#### DEBT CEILING INCREASE

#### MONDAY, JANUARY 27, 1958

United States Senate, Committee on Finance, Washington, D. C.

The committee met, pursuant to call, at 10 a.m., in room 312, Senate Office Building, Senator Harry Flood Byrd (chairman) presiding.

Present: Senators Byrd (chairman), Kerr, Frear, Anderson, Douglas, Long, Martin, Williams, Flanders, Malone, Carlson, and Bennett.

Also present: Élizabeth B. Springer, chief clerk.

Hon. Robert B. Anderson, Secretary of the Treasury; Julian Baird, Under Secretary for Monetary Affairs, Department of the Treasury; William T. Heffelfinger, Fiscal Assistant Secretary; and Paul Wren, assistant to the Secretary, Department of the Treasury; and Robert P. Mayo, Chief, Debt Analysis Staff, Department of the Treasury.

The CHAIRMAN. The committee will come to order.

The committee has now under consideration House bill 9955, for the purpose of increasing the debt limit on a temporary basis until June 20, 1959, by \$5 billion.

(The bill H. R. 9955 is as follows:)

[H. R. 9955, 85th Cong., 2d sess.]

AN ACT To provide for a temporary increase in the public debt limit

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, during the period beginning on the date of the enactment of this Act and ending on June 30, 1959, the public debt limit set forth in the first sentence of section 21 of the Second Liberty Bond Act, as amended, shall be temporarily increased by \$5,000,000,000.

Passed the House of Representaties January 23, 1958. Attest:

RALPH R. ROBERTS, Clerk.

The CHAIRMAN. Now, Mr. Secretary, the committee and I are pleased to welcome you, for I believe this is your first appearance as Secretary of the Treasury, and, personally, I want to express my respect for you and my confidence in you. I feel certain it is shared by every member of the committee.

In the days ahead of us we shall look forward to your appearances before the committee, because all of us realize that we have very difficult fiscal problems confronting us.

So you may proceed, sir, and make your statement.

# STATEMENT OF HON. ROBERT B. ANDERSON, SECRETARY OF THE TREASURY

Secretary Anderson. Thank you, Mr. Chairman.

I should first like to read a statement, a copy of which I think has

been given to each member of the committee.

H. R. 9955, which was passed by the House of Representatives and is now before your committee for consideration, provides a temporary increase from \$275 billion to \$280 billion until June 30, 1959, in the statutory limitation on the public debt.

I sent to each member of the committee a copy of my statement (with accompanying tables and charts) before the House Ways and Means Committee on January 17. I am attaching the same exhibits and would like to review them briefly with you this morning.

Before doing so, however, I want to emphasize again that the

need at this time for a debt limit increase is based on:

1. The fact that cash balances have been running distressingly low, as I will show in detail later.

2. There is need for more flexibility for more efficient and economical

management of the debt.

3. Even with a balanced budget there will still be large seasonal fluctuations in receipts which make operations under the \$275 billion limitation most difficult.

I would like to direct your attention to table I, which summarizes the various changes in the statutory debt limitation during the past

40 years.

Previous changes made in the debt limitation consistently provided larger margins between the outstanding debt and the successive limits than now exist or which would result from the temporary increase under consideration.

Chart 2 compares the debt outstanding in recent years with the debt limit. I should like here to call your attention particularly to the fact that the Treasury operated very close to the \$275 billion limit during the fiscal year 1954, but to keep under the limit we had to adopt

relatively costly expedients.

There was somewhat more leeway under the temporary debt increase to \$281 billion during the fiscal year 1955, but in the fiscal year 1956 the debt was very close to the limit during a substantial part of the winter. There was a little greater margin under the limit a year ago, but, as the chart depicts, during the past several months the Treasury has been extremely close to the debt limit.

You will note that we normally have sufficient margin under the debt limit on June 30 of each year and that it is during the winter

when the limit is the most restrictive.

One of the most serious difficulties encountered by the Treasury in operating under the present limitation is the problem of carrying out our financing in an orderly and economical manner. A large portion of our public debt is made up of securities with relatively short maturity.

More than \$25 billion of Treasury bills mature within the next 90 days and more than \$50 billion of Treasury certificates, notes, and bonds are coming due in the calendar year 1958.

I should like here to call your attention to charts 3 and 4. Chart 3 shows that our first maturity in calendar 1958 is on February 14 and that we have some further maturities almost every month during the rest of the year. Maturities on chart 3 total \$50.2 billion, of which \$21.3 billion is held by Federal Reserve banks and Government investment accounts.

The figures on this chart do not include \$3 billion of tax anticipation bills which we expect to pay off in March, nor do they include \$22 billion of regular 90-day Treasury bills which we normally turn over 4 times a year.

Chart 4 shows the total volume of Treasury financing that has taken place in recent years, which again excludes the regular Treasury bills that we roll over quarterly. The total, for example, in 1957 was \$65.5 billion, of which we were able to extend \$8.8 billion beyond 1 year in 1- to 5-year notes, and \$1.3 billion in 12- and 17-year bonds.

Some part of this debt is coming due each month, so that at all times the Treasury is faced with substantial refunding problems. An objective of sound fiscal policy is to extend the maturity of new issues whenever opportunities are available, so as to avoid concentrating too large a portion of the public debt in the area of short maturities. During the past several months, we have been able to issue only relatively small amounts of longer maturities on two occasions.

We should be able to take advantage of any such favorable opportunities that may arise in the period ahead of us. Under the present debt limit, we are not able to take full advantage of such opportunities by selling long-term issues in advance to retire part of the maturing issues. The need for temporary ovelapping of the debt will be explained later. We will still experience in fiscal year 1959 a continuation of seasonal peaks in the collection of corporate income taxes. These collections of corporate taxes are gradually being leveled off, but there are still large seasonal fluctuations. Under these circumstances, it is necessary for the Treasury to borrow large sums of money in the July-December period to meet expenditures, and to pay off such borrowings in the January-June period, even in years when we have balanced budgets.

I should like to direct your attention to charts 5, 6, and 7.

Chart 5 shows quite vividly the seasonal peaks and valleys of the Federal budget. This clearly indicates the extent to which heavy Treasury borrowing is required during each July through December budget deficit period in anticipation of a budget surplus in the following spring.

Chart 6 is illustrative of the fact that in recent years there is less marked seasonal movement in budget expenditures than in receipts, and, if you look at chart 7 in relation to chart 6, you see the reason for the big seasonal swing in the Government's deficit or surplus position. Chart 7 reflects the way in which taxes flow into the Treasury. As I have said, some of this unevenness is being ironed out slowly as a result of the corporate-tax collection change under the Revenue Code of 1954, but still it has a way to go.

It is difficult to make precise month-to-month forecasts which reflect all cash operations of the Government, including collection of a great many types of revenues, the rates of expenditures under the program of each agency, the issuance and retirement of our public-

debt obligations, and all of the multitude of operations reflected in the total inflow and outflow of the Treasury. We have, however, attempted such estimates of the public debt and cash balances, based upon our best judgment at this early date, and I am submitting for your information these figures in the attached table 3. These figures are based on the assumption that for an operation of this size we should have cash on hand equal to at least 12 days' expenditures—about \$3.5 billion. We have assumed this balance at the middle and at the end of each month with the full realization that between these dates the cash might be below or above this level by a substantial amount. This margin is necessary to keep the Treasury in a strong position to meet wide fluctuations in expenditures and to minimize our vulnerability to slow collections because of weather conditions affecting the mails or

other conditions beyond our control.

In addition to this moderate working balance, we are of the opinion that a reasonable margin for contingencies and provision for flexibility in financing is very important in the public interest. What we mean by "flexibility" involves a rather technical explanation, but I will try to make it clear. For example, if we go into the market to refund an outstanding issue, regardless of the terms of the new issue, we must take into consideration the fact that in the normal course of business certain holders of these securities will need cash. Others will decide that the terms of the new securities do not meet their particular investment requirements and therefore they too will take payment for their maturing securities in cash. So long as the debt margin is very narrow, and cash balances low, the Treasury has to estimate carefully what this attrition (maturing securities presented for cash payment) will be so as not to be in a position where the Treasury could not make payment for all maturing obligations presented. This might mean that the coupon rate on the new securities would have to be more generous than would otherwise be required. If the attrition proves to be greater than anticipated, the Treasury has to go back into the market almost immediately to restore working balances, even before the previous issue has been distributed properly. This threat of a new issue hanging over the market creates uncertainty in the minds of investors and keeps the market for United States Government securities in a weak position. It also unreasonably handicaps the normal financing operations of States, municipalities, and private businesses.

If, on the other hand, a cash offering is included in the refunding program and the market were to improve between the date of announcement of new United States Government financing and the date the books close, the attrition might be substantially less than anticipated. In such event, the Treasury must calculate that it runs the

risk of inadverently exceeding the limit for a short period.

While we subscribe fully to the principle that every expenditure should be scrutinized carefully in the interest of the maximum economy and efficiency, the ability to pay our bills is not the sole consideration in this problem. However, in our opinion an increase of \$5 billion is necessary to provide adequate working balances, flexibility, and a modest provision for contingencies that we deem essential to prudent and economical debt management.

It should also be made clear that the portion of the requested increase in the debt limit that is required for needed flexibility would normally be utilized only at the time of large new financing, and then for a short period. It can best be described as an overlapping operation needed until the proceeds are used either for attrition or the voluntary retirement of Treasury bills or other maturing debt.

I would like to repeat, Mr. Chairman, my pledge to the members of the Committee on Ways and Means of the House that—

We of the Treasury assure you and the members of this committee and the Congress that we will exert all of our abilities to achieve the utmost economy in Government operations and to manage the public debt as best we can in the national interest.

The Chairman. Thank you, Mr. Secretary.

Now, Mr. Secretary, it is my recollection that the first debt ceiling was established in 1917. The ceiling was \$4 billion.

Is it not true that prior to World War I specific authorizations had to be given by Congress for every bond issuance?

Secretary Anderson. That is correct, sir.

The Chairman. In other words, an act had to be passed in order to issue bonds each time they were issued?

Secretary Anderson. Yes, sir. Under the Constitution, the Congress has the power to borrow money on the credit of the United States.

The Chairman. Is it not true that prior to 1917 our national debt was about \$1 billion?

I think that is correct, and that there was no need of a limitation on the total amount of bond issues because prior to World War I there was virtually no public debt.

What I want to emphasize is that historically Congress has controlled the Federal debt by statutory limitations of one form or another.

Secretary Anderson. That is correct, sir.

The Chairman. And the same situation, I think, exists in practically all of the States and localities, namely, that a State is limited by its constitution or otherwise in the amount of money it can borrow and localities are likewise limited.

I simply make that as a statement of historical fact because some people think that a ceiling, a debt ceiling by Congress has no place in our economy.

21297--58----2

Secretary Anderson. Mr. Chairman, if I may, in the statement which I submitted to the House Ways and Means Committee, I outlined a pretty detailed history of the debt situation.

The CHAIRMAN. Yes; that is in the table, is it not?

Secretary Anderson. No; it is not in the table. Well, it is, in part. But the whole history of how this delegation has been given from the Congress to the Secretary of the Treasury is set out in the House Ways and Means Committee statement.

Senator Kerr. There is attached to your present statement the debt

limitation history of legislation.

Secretary Anderson. For 40 years; yes, sir.

The CHAIRMAN. You are familiar with the fact that, in 1953, in January, I think it was, the year of 1953, Mr. Humphrey, the then Secretary of the Treasury, asked for an increase in the public debt from—increase in the public debt ceiling from—\$275 billion to \$290 billion.

Secretary Anderson. Yes, sir.

The CHAIRMAN. That was passed by the House at the \$290 billion figure. It then came before the Senate Finance Committee, as some members of the committee will recall, and after very exhaustive hearings, notwithstanding the fact that the Secretary of the Treasury, Secretary Humphrey, said there would be a panic, that we could not pay our bills, the committee rejected, in toto, this \$15 billion increase.

There was no panic and we paid our bills.

Then, a year later, Mr. Humphrey asked for \$10 billion increase on a permanent basis, and that likewise passed the House, and, in lieu of that, and I happen to have offered the amendment, the Senate, on August 24, 1954, adopted a temporary increase of \$6 billion, which made the total debt limit \$281 billion. That limit was continued for 2 years, and the following year it was reduced by \$3 billion, and then, on July 1 last, with the approval of Mr. Humphrey, the \$3 billion increase was permitted to expire.

In other words, continuation of that \$3 billion increase was not

asked by the administration, Mr. Humphrey, or you.

I remember you wrote me a letter saying that you hoped very much it would not be necessary to ask for it.

I simply bring that out to show the history of the conditions now

confronting us.

I would like for you to cite for the committee, in as much detail as you can, the conditions that have changed since August, when both you and Mr. Humphrey acquiesced in the expiration of this temporary \$3 billion, that now make necessary an increase of \$5 billion which you request on a temporary basis to expire on June 30, 1959.

Secretary Anderson. Senator Byrd, in the—when I assumed this responsibility in July, one of the first studies I made was with reference to the ability of the Treasury to operate within the debt limit.

At that time, it was anticipated that we would have a substantial

surplus during the fiscal year 1958.

There has, of course, been a decline in revenues from what was anticipated back last summer, and we are now anticipating a small deficit.

This results from about \$868 million additional expenditures that are planned by the Department of Defense, as well as a decline of about \$1,100 million in revenues.

It was not without misgivings that I undertook to operate within the \$275 billion debt limit last year. I was motivated, first, by the fact, that any request for the increase of the debt limit would have had to come at the very end of the Congress, and it was with some reluctance that I wanted to come and ask for this debt ceiling without having, personally, a little more experience in trying to live within it.

If the Senator will recall, I did say in my letter that we would make every effort to live within the debt limit, but that it might very well

be necessary to resort to some more costly expedients.

We have, since that time, borrowed money for the Federal National Mortgage Association on two occasions from the public, in part because of the necessity of maintaining reasonable balances, and in part because the statute with reference to the Federal National Mortgage Association indicates that we should, from time to time, seek funds from the public.

I would say, therefore, that, preliminarily, the changed conditions which I would cite in response to your question are moving from what was anticipated to be a surplus condition to a deficit condition, be-

cause of the decline in revenues and increased expenditures.

Senator Martin. Mr. Chairman, would it be all right to interject a question there?

The Chairman. Senator Martin.

Senator Martin. I think a little bit of the detail on the decline of

expected revenues would be helpful to our committee.

Secretary Anderson. You will remember, Senator Martin, that we make what is called the midyear review of September or October of each year, and at that time we anticipated that the revenues would be about \$100 million under the revenues which were anticipated at the time of the submission of the budget in January.

However, there has been a subsequent decline in the revenues, so that we are now anticipating about \$1,200 million less for the end of the fiscal year, June of this year, than was anticipated at the time the

budget was formed in January of 1957.

Senator Martin. Is that a general decline, or is it particularly from

corporations or individuals?

Secretary Anderson. For the most part, it is a decline in individual income tax.

The CHAIRMAN. Isn't it true for the next year, the next fiscal year, you estimate an increase?

Secretary Anderson. That is correct.

The Charman. Something like \$3 billion?

Secretary Anderson. \$2 billion.

The Chairman. \$2 billion? Secretary Anderson. Yes, sir.

The other thing, Senator Byrd, that I think influences me is this: In the first place, I am sure in my own mind that the Treasury ought to maintain reasonable working balances in cash.

What is reasonable? The minds of men might very honestly differ on this subject. But it has occurred to me that, in an operation where approximately \$400 billion flows, on an annual basis, in and out of the Treasury, and where we spend on an average of \$1,500 million each 5 working days, it would not be an unreasonable request to maintain an average working balance equal to about 12 days' expenditures or \$3,500 million.

At the same time, with the management of the debt as large as it is, and calling this year for some \$50 billion of refinancing other than the \$22 billion in 90-day bills, and \$3 billion in tax-anticipation bills, that some reasonable flexibility would put us in a position of doing a much better job so far as the country is concerned.

There is one other factor. It seems to me that, in a country of this size and in an operation of the kind in which we are engaged, there

ought to be some reasonable margin for contingencies.

I have in mind, for example, that technological breakthroughs in our military organization might make it desirable to procure some of the weapons of our protection much more rapidly.

I have in mind the fact that as we make a budget and as we project our expenditures on the budget of the message, this Congress may

very well make changes in those rates of expenditures.

And I have in mind that even though we do our very best in trying to judge the way in which the economy of the country will move, judging for 17 and 18 months ahead is a difficult question, and I recognize all of us can be fallible about that.

The Chairman. I would like to simplify the fiscal situation for this fiscal year: The original budget estimated that the surplus on the

30th of next June would be a billion and a half. Senator Kerr. May I understand that better?

The Chairman. When the budget was presented for the current year, it was estimated that there would be a billion and a half surplus.

Senator Kerr. In this current—— The Chairman. Current budget year.

Now it is estimated that there will be a \$500 million deficit. So that is a \$2 billion difference.

Now, you were compensated in part for that by selling the FNMA bonds for \$802 million so your actual shortage on your estimate of this year is about \$1.2 billion, isn't that correct?

Secretary Anderson. To that extent Treasury working balances

are protected but the \$800 million does not go against the deficit.

The CHARMAN. The \$800 million was included within the debt ceiling when it was originally loaned, when you originally bought the FNMA bonds and those bonds were sold then and you have got the cash for them?

Secretary Anderson. And part of the securities were retired within the ceiling.

The CHAIRMAN. But you got cash, you got \$802 million in cash which was previously held for the Treasury?

Secretary Anderson. That is correct, sir.

The CHAIRMAN. So the difference there is now a question for this fiscal year of \$1.2 billion. In other words you estimated a billion and a half surplus, you now estimate a \$500 million deficit, that is a difference of \$2 billion.

You got \$802 billiou from a source that had heretofore been under the debt limit so you actually have a shortage of \$1.2 billion on your cash balance under the debt limit; that is correct, is it not?

Secretary Anderson. So far as operating balance is concerned.

The CHARMAN. That is for this fiscal year?

Secretary Anderson. Yes.

The Charman. If you are asking for \$5 billion you must contemplate a deficit for other years. It seems to me that your request is not justified unles you think there would be a substantial deficit in the next fiscal year?

Secretary Anderson. Senator Byrd, even though you do not operate with a deficit, you still have the periods during which you collect your taxes in the latter half of the year and you are paying your bills whenever they are presented, part of them will be presented during the period.

The Chairman. I know, but that has existed, Mr. Secretary, for a long time and the condition is better now than it was because these

peaks and valleys are being ironed out.

Secretary Anderson. There will still be about 2 years.

The Chairman. But they are in much better condition in that respect. That was the point Mr. Humphrey made.

Secretary Anderson. Yes.

The Charman. Now—it was over a period, when the——

Secretary Anderson. Five-year period.

The CHAIRMAN. Three years have expired and the condition has been improved since Mr. Humphrey first asked for an increase in the debt limit.

Secretary Anderson. You have 3 years.

The Charman. But there is not as much variation as before. You are catching up with it, by advancing payments.

Secretary Anderson. There is a slight decrease in the variation;

ves. The Charman. Well, there is considerable decrease. I want to make it clear that I shall vote for necessary increases in military funds, but what disturbs me is that you are evidently contemplating a continuation of this deficit spending beyond this fiscal year, although the budget submitted indicates a \$500 million surplus on June 30, 1959.

Secretary Anderson. Even if we have a budgetary surplus of \$500 million in 1959 we are still going to have some very difficult periods if in fact we should maintain reasonable working balances and have

some flexibility within the ceiling of the debt.

If you will refer to table III, for example, Senator Byrd, this would be based upon the assumption that you would operate pretty well within the budgetary limitations, but if you will look at the right hand figures you will notice that on March 15, for example, if we have a working balance of three and a half billion or 12 days expenditures, we will have under the current circumstances a public debt that is above the amount which is currently authorized of \$275 billion—we will be \$1.2 billion above—and if we have the provision for flexibility, then we are right up against the \$280 billion that we are suggesting. or \$279.2 billion.

Senator Kerr. That is \$0.6?

Secretary Anderson. Yes \$276.2 billion before the allowance.

Now, then, to the extent that circumstances worsen, either because we do not collect as much revenue or to the extent to which we are in error in anticipating the amount of bills that we are going to have to pay, our circumstances will be that much worse off.

Senator Kerr. January 15 shows \$279.9?

Secretary Anderson. Yes, sir.

The CHAIRMAN. That situation has existed, of course, for some time. We have operated under it.

You are aware of the fact that there exists today \$70 billion unexpended appropriated balances?

Secretary Anderson. Yes, sir.

The CHAIRMAN. Is it not true that the only protection that Congress has got, the people have got, against the wasteful expenditures, lies in the debt limit?

I mean that is practically the only check on expenditures now?

Secretary Anderson. Senator Byrd, it is certainly one of the primary checks, and I subscribe to the philosophy of having a debt limit, and of making requests for increases in the debt limit upon a limited basis, and of having the limit reviewed by this Congress from time to time.

I think it is a healthy thing.

The CHAIRMAN. You approve of the principle of a temporary increase requiring action by the Congress?

Secretary Anderson. I do, sir.

The CHAIRMAN. Let's proceed a little further: Of course, no one argues you should not have a substantial balance; I have never argued that at all.

The question is the amount of the balance and also the fact that we must bear in mind that the cash balances in the banks do not bear interest. That was all discussed at the time that Mr. Humphrey made his request in 1954.

Congress is in session a good part of the time and the ceiling can

be increased in the case of an emergency.

On the basis of conditions as you see them now, do you estimate a deficit for fiscal year 1959?

Secretary Anderson. Senator Byrd, I do not.

Let me say, of course, that, when you are in the budget process, one has to make a judgment of what is going to happen to the economy for a period of 17 or 18 months ahead, and it would be a much simpler thing, from my point of view, if those judgments could be made within a range of a few millions or hundreds of millions of dollars.

The budget process is such that we finally have to come down to making what are precise judgments in the realization—at least, so far as I am concerned—that no one of us is probably wise enough to pick out precisely the amount of revenue that we will collect that far ahead.

I should like to point out to the Senator some of the factors which went into our thinking in trying to make the budget, the estimates which we have made with reference to our receipts. And that is a realization that we have come to the end of a very strong period of capital investment.

Since 1946 we have had a capital investment in this country of more than \$300 billion. This is an amount of money that would be equal

to the cost of World War II.

A great portion of that capital investment was made within recent years. By the very process of capital investment, plant expansion, and that sort of thing, businessmen plan, build, and expend not only precisely what they need for a given moment but for something beyond that. I think during the past several months we have seen a period in which we have run toward the end of one of these great expansion periods.

Then comes a period of readjustment in the business cycle, and the business community makes arrangements for the kind of things it has

done in the past.

Now then, on a relatively short term from the statistical evidence which has been offered, and which has been available to us, from the kind of people that I see and talk with, I think that a good many adjustments in output and inventories and materials have been made.

During the last several months the balance in the inventory picture

has, I think, improved substantially.

There has been a very prompt and responsive adjustment in the yield

of stocks and bonds and in interest rate levels.

Credit availability is adjusting to provide more opportunities for investment in new projects.

There is apparently some increase in residential housing with ele-

ments of strength in the period ahead.

As there has been some decline in the requirements for private investment, there has been a step up of certain State and local programs.

The defense spending will be stepped up, and such programs as the

highway programs and the like will be coming more into being.

The retail-sales situation, which I am sure the Senator is aware of, has demonstrated a relatively high confidence in the American people during this period.

Now on a longer range we have a growing population in the country, and a population that is constantly trying to improve its standard of

living, constantly increasing demands.

We have an exceedingly large research and development organization in all kinds of companies that are going to open up new opportunities by science and technological advances in ways of making things.

We have a labor force that is growing at the rate of about threequarters of a million workers per year. The output per man-hour in the nonfarm sector of our activity has gone up at a rate of about 2½ percent per year.

We have developed over the years a financial system that provides not only cushions but capable flexibility of meeting varying demands.

And I think that perhaps as important as anything else is a willingness, demonstrated by fiscal agencies, to utilize whatever mechanisms are at their command to be of as much assistance as they can in this kind of a situation.

Now we have an economy that has been operating between 430 and 440 billions of dollars a year on a gross national-product basis.

During the past, for example, between 1954 and 1955, personal income went up from about \$278 billion to \$305 billion. From the period 1955 to 1956 it went up from \$305 billion to \$327 billion.

During the period 1956 to 1957 it went up from \$327 billion to

roughly \$343 billion.

Even if there is an increase in 1958 of something less than half of that rate we think there is reasonable judgment supporting a belief that we would have a \$2 billion increase in taxes over the period, and I say this because, Senator, I fully realize that no man can find things

precisely but in order to give you the background of the kind of things

that have gone into the problem.

The CHAIRMAN. You are not disturbed about the fact that the reports indicate that the corporation income has declined in the second and third quarter of the fiscal year?

Secretary Anderson. Yes, sir; I am disturbed every time I read a

report----

The Chairman. Personal income also has shown a substantial decline?

