me to come before you, having been the only one who stood up and voted "no" in the convention at Boston on the resolutions of the committee.
Senator Weeks. You are not representing the—

Mr. Scudder (interposing). No; I am not representing the country bankers. The rule established at the country bankers' conference on Monday excluded any participation on my part, because the capital of our bank is $1,000,000, and the rule established or promulgated by the chairman of that conference was that no bank having over $250,000 should have any say before the country bankers' conference.

Senator Reed. How long have you been in the banking business yourself?

Mr. Scudder. Between 20 and 25 years.

Senator Reed. Before you became connected with this bank what class of bank were you with?

Mr. Scudder. My first job was in the Bank of Montreal. Although an American, I had the privilege of being in the Bank of Montreal, Canada, and from there I went to Minnesota and established a little bank.

Senator Nelson. At what place?

Mr. Scudder. At Sleepy Eye, Minn.—the State Bank at Sleepy Eye.

Senator Reed. I didn't suppose there was any such town in Minnesota.

Mr. Scudder. Yes; a good, vigorous town.

Senator Nelson. It is a good, lively town.

The Chairman. I think we had better come to the point.

Mr. Scudder. I was simply answering the question.

The Chairman. I know that; I was admonishing the committee as well as the witness.

Senator O'Gorman. I do not think it is fair to say, Mr. Chairman, that time is being wasted. The Senator from Missouri asked a question that I think is very pertinent and enables us to place an appropriate value on the views of this witness. I think it is well for us to allow him to continue his experience in Sleepy Eye.

Senator Weeks. It seems to me anything that would dispel an illusion as to the character of Sleepy Eye had better be given. [Laughter.]

Senator Nelson. It is a good, lively town of 2,500 people.

Senator O'Gorman. What were your activities after you left that place?

Mr. Scudder. My health became poor and I had to go to Texas. I was given up by the doctors. I went to Texas and became a rough rider. I got in the mortgage-banking business, representing the Scottish-American Mortgage Co., of Edinburgh, for the State of Texas. I loaned a great deal of money throughout Texas on ranches and farms for the Scottish-American Mortgage Co. I also got in the insurance business, and was appointed sole agent of the Scottish-American Mortgage Co. and the manager for Texas of the Germania Fire Insurance Co., of New York. In a few years they added other territory, so that I finally became their manager for the Southern States, with headquarters at New Orleans. After that they moved me to New York and I managed the Southern States for the Germania Fire Insurance Co. from New York. An offer then came to me from the Trust Co. of America, then the North American Trust Co., to become its treasurer.
Senator O'Gorman. When was that?
Mr. Scudder. In 1900. The North American Trust Co.
Senator Nelson. Of New York?
Mr. Scudder. Of New York.
In 1904, I think it was, the Trust Co. of America amalgamated with the North American Trust Co. and I was elected the treasurer of the amalgamated company. I served as treasurer for the Trust Co. of America something like five or six years, and then became interested in a little bank called the Jefferson Bank of New York. That was merged with the Century Bank. While vice president of the Century Bank I was called to Richmond and undertook the formation and management of the Richmond Trust Co.
Senator O'Gorman. You were connected with the Century Bank at One hundred and fourth Street and Broadway?
Mr. Scudder. Yes, sir; I was vice president of that bank.
It was at the general convention of the Boston bankers that I became the insurgent. I will read you a short synopsis of the reason for my vote there.
I am in sympathy with some of the suggestions made by the association's currency commission and believe they would be adopted by the administration if presented in the spirit of fairness and real helpfulness. But I was not willing to lend myself to any action that will cut the very heart out of the bill now before Congress and thus destroy the honest efforts which are being made in Washington to reform our financial system. I refer particularly to the entire change asked for by the bankers' committee as to the proposed note issue. When all is said and done, the whole question now really resolves itself into whether this Government shall issue and control the currency or whether the banks shall do it. Please forget for a moment the question as to whether it shall be a Federal reserve bank, with a main institution located at Washington, on the idea that this "headquarters institution," shall serve only the 5, 7, or 12 "artery Federal banks" throughout the country, and not have any direct dealings whatever with the local banks or the general public, or whether it will be the establishment of 5, 7, or 12 Federal banks, without any "headquarters bank," but with simply a controlling "Federal board" in Washington. There really is very little difference between these two plans, although I am inclined to believe the former would prove the more practical.
A condition and not a theory confronts us, and we as bankers are blind if we do not reckon with it. The same condition here as it is carried on in Canada and European countries makes it also impossible to seriously consider any permanent currency issue by our banks unless such issue is practically guaranteed and entirely controlled by our Government, as is the case at present. In Canada seven or eight large banks do all the business, each having its branches scattered all over that country. Is there any community, large or small, in the United States which would support such a system? You know very well that any "branch" of the largest bank in New York city would find itself outwitted by competition at every turn by an independent local banker or bank in any given spot in the United States. If you omit that part of the committee's report referring to the note issue, which the committee desires the banks to undertake instead of
the Government, you will stand a good chance to be heard at Wash­
ington regarding the other recommendations submitted by the com-
mittee; but if you leave it in the administration—and remember the
people are back of this administration—will understand that the gage
of battle has been cast and your action may result in producing a
more drastic measure than should be passed.

"Come, let us reason together" should be the slogan of this con­
vention, and not "Come on and fight." We are partners in the great
business of this country, and the only way any partnership can ever
permanently succeed is when both sides are conciliatory and willing
to give and take. In adopting the entire report of the bankers' cur­
rency committee we will place ourselves in the same category as the
man who wanted to argue religion, but who started out with the
hypothesis that there was no God. There can be no arguing with
such a man and there will be no arguing with us if you demand what
the people have said they will not have. The people of this country
have, through their representatives, settled the two fundamental
principles of currency reform. In no uncertain voice have they
stated, first, that they shall be no central bank in the United States
governed by the bankers themselves, and, second, that the Govern­
ment shall make the note issue. Even if you do not agree with my
argument that we can not do as Canada and other foreign countries
do in respect to our note issues, wouldn't it be wise to take our cue
from what we know to be the sentiment of the people of the United
States and act diplomatically at this time? Why should we commit
an unfriendly act against the people? To do so just at this psycho­
logical moment will put us out of the line of consideration. We
bankers represent the investors of bank stocks; but the Government
at Washington represents the people of this country who have cre­
ated the investor. If the people want their Government to issue
the currency, the investor should bow to this decision and cooperate
to the end that the past friendly relations may continue and redound
to mutual advantage.

I shall be glad to answer any questions, Senator.

Senator Hitchcock. You think the Government should issue cur­
rency. Why should not that currency be issued direct to individual
banks entitled to it rather than create this great machinery which is
going to revolutionize our banking system?

Mr. Scudder. Because I believe, Senator, that if the banks issued
the currency, even though the Government controlled it through a
Federal board, that a condition is more likely conceivable—an ad­
verse condition—against that currency than if the Government issued
it. I for one would rather have the obligation of all of the people
than have the obligation of part of the people. And if the banks
issued the currency it would be an obligation of part of the people,
no matter how strong the bank may be nor by whom controlled.

Senator Hitchcock. I think you misunderstood me. I say if the
Government of the United States issued the currency——

Mr. Scudder (interposing). As its own obligation?

Senator Hitchcock. Yes. Why should it not issue it direct to in­
dividual banks where they need it and when they need it instead of
creating all this machinery which is going to revolutionize our bank­
ing system?
Mr. Scudder. I have no objection to your plan if it is the Government's obligation.

Senator Hitchcock. Now, then, I understand you advocate Government obligation?

Mr. Scudder. I do.

Senator Hitchcock. If the Government under any system is to issue its obligations so as to wipe out $700,000,000 of national-bank notes, and had in addition some elastic currency, the total of which may amount to a billion dollars——

Mr. Scudder (interposing). Emergency currency?

Senator Hitchcock. Yes. Do you think it is safe for the Government to do that without providing a reserve fund in the Treasury to meet any possible demand?

Mr. Scudder. No; I should say a reserve fund is absolutely necessary.

Senator Hitchcock. There is no reserve fund provided for in this bill.

Mr. Scudder. I think there ought to be a reserve fund.

Senator Hitchcock. Then, you criticize it on that account?

Mr. Scudder. Yes, sir.

Senator Nelson. Suppose the Government were to issue this currency as suggested by Senator Hitchcock, what would become of all these bank reserves? How would they be gathered together and utilized for the benefit of the system? Could that be done under the Government?

Mr. Scudder. Yes, sir; that is all provided for in the bill.

Senator Nelson. It is? I don't so understand it. It is the banks that are to do this——

Mr. Scudder (interposing). No; but it is the banks—as I understand the Senator's question, the Government working through the banks under this system.

Senator Hitchcock. No.

Senator Nelson. No. The Senator's question was to do away with the banks; have the Government issue the currency direct without the intervention of the banks.

Mr. Scudder. And without having the system of Federal bank reserves?

Senator Hitchcock. Without all that machinery.

Mr. Scudder. I misunderstood you, then.

Senator Hitchcock. Will you state why you think that is not desirable or possible?

Mr. Scudder. You have to have a banking system; you have to have a method through which you can reach all the people in all the sections of the country.

Senator Hitchcock. Well, could you not do that much better by 50 subtreasuries than you can possibly do it by 12 or 3 or 5 regional banks?

Mr. Scudder. The question had not occurred to me. I had not given it a thought. You mean abolish entirely the system of reserve banks?

Senator Hitchcock. Don't abolish anything; you haven't created it yet.

Mr. Scudder. I mean the principle.
Senator Hitchcock. Drop that revolutionary idea and extend the operations of the Treasury through 40 additional subtreasuries at which the individual bank could apply for a limited amount of currency when it needs it, upon the deposit of security, giving the Government also a first lien upon all of the assets of the individual bank.

Mr. Scudder. Well, that is a new thought to me.

Senator Hitchcock. That allows the banks to have all their reserves; it takes no capital away from any of them, and gives them this Treasury facility in addition—

Mr. Scudder. With a proper reserve?

Senator Hitchcock. With the Government providing a reserve procured by the sale of bonds, the banks to pay a rate of interest which will much more than pay the interest on the bonds, and in addition will pile up a fund for, possibly, the protection against losses, or possibly for the guarantee of bank deposits.

Mr. Scudder. I would not care to offhand give an opinion upon that. I am reminded of what Jefferson said. Jefferson believed that the people would always take the obligations of the Government. You remember he makes the remark that in times of great distress or great national disaster it will be found that the simple Treasury notes will be accepted by the people on faith.

Senator O'Gorman. That is part of the plan suggested by Senator Hitchcock. You are asked now your judgment on it, and I understand you have not any opinion to express?

Mr. Scudder. I have not, except the general opinion that the people would accept such an issue. I have not had time enough to think about the general working of such a plan.

Senator Nelson. What are the fundamental and radical things that are sought to be accomplished by this legislation? Have you any idea what they are?

Mr. Scudder. I think the mobilization of the reserves of the country and the utilization of those reserves, especially in times of panic, and, secondly—well, I should say general currency reform would cover what is in that.

Senator Nelson. How could the Government of the United States, unless it went into the banking business to some extent, gather together the reserves and utilize them in the manner you indicate?

Mr. Scudder. In the manner that Senator Hitchcock indicated?

Senator Nelson. No; in the outline proposed in the bill.

Mr. Scudder. I consider that the present bill before Congress covers entirely the question of the mobilization of the reserves of the country.

Senator Nelson. Could the Government do that business without, to some extent, going into the banking business?

Mr. Scudder. I should not say so.

Senator Nelson. Then, if you leave this matter to the Government, it would only leave it with the naked power to issue currency and then supply gold reserves?

Mr. Scudder. That is Senator Hitchcock's suggestion.

Senator Reed. Let me suggest to you this thought—and I do not know that you are prepared to speak upon it now. I have heard a good deal here about the mobilization of reserves. It is one of these phrases that sound well, and it implies that there is no use now made
of the reserves of the bank. This bill provides for a bank holding in
its own vaults a certain portion of its reserves, the balance ultimately
to go into the reserve bank. Of course, every bank under any sys-
tem will have some reserve that it does not invade. Now, is it not a
fact that these reserves which are now redeposited in other banks are
utilized every day by the banks almost to the same extent that they
would utilize their ordinary balances deposited with other banks?

Mr. Scudder. The great trouble with the reserves of this country
is that when they are needed they are not available, because they
are pyramided; they are piled up.

Senator Reed. I understand, but are they not now utilized day by
day by the banks in this way: You are required, we will say, to
have a reserve of $200,000, and you have $100,000 in your vaults and
$100,000 deposited in New York. As a matter of fact, if you were
not required to keep any reserve at all you would have to keep about
that same $100,000 in New York for the purpose of doing business,
would you not?

Mr. Scudder. Perhaps not to the extent that is now required. I
think the requirements now are much too high.

Senator Reed. Would not the banks be required to keep substan-
tially as much in New York if there were no reserve requirement
as they do now?

Mr. Scudder. I should not think as much; no. I think our insti-
tution keeps more in New York than it would keep if it were not
required to keep these large reserves.

Senator Reed. But you are a State bank. The Federal law does
not make you keep anything in New York.

Mr. Scudder. No; except only the general feeling—

Senator Reed (interposing). And the State law does not require
you to keep anything in New York?

Mr. Scudder. No; it does not.

Senator Reed. Then it is entirely voluntary on your part?

Mr. Scudder. I know it is, but it is regulated by the feeling of
others and what others do. Naturally, I can not publish a statement
of my institution and be below the others in my reserve. I should
be discredited at once if I should do so.

I say that more than is necessary is required now under the pres-
ent reserve system of the country, considering the system we have.
Considering the system we have, I think we have a proper reserve
requirement, but I believe there is where this bill is going to bring
more relief to this country.

Senator Reed. By cutting down this reserve?

Mr. Scudder. By cutting down the reserve and making it possible
to utilize it.

Senator Reed. I am just raising the question whether you do not
utilize it. Now, there have been one or two bankers here who have
frankly stated that they kept their reserves in New York, Chicago,
and St. Louis, and that they maintained that reserve, and yet they
use it day by day, turning it over every few days.

Senator Weeks. As frequently as every 48 hours.

Senator Reed. I just suggest that to you.

Senator Weeks. Mr. Scudder, you are treating this question of the
issuing of circulation as a practical proposition rather than an eco-

onomic proposition, are you not?
Mr. Scudder. No; I am trying to look at it from the economic standpoint as well.

Senator Weeks. Then you believe that as an economic proposition the Government should issue circulation, do you?

Mr. Scudder. Under this bill; yes, sir.

Senator Weeks. You seem to criticize the convention in Boston for having advocated something else. What this committee wants is for the convention in Boston and all the witnesses to state their criticisms or approbation just exactly as they feel, and if the convention in Boston believed that it was economically sound and wise to issue bank notes instead of Government notes it followed exactly the right course in saying so. It is for this committee to decide whether that course is practical and wise.

Mr. Scudder. Surely.

Senator Weeks. But we need the opinion of everybody, and all kinds of opinions, and then we will take that up and try to get it into shape in the form of a practicable bill. So I do not think the convention in Boston is to be criticized because it seemed to pass resolutions which are opposed to what some one wants—the administration or anybody else.

Mr. Scudder. Oh, no; I was simply explaining my vote——

Senator Weeks. Your views?

Mr. Scudder. And my views.

The Chairman. The Chair wishes to remind the committee that we have a large number of gentlemen who expect to be heard to-day.

Senator Weeks. Mr. Chairman, if the committee did not expect to ask this witness questions, he ought not to have been put on, because frequently we get a great deal more out of the questions we ask than from the statements of the witness himself.

The Chairman. The Chair has discharged his duty to the committee when he reminds the committee of the facts.

Senator Hitchcock. Are the members of this committee able to stay over until to-morrow?

Senator Weeks. This gentleman is not a member of the committee. Here are a large number of gentlemen who have come here as a committee to appear before the Senate committee. They were put down to be heard this morning.

The Chairman. The gentleman was allotted 10 minutes, he having said he could finish in 10 minutes, and now he has used a half hour. I merely remind the committee of the facts.

Senator Weeks. You know, Mr. Chairman, perfectly well that no witness can get through until the members of the committee get through asking questions.

The Chairman. And they will not get through until they are reminded of the exigencies of the situation, which the Chair is trying to do.

Senator Bristow. I should like to know whether I understand the witness correctly or not. I understood you, Mr. Scudder, in your written statement to say that if we had a central bank governed by the same rules that these regional banks are to be governed by, with money issued by the Government and the bank controlled by the Government, as it will be under this bill, and if that Government bank had branches, that would be a better system than to have the various heads, such as the regional bank——
Mr. Scudder (interposing). I said that in following out the practical workings of the bill now before Congress instead of having a simple board at Washington if the Federal board were a part of the system it would be more practicable.

Senator Brisrow. If this Federal board were in control of a bank located here, and these 12 branches of the bank, it would be a more practicable system?

Mr. Scudder. I do not know that you would call them branches. They would all be on an equal footing, only that the headquarters at Washington would be the controlling interest. It would have the controlling board located at Washington.

Senator Brisrow. Of course, they could not be on an equal footing with the controlling board at Washington any more than the controlling board of a regional bank could be on an equal footing with them. Of course, that would not be practicable, and the controlling board at Washington would not have authority over it. The impression I got from your statement was that if we could have a central board in control of the central bank here, and let the reserves be mobilized under the control of that one institution and then scattered through the country when required, through its agencies it would be a more practicable system.

Mr. Scudder. I am inclined to believe it would.

Senator Shafroth. The three benefits, that I understand you believe this bill will confer on banks, will be the lowering of the reserve requirement; the mobilization of the reserves in some bank which is close to the individual banks that join the system; and, third, the right to take 30, 60, and 90 day paper to this bank and have currency issued upon the same?

Mr. Scudder. Yes, sir.

Senator O'Gorman. I did not understand the witness to allude to that before.

Senator Shafroth. He did; yes.

Senator Weeks. Are you in favor of the bill as it passed the House?

Mr. Scudder. Yes, sir; with certain amendments that would not destroy the underlying principle.

Senator Weeks. What amendments do you suggest?

Mr. Scudder. Well, I should say I believe the capitalization required from the different banks is a little high. I believe that 6 per cent of the capital and surplus would be a better plan than 20 per cent of the capital.

Senator O'Gorman. Do you think it would be possible to get the required capital from each regional bank if you had the stock requirement fixed at 6 per cent instead of 20?

Mr. Scudder. I have not figured it out by districts. That is a matter to be figured. It figures out in the whole United States, I believe, all right. But you have to take each district, and you do not know where the districts are.

Senator O'Gorman. You have not made that calculation?

Mr. Scudder. No; it is impossible, because you do not know where the districts are.
I believe that 6 per cent of the earnings would be small enough instead of 5. I think it is reasonable, and I think the people would support such a proposition.

I think in the clause which reads:

The manager of the Federal reserve board, subject to the supervision of the Secretary of the Treasury and Federal reserve board, shall be the active executive officer of the Federal reserve board.

I suppose that would probably mean the comptroller in the Secretary's department.

The Chairman. The suggestion has been made to the Chair that the majority of these gentlemen desire to leave this afternoon. Does the committee wish to continue with this witness?

Senator O'Gorman. I think we ought to let this witness take as much time as we need to ascertain what his views are regarding this legislation, and when he gets through we will hear some representative of the visiting bankers from Boston and ascertain what their program is. Personally I should have preferred to have listened to a representative of the visiting bankers from Boston first.

Mr. Scudder. May I make a suggestion, Mr. Chairman? I am perfectly willing to come back to the committee later if they wish.

Senator O'Gorman. I move that we conclude the examination of the witness now before the committee.

(The motion was agreed to.)

The Chairman. The witness will proceed.

Senator Nelson. You had better go on and state the other curative propositions which you have. In what other respects would you improve the bill?

Mr. Scudder. In regard to the exchange proposition, it seems to me that the country bankers have asked a reasonable consideration of this proposition and that there ought to be some method by which at least the items which are long in transit and difficult to collect— that the bankers should be reimbursed for them, perhaps on the basis of a time calculation, at 6 per cent interest on their money. If a simple clause were put in, that the Federal board is authorized to promulgate equitable rates and rules, that would cover the point.

Senator Reed. In other words, you would amend this bill so that, as to the collection of exchange and the regulation of exchange charges, the Federal reserve board should be empowered to make such rules and regulations as in its judgment would be equitable and just?

Mr. Scudder. Yes, sir.

Senator Reed. Leaving the details, not to the bill, but to the board?

Mr. Scudder. To the board. I think that could be very safely done, because it is a detail of the management of the business.

Senator Reed. Will you draw an amendment of that kind and hand it to the committee, that would state your views?

Mr. Scudder. I shall be very glad to do so. That is all, gentlemen. Senator O'Gorman. I should like to ask one question. Your bank is a State bank?

Mr. Scudder. Yes, sir; a trust company.

Senator O'Gorman. You are not compelled to enter this system?

Mr. Scudder. No, sir.

Senator O'Gorman. Will you enter the system?
Mr. Scudder. Well, I think that is a matter I would leave to my stockholders. Personally I should be inclined to enter the system if there were reasonable amendments to the bill.

Senator O'Gorman. You believe there are amendments necessary to satisfy you as to the wisdom of passing this bill?

Mr. Scudder. I think so.

Senator O'Gorman. Do you think a State institution ought to be permitted to enter into this system and enjoy those advantages——

Mr. Scudder (interposing). I certainly do.

Senator O'Gorman. One moment [continuing]. And yet possess opportunities for the development of their business beyond those opportunities possessed by the national banks?

Mr. Scudder. No, sir; I do not. I believe that all should be put on an equal footing, except as to fiduciary business.

Senator O'Gorman. Do you believe that the State banks and the State trust companies should have their State functions curtailed, and be restricted to the business that the Congress permits national banks to engage in?

Mr. Scudder. No; I do not. But, as I understood it, the national banks are given privileges which they had not before.

Senator O'Gorman. Oh, yes; and they have other privileges, but the question is——

Mr. Scudder (interposing). I am in favor of doing that rather than curtailing any rights given us by our own State.

Senator O'Gorman. You can take it as a fair assumption that the Congress will not confer upon national banks all the powers now possessed by State banks, and it has been suggested that if the State banks are permitted to come into this system their powers ought to be more or less uniform with the powers exercised by the national banks, and there should be a curtailment with respect to the functions of State banks, and at the same time some gradual enlargement perhaps of the functions of the national banks. I am asking your view with respect to that proposal.

Mr. Scudder. My view is rather an inclination toward your latter statement, that the national banks should be given other functions.

Senator O'Gorman. Yes; and the State banks' functions reduced so as to conform to the enlarged functions bestowed upon the national banks?

Mr. Scudder. In what way reduced, for instance? What is in your mind, Senator?

Senator O'Gorman. You know that your State banks and State trust companies can now do much banking business that a national bank can not do?

Mr. Scudder. Yes; we can loan on real estate. Take that one point. I believe in an enlargement of the national banking system.

Senator O'Gorman. And you would act as trustee and executor?

Mr. Scudder. That I am not so sure about; I do not know that they will want it.

Senator O'Gorman. I do not know whether you have that power or not.

Mr. Scudder. I know we have that power.

Senator O'Gorman. But the national banks do not possess it?
Mr. Scudder. The national banks do not possess it and I do not think they want it, but I have not studied it from the national bank’s standpoint.

Senator O’Gorman. Would you be willing to have your trust company in Richmond enter this system if the operations of the trust company were confined to the business that national banks are permitted to engage in?

Mr. Scudder. If we were to come in under any such condition as that I would proceed to organize something that would take care of the business that now is taken care of, which would under those conditions be curtailed. I would not like to see it done.

Senator O’Gorman. Do you know whether or not the restrictions that are contained in the proposed bill regarding the character of paper that might be rediscounted in the regional reserve banks will be likely to confer any substantial benefit upon the country banker?

Mr. Scudder. In other countries—

Senator Nelson (interposing). No; confine yourself to America.

Mr. Scudder. Yes; I will. In other countries the initiator of the transaction draws on his customer for the purchase price of his goods, and that becomes at once a commercial transaction, just like a check. I would like to see that occur in this country, the system of two-name paper. That would help the country banker immensely, because all the grain sold, all the cotton sold, could be turned into a country-bank transaction.

Senator O’Gorman. Have you heard the objections urged by country bankers with respect to the character of the paper to which they would be confined for the purpose of rediscounting at the regional reserve bank?

Mr. Scudder. Yes; but country banks in Minnesota loan a great deal on real estate, and under the provisions of the bill we could not use that paper in rediscounting.

Senator O’Gorman. Can you tell us to what extent, if at all, the country bank would be benefited by going into this system?

Senator Nelson. Small country banks, like the bank at Sleepy Eye, for instance.

Mr. Scudder. I do not know that a country bank, under the present wording of the bill, would have very much paper to offer for rediscount.

Senator O’Gorman. The country bank, as well as all other banks, would be restricted to 90 days’ paper?

Mr. Scudder. Yes.

Senator O’Gorman. For rediscount?

Mr. Scudder. Yes.

Senator O’Gorman. Do you think that should be increased?

Mr. Scudder. I think some provision should be made.

Senator O’Gorman. To what extent?

Senator Nelson. Six or nine months’ paper?

Mr. Scudder. I think, in order to carry over the crop, nine months’ time is necessary.

Senator O’Gorman. Would you object to having it increased so that it would mature in a year?

Mr. Scudder. No, sir; I would not, up to a certain limit.

Senator O’Gorman. What would be the limit you would suggest on that?
Mr. Scudder. I had not thought that over, but there ought to be some reasonable limit on that class of paper.

Senator O'Gorman. Does it occur to you that if we had paper extending nine months it would affect the elasticity of the currency?

Mr. Scudder. Yes; in case of the existing volume it would.

Senator O'Gorman. Then you would permit it, but you would reduce the volume?

Mr. Scudder. Oh, yes; restrict the volume.

Senator O'Gorman. To what extent would you reduce it?

Mr. Scudder. I am not prepared to say.

Senator O'Gorman. Have you considered the subject?

Mr. Scudder. I have not, from the standpoint that you mention.

Senator O'Gorman. In a word, you think this bill contains some commendable features?

Mr. Scudder. Some very commendable features.

Senator O'Gorman. But you think the bill as pending before us requires some change?

Mr. Scudder. I think it is a little raw; yes, sir.

Senator O'Gorman. A little raw?

Mr. Scudder. Yes, sir.

Senator Nelson. That is the opinion of a good many bankers, I believe.

Senator Bristow. I understand you to say that national banks should be permitted to loan on real estate?

Mr. Scudder. Yes, sir; some provision should be made for that.

Senator Bristow. To what extent?

Mr. Scudder. That is a proposition, as I told Senator O'Gorman, which I have not considered, and I am not prepared to say.

Senator Bristow. As to how much?

Mr. Scudder. I am not prepared to say about that.

Senator Bristow. Do you think a good real-estate mortgage, conservatively made, would be as good a security for rediscount as a commercial note?

Mr. Scudder. I do, sir.

Senator O'Gorman. As I understand, you say you were a delegate at this Boston convention?

Mr. Scudder. Yes, sir.

Senator O'Gorman. How many attended?

Mr. Scudder. I should think about 3,500 or 4,000.

Senator O'Gorman. They came from all parts of the country?

Mr. Scudder. Yes, sir.

Senator O'Gorman. Did you know, personally, a number of those who were present?

Mr. Scudder. Yes, sir.

Senator O'Gorman. Do you know the general reason why they assembled?

Mr. Scudder. Yes, sir.

Senator O'Gorman. What was it?

Mr. Scudder. It was to proceed with our annual business. We have an annual meeting, and have had one for 25 or 30 years. I have attended them for nearly 20 years.

Senator O'Gorman. Do you know why they took up the consideration of the pending currency legislation?
Mr. Scudder. Yes. A committee was appointed some time ago—a committee of bankers—to consider this question and to report to this convention.

Senator O'Gorman. As I understand it, you were perhaps the only delegate who voted "no" on some proposition regarding this bill?

Mr. Scudder. Yes, sir; on the general proposition to adopt the entire report of the committee, I seemed to be the only one who stood up and was counted. I know there were others who spoke against it.

Senator O'Gorman. Did you see any evidence of a conspiracy at this convention?

Mr. Scudder. No; no conspiracy.

Senator O'Gorman. To defeat or control this legislation?

Mr. Scudder. I felt that during the morning session there was a very friendly feeling to anybody who wanted to speak on the subject, but that there was considerable pandemonium there. Those who endeavored to speak in favor of the committee's report were listened to, but when they came to the opposition, there were interruptions and catcalls and great confusion, and the temper of the meeting in the morning, anyway, was—and I think everyone who was there will bear me out in the statement—that the temper of the meeting was very hostile to any suggestion that did not include the adoption of the committee's report. I rather left in disgust, at lunch time.

Senator O'Gorman. Notwithstanding the fact that you represented the minority element there—and perhaps a very small minority—did you see anything to create a doubt in your mind as to the earnestness or patriotism that was animating the membership of the convention?

Mr. Scudder. No; I got the impression that the leaders were rather trying to rush things through.

Senator O'Gorman. That is not so objectionable, sometimes.

Mr. Scudder. And to override anybody who would dare to get upon his feet.

Senator Nelson. Did you get the impression that they were not acting in good faith?

Mr. Scudder. Oh, no; I think not. I think there was good faith. They simply were anxious to get the committee report adopted.

Senator Nelson. Did you see any signs of conspiracy on the part of the money power?

Mr. Scudder. I think there was no conspiracy.

Senator Weeks. Did it occur to you that possibly the leaders in the convention were following the leaders in very high authority in trying to rush things through?

Mr. Scudder. Perhaps so.

Senator Weeks. Senator O'Gorman has just suggested a question to me. If my recollection does not fail me, I have seen in the press a statement that the Virginia Bankers' Association—do you belong to it?

Mr. Scudder. Yes, sir.

Senator Weeks. That the Virginia Bankers' Association had at two different meetings passed resolutions which seemed to be antagonistic. At first there were resolutions passed which advocated the general principles of this bill, and at a second meeting resolutions endorsing the currency report adopted at the Chicago conference. Do
you know the reason for taking that action, or action which seems to be unfriendly to the first resolution?

Mr. Scudder. Well, I think that a large number of the Virginia bankers were for more conservative action, but somehow the radical element got into the saddle and carried the point. I myself did not get a notice to attend the Virginia bankers' convention, although I understand my failure to get a notice was a mistake, an omission. I do not know whether anybody else was omitted, but I did not get a notice to go to the meeting.

Senator Weeks. Are you representing the Virginia Bankers' Association here to-day?

Mr. Scudder. No, sir; I am not.

Mr. George W. Rogers. Mr. Chairman, are you ready to hear the country bankers now?

Senator Hitchcock. How many representatives have you who desire to speak?

Mr. Rogers. Four or five.

Senator Hitchcock. Have you any estimate as to the length of time you will require?

Mr. Rogers. Probably about 15 minutes each.

Senator Hitchcock. The Senate has a session at 12 o'clock to-day, and it is almost 12 o'clock now, and I do not know whether it is worth while to go on now to hear your representatives. We can adjourn now to go to the Senate and hear you later.

Mr. Rogers. Senator Hitchcock, we have an appointment with the President at half past 2 o'clock. Our time up to the time when it would be necessary for us to leave here in order to get to the White House at half past 2 o'clock is in the hands of the committee, but we feel that inasmuch as the President said he would receive us at half past 2 o'clock we should be there.

Senator Hitchcock. You could come back here at 3 o'clock?

Mr. Rogers. Probably so; yes, sir.

Senator Weeks. I move that the committee take a recess now and reconvene 30 minutes after the Senate adjourns, with the hope that these gentlemen will be here at that time.

Senator Hitchcock. I think we might adjourn until half past 1 o'clock and hear some of these gentlemen, and then if they do not get through they could go to the White House and we could go on with somebody else and hear these gentlemen when they return.

Senator O'Gorman. I desire to express the hope that all the visiting bankers from the Boston convention will remain here, even though it may inconvenience them a little. I hope they will all stay until they are heard, even though they may have to stay over until to-morrow.

Senator Nelson. I feel that way too.

Senator Hitchcock. We want to hear all the gentlemen who are here to be heard.

(Thereupon, at 11.45 o'clock a.m., the committee took a recess until 1.30 o'clock p.m.)

AFTER RECESS.

Senator Hitchcock. Gentlemen, in view of the fact that the Senate is in session and some of the members of the committee are engaged there, and in view of the further fact that the members of
the delegation representing the country bankers have an engagement at the White House at 2.30, the committee will take a further recess until 3.30 o'clock this afternoon.

(Thereupon, at 1.40 o'clock p.m., the committee took a recess until 3.30 o'clock p.m.)

The committee reassembled pursuant to the taking of recess.

Senator O'Gorman. Gentlemen, we will now resume the hearing. Who is the first speaker?

STATEMENT OF GEORGE W. ROGERS, OF THE BANK OF COMMERCE, LITTLE ROCK, ARK.

Mr. Rogers. I am the first speaker, if you please, Senator.

I appear as the chairman of the committee of country bankers. There has been so much discussion in regard to this meeting of the country bankers at Boston that I believe it only fair to the country bankers and to the members of this committee to make a statement in regard to how this meeting was organized, the purposes of the meeting, and what it tried to accomplish. It has been questioned that the members of the conference were sincere; that the so-called country bankers were acting on their own initiative and in their own interests. I wish to assure the members of the committee that we have not been instructed or directed by anybody except ourselves.

The movement was started by Mr. Foote in Mississippi and Mr. Tilton in Alabama and myself in Arkansas to try to arouse the sentiment of southern bankers as to how this bill would affect their interests, and for some time we were quite active. We wrote a number of letters and sent many letters and a great many telegrams. We had agreed on a meeting in Boston, which had been called by Mr. Tilton. About that time I received a letter from Mr. Gordon Jones, of Denver, Colo., suggesting a meeting of the western bankers and asking if I would join in that meeting. I wired him I would be glad to do so. We met in Boston on Sunday and agreed that it would not be practicable to have two meetings of country bankers. On Sunday night we met at dinner, and we discussed this matter from about 7 until 11 o'clock. We wanted to arrive at some common ground that we all could agree upon. I believe that we did. I believe everyone at that meeting was in hearty accord with the resolutions that were offered. Mr. Tilton and myself drew a copy of the resolution which was offered at the meeting on Monday.

That was the largest meeting of bankers I had ever attended at that time. It was held in the ballroom of the Copley Plaza Hotel. We did not attempt to have chairs, because the crowd was so great that we could not sit them in that way. About a third of the room was occupied by chairs, and the balance of the gentlemen stood.

The meeting was called to order by Mr. Gordon Jones, of Denver. We thought it very proper that Mr. Jones should call this meeting to order on account of the active interest he had taken. Mr. Gordon Jones is president of the United States National Bank of Denver, situated in a reserve city, and he is also president of seven or eight country banks in Colorado; but I understand his interests in the country banks are much larger than his interests in the city banks.
Mr. Jones is the only gentleman connected with the movement who had any connection whatsoever with a reserve or central reserve bank.

The meeting, after being called to order, elected ex-Gov. Bailey, of Kansas, as its chairman. After a little discussion Mr. McRae, of Arkansas, offered a motion to approve the great fundamental principles of the bill as it passed the House and spoke upon that at some length. He said that the object of the meeting was not to go into details. The Senate committee did not want details, did not want suggestions in regard to the details of the bill, he said, but the meeting should, in his opinion, approve the great fundamental principles of the bill and let the Senate committee work out the details.

Unfortunately I could not agree with Mr. McRae, and I told the meeting that if we approved the great fundamental principles of the bill we would not do anything, and we might as well not have a meeting; that anything to us was fundamental which materially affected our business.

I offered the following resolutions:

A banking and currency bill is now pending in the Congress. Its speedy passage into law is desirable. Any new financial system adequate to the needs of the Nation must be one that country bankers, National and State, can support with justice to themselves as bodies corporate, and with justice to their customers.

Country banks, as distinguished from the banks in the fiscal centers, represent in number about 75 per cent of all the banks in the United States. They bear the burden of national prosperity in proportion to their numbers—legislation hostile to the welfare of American citizens, whether farmers, wage earners, or business men. A satisfactory banking system has long been needed by the people. Legislation upon this subject has already been too long delayed. The efforts of administration leaders at Washington to pass this statute at a special session is to be commended. Recognizing these facts, and having had no opportunity to go on record concerning this legislation, a large number of country bankers present at Boston, attending the convention of the American Bankers' Association, held a meeting on the 6th day of October, 1913, and the following resolutions were presented and adopted:

First. That Government bonds have been purchased by country bankers at a price that would be unjustified except for circulation and depository privileges that attach to them. These bonds are now selling under par. The good faith of the Nation and its credit must remain unimpaired. If national bank notes are to be retired there should be exchanged for these bonds a new security that will sell upon its own merits at 100 cents on the dollar in the markets of the world, and banks desiring to liquidate their circulation should be given the right to have their bonds retired at not less than their face value.

Senator Reed. Let me interrupt you a moment. "Banks desiring to liquidate their circulation should be given the right to have their bonds retired at not less than their face value" is the concluding sentence?

Mr. Rogers. Yes, sir.

Senator Reed. You mean by that that if a national bank decides to refuse to come into this system then special provision should be made in order to let it out without any loss?

Mr. Rogers. Yes, sir.

Senator Reed. That is the meaning of that phrase?

Mr. Rogers. Yes, sir; that was the understanding of the committee; that was their intention in wording it that way.

Senator Reed. In other words, if Congress now, making an honest endeavor to take out of our currency and banking system the great elements of danger which at times have imperiled the entire banking
system, and national banks thereupon desire to withdraw, we ought to make it as easy for them as possible?

Mr. Rogers. Senator, I am not a national banker.

Senator Reed. That is the thought?

Mr. Rogers. Just a minute; if you will allow me to answer in my own way I will answer your question. I am not a national banker; I have no bonds to make a profit or a loss on, and I believe that inasmuch as the Government has existed for more than 100 years, and its promises to pay have always been worth 100 cents on a dollar, they should always be worth 100 cents on the dollar.

Senator Reed. So do I, and so does every member of this committee. I want to put the proposition to you and to everybody else who is here.

There is a sort of contract between the Government and the national bank?

Mr. Rogers. Yes, sir.

Senator Reed. The Government says, Take these bonds and we will allow you to issue currency upon them. The banks took them. If the Government now was to repeal the circulation privilege, it would seem, if they decided that was what ought to be done, undoubtedly the Government ought to take care of these bonds.

But there was another part of that contract, and that was that this national bank—and speaking broadly this national-banking system—should perform the functions of banks, keep their doors open, receive deposits, and pay out to depositors. We found out, either from the imperfections of the system or the way the banks have operated under it, that the system several times has broken down, and notably in 1907, at a time when the country was in an exceedingly prosperous condition, substantially all of the national banks of the cities, and indeed all the banks of large cities and nearly all the rest, practically closed their doors to their customers; that is to say, they stopped paying out on demand.

Mr. Rogers. Paying cash; paying current money.

Senator Reed. Paying cash. When they issued anything else but cash they violated the spirit if not the letter of the statute. So that it has been found that the banks are unable to carry out their part of this contract.

Now comes the Government, undertaking to modify this system so that the banks can carry out their part of the contract. Do you think the same reason applies for aiding them to defeat the purposes of the Government that would, in the first illustration that I gave, where the Government was simply going to take away their circulation privilege?

Mr. Rogers. No, sir; but if the Government writes into this contract something that the banks can live under—

Senator Reed (interposing). Oh, yes; certainly.

Mr. Rogers. They should take care of the bonds.

Senator Reed. Yes; certainly, if we write something into this contract that the banker can live under, the national—

Mr. Rogers (interposing). No, sir; if you write into this contract something that the individual banks can not exist under, the Government ought to take care of that proposition.
Senator Reed. As long as the Government allows the banks to keep this money in circulation it has given the banks all it originally agreed to, hasn't it?

Mr. Rogers. No, sir.

Senator Reed. Let me state it differently. The bonds were taken by the banks with the understanding that they would be used as a basis for circulation. As long as the Government does not interfere with that right the Government has kept its part of the obligation, has it not?

Mr. Rogers. I do not think so. If the Government writes something else into the national banking act which makes it unprofitable or impossible for the banks to continue in successful operation, I think they should fulfill their part of the contract and not penalize these banks.

Senator Reed. That is true. We will agree to that. Then your complaint is not—you have no complaint under this first subdivision, provided this plan is so worked out that a bank can live and make a reasonable profit?

Mr. Rogers. None whatever; no, sir.

Senator Reed. This, then, is dependent—

Mr. Rogers (interposing). Upon the other provisions of the bill.

Senator Reed. Very well. I have interrupted you too long.

Mr. Rogers. The second paragraph of the resolutions is in relation to the segregation of the savings-bank deposits.

Second. That any unnecessary restrictions placed upon the acceptance and investment of savings deposits is unwise. The prosperity of the people depends much upon the profitable use of their earnings. Country banks have always encouraged thrift on the part of their customers and others resident in their respective localities. Many millions of savings deposits have thus been created. In rural communities there is no need for separate savings banks. Banks doing a commercial business are now satisfactorily caring for this business. These deposits are safely loaned out at home. There is rarely any local market for bonds of any character. To require country banks to invest savings deposits in any one class of securities, to forbid their use for local farming and business needs, to divert this money from local to foreign purposes, will seriously cripple the credit of their customers and result in the very disaster which it is the aim of this legislation to prevent. Segregation of savings deposits, the setting aside of separate capital, the creation of two banks under the same management and under one roof, will place a burden upon country banks which they can not bear, and will deny to their patrons facilities which they require and now enjoy.

Senator Reed. Do you apply that to national banks, or do you mean to apply that to State banks which may desire to come in?

Mr. Rogers. Both.

Senator Reed. The national bank at present has no right to have a savings-bank business, has it?

Mr. Rogers. But they have.

Senator Reed. They are doing it in violation of law, are they not?

Mr. Rogers. That is a question for the comptroller, I believe, and not for me to answer. But they do do a savings-bank business right now.

Senator Reed. Do you mean by that—when you say they do a savings-bank business—do you mean that they receive money upon time deposits, paying interest upon them, or do you mean that they go farther than that and do a regular savings-bank business?

Mr. Rogers. I am speaking of the one I am familiar with in my home town. They do a regular savings-bank business. They issue
BANKING AND CURRENCY.

2251

a pass book, and in that pass book they require a notice of withdrawal. They do not segregate their capital or their funds; they mingle them.

Senator REED. If they are doing that all illegally now, they would not have any just complaint if they were given, in this bill, a limited right to do that which they now do without any right whatever, would they?

Mr. ROGERS. Well, if it required them to invest in securities that were not local. We think that this money owned at home should be used at home.

Senator REED. Undoubtedly, but if a bank is proceeding, ultra vires, in violation of law, and has no right to maintain a savings-bank department at all, this bill gives them a right and limits that right; if the bill does that, it is at least a step in the direction of what the bankers want, although it may not go as far as you think it ought.

Mr. ROGERS. We would prefer a law that could be lived up to and would not have to be winked at.

Senator REED. I am inclined to give it to you, and I was just asking you the question.

Mr. ROGERS. I say the gentlemen who will follow me will speak on these four different subjects which were mentioned in these resolutions, and each one of them has prepared himself to discuss his own special subject.

Senator POMERENE. Will you mention their names?

Mr. ROGERS. Mr. Gordon Jones, of Denver, will speak on the first paragraph, Mr. McLane Tilton, jr., of Alabama, will speak on the segregation of deposits, and Mr. George Woodruff, of Joliet, Ill., will speak on the third section, and Mr. David Barry, of Pennsylvania, will speak on the fourth section in regard to the reserves.

I want to say for Mr. Woodruff that he is thoroughly competent to deal with the subject which has been assigned to him. He comes here with a long experience, and with actual facts and figures. He does a very large business of this nature, which last year amounted to more than $90,000,000. He has with him the exact figures taken from his books.

I made a statement when I was before the committee on a previous occasion that the overhead cost, if the country clearing-house system was put into effect, would eat up all the profits of the bill. I believe, from the figures which Mr. Woodruff will present to you that you will agree with me.

Section 3 of the resolutions is in regard to the matter of exchange. That section 17 of the bill should be so amended in so far as it refers to matters pertaining to exchange. We suggest that section 17, page 33, be amended by eliminating the last word on line 15, the first five words on line 16, the balance of the section after the eighteenth line, leaving the last paragraph of section 17 to read as follows:

"It shall be the duty of every Federal reserve bank to receive on deposit at par and without charge for exchange or collections checks and drafts drawn by any of its depositors upon any other depositor and checks and drafts drawn by any depositor in any other Federal reserve bank upon funds to the credit of said depositor in said reserve bank last mentioned."

Senator SHAFROTH. Do you strike out the word "other" in line 18?

Senator HITCHCOCK. What is the first word stricken out?
Mr. Rogers. The word "upon," in line 15, and then the five words, and then everything after line 19.

Senator Shafroth. You omitted to read the word "other," and I thought you left the word "other" in.

Mr. Rogers. The remainder of section 3 is:

Exchange profits represent a large part of the total net earnings of country banks. It is a proper charge for a fair service rendered. The bill as now drawn will decrease the net earnings of the average country bank by not less than 25 per cent and many of them much more. This gain will not go into the pockets of the business men of America, but will be enjoyed solely by the banks of the collection centers which are now making satisfactory profits. The result of this section will be to take income from banks that can least afford the loss and give this money to banks that are already earning satisfactory profits.

In addition to the above the bill provides a radical change in the method of handling country items. It provides that they shall be cleared and not collected. To accomplish this it would require that the small country banks keep in the Federal reserve banks an amount in excess of their legal reserve sufficient to care for their clearings from two to six days, depending entirely upon the distance and time they are from the bank acting as such clearing house.

Senator Reed. You say there is one man who is going to discuss that section?

Mr. Rogers. Yes, sir. I would like to make the statement that it was the contention of the committee that the member banks could issue their checks on another member bank, and those would be cleared at par by a similar process and charged to the account; that it would eliminate entirely the enormous volume of individual checks on various banks. These checks so cleared would undoubtedly be good; if they were not good, the reserve, the first lien on the assets, and other things would protect the Federal reserve bank. Mr. Woodruff will speak at length with regard to the amount of returned items, etc.

Section 4 of the resolutions says:

That whatever percentage of reserves is agreed upon should carry with it the right to keep not less than one-third of such reserve with approved reserve agents in fiscal centers. The reduction of reserve from 15 to 12 per cent is no real advantage to the country bank. Very few country banks can do business without having a larger amount of funds either in vault or with near-by connections. These connections must be maintained after the passage of this law. The money so held by them should be counted as a part of country-bank reserve.

(5) That the above matters include only those features that country bankers are especially concerned with. There are others of equal importance which concern the larger banks in the fiscal centers. With these subjects we do not propose to express an opinion, but we believe that unless this bill is amended so as to meet the objections and recommendations made herein that very few country banks, either State or National, can afford to become members of the new Federal system. This means that the great majority of country national banks must surrender their charters or retire from business.

The exchange and savings sections of the bill so reduce our earnings that most country banks will show net operating losses instead of the reasonable profits we now enjoy. We desire to do our full duty to the country, but our duty to stockholders and customers must not be disregarded. We desire to become members of the Federal system and assist in making it the success it ought to be and can be made. We earnestly call upon the Congress to consider this resolution as a formal expression of opinion on the part of country bankers who realize the seriousness of the situation that now confronts them. And, finally, we ask for the committee that will present these resolutions to the Hon. Robert L. Owen, chairman, and the Committee on Banking and Currency of the United States Senate for an opportunity to be fully heard in the premises.
We discussed quite freely the attitude of the gentlemen who would speak, in the event that they were questioned in regard to matters not in the resolutions proper, and it was the consensus of opinion that they should answer any questions to the fullest extent of their ability. But when they give an opinion on any matter that is not covered by the resolutions they ask that it be considered as their individual and personal opinion and not as their opinion as the representative of the committee. We feel that we have no right, as members of the committee, to exceed the authority given us by the meeting in Boston.

Senator Reed. You think that if the things that are recommended in those resolutions are done, with the exception of the first proposition in regard to bonds, and if that was made by framing this bill so that all banks could properly come in and not be dragged to ruin or injured seriously that the country banks represented by this committee, some 2,000 in number, would then be content?

Mr. Rogers. I believe so.

Senator Reed. Generally speaking, they favor a bill drawn along the lines of this bill, but they object to certain details?

Mr. Rogers. Yes, sir. Those details they consider vital. If the suggestions made here meet with the approval of this committee and finally become a law, I believe that a very large number, a majority, of the country banks, both State and National, that are large enough to come into the system would do so.

Senator Hitchcock. Mr. Rogers, country banks generally rediscount paper at certain seasons of the year now?

Mr. Rogers. In my section; yes, sir.

Senator Hitchcock. Does that not take place all over the country, from information which you have?

Mr. Rogers. I believe so. I am only thoroughly familiar with my part of the country. I know that is the fact in some parts of the country. Practically every bank in my part of the country discounts at those times.

Senator Hitchcock. Will you explain your idea of the advantage it is to a country bank to come into this new system, when the country bank already has the rediscount privilege by using its city correspondents?

Mr. Rogers. Well, at other times—as the Senator from Missouri says, the big city banks run out, and the little fellows want to feel that the big banks to which they go—the retailer wants to feel that the wholesaler can carry him, if necessary.

Senator Hitchcock. Now, would not that be provided for if the big fellow in the cities joined the association and the country banker stays out?

Mr. Rogers. I believe so.

Senator Hitchcock. So that it is not necessary for the country banker to come in in order to get rediscounts?

Mr. Rogers. No, sir; it is not now, but my personal opinion is that a bill should be framed not only for times of panic but for times of prosperity, to take care of the banks in both times.

Senator Hitchcock. Do you think that the country banks would rediscount more under such a system as we propose than they do at the present time?

Mr. Rogers. No: I do not.
Senator Hitchcock. Do you think they would get lower rates of interest on the discounts?

Mr. Rogers. No; I do not; only to a very small extent. The difference in the rate of interest would be very small.

Senator Pomerene. Where do you do your rediscounting?

Mr. Rogers. New York and St. Louis.

Senator Reed. Have you filed a copy of those resolutions?

Mr. Rogers. Yes, sir.

Senator Pomerene. Did you have any trouble in 1907?

Mr. Rogers. No, sir; in 1907 I borrowed all the money I wanted to. Fortunately I was paying off discounts instead of borrowing at the time. But I received from the banks of New York that I did business with cash at par to an amount three times the amount of my balance at the time they put the lid on. That is the only time I ever shipped any money out of New York. I only shipped money to New York twice in the 25 years that I have been in the banking business. Once was in 1903, when I had the money, and they had been so good to me, I thought they needed it, and I sent what I had to them. And once, afterwards, I got hold of a lot of $10,000 bills, and I shipped them there, because I needed exchange.

Senator Hitchcock. A lot of $10,000 bills? [Laughter.]

Mr. Rogers. Well, it was a lot for me. I had 25 or 30, and it was a lot of them for me.

Senator Hitchcock. It would be for most any of us.

Mr. Rogers. Yes, sir.

Senator Shafroth. Mr. Rogers, one of the objects of this bill in establishing 12 regional banks is to have a reserve bank close to a given territory in which it is included. Do you not think that the right of the bank to keep these reserves there in a place which is rather close to it, together with the power to get money from that bank in times of stress, would relieve the country bank from keeping large reserves?

Mr. Rogers. No, sir.

Senator Shafroth. It would not keep large reserves if it could get plenty of money at any time, would it?

Mr. Rogers. Banking business is a little peculiar business, and it has been expressed in an Irish way, "that the bank only made its money by loaning it, and that a bank that loaned all its money never made any money; the bank that always had plenty of money on hand always made plenty of money." That is on the theory that the public knows what is going on inside of the bank. I do not know how, but they do. And when they know a bank runs along and keeps plenty of cash one hand, and can take care of its customers under any circumstances, the customers go to them.

Senator Shafroth. Don't you think the customers knowing the country bank had joined this department and knowing this reserve bank could give this country bank money at any time would make such a confidence in them that it would make money for them?

Mr. Rogers. No, sir; Senator, I do not for this reason: If the bank kept continually going there and continually borrowing their limit, it would be an invitation for parties to work the country bank by making it borrow and borrow and reborrow so that they could use the funds in their various interests. Instead of using a bank for the
handling of a commercial transaction, it would be used more to supply fixed capital for business. That I do not think is a good thing.

Senator Shafroth. That would bring more income to the bank, would it not. It would have more money out, more money at interest, if they used the bank for that purpose; and it would increase the earnings of the bank, would it not, by having that much more interest?

Mr. Rogers. Senator, if you will just pardon me, and the stenographer will not listen for a minute, I will tell you. Once upon a time there was a bullfrog, and it was out in the field, and he met coming back another frog who said he saw such a great big thing he came away. The bullfrog said, "What was it?" and the other frog said, "It was a bull." The bullfrog said, "Was it bigger than I am?" The other frog said, "Yes; it was heap bigger than you," and the bullfrog commenced to swell up, and he said, "Bigger than that?" And the other frog said, "Yes; bigger than that." The bullfrog swelled up some more, and he said, "Bigger than that?" "Yes; bigger than that;" and the bullfrog swelled up four or five times, and finally he busted.

Now, that is the way with a bank that is trying to borrow itself rich. [Laughter.]

Senator Shafroth. As a matter of fact, the inspections which are made by the department are intended to remedy that, are they not?

Mr. Rogers. They can not; I do not believe it is possible.

Senator Shafroth. You do not think regulation can prevent bank failures?

Mr. Rogers. Yes; I do believe that it does.

Senator O'Gorman. We will now hear Mr. Jones.

Senator Bristow. I would just like to ask one question.

Senator O'Gorman. Senator Bristow would like to ask you a question.

Senator Bristow. Mr. Rogers, unfortunately, I could not be present when you were here before, because I was detained in the Senate, and I would like to inquire how you use these reserves. I understood you to say you would have to carry the reserves anyway, that you have now, in order to handle the business properly, even if this new association were formed. You now have your reserves where?

Mr. Rogers. New York, Chicago, St. Louis, Kansas City, New Orleans, and Memphis.

Senator Bristow. You have them in those five places?

Mr. Rogers. Yes.

Senator Bristow. How much do you keep in those reserve cities?

Mr. Rogers. That fluctuates very widely, according to the seasons of the year and the character of the business that is moving at that time. In the active cotton-moving season, we try to keep the larger part of our money in St. Louis. We sell them our domestic cotton bills, and we ship them money against it. If we have a draft of Massachusetts drawn on three days' sight, it would take us about nine days—from seven to nine days—to turn that into money and get it to our credit in New York. Instead of that we sell that in St. Louis and it makes that fund immediately available there. That is part of it. Then, again, we have a good many cotton concerns doing business with us that draw their drafts against the St. Louis office.
and we discount that exchange and give them the money on it, and allow them to use it.

Senator Bristow. About how much do you have in your reserves as a rule? What would be your legal requirements?

Mr. Rogers. In our State at the present time the banks are organized under the general incorporation act. They have to make a statement to the county court once each year. There is no provision in regard to reserves and no limitation on loans. Fortunately our new banking law will go into effect on the 1st of January, and I think we will then have an excellent law. That will provide 15 per cent reserve for country banks, and a minimum of 20 per cent reserve for any bank that desires to act as reserve agent for another bank. Our reserve runs anywhere from 25 to 45 per cent.

Senator Bristow. You have been carrying a reserve without the law requiring you to?

Mr. Rogers. Yes.

Senator Bristow. Simply as a matter of business?

Mr. Rogers. Yes.

Senator Bristow. From 25 to 45 per cent?

Mr. Rogers. Yes, sir.

Senator Reed. Senator, won't you ask if he had this reserve bank at New Orleans if he could not do the same thing with them, or if he had it at St. Louis?

Senator Bristow. Senator Reed has suggested if you had a reserve bank at New Orleans or St. Louis, that is contemplated in this bill, what exchange would that provide for you so as to relieve you from carrying this amount of reserve elsewhere?

Mr. Rogers. We would have to have some account elsewhere to handle these cotton bills, for instance. They have now in the bill a provision which would enable these Federal reserve banks to handle the individual checks. They do not provide for handling domestic bills of exchange, which is the very much larger portion of our business at certain seasons of the year.

Senator Hitchcock. Does it not provide that reserve banks can buy those bills of exchange?

Mr. Rogers. Foreign, not domestic.

Senator Hitchcock. They can buy of member banks, can they not?

Mr. Rogers. That would put them into the collection business, and I did not understand that was there. I do not think so.

Senator Reed. Would it be, then, an advantage to your bank, if it became a member of this system, if it could take these bills of exchange for cotton to this bank and gets its money?

Mr. Rogers. No; because they are presented immediately on receipt by the central reserve city bank, or the bank we send them to, and collected that day.

Senator Reed. From you?

Mr. Rogers. No; from the drawee.

Senator Reed. Now, let me understand. You advance $100,000 to a cotton dealer.

Mr. Rogers. Senator, if you will just permit me——

Senator Reed (interposing). Yes; just explain it to us.

Mr. Rogers. I had one account I made no loans to whatever. I allowed them to check during the day, and prior to the close of busi-
ness they deposited their drafts in round sums on the St. Louis office. Those drafts ran all the way from $10,000, which was the minimum in one month, to $163,000, which was the maximum. They were discounting the drafts; that is, paying the money out the day the drafts were deposited with us. We had already advanced the funds. We forwarded those to our St. Louis correspondent and he collected them that day and put the money to our credit. We made a charge for that service of $1 a thousand. For that $1 a thousand we had to keep in shape at all times to take care of that business. It costs from 27 to 30 cents a thousand to ship that money from St. Louis to Little Rock. This cotton concern figured for a long time whether it would be more profitable to ship the money down at 27 cents a thousand than to pay us $1 a thousand. But when they went into the proposition they found they would lose a large amount of money by doing so. They would have to advance the money at least one day in advance of its payment, whereas they paid it in the St. Louis office the day after the payment. At 6 per cent interest that two days was 33^1/3 cents, which, added to the 27 cents, made 60 cents right there. Then they would have the disadvantage of the mail being late sometimes or the draft coming on Saturday, and they would have to hold it over until Monday, and they figured that was 65 to 70 cents a thousand. So, if they could not tell each day what the requirements were, they would have to carry a large amount of cash on hand themselves, and they figured that while the cost of the transportation of money was only 27 cents a thousand, it was much cheaper to them to pay us $1 a thousand exchange.

Senator Reed. I still do not understand why you could not do that business, why you could not have those bills of exchange paid right into the reserve bank, instead of, as you are doing now, paying them into the bank of your correspondent.

Mr. Rogers. Senator, I believe I can tell you in straight English what is way down deep in the heart of the country banks and what makes them afraid of this.

Senator Reed. That is what we want to know.

Mr. Rogers. Yes. They are afraid of being dependent only upon this one concern they would have to go to for their money. This man—and he has got to be human; he has got to be able to exercise some judgment as to whether this collateral there is good or not good—if for any reason whatsoever he should have a grouch against the bank, or any reason—if he does not feel well, or for any other reason you don’t get the money, the bank that goes to him is busted. Now, if one bank does not let you have it, presupposing that you are good, you can go across the street or go over on the other corner and say, “Here is my average balance; here is my security; here is what I want,” and if the average balance justifies the loan asked for and the security is good, if one man does not take it others will. But, to get back to this proposition, you are absolutely dependent for the existence of your concern on the judgment or approval of one man.

Senator Reed. But you still could take your bill of exchange and go to an outside bank. This is not going to wipe out the banks of St. Louis; they will still be there.

Mr. Rogers. But you are switching the question.

Senator Reed. I am trying not to.
Mr. Rogers. I am talking about loan deposits. That is my understanding of the question you were asking. If you can not keep a balance with the bank that will justify them in giving you accommodations, they are under no obligations to you whatever; but if you do keep an account with the bank, you have a right to call on them to take care of you when you need the accommodation. And all well-managed banks recognize that right and live up to it.

Senator Pomerene. Let me suggest right there: Under this bill the country banks would have to keep in the regional banks 5 per cent. The other 2 it can place wherever it chooses. Now, you said, as I recall your testimony, that you kept reserves, perhaps, from 30 to 45 per cent?

Mr. Rogers. At times, yes. Down as low as 20, up as high as 45.

Senator Pomerene. If you are only pledged under the terms of this bill to keep 5 per cent in the regional bank, you still have a very substantial amount of reserve which you heretofore kept, and you would be free to place it wherever you chose. You could still have the same banking connections outside of the regional-reserve bank that you would have had heretofore, under those circumstances.

Mr. Rogers. That is as far as I am concerned; but all the banks in our country do not carry that large reserve. I am speaking for the bank that carries approximately the legal reserve carried by national banks. The 2 per cent of their deposits would not be large enough if kept in a reserve bank to pay for the trouble of handling the account. The account would be unprofitable to the city bank. Therefore they can not keep them.

Senator Brustow. Mr. Rogers, if a system could be devised here, whereby we could have the Federal reserve bank stock owned by the public, and that should be a bank of discount and a bank of issue and a bank of reserve, and it should establish branches wherever they were needed, something like the reserve cities now, and under the law any banking institution in the country that was creditable, that presented proper securities could get its discounts at this reserve bank, do you think that would relieve the situation so far as currency and bank business is concerned?

Mr. Rogers. You are asking me a mighty big question. All I have testified to so far was about something I was familiar with. You are now getting a proposition that is too big for me. I would rather you would not ask me to answer that question, as what I have spoken of so far was where I knew what I was talking about.

Senator Reed. Let me ask you: You say you have not told us anything but what you knew about. What about that frog story? Do you vouch for that, of your own personal knowledge?

Mr. Rogers. Yes; I was there the day it happened. [Laughter.] I think, Senator, if in the wisdom of this Congress they should see their way clear to divide the reserve, allowing approximately a minimum of one-third cash, a minimum of one-third with the Federal reserve bank and the balance with approved reserve agents, that it would meet the wishes of a great many, and it would eliminate some harsh features, and would produce a great amount of good.

Senator O'Gorman. If we make provision for regional banks, will there be any need for other reserve agents?

Mr. Rogers. That is another question. I am just answering from my particular end of the business, and the friends of mine where I
am familiar with their business. There might not be a thing for the reserve agents to the extent that it is going to borrow, but it will enable them to transact their business in the usual, ordinary, and customary way and to handle the general line of business and carry a portion of those items that, of necessity, would go to a privately owned bank as their reserve.

Senator O'Gorman. These regional banks are intended to perform every function now discharged by central reserve and reserve city banks.

Mr. Rogers. I think it is a mistake.

Senator O'Gorman. Why can't you continue the deposit system? All the Government deposits will be in the regional banks instead of the central reserve banks, as at the present time.

Mr. Rogers. Yes; but the Government deposits are a very small part of the business of these great central reserve and reserve city banks.

Senator O'Gorman. We will hear from Mr. Jones now.

Senator Hitchcock. One question, if you please, Mr. Chairman [Senator O'Gorman].

Mr. Rogers, if you should go to a regional reserve bank and ask for a discount of some paper, and the reserve bank should decline, for any reason, good or bad, to discount it for you, you would like to have another harbor of refuge, would you not?

Mr. Rogers. I certainly would. That is what I have been trying to explain.

Senator Hitchcock. And a bank in which you keep a line of deposits, should you ask them for an accommodation, would feel under obligations to give consideration to your wishes?

Mr. Rogers. They would be under obligations, because if they did not grant the accommodations they would know I had something to take away from them to offer as an inducement to another bank.

Senator Hitchcock. That is all.

Senator O'Gorman. Mr. Jones we will hear you now. Please state your full name, residence, and banking connections, and how long you have been in the banking business.

STATEMENT OF GORDON JONES, PRESIDENT OF THE UNITED STATES NATIONAL BANK, OF DENVER, COLO.

Mr. Jones. My name is Gordon Jones; my residence is Denver, Colo. I have been in the banking business since 1887, and as to my present banking connections I am president of the United States National Bank of Denver; president of five country national banks of Colorado, one of which has a capital of $50,000 and the other four a capital of $25,000 each, and of two small State banks of Colorado.

Senator O'Gorman. Now, will you state your views in regard to the pending bill or that part of it to which you care to address yourself?

Mr. Jones. I am glad that our chairman, Mr. Rogers, explained away that I was no Jonah on this committee, by reason of being connected with a reserve city bank and my participation in this call of conference, which was absolutely voluntary on account of the country banking interests which I hold. This call was brought about
by correspondence with country banks scattered through some 18 States of the West and South.

Senator SHAFROTH. I would like to have you also say, Mr. Jones, that you attended the conference over in Europe last summer where the question of country deposits and country banking was discussed.

Mr. JONES. Yes; I was a member of the American commission that visited Europe this last summer representing our State of Colorado, and I was honored with the position of vice chairman of the finance committee, which was the largest and most important committee of the European commission.

Senator HITCHCOCK. That was investigating the question of rural credits?

Mr. JONES. Rural credits; yes, sir. I am to undertake particularly to present to you the views of the country bankers upon section 1 of their Boston resolutions and I have been delegated by them to do so. First, I will present the contention of the country banks regarding the needed good faith of the Government on its own behalf and in order to protect the small banks. At the outset it might be well to ask, who is the country banker? One of the banks in which I am interested is a bank in which the most active officer has no stock. He has none because sickness and distress of a financial nature has caused him to invest most of his means in the recovery of his own health and to protect a small growing family. He is recognized as being a most careful and conservative banker.

Now, in speaking of the country bank, in speaking of the officers of that bank, he would naturally be referred to as the country banker. But the country bank is not only the man who sits behind the counter; it is the stockholders and directors. And the stockholders and directors of the country banks are the local farmers, the merchants, women, and often widows of some farmer who has died, or children of the deceased stockholders. Now, any legislation that affects the country banks, or the one we are pleased to term "the country banker" because he is holding his office, affects the stockholder, who is the farmer, the merchant, or the widow, or minors.

Any measure that is enacted, we feel, of itself should be sufficiently attractive to induce banks to join, just as was the enactment of the national banking act in the early sixties, which offered sufficient inducements to banks to come into the national system.

I will lay down another proposition: Any measure that, intentionally or otherwise, requires the meeting of additional requirements other than originally provided at the time of granting charters, which would prove oppressive to the small banks, would not be attractive, so far as the small bank is concerned. We are impressed with the fact that you desire to give us a fair, just, and workable measure.

In 1900 the Government refunded its 3, 4, and 5 per cent bonds with 2 per cents. In order to establish a market for such bonds, it granted national banks the full circulation privilege and reduced the tax on such circulation from 1 per cent to one-half per cent, provided they were secured by 2 per cent bonds. The banks furnished the market. This was as near a contract as can be entered into between a sovereignty and the people. Although the people can not enforce it, we do not feel the Government can honorably evade it. The country banks now find themselves the owners of several hundred.
millions of dollars of these bonds which are declining in market value on account of the threatened removal of the circulation privilege and the placing of the twos on an investment basis. We commend that portion of the bill which provides for retiring the twos at a fixed date, or giving the national banks the privilege of exchanging them for threes in installments, if they elect so to do. We do not feel this will keep faith, however, with the bank that prefers to surrender its charter, or those whose charters expire before the maturity of the bonds, or the date set for their redemption. In this connection I will touch on reasons why some banks would feel obliged to surrender their charters of necessity, which would necessitate the sale of their bonds. There are some small banks to whom to belong to the Federal reserve bank would be no real benefit to them or their communities, but might prove a detriment to both for the reason they would be required to take from their community a portion of their loanable funds and invest it in the stock of a large Federal bank located in some fiscal center and, at the same time, redeposit 5 per cent of its own deposits in that Federal bank, neither being available for use except in the liquidation of the country bank. While the 5 per cent deposit to be carried with the Federal reserve bank is termed a reserve, in fact it is but an investment without interest. This point as to reserve, however, will be elaborated upon by another speaker who will follow me.

Now, the only real benefit the small bank may have is the privilege of borrowing from the Federal reserve bank. There are many small country banks that do not have the character of assets that will be available, but the membership of such banks is not necessary to the success of this act. That is a fact I should like to impress upon you, that the success of this measure does not depend at all on the membership of these small banks that do not feel they can afford to do so. For such banks we submit there should be some provision for returning to the banks 100 cents on the dollar, which the Government originally received for their 2 per cent bonds. In fact, the Government received a premium, and the banks have already suffered the loss of this premium, though with some banks it has been compensated for by profits on their circulation by reason of the length of time they have been operating, but with others it has not been compensated for.

Some such banks hold these Government twos, securing their Government deposits as well. In any plan that contemplates the withdrawal of these deposits provision should be made for redeeming such 2 per cent bonds in cash or exchanging a security for them that is worth 100 cents on the dollar in the markets of the world, in order that the banks surrendering the deposits may do so without reducing their available loanable funds needed at home and suffer no financial loss in the transaction. Unless these provisions are made, what will be the effect on the banks and on the Government? Such banks as feel obliged to liquidate will have to market the 2 per cent bonds in order to get the cash with which to retire their circulation, for the small bank can not afford to hold a 2 per cent investment. Such banks as feel they can not afford to join the Federal reserve bank therefore stand to lose the difference between what they paid for the bonds and what they will sell for on an investment basis, and
such banks as hold Government deposits secured by twos stand to lose an additional amount.

This is serious, and already some of our stockholders are figuring this out; and I know of cases where stock is being offered for sale on account of this threatened depreciation. Just before I left Colorado one banker had been offered stock in his bank at $50 a share less—on account of this possible depreciation—than he had paid for some of the stock last January, and he would not buy it because he did not know what he would be buying, owing to this uncertainty.

We beg of you, therefore, to make proper provision for refunding such twos outstanding as are surrendered by member banks in order to give up their Government deposits, and by such banks as do not feel they can afford to join and who therefore must not only surrender their Government deposits where held but must retire their circulation as well. I believe it will be well for us to keep in mind that in the refunding of the 3, 4, and 5 per cent bonds in 1900 the Government found a market for its 2 per cent bonds with the national banks, and that the Government made about $16,000,000 by the transaction, and has profited by a material reduction in the rate of interest since. The effect on the Government—unless it protected these bonds from liquidating banks that do not feel they could afford to join—would be to see its good credit impaired; its bonds, long selling at par and better, would soon be on the toboggan slide. What figure they will reach, unless we have an early indication of what will be done in the disposition of these bonds, no one can tell. In this connection, we might call to mind that 2½ per cent English consols are selling at 72 on an investment basis. Should our 2 per cents decline to 60 on an investment basis, a small bank with $25,000 of these bonds would lose $10,000. Other banks in proportion. That money is the money of local stockholders—farmers, country merchants, women, trustee-ships, and minors.

Therefore we urge an amendment to the bill, as speedily as possible, that will assure us and the nations of the world that this Government will keep faith with the purchaser of its securities, in order that the uneasiness now being felt will subside and that the market on such bonds may be restored to par or better. And we believe if you can devise some plan to protect these bonds on a par basis they will immediately go back to par and the Government will continue its good credit. If this is not done and the bonds continue to decline, will we be required, as bankers, to charge down the book value of such bonds, or will we be required to put up additional security in order that the solvency and liquidity of our present national-bank notes may be maintained?

In brief, gentlemen, we are asking that the Government keep faith and maintain its credit. If that is done, our small national banks, whose stockholders would prefer to liquidate, can do so without impairment of their investment, and will only have to meet the additional expenses incident to conversion under a State system.

In other words, we beg, for the small banker who accepts the death penalty, that you enact no law that will render his estate insolvent. At the same time I would not imply that I believe there would be any considerable number of national banks to go into liquidation rather than join the association, but we do feel that if there is only one small bank that can not afford to join provision should be made for
that one. With an attractive measure, a great many banks will ultimately grow to proportions to justify their joining.

Here is another aspect of this optional feature of the bill that we would like you to consider. A bank that to-day may not feel it can afford to join may in a few years, if it may continue its national charter, grow to such proportions that it will want to join and can afford to join. The larger the bank the greater the need for the facilities to be afforded by the Federal reserve bank and the more apt the bank is to have the class of securities that are to be accepted by the reserve bank; and there are few of our country banks in the West that to-day have the character of securities described and required in obtaining accommodations from the Federal reserve bank, more particularly on account of the time limit. Therefore many banks that at the outset could not afford to join would undoubtedly ultimately want to do so before their charters expired.

In talking upon the disposal of the Government 2 per cent bonds, I have been obliged to elaborate somewhat, and I thank you for your patience and your courtesy.

In conclusion I would add that it has occurred to us that there are two or three ways to accomplish what we are asking regarding the disposal of the bonds. The first is the optional feature removing the tax or reducing the tax further on the circulating of such banks as come in under the system, raising the tax, if necessary, on the banks that do not come into the system if they continue their circulation. In other words, let us find something that invites the banks to come in, and make it as attractive as I suggested at the beginning, as the national bank act made it for banks to join the present national banking system.

If the optional feature be not considered permit the member banks to continue circulation and the Government pay par for the bonds from liquidating banks not joining; or, third, require the Federal reserve bank in the locality of the bank liquidating to take over the 2 per cent bonds on a par basis from the bank liquidating, and assume the circulating privilege. There would then pass from the small bank that can not afford to continue under the national bank system the circulation privilege, and give its advantages to the combined banks in the locality that can afford to go in the Federal reserve system.

I thank you, gentlemen.

Senator Shaproth. Mr. Jones, what do you think of the provision in the bill for the substitution of 3 per cents for 2 per cents?

Mr. Jones. If I understand the provision correctly—and before committing myself I would like to know that I do understand it correctly—it now provides, does it not, Mr. Chairman, that at the expiration of 20 years all national banks are to be paid par for the 2 per cent bonds, or the 2 per cent bonds are to be redeemed at par?

Senator Hitchcock. That is the provision.

Mr. Jones. And the bank does not have to accept the exchange in 3 per cent bonds meanwhile unless it so elects?

Senator Hitchcock. That is right.

Mr. Jones. We have no objection to find to that. We should like to know that the 3 per cent bond, however, would be marketable at par. Now, there may be large city banks that can afford to accept...
the exchange, but you won't find a country bank that would exercise that privilege unless it could immediately sell its 3 per cent bonds on a par basis; and if it can sell its 3 per cent bonds on a par basis, why should the Government ask small banks to market their bonds for it? In other words, each small bank accepting 5 per cent of its circulation each year will have to turn around and market this small amount of bonds.

Senator SHAFROTH. You would prefer that the Government pay these bonds at par to the banks instead of issuing the 3 per cents, would you?

Mr. JONES. I think it would be keeping better faith.

Senator SHAFROTH. These bonds, I understand, do not mature until 1930, and then they do not mature as against the Government at that time, but, nevertheless, the Government can pay them after that time. Consequently, the bonds not maturing, the Government could not force the banks to take cash for their 2 per cent bonds without their consent. Now, do you think that if the Government were to offer to pay these bonds in cash the banks would be willing to take it?

Mr. JONES. I can only answer for myself and those whom I have heard express themselves. I believe, gentlemen, we would be glad to-day to surrender our bonds and get cash for them and withdraw our circulation. I believe that would be pretty nearly the consensus of opinion, but I am not stating that as a fact. However, we should like to continue the circulation privilege, because there is a little benefit in it, but we do not know what we may be up against later.

Senator REED. Let me say a word to you. I am only speaking for one member of this committee, but I believe I know this committee and I do not think this committee has the slightest idea of doing anything to break faith with any man that has an honest contract with the Government or to repudiate any obligation at all.

Mr. JONES. I assure you there is not any such impression in the minds of our committee to-day.

Senator REED. I know you are not impugning our motive, but I am speaking with reference to this constant impression that something is about to be done to ruin these 2 per cent bonds and leave you, to use an expression that my friend from Arkansas will understand, "holding the sack" on the bonds. I do not think you need waste much time with the committee on that, except to suggest a means by which we could work the problem out.

Senator NELSON. There was one suggestion you made there, the last of the three plans you suggested, that the regional banks take over the 2 per cent bonds and issue circulation on them. There is something in that idea. That was a part of your theory, was it not?

Mr. JONES. Yes; and to explain that——

Senator NELSON (interposing). Could they not do that gradually?

Mr. JONES. Yes; but what about the bank going out of business?

Senator NELSON. If they would take them off your hands at par gradually and, as they took them off, issue circulation on them, you would still be allowed to remain with the balance of your bonds and gradually work them off——

Mr. JONES (interposing). Why would it be necessary to take them gradually?

Senator NELSON. We would not want to change our whole credit at one leap.
Mr. Jones. The regional bank would be out nothing. They buy these bonds. If they amount to $200,000,000 they buy them for $200,000,000 and issue the currency immediately for $200,000,000.

Senator Nelson. We would get just the same kind of credit in effect that we have to-day, so far as that is concerned?

Mr. Jones. Yes, sir.

Senator Nelson. The theory of this bill is that the banks will gradually retire their own bonds and circulation, giving them 20 years for it, and consequently this new currency will take the place of the retired national-bank currency. That is the theory on which the bill is based; do you not so understand it?

Mr. Jones. Yes; but would it not work out just the same if the Federal reserve bank carried the circulation?

Senator Nelson. No: if you shifted it bodily over from one to the other you would get the same condition you have now, only you would have it grouped in these regional banks instead of the little banks.

Mr. Jones. I predict that every member bank will continue its circulation rather than accept 3 per cent bonds. What is the difference whether they continue their circulation or the Federal reserve bank continues a like amount? For the sake of argument say that all the banks will come in. Would the condition be any different whatever if the regional bank takes over the circulation?

Senator Nelson. The regional bank could discount paper and issue currency on it, and that is what the little banks could not do. There is the difference.

Senator Pomerene. Your position seems to be that you want all these banks to have the privilege of going in or staying out as they see fit?

Mr. Jones. That is one of the alternatives we have put up to you.

Senator Pomerene. But that does not answer my question directly. You want the privilege of staying out or going in as you see fit?

Mr. Jones. Yes, sir.

Senator Reed. Then, you would like to have the Government fix a place where you could go and get money whenever you wanted to, and not have to contribute much to it and just have it voluntary?

Mr. Jones. We are talking for the country banker. I do not think the country bank would have to apply to the regional reserve bank for money.

Senator Reed. Well, he is in the banking business, is he not? And when we have the conditions as they are now he is liable to suffer by reason of a general financial stringency or a panic. That is a danger that hovers over you all the time.

Mr. Jones. Quite true.

Senator Reed. Now, do you not think it is worth your while to help obviate that?

Mr. Jones. You will find sufficient banks that will, with needed modifications, voluntarily join to make it a success, without requiring the little bank that could not afford to do so to come in. That is the fellow we are appealing for. I can analyze the statements of many small country banks and show you that they can not afford to come join.

Senator Hitchcock. How many national banks have you in Colorado, Mr. Jones?
Mr. Jones. I am very poor at remembering figures. Senator Shafroth, do you recall? We have discussed that often among ourselves.

Senator Shafroth. No; I do not remember.

Senator Hitchcock. What per cent do you think would come into the new system, if they could stay out without serious loss on their bonds?

Mr. Jones. I do not believe I could undertake to answer that. I think all of our large banks will come in. I would say, gentlemen, that our Denver bank stands ready to come in under that measure with proper modifications. But I do not think some of the little country banks can afford to come in.

Senator Reed. Suppose we were to make a third classification. We already have the provision for the reserve city banks maintaining a certain reserve, and then a less reserve for what is called country banks. Suppose there were a third classification made of the country bank or trust company with only $25,000 of capital and a smaller reserve required from them. Would that be of any help?

Senator Nelson. And a smaller subscription to the capital stock.

Mr. Jones. You mean, to graduate the requirements?

Senator Reed. Yes; we now have two steps, and my suggestion is to make a third step.

Mr. Jones. You are asking my individual opinion?

Senator Reed. Yes.

Mr. Jones. I think every concession you can make that makes it easier and more inviting for the banks to join without feeling that they have to come in to save their charters, the more they will come in and cooperate to the fullest extent.

Senator Shafroth. Mr. Jones, the report of the Comptroller of the Currency for 1912 gives the number of national banks in Colorado as 126. There are probably six or eight more now.

Senator Hitchcock. Can you tell the number of State banks in Colorado, approximately?

Mr. Jones. We had more national banks than State banks up to a short time ago, but Gov. Shafroth assisted to get a mighty good bill through which united State bank organizations under a safer system, and the State banks are growing in numbers.

Senator Nelson. What proportion of your national banks do you think are the small banks of $25,000 capital? Are there as many of them as of the banks of great capital?

Mr. Jones. There are a great many. In a growing country they start with small capital.

Senator Nelson. I want to follow up the suggestion of Senator Reed; I think he was on the right track. Suppose we had these little banks, and, instead of requiring them to subscribe and pay in 10 per cent of their capital, require them to pay only 5 per cent, and only pay in 3 per cent of their deposits instead of 5. Would not that help a great deal?

Mr. Jones. You would have more members.

Senator Nelson. And that would make it much easier. They would only have to contribute one-half of their capital stock; all the other big banks have to. They would only contribute three-fifths, or you might make it 2½ per cent, say. That would put them on
"easy street" as compared to this. Instead of paying in 10 per cent of their capital they would pay in 5 per cent, and instead of 5 per cent of their deposits, say 3 per cent. That would make a big difference?

Mr. Jones. Quite a difference.

Senator Reed. They must ultimately put in 12 per cent of their deposits, or else hold it in their own vaults.

Senator Nelson. They can hold the balance in their own vaults.

Senator Reed. The Senator has gone more into detail. I should like to know what you think about that.

Senator Nelson. Would not that be a great help to them?

Mr. Jones. Undoubtedly.

Senator Reed. Now, suppose we just draw this bill in this form, gentlemen: We require the reserves that are now provided in this bill from banks that go in, perhaps adopting the suggestion that Senator Nelson and I have been suggesting as to smaller banks, but as to banks that do not go in we require them to keep the same amount of reserves as they have now.

Mr. Jones. You are getting at something that is fairer.

Senator Reed. And maybe stop them pyramiding by putting it in other banks.

Mr. Jones. If you mean to make it more inviting to those that come in, that is along my idea.

Senator Reed. You banks have got to get in a safe position. I do not mean you gentlemen individually, but the banking system must be gotten in a safe position, if we can put it there. Congress owes that duty to the country and owes that duty to the banks. Now, there is a system here outlined; we are trying to perfect it. The first thing it does, it reduces materially the amount of reserves that banks are now required to carry. And there may be a further reduction——

Mr. Jones (interposing). In theory; we do not believe it will in practice.

Senator Reed. I mean it reduces it as far as putting it into these banks is concerned. As far as the amount they are required to keep in their own vaults is concerned, there is a reduction. You may have to keep it some place else. There may be further possible reductions.

Now, suppose we enact this law as favorable as we can make it, and then were to provide that as to any national bank not coming into the system it should maintain the same reserves which it is now required under the law to maintain, and that when a reserve was deposited in some other bank that other bank could not redeposit it but would be obliged to hold it so as to stop pyramiding. How would that strike you?

Mr. Jones. Do you think it would be possible to follow the deposit?

Senator Reed. Oh; very easy. You simply specify in the bill that the bank puts $100,000 into another bank and counts it as reserve, and that other bank has to hold that money and can not redeposit it, counting it again.

Mr. Jones. Senator Reed, I spent a few years as State bank examiner in your State, and I do not believe I could follow that deposit and find out whether the bank was living up to the requirement or not.
Senator Reed. I think that is a very small matter of bookkeeping, if I understand it.

Mr. Jones. I do not think it would be. I do not believe you would ever be able to find out where that specific deposit went.

Senator Reed. Let me give you an example. I do not want to take up your time and the time of the committee in arguing it. Let us say there are 100 country banks depositing their balances with the First National Bank in Denver. The bank examiner and the comptroller know what their aggregate deposits are and everybody knows the amount of reserves which they must have on hand in their own vault or in the vault of the First National Bank of Denver. They know the amount of deposits that the First National Bank of Denver has received from this bank and the amounts received from other banks. It seems to me it would be very easy, then, to ascertain whether the First National Bank of Denver had taken these moneys and deposited them some place else, only holding a reserve and treating them as an ordinary deposit.

Mr. Jones. In other words, the bank may not loan it at all.

Senator Reed. No, sir; it must have it in cash.

Mr. Jones. The bank would not receive the deposit, then?

Senator Reed. Exactly; that is what I am talking about. Of course I think I state this rather dully. I can see it better than I can say it. Of course we all understand that if I put a million dollars in your bank and the law requires you to hold as a reserve 25 per cent of it 12 1/2 per cent in your own vaults that that cash has got to be actually in your vaults and 12 1/2 per cent in the vaults of another bank. If that other bank then takes that other 12 1/2 per cent and proceeds to loan it out or to redeposit it, it is, in fact, no longer a cash reserve. It has ceased to be a cash reserve, and hence we have what we call the pyramiding of reserves. Since that can be stopped—and you do not question but what that can be stopped?

Mr. Jones. I do not question but what you can stop almost any bank practice by law.

Senator Reed. The bank would rather keep the entire 25 per cent in its own vaults?

Mr. Jones. Undoubtedly.

Senator Bristow. Why so, if they have this money? Suppose there was a bank which had $20,000,000 deposits and it keeps $4,000,000 or $5,000,000 there; of course that would be within the law.

Senator Reed. You do not seem to catch my thought, Senator. The bank—that is, the second bank—is required to hold 12 1/2 per cent of the other's deposits in its own vaults.

Senator Nelson. Less 5 per cent of circulation.

Senator Reed. Well, I am leaving that out for the present. It thereupon treats that money as an ordinary deposit, holding its own reserve against it.

Now, we could very easily provide by law that when a bank deposited with another bank a part of its reserve that that reserve should no more be used in that other bank than if it held it in its own vault. I was asking the question how a bank would like to have this pyramiding stopped and be allowed to stay in or out, as they pleased, because I think you all agree that pyramiding is a dangerous thing.
Mr. Jones. Would you allow the first bank receiving the deposits from the country bank the use of it at all, or prohibit them from using it?

Senator Reed. I do not see how you allow them to use it, because if they loan it out it would no longer be a cash reserve.

Senator Hitchcock. Senator Reed, would you allow them to keep a reserve of 25 per cent in cash to get that, the way some banks can now? You would not have them keep all the cash there.

Senator Reed. I simply say it is—I was going to say—a farce; it is nearly a farce to talk about a reserve of 25 per cent—cash reserve, for instance—when you take 12½ per cent and put it in another bank and that bank lends it out or redeposits it. It may be redeposited half a dozen times, so that in the end if trouble comes that 12½ per cent has been passed from bank to bank and ceases to really be a reserve within the meaning of the law.

Senator Shafroth. I think Mr. Jones is in error——

Senator Hitchcock (interposing). I think Senator Reed has misstated his own proposition.

Senator Reed. Perhaps.

Senator Hitchcock. I think what you meant was to stop the bank from sending to New York a part of the deposits which it had received from the country bank, and you would permit that bank to keep them all in cash, but loan out a safe proportion of them to its customers.

Senator Reed. That would be a modification and could be adopted under particular circumstances.

Senator Hitchcock. In this bill you allow a Federal reserve bank to loan 66⅔ per cent and keep 33⅓ per cent reserve.

Senator Reed. I am talking about a plan by which these banks can come in or stay out, if we provide what we think is a safe system. That is what we are trying to do.

Mr. Jones. Make it what I have said. Make it attractive for the banks to come in, but do not penalize the banks who do not come in.

Senator Nelson. Suppose we cut the tax of a half of 1 per cent in two? Would that not help the bonds a little? Suppose we made it a quarter of 1 per cent, just nominal; would that not relieve the banks of a good deal of a burden?

Mr. Jones. We beg of you to let it be known definitely, as quickly as you can reach a conclusion, what you decide to do about these bonds in order to prevent their further decline.

Senator Nelson. We are trying to do that, but you can see how difficult it is. They want us to go at railroad speed, but we are using deliberation and trying to get a good bill, and we are constantly prodded because we are not rapid enough.

Mr. Jones. We are not very large bankers, but we want to give you the benefit of what experience we have.

Senator Nelson. You do not want us to go at railroad speed and give you a bad bill?

Mr. Jones. No; we do not.

Senator Reed. If we had accepted some advice that has been given us this bill would have been out of the way some time ago, and you gentlemen would not have had half a chance; you would not have been here to-day.
Mr. Jones. Senators, anything else in regard to reserves it might be well to take up with the gentleman to whom has been especially designated this subject who is to follow me, but anything bearing on the protection of the bonds I will be very glad to answer.

Senator Bristow. You referred to one matter about which I desire to ask you some questions. You said that the small banks, the country banks proper, could not afford to come into this; that the country banker could not afford the loss on his bonds, etc.; but that it was somewhat different with the banks in the cities like Denver—these reserve cities.

Senator Nelson. Big banks.

Senator Bristow. The big banks. What advantage, under the proposed system, has the big bank over the little bank?

Mr. Jones. The large bank feels more keenly the need of relying upon such a system as you are providing. The small banks have not the security, in the first place, to a great extent, so that they can come to the regional bank under the definition as it stands now and get help upon that security. They can get it from our city banks. We hold live-stock loans as collateral in our bank which represent money loaned by country banks over the West, which have a year to mature. It sometimes takes a year or more to mature live stock from the time the farmer begins the process. Sometimes he has to carry the loan over for another year. Such are liquid at the expiration of the time, for the live stock is marketable. Such country bank will always live in the hope that there will be no need of calling upon the Federal reserve bank for 9 months after it makes a 12-months’ loan, in order to get them within the 90-day period.

When the little banks send such paper to us we make them a 90-day loan collateralized by this paper, but the 90-day paper is in turn secured by the longer term paper. We can discount that 90-day paper with the reserve bank. The small country banker is the man we are pleading for. He is the man who is likely to suffer.

Senator Bristow. I agree with you. I am not an expert, but I think the heaviest burden in this arrangement falls on the small man. Unfortunately that is his lot in life in most things, and this is no exception to that, and he is the fellow who is here asking for a hearing and for justice, and it is not any malign influence which is operating upon us. I want that to be distinctly understood. I think every member of this committee is trying to devise some way of relieving the banking situation of the defects that we all admit it has, and we are trying to do it in a way to help the country most.

Now, why should we retire the 2 per cent bonds anyway? Why not let the general banking circulation go on just as it has before and provide for elasticity outside of that?

Mr. Jones. I would ask why.

Senator Bristow. That would not disturb the whole situation nearly so much as this proposition would—this proposition to get rid of the national-bank circulation.

Mr. Jones. That does not take care of the bonds of the banks retiring from business.

Senator Bristow. Of course, that is true, but if you maintain the circulation as it is and let the banks run on just as they are now and not change materially this implied contract that we have with them, and then provide means by which banks can rediscount when
they desire and get additional currency on their assets somewhat similar to this, would not that relieve the entire situation? That is, if your bank in Denver, when there was stress, could take your assets to the subtreasury and get money on them and relieve whatever pressing necessity might exist, if there was any call, usual or unusual, and let them be quickly retired under certain provisions, would not that——

Mr. Jones (interposing). Without enacting this Federal reserve act?

Senator Bristow. Without creating this complicated machinery and disturbing the entire banking system, which has grown up here in half a century.

Mr. Jones. That injects an entirely new thought which is outside the Federal reserve act. That means the Government issuing money direct to the banks.

Senator Bristow. The Government does it now, except it is creating an agency here for the purpose of issuing this money through that agency. Why not utilize the agency that now exists and issue it upon the same kind of collateral and the same security? What is the use of this complicated machinery in order to accomplish that purpose?

Senator Nelson. In other words, what the Senator means is that instead of walking up to Uncle Sam’s counter with Government bonds, you walk up with your commercial paper and say you want notes for it.

Mr. Jones. I understand what he means. His proposition is foreign to the matter which this committee has had under consideration, and foreign to the proposed system which I have studied.

Senator Bristow. It is an additional facility to that which now exists to provide a means by which a bank when it needs help can surely get it if it has proper assets.

Mr. Jones. I think it is worthy of consideration. It has been suggested before. I heard the suggestion several years ago.

Senator Bristow. That is not my idea. It is Senator Hitchcock’s idea. He has been bringing it out here for almost a month.

Then there is another suggestion on which I would like your view. There has been a suggestion made by Senator O’Gorman that we create one Federal reserve bank instead of 12.

Senator Bristow. Under the control of the Government, managed by a board appointed by the President, similar to the present provision in this bill, and have it a bank of discount, a bank of issue, and a bank of reserve.

Senator Hitchcock. The hour of 6 has arrived.

Senator Nelson. Mr. Chairman, before we adjourn I should like to submit a matter to the committee. I have received a letter from Minnesota stating that a delegation of country bankers want to come down here and asking if they can get a hearing. I want to know what to say to them.

Senator Hitchcock. If they arrive between the 22d and the 25th they can be heard.

Senator Nelson. Very well; then I can write them to come between the 22d and the 25th.
Senator Hitchcock. I think we ought to know pretty soon when they expect to be here so we can put the date down.

Senator Nelson. I will wire them in the morning. I ask the consent of the committee to invite them to come.

Senator Reed. I make a motion to that effect.

(The motion was duly agreed to.)

Senator Shafroth. I think you had better make the invitation for the 22d.

Senator Hitchcock. The 22d is full.

Senator Nelson. Very well; I will make it for the 23d.

Senator Bristow. Will Mr. Jones be here to-morrow? There are some more questions I should like to ask him.

Senator Hitchcock. This delegation will be heard further to-morrow morning if desired; and they will be followed by two gentlemen from New York, Mr. Perkins, of Albany, and Mr. Treman, of Ithaca; and there are several Kansas bankers here.

Mr. Jones. At what hour shall I be here to-morrow?

Senator Bristow. At 10.30, please.

(Thereupon at 6.03 o'clock p. m. the committee stood adjourned to meet to-morrow, Tuesday, October 14, 1913, at 10.30 o'clock a. m.)

TUESDAY, OCTOBER 14, 1913.

Committee on Banking and Currency,
United States Senate,
Washington, D. C.

The committee assembled at 10.30 o'clock a. m.

Present: Senators Reed (presiding), Hitchcock, O'Gorman, Pomerene, Shafroth, Hollis, Nelson, Bristow, and Weeks.

STATEMENT OF GORDON JONES—Resumed.

Senator Reed. Is there any member of the committee who desires to ask Mr. Jones further questions?

Senator Bristow. I was asking Mr. Jones last night when we adjourned about the advisability of having one central reserve bank, governed by a board similar to that created in this bill, which should be a bank of discount, a bank of issue, and a bank of reserve.

Senator Bristow. Yes; under Government control.

Senator Nelson. And a central bank—

Senator Bristow. With branches to take care of the different localities of the country. What would you think of that kind of a system?

Mr. Jones. A Government bank without the banks owning the stock?

Senator Bristow. Two suggestions have been made: One would be by popular subscription, like the Bank of France, and another only the banks to subscribe.

Mr. Jones. That is a matter that would entirely change the scope and plan of the present measure. I did not feel competent to talk upon the present measure until after about a month's study of the
bill. I would not feel like giving an offhand reply to another plan unless I had gone into it carefully.

Senator Bristow. Suppose the same stock provisions that are provided for in this bill should be provided for in a bank such as I have indicated, a central reserve bank controlled by the Government, and the stock owned by the banks, just as under this bill.

Mr. Jones. Ownership without representation?

Senator Bristow. Yes; just exactly as this is.

Mr. Jones. I do not think any plan for a bank as proposed without proper representation from the ownership of the bank would be feasible or would work out satisfactorily either to Government or the people.

Senator Bristow. If the Government should establish a central reserve bank with branches, and the subscriptions to the stock be voluntary by any citizen who desired to subscribe, and the Government, through that bank, would perform all the functions that are desired for the relief of the banking institutions of the country—let them have money, discount their paper, etc.—

Senator Nelson. Issue bills.

Senator Bristow. And issue bills, and let it be voluntary with the banks as to whether they subscribe to the stock or not; and whether they did subscribe or not, if they had good paper and were reputable banking institutions, they would have the facilities which the bank afforded—what would you think of a plan of that kind?

Mr. Jones. That would mean an entire reconstruction of the bill, would it not?

Senator Bristow. Yes.

Senator Nelson. Not in its fundamentals.

Senator Bristow. Not in the principles of the mobilizing of reserves and making the currency elastic, which are the only things which have been asked for.

Mr. Jones. Requiring the banks to maintain balances with it?

Senator Bristow. Yes; any bank that desires help would, of course, maintain a balance. It would be a bank of reserve.

Mr. Jones. A plan might be worked out along that line that would be feasible. It is very easy, theoretically, to devise something that would not be practicable.

Senator Bristow. Are you familiar with the Bank of France?

Senator Reed. I would like to interrupt for a moment to call the attention of the committee to a matter which I think ought to be settled, because I think an answer should be given one way or the other. I have a letter here, which was just handed to me by Senator Owen's clerk, from the Chamber of Commerce of the United States, Riggs Building, Washington, D. C., dated October 14, 1913, and addressed to Hon. Robert L. Owen, etc. It states that the report of the chamber's committee on banking and currency has been approved by a large majority of the constituent members by referendum vote, and requests that the chamber be given an opportunity to be heard by the committee. The letter is signed by Elliott H. Goodwin, general secretary.

The question, of course, is whether we will hear them; and if so, when can we hear them.

Senator Hitchcock. I move that we put them down for Thursday.
Senator Reed. If there is no objection to hearing these gentleman on that date, that will be the arrangement of the day.

Senator Bristow. Now, Mr. Jones, I want to inquire a little further of you. What are the deposits of your Denver bank?

Mr. Jones. My bank in Denver?

Senator Bristow. Yes.

Mr. Jones. $6,000,000 deposits.

Senator Bristow. And what is the amount of your stock?

Mr. Jones $400,000, with surplus and undivided profits of a like amount.

Senator Bristow. In the panic of 1907 did you use clearing-house certificates in Denver or did you pay out the money?

Mr. Jones. Some of the banks put out certificates and others did not.

Senator Bristow. Did you use certificates?

Mr. Jones. No.

Senator Bristow. Did you limit your payments or did you pay your depositors whatever they called for? Was there a limit on the amount?

Mr. Jones. There was a limit.

Senator Bristow. There was a limit?

Mr. Jones. A limit as to the cash payments for 10 days.

Senator Bristow. Yes. How much of cash would you have had to have not put any limit—just to have paid out whatever anyone wanted? How much additional money would you have needed, in your opinion?

Mr. Jones. I can not answer that, because I do not know if we had not put on the lid what would have been demanded of us. But I do not believe any bank in Denver would have had to have had any additional amount to have met all the demands on them. In other words, I am sure the putting on of the lid was unnecessary.

Senator Bristow. If the banks of Denver could have gone to a sub-treasury and secured the amount of their capital stock in cash at any time they wanted it, would there have been any uneasiness on the part of the banks as to their ability to have met their demands?

Mr. Jones. None whatever.

Senator Bristow. None whatever?

Mr. Jones. Or of the people, either.

Senator Bristow. Would not that be a very simple way, then, to meet an emergency?

Mr. Jones. It would be a very delightful way, if we could go to the Treasury and get cash as fast as we want it.

Senator Bristow. Of course that takes for granted you would give security to get it?

Mr. Jones. Yes; and we would have it.

Senator Bristow. You would have it?

Mr. Jones. Provided the Government machinery would not be too cumbersome and could give it to us as readily and conveniently as our correspondents do when we have need.

Senator Bristow. Can you see any dangers in a system of that kind?

Mr. Jones. Offhand I can not see but what something could not be devised along that line; but it would mean an entire reconstruction, would it not, of the present bill?
Senator Bristow. It would require some quite radical amendments to it, yes; but there seems to be an impression on the part of some of the gentlemen who come before us that it won't do to suggest anything that would be a very radical departure from the bill. I think I voice at least the views of some of the members of the committee when I say we would like suggestions of all kinds that might be of use to us, regardless of whether they are in conflict with the bill or in harmony with it.