Secretary Anderson. Well, the percentage decline in personal income has been relatively small.

The Chairman. But you are convinced from what you know now,

that in 1959 we will end up with a balanced budget?

Secretary Anderson. I would want to say that I have confidence that during the fiscal year 1959 we will assume a reasonable rate of sustainable growth that would justify our belief that we would have a \$2 billion increase in income receipts.

Now, the existence or not of a balance at the end of that period, would, as the Senator knows, depend upon how well our judgments

prove to be correct and the rate at which we spend money.

The Senator has pointed out that we have not only what is being asked for for new obligational authority, but we have quite a substantial amount from prior appropriations, and we in the Treasury would not be able precisely to control those expenditures.

The CHARMAN. Well, the executive branch of the Government can?

Secretary Anderson. Yes, sir.

The CHAIRMAN. Let's go back to the discussion of deficit spending just once more.

We have lost, as you know, more than one-half of the purchasing power of the dollar since 1940.

During that period we had not deficit spending of \$225 billion.

Do you think that was a major cause of the loss of the purchasing power of the dollar?

Secretary Anderson. I always find it difficult to select the proper

adjective.

I would say that I think it is a very important factor, Senator.

The CHARMAN. Is it the most important factor?

Secretary Anderson. Senator Byrd, I would not want to say cate-

gorically that it is the most important.

I think one simply has to weigh the fact that we have an economy that is so large and so complex and affected by so many different forces, that it is very difficult to reduce it to the terms of saying "These are the most important things in order"—but I certainly agree with the Senator——

The Chairman. You would put it near the top of the list? Secretary Anderson. This is one of the most important.

The Chairman. The alternative of asking for an increase in the ceiling would be to reduce some so-called nonessential expenditures or not necessary expenditures.

Do you think the present budget has made any headway in that

direction?

Secretary Anderson. There are, of course, a number of areas in which a number of programs have been reduced and in which there are less expenditures expected.

One of them is the actual expenditures from the Export-Import Bank. While it was never a part of the expenditure program, there has been a considerable revision in the way that we are approaching the school problem rather than to approach it from construction.

The Chairman. Construction though, was not approved by Con-

gress?

Secretary Anderson. No, sir; I say it was not. I say simply there

was a difference in approach.

A great deal, of course, is dependent on what happens to the decision of the Congress with reference to the postal service, which was taken into our calculations.

Public assistance grants would be down.

The CHAIRMAN. At that point is it a sound budgetary procedure to include as a cash receipt in the budget an increase in postal rates

which have not yet been enacted by Congress?

Secretary Anderson. It seems to me that in making our calculations, which are calculations for what we would expect, that we must take into consideration that the recommendations which are made by the President would succeed.

Now, whether or not they actually do succeed, of course, varies the

total result.

The Chairman. What do you estimate as the total reduction in the budget in the so-called domestic civilian expenditures as compared with the budget of the current year?

Secretary Anderson. Senator Byrd, I do not have that figure; we

would be glad to get it for you.

The CHAIRMAN. We will get it from the Budget Director when he

comes before the committee.

In regard, Mr. Secretary, to this \$500 million of gold which is being held by the Treasury, Mr. Humphrey, as you will recall, sold \$500 million.

Secretary Anderson. Yes, sir.

The CHAIRMAN. Is there any objection to using that gold that is lying dormant?

Secretary Anderson. I would have no objections to its use if it be-

came necessarv.

The CHAIRMAN. Then you have got a cash asset, so to speak, that you can realize on at any time to the extent of \$500 million in addition to the figures you have presented to the committee?

Secretary Anderson. That is correct, you could utilize your gold.

The Chairman. You see no objection to using it? Secretary Anderson. There would be no objections.

The CHAIRMAN. What would be the consequences of a continuing inflation and a further decline in the purchasing power of the dollar?

Secretary Anderson. Well, if you purchased goods at the same rate or at an accelerated rate and if inflation continued, you would simply get less for what you purchased.

Therefore, if you were going to have a quantity of goods as presently contemplated, you would be paying more, and the squeeze on

the Treasury payments would be even greater.

The Chairman. If they have lost one-half of the purchasing power of the dollar in the past 17 years, suppose we lost one-half again of the purchasing power of the present dollar.

Would that create a very disastrous situation?

Secretary Anderson. It would be a very disastrous and undesirable situation, Senator.

The Chairman. In other words, any further loss in the purchasing power of the dollar would possibly have very bad consequences?

Secretary Anderson. I would certainly think we ought to make

every effort to avoid any additional losses.

The Chairman. Our total tax revenue from all sources, State and National and local, social security taxes, etc., amounts to \$112,687 million.

That is a correct figure, I think.

Is that a burden that you think the American people can indefinitely stand? This is the local taxes, the State taxes, everything that

is paid in cash in the way of taxes.

Secretary Anderson. Senator Byrd, I would certainly hope that the time will come when the tensions which exist in the world, and the problems with which the Nation and the rest of the present world are confronted are such that we can alleviate a part of this burden, and I am sure that it would be helpful in developing our own standards of living and our own way of life if those burdens could be alleviated.

The Chairman. It is a very large burden in relation to that?

Secretary Anderson. Yes, sir.

The CHAIRMAN. Just one more question.

I think you and I agree on the fact we have two fronts here; we have a military front which we must keep up and on the other front we must maintain a strong economy in this country.

Secretary Anderson. Tagree with you, sir.

The Chairman. Mr. Secretary, I want to present to the committee and to you a plan with respect to the increase in the debt limit of \$278 billion, which is based on Treasury figures.

The only difference is that it allows for 3 billion cash on hand instead of three and a half, which is contemplated in the administra-

tion proposal, and it utilizes the \$500 million in gold.

I won't ask you to pass judgment on it today but I want to submit it to you for your consideration and ask as to whether or not the figures in this table I have prepared are accurate.

It shows substantial leeways, some as high as \$12 billion at one

time.

The lowest is approximately \$5 billion for a temporary period, if you get \$278 billion, keep \$3 billion on hand, and use the gold.

Of course, I have in mind always that Congress can change the ceiling if the necessity arises, so I would like to submit this proposal to you and have your comment before the committee takes action. I wish especially that you would check the accuracy of these figures which I feel certain are correct because they are based on your estimates.

I will ask that copies of the table be passed to the members of the committee and also to the press.

(The document referred to is as follows:)

Leeway under \$278 billion temporary statutory debt limit—Allowing for \$3 billion balance, including \$500 million from unused free gold

(Based on Treasury estimates of outstanding debt subject to limit, operating cash balance, and unusep

[In billions]

Date	Outstanding debt subject to limit (adjusted to maintain a constant \$3 billion eash balance)	Leeway under \$278 billion limit (com- posed of \$3 billion cash balance in- cluding un- used free gold, and unused debt author- ity)	Date	Outstanding debt subject to limit (adjusted to maintain a constant \$3 billion cash balance)	Leeway under \$278 billion limit (com- posed of \$3 billion cash balance in- cluding un- used free gold, and unused debt author- ity)

(The following letter was subsequently submitted by the Secretary of the Treasury commenting on the chairman's plan as printed above:)

THE SECRETARY OF THE TREASURY, Washington, D. C., January 28, 1958.

Hon. HARRY F. BYRD,

Chairman, Senate Finance Committee, Washington, D. C.

MY DEAR MR. CHAIRMAN: The figures contained in the statement submitted by you during my testimony yesterday on H. R. 9955, a bill to amend the statutory debt limit, showing the estimated outstanding public debt subject to the limitation, adjusted on the basis of maintaining a \$3 billion cash balance, including gold, reconcile with the figures contained in table 3 furnished to the committee in my testimony.

I would like to point out that the figures in your table showing leeway under a \$278 billion limitation, including a \$3 billion cash balance, including gold, are predicated upon cash balances of \$1 billion less than the cash balances projected by the Treasury. The cash balance figures projected by the Treasury of \$3½ billion excluded gold of \$500 million.

I would also like to point out that the actual cash balances of the Treasury during this projected 18-month period ahead will vary from the assumed constant figures shown in Treasury table 3. Our cash balances will be influenced by decisions during this period in the future concerning the manner and amounts of securities that may be issued to raise cash or the securities that may be issued to refund maturing securities. They will also differ because of the need to keep high end-of-month balances during some months to meet heavy expenditures which are concentrated during the first week or 10 days of the following months. In each month of the year, heavy expenditures occur during the first few days for social security and other benefit and pension payments, and in some months certain classes of taxes are not payable to the Treasury until the

last half of the month. These monthly swings in the Treasury's cash balances can be anywhere from \$1 billion to \$3 billion between the end of 1 month until the middle or end of the following month.

For example, between June 30 and July 15, 1956, the Treasury's cash balance was reduced from \$5.7 billion to \$4.2 billion with practically no change in the public debt, and was further reduced by July 31 to \$3.5 billion without any change in the public debt, a decrease of \$2.2 billion. The Treasury's balance on November 30, 1956, amounted to \$5.1 billion and on December 15 it amounted to \$3.2 billion, a drop of \$1.9 billion with only \$0.1 billion reduction in the public debt. In addition, the cash balance was reduced from \$6.7 billion on September 30, 1957, to \$4.3 billion on October 15, a decrease of \$2.4 billion, accompanied by a reduction of \$0.4 billion in the public debt. Swings of this nature are occurring constantly throughout the year.

We are, Mr. Chairman, fully appreciative of your desire to encourage as much economy as possible in the expenditure of our public funds and the motivation which underlies your proposal. We share with you a mutual concern of being

economical in our operations.

We should like to reiterate our assurances to you and the members of your committee that if the debt limit is extended as we have asked, we will not relax our efforts or our influence to achieve our common objective. We continue to believe, however, that our request for the \$5 billion increase in the debt limit is under all considerations in the public interest. We have sincerely tried to demonstrate our reasons for this belief to the members of your committee.

We cannot bring ourselves to conclude that the debt limit which you suggest would, in the opinion of the Treasury and in the judgment of the Treasury experts whom we have asked to examine your suggestion with us, provide sufficient allowances for a reasonably needed flexibility in financing and for contingencies in addition to the responsibility for meeting our projected budgetary payments.

We recognize, of course, that there is always the additional consideration of taking into account margins of error which necessarily must go into our calculations in long-range projections. We must, as well, realize the chauge of programing and the rate of expenditures that may occur because of the judgments of the Congress or the judgments of other Departments of the Government which, more directly than we, influence our rate of payments.

We sincerely hope that you and your committee will continue your examination of our proposals and that you will find them reasonable and prudent.

With warmest regards, I am

Sincerely yours,

ROBERT B. ANDERSON, Secretary of the Treasury.

The CHAIRMAN. Thank you, Mr. Secretary.

Senator Kerr?

Senator Kerr. Mr. Secretary, is it your opinion that this requested increase in the debt limit, if granted, could result in savings of interest on the public debt?

Secretary Anderson. I think it could, sir.

Senator Kerr. It is your opinion that the additional flexibility it would give you in determining percentagewise whether issues could be shorter term or longer term could be of material benefit to the Treasury in meeting its responsibility for the management of the public debt?

Secretary Anderson. I think it would give us a kind of flexibility that would be advantageous from the standpoint of the dollars which might be saved, and I think that it would be advantageous also from another point of view: We have one great market in this country, made up of many, many segments to which people resort to finance all kinds of operations.

The numbers of times which the Federal Government has to go to that market, whether for refinancing or for cash or for whatever purpose, is a disturbing element in market arrangements, which would be

made by citizens, individuals, States, all other people.

If, therefore, we had a margin of flexibility so that we might run larger risks at the time of our financings, or to deal in larger volumes of financing at one time, we would, I hope, be able to get some better balance in the debt, and by utilizing the market less frequently, we would be less of an impediment to other elements of our business world than we are currently.

Senator Kerr. Then is it safe for me to assume that you agree with me that the Treasury in the management of the public debt can have a decided influence on the rate of credit on the public debt?

Secretary Anderson. Well, from our point of view, of course, I conceive it to be my duty to manage the debt as economically as we can and therefore to try to determine not what market conditions ought to be but what market conditions are. Neverheless, if I have to take into account the rate at which I might get attrition, then I have to be influenced to some extent by the offering, by calculating the rate so it can minimize that attrition, if I do not have the flexibility.

Senator Kerr. Flexibility?

Secretary Anderson. That is right.

Senator Kerr. Then am I correct in assuming that you agree with me that the Treasury can be effective in the matter of having influence on the interest rates paid by the Treasury on the public debt? Secretary Anderson. Yes; in the way in which I have stated.

Senator Kerr. Is it a fact that lack of the greater debt limit has resulted in the past fiscal year in expenses which would not otherwise have occurred in connection with operations of the Defense Department where they found it necessary to terminate contracts or stretch out contracts or adopt a new time schedule for outstanding contracts?

Secretary Anderson. Senator Kerr, I have never tried to tell any

department what the

Senator Kerr. I am not asking what you tried to tell them.

Secretary Anderson. Yes.

Senator Kerr. I am just asking you as to the facts about what the situation was.

Secretary Anderson. I am sure that the actions, not only of the Defense Department but others, have taken into account the nearness that we were to the debt limit and have been governed in making some of their decisions by the fact that we were this close.

Senator Kerr. With the least possible result that costs were increased in connection with contracts either that had to be terminated or a new time schedule effected.

Secretary Anderson. That is correct, sir. And not only that, but the schedules would be modified.

Senator Kerr. Now, it has been indicated to me, and I am sure you know, or I hope you know whether it is true or not, and I would like to know whether it is true or not, that there have been times when the Defense Department, even though they did not terminate or partially terminate or implement a new time schedule on contracts, have had to be slow in the payment to contractors furnishing equipment and supplies to the Defense Department.

Secretary Anderson. I think that what actually happened was to decrease by some 5 or 6 percent the amount of progress payments on certain of the contracts.

Senator Kerr. Well, that was put into effect after the contracts were let, and which had been let on either specifications or accepted understandings that the progress payments would be made at the higher rate.

Secretary Anderson. Yes, sir.

Senator Kerr. And that resulted in the contractors having to go more into the market for money and oftentimes at a higher carrying charge to them than they had contemplated, which was then reflected in an increased cost to the Defense Department if it were a cost-plus contract.

Secretary Anderson. That is correct.

Senator Kerr. Is it also true that under the directives of the Budget, the Defense Department and other agencies of the Government have had to postpone starting of work for which Congress had appropriated the money at later periods in this fiscal year so that they might bring about the result that a part of the liability would mature in a subsequent fiscal year instead of this fiscal year?

Secretary Anderson. The extent to which this has been done I do not know, but I am sure that judgments have been made of this nature

because of the closeness that we were to the debt limit.

Senator Kerr. Now you use a figure of \$2 billion in connection with the budget, the balanced aspect of the budget for fiscal 1959 as compared to this year. That was not your estimate of what the surplus would be, but that was your estimate of what the increased revenue would be.

Secretary Anderson. That is correct, sir. We assumed that corporation collections would be about the same and that individual income tax will be up.

Senator Kerr. Well, how much of that result did you figure would

come from the 5-cent postage stamp?

Secretary Anderson. Well, so far as the income tax revenues are concerned, it would not be effected by the postage-stamp rate. But as far as arriving at whether or not we would be able to meet our expenditures out of our current revenues, we took into consideration the postal rate moreover.

Senator Kerr. The estimated surplus of how much for the year?

How much was used?

Secretary Anderson. \$500 million.

Senator Kerr. Was based on Congress fixing postage stamp costs at 5 cents instead of 3 cents, was it not?

Secretary Anderson. That is correct.

Senator Kerr. Was it not also based on an assumption that there would be some difference brought about by congressional action in the handling of the highway funds?

Secretary Anderson. I do not believe that the highway funds were

figured in that calculation.

Senator Kerr. Was there not a proposal to shift certain taxes now going into the highway trust fund?

Secretary Anderson. Oh, yes, sir.

Senator Kerr. Being in the general revenue fund?

Secretary Anderson. There was a proposal to take out the costs of collecting the highway funds. And then, of course, the costs of the jet fuel would be shifted to the construction of airport facilities.

Senator Kerr. And thereby decreasing the trust fund for highways

by that amount?

Secretary Anderson. By that amount.

Senator Kerr. And making that amount—

Secretary Anderson. Available.

Senator Kerr. Conditional in a general revenue fund?

Secretary Anderson. Making it available for other purposes; yes, sir.

Senator Kerr. Was that \$500 million surplus not also based on the assumption that Congress would change the law and pay for those highways now being built out of the general revenue fund through the public lands out of this trust fund?

Secretary Anderson. Yes, sir.

Senator Kerr. In other words, \$500 million surplus was based upon a number of assumed contingenices for which there is no positive assurance of their being results.

Secretary Anderson. It was based upon the assumption that the recommendations in the budget message, would be carried through, and of course that is subject to the determination of Congress.

Senator Kerr. But without action of the Congress, then those assumptions, of course, would not be valid?

Secretary Anderson. That is correct, sir.

Senator Kerr. Now, it was also based on an assumption that there would be certain restrictions by the Congress in nondefense spending, was it not?

Secretary Anderson. Yes, certain programs were reduced. Senator Kerr. Such as benefits to veterans, and what else? Secretary Anderson. Well, there is quite a list of them.

Senator Kerr. Would you give them to us?

Secretary Anderson. There were reductions in programs in a

number of things—public assistance.
Senator Kerr. How much did the President estimate the Congress would reduce public assistance in order to make that \$500 million surplus possible?

Secretary Anderson. About \$13 million.

Senator Kerr. And would you give me the other assumed reductions in nondefense spending?

Secretary Anderson. Yes, sir. There is a list of a great many here. I would be glad to supply the Senator with a complete list.

Senator Kerr. May I have it? Secretary Anderson. Yes, sir.

Senator Kerr. I am going to put it into the record. I just want to look at it at this time.

The Charman. I would just like to state to the committee that the

Budget Director will appear before it.

Senator Kerr. Reduction of \$342 million to the Export-Import Bank; \$11 million reduction in the assistance for public schools in federally impacted areas; \$702 million, improvement in the postal service; \$150 million reduction in Veterans' Administration operations; \$27 million reduction in Federal Housing Administration; \$22

million reduction in miscellaneous housing; \$29 million reduction in small business operations; \$129 million reduction in veterans' benefits; \$6 million reduction in veterans' hospital care and hospital construction; \$9 million, miscellaneous veterans' services; \$4 million reduction in veterans' insurance and indemnities; \$365 million in Commodity Credit Corporation; \$62 million reduction in Farmers' Home Administration; and other items totaling \$1,999 million.

I would like for that tabulation to appear in this record at this

place, Mr. Chairman.

The CHAIRMAN. Without objection, it will go in the record. (The tabulation referred to is as follows:)

#### Specific program cuts in the 1959 budget

[In millions of dollars]

	Fiscal	Change	
	1958 estimate	1959 estimate	
Export-Import Bank	393	51	-342
Foreign information and exchange	141	139	-2
Assistance for schools in Federal areas	223	212	~1Ī
Public assistance		1, 809	13
Postal service		-16	-702
Urban renewal		56	-5
Federal Housing Administration	-53	-80	-27
Veterans' Administration: Housing functions	145	-5	-150
Miscellaneous housing		-23	-22
Highways (in the budget)	38	7	~-31
Small Business Administration		63	-29
Federal Civil Defense Administration	67	64	-3
Veterans' readjustment benefits	866	737	-129
Veterans' hospital care and hospital construction	846	840	-6
Veterans insurance and indemnities.	44	40	-4
Miscellaneous veterans services		162	_9
Commodity Credit Corporation		2, 380	-365
Soil bank (excluding conservation)		604	-16
Farmers' Home Administration	270	208	-62
Interior: Power marketing agencies	41	38	-3
St. Lawrence seaway		19	-25
Forest resources	. 171	169	-2
Fish and wildlife resources	65	58	-7
Recreational resources	: 78	73	<b>-</b> 5
Mineral resources	63	56	-7
Federal financial management	508	507	-1
Central personnel management		108	-16
Total	10, 270	8, 276	-1, 994

Senator Kerr. Can you remember when any other budget was ever given to the Congress and a surplus predicted on the assumption that Congress would reduce the benefits and programs that it had implemented and had been carrying on by the amount of \$1,994 million?

Secretary Anderson. I frankly do not have in mind sufficiently

other budgets to compare them, Senator.

Senator Kerr. If it should happen that the revenues estimated or as estimated, and Congress in its wisdom or lack of wisdom, but in the exercise of its constitutional power, decided to have the same program of governmental operation in fiscal 1959 that it had in fiscal 1958, then instead of there being \$500 million surplus, there would be a \$1.5 billion deficit, would there not?

Secretary Anderson, Yes.

Senator Kerr. In the event the revenues are not as estimated and Congress continues its same program, then the deficit would be increased to the extent that the revenues failed to meet up to the assumptions.

Secretary Anderson. To the extent that we are incorrect in our

revenue estimates, the problem is increased, yes, sir.

Senator Kerr. Now, the President has repeatedly stated that there would be a decided upturn in the business activity and dynamics of the economy during the second half of 1958?

Secretary Anderson. Well, as I recall, he has said sometime dur-

ing the year.

Senator Kerr. And that, of course, is the beginning of fiscal 1959.

Secretary Anderson. Yes, sir.

Senator Kerr. And his estimates of revenue are based upon the accuracy of his belief and forecast that there would be a decided upturn in the business activity of the Nation.

Secretary Anderson. That is correct, sir.

Senator Kerr. Now, if one has the decided conviction that there will not be a decided upturn in the economy of the country, then he would do well to contemplate the extent of the difference that that would make in the forecast of revenue, is that correct?

Secretary Anderson. One would be required to.

Senator Kerr. Then the President's estimated \$500 million surplus was also based upon the assumption that Congress would appropriate no more money for defense than he has recommended for fiscal 1959?

Secretary Anderson. That is correct, and also that the rate of expenditures by the Department of Defense would be as anticipated, because in addition to new obligational authority, there is this holdover.

Senator Kerr. You mean the holdover obligation?

Secretary Anderson. Yes, sir.

Senator Kerr. Which, if the Defeuse Department became of such a critical nature that the administration decided to try to meet it by stepped-up expenditures, would adversely affect that estimated surplus?

Secretary Anderson. Yes; and it would, of course, make the debt-

limit problem very important, if the upswing-

Senator Kerr. I am getting around to that. Secretary Anderson. Yes; pardon.

Senator Kerr. I am getting around to that. Now, I am not asking you to agree with my belief as to what the business conditions in the next fiscal year will be, nor am I asking you to agree with my belief of what the Congress will do, but I would like to ask you this question: Is there not in your mind, as you ask for this increased debt limit, some element of contemplation on your part of the possibilities that I have referred?

Secretary Anderson. There is.

Senator Kerr. Or your awareness of the possibility?

Secretary Anderson. There is, Senator. I think we have to take into consideration—this is precisely one of the things we talk about in contingencies: What will be the program changes made by Congress; what will be the actual rate of expenditures that either circumstances or fortuituous technological breakthroughs and this sort of

21297---58-----3

thing make possible; what will be the expenditures under flexible programs when we are committed to purchase surplus commodities; and that sort of thing? And these are the sorts of imponderables that, it seems to me, justify us in asking for some reasonable margin for taking

care of the contingencies in the debt limit.

Senator Kerr. I will say, Mr. Secretary, that I congratulate you upon what I believe to have been the part you played in reversing the deadly type-credit causes of this administration, the reversals that have moved in the last few months to tend to correct some of the more critical evils of the hard-money-type credit and high-interest-rate policies of your predecessor. And I congratulate you upon what I think is the tremendous saving that you are going to have a part in bringing about in the cost of serving the public debt.

I wish I could share the optimism of your Chief that what has been done would result in this decided upturn in the economy, but I think that you got there too late to effect so great a reversal in such a short

 $_{
m time.}$ 

Now, your estimate of the deficit for this fiscal year is how much?

Secretary Anderson. \$400 million.

Senator Kerr. If you had the conviction that I do, that it would be nearer \$1 billion than \$400 million, you would base your estimate on the requirement for the increase in the national debt limit accordingly, would you not?

Secretary Anderson. That would be an additional consideration.

Senator Kerr. Now, the chairman asked you about the amount of deficit spending that has occurred in the last 17 years. What was that amount, Senator?

The CHAIRMAN. \$225 billion.

Senator Kerr. \$225 billion, and related it to the reduction in the value of the dollar as compared to the 1940 dollar. Can you tell us what part of that deficit spending occurred prior to 1946?

Secretary Anderson. I think we have those tables.

Senator Kerr. I want to tell you there is a man that has come to the rescue of both Secretaries in this committee countless times. He is an indispensable man. He is a living refutation on the part of some that there is no indispensable man.

Secretary Anderson. I can say to you, Senator Kerr, that I am

not unaware of the importance and capability of Mr. Mayo.

Senator Kerr. I want to tell you right now that if this fellow Benton gets hold of him, he will commercialize him into a greater

encyclopedia than the Britannica.