Mr. Jones. May I offer a suggestion right there, then——

Senator Bristow. Yes; I will be glad to have it.

Mr. Jones (continuing). Which your questioning has led up to. I think the present bill is entirely too cumbersome. I think the machinery is too elaborate to make it workable, especially for the small bank, in whose interests we are here to-day. In other words, it may require borrowing on behalf of the banks to keep it going. You have such a large machinery, requiring immense office buildings, absorption of exchange, salaries, and other expenses to operate the regional bank that to make it a success the banks might be compelled to borrow. That would be contrary to the ideas of conservative banking. We have all been educated that banks should borrow for emergency only or to meet temporary demands. This bill contemplates a large amount of deposits will be carried by banks called reserves. These will not be reserves in fact, but merely permanent investments, as I said yesterday afternoon, without interest. We can not draw it out except in case of liquidation. The banks and the Government deposit large amounts, and in order to keep the machinery going it may become necessary to reloan to the banks. The banks do not want to borrow except for emergencies.

Senator Bristow. If you retire the national-bank currency, the banks have got to borrow or there will be a stringency in the currency, because the currency would depend on the borrowing of the banks.

Mr. Jones. The banks would not have to borrow if they could sell their bonds and retire their note circulation.

Senator Bristow. But, then, would not that result in a contraction of the currency if they took $750,000,000 of the national-bank notes out of circulation?

Mr. Jones. Would it be necessary for the banks to borrow from the Federal reserve banks in order to take out currency?

Senator Bristow. There is not any other way to get currency out.

Mr. Jones. We could build up our balances with them and demand it in currency, couldn't we?

Senator Bristow. No; the basis of the currency is 90-day paper; that is the only basis for currency that this bill contemplates.

Mr. Jones. Could the Federal reserve banks under section 15 make loans to commercial interests?

Senator Nelson. No; only to banks.

Mr. Jones. I think you will find——

Senator Bristow. It can discount paper.

Mr. Jones. I think you will find this section would permit them to do so.

Senator Bristow. That is one of the controverted questions, as to whether these regional banks are going into the open market.
Senator Hitchcock. It is agreed, I think, that the only purpose for which a regional bank can go into the market and buy paper is to establish the rate of discount which it has made—to force the other banks to loan money at the rate it has established.

Mr. Jones. How is that, Senator?

Senator Hitchcock. I say the only purpose for which the reserve bank can go into the market and make loans or buy commercial paper is to establish the interest rate which it has created; that is, to force the other banks to loan at the rate which it establishes.

Mr. Jones. If it does do that, then it can issue currency against that paper?

Senator Hitchcock. Yes.

Mr. Jones. Then it will not be necessary for banks to borrow in order for the Federal reserve banks to have assets against which currency can be issued?

Senator Reed. No; this is what the Senator from Kansas means: That if the $700,000,000 of national-bank notes are retired there would then be a shortage in currency, and the banks, in order to get money, would have to deposit their 90-day paper and call upon the Government to issue currency against it. That was the suggestion of the Senator from Kansas.

Senator Bristow. There is no other way of getting currency. But Mr. Jones suggests that these Federal reserve banks could buy commercial paper and issue currency for it.

Mr. Jones. Yes; in order to meet the withdrawal of deposits that may be built up, in excess of the 5 per cent reserve fund, for the express purpose of demanding the currency. There would be no other way to credit deposits.

Senator Reed. I should think that would be a very bad sort of deal.

Mr. Jones. I am expressing myself in a personal way. We were not delegated to talk about that, however, as representatives of the country banks.

Senator Hitchcock. They all agreed it should not be allowed to go into the market and buy paper except possibly to establish the interest rate.

Mr. Jones. Your bill does not say so; if they could buy it they would come in competition with the banks.

Senator Weeks. Mr. Jones, this is not our bill; it is a bill that has been sent to us which we are investigating.

Mr. Jones. That is the reason we are appealing to you to get it in shape so it may be workable.

Senator Bristow. Mr. Jones, how much balance do you carry in your reserve cities and in what cities do you have your reserve in fact?

Mr. Jones. The United States National Bank of Denver keeps about 20 per cent of its deposits in New York, St. Louis, and Chicago, divided between the three central reserve cities.

Senator Reed. How much in your bank as a reserve?

Mr. Jones. Usually nearly 15 per cent, and about 10 per cent more scattered in other parts of the country, necessitated on account of collections, like at San Francisco and Kansas City.

Senator Nelson. That is your exchange business?
Mr. Jones. No; necessitated on account of items we handle that are cleared through those points.

Senator Hitchcock. It that an average amount?

Mr. Jones. I should say that is nearly so.

Senator Hitchcock. What is the total?

Mr. Jones. We generally keep 45 to 50 per cent reserve. In 1907 we closed the panic, what was called the panic, with nearly 58 per cent reserve—not legal; reserve but cash and all balances due from banks.

Senator Bristow. If these regional banks should be established, provided for in this bill, Colorado might be attached to San Francisco or it might be St. Louis. In the event it was, or to New Orleans, have you ever figured as to what effect it would have upon Denver in the transferring of the reserves of the banks that are kept in Denver now to the regional reserve banks?

Mr. Jones. I believe that will be gone into by another member of our delegation who has studied that matter and who is to follow me.

Senator Bristow. If that is the case I won't ask that now.

Mr. Jones. I do not like to anticipate him. There are one or two matters I would like to add to what I said yesterday covering one or two questions asked me, with your indulgence. Answering the Senator from Missouri, I think he was questioning as to whether it would be possible to devise some plan to prevent the pyramiding of deposits by prohibiting the bank receiving the deposits from the first bank—where it originated—from reusing it. After giving the matter some little study last night, I am confident there is not enough cash in the country to provide sufficient reserves if such deposits were to be held in cash by reserve or central reserve banks.

Senator Nelson. Without using them?

Mr. Jones. Yes; without using them, if such banks were required to hold such deposits in cash it would contract the currency beyond conception and it would be wasteful and add to our present hoarding system.

Senator Reed. At the same time, you recognize the fact that the pyramiding of reserves impairs the actual utility of the reserves as a reserve, do you not?

Mr. Jones. Not when things are working smoothly.

Senator Reed. Nothing is the trouble when everything is working smoothly. That implies the absence of trouble, the very statement of it.

Mr. Jones. That is true. I made the remark a moment ago we are building up a big machinery to keep going all the time when we do not need it. And, to be frank with you, I do not believe there is any need of arguing whether the dividends should be 5 per cent or 6 per cent. It might be wiser to figure as to the amount of assessments that may be necessary to keep it going. I do not think under the present plan there would be much dividends for us to quibble over, unless you provide for the Federal reserve banks doing a general banking business. That I would regret very much to see.

Senator Hitchcock. Where you said a moment ago a bank would not be able to operate profitably and successfully, except by borrowing or rediscounting——

Mr. Jones (interposing). A bank would not?
Senator Hitchcock. I understood you to say that under the system which this bill proposes to establish a bank would be compelled to rediscount paper in order to operate profitably.

Mr. Jones. I said it might be necessary for the member banks to become continual borrowers of the Federal reserve banks in order that those banks might operate profitably.

Senator Hitchcock. Oh, you are speaking of the reserve banks?

Mr. Jones. Yes, sir.

Senator Hitchcock. Is it also true that in order that the reserve bank might earn a dividend it would be required to adopt such a policy as would procure currency from the Treasury? It could not operate simply by the reserve deposits with it, could it, at a profit?

Mr. Jones. I thought that was the plan—that it should operate upon the deposits of the Government and the deposits of the banks and its own capital stock.

Senator Hitchcock. Let us see: The law provides that it must keep a reserve of one-third of all the money deposited with it. That means that it can only lend out two-thirds of its deposits; do you think that it would be able to operate at a profit when it only had two-thirds of its deposits to lend and only had the demand for those deposits at certain seasons of the year when banks required discounts?

Mr. Jones. We are getting into a very deep phase of the subject, and I am confident the bankers of the large cities are more competent to answer that than we of the country. I have been under the impression that the bank, to make a success, must loan its loanable funds. To whom is it to loan its loanable funds? The intention, as has been stated, is to relend it to the banks. We object to our banks becoming chronic borrowers, but they might have to become chronic borrowers to make this a success as planned now with the great machinery built up, unless the Federal reserve banks enter the field as competitors of the existing banks.

Senator Nelson. Aside from that if they can not do a general banking business, their whole discount business will simply be limited to the demand for note issue, won't it?

Mr. Jones. It seems to me——

Senator Hitchcock (interposing). Before you go into that, let me ask you this question: Besides being a stockholder in many country banks you are a city banker, are you?

Mr. Jones. I am so considered.

Senator Hitchcock. In Denver. Now, can you give the committee any idea of the cost of handling the business of the country banks? You have a lot of country bank depositors, have you not?

Mr. Jones. Yes. The cost depends on how we handle the business, as to whether we are allowed to charge their account with the items we receive on their town or whether we must send them as funds in transit and upon the interest paid on their balances, and as to the average balance they carry and as to what items they send us, and as to the territory they cover, whether within a limited area or scattered over a large area.

Senator Hitchcock. Under the terms of this bill the reserve bank must credit the checks upon deposits.

Mr. Jones. The gentleman to follow me has been delegated to go into that feature.
Senator Hitchcock. Is he going into the necessity for doing that?
Mr. Jones. Yes; he has analyzed it for you.

Senator Hitchcock. As I understand this proposition, the reserve bank becomes a clearing house for hundreds of banks and will be compelled to maintain a great force to handle the business of those reserve banks; but if you are going to have somebody go into that I would be glad to hear them.

Mr. Jones. Adding to the suggestion made yesterday that the Federal reserve banks should take over the 2 per cent bonds of non-members or of such banks that prefer to give up their charters rather than become members under the terms of the bill we would submit that the Federal reserve banks should certainly take over the 2 per cent bonds held by the banks that are now securing Government deposits, because the Government deposits are to be transferred from the banks to the Federal reserve banks. This we would like to impress upon you, and to give you an illustration I will use my own case: A few months ago I was notified that our bank was designated a regular United States depository. We received a deposit under the prevailing rules that had been established for years.

Senator Nelson. How much was the deposit?
Mr. Jones. $50,000 was the amount we received, which I believe was with interest at a nominal amount or without interest maybe.

Senator Nelson. One and a half?
Mr. Jones. Not at that time. We were asked to send down Government bonds as security. Feeling we always wanted to help maintain the market on twos, as we have always taken a pride in the fact that our Government was floating a 2 per cent bond, we authorized the purchase of 2 per cent bonds. They were purchased, we paying 101 1/4 for them. They were deposited with the Secretary of the Treasury as security for our deposit. Within a short time thereafter we received notice that a new rule had been established and we would have to pay 2 per cent on the deposit. Gentlemen, we are paying 2 per cent on that deposit to-day, and the 2 per cent bonds for which we paid a premium are with the Government as security. Now, there are many other banks which hold Government deposits on which they are paying 2 per cent, and many of which paid a larger premium on the 2 per cents than we did. Now, these deposits are to be removed to the Federal reserve banks, and in justice we ask that the Federal reserve banks take these bonds on a par basis.

Senator Hitchcock. Can you state what amount of 2 per cent bonds are now held by the national banks to secure deposits?
Mr. Jones. I have not the information at hand.

Now, adding to the suggestion I made on behalf of the country bankers yesterday to endeavor to devise some plan that does not penalize the bank that does not feel it can afford to come in and to make it as inviting as possible in order to build up that which the country needs more than the banks, for the banks do not need relief as much as the country needs it. We can protect ourselves, as has been demonstrated, by contracting. The public always suffers more, because we see the trouble and accentuate it and do get in shape to protect ourselves better than the borrowing public can. I understand, by reading history, that at one time even religion was endeavored to be forced by coercion and not made attractive, and it was never successful until it was made inviting and voluntary to the
people. Now, I believe if something could be devised by which it was made inviting and voluntary we could build up a system which all would be glad to join.

Senator Pomerene. Do you think there is an analogy between the banking system and religion in this country?

Mr. Jones. There may be an analogy between religion and anything else that is good for the people.

Senator Nelson. Unless you assume that money is the root of all evil. [Laughter.]

Mr. Jones. Another thing, gentlemen. We country bankers never expect to have representation on the board, but we do believe that there has been provided a sufficient banking representation on the board. Now, I am speaking personally; not for the country bankers at all. One of my reasons for it is we do not feel the machinery will work smoothly without there are more men of approved banking experience on the Federal board. We know what it is to go up against theoretical and technical banking. If a good bank wants to borrow from its correspondent on account of sudden need, it can wire that correspondent it is sending sufficient securities to cover, and the bank can get credit before the securities are received.

Senator Nelson. But do not overlook how smoothly this bill passed the House without the aid of bankers.

Mr. Jones (continuing). And we have asked, for the purpose of protecting our capital stock there, that we be given more liberal representation.

Senator Nelson. Don't you see how easy that could be done without the aid of the bankers? I mean the passing of the bill.

(No answer.)

Senator Weeks. Mr. Jones, do I understand you to say your Denver bank had 58 per cent of deposits in reserve at the end of the panic?

Mr. Jones. Yes. But since I said that it has occurred to me it might have been 52 per cent.

Senator Weeks. 52 per cent.

Mr. Jones. Above 50 per cent.

Senator Weeks. How much did you have at the beginning of the panic?

Mr. Jones. In speaking of reserve, I meant what we had in our vaults and scattered over the country—actual reserve. We call it not legal. We probably had 40 per cent.

Senator Weeks. You increased your reserve 12 per cent?

Mr. Jones. Yes; I think so.

Senator Weeks. Where did you get it?

Mr. Jones. Commercial paper that was paid. We are quite a commercial paper buying bank and the maturity of our commercial paper which was credited to our accounts with our eastern correspondents provided funds greater than demands upon us.

Senator Weeks. Then you did not reloan?

Mr. Jones. We did not deny loans or renewals to local customers. A loan that came to us from a regular bank correspondent or from a local depositor—we did not deny them, because we knew our ground on account of having so much commercial paper.

Senator Weeks. You did not renew your loans that were bought?
Mr. Jones. We were not asked to renew outside commercial paper—we protected our own community.

Senator Weeks. I would like to call the committee's attention to what happened in 1907. Here is a bank that certainly increased its reserve more than 12 per cent. Now, the New York banks at the beginning of the panic had $300,000,000 in reserves. If all the country banks of the country had increased their reserves 12 per cent, it would have taken more than $300,000,000 to have done it. In other words, the New York banks would not have had any reserve left if every country bank had increased their reserve as much as did this country bank.

Mr. Jones. I beg your pardon; you do not understand the way our reserves were increased. Our balances increased in New York through the maturity of our commercial paper payable there.

Senator Weeks. I understand how you increased your reserve.

Mr. Jones. Our cash in vaults may not have increased.

Senator Weeks. That does not make any difference. The reserve was increased 12 per cent by your bank. Somebody had to loan those people who had paper maturing.

Mr. Jones. That is true.

Senator Pomerene. If every bank had increased its reserve to that extent, how much money would have been out in the hands of the public—the pockets of the public?

Mr. Jones. How is that?

Senator Pomerene. I say, to change the question a little, if every bank had increased its reserve 12 per cent during that panic, how much would there have been out in actual use?

Mr. Jones. We did not increase our cash reserve. Our cash reserve may have been reduced, but our general reserve with other banks was increased by reason of the maturity of outside paper.

Senator Nelson. Do you not know what they did with it? They probably held it?

Mr. Jones. They probably used it for the protection of their own communities.

Senator Shafroth. The table was presented here by which it was shown that the New York banks did not have as much reserve in the panic of 1907 as the country banks. Very few banks has as much reserve as the witness's bank.

Senator Reed. Mr. Woodruff, will you take the stand?

We will now hear from Mr. Woodruff.

STATEMENT OF GEORGE WOODRUFF, PRESIDENT FIRST NATIONAL BANK, JOLIET, ILL.

Senator Reed. Mr. Woodruff, you appear as one of the representatives of this committee of country bankers?

Mr. Woodruff. Yes, sir.

Senator Reed. Where is your bank?

Mr. Woodruff. My bank is the First National Bank of Joliet, Ill.

Senator Reed. What is the capital?

Mr. Woodruff. $200,000.

Senator Reed. And the surplus?

Mr. Woodruff. $150,000.

Senator Reed. How long have you been in the banking business?
Mr. Woodruff. Ever since I was 5 years old.

Senator Reed. That is still a little indefinite, but I take it you have been in some 12 or 15 years, at least. [Laughter.]

Mr. Woodruff. About 27 years.

Senator Reed. You have been in the banking business practically all your life?

Mr. Woodruff. I have been in the banking business practically all my life; yes, sir. My father was in the banking business before me, and when I was a little boy he put me in the business. I would spend my vacations in the bank, and go to school at the same time. I have been actively engaged as an officer of the bank for 10 years.

Senator Reed. I believe you have one particular thing you desire to discuss, and I will thank you to go ahead with that now.

Mr. Woodruff. Now, gentlemen of the committee, the committee appointed by the country bankers have asked me to talk to you a few minutes about the exchange section of the bill. So it seemed to me it might be a good scheme for me to take it up briefly from five different standpoints, and then I will be very glad to answer any questions that I can. I desire to take it up first from the standpoint of the reserve bank itself, then from the standpoint of the city bank, then from the standpoint of the country bank, and then discuss the principle involved, and then suggest the changes that the country bankers desire made in the bill.

Now, from the standpoint of the Federal reserve bank itself. We have read the law over, and it seems, from the wording of the law, that the reserve banks will be compelled under this act to accept at par checks drawn by individual depositors upon any member bank, and also the checks drawn by any member bank, which we will call drafts, because that is what we call those checks drawn by one bank against any other bank, and then in addition, of course, the bank drafts of any bank upon any other Federal reserve association. So there are three classes of checks or drafts involved in that provision. From the standpoint of the Federal reserve bank, if it should attempt to handle the personal checks, I believe it would be a very expensive proposition.

In the first place, it would probably involve the taking over of much of the so-called transit business by the Federal reserve bank from the member banks. Of course that business would consist only of checks or transit items upon member banks, but that might be a very large amount of business.

The reason the bankers asked me to talk was because I am a country banker, and therefore interested from the standpoint of the country banker, and also because I happened to clear a great many of these items which come to country banks in my State. There are about 200 country banks who send their business to me, and we cooperate, and we make a small profit in handling the business.

We handle this out-of-town business through what we call a transit department.

Now it is necessary for us to also have an analysis department, because if we did not have some way of knowing whether we would lose money or make money we would run our business at a loss. Every bank which opens an account with my bank—and it is also true of reserve center banks—is listed in our analysis department, and at the end of each month we have an analysis of all the business
we have handled for that bank. We figure the profits we have made out of the handling of that business, and at the end of the month we know how much we have made or lost.

In that connection I have the figures which I sent for the other night, when the members of the committee asked me if I would talk to you. I have the figures from our analysis department covering this year's operations, in which we have handled 799,420 individual checks. That is the number of checks.

Senator Hitchcock. What time is that?

Mr. Woodruff. From January 1.

Senator Hitchcock. There were 799,420 checks?

Mr. Woodruff. Yes; down to the last of August.

Senator Hitchcock. How many months is that?

Mr. Woodruff. Eight months, amounting in the aggregate to $29,900,000. I find that that cost me for overhead expenses, $12,600, which means 42 cents a thousand for overhead expenses. Overhead expense means the cost of the clerical help, stationery, postage, and all of the expenses inside of the bank.

Senator Hitchcock. You mean 42 cents per thousand checks?

Mr. Woodruff. No, sir; per $1,000. That does not figure rent or the expenses of the salaries of the overhead officers. The salaries of the officers directly in charge of the out-of-town department are figured in, but the other officers, the general officers of the bank, are not figured in in figuring the overhead charge of the transit department. Neither is the rent.

Senator Reed. You mean the president and the cashier; those officers of the bank which you have anyway?

Mr. Woodruff. They are not figured in. We had one vice president whose salary was figured in. An assistant cashier does the work now and gives his exclusive time to this department.

Senator Reed. The only thing you charge as overhead charge, as far as salaries are concerned, are the salaries of those men who actually devote all their time to handling this particular branch of the business? Am I right in that?

Mr. Woodruff. Yes, sir.

Senator Reed. That is $12,600?

Mr. Woodruff. Yes, sir. Since I have been president of the bank I have divided the bank into departments, and we have some degree of segregation. We have our savings department and our commercial department and our out-of-town department very well segregated, although we do not segregate the investments, and consequently we can divide our overhead expenses very accurately.

We find the cost of collecting that amount of business, which involves exchange charges and the loss of time in the mails would be about $28,300, and I would estimate that to be about 94 cents.

Senator Hitchcock. 94 cents per what?

Mr. Woodruff. Per $1,000.

Senator Bristow. What were the items of expense? This last item—

Mr. Woodruff (interposing). The last item covers the exchange charges plus the loss of time in the mails.

Senator Bristow. That is the interest on the money while it is in transit?
Mr. Woodruff. Yes. We figure $1,000 to be worth 14 cents per day, that is, at 5 per cent interest. If you come into our bank and cash a check on some bank that is five days away, we give you the $1,000, as we would do whenever a man comes in and we know him. We usually do not quibble about a matter like $1,000 if the man is good, and we absorb the little loss. If he were a stranger we would not do that.

It takes five days to get that back in cash. We have given him cash for it. There would be a loss on those five days of 70 cents. That is carefully figured in our analysis department. We figure how long it is going to take to get that check back from actual experience, and when it comes back we know how much time we lost in collecting it; that is, we know how much money we lost, because otherwise we could have loaned that amount at 5 per cent. We figure a flat rate of 5 per cent. Sometimes we get more and sometimes less. We find a charge of 94 cents per $1,000 is our average cost.

Senator Nelson. Exchange and interest?

Mr. Woodruff. Yes, sir; that is, interest and exchange.

Senator Reed. How much is the exchange?

Mr. Woodruff. We would allow about one-third as exchange and about two-thirds for loss of interest, because of time lost in the mails. That gives you, roughly, a little idea of our experience from actual business in handling a small amount of this business, and you can easily figure what a central reserve bank would have to consider in handling a sum amounting to hundreds of millions of dollars. It would amount to a tremendous expense, and in addition to that it would be a tremendous undertaking to organize transit departments that could even handle the business physically. We find that the banks of this country, many of them, which have built up transit departments have started them in a small way. Even in our little bank down in the country, if we had to develop a transit department and would have our volume of business suddenly thrown upon us, it would necessitate very much loss to us, particularly from the standpoint of the organization of the department; it would take a long time to get that department organized.

Senator Hitchcock. You are clearing for about 200 State banks?

Mr. Woodruff. Yes; some State, some national, and some private banks.

Senator Hitchcock. All of Illinois?

Mr. Woodruff. Practically all.

Senator Hitchcock. Do you handle all the checks that they send out?

Mr. Woodruff. Yes, sir.

Senator Hitchcock. And all the drafts made on them?

Mr. Woodruff. We would if we received any. You know there is a difference between checks and drafts. A check is looked upon as a personal check, a check which an individual draws against his bank; and a draft we call a bank draft, which means that one bank has drawn its draft against another bank.

Senator Hitchcock. I want to know what you actually receive. Suppose a bank in my town received a check from one of the Illinois banks, would that go through your hands?

Mr. Woodruff. If the bank in your town had an account with me and was using my bank as a clearing center.
Senator Hitchcock. Suppose it had only an account with Chicago?
Mr. Woodruff. It would not come near me.
Senator Hitchcock. You do not get all the checks on Illinois banks?
Mr. Woodruff. Of course not.
Senator Hitchcock. The reserve bank located in Chicago would get all the checks?
Mr. Woodruff. Yes; all the checks upon its members, because the law does not allow it to take any other checks. The transit departments would remain as they always have, because there would be such a vast amount of checks that would not go through the Federal reserve bank anyway. They would divide all their transit business and then dump in the Federal reserve bank all checks drawn upon members of the reserve bank.
Senator Hitchcock. Have you any estimate of what that business would amount to, if a reserve bank were located in Chicago and had, say, 1,000 country members?
Mr. Woodruff. Of course, that would be a very hard thing to estimate, because there is no way of determining how much transit business is now handled in Chicago. I think, however, that I can give you a formula that you could use to estimate that. I find that my deposits from country banks amount to about a million and a half; sometimes a little more and sometimes a little less. I find that we clear every month a little better than twice that amount of items. If you use that as a general rule, you will get somewhere near the truth.

The average reserve city bank probably handles about twice as much per month in out-of-town items as is held in bank balances. Of course that might not be true with many banks. Many banks might have dormant balances and not be handling so many of the items. Then in large city banks the local deposits would make the items much greater in number. However, in our bank the monthly items will average about twice the amount of the bank balances. That is about the only estimate that could be made. I think that is about as near as you could get to it.

Senator Hitchcock. If the country balances in Chicago were $75,000,000?
Mr. Woodruff. In such a case we would figure that there is practically in the neighborhood of $150,000,000 of transit business passing through the Chicago banks.

Senator Hitchcock. That would be on the basis on which you are doing business?
Mr. Woodruff. Yes, sir.

Senator Hitchcock. This reserve bank would naturally handle not only Illinois checks but outside checks, and therefore would it not handle a much larger proportionate volume of business than you handle?
Mr. Woodruff. I doubt it. The Federal reserve bank only handles checks on its members, which would mean only the member banks inside of that reserve district.

Senator Hitchcock. Suppose it did handle in the same proportion, which would be $150,000,000 a month, what would the overhead charge on that be, on the same basis as yours?
Mr. Woodruff. My overhead cost, taking the average all through, is less than the overhead cost of the average collecting bank; that is, 42 cents per $1,000.

Senator Hitchcock. What would that be on $150,000,000; that is, in eight months? What would it be on $150,000,000? That would be $63,000 per month, would it not?

Mr. Woodruff. That is the way I estimate it.

Senator Hitchcock. What would the cost of collection, exchange, and interest be?

Mr. Woodruff. 94 cents per $1,000 is my experience in Joliet.

Senator Hitchcock. That would be about $130,000 on $150,000,000?

Mr. Woodruff. Of course, this $150,000,000 that we are estimating on is, as I have explained, a very rough estimate, but it is the nearest we can get.

Senator Reed. In making those figures you ought to take out the one-third you pay for exchange, because, I take it, the regional banks would not have to pay exchange.

Mr. Woodruff. We will discuss that in a moment. Answering Senator Hitchcock, I think that amount would be $141,000. That is the way I figure it.

Senator Hitchcock. Then that would be a total of $204,000 a month that would be the cost of operating a reserve bank in Chicago, as far as the handling of checks and exchange is concerned?

Mr. Woodruff. Only provided we have that $150,000,000 a month. Of course I feel that, as a matter of fact, the Federal reserve bank in Chicago would handle more than that amount of these items. Whether it would or not, I can not say. The bankers of Chicago could give you more definite information on that point.

Another thing you must remember, the reserve bank will not take all the business. It will only take the items on member banks within the reserve district, and that makes a difference.

Senator Hitchcock. What proportion of the total cost of operating a reserve bank would be represented by this $200,000 a month? What additional cost of operating can you estimate?

Mr. Woodruff. I do not quite understand what you mean.

Senator Hitchcock. Would this $200,000 a month represent all the cost of operating a reserve bank?

Mr. Woodruff. Oh, no. That $204,000 a month which you are estimating would merely represent the cost of handling $150,000,000 of checks per month. Of course, that department is entirely separate from the general expense of operating a Federal reserve bank. I am only discussing the exchange section.

Senator Hitchcock. You are not in a position to make an estimate except on that exchange section; to estimate what additional monthly cost there would be in operating such a reserve bank?

Mr. Woodruff. That would be impossible, because you do not know how many employees you would have to have and how much space you would have to have, and things of that kind. Of course, you would have to have a large amount of space to have a transit department which could handle this business. It is impossible to say how much it would cost to operate the bank. Other bankers could give you a better estimate as to their exact cost on that large business.

Senator Reed. You are not estimating the cost for clerk hire alone $200,000 a month?
Mr. Woodruff. For all the expense of handling $150,000,000 of checks. If you will pardon me for suggesting, suppose I go ahead and come back to that, and take the next point now.

Senator Pomerene. I want to ask you one question right there. You stated awhile ago that if a customer presented his check for $1,000 and it would require five days to collect that check, and you gave him the money, the cost would be 14 cents a day, as I recollect your statement?

Mr. Woodruff. That is 5 per cent on $1,000 for one day.

Senator Pomerene. For instance, if I deposited $1,000 in your bank and issued checks on it, and it required five days for the return of those checks to your bank for payment, you do not take into consideration the profits you would have on the $1,000 during those five days?

Mr. Woodruff. No, sir.

Senator Weeks. How much of the cost is for postage?

Mr. Woodruff. That is a thing I can not tell you, because I have not the detail figures. I have them at home, but I have not them here, and I would not like to guess on that.

Senator Shafroth. Does not the gain which a bank makes on checks drawn by its own depositors, and which would take five days to come back to be cashed by you—does not the gain which the bank makes on that about offset the loss which it makes by advancing money on checks coming in?

Mr. Woodruff. In my case, it would not compensate in any way.

Senator Shafroth. How about the average bank? Would it not be about that way in the average bank not having a special clearing department like yours?

Mr. Woodruff. Well, I doubt that very much. Of course, it is impossible for a bank to know what checks are outstanding, and you must remember also that many banks pay interest on these accounts.

For instance, if you deposit $1,000 with me and then you send out a check for $1,000 that takes five days to get back—and five days is not the average time; it is merely the time I took in that example. Suppose it did take five days to get back. Perhaps you are getting 2 per cent on your balance during that time.

Senator Shafroth. So the loss would only be the difference between 5 and 2 per cent?

Mr. Woodruff. I doubt very much whether the outstanding checks in the mail would compensate the banks. The bank feels it is entitled to the balance which a man puts in. There is a very prevalent habit on the part of individuals to draw checks before they put the money in the banks. A man may figure it is going to take five days to get the check back, and he may not put the money in the bank until four days after he draws it.

Suppose I just go along and discuss these other things, and we will have the subject in mind better.

Gentlemen, I feel that from the standpoint of the Federal reserve bank, this will be a very expensive proposition, and will be very embarrassing for the bank to handle. It will be hard to build up the organization.

I understand by this bill that the framers of the bill feel that the reserve banks will accept these individual checks at par and will
compel its depositors to cash them at par, allowing no exchange charge, and that instead of sending them for collection, that they will immediately charge them against the account of the depositor. It does not say that in the bill, and personally I have wondered what right the Federal reserve bank is going to have to do that. But it seems to be the general impression that the bank will have the power to do that under this bill; that when it gets the check drawn against the bank out in the country it will immediately charge that check against the balance that is due to that bank in the country, and then it will send it on to that bank in the country which can not collect any exchange. Of course the check is not drawn on the Federal reserve bank; it is drawn on the country bank, and I can not see what right the reserve bank would have to charge it against the account of the country bank. The impression seems to be that the framers of the bill feel confident that the bank can do that.

Senator Reed. Suppose a man drew a check on his bank in Springfield, Ill., and deposited that check with your bank in Joliet, and your bank accepted it and then sent it to the reserve bank in Chicago, and the reserve bank in Chicago would credit your account with that check and charge that check to the Springfield bank's balance. That is your idea?

Mr. Woodruff. Yes, sir.

Senator Reed. And the check might go to the Springfield bank and come back, in which event the reserve bank would have to hold you responsible?

Mr. Woodruff. Yes, sir.

Senator Reed. And get the money back. Is there any other objection to the system except that in regard to the cost?

Mr. Woodruff. Oh, yes. I am coming to the others.

Senator Reed. I mean to that particular transaction; would there be any other trouble in the way?

Mr. Woodruff. I can not understand under this bill what right the Federal reserve bank would have to charge that to the account of the Springfield bank. The check is not against the reserve bank, and I can not see how it can be presented for payment without being presented at the counter of the Springfield bank. Many reserve city banks at this time try to do that with their correspondents. We have had reserve city banks try to do this, but we refuse to allow them to charge checks against our account, because the checks are payable at our counter, and consequently they must send them to us and we will remit for them.

Senator O'Gorman. What would be the personal advantage to you under the present system in meeting these checks at your counter rather than have them charged against you by the reserve bank?

Mr. Woodruff. Now, I was going to explain that under another head.

Senator O'Gorman. Does it not mean that you really have the use of the money a little longer time?

Mr. Woodruff. Yes, sir.

Senator O'Gorman. That is the only advantage?

Mr. Woodruff. No, sir.

Senator O'Gorman. What other advantage is there?

Mr. Woodruff. If the reserve city bank, in the example I have just given, charges the check against us and then sends it down to us, we
never know what our balance is in the reserve city bank. We may have $50,000 on deposit and our books show $50,000 to our credit in the reserve city bank, and we are carrying that as a reserve; and yet, to-day that reserve city bank, many miles away, may have $60,000 worth of checks come in to it drawn against us. They immediately debit our account and our account is consequently $10,000 overdrawn, and yet on our books we have $50,000 in cash in that bank. We get a telegram stating that our account is overdrawn; and such a case has actually happened with us. We had an account on our books showing that we had $50,000 in the reserve city bank. Four days afterwards we get in the items that have come through and a notice showing that they have debited so much money against our account without our knowledge. The correspondent bank has had trouble with our overdraft. Perhaps some of those checks are not even good checks, and we have to send them back again to the reserve center, in which case our money has been used and our reserve has been depleted without even our knowledge by checks that were worthless.

Senator Hitchcock. And then you may possibly have to send currency on and pay the express charges on the currency sent to that reserve center; instead of paying the money over your counter, you may be compelled to do that?

Mr. Woodruff. That might perhaps be. Of course, we might have to ship currency in order to make our balance good. We sometimes have to do that, although usually we horse trade with another bank, and as a matter of fact very seldom ship currency. That happens to be our position in Joliet, because we are near Chicago. Now, gentlemen, I desire to discuss this from the standpoint of the city bank. That is the second point I have in mind.

We find it would be very profitable for the city bank, because the city bank now has a large transit department handling this business. It would hand over a part of this business to the Federal reserve bank and have it credited at once and would save the loss in the mail and also the exchange which it now pays, and, in addition, it would save a large amount of overhead expense, because it would merely record the items and send them to the reserve bank in one package. From the standpoint of the city banker it would be a very good proposition, and the city bankers could make money out of this provision.

From the standpoint of the country banker—nearly all that I said a moment ago in reply to the questions of the Senators applies to the country banker. The country bank would have these items charged against its account without its knowledge, as I have explained. Then, it would be compelled to take these items at par if I understand the intention of the framers of the bill correctly. At the present time the country banks get exchange for this. There are two different kinds of exchange, and I think that sometimes we get those two different kinds of exchange mixed up. There is an exchange a banker charges his correspondents on checks drawn against him, and there is also the exchange that a bank charges people who come in to cash checks on some other bank. There is a difference between the two kinds of exchange. Perhaps I can illustrate that better by an example.
Suppose a man comes into my bank in Joliet and he says, "I have a check on San Francisco for $1,000 that I want to deposit," and I say, "All right; I am very glad to accept that on deposit," and he puts it in. I figure that my loss on that will be 10 days, and it costs me 14 cents a day, and that is therefore worth $1.40 and that is only provided I do not have to pay any charges in San Francisco. Perhaps I say to him, "That will cost you $1.50 in exchange." In most small towns competition makes it impossible to make that charge, and consequently we absorb that charge. In other towns, where the banks have done that and have found that it ate up their profits, they had to make a clearing-house arrangement, and therefore we find the much-talked about clearing-house agreements in the reserve centers. But in my town, suppose competition does not compel me to absorb that charge, and I say to that man, "It will cost you $1.50 a thousand." That is what is known as charging the customer exchange, and that is provided for by the section on page 33 of this bill which says that nothing in this bill shall be construed to forbid that. That is now the kind of exchange that is practiced by the reserve centers through clearing-house agreements.

That check goes to San Francisco and I get the money back in 10 days, and if I get it at par, all right, and consequently we feel we have a right to make that charge.

The other kind of exchange would be where a man would come into my bank—let us follow out the same example. I send that check to San Francisco. When the San Francisco banker gets that he says, "Well, I have got to remit down there to Woodruff this $1,000, and New York exchange is at a premium, and I have to send him eastern exchange. He has got to get his money East." He says, "I have got to be out a 2-cent stamp and I have got to send him this eastern draft, and consequently I feel I ought to be entitled to an exchange charge." Therefore he charges me, we will say, $1 for doing it, or maybe 10 cents. Those charges vary in all kinds of ways. He makes that charge and he remits to me. That is the other kind of exchange, and that is the exchange the country banker is interested in. When you send checks for collection on the country banker he wants to charge an exchange for them when he remits outside, because they are payable at his counter. If a man walks into the bank and gets cash, that is all right. If a man sends in by mail and the banker has to send the money by draft, he wants to charge a little something for doing that work.

Senator Hitchcock. What is the ordinary charge?

Mr. Woodruff. The transit business is a horse-trade business. In my transit business I have very many different kinds of charges, and it would take a long time to explain them all to you. We have in our transit department an alphabetical index of all banks we remit to. On each card there is a letter or figure, and the man in charge of that department commits those to memory. They might be X Y, and that might mean 5 cents a letter. Perhaps some banker down the State is friendly with us, and we say here suppose you take our business down there. You do not care; it will come from somewhere else anyhow. Suppose you take it and charge us 5 cents a letter, no matter how much comes down; you only have to draw one draft, anyhow. He says will you do the same for me, and we say yes,
and we practice a little cooperation, and maybe we will make a charge of 5 cents a letter. It may be that the letters X Y mean that.

And then, perhaps the letter M means 10 cents a letter, and perhaps the letters A B mean 10 cents a thousand or maybe a dollar a thousand. A dollar a thousand is looked upon as a standard, although in some parts of the country it is as high as $2.50 a thousand. But there is a minimum charge. A man will say, for instance, I will take your business at $1 a thousand, with a minimum charge of 10 cents. A dollar a thousand means 10 cents a hundred. Suppose a $10 check comes in, and he charges 10 cents on that; of course that would figure at the rate of $10 a thousand.

Senator Shafroth. What do you think of fixing a maximum that they can make?

Mr. Woodruff. If you will forgive me for suggesting, I would like to discuss that a little farther along.

Now, I was discussing this from the standpoint of the country banker. Have I made myself clear in regard to the different kinds of exchange?

Senator Shafroth. It is clear to me.

Mr. Woodruff. The country banker feels that he ought to get paid for that work, if that check is not presented at his counter. He feels that the item ought not to be charged against his account without his knowing something about it. He feels that he ought to get a little money for this business because everybody else does. The express companies do not send money for nothing; the telegraph companies do not send it for nothing; and the United States Government makes the largest charge of all for its post-office money orders. The Government can not afford to send that money and remit it to different places for nothing, and the country banker feels that the principle involved is much the same.

Senator Shafroth. It costs money to handle money through the Post Office Department, and do you not think this system, when it is organized, will be such that the business can be done without any expense?

Mr. Woodruff. I regret that I can not say that I believe that to be true. I will touch upon that a little farther down, Senator.

Now, I want to take up the question of the principles involved. You know here again we find two subdivisions of this question that we want to try to get clearly in mind.

Now, there is a difference between facilitating exchange and cashing personal checks. I tried at the start to make that difference plain, by calling bank checks "drafts," because usually in the parlance of banking we call them bank drafts. The checks that are drawn by banks, that are the checks of the bank itself and signed by one of its officers, we call bank drafts, and checks that are simply signed by individual depositors we call individual checks, and that separates the two classes.

Now, there are two principles involved here: First, the facilitation of exchange. That means that in this country we should make it easy to transmit sums of money from one place to another. That we all want, and that ought to be done, and that is a thing that is hard to do now. We have domestic exchange premiums and discounts to-day, and sometimes they are very burdensome. We ought to facilitate exchange.
Then the other thing is the cashing or rather the clearing of personal checks. That is a thing that I doubt very much should be done. The difference is just this: If we leave in this bill the provision in regard to personal checks, we help to encourage in this country the flotation of a large number of personal checks. Bankers differ upon that, but we believe that to be wrong in principle. We believe personal checks were designed for the use of the community where the maker is fairly well known, where conditions are understood, and where the check will get right back to the bank. They were never supposed to be floating around over large areas, encouraging what we call the "kiting" of checks, a thing that causes many losses and a very bad situation in the banking business. If we encourage the sending out of these personal checks a man who has no money in the bank can pay a bill five or six days away with a personal check and never bother about putting any money in the bank until the check comes back. You realize that in the meantime, under this bill, a very bad situation might be created.

A man who had perhaps $10 in the bank would draw a check for $1,000, and would send it to some place, say, three days away. It would come to the reserve bank, and the reserve bank would charge that to the account of the bank upon which it was drawn. The bank would therefore be out that $1,000 immediately, but the check would not come back to the bank for three days, and perhaps the man who gave the check in the first place would not bother about putting in the $1,000 until the three days had elapsed, and the bank would be out the use of the money for three days.

Senator Reed. And the man that drew the check would be out of the country?

Mr. Woodruff. That occasionally happens. We hate to acknowledge it, but it sometimes does happen.

Senator Reed. You think that is facilitating fraud?

Mr. Woodruff. That facilitates transportation to Canada, sir.

Now, we do not believe we should encourage that sort of thing. We believe we should discourage these little personal checks as much as we can, and limit them to small areas. We will get around that by facilitating exchange, and now we get to the thing we should have. Instead of allowing the very little fellow who happens to have a bank account to draw checks and send them all over the face of the earth, as this would tend to encourage him to do, and as is largely done now, suppose we provide what is already provided in this bill, that bank drafts of member banks, drawn against any other member banks, shall be received at par, and that bank drafts drawn by any bank against any Federal reserve bank shall be received at par. That would make it possible for any bank draft to be received practically every place at par.

Now, let us see how that would work. Suppose that John Smith, who is a little merchant in my town of Joliet, has no money in the bank, and he pays a bill down in Kokomo, Ind., with a personal check. All the bad things I have been telling you about may happen under that arrangement. Suppose we can say to John Smith, "Now, those checks do not go through the Federal reserve bank at par, and consequently there is a good deal of difficulty in connection with them when they are sent away from home." He will be discouraged from using those checks for long-distance payments, and furthermore
the people down in Kokomo will write and tell him they do not want a personal check; they want a draft provided these drafts are easy to get and are par at every place. That is what we want, and this law amended as we suggest would make that so.

Now, suppose he does the other thing, that this law is drawn as suggested by our committee, and he is encouraged in every way to give a bank draft. Well, John Smith comes down to my bank, and he says, "Mr. Woodruff, I want to remit $1,000 down to Kokomo, and I want a bank draft." I can give him my bank draft, signed by my cashier, upon any other bank that happens to be a member of my reserve district, and it will go at par; or I can give him a draft against the Federal reserve bank, and that, of course, would go at par any place in America. We sometimes use New York exchange now; usually use New York exchange for doing that. New York exchange goes all over America, just as I figure these drafts on Federal reserve banks would go all over America, but the trouble with that New York exchange is that there is oftentimes a heavy charge for those New York drafts, because New York exchange is at a big premium, for instance, at certain seasons in Texas.

Under the arrangement which we propose the exchange would never cost much because the reserve bank would always be near at hand, and everybody will know that those bank drafts are accepted at par, and consequently I do not think there is going to be much chance to make any charge to John Smith.

Senator Reed. Would you object to the bill providing that a bank could issue drafts without charge?

Mr. Woodruff. I think that is a very good suggestion, personally. I do not believe that the country bankers as a whole would approve that. I am being very frank with you on this subject. I think probably many country bankers would want to make some small charge, because they think they should make a little out of that business.

Senator Reed. Let me ask you another question on that point. That necessity for a small charge is felt most keenly by the very small country bankers is it not?

Mr. Woodruff. Yes, sir.

Senator Reed. That is, a bank that is confined to a little local community, and is one of those banks that somebody described here as a "one-man bank?"

Mr. Woodruff. Yes, sir.

Senator Reed. Where one man is cashier, janitor, bookkeeper, and everything else?

Mr. Woodruff. We have lots of those.

Senator Reed. Where a small income becomes material, and yet it is a very good thing in a community, I take it, especially in these little towns that have only one bank?

Mr. Woodruff. Yes, sir.

Senator Reed. Now, would the banks object if, as to that class of banks, the very small banks, there was permission given for a maximum charge, which would be very low, for the issuing of drafts, and the other classes of banks required to furnish the drafts free?

Mr. Woodruff. Personally, and I speak only for myself, I would have no objection to that. But remember; do not get the two kinds of exchange confused. Remember this is a charge for drafts that are
issued to customers, and we are coming back to this other kind of exchange in a minute.

Senator Bristow. Mr. Woodruff, before you leave that let me say I am afraid you do not appreciate fully how convenient it is for a business man, we will say at Salina, Kans., who has a bill due on the 1st day of November at Chicago, to draw his check on the 31st day of October and mail it, and depend on his collections on the 1st to replenish his account in the local bank.

Mr. Woodruff. Senator, I certainly appreciate how convenient that is. We have that to contend with all the time. He sometimes does not get in his collections to replenish his account, and that is the trouble.

Senator Shafrroth. That is wrong; he ought not to do that.

Mr. Woodruff. That is one of the difficulties we have to contend with.

Senator Nelson. But, Mr. Woodruff, take the case you put. The man, instead of coming to you with his check, or drawing his check to remit to his customer at Kokomo—if, instead of that, you would encourage him to buy a draft from you and you charge nothing for that draft, you would not gain anything by the operation? Your bank would not gain anything?

Mr. Woodruff. No, sir.

Senator Nelson. If, instead of sending a check on your bank to that customer, he came into your bank and bought a draft from you and you charged him nothing for it, you would be making nothing?

Mr. Woodruff. That is perfectly true.

Senator Shafrroth. You would have the use of the money a little longer.

Mr. Woodruff. Perhaps a day, until our draft could get into the reserve bank. There is no doubt that I personally would make more money by letting them draw their checks if I can keep them from skinning me in the meantime.

Senator Nelson. So there would not be any saving in that operation?

Mr. Woodruff. Not for the banker.

Senator Nelson. Suppose you furnished the draft at cost?

Mr. Woodruff. As a matter of fact we never charge for a draft to a customer over the counter, because we consider it good business to encourage them to do business that way. And, by making these drafts go at par, as would be done by this bill as amended in accordance with the suggestion of this committee, we feel it would not be necessary to limit the charge, because it would be known that a bank draft drawn against any member bank or drawn against the Federal reserve bank was free, and I think competition would curb any charges. For competitive reasons it would be impossible to make them. For competitive reasons we never make a charge for a New York draft; it is good business to encourage people to come into our bank.

Senator Shafrroth. What percentage of the checks drawn on your account would you regard as having been drawn on the kiting principle?

Mr. Woodruff. That is a very hard thing to answer. We have every day in the volume of business we handle a number of checks that come back. To come back to the first principle I spoke about—the
Federal reserve bank—you must remember that the clerical department necessary to handle the hundreds of returned checks that would come back because of insufficient funds, because of improper indorsements, because of wrong signatures, because of not being signed, because of being dated ahead—that the hundreds and thousands of those checks that would have to be credited back to the bank would involve, of course, a very large clerical force, and many chances for error.

Senator O'Gorman. Will you permit a question right there? Have you any idea what is the average amount of checks cleared through the New York Clearing House in a month?

Mr. Woodruff. No, sir; that is a thing we tried to get at on the start—where I estimated $150,000,000. It is hard to get at, but I think you could get it from the officers of those reserve centers themselves.

Senator O'Gorman. You have no doubt, I assume, that it exceeds $150,000,000 a month?

Mr. Woodruff. I feel that there is no doubt that it does.

Senator O'Gorman. Do you know whether the clerical force of the clearing house there finds any difficulty in disposing of that business?

Mr. Woodruff. The clearing house, Senator, never sees those items. They are handled through transit departments. They never go to the clearing house. Clearing houses never touch out-of-town individual checks.

Senator O'Gorman. I have reference to the value of the business represented by the checks that actually are cleared in the New York clearing house.

Mr. Woodruff. That is a thing you can easily get from the reports of the New York clearing house, but it does not refer to this question in any way. There is no exchange involved there whatever. Those are local checks.

Senator O'Gorman. And consequently the item of expense would not be comparable?

Mr. Woodruff. It could not be compared in any way, sir.

Senator Nelson. I do not understand that the New York clearing house clears out-of-town checks.

Mr. Woodruff. No, sir; that is the point I make.

Senator Shafroth. Every other town does that has a clearing house, does it not?

Mr. Woodruff. No town in America.

Senator Shafroth. You mean the checks that come through the Denver banks from outside are not collected in the Denver clearing house?

Mr. Woodruff. Only the checks on Denver. There is just one exception to that, and that is in connection with what they call the out-of-town clearing department operated in Boston. That has been very successful, and I will try to remember to speak about that in a minute.

Senator Shafroth. Are there any statistics as to the amount of out-of-town checks that come into these various clearing houses?

Mr. Woodruff. Out-of-town checks do not come into the clearing houses, sir; they are handled in the individual banks. When you spoke a little while ago, Senator, of $150,000,000 a month, you based that on $75,000,000 bank deposits in the city of Chicago. You realize,
of course, that the city of Chicago has a very much larger amount of
bank balances than that. I want to make that clear.

Senator Hitchcock. I estimated that it would be $150,000,000 a
month for 1,000 banks, in proportion to the 200 banks for which you
clear.

Mr. Woodruff. I understand. That will give you a very rough
estimate, because those banks keep fairly small balances compared
with the balances they would keep in Chicago.

Senator Hitchcock. You think that the $150,000,000 a month
would not be a sufficiently high estimate?

Mr. Woodruff. I simply can not estimate it, because I just simply
do not know, and I am getting at it in such a rough way that I want
to impress upon you that it is not an accurate estimate. You can
get estimates by communicating with the manager of the Chicago or
New York Clearing House. I can only tell you that that is an esti­
mate based on my actual experience in Joilet, and that might not
refer to New York or Chicago.

Senator Hitchcock. You do feel, however, that 42 cents per $1,000
and 94 cents per $1,000 for the cost of collecting interest and exchange
would be about right?

Mr. Woodruff. Yes, sir.

Senator Hitchcock. Regardless of the size of the Chicago con­
cerns?

Mr. Woodruff. I think so.

Senator Nelson. What is the total of the two together?

Senator Hitchcock. The total of 42 and 94? It is $1.36.

Senator Reed. From which, of course, ought to be deducted any
part which is now included as exchange, which would be unnecessary
to pay under this bill, because this is supposed to de away with the
exchange charge.

Mr. Woodruff. Yes, sir.

Senator Hitchcock. Let us see if it will do away with the exchange
charge. Would it not be necessary occasionally—

Mr. Woodruff. Will you let me take that up in just a minute,
Senator? I want to take up these matters in logical order, if I can.

You remember we were talking about the principles involved and
we figured it would be a good scheme to facilitate exchange; that a
man would go down to the bank and pay his bills with a draft instead
of sending his personal check, and you, Senator, suggested that it
might, perhaps, be more convenient to send a check the other way,
and I called your attention to the fact that oftentimes they did
find it more convenient.

In addition to that, there comes the question of right and wrong,
and the easier way to do things. This same fellow, John Smith,
can come down to my bank, for instance, and get a draft for nothing,
and that settles the whole transaction. He has to have the money
when he comes down, and we know therefore there is no check kiting.
He gets the draft. The draft is sent to Kokoma, charged against our
account in the nearby Federal reserve bank, and the transaction is
finished. The only trouble John Smith had was that he had to walk
down to my bank, maybe five blocks. Is it not better to allow John
Smith to walk five blocks down to my bank and get a draft than to
let him send a check down to Kokoma and then, figuratively, make
those fellows walk all the way from Kokoma to Joilet? Actually
they do it by mail, but figuratively, they walk from Kokomo to my bank to get exchange on that check.

Senator Brissett. That system has grown up through the consent and acquiescence and cooperation of the banks. And the business men—very creditable business men—will figure at times that if they owe a bill at a distant city they will take advantage of this accommodation, and the house with which they are dealing in the city understands it, and the bank with which that house has its account understands it. The system may be used by those that are fraudulently inclined at times, but don't you think that it has been useful and convenient and that you would be depriving a great many business men of a facility which their bank had been perfectly willing for them to exercise and of which it has never made any complaint?

Mr. Woodruff. Senator, any change in this plan will cost me considerable money, but nevertheless I tell you that I consider the system wrong. That system has been built up by the competition of the bankers and with the acquiescence of the bankers, but we do it because we are in competition.

Senator Brissett. Don't you think you ought to stand a little competition as well as the merchant who has to stand it?

Mr. Woodruff. Yes; but that is not the point involved. We have plenty of competition, as has been brought out by the fact that we are competing so strongly we allow people to do this. But I consider the principle wrong. Out of it grows the discontent with the clearing-house rules. The banks, for competitive reasons, were compelled to go into this, and then they were forced to make these clearing-house agreements in order to protect themselves from loss.

Senator Brissett. We are very proud, at least some of us are, of the banking system we have in this country. It is a great, democratic banking system. There are thousands of independent banks, and it is a competitive system. In most of the towns the banks are intense competitors for business, and that is one of the things that some of us believe ought to be maintained. That is why many of us look with suspicion at some of the provisions in this bill.

Mr. Woodruff. I can only answer your question by saying I feel this provision is wrong in principle, Senator, and my reasons I have already tried to explain.

Senator Shafroth. The principal virtue, I think, in a man giving a check to pay a bill is that when he gets it back he has the signature of the man on the back of it. That is always in his possession, but if he has to go and trace it through drafts it is not so convenient.

Mr. Woodruff. It is not so convenient, but he can always get it.

Senator Shafroth. Certainly, that is true.

Senator Nelson. His indorsement on the draft will be his receipt.

Senator Shafroth. But the draft is not in his possession.

Senator Nelson. It goes back to the bank; it can be got from the bank that issued the draft.

Senator Hitchcock. I should like to ask a question right there. What is to prevent a trust company not in this new system using this facility through a member bank and thus getting its exchange free of any charge?

Mr. Woodruff. There is nothing to prevent, sir.

Senator Hitchcock. A trust company, then, in Chicago could demand of a national bank there a check or a draft upon the reserve
bank there, and when it got that check it could send it to San Francisco where it would be worth par and the Chicago trust company would therefore pay nothing for its exchange, although it did not belong to the system.

Mr. Woodruff. We would not object to that, because proper facility of exchange is a good thing. What we would object to is the trust company in Chicago making an arrangement with a member bank and then dumping all its items for collection into that member bank and that member bank dumping them into the Federal reserve bank and the reserve bank being compelled to handle them for nothing.

Senator Hitchcock. How can you stop that?

Mr. Woodruff. By barring checks bearing the indorsement of a nonmember. Now, if we leave the law as it is, let us see who gets hurt—

Senator Hitchcock (interposing). You mean, as it is in the bill?

Mr. Woodruff. Yes, sir. Suppose we leave it as it is and see who gets hurt. John Smith, down in Joliet, draws his check, and he pays this bill down in Kokomo, and the Kokomo fellow goes and presents it at his bank—deposits it. Now, under this bill he might deposit it at par, while to-day perhaps there would be some exchange charge. If competition is keen there may be no charge anyhow. At any rate, he might gain a little bit there although this law allows the bank in Kokomo to charge—because it says nothing shall be construed to prohibit the bank from charging. At any rate, it is put into that bank. The bank at Kokomo turns it over to its Federal reserve bank.

It would be a better example if I say that John Smith in Joliet draws his check in Joliet and sends it to Chicago, and the Chicago bank turns it into this Federal reserve bank. The Chicago bank may perhaps attempt to charge its customer exchange, because there is nothing in the law that will make it take that at par. It turns it into the Federal reserve bank and the reserve bank will have to take it for nothing. Consequently the Chicago bank gains, because the Chicago bank is relieved of the cost of handling the check. The Federal reserve bank immediately charges it against the country bank. That is, of course, a hardship upon me right away, because it is charged against me without my knowledge and is charged against me without allowing me any exchange. Therefore I am beat out of the exchange, and I have the item charged against me several days before I now have it charged against me. When it comes back down to Joliet, of course, I might add 10 cents to it, but the customer will not stand for that and consequently I am the man that loses.

Now, suppose we made a charge, a minimum charge of $1 as some Senators suggested here a little while ago. Then John Smith draws his check; it goes to Chicago; the Chicago firm deposits it in the Chicago bank, and they deposit in the Federal reserve bank, and everything is just the same. Then the Federal reserve bank sends it to me, and I charge them $1. That dollar has got to be absorbed by the Federal reserve bank. I would be better off, I suppose, because I get my dollar, but the reserve bank would have to absorb that dollar.

Suppose the reserve bank should charge the dollar back against the depositing bank in Chicago.

The great trouble with that would be that the Chicago depositing bank would probably not deposit very many items in the Federal...
reserve bank under those conditions, because the banks that come into
the reserve system are going to be the banks that now do not make a
very large charge; they are going to be the larger banks, the national
banks. Consequently, the Chicago bank would probably collect this
for less than a dollar; once in a while they might get down to this
one-third of 94 cents that I suggested. It could beat the price that
the Federal reserve bank would be quoting. But the large charges
are made by little banks in the country, oftentimes private banks,
very seldom national banks, and almost sure not to be in this system
at all. Consequently, if you charge the dollar back to the Chicago
bank I do not believe this scheme would work at all.

That provides for both those contingencies, and when we get down
to brass tacks, it seems to me the Federal reserve bank has got to do
one of two things: They have to cut this question of individual checks
entirely out—and remember, they never can handle all the individual
checks; they can only handle those upon member banks. There are
always going to be a lot of little private banks that are not members
of this system; out in my State we have some 500 or 600 of them.*
Those checks that are hard to collect would never go to the Federal
reserve bank, and we are never going to have a complete collecting
bank or clearing house. The items will always have to be divided
anyhow, and the Federal reserve bank, at best, could only take part.

Therefore, the best thing in our minds is for the Federal reserve
bank not to handle personal checks at all, but to facilitate exchange
so that a man can always go to a bank and get it. If a man wants,
for convenience, to float his check, it seems to me best to leave the
facilities as they are, and consequently there will always be a charge
made against that to keep that business down.

Senator Shafroth. How would it do to have these drafts among
banks collected free through the regional banks, as you suggested,
and have the maximum charge apply to the other checks only?

Mr. Woodruff. What maximum charge?

Senator Shafroth. $1 a thousand.

Mr. Woodruff. By whom?

Senator Shafroth. By the collecting bank.

Mr. Woodruff. I have just tried to explain that that would not
work; that no business would come through the Federal reserve
bank if you allow the reserve bank to charge $1 a thousand.

Senator Shafroth. Now, as I understood, you wanted only the
bank drafts to go through the regional bank?

Mr. Woodruff. Yes, sir.

Senator Shafroth. Now, why can not there be a law which pro-
vides that in all other transactions a charge of $1 may be made?

Mr. Woodruff. That is, to apply to all transactions outside of the
Federal reserve bank entirely?

Senator Shafroth. Yes.

Mr. Woodruff. If that could be made to hold, there would be no
objection to that.

Senator Shafroth. Take it as to the national banks.

Senator Nelson. There would be no necessity for that, for they
could in every case go and buy a draft instead of sending a check.

Senator Shafroth. Yes; but it is a very great inconvenience. A
man often sends a check out after banking hours, or up here in the
Senate Chamber. I always add 25 cents to the amount of the check; if it is a $200 check, I make it for $200.25.

Mr. Woodruff. The average man does not take that trouble, Senator.

Senator Nelson. You really pay exchange on that.

Senator Shafroth. I do, in order to avoid a kick.

Mr. Woodruff. Now, gentlemen, if you will allow me to make just one or two more remarks, I think I am through. I suggested that perhaps the best thing to do, in our minds, would be for the Federal reserve bank not to touch individual checks at all. If the Federal reserve bank must go into the collection of individual checks—and the country bankers, of course, are opposed to the reserve banks going into the business at all; but if they must go in—then the best thing they can do is to go in on the same lines as the present reserve city banks handle the business. They should put in a separate department to handle out-of-town business and take all checks at par, and handle the business just as it is handled now by the big banks, charging exchange, handling all business, member or nonmember; having an analysis department so they will know how much it costs them, and charge it back to their customers. That could be handled on the lines of the Boston clearing-house out-of-town department. They clear as cheaply as they can, and when they get the returns back they credit the member banks.

If these banks must go into this business, the only way it could be worked successfully would be to do that.

Now, as to the bill itself, we have suggested in our resolution that the bill should be amended on page 33.

Then I want to call your attention to one thing we have left in; that is on page 24, and it seems to me this clears the situation. You will find on page 24, under the head of "rediscounts:"

Sec. 14. That any Federal reserve bank may receive from any member bank deposits of current funds in lawful money, national bank notes, Federal reserve notes, or checks and drafts upon solvent banks, payable upon presentation; or, solely for exchange purposes, may receive from other Federal reserve banks deposits of current funds in lawful money, national bank notes, or checks and drafts upon solvent banks, payable upon presentation.

Now, suppose you leave that in, in case there should ever be any question. It would not do any harm to leave that in and after your Federal reserve bank is organized and after its officers and directors have taken this thing up, if they ever want to create a collection agency or clearing house they can always do it under this section. They may accept checks and drafts; they can take whatever they please when the time comes.

But over here on page 33, where it says it shall be the duty of every Federal reserve bank to take these checks, that, we think, is a great error.

Senator Nelson. If you strike out the word "checks" on page 33 and leave it in on page 24, it would still leave it with the regional banks to do this business and charge for it.

Mr. Woodruff. They could do what they found it necessary to do when the time came. It is very hard for us to sit here and be sure we are all right. Maybe we are wrong, maybe I am wrong, maybe the framers of the bill are wrong on that. It is easy for us to sit here and theorize on how we can handle this business, but, after all,
the men that have to do that are the men who are running the banks after the banks are created. Leave it there, and when the banks are started if the officers feel it necessary to do that they can do it—-

Senator Nelson (interposing). And strike out the word “check” on page 33.

Mr. Woodruff. On page 33, line 15, strike out the word “upon,” the last word. And in line 16, strike out the first five words; also the balance of the section after line 19.

Senator Nelson. How would it read then?

Mr. Woodruff (reading):

It shall be the duty of every Federal reserve bank to receive on deposit, at par and without charge for exchange and collection, checks and drafts drawn by any of its depositors upon any other depositor and checks and drafts drawn by any depositor in any other Federal reserve bank upon funds to the credit of said depositor in said reserve bank last mentioned.

Senator Pomerene. You used the words “checks” and “drafts” interchangeably there, do you?

Mr. Woodruff. No, sir. I tell you, I am not authorized by our resolution to cut out that word “checks.”

Senator Pomerene. But you have clearly defined checks and drafts as we understand them, and now you leave the word “checks” in. As I understand your statement here, you object to the collection of checks?

Mr. Woodruff. Yes, sir.

Senator Pomerene. Why do you leave that word in?

Mr. Woodruff. The only reason that word “checks” is left in is the fact that we say “bank drafts.” That is merely banking parlance. We do that for convenience among ourselves. It was thought that in some places in the country what we consider bank drafts might be referred to as bank checks. There is no difference if it is drawn by the bank.

Senator Nelson. You see, this is a check of one bank upon another, and it would be technically a draft, but this word is used here—-

Mr. Woodruff (interposing). So that it would prevent any question.

Senator Hitchcock. But you do have what are known as cashier’s checks, payable to an individual in a town?

Mr. Woodruff. Yes, sir.

Senator Hitchcock. And such a check should be received at par.

Mr. Woodruff. Yes, sir; but a cashier’s check does not come under this in any way. A cashier’s check would not be drawn upon some other depositor. A cashier’s check is used largely for little remittances within a town——

Senator Hitchcock (interposing). Should not a cashier’s check be received at par?

Mr. Woodruff. Well, it would probably lead to some abuse.

Senator Hitchcock. No; suppose a man in your town is given a cashier’s check for $100 on your bank, and he sends it to Chicago and deposits it, and the Chicago bank deposits it in the reserve bank. Should not the reserve bank have the right to charge it against you at par?
Mr. Woodruff. You might put it in, but it would encourage me to issue nothing but cashier's checks instead of drafts against the Federal reserve banks, because as long as I keep the cashier's checks floating around I would have the use of the money.

Senator Hitchcock. I do not see that that would be kept floating around any longer than the draft would.

Mr. Woodruff. It might never be sent to the Federal reserve bank; probably it would not. There is no reason, Senator, why a bank should use both of these things, for they have the same effect. In other words, if a bank wants to pay a bill there is no reason why it should draw a cashier's check if it is going to have the same effect as a check upon the Federal reserve bank.

Senator Hitchcock. I may go into a bank and say, "Give me a cashier's check to the order of John Smith." That is often done.

Mr. Woodruff. I can see no objection to putting that in----

Senator Hitchcock (interposing). If you leave the word in, that would include a cashier's check.

Senator Nelson. They have left it in.

Senator Hitchcock. They have? I did not understand so.

Mr. Woodruff. One of the members of the committee suggests that I reiterate the fact that most of the banks that make large exchange charges are small State and country banks that would not come into the system. I have already made that point. His point is that this rule, even if it were a good rule, would not affect the worst troubles.

That is all I have to say. I appreciate your kindness.

Senator Bristow. Just a minute. There is one part, Mr. Woodruff, of your statement that I wanted to inquire a little further about. I understand you object to having checks drawn against your bank that may be deposited with your reserve bank in Chicago, for instance, charged to your account. You want it to come there and be collected. One of your objections is it depletes your reserve which your books show you have there and causes confusion. Now, does not that require your reserve banker in Chicago, where your account is, to carry you for that amount of money for the time that is required by that check after it is presented to be sent down for collection?

Mr. Woodruff. In case it is charged against us and overdraws our account it would.

Senator Bristow. Suppose it did not? Now, when a business man in Chicago receives a check in payment of a bill of a party in Joliet he takes that check on your bank and deposits it with his banker, who happens to be your reserve agent there, and that reserve-agent bank credits this customer of its with the amount, but it can not charge the amount to you until it sends it down to your bank, and you authorize it to make such a charge?

Mr. Woodruff. Yes.

Senator Bristow. Now that bank is out of the use of that money until it gets your authority to charge you with it?

Mr. Woodruff. That bank is always foxy enough to take care of itself on that.

Senator Bristow. We are not talking about being foxy; we are talking about the facts.

Mr. Woodruff. Yes.
Senator Bristow. What difference is there between that and the man who follows exactly the same principle and sends his check to Chicago, the dealer there deposits it, and it is sent back to the local bank—we will say to Joliet—and there it is charged up to the merchant's account? Are you not objecting to doing for the merchant exactly what you are demanding that the reserve agent do for you?

Mr. Woodruff. In the first place, the Chicago Bank—I did not mean that word "foxy" disrespectfully, Senator—the Chicago bank, when it credits its customer with that check that it sends down for collection to us, usually, if it is an interest account, does not pay the customer any interest on that check while outstanding. They very properly deduct from the interest account at the end of the month the items in transit. Now, in the analysis department, where they analyze practically every large account, wherever there are any of those outstanding checks, the analyzing department at the end of the month will tell them just what they lost by items being outstanding in the mail, what they lost by checks going from Chicago down to Joliet, and if the balance that the man kept in the bank would not be enough to make up that loss that the bank suffered and give a profit, then they will certainly make some new arrangement. Usually items of that kind may be credited three days after their receipt, or something of that sort. That is how they protect themselves.

I do not quite understand the last part of your suggestion.

Senator Bristow. They protect themselves in that way, as you say? Now, if your account with your reserve agent was sufficient so that it cared to carry that account, and not credit your checks until it had authority from you, it would take your account just as it does now?

Mr. Woodruff. Yes.

Senator Bristow. And if your account there was not sufficient to justify them they would not take it any longer—they would refuse?

Mr. Woodruff. Yes.

Senator Bristow. That would be the same principle applying to you you say the bank would apply to the merchant?

Mr. Woodruff. Yes.

Senator Bristow. My suggestion was that while you object to the merchant taking advantage of this time of transit, you still demand that the bank give you the same advantage that you feel you ought not to give the merchant?

Mr. Woodruff. I understand. That is, you mean if a local depositor in our bank should have $1,000 in the bank and sent a check, and that check goes around the circle, we would get the use of the $1,000 while that check is going around the circle; but if it was charged immediately, we would not get the use of it. Your point is well taken; there is no doubt we make a little additional profit there. The use of bank drafts as we advocate would be fair to everybody for the Federal reserve bank would get the use of the money while items were in transit. Then let us call attention to the other side. Many times the money is not on deposit with our bank.

Senator Bristow. Is not that a question for the bank to settle with the depositors, and not to be settled by law?

Mr. Woodruff. It could hardly be done, just exactly as the Chicago bank does with the merchant.

Senator Reed. Senator Bristow, are you not overlooking this situation? I can only get at it by an illustration. I am addressing
myself to you and Mr. Woodruff. Assuming that the merchant in San Francisco owes a merchant in New York City $10,000. As I understand, Mr. Woodruff, under this plan the merchant could draw a check upon his bank in San Francisco and send it to the New York merchant. The New York merchant would thereupon deposit that check in his bank, and it would that day go into the regional bank, and out of this Government bank there would be paid to that merchant in New York $10,000. Then the check would be sent back to the regional bank in which San Francisco deposited, and there it would be charged against the account of the San Francisco bank. All that would take some 7 or 8 days; maybe 9 or 10 days. The Government banks (we will call them that) would advance that money for all that period of time. In the meantime the merchant either did or did not have the money in his bank in San Francisco. If he did have it there, that local bank would have had the use of that money, but this Government bank would have had to have advanced the money for the use of the merchant in New York City. If he did not have it there, then his local bank would not have had the use of the money, but the merchant in New York would have had the use of the money, and this Government bank would have been advancing the money for several days on the transaction. Now, it seems to me that that is a questionable scheme.

Senator Bristow. I agree with Senator Reed, that I do not think these Government banks ought to have anything to do with that kind of business. I think that is the business of the banks that are organized to handle the business of the country, and that they ought to do just as they do now.

Senator Reed. On the other hand, Senator, if you will pardon me, if this merchant desires to use the $10,000 and had $10,000 in New York of his own money, in some bank, he could check against it properly, because once the check went there that banker can pay it. Or, if he had the $10,000 in his own bank in San Francisco, he could buy a draft and send it on. Now he, in that case, of course, would be out the interest on his money during the time he was transmitting it, but as he owed the bill in New York, and as it was his duty to pay it in New York, there is no hardship imposed upon him when he has to pay the bill where he has contracted to pay it.

Senator Bristow. But, Senator Reed, Mr. Woodruff's proposition is this, that the man could buy the draft just as you suggest and pay it just as you suggest, and not by check as I suggested. But if the merchant gave a check to his New York house in payment of this $10,000 account, and that New York house took the check and deposited it with the regional reserve bank, the regional reserve bank, under the bill, is authorized to charge the account of the San Francisco bank with the $10,000. But Mr. Woodruff is objecting to that, and says that must not be permitted until the San Francisco bank has authorized its account to be charged with that $10,000. Now, he is asking that his bank be permitted to have the use of that $10,000 while it is in transit through the mail back to San Francisco, but that the merchant be deprived of the privilege now given him.

Senator Reed. The difference is that in the first instance the merchant bears the loss incident to the payment of the bill 3,000 miles from his home, but where he has contracted to pay it. In the other case the loss falls upon the regional bank. The regional bank, that
has no interest in the transaction, is compelled to stand that loss, it seems to me. I may be wrong about it.

Senator Bristow. I can see the force of your suggestion so far as the regional bank is concerned, and the bank that deposits with the regional bank ought, then, to pay that bill.

Mr. Woodruff. I want to suggest, in connection with your last statement, that there would be one serious objection to charging those items against the reserve balance. The bill, as I understand, provides that we must keep not less than a certain per cent of our reserve in the regional bank, and then I believe the bill also provides if we disobey any of the provisions of the bill we may be fined or sent to the penitentiary. Now, entirely unbeknown to us, a lot of those items may be charged to our account in the Federal reserve bank. Our reserve in the bank may therefore fall, without any action on our part, to a point below the point provided in the bill, and we may go to prison.

Senator O'Gorman. Do you not think, right there, that the reserve board will make necessary rules and regulations and, among other things, provide that the regional bank will advise member banks daily, by wire, of the checks that have been charged up to their accounts?

Mr. Woodruff. Senator, in that case we would be compelled to deposit by wire also in order to keep our account from being overdrawn. Another thing, the Federal reserve bank could not advise us until the close of business, because they would not know what checks might be presented, and then it would be too late for us to remit.

Senator Weeks. You all agree that the methods of remitting are crude, cumbersome, and unscientific, do you not?

Mr. Woodruff. Yes.

Senator Weeks. And we ought to take advantage of this legislation to improve it?

Mr. Woodruff. Yes.

Senator Weeks. And that the consensus of opinion is that if the reserve bank collects bank drafts and drafts on other reserve banks and lets individual checks alone that would be a reasonable solution of the question as far as this bill is concerned?

Mr. Woodruff. We feel, Senator, that the business of the country would eventually be transacted as it should be and the payments made with drafts on the regional banks.

Senator Weeks. That is, if charges were made on individual checks the custom would grow, and grow rapidly, to use cashier's checks or some form of bank draft or check to pay bills?

Mr. Woodruff. Cashier's checks would not be used very much, in my opinion, but I do believe drafts against regional reserve banks would come to be the standard exchange in this country, a thing I feel should take place.

Senator Bristow. Mr. Woodruff, before you close, I do not want to be understood to be advocating that your accounts should be charged with the checks without first being submitted to you; but I do maintain if that rule is good for you it is good for the merchant. That is what I objected to. You change the system by law and put a burden on the merchant that the banks voluntarily have relieved.
them from, and still, by law, you preserve to yourself an advantage
which you think you ought to have, and an advantage I do not deny
you ought to have.
Senator Nelson. There is where you are mistaken, Senator; they
have never relieved the reserve banks of that duty.
Senator Bristow. I mean the merchants.
Senator Nelson. They have always insisted, most of the banks,
that they should not charge them with those checks until they notified
them.
Senator Bristow. I am not objecting to that; but I do object to
devising a plan here by which a merchant has got to buy a draft
instead of using a check.
Senator Hitchcock. Mr. Chairman (Senator Reed), I move that
we take a recess to-day until 2 o'clock.
Senator Reed. Mr. Woodruff, Senator Shafroth desires to ask you
a question.
Senator Shafroth. I have been requested to ask you this question,
Mr. Woodruff: If the reserve banks must handle individual checks,
should not they be confined to checks originating in member banks,
thereby eliminating all checks bearing the indorsement of nonmember
banks?
Mr. Woodruff. In case you leave the law as it is that would un­
questionably be a very great improvement.
Senator Shafroth. That would have a tendency to have the non­
member banks come into the system, would it not, and be an induc­
ment for them, if their checks were included?
Mr. Woodruff. I think it would be a very small inducement for
country banks, Senator. For city banks it would be an inducement.
Senator Shafroth. It would?
Mr. Woodruff. Yes.
Senator Reed. It has been suggested that we have an executive ses­
session for a few minutes and then take a recess until 2 o'clock.
(Thereupon, at 12.50 o'clock p. m., the committee went into execu­
tive session, at the conclusion of which a recess was taken until 2
o'clock p. m.)

AFTER RECESS.

Senator Reed. We will now hear you, Mr. Tilton. I want to make
the suggestion that you come directly to the criticism of the bill
which you have in mind, or any statement you have to make with
reference to any particular matter that needs improvement. I will
ask you now to state your name, place of residence, and the bank
with which you are connected.

STATEMENT OF M'LANE TILTON, JR., PRESIDENT OF THE FIRST
NATIONAL BANK OF FELL CITY, ALA.

Mr. Tilton. I live in Pell City, Ala.; I am president of the First
National Bank of Pell City; I am president of the First National
Bank of Lincoln and director in another national bank and three
State banks; I am also secretary of the Alabama Bankers' Associa­
Senator Reed. What is the capital and surplus of the bank in which you are directly connected as president?

Mr. Tilton. Mr. Chairman, and gentlemen of the committee, I am here representing a typical country bank that has a capital, as have all these banks I have mentioned—six in number—of $25,000. The largest amount of surplus that any of them has is $7,000. The largest amount of deposits that any has is $160,000, and the smallest amount of deposits of any one of these banks is $30,000. I believe, Mr. Chairman, that I am representing a class of banks that has not yet been heard before this committee and yet which represent, in number, over 60 per cent of all the banks of the United States. And I further feel, Mr. Chairman, that we bear a portion of the burden of the national prosperity directly in ratio to our numbers rather than to our total resources.

You gentlemen have heard here from the country bankers on two subjects, and I am going to speak of the subject of the segregation of deposits, and go into a little more details than Mr. Woodruff did this morning on one feature of the exchange provision of this bill. Mr. Chairman, this is a matter of life and death with us. I heard Mr. McAdoo say yesterday that we should be generous; we should be patriotic. No one recognizes more than I do, and the country bankers as a whole, that legislation of this kind is peculiarly of a sort that calls for prudent compromise and unselfish concessions; but, Mr. Chairman, when we are called upon, as small country bankers to make concessions which send us out of business, I think the limit of unselfishness has been exceeded.

It was my good fortune to be the country banker who called the meeting of the country bankers in Boston.

Senator Reed. I am going to interrupt you there: Was that call instigated in anyway, directly or indirectly, by anybody else?

Mr. Tilton. I will answer that question—no, sir. It was conceived in my mind, and I did not speak to a human being, so far as I am aware, before I sent out my call among the banks of America and the financial journals.

Senator Reed. Pardon me for asking these questions, but I think it is necessary to do it, because of statements that have been made. Did you get letters, or were you advised in any way from any of the large bankers of New York or elsewhere, asking that opposition be stirred up to this bill?

Mr. Tilton. No, sir. On the contrary, those city bankers who spoke to me told me not to call this meeting, because it would be a fizzle and I would be ashamed of the result.

Senator Reed. What city bankers did that?

Mr. Tilton. I used the term "city bankers." I mean by that my close friends at home, the larger banks in the immediate territory with which I discussed this matter. I could not recall their names offhand.

Mr. Chairman, self-preservation is the first law of nature, and when you have in this bill two sections, one the segregation of deposits, and the other the matter of exchange, neither of which is germane to the measure, and when the result of the operation of those two sections is to put out of business, in my humble judgment, fully 60 per cent of the country national banks in America. I do not see how
This committee, which voiced the sentiments it did yesterday, will think for one moment of doing that injustice.

Senator Reed. Now, we are interested in your showing why the bill will do that.

Mr. Tilton. I will do so, sir. Permit me to say right here, however, that the resolution that we adopted in Boston has been misunderstood by a great many people. What we really did there was to try to decide upon as few things as possible which, if incorporated into this bill, would enable the small country banker to join the system and would enable the small national banker to retain his charter, and would induce the small State banker either to nationalize or to come in as a member by whatever provisions might be made.

For 50 years, Mr. Chairman, the financial legislation of this country has been drawn directly in the interests of the fiscal centers. I am not reflecting upon any bank in any large city of which I am aware. Those people are my friends. During those 50 years a great number of small country banks have developed all over the United States. Nowhere have they developed more rapidly than in the cotton field and in the Far West. I believe that any financial system in this country would not be a success unless it is drawn so that these small country banks, of whom mine is one, can come into this system and enjoy a fair profit; and I believe it will be a vital error—a vital error—to so draw this bill that we must stay out and forfeit our charters.

Senator Reed. Now, Mr. Tilton, those are matters we can handle. We want you to tell us what is the matter with this bill; how it is going to injure, and how we can remedy the trouble. You see this is a hearing and your talk is exceedingly interesting and I am not trying to stop it, except I want to get down to the facts, because we have more people to hear now than we are going to be able to hear.

Mr. Tilton. I will come, then, right down to the facts. The two subjects assigned to me are the exchange feature and the segregation of deposits. I believe the exchange feature, unless amended in the manner suggested by these country-bank resolutions, will mean a loss of profits to the country banks which will average more than 25 per cent of their net earnings. Speaking for my own bank, it will be possibly a little larger, and I believe that our net earnings from exchange are very much smaller than they are for the average bank in the cotton field and in the Western States.

There was something said here this morning about how checks are collected. This bill requires us to pay over two counters. The object of this legislation is to enable the bank to pay over one, and always be able to pay. Our checks as now drawn are presented to us over our own counter, either by the individual owning them or by the collecting bank which is acting as an agent for the person who owns them. Under the system you propose here, whereby the Government bank will undertake to collect checks drawn by depositors of member banks, you are forcing us to keep a cash balance to our credit at the reserve bank to take care of those checks as they come in, in addition to keeping necessary cash in our vault to take care of them there if they are presented over our counter. In other words, Mr. Chairman, you are making us be prepared to pay in two places where we are now trying desperately hard always to be able to pay in one.
Senator Reed. I understand you mean that you would have to have a certain reserve in the regional bank, and would also have to have a certain reserve in your own bank, and then you have to have a working surplus over the reserve in your bank, the legal reserve, and you say now that if these checks could be presented at the regional bank you would have to have a working surplus over and above your reserve there, in order that your reserve might be maintained intact?

Mr. Titron. Exactly. I mean this: My present correspondent in New York, the Hanover National Bank, has no authority to charge checks against me it may receive over its own counter. All it can do is to remit those checks to me, in Alabama. If the regional bank is located in New Orleans, for example, I have got to be prepared over the counter of the regional bank in New Orleans, should the checks be presented there for payment, as well as be prepared to pay them over my own counter, should they come there. I do not know where they are coming.

Second, this section as now drawn will require us, for the reason just stated, to keep a sufficient sum in the regional bank over and above our necessary reserve requirements to meet the accumulation of checks during at least three days, if I estimate correctly the average distance of the average territory for each of these twelve regional banks, and we could not do it.

Senator Hitchcock. It would be much harder on you than on the bank located nearer the regional bank?

Mr. Titron. Very much so, sir. My bank, the best one I have, makes an earning of about $4,000 a year on $32,000 and surplus. We have averaged that during the last five years, only because we have had no losses of any nature or description. That represents about 16 per cent on our capital, a little less than 16 per cent on the capital and surplus, and our net earnings during this period I have described have run less than $1,500 out of a total of $4,000. Therefore, the first effect of this section, if these checks are to be collected as the bill calls for, is to take from my bank at Pell City and from every other little country bank of $25,000 capital and more, through the cotton belt, at least one-third of its net earnings. I can not see how this committee can consent to a provision not germane to the bill and which will have any such result upon 10,000 banks in the United States.

I want to correct a statement that was made this morning. It was stated here, or estimated, that Chicago possibly might handle $150,000,000 of country items in a single month. I have talked, just a moment ago, with the gentleman who is going to appear this evening from another committee, not ours. He comes from the city of Albany, in a large collection center. He tells me his collection of country-bank checks each month average over $4,000,000 a day, and there is another bank in that same city that does just as large a business. So when you come to estimate, Mr. Chairman, the amount of country checks Chicago handles, I have not the figures at my command to state that volume. Albany does much more, almost double, what it was estimated that Chicago might do under this measure. There is not a business building in the city of New York, there is not one in the city of Chicago, which would be big enough, Mr. Chairman, to house the employees that would be required to transact that enormous amount of business.
Who is going to profit where we lose? Who is going to get the $1,500 I am making and all these other country banks are making? The business men of America would not get it. They do not pay it now. The only people who are going to get it are the banks in the collection centers. The banks in the collection centers criticize these little banks for making this charge. But I notice none of them turns down our account. Every bank in the city of Albany would be glad to have the account of any one of our banks, even though they say my rate of 15 cents a hundred, or $1.50 a thousand, is excessive. If it is excessive, and does not warrant them continuing to make collections for me and paying the exchange on checks of mine, I want to know why they do not quit doing business for me?

Senator Reed. Why? You make a very interesting statement there, that the only banks that will profit by having exchanges at par are the city banks——

Mr. Tilton (interposing). They are mistaken about it, Mr. Chairman.

Senator Reed (continuing). In collection centers. Now, tell us why and how that is.

Mr. Tilton. I was invited to see the books of a national bank in a city of Alabama, whose name I am not permitted to give unless insisted upon, which estimated they paid to the country banks of north Alabama the sum of $60,000 per year for the collection of those checks.

Senator Reed. Did that bank lose the money?

Mr. Tilton. They made it up by the country bank balances that were kept there with them.

Senator Reed. Didn’t they charge the customer with anything?

Mr. Tilton. No, sir. They have no clearing-house rule in that city to which I refer.

Senator Reed. You know we are dealing with awful hard facts here, or trying too, at least, and we want to get them just as they are.

Mr. Tilton. I can explain just in a moment. In a great many banks outside of the State of Alabama, a great many banks within the State of Alabama, keep balances on deposit with that Birmingham bank for the privilege of clearing their north Alabama items. They figure that the balances kept more than compensate them for the charge they have to pay for the country bank in the territory they clear for. In other words, they make a profit on the exchange by reason of the interest they are able to get out of the bank balances maintained with them.

Senator Reed. Would you, if you had a regional bank, not escape the burden of keeping those balances with the Birmingham bank?

Mr. Tilton. Mr. Chairman, I do not want to escape that burden. The bankers of the large banks in my territory are my closest personal and business friends. We can not do business without leaning on some man who is a little bigger and a little better than we are; a little stronger financially, and a little wiser mentally. He is the man who is our friend, and if we get in a hole, all we have to do is to call on him and he will respond. And that condition applies to every collection center in every State of our Union, so far as I am aware. I would have to keep money in Birmingham because there are several days in the month where my cash withdrawals over the counter
are more than twice our capital, and we would have a great time in getting that money from New Orleans, Atlanta, or Chattanooga.

Senator Reed. And now you call on Birmingham, do you?

Mr. Tilton. I get my cash from Birmingham; yes. Every country bank, so far as I am aware, has a larger bank as close as possible to it where it can always look to get immediate shipments of cash.

Senator Hitchcock. Can it telephone for it?

Mr. Tilton. Exactly.

Senator Hitchcock. And get it in how many hours?

Mr. Tilton. I can telephone and get it the next morning, or I can telephone and get it that afternoon. There are six trains daily.

Senator Hitchcock. How far are you from Birmingham?

Mr. Tilton. Thirty miles. Senator Owen, informally, yesterday, made the suggestion that we could charge our own customers this exchange, and therefore lose nothing. Now, what would happen, my friends? When a customer of mine has drawn checks from our bank, at the end of the month, we make a debit charge to cover the trouble we have gone to to cover the exchange. The banks of Birmingham would jump at such a charge as that and say, "If you do business with us we won't make that charge," and the consequence would be we would lose a great volume of our deposits, because in my home town, like in most country towns, the volume of business we enjoy from our own little cities is comparatively small with what we get within a 5 or 10 mile radius from the outside.

Senator Nelson. From the farmers?

Mr. Tilton. From the farmers; exactly so, sir. It would be impossible for us to make that charge. And I want to comment briefly upon a matter presented here this morning by Senator Bristow. I agree fully with what the Senator said, but I do not believe that 1 country bank in 10 will agree with the view expressed by the speaker, Mr. Woodruff, who at that time was not speaking upon a subject germane to our resolution. Ever since the banking business in this country has been established the cry has gone out to the people of our communities, "Do business with us and pay your bills by check." And if, as Mr. Woodruff suggested, every time a man within 5 miles of my town wanted to pay a bill in Birmingham or Cincinnati or Chicago he came to my bank to get a bank draft for it, I would have as many clerks doing the business of writing checks as I have customers now drawing them. I could not begin to handle the business if our little bank should be run on that basis. It would take at least five more men to transact it.

Senator Reed. You did not mean you would have to have as many clerks as customers?

Mr. Tilton. I would qualify that. We would have to double our force; we would have to employ five more men at least to handle those checks, and it would be a great annoyance to us.

What is the remedy? It is stated in this country bank resolution, "Confine the operations of the Federal banks to only those checks drawn by its members, either, as was suggested by the Senator sitting on the left, drawn on itself, which would be in the nature of a cashier's check, or upon the regional bank in its own territory, or upon any other regional bank with which it might maintain a balance, or upon any other member bank drawing on it. The Government escapes the enormous burden and cost of handling this huge transit
business, and the country bankers continue to enjoy 25 per cent of
their net profits, and if they lose that many of them can not afford
the loss or recoup it in any other way.

Senator Reed. If the country banks in the small towns were forced
out of business, what effect would it have upon the small town of that
community?

Mr. Tilton. I believe the country banker has been the greatest
business developer in this country. I do not know whether or not
the bank has built the little towns that have grown up, but I do
know that there is not a little town in the United States that could
have grown as they have grown without the benefits and facilities
that its little home bank afforded. I can certainly say that as to one
town, because that town I happened to build myself.

Senator Hitchcock. And you may add that one of the great ad-
vantages the towns of America have over the country towns in Eu-
rope is the fact that they have banking facilities which the small
town in Europe has not.

Mr. Tilton. Precisely.

Senator Nelson. And are the great gatherers of deposits from the
farmer in the little rural communities that the big banks could not
get hold of.

Mr. Tilton. When I went to building that city there was nothing
there; it was a 600-acre abandoned farm. I went to present some
letters of introduction to the bankers in Birmingham, who had
passed that alleged town on the Southern Railway, and they looked
at me in amazement at the idea that a bank there could be successful
and yet, gentlemen, that bank there was successful and that town has
grown until to-day we have 3,000 people in six years.

Senator Nelson. And what are your deposits?

Mr. Tilton. $169,000 at the last I heard of it. Not a bit of that
money was in circulation before we came there. That money, so far
as I am aware, except the new money that has come in there from the
manufacturing industries that we have, was money that was hoarded
away by the people.

Senator Reed. You think you rustled that money out of the stock-
ings and bedticks? I use that figuratively; I do not mean literally.

Mr. Tilton. To an enormous extent. These savings deposits are
$80,000, and at least half was money in existence 10 years ago when
the bank was organized, but had never seen the light of day until
it passed over our counter, and I believe that can be said for every
country bank in the United States.

Senator Reed. Who are the stockholders? I do not mean the
individuals; but you have stockholders in your bank?

Mr. Tilton. Yes.

Senator Reed. Are they local people?

Mr. Tilton. Yes.

Senator Reed. Any farmers?

Mr. Tilton. Yes, sir.

Senator Reed. Any merchants?

Mr. Tilton. Yes, sir; manufacturers, miners, and lumbermen.

Senator Nelson. Interested in the business in your neighborhood?

Mr. Tilton. Yes, sir; property owners.

Senator Reed. In other words, the local people, perhaps with some-
body like yourself, who is acquainted with the bank-promoting en-
terprise, the local people get together and take some of their earn-
ings and savings and make a small bank; and then the people put
their money into that bank and that stimulates business and puts
money into circulation and sets it to work, and you think that is a
good thing for a community and a number of those banks are a
good thing for a State?

Mr. Tilton. Yes, sir; and I go further than that and say that
when I went to Pell City to start this bank I spent 30 days trying
to get some stockholders, and I could not get anybody who was
willing to put his money into it, so I borrowed a little more than I
had already borrowed and started a bank, and about a year or two
after that the people were falling over themselves to buy that stock,
and now they complain because they are not stockholders.

I want to say a word about the savings section. That is not ger-
mane to a financial system of the United States. I do not see savings
bank depositors of either State banks or National banks coming to
this honorable committee clamoring for protection. Have they been
here? They regard their savings in country National and State
banks as important, and if they do not like us they can go to the
Government post office and make deposits, because there are dozens
of them in each county in the State. Why, then, encumber this bill
with a provision that does not need to be there, when by omitting it
you will encourage a great many banks to come in that would other-
wise not do so.

A member of the committee made a suggestion that the accept-
ance of savings deposits upon the part of the national banks was
unlawful. It is a mooted point. The Comptroller of the Currency
has ruled that it was. If it is unlawful, and it is certainly desirable,
then I think it should be made lawful.

Senator Nelson. They simply pay interest on the deposits, and
that is what the great reserve banks have been doing, paying 2 per
cent interest on bank deposits, and why the little country bank should
not have as much right to pay interest on its deposits as the reserve
banks I never could see. That is all there is to this savings depart-
ment.

Mr. Tilton. That is all there is, sir.

Senator Nelson. They are time deposits, and you pay your inter-
est on them; otherwise you treat those funds just as the other funds
of your bank, and require the same reserves as you do for the com-
mercial deposits?

Mr. Tilton. Precisely. The growth of the savings departments
of the country banks has been, to my notion, the one great force be-
hind the development of America. Country banks have always
encouraged savings deposits. They are doing it to-day, and they
want to be able to continue to do it. Under the cumbersome system
that this bill provides you hamper them.

Mr. Chairman, you have in this provision created two banks under
one roof. They are just as much two banks as if one was on one
side of the street and the other on the other side of the street. But
they are more than that. Two banks across the street from each
other could be mutually helpful if they desired to be so. Under the
provisions of this section you have created two banks, and have for-
bidden one of them to do business with the other.
Senator Nelson. Or help the other?

Mr. Tilton. Or help the other.

Senator Reed. Let me ask you a question right there. Take this little bank of this little town you were speaking of, Pell City, a little town of 2,000 people. How many employees do you have in your bank?

Mr. Tilton. Four.

Senator Reed. A cashier, and who else?

Mr. Tilton. There is the executive officer, the cashier, assistant cashier, and bookkeeper or stenographer.

Senator Reed. Is that not rather more help than is ordinarily found in a bank of that size?

Mr. Tilton. No, sir.

Senator Reed. Somebody here told us about what he called a one-man bank, in which he said the cashier was the bookkeeper, paying teller, receiving teller, telephone girl, and janitor.

Senator Nelson. That is the case with the little State bank; you know they can have State banks with $10,000 capital.

Mr. Tilton. I have one of them, sir, and I have no bank where I can employ less than two people. The volume of business is growing so much that it is absolutely essential to have one man ready to step into the shoes of another man in the event of sickness, or anything of that kind.

Senator Reed. If this bill was enacted and you had to segregate the savings-bank department, could this same force you have employed now transact the business for both departments?

Mr. Tilton. No, sir.

Senator Reed. How much do you figure it would cost you to run the other departments?

Mr. Tilton. We would have to employ at least one other clerk at not less than $50 a month.

Senator Reed. That is, $600 a year?

Mr. Tilton. Yes, sir. I will come to that in a moment.

Senator Reed. Very well.

Mr. Tilton. Banking in the country consists of taking money from people who have it——

Senator Nelson (interposing). Your deposits are not like city deposits; they are made up of money paid over the till to you?

Mr. Tilton. Precisely; and lending to those who are in temporary need of it. In every rural community, and I suppose in every other community, these two types of citizens exist. If under this bill as now drawn the Federal board is given power to withdraw those savings deposits from one community and invest them in another community, the first and worst thing that is done is the contraction of credit in that community. With us it would mean cutting it down one-third at least in the wintertime and one-half in the summertime.

Senator Reed. Why?

Mr. Tilton. It would mean——because we would have to purchase the class of securities demanded by the Federal board. And if the Federal board does not intend to name a different class of securities from that provided for, what is the use of giving them that privilege?

Senator Reed. You make the statement that it would take from one-half to one-third of your money, or it would result in that contraction——I have forgotten which way you made your statement. I
want you to tell us how that works out—not but a conclusion, but show us how it works out.

Mr. Tilton. On the 1st day of July my little bank at Pell City had, approximately, $75,000 of savings and $75,000 of commercial deposits. All of that money was invested locally—loaned to local manufacturers, miners, business men, merchants, and farmers. If the Federal board in its wisdom, or lack of wisdom, had ordered a few days before that, that in the segregation of our savings deposits we should be permitted to invest only in the following items: United States bonds, State bonds, county or municipal bonds, or in the bonds of certain railroads that have paid dividends regularly for a certain number of years, it would have meant the transfer either then, or gradually, over a period of years, of that $75,000 that we had invested locally and in securities which are on the outside. And I want to say further that the average country-bank board of directors can not tell what is a good bond and what is not. We thought the Frisco bonds were good, but we were disappointed.

Senator Reed. At the present time that $75,000 which you own on time deposits you loaned to A, B, and C right there in your own town and county?

Mr. Tilton. Yes, sir.

Senator Nelson. Just like your other deposits?

Mr. Tilton. Yes, sir.

Senator Nelson. Just like your check deposits?

Mr. Tilton. Yes, sir. The next point to which I wish to address myself is the loss of revenue that this would bring about. If there was an enormous demand created for a certain class of stocks or bonds whereby there came into a market for these bonds country banks which had never before been buyers, in my judgment the net earnings on bonds at the price at which they could be bought would be materially reduced by reason of that demand. I think it would be safe to say that whereas now we can get a bond that will yield us, in some cases, as much as 5 per cent, that by reason of this increased demand the net returns on bonds would decline by reason of their increase in price. The result would be that country banks would get about 4 per cent on their savings deposits.

Senator Nelson. And you could not pay your depositors over 2½?

Mr. Tilton. Exactly, sir.

Senator Nelson. Instead of paying them 3 or 4?

Mr. Tilton. We are paying them 4 now and lending them money in our communities at 6 and 8 per cent. We would figure that to the average country banks in the South where rates are too high—and I am speaking now of the entire cotton belt—I think the transfer of these funds from local loans would mean an average loss of interest of 4 per cent. In my own case it would mean a loss of interest on, say, $70,000. And 4 per cent of $70,000 is $2,800. I have told you that under the provisions of this bill I am going to lose $1,500 in exchange, so that would be a total of $4,300, which is $300 more than we have ever earned during the last five years. And yet we are asked to be patriotic——

Senator O'Gorman (interposing). You do not consider this a perfect bill, then?

Mr. Tilton. No, sir; it is not the holy and sacred thing that I thought it was going to be when I reached here. I think it very
nearly corresponds to what a celebrated German historian said about the Constitution of the United States, that it was forced down the throats of a reluctant people by the stern necessities of the times.

Senator Reed. It was a pretty good thing when it got there, was it not?

Mr. Tilton. Yes, sir.

Senator Nelson. You do not think this bill in its present form would have that effect, do you?

Mr. Tilton. Well, no. These banks are forbidden to do business with each other; they are required to keep a separate cash reserve in their vaults. It says you can not mingle these moneys; that you are not permitted to take money from one department to pay an obligation in the other department. The result is, Mr. Chairman, that you might have $10,000 surplus cash in your savings department and a check of considerable size might be presented in your commercial department and you would have to dishonor it, and that means you are insolvent. If you were to use your savings-department cash to pay that, the bill says you are subject to a $5,000 fine or two years in the penitentiary.

Senator O'Gorman. Take your choice?

Mr. Tilton. Yes, sir.

Senator Reed. They do not give you your choice.

Mr. Tilton. The suggestion of the country bankers in this connection is this: That the exchange feature be granted, so that the Federal bank will be relieved of the burden of collecting any other checks except those drawn by members. The other suggestion as to the savings feature is that that entire section be stricken out. It is not germane to the measure. It has no business there, and it will force many national banks to give up their charters, and it will prevent hundreds of banks from coming into the system who would be glad to do so if they were given an opportunity.

Senator Reed. Let me see if I am right in one thing that comes to my mind now. If you take your bank which now has about half of its deposits—that is, of the deposits which it uses—in time certificates and the other half in ordinary commercial checkable deposits, and you provide that the two funds must be segregated. Of course you would have to keep a sufficient balance on hand in the commercial half of your bank, so that you could be ready at all times to meet demands coming in over your counter, and that would have to be in excess of your legal reserve, would it not?

Mr. Tilton. Yes, sir.

Senator Reed. Now, you would have to create the same kind of a fund in excess of any legal reserve over in the savings department?

Mr. Tilton. Yes, sir.

Senator Reed. And you say you could not use the funds of one department in the other department even for a day?

Mr. Tilton. No, sir.

Senator Reed. Now, the great trouble with the banking business is the liability that you are under of having too many people suddenly demand their money, is it not?

Mr. Tilton. Yes, sir.

Senator Reed. Then is not the fact that you have a large part of your money invested in time securities, which you can justly refuse to pay, really an element of strength to a bank?
Mr. Tilton. No, sir.
Senator Reed. You do not think it is?
Mr. Tilton. No, sir.
Senator Reed. I want to be sure you understand my question. If all your money was subject to demand at once—if half of your money was held on time deposits that you could justly refuse to pay when demand was made before maturity—then is not that fact an element of safety to you?
Mr. Tilton. Mr. Chairman, that is one of the banking propositions that reads very well, but no matter what the strain or stress was, and no matter what maturity there might be on a savings deposit, there is not one good bank in a hundred that can afford to decline payment on a savings account when it is demanded, even though it may not be lawfully due until six months thereafter.
Senator Reed. I thought it was a thing that they ought to be encouraged to do—that the banks ought to be encouraged to do that sort of business, because it might be a very great element of safety in the hour of trouble; but you seem to take the other view.
Senator Nelson. I will tell you what the facts are. They issue time certificates, say, for six months, with a statement that if left six months they will pay that much interest. But, as this gentleman says, whenever a man comes to get his cash, they always give it to him, whether the time is out or not, and all that that man loses is the interest.
Mr. Tilton. Precisely.
Senator Nelson. That is the way it is run.
Mr. Tilton. And more than that, if a person came to your bank and wanted the money and you did not let him have it—suppose he offered the certificate of deposit on the savings bank as security for a loan for the unexpired period, you would not turn him down. If you refuse to do that, or will not let him have the money, you will start a countryman from your front door who is going to rouse the neighborhood.
Senator Hitchcock. You seem to hold rather emphatic views in regard to country banks.
Mr. Tilton. I ought to have emphatic views; I have been through the mill.
Senator Hitchcock. You did not get all your views in Boston, from the city banks, who are supposed to have intimidated you?
Mr. Tilton. I carried my views there and came back with them.
Senator Hitchcock. Did the other country bankers have equally as positive views as you have?
Mr. Tilton. Some of us considered these provisions much more important than any others.
Senator Hitchcock. Then the convention of the country bankers was the real thing, and the spontaneous expression of country-bank sentiment?
Mr. Tilton. Yes, sir.
Senator Nelson. It was not an infection you got from the big city bankers? [Laughter.]
Mr. Tilton. I issued the call, and I wrote the resolutions, and I had no conversations with any persons whatever before I issued the call.

Senator Reed. Who is supposed to represent the sinister influence we have been reading about?

Mr. Tilton. We do not know anything about that sinister influence.

I have tried to show, gentlemen, why the savings section should not be allowed to stand, and so we ask that it be stricken out. If that is allowed to stand, we will have to face a loss in the matter of exchange. Small country banks which represent over half of the total do not make excessive profits. Many of them eke out a bare existence. Every item of expense is pared to the last farthing, and official salaries, and I say it to my sorrow, are kept down below the amount to which we are entitled.

Senator Nelson. They do not give any $20,000 salaries like the big city banks?

Mr. Tilton. The highest salary is $4,500 a year, and the lowest is $1,200 in the bank with which I am connected. There is not much opportunity to get rich out of that kind of a system.

Senator Reed. What does the cashier get as a yearly salary?

Mr. Tilton. From $900 to $1,200.

Senator Reed. What does a clerk get?

Mr. Tilton. From $50 to $75.

Senator Reed. A month?

Mr. Tilton. Yes, sir.

Senator Reed. And does the president of the bank draw a salary unless he is active?

Mr. Tilton. No, sir.

Senator Reed. And if he is active, what would he be doing, acting as cashier, or what?

Mr. Tilton. I do not know of any country bank president who gets more than $1,800.

Senator Nelson. Do you give them 30 days annual leave and 30 days sick leave? [Laughter.]

Mr. Tilton. That depends on how much stock he has. [Laughter.]

Senator Reed. In a word, the salaries are low and the expenses are kept low, and an institution run in that way, if it does not make any bad loan, may make a little money?

Mr. Tilton. Yes, sir.

Senator Reed. And be of service to the community.

Mr. Tilton. I want to say right there that a lack of profits in banking is the most dangerous factor in bank solvency that is extant. You get a president or a cashier prodded by a board of directors, and they are in turn being pushed by dissatisfied stockholders who are complaining of the earnings of their institution, because they are not getting their 6 or 8 per cent dividends and 4 per cent surplus, and you put a bank official in that kind of a position, Mr. Chairman, and you have started that bank on the road to ruin.

Senator Nelson. He has to make risky loans, speculative loans, because of the higher interest?
Mr. Tilton. Yes, sir. In conclusion, the country banker wants this bill to be a success. We are not looking upon it as a partisan measure. We believe it is something designed to benefit all the people. We believe it can be made a success with our cooperation, but we feel it is an injustice to attempt to pass any bill which the small country banker can not take part in. I do not care for the little $2,500 assessment in the stock of the Federal bank; I would not mind if it was $5,000. I would be gaining an additional friend on top of my nearby city connection. I could go to the Government bank, and as a matter of law demand that my commercial paper be changed into currency, whereas now I can only go to a nearby friend and ask it as a favor from him.

Senator Hitchcock. Suppose the reserve bank refuses to discount your paper?

Mr. Tilton. That is not what they are there for.

Senator Hitchcock. There is nothing in the bill to compel it.

Mr. Tilton. I would not care to discuss that question. We would go around and buy a box of cartridges, I guess, and a gun. [Laughter.]

Senator Reed. We have been asking for practical suggestions. [Laughter.]

Mr. Tilton. Mr. Chairman, and gentlemen of the committee, the national country bankers do not want to surrender their charters. You have not any right to force us to do so. We are proud to do business under the laws of the United States, and if the time ever comes when we must surrender that charter, and attempt to go back to the State charter, it is going to mean a very marked reduction in our business. How can a countryman understand why this has been done? You can get up on the housetop and talk for months as to the reason why the Government has passed the law which you can not do business under. It will drive our customers away, and you have no right to disregard the 4,000 or 5,000 country national banks and say that we are going to fix up something for the big banks in the fiscal centers, and let you stay out and surrender your charters, and use your name, and continue to rely upon the same people you have been relying upon.

Senator Reed. You seem to be under the impression that the country bankers had some kind of a right to be heard before they were legislated out of existence.

Mr. Tilton. Yes, sir; we feel that way, quite deeply.

Senator O'Gorman. Have you had any opportunity before these hearings to present your views regarding this pending legislation?

Mr. Tilton. No, sir; this is our first opportunity.

Senator O'Gorman. I am not speaking of you particularly, I am speaking of the country bankers.

Mr. Tilton. This is the first time we have been represented by a committee. There may have been individual country bankers who have had an opportunity to be heard. I do not believe there has been a country banker who is truly a rural banker, as myself, who has had an opportunity to be heard; I mean a banker representing a bank with $25,000 capital and less. We are over half of the total number of country banks.

Senator Hitchcock. It is very evident that the country bankers have not been heard or this bill would have been amended.
Senator Reed. Do you really think it is worth while for this com-
mittee to take two or three days of our time in order to hear the
country bankers? Do you think that would be a good expenditure
time on the part of seven or eight men?
Mr. Tilton. Yes, sir.
Senator Nelson. Do you think we are justified in having these
hearings and listening to you gentlemen?
Mr. Tilton. Yes, sir.
Senator Nelson. And taking into consideration the fact that it
would seriously affect you?
Mr. Tilton. Yes, sir.
Senator Nelson. You think we are justified in that?
Mr. Tilton. Yes, sir.
Senator Nelson. I am glad to hear it.
Mr. Tilton. If we are unable to go into the system, the small
country banker might give up his charter. That is certain. If we
are able to retain our charters and go into the system, I believe that
most of the State banks will also do the same thing.
For one' I believe that the idea is rapidly growing that we should
have but one banking system in the United States. And I feel that
just as soon as the State banks see that they have an opportunity to
come in under this bill and have a part in this new financial system
they will be willing, without being forced to do it at once, to give up
their State charters and do business as national banking institutions.
Now, Mr. Chairman and gentlemen, you have the choice before
you. You have two sections in this bill, the only two we are con-
cerned with. We expressed at Boston no opinion as to whether
there should be 1 or 100 banks, whether there should be 3 or 30 men
on the Federal board. We are not concerned with those things. I
do not believe there is any chance for a Government bank to be
located at Pell City, and I do not believe there is any chance for any
of us ever getting on any of these boards. If we have a chance, we
might be a little bit excited about that, too. The things which we
have presented here now are the two things which will enable us to
become a part of this system.
Senator Reed. Do you think there is any chance for some of you
country bankers, you little men with the banks of $25,000 capital—
I mean the capital is little, not that the men are little—to be on the
board of directors of a regional bank?
Mr. Tilton. I do not imagine so.
Senator Reed. Why not? You have the same vote.
Mr. Tilton. I have not gone into that question.
Senator O'Gorman. Perhaps if you organized them as you organ-
ized the Boston convention you might accomplish something.
Mr. Tilton. I would not undertake that. Here are two features
of this bill that are not germane to it. The bill might be perfect as
it stands; it might do something that was miraculously inspired, and
you could remove the two sections from it and it would do the bill
absolutely no harm. You have the choice of keeping those two
features in and keeping out from 7,000 to 12,000 banks. And from
what I have heard and seen in this committee room since I have
been here I am going back home absolutely certain that no injustice
is going to be done to the country banker.
Senator Reed. Suppose we make the changes that you gentlemen suggest, in substance; perhaps not the changes that you suggest, but give you substantially what you ask for, are you not coming into this system?

Mr. Tillton. Yes, sir; on the run.
Senator Reed. That is what we want to know.
Well, who is the next witness? I believe Mr. Barry is the next witness.

STATEMENT OF DAVID BARRY, CASHIER OF THE FIRST NATIONAL BANK, JOHNSTOWN, PA.

Senator Reed. What is your topic, Mr. Barry?
Mr. Barry. Reserves.
Senator Reed. Where do you live, what is your bank, and what is your position?
Mr. Barry. My name is David Barry; I am cashier of the First National Bank, of Johnstown, Pa.
Senator Reed. What is the capital of that bank?
Mr. Barry. The bank was organized in 1863, and was the fifty-first national bank to be organized.
Senator Reed. What is the capital?
Mr. Barry. $400,000 capital.
Senator Reed. And the surplus?
Mr. Barry. $500,000 surplus; undivided profits, $70,000; deposits, $6,000,000; and our circulation is $209,000.

We have 190 stockholders, and all but about 50 shares of our stock is held in our community. I want to say at the start, Mr. Chairman, that in the panic of 1907, although we are located in a great manufacturing center, where we have heavy pay rolls to meet, in the panic of 1907 everything was paid on a cash basis.

Senator Reed. Did you put any limit on your depositors?
Mr. Barry. None whatever.
Senator Reed. How many other national banks are there in your town?
Mr. Barry. I have those figures here. We have 3 national banks, 4 trust companies, and 4 State banks.
Senator Reed. What is the population?
Mr. Barry. The municipality, I should say, has 60,000, but the immediate neighborhood would probably bring it up to 75,000.

Senator Reed. You may proceed.
Mr. Barry. I am asked to speak on the question of reserves, as it concerns the country banks, and I will read the resolution adopted at the Boston meeting in regard to reserves:

That whatever percentage of reserves is agreed upon should carry with it the right to keep not less than one-third of such reserves with approved reserve agents in fiscal centers. The reduction of reserve from 15 to 12 per cent is no real advantage to the country bank. Very few country banks can do business without having a larger amount of funds either in vault or with near-by connections. These connections must be maintained after the passage of this law. The money so held by them should be counted as a part of the country-bank reserves.

If you will permit me, Mr. Chairman, to refer to the proposed law as compared to the present law, I will say that the proposed law
provides, when it goes into final operation, that the reserve to be held by country banks must be as follows:

Five per cent of our deposits must be held by the regional reserve bank, 5 per cent must be held at home, and 2 per cent may be kept at home or with the regional reserve bank, as we may prefer.

Senator Pomerene. Yesterday in a question I misstated the provisions of the bill, confusing the provisions of the bill with a suggestion which was made here. It is 5 per cent in the vaults, 5 per cent in regional reserve banks, and the other 2 per cent may be either one place or the other.

Mr. Barry. If you will turn to page 37——

Senator Reed (interposing). Either in the reserve bank or in their own vaults; but there is no option permitting you to keep that 2 per cent with any other bank?

Mr. Barry. Oh, no. It is optional between our vault and the regional reserve bank, so far as the 2 per cent is concerned. Five per cent must be kept at home and 5 per cent must be with the regional reserve bank, and 2 per cent we may have either in our own vault or with the regional reserve bank.

Senator Reed. All right; there is, then, no dispute between us.

Mr. Barry. The present law, which we are operating under now, requires that 15 per cent of our deposits be kept in reserve; not less than 6 at home and the other 9 entirely optional. It may be kept at home or with our approved reserve agents, as we see fit. Country banks, indeed, keep on hand for pay-roll purposes, as they do in our district, more than 5 per cent, sometimes 10 per cent, and sometimes 15 per cent of their deposits, and we think that should be permitted to count as a part of the 7 per cent reserves, provided it is kept in lawful money. Under the proposed law, cash on hand over 7 per cent would be counted as reserves, and yet if so counted we must take it out of our possession and send it away into the possession of the regional reserve bank, where we can not get it, and then it counts as reserves. Most of Pennsylvania, Ohio, New Jersey, New York, Indiana, Illinois, Maryland, Virginia, and West Virginia, except one section, are deeply concerned over this provision of the bill. When I came here this morning several gentlemen from the far West and the South asked me to make particular mention of this feature, which was an important thought in my mind at the time. So it is not peculiar to our district.

We feel that the banks in the country should be permitted, as I said a moment ago, to count as reserve any lawful money they may hold in their vaults over and above 7 per cent, even though it reduces their balance with the Federal reserve bank below 5 per cent. We believe that to modify the law as we suggest would strengthen the bill and not weaken it, and we feel, too, there is no likelihood that any country bank will abuse this privilege because there is no incentive.

Senator Reed. How low would you allow them to have their reserves in the Federal reserve bank?

Mr. Barry. Without fixing any fixed limit, I should think that reserve ought to be in every sense of the word a reserve for the country bank. You take, for instance, I am not referring particularly to ourselves, we are so large that the ordinary rules do not apply to us; but you take a bank with deposits of, say, $1,000,000.
Under the law it must keep $120,000—$50,000 at home and $50,000 with Federal reserve bank, and, we will assume, the other $20,000 at home. That is $70,000. One of its depositors comes in and proceeds to build up a great deposit account in order to make a pay roll the next week. So large have the deposits of the country bank increased for this particular purpose, that night, that the country banker must, under the terms of the law ship 5 per cent of those increased deposits to the regional reserve bank.

Senator Nelson. The 2 per cent optional will take care of it.

Mr. Barry. I assume that 2 per cent is at home, because a pay-roll bank will need the 2 per cent at home, and a good deal more. I assume it will keep that much at home, where they need it worse than in the regional reserve banks. Now, the depositor, having deposited daily for 10 days in order to meet a pay roll, in order to have a large balance to meet his pay roll, comes in, we will say, on Saturday, and asks to have given him approximately 7 per cent of the deposits, under these circumstances. That bank dare not temporarily use for even a day or two, as the case may be, any portion of its balance at a Federal reserve bank. If it is loaning close to its reserves, it must positively borrow money for one, two, or three days to meet this pay roll.

Senator Nelson. Suppose that money is in a bank in New York, and the bank uses it as they did in 1907; what will they do?

Mr. Barry. We managed to get along.

Senator Nelson. You managed to get along, but you got along without that reserve money.

Mr. Barry. Yes; but that is liable to happen to-day.

Senator Nelson. Was not that one of the causes of the panic, that the reserves had piled up in New York and they could not afford to pay 2 per cent interest on those deposits, was not that it?

Mr. Barry. It may be——

Senator Nelson (interposing). And they invested it on call loans in the stock exchange, and when the panic came, those loans were the least liquid of all its assets.

Mr. Barry. I am——

Senator Nelson (interposing). You would simply be perpetuating a vicious system.

Mr. Barry. I am talking on quite a different subject. The point I raise is this: We have a large pay roll to make up.

Senator Nelson. Yes.

Mr. Barry. And we dare not take it all out of our vault, because if we do, we will run below our reserve there, and therefore we must keep a balance with other banks in order that we may get it quickly, because we dare not take it out of the regional reserve bank, even temporarily.

Senator Nelson. You can not take your reserves. If you should take your reserves you indirectly violate the law.

Mr. Barry. Under the old arrangement, Senator Nelson, we are required to keep 15 per cent, and we were permitted to keep 9 per cent of that wherever we saw fit. Now we are denied that right, and the provision of the law that positively fixes 5 per cent to be kept at home and 5 per cent to be kept in the regional reserve bank compels us to
keep a much heavier reserve at home in order to meet these pay-roll demands.

Senator Bristow. Let me see if I understand you. Say that your deposits were $1,000,000. Then, under the present law, you would have to have $150,000 of reserves?

Mr. Barry. Yes.

Senator Bristow. That $150,000 could be in other reserve banks or in your vaults?

Mr. Barry. No; 6 per cent is the minimum that you must have.

Senator Nelson. But you can have 15 per cent, if you want it?

Mr. Barry. Yes.

Senator Bristow. And you may have all of it there. Under this proposed law you have got to have so much in your vault and 5 per cent in the Federal reserve bank?

Mr. Barry. Yes, sir.

Senator Bristow. Now, you can not use that 5 per cent in any way; that has to be there?

Mr. Barry. It must be there.

Senator Bristow. So that you might have a large amount of cash at a certain time in the week at home, in fact, in excess of the 7 per cent, but nevertheless you could not count any part of that as a reserve, because you have got to have 5 per cent of your deposits anyway in this bank?

Mr. Barry. Precisely. Let me illustrate that, Senator. We will assume the deposits are $1,000,000, and you have $49,000 with the regional reserve bank, and then $160,000 for pay-roll purposes.

Senator Bristow. You have to have $50,000 with the regional bank?

Mr. Barry. I am first supposing that for the moment you happen to get below the amount fixed by law. If your deposits are $1,000,000, and you have only $49,000 in the regional bank and send the other $1,000 home for pay-roll purposes you are below the law.

Senator Pomerene. Let me ask you there, what actual reserves do you keep on the average?

Mr. Barry. As I said a moment ago, I am not pleading for ourselves, because we carry such an excess of reserve that the law would not apply, but I am pleading for the country bankers in the great pay-roll centers. Our deposits of $6,300,000 we had protected, at our last statement, $605,000, and had from other banks $1,137,000. That is to say, we had $1,700,000—

Senator Pomerene (interposing). What per cent would that be?

Mr. Barry. Ten per cent cash at home and 15 per cent with the reserve agent and 3 per cent scattered among our reciprocal friends.

Senator Pomerene. Twenty-eight per cent, in other words?

Mr. Barry. Yes.

Senator Pomerene. There is not anything in this bill which would prevent any banker from keeping in excess of the 12 per cent if he sees fit.

Mr. Barry. Precisely; but 5 per cent he must keep with the regional reserve bank, which seriously hampers the smaller bank.

Senator Nelson. But he can get a discount on that.

Mr. Barry. That will be a very slow process. You can not get it done by telephone, as Mr. Rogers suggested a moment ago.
Senator Nelson. When a bank gets so its life or death depends on that 5 per cent the bank is hardly worth preserving.

Mr. Barry. Perfectly true, but the 5 per cent ought to be of some use to the bank, nevertheless.

Senator Nelson. It can use it by discounting paper for it.

Mr. Barry. But the point is, there is no use the bank can make from day to day of those reserves as it can now.

Senator Pomerene. So your opinion is that the reserve system now is entirely satisfactory?

Mr. Barry. Not at all.

Senator Pomerene. Don't you think the reserve provision in this bill is an improvement?

Mr. Barry. Provided the 5 per cent is absolute——

Senator Pomerene (interposing). You have 15 per cent now and part of it you must keep in your own vaults.

Mr. Barry. The rigidity of the present law is what we suggest be modified.

Senator Nelson. You can keep 1 per cent more under this law than you are required to keep under the existing law.

Mr. Barry. One per cent less.

Senator Nelson. No; you can keep 7 per cent in your vaults instead of 6.

Mr. Barry. But, as I say, in actual practice we do keep 10.

Senator Pomerene. Is not the rigidity less in the proposed law than under the present law?

Mr. Barry. Pardon me. There is no rigidity in your resources with your reserve agents now.

Senator Pomerene. My question was as to the amount.

Mr. Barry. The amount is smaller, I admit.

Senator Nelson. If you drew all your reserve out from your reserve agent you would be violating the law.

Mr. Barry. Certainly, but nevertheless we would be using the reserve.

Senator Reed. At the present time if a bank had deposits of $1,000,000 it would have to have some place, either in its own vaults or the vaults of other banks $150,000 reserve?

Mr. Barry. Yes, sir.

Senator Reed. Now, if it carried that reserve, 6 per cent in its own vaults and 9 per cent in other banks which it could do, it could get accommodation from those other banks if it needed money suddenly?

Mr. Barry. Yes, sir.

Senator Nelson. Provided there was no panic.

Senator Reed. I am speaking about ordinary conditions. If it wanted to run its reserves down in these other banks it could do so provided at the same time it ran its reserves up in its own vaults?

Mr. Barry. Precisely.

Senator Reed. If it wanted to run its reserve in its own vaults down clear to the 6 per cent it would do so, provided the aggregate in all the places was 15 per cent?

Mr. Barry. Precisely.

Senator Reed. Now, under this proposed law it has to keep 5 per cent in the regional bank, and that 5 per cent in the regional bank is fixed?
Mr. Barry. Absolutely.

Senator Reed. And it has to keep 5 per cent in its own vaults, which is another fixed thing.

Mr. Barry. Yes.

Senator Reed. And when you approach the line of 5 per cent in their vaults you must stop, and the only leeway that is left is 2 per cent. You can keep 2 per cent in excess in the regional bank or you can keep 2 per cent in excess in your own vaults?

Mr. Barry. Yes, sir.

Senator Reed. So you have a leeway of 2 per cent, whereas under the old law you had an actual leeway of 9 per cent.

Mr. Barry. That is it.

Senator Reed. Now, you claim that as it works out it would be something like this: You have $1,000,000 deposits normally, and normally you would have to have $60,000 in your own vaults, under this bill, and $50,000 in the regional bank, and 2 per cent—or $10,000—you could keep in your own vaults or in the regional bank as you pleased. You have $10,000 there you can move back and forth, and that is an advantage.

Mr. Barry. $20,000, if you please; it is the rigidity, it is the fixed investment, you may say——

Senator Reed (interposing). I understand. Now, a man comes in along about the first of the week, and he puts in $20,000, and perhaps later in the week he puts in $30,000 more. Now he has $50,000 in your bank that he is going to use on Saturday night to pay his men off with. But the minute the $50,000 is put in your bank you must send 5 per cent of it, which is $2,500, to the regional bank. You have that much money you must send to the regional bank, and you can not possibly use it on Saturday night.

Mr. Barry. And you can not possibly get it until several days after you have got this amount of cash.

Senator Reed. That is the thing you object to?

Mr. Barry. Yes, sir.

Senator Reed. And, Senator Nelson, I do not think that goes to the question of the solvency of the bank.

Mr. Barry. Not at all.

Senator Nelson. We must legislate, to my mind, for periods of stress. In ordinarily good prosperous times, when everything moves easily, almost any system will do, and our legislation must be shaped to meet emergencies. The panic of 1907, if it disclosed anything, disclosed the fact that our system of bank reserves was a danger.

Senator Reed. Yes.

Senator Nelson. And this gentleman takes exactly the stand that Mr. Reynolds took; and, to my mind, it amounts to this: That these large city banks want to still continue to hold these reserves that they have been able to hold under the present system.

Senator Reed. As I understand, his position is not exactly that. He would like to have the privilege of running the reserve in the reserve bank down below 5 per cent, provided at the same time he could run the reserve up in his own bank enough to compensate it. Do you claim the right to put that reserve over in a third bank?

Mr. Barry. I believe the country bankers would agree with me that we would rather have the percentage of reserve increased back
to 15 per cent, provided we were permitted to keep some with our present city banks, where we can get accommodation.

Senator Nelson. And this 2 per cent interest.

Senator Reed. Suppose that were not done and this bill were amended so that there should be never less than 3 per cent in the regional banks, and a total in the regional bank and in its vaults of not less than 12 per cent. Would that do you any good?

Mr. Barry. That would help some.

Senator Reed. Of course, that is depleting the reserves in the regional bank and making it so there would not be much money there to run it with.

Mr. Barry. Five per cent of $6,000,000,000 is a great deal of money; $300,000,000 added to the Government's deposits make an enormous fund.

If you will permit me to go a little further, I will develop the question why we want to keep our reserves to some extent with city reserve banks, and I will discuss another point or two along the way.

The question has been asked by a good many country bankers here whether the law will be construed in figuring these reserves that the reserves will be counted as the books of the regional reserve bank show or as the books of the country banks show. We believe that is a matter of sufficient importance to have it defined in the bill. That may not seem important until we study the question very closely. As Mr. Tilden stated here a while ago, and Mr. Woodruff before him, there is only one way that a bank of our size could be safe in obeying the law if 5 per cent is absolutely insisted upon and if the regional bank is permitted to charge against our balance of checks that come on us. There is only one way we can be safe, and that will be to keep nearly 10 per cent with the regional bank. If the reserves are figured according to our books, then we can keep pretty close to 5 per cent all the time and not much of an excess.

Senator Reed. Why is that?

Mr. Barry. For instance, when we start in in the morning we do not know what our morning mail will contain. Our mail often brings in $150,000 worth of checks on us. If they came through the regional bank, and our reserve there is $300,000, our reserve is gone. But if it is figured according to our books and we can make that good the same night, that is an entirely different proposition.

Senator Nelson. I have no doubt but that that rule would be adopted. I can not see how they could adopt any other rule.

Senator Reed. It is manifestly quite important.

Senator Nelson. Besides, that brings us to another question here that one of the bankers suggested, and that is this question of net deposits. You will remember that one gentleman—I do not recall his name—said that in the gross deposits you should deduct matters in transit.

Senator Bristow. That was Mr. Vanderlip.

Senator Nelson. So that if you deducted these matters in transit and took the net deposits you would not have this difficulty.

Mr. Barry. The next proposition is, coming back to the subject again, that I asked that our country banks be permitted to carry a portion of their reserves, provided, of course, the proper amount be carried in their vaults and a proper amount be carried in the Federal reserve bank. They ought also to be permitted to carry with city

S. Doc. 222, 63-1—vol 3—26
banks and count as reserve some of their balances. From its very nature, we doubt whether the regional reserve bank will ever become so intimate with the country bank as to give it the service the country bank gets now. There is an old story about a city bank cashier in New York who was very much concerned because he could not match a piece of dress goods that a cashier in the West sent him, and, more recently, we all know the trouble that has been caused New York bank cashiers by requests for tickets for the ball games. It may be improper, but it shows the intimate relationship and friendship in a business as well as a personal way between the city bank and the country bank.

Take our case, and the case of all these banks in the great pay-roll centers. It may be interesting, perhaps, Senators, to know that our bank alone makes up and pays out over its counters every month approximately $1,400,000 in actual cash, which is disbursed right there in our community, and that does not include the pay rolls of the Pennsylvania Railroad and the Baltimore & Ohio Railroad and several other very large pay rolls. I dare say the pay rolls in our community will run close to $1,750,000 a month.

Senator Nelson. Your town is where the great flood was some years ago?

Mr. Barry. Yes.

Senator Nelson. I can locate it now.

Mr. Barry. A long time ago we had an arrangement much less satisfactory than the present one. Our bank itself, for instance, constitutes itself a sort of reservoir for all our neighboring banks. When they get too much cash we have a gentlemen's agreement that we will take it off their hands, because we have these enormous pay rolls to make up. And that, perhaps, may answer the question that may be in the minds of some of you, why we keep at home 10 per cent. The reason for that is that we have to make up these enormous pay rolls, so we relieve our neighbors of this cash. Nevertheless, we find ourselves at times, when unexpected pay roll demands come, that our cash at home is not quite as much as it should be. A long-distance telephone message to Pittsburgh at 10 o'clock in the morning will bring out what we need in any amount. A long-distance telephone message to Philadelphia to-day will bring the money out tomorrow. We do not believe we could get that service from the regional reserve bank; we know we could not, and that is one of the reasons why we ask that we be permitted to carry a portion of our reserves with our present city correspondents.

Senator O'Gorman. What proportion do you suggest you should be permitted to carry with your present city correspondents?

Mr. Barry. I should say 3 per cent. Perhaps I should say, make it equal, half and half; I mean the same amount with the city correspondent as we carry with the Federal reserve bank.

Senator Nelson. That would be 5.

Mr. Barry. Senator Reed suggested a moment ago 3; that we be permitted to reduce our deposits in the regional reserve bank to 3 per cent, and keep 3 per cent with our correspondents.

Senator Nelson. Suppose this fluctuating amount of 3 per cent—I call it fluctuating because it may be in either one of two places—sup-
pose that were placed with your big city banks. Now, instead of being fluctuating—

Mr. Barry (interposing). That would not help us much, Senator, because the amount we require at home is often in excess of the 7 per cent we are permitted to have.

Senator Nelson—. There would not be a great difference.

Mr. Barry. As I said a moment ago, we would prefer the reserve to be continued at 15 per cent, kept in the way I suggest, and to have it 12 per cent and limited to two places.

Senator Pomerene. As I understand your testimony, you said this question of reserves would not affect your individual bank very materially.

Mr. Barry. No.

Senator Pomerene. And you simply had some concern about the smaller banks?

Mr. Barry. Some, because I have talked to them.

Senator Pomerene. On an average, what reserves do they carry?

Mr. Barry. They keep as close to the 15 per cent as they can.

Senator Pomerene. I know that is the legal reserve, but are they somewhat in excess of the 15 per cent?

Mr. Barry. Not to any great extent. As I say, they keep as close to it as they safely and comfortably can.

Senator Nelson. The country banks in my section, as a rule, keep a great deal more than the 6 per cent in their vaults.

Senator Pomerene. Most of the country banks we have heard from thus far.

Senator Bristow. In the large cities, I think, we will find it somewhat different.

Mr. Barry. Here is a peculiar condition. A bank of our size, for instance, within 5 or 10 miles of Pittsburgh, will not keep the enormous reserve in the vault that we keep, because they can send a messenger down with a bag and he will bring it back on the street car in a few hours. We can not do that. The cost of shipment and all that sort of thing would more than make up the amount we have on deposit.

Senator Reed. Mr. Barry, how are you going to build up a central reserve bank system and a regional bank system that is going to be strong enough to withstand the pressure in the hour of adversity and sustain the banking system, unless it has some money on hand to do it with?

Mr. Barry. Well, Senator, that is a very big question, but the thought that is in the mind of the country banker is this—if you will pardon me until I make some figures here. The Government proposes to take 10 per cent of our capital stock at once, and the Government also proposes to take 5 per cent of our deposits of $6,000,000,000, which is $300,000,000. I do not know what the Government deposits will be, but I am told $150,000,000.

Senator Nelson. It will all depend on the revenues, you know.

Mr. Barry. Yes. The bank will start out with resources of $550,000,000; and, since the statement of the Comptroller of the Currency made up on June 4, 1913, showed that the total amount of rediscounts and borrowings of all the national banks in the United States
amounted to only $73,000,000, the country banker is asking, Where is the need of starting out with $550,000,000?

Senator Pomerene. Oh, well, you understand that under this proposed system rediscounts would not be as unpopular as they are now.

Mr. Barry. Senator, I think you will find scattered throughout this country a very large number of banks, ours being one of them—I think, a majority of the banks—that look with considerable horror on the idea of placing themselves in the position of borrowers.

Senator Pomerene. That is because of an old system that has prevailed here for years.

Mr. Barry. You will find a great many banks, too, that are so situated—they are fortunate, I admit—that they do not need to borrow, and no matter what provisions are made in the currency bill for rediscount they will never avail themselves of the rediscount.

Senator Reed. Now, one trouble which we have to contend with, as I understand it, is this: That a bank takes its reserve, and, instead of keeping it in its own vaults where the law may require it to be kept, it deposits it in another bank. It may be deposited in a number of banks, pyramided, and then when the crash comes, by the failure of one bank the money may be tied up in a half a dozen banks. Now, you want to prohibit that system to some extent by forbidding depositing in other banks, do you not?

Mr. Barry. I think, Senator, that if the bill is passed than danger will be at an end, because we still have the regional bank to come to and to rediscount for our city banks and move our reserves. The country bank views the situation in this way: The city bank renders us a service which the regional reserve bank, under this bill, can not possibly render. Now, permit me to state a few transactions that come across our counter daily.

We have some large manufacturing establishments in Johnstown, and the practice was several years ago when we had an item from them to the Pacific coast to send it to Pittsburgh, and Pittsburgh, in a leisurely manner, would send it to Chicago, and Chicago in turn would send it to San Francisco, and San Francisco, perhaps, would forward it to Seattle, and Seattle would make returns back the whole way. Our arrangement is now that we send that item out by special delivery, together with instructions to the bank at Seattle to collect and remit for our credit to the bank in San Francisco, the bank in San Francisco wiring us when they have the credit. Under ordinary circumstances that item is cleared up and placed to our credit with our reserve agent in San Francisco. Then, if our needs in the East require it, we will ask our San Francisco correspondent to make a transfer by wire to New York. These things I mention—such transactions as that—are absolutely necessary to the routine conduct of our business and the business of banks situated as we are.

Senator Nelson. Are you satisfied with the present banking system?

Mr. Barry. No, sir.

Senator Nelson. What are the defects in it in your opinion?

Mr. Barry. The defects are, as Senator Reed said, first, the pyramiding of reserves.

Senator Nelson. Is that all?
Mr. Barry. Another is the rigidity of the currency.

Senator Nelson. Are not the two great things that we are seeking to remedy and cover by legislation, first, to give us a more elastic currency; and, second, to gather together and conserve our reserves and utilize them, making a basis for credit and currency? Are not those the two leading purposes we ought to have in view?

Mr. Barry. I think so.

Senator Nelson. Can we afford to take such a penny view of it and ignore those two central ideas?

Mr. Barry. In creating this legislation I think it would be well to bear in mind that banks such as ours in giving up the $300,000 or more to the regional bank must almost to that extent reduce their loans.

Senator Nelson. We are legislating for the welfare of the whole country; we can not legislate for any particular bank.

Mr. Barry. I am not asking that. I am speaking for the banks of this great section.

Senator Nelson. Here is one advantage. These reserve banks—1 or 12, whatever the number may be—can utilize these 5 per cent deposits, supposing they be discounting commercial paper.

Mr. Barry. Yes.

Senator Nelson. Now, your bank could come to a reserve bank with commercial paper—and I take it you have such paper as this bill contemplate—and get that paper discounted and have bills issued for it. Now, in order to make your bills good, the bank must have a gold reserve of 33 per cent. That reserve, manifestly, must come from its capital and 5 per cent of its deposits. Now, the best part of this system is the fact you are not paying 5 per cent on your deposits. That is the great thing that is permitted, and you build up these reserves. Don't you know that?

Mr. Barry. Two per cent may be part of the attraction, but there are banks in the cities to-day that we would rather keep a free balance with and have the service they render than for other banks to pay us 2 or 3 per cent.

Senator Nelson. You can keep everything you like outside of this 5 per cent.

Mr. Barry. I understand; but it is going to reduce country banking loans by approximately that amount they put in the regional reserve bank.

Senator Nelson. They can not give you emergency currency.

Mr. Barry. Pardon me, Senator, but I think they do give us in ordinary times—

Senator Nelson (interposing). Clearing-house certificates or chips—

Mr. Barry (interposing). No; during ordinary times they can and would serve us better.

Senator Reed. Mr. Barry, let us see if you are not overdrawning that—unintentionally, of course. The ordinary banker who is doing a conservative banking business does not think of running his bank down and keeping it down to the mere naked legal reserve, does he?

Mr. Barry. No, sir.

Senator Reed. He always has that legal reserve, a safety fund—I call it that for want of a better term—and he has to keep that safety
fund there because of the fact that if there were to be a sudden demand he might not be able at once to get money. Now, if there is a place provided where with almost absolute certainty he can get money and get it within a few hours, he can then loan down nearer his legal reserve, can he not?

Mr. Barry. Yes.

Senator Reed. And therefore there would be some money realized in that way to compensate for the moneys that were carried away from the community and over to the regional bank. I want you to speak with great candor on this——

Mr. Barry (interposing). That is true, Senator——

Senator Reed. I want from you gentlemen your candid, absolute judgment.

Mr. Barry. That is true, Senator; but, carrying out what Mr. Rogers said yesterday, there are thousands of banks like ours that would be very sorry to depart from the old practice of being very strong in cash and reserves.

Senator Reed. You can still continue that, and you can still deposit with outside banks, carry as much as you want to in the way of balances, get as much interest as you want to, and have the advantage of that, and still have the advantage of this other system. All that is required is a 12 per cent reserve in the aggregate. Now, I have great sympathy with your argument that you ought to be able to count as your reserve the money in the regional bank, or the money in your own bank, without being required absolutely to keep a fixed amount in the reserve bank provided that system does not work to the depletion of the reserve banks’ moneys. If some plan could be devised whereby if you ran below for a day or two in the regional bank, making it up promptly, I would not see so much objection to that.

Mr. Barry. It is the rigidity of this fixed amount, this reserve in the regional bank——

Senator Reed (interposing). I am only suggesting this as a mere thought; I am not committing myself to it. Would it do you any good if the bill provided that for a period of not to exceed two days, or three days, or four days, you might at any time impair the reserve in the regional bank, provided you had an equivalent amount in your own vaults?

Mr. Barry. It would help quite a good deal. It is the rigidity of the reserve bank balance that the country banks object to.

Senator Nelson. Let me call your attention to this: Under the existing law banks in central reserve cities are absolutely required to keep 25 per cent in their vaults against the 5 per cent circulation. Now, that is a fixed item, is it not?

Mr. Barry. Yes.

Senator Nelson. The central reserve banks in the three great central reserve cities of this country must keep 25 per cent, and that is deader than a doornail, compared with the new reserve banks under this bill. Now, the reserve banks under the provisions of this bill can discount and loan money on that reserve, but the central reserve banks, with a 25 per cent limit, have no right under the law to utilize that for any purpose. Now, the reserve banks can utilize the 5 per cent for discount purposes, can they not?

Mr. Barry. Yes.
Senator Nelson. So it is not as rigid as the 25 per cent in the central reserve banks.

Mr. Barry. That may be, but that does not help the country bankers.

Senator O'Gorman. Have you concluded?

Mr. Barry. Except on one point. Senator Nelson has suggested how easy it will be to get discounts from the regional bank. That is not my own view, but I am not speaking for myself. The country banker, the little fellow in the town of 2,000 population, is asking how in the world can he ever get close enough and what sort of machinery the regional reserve bank will have. How can he possibly present his paper to the regional reserve bank and how will they have the machinery to decide whether or not it is good paper? Compared with the city banker, he feels himself at a fearful disadvantage in getting accommodations.

Senator O'Gorman. Would you prevent the country banker that you speak of sending his collateral to the regional bank with the request for the accommodation he desires, and in due course securing that accommodation perhaps the following day?

Mr. Barry. None of us imagine for a minute it would be rendered the following day. We think it would be a week rather than a day.

Senator O'Gorman. You think so?

Mr. Barry. Yes, sir.

Senator O'Gorman. For what reason?

Mr. Barry. In the first place, here we are in Johnstown. The regional bank may be located in Philadelphia. Under no circumstances can we expect an answer within two days; and if they take any time at all to investigate it it will be at least another day. Under the present arrangement, if you have your securities lying there, you telephone in, and, just as one of the other gentlemen said a while ago, a telephone message will temporarily consummate the transaction.

Senator Nelson. Assuming the banks have the currency there?

Mr. Barry. Of course; that is 400 days out of 500, you might say.

Senator Pomerene. Can you not assume that a bank situated, for instance, as yours is, or any other good solvent bank, if they were in dire need for money the next day they could go to that regional bank with the prime commercial paper, with the indorsement of the member bank on the paper, and get that accommodation without any difficulty?

Mr. Barry. I doubt whether it would come with the same speed as it comes now from our city banks.

Senator Pomerene. You must be a doubting Thomas.

Senator Bristow. I think he knows what he is talking about.

Mr. Barry. I think, Senator, what we would prefer to do would be to send our paper to a bank in a city where the regional bank was located and ask them to attend to it for us. We think they would do it with lightning speed.

Senator Weeks. Mr. Barry, before you leave the stand, you suggested a few moments ago you received various advantages from your relations with your reserve city banks. Can you enumerate those advantages?
Mr. Barry. Yes; I have some of them here. We have here and there in every town a number of men with a surplus of money. They want to buy stocks and securities from time to time and they ask us to attend to it for them. We must ask our city correspondent to attend to it for us. We dare not ask the regional reserve bank; it is in another line of business.

Then, again, we have all sorts of strange collections with bills of lading attached, which the regional bank will hardly undertake.

Senator Nelson. That is the very kind of drafts that we want the regional banks to collect.

Mr. Barry. We have drafts sometimes that are not bills of exchange in any sense of the word. We ask our city bank to go out with a verbal club and get that money. They do the most remarkable things for us. They are close to us as the man outside the counter is.

Senator Weeks. Can you name any others?

Mr. Barry. If, for instance, we do not continue these balances with our city banks, and our customers ask us to buy and sell stocks for them and we are not able to do it, they will very soon transfer their balances to the city banks direct. That is about all.

Senator Weeks. Do they O. K. the paper you buy?

Mr. Barry. Our particular bank does not buy any, but they do for a great many banks.

STATEMENT OF F. M. LAW, OF THE FIRST NATIONAL BANK, BEAUMONT, TEX.

Senator O'Gorman. Will you please state the capital and surplus of your bank?

Mr. Law. The capital is $200,000, with a surplus of $300,000.

Senator O'Gorman. And your deposits?

Mr. Law. $1,800,000.

Mr. Chairman, I will make the concluding remarks on behalf of the committee representing the country bankers. Allow me to say at the outset that, as you perhaps know, the committee which is attending these hearings is composed of one representative from each State, appointed by the country bankers' conference held in Boston, and I was appointed on that committee from the State of Texas. I particularly wanted to emphasize to this committee the fact—representing the country bankers, particularly of Texas—that according to the comptroller's report of 1912 there are 515 national banks in the State of Texas and over 90 per cent of that number are country banks.

I wanted particularly to lay stress on the fact that the country banks, the country national bankers, of Texas are desirous, I think, almost unanimously, of entering this proposed system. We realize the need of it, and we believe that the Government is trying to formulate a bill that will provide the relief needed, provide for a more elastic currency, and provide for the mobilization and utilization of reserves.

But on behalf of the country banks of Texas allow me to say that we believe that the bill as it stands now will, perhaps, work some hardships upon us as country bankers that we can hardly afford to bear. They have been enumerated before you. In the first place, we believe that the loss that will be entailed to us on account of the
depreciation in value of the Government bonds held against circulation and against deposits will be a hard loss for us to bear. The loss we will necessarily have to absorb on account of the proposed regulations in regard to exchange, will take away from us one of the principal sources of revenue of the country bank.

Then, if the proposed segregation of savings deposits were carried into effect it would remove from us another source of income—one of the principle sources.

Then, in addition allow me to say that Texas, being primarily an agricultural State, and the banking business there being based largely on agriculture, we have conditions there that are different, perhaps, from conditions in some other centers of this country. Nearly all of the loans that the country banks make in my State are farm loans, either directly or indirectly. I do not mean by that real-estate loans, but advances made to the farmers for the purpose of harvesting their crops. We either loan directly to the farmer or the farmer has his dealings with the merchant who carries him, and we in turn carry the merchant. In either case the loans cannot be liquidated until harvest time.

That leads me up to the point of saying that under the provision of the bill as it now stands not longer than 90-day maturities are eligible to rediscount from the member banks with the Federal reserve bank. In order for the Federal reserve bank to measure up to the fullest standard of usefulness to the country banks in any agricultural section it will be necessary, in our opinion, to lengthen the maturity of paper that can be rediscounted by the member banks with the Federal reserve bank.

I believe, after conferring with a large number of country bankers throughout my State and some from outside of Texas, that if a provision can be written into this bill enabling the lengthening of these maturities, even a percentage of them, to six months it will give us the relief sought for. And it is my purpose primarily in appearing before the committee to emphasize the fact that the country bankers of Texas are in sympathy with the resolutions passed by the country bankers' conference at Boston and to say that we feel that this bill as it now stands will work some hardships that we can ill afford to stand, but that these amendments which have been suggested, if they can be written into the bill, the country bankers, not only of Texas, but throughout the United States, will not only come into the proposed association, but will gladly come.

Senator Pomerene. May I ask you a question, please, without interrupting you?
Mr. Law. Yes.
Senator Pomerene. How do your monthly loans compare one month with another, in amount?
Mr. Law. They fluctuate quite a good deal.
Senator Pomerene. In about what ratio?
Mr. Law. Well, in the making of the crop our loans are, I would say, 50 per cent greater than they are for the harvest.
Senator Pomerene. That is during what months, now, would you say, they are the largest?
Mr. Law. We begin to make advances to the farmer along in January and February. Those advances are continuous as he plants his
crop, as he cultivates, to the harvest time. We make further advances until the crop is actually harvested and sold. We not only do this, but sometimes, and frequently, the banks are called upon to assist the farmer to hold his crop for more advantageous prices, even after it is harvested.

Senator Pomerene. The thought I wanted to develop, if it is true, is the fact that you have notes constantly maturing every month. Is not that a fact?

Mr. Law. Yes, sir; a certain percentage of them.

Senator Pomerene. A very substantial amount?

Mr. Law. A great percentage of our loans, Senator, mature in the harvest time, in the fall. We make those loans for instance, in February, and they run until October.

Senator Pomerene. And during what seasons of the year do you require additional accommodations; or do you require them?

Mr. Law. Yes, sir. It is during the seasons when we are making the heaviest advances to the farmers, generally along in July and August, when our resources are at the lowest ebb and the demand is greatest.

Senator Nelson. If the proportion of the paper to be discounted—say if 25 per cent of it would be 4-months' paper, 25 per cent 6-months paper, and the balance 90-day paper, would not that help you out? I mean the maturity?

Mr. Law. That we could rediscount with the reserve bank?

Senator Nelson. Yes.

Mr. Law. Yes, sir.

Senator Nelson. Say 50 per cent of it was 90-day paper; 25 per cent 4-months paper, and 25 per cent 6-months paper?

Mr. Law. That would help out a great deal.

Senator Pomerene. What portion of your loans are six-months paper?

Mr. Law. I would say 50 per cent.

Senator Pomerene. And the balance less than that?

Mr. Law. Perhaps 25 per cent is less than 25 per cent more.

Senator Pomerene. That would be nine months, would it, or a year?

Mr. Law. Hardly any loan runs over six months, and we think the six months would measure up to the requirements, perhaps, because we would not rediscount any of this paper until part of the time had elapsed. Paper maturing in October we need not use for rediscount until April or May.

Senator Pomerene. At any period of the year would the six-months paper that you have on hand exceed one-half of your total loans?

Mr. Law. I hardly think so, Senator. It would perhaps approximate one-half at certain seasons of the year.

Senator Pomerene. And the balance would be less than that—most of it?

Mr. Law. Perhaps most of it would be less than that.

Senator Reed. Without desiring to cut anyone off, there are some New York bankers and Kansas bankers who have been here for
several days; and I can say, I think, for the committee, that if there are any of the gentlemen who are here who desire to file any briefs or suggestions with the committee, we would be very glad to consider them. But in justice to those who have been waiting here I believe we must be rather brief. Have you any further suggestion?

Mr. Law. Nothing at all.

Senator Weeks. You, of course were present at the Boston meeting?

Mr. Law. Yes.

Senator Weeks. Did you attend all of the conferences there?

Mr. Law. Yes.

Senator Weeks. And you were present at the meeting at which the resolutions which you come here to advocate were adopted?

Mr. Law. Yes.

Senator Weeks. I have in my hand here an extract from a Washington evening paper relating to those resolutions, and I want to ask you about your opinion of the correctness of the statement made, and I will read it:

The hint is conveyed that the influence of the big bankers of New York is responsible for the apparent unanimity among bankers that really does not exist, judging from hundreds of letters the President has from bankers in different parts of the country giving the bill their approval. It is recognized by the administration, it was intimated in several quarters to-day, that the pressure of the ruling banks of New York is terrific among banks in other parts of the country dependent on these institutions, to a large extent, for favors and assistance. There is likely to be a quiet investigation, etc.

Now I know nothing about the correctness of this statement. There is not a solitary instance of a similar statement, and it is of considerable importance to this committee to know whether any terrific or other influence was used to persuade you country bankers, so called, to adopt the resolutions which you did adopt.

Mr. Law. I would say, most emphatically not, Senator. My observation, and I was present at all the conferences and all of the meetings, and at a good many informal conferences that were not held at any of the sessions—I found absolutely no evidence of anything of that kind.

Senator Weeks. Did you see any such evidence manifest at the Boston convention, or any influence to have such resolutions as you adopted considered?

Mr. Law. The first mention I heard of it, Senator, was the dispatches from Washington that news had reached Washington those sinister influences were at work.

Senator Weeks. And you did not see or hear anything of it?

Mr. Law. No, sir.

Senator Reed. Now, gentlemen, I believe the committee has heard representatives of the Boston meeting as far as you have desired. If there are any further suggestions you have to make, we would be glad to have you send them to us in written form. We are not trying to cut you off, but I understand your wishes have been complied with.

Mr. Perkins, we will hear you now.
STATEMENT OF JAMES H. PERKINS, PRESIDENT OF THE
NATIONAL COMMERCIAL BANK, OF ALBANY, N. Y.

Senator O'Gorman. Mr. Perkins, just state your full name and the bank with which you are connected.

Senator O'Gorman. Capitalized at what?

Mr. Perkins. A million dollars and a surplus of a million and a half.

Senator O'Gorman. And deposits?

Mr. Perkins. About $25,000,000.

Senator O'Gorman. I suppose that is one of the largest banks in the State, outside of the city of New York?

Mr. Perkins. Yes; the largest, except the Marine Bank at Buffalo, I think. Mr. Treman and myself come here to represent the currency committee of the New York State Bankers' Association, which committee has been at work on this bill for the last six weeks or two months, off and on, and to offer some suggestions that they wish offered on the bill, in the way of amendments.

In the first place, we recognize in the present banking system two great faults, one of which is the inelastic currency, and the other is the reserve system which has always broken down in time of stress. We believe the bill in its present form to a certain extent entirely obviates the one and to a certain extent obviates the other of those difficulties. An elastic currency, we believe, is provided for, and we are not going to make any suggestions upon that subject.

I will first take up the matter of reserves, which is the last matter the country banks have been talking about, and therefore, perhaps, it will work in better at this time than later. We are not inclined to agree with the proposition that has been put forward that the reserves should be allowed to remain with their present reserve agents. We believe that the only money that should be reserve, if this new system goes through, is money that is held in the vault of the bank or that is held with the regional reserve bank. And although we believe that that will cause a great deal of upset during the transition period, we think that that has been somewhat obviated by the lowering of the reserve required. We do ask, however, that the period of transition from the present system to the new system be made much more gradual than is contemplated in the bill. We represent, as you see, not only the larger banks of New York City but the country banks scattered throughout the State. There are about 800 banks in our association, 600 of whom are outside of the city of New York.

Senator Pomerene. You mean national banks?

Mr. Perkins. No; all kinds of banks, Senator. We feel that if the banks of the country, national banks of the country, are required immediately upon the organization of these new banks to deposit with the reserve agents 3 per cent of their deposits, and the capital that is required by the bill, it is going to cause a readjustment of credit that will very seriously handicap the credit community of the country. For instance, you take at one bank in Albany, with which I am more familiar than I would be with any other: We have $9,000,000 deposits from national banks that are kept with us as reserve deposits. We do not know whether that is their whole
reserve, or not. It probably is not. But let us suppose that is, we will say, 5 per cent. If three-fifths of that money is suddenly taken out of our bank and placed in the reserve bank, that is going to cause a contraction in our credits, which will be hard to meet and which will be very hard on the community to whom we are loaning money. We recommend that that transition be carried on much more slowly; that instead of 3 per cent—we have not established any exact figure, but for instance, instead of 3 per cent being taken out at once, that 1 per cent be put into the Federal bank to start with.

Senator O'Gorman. That is the deposits?

Mr. Perkins. The deposits. And let that continue, we will say, for six months, or something of that kind, and then another 1 per cent be paid in, and that will continue for six months, and then another 1 per cent. I believe that one of the greatest menaces that the bill has is the contraction that will be made necessary by the change of the reserves. That is the point we are particularly anxious on, in that regard. We believe that the reserves should be in the reserve association; we do not ask that they be allowed to stay with us. That is my view, although it was a hard one to swallow.

Senator O'Gorman. That is your view, although your bank has $25,000,000 of reserves on deposit now?

Mr. Perkins. Yes.

Senator Reed. Would it help them if, instead of the bank being required to carry cash down to the reserve bank and put it in, and then carry over its notes and rediscount them and bring the money back, you were permitted under this bill, in lieu of cash or in lieu of a portion of this cash, to deposit approved securities as part of your reserve?

Mr. Perkins. Yes. That would help, of course.

Senator O'Gorman. Is not that permitted indirectly by the provisions of the pending bill? Of course taking out of this considerable portion of your deposits would, if it was not compensated for in some other way, necessarily cause a serious contraction. But will that not be compensated for by your ability at once to secure the benefits of the rediscounts?

Mr. Perkins. I think so, in a certain way, Senator. But you see, the question is so large that it is not the desire of any banker to rediscount such an enormous amount of money as we have to to carry this thing out. Take in our bank, for instance: If we lost three or four millions we do not want to go with a capital of a million and borrow two or three million dollars, bang, right off the gun. Our people are not educated to seeing their banks borrow that way quickly. I believe the banks are going to become borrowers under this system, and it will be considered all right in time, but I think if you do it right off, quickly, it is going to create an uneasiness and disturbance in the community.

Senator O'Gorman. How much would you have to contribute?

Mr. Perkins. $100,000.

Senator O'Gorman. What is the amount of your deposits?

Mr. Perkins. Of our deposits?

Senator O'Gorman. Yes.

Mr. Perkins. Our deposits are $25,000,000. Of that $25,000,000 $15,000,000 come to us because we are a reserve bank. $9,000,000 of that $15,000,000 are from national banks.
Senator Reed. Under the bill as it is, how much money would you have to take over to this regional bank?

Mr. Perkins. It is a pretty hard thing to tell, Senator, because we do not know just what portion of this is bank reserves they have with us.

Senator Reed. Suppose your deposits remained as they do now; you would have to carry over, for your capital stock, how much money?

Mr. Perkins. $100,000.

Senator Reed. How much are your deposits—$25,000,000?

Mr. Perkins. Yes.

Senator Reed. Then you would have two——

Mr. Perkins (interposing). We would put in 3 per cent of that.

Senator Reed. Three per cent now, but ultimately——

Mr. Perkins. Five per cent.

Senator Reed. Which would be $1,000,000.

Mr. Perkins. $1,250,000.

Senator Reed. Of course, now, if these banks that now deposit with you are simply carrying reserves and there are $9,000,000 of reserves with you, when this bill goes into effect, those reserves will go out of your bank?

Mr. Perkins. That is what we are afraid of. We are not afraid of what we have to contribute, or what we have to put in, but these reserves will be taken from us and put in the reserve bank. We think that should be by slow steps, in order to give us a chance to liquidate the business which we are carrying on and have been carrying on and building up for a great many years.

Senator Nelson. You are required to pay 60 per cent of it within 60 days?

Mr. Perkins. Yes.

Senator Reed. If you had to circumscribe your loans $9,000,000, it would have a very serious effect upon the business of the country?

Mr. Perkins. Over the whole State, yes.

Senator Reed. What is going to take the place of that? Assuming that goes on all over the United States, not only in Albany, but in Buffalo and the whole country? Here is a fund that is now deposited and redeposited and is actually working in the commerce of the country. Now, it is to be withdrawn, and part of it, at least, put into the regional bank. What is going to take the place of that under this bill?

Mr. Perkins. Of course, there is going to be a certain amount of money released, because smaller reserves are required under the bill. In the second place, there probably will be more money released because this bill provides a way for getting money, and the banks will loan a little closer than they have been loaning. The only other way it can come about is through the banks becoming borrowers. Now, there is one thing that has not been gone into, I think, and that is the banks of New York State, if formed into a regional reserve bank, would make a very large one, and the largest one, probably, in the Union. It will probably do less borrowing than the banks of the other parts of the country. We act as a reserve agent for a great many of the country banks in New York State. Albany is a collection-reserve center. I do not believe that the money we loan
to our correspondents, that all the three national banks in Albany loan to their correspondents, runs over a half a million dollars at a time.

Senator Nelson. That is, that they borrow of you?

Mr. Perkins. That they borrow of us. They are not borrowers. I do not see anything in this bill that should make them borrowers. They have not any new burden to carry.

Senator O'Gorman. The fact that they have additional opportunity to secure money will not, necessarily, lead them to an expansion of their banking activity?

Mr. Perkins. No. The difficulty is as you suggest, Senator, that this money is all going to be piled into this great regional reserve bank, and I think it is going to be a very serious trouble to get that money out into use again—at any rate for a time. I think it is going to be a very slow process.

Senator Nelson. Three per cent must be paid in 60 days, and then you do not ultimately get to the end of the 5 per cent until the end of 36 months.

Mr. Perkins. No.

Senator Nelson. Suppose you take the 5 per cent; you do not object to that ultimate period?

Mr. Perkins. No.

Senator Nelson. Suppose you take the 5 per cent and distribute it more equitably in the three years.

Mr. Perkins. That was my idea, Senator, yes.

Senator Nelson. That is, so much within six months, so much within a year, so much within 18 months, so much within two years, so much within two years and a half, and finally 5 per cent by the end of the three years.

Mr. Perkins. That is my idea, Senator.

Senator Nelson. That is, divide the 5 per cent equitably within that period?

Mr. Perkins. Yes.

Senator Bristow. That is what he suggested, Senator.

Senator Pomerene. Into a half-dozen payments, instead of two or three?

Mr. Perkins. I think it would be a very serious proposition. I think there would be a danger there.

Senator Reed. If you were starting a bank to-day—take your bank: You would take $1,000,000 for capital stock and pay it in and then you have $25,000,000 of deposits in your vaults. You would not know what to do with it, and it would take a number of years to get into a position to utilize that $25,000,000 of deposits?

Mr. Perkins. Yes; and this bank is going to be so much bigger than ours; there is no comparison, Senator. It is going to be one of the biggest things we ever saw.

Senator Reed. And you think it ought to grow gradually; its resources ought to grow gradually in order that it can put them into use gradually and the system, instead of being created in a night, ought to be created over a reasonable period of time?

Mr. Perkins. Yes; I think three years is a proper time, but I think if it could be distributed over the three years it would be much safer. You see, 3 per cent is the larger part of your 5 per cent. It is the bulk of it.
Senator Nelson. And you would distribute it within that period; that is what you suggest?

Mr. Perkins. Well, I think if the new bank gets its capital, as is provided by the bill, and gets 1 per cent of the deposits of its member banks—

Senator Nelson (interposing). In what time?

Mr. Perkins. Immediately, and the Government deposits, as is provided by the bill, that that would keep it going from six to nine months, with all it could do to organize and get that thing into shape, and then you could put in another one per cent.

Senator Nelson. By the end of another six months?

Mr. Perkins. By the end of another six months, and another 1 per cent at the end of that six months, and so on. I think it would be a very easy thing to arrange it.

Senator Reed. How would it do to leave it to the central board to make calls, sooner or later, as the business of the bank required? In other words, vesting them with about the same discretion that an ordinary board of directors would have in the management of a bank?

Mr. Perkins. The only objection to that, Senator, would be the uncertainty on the part of the member banks as to just when they would be called upon for the money.

Senator Reed. Suppose they gave them 30 or 60 days' notice?

Mr. Perkins. Yes; if they could only call it in limited amounts.

Senator Nelson. It would be much better to put it in the law.

Mr. Perkins. I think so, too, sir. The minute the law passed, if it did, you would go right to work to carry out a definite program.

Senator Reed. Is there anything else you have to suggest?

Mr. Perkins. Yes. I have two or three other things. We suggest that the regional reserve banks do not pay any interest on the Government deposit; that the rate of interest paid to subscribing banks be increased to 6 per cent.

Senator Nelson. You mean the dividends?

Mr. Perkins. Yes; the dividends. Excuse me. The dividends to the member banks being increased to 6 per cent, and that the earnings above the 6 per cent and the surplus that is accumulated, or to be accumulated, to be paid to the Government. Our idea in that is this, that it is the very essence of this scheme that these banks be not money makers. That is not what they are for, as we understand it, and if all the money above a certain percentage that is made by the banks goes to the Government, you do not give any incentive to the management of the bank to make it a money-making institution. You leave it to perform its functions of regulating the rates of interest and regulating the flow of gold to this country and from this country and carrying out the functions for which it was created. I think it is important also that the member banks be guaranteed their 6 per cent on their subscriptions, and I do not see why the Government should be paid interest on their deposits any more than anybody else should.

Senator O'Gorman. You have given a good reason. If we concluded all beyond the surplus should go to the Government, then it would be an idle thing to give the Government an interest rate which would simply be taken out of that surplus.
Mr. Perkins. Taking it out of one pocket and putting it in the other.

Senator Pomerene. And your further theory is that the Government is not paid interest, or that if the dividends which the banks should get or the stockholders should get should be in excess of 6 per cent it might be a temptation to give more attention to the earning power of the regional bank than the individual bank?

Mr. Perkins. I think so; yes.

Senator Pomerene. One of our good friends this morning said that there would not be anything above 5 or 6 per cent.

Mr. Perkins. That depends on how the bill is framed.

Senator Reed. Do you mean to say the Government ought to guarantee the 6 per cent?

Mr. Perkins. No.

Senator Reed. You did use that expression.

Mr. Perkins. I think the chances would be it would be cumulative.

Senator Nelson. It would be sufficient if it were cumulative?

Mr. Perkins. Yes.

Senator Nelson. So if it did not get it the one year it would get it the next?

Mr. Perkins. Yes.

Senator O'Gorman. What is the next objection?

Mr. Perkins. The next objection is in regard to the collection of country checks and items, which has been gone into pretty thoroughly here to-day. I think, however, we all recognize—now, this is my business; I am one of those city collection banks that is supposed to make this great profit out of the collection business—and I think that everybody who is in touch with this business recognizes the fact that our present collection system is very unscientific. It is not adequate and it is not good. For instance, I can give you a few examples. I know of a banker in Buffalo if you undertook to deposit a check there on Tonawanda, which is 10 miles away, they will charge you exchange for the collection of that.

Senator O'Gorman. At what rate?

Mr. Perkins. I can not quote the rate on that. It will ship it to Albany. We will ship it back to Tonawanda, who will keep it five or six days, or sometimes longer. They will charge us exchange and ship it back to us, and we ship it back to Buffalo again. They are two points within 10 miles of one another. That goes on all over this country, and, in fact, I can not help but think that the country bankers weakened their position this morning when they said they make 25 per cent of their earnings out of their exchange charges.

I do not know whether you are entitled to make 25 per cent of your earnings. I think it is a thing you have got to be more careful about than any other provision in the bill, in a way, because if the Government goes into the collection of these items they charge for exchange at par so that there will not be any dividends whatever. I think the regional reserve banks should be allowed to act as clearing houses under rules and provisions prescribed by their directors or the Federal reserve board. I think it would be a scientific way to handle that thing, to clear the items in the regional reserve banks.

S. Doc. 232, 63-1—vol 3——27
Senator Nelson. It would be a tremendous expense.

Mr. Perkins. It would be a tremendous expense, and it has got to be paid out. They can not do it at par without charging for exchange.

Our transit department costs us every year about $300,000 to operate it.

Senator O'Gorman. The transit department?

Mr. Perkins. The transit department. It costs us half a million dollars to operate the whole of the transit department, and that includes the interest on the bank deposits. Take that out, and the cost of operation will run in excess of $300,000, that is for clerical hire, and the official force, postage, and interest that we lose during the time when the money is outstanding, and the exchange charges.

Senator Pomerene. Can you tell us what your cost would be per thousand?

Mr. Perkins. I have it at home, but I can not give it to you now.

Senator Reed. I wish you would send it to us.

Mr. Perkins. I will get the figures and send them to you, Senator.

My point is this: Do not make a compulsory thing in the act. Put it in the hands of the Federal reserve board or the regional boards to establish rules and regulations to regulate that collection business. The country banker deserves consideration. He can not remit at par without charging; he has to be taken care of in this thing, but it ought to be equitable.

Senator Nelson. What do you think of the suggestion made here that this clearing-house system be limited to checks and drafts of one bank upon another?

Mr. Perkins. I think that is a good suggestion, coupled with the other suggestion which that same speaker made, that they may perform the functions of clearing houses. That clause is in the bill. That leaves it in the hands of the Federal reserve board.

Senator Nelson. You are familiar with the resolution that was adopted by the country bankers. What do you think of the provision that they adopted?

Mr. Perkins. I think that is a pretty good provision, although I do not altogether sympathize with their point of view in adopting it.

Senator Nelson. If you omit that provision on page 33 which they have indicated and leave the provision on page 24, would not that solve it?

Mr. Perkins. I think it would.

Senator Nelson. Under the provision on page 24 the banks could receive those checks and it would be left with the Federal board to determine the charges.

Mr. Perkins. Yes; I think so. I think that would solve it. Personally I would rather see it remain as it is, because that is our business.

Senator Nelson. And to the public at large it would be a great blessing; there is no doubt about that, but we can not afford to crucify the country bankers.

Mr. Perkins. No; I do not think to the public at large, either.

Now, we also believe that some further provisions should be made to take care of the Government 2 per cent bonds. We believe that it is the intention of Congress and everybody else in the country to provide for those 2 per cent bonds, and we recognize it is one of the most
difficult things to do, which you have got to consider in connection
with this bill. It would not be a safe or proper situation to have the
banks of the country holding those bonds on their books at par when
the bonds are selling on the market at 90. It would not be a right
and proper banking proposition.

I think the best suggestion we have had from our committee—
they have made two suggestions—one is that the Federal reserve bank
should take over every year a proportion of these bonds at par, the
bonds carrying with them the circulating privilege. That would
take up the slack that will come from the banks that liquidate and
reduce their net circulation, go into the State systems, and so forth.

The other suggestion is that the Government should pay off every
year a certain number of these bonds at par, and I think that probably
is better. It acts as a sinking fund.

Senator Pomerene. Looking at it from the standpoint of the
success of the system, would it not somewhat embarrass the system if
the regional banks were to take over these bonds?

Mr. Perkins. Well, only that they would then be issuing two
kinds of currency.

Senator Nelson. That would be the trouble, and we ought to get
on one currency basis ultimately.

Mr. Perkins. I think so, too, Senator. If you bought the bonds
at par, and they carry the circulating privilege, they do not cost
you anything; you take it out of their money to pay for the bonds.

Senator Pomerene. It might encourage some banks not to go into
the system.

Mr. Perkins. Our suggestion has been that only a certain pro-
portion of these be taken up every year, say, 5 per cent. If 5 per
cent are taken up every year it will only take up the slack in the
bond market. In my opinion it will not enable any man to get out
of the system, if he can only sell 5 per cent of his bonds. The sys-
tem, we hope, at the end of five years will be working so that he will
not want to get out of it.

Senator Nelson. Suppose we leave the dividend at 5 per cent, as it
is, to the stockholders. Suppose we have interest paid on Govern-
ment deposits, and then suppose all that the bank makes above the 5
per cent dividend is devoted to taking up these 2 per cent bonds. In
that way the Government would not have to advance anything it
would get out of the profits of the banks. Why would not that be a
good plan? I simply offer that as a suggestion.

Mr. Perkins. That might work out, Senator. I think, however, a
surplus should be accumulated for this regional reserve bank.

Senator Nelson. Yes; I mean after the surplus. Suppose they
pay a moderate interest on the Government deposits, and suppose
we leave the banks with 5 per cent dividends and leave all the other
revenues of the regional banks to become a sinking fund for the
taking up of the 2 per cent bonds, do you not believe that in the
course of 20 years that would take them up without any outlay of
money. If that would work well, this new system would pay its own
way, and relieve you holders of the 2 per cent bonds and keep your
bonds at par.

Mr. Perkins. Suppose, on the other hand, Senator, they do not
earn any surplus above your requirements?
Senator Nelson. Of course, that might be.

Senator O'Gorman. In that contingency there could be subsequent legislation, providing for the 2 per cent bonds.

Mr. Perkins. Then it would continue for some years, because you have to roll up your surplus first.

Senator Nelson. Would not legislation of this very nature help to brace up the 2 per cent bonds and stiffen them in the market?

Mr. Perkins. I think it would.

Senator O'Gorman. What is your view regarding the substitution of the 2 per cents, or the redemption of them, and the exchange of them for 3 per cents?

Mr. Perkins. I do not think anybody who is going to stay in the system would want to exchange the 2 per cents with the circulating privilege for the threes without the circulating privilege. He would only do it in case he wanted to liquidate before the bonds became due. In a normal money market the 3 per cent bonds would not sell at par, in my opinion.

Senator Nelson. We know how the British 2½ per cent consols are.

Senator Reed. What do you think, Mr. Perkins, of the suggestion that was made here that we retire a portion of these 2 per cent bonds, issuing in lieu thereof 3 per cent one-year bonds and deposit those with the reserve banks, holding them, in fact, as Government securities, with the privilege, on the part of the reserve banks, to sell them in order to maintain a gold reserve if it became necessary?

Mr. Perkins. Taking the whole issue up that way, Senator?

Senator Reed. Not necessarily the entire issue, but take a portion of it.

Mr. Perkins. I tell you our whole thought on this proposition has been that in order to get this system under way, to get it started, you have got one means of getting the banks all in, and that is the 2 per cent bonds. If they do not have to go in to protect their 2 per cent bonds, most of the banks will wait to see how it works before they go in. If your system is going to be a success, it has got to start out with strength, it has got to have the bankers behind it. In other words, although every man abhors being forced into a thing, you have got to force the banks into this thing or they will not go in.

Senator O'Gorman. You believe in the compulsory features of the bill, then?

Mr. Perkins. Yes.

Senator Reed. I do not believe you entirely have the idea. It was suggested here that one way in which we could take care of a portion of these bonds would be to take those of them that are now on deposit, for instance, take them into this regional reserve bank and retire them out of the assets of the bank, and then replace the assets with bonds running one year and drawing 3 per cent, those to be put aside and not used except for the purpose of maintaining a gold reserve when it became necessary. Is there anything in that?

Mr. Perkins. Yes; I think that would keep the bonds absolutely at par.

Senator Reed. And yet the banks would want to come in, and we would not be forced to buy these bonds unless we wanted to. Do you think that will work out?

Mr. Perkins. I should think so.
Senator Bristow. Do you think legislation adverse to the interests of the banks should be resorted to in order to force them into a thing which they think is against their interests?

Mr. Perkins. I do not think I expressed myself quite clearly on that point. I do not think that any legislation adverse to the banks should be resorted to. I think, however, that it is human nature for every man who has been going along under a certain system to wait to see how a new system goes before he goes into it. It may be the best system in the world, but I do not believe if it was the best system in the world that everybody would go into it when it was organized.

Senator Bristow. Suppose they are forced into it and it proves to be a bad system; what would be the effect on the country?

Mr. Perkins. Very bad.

Senator Bristow. Why would it not be better to establish a system and invite capital to subscribe, without forcing anybody, and make it sufficiently attractive to induce men to take stock, and then let the banks take their time as to whether they come in or not and let them find out whether it is going to hurt or benefit them. Why would not that be better?

Mr. Perkins. I tell you the great fault of our system, as I see it now, are two things, one is the inelastic currency and the other is the method of handling our reserves. The country bank relies on its reserve agent to take care of it in time of trouble, and the reserve agent has nobody to rely on in time of trouble. He has got to be there to take care of all his correspondence. There is no system by which a reserve agent, in time of trouble, can liquidate his assets, and yet he is asked to take care of his correspondents.

Senator Bristow. Suppose we had a Federal bank and made reserve provisions through this central bank controlled by a Government board, the same as this board which is proposed, or similar to it, and that it was voluntary as to whether a bank should come in or not, and if banks did not subscribe citizens could be invited to subscribe, and it was made attractive and by virtue of its desirability it drew the banks of the country into it; would not that be a very much better system than the one proposed?

Senator Nelson. This would be the trouble, Senator, if you will allow me. These private subscribers would have no reserves to put into a reserve bank. The French get along pretty well; they do not have bankers to subscribe to their stocks.

Mr. Perkins. I think the banks—I was coming to that point a little later. I think the one thing which the bankers of New York State, all the bankers I have talked with, are most strong on is that controlling board about which you speak. I believe that if you are going to keep the banks out of this thing, if they stay out it will be because they are afraid of that controlling board, in which they have absolutely no voice.

Senator Bristow. Now, they would not have to come in if they were afraid of them.

Mr. Perkins. Where will they keep their reserves, then; in the present way?

Senator Bristow. Yes.

Mr. Perkins. Then you do not remove the defect, do you?
Senator Bristow. If it was an actual defect you could create a bank of issue and a bank of discount, a Federal bank, and bankers need not subscribe unless they want to, and the Government deposits are there, and this bank would be ready to loan them to any banking institution that does deposit its reserves with them.

Mr. Perkins. And that institution would have branches all over the country?

Senator Bristow. That institution would have branches all over the country. It is a Federal institution, not controlled by private stock at all.

Mr. Perkins. It is only a question as to who would go in and who would not. I think they would be slow to go in.

Senator Bristow. Now, with the example of the Bank of France before us, do you think that would be the case?

Mr. Perkins. No; but the people of this country have had two experiences, I think, with a Federal bank—a United States bank.

Senator Bristow. That was a private bank.

Mr. Perkins. Yes; this is privately owned, of course.

Senator O'Gorman. It is privately owned. It is to be controlled by the Government?

Senator Bristow. Oh, no.

Mr. Perkins. I do not believe—it is simply my personal opinion—but I do not believe the banks would come into that system quickly. It might be that experience would show that it was a wise thing to do.

Senator Bristow. It would not disturb the present system so as to cause any apprehension as to any danger that might come.

Mr. Perkins. No; but the trouble is that the present situation needs disturbing.

Senator Bristow. It does not need any disturbance if you create a means by which any bank can get relief when it needs it if it has the security?

Mr. Perkins. No.

Senator Bristow. If it was a bank of issue, and the Government would discount the paper of any reputable banking institution when it needed the discount in order to get——

Mr. Perkins (interposing). And carried its reserve there?

Senator Bristow. Yes.

Mr. Perkins. Well, I do not know; that might work out. I think the banks of the country are above all desirous that when the system is put into effect that they have some voice, not a controlling voice—I do not think they want that—but that they have some voice in the management of the institution.

Senator Bristow. If they are compelled to subscribe their capital and put their money into it, I think there is no argument against the proposition. You can not justly force a man, or 100 men, to create an institution and then say to them that they shall put their money in it but have nothing whatever to do with its management. But if they are invited to go in, with the understanding that they do not have anything to do with it, and that they need not put their money in unless they want to, they could not have any complaint?

Mr. Perkins. Not a bit.

Senator Bristow. We had a witness before us, and he was a banker, who thought that there would be a hundred million subscribed if
per cent dividends were provided within a short time; that a hundred
million would be subscribed by the people, who would be eager to get
that stock.

Mr. Perkins. His guess would be just as good as mine. It is not a
situation that has ever been put up to the bankers. I have never
heard it discussed at any meeting.

We suggest that in all places where reserves, either for note issue
or reserves for deposit in Federal reserve banks, are mentioned, that
it be gold, and not gold, and lawful money. That is a question which
I will not argue, but about which Mr. Treman has something to say.
We also suggest—and this is the thing I spoke of before—that we
should be derelict in our duty to our association if we did not make it
strong that if this proposition goes through, that the banks be given
a representation on the board that controls this great system.

Senator O'Gorman. As to that, do you not think the banks will have
their influence felt when they have an advisory board, which is pro-
vided for in this bill?

Mr. Perkins. We suggest, Senator, that the advisory board be
dropped, and that the banks be given a representation on the board.
Then they are actual working members of this organization and have
a standing.

Senator O'Gorman. Now, suppose the banks had no representation
on the board, and I think it is safe for you to assume that they will
not—do you not think they would be anxious to have the advantages
of this advisory council?

Mr. Perkins. Undoubtedly, I think.

Senator O'Gorman. I see that all you have?

Mr. Perkins. No; there is one more thing. We recommend very
strongly that the number of reserve banks be substantially reduced
from 12, as provided in the bill now, believing that the essence of
this whole movement is to unite the reserves of the country in as
strong institutions as it is possible to make, and not to have any one
or two or three that are very much weaker than those. There are an
endless number of arguments for that which you have undoubtedly
heard, but perhaps the strongest, and one that is least harped on, too,
is the fact that we believe under this system, if this system is put
into effect, there will grow up around these centers what is called in
Europe open discount markets, or places where bank acceptances,
notes, or bank acceptances and indorsements will be bought and sold
in the open market. The advantage of those open discount markets
can hardly be overestimated, because it makes a place where you can
invest money well, and where you can liquidate money easily. It will
take away absolutely the necessity for one of the worst features of
the present system, that is, loaning money on call in Wall Street.

For instance, in Albany, if I have a sudden deposit of $1,000,000
or $2,000,000 that is liable to remain in my bank a week or a month.
I can not go out and invest that in four or five or six months' paper.
The only thing in the world I can do with that money and earn any-
thing is to put it in New York on call loans, and I believe that is one
of the worst features of the present system, and one that will be obvi-
ated if you have a few strong central points around which will grow
up open discount markets. That is all I have to say, gentlemen.
Mr. Treman will now speak to you.
Senator Nelson. I think you are just right on that subject. I am glad to hear you talk that way.

STATEMENT OF ROBERT TREMAN, OF ITHACA, N. Y., PRESIDENT OF THE TOMPKINS COUNTY NATIONAL BANK, ITHACA, N. Y., AND PRESIDENT OF THE NEW YORK STATE BANKERS' ASSOCIATION.

Senator O'Gorman. Will you kindly give your name and address and banking connections?

Mr. Treman. Robert Treman; Ithaca, N. Y.; president of the Tompkins County National Bank, director of the Ithaca Trust Co., trustee of the Ithaca Savings Bank, and president of the New York State Bankers' Association; and, in a business way, I am president of the New York State Hardware Association, as I spend a part of my time in the hardware jobbing business.

I want to speak in reference to the gold reserve in these reserve banks only.

If there is any one thing that the bankers of the State of New York feel strongly about, so far as I have been able to get their expressions, they are united, I believe, in thinking that the reserve against deposits and the reserve against note issue in the Federal reserve banks should be in gold and gold only, and therefore the words "in lawful money" in two or three sections of this bill should be eliminated and the word "gold" should be the only one used. In other words, that should be the only kind of reserve for the Federal reserve bank.

The question naturally arises, first------

Senator Pomerene (interposing). You would limit that to the Federal reserve banks and not extend it to the reserves of the member banks?

Mr. Treman. No; just the Federal reserve banks. The reasons for that are two, in my judgment. You may ask why should it be done, and, second, how can the gold be provided with which to do it.

Now, so far as the reason for it is concerned, if there is anything that this bank is supposed to do it is to properly mobilize and protect the reserves. And those reserves should not be scattered in the 25,000 banks of the country, but should be mobilized in these field banks—I am speaking of the gold reserve—these few Federal reserve banks. We are entering upon a great foreign distribution of goods. Anyone who has traveled in countries aside from Continental Europe will be surprised to find, as the little traveling I have done has shown me, how we Americans are not occupying the foreign markets. When you go through Turkey, and especially Palestine, you find very frequent instances where the Germans and the Englishmen have gone in and their goods are sold out there. You would be surprised at the amount of German goods in the part of Palestine governed by Turkey.

I was in Venezuela and other South American countries this last winter and found upon inquiry that nearly all the goods there came from Germany or from Great Britain. You go into Cuba, and in all of these places you will find branch banks of English or German banks, or they have banking connections, so that they have ways of
paying the funds back and forth between these countries and the country from which they buy.

One of the provisions of this new reserve-bank proposition, as I understand it, is to offer better facilities for our foreign commerce and for the transfer of money back and forth in our foreign commerce. There is only one money that is recognized by those people, and that is gold. And it seems to me if you want to establish a new banking proposition which is to have strength, especially in foreign countries, it must have the reserve in the gold standard which they have, which all the leading civilized countries have. If this Federal bank is to prove what is expected of it, it has to be practically an anchor against any disturbance in this country caused by foreign obligations. For instance, if we had a condition in the last six months in which the demands to finance the war between Italy and Turkey and the war between the Balkan States and Turkey, and the war in the Balkan States has for six months or more disturbed our markets here, we must be in a condition in this banking proposition to protect the country against the withdrawal of gold which we do not want to go out from this country.

Now, those gold reserves should be concentrated in one place where they can be controlled and where currency can be issued against them.

One of the troubles in 1907 was that our banking credits had been extended and had been growing so much for two or three years previous to that time, and the large overexpansion of banking credits. You had at the time in the United States Treasury the largest aggregation of gold bullion and coin that was ever collected in any country, but you could not use it because it belonged to the owners of the gold certificates which were scattered all over the country.

Now, what you want is to have those reserves in a position where they can be utilized, not only to protect the paper issues, but also to protect the bank credits and to supply the currency and the credits also that is necessary in certain emergencies. It can be well asked how you are going to do this. If you will pardon me a moment, I will give you some figures in regard to the gold of the country. We have in round numbers 3,600 million of all kinds of lawful money in this country. Of that money 364 million is segregated in the Treasury. These are the figures of a year ago.

Now, we will assume that is out of circulation. Of the 3,200 millions that are practically in circulation, 1,500 millions are in the banks, reported to be in the banks, and the 1,700 millions remaining are scattered in commerce and in private banks. Of the 1,500 millions in the banks, $882,000,000, practically a little less than $900,000,000 of gold, was in the banks, in their vaults, either gold or gold certificates, against which there was bullion in the Treasury. Of the $900,000,000 the national banks held $600,000,000 at that time.

What is going to be required to furnish gold for these reserves? You have got to protect the Government deposits up to 33 1/3 per cent of that. We will assume they will be $200,000,000. That is what the House committee gave out. You will practically get from the member banks $300,000,000, and you will have a total of deposits in the banks of substantially $500,000,000, against which you must have $167,000,000 of gold.
The next thing you are to provide for is a gold reserve for any of these Federal reserve bank notes. How much that will be no one can tell, but it is assumed it will not make any undue drain on your gold, because you will protect them by an equal amount of other assets, by the capital of your bank before you touch your gold, and it would seem to me it would be a proper way to maintain your notes that you issue by having the reserve entirely in gold and not in any promise to pay or any other form of lawful money, so called. If you provide that reserve in gold, you will, it seems to me, gain the confidence of the banks of the country in regard to the stability of those Federal reserve banks and you will gain the confidence of the business community, because they will feel that there is actual money in the vaults of those banks, and you will strengthen your position with the foreign people immeasurably over what it will be if you have gold or lawful money. They do not understand that. It does not seem to me that it is nearly so essential that you should have in your member banks so much gold in reserve, because if you establish this system your Federal reserve banks will become the father to the child all the time, and the child will be going to the father. That is the way it is in England. They do not carry any gold reserve to any amount. If they want any, they go to the Bank of England. If the gold is being withdrawn from the Bank of England, it raises its discount rate.

In 1907, when this country wanted gold, they called upon England, and the Bank of England had to furnish the gold that was brought over to this country, and within the period of two months between October and December the Bank of England supplied over $100,000,000 of gold to this country. Their reserve at that time was only about $150,000,000 of gold. You would ask why did that not weaken them? Because the man at the head of the Bank of England was a man trained in banking, and he watches these matters, and the moment there is any danger anywhere in the world they begin to hoist the flag of distress by raising the discount rate, and during this period their discount rate at that time was raised from 4 1/2 to 7 per cent, and the German banks, or rather the Reichsbank, raised their rate from 5 1/2 to 7 1/2 per cent. The Bank of France did not raise theirs quite as much. It went, I think, from 3 1/2 to 4 1/2 per cent within that time. Each one did that to draw gold from other countries to them by reason of the discount. What was the result? The Bank of England had some £30,000,000, or $150,000,000 of gold, in their reserve at the time of the panic in this country in October. Notwithstanding the fact that they supplied $100,000,000 of gold to this country, they landed on December 23 with £29,000,000, or about $140,000,000, still in their reserves that they had drawn from other places.

Now, the banks of New York State, whatever the rest of the country may feel, feel strongly that in that need we should have a banking system so strong that it will provide for any unusual emergency, for the extension of bank credits, and for the protection of the paper currency of the country, and if you do that you will make a strong institution, and the small member banks will take care of their reserves.

I am a country banker. I listened to the remarks of some of the gentlemen who are in the same class as I am in regard to the change
in reserves and what effect it is going to have. I have heard a great deal of discussion about the unfairness of this new bill to the country bankers in compelling them to do so-and-so. Now, they refer to a bank of $1,000,000 deposits. Under the present national-bank act we are required to keep $150,000—15 per cent—reserve. Of that we must keep 6 per cent, or $90,000 in our vaults. Nine per cent can be in a bank in New York, Albany, or some other place, wherever we choose to put it so long as it is a reserve bank. We have been getting 2 per cent on that $90,000; that is, $1,800 a year, if I am not mistaken.

Now, under this new proposition you release 3 per cent, or $30,000. That become the property of the bank to be used for loaning or in any way they care to invest it, in bonds or otherwise. I submit that at the present time they can not earn 6 per cent on that money and make the $1,800, so that although the banker is compelled to put his money in the Federal reserve bank without interest, still, with the lowering of the reserve, he does not suffer a great deal, and it does not seem to me it works a great hardship to our bank.

Now, we recognize in New York that some conditions are very different, as Mr. Perkins has said. The rediscount system is not in vogue to a great extent with the New York State national banks, because they have been educated to believe they ought to take care of themselves and not discount their paper. Under this system I think there will be a change of sentiment, and we undoubtedly will go to our Federal reserve bank and feel that it is perfectly justifiable, it is honorable, and not a sign of weakness——

Senator Pomerene (interposing). And in every case it is regarded as perfectly legitimate and good banking.

Mr. Treman. The bank I have been connected with as president for 10 years never has rediscounted up to the present time, to my knowledge. We buy bonds when we are flush, and carry them along. If we are in trouble we may send them to the New York bank and say, “If we should overdraw any day you have those bonds as protection.” But we try to avoid that, and those bonds have lain there a good many years. We also have the opportunity to sell our bonds in the open market at a slight loss, which is compensated for.

So I could not agree personally with the feeling that you are treating these small country banks wrong in compelling them to go into the Federal reserve bank. I feel strongly that what we need in this country is just such a central organization, composed of two, three, five, or seven units, or something like that. Personally I would make them as small as possible. I would have a few banks and then let them have different branches in the various places that are convenient.

Senator Pomerene. You mean to make the number of banks small?

Mr. Treman. Yes; 4, 5, or 6, instead of 12 as your bill provides. And it seems to me that by establishing the banks around you can make points of convenience for these men who have felt that the reserve bank was going to be so far off they would never get into touch with it. You have the power to provide for branch banks in those places, and make your connection in that way, and it certainly will result in your having greater control in times of emergency if you only have a few banks that will work together, and there is apt to be less friction than by having a large number.
Senator Nelson. There is one point I should like to ask you about; you did not make it quite as clear as I should like. I agree with you it ought to be a gold reserve, but how is a gold reserve to be provided for these regional banks in the first instance?

Mr. Treman. If you left it to me I should have every member bank that subscribes pay for its stock in that bank in gold to start with. You give to your Federal reserve bank the right to purchase gold bullion in the market if they want to, but I want to point out that under your plan of reducing the reserves in cash in the central reserve city from 25 to 18, and in the reserve from 12½ to 9, and in the country bank from 6 to 5, you are going to realize from $230,000,000 to $250,000,000 cash. That all could be paid over, but you do not need it. If the deposits are not more than they are estimated—$550,000,000—you only need about $150,000,000 to $175,000,000 in gold. If you will make them pay their stock in gold you will start with about $100,000,000, and the rest can be accumulated in such a way as a bank may prefer to get the gold out of its own vaults into the other.

Senator Nelson. This has occurred to me as a defect in the bill. It did not provide in the first instance how this gold reserve should be acquired. There was no provision in the bill for that 33 per cent gold reserve, and it seemed to me—but I did not dare suggest it before, and I am glad you have suggested it—that the only way we could get it in the first instance would be to make these stock subscriptions at the outset in cash.

Mr. Treman. Take our case. We have $100,000 and $150,000 surplus. We pay 10 per cent for our stock—

Senator Nelson (interposing). The last bank statement we have here, if my recollection is good, discloses that the national banks have something over $750,000,000 in gold at this time.

Mr. Treman. I have not seen the last statement. The last I have is June, 1912, and there were $882,000,000 of gold in the banks, of which the national banks had about $600,000,000.

Senator Nelson. I think the last statement discloses a little over $700,000,000.

Senator O'Gorman. Mr. Treman, you and Mr. Perkins were at the convention in Boston?

Mr. Treman. Yes, sir; I was there for only a day or a day and a half.

Senator O'Gorman. Did you participate in the deliberations of the convention?

Mr. Treman. Yes, sir; to some extent. I found they were getting into what seemed to me a rather acrimonious debate, and it was after lunch time, and I arose, went to the platform, and suggested that they adjourn for lunch. They did so, and came back and apparently after the luncheon they felt better.

Senator O'Gorman. Do you approve of the recommendations made by the convention regarding the changes that ought to be made in this bill?

Mr. Treman. The recommendation of the American Bankers' Association?

Senator O'Gorman. Yes.

Mr. Treman. I could not personally agree with all of them, sir. I think, in the main, they are correct. They were contending for a
principle, and I did not feel it was wise to take issue on one or two things that I might differ on. The important thing is to get a reserve bank of some kind, or a central bank organization started that will relieve these difficulties as soon as possible; because this country, in my judgment, is on the eve of a great advance. You have wiped out apparently the tariff agitation for a while—

Senator O'Gorman (interposing). We hope for a long while.

Mr. Treman. And if you can settle this currency bill and get it out of the way it seems to me we have a great opportunity, and what I am anxious to see as an individual is a proper banking and currency bill just as soon as possible.

Senator O'Gorman. Do you recall which of the recommendations made by the convention you disagreed with? It was stated yesterday, I think, Mr. Treman, that the only person who opposed them was Mr. Scudder. Is that correct?

Mr. Treman. He was the only man on the floor that I saw that voted against the bill. There were some who did not vote for it.

Senator O'Gorman. What bank did he represent?

Mr. Treman. I think it is the Richmond Savings & Deposit Co., if I remember correctly.

Senator O'Gorman. You know Mr. Scudder, do you?

Mr. Treman. I saw him; I do not know him personally.

Senator O'Gorman. What is his position?

Mr. Treman. I think he is vice president.

Senator O'Gorman. Who is president?

Mr. Treman. I think it is John Skelton Williams, if I am not mistaken.

Senator O'Gorman. Coming back to the previous question, which of those recommendations do you find fault with?

Mr. Treman. Which would I change, for instance?

Senator O'Gorman. Yes.

Mr. Treman. You have asked me quite a question, Senator. There are two questions; one is the recommendations of the American Bankers' Association.

Senator O'Gorman. I am speaking of the recommendations made by this Boston convention which were presented here yesterday.

Mr. Treman. Oh, I did not understand your question.

Senator O'Gorman. Have those recommendations made by the country bankers met your approval?

Mr. Treman. Not entirely so. I should agree with them on the question of leaving out of the bill the savings bank proposition. Now, of course, in New York State we have not the condition they have in the South. We have savings banks that are segregated under State laws, and it is an entirely different proposition, but it seems to me it has no place in this fundamental banking law of the country at the present time.

I should not agree entirely with their recommendation—I am speaking merely for myself.

Senator O'Gorman. I so understand.

Mr. Treman. I should not agree entirely with their recommendation about the reserves, because it does not seem to me it is working any great hardship at the present time; for instance, with our bank, for which alone I am speaking. In this bill you reduce the reserves from 15 to 12 per cent. Now, we probably will do business with
some bank in some other city besides the Federal reserve bank, but I think we can do it without any loss of profit more than we are having at the present time and still make our connection with the Federal bank.

Senator Bristow. The ability of one bank in that respect depends somewhat upon its locality and environment, would it not?

Mr. Treman. Entirely so, in this way: Take a small country bank in Gloversville in our State, where you have certain conditions. They might have every dollar of their deposits that they were legally allowed to loan out in local loans to manufacturers. It is a manufacturing center, and they probably would want to rediscount it. With us it is entirely different. We have not local demand enough, so that at times we buy bonds, or we buy commercial paper outside through note brokers.

Senator Bristow. I think that is all.

STATEMENT OF F. S. LARRABEE, FARMERS' NATIONAL BANK, STAFFORD, KANS.

Senator Bristow. Mr. Larrabee, what is the capital stock of your bank?

Mr. LARRABEE. $25,000.

Senator Bristow. What are its deposits?

Mr. LARRABEE. $500,000. I am also director in 6 State banks, and stockholder in 11, and director of the Larrabee Flour Mills Co.

Senator Bristow. So you appear as a banker and business man?

Mr. LARRABEE. More as a business man, I think, than as a banker.

I come before the committee with some diffidence. I have not any figures; I have not come from Boston. I came direct from Kansas at the request of some of the Senators. I will tell you in advance that the small country banker, such as I am, is not interested so much in the organization as in the operation of the bill. With us, and with me particularly, the only thing I need from an institution of this kind is rediscounting at certain times of the year, and I should have that without limit if it is to be of any benefit to me.

In our wheat-moving period we use enormous amounts of money, and our present source of supply is our corresponding banks in the reserve cities. They lend to us without limit. I have been a banker for 27 years and I have never had a discount refused by a corresponding bank. I have always leaned on them, and they have been good leaning. Of course, in that situation I naturally hesitate about changing my credits without knowing just what I am going to get in return.

Senator Bristow. You have a bank of $25,000 capital? What is its surplus?

Mr. LARRABEE. $25,000.

Senator Bristow. And its deposits $500,000?

Mr. LARRABEE. Yes, sir.

Senator Bristow. What is the population of Stafford?

Mr. LARRABEE. Two thousand.

Senator Reed. Senator, can you pause long enough for me to call the attention of the committee to this statement in the Washington Evening Star:

The committee, it was learned this afternoon, will insist upon H. Parker Willis appearing before it to discuss the bill. Mr. Willis, who is news editor
of the New York Journal of Commerce, was the expert who aided the House committee in framing the bill.

I make no complaint of that statement, but this follows:

Members of the Senate committee expect to learn from Mr. Willis just what parts of the bill President Wilson is responsible for, and also what part Secretary of State Bryan had in framing the House bill.

I have never heard such a suggestion made by a member of this committee. I do not believe anybody else ever heard that suggestion made by a member of the committee.

Senator Bristow. I do not either. I do not think it ever entered the mind of a member of the committee.

Senator Reed. I do not believe the author of that article ever heard anybody make that suggestion except himself.

Senator Bristow. Mr. Larrabee has to leave, and I am rather anxious for the committee to hear him. We can discuss this later.

Senator Reed. I just wanted to call the attention of the committee to it now, because my eye just caught it. Such impressions as that ought not to be sent out by anybody.

Senator Bristow. Now, Mr. Larrabee, as I understand, you are more interested in your ability to get rediscounts. Now, what amount do you rediscount?

Mr. Larrabee. Various amounts. The largest amount I have ever rediscounted in any one wheat-moving period has been $100,000.

Senator Bristow. How do you get those rediscounts?

Mr. Larrabee. I send my paper to New York, St. Louis, or Kansas City, wherever I think I can get the better rate, or wherever I have a line of credit available.

Senator Nelson. Do you sell your paper, or do you give your note and put up the paper as collateral?

Mr. Larrabee. Understand, Senator, that under the existing banking laws a national bank is limited to the amount of its capital stock. I borrow to the amount of my capital stock, and then I give my personal note or the note of my directors for what more money I may need.

Senator Nelson. It is the note of the bank or yourself in any event?

Mr. Larrabee. Yes.

Senator Nelson. And you put up this commercial paper as collateral?

Mr. Larrabee. Not when I give my own note.

Senator Nelson. But when you give the bank's note?

Mr. Larrabee. When I give the bank's note; I attach to it an account of my bills receivable. That happens with me only once a year, and I need that money only 30 or 60 days, because I soon get it back and in large amounts. At times of the year I am in the market for commercial paper myself.

Senator Bristow. Do you have an apprehension that you could not get these accommodations——

Mr. Larrabee (interposing). I have the apprehension this far, Senator, that I feel like waiting. The bill puts the State banks into better shape than it does the national banks. If I were a State bank I could wait one, two, or three years, have my resources and lines of credit open, and at the end of that time if I saw it would be of
advantage I could come in. But as a national bank I am compelled
to go in or go out of business, or else take out a State charter. And I
can not say that I will protect my bonds by staying in the Federal
system. The statement was made here that the bonds would be pro­
tected, but I can not see it. The bonds may go to 80 cents, and if I
were to stay in the system I can not see but what I would have to
put up enough money to make them worth par to protect my circula­
tion.

Senator Bristow. Suppose you asked for a rediscount from the
Federal reserve bank and it was refused?

Mr. Larrabee. If I had done my business with the reserve bank
and had lost my lines of credit with my corresponding bank I
would be in bad shape—absolutely bad shape. And the line of credit
granted to a country bank is dependent upon the deposits that it
keeps with its corresponding banks.

Senator Bristow. What reserve do you keep?

Mr. Larrabee. Twenty-five to thirty per cent.

Senator Bristow. Of your $500,000?

Mr. Larrabee. Yes, sir.

Senator Bristow. Where do you keep it?

Mr. Larrabee. Well, at the end of some days the bulk is in Kansas
City, and at the end of the next day the bulk may be in New York.
I switch it around, depending on my exchange requirements.

Senator Bristow. That is, you leave 9 per cent of your reserve or
more in the reserve cities?

Mr. Larrabee. Oh, yes; my cash requirements are not heavy. I
keep 6, 7, or 8 per cent in cash.

Senator Bristow. Now, in your business you may check out all of
the money you have in Kansas City on one day?

Mr. Larrabee. Practically all of it; it might happen that way.

Senator Bristow. But still your reserve in St. Louis or New
York—

Mr. Larrabee (interposing). I may get heavy exchanges or
drafts deposited with me on St. Louis, which I send direct there, and
I may draw pretty nearly all my balance in Kansas City. The next
day it may be reversed.

Senator Bristow. And you draw your balance out in New York
and have your reserve in Kansas City?

Mr. Larrabee. Of course, those are extreme cases. It might not
happen that way from day to day, but it might happen from one
week to another.

Senator Bristow. So that while it is 9 per cent that you are per­
mitted to keep with your reserve agents, it is—

Mr. Larrabee (interposing). Flexible.