Secretary Anderson. The deficit starting back in 1940 was \$3,918 million; 1941, \$6,159 million; 1942, \$21,490 million; 1943, \$57,420 million; 1944, \$51,423 million; 1945, \$53,941 million; 1946, \$20,676 million.

Senator Kerr. Now, Mr. Mayo, could you tell us how much those figures total?

Secretary Anderson. You want to add them up.

Mr. Mayo. Well, we can do it.

Secretary Anderson. The debt, Senator Kerr, went from \$40,440 million in 1939 to \$269,422 million in 1946. That would be roughly it.

Senator Kerr. All right. Now, in other words, most of that \$225 billion deficit spending occurred prior to June 30, 1946?

Secretary Anderson. Yes, sir.

The CHAIRMAN. Would you mind adding the loss in the purchasing power of the dollar at that same period?

Senator Kerr. That is what I am going to ask him right there.

That is the exact question I want to ask him.

The CHAIRMAN. I think they should be shown together, so I want Mr. Mayo to give that.

Senator Kerr. Now, would this dollar be comparing the present dollar to the 1939 dollar, or the 1940 dollar?

M. M. ... The result of the 1940 dollar:

Mr. Mayo. They are approximately the same, Senator. Senator Kerr. All right. I would like to know now what that

dollar's value was each of these years.

Secretary Anderson. All right, sir. We will get the chart. Senator Kerr, we do not have it in those terms. Could we supply that to you and the committee?

Senator Kerr. I believe that fellow has either got it or—

Secretary Anderson. Can get it.

Senator Kerr. Can give it to us right now.

Secretary Anderson. Suppose he works it out here for us.

Senator Kerr. I have no doubt that his memory capacity and ability is far greater than yours, Secretary.

Secretary Anderson. He will work them back.

Senator Kerr. I know he will.

The CHAIRMAN. Well, you are working them by the year, are you

not, Mr. Mayo?

Mr. Mayo. As a matter of fact, if there is a copy handy of the monetary hearings last summer, they are already in there. I didn't bring that along with me.

The CHAIRMAN. I would like to see first, the deficit, and then, in the next column, how much the purchasing power of the dollar

was.

Mr. Mayo. Yes, sir.

Senator Kerr. And then, Mr. Secretary, I want you to ask him to give us the value of the 1940 dollar as compared to the 1873 dollar.

Secretary Anderson. All right, sir; we will be glad to get that one for you. This chart does not show it by years, which is what you have requested. It shows that the 1939 dollar had declined to about 90 cents, slightly above 90 cents, by 1941.

Senator KERR. What page is that on?

Secretary Anderson. Page 292.

Senator Anderson. The chart is on page 338, is it not?

Mr. Mayo. That is just the index again, gentlemen.

Secretary Anderson. That is the Consumer Price Index. You would have to work it back from the Consumer Price Index.

Mr. Mayo. We have it in here the other way, if I can just put my

finger on it.

Senator Kerr. What page is the one you were talking about on? Secretary Anderson. 292 is the one I was talking about. Senator Kerr, if you will look on page 418.

Senator Kerr. 418. I knew that boy Mayo would come up with Now, Mr. Mayo, I am going to ask you to help me a lot more here before we are through; 1939 is taken as the standard in this table on page 418, is it not?

(The table which appeared on page 418 of the printed hearings on the Investigation of the Financial Condition of the United States

is inserted in the record of this hearing on page 51.)

Senator Malone. It is 1937 to 1939.

Senator Kerr. Is that correct, Mr. Mayo?

Mr. Mayo. Yes; 1939 is correct, sir.

Senator Kerr. Well, this shows that the purchasing power of the 1939 dollar was 71.2 cents in 1946, does it not?

Secretary Anderson. Yes, sir.

Senator Kerr. That in May 1957 it was 49.7?

Secretary Anderson. Yes, sir, 49.7. Senator Kerr. Now I would like for Mr. Mayo to tell us percentagewise the decrease from 1939 to 1946 and from 1946 to 1957, in May?

Mr. Mayo. From 1939 to 1946, percentagewise, is a decline of 29 percent.

Senator Kerr. Twenty-nine percent?

Mr. Mayo. And from 1946, which was 71 cents——

Senator Kerr. 71.2 cents. Mr. Mayo. To 50 cents.

Senator Kerr. It was 49.7, was it not?

Mr. Mayo. That is correct. That is another 22 cents, then.

Senator Kerr. Well, that is 22 cents, but how much is that percentagewise to the 71.2?

Mr. Mayo. That is a little less than a third. It is about a 30-per-

cent decline, Senator.

Senator Kerr. In other words, there has been a greater percentage of decline in the purchasing power of the dollar since that deficit spending than occurred during that deficit spending, has there not?

Mr. Mayo. Yes, sir, I think that is correct.

Secretary Anderson. There has.

The CHARMAN. The Chair would like to ask, though, that there be put into the record the amount of the deficit spending and, opposite that figure, the loss of the purchasing power of the dollar for each of these years.

Senator Kerr. I am going to put that in.

The CHAIRMAN. The Senator from Oklahoma is speaking on another basis.

Senator Kerr. I am just drawing some conclusions, Mr. Chairman, from the very table that you want put into the record, and asking the witness if they are correct.

The CHAIRMAN. This table does not include the deficit spending. Senator Kerr. Well, but the Chairman has given it to us himself.

The Chairman and the Secretary has given it to us.

The CHAIRMAN. I would like the Senator from Oklahoma to read that, and at the same time show the loss of the purchasing power of the dollar in each year.

Senator Kerr. Then we will include in the record at this point a tabulation of the deficit spending per year by year beginning with 1940 through 1957.

Senator Bennett. Before you leave, that, Senator-

Senator Kerr. Yes.

Senator Benentt. What I understood the chairman wanted was a single table combining these two, showing on the same line the year, the amount of deficit spending, and the amount of the decline in the dollar, year by year, so that in one sweep of the eye we can see the relationship year by year.

May I ask that the table be prepared in that way?

Senator Kerr. The Senator may ask that another table be prepared in that way, and I will be glad to have it in the record. I presume he is willing for me to have the tables in the record the way I have designated them.

The Chairman. One table called the Kerr table and another table

called the Bennett table and have both appear in the record.

Senator Kerr. And a third called the Byrd table. Senator Bennett. May I ask that they all appear in the same place as nearly as possible?

Senator Kerr. As nearly as the consummation of the size and the printing will permit.

The CHAIRMAN. Without objection, that will be followed. (The tables referred to are as follows:)

Changes in purchasing power of the dollar and deficit financing, 1873-1957 2

	Consumer price index	Value of the dollar (cal-					ot, June 30
	(1947-49=100)	endar year 1939=100)	Cents	Percent	Amount out- standing	Dollar change	
1873	37. 0 42. 3 59. 4 83. 4 120. 2	160. 5 140. 4 100. 0 71. 2 49. 4	-20.1 -40.4 -28.8 -21.8	-12.5 -28.8 -28.8 -30.6	Billions \$2. 2 1. 2 40. 4 269. 4 270. 5	Billions -\$1.0 +39.2 +229.0 +1.1	

Senator Kerr. Now, then, I note here on page 418 of the investigation hearings last summer that in 1913 the purchasing power of the actual dollar was 40 percent above what it was in 1939; is that correct, Mr. Mayo?

Mr. Mayo. That is correct.

Senator Kerr. Then I would ask you to tell me how much decrease there had been, percentagewise, in the purchasing power of the dollar from 1913 to 1939?

Mr. Mayo. Again, about 30 percent. Senator Bennett. Fifty percent.

Secretary Anderson. It is about 40, is it not?

<sup>&</sup>lt;sup>1</sup> As reflected in changes in the public debt, <sup>2</sup> As compiled by the Bureau of Labor Statistics except for 1873, which is based on a series published by the Federal Reserve Bank of New York.

Senator Bennett. 1.4271.

The Chairman. I do not believe even so great a man as Mr. Mayo could get these figures so quickly, so I think he should have an opportunity to go over the figures before they are printed in the record.

Senator Kerr. All he has to do is a mathematical calculation.

Mr. Mayo. Thirty percent.

Senator Kerr. I think the 30 percent is correct; yes. In other words, then, the reduction in the purchasing power of the dollar from 1913 to 1939 was approximately 30 percent; is that right, Mr. Mayo?

Mr. Mayo. Yes, sir.

Senator Kerr. From 1939 to 1946, through 1946, it was approximately 29 percent?

Mr. Mayo. Yes, sir.

Senator Kerr. From 1956 through 1957, it is approximately 30 percent?

Mr. Mayo. That is correct, using the later year as the base in each

Senator Kerr. Now, then, what is the reduction in the purchasing power of the 1913 dollar in this, the year of our Lord 1958?

Mr. Mayo. Well, the dollar is currently worth approximately 49 cents as against \$1.40 in 1913. That is a reduction, then, of just roughly, about two-thirds.

Senator Kerr. About two-thirds?

Mr. Mayo. Yes, sir.

The CHAIRMAN. Will the Senator from Oklahoma yield just a minute?

Senator Kerr. Yes.

The Chairman. Price controls operated in some of these years, and that held down the inflation, so I think for proper consideration the years in which price controls were in effect should be noted because, naturally, the inflation would not be as great in those years as it was when there was no control. So please note that, Mr. Mayo, in your table.

Mr. Mayo. All right, sir.

Senator Kerr. Now, then, the answer to the question as to the value of the dollar today relative to the 1913 dollar is what?

Mr. Mayo. It is down about two-thirds.

Senator Kerr. It is about 33 cents?

Mr. Mayo. Yes.

Senator Kerr. Well, then, the question that the distinguished chairman asked the Secretary a while ago as to what would be the effect if there was as much depreciation of the dollar in the next 17 years as there has been in the last 17 years might have some light thrown on it by figuring what has happened in 1958 as compared to 1913, might it not?

Mr. Mayo. Yes.

Senator Kerr. Because there has been just as much decrease in the value of the dollar in 1958 compared to 1913 as there will have been in another 17 years as compared to 1939 if the decrease in the next 17 years is just as much as it has been the last 17 years?

Mr. Mayo. Yes.

Senator Kerr. That is correct?

Mr. Mayo. On that assumption, yes, sir; that is right.

Senator Kerr. Well, are my assumptions valid; are they in accordance with the figures you have given me?

Mr. Mayo. That is right, on the basis of those figures.

Senator Kerr. I might say that I share the concern of the chairman about inflation and I am just as much interested in it as he and as the Secretary. But you would not say that our economy today is in a disastrous condition as compared to 1913, would you, Mr. Secretary?

Secretary Anderson. No. sir.

The CHAIRMAN. I think you ought to add to that the debt of 1913

and the debt of today. We had virtually no debt in 1913.

Secretary Anderson. The question, as I gathered from the chairman a while ago, was a more rapid decline in the value of the dollar than is now indicated, so that the more rapid the decline the more severe

would be the problem.

Senator Kerr. Now, I think, Mr. Secretary, if you have Mr. Mayo get it for us, we will find that the 1913 dollar was just as much depreciated compared to the 1873 dollar as the 1939 dollar was as compared to the 1913 dollar. And yet, though we were debt free in 1913, economic disaster had not descended upon us by reason of the fact that the value of the 1913 dollar was as much below 1873 as 1939 was below 1913.

Secretary Anderson. Yes, sir.

Senator Kerr. I would not, for the world, minimize what I regard as the importance of maintaining the stability of the value of the dollar. And I want to say, Mr. Chairman, that we could restore the value of the 1939 dollar if the people were of a mind to do so. I think Congress would have to be working for \$5,000 a year, would they not? Was that not the salary in 1939? Some of you boys were here.

Labor would have to be working for 25 cents an hour. The farmer would have to be selling his cotton for 7 or 8 cents a pound. In other words, the only way that you could restore the value of the dollar to the 1939 level would be to reduce the value of the things you use the dollar to buy to their 1939 level; would it not, Mr. Secretary?

Secretary Anderson. There always has to be a relationship between

the volume of money and the volume of goods.

Senator Kerr. No; I am talking about the value now.

Secretary Anderson. Yes.

Senator Kerr. The only way that you could restore the value of the 1939 dollar would be to restore the price level of things for which the dollar was used to purchase to the 1939 levels?

Secretary Anderson. If you were going to do it just at one swoop,

that would be the way you would do it.

Senator Kerr. Well, if you were going to do it in two swoops, that is the only way you could do it, is it not?

Secretary Anderson. Yes, sir.

Senator Kerr. So, when we talk about restoring the value of that dollar, I think it is well that we bear in mind the specifications of what we are talking about.

Secretary Anderson. Yes, sir.

Senator Kerr. And I am not now taking the position either for or against, Mr. Chairman. I am just exploring the fundamentals that would be required. Now, Mr. Mayo, you will get us the relative value of the 1873 dollar to the 1958 dollar?

Mr. Mayo. Yes, sir. I will get that.

(Data referring to the 1873 dollar are shown on the tables in response to the requests of Senator Kerr and Senator Frear.)

The CHAIRMAN. Will the Senator yield?

Senator Kerr. Yes.

The CHAIRMAN. I would like Mr. Mayo's table to show whether or not, in the history of this country, we lost 48 percent of the purchasing power of a dollar in 12 years; whether this ever occurred in the history of this country before except in the period from 1940 to 1952.

Mr. Mayo. All right, sir.

(The material referred to is as follows:)

The table in response to the request of Senator Frear indicates a decline in the purchasing power of the dollar from 1913 to 1920 of slightly more than half. In other words, the 1920 dollar was only worth 49.4 cents in comparison with the 1913 dollar. The year 1920, however, represented a temporary peak in the price level and throughout the remainder of the twenties the dollar was worth approximately 57 cents in reference to its 1913 value.

The Chairman. Do you have more questions?

Senator Kerr. Yes. I want to get to that question here before we

go any further.

The Chairman. I just want to see a complete picture here. I do not know anybody who is advocating going back to the 1939 dollar, but there are many people deeply concerned with the continuing inflation and decrease in the purchasing power of the dollar.

Note.—Most stringent price controls were in effect from 1942 through June 1946, with more limited controls in effect both before and after this period and during the height of the Korean conflict in 1951 and 1952.

Source: Department of Labor, Treasury Department, and Federal Reserve Board.

Senator Malone. Mr. Chairman, I would like to see the new Senator from West Virginia sworn in. It is about 12 o'clock, and some of us would like to ask some questions of the witness. I wonder if we could come back after, say, 2 o'clock?

The CHAIRMAN. Some Senate Finance Committee bills are going to

be taken up today.

Mrs. Springer, could you arrange that for 2 o'clock and let us meet this afternoon? I would like the members of this committee to be on the floor at 2 o'clock. If we have an afternoon session, we might meet here at 3.

Is that satisfactory?

Secretary Anderson. Yes, sir.

Senator Kerr. Well, Mr. Secretary, I want to thank you, sir, for your frank and able answers to the questions, and I want to say to you that I think your request for an increase in the debt limit is reasonable, and if I shared the chairman's optimism as to what the revenues were going to be next year and the expenditures were not going to be—

The CHAIRMAN. Wait one minute. The chairman has not indicated any optimism. My questions to the Secretary did not indicate any

optimism. It was the Secretary who indicated optimism.

Senator Kerr. I believe I have in a table here before me, Mr.

Chairman----

The CHAIRMAN. The Senator from Oklahoma should understand those figures were based on figures furnished by the Secretary of the Treasury.

Senator Kerr. Well, now, in making your proposal you accepted

them.

The Chairman. I accept them. I accept them, and I show by these figures that they have got a comfortable balance all the way through on their own figures.

Senator Kerr. I think in doing so you have exercised an undue

optimism, because I do not think the figures are realistic.

The Chairman. I never said the figures were my estimates.

Senator Kerr. I did not say that you did.

The Chairman. Well, you said I was optimistic in my figures. There are no figures I could take except those that were presented by the Treasury Department, of course.

Senator Kerr. You see, the Senator from Oklahoma has not been

limited in the figures.

The CHAIRMAN. The Senator from Oklahoma is never limited. Senator Kerr. He has reached some conclusions based upon what he thinks are going to be the results.

The Chairman. Entirely satisfactory.

Senator Williams. I suggest we have incorporated in the record

the Kerr estimate of the revenue for next year.

Senator Kerr. The Kerr estimate is in the record. I estimated we would have nearer \$1 billion deficit than the one the administration is estimating. And I am estimating you will have a \$2 billion deficit next year, instead of a \$500 million surplus in fiscal year 1959. And I believe we will have to raise this debt limit to \$280 billion and come back next year and have an emergency before us. And if we are in that situation, I think it will result in higher interest rates, both in

the Treasury and to private borrowers, and I think you will be in the situation where the Budget Bureau will be running your business instead of the Congress, just like it has been for the last 18 months.

The CHAIRMAN. Senator Williams.

Senator Williams. Are you going to proceed a while, Mr. Chairman?

The CHAIRMAN. We might as well proceed.

Senator Bennett. Mr. Chairman, before the Senator begins, I think the question has been raised. Theoretically, the Republican members of the committee should be there to greet the new Senator who will be sworn in, and I assume as soon as the preliminaries are over—

The CHAIRMAN. Gentlemen, that is right.

Senator Bennett. I wonder if we had not better adjourn now until 3 o'clock?

The CHAIRMAN. We will adjourn now until 3 o'clock.

(Whereupon, at 12:05 p. m. the committee recessed, to reconvene at 3 p. m., the same day.)

#### AFTERNOON SESSION

Present: Senators Byrd (chairman), Frear, Long, Anderson, Douglas, Williams, Flanders, Malone, Carlson, and Bennett.

. The Chairman. We will come to order.

Senator Anderson?

Senator Anderson. Mr. Secretary, I repeated to your predecessor a remark made by a famous Texan who lived down in Houston, named Jesse Jones, that we would never be able to pay off the national debt. We could only water our currency and gradually get rid of it that way and we would have less relative value.

Someone figured out that we paid half the national debt already

by the reduction in the value of the dollar.

Do you think that the starting in again of deficits might start off another little wave of reducing the value of the dollar?

## STATEMENT OF HON. ROBERT B. ANDERSON, SECRETARY OF THE TREASURY—Resumed

Secretary Anderson. Well, I don't think you can overlook the fact that the excessive creation of debt does contribute to a decline in the value of the dollar.

Senator Anderson. Don't you also think, Mr. Secretary, that a debt limit has been helpful in holding the line against these deficits?

Secretary Anderson. I agree with that, sir.

Senator Anderson. I surely do. I have strongly supported the thing that he chairman did when he stood firm against an increase in the national debt. I do not mean to say that I have prejudged this case or am deciding it now, but the position of the chairman appealed to me very strongly.

Out in our part of the country, Mr. Secretary, a cotton farmer took his cotton acreage out from under the soil bank and got a check of \$209,000 from the Government for doing it. He turned around and took some new land, put it under cultivation, and planted over twice

as much cotton as he had before.

I thought it was very, very, foolish. I won't ask you as a Cabinet officer to comment on whether it was foolish or not, but I think if we had a firm limit on the national debt we might eventually get rid of some of the idiotic things we have done under the farm program, this cotton deal being one of them, and that is why I am somewhat interested in it.

I am very much interested in what effect this increase in the na-

tional debt would have on our defense spending.

I think it is on rather loose defense spending. This is not the time nor place to decide how loose it has been, but I took out of Business Week for December 21 a page that says: "There is magic in missiles"— and it lists the fact that, as of October 4, taking the values of October 4 of certain stocks, that Aerojet General has gone up 32.5 percent between October 4 and December 16.

I do not have to tell you what the general pattern of stocks has been

during that period.

Secretary Anderson. Yes.

Senator Anderson. I have just had an appraisal made of an insurance company of which I am an officer, and we operated reasonably well as far as operations were concerned, but we lost money on the most conservative investments you could imagine.

So, I assume most all stocks have probably moved down during this

time

Douglas Aircraft, however, between these dates moved up 21.8 percent; General Dynamics, 24.6 percent; the Martin Co., 24.1 percent; and North American Aviation, 46.3 percent since October 4.

Mr. Secretary, it is my opinion that missiles contracts have been largely responsible for that. Don't you believe that, if we increase this national debt, the missiles contracts may flow like water around

Washington for a while?

Secretary Anderson. It would seen to me that the emphasis which is placed on procurement of missiles is going to be governed more by the recommendations which are made to, and the appropriations which are made by, the Congress with reference to the necessity for this kind of a weapon in order to insure protection of the country than by the debt limit.

The debt limit relates primarily to the problem that is created after the contracts are made and when payments begin, because we are concerned with the rate at which money flows into the Treasury from our receipts and the rate at which the money flows out, either to pay

for progress payments or to pay for the finished articles.

Now, there is not any doubt but what the number of contracts which are made now will have an effect on the rate at which this money is expended. But it will be a delayed effect rather than an

immediate one.

Senator Anderson. Mr. Secretary, I am not trying to single out this company, but this is a Douglas Aircraft booklet, Seventeen Years of Missiles Systems, and starting off to show the Marks and then into the Corporals and the Aerobees, and, on very nice paper and very good printing, the Sparrows, the Nike-Ajax, the Honest John, the Genie—formerly known as the Dingdong—the Thor, and Nike-Hercules, the Sparrow II, and so forth.

These are the things which have shoved up Douglas Aircraft earnings, and there is a tremendous drive on for more and more missiles. It seems to me that \$5 billion more will be an open invitation for this to continue.

The Joint Committee on Atomic Energy has been conducting hearings and we have had, I think, every expert that we could lay our hands on come in and talk about large missiles, the extremely long-

range missiles, and so forth.

We had men from every branch. We had people from the National Committee for Aeronautics and many other groups. Not one of them said that above a certain level you should depend upon anything but nuclear fuel. Yet, within the last few days, and I will try to stay away from classification—and I am sure I will succeed—but within the last few days, a project has been proposed, and, I believe, endorsed, for the construction of a new type of engine that will develop several times the power of the Atlas engines, and not a single expert who was before the joint committee says it is feasible.

Not a single rocket man who has studied this project says it is feasible, but here is a chance for some company to get some more contracts, and, if we increase the debt limit, don't you feel it will

create an easier atmosphere in which to get these contracts?

Secretary Anderson. Senator Anderson, nobody is more interested than I am, or we in the Treasury in spending our funds wisely. I have said in my statement to the committee—and I would reiterate to you—that if this \$5 billion debt-limit extension is given to us, insofar as it is possible, we will not relax any efforts to insure the economic and wise expenditure of our funds.

What we have here is a problem that has already been created, with a very large amount of money available through appropriations for all kinds of expenditure purposes. This Congress will create some more, in its judgment, whatever you decide is the right amount.

But what it finally gets down to in our request is that we believe that, if bills are presented to the Treasury to be paid, we must pay them. This is something that the good faith and credit of the United States requires. We have to make the best judgment we can, not of the rate that we judge people ought to spend their money, but at the rate which they are going to spend their money and in which they will be putting the bills up to the window for us to pay.

On this kind of a basis, it seems to us that asking for the equivalent of 12 days' expenditures, which is about a \$3,500 million operating balance, is a rather prudent, a rather modest request, and that asking for the remaining funds is a matter of taking care of contingencies, providing for the discovery of new techniques, providing for what may happen in our economy, and what may happen as a result of the

judgment of the Congress.

I do not want to be unreasonable. I do not want to try to make the job of the Treasury easy. I would not purport to come to this committee and say, "Let's just do away with the debt limit." I think it is a useful tool. But it seems to us that what we are saying is, "Give us this much latitude; let us see how well we can handle our bills, how well we can manage the debt," and 18 mouths from now we will be back, saying either "We do not need the increase" or "We do" based upon our capabilities.

I would like to point out, for example, some figures on local Government agencies—and the figures which I have here are taken from the Bureau of the Census and they cover only the beginning and the end of the year balances and there may be wide swings as there are in our case.

We have been maintaining seven-tenths of a month's expenditures as an average cash balance.

State governments on the average maintain balances of 2.3 times

expenditures. That is based on their monthly expenditures.

Cities mantain an average ratio of 2.2. If you include in that all school districts or local subdivisions, all local governments as a group maintain about 3.1 times their average normal expenditures.

What we are seeking here is just a reasonable amount of latitude to accomplish both our responsibility of paying our bills and in the

management of the debt in providing for moneys.

Senator Anderson. Mr. Secretary, I know what your personal attitude is and what your official attitude would be. You would have no fears of criticism on that score from me and you know it.

Secretary Anderson. Surely.

Senator Anderson. But I do maintain that there may be a good influence in not just automatically lifting the debt ceiling, but in possibly looking for places where money might be saved and I think if the debt ceiling is not raised too suddently you might find some of those places.

In the farm program the conservation reserve in 1956, your State of Texas and my State of New Mexico together got more conservation

reserve money than all the rest of the Nation put together.

But nonetheless, that will not be the situation this year. We only spent about \$30 million that year, nationwide, in the conservation

part of the soil bank.

This year is a recommendation we spend \$450 million. Now if you leave the debt ceiling on, the Department of Agriculture might say, "Well, maybe we do not have to spend that \$450 million on the conservation reserve. Maybe there is a different type of farm program that might do the job just a little bit on it."

That is all I am saying on these missiles. If the experts who testified before the Joint Committee are right, then I know that this proposal to increase the motors in the Atlas missile 3, 4, or 5 times, whatever it may be, I will be careful about that situation, but whatever it is, I know it is folly. It cannot possibly succeed, and the people who propose it must know it cannot possibly succeed.

But the strange fact is that the Atomic Energy Commission supplies the nuclear fuel and there is no private profit motive in that so we get a lot of proposals to build another type of motor when every witness testifies that once you get over the range that the Atlas

is designed to cover, you had better go to nuclear fuel.

We had a few million dollars, a few paltry million dollars, chopped out of the nuclear fuel project and we will add a hundred times that

much in this project alone.

I am only saying that I believe if the debt limit is not raised we might be able to find some spots that would trim some of this money on it. Here is a market letter dated January 24 which talks about thickol and its solid fuel possibilities, and it says that in statistical terms the story goes like this:

"Sales \$1.1 million in 1948; \$28 million in 1957. Earnings \$52,-000 in 1948; \$1.4 million in 1957." This indicates why we realize

that they are interested in these solid fuels.

I don't know what the military will say about their problems. But you get interesting correspondence. I have been sending some things out to nuclear scientists and asking for their comments and I got one back the other day from a man who pointed out that Northrop had a plane plant at Anaheim, Calif., I do not know this to be true—I have not been to Anaheim in a long time—it is brandnew, completely equipped. The service that was going to use it decided not to use it. Firestone Tire & Rubber Co. missiles section wanted to buy it or lease it but they were dealing with the wrong branch of the military services and they could not have it so they had to go elsewhere and finally all the equipmnet stood idle for a full year and then was sold to a private company.

But the Northrop Co. asked for—that had this fuel, and got money to build a whole new plant at Hawthorne and an office plant in Beverly

Hills.

In private business you would have recommended that they take a look at the plant again and if you have a debt limit that holds them down you are going to say to these people "Find out where

your dollars are going."

Secretary Anderson. Senator, if I may, whatever the debt limit may be, I would certainly be one of those who subscribes to the belief that we ought to examine into each of our expenditures to be sure that they are fruitful and that they produce what we really expected from them.

Senator Anderson. I know that you would, because I have watched

your services when you were watching them.

You and I are familiar with the Navaho project.

Secretary Anderson. Yes, sir.

Senator Anderson. When the Navaho project was abandoned at the cost of—well the official figure is \$725 million, I think it was over a billion dollars, but anyhow \$700 million was thrown away on the Navaho. They did not use the plant out there, they turned around and told General Motors to build a new plant costing \$55 million up in Wisconsin and moved people up there from the California situation.

I am only trying to say to you, Mr. Secretary, that I constantly feel if we put some sort of limit on the debt ceiling that you could say,

"Well, we cannot afford that sort of thing."

In the discussions in the last few days someone told me that there was a proposal to put a missile weighing 300 pounds on the moon, and that somebody is seeking a contract to do it.

Yet, in an independent study, made many years ago, a study was paid for to put a 300-pound missile on the moon, worked out all the details, that has been filed, and a new plan is now going to be developed

to cover the same sort of ground.

I pointed out to people in the joint committee that there had been a project world series which proposed to put a 2,200-pound missile into the sky. Actually, it was 1,180-pound scientific weight, exactly what the Russian missile, the second one, weighed. This study was made in 1956, in March. It was called "Studies in ballistic test vehicles and analyses of problems associated with the advanced reconnaissance satellite."

Nobody in the Department can find the study.

General Betts, who was before our joint committee, is Mr. Holaday's assistant. He had never heard of it. I mentioned it to the Secretary of Defense; he had not heard of it. I understand that; he could not possibly be familiar with all the past history.

But the studies are made and put away and then a new firm is given a million dollar or \$5 million contract to make the study over again. I am just hopeful the debt limit will keep that sort of thing from taking

place. I don't say that it will.

I just want to go to missiles together with you again and then stop. Here is the Newsweek magazine for, I guess, this last week. It has a full-page ad about a missile that cannot miss, the Talos missile, a Navy missile.

It has a full-page ad about the Sidewinder, a Navy missile, a big

story about a Navy missile in it.

These, I presume, are public relations jobs that the Navy has worked up but it mentions Sidewinder. Sidewinder is a very interesting missile but it is an air-to-air antiaircraft missile and we have five of them now coming along with this. We have certainly a very good one in the Genie, the MB one, an excellent missile. If you stop and ask a military man what Sidewinder will do that Genie won't you have trouble getting an answer.

But in the Falcon missile which is air-to-air, an antiaircraft missile, I visited the White Sands Proving Grounds and found

that there were 250 people working on the design of them.

It shocked me to think that many were working on it. When I checked the payroll I found that 2,500 people were working for Hughes out in Beverly Hills on it and you ought to look to see what the product has been of those several hundred millions of dollars spent on the Falcon missile which now is not a very good missile.

I just say to you, Mr. Secretary, for what it is worth that I believe if we kept the debt limit pretty tight this sort of expenditure could

not take place.

The Honest John missile was a pretty good missile. We finished it and built the Little John, which has somewhat slighter weight and little less mileage and then standing right up beside it is the Lacrosse. While the missiles are different, you find out what the mission of the missile is, and there is not much difference.

A newspaper the other day carried a headline "Navy Polaris soars

in test firing."

Mr. Secretary, you and I know that the Navy Polaris did not soar, did it? It not only did not soar, but it cannot soar. It does

not exist and it won't soar for at least 2 years.

This is a press agent job for the sake of what—to keep the missiles program rolling, and I am just afraid that we are going to keep on getting these jobs foisted on us as long as there is money to be had out of the public till and if we chopped it off it might not happen.

If you read the story, it is a cleverly worded story by somebody; it says that the components soured.

Well, a component could be a cotter pin, a bolt, a nut, anything else could be a component. [Laughter.]

But the Polaris, as you well must know, because you were connected with defense, even with the speedup is not scheduled for a long time to come.

Yet there was a full page ad of it in the magazines just a short time ago pushed on them by the public relations departments of our Government, and I am just merely saying if we might hold this down a little bit, we might not have to increase to much and we might save some of the money to go on.

We have several different kinds of missiles, and I do not see any

end, if we just turn them loose.

We made a decision between Jupiter and Thor, then had to back

up, started both going again.

Now somebody says that Polaris will supplant them both. We had Atlas decided upon, then they decided to go with Titan also because Atlas might fail, and there just is not enough money in the country

to keep going with all these programs.

We have got millions and millions of dollars for missiles this year but when you have got a list, these are not secret, this was published in a magazine, but if you look at the manufacturers you get a clue as to why Honest John had to be replaced by Little John, because Douglas and Hercules Powder had Honest John, and Emerson Electric got Little John. And the one that is just like them, Lacross, it got over to Martin, Thiokol, and Federal Manufacturing. Everybody has to have a little piece of the show. I went into a barbershop the other day and the barber said "We certainly are busy—the missiles men are in town." [Laughter.]

I am just trying to say that some of us who believe that may be one way of getting the missiles men out of town again would be to hold

the debt limit where it is.

Secretary Anderson. Senator, I would not try to justify all of the separate programs in the missile or any other field with which I am not fully familiar. I would say, however, sir, that while I believe very strongly in the debt limit as an instrument of restraint, as an instrument of making us take a second look, of evaluating what we are spending our money for, it seems to me that programs of this sort will not quickly be revised and even if they are revised there will be costs incurred in the revision and in the closing of them, and that our efforts here are based upon just the realization that experience has taught us that we are going to have about this level of expenditures under the programs as they now exist.

That we do face in a country as big as ourselves problems which no one can foresee, and that we do need to have these reasonable

balances.

I would not ask that the balances be so great as to encourage people to believe that there was any amount of money available and that

the need for economy had ceased.

What we try to do here is to say 12 days is a modest amount, it is a modest balance, and that the balance which we are asking for flexibility in debt management is a modest balance, a prudent one, and that the restraining influence of the debt limit still ought to weigh very heavily upon us and as far as I am concerned I am sure it will.

Senator Anderson. As I say, I recognize you need to have money

to pay your bills, any responsible business has to have it.

Secretary Anderson. Yes, sir.

Senator Anderson. And I do think there is a restraining influence in the debt limit. There are many of us who think the missiles program is going to get completely out of hand and you will never be able to get close to a balanced budget if we do not stop it before it

gets out of hand.

When the able chairman of this committee and I sat in a briefing at the White House last December, I did not, I thought, get—it did not seem to me there were very good answers to the question of why we had to have several types of the same missile but just as soon as the Army got one, the Air Force and the Navy had to have one, and constantly the same thing takes place. I just do not believe we can afford all these things and we could cut them out as I think we ought to cut the many hundreds of million dollars out of the farm program, then we might get our fairly satisfactory balance in the future.

Senator Williams. Will the Senator yield for a question?

As I understand it you are for an advanced missile program, but as I understand it you do not want the debt ceiling to reach the moon ahead of the satellite.

Senator Anderson. I think the Senator from Delaware has it about right. I think if we would sit down and take a look at the missiles we would realize the problem that faced us in the constant development of these fancy missiles. I went to a briefing at the Army's area in the White Sands Proving Grounds. White Sands Proving Grounds is part of a proving ground that is used by the Army, the Navy, and the Air Force.

The Army has its installation at White Sands, and the Air Force has its installation at Holloman Airbase but they are a very few miles apart, air distance, and they are all using the same base steadily. I had just taken a very careful look at what I used to be the Ding Dong which became the Genie which now becomes the MB-1 and it is a very, very fine air-to-air missile.

It is an exceptionally good missile and everything that I think the Air Service could want, and I asked the briefer, the man who was in charge of the briefing to tell me what Army missile was equival-

ent to the Genie and he did not know what the Genie was.

I said "Well, then, tell me what the equivalent to the MB-1 is." He did not know what the MB-1 was. He is almost 20 miles away from the base where it is fired steadily, but he had not heard of it. He is in another branch of the service.

There was a three-star general sitting beside me who came out from Washington to see the briefing went on all right. He had never heard of either one of them and, if we knew what the other branch of the service had, we might not make the requirement for a brandnew missile, just precisely the same task over and over again.

I honestly believe we can squeeze an awful lot of money out of the missiles programs and if we did we might be able to do what the chairman persuaded the Government to do before; namely, live within

that debt limit.

Thank you, Mr. Chairman.

It is probably extraneous, but I cannot help but feel we can, possibly, save money.

The CHAIRMAN. Thank you Senator.

Senator Williams. Mr. Anderson, first, I want to say I realize your problem and am willing to go along with whatever increase in the debt ceiling may seem to be justified. But, in connection with arriving at that decision, I am wondering did the debt ceiling last—the fact that we let this temporary increase in debt ceiling of \$3 billion expire June 30, you remember; did the expiration of that temporary debt ceiling hinder Government expenditures during the past 6 months to such an extent that our defense preparedness lagged more than would have been the case had you had a greater leeway?

Do you think there was any cutback in such expenditures, based

upon the fact that you did not have adequate leeway?

Secretary Anderson. Senator Williams, I would not be able to answer your question in detail. I would simply say to you that from time to time I have felt it incumbent upon me to call the attention, not only of the Department of Defense but of all the other departments of Government, that we were very close to the debt ceiling, and that, while we all realize that we must perform those functions which are essential to this country, we ought to perform them in the consciousness that we faced 1 or 2 alternatives, either that our expenditure programs not move forward so rapidly as to exhaust our balances, or we would have to face the problem of recalling the Congress to ask that the debt limit be increased.

Senator Williams. Do you think there was any cutback as a result

of that feeling?

Secretary Anderson. Yes. I think there was some. I think there was some increased requirements for the investment of private capital on progress-payment contracts. And I think—

Senator Williams. Do you think the missile program was cut back

as a result of that situation?

Secretary Anderson. I have no reason to say that I think the missile program was cut back; no, sir.

Senator WILLIAMS. Thank you.

The Chairman. I would like to say, in that connection, the White House admitted that the ceiling had nothing whatever to do with it. Secretary Anderson. Yes.

The Charman. With the situation regarding missiles.

Secretary Anderson. Yes.

Senator Williams. In order that we may find out about this, what have been the expenditures during this current fiscal year up to date in the military appropriations, military expenditures, and how do they compare with the expenditures for the preceding year for the same period?

Secretary Anderson. You are talking about cash expenditures? Senator Williams. I am talking about cash expenditures; yes, sir. Secretary Anderson. Let me get the Treasury report.

Senator Williams. As of the most recent date that you have, and what date is that?

Secretary Anderson. This is from July through December 31, 1957. For total military functions, July to December 1957, the expenditures were \$19,359 million.

Senator Williams. That is from July 1 until December 31?

Secretary Anderson. Yes, sir.

Senator Williams. All right.

Secretary Anderson. And the corresponding period for the fiscal year 1957, \$18,375 million.

Senator Williams. May I have those figures again?

Secretary Anderson. For the fiscal year 1958 to date, which would be the current fiscal year.

Senator WILLIAMS. Yes.

Secretary Anderson. \$19,358 million.

Senator Williams. Yes.

Secretary Anderson. And for the corresponding period in fiscal

year 1957, \$18,375 million.

Senator WILLIAMS. In other words, you spent \$1 million more in the last 6 months of 1957 than you spent in the last 6 months of 1956 in the Military Establishment?

Secretary Anderson. Approximately \$1 billion; yes, sir.

Senator WILLIAMS. And you have spent more than if you had it? Secretary Anderson. I do not know how much of an increase there would have been.

Senator WILLIAMS. If we act on the assumption that they held back, then the other line of reasoning is that you would have increased it over and above that extra billion; is that right?

Secretary Anderson. Well, you must remember that I would not be able to measure the total effect which the debt ceiling had in restraining those expenditures. Now, I will say this to you, that, shortly after coming into this Office, and shortly after Mr. McElroy

assumed his responsibilities, there was some additional expenditure planned for the Department of Defense for the remainder of this fiscal year of about \$868 million.

Senator WILLIAMS. That is true.

But they will develop mostly in the next 6 months, will they not? Secretary Anderson. For the most part.

Senator Williams. For the most part?

Secretary Anderson. Yes, sir.

Senator WILLIAMS. But for the last 6 months of last year were about a billion higher than the preceding year?

Secretary Anderson. At that rate; yes, sir.

Senator WILLIAMS. What is your cash on hand as of today, sir?

Secretary Anderson. It is about \$2 billion. We were just——Senator William. Here is the last report, January 16 report, which

was about \$2.6 billion, if I remember correctly.

Secretary Anderson. On January 22, Federal Reserve funds were \$454 million, and tax and loans around \$1,345 million would be, the sum of those 2, about \$1.8 billion.

Senator Williams. May I have that report I just gave you there? Isn't this your net balance of all your accumulated right here, which would be \$2.6 billion?

Secretary Anderson. The Treasurer's balance figure which you are looking at was \$2.9 billion on January 22, Mr. Heffelfinger tells me, including uncollected balances—

Senator Williams. What was last year's figure?

Secretary Anderson. The actual figure on the left is Federal Reserve banks—

Senator WILLIAMS. How does that compare with the last year?

Secretary Anderson. Of the same date?

Senator Williams. The preceding year. Yes. Secretary Anderson. January 15, 1957, approximately \$1.3 billion.

Senator WILLIAMS. And it is how much this year? Secretary Anderson. Approximately \$2 billion.

Senator Williams. Approximately \$2 billion. In other words you have \$700 million more this year in cash than of a comparable date last year?

Secretary Anderson. That is correct, sir. The debt limit, of course,

as you know, was \$3 billion higher then.

Senator Williams. Well, the fact you spent about a billion dollars more in the military than you spent in the comparable 6 months, the preceding 6 months, and your cash has increased by \$700 million and you have leeway in your national debt, I think, of about \$800 million, plus the drawing fund that you would have if you would sell some more FNMA mortgages, I think there has been adequate money to finance the payments of the debt during the past 6 months.

Secretary Anderson. Yes, we have made the payments.

Senator Williams. You have been able to make your payments and have not been squeezed necessarily?

Secretary Anderson. I would not say we have not been squeezed; we have been very close to the limit—within a few hundred million dollars

Senator Williams. Do you think a greater leeway would have been easier to have floated long-term debt, given you more-

Secretary Anderson. Yes, I think it would, sir.

Senator WILLIAMS. You think it would.

How much long-term debt was floated during 1957?

Secretary Anderson. Well, we had in the latter part of 1957 two long issues. Two issues of a half-billion each—

Senator WILLIAMS. The point I am making is, those were both longterm issues and floated during the last half of 1957; weren't they?

Secretary Anderson. That is correct. They were in small amounts. Senator WILLIAMS. And the debt ceiling expired on June 30?

Secretary Anderson. That is correct.

Senator Williams. In the preceding year in which you had the higher debt ceiling, the preceding fiscal year, were there any long-term bond issues floated?

Secretary Anderson. I do not think so.

Senator Williams. Were there any 2 years prior to that? 1954-55 were the last ones prior to this year?

Secretary Anderson. July of 1955.

Senator WILLIAMS. So I just wondered if really this debt ceiling had proved to be the handicap, because the only long-term issues that had been floated in the last 4 years were done after this lapsed in the last half of last year?

Secretary Anderson. Senator Williams, the point here is that market opportunities come from time to time in which you feel, first of all, that the rate of interest at which money is procurable is reasonable, and, secondly, that there is money available for that kind of investments, where you could have some long-term investments.

Now then, what we are saying is that when those opportunities do present themselves, we want to be in a position and should be in a position, in our judgment, to take advantage of extending as much of the debt as we can.

Senator Williams. I think that is correct.

Secretary Anderson. Yes.

Now during the periods in which there is a great demand for investment funds from all kinds of industries, where interest rates are rising and where the availability of money is less, those opportunities simply do not present themselves.

Senator Williams. We were speaking a moment ago that some

of the spending had been curtailed as a result of the ceiling?

Secretary Anderson. Yes.

Senator Williams. \$275 billion ceiling.

Do you know of any particular departments in which—or any

specific projects which were curtailed?

Secretary Anderson. The only one that comes to mind immediately is the requirement by the Department of Defense of their contractors to invest, as I recall, about 5 percent more of their funds in the development of their materials which they were selling to the Government.

In other words, by reducing the amount of the progress payments

which were being made.

Senator WILLIAMS. Is that order still in effect?

Secretary Anderson. So far as I know it is.

Senator Williams. If the debt ceiling were raised would it be reversed?

Secretary Anderson. No. sir.

Senator WILLIAMS. It would still remain in effect?

Secretary Anderson. It would remain in effect.

This, as I understand it, was a decision of a permanent policy by the Department of Defense.

Senator WILLIAMS. That was my understanding and it had no connection with the debt.

Secretary Anderson. Its timing may have had a connection with the debt ceiling.

Senator Long. Might I ask that question be answered again because I am trying to follow the witness and I think it is a very important statement to the committee.

Secretary Anderson. Senator Long, if I get what you want answered again, it was the question that the Department of Defense has contracts in which it makes progress payments as work is performed and it was a decision of the Department of Defense that they would decrease the amount of progress payments that were made from time to time by something like 5 percent.

As the progress payments are decreased the manufacturer is then required to invest more of his own funds in the development of the materials up to the point that it is a finished airplane or a finished missile or whatever it is, and is delivered to the Government, at which time

you pay it all off.

Senator Long. So he gets just as much money but he must advance some of his own money, at least a higher percentage of his own money, in fulfilling his contract?

Secretary Anderson. That is correct.

Now, then, as Senator Williams asked, was this something that would be reversed if the debt ceiling were increased, and I said I do not think so.

I think it was there as a permanent policy.

Now, there is this side effect that the manufacturer, if he is on a cost-plus basis, will, of course, go into the market to get whatever additional funds he may need for his own investment, and then the cost of that additional money becomes a part of the cost of the finished product which, of course, is paid for at the time you get the final product.

Senator Williams. But the point I was making was that it was my understanding that was a policy and one which would be continued

regardless?

Secretary Anderson. Yes, that is correct.

Senator WILLIAMS. And one which was inaugurated regardless of the situation?

Secretary Anderson. Yes.

The Chairman. You feel they were getting a larger percentage than they should be getting, I assume.

Secretary Anderson. It was the decision of the Department of Defense.

The CHAIRMAN. Based not upon the debt limit but because they thought that manufacturers were getting a larger percentage of their costs?

Secretary Anderson. Yes.

The Chairman. Before the article or whatever it was, was finished, is that correct?

Secretary Anderson. That is correct.

The Chairman. And that is the reason they changed the policy? Secretary Anderson. I would think that the timing of the change was probably influenced by the tightness of our situation but that is correct.

Senator Williams. The question was raised by the chairman this morning as to the connection between deficit spending and inflation, and I think it was brought out that the dollar since 1913 had dropped, lost two-thirds of its value, was that correct?

Secretary Anderson. That is correct.

Senator Williams. And that one-third of the value was lost between the period of 1940 and 1946.

Is that correct?

Secretary Anderson. One-third of it?

Senator Bennett. From—one-third of the value lost after 1913 was lost between 1946 and 1956, not 1940 and 1946.

Senator Williams. Yes, 1940 and 1956.

Senator Bennett. Right.

Senator WILLIAMS. Now, my question was this, when was the other one-third lost?

Secretary Anderson. Well, this is the schedule right here.

Senator Bennett. You cannot answer that question, John, because

they kept shifting bases this morning.

Senator WILLIAMS. That is the reason I want to get on base, I got caught between, and if I read this chart on page 418 of this hearing right, and all of our talk this morning was centered around the 1939 dollar, was it not?

And you started back in 1913, the 1939 dollar, assuming that to be a hundred, was valued at 140 percent, is that correct?

Secretary Anderson. That would be correct, yes, sir.

Senator Williams. A dollar forty, and we lost—what was that worth in 1920, that dollar?

Secretary Anderson. I do not have the figure for 1920.

Senator Williams. It is on page 418, Mr. Anderson.

Senator Bennett. It was worth seventy cents.

Secretary Anderson. Seventy cents, 69.3.

Senator Williams. In other words, we lost—the value of the dollar lost two-thirds of its value since 1913.

One-third of it was lost in the World War I period or that 8-year period and the other one-third was lost between the period of 1940 and up to the present time, is that right?

Secretary Anderson. Yes.

Senator Williams. And between those periods it was a relatively stable dollar.

In fact I think the dollar actually increased in value a little bit.

Secretary Anderson. During the period of the twenties it did increase.

Senator Williams. During the period of the twenties it increased in value?

Secretary Anderson. Yes, sir.

Senator Williams. And your drastic drop was in the two areas about half of it taking place from 1913 to 1920?

Secretary Anderson. That is correct.

Senator Williams. And the other half of the drop taking place beginning with 1940 and ending up to the present time, but the bulk of it ending in 1952 and 1953, isn't that correct?

Secretary Anderson. That is correct.

Senator Williams. I think this chart, we do not want to duplicate this, Mr. Chairman, if this was not the one incorporated in the record, I would like to see this same chart which appears on page 418 of the monetary hearings inserted in the record of this hearing.

Mr. Mayo. That particular chart has not yet been introduced in

this record.

The CHAIRMAN. Without objection, it will be placed in the record at this point.

Source: Department of Labor and derived computations.

Senator Williams. Because it does give a complete breakdown from the year 1913 all the way through, and I am like the chairman, I cannot help but feel that there is a decided connection between deficit spending and the value of the currency, and in speaking of the value of the dollar, the question was raised about it being impracticable to roll it back to the 1939 level.

Have you heard any suggestion of anyone connected with the administration or anyone connected with the Government of trying to roll it back?

Secretary Anderson. No, sir.

Senator Williams. Isn't the concern to hold it stable?

Secretary Anderson. I think the concern is to be sure it does not

depreciate further.

Senator WILLIAMS. Just for the record, do you in studying the historical record of other countries in dealing with inflation, do you know of any country in which there has been serious or catastrophic inflation developed that such a catastrophe was not first preceded by a series of unbalanced budgets?

Secretary Anderson. Well, my recollections of the details of the history would be such that I would not want to say this categorically. I am sure that imbalance in payments has been a characteristic of those countries in which there has been great inflation. It has always has been a contributing factor substantially.

Senator WILLIAMS. And you feel that in order to manage this debt

you would need the full 5 billion, do you, Mr. Secretary?

Secretary Anderson. Senator Williams, I honestly do. I have studied the problem as conscientiously as I can from the standpoint

of trying to be modest about the increase.

As I said to the chairman earlier, certainly we can pay the bills of the Government with something less than this, if the expenditures do not radically exceed those we anticipate and if the revenues are collected at something approximating the rates which we are assuming.