Senator Bristow. And it is useful?

Mr. Larrabee. Yes; I do not have to keep it with any particular
reserve agent.

Senator Bristow. Would you feel justified in coming into this
system if the bill should pass?

Mr. Larrabee. I do not think so. If I surrendered my national
charter and took out a State charter, I might take advantage later
on of the privilege of coming in if I thought it would prove useful
and beneficial. Under the State charter, under the laws of my State,
I have many advantages I do not have under a Federal charter. I can loan on real estate; my loan limit is larger, which is an advantage sometimes, and the State law offers us some advantages that we do not get under the national-bank charters.

Senator Bristow. In what way would your milling company be affected by legislation of this kind?

Mr. Larrabee. You know, Senator, within the last 20 years there have grown up among us aggregations of business. Twenty years ago our milling company made 100 barrels of flour daily. To-day we are the second largest milling concern in the Southwest, making over 3,000 barrels of flour daily. At certain times of the year we use enormous amounts of money, and we go into the open market and borrow money. None of our banks could take care of us.

Senator Nelson. You get it through note brokers?

Mr. Larrabee. Through note brokers. We are fearful that when the City National, for instance, have to turn over $50,000 of their deposits to the Federal reserve bank, and the banks in the reserve cities have to do that, they will restrict their operations in the open market, and we will be unable to secure funds to operate our milling company, because they will not buy our paper just for the privilege of rediscounting it with the Federal reserve bank. No bank is going to loan money to outside interests simply for the privilege of reselling their paper. If we were a customer they might do it to a limited extent to accommodate us.

Senator Reed. Are you not mistaken about that Mr. Larrabee? If you do business with a bank right along, and you need some more money and would put up your notes, the bank would go down and get the currency for you.

Mr. Larrabee. They would do that, Senator—the bank I was doing business with. But this summer, in the face of an unfriendly money market, we borrowed a half million dollars for our milling operations. None of our banks nor all of the banks combined would borrow that amount of money for us.

Senator Reed. You are doing business now with how many banks?

Mr. Larrabee. Two.

Senator Reed. Now, suppose your two banks, knowing you were running a safe and sound business there, entitling you to credit—and you must be entitled to credit or you could not get the accommodation—and desiring to accommodate you, one of the members of this system, they could take your paper—

Mr. Larrabee (interposing). But remember, Senator—pardon me for interrupting—but remember they are limited as to the amount they can loan us to 10 per cent of their capital and surplus.

Senator Reed. They are not limited to it under this bill.

Mr. Larrabee. They are not limited to the amount of my paper, like myself, but they are limited as to the amount of loans they can make to us to 10 per cent of their capital and surplus.

Senator Reed. This bill is not written yet.

Mr. Larrabee. I am taking the bill as it stands.

Senator Reed. If that limitation were taken off as to the amount they could lend you, leaving it to the directors of the Federal reserve bank, so that they could accept paper in excess of 10 per cent, then do you not think those banks, in order to handle your business and see-
ning some profit in the handling of it, would willingly take your paper to the Federal reserve bank and obtain money upon it, even if there had to be money issued? Now, Mr. Larrabee, what this committee is trying to get is the frank and honest opinion of witnesses with reference to the virtues as well as the defects of this bill; and when I ask this question I find all witnesses a little inclined to maintain their position, and, of course, they ought to, if it is correct. And, directing your thought to this particular matter now, do you not think it would be a great convenience and help to you?

Mr. Larrabee. Well, Senator, let me explain a little further. We do business with one bank that has $100,000 capital. Do you think that bank would be justified in taking half of our requirements—a half million dollars? Do you think it would be safe to permit them to do it for the privilege of rediscounting our paper?

Senator Reed. Possibly not——

Mr. Larrabee (interposing). So we are glad to go into the open market for a certain part of our funds.

Senator Reed. Let us see about the effect on the open market under this bill. Would there not be a better market for your paper if not only the bank you ordinarily do business with, but any bank purchasing that paper, knew it could at once turn it into money, if necessary, and at a reasonable rate, at the regional bank?

Mr. Larrabee. Of course, it is difficult to tell in advance what will be the result of the operations of this bill. But I estimate it in this way——

Senator Reed (interposing). Leaving you at the same time every resource you now have.

Mr. Larrabee. You understand that banks, when they go into the market for commercial paper from brokers when they have surplus, do not go in and buy paper to resell; they won’t do that. Now, if these large reserve banks have to deposit a large amount of paper and decrease their loans to get money to put into the regional reserve bank, our class of business is the first business they cut out.

Senator Nelson. It is the floating business.

Mr. Larrabee. Yes; they cut that out.

Senator Reed. Now, Mr. Larrabee, of course a bank would not perhaps buy your paper in the market with the purpose in mind at that time of taking it and certainly rediscounting it; but, as this bill offers to every member bank that becomes a member the facility to rediscount if it becomes at all necessary, do you not think that would loosen up the market for your paper just to the extent that this system adds to the present facilities of the market?

Mr. Larrabee. That has not been my opinion, Senator.

Senator Reed. I wish you would tell me why that would not be the inevitable result. To-day you have all the banks of the country to sell your paper to. Now, a new system is created which does two things—well, it would be better to state it as one proposition. It affords a new place in which that commercial paper that is prime and good can be at once rediscounted by any bank. Is not that an additional advantage to that which you now have?

Mr. Larrabee. I do not think you get my point in that, that banks only go in the open market when they have a surplus of funds. And they will take care of their own customers, but in buying commercial paper—that is, when they have loose funds——
Senator Reed (interposing). They will have the loose funds after this system is created, won't they?

Mr. Larrabee. I have taken the statements of the men who have been before you from the reserve centers that their funds will be decreased.

Senator Reed. But they all say they will be decreased at first; that is, there will be a transitory period, but nearly all of them say there is danger under this bill that there will be an inflation afterwards.

Mr. Larrabee. I would not agree with them.

Senator Nelson. As I understand Mr. Larrabee, his demands during certain seasons, his requirement for loans is so big that no one bank can make him a loan. No one regional bank could do it.

Mr. Larrabee. I do not know what their limitations are. My idea was that no single bank where we kept an account would buy our paper to rediscount it.

Senator Nelson. And his further theory is he would have to go to a number of banks to get his accommodations, and that no bank would buy his paper for the sake of rediscounting it with the regional bank.

Mr. Larrabee. That is the theory.

Senator Reed. It seems to me that criticism is based on the idea that the regional bank absorbs the funds of the country, so there are no surplus funds left, whereas the regional bank is expected to be in a position to supply an almost unlimited amount of funds as long as there is a good piece of paper back of it.

Senator Bristow. Now, Senator, I do not think you get Mr. Larrabee's point. Mr. Larrabee is from a little town out in western Kansas of 2,000 people. He has a bank of $25,000 capital. He demands there in his milling business as much as a half million dollars. This year he borrowed a half million dollars.

Senator Reed. I understand.

Senator Bristow. And there is no bank he can go to and borrow that money from that would be justified in loaning him that amount, that could go and get it rediscounted? As it is now, he has his connections, and he has no trouble, but here the rediscounting is only permitted by this regional bank. His present facilities would be curtailed, and he does not see how any bank could rediscount for him and then rediscount at the regional bank.

Senator Reed. I do not understand that. He has his present relations and arrangements made now to take care of this. I do not understand, and I wish you would tell me, why this bill destroys those connections which he now has.

Mr. Larrabee. Let me go a little further. Suppose you had a panic like that in 1907 going on and I had paper maturing. The only way my milling company can get money from the regional reserve banks is from some member bank. These member banks, with my paper coming out, they are not going to take any more time paper to accommodate me, unless I am a customer of theirs; and if I am not a customer of theirs, they are not going to handle that paper; and so, when that matures they are going to get out from under their undertakings just as soon as they can.

Senator Reed. Why are they going to get out from under your undertakings when they could take your paper and everybody else's
paper and go over to the regional bank and get all the cash they
needed?

Mr. Larrabee. I do not know. I have been a banker for 27 years,
and I have never bought paper when I knew I would have to sell
immediately. In time of a panic, if my paper matures, I have got
to liquidate my business. I will take, as an illustration, the bank at
Shreveport, La. That paper matures in November. In November
a panic is on. I do not know the bank at Shreveport has my paper
until it matures. When that paper matures they are going to ask
me to pay, because they are not going to take a chance in a panic of
my failing and leaving them to pay that paper to the Federal reserve
bank. And so I have got to liquidate.

Senator Reed. You have got to do that now, and now if there is
a panic on that bank in Shreveport would not help you and no other
bank would help you. All the banks are in trouble now. Now, do
you think it puts you in a worse condition if there is a place where
all of the member banks, say seven or eight thousand banks, in this
country can go and turn over paper which they take in, intending
to rediscount, and that they now will rediscount, if an emergency has
arisen, and it is in funds and the whole situation of the country will
be relieved—do you think that that puts you in worse condition?

Mr. Larrabee. Senator, I am not complaining of the bill on that
account, but I think that the section looking to open market opera­
tions should be changed.

Senator Reed. In what respect?

Mr. Larrabee. I think at times they should be allowed to go in the
open market and buy paper—the regional bank; such times as that,
for instance.

Senator Reed. Do you think the section ought to be enlarged?

Mr. Larrabee. I think so, yes. Of course, I admit it is a difficult
thing to do. Here you have the monied banks who are in the market
for that paper. At times you are in the market as their competitors.

Senator Reed. If competition is the spice of trade, would it injure
the business of this country if one of those banks occasionally bought
some paper?

Mr. Larrabee. No, sir; I think it would be a benefit to the business
of the country. I think that should be enlarged so as to permit their
open market operations to be more extended. I am not complaining
of the bill on that account, but telling you how it would operate.

Senator Reed. You think the bill is a good thing, if it had some
changes?

Mr. Larrabee. If it had some changes, although I would not say
I would put my bank into it. Of course, a bank is naturally con­
servative, and I would like to see how it operates.

Senator Reed. You would like somebody else to take all the
chances?

Mr. Larrabee. Yes; I would like somebody else to try it.

Senator Reed. Will you tell us, now, how we can get up a system
and start it when all of the banks are in the same frame of mind you
are—want somebody else to take the first step?

Mr. Larrabee. No.

Senator Reed. Yet you realize the necessity of something being
done?
Mr. LARRABEE. Yes; I believe the ultimate result will be the Government doing the banking of the country, and we fellows will be out of business.

Senator Reed. The Government running all the banks?

Mr. LARRABEE. Yes, sir; doing the banking business of the country.

Senator Reed. I do not think that follows.

Senator Bristow. Have you had any trouble in the past in handling your credits?

Mr. LARRABEE. Never. In every panic I have been able to borrow money if I wanted it.

Senator Bristow. In 1907?

Mr. LARRABEE. In 1907. I did borrow money in New York.

Senator O'Gorman. Did you ever have any trouble in getting money in New York?

Mr. LARRABEE. No, not in borrowing credits. I got credit there, but I could not get the currency. The fact was, I wanted credit. I was lacking New York exchange, and I had paper coming due in New York, and I rediscounted that just to get New York exchange. You will remember, in spite of what we are told, we depleted our balances in New York. Exchange was selling in the West from $6 to $8 a thousand on New York, which was evidence we had no money in New York.

Senator O'Gorman. I am very glad to have you state that, and I think that what you now state was pretty generally known, although I was surprised during the day to hear my good friend, Senator Nelson, ask if all of the reserves were tied up in New York.

Mr. LARRABEE. If I had had New York exchange I would have been glad to have sold it at $6 to $8 a thousand.

Senator Reed. I think if we do not do something here pretty soon, Senator O'Gorman is going to demonstrate that Kansas started this panic instead of New York.

Senator Nelson. Maybe you did not have much on deposit to draw from.

Mr. LARRABEE. I know, but if other banks in my section had had it they would have been glad to have sold it to me. New York exchange on Kansas City was selling at from $6 to $8 a thousand.

Senator Weeks. It is your judgment, then, Mr. Larrabee, that the New York banks did all they could in the panic of 1907?

Mr. LARRABEE. I think so, and in the panic of 1893. I was in the banking business then. I borrowed money in New York. Of course I never overstrained my credit; I never asked for anything unreasonable. I have been in the banking business for 27 years, and I have never had a loan refused me.

Senator Weeks. I want to congratulate you on your credit, for I could not borrow money in New York.

Senator Bristow. I am sorry we can not have more time with Mr. Larrabee, because he is a unique witness, living in a little town, which is one of the largest milling towns in the United States.

Mr. LARRABEE. In explanation of my theory that the Government would be in the banking business, I wish to say, to use a concrete illustration, for instance, John Smith has been giving checks all morning, we ought to let him borrow a little money now. He comes to my bank and wants to borrow $2,000 or $3,000. His credit is good. I take his note and he pays 6 to 8 per cent, whatever the rate is.
take his note down to St. Louis and sell it for 3. That note comes
back, and he knows the note has been down there, and he knows what
the Government rate is. He is going to figure, Why could not the
Government loan me that money direct; why is it necessary to have
a bank come between me and the Government? And if he does not
think of it somebody else will, and they will tell him about it, and
your political platforms will be drafted to loan to the people direct,
and the first thing you know you will be in the banking business.

Senator Weeks. You do not think that would be a good thing?

Mr. LARRABEE. I am not sure but what it would be a good thing.

Senator Reed. Then you are not sure you object to this bill on that
ground?

Mr. LARRABEE. Oh, no; I am not objecting to it.

Senator O'GORMAN. You think the bill has some good features?

Mr. LARRABEE. Yes; many good features. Of course the operation
is the main thing. If I can go to a regional bank and discount $100,-
000 in time of need, at the time my crop is moving, it answers my
needs entirely. But until I know I can do this I do not like to cast
off anchors I have in other directions.

Senator Reed. Would you have this system run by the banks or
by the Government?

Mr. LARRABEE. As I told you, I have not considered that we little
fellows would be concerned in the organization, because we would
not have any voice in any way.

Senator Reed. You have a vote.

Mr. LARRABEE. It would be so little.

Senator Reed. Are you under the impression that somehow or
other the little banks are not going to be directors in these regional
banks?

Mr. LARRABEE. I did not understand that if there are any directors
appointed here in Washington on the reserve board that we little
fellows would be among them. They would be some bankers of
prominence, of wide observation. I do not know that we would be
competent to sit here and talk about gold reserves. This gentleman
who talked about gold reserves—I did not understand him.

Senator Reed. But you expect your Senator to understand it with­
out hearing about it.

Senator Bristow. Mr. Larrabee, I am very much interested, al­
though I have known you for a good many years, in some of your
statements. You say that the farmer out there in Stafford County,
if he wants $6,000 or $7,000, and you loan it to him, you charge
him 6 or 7 per cent, and you rediscount that note, and we will say
that the Government rate is three for these rediscounts; and he will
say, "Now, why should I pay Mr. Larrabee 4 per cent? Why should
the Government let Mr. Larrabee have that money, and let him
charge me 7 per cent, while he is only paying 3," and he would not
stand for that?

Mr. LARRABEE. No.

Senator Bristow. In your judgment?

Mr. LARRABEE. No.

Senator Bristow. If he could help it.

Mr. LARRABEE. No.

Senator Bristow. Do you think he would make a fuss about it?

Mr. LARRABEE. You bet he would.
Senator Reed. Why shouldn't he?
Mr. Larrabee. I do not know why he should not.
Senator Reed. Why should you charge him such an extortionate rate, if you could get the money for him for 3?
Mr. Larrabee. Of course, those are current rates now. This new bill may make a cheaper rate and he may get it for 5. But he would kick on giving me 2 per cent profit.
Senator Reed. But he could not get his paper discounted without your indorsement.
Mr. Larrabee. No; but he does not think so. He will say, "Mr. Larrabee would not get it without my note."
Senator O'Gorman. He might remember, Mr. Larrabee, or if he did not you could recall it to him, that your capital was deposited to help create this fund.
Mr. Larrabee. Of course there is an argument, but there is going to be a row about it. [Laughter.]
Senator Bristow. Mr. Larrabee, you are selling to-day $1,000,000 worth of credits, your milling company is. Now, does it naturally come to your mind why this Government could not discount your paper direct?
Mr. Larrabee. No; that is what I am kicking for here.
Senator Bristow. You do not want to have to go to a bank and pay 2 per cent more than the bank does?
Mr. Larrabee. My business, I am not particular about that. What I want is to sell my paper at the going rate. If it is 6 per cent or 4 per cent I want it; what I want is to get funds in my time of need. I would just as soon pay the bank; I would not quarrel about that, if I could get funds through the bank.
Senator Nelson. What you want is currency.
Mr. Larrabee. That is what I want—money.
Senator Bristow (interposing). What you are afraid of is the disturbance in that kind of a system?
Mr. Larrabee. Yes; I am afraid of the restriction of credits, as long as this bank is permitted to engage in open market operations.
Senator Bristow. You went out there 25 years ago?
Mr. Larrabee. Twenty-seven years ago I went to Kansas from New York State.
Senator Bristow. And did establish a bank?
Mr. Larrabee. The first month I was there, and when there were no banking laws in Kansas. All that was required of a bank was to acquire a safe of sufficient size to put confidence in the public and to hang out a shingle. Many people did that and made good. Two or three went there and opened banks and bought their safes on credit and gave a chattel mortgage for them.
Senator Reed. And then made money and made good bankers?
Mr. Larrabee. Some of them have failed, of course.
Senator O'Gorman. Is the banking business profitable in your State?
Mr. Larrabee. It is exceedingly profitable now, Senator.
Senator O'Gorman. What dividend is your bank paying?
Mr. Larrabee. I will tell you what it earned. We have paid two 8 per cent dividends so far this year. Last year we earned 65 per cent.
Senator O'Gorman. What part of the State do you do business in?

Mr. Larrabee. In the rich part, the wheat belt. But that needs explanation, Senator. I have been there 27 years. I could do business in that town without capital. My capital is only $25,000, and we have $1,000,000 of deposits. The people do not ask what the capital is. It is just Larrabee's bank. Nobody else could go there and duplicate that without 27 years' record behind them. I think I have the most profitable bank in the State of Kansas, and it has been hard work that has done it, and not the capital.

Senator Bristow. There is one other witness—Mr. Moses—that I would like to have heard this afternoon.

STATEMENT OF E. R. MOSES, PRESIDENT OF THE CITIZENS' NATIONAL BANK, GREAT BEND, KANS.

Mr. Moses. I am president of the Citizens' National Bank of Great Bend, Kans., and president of two State banks. I am also president of a mercantile company.

Senator Bristow. Mr. Moses, you are engaged in the banking business and the mercantile business?

Mr. Moses. Yes.

Senator Bristow. Tell us what you think about this bill; how it will affect your business.

Mr. Moses. Well, it is only apprehensive. We do not know whether we are going to have the regional bank and get loans as easy and with as much facility as we are doing now. For instance, I can send my note down with one or two of my directors on it, if I want money, for $40,000 or $50,000, and get it immediately, or telegraph for it. Now, if I have my reserve of 9 per cent in one bank and one of the cities I do business with is required to take 5 per cent out, say $20,000 out of $36,000 reserve, that leaves $16,000 to my credit with the bank. My financial standing with that bank is injured to that extent; my loaning capacity is cut down one-half or more. Now, you take the capital I would have to put in of $5,000 and the $20,000 reserve, and I am still injured that much more, because I can go to the banks I have my deposits with there in the West—in Kansas City or in Wichita or Pueblo—and get immediately, by mail or upon a telegram, upon notes sent in by myself and directors, any amount of money I want that is reasonable.

Again, if there is a segregation in the savings bank of my time deposits, I could not begin to accommodate the commercial business of my section of the country this year, because of a crop failure coming there, which has taken all of the money that would be available to accommodate the farmers in putting in their crops and buying cattle or cows, and a good many of them are going more into that business, in which we have to help them out, and it would not aid me in anywise whatever with the State banks there, because if I should make a statement that the capital of my national bank is down to $125,000, they would soon know, immediately. We have to look after business, because the business line is drawn very closely in the western country.

Senator Bristow. What per cent of your deposits are in these time certificates?

Mr. Moses. They run from $360,000 to $410,000.
Senator Bristow. Upon which you pay interest—your savings deposits?
Mr. Moses. No; the savings deposits run about $125,000.

Senator Bristow. And you are apprehensive as to whether you could get the credit you can get now, when you need it, in crop-moving times?
Mr. Moses. Yes, sir.

Senator Bristow. With the facilities from your present correspondent?
Mr. Moses. Yes.

Senator Bristow. Would it be a great hardship upon you to go from the national banking system into the State banking system?
Mr. Moses. It would not if they would make the bonds at par. We could very readily go into it, if they would not let us lose anything.

Senator Bristow. In your judgment, would it be to the best interests of your bank to remain as a national bank or go into the State banking system under the State law?
Mr. Moses. I would prefer staying in the national-bank business, if they would give me time to see the operation of the business. I think a great many others—before I came here quite a number of bankers said if they would just let us stay in until we can see the operation of the law—apparently it will be so amended from time to time that it would be of benefit for us to come in—than what it is at the present time—and we would prefer that. If not, let us get out with our bonds at par. We have, understand, over 1,050 State banks in Kansas, and out of the 1,050 only 250 national banks. Out of 14 banks in my county there are only 3 national banks. So you can see how the State banks and national banks run. The national banks, while we think we have a little prestige over the State banks, yet the State banks are accumulating all the time, and I do not know but what it is good, because every little hamlet where there is a blacksmith shop or an elevator there is a bank coming in.

Senator Bristow. You think that is a good thing for a community?
Mr. Moses. It is; yes.

Senator Bristow. That brings the money into activity more than if it was not there?
Mr. Moses. Yes; it is really needed. The farmers in that country at certain seasons have need for that money at the crop-moving time, and especially when crops are not good. This year they need more money.

Senator Bristow. What change do you need in the banking laws of the country or in the currency?
Mr. Moses. I do not think there is anything needed in the banking laws of the country, except that the larger banks of this country go and get currency when they need it. Country banks do not produce panics. They have plenty of money in the East. We had $140,000 in one place. If we could have gotten hold of one-half if it——

Senator Nelson (interposing). Where was that money?
Mr. Moses. In the reserve banks.

Senator Nelson. Where?
Mr. Moses. In Kansas City and New York.

Senator Nelson. You could not get it?
Mr. Moses. We got all we needed in the main.
You realize—this gentleman from Albany stated he had $9,000,000 of bank deposits, and the banks borrowed only $500,000 of it—you can realize from that how that money piles up, and they have got to do something.

Senator Bristow. What do you think about loans on real estate?

Mr. Moses. That is one advantage that the State bank has over us now in the State of Kansas.

Senator Bristow. You use your bank money in your commercial business?

Mr. Moses. Altogether. Now, in this bill—I like a great many features of this bill. I think the capital stock, however, should be reduced, and I think the reserve that has been mentioned here should be put to 3 per cent, allowing the other 2 per cent to go to the home bank or any other country banks. I think the savings section should be stricken out entirely.

Senator Reed. That expression has been used to-day a number of times. Suppose, instead of striking it out, we withdraw the savings-bank proposition, giving you and the small national banks the right to establish a savings department, giving it to them upon terms so that they could run a savings bank. You would not object to that?

Mr. Moses. No, sir.

Senator Nelson. Making it optional with them?

Senator Reed. Yes.

Mr. Moses. Upon the whole, I think if you make this so that the small banks would continue in the way they are I think they would be induced to come in. If you do not, I really think the small banks, even at a loss, would go out. It is always better to leave them in rather than to force them in. I never saw an institution of any kind that would prosper greatly where the people were forced into it.

Senator Reed. Still there has been force applied many times to the banking system by the enactment of the law requiring them to do certain things that they should do, and requiring them to stop certain things they ought not to do. It has always, when it has been a wise law, been a good thing for the banks. Then we had to apply force to insurance companies, requiring them to keep certain deposits and conform to certain regulations. It has made life insurance an investment where it was once a speculation. Then you had to die quick to beat it.

Mr. Moses. In this instance they have the option of remaining in or retiring. By allowing them to see the operation of the law I think they would all come in. I do not think it is necessary that the small banks should come in; the larger banks probably would join anyhow. When I say the small banks, I mean the banks of $50,000 capital or under; but I think a great many of them would come in. There is no question about it.

Senator Reed. Generally speaking, you think this is a good system, and would be desirable, with certain modifications?

Mr. Moses. Yes, sir. I am very much obliged to you, gentlemen, for giving me the opportunity to appear before you.

Senator Reed. If that is all, we will adjourn now until 10.30 o'clock to-morrow morning.

(Thereupon, at 6.10 o'clock p. m., the committee adjourned until 10.30 o'clock a.m. to-morrow, Wednesday, October 15, 1913.)
The committee assembled at 10.30 o'clock a.m.

Present: Senators Owen (chairman), Hitchcock, O'Gorman, Pomerene, Shafroth, Hollis, Nelson, Bristow, and Weeks.

The CHAIRMAN. The committee will come to order, and we will hear this morning from Mr. Ingle, of Baltimore.

STATEMENT OF WILLIAM INGLE, VICE PRESIDENT OF THE MERCHANTS & MECHANICS' NATIONAL BANK, OF BALTIMORE, MD.

Mr. Chairman. Give your name and banking affiliations and address to the reporter, so that we may have them in the record.

Mr. Ingle, William Ingle, vice president of the Merchants & Mechanics National Bank of Baltimore, Md.

Mr. Ingle. I have been with my present connection 32 years; three years before that in another local bank in Baltimore; an officer of the bank since 1900.

Mr. Ingle. Mr. Chairman and Senators, I think it possibly only fair to say that I am here in a spirit not at all of antagonism to a very large portion of the bill under investigation. In other words, I would like to feel that I could help rather than hinder it, as I recognize the work that has been given to it. I possibly am in the same frame of mind as was owned by a gentleman who has been before you, and one prominent in banking affairs of the country, who, in Boston last week was reported to have said that he thought the bill was about 80 per cent good. I rather imagine that the votes taken in Boston reflect antagonism, not so much to the bill as a whole, but possibly to that 20 or some other per cent which was deemed not as good as it might be, each individual man, possibly, in voting "aye" in support of the Chicago conference having in mind, it may be, some different points which he thought were more vital than others.

I am not a speaker, and I have taken the liberty of making some notes.

Senator Nelson. That is all the better; we do not want oratory, we want facts.

Senator Hitchcock. Did you attend the Boston convention?

Mr. Ingle. Yes, sir.

Senator Hitchcock. Did you see this meeting of the two thousand or more country bankers?

Mr. Ingle. Yes, sir; I was a country banker for the time being, in order to see what was going on.

Senator Hitchcock. Can you give the committee an idea as to whether that seemed to be a free expression of the real opinion of the country bankers?

Mr. Ingle. Senator, I think it was an untrammeled expression, and while it is not fair to impute—and I do not do it at all—it is nevertheless true, I believe, that the matters especially before them
for discussion and investigation were those in which they were largely directly interested.

Senator Hitchcock. And which they understood very thoroughly?

Mr. Ingle. Well, I refer especially to section 17, which refers to the elimination, the possible elimination, of their exchange charge. I think without that that their enthusiasm would have been less marked. I also think that possibly a couple of other things that they threw into their meeting, while important, were possibly so obvious to everyone that they were present at their particular meeting more as sweetening than as being considered vital from the standpoint of objections of the gentlemen assembled.

Senator Hitchcock. Their witnesses who have come before us seemed to lay great stress also upon the depreciation of Government bonds.

Mr. Ingle. I think possibly that was a part of the sweetening.

Senator Hitchcock. They seemed to feel that was a vital matter.

Mr. Ingle. It is a vital matter, sir; but that is something which appeals, and with equal force, to all of us, and it does not at all attach with any exclusiveness to the country banker.

Senator Hitchcock. They also seemed to be very certain that the clause relating to the savings department of country banks would be very obnoxious and would result in keeping most of the banks out of the system.

Mr. Ingle. Senator, I imagine that one's views on that must be tempered by his feeling.

Senator Nelson. Has your bank got any trust company as an appendage, in which your officers are interested?

Mr. Ingle. No, sir; we are simply an individual commercial bank, with no entangling alliances of any sort. We have no savings department or trust-company adjunct, nor do we have real estate loans, directly or indirectly.

Senator Nelson. Do you issue time certificates of deposit?

Mr. Ingle. We do not; we have never issued one.

Senator Nelson. Do you pay interest to individual depositors?

Mr. Ingle. That is a very leading question, and I will be very glad to answer it, if you will pardon me. I can not answer it in a moment, yes or no. We do not, may I say, encourage the payment of interest on ordinary mercantile accounts, and in connection with such accounts we pay very little interest, indeed.

Senator Nelson. Do you issue certificates of deposit?

Mr. Ingle. We issue demand certificates of deposit bearing interest, and I imagine, sir, that we have outstanding at the maximum possibly $100,000 out of an aggregate liability on loans of about $20,000,000.

Senator Nelson. Is not that a species of savings?

Mr. Ingle. No, sir; not in our connection, I should say, because if anyone would come in there and ask us for a demand certificate of deposit, at any rate of interest, we generally refer them to a mutual savings bank. It is only in the case of a man who comes in with, say, $10,000 or $20,000, for which he has no particular use for 60 or 90 days or four months, or something of that kind, and feels that he ought not to let it lie in a bank earning nothing; we will then give
him a demand deposit at, say, 2 or 2½ per cent. I have known us to pay as much as 3 per cent, but not habitually.

Senator Bristow. Will you tell us, please, if you have not, what the capital and deposits of your bank are?

Mr. Ingle. The capital of my bank is $2,000,000; the surplus is $2,000,000; the undivided profits about $200,000; and the deposits a week ago, when I left there to go to the Boston convention, were $20,500,000.

Senator Hitchcock. You are hardly a country bank, then?

Mr. Ingle. No, sir; we could hardly with fairness call ourselves a country bank.

Senator Bristow. How much of your deposits are bank deposits and how much individual deposits?

Mr. Ingle. Our bank deposits, as segregated on our ledger—that is, the out-of-town banking connections—aggregate just about $7,000,000.

Senator Bristow. Seven out of the twenty and a half million is money of other banks?

Mr. Ingle. Of course, you will understand that both amounts in figures as large as that, fluctuate within $1,000,000 more or less frequently.

Senator Hitchcock. You may proceed with your statement.

Mr. Ingle. I will say that if by any chance any Senator may have a question he may desire to ask as I go along, I will try to answer it.

Senator Nelson. You will not find us modest about asking questions.

Mr. Ingle. In discussing any measure as comprehensive in its scope and language as is the proposed currency law, the points to be especially considered might fairly be divided into two classes, namely, those referring to fundamental and economic principles, and, second, those not so related but in connection with which selfish considerations may or may not influence the judgment of those directly interested, although in connection with some of the matter of the act it is difficult to determine just where may be drawn the line between altruism and personal interest in discussing the provisions of such sections.

It may fairly be said in regard to two fundamental principles referred to in the bill, namely, Government guarantee of notes to be issued, and the option of having them redeemed in anything other than gold coin, that the opinion of bank people is essentially unanimous in agreeing that it is most unfortunate that it has been thought wise in the proposed legislation to depart from beaten and tried paths and to offend principles of world-wide acceptance. In both of these situations the bankers' selfish interest is only incidental and relatively trifling, and second to that of the public for whose use notes of any kind are to be issued. As other provisions of the law make absolutely certain the security of proposed note issues apart from Government guarantee, and as law can properly regulate their volume either in the direction of expansion or contraction by providing a sliding scale tax, it is almost a pity to commit the Treasury further to the conduct of active banking and more confuse the present misunderstanding of the word money. The banks do not object to the presence in the law of the strictest ordering and control of their own
note issues, but with substantial unanimity protest that the credit of the Government should be conserved strictly for its own use.

It is equally or possibly more unfortunate that in providing for the redemption of the notes the words "or lawful money" should have been inserted in the act apparently as an afterthought. It is idle to here refer to the old question of double standard of measurement, but as the bill again forces it to the forefront, it is proper to direct special attention to the danger attendant upon the assertion of the discarded principle and this the bankers do with the same unanimity and again for unselfish reasons.

The banks have in mind only the desire to have a law useful and workable when they suggest that a relatively few, rather than many reserve banks shall be first organized. In heartily welcoming many of the provisions of the act it is comparatively immaterial whether there be one single board. The essential things are first, that the branches of a single bank or the several Federal banks controlled from Washington shall be so located as to be in touch with business conditions in the territory which they shall severally serve, and, second, and what is of prime importance if the law is to be helpful to the public through the banks, it is essential that the reserve or branch banks shall be managed from day to day as banks and not as a Government bureau with all the delay and attendant red tape which usually delays business with the average Government office.

Senator Hitchcock. Do you think that as the system is devised it is going to embarrass banks and involve a loss of time in getting the relief they desire?

Mr. Ingle. It would depend altogether, sir, upon the way in which the law is interpreted and handled.

Senator Hitchcock. The reserve banks are to be run just like any other bank?

Mr. Ingle. Exactly, sir, and if they are not interfered with—I mean if they are not so restricted by technical regulations by the Federal reserve board as to permit the directors or the executive officers of the Federal reserve bank from acting with promptness, every objection will surely melt away.

Senator Hitchcock. As I recall it, there is nothing in the bill prevent the directors from running that bank for bankers just as efficiently as any bank is run; in fact, the very purpose of it would be to give immediate results.

Mr. Ingle. Exactly so; and I am only suggesting that because so many people, having in mind their daily dealings—and I say it with all respect—with the Treasury Department and other Government bureaus—

Senator Nelson (interposing). I do not wonder they get that idea.

Senator Hitchcock. I am a little surprised. I have heard the bankers themselves say that when dealing with the Treasury Department, that the Treasury Department was redeeming the national-bank notes more rapidly than the national banks met those notes.

Mr. Ingle. I can tell you just what the reason for that is, if you are at all interested in it.

Senator Hitchcock. Yes; I would like to know.

Mr. Ingle. I am speaking now not ex cathedra, but in a general way, as I have observed it. The Treasury Department, for instance, receives for redemption certain circulating notes issued by any
interior bank. That interior bank, instead of making its 5 per cent deposit as promptly as the Government will require, looks over its ledger and finds, for instance, that it has to its credit in a city, in a reserve city frequently, a certain balance. They will write a letter to such city to get them to transfer for its account to Washington so much money for the credit of this 5 per cent redemption fund. That particular bank, in turn, has a balance, let us say, in Pittsburgh. It wants to use that balance, which may be dead for the time being, and instead of writing to Washington it will write to Pittsburgh, and Pittsburgh, in turn, may write to Baltimore or New York or Philadelphia, so that by the time that 5 per cent redemption deposit reaches Washington the transaction may be a week or 10 days old.

Senator HITCHCOCK. Does that not really prove what I say?

Mr. INGLE. It does, in respect to those banks which adopt that practice.

Senator HITCHCOCK. With the delay on the part of the bank and not on the part of the Government; the Government is always, as it were, holding the sack.

Mr. INGLE. In that particular situation, because it is to the benefit of the bank to use the Government capital as long as possible in that situation.

Senator HITCHCOCK. That was our testimony that the Government has been more prompt in dealing with the banks than the banks with the Government.

Mr. INGLE. Senator, may I make a comparison not in criticism? For instance, in connection with the last distribution of funds made by the Treasury Department the Government was obliged to have proper regulations to safeguard itself, but in caring for all that machinery I imagine as much time as two or three weeks elapsed, in many cases, before the money found its way into the communities where it was wanted. I do not offer that statement in any way of criticism at all. In Baltimore it was handled with exemplary promptness, as far as that goes.

Senator HITCHCOCK. That was not a case of emergency, in the first place, and in the next place, no machinery was provided by law.

Mr. INGLE. I know; they had to make a precedent.

Senator HITCHCOCK. I know they called upon me to name someone in Omaha, where I live, and I suppose the same thing was done with other Senators, and they had to depend upon what arrangements they could make. I thought it was handled, considering the lack of machinery, very well by the Treasury Department.

Mr. INGLE. Very well, and I am not criticizing the officials of the Treasury Department in any sense.

Senator BRISTOW. That brings up a point which has been referred to very often here. Senator Hitchcock refers to his being called up to name somebody to distribute the money in Nebraska—

Senator HITCHCOCK (interposing). It was not to distribute the money; it was to pass upon commercial credit or paper offered by the bank.

Senator BRISTOW. A Democratic politician in the State decided how that should be. Is that to be the practice?

Mr. INGLE. If you will tell me what your State is—

Senator BRISTOW (interposing). Kansas is my State.
Mr. Ingle. Oh, I see. That general subject has absolutely no relation to this bill. That was an emergency; an extraordinary occasion for which extraordinary machinery was provided.

Senator Bristow. It has been stated by a good many bankers that this bill would be a political measure. If the distribution of the Government's funds to relieve the crop-moving period is to be managed by Democratic politicians who have no connection with the Government, it would give some stability to this criticism, would it not?

Mr. Ingle. I hardly follow you there, Senator. It depends altogether upon the view one chooses to take of this comprehensive measure. It would seem to me almost as fair to assume that this bill intended to provide in this Federal reserve board practically a substitute for the present management of the comptroller, subject to the control of the Secretary of the Treasury. We can assume anything. It is true that many of the provisions of this act give wide latitude; so does the present national banking act. Under the terms of the present act it would be competent for the two men—the comptroller and the Secretary of the Treasury—were they so minded, to run their offices as a political machine in connection with the banking of the country. It would give them the opportunity very easily to close a very large percentage of the banks of the country, because we all know that in the matter of the maintenance of reserves, in the matter of excess, or otherwise dangerous law, almost every bank in turn lays itself open to very severe criticism by the department. So I can not say that—unless we assume that the bill was prepared deliberately as a political measure—that it is any more open to abuse than the present law. I, for one, do not believe for a moment that the bill reflects any desire to control the banks or their credits for political purposes.

Senator Bristow. Of course, you do not believe that politics ought to have anything whatever to do with the administration of a power of this kind, do you?

Mr. Ingle. Politics as politics?
Senator Bristow. As partisan politics?
Mr. Ingle. No, sir; I do not.

Senator Bristow. I think we all agree on that. There is some apprehension on the part of a good many bankers, as you know, that it will be used as a political agency in times of intense political partisan contention.

Mr. Ingle. That may be a very natural fear, Senator.

Senator Bristow. And I was just suggesting, since the distribution of this money that was recently distributed was supervised, to an extent, by politicians, who had no connection with the Government, in some of the States, that that was a ground for some such apprehension, or might be.

Mr. Ingle. Senator, if I understand that part of the program, these gentlemen in the several States were named not at all to apportion this money; as a matter of fact, as far as I am aware, they were not named until after the apportionment had been made. They were simply named as the personal representatives of the Treasury Department to see that the collateral was properly lodged in the hands of some one other than the interested banks. In other words, they were the custodians, to all intents and purposes, of the collateral.
They were also assumed to pass upon credits. I imagine that that portion of their labor was very light. In that case it is hardly possible to assume that any single individual, frequently not a bank man, would know anything in particular about the individual notes held among the assets of particular banks receiving a portion of the crop fund.

Senator Bristow. Do you not believe, Mr. Ingle, that whatever provision we make here should be made in such a way that any banker, regardless of his politics, or his religion, or any other incidental relationship, could, by right, obtain from the Government the help that he needs if he has the proper security or collateral to get it and not have to depend upon the will of some man?

Mr. Ingle. Again, Senator, an answer to that question must—I mean the answer you would probably like to make—would assume that we would be in danger of having these Federal reserve banks managed as a semipolitical organization and be subject to suggestion or control, apart from the need the member banks might have for money.

Senator Bristow. Would that not seem to be guarding against such a possibility? Do you not think that is advisable?

Mr. Ingle. As an abstract proposition, sir, I believe in the fullest liberty, but in real life, we will meet all throughout this country any number of banks, the limit of whose desires in obtaining money is only the stock in hand held by anyone from whom they can get it. If under no restraint whatever, many such banks would, if no brakes were put on them, borrow the entire stock of the Federal reserve bank, so that we must permit some latitude of veto power.

Senator Bristow. Should not that be fixed in the law as nearly as it can be?

Mr. Ingle. It is a pretty hard thing, sir, to write a law which will meet every situation. The tighter you make the law, the more unworkable it is. I would very much rather live under a law which was broad in its provisions and then trust to those administering it, trust to their sense of fairness.

Senator Bristow. According to that theory, then, we ought not to have laws; just elect men to govern the country.

Mr. Ingle. Oh, no. Law is often simply to give general directions, but not to say, for instance, what we shall have for lunch every day. Senator Bristow. I had not thought of having a law of that kind in connection with this bill. [Laughter.]

Mr. Ingle. I mean we do not want to be too exact in any law we draw. We want some play. Until we all have wings——

Senator Nelson (interposing). You want elasticity in the administration of law as well as of currency.

Senator Bristow. I will not disturb you any further now.

Mr. Ingle. I am very glad to answer questions. I do not know that I have responded very clearly to your questions.

Senator Weeks. You referred to the supervision which the Secretary of the Treasury would have over the reserve board as provided for in this bill.

Mr. Ingle. No, sir; I did not intend to say so, sir. I referred to the charge that in the present national banking act the Comptroller of the Currency, with the consent of the Secretary of the Treasury—
the two men have practically absolute power over banks, unless they are so very good that their officers are ready for translation. Under the new law the Secretary of the Treasury, as such, will, I assume, have no special voice.

Senator Nelson. Only as a member of the board.

Mr. Ingle. As a member of the board, if the law as it is drawn still stands.

Selfish considerations must be present, considering section 19 of the bill, the section providing for the refunding of outstanding 2 per cent bonds, but surely the motive prompting the suggestion that fairer provision be made for the protection of national banks holding these bonds in faith in their Government can not be thought to be altogether unworthy. Under the terms of the act, State chartered institutions are expected to avail themselves of its provisions. If all other conditions were even, the State banks would, under the law, be better off in owning practically no United States bonds than the national banks, which have made it possible for the Government to fund its debts and to borrow money on terms the best in the world.

It might be well to mention here the existence of a condition the presence of which will have great weight with all national banks in determining whether or not they will continue in business subject to Federal control. Practically all such banks are in sharp competition with State chartered institutions organized under liberal and many times unsafe charters and operating under widely differing local laws. Under existing law national banks tied down to the wholesome provisions of the national-bank act have seen their business so crippled by banking not controlled by its provisions that only the ownership of United States bonds and the presence of faulty reserve laws which give them some profit at the risk of safety, has prevented them from surrendering their national charters. Only about one-third of the banks of the country are under Federal control. It is difficult to conceive that any national law can be of real value unless it entirely controls the subject with which it deals when such subject is of common interest to the entire country. Either some way should be found to nationalize banking or, if that be impossible, a new law should be so inviting as to compel common assent to its provisions, regardless of State lines. In other words, it would be only fair to see that national banks should have an even chance in competition with State institutions and especially so as the former must enter the competition with the handicap attaching to the ownership of United States 2 per cent bonds.

Much has been said against Federal control and compulsory subscription to stock in the reserve banks as also the forced deposit of part of the reserve in these banks. If it were not for the presence of the United States twos, which could not be sold on an investment basis without a loss of $250,000,000, there would be little force in this point made against the law, as a bank could either accept or reject the plan. In other words, the idea itself is not inherently unsound and with conditions such as would permit the exercise of untrammeled judgment no one could reasonably oppose it. National banks have always been under control of a law which inflexibly interpreted and followed could be made safe, just as severe in its effects as could be the action of the Federal reserve board under the proposed act. Instead of having, as in the past, two men to determine just
when a bank should be liquidated, the new law gives the power to seven. In connection with the controlling board it is unfortunate, as a matter of expediency and fairness, that the law insures the presence of only one practical bank man in its number. As under the new law more money will be released from reserves now held for loaning at current rates, that will be required to be kept with reserve banks, no harm or loss should follow the gradual transfer of the funds. In following much which has been said on this point, it might appear that the funds so transferred are to be destroyed or otherwise rendered useless, whereas just the contrary is the case.

Senator Hitchcock. Do you understand that those reserves which are to be kept in the reserve banks are to be subject to the same use that banks now make of their reserves in reserve centers?

Mr. Ingle. I will come to that a little later. It would seem to be wise, however, to avoid the rigidity in these reserve balances suggested by the law as drawn. It is assumed that these reserve balances are to be the active checking accounts of member banks. Against such balances will be charged not only checks drawn directly against them, but checks drawn on member banks and cleared through Federal reserve points. In consequence no balance can be a constant quantity. Would it not be possible to give some play here? For instance, a member bank might be permitted to encroach, say, 25 per cent upon its determined balance without penalty, provided its cash reserve at home was at the moment correspondingly increased. If depleted beyond the amount of such percentage, certain penalty could be provided to prevent the depletion for sake of profit or for any reason other than to meet some immediate exigency.

Senator Hitchcock. I infer, then, from your criticism or suggestion of a change, that you think that the provision in the bill which practically impounds the reserve where it can not be used—

Mr. Ingle (interposing). I think it is faulty, sir.

Senator Hitchcock (continuing). Is a defect in the bill.

Mr. Ingle. I think the money, or the credit, so carried and to be used only as a matter of bookkeeping from morning to morning in figuring the reserve might as well be impounded in Greenland as in the Federal reserve bank.

Senator Hitchcock. It can not be used in the bank which has the reserve at all?

Mr. Ingle. No, sir.

Senator Hitchcock. Two-thirds of it can be used as loanable funds in the reserve bank, and that is the only use that can be made of it?

Mr. Ingle. That is right.

Senator Hitchcock. But under the present system, if the bank has a part of its reserve in its vault and a part of its reserve in Chicago and a part in New York, it can so change these reserves by drafts and remittances that it practically makes active use of its reserves, does it not?

Mr. Ingle. It can withdraw the last dollar of its balances in any reserve city.

Senator Hitchcock. So that at present all of its reserves are capable of being mobilized and used, whereas under this proposed system 5 per cent of its—

Mr. Ingle (interposing). Deposits.
Senator Hitchcock (continuing). Of its deposits are impounded in the reserve bank; another 5 per cent of its deposits are impounded in its own bank; and both these amounts are just as much out of its reach as if they were down in the bottom of a well.

Mr. Ingle. Excepting for this reason, Senator: I think to make this law of any value at all it should provide that the member banks should be required to keep an average balance of a certain per cent of its deposits; otherwise the law would not be effective, as permitting the reserve banks to be of any service to their members. The thing I urge is that the constant presence of the reserves should not be required. If, for instance, a bank having a forced deposit—if I may use the word—of $800,000 with the Federal reserve bank finds it necessary to very heavily draw exchange on a particular day—it may want to draw $100,000, or $200,000 more than its current dispatches to that bank on that particular day. In addition to that, the Federal reserve bank may, on the morning on which those drafts are presented for payment, find itself in possession of another $100,000 worth of checks on its member bank, drawn by customers. So that its reserve then, fixed by law, would be depleted.

Now, what would be the consequence? Would that Federal reserve bank decline to honor those drafts or any of them? Or should they not be permitted to allow the bank having occasion to draw excessively to replenish that fund in exchange which it could arrange for, either among its neighbors in the ordinary course of business, possibly, or, if no other remedy presented itself, by the shipment of Federal reserve notes or other currency?

Senator Hitchcock. But there is no provision in the bill which requires a Federal reserve bank to repudiate the drafts of a member bank as long as it has any balance at all?

Mr. Ingle. And yet if we are required to keep the reserves as stated in the bill, it would have that effect.

Senator Hitchcock. The provision is that the member bank must make it good within a limited time.

Senator Nelson. Yes; within a month.

Mr. Ingle. But the language can be modified. And in modifying it, unless it is desired to destroy the usefulness of these Federal reserve banks, there should be some penalty attached to the withdrawing of these deposits below a certain percentage.

Senator Nelson. There is no restraint on the reserve bank. They can loan out the whole 5 per cent. The restraint is on the member bank.

Mr. Ingle. Yes; the restraint is on the member bank.

Senator Nelson. But, so far as the reserve bank is concerned, the fund is not tied up?

Mr. Ingle. Not at all.

Senator Nelson. And you must not overlook the fact that that 5 per cent fund is, after all, the biggest part of the capital of the reserve bank.

Mr. Ingle. And for that reason the law should be compulsory; but it should so protect the Federal reserve banks——

Senator Nelson (interposing). Compulsory in what direction?

Mr. Ingle. In compelling the banks to recognize a certain percentage of their deposits as a normal deposit to be maintained with the Federal reserve bank; and the moment they impinge below a cer-
tain permitted percentage, I think they should be penalized, so as to be compelled, practically, to replenish this depleted reserve.

Senator Nelson. But if you adopt that other provision of the bill, the clearing-house provision as to checks, as it is in the bill, how can a member bank always tell what its balance is?

Mr. Ingle. If it follows the bill in good faith it can.

Senator Nelson. It can tell what the regional bank may have cleared of its checks—-

Mr. Ingle (interposing). It can tell within a margin of some 20 per cent or 25 per cent of its deposits—-

Senator Nelson (continuing). But how can a member bank tell how many checks have been drawn on it?

Mr. Ingle. It can not tell at all.

Senator Nelson. And they will not know about those checks until they are turned in to the regional bank, and the regional bank charges them to the member bank?

Mr. Ingle. Exactly; that is correct.

Senator Nelson. So that it is impossible for these local banks, or member banks, to determine under that system proposed in the bill as to the clearances until they are advised by the regional banks?

Mr. Ingle. They can tell from their own books with an exactness which will permit them to replenish their reserves. They will know exactly the condition of their balance this morning—-

Senator Nelson (interposing). But the banks do not tell them until those checks turn up what has been drawn against them?

Mr. Ingle. Exactly; but they know what they have drawn on that Federal reserve bank, and they know by experience—-

Senator Bristow (interposing). But you do not understand what Senator Nelson is referring to.

Mr. Ingle. Yes, Senator Bristow; I do.

The Chairman. I think Senator Nelson did not understand him. What he was trying to explain is that by experience the member banks can tell approximately how much the checks that will come in against them will amount to.

Senator Nelson. Oh, they can can guess at it, of course. But let us suppose, for instance, that Mr. Ingle is a member bank.

The Chairman. Yes.

Senator Nelson. And we will say that all the members of this committee are depositors in his bank.

The Chairman. Yes.

Senator Nelson. And we, each of us, draw checks on our accounts there, and those checks are sent to the regional bank. Now, he does not know that we have drawn those checks or that they are out until the regional bank calls his attention to it under this proposed clearing-house system.

Senator Pomerene. Well, does that differ materially from the present practice?

Senator Nelson. Oh, yes; these country banks do not allow them to do that now.

Senator Pomerene. But these checks may be drawn and sent out to different customers of the bank and cashed.

Senator Nelson. But the bank they are drawn on does not allow them to send them out to other banks for collection.
Mr. Ingle. Only in exceptional cases.

Senator Nelson. But the rule is the other way.

The Chairman. The bank, however, does not know what checks will come in drawn on it any day until the checks are presented. They do not know what checks are going to be drawn against them on a certain day.

Senator Hitchcock. There is this difference in the two cases: A country merchant will not present a check on a bank in his own town for $10,000 if he has only $2,000 on deposit. But he may send the check to a manufacturer in a city, and the manufacturer may deposit the check in the city bank, and the city bank may deposit it in the reserve bank, and the reserve bank may charge the amount of that check, $10,000, to the country bank, although the man who drew it had only $2,000 on deposit there.

Mr. Ingle. That will not make any difference if there are responsible indorsers on it.

Senator Hitchcock. It would make this difference, that that $10,000 check would be presented for payment and charged by the reserve bank against the country bank, although the man had only $2,000 deposited in the country bank.

Mr. Ingle. That is exactly what should be done. That would break up the terrible practice of "kiting."

Senator Hitchcock. Then we had a man before the committee yesterday who said that that would encourage "kiting"; that it would encourage the country merchant to send his check to the city, where he owed somebody some money; and then he would depend on subsequent collections to make it good by the time the check reached his home bank.

Mr. Ingle. Senator Hitchcock, neither the country people nor the city people need any encouragement as to that. That is a lesson they learned long since.

Senator Nelson. Now, here is the way it would work of necessity, about that 5 per cent reserve in the regional bank. The regional bank would cash a lot of checks drawn on your bank. And they would report to you, saying: "We have cashed so many checks drawn against you. That reduces your 5 per cent balance so much; you must replenish it." Now, what else can you do? What other system could be applied?

Mr. Ingle. I would not adopt any other system. But I only suggested——

Senator Nelson (interrupting). So that the regional bank which has cleared these checks must notify the member bank that it has a deficiency, and the member bank must have an opportunity to put in enough funds to make it good.

Mr. Ingle. Senator Nelson, if you will let me explain the routine in such cases I think I can make it clear. That Federal reserve bank, upon cashing checks drawn on the member banks will follow the usual banking practice.

Senator Nelson. Yes.

Mr. Ingle. They will simply take those checks from day to day, inclose them in a letter——

Senator Brusrow (interposing). But that is not the law.

Mr. Ingle (continuing). And charge the bank with that. The next morning the member bank has notice of the amount of any
deficiency for which it will have to provide in its current dispatches to this Federal reserve bank to bring its reserves back to the 5 per cent required.

And I only suggest that the law be so amended as not to make it appear that this 5 per cent was an absolute, fixed quantity—that you are obliged to keep that 5 per cent there.

The Chairman. It is no more fixed than the present reserve is.

Senator Nelson. It never can, in practice, be a fixed quantity.

The Chairman. No reserve is a fixed quantity.

Mr. Ingle. Well, if that is the thought, all right. I only brought that point out because it has been suggested that the impounding of this 5 per cent would make it rigid.

The Chairman. If the impounding of it in that way would make it rigid, it ought to be changed.

Senator Nelson. The language is rigid:

That every Federal reserve bank shall at all times have on hand in its own vaults, in gold or lawful money, a sum equal to not less than 33½ per cent of its outstanding demand liabilities.

The Chairman. Yes.

Senator Nelson. And up above the bill says:

And from and after the passage of this act such fund of 5 per cent shall in no case be counted by any national banking association as a part of its lawful reserve.

The Chairman. I think if you will look at the national banking act, you will find that the requirement is the same. It is a reserve, but it is a reserve which can only be used for certain purposes.

Senator Hitchcock. Under the law as it exists now, a bank may have part of its reserve in its own vaults, part of its reserve in a reserve city bank, and part in a central reserve city.

The Chairman. Yes; and it may use them in all three places.

Senator Hitchcock. But this bill requires the bank to have 5 per cent of its deposits in one place, and 5 per cent of its deposits in another place; and even though a deficiency in one place is made up by an excess of reserve in another place, the bank will still have a default in the first place.

The Chairman. You may have a deficiency in all three places and still make up the default.

Senator Hitchcock. But under the present law the deficiency in one place may be made up in another place.

The Chairman. I thought you meant that under this bill the reserves could not be invaded at all.

Senator Hitchcock. I meant that the reserve which is kept in the reserve bank could not be invaded at all.

The Chairman. I do not think that is the meaning of the provision in the bill.

Senator Hitchcock. What page is that?

Senator Hitchcock. What I have in mind is this: The member bank is required to keep a reserve of 5 per cent in the Federal reserve bank. That is an absolute requirement.

The Chairman. But that reserve is for the purpose of use by the reserve bank—-
Senator Hitchcock (interposing). Then the bill says, "The Federal reserve board may notify"—no; that is not the provision I have in mind.

Senator Shafroth. I think that section 21 is what you have in mind. Senator Hitchcock, repealing the provision in the national banking act as to the 5 per cent redemption fund being counted as part of the reserve.

The CHAIRMAN. I think it is section 20 he has in mind.

Senator Nelson. Well, you can see the necessity for that. Under the present national-banking system the 5 per cent deposited in the Treasury for redemption of the circulating notes of the national bank is always deducted from the amount the bank is required to keep in reserve, whether it is a country bank or a bank in a reserve city or a bank in a central reserve city.

The CHAIRMAN. That is right.

Senator Nelson. It is necessary to do away with that in order to make it conform to other parts of this bill. That is, the law now allows the 5 per cent for the redemption of national bank notes to be deducted from the reserves required; and the meaning of this bill is that that 5 per cent which they have heretofore been allowed to deduct shall not be deducted from the reserves required under this bill.

The CHAIRMAN. Yes; it shall no longer count as reserves under this law. But that 5 per cent fund is constantly invaded by the banks. Sometimes they go below it and sometimes they go over it. And these reserves are capable of being invaded for legitimate purposes, and sometimes for illegitimate purposes; but if they go below the line they are expected to promptly make it up.

Senator Nelson. And this bill adopts the same principle in regard to the 33 1/3 per cent reserves of the regional banks; the 5 per cent that they are required to deposit for the redemption of the notes in the Treasury is deducted from the 33 1/3 per cent reserves required.

The CHAIRMAN. Yes.

Senator Nelson. We are adopting exactly the same principle for the regional bank as now exists.

Senator Bristow. Now, you referred with some earnestness to the system of "kiting" which has been discussed here to some extent. Do you disapprove of the checking system which has become so prevalent in the country, in the payment of bills by check, instead of by bank draft or——

Mr. Ingle (interposing). Not at all, when such checks are drawn to pay a bona fide bill. But, in practice, in quite a degree, a man in the country over here [indicating] has a friend in another country bank over here [indicating] some 10 or 20 miles, or 120 miles away. This man in the country at one point will ask one of his friends, or he himself will draw a draft for $1,000 on his friend over here 100 miles away; and the man drawing the draft will send that draft to, let us say, Chicago——

Senator Nelson (interposing). As far off as he can.

Mr. Ingle. As far off as he can. By the time this man over here gets it—and many times these drafts are not drawn on funds at all. They are fictitious from first to last. But this man at the point at which the draft is drawn will promptly take his collection charge of $2.50 off of that $1,000 at the expense of the bank in Chicago, and in
the same breath present his Chicago bank a draft drawn on his friend at the initial point, and he, in turn, takes his $2.50 off the same $1,000. They keep that up in a more or less generous way. So that, once you hold out a check so drawn you break the combination, and sometimes break a bank, as happened two years ago in Kentucky, at the hands of some one very well known to me.

Senator Bristow. Well, I bring the point up because it was emphasized yesterday, and a serious objection was made to the system of the payment of bills by check. To illustrate: I live at Salina, Kans., and I might have a bill due in Chicago, and I pay that bill by writing a check on my local bank for $1,000 and mailing it to the party at Chicago to whom I was indebted ——

Mr. Ingle (interposing). Senator Bristow, I catch your point, now. May I respond? I did not catch it before.

Senator Bristow. Yes.

Mr. Ingle. I think that is not a businesslike practice. You go to Chicago and you buy $100 worth of goods from some one. When you pay your bill you send him a check on Hickman, Ky., for $100, it is true. But that man in collecting that check only gets, possibly, $99.50. In other words, you are compounding with your creditor at $99\frac{1}{2}$ cents on the dollar. I think you ought to go to your bank, as was the habit a generation ago, and purchase a draft on Chicago, or some reserve center, and pay the cost of it. If you do not keep an account that will justify that bank in giving you a draft at par you should pay the cost and send that draft at par to the man to whom you owe the $100.

Senator Bristow. But suppose my creditor at Chicago and my banker at Salina and his banker at Chicago are perfectly satisfied with this method of handling the business, what right has the Government to interfere with it?

Mr. Ingle. They make a virtue of necessity. I do not think they are at all satisfied; somebody pays the freight. The bank which actually makes the collection pays for it. It either pays the country bank an actual exchange charge in money or it renders a return service for that interior bank in the shape of clearing its checks on other territory, which, boiled down into dollars and cents, generally means more than would result from a direct exchange charge.

Senator Bristow. Well, the country banks encourage that kind of remittance and desire it. They very much prefer that to the sale of drafts.

Mr. Ingle. Of course they do, because they know that they can not very well compel their own local customers to pay them 10 or 15 or 25 cents when they want to settle a draft out of town, as they can put some other disinterested bank under duress, practically, by compelling that bank ——

Senator Bristow (interposing). Under duress in what way?

Mr. Ingle. Well, I do not know whether "duress" was the word I should have used there.

Mr. Ingle. Well, they are obliged to do it.

Senator Bristow. Why are they obliged to do it?

Mr. Ingle. Because they have got to do business.

Senator Bristow. It is competition which makes them do it. If they do not do it, somebody else will.
Mr. Ingle. Yes; but it is competition based upon the use of a false principle and one which suggests the payment of a 100-cent debt in a 99\% cent dollar.

The Chairman. Mr. Ingle, will you allow me to explain at this point? I want to ask the committee if it will be agreeable to hear Senator Thomas at 3 o'clock this afternoon? He desires to be heard at 3 o'clock.

Senator Nelson. What is our program for the day?

Senator Hitchcock. Let us make it 3.30.

The Chairman. Half past 3 will be agreeable to me. But I should like to give him notice of the time, so that he can accommodate himself to it.

Senator Shaffroth. That is satisfactory to me.

Senator Bristow. It is satisfactory to me, if it is to the Nebraska delegation.

The Chairman. We will make it half-past 3 then.

Senator Bristow. Well, continuing on the subject we were discussing: I think it is quite an important matter; because it has developed here in these hearings recently that the city banks would like to change the custom of making these remittances, while the country banks are very much opposed to any change in the method of remittance. The country banks—some of the gentlemen appeared before us yesterday—insisted that that method of remittances by check is a good thing for the country, and greatly facilitates business, and is a very great convenience; and that any bank in the city that will not conform—or any city that will not conform—to that practice which has grown up, would find itself handicapped, because it naturally would drive trade away. And one gentleman talking to me yesterday cited the instance of New York, the New York banks—I think probably through the clearing-house association; it made certain charges upon the country banks that Philadelphia did not, and that the tendency was to help the business of Philadelphia.

Mr. Ingle. But only in a very moderate degree, Senator Bristow. It would have been in greater degree, were it not for the fact that there again was interposed the fictitious condition made by the present banking act, under which we are compelled, whether we want to or not, to keep a balance in New York. In consequence, the New York banks, of all the banks in the country (and in a relatively lesser degree the Chicago banks) can make rules with the knowledge that the banks of the country as a whole are obliged to follow them. Such conditions do not attach to banks in the reserve cities of the second class.

I think the issuance of local checks is a very convenient method of settling accounts. There could be no objection whatever to it, if it were so arranged, as it is proposed under this law, that such checks are to be redeemed at their face value, not at a discount for the benefit of the paying bank.

I go to a country bank, or any bank, with a check for $10,000, and I can get $10,000 if I am known and that check is good. If I, rather than go there myself, elect to send that check by mail, surely that paying bank is as much obligated to pay me 100 cents on the dollar on that check as if I were there in person.

Senator Nelson. But how do they get the money to you?
Mr. Ingle. They can send me—they can elect, as a matter of courtesy, if you choose, to send me a piece of exchange which I can collect, or they can put a lot of currency in a bag and express it to me at my risk.

Now, if they want to charge me 5 cents or 10 cents or 15 cents for the time they are required to tie up that shipment of money in a bag or package rather than pass it to me over the counter, I assume that that would be a legitimate charge.

Senator Hitchcock. Now, as a banker, when you receive deposits you engaged to pay them over your own counter on demand, do you not?

Mr. Ingle. Yes; I engage to pay them over the counter on demand.

Senator Hitchcock. You do not engage to pay them by express or over the counter of another bank 500 miles away on demand, do you? You only engage to pay them at your own bank, do you not?

Mr. Ingle. I would suggest that this bank, when it registers the money by mail—I am not concerned whether it goes over the counter or through the side door. The bank is as obligated to pay that in one way as in the other.

Senator Hitchcock. I am talking about the proposition involved in this bill. If a man in your town draws a check on you for $1,000 and one of the citizens of the town present it, you pay it over your counter. Suppose that man instead of giving the check to a citizen of your town sends it to somebody in New York and that person deposits it in a bank, and that bank presents it at the reserve bank in New York and that is charged to your account in New York. Is not that practically compelling you to pay that $1,000 in New York, and will not that compel you to stand ready at all times to pay your depositors either at your own bank or at the reserve bank at the option of the depositor? Does not that compel you to be ready to pay it in two places at the same time?

Mr. Ingle. Hardly so, because that is a convenient method of paying that check at the counter of that bank on which it is drawn. If the reserve of that bank with the reserve bank is depleted, the inferior bank is obliged to pay that money over its counter to that reserve bank, in order to replenish its balance.

Senator Hitchcock. I say it is compelling you to be ready at all times to pay your depositors in two places, namely, at your own bank or at the reserve bank.

Mr. Ingle. As long as that is what is done now, I can not see that it makes any difference to express it so in law.

Senator Hitchcock. It is not done now.

Mr. Ingle. Yes; if I send a check for mail for $1,000 to a bank in an interior town, I do not get the money for it in return. I get a check on the very same bank in New York.

Senator Hitchcock. Let us take the same case as an instance. A citizen in your town having a credit in your bank sends $1,000 to a merchant in New York, and the merchant in New York deposits it in a bank in New York in which you have an account. Does that bank charge it up to your account?

Mr. Ingle. As a practical matter; yes, sir.

Senator Hitchcock. As a practical matter it sends it out to you, and you pay it when it gets to you, or it sends it to another bank
in your town and is paid at your counter. All the testimony here has indicated that no reserve bank has any right to charge to the account of its country correspondent a check drawn against that country correspondent.

Mr. INGLE. Senator, that is a question of practice.

Senator HITCHCOCK. Can you tell me of any bank in New York which reserves the right to charge its country correspondent with checks which it may receive—individual checks?

Mr. INGLE. Yes; we have four reserve agents in New York which charge promptly against our balances in their hands not only checks on us, but any business they choose to send us in Baltimore.

Senator HITCHCOCK. That is an exceptional arrangement, is it not?

Mr. INGLE. I believe that is because we are a very good bank.

[Laughter.]

Senator HITCHCOCK. That places you at the mercy of all of your depositors.

Mr. INGLE. We try to be prepared for that, sir.

Senator HITCHCOCK. Then, a man might overdraw his account and it would be charged to you in New York.

Mr. INGLE. That would make no difference, in practice.

Senator HITCHCOCK. I think that might open the door to fraud.

Mr. INGLE. I cannot see that it would.

Senator HITCHCOCK. If a man might present a check in New York against you when he had no account at all and get money on that—

Mr. INGLE (interposing). That can be done anyhow; it is done every day.

Senator HITCHCOCK. But it would not be charged to you?

Mr. INGLE. I would just as soon have it charged to my account as to send it on for collection and the New York bank has parted with that money.

Senator HITCHCOCK. I want to know, seriously, whether a country bank doing business with a reserve center is compelled to have checks which individual depositors draw against it charged to the account of that country bank in New York or Chicago or anywhere else. You say that is the practice now?

Mr. INGLE. No, sir; I do not say it is the practice. I say, unfortunately, it is the growing habit of the interior banks to insist upon what we call double accounts in the transaction of their business.

Senator HITCHCOCK. What is the practice now? Tell me frankly what is the practice now.

Mr. INGLE. I can only state for ourselves. I assume that we now have about 800 out-of-town bank accounts on our ledger, and we charge against the credit balances all of our business in fully 600 of those accounts. On the other 200 accounts, they are double accounts, you understand, where they will not let us do that.

Senator HITCHCOCK. We are talking about different things. Are you talking about checks drawn by another bank upon you?

Mr. INGLE. I am talking about in Baltimore the checks drawn on Salisbury, Md., or any town, I do not care where, where the practice prevails with us.

Senator HITCHCOCK. Let me give the same illustration I have. I am asking you whether an individual citizen of Baltimore—Baltimore is your place, is it not?

Mr. INGLE. Yes.
Senator Hitchcock. Whether an individual citizen of Baltimore draws a check on your bank which goes to New York and gets in the hands of your New York correspondent, does that New York correspondent charge that check to your account?

Mr. Ingle. If in connection with it or any one of the four New York correspondents we have, it does it that very minute.

Senator Hitchcock. What do you mean by any one of your New York correspondents?

Mr. Ingle. I have different arrangements, sir, with different banks.

Senator Hitchcock. You mean to say you have four New York correspondents—

Mr. Ingle (interposing). And they will charge that check on Baltimore, or any other check they choose to send up drawn on Baltimore, direct to our balance in their hands.

Senator Hitchcock. If John Smith, in Baltimore, draws a check on your bank, your correspondent charges that up to your account?

Mr. Ingle. Up to my account.

Senator Hitchcock. Without submitting it to you.

Mr. Ingle. I get it the next morning, and I am given a debit for it.

Senator Hitchcock. Let me ask, when is it charged to you?

Mr. Ingle. The very moment he gets it; the very moment he gets it he debits it.

Senator Hitchcock. I say is that the practice of country bank correspondence?

Mr. Ingle. I say I can only tell you from our experience. I say it is a growing and vicious practice, in my judgment.

Senator Hitchcock. Which is the vicious practice?

Mr. Ingle. This thing of permitting the maintenance of those double accounts.

Senator Hitchcock. What do you mean by maintaining double accounts?

Mr. Ingle. I am speaking of that situation which you pictured, where we have a balance in New York, and where New York will send us business from day to day for collection and remittance either upon receipt, or after three days, or next week, if you choose. Now, what does that practice result in? We are assumed to keep 25 per cent reserve. Can't you see, if any bank has a balance to its credit in New York of $500,000 it will also have $500,000 cash in its vaults. The two sums together may represent the 25 per cent on that bank's deposits. Now, if that New York bank sends its out-of-town bank business from day to day, for remittance twice a week, let us assume the paying bank may accumulate from the New York bank $250,000 worth of business to be remitted for twice a week. Now, in practice, what do many banks do? They continue to count as reserve the full debit balance of $500,000. And, as we all know, a reserve is only maintained at all with a view of protecting depositors of a bank in case of failure or liquidation—if we never failed we would not want any reserve. You see that means our reserve the moment the bank fails; it is not our total debit balance in New York; it is that total debit balance less the balance we may have on our books from New York for remittance at any particular time in the future. So that instead of having $500,000 reserve, we, as a matter of fact, only have $250,000 reserve.
BANKING AND CURRENCY.

Senator Hitchcock. You mean New York has sent you $250,000——

Mr. Ingle (interposing). For collection and remittance once a week, if you choose—an accumulating balance. The practice is, where it is done for accumulating balances it sends a very small balance the first three or four days and a very large one on the fifth or sixth day to save the New York bank.

Senator Hitchcock. To save the New York bank?

Mr. Ingle. The New York bank gets its return quickly. For instance, one bank in Baltimore will arrange to remit for a certain New York bank on Wednesdays and Saturdays each week. That New York bank will arrange with another Baltimore bank to remit it twice weekly, on Tuesdays and Fridays, and so on, possibly with a third bank on Wednesdays—on the other two days. Now, in sending their deposits they so arrange it that their money will be away from them the shortest possible time, which is a very excellent idea from their point of view.

Senator Hitchcock. You mean New York does that?

Mr. Ingle. New York does; yes. The idea that I insist upon in opposition to this double-account business is this: That a bank which keeps its reserve honestly, which tries to keep a reserve of 25 per cent—and if it does not it can not help itself, it is gone, in tight times or for some other reason—such a bank, in trying to keep its reserve, only figures as its reserve its actual balance in New York plus its cash on hand. Now, if those full debit balances are permitted to be counted, can’t you see that the bank which does that and makes no deduction for offsetting balances has a very superior advantage over a bank which insists upon a single account, in which is always reflected the actual amount of money the owning bank can draw for in case it has to have it.

Senator Hitchcock. You say you have $7,000,000 of country-bank deposits?

Mr. Ingle. Yes.

Senator Hitchcock. Suppose you receive a batch of checks against one of those country banks in a country town in your State; do you charge those checks to the account of that country bank when you receive them?

Mr. Ingle. I think so, in our case in 75 per cent of our accounts.

Senator Hitchcock. Does that depend altogether on the arrangement between the banks?

Mr. Ingle. Altogether on the arrangement between the banks, and sometimes they are changed.

Senator Hitchcock. Suppose you send that country bank collection items; when do you charge them with those items?

Mr. Ingle. Only upon receipt from that bank of advice of their payment. We charge them, as a matter of fact, one or two days after they have the money.

Senator Hitchcock. Do you charge to their accounts such checks drawn by their individual customers as soon as you receive them?

Mr. Ingle. That is right.

Senator Hitchcock. That is at variance with the custom as stated to be by all the bankers who have testified before this committee. They have all testified that no correspondent was permitted to charge up items against its country correspondent until they had been collected.

Federal Reserve Bank of St. Louis
Mr. Ingle. I think they made awfully poor arrangements.

The Chairman. It is a very common practice for people traveling in Europe. They draw on their letter of credit against the country bank's correspondent in Europe, and it is charged against the home bank.

Senator Nelson. That is why the country bank makes a profit; they want something for making that collection.

Senator Hitchcock. You say with 75 per cent of your country bank customers you charge checks to them just the minute you receive them?

Mr. Ingle. I think I am approximately correct there, sir. I say it is substantially so in the case of 800 correspondents; I do not follow it personally, but I feel I know it.

Senator Hitchcock. Why do you discriminate in that way?

Mr. Ingle. Simply because one arrangement is satisfactory to one man, and another man won't do it the same way, but some other arrangement would suit him better. With our New York correspondents we make that arrangement; we insisted upon the arrangement.

Senator Hitchcock. Why?

Mr. Ingle. Because we felt it was not a fair thing for us, when our Government statement was called for, to swear our reserve was a certain average for a 30-day period when we knew during that 30-day period we might have had offsetting credits on our books from New York banks which would probably deplete our reserve 4 per cent.

Senator Hitchcock. For that reason you should always make an allowance for checks drawn against you and floating around in transit?

Mr. Ingle. Oh, no; I think it is a perfectly fair proposition there. We do not want to lean backward because—out of sight, out of mind. We have no knowledge whether the New York bank has $100,000 or $1,000 on that day.

The Chairman. And it is a matter of saving in bookkeeping?

Mr. Ingle. Altogether. It is a matter of protecting the bank.

The Chairman. What bookkeeping does it save you?

Mr. Ingle. It does save us bookkeeping.

The Chairman. I would like to have you explain to me what saving there is in it.

Mr. Ingle. Well, in the actual bookkeeping it simply saves the difference in time it requires to keep two accounts——

The Chairman. Instead of one.

Mr. Ingle (continuing). And one account. It all goes into a common account. Further than that, in maintaining these two separate accounts there are numerous times in which all kinds of irregular things happen, and we are eternally being mixed—an entry in one account is intended to go into another account.

The Chairman. And you have a whole lot of trouble in reconciling the accounts.

Mr. Ingle. Yes; in reconciling the accounts. I think the practice is wrong, Mr. Chairman, because the balance due in any situation should reflect the net balances due.

The Chairman. It avoids double-heading—what they call double-heading—does it not?
Mr. Ingle. Double-headers. It has led up to this: Our figures in all of our statements do not reflect the real thing at all, when we take all of this pyramiding of reserves where one item of $5,000 may be reflected for a period of a week in the statements of five other banks all over this country before that item is liquidated. And, in connection with these double accounts, I think it is fair to say that probably 25 per cent of the amount of our statement footings represents wind. It does not mean anything at all. It is gratifying to report $50,000,000 of deposits rather than $40,000,000 or $35,000,000, the real deposits you can loan.

Senator Pomerene. Let me see if I understand your statement in reference to the bookkeeping. Under the present arrangement that you have with your New York correspondent your account is charged with a check which they have paid and sent to you. If that was not done, they would have to have the same account with you and also a collection account with you, would they not? Do I make myself clear?

Mr. Ingle. I think I follow you, Senator.

Senator Pomerene. That is, for instance, I draw a check upon your bank—I have an account there—and it was sent to New York. Now, of course, I am not a depositor in your New York bank, and when they received my check there, if they adopt the other system, they would have to send that on to you as an item for collection, and that would necessitate the double bookkeeping you are speaking of.

Mr. Ingle. Double bookkeeping. There is one thing I ought to explain in that connection, sir. You appreciate this arrangement with any number of New York banks—I think we deal with about 9 or 10 New York banks—they will differ. The purpose we had in mind was the avoidance of an appearance on our books of an item due to reserve agents. You will frequently see in statements, if you will look at the publications, “Due from reserve agents, $750,000,” “Due to reserve agents, $430,000,” as a deposit. Now that is only a bookkeeping entry for convenience, if you choose, or for profit, if you choose, but it serves to artificially swell the deposit line and it always exposes the bank so carrying its account to count the full debit balance as a reserve rather than $200,000 as the actual reserve in case he fails, because that is all he has.

Senator Reed. Mr. Ingle, you have gotten into a line of discussion here that several times I have tried to get some light on. I think you are inclined to deal with this subject frankly. I would like to talk with you a minute about it. To begin with, and rather aside from what I have in mind, I want to ask you this: If a citizen of Baltimore, having an account in your bank, draws a check payable to a merchant in New York City, let us say, for $10,000, and the check is deposited in his bank and credited to him, what protection does your bank have provided that check should happen to be a bad check? How does that bank know he has a balance of $10,000 in your bank?

Mr. Ingle. That bank is not concerned to know, sir. That bank, in accepting a check for $10,000 does so from one of its customers, and it is assumed he would be a reputable merchant. Obviously that bank would not accept from a merchant in whom he had no confidence, any one’s check for $10,000.

Senator Reed. In other words, it knows its depositors, and if a depositor puts in a bad check the depositor makes it good.
Mr. INGLE. There it has recourse upon him, and if it is returned the depositor makes it good.

Senator REED. The protection rests upon the fact that the depositor is known to it, and if he is not a reliable man, and a solvent man you simply send it for——

Mr. INGLE (interposing). For collection.

Senator REED (continuing). For collection, which obviates that difficulty.

Mr. INGLE. Exactly.

Senator REED. Now, I want to come to this question of pyramiding reserves for a minute. Assuming a bank must keep $12\frac{1}{2}$ per cent of its deposits in its own vault and $12\frac{1}{2}$ per cent of its deposits in some other reserve bank or banks, is it not a fact that those funds thus deposited with other banks are frequently so deposited with other banks so that as a matter of fact that $12\frac{1}{2}$ per cent ceases for all practical purposes to be a reserve at all?

Mr. INGLE. I entirely agree with you, sir. As a matter of fact, the actual cash, gold—let us call it gold, if you choose, for the sake of letting you understand what I mean—the actual gold reserve or the actual legal reserve in money, in lawful money, against a deposit line of $100,000 in a country bank is just about $7,500 in money by the time that the reserve in the secondary reserve city is further split up by being transferred, a respectful portion of it, to the reserve city. You understand what I mean, sir?

Senator REED. Yes.

Mr. INGLE. If a country bank deals with a reserve city of the second class, which city in turn deals with a central reserve city, the original deposit of the country bank is represented by just $7\frac{1}{2}$ per cent in real money.

Senator REED. Yes.

Mr. INGLE. Now, mark you, here is another question there, sir. Very unfortunately, in the case with a very generous share of these reserves they are made up not of cash, not of demand paper payable in a reserve city, but of miscellaneous checks and drafts listed on slips a yard long many times, scattered all over the known world, I might almost say.

Senator REED. You mean to say, instead of carrying cash they carry something in lieu of cash and count it as cash?

Mr. INGLE. No, sir. I mean this, that a bank in the interior and also many banks in the reserve cities of the second class, will have its correspondent in either a reserve city of the second class or a central reserve city. That interior bank will send to Philadelphia, if you choose, a long letter made up of items, 10 per cent of them on Philadelphia and 90 per cent of them on other points within the territorial limits of the United States, very often. The moment the interior bank charges Philadelphia with the footing on that letter, it looks like money to that interior bank, and it proceeds to draw against it as money. You should say competition should prevent all of that. That is very true, but the practice is horribly abused.

Senator REED. The fact is, then, if I understand you (and I am going to put it in my own words to be sure I do), we will say that a bank in Indiana has an account with a bank in New York and uses it as its reserve agent. It gathers up a lot of collections scattered broadly over the United States and sends them down to the bank in
New York, in the aggregate amounting to $500,000, and the bank in New York at once credits to the bank in Indiana $500,000. The bank in New York, however, does not have $500,000 in cash, but has $500,000 in collection items.

Mr. INGLE. A certain percentage of it, anyhow.

Senator REED. Yes. And therefore the bank in Indiana credits itself in its reserves with $500,000 in cash in the reserve in Philadelphia and treats it as though it were cash when in fact it is a liability.

Mr. INGLE. Unliquidated business.

Senator REED. That is practiced extensively?

Mr. INGLE. Most extensively. And anything in the world, as, for instance, this bill, which will compel or induce the prompt presentation of those checks at a minimum cost would be a step in the right direction and get things down to a dollars and cents basis.

Senator REED. Now, you stated a moment ago that as it worked out with an ordinary country bank having deposited a portion of its funds in a reserve bank, and then that money can be redeposited, etc., there was an actual reserve of about 7 1/2 per cent. Now, do you deduct from that 7 1/2 per cent a further sum on account of the system you have just explained of sending in checks and drafts, etc., to be collected and credited?

Mr. INGLE. No, sir; I am afraid if we did that, in many cases we would have a minus quantity.

Senator REED. That is what I want to get at. You mean that the 7 1/2 per cent exists because as a part of that 7 1/2 per cent is counted the credits which the banks obtain when they have not deposited their cash but have deposited items for collection.

Mr. INGLE. I think that statement is true, sir.

Senator REED. And that the items for collection are so great in the aggregate as to wipe out the entire reserve of 7 1/2 per cent?

Mr. INGLE. Yes. But it differs with different banks, if you please, Senator.

Senator REED. I am asking about the general custom.

Mr. INGLE. I am speaking about the abuses which have grown up by reason of the practices that have grown up under the present law.

Senator REED. I understand some bankers do not do it but that this is a general custom.

Mr. INGLE. I think it is quite general.

Senator REED. Then, as a matter of fact, our reserve system, with the exception of the money actually held in vaults in the banks, is a good deal of a—

Mr. INGLE (interposing). Of a delusion and a snare.

Senator REED. Yes. Now, if that is true (I am coming to another question) and this bill changes the aggregate of the reserves by reducing them in various amounts, depending upon the class of banks, and yet compels the actual keeping of the money, the effect will be to really increase the reserves—the actual reserves.

Mr. INGLE. That would be my judgment, Senator.

Senator REED. So that in the change which we are putting in operation, applying it not to the law as it now exists, but to the custom which has grown up under the law, there would be actually more money tied up in reserves under the new system than under the old,
although we have reduced the amount in percentages in this bill? Putting it in another way——

Mr. INGLE. I think I catch you, sir, but you must remember this, Senator, that a part of the 18 per cent reserve which we will be required to keep under this law will not be money at all; it will be a credit on the books of the Federal reserve banks, of which only one-third is held in cash.

Senator REED. Yes.

Mr. INGLE. So that we will then have, under the new law, roughly speaking—I have not a blackboard here, sir—about the same amount of actual money reserve as we now have.

Senator REED. But, of course, you have introduced into your last answer a further provision; that is to say, that the bank, as soon as it deposits its reserve with the regional bank, will then borrow it back?

Mr. INGLE. It will be borrowed back. It is not material to us whether we earmark it or not. It will be borrowed back by some one, and that bank will only hold, as a matter of fact, 33 per cent of its liability to us in cash.

Senator REED. But, omitting that last transaction, which may or may not take place, and putting this thing, if I am able to do it, in a sentence, the 15 per cent reserve required of a country bank and maintained, as you say it is maintained under the present system, actually demands less cash as it is worked now under the present system than would be required under the new bill in actual cash, although the reserves are reduced to 12 per cent? That is, now, up to the time that the regional bank rediscounts.

Mr. INGLE. Senator, I am just running it through my head as you are asking it. My impression is it will require a very slight increase in the actual cash held in the reserves in the country bank, either one place or another. But here against this in this law is the wonderful compensating advantage——

Senator REED (interposing). I am not speaking of the advantage now; we are coming to that in a moment. I am not contending against the bill. The present system is so run that that part of the reserve which is deposited in other banks is practically wiped out as a cash reserve. Under the new system the cash is actually put in the vaults of the bank, or would be in the vaults of the reserve bank, as far as the reserve part of this system goes. Then, of course, the reserve bank is permitted to loan all of the reserves that have been put up with it except a 33 per cent reserve, which it must hold. That is the situation as it works out.

Mr. INGLE. Yes.

Senator REED. And I take it from that the central reserve bank has actually loaned out the money that has been put up with it, and there is more money in cash in the banks under the new system, although the reserve is less, in figures—that is, in percentage—than there is in cash locked up now in reserves with a larger percentage.

Mr. INGLE. Senator, I have not attempted to work that out, and I must confess I have looked at this subject more from the viewpoint of a banker in a secondary reserve city, of course, more or less in its related aspect.

Senator REED. We can figure from your previous statements, but of course you can supplement this by any statement you want to make,
in writing or otherwise. Now, let me ask you about another matter that is not, perhaps, exactly germane to this question: To what extent is this practice followed by banks, namely, a bank likes to have a showing of a large amount of deposits; it looks good. To what extent do they practice this system of bank No. 1 depositing $100,000 with bank No. 2, bank No. 2 depositing $100,000 with bank No. 3, bank No. 3 depositing $100,000 with bank No. 4, and bank No. 4 depositing $100,000 with bank No. 1—to what extent is that sort of scheme worked?

Mr. INGLE. Senator, I have never had much personal experience in those directions. I have heard of that and I probably have known of two or three concrete situations of just that sort, where a bank, for instance, will at a given moment want to replenish its reserves, if you choose. A bank in Baltimore may draw on, shall I say, Cincinnati for $100,000. At that time it will not have a penny to its credit in the city of Cincinnati. It will send that draft so drawn out to Chicago. It is a central reserve point. By the time that draft on Cincinnati will have reached its destination the drawing bank, the initial bank, will send to Cincinnati, maybe, a draft on Pittsburgh, and so on, and in that way deliberately proceed not only to build up its deposit line but at the same time to build up its reserves.

Senator REED. That is kiting?

Mr. INGLE. Exactly so; pure and simple. There is quite a little of that done. In a city, for instance, with a dozen banks I will assume that probably no more than two or three banks will do that. The other banks will not do it, but they recognize they are handicapped in not being moved to do it. They swell their deposits otherwise artificially in many ways. For instance, there was offered me for discount only last week a certificate of deposit drawn by a bank for itself for some thousands of dollars. That bank will loan its customer, will accept a customer's note for $5,000. It has not the money; it has exhausted its credit in the shape of bills payable or rediscounts, if you choose, direct, but it will give that customer its time certificate of deposit payable three, four, or five months after date. That customer will take that time certificate of deposit and, through some other channel, discount it. In the meantime such time certificates will appear as deposits in the statement of the issuing bank. There are all kinds of devices, sir, which we can not recall on the spur of the moment, but it gives us pause as we meet with them from day to day.

Senator REED. There is a good deal of that done, you say?

Mr. INGLE. Quite a little of that done.

Senator REED. I had in mind a different transaction from that and a transaction which could not be said to be dishonest, but simply a bank's desire to have it appear they have a large amount of deposits. And of course in the illustration I used, bank No. 1 could have actually deposited with bank No. 2 $100,000; bank No. 2 could actually deposit the $100,000 with bank No. 3—not the same, but another hundred thousand—and that could be carried on until it made the circle and got back to bank No. 1. And if there were 10 banks there would be an aggregate of a million dollars of deposits and yet each bank would owe as much as its deposits, and there would be an apparent increase of a million dollars in the aggregate in those banks, and yet not an actual increase of a penny.
Mr. Ingle. That is exactly what I suggested about the 25 per cent of the total statement footings of the country representing air.

Senator Reed. So that you think the aggregate deposits of our banks to-day, if they were gotten down to what they actually are, would shrink very largely?

Mr. Ingle. If boiled down to a condition which would be brought about under the terms of this bill by the clearance of the checks as promptly as possible and not as great a delay as possible, I am inclined to think the statement footings under the present system would probably shrink to a loss of 20 to 25 per cent. It would not mean the loss of a penny except pride.

Senator Reed. I did not hear all of your testimony, and I may repeat a question that has been asked, but for my own information I want to ask this: If your bank has a part of its reserve in its own vaults, as required by law, a part of its reserve in the regional bank, as required by law, but the aggregate of the two accounts being sufficient to comply absolutely with the law, and one of your customers draws a check and passes it through the regional bank, and it is instantly charged, will that not compel you to keep an amount with the regional bank considerably in excess of your legal reserve, lest the transaction I have referred to would bring you below the legal reserve?

Mr. Ingle. Senator, I referred to that before you came into the room, and I took the liberty of suggesting that this bill be amended so as to allow some little play in a situation which otherwise would inflict a penalty. That reserve account should, without penalty, be permitted to be 20 per cent below the fixed amount, and below that there could be a penalty fixed so as to prevent exploiting that account for profit.

Senator Hitchcock. Will you state in a few words your objection to having this provision of the section changed?

Mr. Ingle (interposing). Pardon me, Senator, what section is it?

Senator Hitchcock. It is on page 33. Most of the country bankers have urged that that section be changed so as not to require a regional bank to accept checks upon member banks at par. Now, why do you think it would be better to continue to have the regional bank accept those checks at par?

Mr. Ingle. It is probably fair to divide that answer. First, for the reasons I have sought to give, I think it should be almost obligatory to compel the retirement of these checks at the earliest possible moment, in order to avoid this undue and unreasonable expansion of credit, this duplication of credits in the hands of four or five successive banks, by reflecting the credit of a single item in process of liquidation.

Now, the meat of their objection, as I take it, is in regard to the par facilities. Now, of course there comes a consideration which is selfish at both ends of the argument. I have already brought out why I feel that the bank, the paying bank, should honor its customer's checks when they are presented. Here is a thought I omitted. I can not talk very well, and I have to speak rapidly and without any preparation, as you ask questions.

You must remember that if the customer of an interior bank will go into his bank and ask for a draft on Chicago with which to pay
a bill in Chicago, his country bank will probably charge him some­thing for the draft and the Chicago man gets his payment at par. Now, if, instead of doing that, the interior man sends his local check to Syracuse, N. Y., we will say, in payment of a bill, there has elapsed one day; Syracuse will send that to its reserve point, and another day has elapsed; the reserve point will send it to the bank upon which it is drawn, and that makes three days. Speaking in a broad way, checks, handled ever so promptly, will require two or three days to reach their destination, so that the bank upon which they are drawn gets the benefit of the additional time in which to keep its money loaned during the exact number of days in which those checks are required to reach it. They now get the advantage not only of the additional time which now amounts to a week or 10 days many times, but they also get from $1 to $2.50 a thousand in remitting for those checks.

But, gentlemen, the devices used by many banks are very ingenious, indeed, when arranging for the best possible results to their profit-and-loss accounts. I do not blame them at all.

Senator Hitchcock. I want to refer you to some testimony which has been given before this committee. A very intelligent banker from Peoria testified yesterday or the day before, before the committee, that if the bill as drawn is favorably reported and permits a customer of a country bank to draw his check with the assurance that it will be received at par by the reserve banks, that remittance will be made that way, and the result will be that the reserve bank will have a great mass of checks of that sort to handle. He says, however, if a discrimination is made between bank drafts and individual checks it will require a country merchant who desires to remit to go to his bank and get a draft upon the reserve bank. That draft will pass at par not only in that reserve district, but in all other reserve dis­tricts, and as it passes at par, and because of the competition between banks, the country bank will not make any charge for that draft upon the reserve bank, which he says will put a stop to kiting. He says that if this remains as it is the country merchant, knowing that his check sent, say, to Chicago, or, as you say, to Syracuse, will not be charged to his account in his home town until it has made the rounds, and will continue to maintain the practice of paying in checks, the man depending upon his collections to make his money good later on.

Mr. Ingle. On the contrary, sir, I think under the new law he has got to pay the bill earlier than under present conditions. He knows that check is coming immediately back to his home bank.

Senator Hitchcock. Suppose this law discriminates between an individual check and a bank draft upon the reserve bank?

Mr. Ingle. I do not see the occasion for it or the merit in it. There, again, comes selfishness, which is altogether a proper emotion in such a case, I imagine. I think our friend from New Orleans is figuring that half a loaf is better than no bread. If he has got to be stripped of part of this, he might as well save half of it out of the wreck. I can not see the difference between a check drawn on any bank by a banking correspondent and one drawn on it by an individual customer. Some individual customers have their checks frequently in the form of an ordinary bank draft, as looking more substantial, if you choose.
Senator Reed. The distinction which he made was this: When a man went to his bank and drew his check upon that bank, say, for $1,000, and obtained a draft, that then that bank knew that that money was drawn out and reduced its account by that much, whereas if he simply drew a check and said nothing to his bank about it and sent it on to New York, and it went to the regional bank in New York, incidentally his reserve in that bank was reduced. He would not know about that, and his reserve might be wiped out without his knowledge, whereas if the bank-draft transaction took place it took place at his counter, and he immediately made his entries. That was one reason he gave.

Mr. Ingle. If you will excuse me, that is a very strong argument, because there is no greater reason to suppose that a merchant in a country town will, under these changed conditions, go to his local bank and get a draft on a Federal reserve bank than he would now go to that bank and get a check on New York to pay a bill. That merchant, speaking generally, wants that check to stay out as long as it can, and the bank upon which it is drawn wants it to stay out, and the member bank is not at all concerned when that check is charged to its account on the books of the Federal reserve bank, assuming that this law can be amended to permit some little play between the 5 per cent definitely and the 4\% to 5\% per cent as the exigencies or delay might possibly demand.

Senator Reed. He urged this as a reason: He said if you adopt the system that the bank draft will be credited at once in the reserve bank, that works no harm, because the member bank knows the draft is out and has deducted it from its account. Therefore it must increase its reserve in its own bank, or it must increase its reserve, if necessary, in the regional reserve bank, and that that sort of banking, if that draft would be regularly cashed at par and at once, creditors would demand it and get it. If, at the same time, you provide that a bank check would not be so credited but would simply be accepted for collection and sent on to the bank upon which it was drawn, and that that discrimination in the law between the two kinds of paper would build up the bank-draft system and would circumscribe the check system. Is there anything sound in that?

Mr. Ingle. I can not say it is unsound, but I think it is probably Utopian. I think the competition in the cities to which such checks are sent will also require that they be accepted as cash on the same basis as the check on a Federal reserve bank, and the bank accepting them as cash simply takes its own chances.

Senator Reed. It would not be Utopian if the law provided that that check should bear a charge for collection and a draft not?

Mr. Ingle. I will not venture that suggestion. I doubt whether the law could say that.

Senator Reed. Oh, yes; the law could easily enough provide that if we wanted to have it do so. It could provide that the regional bank would cash the draft, and the regional bank would send the check on for collection, and that there should be a collection charge.

Mr. Ingle. The trouble would be that the check would not go to the regional bank; it would go direct to its destination, as is done now, or there would be some other rearrangement.

Senator Reed. Through some other bank?
Mr. Ingle. Yes, sir; I take it so. It would be like New York—Senator Reed (interposing). That would put it at some disadvantage?

Mr. Ingle. The customer would not care a rap about it if he gets a credit upon the books of the bank. He does not care what happens.

Senator Reed. He would just go to his own bank, and his own bank would give him credit and put it through?

Mr. Ingle. The customer would not care how. You know in drawing cotton drafts, as is done on the New England States, where three days' grace is always not only allowed but taken on drafts drawn at sight, the owners of those cotton drafts at the initial point puts them in their banks as cash. Then the initial bank, unless we have prearranged it, immediately begins to quarrel with its corresponding bank, because it declines to accept as a cash credit an item which will not be paid until the lapse of four or five days thereafter, but if that fellow has a good account, well, we swear in private and properly credit it up to him and say nothing about it. If he has a bad account, we will simply forward it for collection and give him credit upon its actual payment.

Senator Reed. How would it strike you if all checks used in interstate commerce—private checks—had to have a stamp upon them, the proceeds to go to the supporting of this banking system?

Mr. Ingle. Well, I would rather——

Senator Reed (interposing). I am not committing myself upon that proposition; I am just asking you about it.

Mr. Ingle. I suggested here that it is a pity that some way under the interstate clause of the Constitution could not be found to nationalize the whole business, and then you would relieve all of us of a great deal of worry and trouble, and we could all take the same dose of medicine or tonic, as you please.

Senator Bristow. I started to question you on this check business sometime ago, and I want to proceed with it.

Senator Reed. I beg your pardon for interrupting you, Senator.

Senator Bristow. That is all right. There is one important matter that has not been brought out, which I would like to have brought out. You seem to be opposed to the present system of remittances by checks. I want to ask you——

Mr. Ingle (interposing). No, Senator, I would not like to be so set down. I am opposed to the present handling of the checks which are remitted. I think checks, local checks or checks of any kind, are proper methods of remitting, if you choose, under our development, as we view it. I think there should be some way provided to quickly get those checks back to their paying banks; get them back as promptly as possible.

Senator Bristow. That is a question for the banks to consider as to how they will handle the checks. But you criticized the remittance which I suggested I had made to Chicago by check to pay an account there, because you said that was paying a $1,000 account with $999.50.

Mr. Ingle. That was the effect upon the party of the second part who gets your check.

Senator Bristow. That is a question for the banks to consider as to how they will handle the checks. But you criticized the remittance which I suggested I had made to Chicago by check to pay an account there, because you said that was paying a $1,000 account with $999.50.

Mr. Ingle. That was the effect upon the party of the second part who gets your check.

Senator Bristow. That is a question for the banks to consider as to how they will handle the checks. But you criticized the remittance which I suggested I had made to Chicago by check to pay an account there, because you said that was paying a $1,000 account with $999.50.

Mr. Ingle. That was the effect upon the party of the second part who gets your check.

Senator Bristow. That is a question for the banks to consider as to how they will handle the checks. But you criticized the remittance which I suggested I had made to Chicago by check to pay an account there, because you said that was paying a $1,000 account with $999.50.

Mr. Ingle. That was the effect upon the party of the second part who gets your check.

Senator Bristow. That is a question for the banks to consider as to how they will handle the checks. But you criticized the remittance which I suggested I had made to Chicago by check to pay an account there, because you said that was paying a $1,000 account with $999.50.
When you go to a bank and deposit, say, $1,000, they present you with a check book and prefer that you check that out rather than that you draw it out and disburse it that way.

Mr. Ingle. For purely selfish reasons, of course.

Senator Brisrow. That leaves the money in your bank?

Mr. Ingle. Exactly.

Senator Brisrow. If you have a pay roll, small or large, say with only 15 or 20 employees, your bank prefers that you pay your employees by check rather than going to the bank on Saturday afternoon, if you pay on Saturday, and drawing out the money and paying them cash, because it keeps the money in the bank, and the checks go around to the various merchants and finally come in. That is a practice which country bankers have encouraged and developed, have they not, for a series of years?

Mr. Ingle. Unfortunately, they have.

Senator Brisrow. Why do you say unfortunately? What does that do? As a matter of fact, does it not bring the money that otherwise would be in the safes, or in the desks, or in the bureau drawers, in the community, or out on the farms, into the bank? Does it not increase the reservoir of money there for the use of that community and has it not resulted in the establishing of banks in communities where 30 years ago would have been regarded as ridiculous to undertake to establish one? Has it not resulted in drawing out of the hiding places millions of dollars for the use of American people in their commercial transactions?

Mr. Ingle. Senator, I guess I will have to say yes to that. I do not know whether that is altogether a proper answer, whether it has been so much the use of the checks as it has been the solicitation of deposits which otherwise had been concealed within the stockings and cupboards, I do not know. The money has come from the solicitation; the checks follow afterwards, and operate to keep the money more or less in the banks.