I do not want to jeopardize any savings that can be made in this country. I would simply emphasize that we have three considerations: One, the maintenance of reasonable balances to pay our debts.

Two, the maintenance of sufficient margins of flexibility that we can take full advantages of all opportunities that come to get the debt in better balance.

And, finally, to have a reasonably prudent amount which we can

call upon for contingencies.

Now the minds of men can differ. This is not an effort to make my job easy, but it is something that we have tried to regard as a

modest approach to our problem.

Senator WILLIAMS. I might say that I recognize our responsibility to give you the means whereby you could manage the debt and pay the bills, and it is our responsibility here to give consideration to that at the time we authorize those expenditures.

Secretary Anderson. Surely.

Senator WILLIAMS. And not pass it on to you, the responsibility. But how would you feel about using, say we had this 4 or 5 billion dollar debt, using a portion of that leeway to finance a tax reduction?

Secretary Anderson. Well----

Senator Williams. In other words, I will put the question this way: Do you, I think there is a question which has been raised as to whether you would favor tax reduction under certain circumstances?

Secretary Anderson. Yes.

Senator Williams. Well, suppose we had a circumstance where we were operating at a deficit, which we would be if there was a period of high unemployment.

Would you further that and utilize a portion of this national-debt

leeway to finance a tax reduction in such a period as that?

Secretary Anderson. Senator Williams, the point at which the debt ceiling would be set would not be the determining factor in

my own judgment, as to the advisability of tax reductions.

As a matter of my own thinking, I believe that we ought, so far as it is possible, to pay for our current expenditures out of current earnings and particularly at a time when the operation of the economy is at relatively high levels, it is undesirable to add to the debt and to the burdens of future generations.

I have said, however, that it is conceivable to me that economic circumstances might be such as to warrant the utilization of a reduction in taxes as a fiscal instrument to improve the growth and development of the economy of the country.

I do not believe that that time is here now.

I would arrive at that judgment more by the conditions of the

economy than I would by the debt limit.

Senator Williams. Should such an event arise wherein you felt that the tax reduction under those circumstances was justified, would your request have to be accompanied with a corresponding increase in the debt to finance that or would you have adequate leeway under this 5 billion to do it, assuming it came this year?

Secretary Anderson. Of course that would be a question that would be dependent upon the size of any reduction, but if the expendi-

tures remained relatively high-

Senator Williams. You could not get much of a tax reduction

of less than \$2 billion for it to do anybody any good?

Secretary Anderson. If the expenditures were going to be high and the revenues were going to be low and you were going to have a tax reduction—and utilize it as a fiscal instrument—then you would have to have more increase in the debt ceiling in order to borrow the money to accomplish it.

You would have to tie the two together.

Senator Williams. In other words, I saw the question raised and the reason I was bringing it up, was I saw the suggestion made that one purpose of getting this \$5 billion was to get the necessary leeway for a couple of billion dollars tax reduction if later on it was decided upon. I did not think it was true but I wanted to get it on the record.

Secretary Anderson. It has not gone into our thinking, Senator.

Senator Williams. It was not. If there was such a tax reduction authorized later it would be accompanied by an increase corresponding in the debt?

Secretary Anderson. It would if expenditures remained at a high

Senator Williams. And you think this is needed for any program other than that?

Secretary Anderson. That is our judgment, sir.

Senator Williams. I have no further questions.

The CHAIRMAN. Senator Frear?

If you will pardon the Chair for just one moment.

I would like Senator Douglas' attention to this because he took a great interest in this—in 1953 at the time of the first request for the increased debt limit, one of the reasons, I think, why the Senate Finance Committee rejected it was the high balances on hand?

Secretary Anderson. Yes, sir.

The CHAIRMAN. And I see that on January 9, 1958 you submitted to me a statement that indicates that at certain periods you expect to have \$5 billion and \$6 billion on hand which is not drawing interest and deposited in banks.

What assurance has the committee got that you will not have over

\$3 billion on hand?

Secretary Anderson. These are figures which relate to the middle and the end of each month, and there will, Senator Byrd, be fluctuations between those periods, both up and down.

There will be periods in which it will be in excess and there will be periods when it will be lower, and the \$3.5 billion is an arbitrary

balance.

I would not by any means want to represent—— The Chairman. It may be \$6 billion or \$7 billion.

Secretary Anderson. It could because the shift would be very great. The Chairman. That is in the banks without any interest paid on it? Senator Douglas will recall there was a very great debate in the Senate, and that makes the possibility of it that much greater if you get the full amount of the increase that you ask for.

Secretary Anderson. There are those fluctuations and they come in particularly when there is a heavy taxpaying period, and then the balances decline as you have noted into relatively small figures, even

within the 2 weeks period.

The Chairman. Senator Douglas, do you have any questions on this?

Senator Douglas. I took the figures of the New York clearing house which are weekly figures on the Government balances. I took them from the New York Times over a period of some years, from 1953 through early 1957 for each of the banks and I put them into the Congressional Record, I believe last year, with the letters A, B, C, et cetera

for the banks rather than specifically identifying the banks.

I can only say that in some banks the balances never fell below many millions of dollars. Even during the weeks of the greatest withdrawals there would still be a balance in some banks running into the millions of dollars. When I took the lowest figure for each bank, i. e., the lowest figure of bank A, during this period of years, and the lowest figure for all of them in any week during this period of years and totaled them the result was a very large sum of interest-free deposits.

I think, I mentioned to you privately when you were confirmed last summer, my concern about this matter. We now have some tentative figures for clearinghouses of other cities and this whole ques-

tion I think is a very serious one.

Secretary Anderson. Senator Douglas, I do not have your concern about this situation. In the last few weeks Mr. Baird and I have had 2 or 3 conversations with Mr. Campbell. We have been studying it, and there are these considerations, among others: The balances are spread over about 11,000 banks in the country. They run from periods during which they are relatively high to periods when they are fairly low.

I think I said in my testimony to the House Ways and Means Committee that sometime in February we expect all of the balances in the country that are in the hands of the banks, uncalled for, that is uncommitted, to get down possibly as low as \$250 million or \$275

million.

Senator Douglas. You mean the total?

Secretary Anderson. Yes, sir; the uncalled balances.

The CHAIRMAN. That would not be true if you increased the debt limit?

Secretary Anderson. I beg pardon, sir.

The CHAIRMAN. That would not be the case if there were an increase in the debt limit.

Secretary Anderson. No, sir; if we had some additional borrowings, it would not. This would be one of these tight periods.

Senator Douglas. I am not maintaining that you should keep the total deposits down to \$275 million.

Secretary Anderson. I know that.

Senator Douglas. I agree that would be a dangerous point. But I am merely reenforcing what Senator Byrd pointed out at the time, namely, that you have billions of dollars of deposits in banks, and while it is true that small banks have small amounts, it is also true that big banks have tremendous amounts and this is interest-free money.

As practical men we know that one of the great abuses in banking is the use of interest from deposits of public funds—of local funds, county funds, and State funds. I believe we have had some experiences in Illinois in this respect and this is a political football.

I do not say nationally, but I mean locally.

As I understood it the justification that was originally advanced so far as the interest-free deposit of national funds is concerned, was that it would merely offset the unpaid services which banks performed for the Government, and during the period of the war, I quite well grant that they did perform a great many unpaid services in the floating of bonds and so forth and so on.

But certainly the volume of these unpaid services has declined as we have moved away from war emergency into a financial situation which

has become approximately stabilized.

If you go into this matter, as you apparently are doing, I think you will find that there are real opportunities, either of cutting down the total balances or if you insist on depositing them to have some of them, at least, in time deposits on which interest could be collected.

Secretary Anderson. Senator, there are 2 or 3 other factors that we are weighing. One of them is that most of these deposits simply represent a shift in the deposits from their other customers to the tax and loan accounts.

In other words, in the process of tax collections, in the process of buying securities, there is a shift from a demand deposit of a customer who either pays his tax or who buys a Government security so that it is shifted from the customer's account over to the tax and loan account until it is called for.

If you took the same total deposits in banks during those periods, there would not be very much change. They are both on demand, the customer's account is on demand until he buys the security, or until he pays the tax.

The money is then shifted by the bank over into the tax and loan accounts which is the same money in the same bank. It is in a different

account now. It is on demand because it is on our demand.

Senator Douglas. Yes; but there is a very large hard core of the deposits which you never demand. I think if you would take the record say of a hundred leading banks in the country—I won't say to take the records of 11,000 banks—but take the records of a hundred leading banks in the country and see what was the lowest weekly deposit for each, and then get the totals.

Secretary Anderson. I don't think we have it on the full hundred. Senator Douglas. As I say, I will submit a tear sheet in the record on this material I put in on the New York banks.

Weekly statistics on United States deposits in selected New York banks, January 1953 to August 1955
[In thousands]

<sup>&</sup>lt;sup>1</sup> As reported in source. Detail does not add to total.

Source: New York Times,

Senator Douglas. I am not indicting them. That is, I concealed

their identity by giving them letters rather than names.

Secretary Anderson. I, frankly, have been studying the problem, as I have indicated. I have not yet been persuaded that it is to the Government's net advantage to pay for the services rather than to charge interest of some kind on the tax and loan accounts.

We have asked Mr. Campbell to reexplore that problem and I have

asked Mr. Baird to do it.

Mr. Baird has brought up to date a memorandum of his latest thinking which I will be glad to supply, and there is a secondary problem, of course.

One of the services which the banks render, of course, is the issuance of savings bonds and that sort of thing, and in addition to banks you have a large number of commercial institutions that do it as well.

So that you run into the additional complication that if you set up a standard of compensating the banks for this kind of service then do you compensate comparable commercial people who are now just charging this as part of their overhead or taking on some additional burden?

(The memorandum referred to is as follows:)

TREASURY COMMENT ON PROPOSAL THAT CONGRESS ENACT LEGISLATION PERMITTING BANKS TO PAY INTEREST ON BALANCES IN TREASURY TAX AND LOAN ACCOUNTS, JANUARY 24, 1958

### I. BACKGROUND

Exhibit 1, attached hereto, contains a brief history of the tax and loan accounts and a summary of current operating procedures. Exhibits 2, 3, and 4 contain data reflecting the volume of transactions in the accounts during the calendar year 1957. Exhibit 5 reflects the fluctuations in tax and loan account balances by showing the high and low balances in the accounts during each month of calendar year 1957.

II. PROBLEMS INVOLVED IN REQUIRING BANKS TO PAY INTEREST ON TAX AND LOAN ACCOUNTS

## A. Interest rate on Government securities

Experience has shown that when banks are permitted to make payment by a deposit credit in their tax and loan account for the purchase price of Government securities, the rates of interest paid on such issues are less than otherwise would be paid if the funds did not clear through the account. For example, there is listed below information with respect to eight different issues of Treasury bills, which is self-explanatory:

Special issues eligible for payment by credit in tax and loan account:

	Rate
Date of issue: (pe	ercent:
Oct. 17, 1956	2.686
Nov. 16, 1956	2.617
Dec. 17, 1956	2.585
May 27, 1957	2.824
Regular weekly issues not eligible for payment by credit in tax and loan	
account:	
Date of issue:	
Oct. 18, 1956	-3.030
Nov. 15, 1956	2.979
Dec. 20, 1956	3.331
May 31. 1957	3.245

It is reasonable to assume that any payment of interest on balances in tax and loan accounts would be reflected in higher interest rates which it would be necessary for the Treasury to pay on Government securities. This would be particularly significant during periods of heavy borrowing as occurred during World War II.

## B. Effect on volume of transactions in tax and loan accounts

Should the Congress enact legislation requiring banks to pay interest on balances in tax and loan accounts, the volume of funds cleared through the accounts would possibly be materially reduced. The greater part of credits in tax and loan accounts represents transfers from accounts of customers of banks and, therefore, does not represent "new" money to the banks. It stands to reason that many banks, rather than take the money out of their customers' accounts and immediately credit same in their tax and loan accounts and pay interest on such balances, would discontinue clearing the funds through the tax and loan accounts and take advantage of the "float" in their favor which results when their customers make payments by check either to Federal Reserve banks or directors of internal revenue. Such action on the part of banks would defeat the purpose for which tax and loan accounts are maintained and as a result would create many problems for the Treasury.

## C. Determination of earning value to banks of Treasury tax and loan account balances

The wide fluctuations in the balances in tax and loan accounts as reflected in exhibit 5 make the earning value of the balances highly questionable for the majority of banks. Most banks are not in a position to invest the fluctuating portions of the account for the short time that the funds are available to them.

It is significant to note, also, that balances with member banks are subject to reserve requirements of the Federal Reserve Board averaging approximately 16 percent and subject to insurance assessments of the Federal Deposit Insurance Corporation.

## III. PROBLEMS ENCOUNTERED IN ALLOWING CREDIT TO BANKS FOR SERVICES RENDERED TO THE GOVERNMENT FOR WHICH THEY ARE NOT OTHERWISE COMPENSATED

The recommendation of the Comptroller General that present laws be amended to permit the banks to pay interest on balances in tax and loan accounts is coupled with the proposal that credit be allowed banks for services performed for the Government for which they are not otherwise compensated. This proposal contemplates the payment of fees to banks for services rendered the Government. In his audit report to the Congress covering the Office of the Treasurer of the United States for the fiscal year ended June 30, 1954, the Comptroller General mentioned the following services performed by banks for which they were not compensated:

- 1. The sale and issuance of United States savings bonds.
- 2. The handling of withholding, social security, and excise tax deposits.

  3. The distribution to bank customers of announcements and the receipt of subscriptions for other Government securities.
- 4. The furnishing of confidential information to the Internal Revenue Service regarding large currency transactions and interest payments.
  - 5. The issuance of bank drafts.

Other functions performed by banks such as the cashing of Treasury checks without charge against individual payees are not included in the services set forth above. Many banks look upon the cashing of Treasury checks as a service to the Government and do not make a charge against the individual payees of the checks. On the other hand, a substantial number of banks throughout the country do make a charge against individuals for cashing Treasury checks. Should a system of paying fees be adopted, the question would be raised immediately as to whether or not the cashing of Treasury checks without charge is a service for which the banks should be paid.

The Comptroller General's recommendation provides that the fees to which banks would be entitled for services rendered the Government would be credited against the interest charged the banks on balances in tax and loan accounts. This would not be possible in all cases inasmuch as there are approximately 14,500 banks throughout the country which render services to the Government, but only 11,000 of such banks maintain tax and loan accounts on their books. Also, other financial institutions and commercial concerns render some of the services mentioned by the Comptroller General. The payment of fees could not, of course, be limited to those banks which maintain tax and loan accounts on their books.

Comments with respect to the payment of fees to banks for rendering the five services mentioned by the Comptroller General in his report to the Congress covering the Office of the Treasurer of the United States for the fiscal year 1954 are set forth below:

1. The sale and issuance of United States savings bonds.—The attached statement, exhibit 2, shows that banks issue at least 59 percent of all savings bonds sold. Banks absorb substantial amounts of expenses not only in connection with the actual issuance of savings bonds, but also in advertising and sponsoring the program in their local communities. It would be impossible to place a dollar value on the services rendered by banks throughout the country in connection with the savings-bonds program. The sale and issuance of savings bonds is not confined to banks. There are approximately 8,000 commercial concerns throughout the country which also act as issuing agents for the bonds. If it were decided to reimburse banks for expenses incurred in connection with the savings-bonds program, it would be necessary to give the same consideration to the other 8,000 agents.

2. The handling of withholding, social security, and excise tax deposits.—The Comptroller General, in his report to the Congress, estimates that the cost to banks of rendering this service is 5 cents per transaction. If it were decided to pay banks a fee for this service, I am sure they would be able to prove conclusively that their expenses (tellers' time in accepting payments, preparation of transmittal letters to Federal Reserve banks, and postage) in connection

with the handling of each transaction greatly exceed 5 cents.

3. The distribution to bank customers of announcements and the receipt of subscription for other Government securities.—Banks distribute announcements and receive subscriptions for the purchase of marketable securities and they handle matured marketable securities for redemption or for exchange into new issues. Banks also render considerable assistance to the Treasury in the weekly sale and distribution of Treasury bills. Treasury bills are usually issued with maturities of 91 days, with an issue maturing each week for 13 consecutive weeks. The proceeds of these bills are not deposited in tax and loan accounts. In bidding for Treasury bills many subscribers submit their tenders through banks, the banks check with dealers on possible bid ranges and enter their customer's bid for the amount requested. It would not be feasible to pay banks fees for rendering these services.

4. The furnishing of confidential information to the Internal Revenue Service regarding large currency transactions and interest payments.—The Comptroller General, in his report to the Congress, stated that these services are of value to the Government but he had no basis for estimating the amount of expenses incurred by banks in rendering the services. The Treasury also is not in a position to accurately estimate the amount of such expenses. It is important to point out that financial institutions, other than banks, also render these services. It is conceivable that, if banks and other financial institutions were paid a fee for rendering the services, the cost to the Government would run into

a very large sum of money.

5. The issuance of bank drafts.—In order to facilitate the transmission of miscellaneous collections made by public officers to Federal Reserve banks and branches for credit in the account of the Treasurer of the United States, arrangements have been made with approximately 2,300 banks throughout the country to issue bank drafts to Government officers in exchange for their collections. The terms and conditions under which the bank drafts are issued are set forth in our Bank Draft Procedure Manual, copy attached as exhibit 6. Treasury balances are maintained with approximately 2,000 of the banks as a basis for rendering the service, the other 300 banks having elected to render the service without the benefit of a Treasury balance. These 300 banks could at any time request and receive a Treasury balance based upon the volume of drafts they are furnishing Government officers. The compensation to banks for issuing drafts is now being taken care of under a procedure which has been in effect for the past several years. The present procedure has proved to be satisfactory in every respect.

Should the Congress enact legislation requiring banks to pay interest on balances in tax and loan accounts and providing for the compensation of banks and other commercial concerns, either on a fee basis or reimbursement of actual expenses, for services rendered the Government, it would, of course, be necessary for the Treasury to obtain additional employees to handle the tremendous volume of work involved. How many additional employees ultimately would be required to (1) handle the collection of interest on balances in tax and loan accounts; and (2) review, settle, and pay claims of banks for services rendered, only time and experience would tell.

#### IV. CONCLUSIONS

The payments to banks and other agents for services rendered plus the substantial additional administrative expenses of the Treasury and increased interest payable by the Treasury on public-debt obligations would, in the opinion of the Treasury, exceed the interest collected on balances in tax and loan accounts. The question of expenses, while very important, is not the primary consideration. The Congress has provided a flexible means of regulating the Treasury's money flow by authorizing the Secretary to maintain deposits with banks and to withdraw such deposits as they are needed for Government expenditure. The exercise of this authority requires the application of a great deal of judgment and discretion. It cannot be reduced to a mechanical process and the depositary services rendered by banks cannot be reduced to a dollar value

## Ехнівіт 1

## OPERATION OF SPECIAL DEPOSITARIES (TAX AND LOAN ACCOUNTS)

The system of special depositaries originated during World War I. The first Liberty Loan Act of 1917 provided that banks purchasing securities issued under terms of the act, for their own account or for the account of their customers, could deposit the proceeds from such purchases into special accounts known as war loan accounts. Until 1935, deposits in these accounts were not subject to reserve requirements. Originally the banks were required to pay 2 percent interest on such deposits. However, this was considerably below prevailing interest rates at that time. In the early 1930's, this interest rate was lowered and then eliminated entirely along with interest payments on other demand deposits in keeping with the provisions of the Banking Act of 1933.

During the 1930's, receipts from the sale of Government securities were relatively small and comparatively little use was made of the war loan accounts.

The heavy borrowing requirements of the Federal Government accompanying World War II provided a need for the Treasury to utilize more fully the war loan accounts. The act of April 13, 1943 (57 Stat. 65) suspended, for the duration of hostilities plus 6 months, all reserve requirements and Federal deposit insurance assessments against balances in these accounts. The accounts were again subject to reserve and insurance requirements after June 30, 1947.

Following World War II, the Congress provided for wider uses of these accounts by authorizing the Treasury to use them for processing certain tax receipts. Beginning with March 1948, the banks were permitted to credit to these accounts receipts of withheld income taxes, which previously had been turned over to the Federal Reserve banks monthly or more frequently. On January 1, 1950, the Treasury revised the system for deposit of witheld income taxes and extended the provisions for deposit to war-loan accounts to include deposits of payroll taxes from the old-age insurance program. The war-loan accounts were renamed "tax and loan accounts" on January 1, 1950.

Other taxes have since been made eligible for deposit in these accounts. Under a special arrangement, large quarterly payments (checks of \$10,000 or more) of income and profits taxes, may be deposited in tax and loan accounts when, and to the extent, that the funds are not immediately needed by the Treasury. This arrangement was first provided for quarterly tax payments of March 1951.

Beginning in July 1951, railroad retirement taxes became eligible for deposit to these accounts. In July 1953, certain excise tax payments became eligible.

It must be borne in mind that deposits are not made by the Treasury into these accounts. Deposits to the tax and loan accounts occur in the normal course of business under a uniform procedure applicable to all banks whereby customers of banks deposit with them tax payments and funds for purchase of Government securities. In most cases the transaction involves merely the transfer of money from a customer's account to the Government's account in the same bank. On occasions, to the extent authorized by the Treasury, banks are permitted to deposit in these accounts proceeds from subscriptions to public debt securities entered for their own account as well as for the accounts of their customers.

The working cash of the Treasury is held in the Federal Reserve banks and branches. The Treasury draws upon these balances for its daily disbursements. As these balances become depleted they are restored in part through various receipts deposited directly to the Treasurer's account at the Federal Reserve banks.

However, a large part of the receipts to these accounts is derived by calling in (transferring) funds from the tax and loan accounts in commercial banks.

In brief, the tax and loan account system permits the Treasury to leave funds in the banks and in the communities in which they arise until such time as the Treasury needs these funds for its operations. In this way, the Treasury achieves a balancing effect not obtainable by any other known device, and thus discharges its primary fiscal responsibility of so handling its money as not to affect unduly the economy.

Special depositaries are divided into three groups as follows:

Group A: Those banks whose tax and loan account balance is less than \$150,000. Withdrawals from these banks are made less frequently than from banks in the other two groups. There are 9,582 banks in this group.

Group B: Those banks whose tax and loan account balance is \$150,000 or more, except those banks which are included in group C. Withdrawals from group B banks are usually made at least twice each week. The frequency of withdrawals from this group of banks will vary depending upon the need for funds at the Federal Reserve banks. There are 1,340 banks in this group.

Group C: Those banks having total deposits amounting to \$500 million or more as shown by the latest "call" reports of the bank supervisory authorities. Calls for withdrawals of balances with group C banks are usually made at the same time as calls on group B banks. However, calls on group C banks are subject to later adjustment by way of an increase, decrease, or cancellation on any particular day that Treasury closing balances in the Federal Reserve banks are expected to deviate substantially from the desired level. There are 45 banks in this group.

The Treasury, to the extent possible, gives advance notice of withdrawals to the three groups of banks.

#### BANK DRAFT PROCEDURE MANUAL

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, D. C., January 7, 1949.

Fiscal Service—Bureau of Accounts

#### GENERAL PROCEDURE

- 1. Purpose of procedure.—The purpose of this procedure is to facilitate the transmission of miscellaneous collections made by public officers to Federal Reserve banks and branches for credit in the account of the Treasurer of the United States.
- 2. Banks authorized to furnish bank drafts to Government officers.—The Treasury, at a location where Government officers have need of banking facilities for the purpose of exchanging their collections for a bank draft, will authorize a bank-holding designation as a depositary and financial agent of the Government to render the desired service. The use of bank drafts facilitates the transmission of collections to regional offices for subsequent deposit to the credit of the Treasurer of the United States.
- 3. Title of banks holding such authorization.—Banks authorized to furnish drafts are referred to as "bank draft depositaries."
- 4. Type of collections to be exchanged.—Bank draft depositaries will receive from Government officers their collections consisting of currency, coin, local and out-of-town checks, postal money orders and postal notes, and issue in exchange therefor a draft drawn in favor of the Treasurer of the United States.
- 5. Description of the draft.—The draft should be payable only to the Treasurer of the United States and should be drawn on a Federal Reserve bank or branch of the district in which the bank is located, or on a correspondent bank located in the same city as such Federal Reserve bank or branch. The drafts must be presented to the Government officers at the time of presentation of their collections.
- 6. How checks presented in exchange for drafts will be endorsed. —The following form of endorsement and notation will be placed on checks, postal money orders, and postal notes by Government officers subject to this procedure: On face of check:

"This check is in payment of an obligation to the United States and must be pair at par. N. P. Do not wire nonpayment.

On reverse of check:

"Pay to the order of

"(Name and location of bank)
draft drawn payable to the Treasurer of the United States.