Senator Brisrow. Now, say there is a farmer out here in Maryland, and he may be growing his crops and he is paying his hired men. His banker would prefer that he keep his money which he has in the bank and take a check book. It is safer. It is not lost. If the check is lost and it does not turn up, that is better than to lose the money and have it destroyed. The result has been that the farmer has written checks. We will say he wants to pay a bill in Baltimore instead of at Marlboro, we will say, and so he sends a check to Baltimore. The merchant takes that check and deposits it in his bank. If you take from him this convenience of paying these bills with checks, and make it so he can not do it, you will destroy a system and a custom which has been built up, and which, it seems to me, has added very greatly to our commercial activity.

Mr. Ingle. We will never do that. We have no desire to do that. On the contrary, once that check is issued, I do not believe it should circulate as currency for 10 days before it is redeemed. Before it gets back to its paying bank it may have traveled 2,000 miles if you choose, all around the country, before it reaches its destination.

Senator Brisrow. There may be an occasional abuse in this, the same as in almost everything else.

Mr. Ingle. I think a usual abuse, if you will excuse me, sir.
Senator Bristow. What is the objection? I will give a check for $10 to some one, we will say, who may be employed by me. I may be a farmer. I may buy something and I give the man from whom I buy a check, and if he thinks it is all right (my reputation may be good in the community) he takes that check, and there is somebody whom he owes something to and he has not the money, and he says to the man to whom he owes something, "I have not the money to pay this, but I will assign to you a check of Bristow's which he gave me for a pig," and he takes it, and in the course of a few days it comes back to the bank. What harm has been done? Is not that a convenience?

Mr. Ingle. That is a convenience. But you will not let a bank do that. You will not let a bank issue its notes by indorsement and pass them around as money.

Senator Bristow. Do not let a bank—

Mr. Ingle (interposing). We cannot issue our promise to pay and circulate it as money. We do it in times of panic, issue a certificate of deposit or some makeshift-currency device, but everyone looks askance at it.

Senator Bristow. If this customer or the employee, or whoever it may be, is perfectly willing to accept that check, because he knows it is good, and can get the money at any time he wants it, and if it is convenient for him to transfer that to somebody else for some other consideration, it gets back to the bank and is then retired. What harm does that do? That is what I would like to know?

Mr. Ingle. No special harm, except that it is a privilege you grant him of circulating his checks as money which you will not grant to the bank. You will probably believe that a note of my bank for $10 issued outside of the currency act would be a good asset in your pocket. But I am not permitted to issue that note except under a penalty of 10 per cent interest. You expressly say that I shall not do that, and yet you have a provision for the redemption of these circulating checks, and so are in effect making of them a circulating medium.

Senator Bristow. You will give a certificate of deposit; you will give a bank draft; that is your check?

Mr. Ingle. Yes.

Senator Bristow. If I go to you, if I am a customer of yours in Baltimore, and I ask you for a bank draft instead of sending a check, and get a draft, what is that but your check?

Mr. Ingle. That is, to all intents and purposes, over night if you choose, that is money. That is the transfer of funds, and I want that check to be presented as quickly as possible. It is in the promptness of the redemption of this media—

Senator Bristow (interposing). What is the difference between that draft which you give me, which is a check on your bank, issued by your bank, or upon a New York bank, probably issued by you, and a check which I may give to somebody on your bank?

Mr. Ingle. Absolutely no difference whatever. I am not trying to discriminate between the two classes of paper. I am only suggesting that they ought to be redeemed as promptly as may be.

Senator Bristow. You give me a draft for $1,000, and I owe a man $1,000, and I say I have not the cash, I have not the money
on deposit, but I have a draft in this bank for $1,000, and I tell him I will turn that over to him. He says that is all right. That is against the law?

Mr. Ingle. No, sir. I entirely approve of the provisions of the negotiable-instrument act under which title can pass by indorsement, but I do not believe in making a circulating medium of checks, or doing anything which will take the holders of checks and keep them away from the paying bank any longer than is possible.

Senator Burrows. The law treats your check no differently from the way in which it treats my check, so far as the check goes. When you come to the bank notes that are to circulate as money, that is a different proposition, and there are reasons, wise or unwise, which it is not necessary for us to discuss just now, because we might not be so very far apart upon the advisability of bank notes being used that way, if issued in the right way. That is all. I wanted to bring out this important point which has been overlooked by the bankers in the great cities who are concerned with the crediting of these checks. They overlook the tremendous advantage that they have been to the country, and to the banking business of the country by the development of that system.

Mr. Ingle. By all means continue their use in any volume whatever, but provide by proper legislation to invite rather than discourage their prompt redemption, and I think such an invitation is extended under that particular clause of the bill which permits us to have those checks redeemed at par by the Federal reserve banks.

Senator Nelson. You have only given us a little part of your statement. Suppose you finish your general statement.

Mr. Ingle. I will do that.

It must be assumed that section 4 in permitting removal of directors in class B intends only to give the Federal board a weapon of defense for use only upon occasion, and does not mean to suggest that removals are to be the rule. If Congress in section 7 could say 6 per cent rather than 5 per cent as dividend rate the bill would be much more acceptable to many banks, and especially the interior institutions which earn more on their money than the rate suggested in the act.

Senator Nelson. What do you think of increasing it to 6, and then having the excess go directly to the Government?

Mr. Ingle. There again, Senator, it would depend upon how this Federal bank was to be managed.

Senator Nelson. The theory of some people is that it should be used for the purpose of aiding our system rather than as a money-making institution.

Mr. Ingle. If that is followed out, if that is to be done, if an underlying thought is in evidence, or may be in evidence, that it is a money-making proposition to the Treasury Department, it would obviously compel us to view it differently. For instance, one provision—

Senator Nelson (interposing). The argument is made that to give the member banks an interest in the surplus revenue would tend to arrange it for the purpose of merely making money. If you take away the surplus of the interest and leave it so that they will simply get their dividends, it would be more apt to be run for the good of the cause, rather than as a purely money-making institution?
Mr. INGLE. Senator, you must remember that if you could by Federal act compel everybody to assent to these principles they would assent whether they wanted it or not. That will be one situation. Here we want to pass an act which shall invite people to come into it. I said that a 5 per cent revenue will not appeal to a bank which is accustomed to get 6, 8, or 10 per cent revenue from its local loans, and I believe that with 6 per cent instead of 5 per cent, and with the present distribution of the surplus profits, I believe that you would find a very much more ready assent, and you would hear very much less of the confiscatory features of the bill.

Senator NELSON. You are looking at it simply from the standpoint of mammon and not from the standpoint of public spirit.

Mr. INGLE. Purely from a standpoint of mammon, as a practical proposition and in dealing with a new situation.

Section 14 too narrowly defines the classes of paper available for rediscount. While city banks could possibly meet requirements the country banks certainly would not be able to do so. In this connection it may be proper to say with respect that the Secretary of the Treasury did not draw proper deductions from the information derived from the last reports made to the comptroller in response to that officer's request for a statement of maturities of paper held by the banks.

At almost all interior points the actual maturity of a note bears little relation to the date at which its payment is expected, and to attempt to collect such paper in accordance with its terms would be futile. In the cities paper drawn by the best people is frequently made with the idea of renewing it at the mutual convenience of those directly concerned. It probably is fair to say of maturities in any given month, excepting possibly October and November, when the percentage is greater, that not more than 20 per cent of maturing obligations are paid on their due dates, while in connection with so-called demand loans payment is made at the pleasure of the borrowers, excepting the “street” loans made in New York. If this section of the law could be better worked out in detail, its beneficial provisions would atone for much in the act to which such ready assent cannot be given.

Senator NELSON. You would extend the maturity limit of the paper?

Mr. INGLE. Not so much that. I would have it more nearly conform to the present practice. The city bankers and the banks in the larger communities have paper acceptable under the terms of this law, either commercial paper or paper which could be by interpretation made commercial paper. But, I take it, that this law, in saying 90 or 120 days, has in mind paper which it is expected will be paid.

Now, the average interior bank, particularly in agricultural sections, has one pay day a year; it may lose that for two or three months, and after that the paper may not be made during the remaining nine months. That bank, in borrowing, if it makes a note for three or four months, does it with the palpable intention of having it renewed for another period of three or four months, so that it will be paid finally after the expiration of eight or nine months.

I do not see why it would not be altogether competent for an interior or any other bank to follow the present practice, and in addition to rediscounting straight paper with indorsements to make
its own obligations and pledge with that its customers' bills receivable in such volume as was done during the recent panic. In doing that you would not only be following a usual practice but one which would permit very much better protection to the Federal reserve bank, because in the absence of very close investigation it goes without saying that no Federal reserve bank, for instance, in Columbus, Ohio, could possibly know anything about the small bills receivable, collected, and eligible under the letter of this act by some bank in some small interior Ohio town. They are tenant notes, country notes, perfectly good to the holding bank, but altogether unknown outside of its own district. So I think it would be wise to make more explicit the provisions of your law and not leave so much open to the interpretation of the Federal reserve board, and say that the banks can borrow from the Federal reserve bank on their own notes, secured by the pledge of their customers’ paper issued for all these purposes as prescribed in the act.

Senator O'GORMAN. Would that afford ample security to the Government?

Mr. INGLE. I think it would afford better security than the Federal reserve board could receive under a strict interpretation of this law. The affairs of a country bank will entirely be known under this new order of things to the Federal reserve bank with which it is connected. That Federal reserve bank can not know anything of the individual notes held among the assets of those banks, except in a general way, in connection with the larger obligations, if you choose.

Now, when such an interior bank pledges its miscellaneous bills receivable or rediscouts simply upon its indorsement, the Federal reserve bank will stand or fall by that obligation itself, with, of course, the protection given it by the law, as to the liens, and so forth. But if that interior bank could give its reserve bank its direct obligation for $10,000, and with that note pledged $12,000 or $13,000 or $14,000 worth of its customers' miscellaneous paper, the Federal reserve bank would have 140 per cent to protect the 100 per cent of the bank's assets, and that is the way in which business is usually done, and it would seem to me we want to make things easy for the country banks and not hard, not too much disturbing their accustomed methods of doing business.

Senator NELSON. You mean the practices when a bank wants to borrow from another bank, the borrowing bank gives its own notes, and does it with the notes of its customers as collateral?

Mr. INGLE. Exactly, with a proper margin.

Senator NELSON. Is that practice more general than the other practice of getting money simply on discounting notes?

Mr. INGLE. Oh, my dear Senator, I think my bank, if you will excuse the reference, to illustrate the point; we have loaned $5,000,000 to interior Southern banks, for instance. I do not believe we have under rediscount $300,000 worth of paper. I think the rest of the direct obligations of the banks, all with the pledge of collateral. We then have better protection, and when we want to make a loan we can say we will not lend a man $10,000 with only a 10 per cent margin of collateral; that he has got to give us 50 per cent margin, and so we will lend him $10,000 if he gives us $15,000 of paper. That permits some sliding scale and to reflect our judgment of his solvency.
Senator Nelson. Under this system in the bill, you must remember that the member bank who seeks to discount must indorse the paper and be responsible?

Mr. Ingle. Exactly so.

Senator Nelson. So that in the one case you would have him held as an indorser, and in the other case you would have him held as the maker, with the notes as collateral.

Mr. Ingle. We take all these things upon the assumption that a bank may do a great many things.

Senator O'Gorman. I move that the committee take a recess until half past 2 o'clock.

(Thereupon, at 1 o'clock and 5 minutes p. m., the committee took a recess until 2.30 o'clock p. m.)

AFTER RECESS.

Senator Hitchcock. Mr. Ingle, will you proceed with your statement?

Mr. Ingle. I suggest that the law should contain some provision under which it would be impossible for any bank to assume liability of any nature, whether for deposits, notes, acceptances, or bills payable, beyond the amount of some agreed multiple of its own capital responsibility.

It is altogether gratuitous; but it has just occurred to me that it would be a wise provision, as every bank, in loaning its money to any customer always requires that that customer shall furnish it with, certainly, 10 per cent margin to protect it against possible loss. The margin may or may not be good. The security may or may not be good. But the bank always feels that it has that margin, either in the value of securities or in the value of a man's stock in trade, whatever it may be, to protect it; and it seems to me that anyone dealing with a bank has a right to demand that that bank shall furnish him with the same measure of protection, or some percentage of it, at least, as the bank itself requires at the hands of customers.

Senator Nelson. Suppose you limited it to capital and surplus?

Mr. Ingle. Well, I would just amend the percentage. I would say 10 per cent, 15 per cent, or 20 per cent of capital, or 8 per cent, 10 per cent, or 12 per cent of capital and surplus—whatever was thought desirable.

Again, section 17 provides machinery for what must become a most useful agency and one which in its workings must relieve business of an onerous tax now laid upon it.

That is the section which we discussed here a little ahead of its order. But I will repeat it for the purpose of making a consistent statement.

Obviously any objection to this section must be selfish in its nature. Banking is the solicitation of deposits to be protected by shareholders' capital, all to be loaned in proper directions at current rates of interest, and checks drawn against such deposits should be paid without discount. A bank makes more profit in interest for the time in which its customers' checks are outstanding in process of collection than the cost to such bank of furnishing exchange if indeed it is required upon occasion in making such exchange to ship currency. When a bank claims that the loss of its exchange charge,
oftentimes $2.50 per thousand and even more, deprives it of its living; it is furnishing the best argument that no bank is needed in its community.

Senator Hitchcock. Let me interrupt you there. I have seen something of small European towns where they have no banking facilities; and I think it is one of the very satisfactory conditions in the United States that almost every town, however small, has banking facilities; and I am disposed to ask you to demonstrate that a community, a small community of 2,000 or 3,000 people, would be better off without any banking facilities at all, provided a bank could not live wholly by the small loans it could make there?

Mr. Ingle. Well, I do not think any situation is justified, sir, when, in order to keep such a situation alive, a special tax is laid upon a community not attached to that situation. You know, in talking this way, Senator Hitchcock, I would not have you think that I desire to place myself in a position of antagonism to interior banks. Far from it. I have tried, in three or four directions here, to point out defects in the bill, in my judgment, in which the country banks are not fully served.

Senator Hitchcock. Let me take an illustration, so that we will have a concrete case. A town of 2,000 population with a small bank that has, say, a capital of $15,000—I do not know what would be the proportion.

Senator Nelson. It would not be less than $25,000.

Senator Hitchcock. Well, let us say $15,000. That bank furnishes a place where people can deposit funds; it furnishes a place where people can get exchange; it furnishes a place where those in need of money can borrow; and, as far as these loans are concerned, the bank is not able to loan enough money to operate profitably; and in order to eke out what it is not able to do through loans it makes a certain amount upon exchange in this way, by charging a discount upon checks.

Now, the result is that that community has a little bank, and if deprived of that opportunity to make that little profit upon checks, that community would be without that bank, and the money that would be saved there would be put in stockings, mattresses, and under carpets, and the people would have no facilities for doing business. Do you think that community would be better off under those conditions?

Mr. Ingle. Well, I do not know that that situation would justify taking up a contribution throughout the country to support a bank in that community.

Senator Hitchcock. Let me put this case to you: Suppose there were no bank there and there were collections against people in that town. They would have to be sent to a lawyer, and he would make a charge for them. Why not have a bank to make the collection?

Mr. Ingle. Very true. But you must remember that this law does not undertake to interfere with the daily operation of all of our banks in and out of town, in so far as it refers to the collection or handling of any business other than negotiable checks. We would still have our commerce of the country, as represented by bills of lading and shipment of cotton and grain, etc. That would still be handled through ordinary banking channels.
vided in this act has reference only at the moment to checks and not at all to drafts or notes or other evidences of indebtedness; so that a bank would not be handicapped at all in that way.

Senator Hitchcock. Perhaps I misunderstood you. I understood you to say that if a bank could not live in a community without making those charges upon checks that was complete evidence that no bank was needed in that community.

Mr. Ingle. I think that is a fair statement, sir.

Senator Hitchcock. Well, I will not interrupt you any further.

Mr. Ingle. Well, I would not like that statement to go out without a word of explanation, because it would leave me in a rather equivocal situation, possibly. Before the multiplication—or the extraordinary multiplication—of banks that this country has seen during the past 10 or 15 years it was altogether possible to very comfortably serve a community within a radius of 10 miles, let us say, of Raleigh, N. C., by one, two, or three banks in Raleigh. Everyone mailed their checks, as they are invited to do now, to the city banks for deposit. They took care of current business transactions in that way.

Suppose a merchant had a bill against a man outside of Raleigh. He would send him the bill to his post office. The man would send the merchant from his local post office, 5 miles away from Raleigh, his check on Raleigh; or, if he happened to be going into Raleigh on court day, he would get in a piece of exchange on some northern point, if you choose. His business was fairly well served.

Now, we have in all of these relatively very small places not one bank, very often, but two or more banks in small communities of anywhere from 500 to 1,500 people.

Now, one bank will start in such a community. It will make a success, in one way or another, by altogether legitimate business; do not misunderstand me. Suppose it has made such a great success, if you choose, that competition turns up. There will be another bank. In a little while you will find a third bank.

Then competition becomes very severe, and what is the next step? Those banks get together and they agree upon a tariff schedule for exchange charges.

Now, if they would make a tariff which would reflect the expense that those banks were put to in making that exchange, plus a fair fee for their clerical work, their postage, and such matters, no one would have any objection to urge, I imagine. But it unfortunately is the case that in very many and an increasing number of cases those two or three banks in those small communities will make some such agreement as this:

We will unite and say that we will all make a charge of one-eighth or one-fourth of 1 per cent on all business reaching us.

And no matter to which bank is sent business on that community that bank in collecting those items would pay its neighbor the agreed rate of exchange. So that each bank gets its own exchange on its own customers' checks.

And there you have as arbitrary a trade-union as can be well conceived of. There is no escape from that. It is the abuse of that thing that is onerous.

Senator Brinsrow. Well, now, that is done by the merchants.
Mr. Ingle. Pardon me, I do not understand.

Senator Bristow. The same plan is carried out by the merchants in that community frequently. There is not any other line of business in which the same processes are not in operation.

Mr. Ingle. Well, that does not justify it. Two wrongs are not supposed to make a right.

Senator Bristow. But why should we legislate to prevent the banks from charging this exchange, or against there being more than one bank in a town, any more than against there being more than one store?

Mr. Ingle. Because you are legislating on the subject of banks now. One of these days, possibly, you will legislate against dry-goods stores.

Senator Bristow. Would you limit the number of dry-goods stores in a small town?

Mr. Ingle. I do not know. You may get to that point. I am only suggesting that that is the reason—that you are now dealing with banking.

Senator Bristow. I am very much interested in this. Do you think we ought to prevent a bank from starting unless there is enough business there, according to your notion, to justify it?

Mr. Ingle. Not at all. I think a bank should start wherever it is practicable. I am a great believer in the virtue of individual initiative. But I believe if a man makes a mistake and starts a bank that can not succeed without having the rest of the country contributing to its support it is a very undesirable condition.

Senator Bristow. Please tell me how the rest of the country is contributing to its support?

Mr. Ingle. Well, on every exchange charge that is levied, sir, the man away from that community pays it.

Senator Bristow. Well, he may or he may not. Now, we will say that a merchant in that community has an account for a bill of goods in Baltimore, and this merchant sends a check to the wholesale house in Baltimore to pay his account.

Now, the wholesale house sells this man goods. He makes his own charge. The charge which he makes is sufficient so as to justify him in accepting a check in payment. He does not refuse it. He says, "That is all right. That is entirely satisfactory to me." The wholesaler deposits this check with his bank. The bank there in Baltimore says, 'This wholesaler's account is sufficient so that we are perfectly justified in handling this business for him without charging him anything for it. We are making money out of his account.' If it did not make money out of it, it would turn him down; it ought to. It is optional with the bank whether it accepts the wholesaler's account or not. It is optional with the wholesaler whether he accepts the merchant's check or not. The wholesaler is glad to do it, and the bank is glad to do it.

Mr. Ingle. But the bank's enthusiasm is more or less modest and moderate.

Senator Bristow. But it does it of its own free will. There is no law compelling it to do so.

Mr. Ingle. Oh, no, sir.
Senator Bristow. Then that check comes back. Now, the merchant pays enough for his goods in this transaction to take up these incidental expenses, or the price of the goods would go up so that he would pay enough. The community bears the burden. The country does not bear it.

Mr. Ingle. What is the difference between the community and the country?

Senator Bristow. Well, the difference between the community and the country is that the community is a part of the country, as I use the term.

Mr. Ingle. Oh, I beg your pardon.

Senator Bristow. Nobody else bears the burden of this except that community itself where the bank is located, and the bank is a part of the community.

Mr. Ingle. That particular community bears the burden of these transactions in that case. In another case another community would bear it. And, as I said, the country as a whole is levied upon in order that a bank in a community which would not otherwise support a bank may make its living.

Senator Bristow. Now, it seems to me that your argument is that instead of a little bank here with deposits of $50,000, as many of them have, and a capital of $10,000—that serves a very useful purpose, in my opinion, in the community, and is very beneficial not only to that community but to every other community that it touches, if it is run honestly—and we presume that they are—

Mr. Ingle (interposing). May I interrupt and ask you a question there?

Senator Bristow. Certainly.

Mr. Ingle. Where would you draw the line of capital responsibility in arguing for the multiplication of these small banks?

Senator Bristow. Just as many banks as the man wanted to put the money in to start.

Mr. Ingle. Well, let us take a bank of $10,000 capital. Would you say that that would be wise?

Senator Bristow. Certainly.

Mr. Ingle. Take a bank with $5,000 capital. Would that be wise?

Senator Bristow. Surely.

Mr. Ingle. Well, if there is no limit, then a bank with $1,000?

Senator Bristow. $1,000 is getting a little low.

Mr. Ingle. There must be some limit; there must be some margin which you would want there to protect business that would seek that bank. Now, there was a provision in the national banking act limiting the capital to not less than $25,000. In your view would that be proper?

Senator Bristow. Well, we will say $25,000. We will say that is a proper limit in a national bank. In the State banks they run down to $5,000. But say $25,000 for a national bank. Now, I believe that wherever there are men willing to put up the $25,000 and willing to go into the banking business they ought to have the opportunity to go in.

Mr. Ingle. Certainly. And wherever you will find enough men to start with a capital of $25,000, you will find enough men to deposit in that bank to make it self-supporting without "Passing the hat around."
Senator Bristow. Nobody wants to “Pass the hat around.” If there is no bank there, you send the business to a justice of the peace or some other officer.

Mr. Ingle. Excuse me, sir, I will have no account on that particular place. Checks are drawn only on places where there are banks.

Senator Bristow. But some other communities would have an account out there.

Mr. Ingle. I may have an account against a dry goods man or a country merchant at a crossroads store where there is no bank.

Senator Bristow. Yes.

Mr. Ingle. And if that is a good account, my statement to such a man will quite as effectively bring a remittance from him in the shape of some sort of a check as if he lived in a town where there were a dozen banks. If, on the contrary, he was not ready or willing to pay that account, I will have no more difficulty with him, practically speaking, because he lives in a country town, if I am obliged to send it to a lawyer. A lawyer would simply get in his automobile and go out there and serve a notice and hale him into court to defend his suit. That would make no difference.

Senator Bristow. If you send it to him by bill, if he has not an account at home, he has an account away from home?

Mr. Ingle. Five or ten miles away.

Senator Bristow. Five or ten miles away; and you would insist on him going there and letting that man collect the fee?

Mr. Ingle. Not at all “insist,” Senator Bristow. I would only suggest that that would be a fairer proposition than levying a toll upon the country as a whole, as would be necessary otherwise to support that bank.

Senator Bristow. I can not understand how you would levy a contribution upon the country as a whole where the community that supports the bank pays the toll.

Mr. Ingle. I am speaking of this community one day and the next community the next day, and so on.

Senator Bristow. But it is another transaction then.

Mr. Ingle. And the country as a whole supports this proposition. I must be extremely poor on using language if I have not made myself clear.

Senator Bristow. I think I understand. To sum up, you are opposed to so many of these country banks being established?

Mr. Ingle. No, sir.

Senator Hitchcock. I got the impression that you think there are too many of these country banks and that they ought not to exist unless they are able to exist without making charges on their checks.

Mr. Ingle. If you will disassociate those two thoughts. As to country banks, I think the more there are the merrier. I am in hearty accord with the multiplication of country banks.

Senator Hitchcock. Let me quote you again. You said, in substance, that if a country bank could not exist without making charges on its checks and collections that was the best evidence that that community was not entitled to a bank.

Mr. Ingle. That is right; I think I can affirm that.

Senator Hitchcock. Well, I think we understand your position, then. Perhaps you had better go on with your statement.
Mr. Ingle. As deposits of public funds are now placed there is little profit to the banks holding them. I am speaking of the normal deposits as they are usually distributed and not any special deposits for particular purposes.

The bill in requiring that such deposits be transferred to reserve banks will work no real injury beyond some momentary inconvenience. Here, again, the board, in naming an extravagant rate of interest to be paid on such deposits by Federal banks, could do member banks an injustice; but it must be assumed that no such intention is held.

In other words, the proposed law says that the Federal reserve board shall name the rate of interest to be paid by the Federal reserve banks on public deposits. That rate of interest paid is now 2 per cent. If, for instance, the Federal reserve board should say that the idea of profit to the Government, or for any other reason, for these Federal reserve banks shall pay to the Treasury Department 6 per cent on those deposits—and there is nothing in the law to prevent it—you can see that the Treasury would reap the benefit of a 6 per cent investment on its funds in the Federal reserve banks for distribution as dividends or otherwise. That is possibly a little farfetched, but I just suggest it because there is no limitation.

Senator Bristow. Why should the Government receive money on its deposits any more than the banks receive money on their deposits?

Mr. Ingle. Because the Government—I do not say that it should. I am dealing with a condition not a theory. I am trying to justify the presence in the law of that special provision.

Senator Hitchcock. I want to remind the committee that it is 3 o'clock now, and that Senator Thomas has an appointment with the committee for half past 3. Are you likely to be through at half past 3, Mr. Ingle?

Mr. Ingle. I will be through at any time that the committee will be generous enough to dismiss me. The Government will contribute to the working capital of these Federal reserve banks some sum of money between $150,000,000 and $200,000,000.

Senator Bristow. That is not capital; that is deposits.

Mr. Ingle. I did not say it was capital. That money will be loaned by these Federal reserve banks at whatever rate is determined upon—4 per cent, 5 per cent, or 6 per cent. It seems fair to give the Treasury 2 per cent, or some fair rate of interest on that contribution—very generous contribution of capital—and a permanent contribution you might assume, as the member banks will, either in the dividends or in their share of the 40 per cent excess earnings to be divided in lieu of interest on deposits, receive a certain part of the money earned by the Treasury deposits.

Senator Bristow. Suppose the surplus earnings all go to the Government and the banks do not get any of it, then what?

Mr. Ingle. I would not like to express my opinion on that in this company. I think that would be very arbitrary and unfair.

Senator Bristow. That has been advocated by nearly every witness we have had here who represented a large bank.

Mr. Ingle. I am sorry; I am out of touch with that.

Senator Bristow. That the bank should not be a money-making institution, and that any profit over the 5 per cent or 6 per cent, which ever is allowed, ought to go to the Government as an evidence
that the banks are not to make any money out of this regional reserve bank.

Mr. Ingle. Then, again, sir, it depends upon the shape that the law finally takes. I say if you have a 5 per cent dividend only, that is a very moderate contribution, with the interest the banks are all making. If you say 6 per cent dividend, it would be more attractive.

Senator Nelson. Suppose all the rest of the revenue went to form a sinking fund to take up the 2 per cent bonds?

Mr. Ingle. Well, Senator, I do not know that the banks would have much care as to what happened to the rest of that money, although it would be nice to feel that some definite provision was made for the redemption of these 2 per cent bonds at some time. I do not think the banks want the reserve banks to be a money-making institution. On the contrary, I do not think they should be, because they would be tempted to always charge more than was fair for rediscouts. But they ought to give such a return for the contribution made by the member banks as to make those member banks want to go in and not make them hesitate and go in simply because they feel they are obliged to.

Senator Reed. Mr. Ingle, how much interest do you think, or upon what basis do you think the reserve bank should fix interest charges to member banks, either for funds or for money issued; I mean funds on hand or money issued?

Mr. Ingle. I am glad you asked me that question. I think that the Federal reserve bank should, in fixing its discount rate, have respect for the local interest rate permitted by law in the particular State or territory from which the application for funds shall come. In other words, I think that it would not be fair for the Federal reserve board to charge a bank in a State where 6 per cent was the legal limit of interest, to charge that bank 5 per cent, if you choose, for money; and on the same day charge only 5 per cent to a bank located in a State in which the legal rate of interest was 8 per cent.

I think that the rate fixed at any given day should be so adjusted, on a sliding scale, as, having 6 per cent for a normal rate, because it is the common rate, and 5 per cent as the rate quoted—that where you are dealing with, let us say, 8 per cent territory, you should charge banks for funds in that 8 per cent territory 5 per cent, plus one-third of 5 per cent. So that the money shall be gotten out on these terms from these Federal reserve banks; as otherwise you can see that there will always—if money is plentiful and the reserve board chooses to charge, say, 4 per cent discount rate, that rate probably would not tempt a bank in territory in which a 4 1/2 per cent rate was then prevailing to borrow money, but it would very easily tempt a bank where loans were being made currently at 8 per cent; and it might be continuously borrowing and borrowing beyond the limit of safety.

Senator Hitchcock. If that was put into force, would not the effect be to lower the rate of interest from 8 per cent?

Mr. Ingle. Absolutely; and that is why I advocate it. You would find, before a great while, that instead of finding here 6 per cent territory and there 8 per cent territory, and 10 per cent contract rate, you would soon have a 5 and 6 per cent current rate all over the country.
Senator Hitchcock. If the banks were able to borrow at 4½ per cent, they would not charge their customers 8 per cent, 9 per cent, or 10 per cent, would they?

Mr. Ingle. Were you ever a customer in such territory, Senator Hitchcock?

Senator Hitchcock: I have been for the last 30 years. I suppose there has not been a period in the last 30 years in which I have not been a customer in such territory.

Mr. Ingle. Well, I can only say—

Senator Hitchcock (interposing). My experience has been that, as the banks got easier in money interest rates fell in the community; and I feel that if the banks in the West were able to rediscount their paper on the same terms as in the East we in the West would be able to borrow money on as good terms as in the East.

Mr. Ingle. You would in Kansas City, St. Louis, Wichita, and cities with 100,000 or 200,000 people or more; yes. But where you get into the interior, into the country where they have smaller banks; where they are wanting more capital all the time, and will always need all they can get and take all they can get, you will find that those banks will look upon the difference between the rate they pay and the rate they can get, and the rate they do get, as profit. It is perfectly legitimate profit.

But we are constantly being quarreled with now, when we in tight times have charged an interior bank 6 per cent; we are reproached with the suggestion that in charging them 6 per cent we do not permit the borrowing bank to make any profit that is material—a mere 1 or 2 per cent on the transaction. So I suggest that as furnishing a means by which the interest rates throughout the country will be brought to a parity.

Senator Hitchcock. Well, has the Government any right, in establishing a great facility like this, where it is laying a burden upon all the banks substantially equal, in proportion to their size; has it any right to discriminate against the customers of one bank and in favor of the customers of another bank?

Mr. Ingle. Yes; because that is one of the strongest arguments used in advocating 12 regional banks rather than 1 big bank, because those 12 banks are assumed to be 12 banks in order that they may safely respond to the needs and wishes of their own community; they know what their community wants and when they want it; and it is not proposed in this law, if I understand it correctly, to always have a uniform rate of discount.

Senator Hitchcock. That is one of the big questions before this committee.

Mr. Ingle. And I thought that this law was so drawn, because it was suggested that this central board had power, in fixing rates, to discriminate, if you choose to use that word, among different sections of the country.

Senator Hitchcock. Well, there is going to be a very strong opposition to that doctrine. We think out West that it would be just as reasonable to compel us to pay more for our postage stamps than the people of the East as it would be to compel us to pay a higher rate of interest on the money we use than the people in the East.

Mr. Ingle. There is this broad difference, I suggest: In the new and undeveloped parts of the country there is no limit to the demand
for capital—essentially so. Everybody in some of the new sections of the country is living as if they had only 30 days to live and after that the deluge. They want to do everything in the next three or four months. If they can get hold of that money in any way, they will get it, and they will at once spend it.

Senator Hitchcock. That is a very popular idea among people that have not been out West; but I assure you that we have banks which are just as conservative in their dealings and business men who are just as conservative in the West as there are in the East, and we feel that we are entitled to the same protection from the Government that the people in the East receive.

Mr. Ingle. What makes the difference in the interest rate between Idaho and New York is the demand. That does not mean, because of the difference in interest rate, that the banks in Idaho are not in the hands of people as thoroughly competent as those in New York.

Senator Hitchcock. I do not know what the difference in the interest rates between Idaho and New York is; but I know that we often have interest rates lower in Omaha than they are in New York.

Mr. Ingle. But Omaha is very close to the center, not of civilization, but of population—well, I want to withdraw that first suggestion. [Laughter.]

Senator Nelson. Call it the center of gravity.

Senator Hitchcock. Well, I will not interrupt you too much.

Senator Shafroth. Have you finished your prepared statement?

Mr. Ingle. Yes, sir; and I appreciate very much your consideration.

Senator Weeks. I want to ask you two or three questions. If we pass a bill similar to the House bill, can you think of any good reason why a bank in Omaha, or Idaho—as you have used that illustration—having paper that conformed to the provisions in the bill, should not be able to get its accommodation on exactly the same terms as the bank in New York, or Boston, or Baltimore?

Mr. Ingle. The only reason I can think of—and that is the controlling reason—is this: That that bank in Idaho—I am speaking impersonally now, you understand, of course—that that bank in Idaho is using the facilities of a bank serving other portions of the country, is supposed to make out of those facilities more profit than the bank in the more thickly settled and more thoroughly financed sections of the country, if you choose to put it that way.

Senator Weeks. Now, let me suggest this to you: Of course, Idaho is developing more rapidly than New York or New England.

Mr. Ingle. Exactly.

Senator Weeks. And there is more opportunity for development there, and more money is needed for that development. But we are establishing a national system now; and a national system should be national in every respect, it seems to me; and I believe that if the rate for rediscounts were made the same for banks in every section of the country, it would take money from the older sections into the parts of the country which need to be developed, and would bring about that development very much quicker than if the present high rates of money are going to continue; that it would bring down the rate to every borrower in those sections.
And it does seem to me that there is no economical or sound reason why, if we are establishing a national-banking system, the same rate of interest should not obtain in every section of the country.

Of course, that does not mean that private joint stock banks may not loan at a higher rate to their customers in Idaho than a similar bank does in New York. But the rate to the Idaho borrower is going to come down as a result of that policy; and the rate to the New York borrower probably will not increase.

Mr. Ingle. If that should prove to be true, sir, the result would be in line with the wishes of all of us, I am confident.

Senator Weeks. Undoubtedly.

Mr. Ingle. We want to attain the situation in which the rate will be uniform the country over. After that has been done, then all banks alike will reap approximately the same profit from their membership in the Federal reserve banks.

Senator Weeks. Well, I have not any doubt that that will be the result.

Now, let me ask you, were you in Boston at the convention the other day?

Mr. Ingle. Yes, sir.

Senator Weeks. You testified this morning that you had bank deposits aggregating, perhaps, $7,000,000. Are they generally from the South?

Mr. Ingle. It is pretty hard for me to give you exact figures; but if you will permit me to approximate, I will do so. Bank deposits in any reserve city other than the central reserve cities are certainly of two, and possibly of more, kinds.

We first have reserve deposits proper. Speaking in a general way and as of Baltimore or any other secondary reserve city, those reserve deposits proper come from the territory immediately tributary to such city, from interior Maryland, northern Virginia, and lower Pennsylvania, if you choose, in the case of Baltimore. So it is with every city. Our bank will clear the miscellaneous business for that territory in connection with the reserve account, which is more or less generous in relation to the volume of country checks handled for such interior accounts. Now, another class of bank balances is made up of deposits from cities like Chicago, New York, Philadelphia, Cincinnati, or Pittsburgh, if you choose. Those are balances and they are very material balances. In fact, the balances, in the matter of figures, are very much larger than the reserve balances proper. But those balances simply represent a method of payment for services rendered in the collection of interior checks for account of all those banks in these larger cities. So I say that out of a $7,000,000 bank deposit line probably half of it is made up of reserve balances proper and the other half of balances from the reserve cities or central reserve cities of the country for which a direct service is performed.

Senator Weeks. That answers my question. How many banks deposit with you?

Mr. Ingle. We have 800 out-of-town accounts.

Senator Weeks. You are in fairly close touch with those banks?

Mr. Ingle. They are largely through the South.

Senator Weeks. Have you talked with them about this legislation?
Mr. Ingle. Only incidentally, sir. I have not had the opportunity, sir; only as they came in and out on their way down.

Senator Weeks. Have you tried to influence them either in support of or opposition to this bill in any way?

Mr. Ingle. Absolutely no. I have written one letter, and that was in response to an invitation.

Senator Weeks. Did you vote for the resolutions that were adopted by the Boston convention?

Mr. Ingle. The resolutions commending the proceedings in the Chicago conference?

Senator Weeks. Yes.

Mr. Ingle. I did. I will tell you why, if you want me to pursue it further.

Senator Weeks. I would be glad to have a brief explanation.

Mr. Ingle. I am one of those who think the bill is very largely good. I think, however, it has in it two or three features that are bad from my point of view. When you jumble them up and ask a vote for an entire proposition, in which is to be found imbedded two or three points which economically might appear to you to be radically wrong, you feel you are justified, shall I say, in protesting against the passage of that bill with those elements in it. There was no way provided by which we could separate the questions under discussion. We had to vote aye or nay on a particular offer—Do you or do you not approve the proceedings of the Chicago conference?—which covered, I think, 10 or 12 recommendations on matters of differing degrees of importance. So I think that was responsible for quite a fair number of votes aye.

Senator Weeks. Do you know Mr. Scudder, of Richmond?

Mr. Ingle. Yes; I saw Mr. Scudder, and I saw him put up his right hand, the one lone man on the premises.

Senator Weeks. Is he one of your correspondents?

Mr. Ingle. No. I say "No" hurriedly. Is his bank the Richmond Bank & Trust Co.?

Senator Weeks. Yes.

Mr. Ingle. I think not, sir.

Senator Weeks. Then you were not in sympathy with his position?

Mr. Ingle. As an abstract proposition, I think yes, because he took his position as a sort of protest, if you choose, against combining in a single vote the approval or disapproval of 10 or 20 different principles.

Senator Weeks. Do you see anything in the financial situation which looks now like an emergency?

Mr. Ingle. No, sir; I do not.

Senator Weeks. Do you approve of the course which is being followed to thoroughly thrash out all of the questions relating to this subject?

Mr. Ingle. Most heartily, sir. And I think the better you thrash it out, the more workable a bill you will get, and that is all the banks want.

Senator Weeks. I think you have assisted us in doing that.

Mr. Ingle. You are very generous, sir.

Senator Reed. Now, in a word, your position is this: You think the bill, in the main, has the elements of a good bill?
Mr. INGLE. I do.

Senator REED. And you think it needs some changes in order to make it a better bill?

Mr. INGLE. I do.

Senator REED. And some of those changes you think are very vital and some you think are not so important?

Mr. INGLE. If you will permit me to repeat—the two vital things to which I object, as found in the bill, are, to me, the unnecessary going out of the way to make the Government guarantee the credit instrument, and, second, the placing in the bill of the words "lawful money," when referring to the redemption of the same credit instruments.

Senator NELSON. You believe they should be redeemed in gold?

Mr. INGLE. Well, I think it means no more to say gold under existing statutes. I think it a pity to have first said "gold," and then to put the "lawful money" afterwards.

Senator SHAFFROTH. Don't you think that putting in the "lawful money" has a tendency to preserve the gold reserve and to preserve, consequently, the gold standard?

Mr. INGLE. I can follow the reasoning adopted by the chairman of this committee. I can understand that to make it a little difficult to get anything is to conserve your store of that particular thing.

Senator SHAFFROTH. When it creates 12 distinct centers that will be bidding for gold against the Government, will it not require a great deal more gold to make those redemptions if you have a deposit of 33 per cent in each one of those reserve districts, instead of having the same thing in the General Treasury?

Mr. INGLE. Mr. Senator, I think I ought to say here I am getting on awful thin ice. I am an economist, sir, and I am principally a practical banking man, and I do not know anything about that end of it.

Senator SHAFFROTH. Don't you know when money like this is redeemable in lawful money you can save a great deal in the quantity of the reserve? For instance, suppose I have a $1,000 bank note, United States note, redeemable in lawful money, and I go to a United States bank and say I want gold. The bank says, "No; I won't give you gold; we have not got the gold in the treasury; we will give you lawful money." I say, "All right." Then the bank says, "If there is going to be a run on the gold, I will just take that and lock it up." Then (suppose I am in Baltimore) I take that lawful money and I come to Washington, and I go to the Federal Treasury and present that and say, "I want $1,000 in gold." The Government says, "Certainly," and gives me the $1,000 in gold. Then the Government says, "If we are going to have a run on gold, we will lock that up." In that way for $1,000 in gold the Government has locked up $2,000 of money payable in gold, and that would have a tendency for the Government not to keep so large a gold reserve, would it not?

Mr. INGLE. As I see it, no. But, as I say, I may be very wrong in anything I suggest along this line. I say this: If we could feel away back in the heads of some of us that there was no idea to enlarge the interpretation of "lawful money" there could be no objection to employing that term. Our present lawful money, while it is safe and good, there is a limit to its value. That very injection of the words "lawful money" in a thing which first said "gold," which for
one instant would indicate the want of gold dollars, would indicate to
a man a kind of apprehensive measure, which would draw the atten-
tion of the country to it if there should be proposed some little law
adding very largely to the volume of "lawful money." It would be
a very troublesome thing to have in the law. Then there would be
no gold at all; gold would hide quickly.

Senator Shafroth. Don't you think it has been a great advantage
for national-bank notes to be redeemable in lawful money? If they
had had to keep gold for the redemption of the national-bank notes,
it would have required an enormous amount of gold. As it is,
$150,000,000 in gold provides for the redemption of $346,000,000 of
greenbacks, and $700,000,000 of national-bank notes. That is all the
gold that is required. But if you make everything redeemable in
gold, you have got to have $500,000,000 or $600,000,000 locked up in
the Treasury or in these regional reserve banks.

Mr. Ingle. We do not care where it is, as long as it is there.

Senator Shafroth. You do not want to make it hard for the Gov-
ernment to maintain the gold reserve?

Mr. Ingle. No. I do not think the Government ought to guarantee
the notes; I think the responsibility should rest with the banks.

Senator Shafroth. The people do not think the banks ought to
have control of the gold reserve as much as the Government ought to.

Senator Reed. Let me ask there: Is it not true the safer a currency
system is, the easier it is to get gold; and the more unsafe it is, the
more likely it is for the gold to run away and hide? Is not that the
universal rule?

Mr. Ingle. Here again, Senator, you have got me, I am afraid. I
am getting in very deep water on this economic question. I can not
see it so. The point I wanted to draw out was that there was no
necessity for getting the Government to occupy this situation as a
guarantor. We are teaching our people, it seems to me, that there is
something peculiar attached to the Government's credit that does not
attach to the credit of any individual. That is not true, except in
degree. A credit of the Government of the United States is not any
better than your credit individually, I take it.

Senator Reed. I wish I could convince the people that way.

Mr. Ingle. You can only tax to raise money; you can tax to a
certain limit, and beyond that limit the people begin to get restless.
Why, then, assume directly a responsibility for 1,000 millions of cur-
rency when that currency can be just as good and just as readily regu-
lated in volume and character without that guaranty as with it?
That is the only point I make against that, sir.

Senator Reed. You do not understand my question I am sure. If
you have a large currency resting upon a very small gold basis, is it
not very much more likely there will be a discarding of that cur-
rency and a raid on the gold than there would be if there was a very
large gold basis?

Mr. Ingle. Oh, yes; of course; and we have provided in this act
for a 33 per cent basis. I think that is more than enough.

Senator Shafroth. But they also provided in the act of 1890 and
of March 14, 1900, that there shall be a gold reserve, and the Gov-
ernment is obliged to maintain the parity of all forms of money.

Mr. Ingle. I believe that was put in there in absolutely good faith,
and I only say it is a pity to inject that thing, whereas the Govern-
ment could have a reserve by simply leaving the words "lawful money" out of the bill.

Senator Shafroth. But it would make an enormous burden on the Government to maintain the reserve in gold.

Mr. Ingle. I would not have the Government have anything to do with it. That is the point I make. The banks should have to maintain that gold.

Senator Shafroth. The bill is predicated on a different basis.

Mr. Ingle. Exactly.

Senator Nelson. Ought not the banks to supply the currency to maintain the gold?

Mr. Ingle. It should be their business to maintain it at any price, profit or loss.

Senator Shafroth. Do you think the law says those notes are redeemable by gold?

Mr. Ingle. The bank notes are.

Senator Shafroth. No; they are redeemable in gold or lawful money.

Mr. Ingle. The lawful money will bring the gold.

Senator Shafroth. And the same way under this bill, if you have the gold and lawful money, the lawful money would bring the gold and prevent a raid.

Mr. Ingle. Oh, yes. But if it stays where it is to-day it could do no possible harm.

Senator Shafroth. But if it stays where it is it would necessitate the Government maintaining a reserve of four or five times what it does now, would it not?

Mr. Ingle. Yes; but if the Congress shall enlarge the "lawful money" by including everything else we are really in bad shape.

Senator Shafroth. You can imagine difficulties; but there is the pledge of the Government against it enacted in this very bill.

Mr. Ingle. I have no selfish considerations to urge here, Senator; you can see they are not.

Senator Weeks. Mr. Ingle, when a person is entitled to something and understands there is an attempt in some form to prevent his getting it, do you not think it is inclined to make him more anxious?

Mr. Ingle. Altogether anxious.

Senator Shafroth. Has there been any anxiety about cashing the national-bank notes?

Mr. Ingle. My recollection is, in the panic in the early nineties, when the people wanted to hoard currency, they went into a bank and, if it was possible for them to do so, they took gold; and in 1907, when they wanted to hoard currency, they went into a bank and took what was given to them, without any difficulty.

Senator Shafroth. The reason for that was there was a deficiency in the Treasury and money had to be borrowed under the excuse of maintaining the gold reserve, when, as a matter of fact, it was to maintain the expenses of the Government.

Senator Nelson. Here is another point I want to call attention to—

Senator Hitchcock (interposing). Gentlemen, the hour of 3.30 has arrived, at which time Senator Thomas was to appear before the committee. He has stated, however, he will give way to Mr. Bucholz, of the Omaha National Bank, who is compelled to leave,
and Mr. Bucholz expects only to detain the committee about 15 minutes, unless the committee detains him longer. So, if that is agreeable to the committee, we will call Mr. Bucholz.

STATEMENT OF W. H. BUCHOLZ, VICE PRESIDENT OF THE OMAHA NATIONAL BANK, OF OMAHA, NEBR.

Senator Hitchcock. Mr. Bucholz, please state for the benefit of the committee your name and your banking connections.

Mr. Bucholz. W. H. Bucholz, vice president of the Omaha National Bank, of Omaha.

Senator Hitchcock. How large is the Omaha National Bank?

Mr. Bucholz. It has a million of dollars capital and surplus and profits of $800,000, and deposits of about $12½ millions of dollars.

Senator Hitchcock. What size is Omaha?

Mr. Bucholz. Omaha proper has probably 125,000 people.

Senator Hitchcock. Do you prefer to make your statement in your own way, or shall I ask you some questions?

Mr. Bucholz. I would be glad to have you ask me some questions, if I can answer them.

Senator Hitchcock. To what extent have you deposits of country banks?

Mr. Bucholz. About between $5,000,000 and $6,000,000. It fluctuates between $5,000,000 and $6,000,000.

Senator Hitchcock. Can you give an estimate of the total country bank deposits in Omaha?

Mr. Bucholz. Yes. Approximately $33,000,000.

Senator Hitchcock. $33,000,000 of country bank deposits in Omaha?

Mr. Bucholz. Yes; Omaha and South Omaha.

Senator Hitchcock. And what do the total bank deposits of Omaha and South Omaha amount to?

Mr. Bucholz. $55,000,000.

Senator Pomerene. You have more country bank deposits than you have local?

Mr. Bucholz. Yes.

Senator Hitchcock. I think you had better proceed with your own views about this bill.

Mr. Bucholz. My statement, gentlemen, will be very short. In justice to myself I should explain I had no opportunity to prepare a regular review of this bill. The request to come here and appear before you came to me at Boston, and that session was very busy there and I had little time to get down and analyze seriously this proposed currency bill as I should in order to appear before so important a body as that before whom I now stand.

It seems to us in the West that we owe so much to the independent banking system, which we have had there, for our development and progress that we can see no good in what seems to us an attempt to destroy the national banking system and substituting some other with the provisions for which we are not in entire accord. In Nebraska the sentiment is very strong against this new currency bill. I might say that in my own contact, through correspondence and personal interview with national banks of that State, I know of many
of them who are preparing now to go out of the national banking system, if this bill becomes a law, and to join the State banking system, and that even in view of the fact that we have a guaranty law there to which we are upon principle opposed as national bankers. But we would rather take that medicine than engage in this system, which we think will do much to retard our development and our growth in Omaha proper. I might mention the Omaha National Bank as an example, because I have made figures on that. Our computation convinces us that we shall lose in our reserve balances something over $2,000,000—perhaps two million and a half.

Senator Hitchcock. Those are the balances with country banks?

Mr. Bucholz. Yes, sir; with us.

Senator Hitchcock. What do you mean? That they will lose those balances?

Mr. Bucholz. They will have to withdraw them when they come into the system to place them with the Federal reserve banks; and, of course, if we have to put up money for it, to get that money we will have to contract our loans.

Senator Reed. Now, let me ask you a question: Suppose this system goes into effect and suppose the country banks withdraw their deposits from your banks. You, of course, would not like that. How are you going to help yourself on that by organizing a State bank? You will still be out those same deposits.

Mr. Bucholz. We won't have to put up any reserve with the Federal reserve bank nor place 5 per cent of our deposits with the Federal reserve bank.

Senator Reed. Don't they keep any reserve under the State law?

Mr. Bucholz. Yes.

Senator Reed. How much?

Mr. Bucholz. The same as the national law.

Senator Reed. Would you be, then, any better off?

Mr. Bucholz. We would have control.

Senator Reed. You do not have control of the reserves; you are obliged under the law to set aside, to segregate that amount and hold it as a reserve.

Mr. Bucholz. Yes; I know. That reserve has been altogether too scattered, and we have only learned in recent years it is there for a purpose, and that purpose is to use in an emergency. We have been taught that by a bitter lesson.

Senator Hitchcock. How much capital would your bank have to contribute to the proposed system?

Mr. Bucholz. $200,000.

Senator Nelson. And how much in the 5 per cent of deposits?

Mr. Bucholz. Approximately between $600,000 and $700,000.

Senator Nelson. So you would have to contribute from $800,000 to $900,000?

Mr. Bucholz. Yes; in addition to the loss of our deposits. Of course, we have our present reserves, and as to our own contribution to the reserve, it would not make any difference. We would have to draw that from Chicago, St. Louis, New York, and reserve centers.

Senator Pomerene. What are the actual reserves which you carry on an average?
Mr. Bucholz. With our own institution the real reserve will run 30 per cent, and the apparent reserve, made up of float and all that sort of thing, will very often go to 40 or 50 per cent.

Senator Pomerene. You mean real reserve, that which you carry in your own vaults?

Mr. Bucholz. No; what I mean is actual money we carry in our own vaults and real money with our correspondents. It does not mean collection accounts, or anything of that kind.

Senator Hitchcock. Mr. Bucholz, the witness who preceded you stated it was his custom to permit his New York correspondent to charge to his account checks which came into his possession drawn by depositors of the Baltimore bank. Do you allow your New York correspondent to charge to your account a check which one of your customers draws on your bank which may fall into the hands of your New York correspondent?

Mr. Bucholz. We do not.

Senator Hitchcock. Do you know what the custom generally is with banks?

Mr. Bucholz. I heard the testimony of the gentleman who preceded me, and it is the first time I knew that was permitted.

Senator Hitchcock. You never knew of it being done before?

Mr. Bucholz. No, sir. I would like to explain a little further as to that, that the gentleman referred to the fact that some banks carry two accounts, and they remitted weekly or semiweekly or twice a week, as the case might be. We do not do that way. These checks that come to us from our correspondent banks we send them a draft for them on the very day we receive them. We do not place them to anyone’s credit, or carry them as a float to bolster up our figures, or anything of that kind, and I believe that is the practice—I know it is throughout the Mississippi country.

Senator Hitchcock. Do you see any danger in permitting a correspondent bank, or the proposed reserve bank, to charge against a member bank a check which had been drawn by an individual depositor on a member bank?

Mr. Bucholz. I do. If the New York correspondent paid a check drawn on the Omaha National Bank they would pay that check with our own funds, with the funds of the Omaha National Bank, and send it to us. After having once paid the check we, of course, have no recourse so far as we are concerned whether the check is good or not, or whether it affords indorsement, or anything of that kind. The check is paid and the man has his money.

Senator Pomerene. In that event would your New York correspondent stamp it paid?

Mr. Bucholz. I do not know as to that. But, in any event, if they paid it with our money, the check is paid, and all defense against it, if protested, would be shut off. That is one of the main reasons why that should not be permitted. Aside from that, we could not tell how much money we had with our New York correspondents.

Senator Reed. Let me see if you are accurate about that. The Government establishes a Federal reserve bank. That bank is composed of a number of elements, some 600 or 700 national banks constituting its stockholders. It is a separate entity; it is a thing itself; it can sue and be sued. You are a stockholder only. You deposit with it $100,000, and a man, upon a false check, drawn upon the
bank at Omaha, presented at that counter, receives $100,000. You say it has been paid out of your own money, and therefore you would have no recourse. I do not agree with you. That bank up there is just as separate from your bank as one corporation is from another, and if it paid a check that was a bad check it would be out, not you; I think you are mistaken about that.

Mr. Bucholz. On that question were discussing the relations between the Omaha bank, for instance, and its New York correspondent. We were not discussing the proposed law.

Senator Reed. If your Omaha correspondent puts money in there and it paid your money out, you would have recourse.

Mr. Bucholz. The question is, would you if it had actually paid the money on checks?

Senator Reed. Unquestionably.

Senator Pomerene. Every time a man would present a check to your New York bank, that is of itself a representation that it is a bona fide check.

Mr. Bucholz. But that check is not payable in New York.

Senator Pomerene. If it should be, in the instance you speak of, and it would develop afterwards it was a forged check, you would have recourse on that bank.

Mr. Bucholz. Perhaps so—in case of forgery.

Senator Reed. And in the case of overdraft.

Mr. Bucholz. Suppose a man in New York who held that check an innocent holder, and when it came back to us we found the bank had paid an absolutely bad check and charged it to the Omaha National Bank; I think they would have a good stand and it would have to stand paid if it was paid out of our funds.

Senator Pomerene. Even if there were no funds in your bank at the time the check was drawn?

Mr. Bucholz. Yes.

Senator Pomerene. Oh, no.

Senator Reed. The rule will not be different now, where one of your correspondents pays a check that ought not to have been paid; nor is the rule now different with reference to that correspondence than it is with reference to any other bank with which you have no funds. That bank pays it at its peril. The danger in this system lies in the Federal reserve bank cashing bad checks and itself losing the money.

Mr. Bucholz. Well, according to my information and belief, and according to my recollection of court decisions, a bank check—a check drawn on a bank—is a vastly different thing than a bank draft drawn by one bank upon another. A check is payable at one place. It is an order from one man to another to go to that place to get the money.

Senator Reed. That is true.

Mr. Bucholz. And he has no business in going to any other place.

Senator Reed. Therefore if a bank takes a chance of cashing it, it does so at its own peril.

Mr. Bucholz. Exactly. But if you arrange, your correspondent may cash those checks and charge them to your account; that is a vastly different thing.

Senator Reed. That is a different thing; you have a new element, a contract in which you authorize your correspondent to use your funds to cash that check.
Mr. Bucholz. Exactly.

Senator Reed. In that case if it uses ordinary diligence, the same as the law imposes upon anybody except a bailee without hire, it would, of course, go acquitted.

Mr. Bucholz. That was the question under discussion, if a New York correspondent paid your checks and charged them to your account.

Senator Nelson. If the practice which this banker from Baltimore stated did actually exist, the bank paying it would simply be the agent of the other bank, and it would bind its principal.

Mr. Bucholz. That is exactly the point I was trying to make.

Senator Reed. It was because they had authorized them.

Senator Nelson. Of course, a different rule would apply if it had no right to do that.

Senator Bristow. Senator Reed, that is the position the gentleman has taken from the beginning—that it would be unsafe to authorize the correspondent to charge to his account the checks when they were presented.

Senator Nelson. But that is the principle that is sought to be applied in this bill—to charge it.

Senator Hitchcock. For the present, Mr. Bucholz, the practice is that banks do not allow their reserve correspondents to charge to their accounts checks upon them which come in the regular course of business.

Mr. Bucholz. Yes, sir; that is true with our correspondents, and true with those banks that deposit with us.

Senator Hitchcock. You started to say when you were interrupted something about the method you would take to raise the necessary money, to raise the contribution you are required to make to the capital stock of the reserve bank, and also to secure the money that will be necessary for you to have in order to transfer the country deposits that you now hold.

Mr. Bucholz. I see no way except to get that money by calling in some of the loans and getting it that way.

Senator Hitchcock. Have you made any estimate at all as to the amount of loans that would be called, for instance, in the aggregate in Omaha?

Mr. Bucholz. Yes, sir. Several of us were discussing that matter a short time ago—not with any plan to that effect, but it just came up—and we began to figure there, and it is between $8,000,000 and $10,000,000 out of Omaha.

Senator Hitchcock. You think the loans will have to be reduced?

Mr. Bucholz. Yes; it will take that out of Omaha. Of course there is some excess reserve in Omaha now. Things are fairly easy there, and there are no signs of a shortage of money, and part of that would be made up from the excess money we now carry. It would not all have to be called, but I think it is safe to say that perhaps $5,000,000 at least, in that city, would be liquidated in the way of calling in bills receivable.

Senator Hitchcock. Do you think that same process would be necessary in St. Paul, Minneapolis, Kansas City, and other reserve cities?

Mr. Bucholz. Most assuredly. I can figure it no other way.
Senator Reed. If that was done, what would be the effect on business?

Mr. Bucholz. It would be bad.

Senator Reed. What is your suggestion as to the remedy?

Mr. Bucholz. My suggestion is that the Federal reserve banks do not have any capital stock. I can see no reason why the banks should contribute to the Federal stock. What is proposed to do with this stock of the Federal reserve bank? Why should you have one? That is one thing.

Senator Reed. Of course the richer those banks are the more money they have in a time of stress to advance. That is one thing.

Mr. Bucholz. True enough; but if you have impoverished the other banking institutions in the meanwhile, you bring on the necessity for calling on the Federal reserve bank very much sooner; that is all.

Senator Pomerene. You have already in your vaults, I take it, a good many securities that do not pay you more than 5 per cent a year?

Mr. Bucholz. Not a great many. We have some. We have some bonds.

Senator Pomerene. You, I believe, have $1,000,000 capital stock?

Mr. Bucholz. Yes.

Senator Pomerene. And this would require $200,000. Of course, you do not take that out of your capital stock?

Mr. Bucholz. You pay for that out of your deposits.

Senator Pomerene. And you, as a rule, have a very substantial sum, at least, invested in securities in the shape of bonds, etc., that do not pay more than 5 per cent?

Mr. Bucholz. True; but we carry those because they are convertible if needed.

Senator Pomerene. Now you can go to a bank and rediscount?

Mr. Bucholz. Yes.

Senator Pomerene. And you can do it under the present system; that is true?

Mr. Bucholz. Under the new system, it strikes me, we shall become sort of note brokers and commission merchants, and take money at one rate.

Senator Hitchcock. Does your bank frequently rediscount paper now?

Mr. Bucholz. For ourself?

Senator Hitchcock. Yes.

Mr. Bucholz. Not at all.

Senator Hitchcock. You do not rediscount?

Mr. Bucholz. No, sir.

Senator Hitchcock. You do not borrow of other banks?

Mr. Bucholz. No, sir; we have not done so for years.

Senator Hitchcock. Is that generally true of any other banks of Omaha?

Mr. Bucholz. I think so. Four or five of the larger banks there have not borrowed any money for quite a number of years—not since 1907, at least.

Senator Reed. You really think most of the banks in Nebraska would go out of the banking system?

Mr. Bucholz. If the bill passed in the present form, I am certain of it.
Senator Reed. What have we got to do to keep you from going away and leaving us?

Mr. Bucholz. By making it attractive to come in.

Senator Reed. How? What is your suggestion?

Mr. Bucholz. In the first place, making it so attractive it won't be considered as compulsory. A man does not like to be forced to do a thing.

Senator Reed. You say, "make it so attractive." Of course, a man might say to an ill-favored youth to make himself so attractive that the ladies would all like him. But that would not help out much unless you could give him a recipe. I wish you would tell us how to make it attractive. In all seriousness, what is necessary to make it so that the banks will want to come in?

Mr. Bucholz. It all depends upon what you have in mind as to the purpose of the bill.

Senator Reed. What must be done to the bill so as to make you feel you will be justified in coming in, having in consideration, of course, that the bill will have to be just to all other interests in the country?

Mr. Bucholz. Well, it must be workable in all its features. I think there are some—

Senator Hitchcock (interposing). Specify. You indicated one objection, that you thought you ought not to be required to subscribe to the capital stock.

Mr. Bucholz. Yes.

Senator Hitchcock. Is there anything else?

Mr. Bucholz. I think if the Government receives interest on its Government deposit with that Federal reserve bank the bank should receive interest on its bonds with the Federal reserve bank. That is another point.

And then the main point is that some provision should be made to take up the 2 per cent bonds.

Senator Reed. We are talking about what is necessary to do to get you in.

Mr. Bucholz. That is one of the things.

Senator Reed. Of course if the Government is going to repudiate its 2 per cent bonds, they can do it just as well with you out as with you in. That, it seems to me, is a sort of side proposition. Not that I am intimating that I am in favor of any such proposition, and I think I can speak for this committee and say that this committee does not propose to try to do anything like that here.

What have you got in the way of Government bonds?

Mr. Bucholz. $1,000,000.

Senator Reed. And you have your circulation on that?

Mr. Bucholz. Yes, sir.

Senator Reed. You buy these bonds and have the circulation privilege?

Mr. Bucholz. Yes, sir.

Senator Reed. If you are allowed to continue a circulation privi-lege, you do not want to keep your bonds?

Mr. Bucholz. No, sir. If we are going to have a new system, I would like to start new.

Senator Reed. Suppose we do have a new system which provides that there can be other money issued, and yet suppose, as a part of
that system, we were to maintain substantially the present system and build upon it, allowing the national-bank notes to still continue to exist, issuing to them as we do now. Do you think that we ought, under those circumstances, compel you all to surrender your bonds?

Mr. Bucholz. That would be an entirely different matter.

Senator Reed. If you build upon the present system and extend its usefulness and ability to serve the public, certainly I should be glad to continue under it and retain the bonds.

Senator Reed. All that it is proposed to do, with the exception of the provision for the retirement of one-twentieth of the national-bank notes each year, is to provide a system by which the bank can get additional currency, which is supposed to be obtained only for a short time, on paper that liquidates itself. That, of course, would not impair the value of your national-bank circulation?

Mr. Bucholz. No; except that the redemption is not in cash, but that is in 3 per cent bonds.

Senator Reed. I am talking about leaving out the 3 per cent bonds. You mean the 5 per cent from year to year?

Mr. Bucholz. Yes.

Senator Reed. And let you go along as you are now, you would be satisfied, as far as your bonds were concerned. We have about $700,000,000 of bonds at about $700,000,000 of circulation.

Now, if we provide that these bonds, when they are redeemed, 5 per cent of them each year, that the Government should take them at par——

Mr. Bucholz (interposing). And pay cash?

Senator Reed. And pay cash. That would——

Mr. Bucholz (interposing). That would overcome my objection; yes, sir.

Senator Reed. That would overcome your objection?

Mr. Bucholz. Yes, sir.

Senator Reed. There is nothing insurmountable in all that?

Mr. Bucholz. Not that I see.

Senator Hitchcock. Have you any 2 per cent bonds to secure deposits?

Mr. Bucholz. No, sir. We have threes to secure deposits, if I am not mistaken. I think the United States deposits are covered by 3 per cent bonds.

There is just one more point I wish to discuss, and then I am through. That refers especially to the country banks in Nebraska. That relationship has been built up from early times. For instance, 31 years ago I was a country banker and so remained for 20 years, and I lived in a small town, grew along with it, brought together the local capital that could be obtained, and borrowed from the outside all we could, so that that meant building up a town and a community. It is an agricultural community. It has been very prosperous. If the people have surplus money, the banks will reflect that condition. The paper that is made there, to a large extent, consists, for instance, of paper given by cattle feeders—steers to be put in a feeding lot and fed—which will take perhaps four or five or six months to mature. That is a very important part of Nebraska's industry, and such paper as that would not be eligible under this proposed law.
Senator Pomerene. Take the average country banker, such as you have out in your agricultural communities. What portion of their loans would you say were made each month?

Mr. Bucholz. New loans?

Senator Pomerene. Yes; new loans.

Mr. Bucholz. Well, a very small per cent at certain seasons, and a very large per cent at other seasons.

Senator Pomerene. Can you give us any estimates?

Mr. Bucholz. Probably 80 per cent of the loans in the country bank, normally, are made in the fall of the year.

Senator Pomerene. During what months of the year?

Mr. Bucholz. From September to January.

Senator Pomerene. That is four months.

Mr. Bucholz. Yes; and they run over until the spring months.

Senator Pomerene. Yes; I understand. You say 80 per cent of the loans are made in four months. What portion of that 80 per cent is made in each of those four months?

Mr. Bucholz. I am not able to say.

Senator Pomerene. Of course, it would be distributed along during all of that time?

Mr. Bucholz. Yes.

Senator Pomerene. That would be gradually maturing?

Mr. Bucholz. It would, depending a good deal on conditions. Some years a farmer will hold his wheat and will not sell it in August; he will sell it perhaps in December, and he may hold it until March, and borrow the money to hold the wheat.

Senator Pomerene. All of which would seem to indicate to me, at least, that the notes held by the bank were constantly maturing.

Mr. Bucholz. Certainly, but they are renewed. They renew them; they are not paid.

Senator Pomerene. Very well. There would not be any time during the year, would there, when the bank would not have a considerable amount of paper that was maturing in from 90 to 120 days?

Mr. Bucholz. Yes; it would mature right along, but the country banker knows to a certainty he can get that money at that time.

Senator Pomerene. That paper then could be used for discount purposes, or rediscount purposes under the provisions of this bill?

Senator Hitchcock. I think not, Senator Pomerene. The definition of commercial paper is paper which grows out of the commercial transaction. It liquidates automatically. This paper which Mr. Bucholz refers to does not liquidate.

Senator Pomerene. I had in mind that there might be some possible change in the definition of commercial paper here. I was addressing my questions rather to the fact that your paper was maturing from month to month.

Mr. Bucholz. In my own bank, for instance, our paper is paid off at the rate of $1,000,000 a month. That has been the record for three years; that amount actually paid, and we would take care of ourselves very nicely under this provision.

Senator Pomerene. I would like to ask you another question. Have you figured out the advantages and disadvantages of the proposed measure, as compared with the present system, so far as they relate to your own bank?
Mr. Bucholz. Yes.
Senator Pomerene. Have you those figures with you?
Mr. Bucholz. No; I left them at home.
Senator Pomerene. I would be very much pleased to have you furnish them, and have them incorporated in your testimony.
Mr. Bucholz. I would be very pleased to do that. Unless you have some other questions, gentlemen, that is all I have to say.
Senator Bristow. I would like to inquire what defects do you think we have in our present system that ought to be remedied?
Mr. Bucholz. Well, on the whole, I think we have a very good system. We have a system where the circulation of the banks that passes as money. No one questions it, and has never questioned it, to my knowledge. The only possible criticism I can think of would be that at certain periods, either by unusual business expansion or overspeculation we find a rigidity in the volume of money we have to use, and of course my own idea would be to follow out the natural consequences of an expansion of the national banking system to the extent of having a central credit reservoir where temporary additional money might be obtained.
Senator Bristow. What you would like, as I understand it, would be to have some provision made whereby you could get additional currency when it is needed?
Mr. Bucholz. Yes.
Senator Bristow. On the assets of your bank?
Mr. Bucholz. Yes.
Senator Bristow. And then when it was not needed that would normally retire?
Mr. Bucholz. I would fix it so that the retirement——
Senator Bristow (interposing). And you think it would be much better for the business of your part of the country if a provision of that kind could be made without breaking up the present banking provisions that have grown up in the past half century?
Mr. Bucholz. You have explained my idea exactly, I think.
Senator Bristow. Suppose that a provision was made so that your bank could go to the subtreasury, that a subtreasury should be located at Omaha—I believe you have no subtreasury there now—suppose a subtreasury was established there and during these periods of stress you could take the assets of your bank there and upon your own credit, hypothecating your assets, get the credit you needed by paying a certain tax on it while it was used, and when it was through this would come back into your bank and be retired and your assets would be returned to you. Would that relieve you of the embarrassment you have now?
Mr. Bucholz. Yes; I think so; and if you extended the present central reserve cities to five instead of three and confine the privilege to just the central reserve cities under certain restrictions it would accomplish the purpose, in my judgment.
Senator Bristow. Suppose we had just one regional bank and we had a Federal bank which received the Government deposits and which would be a bank of issue and discount and that bank would have branches located in the various commercial centers of the country and you could go to your branch of that bank and get currency upon your assets?
Mr. Bucholz. I do not like that idea so well. Perhaps that is due to some prejudice I have had for years against the Government engaging in the banking business. My belief is that the Government should pass the laws, provide what kind of banking business should be done, and let individuals do the banking business under proper regulations.

Senator Bristow. But the Government then would be running only 1 bank instead of 12. The Government now is establishing 12 banks and is going to run 12 banks.

Mr. Bucholz. I think the fewer it runs the better it will be for the country.

Senator Bristow. If this board created here or this board in Washington has 12 banks scattered all over the United States at long distances—suppose we had one bank here in Washington which they managed and which performed all the functions that these 12 would perform, and that was done without requiring the banks to put up any capital stock, and any bank that kept its reserve there could get relief whenever it wanted it, as I have stated, do you not think that would simplify this very much?

Mr. Bucholz. I do. That is in line with the expansion of our present system, with some additional safeguards.

Senator Bristow. And you think that strengthening the present system takes care of this apparent defect?

Mr. Bucholz. Yes, sir.

Senator Bristow. We have had quite a discussion here in the last few days in regard to these country checks. The gentlemen who preceded you, and one or two gentlemen who were here yesterday, are anxious to have the check system discredited, to a certain extent, in order to reduce the number of the checks. You say you have been a country banker and now you are a reserve banker?

Mr. Bucholz. Yes, sir.

Senator Bristow. Let us have your opinion about the method of banking by country checks, of refusing to give the customers of country banks the use of country checks. What do you think the general effect is on the business of the country in a case of that kind?

Mr. Bucholz. I think the general effect is very good.

Senator Nelson. You mean the general effect of having a lot of checks afloat?

Mr. Bucholz. Of using checks——

Senator Nelson (interposing). Instead of drafts?

Mr. Bucholz. Yes. That practically amounts to the same thing, checks or drafts, because it is not always convenient to get a draft.

Senator Reed. I want to ask this witness one more question. Take the banks in your town; is the amount of their capital stock any real index to the size of the bank?

Senator Nelson. You mean the volume of business they do?

Senator Reed. Yes; the volume of business they do, and the profits they make.

Senator Nelson. Any real or certain index?

Mr. Bucholz. Yes; I believe the capital and surplus would be.

Senator Reed. The capital and surplus?

Mr. Bucholz. Yes, sir.
Senator Reed. You frequently find a bank, do you not, with a small capital and a large surplus, which is really a bigger bank and makes more money and handles more business than another bank with a larger capital and without a surplus.

Mr. Bucholz. That is quite true.

Senator Reed. Now, if the capital stock of this central bank is to be contributed by the banks, should it not be based upon capital and surplus, instead of upon capital alone?

Mr. Bucholz. I think it would be very unjust to base a contribution of capital merely on the capital of the bank contributing.

Senator Bristow. I think this matter of country checks is a very important matter, and you seem peculiarly fitted to discuss it. Now, if you will, tell us in what way it has been a good thing for the country and for the banking business as a whole?

Mr. Bucholz. When I was a country banker, I would tell the farmers, when they came in to buy some goods, that they ought to leave their money at the bank, deposit it in the bank, take a check book and pay their bills in that way.

Senator Bristow. With checks?

Mr. Bucholz. With checks. That is about the only thing that appealed to the farmer. He did not have to carry the money in his pocket and take a certificate and come to the bank every time he wanted a little money. That has been generally done throughout the agricultural West. That is a part of the development of that country.

Senator Nelson. But you overlook the point we are after. This inquiry does not cover that kind of check. That is the other class of checks. For instance, the merchant in Nebraska, in an interior town, goes to Chicago and buys a bill of goods there, and instead of remitting to the wholesale merchant in Chicago by draft he sends his check on his local bank, and that is the kind of check we refer to.

Mr. Bucholz. Of course, the ideal condition is for a merchant to go to his bank and buy a bill of exchange payable at the place where he owes the money. But we do not come to that. We do not approach the ideal condition. For instance, in Omaha some of our large accounts are 10 blocks away from us. They do not want to come to the bank and buy a draft. They make out a check and send it away.

Senator Nelson. When that check comes back what do you do with it? Do you charge for remitting that money?

Mr. Bucholz. Yes; we make a charge of one-tenth.

Senator Nelson. A merchant in Chicago has a check from one of your Omaha merchants upon your bank, the Chicago bank sends it to you, and you charge for that?

Mr. Bucholz. Yes; we do.

Senator Nelson. And does that charge come out of—it comes out of the bank that sends it to you, primarily?

Mr. Bucholz. Primarily, and sometimes ultimately; sometimes they absorb that exchange.

Senator Bristow. That is their business; that is not the Government's business.

Mr. Bucholz. Not a bit.

Senator Bristow. Not any more than to fix a law which would fix a limit as to the time for giving a cash discount, if payment is made in 10 days?
Mr. Bucholz. It has not a thing to do with a Government regulation.

Senator Bristow. The Government has not a thing to do with it.

Mr. Bucholz. This exchange charge ultimately comes out of the man who owes the money. It comes out of him ultimately, anyway, and it ought to.

Senator Bristow. My office is across the hall in this building. I may owe somebody in New York. He may have on his letterhead "Country checks not received," but I do not want to go down town and buy a draft, and so I write a check and let him turn it down—it is not convenient for me to go down town—and if he does not want to do that he may send it back.

Mr. Bucholz. Certainly; that is a matter between you.

Senator Bristow. If we should undertake to make it impossible for me to write that check we would interfere with a development which has accommodated itself to the convenience of the entire business public of the United States?

Mr. Bucholz. So much so that 92 per cent of it is done that way.

Senator Nelson. Go a step farther in that direction. This bill proposed in its original form to have the regional banks clear those checks as a clearing house; that is, those checks would be taken there and deposited, coming from a member bank. They are to be deposited in the regional bank and credited as cash and immediately charged up to the member bank. What have you to say about that?

Mr. Bucholz. The effect of that is to penalize the members of the Federal reserve bank and put them in competition with other banks.

Senator Nelson. The effect of it is to deprive you of your exchange fee?

Mr. Bucholz. Exactly; and it also puts a penalty on our belonging to the Federal reserve bank.

Senator Bristow. That is, if you did not find it convenient to permit your customers to pay these accounts by check on your bank the tendency would be for them to do business with a bank that would permit them to do business in that way?

Mr. Bucholz. Exactly.

Senator Nelson. Suppose a merchant at Fairbury, in your State, wants to buy a bill of goods in Omaha; he issues a check on his local bank at Fairbury and sends it to the merchant in Omaha. The merchant deposits it with you. How do you collect that?

Mr. Bucholz. Our practice is to collect direct.

Senator Nelson. Do you charge it to the bank in the first instance?

Mr. Bucholz. No, sir; we do not.

Senator Nelson. You collect it direct?

Mr. Bucholz. Yes, sir.

Senator Nelson. In what way?

Mr. Bucholz. We have a transit account that runs from $800,000 to $1,200,000. We charge it to the transit account, and we send it to the bank direct, and the banks remits in Omaha exchange, and we credit it to the transit account, and thus the transaction is closed.

Senator Nelson. That is, less the exchange?

Mr. Bucholz. Yes, sir; and we charge back the exchange to the man who deposits the check. We do not absorb the exchange.
Senator Nelson. And the local banker at Fairbury gets that exchange fee?

Mr. Bucholz. Yes, sir.

Senator Nelson. And it comes out of the merchant who has deposited it with you?

Mr. Bucholz. Yes, sir.

Senator Bristow. You do not absorb that charge?

Mr. Bucholz. No.

Senator Bristow. Many banks do?

Mr. Bucholz. Yes; but we do not.

Senator Nelson. Do you charge even where your customer has a good account with you?

Mr. Bucholz. Absolutely.

Senator Nelson. You charge in every case?

Mr. Bucholz. Yes, sir.

Senator Bristow. In my little town in Kansas they never charge, none of the banks.

Senator Nelson. What profits do you get out of that kind of business?

Mr. Bucholz. It is a loss to us, as a reserve bank for other bankers.

Senator Nelson. In what way is it a loss, if you charge up the fee to the merchant?

Mr. Bucholz. We are obliged—we give him credit for that, and he has a balance to check against up to a certain day, and we are out the use of the money.

Senator Nelson. Do you give that merchant the credit on the check before you collect it?

Mr. Bucholz. Yes, sir.

Senator Nelson. Immediately?

Mr. Bucholz. Immediately, when he brings it in.

Senator Nelson. And you are out the use of it until you get the money?

Mr. Bucholz. Yes, sir; the postage and the work and labor in sending it out.

Senator Nelson. The only man who makes a profit out of that is the little banker on which the check is issued?

Mr. Bucholz. He is the man who gets the profit.

Senator Nelson. He gets the profit?

Mr. Bucholz. Yes, sir.

Senator Hitchcock. If that is all, Mr. Bucholz, we will excuse you, and we are obliged to you for appearing before us.

We will hear Senator Thomas now.

STATEMENT OF HON. CHARLES S. THOMAS, A UNITED STATES SENATOR FROM THE STATE OF COLORADO.

Senator Thomas. Gentlemen, I want to call the attention of the committee as briefly as I can to a phase of the currency problem that I do not believe has received much consideration so far, but which seems to me to be one of sufficient importance to justify me inflicting myself upon your consideration for a few minutes.

I have reference to the matter of the United States bonds drawing interest, not only those which form the basis of bank circulation, but
all interest-bearing bonds and the manner in which they should be disposed of in connection with the general scheme of currency legislation.

I think I may safely assume at the outset that the payment of the interest-bearing national debt is very remote, and that is true not only of our own but of all the nations of the world. We are not making any provision for it to speak of, and we are living up to our income. And the consequence, the bonded debt of the Government is, for all purposes of currency legislation, at least a permanent condition.

Now, one of the most serious objections or criticisms that I have heard relating to the Glass bill is based upon the effect of that bill on the values of Government bonds held by the bankers and used by them to secure circulation, and the loss which they must sustain in the event that provision is destroyed and a different system of currency is adopted without reference to the bonds themselves.

It is true that in 1900, by the act of March 14 of that year, the Government paid the banks the difference between their face value and their premiums, up to a certain amount—I forget just now what—when that bill was amended, and certain changes made in the national banking act. And it is equally true that now the Government does not want and will not inflict any loss upon the banking fraternity. At the same time there is, in my judgment, a very deep objection, a popular one, to the substitution of a 2 per cent for a 3 per cent bond. Whatever may be said concerning it, the fact remains that it does increase the rate of interest upon a majority of the bonds of the country. And while there may be compensating advantages, the average man knows that if he exchanges a 2 per cent note for a 3 per cent note he is paying more interest than he was before. I confess that is an argument which appeals to me with a great deal of force, and is aimed at a condition which, if it can be avoided, ought to be avoided. A good deal of criticism against this bill, too, has been aimed at the possible effect it will have, the probable effect, as a great many believe, and the way of contracting the currency, and necessitating the resort to a reduction of loans, of discounts, for the purpose of securing sufficient money to meet the requirements of this measure, and particularly with reference to the matter of reserves. Now, if those objections can be met by introducing in this bill an amendment which will take care of the bonds, which will not affect, principally at least, the reduction of the currency, and which at the same time will keep the bonds at par and reduce the interest upon them, that is certainly something that ought to adjust itself at least to the serious consideration of this committee.

Senator Nelson. You do not mean reduce the interest on the 2 per cent bonds?

Senator Thomas. Yes; I mean precisely that.

Senator Nelson. Reduce the interest on the 2 per cent bonds?

Senator Thomas. Yes; even to reduce the interest on 2 per cent bonds.

These preliminary remarks lead up to the proposition of providing for an interconvertible bond, which in the hands of any one bank or citizen or business corporation may be exchanged and reexchanged at any time at the pleasure of the holder for bond certificates or
Treasury notes, and which at the same time would enable the bonds themselves to be used for the reserves required to be kept by the banks.

Now, I am not going to advocate——

Senator Hitchcock (interposing). You mean the bonds to be kept as reserves?

Senator Thomas. Giving the bonds the——

Senator Hitchcock (interposing). The power of gold?

Senator Thomas. The power of gold, so far as the reserves of the national banks are concerned. I think that irrespective of any particular opinion concerning the wisdom or unwisdom——

Senator Pomerene (interposing). Do you mean the new bonds we are to issue instead of the twos?

Senator Thomas. Yes; and any new bonds that are proposed to be issued in place, not only of the twos, but of all other outstanding bonds. I am coming to that later on.

Senator Hitchcock. You would have them payable on demand?

Senator Thomas. Yes. I have to say before unfolding the scheme, that while I have always been a believer, as long as you are going to have a bond currency, in extending the right to issue currency upon bonds to all individuals or corporations owning such bonds, and while I believe, and I think popular opinion justifies it, that the most popular currency we ever had in this country are the greenbacks issued by the Government without the interposition of any other agency whatever, and it has manifested itself by the impossibility of this retirement, although nearly 50 years have elapsed since the close of the war.

There is something in a currency which issues directly from the Government. That brings me to another objection that I have heard, and about which a good many of my constituents have written me, and which you have at least heard by way of criticism of the proposed currency system in this bill, and that is it is confined to the banks and is not general in its character. In other words, the bill proposes to and does lend the credit of the people to the people's creditors, instead of lending their credit impartially, both to those who are in and those who are out of the banking system.

This plan of this proposed change, which, as I say, has already appealed to me, was called to my attention very early in the session of this Congress by a pamphlet upon the subject, written by Mr. William A. Amberg, of the city of Chicago, which includes a proposition of Hugh Hanna, who, a great many of you gentlemen will remember, was the chairman of the National Monetary Conference at Indianapolis in 1900. As a result of my reading this proposed amendment of Mr. Amberg's and by rereading of it and digesting of it, I wrote him and asked him to prepare an amendment to the pending bill embodying his views in proper legislative form, and also giving the various things which, in his judgment, would accomplish, together with the method of its accomplishment. He has done this so well and so completely, in my judgment, that I think I am justified in taking my time and yours in referring to that rather than by attempting to explain it all.

Senator Nelson. Is it very long?

Senator Thomas. It is not very long.
Senator Nelson. I do not think there would be any objection to reading it.

Senator Thomas. I am going to read it. It is not as long as it appears, because it contains the proposed amendment which I shall not at present read. Mr. Amberg says that he proposed the original pamphlet in response to a general invitation for communications to be prepared and presented concerning the general subject of monetary legislation, and in response to this invitation he published last May a pamphlet entitled "Outline of a Plan for Funding the National Debt and for Maintaining an Elastic Reserve Currency," which attracted some attention because of its novel treatment of the subject and for the advantages insured by its adoption, which he states to be the following:

The saving of millions of dollars in interest.
The means of determining at regular intervals a proper interest rate on bonds.
An equivalent to the Government of the profit on the circulation privilege in the form of a low interest on its bonds.
Taking the Government out of the banking business.
Independent of syndicates in the citation of its funds.
An automatic sinking fund.
The maintenance of the gold standard.

I may say that that does not appeal to me at all. It is a matter of total indifference to me whether the gold standard is maintained or not. Other advantages which he states are:
The simplicity of the system; the freedom of competition in regard to Government bond issues; the ultimate increase within certain limits of available money; its adaptability to expansion in the event of war; the means of accelerating or retarding the process of funding to the best advantage; and introduction of a short-term gold bond, bearing a low competitive rate of interest, which is made available for money reserves for banks because exchangeable in that emergency for correlated legal-tender bond certificates at any sub-treasury on demand.

I think it will be conceded, gentlemen, that if this proposition accomplishes one part of that which is claimed for it by its sponsors it is very desirable that it should be incorporated in this measure, whether as a substitute for section 19 or as suppletory to it is a matter for further consideration.

Of course this idea of a convertible bond is old. I think a number of propositions have been made during the past 25 or 30 years for the convertibility of all interest-bearing bonds into currency and reconvertibility at the pleasure of the holder.

Senator Shafroth. There was a bond carrying interest with it which circulated as money during the war.

Senator Nelson. They were what we called the "seven-thirty notes"; they were not bonds.

Senator Thomas. They were not bonds, strictly speaking, but in their legal sense I presume they were.

Senator Nelson. They circulated as money, but they went out of circulation and immediately retired?

Senator Thomas. Now come to a consideration to a proposed amendment itself, which I will not read.

Senator Nelson. You might give us the outline of the plan.
Senator Thomas. That is given in what I will call attention to. Authorize the funding of the public debt and the issue of short-term, 10-year renewable term bonds in an amount to fully cover the principal of the entire debt and the premium on outstanding bonds. There should be, say, 20 issues of equal amount maturing six months apart.

Let us assume that the total authorized is $1,500,000,000; this would make each issue $75,000,000.

Senator Hitchcock. How do they figure such a large amount as that?

Senator Thomas. That is simply to present the plan. It is somewhat larger than the total amount of the interest bearing and the noninterest-bearing debt, and at the same time it is contemplated that a possible emergency may arise which will require more.

The interest rate on the bonds, which may vary with each issue will be discussed later; for the present, it will suffice to state that the interest rate is to be determined for each issue when made.

With the complete funding of the debts will mature $75,000,000 of bonds every six months; and the interest rate should be fixed on each renewal issue. The purpose of that is to regulate an arranged legal rate and to enable the bonds to bear interest at less than 2 per cent, as I think will be the case.

Senator Nelson. Who would take the bonds?

Senator Thomas. Well, anybody would take them; everybody would take them, and be glad to get them, and the national bank particularly. [Reading:]

It would not necessarily take 10 years to refund the debt. Refunding can proceed as rapidly as desired, or as may be found economical. The first issue would necessarily be for 10 years; other issues after the lapse of every six months would also be for 10 years, but accelerating issues can be made for shorter periods, each timed to mature six months earlier than the earliest maturity of bonds previously issued, as 9½ years, 9 years, 8½ years, etc., from the date of the first issue.

The renewal of the serial issues begins with the earliest maturity and renewals will come regularly every six months thereafter, provided all the 20 serial issues are out. If the debt be not entirely funded by the time the earliest maturity arrives, there will be other "open" maturity dates besides the two provided for emergencies. If the time required for funding could be predetermined the earliest maturity date could be fixed for the first serial issue, all subsequent issues expiring six months later than the preceding one. The object of all this will appear later, when we come to apply an interest rate.

On the back of each bond should be printed a table showing the accrued interest (according to the interest rate it bears) for each given day in the year between coupon maturity dates.

We then have a bond representing a specific amount and showing the amount of accrued interest on any given day.

We now come to the bond certificates; that is, the name given to the notes that are to be exchanged. [Reading:]

The bond certificates, as stated in the bill, are practically the same as our present United States notes, and need only an added clause to the effect that they are exchangeable for the new interest-bearing bonds at par, upon payment of the accrued interest on the day the exchange is made. These certificates alone are exchangeable for the bonds. This is an absolute requirement, and suggests the desirability of exchanging all the various kinds of certificates now issued, in kind only, as gold for gold certificates and silver for silver certificates only.
Senator Nelson. Let us see if I understand you, Senator Thomas. These certificates are, in substance, to be the paper money that is issued upon those short-time bonds?

Senator Thomas. Precisely.

Senator Nelson. It is to be the paper currency of the country?

Senator Thomas. Exactly.

Senator Hitchcock. Let me ask you a question.

Senator Thomas. Certainly.

Senator Hitchcock. Is it proposed that the Government shall issue $75,000,000—

Senator Nelson (interposing). Ten-year bonds.

Senator Hitchcock. Ten-year bonds?

Senator Thomas. Yes.

Senator Hitchcock. And offer them to those who now hold Government bonds?

Senator Thomas. Yes.

Senator Hitchcock. Then they are exchanged on an even basis for the present bonds?

Senator Thomas. Yes.

Senator Hitchcock. Those who receive these new bonds will draw what rate of interest, if they hold them?

Senator Thomas. Two per cent.

Senator Hitchcock. Two per cent. And if at any time they desire currency for them they can turn them over to the Treasury and secure currency to the amount of the face of the bonds, plus the interest accrued?

Senator Thomas. Yes. [Reading:]

Each issue of bonds, when ready, is to be delivered to an official of the Treasury Department whom I will designate the "custodian," whose duties are practically the same as those of the officer who now exchanges gold for gold certificates and vice versa, the only difference being that he is provided with an interest fund.

He has to give out the bonds for bond certificates only, collecting the accrued interest shown on the back of the bonds, and when the operation is reversed and bonds are presented for certificates, he pays the accrued interest.

Senator Hitchcock. Well, they deal out bonds as long as anyone presents them, to the entire issue of bonds, if they are presented?

Senator Thomas. Yes; in the first instance.

Senator Hitchcock. In the first instance; and that goes on for how many years?

Senator Thomas. Assuming that there is $1,500,000 of the whole thing—

Senator Hitchcock (interposing). Twenty years?

Senator Thomas. The bonds could be reissued every 10 years, upon interest dates. I think you will find, Senator Hitchcock, that you are anticipating what Mr. Amberg has outlined in his scheme.

Senator Pomerene. You would expect to retire these national-bank notes under that scheme, would you?

Senator Thomas. Yes; that would come as a matter of course; and the consideration of that would be the reserve quality of the bonds. [Reading:]

He is not to part with bonds for any other form of money.

Senator Nelson. What is that?
Senator Thomas. [Reading:]  
He is not to part with bonds for any other form of money.  
I am not now talking about the redemption of the bonds, but the exchange of the bonds, when an exchange is desired. [Reading:]  
There will always be the same amount of certificates in his possession as there are bonds outstanding. 
I assume that the legal tender character now attaching to greenbacks will apply to bond certificates which replace them. 
As a currency, it is better, because secured by interest-bearing United States bonds. 
They are never to be paid out by the Treasury before the new bonds are in the hands of the custodian, nor in excess of the amount of bonds so placed. 
No additional certificates are required for renewals of bond issues; they are paid out only for the principal of the debt and premium on certain bonds now outstanding, and for other items recognized as a part of the national debt, which includes greenbacks. 

Now, I come to the new bonds as bank reserves. [Reading:]  
The bonds, being instantly convertible into legal tender bond certificates, are especially adapted for bank reserves, not only for national banks, but all other banks, trust companies, and all classes of investors who have idle money awaiting investment. The sum of all these combined is so large that the demand for bonds can be met only in part, which will enable the Treasury to secure a very low interest rate on bonds, virtually a Government “call-loan” rate. Banks could keep a large part of their money reserve in these bonds, because they could be converted any day into bond certificates at any subtreasury, and conservative bankers could therefore increase their present reserves without loss. 
There is no way of determining what the money reserve of all the banks and trust companies aggregates. It can only be conjectured. 
And then he makes the conjecture upon some figures which he gives, that the amount in reserves is probably, all over the country, $2,500,000,000; and assuming that to be the amount, the total issue of the new bonds could be held by the banks alone as a part of their reserves, because instantly convertible into currency. 
Now, these bonds have that quality. They certainly will not fall in value, and there can be no loss in that way. 
Senator Hitchcock. Does that mean they would get 2 per cent interest on the reserves? 
Senator Thomas. It would virtually mean that, as long as the bonds require a reserve. The bonds and the money into which they are convertible are both available as reserves; and the effect of that, of course, is to release, to the amount of the bonds in reserves, all this currency and all other currency for circulation. 
Senator Hitchcock. Of course, as far as the national banks are concerned, the $700,000,000 would be retired in currency. 
Senator Thomas. The $700,000,000 would be retired in currency, or the same amount would be issued for the bonds. It would be an exchange. There would certainly be no contribution by the banks of currency. 
Senator Bristow. Now, Senator Thomas, I should like to see if I have the correct idea. You proposed to issue these bonds, and they may be exchanged at any time for what you call a bond certificate? 
Senator Thomas. Yes; you may call it anything. 
Senator Bristow. It is a currency which is equivalent to the greenback, or the national-bank notes? 
Senator Thomas. Yes.
Senator Bristow. And whenever anyone wants currency they take the bond to the Government and get it?
Senator Thomas. Yes.
Senator Bristow. And if they prefer the bond to the currency, they take the currency and get the bond?
Senator Thomas. Yes; they are interchangeable, with the added element that the bond is available for reserves.
Senator Shafroth. It makes it a somewhat automatic regulation of the currency.
Senator Pomerene. Well, if I had one of these bond certificates and took it to the Treasury or a regional reserve bank and got the currency—
Senator Thomas (interposing). You mean the bond, not the certificate. The certificate is currency.
Senator Pomerene. Well, get the certificate—would that end the matter, so far as the bond is concerned?
Senator Thomas. No.
Senator Pomerene. Or could it be reissued?
Senator Thomas. No; it must be reissued if anybody comes and asks an exchange of the bond for other certificates or greenbacks.
Senator Bristow. While the Government has the bond it does not cost the Government anything?
Senator Thomas. It does not cost the Government anything.
Senator Shafroth. When there is a redundancy of currency, these bonds could be drawn out.
Senator Weeks. I understand the plan prohibits the redemption of the bonds or certificates in gold?
Senator Thomas. No, not the bonds; the bonds are to be paid out only for the certificates and the certificates redeemed in bonds; but the bonds are gold bonds.
Senator Weeks. If I had the certificate and wanted gold, I could go to the Treasury and get the bond and immediately convert that into gold?
Senator Thomas. Oh, yes.
Senator Shafroth. Well, is the bond payable on demand?
Senator Thomas. The bonds are payable every 10 years. I suppose the bonds would be the equivalent of gold now. But you could get gold by as easy a process as you can get gold now under the national-bank act.
Senator Weeks. That is simply two processes, exchanging it into legal tender and exchanging the legal tender for gold?
Senator Thomas. Yes; because you can do that you do not want to. [Reading:]

The recent circular of a firm making a specialty of Government bonds gives a table showing high and low prices during certain years of bonds available as security for national-bank notes. This shows a mean average interest yield on 2 per cent bonds ranging from 1.68 in 1901 to 1.96 per cent in 1912.

This low rate arises from the competition of national banks alone. How much lower the interest rate might be if they were sought in universal competition, coupled with facilities for instant conversion into currency, may be imagined.

Regarding the rate of interest which the Government may secure on the new bonds, it is my firm belief that as low as 1.2 or 1.4 per cent may suffice under this plan. These conclusions rest on the fact that as national banks investing capital in the present bonds to secure circulation (which capital might be fully loaned at 5 per cent) have a net income derived from circulation

S. Doc. 232, 63-1—vol 3——33
(over and above 5 per cent) after paying taxes on circulation, etc., of only 1.25 to 1.4 per cent, whereas under this plan they could invest a part of the idle money they are required to keep on hand as a reserve in convertible interest-earning bonds.

That is to say, bonds on deposit as part of the reserves would pay something more than they are making upon their bonded investment now. [Reading:]

When the funding is practically completed, and we reach the renewal stage, our experience will have been such that there will be but slight changes in the interest rate. Just now we can not estimate positively how low an interest rate will still command a slight premium for the bonds.

To be absolutely on the safe side, let us assume that the first issue of $75,000,000 10-year bonds bears interest at the rate of 2 per cent. If that proves too high, considering their desirability, it will manifest itself by the bonds commanding a premium in the open market, which will be a gold market when our present United States notes are exchanged, and will remain so unless subsequent legislation should change the character of our currency, which is not likely. With open-market quotations at hand, it is easy to determine what lower rate of interest will suffice to keep them at a little above parity with gold.

He suggests that interest rates be always fixed at a multiple of one-fifth of 1 per cent, as 1.6, 1.8, 2, 2.2, 2.4, etc., per cent, because, even if bonds should be issued in denominations as small as $50, there will be no fractional cents in the semiannual coupons. Of course that is for convenience. [Reading:]

So far as the Treasury is concerned, it recognizes no premium or discount in making exchanges of bonds and certificates, regardless of whatever the "open market" may be. But in order that parity with gold may be maintained, and also that the certificates may be a real reserve currency ordinarily withheld from circulation, the interest rate on each series of bonds when issued or renewed should be such as to command a very slight premium for the bonds. Bond certificates immediately exchangeable for bonds bearing even a very low rate of interest will be withheld from general circulation by banks, and gold and silver and their certificates will be paid out instead. The above ideas being followed, it is evident that these bonds will never be at a discount.

And there is where it seems to me that the holders of these vast bond issues should be fundamentally interested in this plan. Temporary aberrations in the money market will correct themselves, and the system will have a steadying influence on the "value of gold," just as an idler pulley has a steadying effect on a leather belt transmitting power. [Reading:]

The question as to what the denominations of the bonds should be can be determined by experience gained from the first issue. However, to insure perfect equality and no special privilege to any class, it seems desirable that some bonds as small as $50 shall be issued. [Reading:]

The custodian's duties are substantially these:

He must give out bonds for bond certificates only, and bond certificates for bonds only. The interest, either way, is to be paid in gold or its equivalent; hence, if he be given a certain amount of the new bonds, he will, whatever the exchanges may be, have always the same total amount in bonds and bond certificates. Custodianships may be established in other than subtreasury cities to give the benefit of quick exchange to smaller geographical divisions.

Of course that was written before the Glass bill was passed. [Reading:]

An economical feature of the plan is that it saves interest on the bonds while the certificates are outstanding, and even while the Treasury has possession of them. If the Treasury receives bond certificates as currency in the regular
course of business it will naturally retain them as banks would, and thus save interest.

A permanent holding of bond certificates by the Government is automatically, the equivalent of a sinking fund to the extent to which they are so held. They are simply an "offset" to the bonds which are held by the custodian.

As the Government maintains parity with gold on the new bonds by fixing the interest rate on one serial issue every six months, it does not concern itself with premium on bonds, as it never sells them—unless necessary to replenish the gold reserve fund as stated in the bill, which would be an unlikely occurrence. It holds them merely for the purpose of exchange for the only thing which will command them, and that is bond certificates. The reason for exchanging bonds for bond certificates only is to prevent contraction in the currency and to make the certificates more valuable than any other circulating medium.

And I may say right here, gentlemen, that one of the criticisms that I have seen made of this bill is that the manner in which redemptions of the new currency are to be had may operate as another endless chain—the drawing of gold out of the Treasury. That danger is absolutely eliminated in this system of currency expansion.

It is possible to delay the determination of the interest rate on each of the serial issues to within 30 days of their several dates. While the bonds are printed by hand from steel plates, which is a slow process, the date, interest rate, and interest table can be quickly printed from type on ordinary printing presses.

This gentleman suggests a smaller bond in size. He says:

While the bonds would have to be printed for each particular issue, the certificates, which may be of any denomination desired, are general and command any bond issue, or any particular issue designated by the Secretary of the Treasury, as deemed advisable. They will last indefinitely, not being subject to the wear and tear of ordinary currency.

The daily summarized reports of the custodians showing the relative amounts of bonds and bond certificates on hand would be a better barometer of local and general currency conditions than are now the clearing-house reports of business conditions.

He says that bond certificates can be issued of any denomination, even $1, $2, and $5 bills being practicable. My own idea is that they can be larger than that, and that the smaller currency should be entirely confined to silver certificates. This gentleman, in the preparation of his bill, prohibits the legal-tender character of these bond certificates from applying to interest on the public debt and the payment of customs dues. My own idea would be to make them universal legal tender, although he gives a good reason for it.

Senator Brain. Senator Thomas, let me make this suggestion, and see what effect it would have. Suppose I have $1,000 that I do not want to use. I take it down here to a bank and I probably put it in a trust company, where it will bear 2 per cent on a monthly balance or a weekly balance, perhaps 3 per cent, depending on where I place it. And it stays there and it is loaned out to somebody else. There are a large number of people who do the same. And that makes the bank's balance.

Now, suppose instead of that I go and get a Government bond and put it away and get 2 per cent. That is as good as anything could be. I would know that I could get cash for it when I wanted it.

Would not that fact have a tendency to take away all these bank deposits? And now somebody else goes and borrows this $1,000 of mine, who needs it, and he pays 4 per cent or 5 per cent on it, as the
case may be, and the bank keeps it there for that purpose and deals in this surplus currency that is in the country—collects it and loans it out.

Now, that is a good thing. Somebody can get the money that otherwise could not. If I go and get one of these bonds and put it away, that currency would be gone and nobody could get it. I would get 2 per cent on it, but the other man would not have the opportunity of borrowing it.

Senator Thomas. You can do the same thing with gold. You can do the same thing with any other sort of currency. The fact that you could do that is, to my mind, one of the best arguments in favor of the genuineness of the scheme.

Senator Bristow. Well, it is a very important thing to the business of our country as it is now that we should have banks.

Senator Thomas. Certainly.

Senator Bristow. So that men who need money, who have not got it, who are carrying on business with large capital—and the vast majority of our men are doing that—can borrow it.

Senator Thomas. When that demand comes there will be rapid exchange of these bonds for currency. It will work automatically.

Senator Shafroth. When money is worth more than 2 per cent money comes out and the bond goes to the Treasury.

Senator Thomas. Yes. That, if I may be allowed the expression, is the beauty of the proposition.

Senator Bristow. The banks would have to pay more than 2 per cent, then, to get this currency, instead of its being put into bonds.

Senator Thomas. As a matter of fact, it would reduce the actual income on the bonds, because the bonds would go to a premium in proportion to the demand for that bond currency.

Senator Weeks. Senator Thomas, what makes you think those bonds would go to a premium?

Senator Thomas. They are at a premium now, are they not? Because they have the quality of basis for currency issue.

Senator Bristow. They were before this bill was introduced.

Senator Nelson. They are about 94½ now.

Senator Shafroth. Mr. Vanderlip said they were worth 3.18 interest, and therefore they were more valuable than the 3 per cent bond; and for that reason the national-bank circulation would retire.

Senator Thomas. Well, assuming that they are now below par, it is because of the probable effect of this bill upon them. But with that quality and requirement they are worth a premium, are they not?

Senator Bristow. Well, they have been; yes.

Senator Thomas. I mean with this qualification, and with the added qualification of being receivable for reserves for bank deposits.

Senator Hitchcock. It is proposed to have the Government issue $75,000,000 of these bonds a year, is it?

Senator Thomas. Every six months.

Senator Hitchcock. Every six months?

Senator Thomas. Or so that each $75,000,000 will fall due at intervals of six months.

Senator Hitchcock. Well, that would be $150,000,000 a year.

Senator Thomas. That would fall due every year?

Senator Hitchcock. In five years, then, we would retire all the present national-bank currency.
Senator Thomas. Upon the assumption that they were issued every six months, as well as falling due every six months.

Senator Hitchcock. Well, after you had accomplished that, would they be in the form of bonds, in your opinion, or would they be in the form of outstanding currency?

Senator Thomas. Well, my own opinion is that these bonds would be used for the most part for reserves.

Senator Hitchcock. They would be in the form of bonds in the vaults of the banks?

Senator Thomas. They would be in the form of bonds in the vaults of the banks, and in the vaults of the reserve banks.

Senator Hitchcock. The banks would be using those in the place of gold?

Senator Thomas. In the place of all sorts of reserves.

Senator Hitchcock. In the place of all kinds of reserves. What would become of the gold and other forms of money which the banks now hold as reserves?

Senator Thomas. It would give them circulation in the banks.

Senator Hitchcock. Well, they would not be in the banks if they were displaced by those hands.

Senator Thomas. Not as reserves; but they would be in the banks just the same.

Senator Hitchcock. Well, banks do not hold ordinarily more than their reserves.

Senator Thomas. When I say "in the banks," I mean in the business of the country.

Senator Hitchcock. Well, then it is proposed to issue another $75,000,000—

Senator Nelson (interposing). Every six months for 10 years.

Senator Hitchcock. So that we would have outstanding, approximately, $1,500,000. Would that be in the form of bonds, or would it be in the form of currency?

Senator Thomas. Both, and interchangeable.

Senator Hitchcock. Well, if it was in the form of currency it might lead to an inflation.

Senator Thomas. How?

Senator Hitchcock. Because it would provide much more currency than we have at the present time.

Senator Thomas. Well, would that be inflation? Do you not think that we need more currency?

Senator Hitchcock. The testimony here indicates that at certain seasons of the year it is too little, and at other seasons of the year it is redundant.

Senator Thomas. Yes; and I can understand that the present system prevents expansion.

Senator Nelson. Our bonded debt now is between $900,000,000 and $1,000,000,000.

Senator Shafroth. That does not take in the Panama bonds.

Senator Nelson. I think it includes all the outstanding bonds now that are charged against the Government.

Senator Thomas. I have a statement here that I could read on that subject.

Senator Hitchcock. Let me put this case to you, Senator Thomas. Senator Thomas. Certainly.
Senator Hitchcock. If the result of this change were to be the issue of the same amount of currency that we have now——

Senator Thomas (interposing). Plus the amount of the debt of the United States not represented by any currency at the present time.

Senator Hitchcock. Yes. That would result in giving us an expansion, if not an inflation of currency, would it not?

Senator Thomas. We want an expansion of the currency; and that is just one of the merits of this proposition.

Senator Hitchcock. Well, it is estimated that we want it at certain seasons of the year, and at other seasons we want it retired. My point is this: Are you sure it would result in a reduction of the interest on bonds?

Senator Thomas. I do not think there is any doubt about it; and that is the reason the six months' intervals are provided for, so that the interest could be regulated.

Senator Hitchcock. It seems to me that you only accomplish a reduction of the interest by contracting the currency.

Senator Thomas. I do not see how, if I understand your argument.

Senator Hitchcock. Well, by expanding your currency——

Senator Thomas (interposing). Well, I understand that one purpose of this bill, and one of the demands for it, is that we need more currency.

Senator Hitchcock. Not more currency; we need an elastic currency.

Senator Thomas. That means we need more at intervals. This is a loan for securing that currency and at the same time arranging it automatically.

Senator Weeks. Yes; but you might need very much less than we have now at intervals.

Senator Thomas. That does not worry me much. I do not think this country has been in such a position for 25 years—that we have more currency than we need.

Senator Nelson. The difference would be between bonds outstanding now and the national-bank circulation now——

Senator Weeks (interposing). Let me finish my statement, please. I think it is a fair assumption that we have had too much. If there were not too much, the interior banks would not be dumping their circulation into New York a great deal of the time, which circulation is coming back here to the Treasury for redemption frequently. There are bales of that circulation coming back to the Treasury for redemption that have never been opened.

Senator Shafroth. Because it can not act as a bank reserve. Not a dollar of it would come back if it could act as bank reserve.

Senator Weeks. I am not discussing what can be done with it. But is it not a fact?

Senator Thomas. But a great deal of this goes to New York to be put into call loans.

Senator Weeks. Not at all. That money is coming to New York like a stream of water over a dam, and coming here to the Treasury; and there are over $44,000,000 of it here now.

Senator Thomas. Then I should think you would have a currency that had elasticity now, so that you do not need any additional legislation.
Senator Weeks. Well, that is not a question of elasticity. The circulation is put out again.

Senator Shafferth. The reason of that is that we have got too little money that will act as reserves.

Senator Nelson. You see the value of the system is that if you have $100,000 of these bonds you could go to the Treasury and get the money and turn the bonds in; and then when you got through with using the money you could turn the money in and get back the bonds.

Senator Weeks. You can do the same under the present system.

Senator Thomas. Yes; but everybody can not do it.

Senator Nelson. This is for everybody; not only the banks, but for you and me.

Senator Weeks. Well, I suppose as a practical proposition everybody would do what the country bank does not. If the country bank wants to take out more circulation, it sends to its reserve agent and its reserve agent does it for the country bank.

Senator Thomas. It may be that it is generally done through the agency of the banks. But this system meets the fundamental objection that the present system is designed for the banks, and not for the whole people.

Senator Nelson. The beauty of this system is that whenever your money is idle you convert it into a 2 per cent bond; and the moment you want money you convert the bond into currency.

Senator Weeks. I am not discussing or raising any point about the fundamental objection of making additional circulation a Government note, in the first place, and making it a legal tender, in the second place. That is a matter that, of course, would be involved in this proposition.

Senator Hitchcock. Senator Thomas, there would be no time when the banks would keep this currency in reserve, because they would be drawing no interest on the currency. They would keep it in the form of bonds in order to get the interest. It would count as reserves just as much in bonds as it would in cash.

Senator Thomas. Yes.

Senator Hitchcock. And during that time the Government would be paying interest on those bonds.

Senator Thomas. Yes.

Senator Hitchcock. Now, the reserves held at the present time by national banks are something over $1,000,000,000.

Senator Thomas. Yes.

Senator Hitchcock. Then, how can you accomplish a saving of interest, when it would be to the profit of banks to keep these reserves in the form of bonds, because they would count as cash and draw interest at the same time?

Senator Thomas. I do not assume that these bonds would be constantly in reserves to the extent which you suppose.

Senator Hitchcock. I am putting this case to you: That at the present time there is a minimum of reserves which the national banks hold amounting to 1,000 millions of dollars in round numbers. Now, that is bedrock. The banks do not go beyond that. They do not use that. They keep that as a standing reserve. They naturally want interest on it. So they keep it in the form of bonds instead of in the
form of currency. And if they do so, would not the United States Government be paying interest on it during all that time?

Senator Thomas. Not those bonds deposited with the Government—with these regional banks. Of course, if it were sent by one of the banks from Omaha to New York it would draw interest.

Senator Hitchcock. It would keep the bonds in its own vault.

Senator Thomas. It would keep the bonds in its own vault.

Senator Hitchcock. And they would count as cash there.

Senator Thomas. But the Government now pays interest on the bond just the same, and pays a good deal more than 2 per cent. And right there would be the difference in interest between the 4½ per cent bond and 4 per cent bond and the 2 per cent bond.

Senator Weeks. Let us take this as an illustration: Suppose you went into a bank for $1,000, and you would get that $1,000 in such denominations as you wanted it in. You take that circulation and use it in your business. Later somebody pays you $1,000 of that circulation. What would you do with it? Hold the debt or hold the bond?

Senator Thomas. If I should answer you truthfully, I would say I would give it to my creditors, no matter what kind it was.

Senator Weeks. Would not everybody do it?

Senator Thomas. They would if they were in my position, because they could not do anything else.

Senator Weeks. Would any individual receiving such circulation voluntarily exchange that into a bond paying 1½, or even 2, per cent?

Senator Thomas. Yes; I think so.

Senator Weeks. Why would not a man take a Massachusetts State bond paying 3½ or 3¾ per cent instead?

Senator Shafter. A Massachusetts bond can not act as a reserve.

Senator Thomas. The convertibility of the bond and the fact that it can be used for reserve would make it an attractive bond, I think, even to the individual.

Senator Weeks. I would not invest in a 1½ per cent bond when I could get a 3¾ per cent bond.

Senator Nelson. You see, the beauty of this system is that it makes every individual who carries those bonds a sort of movable bank.

Senator Bristow. Senator Weeks, you say you would invest in Massachusetts bonds. In the first place, they are in denominations you can not get very well; and then you can not sell them readily. You may say to me—I have $1,000 here in the Washington Loan & Trust Co., which draws 2 per cent—"Why do you keep that $1,000 there when you could get a Massachusetts bond that draws 3½ per cent?" I do it because I can get it when I want it.

Senator Thomas. Gentlemen, if you will allow me, I think some of these things are discussed in the paper further on.

Senator Nelson. As I understand you, you say that by and by they can issue these bonds at rates lower than 2 per cent?

Senator Thomas. Yes; that is the reason six months' intervals of maturity have been provided for.

Senator Hitchcock. It is the habit of this committee to jump right into the middle of a thing before it has been discussed in order.
Senator Thomas. I am not objecting, but I do not want to detain
the committee. [Reading:]

The clause in the bill relating to customs dues is the same as that which
now appears on the backs of United States notes. It will never be necessary to
make it operative except in the event of a prolonged and costly war.

Gold certificates have a 100 per cent gold reserve. Bond certificates will have
a 100 per cent serial gold bond reserve, which bonds have a $75,000,000 gold
reserve to meet an entire serial issue as it falls due. That is what the amend­
ment provides. And there is ample provision for replenishing the gold reserve
if drawn upon to meet the next serial issue at its maturity six months later.

Silver certificates have a 100 per cent reserve in silver dollars. By congress­
ional act the Government must maintain parity. The bill directs the Secretary
of the Treasurer to issue $1, $2, and $5 silver certificates in lieu of those of the
denominations of $10 or more, which amount to about $22,000,000. That is in
order to make silver bear the burden of the small currency of the country.
When the funding is completed over $320,000,000 of gold certificates of the
denominations of $5 must be provided to meet the requirements of trade for
this denomination.

Bond certificates will not ordinarily serve the purpose, as they will be with­
drawn from circulation to command bonds and create a scarcity of small bills,
which are absolutely required. He reaches the conclusion that as these smaller
silver certificates are needed they will never be presented for redemption in
gold to any extent; so that a gold reserve of $25,000,000 is ample, making
$100,000,000 in all, thus releasing $50,000,000 of the present reserve.

He says he realizes that some persons will question the necessity of main­
taining any gold reserve, but he looks upon it as a possible necessity; it gives
assurance to the world of the character of our money.

From the standpoint of economy alone it is a good investment. The loss of
interest on $100,000,000 will be more than offset by the lower rate of interest
our bonds will command, because of the maintenance of the fund. A borrower
at a bank soon realizes the fact that the average balance he maintains with it
has a very decided influence on the interest rate demanded.

Senator Hitchcock. What is that reserve for? These bonds are
payable in certificates and the certificates exchangeable for the bonds.

Senator Thomas. The reserves are for the bonds.

Senator Hitchcock. You mean as against their maturity?

Senator Thomas. Yes.

Senator Hitchcock. Then it should be a sinking fund, not a re­
serve.

Senator Thomas. Well, it is only the amount of one of the issues.
It is not probable that, with these attributes, the redemption of the
bonds will be desired or demanded; but provision should be made,
of course, for raising the money in the event that it should.

Senator Weeks. If an issue of bonds were presented for payment
you would have reserve enough to pay that, and you would proceed
to replenish your reserve, would you not?

Senator Thomas. Yes; at once. That is provided for. The plan
as outlined limits the bond certificates to the amount of the national
debt, in round numbers about $1,350,000,000, while the full cycle of
20 $75,000,000 issues of bonds maturing six months apart would
amount to $1,500,000,000. This leaves two issues, and consequently
two maturity dates, free for emergencies, which is a very necessary
precaution not only for preliminary war preparations, but also for
many other purposes. It may be necessary to provide for Panama
bonds, not yet issued, to reimburse the general fund. It might be
profitable to have an open maturity date for a shorter time bond
when the interest rate manifests an upward tendency.
Banking and Currency.

He then gives the interest rate of the available paper currency, as follows:

- From bonds not now available as a basis for circulation: $213,000,000
- Premium on 4 per cent bonds at about 10 per cent, say: 12,000,000
- National-bank redemption fund, treated as a liability by the Treasury, say: 25,000,000

Which is an increase of: 250,000,000

Another form of presenting the increase is that on March 1, 1913:

- Interest-bearing debt: $965,706,610
- Debt bearing no interest: 1,677,650
- United States notes of all kinds: 376,460,242

Total: 1,343,844,502

There is a considerable amount of the national debt included in the above which will never be presented, having been lost or destroyed; for example, fractional currency, $6,854,865. Therefore the final limit of bond-certificate issues, after adding premium on bonds now outstanding, can not exceed the sum of $1,350,000,000.

The currency in circulation which would be retired on March 1, 1913, was as follows:

- Treasury notes of 1890: $2,742,000
- United States notes: 346,681,016
- National-bank notes: 751,117,794

Total: 1,100,540,810

Which leaves about $250,000,000 as the increase.

Senator Nelson. This presupposes the retirement of the greenbacks, too?

Senator Thomas. Oh, certainly. [Reading:]

So that the available increase in the circulating medium will be about $250,000,000 independent of the release of fifty millions of the gold reserve, and if the Government deposits its money in the national banks on security other than these convertible bonds, another one hundred millions can be fairly relied upon, thus making a total of $400,000,000.

The Steadying Effect of an Adjustable Interest Rate.

When the premium on bonds goes up in the open market the interest rate will go down, and when the bonds command no premium the interest rate will go up. This idea, which is economically sound, is applied every six months to $75,000,000 of bonds. It will have a steadying effect on the value of bonds as a whole, and the temporary "aberrations" of the money market will affect them but little. This is another argument for limiting the term of the bonds to 10 years.

Bank-Reserve Requirements.

The money-reserve requirements of all bonds, trust, and other companies (though no data is available) I estimate at nearly double the amount of serial bonds. Would not a big bank having ten or twenty millions of gold certificates locked up in its vaults which must be kept there idle and earn absolutely nothing gladly substitute all the bonds they could get that would earn even as low a rate as their investment of bonds for circulation has yielded them, say, 1.2 or 1.4 per cent, especially when they could exchange them for legal-tender currency (on a gold basis) on an hour's notice?

Think of the enormous expense of all the engraved plates, the printing, the signing of bills, the red tape, and the delay, to say nothing of the capital they have to put into bonds and the trouble of getting circulation money, under the present system.
BANKING AND CURRENCY.

Under this system their capital is not touched. Their money reserve is a fixed per cent of their depositor's money which they are obliged by law to keep for their protection in times of emergency. What better emergency money can you provide than bond certificates?

Consider also the enormous expense the Government will save by dispensing with the present system and adopting one so absolutely simple.

WAR BONDS.

In case of war the serial issues could be increased, and so long as the bonds do not approach the full requirements for bank reserves the rate of interest will be low. It is well to recognize the fact that the nearer the amount of bonds approaches the total bank-reserve requirements the interest rates will rise on account of decreasing competition for them in the open market.

ADDITIONAL CURRENCY REQUIREMENTS.

I disclaim any purpose to limit the paper money of the country to gold, silver, and bond certificates. These appeal to me because they will all be operated on the same principle—that of immediate interchange, the last to the mutual benefit of the banks and the people.

The bond certificate idea is exceedingly simple once we divest ourselves of our "habit of thought" regarding paper money.

Fortunately we have had a long experience with national-bank issues and can estimate very closely what a currency issuing privilege is worth to the people. We are perfectly willing to give them an equivalent in different form because we impose on them the arbitrary requirement of a money reserve for our deposits. In doing this as herein outlined, the people will get a low interest rate on the debt and the banks and others who want a like interest on money necessarily idle can invest it in convertible bonds.

STATEMENT OF N. F. BANFIELD, VICE PRESIDENT FIRST NATIONAL BANK, AUSTIN, MINN.

Senator Hitchcock. Will you state, please, your banking connections?

Mr. Banfield. I am vice president of the First National Bank of Austin, Minn.

Senator Nelson. What is the capital and surplus?

Mr. Banfield. Capital, $100,000; surplus, $150,000; undivided profits, $20,000; average deposits $1,100,000; circulation secured by bonds $100,000.

The bank has been established for 44 years. I have been connected with it for 34 years and an officer for 31 years. I wanted to say just a word about the farm-loan proposition. We are interested in that. We are in an agricultural and dairying section. At the present time the farm loans are mostly carried by the insurance companies and the eastern savings banks, and are negotiated mainly through the local country banks with those companies, involving considerable time in the way of preparation of applications, submitting them for approval by the trustees of the companies and of the saving banks, causing delay and uncertainty, and the loss of considerable time before a loan can be closed.

Now, there is in this bill a provision for farm loans to the extent of 25 per cent of the capital and surplus of the banks, limited to one year. Now, that limitation of time is somewhat like the oyster stew that was brought to the man who found only one oyster in it. He complained to the waiter that there were not enough oysters in it to give it a flavor, and the waiter replied, "That is not put in there to give it a flavor; that is only put in there to christen it." That is
about like that one-year period as to the required time for farm loans. To make that practical and of service to the Northwest section of the country for which I am speaking particularly, that should be at least a 5-year period. It makes it practically unavailable to have it for only 1 year.

Senator Nelson. What proportion of your deposits are time deposits?

Mr. Banfield. Our deposits consist of $600,000 in time deposits, upon which we pay interest, and $500,000 in individual deposits.

Senator Weeks. Is not the basis we should use in determining the amount of money which may be loaned on lands the percentage of time deposits, rather than the capital of the bank?

Mr. Banfield. I was just going to come to that in a moment. I was going to suggest that this provision is all right as far as it goes for certain banks—25 per cent of the capital and surplus of the banks. Then follow that with the words:

Provided, That in the cases of banks having time certificates or savings deposits, or both, in excess of their capital and surplus they shall be allowed to loan 25 per cent of the amount of their outstanding time certificates and savings deposits.

On account of that being somewhat fluctuating, I would have that determined by the amount of those time and savings deposits as shown in the last published statement to the Comptroller of the Currency as a guide to fix that at a definite amount. I think that would be practicable.

Now, in our case the present phraseology of this bill would permit us to loan $62,500 out of our $600,000, or about one-tenth. Now, that is not enough; we should be allowed to loan one-fourth of the aggregate amount of our time and savings deposits, which would be $150,000.

Senator Pomerene. Do you think that would be wise, to extend that privilege to all commercial banks?

Mr. Banfield. This bill limits it to the banks outside of reserve centers.

Senator Nelson. That means country banks.

Mr. Banfield. Country banks.

Senator Nelson. Now, here is another thing, if the committee will excuse me. Don't you find that these farm loans that you take—farm mortgages—are easily discounted and sold—that there is a market for them?

Mr. Banfield. I should like very much to answer that question. I remember distinctly going through the panic of 1893; that is 20 years ago this past summer. I remember it with a great deal of vividness. We had some farm-mortgage loans that we had as collateral that were owned by myself and our president as partners in a firm that we have to carry on that business, and out of all the paper that we had we found our mortgages the best and the only thing upon which we could realize or get any money during that period.

Senator Weeks. You mean locally?

Mr. Banfield. Locally; well, we could not get any outside.

Senator Nelson. You must remember these country banks do not carry these bonds.

Senator Hitchcock. To whom did you sell those mortgages?

Mr. Banfield. We sold those mortgages to clients that we had scattered throughout the country; some East and some in the West.
were glad to get them. They were somewhat timid about banks, and were very glad to be able to get those mortgages in which to put their money, and if we had only had a larger stock of them our condition would have been more comfortable.

Senator Hitchcock. They took the money out of banks that they were a little afraid of and put it into these mortgages?

Mr. Banfield. They got the money somewhere. I do not think it all came from banks; I think it came from hidden places where they had it.

Senator Hitchcock. You sold them at some discount, I presume?

Mr. Banfield. No, sir; we did not have to do that.

Senator Nelson. What interest were those mortgages paying?

Mr. Banfield. I have forgotten now.

Senator Nelson. Probably 6 or 7 per cent at that time?

Mr. Banfield. In 1893, I should say, certainly 6 per cent and possibly 7 per cent; I think very likely 7 per cent at that time. So this argument we hear at times that farm mortgages tie up your money in a fixed long-time security does not, to my mind, follow, for this reason, that we found them the most liquid form of asset we had.

Now, another thing: The present national banking law permits us to take bonds of almost any description, provided it is named a bond. Nearly all of those public-utility bonds and many other forms of bonds that are carried by banks as investments are now secured by an underlying mortgage, but just because they are called a bond they go with the department and we can carry any number we want to.

Senator Nelson. They are nearly all secured by underlying mortgages or a trustee?

Mr. Banfield. Yes. I claim we should have the same right to carry our first-class farm mortgages as this bill provides, not to exceed 50 per cent of the actual value of improved farm lands.

Senator Nelson. Not on city property?

Mr. Banfield. Not on city property; I am not asking that. I do not recommend that, but I do recommend loans on improved farm lands not to exceed 50 per cent of their actual value.

Senator Nelson. And 25 per cent of both time and savings deposits?

Mr. Banfield. Yes, sir.

Senator Bristow. Such a privilege as that would have a tendency to make farm mortgages sought after more than they are now.

Mr. Banfield. It certainly would. It would bring the country banks throughout the Northwest—now, I am speaking from actual knowledge of the desire of the country banks of Wisconsin, Minnesota, North and South Dakota, and Iowa, and I know they all think highly of this privilege in this bill, and it would rub off that rough spot of antagonism to the bill if you will just make those amendments I have suggested.

Senator Shafroth. What limit would you fix as to the maturity of the notes secured by deed of trust?

Mr. Banfield. Five years; that is our usual time.

Senator Bristow. This one-year proposition is a hypocritical pretense.

Mr. Banfield. It is just put in there to christen it.

Now, another matter: While I am talking as a banker, I believe bankers as a class are patriotic, and when I say I am saying this in
behalf of the farmer, I am telling you the truth, because he can come in there and sit down next to me and tell me what he needs and I can fix him up just as quickly as we can make out the papers without any delay, without any red tape, and you by amending this bill as I have indicated will please and accommodate and help a large class of northwestern farmers who want just that very thing. At the same time you will provide the banks with an absolutely safe—and we call it choice—kind of paper, the best kind of paper we can get.

Senator Shafroth. Will you write out your amendment, interline it in the bill and forward it to the chairman of this committee, and label it as suggestions with regard to real estate loans made by you?

Mr. Banfield. I shall be glad to do so.

While I am here, if I am not trespassing on your time, I want to speak with regard to this commercial paper that this bill proposes to take from banks for rediscount. In our section of the country we are born and bred with an antipathy to rediscounts. It is the last thing that banks up our way want to do, and we have not done it nor attempted to do it since 1893, not once. We regard it as a sign of weakness, as a flag of distress, and would not resort to it except as a last necessity. But, of course, under this proposed measure, if it becomes the fashion and is the custom adopted here, I imagine that the banks will fall into it, although it is something that the conservative bank will hesitate a long time about doing—borrowing money and indorsing everybody's note to hire money on to lend to somebody else.

Senator Bristow. Don't you think it will delocalize your business to a certain extent?

Mr. Banfield. I do. I think there will be a temptation on the part of the banks to do a class of business they ought not to do. I think that if the Government bank makes a low rate, so that there is a chance for 1 or 2 per cent profit, some of the banks would be led into doing too much of that, and it is going to be too easy for borrowers to get money. That is one of the evils of the present time.

Senator Nelson. Don't you think any bank legislation we enact ought to provide for assistance to the farmers, giving them credit as well as the merchants and manufacturers?

Mr. Banfield. I most certainly do, and that is why I am here saying this about those farm loans. They are the backbone of our country.

Senator Nelson. And any system that does not take care of farm loans is an insufficient and incomplete system?

Mr. Banfield. It is, I believe. I think that is an essential part of this proposed bill, and I hope, gentlemen, you will see to it that there is an amendment made along the lines I have indicated.

I thank you.

Senator Hitchcock. We will take an adjournment until to-morrow at 11 o'clock. That will enable us to hear Mr. Milliken from 11 to 12, and in the afternoon the representatives of the Chamber of Commerce of the United States.

(Thereupon at 5.45 o'clock p. m. the committee stood adjourned to meet Thursday, October 16, 1913, at 11 o'clock a. m.)
THURSDAY, OCTOBER 16, 1913.

COMMITEE ON BANKING AND CURRENCY,
UNITED STATES SENATE,
WASHINGTON, D. C.

The committee assembled at 11 o'clock a. m.
Present: Senators Owen (chairman), O'Gorman, Reed, Pomerene, Shafroth, Hollis, Nelson, Bristow, and Weeks.

STATEMENT OF R. C. MILLIKEN, MONETARY STATIST, BOND BUILDING, WASHINGTON, D. C.

The Chairman. Mr. Milliken, we would like you to address yourself to this bill, and tell us what you think its defects are and what its advantages are.

Mr. Milliken. Before attempting to discuss any change in our present banking and currency system I beg your indulgence while I make a few observations. First, let us see what the principal object of banking is; second, how a bank accomplishes that object; and third, what constitutes safe banking.

The principal object of banking is to economize capital and that object is attained by furnishing a mechanism for the exchange of credits. A bank raises its borrowed capital in three ways, namely, by issuing notes, by receiving deposits, and by accepting bills. If a person will lend me $100 for nothing and I lend that $100 to another person at 6 per cent interest, then in the course of a year I shall gain $6 by the transaction. Again, if a person will take my promise to pay and bring it back to me at the end of the year and pay me 6 per cent interest for it, just as though I had lent him $100, then I shall gain $6 by that transaction. That is a fair representation of the operation of banking and of the way in which a banking capital is created by deposits and notes.

Now, it is obvious that those two methods of banking are adapted to produce precisely the same effects. In each case a banking capital is created, and each capital is employed in precisely the same way, namely, in the discounting of bills or making loans. To the parties who have their bills discounted, it matters not from what source the capital is raised, the advantage is the same to them, the mode in which they employ the money is the same, and the effect upon trade and commerce will be the same. In the case of the bank issuing notes it increases the amount of money in the country. But the bank receiving deposits will not have increased the amount of money one iota, but it will have given increased motion to money, and the effect upon trade and commerce will be the same. The enormous increase in deposit banking in this country has virtually supplanted the necessity for bank notes.

At the present time our bank deposits aggregate $20,000,000,000, or more than $200 per capita. When a man speaks of his cash he always includes his bank deposit, because under ordinary occasions it is equivalent to cash. In 1860 the total bank deposits of New York were only 15 million, whereas at present they exceed $5,000,000,000. Let me further illustrate this by directing attention to the national banking system for 42 years, from 1867 to 1909. I have drawn a
savings-bank deposits must be sent for investment. Those Frenchmen eliminated the speculator from the control of their Caisse and passed a law prohibiting any person, during a single year, from depositing more than 1,500 francs ($300) in any one or number of savings banks. French statesmanship encourages the use of savings banks by wage earners until they have accumulated a corporate unit, which in France is 1,000 francs ($200), and then it encourages those toiling masses to become investors and be a part and parcel of French prosperity, whereas we encourage them to use savings banks as investment institutions.

The next question is, What monetary law should be observed in order to conduct the business of exchanging credits on safe lines? What is the line of demarcation between expansion and inflation? There are two schools of thought on this subject—or some contend one is a school of thought and the other of guesswork—to be observed in doing this business safely. Just as there are two schools of medical thought in prescribing treatment for debauchery, one prescribes temperance, while the other school fattens off of their unfortunate patients by prescribing as many different remedies as there are quacks engaged in the business. One of those monetary schools teaches that no possible harm will result to humanity if the person or institution doing a banking business will cover its demand-payable borrowed capital with liquid assets, while the other teaches that only a certain portion of such borrowed capital should be covered with money. No two of the doctors of the latter school are agreed on the size of the dose to be prescribed. Dr. Monetary Commission prescribed a 50 per cent dose. Dr. Chicago Bankers' Conference prescribed a 40 per cent dose. Drs. Owen-Glass prescribe a 33\(\frac{1}{3}\) per cent dose. Dr. Sprague prescribed a 55 per cent dose. Dr. Berry prescribed a 20 per cent dose. Dr. National Banking Act prescribed a 25 per cent dose to patients living in some localities and 15 per cent for those living in other localities. Not one of those doctors has ever attempted to give a reason for the size of the dose he prescribed, because his action is not based on reason but guesswork. Some of those doctors insist that the medicine they prescribe should be pure and contain nothing but standard gold, while others contend it makes no difference about the purity of the medicine so long as it bears the "pure-food" label.

The next question for consideration is: What are "liquid assets"? This is a phrase of quite recent origin, as anyone will observe by referring to Murray's English Dictionary. It was first used by the London Daily News on May 26, 1879. Its next use was by the Pall-Mall Gazette on May 5, 1884, when advocating the organization of a joint-stock company to take over the "liquid assets" of the Bank of Glasgow. "Liquid assets," as now used by monetary experts, are assets which are self-convertible into gold. They include gold, demand transfers by solvent concerns on solvent concerns for gold, and solvent commercial paper payable at short and fixed periods. Mr. Geo. M. Reynolds negatively gave a correct definition of this phrase, which may be found on page 226 of these hearings. This is what he said:

The man who borrows money on stock-exchange collaterals in New York, and who wants to realize on them quickly, must depend on the ability of the borrower to reborrow that money immediately elsewhere or upon the sale of
the same. Now, if the condition is so bad that the banks of the city of New York are unable to extend accommodations, the result is that there is a very violent break in the values of securities, and we are in the midst of a panic.

Civilized man's existence depends upon being fed, clothed, and sheltered, and commercial paper is the credit instrument through which those articles are financed and brought to his door. Man is timid about making permanent investments during panicky times, but he must have raw materials to keep his factory wheels going, and he does make and will continue to make provision for such materials. And so it is in every line of business. Provision is made to meet commercial paper when other things will be passed by; especially will men defer making permanent investments when times are hard. Just here I wish to puncture the misstatement made by several of the witnesses who have appeared before this committee to the effect that you can always raise gold with our Government bonds. I recall very distinctly that Mr. Berry made use of that statement. Nothing could be further from the truth than that statement. You can't draw a dollar of gold from the Bank of England with a permanent investment, but you can draw the last dollar of gold out of that institution with solvent commercial paper payable at short and fixed periods. The same thing is true with respect to the other European central banks, because all those institutions, with the single exception of the Reichsbank of Germany, are controlled by merchants.

To illustrate to you what safe banking is let me quote from the testimony of Mr. A. Barton Hepburn, chairman of the board of directors of the Chase National Bank of New York, before the Glass investigating committee last January. It may be found on page 6 of those hearings. This is what he said:

Some years ago I called upon the Credit Lyonnais, in Paris, one of the great banks of the world. The gentleman with whom I was in conversation passed over to me their last bank statement. I glanced it over and remarked:

"Well, you owe a great deal of money."
"What is that you say?"
"You owe a great deal of money."
"What do you mean?"
"Your deposits are about $350,000,000."
"Oh, yes, we owe depositors: but we could pay them easily if we had to."
"Could you? How long would it take you to pay them in case of necessity?"
"The element of time would not enter into the matter at all, except in so far as it required time to perform the physical labor."
"But how; tell me just how you would do it?"

Almost thinking I was questioning the condition of his bank, he took the balance sheet and proceeded:

"Well, we have so much cash; let us deduct that."
"Yes."
"Then we have so much due from banks. We could value against that and deduct the same."
"Yes."
"We have so much exchange, acceptances, etc., which have an immediate market. We could realize upon and deduct that."
"Yes."
"Now, we have reduced our obligations in this manner to something less than $200,000,000, and we have very, very much more than that in commercial paper."
"Yes; but how are you going to pay debts with commercial paper?"
"Take it to the Bank of France and get currency for it."
And he might have said gold, which is the same thing—
"Could you do that?"
"Certainly."
"Is there any law which would compel the Bank of France to discount your commercial paper without limit?"

"Law—yes; the law of its being; that is what the bank was created for."

Before commenting on the statement of the Credit Lyonnais let me direct your attention to the following language on page 24 of House Report No. 69, filed in the House of Representatives September 9, 1913, by Mr. Glass, chairman of the House Banking and Currency Committee. It is this:

There has been a tendency to overestimate the importance of the note-issue function and to treat it as if it were the chief object to be attained in banking legislation. The idea may be attributable to the belief that "emergency currency" is what is needed in order to relieve panics and stringencies, whereas what is actually needed is fluid resources of some kind, whether notes or not.

In an address last winter in this city, before the Chamber of Commerce of America, Mr. Glass, in summarizing our monetary ills, used this language; I quote the first two paragraphs of his address. He said:

I believe that nearly all students of this subject will agree with me in thinking that the main points to be dealt with in any banking legislation that may be attempted are:

1. Provision for rediscounts or sale of commercial paper in a way and to an extent that will enable banks to get fluid resources whenever they or their customers may require.

These are the only two instances in which I have observed the phrase "fluid resources" used. He doubtless used "fluid" as synonymous with "liquid." The two words are synonymous when applied to free-flowing substances, such as water, but never in a monetary sense when applied to assets or resources. It is proper to say you have assets or resources which you can convert or liquidate into cash, but it would be improper to say you could water them into cash. [Laughter.]

I make these quotations not only to show that the author of the House bill does not understand the most important phase of his report, but that he is laboring under a misconception as to the purpose of the institutions his bill proposes to create; that is, he labors under the delusion that if the banks of deposit can have a place where they may secure "fluid resources" for themselves and their customers, everything will be all right and we will be free from panics. Nothing could be further from the truth. All banks, whether banks of issue or deposit, must cover their demand-payable obligations with liquid assets in order to be solvent and prevent inflation. Is there any wonder, then, that Mr. Glass should not have made any provision to prevent inflation on the part of the banks of deposit? The Credit Lyonnais is solvent, per se, and not because the Bank of France will supply it with "fluid resources."

Having shown that in order to do a safe banking business a bank must cover its demand-payable obligations with liquid assets, and that the principal item of liquid assets is solvent commercial paper payable at short and fixed periods, the next question is, What portion of such demand obligations should be covered with gold and what portion with such commercial paper? That depends on several things; first, upon the maturity of the commercial paper; second, upon the expansion of the bank's credits; third, upon the manner in which capital and labor are rewarded, etc. In 1810 the British Par-
liament appointed a committee of 15 monetary experts to investigate and report the conditions under which the Bank of England could issue notes or circulation currency, and their report has become famous as the "Bullion committee law." That law is as follows:

There can be no possible excess in the issue of Bank of England paper so long as the discount of mercantile bills is confined to paper of undoubted solidity, arising out of real commercial transactions and payable at short and fixed periods.

This same sound principle was announced six years before (1804) by a committee of experts appointed by Parliament to ascertain the state of the bullion of the Bank of Ireland, and report the conditions under which it could safely issue notes. Each committee was composed of 15 experts, only two of whom served on both committees. But the Bank of England committee, known as the bullion committee, has been generally credited with announcing that sound philosophy. This committee also reported that the directors of the Bank of England did not know the other committee had announced such truth. It must be borne in mind that the Bank of England then and until the bank act of 1844 enjoyed a monopoly, those in control being actuated by a banker's profit. It is no easy thing to induce business men to adopt a philosophy which may mean loss of profit to themselves. When those in control of the greatest bank in the world refuse to adopt a philosophic truth and do business in accordance therewith, is there any wonder that the nonmonetary experts of Parliament should go to the other extreme and require the bank to cover their notes, dollar for dollar, with gold?—the very thing done by the bank act. The British public had lost all patience with the Bank of England after the disastrous panics of 1825 and 1837. For one-quarter of a century, 1797 to 1825, the notes of the Bank of England were below par most of the time.

The first instance in which an American Congress has announced that the world is round, monetarily speaking, was the passage of the Glass bill recently by the House. But the bill did not repudiate the "flat system of geography," for it adheres to the fixed gold reserve principle embodied in our present national banking system, the most dangerous feature of that system. To illustrate my meaning, I wish to read you the last four annual statements of the domestic bills carried by the Reichsbank of Germany. I would like to have them put in the record.

(The statement referred to is as follows:)

Domestic bills held by the Bank of Germany Dec. 31, 1909, 1910, 1911, and 1912.

It will be observed that on December 31, 1909, the Reichsbank had 46.9 per cent of its bills maturing within 15 days, 16.6 per cent ma-
turing within 16 to 30 days, 24.1 per cent within 31 to 60 days, and only 12.4 per cent within 61 to 90 days. Whereas four years later those ratios ran as follows: Thirty-seven and three-tenths per cent, 18.3 per cent, 25.2 per cent, and 19.2 per cent, respectively. There was a decrease of more than 25 per cent in 15-day bills and an increase of more than 50 per cent in 60 to 90 day bills. It would be ridiculous to have required that bank to carry the same amount of gold in 1909 that it had in 1912, and yet that is precisely what this bill proposes. Our present reserve law is unsound and unsafe, and we should discard it. If we should discard that and adopt a true test of bank solvency, we would soon educate the public on the truth.

I wish to thank the committee for permitting me to propound some questions to Mr. George M. Reynolds touching the subject of bank reserves. My questions and his replies will be found on pages 288, 289 of the hearings. I was particularly anxious to be able to propound those questions to him because he is not only a most intelligent man, but a philosopher of credit as well and is to-day practicing in his banking establishment what I am preaching—that is, he is covering his borrowed capital with liquid assets. Let me quote a few lines of that colloquy:

Mr. Milliken. Bank A has in gold 10 per cent of its deposits and 45 per cent of commercial paper maturing within 15 days, 25 per cent within 16 to 30 days, 15 per cent within 31 to 60 days, and 5 per cent within 61 to 90 days, and no commercial paper maturing after 90 days.

Bank B has 20 per cent of its deposits in gold, 15 per cent in commercial paper maturing within 15 days, 15 per cent in 16 to 30 days, 15 per cent within 31 to 60 days, and 35 per cent in 61 to 90 days, and no commercial paper maturing after 90 days.

Now, is it not a fact that Bank A is in a better position to meet its obligations than Bank B even though the latter at the particular time this statement is made has 100 per cent more gold in its vaults than Bank A?

Mr. Reynolds. I would say yes. If I understand you correctly, your whole theory or question is as to whether or not a very large percentage of your liabilities covered by short-time maturing commercial paper, with a small cash or gold reserve, is not better than a somewhat larger gold reserve with a very much smaller percentage of short-time commercial paper?

Mr. Milliken. Yes.

Mr. Reynolds. I certainly agree with you.

If Congress would repeal our present national-bank reserve requirement and adopt this scientific test of solvency, it would teach the public the truth, whereas the present law teaches them a fallacy. It would not be revolutionary in any sense of the word, for it would merely require those banks to state the important factors constituting their solvency without prescribing a fixed amount of any one of those factors. Let the public read those published bank statements and they will begin to inquire the reason thereof. In time each bank will be vieing with each other for the best statement. We must educate the public on what is sound banking, and this is the very best way to accomplish it.

I am an advocate of a sound credit system as distinguished from a banking system. I maintain that there is too much capital and too many persons engaged in the business of exchanging bank credit for profit. Let me call your attention to the fact that the 46 banks of England and Wales have a paid capital and surplus of less than $400,000,000, or less than twice the paid capital and surplus of the Texas banks, yet the credit machinery of England alone will finance
something like 50 times as much commerce as does the credit machinery of Texas. At least four billions of our foreign commerce is financed through the English credit machinery. Something like three-fourths of the foreign commerce of South America and South Africa, nearly all the foreign commerce of India, a large portion of the foreign commerce of Asia, and much of the foreign commerce of Europe is financed through the credit machinery of England. The commercial credit of England is free and independent of bank credit, because commerce finances itself in that country.

I shall illustrate this by supposing that we were operating under the English credit system. Suppose John Wanamaker, of Philadelphia, should sell a $10,000 bill of merchandise to Woodward, Wight & Co., of New Orleans. If that was done in England, Wanamaker would draw a bill of exchange on Woodward, Wight & Co., on say, 90 or 120 time, and the latter would accept it and return it to Wanamaker. Suppose the day Wanamaker received that bill he should need $10,000 of granulated sugar, and call up the American Sugar Refining Co. and place the order, and at the same time say, “Don’t draw on me, I will send you Woodward, Wight & Co.’s acceptance,” giving the date and amount of the same. Of course if the American Sugar Refinery would trust Wanamaker it would trust him plus Woodward, Wight & Co. Suppose the day the sugar refinery received that bill it should order $10,000 of raw sugar from Woodward, Wight & Co., and it should write, “Don’t draw on me, I will send you your own acceptance to John Wanamaker.” So here would be three instances in which commerce would finance itself and save three banker's profits. It may be said this is theoretical, but I wish to say that similar transactions are done in England every year for hundreds and hundreds of millions of dollars. The bill of exchange is the principal circulating medium in the commerce of England. They have few bank notes, because the Bank of England can not issue a note without covering it with gold, dollar for dollar, except for a small amount to cover an old Government debt. What is best of all is the fact that the English credit machinery does that enormous business on the safest basis as well as in the most economic manner. They have very little gold compared to us. How do they accomplish it?

Let me explain the English credit machinery. In the first place the Bank of England is a real bank of commerce, because it is controlled exclusively by merchants, not for profit but as an aid and adjunct to commerce. And the reason that those bills of exchange circulate as cash in England is the fact that the Bank of England stands ever ready to pay the cash on them at all times. If they have not the gold in their vaults with which to liquidate them when presented they proceed to find the cash for that purpose. “It is the law of its being” to find gold for the liquidation of sound commercial paper, as said to Mr. Hepburn by the officer of the Credit Lyonnais, when speaking of the Bank of France. That is another bank of commerce which is controlled exclusively by merchants as an aid and adjunct to commerce. The fact being thoroughly established in those countries that those two banks stand ever ready to pay the cash on those commercial bills causes them to circulate independent of banks. If the proposed bankers' controlled regional banks are
created, will we have an independent credit system in this country? I say no, for two reasons: First, because they will be controlled by bankers who will be selling credit for profit, and most of them will not care whether the prospective borrowers desire credit for speculative or commercial purposes.

Senator O'Gorman. You are speaking now of the officers of the regional bank?

Mr. Milliken. Yes, sir.

Senator O'Gorman. Will not the fact that they are allowed a return of 6 per cent on the capital invested be a protection against that abuse?

Mr. Milliken. No, sir; because those men may use those banks as "feeders" to build up their private banking institutions.

Senator O'Gorman. Of course, you do not say they will; you mean that possibly they may?

Mr. Milliken. Yes, sir.

Second, because the holders of those bills can not go direct to those regional banks, as is the case in Europe, but must pay two bankers profits. It is simply ridiculous to talk of having an independent credit system when the head of the system is controlled by bankers.

In proof of my contention that the Bank of England is a merchants' controlled institution I offer the statements of Walter Bagehot and Hartley Withers published in their monetary books entitled, respectively, "Lombard Street and the meaning of money," which were read into this record by Senator Shafroth. I also offer the statement of the governor and directors of the Bank of England procured by the Monetary Commission, which was also read into this record by Senator Shafroth. I ask the privilege of rereading them into this record at this place:

Senator Shafroth. But I want to read to you a little paragraph from Walter Bagehot's book, Lombard Street, which probably clears the matter up more thoroughly than we did.

He says:

"In London no banker has a chance of being a Bank of England director or would ever think of attempting to be one. I am here speaking of bankers in an English sense—those who accept deposits subject to check. Not only no private banker is a director of the Bank of England, but no director of any joint-stock bank would be allowed to become such. The two situations would be taken to be incompatible. The mass of the Bank of England directors are merchants of experience and drawing a considerable capital in trade, in which they have been brought up and with which they are well acquainted. The direction of the Bank of England has for many generations been composed of such men."

Mr. Wexler. Yes, sir.

Senator Shafroth. Mr. Wade, a few moments ago you made the statement that members of banking houses were in reality members of the governing board of the Bank of England. I had occasion to look at a book entitled "The Meaning of Money," by Mr. Hartley Withers. There he says:

"When we come to consider the bank's organization, its most striking features are the constitution of its court of directors and its system of government by rotation, and these are points on which the bank's critics have fastened with the keenest energy and determination. "The bank court is a committee recruited chiefly from the ranks of the accepting houses and merchant firms, and its members are nominated by itself, subject to the purely formal confirmation of the shareholders; and it is an unwritten law that no banker in the ordinary sense of the word—that is, no one connected with what we call the check-paying banks—can be a member of it. "At first sight this is one of those anomalous absurdities so common in England and so puzzling to the intelligent foreigner, who can not understand
why we suffer them. A court of directors ruling the Bank of England, and so performing most important banking functions, and yet disqualifying for membership anyone with an expert knowledge of banking, is a tempting subject for an epigrammatically minded satirist. But, in fact, this anomaly, like many of our others, not only works excellently well in practice, but is, when calmly considered, clearly based on sound common sense. For in the first place it would obviously be undesirable that a member of one of the outer ring of banks should have the insight into the position of his rivals which membership of the Bank of England court could give him unless all the others were similarly privileged. But if all the other banks were represented on the bank court it would become a committee of unwieldy dimensions, perhaps reproducing or reflecting in the bank parlor the rivalries and jealousies that stimulate the outer banks to work against one another but are not conducive to their working together.

"And the question of proportionate representation would be difficult to settle. As it is, the bank court, being free from connection with the outer banks, except by keeping their balances, is able to watch their proceeding with a wholly impartial eye and, on occasion, to make suggestions with salutary effect."

Senator Shafroth. I hold in my hand the answer of the governor of the Bank of England and the interrogations of the monetary commission. Let me show you what he says here:

"Q. Is it customary to reelect directors at the expiration of their terms?—A. It is customary for directors to be reelected.

"Q. Is there any custom restricting the class from which the directors may be selected?—A. There is no legal restriction as to the class from which directors may be selected, except that they must be 'natural-born subjects of England, or naturalized,' but in actual practice the selection is confined to those who are, or have been, members of mercantile or financial houses.

"Excluding bankers, brokers, bill discounters, or directors of other banks operating in the United Kingdom."

As tending to disprove the statements of those noted Englishmen, I refer you to the testimony of Mr. Festus J. Wade. The members of this committee who listened to him doubtless recall the intolerance with which he answered those disagreeing with him. When Senator Shafroth read from Bagehot's "Lombard Street" the witness pooh-poohed that author and demanded that the Senator produce the statement of the governor of the Bank of England, repeating that his information was based on the statement of that official to the Monetary Commission. The witness kept bantering Senator Shafroth to produce that testimony, telling him it was in the Monetary Commission's reports and a part of the Congressional Record. Now, those of you who were present will recall that Senator Shafroth left the committee chamber and came back with that evidence, the very evidence the witness demanded and it completely refuted his contention. I never saw a witness whose testimony on a point was so completely destroyed as was the testimony of that witness on that point.

Let me say that 6 of the 24 directors of the Bank of England are members of mercantile houses which do an acceptance business. That is to say, they are members of houses which have a large foreign trade, and that means that they have foreign credit, so much so that foreign dealers with other English concerns require that their names be procured before they will extend credit. They only charge 25 cents per $100 for selling their names and guaranteeing the prompt payment of those bills, or less than many of our country banks will charge for collecting checks on which they assume no financial responsibility. To illustrate this further, let me say that as we have thrown down our tariff barriers it will be necessary for our merchant princes to go out into the marts of the world and find customers for
our products. Suppose Marshall Field & Co., of Chicago, go to South America and Rice Stix & Co., of St. Louis, go to the Orient. No one firm can cover the whole world, not all at once at any rate.

Suppose that Rice, Stix & Co. should need a cargo of hides in their oriental trade and they should order the same from an Argentine hide dealer. The Argentine dealer would doubtless require them to induce Marshall Field & Co. to become the acceptors of that bill, because he would know the financial standing of the latter, as they would have an extensive trade and credit in South America, but might know nothing about Rice, Stix & Co. Both of these great American mercantile houses to-day have extensive credit establishments to ascertain the financial standing of those to whom they sell. So that they could do that acceptance business without incurring any additional expense whatever. Now, to charge them with being bankers because they did that credit business would be as reasonable as if you were to charge a merchant with being a drayman because he built his warehouses along a railroad sidetrack and thereby eliminate the drayman's expense. Those English merchants charge just the same for accepting a 30-day bill as they do for a 120-day bill. So they are not interest gatherers, as is the case with bankers; on the contrary they are interest payers. Mr. Sol Wexler, of New Orleans, a most intelligent banker who testified before you, did not call those great merchants who control the Bank of England bankers. He does an extensive business with them and knows that some of those in control of that institution do an acceptance business. Mr. Wexler said that we had no such class in this country, and he might have also said that we never would have such a class if the proposed bill passes, because such acceptances would have to pay two bankers' profits before they could be liquidated by the proposed central banks or regional reserve banks.

It is preposterous to suppose that bankers would exert themselves in establishing open money or credit markets and thus lessen the banking business. "It's the law of their being" to increase their business of selling or exchanging credits.

(Thereupon at 11.58 o'clock a.m., the committee took a recess until 1 o'clock p.m.)

AFTER RECESS.

The CHAIRMAN. Mr. Milliken, the committee will be pleased to have you continue your remarks.

Mr. MILLIKEN. The fact that the Bank of England is controlled by the great merchants, the very highest grade of interest payers in the world, causes those bills to circulate free and independently of the banks of that country, because the public understand that it is "The law of their being" (the merchants in control of the Bank of England) to find cash for the liquidation of commercial bills, just as our gold certificates circulate until they wear out without ever being presented for payment, simply because the holders have confidence in the good faith and ability of the Government to redeem them in gold coin on demand. But let the Government refuse to redeem one of them and that fact be widely known, and the public would demand the gold.
Napoleon, after listening to the forceful appeal of Mollien, his famous minister of finance, for the freedom of the Bank of France from the Government shackles with which it was then bound, sat silent and then observed:

The world is old; we should profit by its experience. It teaches us that ancient practice is often worth more than new theories.

That is sound advice—something which should be heeded at all times and on all subjects by all lawmakers; but that advice has a peculiar application at this time when the American Congress has assumed the responsible task of attempting to remedy the present evils of our faulty credit system.

It is necessary, therefore, that we take a retrospect of the “ancient practice” of credits, in order that those of this day and generation may know how far from the line of safety the present “practice” deviates from “ancient practice.” It is needless to say that the people of the United States learned the practice of banking from the people of western Europe, principally from the mother country, while the people of western Europe learned it from the merchants of Venice, who enjoyed the most extensive trade and commerce during the whole of the Middle Ages.

It is singular, indeed, that the astute and wealthy commercial nations of western Europe should have delayed until the latter half of the nineteenth century the adoption of the philosophy of credit taught them by the Venetian merchants at least six centuries before. This is but another of the many evidences of the oft-repeated adage that history in time will surely repeat itself.

There are three necessary prerequisites to the establishment of a sound and extensive credit system, viz, the possession of ample wealth, the enjoyment of extensive trade relations, and the maintenance of commercial honor. In each of these the Venetians easily excelled the balance of the world during the whole of the medieval period. During that period they had a virtual monopoly of the carrying trade of the world. Even as early as 523 A. D. their river or domestic commerce was extensive and valuable, while in the eighth century their carrying trade and commercial relations with many distant regions were established on a tolerably sound footing.

It is said that—

The Chronicle of the Monastery of Cava relates how in 987 some large Venetian ships stayed at Salerno on their way to Syria, and how not unfrequently the merchantmen of the Republic foundered in that neighborhood with rich cargoes.

From the eleventh to the fifteenth century Venetian wealth was the wonder of the world, and her commerce stood on an unapproachable eminence which extended throughout civilization. Her argosies formed the sole channel of communication between the courts of Germany and Constantinople, and her well equipped and expensively guarded caravans furnished the only connecting link between the Occident and the Orient until the British discovered the Cape of Good Hope route in 1484.

Hazlitt, in The Venetian Republic, Volume II, page 554, in writing of Venetian credit and charitable institutions for the sixteenth century, says:

Throughout the Lombard part of the Empire or dominion the same solicitude, however, was shown by the establishment of hospitals and refuges, and by the
loan of money on easy terms, to alleviate distress, provide for old age, and assist traders and agriculturists. The Monte di Pietà was a universal institution. * * * That at Brescia advanced to any poor person on adequate security without interest up to scudi di oro, and if the money was not returned within a year the pledge was sold and any surplus returned to the borrower, deducting only a soldo for the expenses. The Monte at Verona was under the management of a committee, which lent on security at 6 per cent to commercial houses or individuals, * * * but to the poor it lent sums not exceeding four lire gratuitously.

It must be borne in mind that the period of Venetian history about which the author writes antedates the organization of the Bank of Amsterdam, the oldest incorporated bank of western Europe (1609). The same historian, Volume II, page 621, in writing about the poor coinage laws of the Venetians, says:

Of foreign money, in addition to what we have enumerated, there were three other varieties, which Venice, from a lack of sufficient supply of her own manufacture, acknowledged and accepted during the earlier centuries. There were the Arabic dirhem of silver, which conveniently adapted itself to current requirements, being equal to two Lombard or Frankish denari; perpero; and the besant or bysant.

Continuing, the historian says:

All these devices for obviating the inconvenience arising from a scanty currency might, however, have failed to provide any adequate remedy for the evil, if trade had not been largely conducted on a basis of exchange, and payments in kind had not long remained in universal vogue. We must acquit the Venetians of an ignorance of bills and other substitutes for cash, when such facilities were elsewhere enjoyed in the twelfth or thirteenth century; and while the first explicit reference to such matters is as late as 1405, the passage where it occurs speaks of it rather as a familiar principle than as a novelty in practice, and so much so that we have an actual document of 1326 immediately belonging to Milan, but the counterpart and sample beyond doubt of thousands and hundreds of thousands which once existed up and down commercial Europe. It is in the subjoined terms, and points to a practice of giving six months' credit, or, as it is now expressed, of drawing at six months:

"Pagate per questa prima lettera a di lx Ottobre a Luca de Poro, Lib. XLV. Sono per la valuta qui da Mascia Reno al tempo si pagate e ponete a mio conto, e che Christo vi guarde. Bonromo de Bonromei de Milano, lx. de' Marzo, 1325."

The same author tells us, Volume II, page 643, that:

On the 4th of June, 1160, the Government borrowed of half a dozen merchants the sum of 150,000 silver marks.

This was the first instance in history of a government funding its debt, and antedates by more than five centuries the organization of the Bank of England and funding of the first British Government debt. The bill of exchange was, no doubt, the most popular credit instrument employed by the great merchants of Venice, because it was peculiarly adapted to the character of their commercial transactions—the world-wide effort in bringing producer and consumer together.

Add to the international reputation which those pioneers in commerce had acquired for capacity and honor, their vast riches, and we have fundamental conditions underlying a sound and extensive credit system. That those great merchants employed that and similar credit instruments for centuries solely as an aid to their commercial enterprises, and not for profit, there is little dispute, and so long as they confined them to real commercial transactions history makes no mention of financial crises.

As the use of such credit instruments by those merchants as an aid to business antedates the art of printing, it is difficult to designate the
exact period when independent credit or banking institutions were organized to sell credit for profit.

The date of the first Venetian usury law was 1254. It is reasonable to assume, therefore, that special credit or banking institutions did not long exist before the enactment of this law. It was a century after the enactment of this usury law before history gives any account of serious difficulties arising from the failure of private banking firms. Hazlitt, Volume II, page 646, says:

In 1355, October 15, it was resolved by the Pregadi that Ser Marino Baffor of Santa Maddalena, and Ser Marco Trevisano, bankers, having absconded with 20,000 ducats, be cried, and that whoever shall lead to their conviction, and deliver them into custody, shall have 550 lire. In 1390 the private bank of Ser Antonio Contarini failed, and was thus wound up by order of the Council of Pregadi.

It was among the domestic troubles and embarrassments of the Doge Foscari that the bank of Andrea Priuli, his father-in-law, suspended about 1440. In 1502, the general inconvenience produced by insolvencies led to the institution of the Proveditori sopra Banchi.

From the thirteenth century, the time when it is most probable the Venetian merchants ceased to do a credit business strictly as an aid to commerce, until the first half of the last century, is the dark age of credit.

During those six centuries, no one seemed to know the exact nature of credit, though every class of credit instrument was in general use. During that period every civilized country suffered from the effects of bad legislation and worse banking practices. France was financially ruined on numerous occasions as a result of such practices and legislation.

But the nineteenth century brought forth a vast army of philosophers of credit, and, strange to say, all that philosophy corroborated the "ancient practice" of the Venetian merchants. The first was the "Bullion committee law," which was announced in 1804, and reannounced in 1810.

The next most philosophic truth respecting credit institutions was that the merchant is the permanent regulator of the interest rate (the rate of profit). This truth was announced in 1827 by James W. Gilbart, F. R. S., who was probably the greatest philosopher of credit the world ever produced. He spent 50 years in actual banking practice, and mastered every detail of the business. His opinion on banking and bank credits was more highly respected than that of any person of his age. He did more to destroy the monopoly of the Bank of England and make it a merchants' controlled institution than any other person in the United Kingdom. He did not accomplish that great work by making monetary experts of members of Parliament, though he appeared before more parliamentary monetary commissions during the first half of the last century than any person in the United Kingdom. On the contrary, he accomplished it by organizing the first of the London great joint-stock banks. At that time the Bank of England enjoyed a monopoly of the banking business within a radius of 65 miles of London. Therefore, Gilbart had to fight in all the courts of England to establish his philosophic truths. He lost in the courts, but he so educated the British public that the monopoly of the Bank of England was destroyed by Parliament.

I wish you would bear with me while I read the most important truth announced by Gilbart, namely, that the merchant is the perma-
Sir Josiah Child, in his excellent Essay on Trade, accuses the “new-fashioned bankers” of “being the main cause of keeping the interest on money at least 2 per cent higher than otherwise it would be; for by allowing their creditors 6 per cent they make moneyed men sit down lazily with so high an interest and not push into commerce with their money, as they certainly would do were it at 4 or 3 per cent, as in Holland. This interest also keeps the price of land at so low as 15 years’ purchase. It also makes money scarce in the country, seeing that the trade of bankers being only in London it very much drains the ready money from all other parts of the Kingdom.”

That we may be able to judge of these accusations—

Says Gilbart—

It will be necessary to make some observations upon those circumstances which influences the rate of interest.

It has been the opinion of most of our political economists that the rate of interest is regulated by the rate of profit. This sentiment has, however, been attacked. It has been contended that the rate of interest is not influenced by the average rate of profit but by the moneyed capital in the market, compared with the wants of borrowers—in other words, that the price of money is influenced by the proportion between the demand and the supply.

This sentiment is undoubtedly right, but it does not overthrow the proposition against which it is advanced. The price of money or of the loan of money is, no doubt, like the price of any other commodity, regulated at any particular time by the proportion between the supply and the demand. But does not the rate of profit regulate the supply and the demand? Will any commercial man borrow money when he must give a higher interest for it than he can profit by its use? Or will any man lend money at a very low interest when by engaging in business he can make a very high profit? It is true that on particular occasions and under particular circumstances some individuals may do this, but not permanently and universally. It is obvious, then, that a high rate of interest in proportion to profits increases the supply of money and diminishes the demand, and a low rate of interest in proportion to profits increases the demand for the loan of money and diminishes the supply. The rate of interest, therefore, is ultimately regulated by the rate of profit.

When we say the price of cotton is regulated by the cost of production, we do not mean to deny that the market price of cotton is fixed by the proportion between the demand and the supply. On the contrary, this is admitted; but, then, it is contended that the supply itself is regulated by the cost of production. If the market price of cotton were so low as not to furnish the grower a fair average of profit on the capital employed, then would capital be removed after a while from the cultivation of cotton to some other employment? And if the price of cotton were so high as to furnish more than a fair average of profit, then after a while more capital will find its way into that employment, the supply would be increased, and the price would fall; but it is only by influencing the supply that the cost of production may be the same for a number of years; the price may be perpetually varying. The price may from a variety of causes be in a state of constant vibration, but it can not permanently deviate on one side or the other much beyond the line marked out by the cost of production.

It is the same with money. It is subject to perpetual fluctuations from the proportion between the demand and the supply, but it does not deviate far from the line marked out by the rate of profit, for the rate of profit not only influences the supply (as with cotton) but also influences the demand.

The above reasoning is founded on the supposition that those who borrow money borrow it for the purpose of investing it in trade or of making a profit by its use. But this is not always the case; and is never the case with the Government of a country, who always borrows for the purpose of spending. Now, we can form a judgment as to what portion of his profits a merchant is willing to give for the loan of a sum of money, but we can form no judgment as to the conduct of a prodigal rake who wants money to spend on his follies. A king or a government is in the same state.

They will borrow money as cheaply as they can; but at all events money they will have. We can not therefore infer that, because Charles II gave at
times to the new-fashioned bankers 30 per cent for money, the average rate of profit exceeded 30 per cent. May not, then, those advances to the king have had the effect of raising the interest of money and thus justify the accusations of Sir Josiah Child?

When a number of commercial men borrow money of one another, the permanent regulator of the rate of interest is the rate of profit; and the immediate regulator is the proportion between the demand and the supply. But when a new party comes in to the market, who has no common interest with them who does not borrow money to trade with but to spend, the permanent regulator (the rate of profit) loses its influence, and the sole regulator is then the proportion between the demand and the supply. The loans to the king created a much greater demand for money and the rate of interest consequently rose. These demands were so great in amount and were so frequently repeated that the rate of interest became permanently high. Many individuals would no doubt (as Sir Josiah Child states they did) withdraw their capital from trade and live upon the interest of their money. And others who were in business would employ their superfluous capital in lending it at interest rather than in extending their business. Those commercial men who now wanted to borrow money must give a higher interest for it than they did before. To enable themselves to do this they must charge a higher profit on their goods. Thus, then, in the artificial state of the money market, it appears reasonable to suppose that the rate of interest may have regulated the rate of profit instead of the rate of profit regulating the rate of interest, which is the natural state.

Not a single European Parliament has ever adopted that sound philosophy of Gilbart, namely, that the merchant is the permanent regulator of the interest rate, yet the majority of those central banks have become controlled exclusively by great merchants. I maintain that the great merchants should control the head of the credit system or ultimate reserve agent for the following reasons:

1. Because that is the best safeguard against the monopolization of credit.
2. Because that is the only way to have a credit system as distinguished from a banking system.
3. Because that is the only way to establish a credit system of the greatest efficiency and economy; but, if the banker were to control that institution, as well as a private banking establishment, then banking would cease to perform its real mission of economizing capital and become a millstone around the neck of commerce.
4. Because no credit system is sound unless its note issues are based on sound commercial paper, and as the merchant is the maker of that paper it naturally follows he is the best judge of its quality.
5. Because the merchant is the permanent regulator of the interest rate (the rate of profit); the price he can pay for the loan of money being regulated by the profit he makes on his goods. But this rule does not apply to those who borrow for the purpose of spending, such as a profligate rake or a government; neither does it apply to the banker, as he is the most potent factor in the supply and demand (the immediate regulator of the interest rate), and if the banker were to control the head of the credit system, then the rate of interest would regulate the rate of profit instead of the rate of profit regulating the rate of interest, which is the natural state.
6. Because the merchant is better fitted temperamentally than the banker to control the head of the credit system, for the reason that the banker is the greatest demand debtor known to the business world, while few of the merchant's obligations are payable on demand. Therefore, when the banker needs money he must have it immediately—to-day, not to-morrow—and when such demand on the banker becomes urgent it wholly unfit his to take the proper per-
spective as to the effect which the granting of such request would have on future interest rates.

7. Because notwithstanding the fact that the merchants furnish the security for most of the paper entered at the counter of the central bank for discount, yet a vast majority of its discounts are made through and by bankers, done voluntarily and in the ordinary course of trade. The very merchants who control these European central banks do not go directly to them for discounts as a rule. Instead they patronize the banks selling credit for profit, because the rate of discount of the central banks is frequently 100 per cent in excess of the market rate. In proof of this I refer to the following statement showing the market and Bank of England rate for money on the last Thursday of each month during 1910:

But if the central bank were controlled by bankers, it would be used as a “feeder” to the private banks owned by them, and thus accentuate the greatest curse known to American corporate management, viz, the control of one corporation by another doing the same business. We have but to view the many railroads which have been wrecked by this pernicious practice, also the many scandals which have occurred in the control of our life insurance companies as a direct result of this practice.

8. Because if the banker be permitted to control the head of the credit system there would exist a strong incentive for him to deny credit to a troublesome though worthy competitor, because if failure resulted he would profit by the lessening of competition, or if by getting him in a tight place and buying him out at his own price, he would profit in that way. No such unworthy motive would actuate the merchant, as he would be prohibited from engaging in the banking business for profit.

9. Because credit has exactly the same influence, if affecting values, as gold—influencing them downward when used for production and upward when used for speculation and overconsumption—and as 99 times more business is done with credit than with gold, and the merchant being selfishly interested in production as well as in a low rate of interest, it naturally follows he should control one important credit institution.

10. Because by placing the best merchants in control of the ultimate reserve agent, we would not only be following the “ancient practice” of the Venetian merchants who introduced the use of credit instruments into western Europe, but we would be following the present practice of every country in Europe enjoying a credit system which is the envy of the balance of the world.

S. Doc. 232, 63-1—vol 3—35
I have here an amendment to this bill—a supplemental amendment. I will read it now:

[Amendment to S. 2639 by adding sec. 30.]

SEC. 30. This act also authorizes the establishment of a bank of commerce to be controlled in a decentralized manner by the merchant citizens of the United States, a portion of the profits of such bank shall be paid into the Treasury of the United States and held in trust for the capitalization of a rural credit system. Such bank of commerce shall operate and be governed solely according to the terms of its charter, which shall read as follows:

CHARTER FOR THE BANK OF COMMERCE.

ARTICLE I.

SECTION 1. (Name of corporation.) The name of the corporation shall be the "Bank of America," and referred to herein as the bank.

ARTICLE II.

SECTION 1. (Object of the bank.) The object of the bank shall be to provide credit for the distribution of commerce, and as a means to that end it shall have power and authority to do a general banking business, and do and perform any and every act incident and pertaining to such business, except the issuance of circulating currency, and act as the depositary and fiscal agent of any State government or any subsidiary thereof, when lawfully chosen as such by any such State or its subsidiary government, or of the Government of the United States when not otherwise expressly provided by law.

Paragraph 1. (Bank to maintain gold standard.) The bank shall pay its obligations in gold of the present standard of weight and fineness, and should Congress make the bank the sole depository and fiscal agent of the Government of the United States, then it shall be the further duty of the bank to maintain an ample supply of gold for the protection of public and private credit.

ARTICLE III.

SECTION 1. (Bank's executive office.) The bank's temporary executive office shall be located by the board of directors at their first meeting, where it shall remain for three years, and at the expiration of that time the board shall establish a permanent executive office; but branches, agencies, and board meetings may be established and held in such places as the by-laws may prescribe.

ARTICLE IV.

SECTION 1. (Capital stock.) The amount of the authorized capital of the bank shall be $100,000,000, divided into one million shares of $100 each, and the certificates therefor shall be numbered from one to one million, inclusive. The capital with which the bank may begin business shall be $1,000,000, but the paid-in capital at the close of its first year's business shall be not less than $5,000,000, and the remainder of said capital shall be paid in in cash from time to time, as the bank's business may require and in such amounts as the by-laws or the Secretary of the Treasury may prescribe: Provided, That the Secretary of the Treasury shall not require the paying in of more than $3,000,000 of such capital during any one year. All stock must be of the same class and dividend-earning ability.

Paragraph 1. (Disposition of profits.) The stockholders shall be paid from the profits a dividend of 6 per centum per annum, payable annually, semi-annually, or quarterly, as the by-laws may prescribed, which shall be cumulative. The remainder of the profits shall be placed to surplus until it equals 20 per centum of the paid capital, and thereafter the bank shall accumulate an old-age pension fund equal to a dividend of one-half of 1 per centum per annum, to be paid, as the by-laws may prescribe, to such employees who have been paid salaries for ten consecutive years of less than $3,000 per annum, and the balance shall be paid as follows, namely: One half to the stockholders and the
other half into the Treasury of the United States, to be held in trust and employed in capitalizing a rural-credit system.

Subpar. 1. (Congress may change ratio of profits.) Congress shall have authority, decimally after the twentieth year, to change the apportionment of profits provided in this section.

Par. 2. (Public to own stock.) No corporation shall become a subscriber to or be one of the original stockholders of the capital stock, and no individual shall be a subscriber to more than twenty-five shares thereof, except those merchant citizens who will qualify as electors, directors, and officers by disposing of their other banking investments, and no elector or director shall become such subscriber to an amount in excess of 5 per centum of his mercantile investments.

ARTICLE V.

SECTION 1. (Duration of bank.) The duration of the bank shall be fifty years from the time it begins business, but Congress shall have authority, decimally after the twentieth year, to amend this charter.

ARTICLE VI.

SECTION 1. (Corporate powers of bank.) The corporate powers of the bank shall be exercised as follows, viz: The legislative power shall be exercised by a board of directors or bank parliament and the bank court, provided that the bank court shall exercise only such authority as may be delegated to them by the parliament except in the matter of fixing the discount rates; the executive or administrative power shall be exercised by a governor and deputy governor and such officers, managers, and agents as the governor may appoint, provided he shall make no appointment not authorized by by-law and if the appointee is to be paid exceeding $2,000 per annum the appointment must be approved by the bank court; and the inspection power shall be exercised by the censors and inspectors.

SEC. 2. (Number of directors and votes of each.) Each State and the District of Columbia shall be entitled to one director, provided it has six qualified electors who have resided therein for a term of two years, and each director shall be entitled to one vote on the board or bank parliament.

Paragraph 1. (Classification of directors.) The classification of directors, districts, and territory comprising each shall be as follows:

FIRST CLASS.

Subpar. 1. (Classification of new States.) If new States be created out of any of the territory mentioned in this paragraph and designated as the forty-nine directors' districts, the first shall become the fiftieth district and be a member of the fifth class, the next shall become the fifty-first district and be a member of the first class, and so on, consecutively.

Par. 2. (Terms of office of directors.) The first board of directors shall be divided into five classes in the order provided in paragraph 1 of this section. The term of the first class shall expire on the second Tuesday in April next following their election; that of the second class one year from that time; that of the third class two years from that time; that of the fourth class three years from that time; and that of the fifth class four years from that time, and so on, consecutively, in each and every year thereafter, so that all the directors of one class shall be elected annually thereafter, provided there be the requisite number of electors in a district to elect a director. All vacancies occurring on the board of directors shall be filled at a special election to be called by the governor within ninety and not sooner than sixty days after such vacancy occurs to fill such unexpired term.

Par. 3. (Qualification of directors.) Each director must be a bona fide resident of his director's district and a qualified bank elector and remain both during his term of office.

Par. 4. (Manner of electing directors.) The directors shall be elected by the ballots of the qualified electors residing in their respective directors' districts. Such ballots after being cast must be forwarded to the executive office of the bank by United States post, inclosed in official envelopes, printed or written "Official director's ballot" in red ink on the address side thereof.

Subpar. 1. (Ballots and envelopes, how furnished.) It shall be the duty of the secretary, thirty days before an annual and fifteen days before a special election for director, to mail one official ballot and envelope to each qualified elector residing in the district in which such election is to be held.
Subpar. 2. (Inspectors of election.) The secretary shall, on the fourth Tuesday in March of each year, in the presence of the censors, who shall be inspectors of elections, open and count the official ballots cast for directors at the elections held two weeks previously.

Subpar. 3. (Candidates for directors.) Each qualified elector who desires to become a candidate for director of his district must notify the secretary of such desire four months before an annual and thirty days before a special election, and the secretary shall inform such candidate of the approximate cost in postage and printing necessary to place his name before the qualified electors of his district. If such candidate within fifteen days after the mailing of such information makes remittance to cover such expense, it shall be the further duty of the Secretary to cause the name and address of each such candidate, as well as the style of the mercantile house or houses with which each is connected, to be printed on each such ballot sent out by him, and mail one to each qualified elector of that district. The candidate receiving a plurality of the votes cast at such election shall be declared elected. If two candidates tie at any election, then the two receiving the highest number of votes shall be eligible candidates at a special election therefor.

Par. 5. (Annual election of directors.) The annual election for members of the board of directors to fill the places of the outgoing class shall be on the second Tuesday in March of each year, and the newly elected members shall take charge of their office the second Tuesday in April next following and hold such office for a term of five years, provided they remain eligible during such period.

Par. 6. (Compensation of directors.) The members of the board of directors shall be compensated by salaries fixed by by-law and traveling expenses incurred in attending board meetings, and as an extra compensation for prompt attendance at the executive office at noon on Monday immediately preceding the annual parliamentary session on the second Tuesday in April of each year, and there remain during business hours until six o'clock postmeridian the following Wednesday, they shall be paid each $4 per hour spent in traveling by the quickest route from their homes to such executive office and return, and at the same rate per hour while actually attending to the duties imposed on them under this charter from noon on said Monday until said six postmeridian on the following Wednesday.

Subpar. 1. (Penalties for failure of attendance.) Any director who fails to attend the annual parliamentary session by noon on said Monday and there remain, during business hours, until 6 p. m. the following Wednesday shall receive no salary for the following year nor any portion of the extra compensation mentioned in the sixth paragraph of this section. Any director who shall have been derelict in attendance on such annual parliamentary sessions for three out of five years shall be rendered ineligible thereafter from holding such office.

Par. 7. (Salaries fixed by by-laws.) All salaries exceeding $2,000 shall be fixed by by-laws.

Par. 8. (Quorum.) A majority of the directors shall constitute a quorum for the transaction of business.

Par. 9. (Chairman of the board.) The board of directors shall elect one of their members chairman, who shall preside at the meetings or sessions of the board and may call the members together in extraordinary session by giving each member thereof at least fifteen days' previous notice.

Par. 10. (Nonpolitical control guaranteed.) No director shall hold or become a candidate for any office under any government or with any political party while he holds his directorship with the bank.

Sec. 3. (Electors.) Each merchant citizen of the United States who owns at least twenty-five shares of the bank's stock and twenty times as much interest in such mercantile house or houses as is defined in paragraphs one and two of this section, whose principal estate is invested in such house or houses and who does not own any stock or interest or hold any office in any other bank or banking institution stock bond or bill brokerage or bill discounting establishment is declared to be a bank elector and entitled to cast one vote by ballot at each election held for director or censor of the district in which he resides and has resided for at least two years previously except as otherwise herein expressly provided.

Paragraph 1. (Mercantile house defined.) The term "mercantile house" within the meaning of this section is a person, firm, corporation, or association engaged in the mercantile business which enjoys, continues to enjoy during the
term of such electorship, and for five years previous to the acquisition of such electorship privilege has enjoyed good credit, and one-half of whose sales comprises articles purchased for a consumptive demand and not exceeding twenty-five per cent of whose sales are articles of its own manufacture or production.

Par. 2. (Consumptive demand defined.) The term "consumptive demand," within the meaning of this section, are purchases made to be disposed of in the ordinary course of trade on which the house expects to realize a merchant’s profit in contradistinction to a speculator’s profit.

Par. 3. (Rule for determining ratio of interests.) After the bank has been in operation ten years the rule for determining that the ratio between an elector’s mercantile and bank investments is twenty to one, respectively, shall be according to the average net annual income derived from each class of investments for the five years next preceding; but during the first decade such ratio shall be determined according to the par values of the two stocks, if the mercantile house be incorporated, otherwise by the market or fair cash values of the two classes of investments.

Par. 4. (Disqualification of electors.) The board of censors may, by a unanimous vote and when they believe the public interest will be best served thereby, call a confidence election to disqualify any one or number of electors. Three months’ notice must be given each elector who is sought to be disqualified, the reasons therefor set forth in writing and signed by the censors, and a copy furnished each such elector.

Par. 5. (Confidence election district.) Each director’s district shall constitute a separate confidence election district.

Subpar. 1. (Voters at confidence elections.) Each citizen of the United States (exclusive of the electors, directors, and officers) who is a stockholder of record of the bank at least two years before such election, and who has been a resident for the same length of time of the district in which such election is to be held, shall be entitled to vote his stock at each confidence election held in his district, each share of such stock being entitled to one vote.

Subpar. 2. (Effect of confidence elections.) If ninety per centum of the stock of such voters is represented at such election and fifty per centum thereof is cast to disqualify an elector, it shall have the effect of disqualifying such elector from voting for a director thereafter or holding that office.

Par. 6. (How to become an elector.) Any merchant citizen desiring to qualify as a bank elector shall make such desire known in writing to the secretary, on receipt of which the secretary shall forward a formal electorship blank to such applicant, to be by him filled out, sworn to, and returned to the secretary in an envelope which the secretary shall inclose for that purpose in his letter replying to the request of such applicant, such envelope to have printed on its address side in red ink the words “Formal application for electorship.” On receipt of such formal application properly signed and sworn to the secretary shall turn it over to the board of censors for verification, and when so verified it shall be returned to the secretary, who, if he finds the statements contained therein to be true and entitle the applicant to an electorship in the bank, shall cause the applicant’s name and address to be recorded in the electorship book, file the application in the electorship vault, and issue an electorship certificate to the applicant.

Subpar. 1. (When mandamus proceedings may be invoked.) Should an eligible merchant citizen be denied the privilege of an electorship after complying with all the requirements imposed he shall be entitled to apply to any court of competent jurisdiction for a writ of mandamus.

Par. 7. (Elector to make affidavits annually.) It shall be the duty of the secretary and censors annually to prepare questions to be propounded to those electors of districts in which elections are to be held the following year touching their qualifications as such and cause the same to be signed and sworn to by them, and when replies thereto are received have them properly filed in the electorship vault.

Subpar. 1. (Confidential communications.) All information acquired by the secretary and censors by virtue of their office touching the qualification of electors shall be kept in confidence and not divulged to anyone except the Attorney General of the United States and such representative as he may designate to receive the same.

Par. 8. (Sectarian control prohibited.) Not exceeding thirty-four per cent of the electors of any director’s or censor’s district shall be of the same religious persuasion or sect. If a greater percentage than that should become qualified,
then the ones last qualified shall not be entitled to vote for director or censor during the period such condition exists.

Sec. 4. (Governor.) The governor shall be a citizen of the United States who does not own less than two hundred shares of the bank's stock and who owns no stock or interest nor holds any office in any other bank or banking institution, stock, bond, bill brokerage, or bill discounting establishment.

Paragraph 1. (Governor's tenure of office.) The governor shall be elected by the board of directors on Wednesday next following the second Tuesday in April of each year which is the multiple of five, and shall hold his office for a term of five years and until another is elected in his stead: Provided, That the board of directors may, by a two-thirds vote, remove him from office.

Par. 2. (Duty and authority of governor.) The governor shall be the bank's chief executive officer and chargeable with the safe and efficient conduct of its business, to which end he shall possess power and authority to appoint such officers, managers, and employees not otherwise herein expressly provided to aid him: Provided, That every such appointee who is to receive a salary in excess of $2,000 per annum shall be approved by the bank court: And provided further, That he and his appointees shall be amenable to the by-laws and governed thereby.

Sec. 5. (Deputy governor.) The deputy governor shall be a citizen of the United States who owns not less than one hundred shares of the bank's stock, and who does not own any stock or interest nor hold any office in any other bank or banking institution, stock, bond, bill-brokerage, or bill-discounting establishment.

Paragraph 1. (Deputy governor's tenure of office.) The deputy governor shall be elected by the board of directors on Wednesday next following the second Tuesday in April of each year which is a multiple of five, and hold such office for a term of five years and until another is elected in his stead: Provided, That the board of directors may, by a two-thirds vote, remove him from office.

Par. 2. (Duty and authority of deputy governor.) The deputy governor shall perform the duties imposed by this charter on the governor during his absence or inability to act and such other duties as may be assigned him by the governor: Provided, That he and his appointees shall be amenable to the by-laws and governed thereby.

Sec. 6. (Qualification and number of bank court.) The bank court shall consist of nine persons who shall be qualified electors and own not less than fifty shares of the bank's stock, and who does not own any stock or interest nor hold any office in any other bank or banking institution, stock, bond, bill-brokerage, or bill-discounting establishment.

Paragraph 1. (Tenure of office of members of bank court.) The members of the bank court shall be elected by the board of directors annually for a term of one year: Provided, That the board of directors may, by a two-thirds vote, remove a member thereof from office.

Par. 2. (Duty and authority of bank court.) The bank court shall have authority to fix the discount rates, the same to lower and raise at their pleasure, and do and perform such other duties as may be delegated to them by the board of directors: Provided, That a by-law enacted by the bank court shall remain in force only until the next meeting of the board of directors. The bank court shall, immediately after enacting a by-law, notify each member of the board of directors thereof.

Sec. 7. (Secretary.) The secretary shall be elected annually by the board of directors and hold such office for a term of one year and until another is elected in his stead. The board of directors shall elect an assistant secretary, who shall perform the duties imposed on the secretary during his absence or inability to act.

Paragraph 1. (Duty and authority of secretary.) It shall be the duty of the secretary to attend the meeting of the board of directors and bank court, and keep true records of what transpires thereat. He shall keep the stock and electorship books, become the joint custodian with the censors of the electorship applications and papers and evidence pertaining to the qualification of electors, and not divulge their contents to any person except the Attorney General of the United States and such representative as he may designate, perform the duties imposed on him under paragraph six of section three of this article, direct the work of the inspectors, and perform such other duties as the by-laws may prescribe.
Sec. 8. (Inspectors.) The board of directors shall elect annually such number of inspectors as the business of the bank may require, who shall hold office for one year only, and until others are elected in their stead.

Paragraph 1. (Authority and duties of inspectors.) It shall be the duty of the inspectors to investigate infractions of this charter and the by-laws and report to the secretary. They shall do and perform such other duties as the by-laws may prescribe.

Sec. 9. (Censors.) The bank shall have three censors, who shall be elected four months apart for a term of one year each, and shall be ineligible for reelection. A censor must be, and for five years next preceding his election have been, a public certified accountant and resident of or maintain a business office in the censor's district from which he is elected.

Paragraph 1. (Classification of censors.) There shall be two classes of censors, first and second class. Those of the first class shall be elected from cities with more than one million five hundred thousand inhabitants, wherein reside at least six electors, and those of the second class shall be elected from cities having from one hundred thousand to one million five hundred thousand inhabitants, wherein reside at least six electors. There shall be one of the first and two of the second class. The electors of such cities shall be entitled to cast one vote each by ballot at each censor's election held therein.

Par. 2. (Directors to designate censors' districts.) The board of directors shall, at each annual parliamentary session, designate three censors' districts in which censors for the following year are to be elected.

Par. 3. (Manner of nominating and electing censors.) Six months before a censor's election the secretary shall notify each elector of such district of his privilege of placing in nomination one eligible candidate for censor. One month from that time he shall notify each candidate so nominated and ascertain if he be eligible and will serve if elected. Two months from that time he shall prepare ballots containing the name and address of each such candidate, as well as the style of the firm or corporation with which he is professionally associated, and mail one of such ballots to each of the qualified electors of such district, together with an official return envelope printed or written "Official censor's ballot" in red ink on the address side; and three months from that time he shall, in the presence of the censors, open and count the ballots cast at such election. Immediately after each censor's election the secretary shall notify the censor of his election and the date his term of office begins.

Par. 4. (Censors elected from separate States.) No two censors serving the bank at the same time shall reside in the same State or within two hundred miles of one another.

Par. 5. (Authority and duties of censors.) The censors shall have power and authority to supervise all elections, investigate the qualification of electors, directors, members of the court and officers, call confidence elections, scrutinize the loans and discounts of houses in which electors, directors, members of the court and officers own any stock or interest (and if the censors find such loans or discounts excessive or unsafe, they shall notify those who made them to cease granting further credit to them unless the bank's interests are fully protected), verify the statements, audit the accounts, and inspect the transactions and properties of the bank, and give such publicity to the errors and acts of those responsible for the control as in their judgment will be beneficial to the bank and the public interest: Provided, They shall not divulge any information acquired by them concerning the qualification of electors except to the Attorney General and such representative as he may designate.

ARTICLE VII.

SECTION 1. (Annual bank statements.) The governor shall cause to be rendered annually, at such date as the Secretary of the Treasury may designate, a full and complete statement of the bank, showing: First, the amount of business transacted by it the previous year; second, the total of its assets and liabilities; and, third, the amount of its liquid assets and the ratio which each item of such assets bears to the bank's borrowed capital payable on demand; and in giving the amount and ratio of such liquid assets represented by its commercial paper and bills and securities arising out of real commercial transactions the statement shall show the amount and ratio thereof maturing, as follows: Within fifteen days, within sixteen to thirty days, within thirty-one to sixty days, within sixty-one to ninety days, and beyond ninety days, respectively.
Paragraph 1. (Other statements.) The bank shall render such other statements from time to time as the Secretary of the Treasury may require.

ARTICLE VIII.

SECTION 1. (Duty of Congress.) The Congress shall prescribe penalties for the violation of this charter and the by-laws enacted thereunder, embezzlements, forgeries and embezzlements, and enact appropriate legislation for the efficient and economic promotion of the bank.

I also have here an index to this charter and an analysis of the control provided under the charter, which I should like the committee to hear.

Article I gives the name of the bank; Article II treats of its object and authority; Article III treats of its place of business; Article IV treats of its capital and disposition of profits; Article V treats of its duration; Article VI treats of its control—the principal feature; Article VII treats of the statements required; and Article VIII treats of duty of Congress as to its promotion, etc.

I will now give an analysis of the control (Art. VI). The first subject treated is division of corporate powers. Section 1 divides the corporate powers of the bank among three separate bodies, viz: The executive (governor), legislative (directors and court), and inspectors (censors and inspectors, the censors to inspect principally the electors and directors, and the inspectors to inspect the officers and those directly responsible for control). In thus separating the powers of control I have followed the charters and practices of the banks of England, France, and Belgium.

The next subject treated is legislative power (directors and bank court). Sections 2 and 6 (Art. VI) vests the legislative power in a board of 49 directors, elected severally by the "great merchants" of the 48 States and the District of Columbia, and a bank court of 9 members elected annually by the directors, the court only to exercise such legislative authority as may, from time to time, be delegated by the directors. Coupled with this legislative authority the directors also elect the governor (the chief executive officer).

Then follows the important feature of a decentralized control. The principal difference between those three European banks and the proposed commercial "Bank of America" lies in the fact that their control is centralized, while this is decentralized. That is to say, they elect their directors collectively, on the national principle, while the directors of the proposed bank of commerce are elected severally by States, on the Federal principle, just as are our Senators and Representatives in Congress. This places the supreme corporate powers of the bank in the several States. This is the only practical way in which they could be elected. The "great merchant electors" of Texas know each other at the present time and can intelligently elect one of their number as a director to represent them on the board of the bank of commerce. They are made acquainted with each other through the commercial travelers who make that State, but the "great merchants" of Texas do not know the "great merchants" of Florida, because there is little business intercourse between them and the same commercial travelers do not make both those States. Therefore, it would be folly to expect the best merchants of one State to elect a director from the best merchants of another State.
Decentralization will prevent shirking of responsibility. New York has amassed her wealth at the expense of the balance of the country simply because the business men of the other sections have shirked their responsibility of control. Under the proposed plan such a thing will be impossible, because if Texas goes without representation on the board, the merchants from Texas will have no one to blame but themselves, for no other State could elect a representative to fill such vacancy. The principal objection made by Thomas H. Benton to the old United States Bank was that—

its board of directors resided in six States, all bordering the North Atlantic Ocean, while the West and South furnished a large share of its business.

The proposed plan of decentralization is a complete answer to such objection. If we are to ever have a credit system free from bank domination, then the merchants of every section must assume the responsibility naturally resting on them; and if some shirk such duty we must be able to readily locate the responsibility and know who is to blame. The merchants of most other countries have assumed this responsibility, and there is no reason why those of this country will not do likewise, if we only provide a practical means under which they can act.

Now I come to an important feature of the control by electors or voting units. Section 3, Article VI, treats of the electors or voting units of control. The real meat of the proposition is contained in this section and the several paragraphs under it. Those great merchant electors are the very source of control in this, as in those great European banks of commerce, and that is all those European control banks are. Now the only way to have a real bank of commerce is to place the commercial interests in exclusive control, controlling it not for profit but as an aid and adjunct to commerce. The only way to do that is to proportion his stock holdings in the bank of commerce to his mercantile interests. I have placed that at the ratio of twenty to one—that is, I require a minimum bank interest of $2,500 (exactly the same as the Bank of England elector) and require a minimum mercantile interest of $50,000. This makes the great merchants merely trustees, as the public at large would own the stock as an investment. If a merchant were permitted to own as much stock in the bank of commerce as he owns in the mercantile business, then he would be selfishly interested in having such bank earn dividends, whether that institution served commerce or speculation. If the merchants who are to control this institution were permitted to own stock in a banking institution, then he would use the bank of commerce as a “feeder” to his banking interests. While the merchants of England, France, Belgium, and the Netherlands control their central banks (or banks of commerce), yet the principal customers of those four institutions are bankers, because they voluntarily keep their reserves with them on which they receive no interest. I will now give the number and financial responsibility of the voting units of those three European central banks as well as the Owen-Glass plan and “Bank of America.”

Now, as to the number of voting units, the Bank of England has approximately 300.

The Bank of France has exactly 200.

The Bank of Belgium exactly 528.
Proposed Owen-Glass plan approximately 60,000 to 250,000.
Then I take an average of a hundred stockholders per national
bank. If all the national banks were to come in, there are 7,400 banks,
or 740,000 stockholders. Divided that by 12 and we have a list of
over 60,000 stockholders. If the State banks were to come in, that
would make in each of these regional banks an average of about
250,000 stockholders. The proposed Bank of America, approxi-
mately 100 per State on the average (they would only be by States),
there would be about 5,000 in the whole country.
Now I come to the financial responsibility of voting units. In the
Bank of England it is $2,500 Bank of England stock and $100,000
and over of mercantile investments. No other banking investments
permitted.
In the Bank of France, the 200 largest stockholders of the Bank
of France who have large investments in commerce. No other bank
investments are permitted.
In the Bank of Belgium, it is $2,000 Bank of Belgium stock and
at least $50,000 mercantile investments. No other bank invest-
ments are permitted.
Under the proposed Owen-Glass plan, the wealth of voting units
range from $100 to $100,000,000, all interested in banking and no
commercial investment required.
Again, under the proposed Bank of America it would be $2,500
Bank of America stock, and at least $50,000 of mercantile interests,
with no other banking investments permitted.
Then as to the stockholders who vote for control and those who do
not so vote:
In the Bank of England there are approximately 300 voters and
over 18,000 stockholders who exercise no voice in the control.
In the Bank of France 200 voters and over 31,000 stockholders
who exercise no voice in the control.
In the Bank of Belgium 528 voters and over 10,000 stockholders
who exercise no voice in the control, except to recall directors.
In the proposed Owen-Glass plan 60,000 to 250,000 voters who con-
trol; no nonvoting stockholders.
Under the proposed Bank of America plan 5,000 voters and ap-
proximately 250,000 stockholders who will exercise no voice in con-
trol, except to recall directors.
I now take up the incentive of actual electors of governor toward
interest—that is to say, whether they are interest payers or interest
gatherers. In the Bank of England they are interest payers, in the
Bank of France interest payers, Bank of Belgium interest payers,
proposed Owen-Glass plan interest gatherers, proposed Bank of
America interest payers.
And then as to the occupation of governor’s electors:
Bank of England, merchants; Bank of France, merchants; Bank
of Belgium, merchants; proposed Owen-Glass plan, bankers; and
proposed Bank of America, merchants.
As to bank-stock requirement of chief executive officer, who is the
governor:
Bank of England, $20,000; Bank of France, $20,000; Bank of Bel-
gium, $10,000; proposed Owen-Glass plan, none; and proposed Bank
of America, $20,000.
In the case of the Bank of England the governor of the Bank of England is elected at the annual meeting of the bank “Court of proprietors” (great merchants) by those “great merchants.” Some of those “great merchants” do an acceptance business as an aid to their mercantile business. Six of the 24 directors are members of those acceptance houses. They are not bankers because they charge just as much for accepting a bill running 30 days as they do for one running 120 days.

Bank of France: The governor of the Bank of France is selected by the President of France from three names submitted to him by the minister of finance. But the minister of finance must choose a person owning 100,000 francs of the Bank of France’s stock, worth $431 per $100, or $86,000. The transfer of the stock is controlled by the 200 merchant electors. And they see to it that nobody but a great merchant will ever get 100,000 francs of the Bank of France’s stock. So, in the final analysis, it is the great merchants who control. The 200 great merchants of France, the 200 largest stockholders of the Bank of France, control it, and as they are merchants they will not permit another class to become large stockholders. It is gradually working up to that. There is no law making the Bank of France a merchant control or a bank of commerce, so you can see it makes no difference who would elect the governor of the Bank of France. It would be just the same.

Bank of Belgium: The governor is selected by the King of Belgium, but he must choose the governor from a number of stockholders owning at least 50,000 francs of stock. That stock is worth $450 per $100, which means an investment of $45,000. But the board of directors who are elected by the 528 “great merchant” electors will not permit anyone to acquire that amount of stock who is not fit to be the governor of the bank. Furthermore, the directors of the Bank of Belgium, just like the directors of the Bank of England and Bank of France, constitute the legislative body of those institutions, and the governors are amenable to the by-laws enacted by them.

The Owen-Glass plan: The chief executive officer of each of those reserve banks can not own stock in the institution over which they preside, as that is owned exclusively by member banks. So he may be a dummy, as is so frequently the case in the control of important American financial institutions. He will be elected by the nine directors, six of whom (a majority) will be elected by member banks. So that he will owe his position to the interest gatherers, while all those great banks owe their positions to interest payers.

Bank of America: This is to be a bank of commerce, and the only way to make it a real bank of commerce is to have it controlled exclusively by the commercial interests. But we don’t want a dummy at the head of so important an institution, and the very best guaranty against dummyism is to require a reasonable stock ownership in the concern the head is authorized to bind for large sums.

It will be observed from the foregoing that the very source of control of those three European central banks is the great merchant electors, the most prominent interest payers of those countries.

Bank court: Section 6 treats of the bank court, composed of nine persons elected annually by the board of directors; each member of the court must be a qualified elector.

Senator Reed. Does that relate to the European banking system?
Mr. Milliken. It relates to the bill that I have prepared as an amendment to this bill, establishing a bank of commerce, which is nothing in the world but the Bank of England.

Senator Nelson. He has prepared a bill for a bank here, and put it into the record, and this is to describe how that bank is formed.

Mr. Milliken. This court would correspond with the executive committee of many American corporations to-day in the matter of imposing checks on the executive officers and thus prevent too frequent meetings of the board of directors, the members of which will be widely scattered in the several States. The establishment of this court corresponds also with the practice of the Bank of England. Its charter provides that the “court of proprietors”—300 great merchant electors—shall constitute a bank parliament, but it was found that that body was too numerous to fulfill such function, so that power was delegated to the board of directors, composed of 24 persons.

Secretary: Section 7 treats of the secretary, the home office representative of the board of directors, whose duties are clerical.