"(Date)

"(Name and title of Government officer)"

# Uncollectible checks

- 7. Action on part of bank.—If a check (which was included in the funds exchanged for a draft) is uncollectible, the bank will notify the Government officer concerned, giving such information as may be available regarding the uncollectible item.
- 8. Reimbursement to bank for amount of uncollectible checks.—The bank will be reimbursed by the Government officer originally presenting the check for the amount of the uncollectible item. There is attached a copy of Treasury Form No. 448 (bank's acknowledgment of cash redemption of uncollected check).

¹In some instances checks presented in exchange for drafts will be drawn on nonpar banks. If such banks disregard the notation on the face of the checks and refuse to remit at par, the checks should be treated as uncollectible items and the bank issuing the draft will be reimbursed by the Government officer as noted in sec. 8.

### COMPENSATION OF BANKS FOR FURNISHING BANK DRAFTS

9. Policy of the Treasury in compensating bank draft depositaries.—Depositaries are compensated for their services through the maintenance of balances with such depositaries and are permitted to purchase 2 percent depositary bonds to be held as security for the balances. The amounts of the balances maintained with depositaries are based upon the average monthly dollar amount of drafts furnished. The following schedule shows the amounts of balances to which depositaries are entitled upon the basis of the average monthly dollar amounts of drafts furnished:

Average monthly dollar amount of drafts furnished by bank draft depositary:	Amount of Treas- urer's balance to be allocated bank draft depositary
\$1 to \$3,000	\$2,000
\$3,001 to \$5,000	3,000
\$5,001 to \$8,000	4,000
\$8,001 to \$12,000	
\$12,001 to \$16,000	6,000
\$16,001 to \$20,000	7,000
\$20,001 to \$30,000	8,000
\$30,001 to \$40,000	9,000
\$40,001 to \$50,000	10,000
\$50,001 to \$70,000	12,000
\$70,001 to \$100,000	15,000

It is believed that this schedule of compensation will be equitable, however, if due to unusual circumstances at a particular point, a bank is of the opinion that the schedule is not equitable and will so advise the Treasury, the matter will be given prompt consideration. As indicated, the schedule does not apply in cases where the dollar volume of drafts furnished exceeds a monthly average of \$100,000. Such cases will be given individual consideration with a view to arriving at a basis of compensation that is equitable from both the standpoint of the bank and the Treasury.

10. Periodic adjustment of Treasurer's balance.—Government agencies using the facilities of the bank will furnish the Treasury with information as to the monthly dollar amount of drafts obtained from the bank. The Treasury will review such information and, applying the schedule outlined above, will adjust the Treasurer's balance periodically, not less frequently than twice per year.

11. Procedure to be followed in establishing Treasury balance.—The Treasurer's balance, when computed as above, is placed to the bank's credit on the books of the Treasurer of the United States, and upon the basis of the bank's subscription, the funds are used to purchase a 2-percent depositary bond in like amount. The bank will acknowledge credit by signing a transcript (form 18) prepared and forwarded by the Treasury. Further reports on form 18 will be submitted by the bank on the last business day of each month and at such other times as may be requested by the Treasury. The balance in the Treasurer's account will not be withdrawn prior to the expiration of 30 days' written notice from the United States Treasury.

12. Notice of withdrawal or amendment of provisions of this manual.—The Fiscal Assistant Secretary of the Treasury may waive, withdraw, or amend at any time, or from time to time, any or all of the provisions of this manual. Notice of such changes will be given by an appropriate amendment or supplement to this manual.

E. F. Bartelt, Fiscal Assistant Secretary.

<sup>&</sup>lt;sup>2</sup> Depositary bonds may be redeemed at par and accrued interest, at any time, at the option of the United States or the depositaries and financial agents, in whole or in part, upon not less than 30 nor more than 60 days' notice in writing given by either party to other other. The 2 percent depositary bonds are issued in registered form only in the name of the Treasurer of the United States in trust for the depositaries and financial agents to which they are allotted, and are not transferable. Checks covering interest on the bonds are forwarded semiannually on June 1 and December 1. Such interest is subject to all Federal taxes now or hereafter imposed. The bonds are subject to estate, inheritance, gift, or other excise taxes, whether Federal or State, but are exempt from all taxation now or hereafter imposed on the principal or interest thereof by any State, or any of the possessions of the United States, or by any local taxing authority.

The Chairman. I do not think the banks should be compensated. They are getting the business. The business is going through them. I don't believe they should be compensated for it. I do not want to take Senator Frear's time, but last September you had \$6.7 billion in cash, and I wonder if it would be possible to furnish the committee with a statement of how many banks would you say, Senator Douglas?

Senator Douglas. I would say take a hundred of the largest banks which had the largest deposits, take the deposits, for example, of September 30, and what you estimate they will have on March 31 under the old ceiling, because this figure, this table you gave me, I imagine, was prepared on the old ceiling, was it not, January 9?

Secretary Anderson. Yes. The Chairman, 1958? Secretary Anderson. Yes.

The CHAIRMAN. Then on June 30 under the old ceiling without the

increase you have got \$6.1 billion estimated on hand.

Now that is a large amount of money to leave in the banks without the payment of interest, and I think the banks have this business going through them and they are compensated in that way.

Secretary Anderson. Well, the way it is done, is that we notify— The CHAIRMAN. I know, but I am speaking of the way it gets into

It is put in by the taxpayers, is it not?

Secretary Anderson. That is really just a transfer within the banks. The CHARMAN. That is right.

Secretary Anderson. If you go to a bank——

The Charman. I do not see that the banks are entitled to special consideration for what they do, any more than all of us who are in business and deduct the social security and pay it to the Government, we are not paid anything.

Secretary Anderson. I am not talking about that kind of com-

pensation.

The kind of compensation we were talking about is the services which they give to us in issuing savings bonds or things of that sort, and the service, of course, which they give in the cashing of Treasury

checks, and a whole line of services.

Now, as I understood when this issue was raised by Mr. Campbell, the Comptroller General, it was raised on the basis that instead of leaving the money on demand and not paying interest, that you make some interest charge and that because you were making an interest charge you then set up a scale of payments for the services, which the banks would render on behalf of the Treasury, so that you either let them have the money in the banks, in the tax and loan accounts or you pay for the services.

Senator Williams. Might I ask a question in connection with that: You say that this money is merely transferred in the same bank but the bulk of this money to which we are referring here are payments

of income taxes and corporation taxes, are they not?

Secretary Anderson. It is both that and the sale of securities.

Senator Williams. That is right.

Secretary Anderson. Checks of \$10,000 or more, I think—

Seantor Williams. But a lot of it would be revenue, normal payment of taxes that you are speaking of transferring.

Secretary Anderson. Yes. The total last year was more than \$49 billion deposited all told, and of that \$15 billion came from the sale of marketable Government securities.

Senator Williams. And the other 35——

Secretary Anderson. \$28 billion came from income and social-security taxes, and individual and corporate income taxes \$4 billion.

Senator Williams. But, speaking—that is about 31——

Secretary Anderson. Well, there are \$2 billion-\$2.7 billion for

savings bonds.

Senator Williams. Well, all right. But the procedure is that the people in the areas, we will say, for instance the Chicago area, you have your district office in Chicago, for all of the immediate areas surrounding that for a hundred miles, the people will send their checks to the Director of Internal Revenue, the payment of their taxes, that would be deposited in the banks on which the checks are drawn.

They would be deposited in the central banks in the area of Chicago

or Wilmington or New York; is that not true?

Secretary Anderson. The process, as I understand it, Senator Williams, is that on checks over \$10,000, there is an arrangement between the Treasury, the Federal Reserve, and the banking system.

Senator WILLIAMS. And coming back to the bank upon which they

are drawn?

Secretary Anderson. And coming back to the bank upon which they are drawn.

The Chairman. Senator Douglas, can you add any information that the Chair has not suggested that you would like to have from the Secretary?

Senator Douglas. Have you requested the Secretary to furnish

these figures----

The Chairman. Mr. Secretary, I am taking some of these largest amounts, March 31, of this present year, and June 30, and September 30 of last year, the hundred of the largest banks having these deposits and from that information we can work down to others.

I think it is a matter that we should go into because there is quite

a lot of interest involved.

Secretary Anderson. I would like, if I may, to have some reason-

able flexibility in preparing this statement.

For example, I don't see very well how we can do it in any time forward. It would have to be backward. We would have to do it from a past date.

The Chairman. Yes, I recognize that.

You estimate that March 31 you will have \$5 billion in cash.

Secretary Anderson. Those are the estimates but how they would be distributed I do not know.

The CHAIRMAN. You could not furnish that as against the particular bank?

Secretary Anderson. No. Then again, Senator, take January of 1957, last year, on the 2d day of January there was \$2,872 million in deposit in these banks.

On the 16th, 14 days later there was \$856 million, so that you had

had a drop of \$2 billion in a 12-day period.

So I would think if we were going to try to work out some kind of typical figures——

The Chairman. Well, suppose we say on June 30, 1957, July 15, 1957, and then we will come around to September 30 and December 31.

All of the figures are based on the \$275 billion limit.

Secretary Anderson. That is correct.

(The information requested is as follows:)

High and low balances in certain months and balances on selected dates in Treasury tax and loan accounts in commercial banks

[Deposits are not made by the Treasury into the tax and loan accounts. The deposits to the accounts occur in the normal course of business under a uniform procedure applicable to all banks whereby customers of banks deposit with them tax payments and funds for purchase of Government securities. The transactious involve merely the transfer of money from a customer's account to the Government's account in the same bank. On occasions, to the extent authorized by the Treasury, banks are permitted to deposit in these accounts proceeds from subscriptions to public debt securities entered for their own account as well as for account of their customers. The Treasury makes withdrawals on a uniform percentage basis from the tax and loan accounts in these large banks, and proportionally from tax and loan accounts in other banks, for transfer to its operating accounts in the Federal Reserve banks to meet day-to-day disbursaments! disbursements. [In thousands]

Commercial banks with All other tax Date total deposits of and loan \$500.000.000 or more for all depositors

The CHAIRMAN. Now you are asking for \$5 billion more? Secretary Anderson. That is correct.

The CHAIRMAN. It is reasonable to think those balances would be increased?

Secretary Anderson. Yes.

The CHAIRMAN. I apologize again to Senator Frear.

We will go into this matter further.

Senator Frear. No apologies are necessary, Mr. Chairman.

Mr. Secretary, not in defense of the commercial banking fraternity of this country, but I have some sympathy for what you said for what banks do for the Federal Government.

In the little town where we live there is an Air Force base, and I have known several times when the money for the payroll was not available and did not arrive in time and when they called on the local bank to supply the cash, and that came out of their own account.

Of course, they recognized the Federal Government ought to be good for it but there were times when they had several days of out-of-

pocket money.

But they do perform services in selling bonds and paying for bonds, and also collecting the social security and using them as a depositary and we recognize the fact, too, that when they have deposits there they loan some money to get some interest off.

So it is a two-way street. Not only on behalf of the Government

or on behalf of the bank.

I like to be in line with people and like to be up to date and modern. I do not want to be indicted for not living up to the agreement and I

would like to ask Mr. Mayo a couple of more requests.

If you took the hearings on page 418 of part 1 of the Investigation of the Financial Conditions of the United States, and you used as a basis for your dollar 1939, would it be a great deal of trouble if you used the basis of 1873 and 1913 and put them down just alongside of these columns so that you would have the three corresponding figures and then we could start, as Senator Williams or Senator Byrd has suggested, we know when it is every year the basis on which the dollar is worth, if that is an unreasonable request and takes too much time—

Mr. Mayo. No; we can do it easily. (The information requested is as follows:)

Source: Department of Labor and derived computations.

Senator Frear. Put that down at the bottom of your list.

We are talking about additional authorized for Export-Import Bank for just a while this morning Mr. Secretary, and I believe there is a request in for additional lending authority for \$2 billion, and if that is granted, how will that affect your debt?

Secretary Anderson. I don't think that the immediate effect on the budget will be adverse, that is because these will be commitments which will be made, but until the money is actually drawn there is usually quite a lapse of time even though the authority is there.

Senator Frear. But it is contingent?

Secretary Anderson. Yes; sooner or later.

Senator Frear. And you have to take it into account in your debt ceiling?

Secretary Anderson. Yes.

The CHAIRMAN. What agency is that, Senator? Secretary Anderson. The Export-Import Bank.

Senator Frear. Export-Import Bank. I know you are going to be called upon to increase their borrowing authority by \$2 billion.

Secretary Anderson. That is correct.

Senator Frear. Just suppose now, Mr. Secretary, that such a thing might happen that your request for increasing the debt ceiling did not find the affirmative action in Congress, what would be your alterna-

Secretary Anderson. Well, if there was no increase, if we remained at \$275 billion, and the revenues were down, and the expenditures were up for any purpose, we would, of course, have to first utilize the free gold which we have, \$500 million, and we would as we have done in the past, sell some securities in the market, such as the FNMA securities, which normally the Treasury would hold, would sell those-

The Chairman. How many of those have you got and how

Secretary Anderson. We have exhausted those now.

The Chairman. The FNMA's.

Now those issued after 1954 do not go through the banks; do they? Secretary Anderson. By FNMA?

The Charman. Under the debt ceiling.

Secretary Anderson. Those that are currently bought by FNMA? They accumulate them up to a certain amount, say one or two hundred million dollars. Then they go into the market and sell their own securities and pay us off.

But we have to carry them until they get to that point on their

secondary mortgage purchases.

The eight hundred-odd million dollars referred to this morning is in the management and liquidation account, and this is simply a question of do we hold the FNMA's notes, which are financed under the debt limit, or do they sell securities in the market?

So that it is not a matter of budget concern, it is a matter of who

holds the debt.

Senator WILLIAMS. Might I ask a question? How many more of those do you have now?

Secretary Anderson. I think we have exhausted those. Just about at the exhaustion point.

Then of course if we utilize the gold, and the anticipations were such that we were going to have difficulties, we would simply have to ask the Congress at that time to increase our borrowing authority.

Senator Frear. Well, this is probably hypothetical, but suppose they did not increase it, even when you come down here in an emergency and do not increase it, what alternative would you have then?

Secretary Anderson. You simply could not write the checks.

Senator Frear. You could not pay your bill, that is right. Senator Frear. You are in default and in the eyes of the foreign nations you probably would be in bankruptcy?

Secretary Anderson. Yes; even in the eyes of the American cus-

tomer who did not get his check paid.

Senator Freak. I just wanted to go further and say regardless of in the eyes of the foreign nations when we got down to some mail carrier who did not get his check or some civil servant who did not

get his check, I think it would be closer to home than that.

I can assure you, Mr. Secretary, I am not looking forward to any condition like that happening but I share what the chairman has said in his desire to maintain that debt ceiling sort of as a regulatory instrument that we do not obligate ourselves more than we can take in or more than our revenues, and expenditures are limited to our revenues except under certain particular instances, and in those times, I really believe that the Congress should be the authority which should say whether we would spend this money or whether we would not.

Now I rocognize, too, that I think you people downtown can tell us a thing or two about the way we appropriate money up here.

After we appropriate it, why, of course there are no strings, you can go ahead and spend it. So maybe there are a few things we ought to get into a huddle on ourselves up here and dictate a few things around the table and say if we are a little more considerate in how we authorize the expenditures of money your problems may be a little less difficult.

I thank you for your testimony, and I appreciate it, and I, along with the rest of the members of this committee, I think, Mr. Secretary, have great faith and confidence in you.

Secretary Anderson. Thank you, sir.

Senator Frear. Even though good men, including you and myself, may have differences of opinion, we still have something in common.

Secretary Anderson. Absolutely, sir. The Chairman. Senator Flanders?

Senator Flanders. Mr. Secretary, I had in my mind some questions along the same line as Senator Frear, but we have been telling ourselves for the years I have been on this committee that we ought to have this limit on the debt, the debt ceiling, rather closely held so as to keep us from "going haywire."

I am wondering on whom the effect of the closely calculated debt limit is expected to fall. Primarily, it would seem to me that those who should take warning that we are approaching the debt limit would be Senators and Representatives, but I never heard—I was never sure—that the approaching disappearance of the margin was ever having much effect on appropriations or legislation in general, and probably we are the ones who should most take warning from the approach to the debt limit.

21297---58----6

The second—and here is perhaps where we have a right to expect it to be observed—the second would be the administration in making

up its budget and its requests for appropriations.

Mr. Chairman, to what extent have you seen any evidences on the part of any administration—Democratic, Republican, present, past, or future—that the debt limit was a deciding element in the request for appropriations?

The CHARMAN. I have not observed that, but I would say, however, that the unexpended balances, \$70 billion of unexpended bal-

ances, cannot be spent unless it is within the debt limit.

Senator Flanders. That is one place where it has its effect. And then when the unfortunate Secretary of Defense or the Secretary of the Army, the Navy, or the Air Force, comes up and we hear that this money has not been spent, then the unfortunate Secretaries are landed on like a ton of bricks, because the intentions of Congress in appropriating this money have not been carried out, and "Why didn't you do it?"

And so they go on the griddle.

And last, we come down, sir. to you. I have aways been interested in the atmosphere that normally, let us say, permeates the hearings when any responsible officer of the Government is before any committee, whether the House or the Senate, under Democratic or Remarkable and the smithless of the

publican chairmen, that he is on the griddle.

Sometimes the temperature is comparatively mild, and he is merely being seared; and sometimes he is being "frizzled." But the question arises in my mind as to—I would follow along in my thoughts the same line that Senator Frear pursued: What can you do about it? Are you anything but a helpless pawn on a chessboard where the moves are being made by others? What can you do about it?

Secretary Anderson. Well, Senator, if someone presents us with the bill, the only thing we can do is pay it, and to pay it as long as

there is money with which to pay it.

Now, it is a part of my responsibility to keep my colleagues in the Government advised as to how near we are to the debt limit, so that those agencies which have a more direct control over their expenditures will make their plans with an awareness of this tight situation.

If, however, we got to a position where there was not an adequate amount of cash on hand and if I had no borrowing authority under the public debt limit to borrow, my recourse would be to come back to this committee and say, "Gentlemen, this is the position we are in, and in order to maintain the full faith and credit of the country, which is our primary consideration, we must have some more borrowing authority."

Senator Flanders. Well, that, I think, is a fair statement of the position that you would be in. Under those circumstances, I would not be inclined to put the heat on you for coming back, provided you

had done all these other things that are possible.

Now, I picked up some words from your verbal testimony this morning. You asked for a reasonable flexibility for a much better job for the country. I have not heard all the testimony, but I was wanting to interpret that in terms of, say, a much better job for the country, that is, general, and in terms of saving money.

And if I have understood what you have said in answer to Senator Williams and to Senator Frear, and others, you really feel that you could, both from the long-run task of placing long-term bonds and the short-run task of getting, immediately getting, better interest rates, save money if you had more leeway so that you could place the securities in the market at the most favorable time, and not have your hand forced.

That is what you have been saying, is it not?

Secretary Anderson. With one additional factor, and that is that when market opportunities present themselves, to put some of the debt in longer term securities.

Senator Flanders. Yes.

Secretary Anderson. In order to secure a better balance.

Senator Flanders. Yes.

Secretary Anderson. You would be in a position to better market those securities without fearing that you would have an attrition so high that you would either not be in a position to pay off the bonds, or if you did pay them off while you were still distributing the long-term bonds in the market, we would be going right back into the market to take shorter term maturities, thereby competing with the very people whom we have tried to sell the long-term bonds to.

Senator Flanders. I think that is clear.

Now, Mr. Chairman, I missed the description of this sheet here which you distributed to us this morning, and I am wondering what the difference is between the last column on table 3 here, and the middle column of this sheet which you have distributed. What is the difference?

The CHAIRMAN. The first difference is that the gold is not included.

Senator Flanders. That is \$500 million.

Secretary Anderson. That is right.

The Charman. \$500 million. And then, Mr. Anderson thinks it should be \$3.5 billion minimum on hand. My figures provides for \$3 billion minimum.

Senator Flanders. That adds up to \$1 billion difference.

The CHARMAN. The other difference is that the limit I propose would be \$278 billion instead of \$280 billion. The righthand column shows the amount of leeway under the \$278 billion limit, including the \$3 billion cash balance and using the gold, and unused debt authority.

And you will note, for instance, in April they will have, April 15, \$11 billion; and June 30 is \$12 billion. Now, there are some low points. The lowest point is approximately \$5 billion in the next 18 months, and I am using as a base the figures which came from the Treasury.

I think Secretary Anderson, will—I asked him this morning to confirm whether or not these figures were based upon Treasury figures with the changes that I have mentioned.

Secretary Anderson. I am sure they are, sir. I frankly have not been able to study them.

The CHAIRMAN. I am sure they are. I had them very carefully prepared. I do not want to argue the case right now.

Senator Flanders. Mr. Chairman, I have not heard the discussion—unfortunately, I have not been able to be here all the time—

I have not heard in the discussion any judgment given by the Secretary as to the advantages or the dangers of reckoning in or more drastically using our gold reserve in determining the debt limit.

If that has been done, I missed it, either by absence or lack of com-

prehension.

Secretary Anderson. Senator Byrd asked me this morning, sir, if I could see any reason of substance why we should not utilize the gold. This is an amount of gold which was acquired originally when the value of the gold dollar was changed in 1934.

At that time we had about \$2.8 billion as an increment in the

change in the value.

That gold has been utilized to supply money to the Exchange stabilization fund and to the International Monetary Fund; and in November of 1953, when there was one of these tight periods, \$500

million of gold remaining in the general fund was used.

I stated to Senator Byrd that I had no objection of substance to utilizing the gold. It is an additional amount of money that we can always utilize when circumstances require. And if we had gotten into tighter periods or if we get into tighter periods, this is one of the things we always keep in the back of our mind, you can always sell this much gold and utilize it.

The CHAIRMAN. You would use it if you need it.

Secretary Anderson. Yes.

The CHARMAN. But you regard it as a cash quick asset, that is the point I made.

Secretary Anderson. It is the point—

The CHAIRMAN. That is the point I made, that he could use it at

any time and get the \$500 million.

Secretary Anderson. You could issue a gold certificate to the Federal Reserve and, of course, they would deposit the amount to your account. The gold would still be part of the Nation's gold stock.

Senator Flanders. If these things can be done, they still raise the question in my mind as to what the practical effect of a close margin is. Will it affect Senators? Will it affect appropriation demands from the administration? Will it affect the use of appropriations?

Just what way does the tight ceiling work! What is the machinery, what is the mechanism! And I think perhaps, since the chairman and I have hitherto always been of one mind in that matter, and I presume I still am, that I ask for a little speech from the chairman on that subject instead of asking you.

Secretary Anderson. All right, sir.

Senator Flanders. But I have begun to wonder about when you have a responsible Treasurer, not Treasury, but a responsible Secretary of the Treasury, and I think we have had, both in you and your predecessor, what does the tight ceiling do for the country and to you? That is the basic question.

And the question is whether that is to be in the form of a speech from the Senator or of a brief from the Secretary of the Treasury. Maybe we have been getting the answers here today, but I am not so sure about the practical effectiveness of the tight ceiling as I have been in years past when I tried to figure out logically just how it works.

I just will go on to one more point I wanted to raise, and this is in a way on the sideline, but it has been brought up: We have here on

this page 418 of the investigative hearings consumer prices and the purchasing power of the dollar, 1913 to date. And of course the consumer prices as they are worked out by the Bureau of Labor Statistics are the standard way of measuring the purchasing power of the dollar. It measures it in consumers' terms, and that is where it hurts, and the basis of that calculation changes every few years.

I believe they have automobiles in it now, and they certainly did not have automobiles in it back in 1873, about which we have been

talking.

Perhaps, Mr. Chairman, I might ask our own expert, Mr. Mayo, whether there is anything in that continuously changing composition of the basis for the purchasing power of the dollar which invalidates the relationships, say, between 1873 and 1956, just to use the 2 extremes, 1957 or 1958, the 2 extremes we have been talking about.

Mr. Mayo. Well, I would not pretend to be an expert on the cost of living index going all the way back to 1873, but I do know that prior to 1913 the only figures that are available are not Government figures. They are figures that have been prepared in connection with various private studies which have been made for specific purposes.

They were based on such figures as were available in the public press, on the price of pork, the price of a restaurant meal, and odd

bits of information which are in no way standardized.

Therefore, I think the point is well raised as to the difficulty of making a statistical comparison back into the 19th century when your

figures are on a rather tenuous base.

Senator Flanders. Mr. Chairman, there are at least two of us here who once were not in the Senate—I am one of them, the other is Senator Douglas. When neither of us were in the Senate, many years ago, I was much intrigued by a book on prices written by Douglas and Director. Do you remember that book?

Senator Douglas. Yes, very well.

Senator Flanders. So that I sit here with the presupposition that Senator Douglas is also an authority, and may I have permission to catechize a member of the committee as to that question I have just been asking as to the comparability of prices over that long range?

Sentaor Douglas. I will be very glad to try to answer such questions, but I would remind you of the rule that the farther you are from, the brighter you are, and I am very close at hand and therefore I cannot be regarded as an expert.

Senator Flanders. I, sir, having been foiled and completely de-

feated in my endeavors, will cease asking questions.