Censors and inspectors: Sections 8 and 9 treat of the inspectors and censors, respectively. One class is permanent and the other temporary inspectors. All are elected by responsible financial bankers not directly responsible for the actual management of the bank. They are elected by the very class who elect the censors for the central banks of England, France, and Belgium. Professional accountants, if elected in a practical manner by responsible financial bankers not in control, are far superior to Government inspectors, because their professional reputations will suffer by withholding from the public important information acquired by them, for their successors will be rivals who would surely expose them for such conduct. It is entirely different with Government examiners, persons who have no professions but the public service, and as man is naturally inclined to want to advance his condition in life, and that service offering no opportunity in that direction, he naturally looks about for some lucrative bank office to fall into when he gets out of the Government job. In order to accomplish their purpose they show favoritism to banks instead of protecting the public interest by exposing error.

No one who has studied the history of our Government-inspected banks and life insurance companies will deny the truth of this statement. Our abnormal banking condition is attributable to this system of paternalism. No country but ours inspects its banks. It is a species of special privilege which has done more to create public distrust than any other. It has taught our business men to look with contempt upon public officials, because many business men have gone out and corrupted those officials. We can never hope to have a sound and healthy credit system in this country until we abandon this species of special privilege.

Argument for this amendment: If this Congress will adopt this amendment and place the most prominent interest payers in control of one bank, just as most European countries have done, we will then be on the road to a sound and healthy credit system, but we will never reach that condition until that class of our citizenship assume the responsibility naturally resting on them in this important matter.

An increase in the quantity of gold is not the cause but only the effect of an advance in prices. It would have the contrary effect of
reducing prices if it were used in production. The price of any commodity is regulated by the proportion existing between the supply and the demand for that commodity. Whatever increases the supply or diminishes the demand will lower the price, and whatever increases the demand or diminishes the supply will advance the price. The seasons and elements are the most potent factors in influencing the prices of agricultural products. Rain and sunshine coming at the right time and in proper proportions will produce abundant crops and consequently cause a decline of prices. For instance, in 1909, with a 12,000,000-bale cotton crop the price advanced to 16 cents, while in 1910, with a 17,000,000-bale crop the price declined to 8 cents, yet the latter year witnessed the greatest production of gold in the world's history—$500,000,000. Suppose the cotton-growing industry had acquired $200,000,000 of that year's gold production, gone into the market with it and bought up 4,000,000 bales, and that fact had been known to the spinners. Suppose also that it had been known to the spinners that the planters intended to take that number of bales off the market and hold it indefinitely unless they realized 20 cents for it. Such use of that gold by those selfishly interested in advancing its price would have effected an advance in the price, for each spinner would have been looking out for the purchase of enough to have kept his factory wheels busy, and as the available supply would have been less than the spinning capacity for that year, the price would undoubtedly have advanced. Whether this would have advanced the price to 16 cents or more would depend altogether on the effect which this organized effort on the part of the planters inspired among the spinners, but that it would have advanced the price to a considerable extent there can be no question. It will be observed, therefore, that it depends altogether on the use to which money is put whether it will effect a rise or a decline in prices.

Money is merely an interpreter of values among traders. But it must possess an actual value—a value aside from its use as money. If I offer to buy a horse of a person who knows nothing about any money except that of this country, and propose to pay him in soldos, our minds do not meet, because he has no conception of my offer. Let me tell him a soldo is an ancient Venetian coin containing 51.6 grains of standard gold and still our minds would not meet unless he knows what standard gold is and how much is contained in our gold dollar. But when I tell him standard gold is 90 per cent fine and our gold dollar contains 25.8 grains our minds come together immediately, because I have reduced our trading thought to a common denominator—standard gold. The unit of value with me would be 51.6 grains standard gold, while with him it would be 25.8 grains. Therefore when I speak of a soldo he instinctively thinks of $2, the equivalent; and if my offer for his horse be 100 soldos and he is willing to accept $200 our minds have completely met. But suppose I haven't the 100 soldos, then we could use the exact equivalent—200 gold dollars. Suppose I haven't the 200 gold dollars, then we could trade if we could agree on some other equivalent. Suppose I have 200 silver dollars, 200 silver dollar certificates, and 40 $5 greenback notes with me, and he knows that Congress has enacted a law requiring the Secretary of the Treasury to maintain the parity between all our so-called "moneys," or written promises of the Government to pay money, and that that official had declared that the
only way to render that law effective was to give each holder of those "promises to pay" the option of choosing the kind of money he wished them to be redeemed in, then we could agree on any of those Government credit instruments and thus consummate our trade in Government credit.

Suppose I had none of those Government credit instruments but had a $200 certified check on a bank he believed to be solvent, then we could trade just as if I had possessed the gold. Suppose I had no bank-credit instrument with me but held a $200 bill of exchange drawn by the Standard Oil Co. on the Pennsylvania Railroad for fuel oil, at 90 days' sight. I suspect we could trade, as he would doubtless know that any bank in the country would discount it; but I would have to pay the discount charge, if he were to realize $200 cash for his horse. So, while we have thought in gold, we have traded in credit.

The Government's stamp on our gold coins does not make them money. While that stamp is indisputable evidence as to the quality, it is only prima facie evidence as the quantity of gold contained therein. To question the quality would be imputing dishonesty to the Government, and this the law will not sanction. But we all know that coins wear when handled, also that some evil-minded persons clip them for private gain. Therefore, in order to protect the public against either of those contingencies, the law properly protects the public by declaring that those stamps shall only be prima facie evidence as to their weight. Hence, the 25.8 grains of standard gold in one of our gold dollars constitutes the unit of value.

Ask an advocate of the quantitative theory of money if credit does not have an influence on prices, and he invariably replies in the affirmative; but ask him to state the relationship between the influence of gold and credit on prices, and he says he does not know; and I have never been able to get one of them to approximate the relationship of those two factors on prices. Hence it is that my mind fails to follow them. Please let me read you an excerpt from an address I delivered before the Young Men's Christian Association of this city on April 11 last bearing on this subject, which Senator Shafroth did me the honor to have incorporated in the Congressional Record on July 24 of this year:

Credit has as much influence on prices as gold. In other words, an expansion of credit by $100,000,000 has as much influence on prices as an addition of $100,000,000 to the quantity of gold. It matters not whether the credit instrument employed to bring about such expansion be bank notes, deposits, bills of exchange, promissory notes, or any other evidence of credit, the effect on prices will be precisely the same. John Stuart Mill says, "Money and credit are exactly on a par in their effect on prices." Henry Dunning Macleod, the great Scotch philosopher of credit, says:

"It is perfectly acknowledged that credit produces exactly the same effect on prices as gold. And it has been shown by authenticated statistics that in modern times gold only forms about 1 per cent of the circulating medium of currency; and to suppose that a variation to the small extent of a fraction of 1 per cent in the amount of the circulating medium, or measure of value, could produce the effect so popularly attributed to it is wholly beyond reason."

Go to a store and buy an overcoat, and you thereby remove that one article of commerce from the market and, pro tanto, cause an advance in the price of that article, and the effect is precisely the same whether you pay for it in gold or obtain it on credit. That credit may be evidenced by your open account with your merchant, by your promissory note executed in his favor, by a bill drawn by you on some of your debtors or a person who has agreed to accept it, by your
check on your bank or a bank note. The effect will be the same whether you use one or the other of those credit instruments or pay for that overcoat in gold. The cause for the advance in the price was your consumption of that article. Any credit system, therefore, which facilitates the production of commerce or restrains overconsumption is a good system, and any credit system which does not afford ample facilities for the production of commerce or which fails to restrain overconsumption is a bad system.

In conclusion, let me say that as credit is on a par with gold in influencing prices—influencing them downward when used for production and upward when used for overconsumption; as the production of commerce is an absolute necessity to civilized man’s existence and overconsumption an evil which should be restrained; as credit has about ninety-nine times greater influence than gold in affecting prices—does it not follow, then, that we should have one credit institution in this country whose sole mission it is to facilitate the one and restrain the other of those conditions? Without such an institution commerce will not only suffer for lack of ample facilities, but panics will continue periodically to wipe us off the financial map.

Senator Reed. Mr. Chairman, I move we now hear from the chamber of commerce.

The Chairman. The committee will hear from the United States Chamber of Commerce. We will be glad to arrange the hearing of any particular members of your committee you would prefer.

Mr. Simmons. If you will permit me, I will just make a general statement and then suspend in favor of Mr. Fisher, who has come here at considerable inconvenience and has an engagement in New York this evening and desires to get away.

STATEMENT OF W. D. SIMMONS, OF ST. LOUIS, CHAIRMAN OF THE BANKING AND COMMERCE COMMITTEE OF THE CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA.

Senator Nelson. Where do you live?
Mr. Simmons. St. Louis, sir.
Senator Nelson. Are you a banker?
Mr. Simmons. No, sir; I am a business man, and I am a director in a bank.

Senator Reed. You are of the Simmons Hardware Co.?
Mr. Simmons. Yes, sir. At the last annual meeting of the National Chamber, as it is generally called, there was a resolution to the effect that our present banking and currency laws were entirely inadequate for the present needs, and the board of directors was requested to take such vigorous action as would, in their judgment, contribute most effectively to a solution of the problem.

When the Owen-Glass bill was first introduced, the committee on banking and currency of the National Chamber was instructed to come to Washington and discuss that bill and make recommendations to the board of directors. A report was made, and the board of directors instructed that it be made the subject of a referendum to the constituent members all over the United States. That referendum has just been completed and, in accordance with the directions of the board of directors, we are here to report to you the result of it.

It was submitted to the constituent members’ inspection, first, as regards the report as a whole and then in seven sections in regard to certain specific details concerning which it was thought wise to have separate action by the constituent members.

Senator Reed. Was any argument sent out along with this referendum vote?
Mr. Simmons. Practically no argument, Senator Reed, because it is the custom of the chamber, when submitting to a referendum vote, if arguments are submitted, to submit exhaustive arguments on both sides, so as to have all sides shown.

Senator Reed. Is there any argument in here?

Mr. Simmons. No, sir.

Senator Reed. You simply sent the bill out?

Mr. Simmons. Just as it is there, practically no argument, except the recommendations of the committee and the reasons why.

Senator Reed. You sent the recommendations of the committee——

The Chairman. This book was sent to each chamber?

Mr. Simmons. Yes; this book was sent to each chamber, in this form, and the recommendations of the committee put in that form, and the reasons stated in a very few words, practically without argument, unless those words are so considered.

Senator Reed. What I am trying to get at is whether you sent this bill out and said, “Now, we would like you to let us know what you think of the bill, after examination,” or whether you sent the bill out with suggestions as to defects, imperfections, etc., in it.

Mr. Simmons. That is what I was about to explain, Senator Reed. It was done in these seven sections: First, in regard to the committee’s report as a whole, and then dividing up that report in these seven sections, so that the constituent members might either report as a whole, or might vote, as some did, on the separate sections.

Senator Nelson. You proceeded on the theory, then, that we would legislate by counting heads and not noses?

Mr. Simmons. I do not catch the significance of that.

Senator Nelson. I say you proceeded on the theory that we would legislate by counting heads and not noses.

Senator Shafroth. No; but their recommendations should be based upon that.

The Chairman. This organization, Senator, represents an organization of the various chambers of commerce of the United States, some three hundred and odd.

Mr. Simmons. Four hundred and over, now.

The Chairman. Some four hundred and odd. They appointed a special committee to study this question of banking and currency, and that committee discharged its duty and then submitted the result of its work to the various organizations through this book and they voted upon it, having this book before them as their guide, as the recommendations of their committee.

Senator Nelson. Those chambers of commerce voted?

Mr. Simmons. Yes.

Senator Nelson. I know how that is done; four or five get together and pass most any kind of a resolution.

Mr. Simmons. The vote in regard to the committee’s report as a whole was 303 in favor and 17 against.

Senator Shafroth. In favor of what, now?

Mr. Simmons. In favor of the approval of the report as a whole. Under the heading of section A, which was in favor of our suggestion to increase the number of members of the Federal reserve board by having the original seven elect two others, subject to the approval of the President, and the compensation of the governor and vice
governor of the board to be fixed by the board itself, that was voted upon favorably by 346 to 70.

Senator Reed. Now, on what page do I find the statement you sent out along with your report on that?

Mr. Simmons. This is the statement right here, sir. It started right there—oh, in regard to that particular point?

Senator Reed. Yes.

Mr. Simmons. That is on page 7.

The Chairman. How was that vote?

Mr. Simmons. That vote was 346 to 70.

The Chairman. How was the vote on the next one?

Mr. Simmons. On the next, B, which was in favor of a Federal reserve council, the president and vice president to sit in Washington and their salaries to be paid by the banks, the vote was 303 to 82.

Under D, which was in favor of the recommendation creating the new system of Federal reserve banks by beginning with the present central reserve cities and then having the Federal reserve board increase the number gradually as their judgment dictated, that was voted upon favorably by 343 to 73.

The Chairman. And on D?

Mr. Simmons. On D there were three divisions, A, B, and C, and the votes were somewhat different. On A, which was a restriction of the issue of Federal reserve notes—that is, that there be no restriction—the vote was 397 to 17.

B, that there be no interest charged on the Federal reserve notes, the vote was 378 to 17.

C, that it be unlawful for any Federal reserve bank to pay out any notes but its own, the vote was 397 to 17.

The Chairman. E, now.

Mr. Simmons. E, in favor of the report that the Federal reserve notes should not be obligations of the Government, but should be guaranteed by the Government, the vote was 367 to 48.

The Chairman. F?

Mr. Simmons. F, in favor of the Federal reserve banks mutually guaranteeing the reserve notes, the vote was 378 to 38.

The Chairman. G?

Mr. Simmons. G, in favor of the recommendation that the reserve requirements be modified and reduced, the vote was 390 to 23.

Now, Mr. Chairman, if it is agreeable to you I will let Mr. Fisher make his statement so that he may catch his train.

The Chairman. Have you a list of the chambers of commerce referred to in here?

Mr. Simmons. I am not quite sure we have it here, but we have such a list.

The Chairman. I think that ought to go in the record, so we will know who it is that is doing this voting.

Mr. Simmons. Yes, sir.

The Chairman. Mr. Fisher, we will hear from you now.
STATEMENT OF EDMUND D. FISHER, DEPUTY COMPTROLLER OF
THE CITY OF NEW YORK AND MEMBER OF THE COMMITTEE
REPRESENTING THE CHAMBER OF COMMERCE OF THE UNITED
STATES.

The Chairman. Will you give your name, residence, and the
official position you hold.

Mr. Fisher. My name is Edmund D. Fisher, deputy comptroller
of the city of New York and a member of the currency committee
of the United States Chamber of Commerce.

I might state, Mr. Chairman, that the members of this committee
were called here this morning by telegram received by them yester­
day, and that there are, so far as I know, no formal statements pre­
pared; and we ask as a matter of courtesy that you will send us for
revision a copy of what we may say here.

The Chairman. A copy of your remarks will be sent to you for
your revision.

Mr. Fisher. I presume my function here, as a member of this
committee, would be, perhaps, to answer any questions in relation to
the subject matter of this report, in the first instance; and in the
second instance, and speaking personally, the one thought that occurs
to me that might possibly be of service in the considerations of this
committee is in relation to short-time notes.

Under the direction of Comptroller Prendergast it is my imme­
diate function to sell what we call the revenue bonds and the revenue
bills of the city of New York. Inasmuch as there has been a good
deal of testimony before this committee in favor of handling the
Government bond problem by, in part, converting the 2 per cent
bonds into one-year notes, it has occurred to me that our experience
in New York might have some bearing on the question.

We originate the short-time notes first, and then fund them into
bonds. Your problem is the reverse problem, but I think the prin­
ciples of operation are practically the same.

As I said before. I have no prepared statement, and consequently I
will not guarantee my figures as being accurate, but the principles
are correct.

Senator Weeks. May I ask you a question right there? You say
you originate the short-times notes first?

Mr. Fisher. I mean to say we issue them, and after a sufficient
number, say $50,000,000, have been accumulated, we have a bond sale
and fund those notes.

Senator Weeks. You would issue the short-time notes, then, even
if there were a suitable market for the sale of long-time bonds?

Mr. Fisher. Not necessarily. That is apart from this broad ques­
tion. I want to try to show to you how a central bank, organized
under the direction of this Federal reserve board which you are
planning for, may help to safeguard the gold of the country through
the operation of the short-time principle. I propose to give you a
specific illustration showing how the city of New York, in selling at
certain periods these short-time notes, may help the country.

For instance, in 1911—in the spring of 1911—money in New York
and throughout the country was fairly tight. If I recall rightly, the
rate at which I had to borrow in New York City on either the revenue bond type or the corporate stock note type was then 5 per cent. Of course, we had the option of borrowing this money in the local market in New York or Philadelphia or Chicago, wherever these notes might be placed, or, under the forms that we have developed, in Paris or London or Berlin, or any of the large money centers of Europe.

There had been exported at that time $5,000,000 of gold, and the banks who were commenting upon the situation estimated that there would be an export movement of gold, aggregating, if I recall rightly, about $15,000,000.

Now, having in our work, necessarily, through this large volume of business, the broad attitude as well as the local attitude in mind, it seemed wise to borrow the money in Europe, particularly as the exchange rate was very high. So we effected an arrangement aggregating £2,000,000—$10,000,000—at an exchange rate which approximated, when the transaction was initiated, about the gold export rate, we will say, for the sake of argument, 4.8775.

Now, the very act of effecting this arrangement in Europe compelled the city to sell exchange. In doing that, naturally, there was a tendency to depress it from 4.8775, for example, down to 4.8725. As we sold it the price was reduced and it automatically tended to withdraw gold from the export market, with the result that almost within 24 hours that export of gold ceased, and there was not a dollar over the five million exported, and we believe that, understanding the situation, the continuity of that export movement of the extra ten was partly stopped by the sale of those short-time instruments abroad.

In similar fashion any number of Federal reserve banks, acting in unity and in an endeavor to protect the gold reserves of the country, had a popular instrument—I do not want to argue necessarily that a 3 per cent short-time note would be a popular instrument; I think the rate, perhaps, might be too low, but I am not going to discuss that point—but if they had a short-time Government note that could be sold at such a time and there was a demand for it abroad, it would offset, if we may use that term, the export movement almost inevitably. Now, as to the rate. It is quite evident that there might be conditions arise where the Federal reserve bank would be willing to sell a 3 per cent one-year note perhaps with a maturity of three months and on a basis a little more favorable than 3 per cent. It is to be presumed that they would not always be able to effect their transactions upon the expressed rate of the instrument itself. Inasmuch as they were drawing higher rates in restricting the country's credits, presumably getting a profit on that basis, they might, at times, sell these notes at 3⅛ or 3¼ or 3⅜, although there would be a technical loss, apparently, on the particular transaction, but no loss, broadly, even perhaps from the standpoint of the profits of the bank, and ultimately a very great gain to the country as a whole.

So I believe the plan that was suggested some time ago by Mr. Warberg, that a portion of those Government bonds be taken and converted as a basis for currency, a basis for financing any such short-time notes, is a proper and sound principle.

Senator Nelson. It would not help the exports of gold unless you got a market for those notes abroad?
Mr. Fisher. Exactly.

Senator Nelson. What assurance have you that we would have such a market?

Mr. Fisher. No assurance, any more than we had an assurance in New York City at that particular time that gold was being exported or that we could sell the notes. You must remember that the average rate abroad, looking back over a period of 40 years or more, has been lower than the average rate in this country. We hope there will not be that difference after you have passed this bill in modified form, but it is quite likely that the differences between the rates will be very much slighter and that the necessity for foreign borrowing will be very much less than at the present time.

Senator Shafroth. In the case of your $10,000,000 you would ship over in bonds and get cash for, why would that be reflected immediately any more than the $600,000,000 of the balance of trade that we have in favor of this country?

Mr. Fisher. For this reason, that when the transaction was initiated exchange was at the gold export point. In order to get that sterling abroad in this country in dollar form we had to sell exchange through the exchange houses.

Senator Nelson. At a premium?

Mr. Fisher. At the expressed rate, but when you sell exchange for a $10,000,000 loan you begin to protect the market, because there is only so much exchange available. If we did not sell exchange, the usual transaction would be this: That we would send the bills abroad and arrange for a countervailing shipment of gold to this side, but it is not done that way, as a rule, unless the trend of exchange is definitely in favor of the shipment of gold. In this case we were shipping gold to Europe, and that transaction ultimately impelled a shipment of gold to us, and one offset the other, and it was made vital in the selling of exchange to protect the market for exchange and make it much lower than the gold export point, and during the following months there did not happen to be in this particular case any further exports of gold. Such a transaction, I will admit, may very easily be lost in the great aggregate of transactions; but happening to be involved in the matter personally, and happening to hear all the trend of thought on the subject, and realizing that we might help the country as well as get money at a lower rate, I initiated the transaction with what, to me at the time, was a very startling result, the immediate cessation of the gold export and the breaking of the exchange rate.

Senator Weeks. Have you done that more than once?

Mr. Fisher. Oh, yes. The city of New York borrows an aggregate of $20,000,000 a month, so that you can see we are a very vital factor in the exchange market when we borrow that abroad.

Senator Weeks. What has been the average rate?

Mr. Fisher. I should say about 4 per cent.

Senator Weeks. Are the securities actually shipped or held in New York?

Mr. Fisher. They are shipped in the aggregate, although in some cases, owing to the tax laws abroad, there is a request to have them domiciled in the portfolios of some of the trust companies, but
finally, to all intents and purposes, they are foreign transactions. They have a memorandum abroad if they have not the actual bills. In general, we know they are sent abroad because they bear the stamps of the foreign purchasers when they come back to us for cancellation.

Senator Weeks. And you pay the expense of shipping?

Mr. Fisher. No.

Now, to come back and try to finish the discussion of this short-time note principle. There have been suggestions that these bonds be cut in half; that they be half short-time notes and half bonds in the initiation of this plan. Upon that point it is suggested that nobody knows the financing ability of the Federal reserve bank, and I should suggest two elements of flexibility. People have been arguing for flexibility in currency; I would argue for flexibility in plan. For instance, if the recommendation is made to cut the bonds in half and have one-half notes, I should say that not more than one-half the bonds be converted into notes and not less than 15 per cent, so that the banks will be able to absorb the business, letting them take it on gradually. Furthermore, if a 20-year limitation is made, I think it would be entirely unsound, to the extent that you might have difficulty in developing the principles of your plan, for the reason that they would run to 21, 22, or 23 years. I should say to the extent that your plan works slowly, putting the flexibility in at the beginning, to that extent you might have difficulty in developing the principles of your plan, for the reason that they would run to 21, 22, or 23 years. I should say to the extent that your plan works slowly, putting the flexibility in at the beginning, to that extent you might not need flexibility at the other end. You need to introduce two principles of flexibility in the volume of those you wish to absorb, either in one way or another, and flexibility on the other end in the time of the ultimate applications of the principles laid down. I think those two points are very vital.

Senator Weeks. Will you make a definite draft of your idea, not only as to the refunding of the 2 per cent bonds but the handling of the bonds in which they are refunded until maturity, and submit that to the committee?

Mr. Fisher. What you want is a definite section contemplating the philosophy that I have outlined, in the including of both elements of flexibility?

Senator Shafroth. Not the reason but the language itself, just as it ought to go into a law.

Mr. Fisher. You have no objection to an argument?

Senator Shafroth. Not at all.

Mr. Fisher. That is all I care to volunteer to the committee, but if any suggestions occur to you in regard to questions concerning the work of the Chamber of Commerce of the United States in relation to these points we have recommended I shall be very glad to answer your questions, if I can.

Senator Nelson. In order to save us the time reading this pamphlet, is there any one of you gentlemen who can state what the points are? I will not have time to read these things afterwards; I would like to get them on the spot.

Mr. Fisher. You want a recommendation on the underlying philosophy.

Senator Nelson. I would like to know what it is you desire to have in the bill and your ground for it.

Mr. Fisher. I think I will start with the first item on page 5. I will give you the suggestions of the committee, and I will try to
specify the principles of the philosophy underlying the suggestion, if that is satisfactory to you?

Senator Nelson. Yes; that is satisfactory to me.

Mr. Fisher. The bill provides for a board of seven, of whom at least one shall have had banking experience. This element of banking experience can be strengthened without weakening the element of public control. We therefore suggest that the Federal reserve board be increased to nine; that the original seven shall choose two additional members, subject to the approval of the President; and that the board thus constituted shall elect the governor and the vice governor of the Federal reserve board.

My conception of that is, perhaps, somewhat colored by the discussions which have taken place; but I felt this, that in the first place we desired to accept the general principle of Government control that has been discussed here, and I need not go over it; and that the element of three administrative officers out of the seven developed lack of continuity in management. We have had some experience in New York City with the lack of continuity in management, and I suppose it cost the city $5,000,000 a year. I came into office four years ago, and I go out of office at the end of this year. It took me a year to digest and analyze all the principles involved in this broad question of financing the city. I had to start in the second day and borrow $5,000,000. I lost 7 pounds during the first week, but gained it all back during the second week. The point is this, it seems to me, that what you want is continuity in management.

Senator Nelson. It has been suggested here, and with a good deal of force, that instead of having three Government officials we only have one Government official, the Secretary of the Treasury.

Mr. Fisher. I would agree to that.

Senator Nelson. Eliminate two, for there would be no occasion for these extra two if that plan was adopted.

Mr. Fisher. There has been a great deal of talk about what we call the political quality of the board. You have had experience with bipartisan boards. I think it has been a definite mistake to try to make this a bipartisan board. I would rather have President Wilson appoint all Democrats, if necessary, than to be compelled—I mean from the standpoint of quality—to search over the country for the sake of balancing one party against another party. That is not what you want; you want quality.

Senator Nelson. If we drop two of those officials the board would be composed of seven?

Mr. Fisher. Yes.

Senator Nelson. And you would have six to which you could apply your principle of continuity, so there would be no occasion to increase the board by two?

Mr. Fisher. The President, under the proposed law, appoints four. The Chairman, He would appoint six, under your suggestion?

Mr. Fisher. Then you adopt our suggestion in its essentials?

The Chairman. Yes; but we do not make it a board of nine.

Mr. Fisher. That is immaterial. You minimize the so-called political quality.

Senator Nelson. Is that a good solution?
Mr. Fisher. That is an excellent solution, and I think that my confreres would accept that.

In the next item we suggest the organization of a Federal reserve council, elected by and representing the directors of the Federal reserve banks and serving in an advisory capacity.

This council should meet at stated periods in conference with the Federal reserve board. The president and vice president should reside in Washington, and sit at the meetings of the board, but without vote. The compensation of the officers and members of the council should be fixed and paid by the Federal reserve banks. You see the idea is not to destroy the philosophy of the bill.

This recommendation of the report has been partially adopted. The reprint of the bill provided for a Federal advisory council, to consist of as many members as there are Federal reserve banks, each Federal reserve bank by its board of directors annually selecting one member. The meetings of said advisory council shall be held at Washington at least four times a year and oftener if called by the Federal reserve board. The council may select its own officers and adopt its own methods of procedure and a majority of its members shall constitute a quorum for the transaction of business.

The council shall have power, first to meet and confer directly with the Federal reserve board on general business conditions; second, to make oral or written reports concerning matters within the jurisdiction of said board; third, to call for complete information and to make recommendations in regard to discount rates, rediscount business, note issues, reserve conditions in the various districts, the purchase and sale of gold securities by reserve banks, open market operations by said banks, and the general affairs of the reserve banking system.

These changes do not provide that the president and vice president of the council should reside in Washington and sit at the meetings of the board, but specify that the members shall receive no compensation for services, contrary to the recommendation of the report that compensation should be fixed and paid by the Federal reserve banks which would make residence in Washington possible.

Senator Reed. This bill gives to the banks a control of the regional banks directly and in the first instance. If there are 12 banks, there will be 60 representatives of the banks upon the boards of those 12 banks, in constant touch with the central board, familiar, as a matter of first instance, with the business with which they are concerned, free at any moment to approach the central board and confer personally or by letter. Why is not that a sufficient board or council to satisfy anybody?

Mr. Fisher. Because 60 men on various boards throughout the country have not, inherently in their position, the consolidated ability to express their judgment, and consequently, without in the slightest degree destroying the philosophy of this bill. If you have a Government board of seven men, with two officers, such a council as suggested will give that consolidated voice where it is most needed, in the most efficient manner, and without delay.

Senator Reed. Let us see. How will these two men sitting there get that consolidated voice; from whom will they get it?
Mr. Fisher. I should say that it would not express itself as a representative vote or representative voice; it would be an expression of judgment.

Senator Reed. Of two men?

Mr. Fisher. Of two men, and, in the last analysis, representing the banking fraternity.

Senator Reed. Yes; representing the banking fraternity and outside of this system?

Mr. Fisher. Yes; but the banks of the country would have a check on those men.

Senator Reed. How?

Mr. Fisher. By their recall.

Senator Reed. The banks can recall them?

Mr. Fisher. Certainly; through the medium of the Federal reserve banks they could recall them.

Senator Reed. Let us spend a moment on that. We create a system of 12 banks—and I take 12 as the number merely because that is named in the bill. The banks elect 72 men to directly represent them; they are elected from each district. Those 72 men are familiar with affairs in the country at large.

Mr. Fisher. I should say that they are more particularly intimate with their particular districts.

Senator Reed. Very well; but each of the six is particularly posted with reference to his district; he knows the facts, knows the conditions of the crop; he knows the conditions of the money demand and supply. He is in constant touch with 12 men who are impartial, and whose business it is to manage the entire system. They have an absolutely unselfish interest. If the central board is composed of intelligent men who understand the system, understand banking, are in direct touch with the sources of information all over the country, are they not from the very best and highest source, and they are in a position to receive the opinions and suggestions of all these men who directly represent the banks, and nobody else?

Now, I want to know if that is not a better representation of the banks than they can possibly have by sending down here two men who may have been picked by some banking organization which is generally under the control of these big men?

Mr. Fisher. I will again say no; that it is not a consolidated representation. They will express themselves in letters as to different points, but I believe that the two men whom we must also put in the category of the men of the same class you have stated would be disinterested and work for the benefit of the country.

Senator Reed. They can not be disinterested if they represent the banks.

Mr. Fisher. Do you believe that two more men, simply because they happen to be chosen by the Federal reserve boards, will have the quality of disinterestedness?

Senator Reed. Two more men? No.

Mr. Fisher. Or have the same quality of judgment?

Senator Reed. But you gentlemen propose to have them selected by the Federal reserve board, as I understand you.

Mr. Fisher. The proposition is this, that the directors of each one of these Federal reserve banks will choose one man, and all
those men will constitute a Federal advisory council; and, in the second step, this Federal advisory council will choose two men to represent them, and those two men will sit, without vote, with the seven proposed in this bill for what they are worth. If they are worth nothing they will do no harm——

Senator Reed. I do not follow your conclusion. I have known of a great many occasions where people were not worth anything and they did harm.

Mr. Fisher. The precedent of this suggestion is in the German experience. They have there the imperial control, but they have in that imperial control the voice of the banking and business interests of the country, and that voice never has been at discord with the imperial control. They work in harmony, and that is the best possible illustration of the success of the principle suggested.

Senator Reed. The whole system over there, of course, is entirely different from this.

Mr. Fisher. We have to search somewhere for ideas, however.

Senator Reed. But you can not take one part of the system and fit it on to another, and necessarily draw a conclusion as to its value. I want to direct your attention to a fact that, it seems to me, the advocates of this suggestion overlook, and that is that these banks do have the right of direct appeal to their representatives, to the central board, the right to advise the central board, and the central board has the right to listen, and will undoubtedly listen, to great financiers and, I hope, to small financiers.

Mr. Fisher. I will simply say in addition that this is intended to furnish a definite basis for making that direct appeal forceful.

Senator Nelson. Would it not result in one of two things: Either these representatives of the regional bank on this council must have the advice and accord with the wishes of their boards of directors, or else they go there as mere individuals, representing their individual views? I mean these members of the advisory council. Now, which would it be? Would you have them go there as the representatives of the boards of directors, taking their opinion before they act, or would you have them go there and express simply their personal views?

Mr. Fisher. If there develops a definite opinion throughout the country in relation to a definite policy, that would of course express itself in a definite form in the minds of those two men. The truth of the matter is, however, and you all know it to be true, that banking recessions or accessions, the ebb and flow of banking, run along such definite and fixed lines that almost every banker in the country that has thought about it at all knows in advance almost what is going to happen. We talk about this discount rate. I have been told one week in advance what was going to be the policy of the Bank of England, and yet I do not believe that a single member of that board "leaked," as we call it, or in advance intimated to the public what he was going to do. It simply means this: That they inevitably had to advance or had to charge the discount rate; it was necessary. They knew it; every banker in the country knew it that was watching the broad aspects of commercial and business relations. There is not going to be, gentlemen, this conflict between politicians and bankers. You know your principle is sound and, in my opinion, it is going to work harmoniously, but you want to get as high a
basis of intelligent judgment as you can. We believe that by having two men there, without a vote, but to advise and express their judgment—even their own judgment, if you will, but rather the consolidated judgment of the banking world—will give a better result in the aggregate than the method proposed.

Senator Reed. Let me call your attention to this: The capital that is furnished by these banks as their contributions to the capital stock is, in the last analysis, furnished by the depositors.

Mr. Fisher. Yes.

Senator Reed. They are the people of the country, speaking broadly. I am not, in what I say, trying to put myself in a position of antagonism to the banks——

Mr. Fisher. I understand; you want to bring out the facts and the truth, as far as you can get at it.

Senator Reed. The Government then comes in and furnishes a very large part of the money that constitutes the assets of these banks, or, more properly speaking, the money that they have the use of, and then proposes to lend to this system its power to issue currency. The banks are put in control of the 12 regional banks. They are not content then to let the Government manage the general system on behalf of the bankers, on behalf of the borrowers, on behalf of the farmers, but they want a special representative. Can you tell me any more reason why the bankers should be specially and particularly and directly represented up there than the Farmers’ Alliance?

Mr. Fisher. Representation in the sense that we recommend it is not control. We stand for Government control. We have not suggested that the bankers have even a minority representation on this board of seven. We merely say that it may be desirable to give them the ability to speak in a concrete and definite way in the meetings of that board. It does not take one iota from the control. And if their judgment is good, and if it is accepted, it is accepted with the knowledge and consent of the seven Government representatives.

Senator Reed. But you do not answer my question. Why should not the farmers of the country have representation on that board in an advisory capacity? Why should not the merchants of the country have direct representation on that board in an advisory capacity?

Mr. Fisher. They have it because the very fabric of your bill provides that three of these members shall represent those very interests.

Senator Reed. Oh, I am not talking about that; I am talking about the central board.

Mr. Fisher. We are not arguing for bank representation on the central board; merely a voice.

Senator Reed. You are asking for a voice. You and I are talking about the same thing; don’t let us get into a tangle about terms. If the bankers should have representation in the shape of an advisor upon this central board, appointed by the Government, why should not the great business interests, and the small business interests, have this same kind of advisor to represent them? Why should not the farmers have the same kind of advisor to represent them? And why might we not extend that indefinitely?

Mr. Fisher. Again I say that these two men represent not only the banking interests, but the commercial interests and the farming in-
interests, because they are chosen by a series of composite boards that are manufactured by this bill to represent all those interests.

Senator Reed. You know perfectly well, and I know perfectly well, and every banker that has been on the stand that has been asked about it has frankly said the banks will pick the six members from the boards of directors of the regional banks. They do not make any question about that, and we need not haggle about it now. It is going to be bank representation; it is bank representation——

Mr. Fisher. In the first instance.

Senator Reed. Perhaps broadly so. Now, the bankers having that representation already in the regional bank, the Government board being here to represent everybody, if the United States Government and all the people need to have the advice of bankers especially, why not have some advice for great borrowers, and small borrowers, for farmers, and for other classes of people? I can not see why they do not need it just as much as the banks do.

Mr. Fisher. Do they need it at all?

Senator Reed. I think it is a piece of absolutely unnecessary machinery, because I hold that this board, if it is properly constituted, will hear from all these original banks, will listen to financiers, to borrowers, and to people generally who have advice to give. It will not close its ears and cease to think, but any citizen that has a proper case to represent can go there and represent it. And I think it would be highly improper, if you want my opinion—and this is one question I am ready to vote on—to put a banker on that committee and let him sit in the councils of that board as an advocate who may speak behind closed doors.

Mr. Fisher. I will agree with you in the general statement that the board could hear the farmers and the merchants of the country, but, on the other hand, I do not agree with you that it will necessarily hear them.

Senator Reed. Oh, yes; any proper board will.

Senator Bristow. Now, let me ask you this: Suppose the bankers were not required to subscribe to this capital stock, that any citizen could subscribe to the capital stock to keep this bank going——

Mr. Fisher. Mr. Chairman, I want to make the reservation, of course, at this point that what I am saying in this ejaculatory manner is purely personal and does not represent the views of the gentlemen of the committee. I have to use my own judgment in answering these questions.

Senator Weeks. May I suggest, Mr. Chairman, that Mr. Fisher has to catch the 3 o'clock train?

Mr. Fisher. Mr. Chairman, I want to make the reservation, of course, at this point that what I am saying in this ejaculatory manner is purely personal and does not represent the views of the gentlemen of the committee. I have to use my own judgment in answering these questions.

Senator Weeks. May I suggest, Mr. Chairman, that Mr. Fisher has to catch the 3 o'clock train?

Mr. Fisher. I have already missed that train and shall have to be an hour late. I am perfectly willing, under the circumstances, to take the 4 o'clock train rather than the 3 o'clock if I can be of service.

Senator Bristow. As I was saying, if the bankers were not required to subscribe to this stock—if it were purely voluntary with them or any other citizen that wanted to subscribe—then, of course, you would make no claim for representation?

Mr. Fisher. It is not a claim for representation; it is an attempt to help the quality of management. I am not in sympathy with the idea of representation particularly. All our discussions in the past few months on this question, where intelligent men have got together, has not been in favor of representation. When you appoint
a man to the Supreme Court he has divorced himself from the bar; he may be a lawyer, but he represents the country in that court. And the banker does not expect to have a man on that board who will listen to what this bank says and what that bank says; he goes there in a judicial capacity, and I think you want to drop the idea and the bankers want to drop the idea of representation. The bill you have before you frankly says "One man of trained banking experience." If you will alter the complexion of the bill, we may withdraw this suggestion, but we have to take the bill as we find it. I do not want to see a board of whom only one man has trained banking experience.

Senator Reed. Although I disagreed with you a moment ago, I am going to agree with you on that proposition.

Mr. Fisher. We are arguing on this bill; not any other bill.

Senator Bristow. But I am inquiring about a different proposition and I want your views on it. Suppose we amend this bill—which I hope we shall do very materially—and that there is no compulsory subscription required of the banks; suppose we leave it voluntary as to whether they subscribe or not, and that anybody may subscribe——

Mr. Fisher. Then I will answer you flatly that what I am arguing for, and what, I think, my confrères are arguing for, is quality of judgment, which has nothing to do with the principle of stock subscription.

Senator Bristow. Now, this bank or banks created in that way would perform functions similar to these, and in that event you would not insist that we ought to have this advisory council?

Mr. Fisher. Under the terms of this bill as it stands?

Senator Bristow. That would not be the terms of this bill.

Mr. Fisher. You mean if you put these men or some other men on that board——

Senator Bristow. Oh, this bank would be governed by a board, yes; but no banker would be compelled, in order to maintain his charter, to subscribe to it.

Mr. Fisher. But you retain the principle of one trained banker in the bill.

Senator Bristow. Oh, I do not care much for that.

Mr. Fisher. It makes a difference in my answer. I can not answer unless you change the complexion of the bill.

Senator Bristow. Leave it as it is.

Mr. Fisher. Then I say have the advisory council, most certainly.

The Chairman. And you argue that that would be along the line of the central auschuss of the Reichsbank?

Mr. Fisher. Yes; which experience has shown to be eminently satisfactory.

Senator Nelson. Would it not be simpler—I am putting a hypothetical case, not to intimate that it expresses my views—instead of having this cumbrous advisory council and the board of seven to have two practical bankers not owners of bank stock or interested in banks at the time, but with practical banking experience, on the board?

Mr. Fisher. I think personally that if the bill provided that at least three trained bankers——

Senator Nelson. No; two.

Mr. Fisher. I am giving you my answer; I am not accepting your idea. I would say this, that if the bill provided for at least three
trained bankers, the advisory council would be much less necessary under the terms of the bill.

Senator Nelson. Why would not two be enough?

Mr. Fisher. They might both be sick in bed.

Senator Nelson. Would it not be better to have these two outsiders?

Mr. Fisher. No well-managed organization to-day can be handled successfully with only two officers. I think, by the way, Mr. Chairman, that is something you ought to contemplate in your amendments. You have not provided, for instance, for a deputy for your Federal reserve agents in case of illness or absence.

Senator Nelson. That would be provided by rules and regulations, I think.

Mr. Fisher. And I am inclined to think that a chairman and vice chairman are hardly sufficient. There ought to be provision for a substitute in case of emergency. No well-managed bank to-day of any size can successfully handle its business with only two executives, because if one is away on vacation or, as he properly might be, perhaps, in this case, in Europe studying banking conditions, the entire responsibility on one man might be entirely too great. I think that three, or at least two, with a provision for deputization of power, is quite essential wherever officers of chairmen are provided for.

Senator Nelson. Would it not strike you as simpler to have a board of seven, five appointed by the Government and two appointed by the Government, but from a list furnished by the banks of practical bankers, but not stockholders or officers in banks at the time? Would not that be a solution? I am putting a hypothetical case.

Mr. Fisher. No; I think that as this is, after all, a banking enterprise, two is rather a small number for me to argue for.

Senator Nelson. Why three?

Mr. Fisher. For the very reason I have stated, that with one man away there would only be one man left. If you have three, then with one man away you have two left. Understand, I am not worrying over the question of management. I am not worrying as to whom President Wilson is going to appoint. I think it will be satisfactory. We are discussing this thing from the standpoint of all time, and two men in any capacity is too small a number from the standpoint of practical business experience. Now, for the third point. In the creation of a system of Federal reserve banks a beginning should be made with the present central reserve cities, additions to be made by the Federal reserve board gradually as, in their judgment, conditions warrant them. Meanwhile the facilities required by other centers could, in our judgment, be adequately supplied by branches.

Senator Nelson. That means you would start with three regional banks?

Mr. Fisher. The philosophy underlying that suggestion is this, that the credit fabric of the country, the loan fabric, has now been built up upon the principle of central reserve cities and reserve cities. Our thought was, although it is not fully expressed here, that a Federal reserve bank, in the first instance, in every central reserve city, with a branch in every reserve city, would be a scientific and accurate basis of starting in this enterprise. That would mean that there would be no shifting of reserves where they are now segre-
gated. It would be handled by rediscount in the centers where they now repose. I am inclined to think that is a very sound statement to make.

Senator Nelson. There is a good deal of philosophy in it.

Mr. Fisher. If you take twelve, an arbitrary number—and I want to state, gentlemen, that an arbitrary number is senseless. Why twelve? Why thirteen? Why nine? Why eleven? I see no philosophy in any arbitrary number. You want to draw a bill based on principles. For that reason we suggest one in every reserve city. Of course, when this suggestion was first made your reserve requirements were more along the old lines. You have since changed them. Our recommendations here in some cases have been carried out.

Senator Nelson. Your theory is this, that if you made the regional banks in the three reserve cities—New York, Chicago, and St. Louis—and limited it to that—

Mr. Fisher. At the start.

Senator Nelson. At the start, it would work less friction and less jarring to the reserves of the country? It would be more like these banks stepping into the shoes of the old system.

Mr. Fisher. It would not break down a single dollar of credit by diversion to the other sections, because your bill provides for rediscounts of $216,000,000—I do not recall the exact amount, but somewhere between $210,000,000 and $220,000,000. Now, if you take the bill as it stands and arbitrarily make 12 different centers there will have to be support drawn in a general sort of way from certain sections, and the money will be diverted to sections where it can not profitably be used.

Senator Nelson. And a good deal of it will come from these three central reserve points?

Mr. Fisher. Yes. Understand, I am not here arguing in support of any selfish principle, and I am sure our committee is not.

Senator Weeks. Mr. Fisher, it seems to me to be a very practical suggestion, because there would be less disturbance perhaps than under any other that could be made. But I do not see anything scientific about it, because in order to become a central reserve city all the banks in a reserve city have to do is to keep 25 per cent of their deposits in reserve. In order to become a reserve city it has to be a certain size—

Mr. Fisher. You understand, since this suggestion was made, you have taken away the vitality of the central reserve city and the reserve-city idea largely.

Senator Weeks. There is nothing left.

Mr. Fisher. And, consequently, this suggestion has force only in that the reserves in these sections are now supporting certain credit fabrics.

Senator Weeks. We may say, then, as I have said, that it is a practical suggestion rather than one involving a principle.

Mr. Fisher. The principle has been taken away, because you have changed the reserve requirements, but it was based on a principle when it was first suggested. It is now a practical suggestion rather than a continuing principle, if you will note the distinction.

Fourth, at the end of paragraph 1 "Acceptances authorized by this act" are placed in the list with lawful money, national-bank
notes, Federal reserve notes, and checks and drafts upon solvent banks as funds which must be accepted on deposit by Federal reserve banks. This suggestion, gentlemen, I think, has no force now since the bill was amended by the House committee. We need not consume any time on that point.

Fifth, substitute for lines 21 to 24, after the word "securities," the following:

but it shall include obligations issued by the United States, or by any State, county, or municipality in the United States, and maturing in not more than six months.

I want to call your attention, gentlemen, to the fact that this suggestion is fundamentally sound, and that the plan developed in this bill is fundamentally unsound; that is to say, particularly if you throw the burden on these Federal reserve banks, looking out for these 2 per cent bonds, it seems to me you do not want to bring into competition State bonds and municipal bonds and county bonds. But I think you can very happily for temporary purposes buy the short-time obligations of States and cities. You know you have had a great deal of argument here before you from time to time on the subject of fluid and fixed credit; and if there is any philosophy in those arguments it certainly is all directed against this principle in the bill, and if you do include it as a principle in the bill it should only be for capital purposes.

Senator Nelson. You are violating by putting a part of the resources of the bank or investing it in fixed securities what I call the principle of natural elasticity. Elasticity, as I understand it, is to be based on the commercial wants of the country—on what trade, traffic, and commerce need. You want part of it diverted to buy these securities?

Mr. Fisher. No; I say take fixed securities out and accept our suggestion of taking the fluid type.

Senator Nelson. All those securities are, in a sense, fluid.

Mr. Fisher. What I mean is this: Suppose the city of Philadelphia has taxes due on the 1st of July, and experience shows they collect 80 per cent of those taxes. They issue on the 1st of April a short-time instrument due the 1st of July to be paid by those taxes. That would be an absolutely gilt-edged investment, a type of investment that could be sold abroad, that would be bought abroad, and would in a measure help these Federal reserve banks in safeguarding market relations between Europe and this country so far as the gold question is concerned. I see no reason why strictly fluid city securities, or even State securities, which are to be paid out of taxes should not have just as good standing as the other type of fluid instrument. It has got to come from the people.

Senator Nelson. If you adopt that principle you would have our currency measured not only by the commercial wants of the country, but you would have our currency measured by the amount of these municipal notes issued, and you would get an artificial elasticity. You would measure it not only by what commerce needs in the shape of notes and bills of exchange and acceptances, but in addition to that you would inject into it this matter of municipal bonds, and you would absolutely destroy the scientific principle of elastic currency.
Mr. Fisher. I want you to consider in that connection this feature, that the better type of these short-time instruments are very popular in Europe.

Senator Nelson. I do not care about popularity; here is the principle. Our currency under this system would fluctuate by the municipal wants of these cities according to the volume of municipal notes they issued.

Mr. Fisher. If you will let me finish what I was going to say: These short-time instruments are growing popular in Europe, and would be a character of investment—and I am making a distinction now between a currency basis and an investment basis—which could be sold in Europe. It would be a very easy instrument through which these Federal reserve banks could control the gold reserves. I have shown you, as an example, how the city of New York has been able to protect the gold reserves of this country by selling these instruments——

Senator Nelson. But you are all the time assuming that for this volume of municipal notes there would always be a market in Europe.

Mr. Fisher. I am suggesting further—and you remember I stated it in the beginning—that the principle of the investment of capital, which is an entirely different thing from the use of deposits, should be considered. You agree with me that this should be stricken out, as it stands?

Senator Nelson. We do not want municipal bonds in there. We do not want that the basis of our new currency, Mr. Fisher.

Mr. Fisher. But you should consider, however, if you are going to have anything of this nature in your bill, this short-time-note principle, because it has a bearing on the subject entirely separate and apart from the currency question——

Senator Weeks. Mr. Fisher, would your recommendation be that the reserve banks should be authorized to purchase public bonds having not longer than nine months to run?

Mr. Fisher. I told you what is really the scientific handling of this question. Of course, the warrants of small municipalities are easily handled by the local banks. The large cities, of which there are not very many, have a volume of issues that do go outside of their particular environments. Now, if this is to be treated properly, I believe that for capital purposes these Federal reserve banks could take the type of notes that would be issued in anticipation of definite revenues; and there should be in contemplation the history of experience. In other words, if the preceding year the taxes received were paid at the rate of 80 per cent, no issues should be taken that were not justified by the experience of the preceding year.

Senator Weeks. You know we have a law in Massachusetts which authorizes municipalities to borrow in anticipation of taxes. Taxes are collected the 1st of November, and those obligations are always paid.

Mr. Fisher. Always paid except those against arrearages.

Senator Weeks. That is a very small percentage, and even now a considerable amount of foreign money is invested in those short-time notes.

Mr. Fisher. Now, if you will limit it to capital purposes and not take in deposit money, it will make an excellent investment, because it is something that might be sold abroad, when you could not sell a
short-time Government bond. That is a suggestion. It is at least worth considering.

And I think our suggestion has a sound basis. I fully recognize what our friend here says about the question of the commercial as against municipal credit; but these are strictly fluid credits; they are always promptly paid, as you know from your experiences, and I believe for capital purposes it would be a very desirable and a very useful type of investment.

Senator Nelson. I do not want to interrupt you, but it is merely to clear up my ideas.

Mr. Fisher. I agree with your fundamental principle, and consequently I would say that these short-time notes should be used only for capital purposes and should have some carefully drawn instrument which should provide for the quality of the revenue bonds taken.

Senator Weeks. I suggest that you draw up for us what you have in mind.

Senator Nelson. Your modification of it. You understand my view of an elastic currency—we call it an asset currency—that is, based upon the commercial wants of the country; and it should fluctuate, ebb and flow with the commerce of the country.

Mr. Fisher. Yes.

Senator Nelson. Now, I do not look upon these bonds as a part of the commerce of the country in that sense.

Mr. Fisher. Neither do I.

Senator Nelson. And that is why I make the suggestion.

Mr. Fisher. And I agree with you that there should not be any principle developed by which State or municipal issues should become the basis of a broad expansion of currency; and I think that my conferees will agree with me that that should be a capital investment.

Prof. Johnson, how do you feel about it; am I right?

Prof. Johnson. Thoroughly.

Mr. Fisher. I think we have now come to item No. 6.

Senator Nelson. If you will be kind enough to state what section that refers to as you go on, it will be easier for us to follow you.

Mr. Fisher (reading). "It seems to the committee that such a limitation"—the bill provided originally that there should be a limitation of $500,000,000 for the currency issues. That having been changed, I will omit making any reference to it.

So I will go next to item No. 7. [Reading:]

An issue of Federal reserve notes is hereby authorized. The said notes shall bear on their face the guaranty of the United States and shall be issued at the discretion of the Federal reserve board, and solely for the purpose of supplying currency to Federal reserve banks, as hereinafter set forth. They shall be receivable for all taxes, customs, and other public dues, and shall be redeemable in gold on demand at any Federal reserve bank.

Now, of course, this refers to what some regard as a very sore point in this bill. Our committee suggests—

Senator Nelson (interposing). Under section 17, the United States is not technically a guarantor of these notes. It is the principal debtor.

Mr. Fisher. The suggestion is fundamentally this, that instead of these notes being called the obligations of the United States, which seems to our committee an extremely indefinite thing, and not supported by any means by which the obligation is made definite, that
a flat and definite guaranty will serve the purpose of developing the philosophy of the bill, which I take to be, that in the initiation of this enterprise the developing of Federal reserve banks with individual issues, there is to be a solidarity to all the issues, so that there will be no discrimination between New York and New Orleans, or Chicago or St. Louis.

We believe the principle of guaranty will be justified, so far as the Government is concerned, by the excess earning power which the bill plans to give to the Government.

Now, that will give the unity to the issues. It will be economically sound, because you can not have any fiat issues under a guaranty of some other people's notes, whereas at some time, at some distant future time, it might be possible that other types of obligations will come into competition with this bank obligation. I need not discuss the economic basis of the obligation. But if you do adopt it, I have no doubt you will have all the security you will need, under a principle that is economically sound and eminently practical.

Senator Bristow. Why should the Government guarantee the note of the bank?

Mr. Fisher. Why should they be Government obligations, as provided in the bill?

Senator Nelson. Well, is there any practical effect—not legal effect? Take the bill as an entirety; it provides that the regional bank shall keep a 33\(\frac{1}{3}\) per cent reserve.

Mr. Fisher. Yes.

Senator Nelson. And they are required to redeem the notes themselves?

Mr. Fisher. Yes.

Senator Nelson. Practically, in one sense, although the phraseology is not such, it amounts to this, that the Government—the principal debtor, in effect, is the regional bank and the Government is the secondary debtor?

Mr. Fisher. We have another recommendation in that connection, which is simply this, that all the Federal reserve banks be mutually responsible for all these notes. That will make even less necessary the principle of Government obligation or guaranty.

Senator Reed. Well, you are rather inclined to the view, I take it, that when this currency is issued it ought to be a currency that is backed by the assets of all these banks?

Mr. Fisher. Yes, sir.

Senator Reed. And then ought to have, in legal effect, the guaranty of the United States Government on top of everything else?

Mr. Fisher. That is what we argue for.

Senator Reed. So that it would be a currency as stable as the Government itself?

Mr. Fisher. Yes. I am not expressing any individual view. I do not think it is necessary.

Senator Reed. That is the opinion of this board?

Mr. Fisher. That is the opinion of this committee.

Senator Reed. That is a question which we have had some discussion about.

Mr. Fisher. But there is a very important difference—Senator Bristow (interposing). That is what I want you to clear up. I do not think you differ from the others who have appeared.
Explain the difference, will you, please, between an obligation of the Government and a guaranty of the Government.

Mr. Fisher. A guaranty, in the last analysis, implies the possibility of a loss. In working this thing out properly there should be a segregation of the earning power of these various Federal reserve banks to establish a fund to meet such losses, and the Government, in effect, will be the trustee of that fund—will be its disbursing agent—and will provide for these losses.

But in order to make their action potent and effective it has got to take some form; and we believe that the flat guaranty, the same as the flat guaranty of a surety company, where it gets premiums as a consideration, is a business proposition, as against putting in, in a broad, indefinite fashion, the words, "These are the obligations of the United States."

Senator Hollis. Well, instead of the certificate or note bearing the statement, "This is an obligation of the United States Government," you would have it bear the words, "This note is guaranteed by the United States Government," would you?

Mr. Fisher. I would say this, in substance, "In consideration of the surplus earning power of the Federal reserve banks, which, under section so-and-so, subdivision so-and-so, is segregated for this purpose, the Government hereby guarantees, under the audit of the Secretary of the Treasury, this note."

Senator Nelson. You need not put in any consideration, as would be the case in a contract?

Mr. Fisher. It would be logical; that is all.

Senator Bristow. The surplus earnings are to go to the Government—or the Government could put a tax on them?

Mr. Fisher. There are many ways of handling it.

Senator Bristow. And that could be a sinking fund, and the Government, by virtue of having this fund collected from this business, could guarantee that these notes would be paid?

Mr. Fisher. Certainly, in a businesslike way. And they are watching their job, too, so that they will not have any losses.

Senator Bristow. Yes.

Senator Nelson. Would you want these notes payable on demand in gold?

Mr. Fisher. At the banks.

Senator Nelson. At the banks?

Mr. Fisher. Not at the Treasury. Only when there is loss is the Government interested in the thing. When there is loss, provide for it specifically, either from the fund or in some other way.

Senator Nelson. Will you tell me where this bill provides for the regional banks getting gold to redeem them?

Mr. Fisher. This bill?

Senator Nelson. Yes; this Glass-Owen bill. Is there any direct provision in this bill which enables the banks to get the gold in the first instance, the 33 1/3 per cent gold?

Mr. Fisher. Well, that is an automatic proposition.

Senator Nelson. How do you mean, an automatic proposition?

Mr. Fisher. The development of a number of regional reserve banks and establishing deposits will throw the gold——
Senator Nelson (interposing). There is nothing in this bill requiring these stock subscriptions or this 5 per cent deposit to be made in gold.

Mr. Fisher. But you can get the gold the next day.

Senator Nelson. Where would the regional reserve banks get the supply of gold?

Mr. Fisher. Oh, you can get the gold the next day—by the collection of other items.

Senator Nelson. What items?

Mr. Fisher. It might be well to amend your bill to make it "lawful money"; but mechanically it would be awkward to ship lawful money to Washington or New York or Chicago. A certified check, in ordinary banking practice, would bring you gold in the ordinary course of business.

Senator Nelson. But we will say that all these stock subscriptions and the 5 per cent fund can be paid in national-bank notes, for example, what then?

Mr. Fisher. I think if you make it "lawful money" that you will safeguard what you have in mind.

Senator Nelson. That is lawful money. They could be paid in either silver, gold, or greenbacks—all three.

Mr. Fisher. Yes.

Senator Nelson. Suppose the banks in their subscriptions and in their 5 per cent reserves—suppose they dumped in nothing but greenbacks—or silver, if you please?

Mr. Fisher. Yes.

Senator Nelson. What then? That would leave the bank to start without any gold, and it would throw the whole gold redemption onto the Government, if you leave the bill as it is, would it not?

Mr. Fisher. As a matter of business practice, I should suppose, unless there is some plan to the contrary, the Federal reserve bank would be inclined to change that to gold.

Senator Nelson. Would it not be better, in order to give these regional banks a gold redemption fund to start on, to require at least a part of this stock subscription and a part of the 5 per cent deposit to be paid in gold coin?

Mr. Fisher. I believe that a percentage, based on the relative amounts of money in the country, so much gold and so much greenbacks, and so much silver certificates, if you will, will be about as far as you can go. In other words limit the proportion relative to the proportion now existing in the currency of the country.

Senator Nelson. Now, my recollection is that the last bank statements—and the chairman, who is well up in figures, will correct me if I am wrong—showed that our national banks have over $700,000,000 in gold coin in their vaults?

Mr. Fisher. Yes.

Senator Nelson. That is my impression. I think I am not far out of the way, am I, Mr. Chairman?

The Chairman. That is substantially right.

Senator Nelson. Yes; I think a little over that. So that they could provide an ample reserve from that stock, could they not?
Mr. Fisher. Yes. I think that the words "lawful money," however, would be logical, and that the trend of experience would give the proportionate amount of relative items that would be appropriate.

Senator Nelson. Yes.

Mr. Fisher. If you compel them to give gold, flatly, you would be compelling them to alter the normal, natural relations of their present reserves.

Senator Nelson. But would you not throw the whole burden on the Government in that case? Suppose we had a condition as we had during the last two years of Cleveland's last term, where it should pay the brokers and people of New York to ship gold to Europe; they would get those national-bank notes and go to the Treasury and snake out the gold and ship it to Europe and you would be throwing the whole burden of gold redemption on the Federal Government, would you not?

Mr. Fisher. It seems to me that what you call the burden on the Government to the extent that it is a burden, would be in favor of this semi-Government bank, and consequently no harm would be done. In the last analysis, it is more desirable to have the protection of the Government's gold supply in the hands of these banks than in the hands of the Government, because they have commercial means of protecting those supplies.

Senator Nelson. Yes.

Mr. Fisher. And so I have no special horror of that condition that you suggest; for even if these Federal reserve banks did go and exchange their greenbacks for some of that gold it would do no particular harm, because it would be merely a change of place of the deposit of that money.

Senator Nelson. Yes.

Mr. Fisher. Of course, no one knows just exactly what the experience would be if "lawful money" were used. And if you want to be severely scientific I suppose if you compelled it to be paid in "lawful money," as I said before, in the proportion in which the banks now have money, it would be about as good a result as you could expect.

Senator Nelson. Now, a part of the object of this bill, and I think a most worthy object, is to confer power on this system to do what I call the foreign exchange business, which is now done through the large foreign banks. In other words, to control the shipment of imports and exports with our American banking system. Now, if we base our money—get it out of line with the money of Europe, with the Bank of England, and make our money redeemable in the alternative, in gold or in national-bank notes, we are not in a position to compete with London and the London market in the matter of foreign exchange, it seems to me. You are putting us out of skew, to use a vulgar expression, with the banking system abroad.

Mr. Fisher. We have got to effect our ultimate exchange with international money; that is true.

Senator Nelson. Yes.

Mr. Fisher. But you always have the protection of peremptory mandate. The Bank of France, if it wants to—and there is no law that I know of that covers the situation—pays out silver, and they naturally discriminate between the demand of their local people and the demand of international trade. We, in our experience, naturally,
would have to accept and comply with the demands of international trade. But I presume that if it came to a crisis we would be peremptory in our relations with our own people. In other words, we would give them some of these notes that you criticize.

Senator Nelson. Now, let me give you a concrete case—and this is a real case. A wholesale grocer in Minnesota, in importing coffee from South America, has to do it in this way: He has to buy a letter of credit on a bank or an accepting house in London, and then he has to issue his draft, draw on that bank or accepting house in order to get his coffee, and pays for it in that way. Now, that is the system we are acting under now.

Mr. Fisher. Our merchants are paying two charges for their exchange.

Senator Nelson. Yes. Now, we ought to get away from that system, ought we not?

Mr. Fisher. Your bill provides, in broad terms, to get away from it.

Senator Nelson. Now, can we get away from it and accomplish what you set out to do, unless we make our monetary system in harmony with the Bank of England notes, redeemable in gold?

Mr. Fisher. Now, I will refer to——

Senator Nelson (interposing). Well, I will not ask you any further——

Mr. Fisher. Well, it seems to me that we have got to accept for the time being, the fact that our currency is somewhat heterogeneous. But with the establishment of these Federal reserve banks, and with the full knowledge that we have $1,000,000,000 of gold deposited with the Government at the present time; and without any antagonism, gentlemen, on your part, I believe that those gold certificates will gradually drift into these Federal reserve banks, and that the notes of the Federal reserve banks will gradually take their place—that you have got a potential and very positive force which will increase the relative amount of gold in banking circles of the country. With all this, I think there is nothing ahead that is particularly dangerous.

Senator Nelson. Do you think that, dollar for dollar these new notes of the regional banks will take the place, without any "ifs" or "ands" of the gold certificates?

Mr. Fisher. Gradually; and if you will advocate the principle which is advocated by some, that these Federal reserve banks are to hold the reserve money of the banks of the country, you would have a very much greater reserve of gold, than you will under this bill. I am not prepared to argue for that principle; but it is being thought of; and it will give you a larger store of gold in the center than you can possibly have under the bill.

Senator Reed. If these notes issued under this system are meant to meet the needs of commerce——

Mr. Fisher (interposing). Domestic commerce.

Senator Reed. Yes. That, of course, involves the idea of expanding and contracting, as the demands of commerce are greater or less. Now, it has been argued here by nearly every witness that there was no danger in the amount issued, or but little danger, because they would be speedily turned into the banks and redeemed.

Mr. Fisher. If properly developed.
Senator Reed. Now, if you were to permit those notes to be used as bank reserves that would tend to deter the redemption and destruction of them and the retirement of them, would it not?

Mr. Fisher. Yes. But that is a different question. The time might come when through the relative lessening of the amount of gold in the Federal reserve banks the broad results of an international purpose of developing great stores of gold in the centers might justify the substitution of these notes for gold. It is not a question today, but the time may come. In Germany, the notes of the German Bank are held in the reserves of the banks. That throws a larger store of gold to the center. Truly, the redemption proper is much more slow, and in some cases the bills may never be presented. But it gives us a more potent gold power which may offset that inflation to which you refer. I am not arguing for it; but I want you to consider the point.

Senator Reed. What I am trying to get your views upon—because you have had a good deal of practical experience—is this: When a man brings a promissory note or bill of exchange to a bank and that bank deposits it with the Federal reserve bank and gets currency for it, of course that is currency based upon credits.

Now, if you substitute as a redemption fund credit money, it seems to me that we would be in a position of redeeming credits with credits, and therefore we would destroy the idea of an ultimate redemption in something that the world calls money.

Mr. Fisher. The more prompt the clearing and the more prompt the redemption the less the inflation and the more accurately the commodities exchange themselves.

Senator Reed. Therefore ought we not to insist that the reserve, whether it be a 33\(\frac{1}{3}\) per cent reserve or a 20 per cent reserve or a 75 per cent reserve—whatever it is—should be an actual reserve in gold?

Mr. Fisher. Yes.

Senator Reed. I thought I had misunderstood you.

Mr. Fisher. Not at all. I merely want to call your attention to the fact that the time may come when it is desirable to get into the center for international purposes some of the gold now reposing in the reserves of our national banks and our State banks and trust companies.

Senator Reed. What do you mean by "into the center"?

Mr. Fisher. Into the Federal reserve banks. And to the extent that there are Federal reserve notes outstanding there will be a trend of gold to the center, and it will be a greater trend if some of these notes were held for reserve purposes. But it would mean this: That the aggregate reserves of the country would be relatively less. We have very much higher reserves here than in Germany or in France or England, and the time may come when we may have to be more on a parity of reserves, and that would be an easy way, and in some respects the best way—to reduce the reserves without reducing the percentages.

Senator Reed. Now, it is a little aside from what you have been talking about, but it is kindred to the theme we are speaking of. Do you not believe that the very fact that the Federal Government has in its vaults a billion and nearly one hundred million dollars of
gold, and in addition to that $150,000,000 more of gold stored away, is a great element of strength in our present financial system?

Mr. Fisher. In 1908, when I was invited to appear before the then House Committee on Banking and Currency, I argued on the plan that was then suggested—that the Government always should have behind all banking its own store of gold.

Senator Reed. You would like to see that maintained?

Mr. Fisher. And it will be maintained under this bill to the extent that the certificates of that gold are held for reserve purposes.

Senator Reed. Yes.

Mr. Fisher. It will be lessened to the extent that you can substitute in the hands of the people Federal reserve notes for gold certificates now locked up in safe-deposit vaults and in stockings all over the country.

Senator Reed. Yes.

Mr. Fisher. It is probable that there will be a gradual trend, by which $300,000,000 more gold will come to the banking system under the Federal reserve banks.

The Chairman. There is a little over $900,000,000 of gold in all the banks, and a little less than $600,000,000 in the national banks.

Senator Nelson. I was referring to the national banks, Mr. Chairman. I am mistaken. You say a little less than $600,000,000?

The Chairman. Yes; in the national banks.

Senator Nelson. Yes.

Senator Reed. You are a little away from the thought I had, Mr. Fisher. If it is a good thing to have this store of gold, whether it is represented by gold certificates or however it may be represented—if it is a good thing to have that great store of gold, which you and I seem to agree upon——

Mr. Fisher (interposing). Well, Germany has that principle, if you remember.

Senator Reed. Well, if that is true, I wanted to ask you if, under our present bank-currency system and greenback system, this gold that is now in the Treasury is not accumulated there by virtue of the fact that the greenbacks and the bank notes circulate generally among the people, performing the functions of money, but at the Treasury of the United States—at the custom house—they are not receivable as a full legal tender, and therefore gold flows in?

Mr. Fisher. I think that is one source of the gold supply. And the second and greatest is that nobody wants gold.

Senator Reed. Very well; they do not just now.

Mr. Fisher. No.

Senator Reed. That is about the only way we get it. Would it not be the part of unwise to retire those two forms of currency without substituting some other method by which we would gather this gold in?

Mr. Fisher. If I recall rightly, in the recommendation of our committee, to which we are coming, there was the thought—although we did not say so in so many words—that it might be possible, as an added use of the earning power of the Government, as an outgrowth
of this system, to give the Government the privilege of buying up its own obligations.

Now, that expression "own obligations" is a broad term. It may mean notes, it may mean bonds. And if I recall the discussion on that point, it was broadly regarded as unsound to develop any principle in banking in this country that did not ultimately contemplate—perhaps not immediately, but ultimately contemplate—the retirement of the greenbacks. On the ground, perhaps, not so much that they are any particular danger to-day; they have been absorbed in the credit relations; and any effect that has come from increased prices has been lost sight of for many years; but it has been recognized that, if you have the principle of Government issues based on them, in one year you may have a larger amount than in another year; and just as soon as you increase such issues, just so soon do you inflate prices. That is an automatic result. You know it was the case in war times, and it may be the case at any time in the future while you have an issue based on debt. So that all economists and practically all bankers, although they recognize there is no particular danger to-day with the greenbacks, also recognize that fundamentally it would be a very desirable thing to get rid of them.

Senator Reed. Well, if you think the issuance of money based upon debt works inflation and governs prices, then it seems to me that this bill ought to be scanned with some care, because we propose to issue money here based upon debt.

Mr. Fisher. What kinds of debts?

Senator Reed. Debts of individuals indorsed by banks and indorsed by the Government.

Mr. Fisher. When payable?

Senator Reed. At various times.

Mr. Fisher. Not to exceed?

Senator Reed. Well, let us say 90 days; and there is no reason in the world why they should not be immediately renewed and kept out upon new paper, so that the volume would be constantly greater.

Mr. Fisher. Well, in this state of the wisdom of the banking world, or of the legislative world, it would be absolutely impossible to make a scientific relation between commodity prices and banking practice—I will agree that we can not do that, but we understand the general trends.

Now, there is a vast difference between a note based upon a debt which grows out of the sale of commodities, which is manufactured to exchange those commodities, which clears itself and is paid, and the commodities consumed, and a debt of a Government for war supplies, or any other kind of supplies which may be paid, never, or from 1 to 20 years hence.

Senator Reed. I know.

Mr. Fisher. There is a vast difference in solidity.

Senator Reed. There is a difference in the two systems, and a very radical one, if you assume, first, that the Government issues its currency to pay its running expenses and makes no provision for the speedy retirement of that currency; and then you issue another currency based upon obligations that all mature within 90 days, and thereby the currency is retired.

But we must take into consideration that as far as this bill is concerned if $1,000,000,000 of money was issued on 90-day paper to-day,
there is no reason why as that 90-day paper matures other paper cannot be substituted for it—a continual flow of paper coming in to take the place of that which is paid off; and thus the currency be kept—$1,000,000,000 in excess of what it was before the operations began.

Mr. Fisher. The truth is, just what you say is entirely the practice of the last 15 years, and during that period you have seen prices go up in this country 40 per cent. One of the chief elements, in my judgment, for prices having gone up in such a fashion has been the development of credit on collateral loans, on single-name paper, we build factories and other enterprises. And, strictly speaking, we can not get any nearer to a correct relation between money and prices than prompt clearing, and everything you can develop in this bill to effect prompt clearing will bring you nearer to that relation. I think credit currency is absolutely sound, but you can not do any more in this form than to provide the trend.

Senator Reed. Can not that be worked out to a great extent by using this term "automatic"?

Mr. Fisher. I do not think you can possibly, scientifically, develop the absolute correct relations between the loan made upon fixed and upon fluid credit. We understand the philosophy of it, and within the last year there has been a great deal of thought and attention paid to that subject. I agreed to write two suggestions for two amendments; but I would not agree, and I do not believe any man in the world would agree, to write any amendment that would segregate scientifically and correctly the relations between fixed and fluid credit.

Senator Reed. Would it be your idea if a certain currency has been out a certain length of time, it should begin to bear some kind of interest charge which would compel its retirement?

Mr. Fisher. This bill provides that currency shall not be issued by any other bank than the one that originally issued it. In other words, it will come back for redemption. Now, we have two definite experiences. If I remember rightly, at the very most Canadian currency does not remain out more than 30 days. I think the Scotch experience, perhaps, because of being a smaller country, is that it remains out a shorter time. I do not remember the exact figures. I do not think you need worry about inflation under the bill, because you provide prompt redemption. Other than that, it is based on fluid credit. Of course, going into the broad question, you have developed scientifically that collateral loans should always be against time deposits that can not be spent. Fluid loans should be the only basis for currency issues, and should be the only basis for demand deposits; and if you carry those ideas out into the realm of the savings bank, into the realm of the trust company, of the State and National banks, you are developing the principle—if you could give the proper relations that would help. You have done something in this bill that I think will cause added confusion between the prices of fixed and fluid credits, and that is putting the savings bank section in the commercial bank section. Unless there is an absolute segregation, and an absolutely scientific management, you have provided a means by which you can do a broad business upon a lower reserve basis and upon a fixed form of credit.

Senator Reed. You think there is some danger of inflation unless it is safeguarded?
Mr. Fisher. Unless the segregation between the savings and commercial banking is properly safeguarded.

The Chairman. There are one or two questions I would like to ask you, Mr. Fisher. It has been suggested, with regard to the 2 per cent bonds, that a certain volume of those bonds might be annually retired upon the plan which I shall explain to you—that is, that the 2 per cent bonds held as a basis of note issue might be taken over in a certain fixed amount. We will say, for the purpose of convenience, 10 per cent of the outstanding volume, amounting to some $70,000,000, to be taken over annually. Then, when those twos would be taken over by the United States, the United States would, in that event, assume the redemption of the national-bank notes issued against those particular bonds now held by the Comptroller of the Currency. The United States, in redeeming those national-bank notes, which now rest upon the 2 per cent bonds, would issue its own Treasury notes, payable in gold, at the Treasury in Washington, and place in the reserve division of the Treasury those $70,000,000 of twos, but in the form of threes, with a right in the Treasury Department or the Federal reserve board to issue them either as bonds maturing in 20 years or as annual notes renewable during a period of 20 years at the 3 per cent rate. In that way it would provide a basis of obtaining gold, if necessary, to redeem such notes, and to issue those notes in small denominations so that they would be readily absorbed as till change, and therefore prevent, by that arrangement, the rapid delivery of these notes for redemption.

Along with that suggestion, as a part of it, it was proposed that a like amount of gold should be put in the Treasury reserve by taking the gold from the current funds of the Treasury and putting them into the reserve division and issuing, in lieu thereof, a like amount of Treasury gold notes. The effect of that would be, in one such transaction, $70,000,000 of bonds and $70,000,000 of gold going to the reserve division, and against it $140,000,000 in Treasury notes payable in gold at the Treasury in small denominations.

Is that too complicated a proposal for you easily to follow?

Mr. Fisher. The proposition for the Government to redeem its bonds with short-time obligations is good. The currency provision I do not like at all. It would simply be an added confusion to our currency system.

The Chairman. The purpose being eventually to retire—

Mr. Fisher. I would let the currency be handled by the banks. You might better let the short-time notes go into the banks and let the banks finance the $70,000,000. Let the Government retire and finance, perhaps, the sale of 3 per cent bonds, but it seems to me the issue and financing of short-time notes should be done by the banks and not by the Government. I would not confuse the two principles.

The Chairman. The proposal was to retire the national-bank notes, and this was the method by which to retire the national-bank notes instead of the 2 per cent bonds alone. There would be in lieu of that 50 per cent of bonds and 50 per cent of gold.

Mr. Fisher. It seems to me the retirement of the national-bank notes can be effected by the Federal reserve bank. You have the germ there of a good idea, but the currency function should be handled by the banks and the other end of it by the Government—
that is to say, pay off the long-time bonds by short-time notes. But I would not let the redemption gold reserve of the currency function unify itself with the general principles of your bill, and I think it will be very much more satisfactory because, potentially, as you give it, there is an element of inflation there.

The Chairman. The note issue would be identical; there would be no inflation whatever. The notes issued would be notes to take the place of the national-bank notes on the one side and to take the place of the gold on the other.

Mr. Fisher. That probably could be done if there were no collateral bank plan developed at the same time, but I do not think the two together would be desirable.

The Chairman. The purpose was to provide for the 2 per cent bonds in a way that would be satisfactory to the banks of the country, who have been a little apprehensive that they would suffer a loss.

Mr. Fisher. I believe the plan, however, to let the Federal reserve bank retire a certain percentage each year by the issue of bonds or currency either, maximum and minimum, as I have suggested, would be a much better plan and the whole fabric of our currency would be much stronger.

The Chairman. Mr. Simmons, who have you now?

Mr. Simmons. If you will permit me, I will continue with that.

STATEMENT OF W. D. SIMMONS—Continued.

Mr. Simmons. I will not attempt to follow Mr. Fisher’s lead in the scientific discussion, but from the standpoint of a business man, with the exception that we utilize, as business men, the services of Mr. Fisher and a number of men in conference with us to give an explanation to us of certain points; and, as a result of those conferences, we have formed our conclusions and made a report to the business men of the country.

Mr. Fisher stopped at No. 8. It speaks there of a tax upon notes, and the point I wanted to make is that our conclusion was that the taxing of notes put a tax upon certain elements of the business interests of the country, because they have occasion to use notes and as compared to those who only have occasion to use checks. And it was a discrimination which we thought ought to be avoided, because we saw nothing in it but discrimination. Inflation is next. Inflation could be without any issue of notes at all. It could occur, in fact, where no notes are called for or desired. That covers 8 and 9.

As to No. 10, the mutual guaranty of the notes, that was covered by Mr. Fisher.

No. 12, the statements of the Federal reserve bank has been covered in your recent draft of the bill.

No. 13, the authorization of the Federal reserve banks to make deposits in and discounts for any other Federal reserve bank. We distinguish there between authorization and requirement. It seemed to us that unless your requirements were very thoroughly protected, perhaps as has been proposed since, it was very much better and safer to trust to the judgment and patriotism of the Federal reserve banks and their directors, as a whole, than to leave there a requirement with a possibility of the use of it as has been suggested might occur.
Senator Nelson. Mr. Simmons, Mr. Vanderlip suggested that unless you had such a compulsory process, the system would not work at all. You must have it so arranged that you can pipe the reserves from one regional bank into the other, and you could not do that unless you had the compulsory system.

Mr. Simmons. I say unless it was safeguarded, as has been suggested, by a nonpartisan element and the requirement of unanimous consent.

No. 14, the automatic continuance of the banking system. It seemed to us there was a danger to the business interests of the country to have no provision for the automatic continuance of the existence and authority of banks to do business in case there should be some delay in forming some substituted plan when these charters expire. There have been such things as deadlocks and things of that kind, and it seemed to us that some provision should be made here so it would be automatic and have the business of the country continue, rather than have the whole business of the country thrown in a turmoil.

Senator Nelson. This does not interfere with the automatic business you refer to, except in the bond provision providing for the gradual retirement of the circulating notes and in the change of the reserve provision of the existing law. This system of pyramiding reserves, the bill provides for a gradual change from one system to the other within three years, beginning with 3 per cent during the first year and culminating at the end of the third year with 5 per cent. Otherwise it does not interfere with the existing system of the national banks.

Mr. Simmons. But their charters would practically all expire at the same time.

Senator Nelson. Oh, no; their charters continue. They would expire if they did not come into the system, but if they come into the system they would continue under their charters as they are.

Mr. Simmons. Indefinitely?

Senator Nelson. No; those charters are only for 20 years in each case.

Mr. Simmons. That is the point, and that is the reason we thought if at the end of those 20 years there was not some substitute legislation the banks should be allowed to continue.

Senator Nelson. We do not change that system; there are a great many banks that have renewed their charters. They renewed after the 20 years. Some have had two renewals and lots of them have had one.

Senator Reed. And, Senator, there has never been a renewal denied in case the bank was sound.

Senator Nelson. I do not recall any renewals being denied where a bank was sound. They were always given as a matter of course. And, for instance, if the bank joins this system its charter is for 20 years and, assuming it has run for 10 years and has 10 years more to run, it would run under that. And at the end of the 10 years, unless we change the law and this bill does not change that part of it, as a matter of course they could get a renewal if in a sound condition. I think there are only two changes, and they are in the matter of reserves and in the matter of gradual retiring of the circulation, which
is squinted at in one section with reference to the bonds. Outside of that they are left intact.

The Chairman. The intention of this bill was to limit the life of those reserve banks to 20 years, and I understand Mr. Simmons's suggestion relates to putting in an automatic provision, in this connection, with regard to the life of the Federal reserve banks and not the ordinary national banks.

Senator Nelson. No; he referred to national banks. You referred to national banks, didn't you?

Mr. Simmons. If I did, I beg your pardon; I did not intend to refer to national banks. Our one point is, as we understand this law, to provide that the Federal reserve banks should automatically continue at the end of 20 years if, at the end of that time, there is no provision made, or there is no substitute provided. Unless there is some provision made for that, they should automatically continue the same as directors continue until their successors are elected.

Senator Nelson. The same as in the case of the national-bank act, I thought you referred to national banks.

The Chairman. It would require affirmative action, of course, at the end of the 20 years.

Senator Nelson. I think the bill ought to provide as the national-bank law does for renewal under proper conditions. Otherwise, the system would be at the mercy of Congress.

The Chairman. The intention was to make it at the mercy of Congress, instead of having Congress, possibly, at the mercy of the system.

Senator Reed. There ought to be a phrase put in there providing, in the event of no other legislation, that the system might continue.

Mr. Simmons. That is our whole point.

Senator Reed. We will consider that.

Senator Nelson. You are right. In case the system is retained, then there can be a renewal, if the bank is sound.

Mr. Simmons. No. 15 has been covered by Mr. Fisher, except it refers to the use of some of these profits to liquidate the existing demand obligations of the United States. The situation as we see it from a business standpoint is that those notes, as they come out, with lawful money as a reserve against them, are practically the obligation of the maker, the United States, backed by security—good commercial paper—and then against them for their protection, a reserve—the obligations of the same maker, without any backing. Our idea is that the existence of the greenbacks is what makes that necessary, and it would be wise, so far as possible, or, as soon as possible, to get rid of that which makes that obligation.

Senator Nelson. You would avoid that by making the new notes redeemable in gold?

Mr. Simmons. Yes.

Senator Nelson. Don't make war on the greenbacks. The greenbacks and the soldiers are what saved this country, and I want you to remember the soldiers carried the greenbacks in their pockets while they carried the muskets on their shoulders. It was not the capitalists who saved the country; it was the people of the country who were willing to take that currency and the people of the country...
try who shouldered the muskets. Don't make war on the greenbacks.

Mr. Simmons. I am not making war on the greenbacks, but I am suggesting taking a rather anomalous situation out of the way.

Senator Reed. Senator, you never came around and growled because you took those greenbacks at 35 cents on the dollar, did you?

Senator Nelson. Oh, no; we took the greenbacks and were glad to get them.

Mr. Simmons. The only other section that requires attention is the one with regard to the use of the words "Secretary of the Treasury," and his position. It seemed to us that the provisions relative to the Secretary of the Treasury were, in some cases, the way this bill came to us—some of those instances have since been changed—were rather conflicting in respect to his relation to the board of which he was a member. In some cases he was practically in a position to supersede the action and authority of the board of which he was a member. It seemed to us wise to suggest that it be made entirely clear. If the Federal reserve board principle is to obtain—and we are ready to grant it is perhaps the best one—then it would seem to us the Federal reserve board should be and have entire control and should not be superseded by one member of that board. The other points, I think, have all been covered in your recently drafted bill.

Senator Brustow. I was not present during the statement of Mr. Fisher. I was called out and did not get to ask a question I wanted in regard to the character of the Government's guaranty of these notes—that the Government stood as a guarantor, and, by virtue of the Government's standing as such indorser of those bank notes of these banks, it should receive the profits from and above the 5 per cent—60 per cent of it—and, presumably, those profits to the Government would create a fund which would justify it and make it safe in standing for this security for the ultimate redemption of these notes. Is that an idea that reflects the opinions of your committee?

Mr. Simmons. Yes. It reflects the conclusion we came to under existing conditions. I think the opinion of our committee generally, and I think the general consensus of the business opinion of the country, is that it would be well to have these notes a bank issue, and then, if you want that Government protection, it can be; but there is something to go back of that, something where the Government supervises and guarantees the holder of that note, perhaps, but does not get into the shape of a maker, and the compensation being that it shall have the profits of this fund to make it entirely safe.

Senator Brustow. That is a sound business principle, is it not? Do you not think it makes it entirely so?

Mr. Simmons. It appears so to us; yes.

Senator Brustow. Now, what would you think, in order to give this bank and national banking system of the country greater stability, of having a similar provision in regard to the deposits of the bank. Let the Government levy a tax of some kind on the operations of the bank, to create a fund which would guarantee losses by depositors in case the national bank failed.

Mr. Simmons. I would think the general consensus of opinion is against anything in the shape of the Government guaranteeing deposits, based upon experiences that have been had.

Senator Brustow. What experiences do you refer to?
Mr. Simmons. I think the experience they had in Oklahoma, which I think your chairman can tell more about than I can. I am not stating except what I believe is the general opinion on that point.

Senator Bristow. I mean where there has been some condition of failure in Oklahoma. But suppose the Government did not stand sponsor, but that it created a fund by taxing the banks and that fund was in the nature of a sinking fund out of which any of these depositors would be paid, similar, we will say, to the Kansas law, it simply administered an insurance department of the banking department. As I understand, there are private insurance companies now created to guarantee against the loss of bank deposits. Such companies are in operation now, as well as State companies that have been organized. In the State of Kansas there is a company that is supervised by the banking department—that refers to the State banks—and another company is organized which insures the deposits of national banks. It is a private insurance company for that purpose.

Why would it not be just as practicable for the Government to create a fund, which fund, so created under the supervision of the Government, should be pledged to the payment of depositors for losses upon the same principle we are creating a fund to incure the payment of any of these notes that might fail.

Mr. Simmons. I am not authorized to speak for the National Chamber, because that point did not come up, but I think I understand the general attitude of the business interests toward that proposition, and that it would be unwise because it would practically put a premium on lack of care in the use and loaning of the deposits, the idea being it would not make any difference and would help most the man who regarded the thing least, with the least care in his work and the least care in his credit, without himself taking the risk.

Senator Bristow. Have you ever examined the operation of the Kansas law?

Mr. Simmons. Not sufficiently to speak with thorough knowledge of it; no, sir.

Senator Pomerene. What is your judgment of that, Senator?

Senator Bristow. The actual operations of the law have been entirely satisfactory. A depositor can not lose anything in a Kansas State bank. It is a voluntary fund; it is entirely voluntary as to whether a bank comes in.

Mr. Simmons. It is not as to the depositor?

Senator Bristow. No; it is not as to the depositor.

Mr. Simmons. He is the citizen, and he pays the bill; he loses his share.

Senator Bristow. No; the citizen does not pay the bill. It is like insurance exactly.

Senator Pomerene. How many bank failures have you had since that time?

Senator Bristow. One.

Senator Pomerene. Within what period?

Senator Bristow. Four years. And the depositors receive immediately a certificate for the amount of the deposit, which bears 6 per cent and it at once goes to a premium.

Mr. Simmons. That is not an insurance company.
Senator Bristow. It is by insurance. It is a mutual insurance company organized by the State and supervised by the banking department. It simply provides that any bank which desires to insure its depositors can subscribe to this fund and pay its assessments, and that goes into a fund that is kept in the State treasury. If a failure occurs of any of the banks, the banking department of the State pays the depositors, takes possession of the failed bank and closes up its affairs, and then the receipts from the winding up of the bank's affairs go into this fund which has been drawn upon.

Senator Nelson. That is practically the Canadian system.

Senator Bristow. It works just as Mr. Dawson said the Canadian system worked. The depositors of the failed bank really get more money, because their certificates at once go to a premium.

Senator Nelson. They get certificates that draw 6 per cent interest.

Senator Bristow. Ours is exactly the same. The national banks have organized a mutual insurance company which they supervise, and it is not supervised by the State. They have had no failures.

Mr. Simmons. Who is it in that case that decides who shall come in?

Senator Bristow. It is wide open to anybody that will comply with the conditions.

Mr. Simmons. It is not wide open to anybody, but they make conditions.

Senator Bristow. The State makes conditions also. Nobody can come in except a bank that has a proper standing.

Senator Pomerene. With your experience in Kansas, it would hardly be fair to say that banking insurance placed a premium on bad banking.

Senator Bristow. No. That is the argument of people who do not know anything about it.

Senator Nelson. The real opposition is it places the big banks that are such good institutions on a level with the others that are not so good—with the small institutions. They have as big a show to get deposits under that system as we have, and that is where the opposition comes from.

Senator Reed. Mr. Simmons, are you directly interested in the banking system yourself?

Mr. Simmons. I am a director in a bank; yes, sir.

Senator Reed. Your principal business is running the great hardware business with which you are connected?

Mr. Simmons. Yes, sir; entirely.

Senator Reed. And I think you have one of the largest wholesale hardware businesses in the country. Now, your banking business is a sort of an incident?

Mr. Simmons. A very decided incident.

Senator Reed. As a business man, you recognize the fact that you are constantly interfered with in your business by the uncertainty as to whether a bank can let you have all the money you want, even when there is absolute solvency?

Mr. Simmons. The uncertainty as to whether they are going to continue to be for some time to come.

Senator Reed. And you fear these financial panics and depressions that come. Do you think, under all the circumstances and in view
of the conditions, that every line of business, including the banks, can afford to make some sacrifice in order to get a stable system?

Mr. Simmons. Well, I think they already have; it is a question of what you mean by sacrifice.

Senator Reed. That a bank can ever afford to sacrifice it profits?

Mr. Simmons. Yes; I do; undoubtedly; a financial sacrifice.

Senator Reed. And that they could all get together and cooperate to work out a system and not be, as I fear some people have been, fighting a system; I do not mean you bankers.

Mr. Simmons. Perhaps I can answer you by calling your attention to the pending clause of the report of our committee, recommending that we recognize here a definite effort to do a constructive thing and to supply this country with the kind of currency system. The attitude of the committee was to see to what extent they could be helped to do that; not to find fault, but to see what we could do to add strength to that.

Senator Nelson. You have a very able report, and I want to congratulate you on the points you have made and to the sound basis on which you have argued. I think you have been very helpful to us here in making your suggestions.

Mr. Simmons. You are very kind to say that, Senator.

Senator Reed. I agree with that remark.

Mr. Simmons. If it is agreeable to the committee, Mr. Wheeler, the president of the Chamber of Commerce of the United States, will address you now. He can give you a pretty clear idea of the purpose of the chamber in taking up this matter.

The Chairman. We will be very glad to hear Mr. Wheeler.

STATEMENT OF HARRY A. WHEELER, VICE PRESIDENT OF THE UNION TRUST CO., CHICAGO, ILL., AND PRESIDENT OF THE CHAMBER OF COMMERCE OF THE UNITED STATES.

Senator Reed. Will you give your name and your business connections.

Mr. Wheeler. Harry A. Wheeler, banker; vice president of the Union Trust Co., Chicago, Ill., and president of the Chamber of Commerce of the United States.

Mr. Chairman and gentlemen, this matter has been so clearly stated, it seems to me, by Mr. Fisher and Mr. Simmons relative to the points covered by our committee on banking and currency, and submitted for the vote of the chambers of commerce of the United States, that if I should go over that matter it would be a waste of your time and simply a repetition. I would like to put into the record, however, a statement of how we came to ask for this hearing on behalf of the chambers; how they are tied together, and how the vote was taken; for Senator Nelson, voicing the idea that chambers of commerce have always acted through a few men who voice the sentiments of all the members, holds the impression that we fear some of the rest of you gentlemen hold that this vote was taken in a desultory sort of way without the idea of getting the sense of the organizations and therefore would represent merely the sentiment of the few men who might have received the report and read it and voting "aye" or "no."
Now, the chamber of commerce——

Senator Nelson. I am disabused of that idea. I think our experience here in Congress, of getting resolutions of chambers of commerce and other organizations which do not mean very much may have given us that impression, but after hearing what you gentlemen have had to say to-day I am satisfied that that does not apply to your case, because you seem to be working on bedrock all the time.

Mr. Wheeler. I thank you, Senator.

The Chamber of Commerce of the United States was formed only 18 months ago. It was an organization to bring together as a united body all of the national trade organizations and the chambers of commerce and boards of trade of the country. And a chamber of commerce in a city of 1,000 inhabitants is made just as welcome as a member, and it is made just as possible for them to become a member as the Chamber of Commerce of the city of New York, or of the city of San Francisco, or of Boston, or of any other of the larger cities, or of the American Bankers' Association, or of the National Wholesale Dry Goods Association. That democracy has been written into the organization, and its board of directors, which comprises 25 men chosen from definite geographical divisions in every part of the country, have had conferred upon them no power to commit the chamber to any policy or any piece of legislation, and that it may be fully decided whether the matters submitted to the chamber are of a national character, and proper to be submitted to the various bodies for their opinion, and if it is so determined, then such a referendum as this must be prepared and submitted to all the organizations affiliated with the chamber.

Senator Reed asked whether there was argument. If you gentlemen had the time I would like to have you see the manner in which this is put up, with the report of the committee, its relation to the bill then being considered, and the marginal notes with the suggestions that were made, and with marginal notes relative to the amendments that had been suggested. There is not one single syllable in that urging any member of the chamber of commerce to support any one of those provisions, but they are placed exactly before them in a business way in order to endeavor to ascertain what is their mind and what is their opinion in regard to that matter.

Now, gentlemen, when this referendum was issued there were 380 organizations represented in this body, and it represented 200,000 business firms and business men in the constituent membership of these organizations. If I were to say to you that the vote which has been taken and recorded to you by Mr. Simmons was the vote of the business men of this country, I would deserve your censure and condemnation, because it is not. You know as I do how hard it is to get business men to take economic questions and study them and record an intelligent opinion upon them. This went out to the various organizations and associations and was voted upon by more than one-third of the organizations and by 41 per cent of the full voting strength of the chamber. The voting strength is made up so that the Chamber of Commerce of the city of Boston, for instance, has 10 votes and the Chamber of Commerce of Phoenix, Ariz., 1 vote. The maximum number of votes that any organization may cast in regard to any question or piece of legislation upon which a referendum is submitted is 10 and the lowest, of course, is 1. So that an organization of thousands of members can not record more
than 10 votes and never by any combination can dominate the vote of the whole, and 41 per cent of all the votes that could have been cast upon this question was cast by the associations.

Senator, it was my good fortune during the 45 days that this question was pending before the business associations of this country to visit a good many cities, working with them in connection with what I regard as one of the most fundamental principles of our business life, to get our business men interested in something besides trading their own goods for other people's goods or their own goods for profit; that they shall interest themselves in a sane way in finding out what is going on, what is their relation to it, how it affects their business, and get them to form a clear opinion and to express an opinion where it may be of value.

In that the Chamber of Commerce of the United States from its beginning has wished to say to the executive and legislative branches of this Government in Washington we are not coming to you and asking that you pass legislation for us; we are not pressing bills for your consideration; we are asking that you help us to help you if you want the business opinion of this country upon measures that are before you. We will give it, as we have tried to do in this case, an absolutely impartial and unbiased opinion upon various points, presenting the matters of these organizations, not asking that they support the measures as we proposed them, but that they give us their advice and help and suggestions.

I never have seen business men more keenly interested in any subject than the people have been in this matter. The boards of directors of various organizations have called their organizations together, and when that was impossible they have sent out extracts from this report and asked that these arguments and extracts and explanations be read and the vote recorded, and during the last 45 days, Mr. Chairman, I have sat in conventions of business men who have asked me to come in and talk to them about these seven provisions, and they have recorded their vote upon them. You will know from Mr. Simmons's report that it is not a unanimous vote. There were some 90 votes against the one which received the greatest number of negative votes and I believe some 390 votes in favor of the provision which received the greatest number of affirmative votes. So that there was thought in this matter, and in presenting it to you as we do to-day we present it as the sober and deliberate action, favoring these recommendations for amendment or the suggestions for your consideration. They come from 140 of the largest commercial organizations in this country, in 28 States of this country, and comprising a membership of more than 150,000 business men.

And if you have time to read the letters that have come from those organizations which did not vote and find how conscientiously they considered their relation to this subject you would be still more impressed. I am only going to give you one. One organization having had its committee at work upon this proposition, brought it before its executive board for consideration and said, "We can not approve all of the amendments suggested by the committee of the Chamber of Commerce of the United States. We can not vote against your bill, because in so doing it would tacitly approve the bill as now written. Neither can we vote for your bill, and because we can not do either
one we dare not vote at all." They have been conscientious in the matter and tried to look at it in a fair way. I do not believe in that standpoint. I do not believe that is a good thing, but these organizations have, so far as possible, endeavored to form their conclusions soberly and honestly, and I give them to you for what they are worth.

As this organization grows it will endeavor, whenever it comes before a committee of the Senate or House, to bring to you the honest and unbiased and unprejudiced opinion of the members of these various organizations.

I am very much obliged to you, gentlemen.

The Chairman. The committee very highly appreciates the pains you have taken to carefully examine this bill and criticize it and suggest amendments to it, and nothing could be higher evidence of the opinion you have given than the form in which you have presented it to your own members.

Senator Shafroth. We expect to utilize this very much.

Senator Bristow. Of course, this does not purport to reflect so much the views of these men as to what legislation we ought to have and what amendments ought to be made to this bill?

Mr. Wheeler. That is right, Senator.

Senator Bristow. Now, some of us believe that a central Federal bank would be better than 12 Federal banks organized as these are proposed to be organized. Now, as to the choice between a central Federal bank providing for the performance of certain functions in our financial system or 12 banks organized as these are, we would not have the judgment of these gentlemen as to that, but only an amendment which they feel ought to be made to this specific bill?

Mr. Wheeler. That is right. Our committee on banking and currency when it came to Washington to study this bill and endeavored to formulate a report felt that your effort in Washington was one directed toward constructive legislation; that you had certain principles which you believed should be worked into the bill, and we were ready to try to support you in legislation on those principles.

We therefore put to our constituent members no question that was not related to the bill itself. We did not argue that a central bank was better than 3 or 12.

Since we came to look at this as a business proposition, knowing, as business men do, the difficulty of establishing a great working machine with a large number of branches thrown out, we felt, when in the wisdom of the Federal reserve board of this association there should be a gradual development of the regional associations instead of endeavoring to establish a great number at once and thereby making confusion, that possibly that could be avoided and yet not destroy any of the principles that underlie this bill, beginning with the natural centers and increasing as the demand came or as the Federal reserve board saw fit to increase them. That is the nearest we came to that point.

Senator Bristow. Would we infer properly from that that in your opinion if this Federal reserve board should start with one Federal reserve bank, extend branches of it or establish others of a similar character until it gradually absorbed the entire functions which are contemplated, would be safer and create less possible disturbance of the normal operations of our business affairs than to undertake to create the whole thing at once in one general enactment?
Mr. Wheeler. Not from the Chamber of Commerce of the United States, because it has expressed no voice upon that. Personally, if you are going to adhere to the provisions of the bill relative to the number of regional associations, and you want convenience as well as safety, I believe that more than one regional bank started at the beginning is desirable rather than detrimental.

Senator Bristow. How many would you suggest?

Mr. Wheeler. I hold with my own committee that with perfectly natural conditions certain three centers might be chosen, and then you may have within six months nine more. That development would be the natural and logical development under the development of the Federal reserve board.

Senator Nelson. Your suggestion is that we start with three in the central reserve districts.

Senator Bristow. That strikes me as an interesting suggestion.

I would like your own opinion on this phase of the subject. We are creating here by this bill a Federal reserve board that sits here in Washington and supervises these banks at a distance without any personal contract with them. Under your suggestion there would be three. These three banks that are in active operation as banks are presided over by boards of directors and superior to them stands this Federal board. Would it not be better, from a business point of view, safer, and tend to efficiency to have that board itself in the active management of the bank, so that with its experience in contact with the operations of the banking business it would have a judgment based not only upon its theoretical knowledge but on the actual experience of the men who are to decide, ultimately?