The Chairman. The hour is getting late, and I do not assume we can finish this afternoon. Senator Long, do you desire to go ahead? Senator Long. I have only about 1 question or 2, Mr. Chairman.

Mr. Secretary, in regard to the question Senator Anderson asked, it seems to me the answer lies in greater unification of the services. What, if anything, can you do about that as one of the President's Cabinet?

Secretary Anderson. Well, this is certainly not one of my primary responsibilities, and I think I could do nothing, except opinions might be asked from time to time, and there have been none asked up to this point.

Senator Long. I assume there are some discussions of economy in the military when the Cabinet meets from time to time.

Secretary Anderson. That is right.

Senator Long. You were formerly Secretary of the Navy, and you know something about those problems.

Secretary Anderson. Yes.

Senator Long. Have you expressed an opinion on those matters from time to time?

Secretary Anderson. Oh, yes. All such matters, Senator, whether they relate to expenditures of the Defense Department or other departments, are reviewed in the light of what will be the impact on the country, on industries, on our tax collections, upon other programs, how much of our total money will be utilized in their programs, this sort of thing.

Senator Long. You personally feel we could make considerable economies if we can force upon the services greater unification in the

research and development of their new weapons?

Secretary Anderson. Without trying to impose my judgment on the military department, I would think that any organization which was as large, as widespread as that organization can constantly be improved by people who are working at it so that you do have tighter controls, more sharing of information, better utilization of common facilities, and that sort of thing.

Secretary Long. One thing that concerns me very much about our fiscal picture is that we are going to have to continue to maintain a rate of economic growth if we are going to continue to have a balanced budget, based on our present tax structure. Do these figures you have presented to us include the assumption that the economy will continue to expand?

Secretary Anderson. These figures are based upon the same judgments which went into our calculations of what the revenues would be for the fiscal year ending 1959, which would be a \$2 billion ex-

pansion.

Senator Long. Right now, the economy is in something of a downturn or a moderate slump. Do you have any further thoughts about the predictions that this economy will recover from that slump during the next 2 or 3 months and again increase in production of income?

Secretary Anderson. I think this morning, before you were here, Senator Long, I went over with Senator Byrd the number of factors which had gone into our judgment in giving rise to a belief that there would be an upturn in our economy.

I have not tried to pinpoint precisely the time or month in which it would take place. But without reviewing those matters which went into the record earlier this morning, I do believe that the econ-

omy will reassert itself.

Senator Long. Do you feel that a general reduction in the level of interest rates would tend to increase construction and increase eco-

nomic activity?

Secretary Anderson. Of course, the rate at which you can borrow money, and the availability of the credit, they are both important factors in construction as well as other capital investments.

I think, however, if you look at the decline in the interest rates which have taken place since last October 14, it has been a very significant decline; in fact, almost a dramatic decline.

Senator Long. It would seem to me that insofar as it has declined, it probably has helped to retard what otherwise would have been a

more abrupt slump in the economy now.

I personally know of groups who explained to me that the reason they are calling off their expansion plans is because they felt the cost of interest money was too high, and so that contributed to the slump.

You are, are you not, about the principal Cabinet member who would be looked to to advise the President with regard to this interest-

rate problem?

Secretary Anderson. I would think perhaps as much as anyone else in the Cabinet. He would also counsel with the Council of Economic Advisers and others. But this is the sort of thing, Senator Long, that we discuss on an informative and exchange-of-information basis in the arrangements which now exist for meetings between the President, myself, the Chairman of the Federal Reserve Board, the Chairman of the Council of Economic Advisers, so that each of us in the performance of our separate responsibilities will have the thinking and the collective judgment and the weighing of the effect of the statistical charts which all of us have available to us.

Senator Long. Do you—I am not sure I got the answer I wanted to

the question, at least that I got a direct answer to the question.

Do you feel that a further reduction in the general level of interest

rates would contribute to economic growth at this time?

Secretary Anderson. Let me put it this way: I think any reductions in the cost of money and increases in the availability of money contribute to the willingness of people normally to make investments, if other circumstances of the economy are such as to make them believe they are worth while.

Senator Long. Do you see any reason why those factors would not react in just such same fashion as that at the present time?

Secretary Anderson. I would think they would so react.

Senator Long. Thank you very much.

That is all, Mr. Chairman.

The CHAIRMAN. The committee will adjourn until 10 o'clock to-morrow morning.

Senator Douglas. May I, before we adjourn, ask the Secretary a question?

The CHAIRMAN. Yes, sir.

Senator Douglas. At this time I would apologize, both to the chairman and the Secretary, for not being here earlier in the day, and to assure them it was not intended to be a discourtesy to him but sim-

ply because of other committee meetings.

What I would like, Mr. Chairman, if I may ask the Secretary, is a list of all Federal programs which lend, spend, or grant funds which are not included under the present debt limitation. As I understand if there are various borrowings of organizations owned by the Government which are not included under the formal debt limit, and I would like to mention a few, and I am not at all certain that they are all-inclusive:

First, military housing under the so-called Capehart program.

Second, the lease-purchase agreements which are a method of avoiding the appropriations process, and provide for public buildings and facilities.

Third, the highway program.

Fourth, the United States share of the St. Lawrence seaway expenses. Fifth, the obligations of the Commodity Credit Corporation.

Sixth, FNMA sales of securities to the public.

Now, there may be others, but what I am trying to get at primarily is that I believe we should have a complete list of those activities, the extent to which commitments have already been made and in which future commitments are likely to be made, and the rates of interest which are paid on these. I think we should have these because in many cases when you remove a program from the debt ceiling you have to pay an interest rate which is in excess of what the interest rate would be on direct Federal borrowing, and this may not be the best policy for the Federal Government to pursue.

What I am trying to get at is that we should know the true nature of the Federal debt and the extent to which the present administration has avoided increases in the debt limitation by other methods of borrowing, which turn out to be more costly to the taxpayer.

I wondered, Mr. Secretary, if you could furnish us with this informa-

tion

Secretary Anderson. Yes; I can.

Senator Douglas. Personally, I would like to have it before I am finally to vote on the question of increasing the debt limit itself.

Secretary Anderson. Yes; we will try.

The Charman. Do you understand clearly what Senator Douglas wants?

Secretary Anderson. I was explaining to the chairman that we are preparing for a financing which will take place which will occupy my time tomorrow morning, and that I am then scheduled to go down to New Orleans on Tuesday afternoon and to make two speeches, which would not bring me back this week. So, I was wondering if there would be a way of my either getting through early in the morning or later this afternoon and furnishing some additional information. If there is not, of course, I will accommodate myself to the wishes of the committee.

(The material referred to follows:)

JANUARY 30, 1958.

Hon. PAUL H. DOUGLAS,

United States Senate,

Senate Office Building, Washington, D. C.

My Dear Senator: I am replying for Secretary Anderson to the request you made in the debt-limit hearings Monday afternoon for "a list of all Federal programs which lend, spend, or grant funds which are not included under the present debt limitation."

As you know, practically all of the operations of the United States Government—including budgetary as well as trust-fund operations—are reflected in the public debt of the United States or, to a very minor extent, in debt obligations guaranteed by the United States. These public-debt and guaranteed obligations totaled \$275,002 million on December 31, 1957, (\$274,564 million subject to the statutory limit and \$438 million not subject to the limit). In addition, there were \$6,221 million of securities and issued by Federal Government agencies which are not guaranteed by the United States Government on the same date, as listed in the attached table.

In addition to these two categories, there is a third category which may be called the long-range commitments and contingencies of the United States Government. A copy of the regularly prepared Treasury statement on this subject, as of June 30, 1957, is also enclosed with this letter. To the extent that any of this latter group of items actually result in cash disbursement by the Federal Government it would be reflected directly in budget expenditures and therefore in the public debt or guaranteed obligations.

In the discussion the other day, you mentioned specifically six items which occurred to you as examples of borrowings that were outside of the debt limit. Your first item was military housing mortgages, which are initially obligations of the Department of Defense. These mortgages are also insured by the Federal Housing Administration, and are, therefore, included in the list of long-range commitments and contingencies. To the extent that any of these mortgages are purchased by the Federal National Mortgage Association in its special-assistance program, they are paid for out of FNMA funds which are reflected as part of budget expenditures and therefore in the public debt. As of January 25, 1958, FNMA had purchased \$13 million of military housing mortgages and had approximately \$400 million in outstanding commitments. By comparison, purchases and commitments for military housing mortgages outstanding by private financial sources totaled \$147 million.

Lease-purchase contracts involve long-range commitments by the General Services Administration and the Post Office Department. The program, however, is still very small. As of December 31, 1957, only 1 contract for \$1.7 million had been completed by GSA, and 4 by the Post Office Department, totaling \$0.5 million. By June 1959, GSA expects to have 76 buildings, costing some \$297 million, under purchase contract on which the future annual payments for principal and interest during the contract period will amount to \$23 million.

The highway program has been operating at a surplus and the surplus funds have been invested in special issues of Government securities which are part of the public debt. If in the future, the highway fund should ever need to exercise its statutory authority to borrow temporarily from the Secretary of the Treasury, the Treasury would be called on at that time to provide funds which it in turn would borrow as part of the public debt.

The United States' share of the cost of the St. Lawrence seaway is being financed by St. Lawrence Seaway Development Corporation borrowing directly from the United States Treasury (\$83 million outstanding on December 31, 1957) so that this is already reflected in the public debt.

This is also true in regard to the expenditures of the Commodity Credit Corporation, which currently owes the Treasury almost \$13 billion, money which the Treasury in turn has had to borrow directly. In addition, the Commodity Credit Corporation has an obligation to purchase approximately \$250 million of loans to farmers from commercial banks which will not be reflected in the public debt until such time as Commodity Credit Corporation is actually required to take

I hope that the material which we are providing you with this letter will be sufficient to answer your inquiry satisfactorily.

Sincerely yours,

Julian B. Baird, Under Secretary.

Long-Range Commitments and Contingencies of the United States Government as of June 30, 1957

The attached statement covers the major financial commitments of the United States Government, except the public debt outstanding and those involving recurring costs for which funds are regularly appropriated by the Congress and are not yet obligated, such as aid to States for welfare programs and participation in employee-retirement systems. The statement is segregated into four categories, namely (a) loans guaranteed and insured by Government agencies, (b) insurance in force, (c) obligations issued on credit of the United States, and (d) undisbursed commitments, etc.

The items appearing in this statement are quite different from the direct debt of the United States. They are programs of a long-range nature that may or may not commit the Government to expend funds at a future time. The extent to which the Government may be called upon to meet these commitments varies widely. The liability of the Government and the ultimate disbursements to be made are of a contingent nature and are dependent upon a variety of factors, including the nature of and value of the assets held as a reserve against the commitments, the trend of prices and employment, and other economic factors.

Caution should be exercised in any attempt to combine the amounts in the statement with the public debt outstanding, for that would involve not only duplication, but would be combining things which are quite dissimilar. As indicated by the enclosed statement, there are \$98.1 billion of public-debt securities held by Government and other agencies as part of the assets that would be available to meet future losses. The following examples illustrate the need for extreme caution in using data on the contingencies and other commitments of the United States Government.

- 1. The Federal Deposit Insurance Corporation had insurance outstanding as of June 6, 1957, amounting to \$119 billion. The experience of the Federal Deposit Insurance Corporation has been most favorable. During the period this Corporation has been in existence, premiums and other income have substantially exceeded losses, which has permitted the retirement of Treasury and Federal Reserve capital amounting to \$289.3 million (all repaid to Treasury), and the accumulation of \$1.8 billion reserve as of June 30, 1957. The Corporation's holdings of public-debt securities as of that date amounted to \$1.9 billion, which already appears in the public-debt total. Out of \$233.4 billion of assets in insured banks as of June 6, 1957, \$61.6 billion are in public-debt securities (also reflected in the public debt). The assets, both of insured banks and the Federal Deposit Insurance Corporation, as well as the continued income of the Corporation from assessments and other sources, stand between insured deposits and the Government's obligation to redeem them.
- 2. The face value of life insurance policies issued to veterans and in force as of June 30, 1957, amounted to \$44.2 billion. This does not represent the Government's potential liabilities under these programs since some of these policies will probably be permitted to lapse and future premiums, interest, and the invested reserves amounting to \$6.8 billion of public-debt securities should cover the normal mortality risk.
- 3. Under the Federal Reserve Act of 1913, as amended, Federal Reserve notes are obligations of the United States which as of June 30, 1957, amounted to \$25.8 billion. The full faith and credit of the United States is behind the Federal Reserve currency. These notes are a first lien against the \$51.4 billion of assets of the issuing Federal Reserve banks which includes \$23 billion of Government securities already included in the public debt. These notes are specifically secured by collateral deposited with the Federal Reserve agents which, as of June 30, 1957, amounted to \$16.9 billion in Government securities and \$11.8 billion in gold certificates.

<sup>2</sup> Includes accrued interest of \$2 million.

3 Less than \$500,000 Less than \$500,000.
 Represents the administration's portion of insurance liability. The estimated amount of insurance in force and loan reports in process as of June 30, 1957, is \$1,061 million. Insurance on loans shall not exceed 10 percent of the total amount of such loans.
 The Export-Import Bank of Washington acts as agent in carrying out this program.
 Includes loans sold subject to repurchase agreements and deferred participation agreements.
 Represents estimated insurance coverage for the 1957 crop year.
 Figures are as of June 6, 1957.

9 Excludes accrued interest.

10 Includes public debt securities amounting to \$16,905 million that have been deposited with the Federal Reserve agents as specific collateral.

Note.—The above figures are subject to the limitations and precautionary remarks, as explained in the note attached to this statement.

The Chairman. Senator Malone has some rather extended questions, I think, judging by the number of books he had there. So he left with the assurance that he would be the first one to examine you

Senator Bennett. How many other witnesses are we going to hear, Mr. Chairman?

The CHARMAN. The only other one I know of is the Budget Director.

Senator Long. Is it possible, Mr. Chairman, to notify Senator Malone that the committee plans to stay in session somewhat longer to accommodate him? I recall on the trade hearings I sat with Senator Malone until midnight.

The Chairman. Would there be any harm done if it was not acted upon until next Monday?

Secretary Anderson. No, sir: I do not think so.

(Off the record.)

The CHAIRMAN. We will meet at 9 o'clock in the morning.

Senator Bennett. May I dispose of mine tonight, Mr. Chairman?

The Chairman. Senator Bennett.

Senator Bennerr. I am sure by this time everything is in the rec-

ord, but perhaps I can clarify 1 or 2 things.

Earlier this morning, the adequacy of your estimates of income and expenses was questioned, with the inference that the deficit would probably be greater in 1959 than the present budget plans for.

If that were true, would that not suggest all the more need for

flexibility in your position?

Secretary Anderson. Not only the need for flexibility, but the

actual need for being able to meet our expenditures.

Senator Bennett. So that the uncertainty of the present situation is a potent argument for the necessity of a greater margin between your present situation and the actual debt—

Secretary Anderson. It is indeed.

Senator Bennett (continuing). Limit.

The other thing I would like to get into the record:

 $\Lambda$  great deal of time has been taken today developing the idea that you, as the Secretary of the Treasury and manager of the fiscal affairs of the country, are being used as an involuntary instrument in

the interest of economy.

I think it has been brought out that Congress appropriates more than it should sometimes, and it has been brought out that the executive department has a backlog of some \$70 billion of appropriated funds, and the inference—well, more than the inference; the rather plain statement has been made over and over again that it is desirable to keep the debt ceiling right down on top of your head so that you become an involuntary control on those of us who really initiate, who really create, the problems.

It seems to me that whatever value that may have, we have ignored the fact that you do have an affirmative responsibility in your situation, which is to manage the public debt as cheaply and as success-

fully, advantageously, as possible.

Now we have a choice here. I think we are setting up a choice. Is your affirmative responsibility to be sacrificed in order that under some circumstances your involuntary usefulness may be increased? And I feel that it would be shortsighted for us to assume that your affirmative responsibility should be scuttled or at least endangered in this kind of situation.

During the heavings last summer, a great deal was made of the fact that the public debt is becoming increasingly short, that there had not been enough long-term issues during the past two years, and the process of attrition of time was shortening up the debt.

Do you feel, as part of your responsibility, you should be attempting constantly at least to replace that attrition, if not to lengthen out the

present average life of the debt?

Secretary Anderson. Senator, I feel very strongly that we ought to take full advantage of every opportunity the market gives us to extend and thereby better balance the debt, not only from the standpoint of doing it as economically as we can during periods when interest costs are perhaps not as high as at others, but for another very important reason:

We, every time we go to the market—and when I say "we," I am talking about the United States Government—with any kind of security, we compete in the whole market process with others who are seeking funds, and to that extent we make more difficult the financing of private businesses, more difficult the financing of local subdivisions, States, municipalities. And I think we have the dual responsibility, in trying to take advantage of these opportunities, both to get this thing in better balance so that you do not go so frequently, as well as to try to do it more economically if the opportunities come.

Senator Bennett. I think that is a very important phase of it. I would like to return to the other one briefly for a minute, however.

A point has been made that during the preceding 2 years, the years of your predecessor, there were no long-term bonds sold. You have sold two small issues. Would you say that the present situation may be more favorable to you in carrying out your responsibility to lengthen the average of the debt than the situation your predecessor faced in those two years?

Secretary Anderson. Senator, I would not at all want to be unresponsive to your question. I would like to respectfully suggest that we are very close upon some financing, and I would like to defer any direct answer of what I believe until that is over.

Senator Bennett. Let me rephrase the question: When or to the extent that the present situation would seem to offer an opportunity for a lengthening out of the debt, would a very tight debt limit make it impossible for you to take advantage of that situation?

Secretary Anderson. It would make it impossible or exceedingly

difficult to take advantage of it, yes, sir.

Senator Bennett. I think those are all my questions.

Excuse me, may I ask one more.

Earlier today the record shows or you reported that last fall, if I remember correctly, you disposed of or you used the FNMA as a device to give you a little more leeway in you ceiling.

Secretary Anderson. Yes.

Senator Bennett. And the record shows that you have exhausted that source, practically exhausted that source of leeway.

Secretary Anderson. Yes.

Senator Bennett. You have \$500 million worth of gold which, if sold, would do the same thing.

Secretary Anderson. It would be exhausted.

Senator Bennett. Is that the last resource you have?

The CHAIRMAN. There is some silver, and so forth, about a couple

of hundred million. [Laughter.]

Secretary Anderson. You have some silver, and then you have some leeway under the CCC, for instance, but it is a very awkard situation.

Senator Bennett. But it is an awkward situation.

Secretary Anderson. Yes.

Senator Bennett. And it seems to me if we say to you, "Sell that \$500 million worth of gold," we are putting you in a position where, in the event of a contingency or an emergency, then you have got no very readily available source of cash left.

Secretary Anderson. I really have no place to go except to come back and ask for an increase in the debt limit.

Senator Bennett. It seems to me the Government of the United States, big as it is, should not come right up to the last ultimate resource before it gives you some flexibility in carrying out your responsibility. Is that a fair statement?

Secretary Anderson. That is a fair statement, and we have felt that in seeking this \$5 billion of increase, that we are approaching our problem modestly and prudently, and not asking just for unneeded amounts of money or unneeded borrowing authority.

Senator Bennett. Did anybody ask you earlier to indicate for the committee, as I think for the House committee, the added cost in

interest that the FNMA transaction represented?

Secretary Anderson. No one has asked. I have those figures.

The spread is about one-half to five-eighths of 1 percent difference. Senator Bennett. On \$800 million.

Secretary Anderson. \$800 million.

Senator Williams. Will the Senator yield for a question at that point?

Senator Bennett. Yes.

Senator Williams. Mr. Secretary, do you think it would be wise to go back to the old provision whereby the Government, I mean the Treasury Department, sold these as Government bonds and to cancel the authority of these agencies to sell them direct, as we did, because unquestionably we could save this one-half or five-eighths of a percent, and while these bonds that are being sold do not have a direct Government guaranty, there is a moral commitment there which we all recognize.

Secretary Anderson. Well, certainly it would be cheaper if they were all direct obligations of the United States. If, however, you attempted to put all of the obligations which are not the direct obligations of the United States under the same blanket, then we would certainly have to be asking for a much larger increase in the debt ceiling than we are asking for.

Senator Williams. I recognize that. I just wonder, if the Senator would yield again, would you advise we face that situation, take an inventory and reevaluate our debt ceiling to cover it, and bring them all in under and sell them as Government bonds?

Secretary Anderson. I would not say I have reached a firm conclusion. It is a matter in which Mr. Baird and I and other members of the Department are studying it very carefully.

Senator Williams. And you would not care to make a recommendation?

Secretary Anderson. Not at this moment, sir.

Senator Bennett. I appreciate the Senator's bringing that up.

I do not have the figures before me, but I have the impression that over in another committee a feeling is developing the Treasury has no obligation involving FNMA funds, so the Treasury should reinstate its earlier obligation, FNMA's loaning authority should be increased; because of the Treasury once having had \$800 million and sold them, now they ought to give us \$800 million more of Treasury funds so we can have that much more money to loan. So if they were definite Federal obligations, you would avoid that particular pressure.

The CHAIRMAN. Of course, they do not come under the debt limit,

since 1954.

Senator Bennett. No. But, Mr. Chairman, there are people who are anxious to see FNMA buy more mortgages who say, "Well, there is no Federal money in FNMA now. There was \$800 million there last year. The Treasury should be willing to take \$800 million more worth of FNMA funds and thus increase their loaning authority, put it under the debt limit."

The CHAIRMAN. That does not come under the debt limit by law, am I correct?

Secretary Anderson. It does not come under the debt limit.

The Chairman. Not since 1954.

Senator Bennerr. But to the extent you provide money for FNMA directly, that comes under the debt limit.

Secretary Anderson. Yes. But we go out and market those to the public in order to get the public holding the bonds instead of the Treasury

The Chairman. But that is a small amount on a temporary basis,

is it not?

Secretary Anderson. Yes, sir. You see, we have two funds in the FNMA. One is this liquidation account, and those are the funds which were referred to recently in the \$800 million.

Now, in the secondary mortgage market they call on us from time

to time for funds with which to buy mortgages.

The CHAIRMAN. That is a revolving fund.

Secretary Anderson. Revolving. When they accumulate it they go to the public and sell it.

Senator Bennett. I am through.

Senator WILLIAMS. On the World Bank bonds, those are sold direct to the public by the World Bank and are not counted in the national debt, is that not correct?

Secretary Anderson. That is correct.

Senator Williams. But they do carry a legal Government guaranty.

Secretary Anderson. Up to a certain amount.

Senator Williams. Up to \$2.5 billion.

Secretary Anderson. Yes.

Senator Williams. In other words, we definitely guarantee those just as we do every Government bond that is issued, is that not true?

Secretary Anderson. Well, there is not perhaps the same legal

situation, but it is an obligation.

Senator Williams. Well, is there not a legal obligation? I am just asking the question. Does not the law say that the Treasury Department will furnish up to \$2.5 billion?

Secretary Anderson. They can call on the Secretary of the Treas-

ury and you are obligated to put it up.

Senator Williams. You are obligated to put the money up. So it is a guaranty.

Secretary Anderson. Well, when you get down to this choice of

words, you get legal significances.

Senator Williams. I think we asked you for some further explanation on that. Do you have that report ready? The last time you were up here, I think we asked for a compilation.

Secretary Anderson. That is when I was visiting with you. We

do not have that material.

Mr. Baird. We will give you that, Senator.

(The information requested is as follows:)

RELATIONSHIP OF UNITED STATES LIABILITY ON STOCK OF INTERNATIONAL BANK TO PUBLIC DEBT LIMIT

The articles of agreement of the International Bank for Reconstruction and Development, of which the United States became a member pursuant to the Bretton Woods Agreements Act of 1945, provide that 80 percent of the stock

subscription of each member country is subject to call by the bank only to meet obligations of the bank for funds borrowed or on loans guaranteed by it. The subscription of the United States to the International Bank is \$3,175 million, so that the 80 percent obligation is \$2,540 million, at the maximum. Members are liable to call regardless of the currency in which the obligation of the bank to be met is expressed, but payments on any call may be made, at the option of the paying member, in gold, in United States dollars, or in the currency required to discharge the obligations of the bank for which the call is made.

The 80 percent portion is not a specific guaranty or security applying to any particular obligations of the bank. In fact, the bank's articles provide that all bonds issued or guaranteed by the bank must bear on their face a conspicuous statement to the effect that they are not an obligation of any government, except as the government may be liable as a borrower on the particular security.

The aricles of agreement also provide that when calls are made on the 80 percent subscription, they shall be in uniform proportion on all shares. If a call did not yield the funds necessary to meet the obligations of the bank then due because all the members did not respond to the call, the bank would be required to make further calls until the necessary amounts had been collected from the members which did pay.