Senator Nelson. You mean one single bank?

Senator Bristow. Well, yes; if those men were in charge of a bank, would they not be better equipped to pass wisely upon the questions that would come naturally before them?

Mr. Wheeler. You ask this as my personal opinion?

Senator Bristow. Certainly.

Mr. Wheeler. I think if it were possible to secure it from Congress and with the consent of the country, that the highest efficiency would come through greater centralization, but I am also equally convinced that it is not practical at the present time to do it.

Senator Bristow. That suggestion has been made to us heretofore. Please tell me why you think it is not practical.

Mr. Wheeler. I think that the same reason that brought into disrepute the bill put out by the Monetary Commission—the fear of control which would always be present—would probably have the effect of making your central bank distasteful to a large number of the people of the country.

Senator Bristow. Have you taken into consideration the wide difference between the Monetary Commission's plan and the one suggested?

Mr. Wheeler. I think, Senator, that you have a very admirable adaptation in the present plan. It is in a sense a broadening of the scope of the other, and in another sense it is a contracting of that scope through the elimination of a very large amount of machinery that might have been very difficult or expensive to operate. Personally I have no fault to find with the provision of the bill creating, as it does, a given number, or even if you make it an indeterminate num-
ber, in the discretion of your Federal reserve board or regional associations that shall be linked together definitely by a board that shall have control of the issue and shall really have control in large measure of the actual direction of the banking functions of the country.

Senator Bristow. You think that board, situated, as it will be, at a distance, in Washington, as a governing board, and not actively in touch with the operations of the banking business, will be more capable of passing wisely upon the questions that grow out of the operations than if they were in active touch with the situation?

Mr. Wheeler. In so far as they are required to do it in their general supervision. If you gentlemen can, in your wisdom, work into the bill some advisory capacity that is real and not fanciful, that has responsibilities and that is responsive to the country itself, then I say yes, they can do so.

Senator Reed raised the question of the relationship of the two members of an advisory council. May I suggest, Senator, that their relationship, to my mind, is like this: They are elected by an advisory council, one member of the council being chosen by each regional bank, by the vote of the directors of that bank, representing three banks, three representing the commercial and industrial and agricultural interests of the country, and three appointed by the Federal reserve board. You have, therefore, a board of directors of your regional association elected a member of the advisory council or board of the regional association, really being representative of the three elements that constitute our national life.

I believe that you can safely say that an advisory council elected as suggested is really representation more than the bankers, although I grant you that six of the nine board of directors of the regional bank are elected under certain provisions of your bill by the member banks; but they are so safely guarded that your Federal reserve board has the right to change that representation, and therefore your advisory council, in my judgment, with either 5 or 7 or 12 or 20, would really be representative of the several sections of our life rather than only the banking elements of our life. If the council was then elected, and out of their number best qualified to serve them in an advisory capacity with the Federal reserve board at Washington, charged with no other task than to keep informed relative to the financial and the agricultural and commercial conditions in their regional districts, and had that as their sole task, I believe you add distinct strength, because your Federal reserve board is charged with the task of guiding and supervising all the affairs of the regional banks and practically protecting all of the functions of those banks, and they have a task which is a big one for seven to perform, and these two men will bring live-wire information to the seven relative to the districts and their condition.

Senator Bristow. As I understand you, you would prefer to have these three regional banks governed as the provision is made in this bill rather than to have one central bank governed by a board selected similar to this Government board?

Mr. Wheeler. Again, personally, I can only reiterate what I said before. From the point of my efficiency, if it seemed possible, there are advantages in a central bank, as there are always advantages in centralization. But, next to that—which does not seem to me practicable—I believe this plan is good.
Senator Bristow. But please leave out the proposition as to whether it is practicable or not——

Senator Nelson. Will you allow me to put in this remark right here in connection with this, that in answering the Senator you must bear in mind that the Aldrich bill, so called, was controlled by the bankers, and this plan is to give the absolute control to the Government.

Senator Bristow. That is exactly the point. This proposition is that the Government shall control a United States bank, and the bankers shall not appoint any of the officers that shall control it. They need not subscribe to the stock unless they want to.

Mr. Wheeler. Senator, I think the difference very largely is this: Under the so-called Aldrich plan, which was a control by the banks, as you say, your central bank had full banking functions, but had attached to it a very large amount of a very cumbersome machinery—more district associations than you gentlemen have reserve associations in this bill, and tacked on to this a large number of local banks that were feeders into these others.

Senator Bristow. If you will pardon me, I would rather have this than the Aldrich system, but I am very much against this.

Senator Pomerene. I thought you favored the Aldrich system.

Senator Bristow. I should not vote for it under any consideration. But I am trying to get at another thing. I want to know if you believe that a central bank, controlled by the Government, by a board appointed for that purpose, operated by that board, performing all the functions that are intended to be performed by this system, providing means for the mobilization of reserves, a bank of issue, a bank of Government deposit, a bank of rediscount—if you think it would be more efficient than three regional banks governed as suggested in this bill?

Mr. Wheeler. I do not.

Senator Bristow. Why do you not?

Mr. Wheeler. The only advantage we can get from a central bank, governed and controlled as you would have it in relation to this same sort of movement, would be a possibly greater mobilization of reserves. The power of issue lies with the Federal reserve board, as you have it here in your bill, and the supervision likewise, and with a central bank you must have branches, and many of them probably, to serve, as you will in this case have to have branches of your regional association. And I believe that for convenience sake where you have tied up your regional association through such a number as you here propose—and I depart from some of the testimony that has doubtless been given by many in my own profession relative to the power that you may give to cause reserves to be transferred. I believe they should be in some wise safeguarded, but the permissive power to require certain functions to be performed must be given to your central body, whether it be a Federal reserve board, as planned in this bill, or the board of directors of a central bank such as you may suggest. And I believe that for the convenience of the country it will ultimately work out better, as experience is gathered and as we may make certain amendments, in the operation of these regional banks and in the control of the Federal reserve board, to have them located at various parts of the country instead of absolutely centralized at one point.
Senator Bristow. Now, suppose that instead of having these directors of the regional banks selected as they are we have them all appointed by the President and confirmed by the Senate, so that the regional banks are controlled and governed by a Federal board.

Senator Pomerene. I do not believe I understood your question. Do you mean that all of the members of the regional board be appointed by the President?

Senator Bristow. Yes; that is just what I mean.

Mr. Wheeler. Senator, I think, that if you were to do that you would either be compelled to work into this bill some provisions that would absolutely compel the banks of the country to join in this movement, or you would drive them away from it. If you compel subscription to the capital stock of a body that has to do not only with that capital but with the reserves and without any voice or control whatsoever in the matter except such as may be delegated to it by an appointive power from a distant point, I think it would be an injustice to the men who contribute the capital, and I think they would not feel very much like joining into a regional association plan of that kind.

Senator Bristow. You think it is more unjust, if I understand you correctly, for the Government to appoint the managers of the regional banks than it is for the Government to appoint the board which supervises the action of the managers of the regional banks?

Mr. Wheeler. I think the central board, which is in the control and appointing power of the Government, is the supervisory power of the functions of all the banking of the country and the power of issue, and the Government in this bill to stand back of the notes that are issued, and if it stands back of them as responsible it has the right to name the men who shall control that issue and who shall supervise—and wisely supervise, we in business believe—the banking operations and functions of the country.

Senator Bristow. You distinguish, then, between this supervisory board here at Washington, that you do not care to have a member on, but that you want to be in intimate relations with—you distinguish between that board and a board that is to actively manage these banks?

Mr. Wheeler. Yes; I do.

Senator Bristow. Now, there are some of us that believe that the same interest that would control Mr. Aldrich's central bank would control these regional reserve banks—some of us have not any doubt about it—that this provision is simply a very adroit way to avoid the unpopularity of Mr. Aldrich's plan and still not lose the essential substance of it.

Mr. Wheeler. Well, you have safeguarded yourselves in this way. Out of the board of nine, six are elected under certain conditions—and, I think, very ingenious conditions. And I do not agree with you that they are likely to work to central control by the member banks. Let us not forget that three of the nine are appointed by the Federal reserve board and that three of the nine may be removed by the Federal reserve board if they should not be representative of the interests that are supposed to be covered by the provisions of that bill.

Senator Bristow. Suppose that we here, in our judgment—I am not saying that many members of the committee would favor it—
BANKING AND CURRENCY.

make six of them appointed by the Government direct, or seven, and let the bankers elect two; in other words, have the same proportion of the management of these regional banks that you want on the Federal board here.

Mr. Wheeler. Again, personally, Senator—because these are only personal opinions, and they have nothing to do with the referendum—I like the present plan better.

Senator Bristow. That is what I have been trying to get at. I have an impression that the great interests which are so much interested in this legislation are willing to accept a Federal board provided they can have a close relation to it, but with supervision in a general way; but they would strenuously object to having the regional boards have direct personal control, even if they did not have to subscribe the stock.

Mr. Wheeler. Admitting now there should be another method of stock subscription?

Senator Bristow. Yes; what would you think of that?

Mr. Wheeler. I think if you leave the banks out of it altogether they have no voice. Make it optional for them to come in or not. You choose your method of control as you please. Not speaking for the banks, but from a common-sense viewpoint, I should judge they would not be interested when they were not parties to the transaction, in any sense of the word.

Senator Bristow. Do you think that kind of system would succeed in this country; that kind of Federal bank, based on popular subscription?

Mr. Wheeler. I am not competent to answer that question.

Senator Bristow. Is it not quite similar to the French system?

Mr. Wheeler. They have a widely scattered stock holding; so have the others; so has the Bank of England, but not absolutely open to the general public in point of controlling power. If you are going to give your shareholder in your American bank, who holds one share, voting power, then naturally you would confer upon him something they do not have among those who hold stock in the Bank of England. You democratize it; I do not know that you benefit the selection, by any means, of the directorate.

Senator Bristow. What is the capital of your trust company?

Mr. Wheeler. $2,000,000.

Senator Bristow. And its deposits?

Mr. Wheeler. The deposits are $22,000,000.

Senator Bristow. You are the vice president?

Mr. Wheeler. Yes.

Senator Bristow. Who is the president?

Mr. Wheeler. Mr. Frederick H. Rawson.

Senator Nelson. Are you affiliated with a national bank?

Mr. Wheeler. Senator, I am not.

Senator Nelson. I do not mean you personally, but the trust company?

Mr. Wheeler. We are not.

Senator Nelson. No national bank is a stockholder or has any interest?

Mr. Wheeler. Not in the slightest degree.

Senator Nelson. There are some trust companies that are only annexes of national banks. Yours is not one of them?
Mr. Wheeler. Happily, ours was organized in 1869, and has stood on its own legs since that time, and has no other affiliation.

Senator Nelson. There is one point more I should like to call your attention to. As I understood it, your opinion and the opinion of your delegation is this, that inasmuch as we are now starting on a new experiment, the issuing of what I call asset currency, a currency that we have never had since the old system of State banks before the war, you feel—and I understand it is the force of your referendum—that that currency should be guaranteed, although it is a currency of the banks; that it should be guaranteed by the Federal Government?

Mr. Wheeler. That is the recommendation of the referendum.

Senator Nelson. That is as I understand it. That is all.

Senator Weeks. Mr. Wheeler, if the Senate passed the bill as it came to it from the House, would your trust company come in under the bill and become a member of the association?

Mr. Wheeler. I do not think it could, Senator, because the bill as I read it now in the last copy that I have is so clouded with respect to the relation of the State bank and trust company to the other scheme that I doubt if it could come in without some changes in the present bill.

Senator Weeks. If the bill were changed to conform to the recommendations made by the chambers of commerce, do you think that would change the conditions so that you would come in?

Mr. Wheeler. That would not change it, Senator.

Senator Weeks. Then you do not think your trust company would become a member of the association under any circumstances that are likely to prevail?

Mr. Wheeler. Quite to the contrary, I think they would, but I think the necessity would be to clear up certain phases of the bill which are now rather indistinct in our minds relative to the savings-bank section. There are provisions there relative to liabilities. As I understand it, the bill was drawn with the idea that it should apply to the national bank, and not any very great care was used in phrasing the bill to make it possible to apply it jointly to the National and State banks.

Senator Weeks. You have not discussed that, of course, in any form, because you are here to discuss the report which the chamber of commerce has made; but I suggest to you that you in some way communicate to the committee your views on that particular point, because that is something we have to consider, or should consider, before we finally report the bill.

Senator Shafroth. We should like very much to get your trust company in.

Mr. Wheeler. I think if you can make this attractive enough so that the State banks and trust companies will be desirous of affiliation, it will greatly strengthen the whole thing.

Senator Weeks. We want to make it attractive enough, and we want to know what we have to do to do that.

Mr. Wheeler. Senator Weeks, you received from Mr. Hulbert, of the Merchants' Loan & Trust Co., certain suggestions from the State banks of Chicago.

The Chairman. Yes. Do you happen to have a copy of that?
Mr. Wheeler. I have a copy at the hotel, and should be glad to send it to you.

The Chairman. I should be glad if you would. I had a copy and lost it.

Mr. Wheeler. Those we subscribe to; and while I was present at the meeting which considered Mr. Hulbert's suggestions the bankers present distinctly stated that in making these suggestions they did not say that the bill with those suggestions incorporated would be one that would invite them in. They asked the Senate committee to give consideration to them to clarify the provisions of the bill so as to make possible their coming in, whereas now they feel they could not.

Senator Weeks. I want to bring up just one point which you have discussed during the questions which Senator Bristow asked you, and that is about the question of local credit. You are in close touch with the depositors and the borrowers of your trust company. You have talked with them about their needs, and you try to respond by loaning to them when they need it. Do you think a board here in Washington is going to be competent—it does not make any difference how wise the men are—to determine that a customer of yours does not need the accommodation, or that you should not lend him the money, even if you needed to make a rediscount by so doing?

Mr. Wheeler. I do not think, Senator, that any Federal reserve board at Washington can properly sense the needs of the customer of an individual member bank.

Senator Weeks. Let me put that proposition of mine in a little different form? Don't you think this law ought to be such that a member bank may, within certain limitations as to amount, be able to go to the reserve bank and get rediscounts—assuming, of course, that it is paper that comes within the provisions of the law—without any veto from anyone?

Mr. Wheeler. I think that would add greatly to the attractiveness of the measure and its working basis, but you have, as I understand, in your reserve association the power of discrimination with respect to paper, or you intend to have it.

Senator Weeks. I have not very much confidence in the power of a board in Washington to discriminate as to the paper of your customers in Chicago.

Mr. Wheeler. What about the board of the regional reserve association?

Senator Weeks. Well, I have not very much confidence in that even. I would rather have your judgment. I want to have this law finally framed so that your customer needing money may go to you, and, if you agree that he does need it, you may make a loan, even though you have not the money to lend and need to make a rediscount by so doing, and that you can get your rediscount as a matter of right, not as a matter of say so of some board—up to some limit, of course. I do not think we ought to provide for rediscounting an amount greater than the capital of the bank—perhaps some such limit as that—but, up to some such limitation, I think the banks should have the right to go to the reserve bank and get accommodations without any veto from anyone. If we do that we are going to have a national system and we are going to accommodate the business interests of the country, as those interests are determined by the local
banker and by the local borrower and not by a board in Washington or anywhere else. If we are going to provide that a board shall determine those things, in my judgment we are going to have all kinds of confusion and dissatisfaction.

Senator Nelson. Senator Weeks, let me call your attention to one thing that occurs to me——

Senator Weeks. I intended to have Mr. Wheeler express an opinion. I was doing the talking when I intended to have him doing the talking.

Senator Nelson. I was waiting for his answer.

Senator Weeks. I wanted to know, Mr. Wheeler, if you agreed to that proposition.

Mr. Wheeler. I am in agreement for anything in this bill that will make flexible the operation of the bill with respect to the member banks.

Senator Weeks. And that will accommodate the business interests of the country with certainty?

Mr. Wheeler. Yes. There is, however, just one question that I think deserves consideration in connection with that statement. If you make it a matter of right up to a certain limitation to demand the rediscounting privilege of the paper that comes under the class, you do not then give any consideration to the ability of the regional bank to meet those demands which may at some time grow excessive. And I think therein the supervisory power—the veto power—is good. You strengthen in that case rather than weaken your system, for the safety of the whole fabric must lie upon the ability of these regional banks to do the things they are asked to do and that they could not be forced to do by making it the right of a member bank—something that we are not in a position to do with respect to funds available for the purpose.

Senator Weeks. Why, Mr. Wheeler, if we had no reserve board at all, if member banks were allowed to go to the member banks and rediscount every dollar of paper they had in their portfolios, in my judgment that paper would be redeemed and taken care of, and you never would hear of any disturbance at all, without any supervision whatever. I do not mean to say I am in favor of removing all supervision and restriction, but I think there is no question that would be the result.

Senator Nelson. Senator Weeks, here is one thing that occurred to me in this connection. These regional banks practically have two kinds of discounts—one is a discount for the purpose of obtaining currency and the other is an ordinary discount where they seek to borrow money. Now, ought there not to be a brake on the discount for obtaining circulation in order to prevent inflation?

Senator Weeks. I should like to discuss that with you sometime, but I do not think we ought to interrupt Mr. Wheeler’s statement in order to do so now.

Senator Nelson. Can you not see there are two kinds of discount there—one for the purpose of circulation and the other for the purpose of obtaining a loan?

Senator Weeks. I can see that the borrower might use the discount for two different purposes, but, as far as the effect is concerned, it would be of the same character.

Senator Nelson. Probably.
Senator Pomerene. Would you advise the rediscounting of certain classes of paper which you would not permit to be used for purposes of issue of currency?

Senator Weeks. Probably; I should be glad to talk with you about that matter.

Senator Pomerene. I should be glad to talk with you about that.

Senator Nelson. That is the point I referred to—the discounting of paper for other purposes and securing currency.

Senator Reed. Mr. Wheeler, I want to discuss with you for a moment the question of this advisory board, and see whether, after all, there is any necessity for it. You do not doubt for a minute, do you, that the central board of control will be in reasonably close touch all the time with the 12 regional banks, if it is a competent and proper board?

Mr. Wheeler. Reasonably close; yes.

Senator Reed. It has a direct representative on the board of directors of that regional bank, and the bank in interest has the president of the bank—for, of course, they will elect him. So that each of these 12 regional banks would be in a position to directly correspond with and make their wishes known to a central board through two agents, one of which is the president of the bank, selected by the men the bankers have selected—that is, by the six directors—the other will be the chairman of the board of directors selected by the Government. Now, there are pretty direct sources of information and advice, and they, in a way, represent different interests, do they not?

Mr. Wheeler. Yes.

Senator Reed. Now, do you think, if you constituted yourself this central board, and you had those two sources of information, together with daily reports as to the transactions of the bank, you would have much difficulty in getting all the advice you needed from both sides of the question, and sound advice?

Mr. Wheeler. I think, Senator, if you impose upon the directors of the Federal reserve board the necessity for securing this information, it is going to be a slower process than if you had two men sitting with them who were supposed to have the information and to have nothing else to do but to get it and keep it available. And it seems to me a matter not of multiplying methods, but really of concentrating to a point that would make available to the seven members of the board, without the necessity of correspondence or of communication, except to verify, as they may wish to verify, with their own agent in that regional association, the information they desire relative to the needs of that district.

Senator Reed. Now, these two men sitting in Washington would have to get their information somewhere?

Mr. Wheeler. Yes; just exactly the same, but they would have solely the business of getting it, and not the business of following the affairs of the banking system of the country, whereas the seven men are responsible for some very heavy operations.

Senator Reed. Don't you know, when you boil the criticism down, that there is not much in it, particularly when you take into consideration the fact that these banks would effect any kind of organization they want for the purpose of having a representative here in
Washington who can go down to the board every day and talk with the board and the board always be willing to listen to him, as long as he comes in a proper way? Don't you know that is the way this will work out?

Mr. Wheeler. It may, if the authorized source inclusive in the machinery——

Senator Reed. I would not have any objection at all to allowing the banks to have two agents in Washington; but I do object to have them sitting with this board.

Mr. Wheeler. Well, they are powerless, unless they do.

Senator Reed. Well, certainly they are powerless, except to give the board information. Now, if you mean to put them on this board for the purpose of controlling this board let us be frank about it and say that.

Mr. Wheeler. That is ridiculous. Whether the president of the United States is the present incumbent, or any other, this Nation will always trust him to appoint men in that important capacity that could not be controlled by two men elected by a dozen representatives of the Federal reserve or regional association.

Senator Reed. Now, it is ridiculous that they should control. Therefore, all that is left is that they should advise. Is not that true?

Mr. Wheeler. That is just what we ask from them.

Senator Reed. Do you doubt for a minute—and is it not ridiculous to assume; I will adopt your adjective—that any Federal reserve board would refuse to listen to any man who substantially represented the banking interests who came there with a proper suggestion?

Mr. Wheeler. I thoroughly believe that your Federal reserve board will do just that thing. But rather than have to wait until some man may come, as chance may send him, or as a crying need in his region may demand that he go, if you can have instead a continuous representation there on the ground, in communication with those who have the information at their hand and can give it to them, I think it is an advantage to the Federal reserve board to have this representation present at all times rather than have it come spasmodically.

Senator Reed. Well, I think the suggestion would not be urged with such pertinacity and in such a serious way unless there was in the back of somebody's head the thought that those bankers would have a potential influence—I do not mean an improper influence; but I do think, since we are talking about it, that a Federal reserve board properly organized, with its machinery and its employees, will be every day—and I will go further and say every hour of the day—in actual touch with the 12 regional banks and know exactly what is going on. If it does not, I do not want to see the system established.

Mr. Wheeler. Senator, might I suggest this to your mind? You assume that these men would be bankers; and I think you are absolutely right; and they would be, in a sense in the employ of the reserve associations, as they would be elected by those who were elected by the regional boards of directors. But when it comes to the question of residence in Washington and having authority to sit there, and have their cause strongly advocated before that board,
please do not forget that the bankers have absolutely eliminated from their recommendations the idea of the advisory council, and have asked you for another thing in connection with the Federal reserve board. The Council at Chicago which was held a few weeks ago distinctly said "No" to the advisory council, and had it been one of those propositions that the banks of the country were interested in putting two men on that board, without vote, in order that they might be watchers, they certainly would not have seen fit to forego that as one of their recommendations.

But the suggestion does not, as I understand it, come out of the banking fraternity. I think the first suggestion that was made for the advisory council was made by the committee of the Chamber of Commerce of the United States, and I think that Senator Owen, the chairman, talked with the members of our committee back in July on that question. At any rate it was worked into the bill after that conference had been held here in Washington. Now, it is not a banker's proposal, Senator, as I understand it. It is a proposition that comes from the commercial interests of the country.

Senator Reed. Well, if it came from the bankers, I would not turn it down on that account.

Mr. Wheeler. We are not all bad.

Senator Reed. No. I say there are two very ridiculous things going on. One is the gentleman who indulges in writing a letter denouncing all bankers as wicked, and the other the bankers getting together and denouncing Congress as a lot of socialists, and between the two I think I have the most sympathy with the fellow who writes the letter, because he has got the most sense; but not much with either.

Now, suppose that, instead of adopting your suggestion, this committee should conclude to recommend taking the Cabinet officers out of this board, leaving the Secretary of the Treasury, and should conclude to require, say, three practical bankers to be appointed, and that they should recommend that the bill should provide for good salaries, and that the permanency of this board as to its membership should be largely assured, do you not think that would go a long way toward satisfying the demands that you people make along that line?

Mr. Wheeler. I think that you would have reduced the necessity; but the utility of the advisory council from an advisory standpoint still remains.

Senator Reed. Well, I will not argue that point. I think there are objections, but I am very much obliged to you.

Mr. Wheeler. Mr. Chairman, will you please accept my thanks again for your courtesy in hearing me?

The Chairman. The committee very greatly appreciates you gentlemen having been here.

Gentlemen, it is now 10 minutes after 5 o'clock.

Senator Reed. There is a gentleman here from my State—but I believe he has gone.

The Chairman. Then, suppose we adjourn until 10 o'clock tomorrow?

Senator Bristow. Would it not be better to make it 10.30, Mr. Chairman?
Senator Nelson. Yes; half past 10 would be better. Who are to be heard to-morrow?

The Chairman. Prof. Jenks, of Columbia University. Mr. Gilbert was to follow him, but he says he can not get here at that time.

Senator Nelson. I want to hear somebody on the foreign-exchange question.

The Chairman. That is Prof. Gilbert.

The following additional statement of Mr. George H. Shibley was filed with the committee:

Mr. Chairman and gentlemen of the committee, when I was before you on October 7 and had closed my statement, a request was made of me by one of your number that I incorporate my ideas in a bill, and I have done so, suggesting amendments to the House bill. Herewith I present the copy to the committee, and will ask that it be published in the record, together with a brief summarization of the main points.

My proposal is for legal-tender notes, whereas the House bill proposes a paper currency that would be inferior to gold money in legal-tender qualities, and therefore the banks and individuals would hold gold and thus keep it from being placed in the Nation's gold reserve.

I propose a single gold reserve in connection with 12 banks of issue. At the start the gold reserve would amount to more than $1,250,000,000—all of the gold at present in the United States Treasury—which is more than six times the amount of England's central gold reserve and one and one-half times more than the French central gold reserve, the largest in the world to-day.

An added power for the Federal reserve board that I propose is that the law shall transfer to it the $759,000,000 of United States bonds, now held by the Treasurer of the United States as security for the bank-note circulation, this change to be brought about by the retirement of the bank notes, followed by the purchase of the bonds by the Federal reserve board through the issuance of Federal reserve notes. The proposal is to reissue the bonds to the Federal reserve board as 3 per cent's, to be used as needed to retire paper currency to prevent inflation. Paper currency will have to be retired somewhat in proportion as the national bank reserves are lessened; probably $550,000,000 of paper currency will have to be retired as rapidly as the bank reserves are lessened if stability in the purchasing power of money is to be maintained; and then there is the immense output of gold from the mines. This volume of gold from the mines is such that doubtless something like $100,000,000 of paper currency should be retired yearly during the dull season of the year until such time as the mint price for gold is reduced throughout the gold-standard world. These needed provisions for retirement of paper currency can be met by placing within the control of the Federal reserve board the large volume of United States bonds, as I have suggested.

To meet the unusual demands for money within our country, the only thing needed is authority to provide an elastic volume of legal-tender paper currency, the same as is supplied in each of the leading European countries except England.

To provide for the prompt retirement of the paper currency that may be issued in times of threatened bank failures, I have proposed a plan for the resale of commercial paper by the Federal reserve banks to such of the member banks as may have more money on hand than is needed.

The success of the proposed system would in nowise be dependent upon the cooperation of the national banks or the State banks or trust companies. Immediate and continued success would be assured, and both the banks and the people should heartily approve the system. All are vitally interested in the establishment of a system that will promote prosperity, as the proposed system unquestionably would, for it is constructed upon the principles in successful operation in Europe for 40 years. No untried ideas are suggested; whereas the present bill is in many of its details in direct opposition to the successful experiences in Europe, as I have explained in my statement of October 6 and 7.
AN ACT To provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That the short title of this act shall be the " Federal Reserve Act."

FEDERAL RESERVE [DISTRICTS] BANKS.

Sec. 2. That within ninety days after the passage of this act, or as soon thereafter as practicable, the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, acting as "The reserve bank organization committee," shall designate from among the reserve and central reserve cities now authorized by law a number of such cities to be known as Federal reserve cities, and shall divide the continental United States into districts, each district to contain one of such Federal reserve cities: Provided, That the districts shall be apportioned with due regard to the convenience and customary course of business of the community and shall not necessarily coincide with the area of such State or States as may be wholly or in part included in any given district. The districts thus created may be readjusted and new districts may from time to time be created by the Federal reserve board hereinafter established, acting upon a joint application made by not less than ten member banks desiring to be organized into a new district. The districts thus constituted shall be known as Federal reserve districts and shall be designated by number according to the pleasure of the organization committee, and no Federal reserve district shall be abolished, nor the location of a Federal reserve bank changed, except upon the application of three-fourths of the member banks of such district.

The organization committee shall, in accordance with regulations to be established by itself, proceed to organize in each of the reserve cities designated as hereinbefore specified a Federal reserve bank. Each such Federal reserve bank shall include in its title the name of the city in which it is situated, as " Federal Reserve Bank of Chicago," and so forth. The total number of reserve cities designated by the organization committee shall be not less than twelve, and the organization committee shall be authorized to employ counsel and expert aid, to take testimony, to send for persons and papers, to administer oaths, and to make such investigations as may be deemed necessary by the said committee for the purpose of determining the reserve cities to be designated and organizing the reserve districts hereinbefore provided.

[Every national bank located within a given district shall be required to subscribe to the capital stock of the Federal reserve bank of that district a sum equal to twenty per centum of the capital stock of such national bank fully paid in and unimpaired, one-fourth of such subscription to be paid in cash and one-fourth within sixty days after said subscription is made. The remainder of the subscription or any part thereof shall become a liability of the member bank, subject to call and payment thereof whenever necessary to meet the obligations of the Federal reserve bank under such terms and in accordance with such regulations as the board of directors of said Federal reserve bank may prescribe: Provided, That no Federal reserve bank shall commence business with a paid-up and unimpaired capital less in amount than $5,000,000.] The organization committee shall have power to appoint such assistants and incur such expenses in carrying out the provisions of this act as it shall deem necessary, and such expenses shall be payable by the Treasurer of the United States upon voucher approved by the Secretary of the Treasury, and the sum of $100,000, or so much thereof as may be necessary, is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, for the payment of such expenses.

POWERS AND DUTIES OF FEDERAL RESERVE BANKS.

Sec. 3. The powers and duties of each Federal reserve bank shall be:

(a) To establish and maintain throughout the Nation an improved system for the transfer of money and credit, to be known as the Federal reserve sys-
BANKING AND CURRENCY.

tem, to consist of twelve or more Federal reserve banks, also a supervisory board, and as many of the privately owned banks as care to join, each of said privately owned banks to deposit with the Federal reserve bank in its district sufficient reserves to settle the daily balances.

(b) Through the mechanism hereinafter provided each Federal reserve bank shall control the interest rate for money within the district where the said bank is located, the rate of discount to be subject to the supervisory power of the Federal reserve board provided for in this act, and the aim shall be to promote stability in the purchasing power of the standard of value, thus to aid in the development of the industrial system and of prosperity and deal justly as between the industrial groups.

(c) In connection with the official rate the Federal reserve bank shall at all times (1) offer to supply money to the national and such other banks as comply with the requirements of this act, the cash to be distributed by rediscounting short-time business paper as hereinafter provided, and (2) be in a position to reduce the volume of money in circulation (a) by retaining the cash received from the payment of the short-time business paper, (b) by reselling business paper should offers for it be made, and (c) should occasion require to retire from time to time some of the existing currency or its substitutes. [Two additional sources of change in the volume of money in circulation will be the inflow and the outflow of gold from our shores.]

(d) The national board of the Federal reserve system shall be placed in control of the gold in the United States Treasury, subject to the existing obligation with the holders of gold certificates, and there shall be maintained a gold reserve for the entire Nation, so that demands for gold from abroad will not affect the volume of money in circulation in the United States, and that the gold standard of prices will assuredly be maintained, resulting in a fixed par of exchange with the other countries using the same standard.

(e) In connection with the paper currency, which shall be legal tender, there shall be back of every dollar issued an equal amount of gold or an equal amount of commercial paper, as hereinafter provided for, or bonds of the United States or of a State or of a municipality of this Union, and every dollar of paper currency in circulation from whatever source shall be redeemable in gold at the main offices of the Federal reserve board upon demand, at par.

(f) Branches within the district shall be established wherever the board of directors shall deem best, subject to a right in the Federal reserve board to finally decide.

(g) With the consent of the Federal reserve board, to open and maintain banking accounts in foreign countries and establish agencies in such countries wheresoever it may deem best for the purpose of purchasing, selling, and collecting foreign bills of exchange, and to buy and sell with or without its indorsement, through such correspondents or agencies, prime foreign bills of exchange arising out of business transactions which bear the names of two or more responsible parties or are secured on the property sold. (Compare page 27 of House caucus bill.)

(h) To accept payments for the Federal Government without charge, and, without charge, to make payments for the said Government to the extent of its credit balance, and as far as may be requested by the said Government to take over for safe-keeping or management, free of charge, securities and valuables belonging to it or placed under its management. (From Swiss law.)

(i) The said bank shall become a body corporate, and, in the name designated in the organization certificates, shall have power to perform all the acts necessary and proper to carry out the purposes of this act, and shall have succession for a period of twenty years from its organization unless sooner dissolved by act of Congress.

(j) The Federal reserve board and the boards of directors of the Federal reserve bank shall not invest funds in real estate except with the consent of Congress.

ONE GOLD RESERVE.

Sec. 4. That as rapidly as gold certificates shall be paid into the Federal reserve system, and paid into the United States Treasury and the subtreasuries, they shall be retired, and in their place shall be issued a like amount of legal-tender notes provided for in this act. (See page 1846 of Hearings.)
As rapidly as the Treasury notes and the United States notes now outstanding shall be paid into the Federal reserve system and paid into the United States Treasury and subtreasuries they shall be retired, and in their place shall be issued a like amount of the legal-tender notes called for in this act. Whenever gold bars or gold coins are tendered to a Federal reserve bank at its main office it shall forthwith purchase it at the rate of $18.60 per troy ounce, nine-tenths fine, and when pure at $20.66 per ounce. The purchase money shall be the legal-tender notes provided for in this act, and all of the gold received by each Federal reserve bank shall be held by the national board. (See Hearings, page 1825, last paragraph.)

As rapidly as gold coins shall be received in the United States Treasury and subtreasuries they shall be transferred to the Federal reserve banks in exchange for the legal-tender notes called for in this act unless the Government shall choose to retain them. (See page 1825 of Hearings.)

ADDITIONAL POWER IN THE FEDERAL RESERVE BOARD.

Sec. 5. That the circulating notes of the national banks shall be retired under regulations to be provided by the Federal reserve board hereinafter provided. The said board shall offer to purchase at par and with accrued interest the United States bonds on deposit with the Treasurer of the United States as security for the said circulating notes, payment to be in legal-tender notes issued under authority of this act. The bonds purchased shall be canceled, and in their place shall be issued to the Federal reserve board an equal amount of three per cent United States bonds, to be held by the said board for future use. The bonds shall be made payable at such times as the Federal reserve board shall specify: Provided, That the time shall not exceed twenty years from the date of sale by the said board. These bonds shall be exempt from Federal, State, and municipal taxation, both as to income and principal, and shall be used by the Federal reserve board to retire paper currency whenever required for promoting stability in the purchasing power of money, and may be used to maintain the gold reserve. (On the proposed basis of maintaining stability in the purchasing power of money probably $350,000,000 of paper currency will have to be retired to prevent inflation from the reduction in the volume of the national-bank reserves. To prevent inflation from gold from the mines it may be that each year $100,000,000 of paper currency may have to be retired until an international agreement is reached to reduce the mint price for gold; pages 1775–1781 of Hearings. The total volume of paper currency in circulation before the retirement of any of it as above suggested would be $2,355,000,000, with a gold reserve amounting to more than 50 per cent.)

If at any time $200,000,000 of paper currency shall be retired to make place for gold from the mines, the President shall invite the Governments of the earth to unite in an agreement that each will amend its mint law by reducing to an agreed figure the price at which gold shall be coined. (See pages 1775–1782 of Hearings; also memorial by Mr. Shibley dated May 12, 1913, pages 7, 18, published by Senate Committee on Banking and Currency.)

[FEDERAL RESERVE BANKS.]

Boards of Directors of Federal Reserve Banks.

Sec. [4] 6. [The national banks in each Federal reserve district uniting to form the Federal reserve bank therein, hereinafter provided for, shall under their seals, make an organization certificate, which shall specifically state the name of such Federal reserve bank so organized, the territorial extent of the district over which the operations of said Federal reserve bank are to be carried on, the city and State in which said bank is to be located, the amount of capital stock and the number of shares into which the same is divided, the names and places of doing business of each of the makers of said certificate and the number of shares held by each of them, and the fact that the certificate is made to enable such banks to avail themselves of the advantages of this act. The said organization certificate shall be acknowledged before a Judge of some
court of record or notary public; and shall be, together with the acknowledge-
ment thereof, authenticated by the seal of such court, or notary, transmitted
to the Comptroller of the Currency, who shall file, record, and carefully pre-
serve the same in his office. Upon the filing of such certificate with the Com-
proller of the Currency, as aforesaid, the said Federal reserve bank so formed
shall become a body corporate, and as such, and in the name designated in such
organization certificate, shall have power to perform all those acts and to enjoy
all those privileges and to exercise all those powers described in section fifty-
one hundred and thirty-six, Revised Statutes, save in so far as the same shall
be limited by the provisions of this act. The Federal reserve bank so incorpo-
rated shall have succession for a period of twenty years from its organization,
unless sooner dissolved by act of Congress.] (See sec. 3, par. 1.)

Every Federal reserve bank shall be conducted under the oversight and con-
trol of a board of directors, whose powers shall be the same as those conferred
upon the boards of directors of national banking associations under existing law,
not inconsistent with the provisions of this act. Such board of directors shall
be constituted and elected as hereinafter specified and shall consist of nine
members, holding office for three years, and divided into three classes, desig-
nated as classes A, B, and C.

Class A shall consist of three members, who shall be chosen by and be rep-
resentative of the [stock-holding] member banks.

Class B shall consist of three members, who shall be representative of the
[general] public interests of the reserve district except the bankers.

Class C shall consist of three members, who shall be [designated by the
Federal reserve board] representative of the public interests of the reserve
district except the bankers.

Directors of class A shall be chosen in the following manner:

It shall be the duty of the chairman of the board of directors of the Federal
reserve bank of the district in which each such bank is situated to classify the
member banks of the said district into three general groups or divisions. Each
such group shall contain as nearly as may be one-third of the aggregate number
of said member banks of the said district and shall consist as nearly as may be
of banks of similar capitalization. The said groups shall be designated by
number at the pleasure of the chairman of the board of directors of the Fed-
eral reserve bank.

At a regularly called directors' meeting of each member bank in the Federal
reserve district aforesaid the board of directors of such member bank shall
elect by ballot one of its own members as a district reserve elector and shall
certify his name to the chairman of the board of directors of the Federal reserve
bank of the district. The said chairman shall establish lists of the district
reserve electors, class A, thus named by banks in each of the aforesaid three
groups and shall transmit one list to each such elector in each group. Every
elector shall within fifteen days of the receipt of the said list select and certify
to the said chairman from among the names on the list pertaining to his group,
transmitted to him by the chairman, one name, not his own, as representing
his choice for Federal reserve director, class A. The name receiving the greatest
number of votes, not less than a majority, shall be designated by said chairman
as Federal reserve director for the group to which he belongs. In case no can-
didate shall receive a majority of all votes cast in any group the chairman
aforesaid shall establish an eligible list, consisting of the three names receiving
the greatest number of votes on the first ballot, and shall transmit said list to
the electors in each of the groups of banks established by him. Each elector
shall at once select and certify to the said chairman from among the three
persons submitted to him his choice for Federal reserve director, class A, and
the name receiving the greatest number of such votes shall be declared by the
chairman as Federal reserve director, class A. In case of a tie vote the balloting
shall continue in the manner hereinafter prescribed until one candidate
receives more votes than either of the others.

[Directors of class B shall be chosen by the electors of the respective groups
at the same time and in the same manner prescribed for directors of class A,
except that they must be selected from a list of names furnished, one by each
member bank, and such names shall be those of officers or directors of
any bank or banking association. They shall not accept office as such during
the term of their service as directors of the Federal reserve bank. They shall
be fairly representative of the commercial, agricultural, or industrial interests
of their respective districts. The Federal reserve board shall have power at
its discretion to remove any director of class B in any Federal reserve bank.
If it should appear at any time that such director does not fairly represent the commercial, agricultural, or industrial interests of his district.

[Three directors belonging to class C shall be chosen directly by the Federal reserve board and shall be residents of the district for which they are selected, one of whom shall be designated by said board as chairman of the board of directors of the Federal reserve bank of the district to which he is appointed and shall be designated as "Federal reserve agent." He]

Directors of class B and class C shall be appointed by the Federal reserve board from among those who shall have been nominated by the organized citizens of the district other than the bankers, subject to the advice and consent of the Senate. The aim shall be to select residents of the district who shall be fairly representative of the citizens of the district other than the bankers.

The chief executive officer of each Federal reserve bank shall be known as governor and shall be nominated by the board of directors and confirmed by the Federal reserve board. His term of office shall be indeterminate, subject (1) to the will of a majority of the board of directors, or (2) the Federal reserve board may call for the nomination of a successor.

In the transaction of business between the Federal reserve board and each of the Federal reserve banks, the national board shall be represented by its appointee, who shall be a person of tested banking experience, and shall be designated as "Federal reserve agent." He may be present at all meetings of the board of directors at which business is officially transacted, and shall have unrestricted access to the books and papers of the bank [and in addition to his duties as chairman of the board of directors of the Federal reserve bank of the district to which he is appointed]. He shall be required to maintain under regulations to be established by the Federal reserve board a local office of said board, which shall be situated on the premises of the Federal reserve bank of the district. He shall make regular reports to the Federal reserve board and shall act as its official representative for the performance of the functions conferred upon it by this act. He shall receive an annual compensation to be fixed by the Federal reserve board and paid monthly [by the Federal reserve bank to which he is designated] from its treasury upon vouchers issued by order of the said board.

Directors of Federal reserve banks shall receive, in addition to any compensation otherwise provided, a reasonable allowance for necessary expenses in attending meetings of their respective boards, which amount shall be paid by the respective Federal reserve banks. Any compensation that may be provided by boards of directors of Federal reserve banks for members of such boards shall be subject to review by the Federal reserve board.

The reserve bank organization committee may, in organizing Federal reserve banks for the first time, call such meetings of bank directors in the several districts as may be necessary to carry out the purposes of this act and may exercise the functions herein conferred upon the chairman of the board of directors of each Federal reserve bank pending the complete organization of such bank.

At the first meeting of the full board of directors of each Federal reserve bank after organization it shall be the duty of the directors of classes A and B and C, respectively, to designate one of the members of each class whose term of office shall expire in one year from the first of January nearest to date of such meeting, one whose term of office shall expire at the end of two years from said date, and one whose term of office shall expire at the end of three years from said date. Thereafter every director of a Federal reserve bank chosen as hereinbefore provided shall hold office for a term of three years; but the chairman of the board of directors of each Federal reserve bank designated by the Federal reserve board, as hereinbefore described, shall be removable at the pleasure of the said board without notice, and his successor shall hold office during the unexpired term of the director in whose place he was appointed. Vacancies that may occur in the several classes of directors of Federal reserve banks may be filled in the manner provided for the original selection of such directors, such appointees to hold office for the unexpired terms of their predecessors.

MEMBER BANKS—THREE CLASSES.

Sec. 7. That in connection with each Federal reserve bank there shall be three classes of member banks, as follows:

Class A. The national banks.

Class B. The State banks and trust companies that comply with the regulations of the Federal reserve board concerning the rediscount of commercial paper.
Class C. The banks that become members of the Federal clearing house.

Each national bank and each State bank and trust company in the United States on the mainland may become a member of the Federal clearing house system, and the condition of membership shall be the depositing of sufficient funds to settle the daily balances, also the compliance with the other clearing-house regulations to be issued by the Federal reserve board.

To entitle a State bank or trust company to the right to rediscount commercial paper as hereinafter provided it shall comply with the regulations by the Federal reserve board on this subject, which shall not request that banking capital be deposited with the Federal reserve system.

To safeguard the national banks against runs by depositors and to safeguard the citizens against losses and inconvenience from insolvent national banks, the Federal reserve board shall issue regulations whereby each national bank shall be entitled to rediscount commercial paper, and also, when necessary, secure direct loans from the Federal reserve system to the amount owing to depositors: Provided, however, That the liability of the Federal reserve system and of the Government of the United States for losses from this source shall be limited to the amount of the profits of the Federal reserve system for the preceding ten years. (See pages 1841–1842 of Hearings.)

FEDERAL RESERVE BOARD.

Sec. [11] 8. That there shall be created a Federal reserve board, which shall consist of [seven] five members, including the Secretary of the Treasury, [the Secretary of Agriculture, and the Comptroller of the Currency] who shall be [members] a member ex officio, and four members appointed by the President of the United States, by and with the advice and consent of the Senate [.] In selecting the four appointive members of the Federal reserve board, not more than one of whom shall be selected from any one Federal reserve district, the President shall have due regard to a fair representation of different geographical divisions of the country. The four members of the Federal reserve board appointed by the President and confirmed as aforesaid, who shall devote their entire time to the business of the Federal reserve board and shall each receive an annual salary of $10,000, together with an allowance for actual necessary traveling expenses [and the Comptroller of the Currency, as ex officio member of said Federal reserve board, shall, in addition to the salary now paid him as comptroller, receive the sum of $5,000 annually for his services as a member of said board]. Of the four members thus appointed by the President [not more than two shall be of the same political party, and] at least one [of whom] shall be a person experienced in banking. [One shall be designated by the President to serve for two, one for four, one for six, and one for eight years, respectively, and thereafter each member so appointed shall serve for a term of eight years unless sooner removed for cause by the President.] The term of office shall be four years unless sooner recalled by the President. (Pages 1787, 1816, and 2526 of Hearings.) Of the four persons thus appointed, one shall be designated by the President as manager and one as vice manager of the Federal reserve board. The manager of the Federal reserve board, subject to the supervision of the Secretary of the Treasury and Federal reserve board, shall be the active executive officer of the Federal reserve board.

[The Federal reserve board shall have power to levy semiannually upon the Federal reserve banks, in proportion to their capital stock, an assessment sufficient to pay its estimated expenses for the half year succeeding the levying of such assessment, together with any deficit carried forward from the preceding half year.]

The first meeting of the Federal reserve board shall be held in Washington, District of Columbia, as soon as may be after the passage of this act, at a date to be fixed by the reserve bank organization committee. The Secretary of the Treasury shall be ex officio chairman of the Federal reserve board. No member of the Federal reserve board shall be an officer or director of any bank or banking institution or Federal reserve bank nor hold stock in any bank or banking institution; and before entering upon his duties as a member of the Federal reserve board he shall certify under oath to the Secretary of the Treasury that he has complied with this requirement. Whenever a vacancy shall occur, other than by expiration of term, among the four members of the Federal reserve board appointed by the President, as above provided, a successor shall be appointed by the President, with the advice and consent of the
Senate, to fill such vacancy, and when appointed shall hold office for the unexpired term of the member whose place he is selected to fill.

The Federal reserve board shall annually make a report of its fiscal operations to the Speaker of the House of Representatives, who shall cause the same to be printed for the information of the Congress.

Section three hundred and twenty-four of the Revised Statutes of the United States shall be amended so as to read as follows: "There shall be in the Department of the Treasury a bureau charged, except as in this act otherwise provided, with the execution of all laws passed by Congress relating to the issue and regulation of currency issued by or through banking associations, the chief officer of which bureau shall be called the Comptroller of the Currency, and shall perform his duties under the general direction of the Secretary of the Treasury, acting as the chairman of the Federal reserve board:"

Provided, However: That nothing herein contained shall be construed to affect any power now vested by law in the Comptroller of the Currency or the Secretary of the Treasury.

Powers and duties of Federal reserve board.

Sec. [12] 9. That the Federal reserve board hereinbefore established shall be authorized and empowered:

(a) To examine at its discretion the accounts, books, and affairs of each Federal reserve bank and to require such statements and reports as it may deem necessary. The said board shall publish once each week a statement showing the condition of each Federal reserve bank and a consolidated statement for all Federal reserve banks. Such statements shall show in detail the assets and liabilities of such Federal reserve banks, single and combined, and shall furnish full information regarding the character of the lawful money held as reserve and the amount, nature, and maturities of the paper owned by Federal reserve banks.

(b) To control a central gold reserve for the benefit of the entire Nation.

(c) To permit or require, in time of emergency, Federal reserve banks to rediscount the discounted prime paper of other Federal reserve banks[, at least five members of the Federal reserve board being present when such action is taken and all present consenting to the requirement]. The exercise of this compulsory rediscount power by the Federal reserve board shall be subject to an interest charge to the accommodated bank of not less than one nor greater than three per centum above the higher of the rates prevailing in the districts immediately affected.

(d) To suspend for a period not exceeding thirty days (and to renew such suspension for periods not to exceed fifteen days) any and every reserve requirement specified in this act: Provided, That it shall establish a graduated tax upon the amounts by which the reserve requirements of this act may be permitted to fall below the level hereinafter specified, such tax to be uniform in its application to all banks; but said board shall not suspend the reserve requirements with reference to Federal reserve notes.

(e) To suspend, for cause relating to violation of any of the provisions of this act, the operations of any Federal reserve bank and appoint a receiver therefor.

(i) To perform the duties, functions, or services specified or implied in this act.
SEC. [13.] 10. There is hereby created a Federal advisory council, which shall consist of as many members as there are Federal reserve districts. Each Federal reserve bank by its board of directors shall annually select from its own Federal reserve district one member of said council, who shall receive no compensation for his services, but may be reimbursed for actual necessary expenses. The meetings of said advisory council shall be held at Washington, District of Columbia, at least four times each year, and oftener if called by the Federal reserve board. The council may select its own officers and adopt its own methods of procedure, and a majority of its members shall constitute a quorum for the transaction of business. Vacancies in the council shall be filled by the respective reserve banks, and members selected to fill vacancies shall serve for the unexpired term.

[The Federal advisory council shall have power (1) to meet and confer directly with the Federal reserve board on general business conditions; (2) to make oral or written representations concerning matters within the jurisdiction of said board; (3) to call for complete information and to make recommendations in regard to discount rates, rediscount business, note issues, reserve conditions in the various districts, the purchase and sale of gold or securities by reserve banks, open-market operations by said banks, and the general affairs of the reserve banking system.]

That the representatives of the bankers on the boards of directors of the Federal reserve banks and every national organization of citizens may inquire of the Federal reserve board concerning its affairs and answer shall be made. Also, representatives of the said organizations may rightfully tender advice. (See page 1789 of Hearings.)

REDISCOUNTS.

SEC. 11. That banks in classes A and B may, at an office of the Federal reserve bank within the district wherein the applying bank is located, rediscount notes and bills of exchange that arise out of commercial transactions as hereinafter defined.

The paper that shall be eligible to rediscount within the meaning of this act shall consist of notes, bills of exchange and acceptances issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used, or [may] arc to be used, for such purposes, the Federal reserve board to have the right to [determine or] define the character of paper thus eligible; but such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stock, bonds, or other investment securities, nor shall anything herein contained be construed to prohibit the rediscounting of notes and bills of exchange secured by staple agricultural products, or other goods, wares, or merchandise.

The security to the Federal reserve banks shall include the indorsement of the banks.

The maturity of the paper eligible to rediscount shall be stated from time to time by the Federal reserve board, together with such other regulations as it may deem proper.

The aggregate of [such] notes and bills, based on the exportation or importation of goods, and bearing the signature or indorsement of any one person, company, firm, or corporation rediscounted for any one bank shall at no time exceed ten per centum of the unimpaired capital and surplus of said bank; but this restriction shall not apply to the discount of bills of exchange drawn in good faith against actually existing values.

Any national bank may, at its discretion, accept drafts or bills of exchange drawn upon it having not more than six months' sight to run and growing out of transactions involving the importation or exportation of goods; but no bank shall accept such bills to an amount equal at any time in the aggregate to more than one-half the face value of its paid-up and unimpaired capital.

Section fifty-two hundred and two of the Revised Statutes of the United States is hereby amended so as to read as follows: No association shall at any time be indebted, or in any way liable, to an amount exceeding the amount of its capital stock at such time actually paid in and remaining undiminished by losses or otherwise, except on account of demands of the nature following:

First. Notes of circulation.
Second. Moneys deposited with or collected by the association.

Third. Bills of exchange or drafts drawn against money actually on deposit to the credit of the association, or due thereto.

Fourth. Liabilities to the stockholders of the association for dividends and reserve profits.

Fifth. Liabilities incurred under the provisions of sections [two, five, and fourteen] eleven of the Federal reserve act.

LOANS TO MEMBER BANKS.

(From the Owen-Glass bill.)

Sec. [14.] 12. Whenever in the opinion of [the Federal Reserve Board] a board of directors of a Federal reserve bank the public interest [so] requires [the Federal Reserve Board may authorize the reserve bank of the district to] that the bank shall discount the direct obligations of member banks, secured by the pledge and deposit of satisfactory securities, authority so to do is hereby granted. (See section 7, above.) [; but in no case shall the amount so loaned by a Federal reserve bank exceed three-fourths of the actual value of the securities so pledged or one-half the amount of the paid-up and unimpaired capital of the member bank.]

OPEN-MARKET OPERATIONS.

Sec. [15] 13. That any Federal reserve bank may, under rules and regulations prescribed by the Federal reserve board, purchase and sell in the open market, either from or to domestic or foreign banks, firms, corporations, or individuals, prime bankers' bills, and bills of exchange of the kinds and maturities by this act made eligible for rediscount, and cable transfers.

[REDISCOUNTS.]

Deposits.

Sec. 14. That any Federal reserve bank may receive from any member bank deposits of current funds in lawful money, national-bank notes, Federal reserve notes, or checks and drafts upon solvent banks, payable upon presentation; or, solely for exchange purposes, may receive from other Federal reserve banks deposits of current funds in lawful money, national-bank notes, or checks and drafts upon solvent banks, payable upon presentation.

Resale of commercial paper.

Sec. 15. That whenever member banks of class A or B possess excess cash they may purchase interest-bearing paper from the Federal reserve bank in their respective districts. The Federal reserve board shall prescribe rules under which the reserve banks shall offer to resell the paper they have purchased.

NOTE ISSUES.

Sec. [17] 16. That Federal reserve notes, to be issued at the discretion of the Federal reserve board for the purpose of making advances to Federal reserve banks as hereinafter set forth and for no other purpose, are hereby authorized. The said notes shall be obligations of the [United States] Federal reserve system and shall be [receivable for all taxes, customs, and other public dues] legal tender. They shall be redeemed in gold [or lawful money] on demand [at the Treasury Department of the United States, in the city of Washington, District of Columbia, or at any Federal reserve bank] at the office of the Federal reserve board in each of the Federal reserve banks.

Any Federal reserve bank may, upon vote of its directors, make application to the local Federal reserve agent for such an amount of the Federal reserve notes hereinafter provided for as it may deem best. [Such application shall be accompanied with a tender to the local Federal reserve agent of collateral in amount equal to the sum of the Federal reserve notes thus applied for and issued pursuant to such application. The collateral security thus offered shall be notes and bills accepted for rediscount under the provisions of section 14 of this act, and] Delivery of the notes shall be made as called for, and at the close of each business day the Federal reserve bank shall transfer to the Federal
BANKING AND CURRENCY.

reserves agent an amount of acceptable commercial paper taken under authority of sections 11 and 12 of this act, which, together with the amount of gold certificates and of gold received, shall equal the amount of notes used. The Federal reserve agent shall each day notify the Federal reserve board of issues and withdrawals of notes to and by the Federal reserve bank to which he is accredited. The said Federal reserve board shall be authorized at any time to call upon a Federal reserve bank for additional security to protect the Federal reserve notes issued to it.

Whenever any Federal reserve bank shall pay out or disburse Federal reserve notes issued to it as hereinbefore provided, it shall segregate in its own vaults and shall carry to a special reserve account on its books gold or lawful money equal in amount to thirty-three and one-third per centum of the reserve notes so paid out by it, such reserve to be used for the redemption of said reserve notes as presented; but any Federal reserve bank so using any part of such reserve to redeem notes shall immediately carry to said reserve account an amount of gold or lawful money sufficient to make said reserve equal to thirty-three and one-third per centum of its outstanding Federal reserve notes. Notes [so] paid out by each Federal reserve bank shall bear upon their faces a distinctive letter and serial number[, which shall be assigned by the Federal reserve board to each Federal reserve bank]. Whenever Federal reserve notes issued through one Federal reserve bank shall be received by another Federal reserve bank they shall be returned for redemption to the Federal reserve bank through which they were originally issued[, or shall be charged off against Government deposits and returned to the Treasury of the United States, or shall be presented to the said Treasury for redemption]. No Federal reserve bank shall pay out notes issued through another under penalty of a tax of ten per centum upon the face value of notes so paid out. [Notes presented for redemption at the Treasury of the United States shall be paid and returned to the Federal reserve banks through which they were originally issued, and Federal reserve notes received by the Treasury otherwise than for redemption shall be exchanged for lawful money out of the five per centum redemption fund herein­after provided and returned as hereinbefore provided to the reserve bank through which they were originally issued.]

The Federal reserve board shall have power, in its discretion, to require Federal reserve banks to maintain on deposit in the Treasury of the United States a sum in gold equal to five per centum of such amount of Federal reserve notes as may be issued to them under the provisions of this act; but such five per centum shall be counted and included as part of the thirty-three and one-third per centum reserve hereinbefore required. The said board shall also have the right to grant in whole or in part or to reject entirely the application of any Federal reserve bank for Federal reserve notes; but to the extent and in the amount that such application may be granted the Federal reserve board shall, through its local Federal reserve agent, deposit Federal reserve notes with the bank so applying, and such bank shall be charged with the amount of such notes and shall pay such rate of interest on said amount as may be established by the Federal reserve board, [which rate shall not be less than one-half of one per centum per annum.] and the amount of such Federal reserve notes so issued to any such bank shall, upon delivery, become a first and paramount lien on all the assets of such bank.

Any Federal reserve bank may at any time reduce its liability for outstanding Federal reserve notes by the deposit of Federal reserve notes, whether issued to such bank or to some other reserve bank, or lawful money of the United States, or gold bullion, with any Federal reserve agent or with the Treasurer of the United States, and such reduction shall be accompanied by a corresponding reduction in the required reserve fund of lawful money set apart for the redemption of said notes and by the release of a corresponding amount of the collateral security deposited with the local Federal reserve agent. Any Federal reserve bank may at its discretion withdraw collateral deposited with the local Federal reserve agent for the protection of Federal reserve notes deposited with it and shall at the same time substitute other collateral of equal value approved by the Federal reserve agent under regulations to be prescribed by the Federal reserve board.

It shall be the duty of every Federal reserve bank to receive on deposit, at par and without charge for exchange or collection, checks and drafts drawn upon any of its depositors or by any of its depositors upon any other depositor and checks and drafts drawn by any depositor in any other Federal reserve bank upon funds to the credit of said depositor in said reserve bank last men-
tioned, nothing herein contained to be construed as prohibiting member banks from making reasonable charges to cover actual expenses incurred in collecting and remitting funds for their patrons. The Federal reserve board shall make and promulgate from time to time regulations governing the transfer of funds at par among Federal reserve banks, and may at its discretion exercise the functions of a clearing house for such Federal reserve banks, or may designate a Federal reserve bank to exercise such functions, and may also require each such bank to exercise the functions of a clearing house for its member banks. The Federal reserve board shall issue regulations providing for a clearing house for the entire Nation on the mainland. The rates at which funds shall be transferred through the said system shall be fixed from time to time by the Federal reserve board, and its decision after a public hearing shall be final. The hearings shall be published.

Sec. [18] 17. That so much of the provisions of section fifty-one hundred and fifty-nine of the Revised Statutes of the United States, and section four of the act of June twentieth, eighteen hundred and seventy-four, and section eight of the act of July twelfth, eighteen hundred and eighty-two, and of any other provisions of existing statutes, as require that before any national banking association shall be authorized to commence banking business it shall transfer and deliver to the Treasurer of the United States a stated amount of United States registered bonds be, and the same is hereby, repealed.

BANK RESERVES.

Sec. [20] 18. That from and after the date when the Secretary of the Treasury shall have officially announced, in such manner as he may elect, the fact that a Federal reserve bank has been established in any designated district, every [banking association] national bank within said district [which shall have subscribed for stock in such Federal reserve bank] shall be required to establish and maintain reserves as follows:

(a) If a country bank as defined by existing law, it shall hold and maintain a reserve equal to twelve per centum of the aggregate of its deposits, not including savings deposits hereinafter provided for. Five-twelths of such reserve shall consist of [money which national banks may under existing law count as legal reserve.] legal-tender notes held actually in the bank's own vaults; and for a period of fourteen months from the date aforesaid at least three-twelths and thereafter at least five-twelths of such reserve shall consist of a credit balance with the Federal reserve bank of its district. The remainder of the twelve per centum reserve [hereinbefore required] may, [for a period of thirty-six months from and after the date fixed by the Secretary of the Treasury as hereinbefore provided,] consist of balances due from national banks in reserve or central reserve cities as now defined by law and balances due from a Federal reserve bank or banks. [From and after a date thirty-six months subsequent to the date fixed by the Secretary of the Treasury as hereinbefore provided the said remainder of the twelve per centum reserve required of each country bank shall consist either in whole or in part of reserve money in the bank's own vaults or of credit balance with the Federal reserve bank of its district.]

(b) If a reserve city bank as defined by existing law, it shall hold and maintain, for a period of sixty days from the date fixed by the Secretary of the Treasury as hereinbefore provided, a reserve equal to twenty per centum of the aggregate amount of its deposits, not including savings deposits hereinafter provided for, and permanently thereafter eighteen per centum. At least one-half of such reserve shall consist of [money which national banks may under existing law count as legal reserve.] legal-tender notes held actually in the bank's own vaults. [After sixty days from the date aforesaid, and for a period of one year, at least three-eighths and permanently thereafter at least five-eighths of such reserve shall consist of a credit balance with the Federal reserve bank of its district.] The remainder of the reserve [in this paragraph required] may, for a period of thirty-six months from and after the date fixed by the Secretary of the Treasury as hereinbefore provided, consist of balances due from national banks in central reserve cities as now defined by law and balances due from a Federal reserve bank or banks. [From and after a date thirty-six months subsequent to the date fixed by the Secretary of the Treasury as hereinbefore provided, the said remainder of the eighteen per centum reserve required of each reserve city bank shall consist either in whole or in part of reserve money in the bank's own vaults or of credit balance with the Federal reserve bank of its district.]
(c) If a central reserve city bank as defined by existing law, it shall hold and maintain for a period of sixty days from the date fixed by the Secretary of the Treasury as hereinbefore provided, a reserve equal to twenty per centum of the aggregate amount of its deposits, not including savings deposits hereafter provided for, and permanently thereafter [eighteen] twelve per centum. [At least one-half of such] This reserve shall consist of [money which national banks may under existing law count as legal reserve,] legal tender notes, held actually in the bank's own vaults and balances due from a Federal reserve bank or banks. [After sixty days from the date aforesaid, and thereafter for a period of one year, at least three-eighteenths and permanently thereafter at least five-eighteenths of such reserve shall consist of a credit balance with the Federal reserve bank of its district. The remainder of the eighteen per centum reserve required of each central reserve city bank shall consist either in whole or in part of reserve money actually held in its own vaults or of credit balance with the Federal reserve bank of its district.]

Sec. [21] 19. That so much of sections two and three of the act of June twentieth, eighteen hundred and seventy-four, entitled "An act fixing the amount of United States notes, providing for a redistribution of the national bank currency, and for other purposes," as provides that the fund deposited by any national banking association with the Treasurer of the United States for the redemption of its notes shall be counted as a part of its lawful reserve as provided in the act aforesaid, be, and the same is hereby, repealed. And from and after the passage of this act such fund of five per centum shall in no case be counted by any national banking association as a part of its lawful reserve.

A NEW TITLE.

Following is a proposal for a new title for the bill:

"A bill to provide for the establishment of Federal reserve banks, to establish a unified control of the purchasing power of money and that shall aim to promote stability, to insure competition in the loaning of money, safeguard the solvency of banks, guarantee the safety of deposits in national banks, and for other purposes."

Mr. SHIBLEY. Gentlemen, there is an important detail in connection with the proposed law that I merely touched upon in my statement of October 6 and 7. In the House bill there is a proposal that of the four members of the Federal reserve board who are to be other than Cabinet members and the Comptroller of the Currency—

"One shall be designated by the President to serve for two, one for four, one for six, and one for eight years, respectively, and thereafter each member so appointed shall serve for a term of eight years unless sooner removed for cause by the President." (Sec. 11, lines 16-20, p. 18.)

The effect of this proposal if enacted into law would be to abolish to some extent the people's self-government in connection with the monetary system. The proposal is that the term of office of a majority of the seven members of the Federal reserve board shall be eight years, and therefore is nearly as oligarchical as the plan whereby the people elect Senators for six years and a Chief Executive for four years, thereby making it possible that the people's will as expressed at an election of Representatives may be blocked for two or four years. The proposal for the Federal reserve board is that it might be nearly two years after the people had turned a set of leaders out of power before they could get control of the Federal reserve board. To realize the far-reaching nature of this proposal let us briefly review the history of the Government of our country.

The Revolutionary War was successfully fought under a system of self-government by the people. The people's will prevailed because of a system of government in which the nomination and the election of members of the legislatures and the governors was comparatively simple and direct, in combination with a system whereby the voters instructed their representatives at will, and the legislatures elected the members of the Congress, subject to recall at any time. And Congress controlled the national executive department.

It was through the use of this system that the colonists fought the mother country and, with the aid of France and Divine Providence, won their freedom. The coming of peace and the opening of the country to trade with England the small amount of gold and silver that was in the country was largely shipped abroad to pay for purchases. This export of the gold and silver resulted in falling prices for commodities and the usual hard times. The control of the volume of money was in each of the 13 States, and, as usual, there was
much debate as to what should be done about issuing paper currency. In New Hampshire the voters at town meeting balloted upon a proposed State law for the issuance of more paper currency and rejected the proposal. In Massachusetts the volume of money was such that prices for commodities fell tremendously and mortgages were foreclosed at a mere fraction of what had been the selling prices for property. The creditor class controlled the legislature, and continued to do so for several years, which gave rise to Shay's rebellion during the latter part of 1786 and the first few months of 1787. The Constitutional Convention for the proposing of amendment to the Articles of Confederation met early in 1787, and it was a reactionary organization, having been elected by the existing legislatures. The people were not permitted to elect the delegates. It was so reactionary that of the 56 patriots who 11 years before had signed the Declaration of Independence only 6 were elected as delegates to the National Constitutional Convention.

In other words, the Federalists were in control. Instead of carrying out the instructions whereby they held office, namely, to propose amendments to the then-existing system of National Government, they at once closed the doors of the convention to the public and proceeded to plan a new and a reactionary system of government, one that would, if placed in operation, effectually abolish self-government by the people. The people were to be denied the right to instruct the men in office, whereby making the few in office a set of elected rulers; and only one of the four sets of officials in the National Government were to be elected by the people.

In the campaign for the election of delegates to the State conventions that were to pass upon this proposal it was described in various ways, among others in a set of letters by leading Federalists in what has come to be termed "The Federalist." In Letter No. X it is plainly stated that the will of the majority ought not to be permitted to prevail. The plan proposed was "The delegation of the Government to a small number of citizens elected by the rest."

And the letter continues:

"The effect is to refine and enlarge the public views by passing them through the medium of a chosen body of citizens." (P. 57, Lodge's edition.)

But the reactionists did not fully succeed. The only way that they could get the approval of the needed number of States for the proposed limitations on the people's power was to agree with the patriots that the First Congress would submit amendments restricting the power of Congress. This Massachusetts plan, as it was termed, resulted in the first 10 amendments materially limiting the power of Congress.

And eight years later the people's leaders succeeded in establishing party government. Washington was to retire from office and the patriots nominated Jefferson for the Presidency, and as they had developed quite an organization throughout the country they almost succeeded in securing control of the entire Government. They secured a majority of three in the House, and thus could stop some of the reactionary measures.

But two years later, owing to unfortunate conditions in France, a country that had made a failure of an attempt at popular government, the Republicans in the United States lost control of the House and the Federalists came into full control. They acted so in violation of the doctrines of popular government that in 1800 the people turned them out of the Presidency, the House, and the Senate and the incoming organization, headed by Jefferson, was pledged to majority rule and all of the other doctrines of the people's rule, and the pledges were kept.

Thus the people recovered their liberties to a very large degree. But there still remained the six-year term of office for the Senators and four years for the President, so that a people's victory in an election of Members of the House might not give them the control of the Government. That system of checks upon the people's rule is unknown in most of the countries in Europe. In England, France, Italy, and most of the European countries the party organization in control in the most popular branch of the legislative body has become the ruling power throughout the nation.

And here in the United States of America the tendency is to open a channel so that the party organization that is successful at the polls shall take charge of the Government and be given an opportunity to promote the general welfare, instead of dividing the control of the Government between two sets of party leaders, so that one can see the acts of the other.

Therefore the forthcoming currency and banking law should provide that whenever a party organization shall elect the head of the Government he shall
be authorized to carry out in the administrative department the pledges made to the people; for example, carry out the pledges as to the control of the price level and the other features of the currency and banking system that are under the control of the Federal reserve board. The control within this board should be the same as in the Department of the Interior and the other departments, so that the head of the Government, whom the people elect, shall at once enter upon control as soon as he is sworn into office. It would not do to provide that the departments should be placed under boards not controlled by the people's elected representative, nor will it do to provide that the Federal reserve board shall not be responsive to the people's will at a presidential election. In order to make the needed change in the bill there should first be dropped the provision for private capital stock and a vast amount of bank reserves. Then the conditions would be such that it would clearly appear that the control of the Federal reserve board should be in the head of the Government, elected by the people, the same as the control of the Treasury Department.

I now turn to another subject, and one upon which I have been asked to speak. Some of the witnesses before this committee have not recognized that during recent years there has been a scarcity of fluid capital, but declare that there has been a scarcity of money. That is a serious error.

Each year an immense volume of consumable articles are produced throughout the world, termed "fluid capital," as distinguished from fixed capital, such as the railroads. The result of establishing a unified control of the interest rate in this country will be that intelligence will be used in adjusting the interest rate for money, so that it will be fed out at rates that will conserve the volume of products. Money and bank credits are used to purchase the consumable articles, and the interest rate should be such as to spread out the consumption over the entire year and not run into a shortage. That will be accomplished through the control of the interest rate by the Federal reserve board if it properly performs its duties.

The principal thing in this connection is to distinguish between a scarcity of consumable things; that is, fluid capital and scarcity of money.

One more point. I have been asked if the gauge for the measurement of the purchasing power of money should include houses, lands, railroads, and other forms of fixed investments.

The proper answer, I believe, is no, because there are so many other factors than the volume of money that affect the prices of houses, lands, and railroads. The recent law for railroad valuation has affected the prices of railway stocks, and the changes in the density of population in each community affects the prices of land and of houses, whereas the prices for products in the primary markets—that is, the leading wholesale markets—are at once affected by changes in the interest rate for money. Thus the prices for commodities at wholesale have come to be used to measure the purchasing power of money. Economists are agreed on that point.

That concludes what I wish to present.

(The chairman presented the following, with request that it be printed in the record:)

REPORT OF CURRENCY COMMITTEE OF THE UTICA (N. Y.) CREDIT MEN'S ASSOCIATION.

To the officers and members of the Utica Credit Men's Association.

The entire work of this committee during the past year has been in connection with the efforts of the commercial interests of this country to bring about a proper and adequate reform of our banking and currency laws. Owing to the great lack of knowledge of business men generally upon the subject, the committee has devoted a considerable part of its efforts to forwarding the campaign of education which has been carried on by the national association.

Under date of February 17 we issued to the members of our association, and to business generally in this vicinity, over 800 of the national association's leaflets No. 1, together with a circular letter from the Utica association calling particular attention to the leaflet and the points covered by same.

On May 23 we issued in a similar manner, the national association leaflet No. 2.

On January 18, under the auspices of the Utica association, a meeting was held at Hotel Utica, to which a general invitation was extended to anyone interested, and which meeting was addressed by Edmund D. Fisher, deputy comptroller of New York City, an acknowledged authority on banking and finance.
Another important part of the committee's work consisted in issuing to our
members and business men in this vicinity bulletins requesting them to urge
upon the various authorities in Washington proper consideration of this im-
portant subject.

We feel that the work done by the national association in its various branches
has contributed very largely to the progress already made in this matter, and
we also feel that the most important work lies ahead and that the immediate
future is the most critical point in the progress of this much-needed legislation.
It is a well-known fact that practically all legislation in countries such as ours
must, to a certain extent, be in the nature of a compromise, and that it is im-
possible to obtain the passage of any law that will please all.

The national committee on banking and currency, and also your local commit-
tee, have carefully considered the bill now before Congress, and while they feel
that it is not all that could be desired, they believe that an honest and earnest
effort is being made to give us a law that will overcome the principal defects in
our present system. We feel that any criticisms should be made in a friendly
and helpful spirit, and that we should aim to make only such as are of a con-
structive nature. After careful deliberation, your committee feels that it can
do no better than indorse the changes to the so-called Glass-Owen bill recom-
ended by the banking and currency committee of the national association,
and which are embodied in a brief presented by them to the Senate Committee
on Banking and Currency at a hearing which was accorded them on September
24, a copy of which brief it attached and made a part of this report.

We therefore offer the following resolutions:

Whereas it is a well-known fact that the waste incident to financial crises has
always been a serious burden to the business interests of the country; and
Whereas the Utica Association of Credit Men includes in its membership prac-
tically all of the larger and more important commercial interests of Utica
and vicinity, and is a part of the National Association of Credit Men, repre-
senting the larger part of the business interests of the United States; and
Whereas the banking and currency committee of said association has carefully
considered the so-called Glass-Owen currency bill and changes recommended
in same: Now, therefore, be it

Resolved, That this association urges upon the proper authorities at Wash-
ington and in particular upon the Senate Committee on Banking and Currency
the necessity of the following changes in order that the bill when enacted into
law will fully meet the situation and give us the relief from the recurring crises
and financial panics which it is aimed to obtain:

I. That the number of Federal reserve banks be materially reduced. A
smaller number, not over six, would insure banks of larger capital and resources
and would overcome to a great extent the present serious defect of scattered
reserves and would simplify the supervisory work of the Federal reserve board.

II. That either the Federal reserve banks have a representation on the Fed-
eral reserve board or the powers of the advisory board be increased and that the
advisory board be allowed to select its own officers and that two of such officers
receive salaries, maintain an office where the office of the Federal reserve board
is located, and attend the meetings of the Federal reserve board but without a
vote. We believe that the influence of these two members of the advisory
board, supported by public sentiment, would be more effective than were they
granted voting powers.

III. That the Federal reserve notes should not be the obligation of, nor be
guaranteed by the Government, but be the direct obligation of the bank that
issues them and redeemed by that bank in gold on demand. Making the
Government guarantee the notes presupposes that the Government is to be a
beneficiary in some way or receive a valuable consideration through the issue
of them, and to compel the Treasury to redeem them on demand presupposes
that the Treasury will have the means of acquiring the gold required for such
purposes. Being a direct and first lien upon the assets of the issuing bank and
secured by prime commercial paper and other high-class securities acceptable for
rediscout under the provisions of the act and a gold reserve of at least 33½
per cent there will be no doubt that such notes without further security would
circulate freely at par and perform their functions properly and adequately.

That the reserve against notes issued should be gold exclusively, and that
the words "lawful money" as applied to reserves for the redemption of notes
should be stricken from the bill.

IV. That the interest be not paid by Federal reserve banks on deposits of
any sort, but that if it is to be paid on Government moneys the same rate should be paid to banks as an inducement to them to deposit that part of their reserve which the measure leave optional with them to keep in their own vaults or to deposit with the Federal reserve bank.

V. That the provision for saving departments in connection with national banks be stricken out entirely. We believe that commercial and investment banking should be kept as nearly separate and distinct as possible.

Resolved, That certified copies of these resolutions be forwarded to Hon. Elihu Root and Hon. James A. O'Gorman and to Hon. Robert L. Owen, chairman of the Senate Committee on Banking and Currency, and that they be urged to give them their most careful consideration and that they be assured that the criticisms or suggestions are offered in the most friendly spirit and with the sole object of contributing to the end that is desired.

Respectfully submitted.

W. I. Taber,
F. W. Sessions,
A. H. Dobson, Chairman.

A BRIEF PRESENTED TO THE SENATE COMMITTEE BY THE BANKING AND CURRENCY COMMITTEE OF THE NATIONAL ASSOCIATION OF CREDIT MEN.

Our commercial history shows that the waste attending financial crises falls heaviest upon business, and business men are therefore directly interested in the adoption of a banking and currency system that will meet the needs of a growing commerce and save them from the occasional heavy waste and the constant menace of an ineffectual system.

The banking and currency committee of the National Association of Credit Men has closely examined the proposed Federal reserve act to ascertain its powers as a regulative measure to provide for the nation's banking and currency requirements and to save business from the depression and waste of financial crises.

The committee is convinced that the spirit of the proposed act is constructive. The framers of the bill could not foresee all the situations that such a measure is destined to meet, therefore Congress should receive in a friendly spirit the criticism which is directed by bankers and merchants against some of its provisions which, if not changed, may impair its efficiency as a governmental instrument of regulation. Such criticism should not be regarded as prejudiced, but as coming in a spirit of helpfulness from those whose experience qualifies them to forecast the effect of the proposed law upon the business of the country.

The committee offers the objections hereinafter set forth in the friendliest spirit. It is believed that the changes suggested are essential to win the confidence of the people and make the measure a safe and effective means of accomplishing the purpose for which it is intended.

Other changes, suggested by a careful study of the measure, but which seem to be of minor importance now, can safely be left for consideration until after the bill has been enacted into law and its practical application has demonstrated the need and value of such changes.

The committee suggests and urges the following changes:

I. THE NUMBER OF FEDERAL RESERVE BANKS.

The minimum number of Federal reserve districts and Federal reserve banks required by the proposed act, namely, 12, should be materially reduced. The needs to be met and the benefits to be derived from an adequate reserve system are best assured through banking associations of large capital and resources. A smaller number of Federal reserve banks would be more efficient in consolidating and mobilizing reserves and protecting and conserving the Nation's supply of gold than the minimum number mentioned in the bill, and would concentrate and economize the supervisory work of the board of control.

The needs of different sections of the country can be met by branches of Federal reserve banks just as effectually as that service may be performed by the parent banks.

II. CONTROL AND MANAGEMENT.

The Federal reserve board is to possess very great powers and is to perform a public function of far-reaching importance. Therefore its members should be above suspicion of inefficiency, prejudice, and political control. They should possess high qualifications, based on a profound knowledge of and a wide ex-
PERIENCE in the theory and practice of finance. We can see no menace in having the Federal reserve banks represented upon this board, but if the Federal reserve banks are denied representation upon the Federal reserve board, then the powers of the advisory board should be increased. This board should be allowed to select its officers, and two of such officers should receive salaries, maintain an office where the office of the Federal reserve board is located, and attend the meetings of the Federal reserve board, but without a vote. The influence of these two members of the advisory board, supported by public sentiment, will be more effective than were they granted voting powers.

III. FEDERAL RESERVE NOTES.

These notes should not be the obligation of nor should they be guaranteed by the Government, as there is no provision in the bill for the Treasury to acquire and maintain the gold reserve necessary for their redemption. They should be the direct obligation of the bank that issues them and redeemed by that bank in gold on demand.

To make the Government guarantee the Federal reserve notes and compel the Treasury to redeem them on demand presupposes:

A. That the Government is to be a beneficiary in some way or receive a valuable consideration through the issue of said notes.
B. That the Treasury will have the means to acquire the gold required for redemption purposes.

As the Government will not receive a valuable consideration through the issue of these notes, and all Government moneys will be deposited in the Federal reserve banks under the provisions of this measure, leaving the Treasury powerless to acquire gold except by issuing bonds, it will be dangerous to the credit of the Government to impose upon it this redemption requirement.

As a direct and first lien upon the assets of the issuing bank and secured by prime commercial paper, acceptances and other high-grade securities, acceptable for rediscount under the provisions of the proposed act, and a gold reserve of 33\% per cent, there need not be any doubt that such notes without any other security will circulate freely at par and perform their functions properly and adequately.

The reserve of not less than 33\% per cent and not more than 40 per cent held by the issuing banks for the redemption of these notes should consist of gold exclusively. The words "lawful money," as applied to reserves for the redemption of notes, should be stricken from the bill.

IV. INTEREST ON DEPOSITS.

From an economic standpoint the Federal reserve banks should not pay interest on deposits therein, but if interest is to be paid on Government moneys, the same rate should be paid to banks as an inducement to them to deposit that part of their reserve which the measure leaves optional with them to keep in their own vaults or on deposit with a Federal reserve bank. There should be no preferreddepositors in Federal reserve banks.

V. SAVINGS DEPARTMENTS IN NATIONAL BANKS.

That provision should be stricken out entirely. It is dangerous. A careful reading of that provision of the bill impels one to believe that unless the Federal reserve board exercised very close scrutiny and established strict regulations very nearly all of the functions performed by the commercial department of a bank could be exercised by the savings department upon a very small and inadequate reserve, thereby defeating the reserve requirements of the bill as applied to national banks and jeopardizing the security of depositors.

We urge the eliminations and changes suggested in these five objections as directly concerning essential parts of the proposed act, and without which its powers to do the work for which it is directly intended may be seriously questioned.

The committee urges upon legislators, business, and banking men, in considering banking and currency legislation, that is in its judgment the greatest of our present national questions, a spirit of deep patriotism, so that the general and not special interest may be served.

(Hearing held Sept. 23, 1913.)

(Thereupon, at 5.10 o'clock p. m., the committee adjourned until tomorrow, Friday, October 17, 1913, at 10.30 o'clock a. m.)
Senator SHAFROTH. Prof. Jenks, will you please give your name, your business, and your experience in banking?

STATEMENT OF PROF. JEREMIAH W. JENKS, PROFESSOR OF GOVERNMENT, NEW YORK UNIVERSITY, NEW YORK CITY.

Prof. Jenks. My name is Jeremiah W. Jenks and I am professor of government in New York University. What more information would you like along this line?

Senator SHAFROTH. Well, your experience in any matters concerning economics or banking.

Prof. Jenks. I have been professor of economics for something over 20 years, and have taught along these lines more or less.

At the time that the question of the establishment of a new monetary system for the Philippines was under consideration I was asked by the War Department to visit the English and Dutch colonies, to look into their monetary systems, and advise on the legislation for the monetary system in the Philippines. I made a report on that, and a year or two later at the request of Secretary Root, at that time Secretary of War, I went to the Philippines again to advise further with reference to the establishment of that system.

I was also a member of the Commission on International Exchange that, at the request of the Chinese Government——

Senator SHAFROTH (interposing). That commission was asked to advise with them as to the establishment of a monetary system?

Senator NELSON. You were also on the Industrial Commission, were you not?

Prof. Jenks. I was not a member of the Industrial Commission, but was special agent in charge of their investigation of industrial combinations.

Senator BRISTOW. Have you ever been engaged in the banking business?

Prof. Jenks. Not at all.

Senator BRISTOW. You are just a student of these problems?

Prof. Jenks. I am just a student of these problems.

Senator SHAFROTH. Now, Prof. Jenks, you can tell us what you think of the bill, and what features of the bill are good and what features, in your opinion, are bad.

Prof. Jenks. I have been looking over the bill with a great deal of interest, and it seems to me that, fundamentally, it is good, and that there is very good reason for believing that it will improve very decidedly our present very defective banking system.

The three special points that have seemed to me of dominant interest are, first, that with reference to the issue of bank notes, because I think that our banking system has needed, almost more than any-
thing else, a system of currency that would have sufficient elasticity to adapt the supply of currency to the needs of business from time to time. I shall have one or two suggestions to make on that point, but it seems to me that, on the whole, the bill covers that point quite satisfactorily.

Secondly, heretofore we have had nothing that we could speak of as a real banking system for the country—a unified system. The bill aims to cover that feature; and although I think some changes in the bill as it stands now should be made on that point, it will, with some changes, meet that need quite satisfactorily.

In the third place, we have hitherto lacked any organization by which the bank reserves against deposits and against the issue of notes also could be easily mobilized to meet the needs of business in the different sections of the country at any time. The bill is making provision for that, which, again, I think is not quite satisfactory, but is clearly looking toward that; and it is likely, with some amendments, to accomplish that fairly well.

Most important of all, and underlying all of these, is the desirability that the currency system of the country should be on an absolutely sound basis; that it be a system so based upon gold that there can be no question in the mind of any person here or abroad that it is really sound from that viewpoint. There must be confidence on the part of the business men, here and abroad, as to the real stability of the system.

Along that line also, I think it desirable that new measures be taken so that the gold reserve of the country will be maintained in sufficient quantity and with a sufficient degree of stability so that confidence will not be disturbed.

There, again, it seems to me desirable to have some slight modifications made in the bill.

Those are the four most important needs that I had in mind. There are one or two other minor matters. Perhaps it would be well if I were to speak of those four points in that order, and then let other questions come up afterwards.

Senator Shafroth. Very well; that will be agreeable to us.

Prof. Jenks. Regarding the note issue, my own opinion has been—as I think it has been the opinion of most people who have been students of currency and banking—that it is better to have the elastic part of any currency system bank notes, rather than Government notes.

On the other hand, I have myself felt, in looking through this bill with a good deal of care, that although these are Government notes, the provisions for the issue of these notes, for their redemption, and for the reserve against them, are such that they possess practically all of the features of a bank-note currency issue with a Government guaranty.

Under these circumstances, while I myself should prefer to see it provided frankly and openly that they are bank notes, with, if it seems desirable, a Government guaranty—although I think they can be protected so that such guaranty would not be necessary—I think there is no very serious objection to them as they stand, because they are quite different in nature from the ordinary Government note that proved so disastrous in our earlier history and in the history of
almost all countries where Government notes have been directly issued.

Senator Reed. Now, may I interrupt you there? I came in a little late and did not get your name.

Senator Nelson. He is Prof. Jenks, of New York University.

Senator Reed. You referred to the disastrous results which followed from the issuance of Government notes. Do you refer to the greenbacks in their early history?

Prof. Jenks. I think that is a very good illustration.

Senator Reed. What other Government notes do you have in mind?

Prof. Jenks. I have in mind some of the French Government notes; some of the French assignats of the earlier days.

Senator Reed. They were issued without proper safeguards, were they not?

Prof. Jenks. Yes; issued without proper safeguards; and also without the possibility of ascertaining what the business demands called for, and without proper provision for redemption.

Senator Reed. Yes.

Prof. Jenks. It seems to me that, as regards the plan proposed in the bill, those defects are very largely covered——

Senator Reed (interposing). Well, Prof. Jenks, do you not think that the trouble with the Government note was not the fact that the Government issued it instead of the bank but that it was an improvident issue?

Prof. Jenks. I think that is very largely true; but that brings up also another phase of the matter——

Senator Reed (interposing). Well, just a moment, if I may cut off your answer; we will give you plenty of latitude.

Prof. Jenks. Yes; certainly.

Senator Reed. The experience of the world with bank notes has been about a thousand times as disastrous, has it not, as the experience with Government notes—for the very same reason that the proper safeguards were not taken?

Prof. Jenks. It has been often disastrous.

Senator Reed. So that the "unsafety"—if I may use that sort of an adjective—of the issue does not depend upon the question of whether the Government issues it or a bank issues it, but upon the conditions under which it is issued?

Prof. Jenks. I would agree to that. On the other hand, it is, I think, also true that the notes issued by the banks have a better opportunity—the people who are in charge of the bank issue, if they are the bankers themselves, have a better opportunity of adjusting them to the needs of business than Government officials have.

Senator Reed. Do you remember the days of wildcat banking in this country?

Prof. Jenks. At the time of wildcat banking in this country conditions were such that the difficulty was the other way; the people who were in charge of issuing those bank notes had an opportunity of issuing them fraudulently; they were not properly watched or safeguarded.

Senator Reed. Those were the evils in that system.
Prof. Jenks. Yes; there were many evils in that system.

Senator Reed. I was interested in getting your opinion, because I have never been able to fathom the reason for the assertion which has been made that a bank note was perfectly good until the United States Government wrote its guaranty on it, and then it at once became an element of danger and a poor kind of currency.

Prof. Jenks. The matter depends, as I said before, upon the provisions for adapting it to the needs of the country and also to the securing of its ultimate safety. And, as I said before you came in, it seems to me that the provisions of this bill, while making Government notes, are substantially identical with providing what a bank note would be, if properly supervised and guarded by the Government, with an added Government guaranty, because the Government itself makes no provision whatever for the redemption of the notes by itself until after the banks have exhausted all of their resources.

Senator Reed. Does not the virtue of the banking system and the strength of the Government make it safe?

Prof. Jenks. To a certain extent that is true. I should prefer it the other way myself, for almost all banks the world over have been in the habit of looking at this question from the standpoint of the bank note; and I think that many of the attacks which have been made upon this bill by the banks because they are Government notes instead of bank notes have been made without looking at the fundamental provisions made in the bill.

Senator Reed. I am glad to have your analysis of the way the bankers look at it. While the bankers look at it that way, 99 per cent of the people of the United States would rather have a Government note than a bank note. And it seems to me that that feeling is a great element of safety for the Government note.

Prof. Jenks. I differ in my estimate as to how people look at it. I should say that, aside from the bankers, the business men of the country, the leading merchants, the leading importers, the leading manufacturers, and so on, would be more inclined to look at the matter in the other way than in the way you put it.

Senator Reed. They are the 1 per cent of the people of the United States, but I am talking about the other 99 per cent.

Prof. Jenks. There, again, we should differ as to the percentage. The fundamental thing, after all——

Senator Shafroth (interposing). What has been the matter with our greenbacks, I should like to know?

Prof. Jenks. The fundamental trouble with our greenbacks? I am glad you raised the question. I was going to raise it myself in a different way.

Senator Nelson. You had better let the greenbacks alone; I give you fair warning. [Laughter.]

Prof. Jenks. I am willing to leave them alone. The point, of course, is this, as regards the Government issue of greenbacks: It was an emergency issue made at a time when the Government was very much in need.

Senator Reed. And the Government was in an emergency.

Prof. Jenks. I say the Government itself was in a very serious emergency.
Senator Shafroth. The Government saved interest on $300,000,000 or $400,000,000 for 30 or 40 years.

Prof. Jenks. I am inclined to think that it cost a great deal more than that saving, because of the depreciation of the notes.

Senator Shafroth. That was not a result of the notes, but of the war condition.

Senator Nelson. You overlook the fact that the people who took that money were our soldiers. I carried a musket and a rifle, and I carried those greenbacks in my pocket, and thought, as Fitz Green Halleck expressed it, we were "ready to smoke the pipes in peace and carry the tomahawks in war."

Prof. Jenks. Yes.

Senator Nelson. Now, we had enough faith in the Government to take that money, and we never raised an issue on the depreciation. That came from the fellows higher up that gobbled up the money after we got through with it. [Laughter.]

Prof. Jenks. I agree with that; but it would have been better for you, if instead of carrying a 40-cent or a 50-cent dollar you had been able to carry a 100-cent dollar. It may be that the Government had no other alternative; but it would take most of the day to discuss that question.

But granting it that it was an emergency matter, a case of necessity at the time, it was, after all, forcing the soldiers and others into a situation that was very unfortunate. Prices were double what they otherwise would have been; perhaps somewhat more than that at times.

Then, when it came to the getting them back ultimately to the gold standard, by contracting the currency, the only way possible, over a series of years, it led to a depreciation of business that was very serious. I think we would all agree on those facts.

Senator Nelson. It was very helpful during the war in paying old debts. [Laughter.]

Prof. Jenks. That is a viewpoint, however, I think, that in the piping times of peace that we have now we should hardly like to take as a principle.

Senator Reed. Prof. Jenks, I just want to call your attention to some figures. I am not just making an argument on the greenbacks. But there has been so much said about it. Now, I have always had an idea that the only trouble with the greenback issue was the size of the Confederate Army. [Laughter.]

And I want to call your attention to some figures. I find that this is the situation:

Specie payments were suspended in 1862 and remained suspended until 1879. The greenbacks—the average gold value of the United States note ran in this way: In 1862 was 63 cents on the dollar.

Senator Nelson. I guess in 1864 it was the lowest.

Senator Reed. In 1863 it was 68.9 cents. In 1864 it was 49.2 cents.

Senator Nelson is right.

Senator Reed. In 1865 it was 63.6 cents. In 1866—now we have got through the war—it was 71 cents; in 1867, 72.4 cents; in 1868, 71.6 cents; in 1869, 75.2 cents; in 1870, 87 cents; in 1871, 89.5 cents; in 1872, 89 cents; in 1873, 87.9 cents; in 1874, 89.9 cents; in 1875 it
dropped back to 87 cents; in 1876, it was 89.9 cents; in 1877, 94.4 cents; in 1878, a year before the resumption of specie payments, it had gone to 99.2 cents.

So, I think that the war had something to do with that; and when we commenced to get our debts paid off and get some money in the Treasury, it got to be pretty good money.

Prof. Jenks. We began retiring them, and it was known that we were perfectly certain to retire them.

Senator Reed. And in 1879 we resumed specie payment.

Prof. Jenks. Certainly. As soon as people became convinced that the greenbacks were going to be redeemed, and enough of them were redeemed, of course they went up in value.

Senator Reed. But that is not all. They went up before that.

Prof. Jenks. Of course, they were going up during that period. But when we do get depreciation, and it becomes essential to contract the currency to restore its value, that act tends toward the depression of business generally.

Senator Smalley. There have been no discounts on them since 1879, 34 years, have there?

Prof. Jenks. No.

Senator Hitchcock. Prof. Jenks, are you arguing against the issue of United States notes?

Senaror Nelson. We had better drop greenbacks and get back to this bill.

Prof. Jenks. No, Senator, what I was arguing for was this: I said that under the circumstances my own opinion had been in favor of bank notes rather than Government notes, but that all of the provisions that have been made in this bill have given the Government notes practically the character of an excellent quality of bank notes, with a Government guaranty back of them.

So it seems to me that the difference between those who are advocating Government notes, as provided in the bill, and those who are advocating bank notes, is really very slight; the difference is largely a matter of name.

Under these conditions, personally, I have little objection to the bill as it stands on this point, although I should prefer to have it put the other way—straight bank notes.

Senator Hitchcock. Have you made any study which would enable you to decide whether the reserve provided for in the Treasury for the redemption of these notes is adequate?

Prof. Jenks. I have thought this with reference to that question: The proviso made for the reserve in the Treasury is 5 per cent; and, of course, it can call upon the reserve banks to have that supplemented at any time, if necessary. I imagine that would be sufficient. Of course it might happen that there could be a sudden demand upon the Treasury from some section of the country that it would be a little difficult to meet out of that 5 per cent that came from that section of the country, but I think if you take the whole Treasury reserve, and the fact that it can be supplemented immediately by telegraph if necessary, I do not see why that is not sufficient.

Senator Hitchcock. Do you think that 33 1/3 per cent reserve provided for in the bill is ample?

Prof. Jenks. I had a suggestion to make on that. I think it is much better to have that reserve handled in a somewhat different
way. The proviso in the bill as it stood earlier—some amendments have been made—was that the Federal reserve board should have the right to suspend that provision with reference to reserves, and no provision was made in the first place with reference to a tax upon a deficiency of reserves. That has been changed.

My own judgment upon that matter would favor the form in which the bill stands now as regards bank notes. The Federal reserve board should not be called upon under any circumstances to suspend the provisions of the law, but that the law shall provide a tax for any deficiency in reserves. I prefer to make the reserve a little higher than 33\% per cent—say, 35 per cent—and then impose a tax for every 1 per cent below that 35 per cent, and a steadily increasing tax, so that the pressure would come pretty soon—say, by the time the reserve got down to 30 per cent—so that the banks would only under the most extreme emergency be inclined to let the reserves go lower.

I did have some objection to the suggestion that you could put the reserve at 50 per cent and then tax it 1\% per cent for every 2\% per cent deficiency. A 50 per cent reserve is unnecessarily high.

The thought occurred to me that you could start with about 35 per cent reserve and tax every deficiency; 1 per cent for every 1 per cent fall, until the reserve reached 30 per cent and then increase your tax to 1\% per cent for every 1 per cent of decrease. The tax would thus be 12\% per cent when the reserves were 20 per cent. The rate might increase more rapidly if it seemed best.

Senator Hitchcock. What advantage is there in taxing that deficiency in reserve rather than increasing the charge for the notes?

Prof. Jenks. I think the point is quite different. I will speak of the two separately, if I may.

Senator Hitchcock. Yes; certainly.

Prof. Jenks. As regards the deficiency in reserve, the thought is this: We do not provide for a reserve of just 33\% per cent, or whatever per cent we take, with the idea that there can be no going below that. We expect the bank, in case of emergency, is going to violate that provision. And it is a very bad thing for the country, I think, to have a banker or any other man think he can violate a law as it stands.

Now, what you want to do is this: You want to have a reserve large enough so that you can feel that at all times it is safe, and then when the pressure comes for the extension of credit in the time of a threatening crisis you want to be able to make the man who takes the credit under those circumstances pay for it, and pay high enough so that he will not want to take very much, but take just what is necessary to save his business.

The bank, of course, will extend the credit or will not extend the credit as it sees fit; the bank ought to be willing to extend the credit just as far as it safely can.

If the bank has to pay a considerable tax upon the deficiency in reserve it will keep stiffening up the terms under which it makes the loan, without absolutely stopping, in such a way that it will, in many cases doubtless prevent the bankruptcy of individual concerns, and at the same time will not be violating the law. That much as covers the reserves.
It seems to me that you have a sufficient degree of elasticity to insure the safety of the system and to protect the business men of the country, because you can under these emergencies give them accommodation without violating the law.

On the other hand, you are making your terms severe enough so that there is no danger of your reserves getting below a perfectly safe amount at all times.

Now, that is a perfectly automatic process, and every one of our laws ought to work automatically, just as far as they can, and you ought not to confer upon any board or any individual the right to exercise discretion more than is necessary. The banks have to exercise discretion anyway with reference to the credit of the person who wants the loan, but when it comes to the demand for suspension of the law I do not see how the Federal reserve board can act really intelligently on a question of that kind.

Let us assume a case like this: The Federal reserve board has its seat in Washington. They, of course, have their Federal reserve agents reporting to them from all over the country. There comes a pressure, let us say, in a distant part of the country. San Francisco, a very severe pressure that comes suddenly; they will have to take the judgment of the Federal reserve agent out in that section as to whether, on the whole, they should suspend that provision. They are not really in a position, as a board, to take intelligent action in the case, based upon their own knowledge, because, if action is taken, it ought to be taken within 24 hours.

Senator Hitchcock. I agree with you fully, Prof. Jenks; but would not an increase in the interest rate or the tax charged for the use of the currency by the reserve bank have the same effect?

Prof. Jenks. Yes; in part; but that also requires special discretion, and is not automatic. May I take that up separately, and it will answer your question?

Senator Nelson. In connection with that subject, there are two questions in connection with this matter of currency that I would like to call your attention to. One question was suggested the other day by one gentleman who appeared before the committee, and that is that after these notes—the regional-bank notes—have been issued under the bill they are required to be redeemed by the bank issuing them.

Prof. Jenks. Yes.

Senator Nelson. Or, if they came into the hands of another regional bank, they have got to be sent to the issuing bank.

Prof. Jenks. Yes.

Senator Nelson. Now, the question that was raised the other day was: After those notes are received in that way can they be put out into circulation again, or have they exhausted themselves?

Prof. Jenks. I should prefer myself, having them canceled.

Senator Nelson. Well, is the bill clear on that? That is the point.

Prof. Jenks. I do not think so.