Another factor which makes the exact amount of a member's actual liability on the 80 percent subscription very uncertain is that no call would be made unless the bank had in fact suffered serious defaults on its outstanding loans. To date all payments on loans to the bank have been made as they fell due. Moreover, the bank has very substantial reserves which would be utilized before calls were made on the stock subscriptions.

Thus the liability of a member of the International Bank on the 80 percent subscription is highly contingent as to both amount and time when it might take effect. It is clear that this liability is not subject to section 21 of the Second Liberty Loan Act, as amended (31 U.S. C., section 757b).

Senator Carlson. Mr. Chairman, before we adjourn, if I may have a moment. I will not be able to be here in the morning, and therefore I want to say that I appreciate very much the fine statement of the Secretary today, and I think most everything has been asked in the way of questions.

It is an interesting history to me to watch this debt limit increase. I happen to have checked the tables, that is, table 1, and I note that I was a member of the House Ways and Means Committee May 26, 1938, when the debt limit was \$45 billion, and I followed it on through.

In 1941 we stepped it up to \$65 billion; in 1942, \$125 billion; 1943, \$210 billion; 1944, \$260 billion; 1945, \$300 billion; and in 1946 back to \$275 billion.

Then I left the House of Representatives in January 1947 and they did not raise the debt limit until 1954 when I got back on this committee, and it was \$281 billion; 1955, \$281 billion; 1956, \$278 billion; 1957, \$275 billion, and now it is before us again for a \$5 billion increase.

So I have had an interesting experience in following this debt limit. I want to ask the Secretary, and I appreciate his problems, after all, Congress builds the expenditures of this Government; you do not do that. Under our Constitution, you handle our debt, our Federal debt.

Now, you have stated to this committee that you think you should have available funds for expenditures which would be \$3.5 billion, or 12 days' expenditures.

In these past years of all these debt limits that I have mentioned, what has been the situation in the Treasury? Have they had greater leeway or less?

21297—58——7

Secretary Anderson. Very much larger leeway.

Senator Carlson. Well, I very well remember back in the House Ways and Means days when they had many times what you are requesting today, and I would be pleased, Mr. Chairman, if they would put that in the record. I do not want to take the time of the committee this evening, but I remember some of those discussions, and sometimes we had billions of dollars in cash, hundreds of millions of dollars in cash and billions in leeway, and I would like to have that placed in the record.

Secretary Anderson. We have those figures, and we will be glad to put them in the record.

Senator Carlson. I think it would be interesting.

Secretary Anderson. All right, Senator. (The information referred to follows:)

Public debt subject to statutory limitation and operating cash balance

[In billions]

Date	Statutory limitation	Debt out- standing subject to limitation	Balance issuable under limitation	Operating cash balance, including gold
June 30—  1936 1.  1937 1.  1938 1.  1938 1.  1939 1.  1940.  1941.  1942.  1943.  1944.  1945.  1946.  1947.  1948.  1949.  1950.  1951.  1952.  1953.  1954.  1955.  1956.  1957.  Dec. 31, 1957.  Jan. 27, 1958.	\$45. 0 45. 0 45. 0 45. 0 249. 0 65. 0 125. 0 260. 0 300. 0 275. 0	\$32. 8 35. 9 36. 9 40. 4 43. 2 49. 5 74. 2 208. 1 268. 7 265. 5 251. 5 252. 0 256. 7 254. 6 258. 5 273. 9 272. 4 270. 4 274. 6	\$12. 2 9. 1 8. 1 4. 6 5. 8 15. 5 50. 8 69. 5 51. 9 31. 3 6. 1 17. 5 23. 0 18. 3 20. 4 16. 5 4. 2 7. 1 8. 6 6 7. 8	\$2.4 1.1 1.8 2.4 1.2 2.0 2.4 8.9 19.6 24.3 3.1 4.2 5.3 7.1 6.4 2.5 5.7 5.7 5.7

<sup>&</sup>lt;sup>1</sup> Congress limited the amount of bonds outstanding. The figures include the following for bonds on the dates when such limitation was in effect:

Date	Limitation	Amount of bonds out- standing subject to limitation	Balance issuable
June 30— 1936	\$25. 0	\$18. 4	\$6, 6
	25. 0	21. 9	3, 1
	30. 0	24. 3	5, 7
	30. 0	28. 4	1, 6

<sup>&</sup>lt;sup>2</sup> Includes authorization for national-defense purposes in act approved June 25, 1940, of notes, certificates, and bills in an aggregate amount of \$4\$ billion outstanding at any one time, less any retirements made from the special fund made available under sec. 301 of the Revenue Act of 1940. No securities issued under this authority were outstanding on June 30, 1940. The act approved Feb. 19, 1941, eliminated the separate authority for \$4\$ billion of national defense series obligations.

Senator Carlson. Second, there was some discussion this morning about your using the anticipated postal revenues in case Congress

should vote 4- or 5-cent postage rates.

Now, Congress has not voted that, and if we pass the postal-pay bill which is on the Calendar of the Senate, and as I understand will be up for consideration soon, the deficit in 1959 will be \$701 million in the Post Office Department, and if we add to it this \$320 million in the postal pay bill which is now on the Calendar, the deficit will be well over a billion dollars. That will add further to your difficulties; will it not?

Secretary Anderson. Yes, sir.

Senator Carlson. I believe the President recommended pay increases of \$1,052 million for postal, classified, and military. Do you remember if that is correct?

Secretary Anderson. I do not remember the particular figure, but

it is in that neighborhood.

Senator Carlson. I think that is the correct figure. The President

recommended \$160 million for an increase in postal pay.

Now, anything we vote in excess of \$160 million, I assume will become a pattern for the other employees of the country, classified and military, which I think, Mr. Chairman, has possibilities of greatly adding to the problems of the Secretary in this program. And we, in Congress, have a responsibility not only in that phase, but I personally feel that we must do everything we can to help the Secretary in his problems in this financing of our national debt to the best advantage.

Secretary Anderson. Thank you, sir.

Senator Carlson. I thank you, Mr. Chairman.

The CHAIRMAN. We have our own responsibilities, too, not to pass these bills if they are going to add to the debt.

Mr. Secretary, are you going to call Senator Malone?

Secretary Anderson. I will call Senator Malone and be in touch with you.

The CHAIRMAN. What is the latest hour you can stay here tomorrow

morning?

Secretary Anderson. My meeting is set up for 11 o'clock.

The CHAIRMAN. Does any other Senator desire to question the Secretary?

Senator Jenner.

Senator Bennett. He is out of town.

The CHAIRMAN. He is very much interested in this debt ceiling.

Secretary Anderson. I will go see Senator Malone now.

The Chairman. If Senator Malone desires to question you in person, the committee will meet tomorrow morning at an hour which will be agreeable with both you and Senator Malone. If, perhaps, Senator Malone is satisfied with the testimony thus far, it will not be necessary to meet tomorrow. I shall be glad to allow Senator Malone to submit a statement in the record in lieu of his interrogation of you if he so desires.

Secretary Anderson. I will go to his office immediately and so

advise him.

The CHAIRMAN. Will you notify Mrs. Springer of the agreement reached?

(In accordance with permission granted by the chairman, the following remarks made by Senator Malone at the end of the hearing on January 28, 1958, and summary statement of views subsequently

submitted, appear at this point in the record.)

Senator Malone. Now, Mr. Chairman, I want to say at the outset that I think it is utterly impossible to consider one particular part of this arrangement that has been going on now for 25 years to attack the social and economic structure of this country, that it is utterly impossible considering them one at a time and giving them the proper weight. The first thing we did was in 1933, and was when we followed England and other foreign nations off the gold standard and utterly abandoned any attempt at holding the purchasing power of the dollar.

Since that time, no attempt has been made by any administration, including our own, to hold the purchasing power of the dollar. We give it lipservice, but when we cut it loose from the gold standard we cut the only mooring it had, just like cutting the mooring of a balloon, and there is no place for it to go but up. Inflation has continued over this 24- or 25-year period and it will continue to go up, which means, of course, that all of the pensions and the savings and

everything in the country are destroyed.

Now, with that one particular thing we priced ourselves out of the world markets almost immediately. So we are entirely priced out of the markets of the world now except to the extent that we furnish a subsidy or give them money ahead of time to buy the goods. That is where your \$70 billion went—into building plants there to compete with our goods with cheap labor, shipped back here under the virtually free-import system that we adopted in 1934; and to build dollar credits. Under my questioning of Secretary Humphrey in part 1 of the parent testimony and of Mr. Martin in part 3, it was brought out that if all the dollar credits in Europe and Asia were converted, as they could easily be so that they could demand gold for their dollar credits, we would have only \$5.7 billion of gold left.

Now here we are using part of the gold for this debt. But we better figure out whether we own it or not. It is reported to us each year that we have \$22 billion or \$24 billion in storage, but nothing

is said about who owns it.

Now, they testified that they could stop payment in gold but also admitted readily that that would depress the American money on international markets and probably cause a severe depression in the United States

Now, in 1934, the Congress passed the 1934 Trade Agreements Act and transferred to the Executive the constitutional responsibility of Congress to regulate foreign trade and the national economy with full authority—and this is the gimmick—that even when the Tariff Commission (which is just a "chore boy," a messenger boy; they have no authority whatever) recommends to the President that an industry, a part of it or all of it, is threatened to be distributed among foreign nations by our free imports policy, that—and Secretary Dulles testified to this, sitting right in this chair in 1953 when they extended the 1934 Trade Agreements Act to June 1958—the President must, or may, consider whether or not by the sacrifice of a part or all of an industry, be it textiles, machine tools, minerals, or one of more than 5,000 other industries and materials—if by the sacrifice of all or a

part of that industry he can further our international policy of treaties and agreements; then he must or may do that. In other words, there is a gimmick there that never was in the Constitution of the United States.

Also, the same Mr. Dulles testified that in 1947 they organized General Agreement on Tariffs and Trade and transferred the constitutional responsibilities of Congress to regulate foreign trade and the national economy to Geneva under that GATT—General Agreement on Tariffs and Trade—and that they then could make these multilateral trade agreements. And there, again, Mr. Chairman, is another gimmick. They make these agreements; they lower the tariffs of the United States on important things and will lower the tariffs on some of their material; but as long as they are short of dollar balance, they do not have to keep the agreements, and you are short of dollar balance until you are all living alike; in other words, you just divide the wealth of the United States of America.

So from 1947 to the present time—first, 34 and now 37 foreign competitive nations have been, and are, sitting there dividing the markets of the United States among them, and the markets of the

United States are gone. So we are living on a war economy.

Now we want to hop that up to \$42 or \$44 billion because that is the only thing we are living on, the purchases of the materials that we manufacture in the United States through our own economy, our own \$42 or \$44 billion. If you quit spending that money for 60 days at that

rate, you are out like a light; everyone knows that.

Now, the third thing is the billions to Europe. That started with the Marshall plan, so ably outlined by the chairman this morning. It did not really start with the Marshall plan; it started with the \$3,750 million to England in 1946, which was going to be the last. That was going to be the last; everything was going to run rosey in Europe from then on. But Mr. Marshall made a speech at Harvard in 1947 in which a paragraph appeared—I doubt if the old man knew it was there himself—where he said, "We should help them get on their feet by certain cash payments." The Prime Minister of England took that ball on the first bounce and within 30 days let us know just how much it was going to cost us. And the chairman is right; it was supposed to be \$15 billion in a 5-year program, of which the senior Senator from Nevada on the floor in 1948 said, "Once we start it it will become permanent"; and it has.

The Secretary of State sat right in that witness chair and testified it must be permanent. And that is when you gave him the money last year. This year I hope we have him here again and let him explain it.

Now, the fourth thing, there are four organizations, Mr. Chairman, that are operating for one thing, and that is to finance American corporations and individuals and others to build plants in foreign nations and use the cheap labor and send the stuff back here through the free importing policy. Those four are, according to Mr. Martin who testified on page 1,593 of part 3 of the hearings under my questioning: the Export-Import Bank, the International Bank, the International Monetary Bank, and the International Finance Corporation. The Export-Import Bank we finance entirely; the other three we finance up to 36 percent, but actually we put in the only real money. The other is their thin paper money. So that as a matter of fact we finance all four of

them—for one purpose, and that is to loan money and to finance American organizations and corporations and individuals to go to foreign nations and build these plants and send this stuff back with the \$2-aday labor or 50-cent labor, whatever it is.

Now, with those four organizations operating, it is, in effect, a pincer movement, Mr. Chairman, to destroy the economic and social structure of this Nation—and it is much nearer destruction now than many of

the Senators, I am sure, realize.

One thing I believe the Senators should realize, and of course they must. If they do not vote for it, an administration cannot do it. So there is no reason to blame an administration for spending \$70 billion on foreign nations in 10 or 12 years. There is no reason to blame an administration for keeping up 3 missile organizations over these last years and 5 air corps, because if Congress did not vote for it they could not do it.

Now, Mr. Chairman, everyone who studies it knows that at least \$15 billion a year is spent in obsolete material and in billions to Europe, our 3 missile organizations, and the 5 air corps. We have an Air Corps, a Navy air corps, an Army air corps, a Marine air corps, and a Coast Guard air corps; we need one air corps. We have 3 missile organizations, and, of course, everyone realizes we need 1. And here we have, in addition to that, foot soldiers in 73 nations throughout the world, all "dead" when the fight starts; because, if they are not in the way, they will cut them off like MacArthur did the Japs out on those isolated islands. And if they are cut off that way, they will starve

just like chinchbugs in Kansas.

Now, Mr. Chairman, I want to close by saying I have seen every nation in the world, and I did not go for social purposes. It took 11 years. The last trip was for two months and a half behind the socalled Iron Curtain in 1955 and when they finally turned me loose I traveled 14,000 miles in Russia. I was in every one of the Socialist Republics, took pictures in their manufacturing plants, where they are building their dams on the Volga River, and all over. I held an interview there that was widely used here, although sometimes misquoted, and when I got back on the Senate floor in 1955, I said in speeches three things: (1) that in a very reasonable time Russia would make itself self-sufficient in the area under its control in everything they need for war or peace; (2) there would be no successful revolt; (3) all the power in the Eastern Hemisphere has moved to Russia. There is no power in Europe, there is none in England, none in France. The empire colonial system is dead.

Then I said, Mr. Chairman, if these three things are true—and I believed them to be, and I do as of this minute—then we must make our system work. The Russians, whether we like it or not, are making theirs work. Ours is not working. We are sitting here on the Senate floor and on the House floor by the votes of our people. Yet there is no more chance of you holding that debt limit to \$275 billion than there is flying to the moon in the morning. And the chairman understands that just as well as does the senior Senator from Nevada.

It is a question of how much you are going to give in each time. That is all.

I admire the senior Senator from Virginia, the longtime chairman of this committee, for his attempt to hold it down. But after our

votes—I say ours because of my ineffectual attempts to prevent it on the Senate floor—the majority of the Senators have voted consistently for the four things that I have talked about as a pincers movement to destroy us and as long as they do, they will be sitting here doing exactly what they are doing, year after year.

We heard three times from Secretary Humphrey this same story that we heard from Secretary of the Treasury Anderson yesterday. Is that not true? And each time all this committee could do was to

accede to his request to a certain extent; is that not right?

The CHAIRMAN. Right.

Senator Malone. Now, then, in my humble opinion, Mr. Chairman, unless we realize that there is something wrong in Denmark with all of the State Department palaver that we are going to surround Russia and contain Russia—well, you might as well contain me in Nevada, or you in Virginia. So all he did was give them time to get ready.

Now, if you will go deep enough into this national defense thing, you will find what I say is true. You can make this hemisphere self-sufficient for war and peace. You can defend it from North America, and that is the only place from which you can defend it. Because we are going to get run out of Europe in 2 years, and maybe much sooner, because they will tell you that their security is threatened if our stuff is allowed to stay there.

So, Mr. Chairman, with the privilege of rearranging what I have said, I am going to close now. But I want to close by saying again that when, in this committee or on the Senate floor, we allow these things to come one at a time and are overwhelmed by it without considering the picture, then this is only the beginning of the end. It has been going on 25 years. It did not start yesterday. The Eisenhower administration did not start it. It is simply carrying on what it inherited. That is the worst thing you can say about it.

I am very fond of the President. I have a fine personal relationship with him. The fact that I have never voted for any of these billions of dollars to Europe and funny money and free trade, free imports, that are destroying the American jobs and American investments—does not alter that and I always tell him first. I have a visit

with him, and he knows exactly how I am going to vote.

But I agree with the chairman now. As long as the Senators of the United States go out on that Senate floor and vote for all of these things I have mentioned, they have no alternative here than to do what the Secretary of the Treasury requests.

(The summary statement subsequently submitted by Senator

Malone follows:)

## SUMMARY STATEMENT OF SENATOR GEORGE W. MALONE

Abraham Lincoln, in referring to what he regarded as a preconceived plan, once said:

"We cannot absolutely know that all these exact adaptations are the result of preconcert. But when we see a lot of framed timbers, different portions of which we know have been gotten out at different times and places and by different workmen, and when we see these timbers joined together, and see they exactly make the frame of a house or a mill, all the tenons and mortises exactly adapted to their respective places, and not a piece too many or too few—in such a case, we find it impossible not to believe that all worked upon a common plan or draft drawn up before the first blow was struck."

#### A PRECONCEIVED PLAN

Mr. Chairman, there is little doubt that there was a preconceived plan to divide the wealth (markets and cash) of this Nation among the nations of the world, and to make us dependent upon foreign nations across major oceans for the critical minerals and materials without which we cannot fight a war or live in peace.

In 1933 this Nation followed England off the gold standard and adopted a managed currency which could only result in inflation and the pricing of this Nation out of the world markets. The following year the Congress passed the 1934 Trade Agreements Act (so-called reciprocal trade) which transferred to the President this constitutional responsibility of Congress and gave him full authority to place it in the hands of competitive foreign nations at Geneva, Switzerland where it now resides. At Geneva these nations are now dividing our markets among themselves and thereby causing unemployment here and making us dependent upon them for important critical materials necessary for our security while we are living on a "war economy."

In 1946 the \$3\% billion loan to England, the Marshall plan in 1948, succeeded by ECA and mutual security, started a program of direct division of the wealth, which the Secretary of State now testifies must be permanent. Under this plan more than \$60 billion has been transferred to foreign nations.

The Constitution has continually been modified by treaty—as, for example, the status of forces treaty—and these modifications altogether have finally taken form as a plan for the destruction of the United States through amending the Constitution without submitting it to the people as has been guaranteed by that document.

The plan constitutes international socialism at its worst and can only result in complete international social and economic control of the United States of America, together with a severe curtailment of our established wage living standards. The Secretary of the Treasury has testified that he represents only one part of the plan.

## WAGES, INSURANCE, PENSIONS, SAVINGS REDUCED BY INFLATION

A continued managed currency means a continued inflation. Continued inflation means a continued reduction in wages, insurance, pensions and savings through reduction in purchasing power of the dollar.

As President Lincoln well said:

"In such a case we find it impossible not to believe that all worked upon a common plan or draft drawn up before the first blow was struck" to internationalize the social and economic structure of the United States.

George Washington, relative to evading the Constitution, said in his farewell

"If in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed."

The Constitution plainly says in article 1, section 8 that:

"Congress shall have the power \* \* \* to coin money, regulate the value thereof, and of foreign coin \* \* \* "

On December 23, 1913, the Congress passed the Federal Reserve Act, setting up the Federal Reserve Commission and transferring to that body the management of the Nation's currency.

# THE SECRETARY FAVORS A MANAGED CURRENCY

The Secretary of the Treasury, Mr. Humphrey, testified that he favored the continuation of the managed currency system and that the Federal Reserve Commission had the power to determine the amount and kind of currency in circulation and to fix the stock exchange margin.

Congress only recourse would be to amend the Federal Reserve Act.

The Secretary testified that he had the power to fix the rate of interest to be paid on Government bonds, which influenced the interest to be paid on private funds and bonds, and that foreign governments can secure our gold through dollar balances, for \$35 per ounce and sell it on the open world market for any price they can get.

The Secretary further testified that he would not change the present "managed currency" system regulated under the Treasury and the Commission, as long as the unsettled international situation prevailed.

Since troubled times have been the established condition in Europe and Asia

for centuries the situation is not likely to change.

The record, however, is that a strong nation has always led in establishing a sound currency and that weaker nations have followed their example—the United States in 1879 and 1900 and England in 1916.

Regardless of that record the Secretary still maintained that we should retain our presently managed currency.

#### DUTIES OR TARIFFS

The Constitution is explicit in article I, section 8, that:

"The Congress shall have the power to lay and collect taxes, duties, imposts, and excises \* \* \* to regulate commerce with foreign nations, and among the several States \* \* \*."

The Congress passed the 1934 Trade Agreements Act and transferred to the President its constitutional responsibility to regulate our national economy and foreign trade and, with it, gave him the full authority to transfer that responsibility to Geneva, Switzerland, where at this time 34 foreign competitive nations, through multilateral treaties under the GATT (General Agreement on Tariffs and Trade) are dividing the American markets among themselves.

#### GOLD OWNED BY UNITED STATES AND IN OUR POSSESSION

The Secretary of the Treasury testified that we have stored in various depositories in this country including Fort Knox, \$22,406 million in gold.

A statement from the Treasury specified that \$16,200 million of dollar credits are owned by foreign nations and individuals—and that it is customary to honor these dollar credits of foreign nations in gold when presented for payment.

It is generally known that the individually owned dollar credits can be readily converted to nation-owned credits and therefore subject to redemption by gold payments.

The Secretary testified that he can, of his own volition, refuse gold payments for foreign-offered dollar credits but that, in the absence of an international emergency such as war, the effect of such a refusal to honor the American dollar credits would be depressing on the foreign exchange.

Further testimony showed that if all foreign dollar credits were honored by gold payments in the customary manner we would then have \$6.2 billion of gold remaining in the United States Treasury to back the \$27.4 billions of outstanding currency, which is not up to the required 25 percent by law.

#### THE GOLD STANDARD

Mr. Chairman, on April 1, 1957, I introduced Senate bill 1775 which provides in part:

"That notwithstanding any other provision of law, gold in any form, mined subsequent to the enactment of this act, within the United States, its Territories, and possessions may be melted, smelted, concentrated, or otherwise treated so as to prepare it to be sold, or held and stored as is, or has been customary with gold, and it may be bought, held, sold, or traded upon the open market within the United States, its Territories, and possessions for any purpose whatsoever without the requirement of licenses and it may be exported without the imposition of duties, excise taxes, the requirement of licenses, permits, or any restrictions whatsoever."

Then on April 16, I introduced Senate bill 1897 which provides in part:

"All money of the United States, including money issued by banks, shall be maintained on a parity with the standard gold dollar by freedom of exchange at its value with standard gold bullion or coin at the United States Treasury."

## SECTION 336-THE 1930 TARIFF ACT

The 1934 Trade Agreements Act as extended expires in June of 1958. If it is not renewed then, Congress automatically resumes its constitutional responsibility to regulate foreign trade and the national economy and the American workingmen and producers are back in business under section 336 of the 1930 Tariff Act headed "Equalization of Costs of Production";

"If the Commission finds it shown by the investigation that the duties expressly fixed by statute do not equalize the difference in the cost of production of the domestic article and the like or similar foreign article when produced in the principal competing country, the Commission shall specify in its report such increases or decreases in rates of duty expressly fixed by statute (including any necessary change in classification) as it finds shown by the investigation to be necessary to equalize."

## DUTIES OR TARIFFS

Mr. Chairman, on January 7, 1957, I introduced Senate bill 28, which if passed would return the regulation of our foreign trade and national economy to the Tariff Commission, an agent of Congress, under the 1930 Tariff Act.

Under the heading "Declaration of Policy," the following language is to be found in section 1 of my Senate bill 28.

## DECLARATION OF POLICY

Section 1. It is declared to be the policy of the Congress—

- (a) to facilitate and encourage trade with foreign nations on the basis of fair and reasonable competition.
- (b) to maintain an investment climate through the principle applying equally to the whole country.
- (c) to provide necessary flexibility of import duties thereby making possible appropriate adjustments in response to changing economic conditions.
- (d) to assure the accomplishment of these objectives by returning to the provisions of the Constitution (art. 1, sec. 8) in the control over American import duties now subject to international agreements.
- On page 3 of the bill, in subparagraph (2) of subsection (b) of section 3, the Commission is authorized and directed, among other things—
- (2) to prescribe, upon termination of any foreign-trade agreement, that the import duties established therein shall remain the same as existed prior to such termination, and such import duties shall not thereafter be increased or reduced except in accordance with this act.
- It is also provided, in subparagraph (1) of section 3 (b), that the Commission is authorized and directed—
- (1) to terminate as of the next earliest date therein provided, and in accordance with the terms thereof, all the foreign-trade agreements entered into by the United States pursuant to section 350 of this act.

That is to say, the 1930 Tariff Act.

Section 4 (a), under the heading "Periodic Adjustment of Import Duties," provides as follows:

"Periodic Adjustment of Import Duties

"Sec. 4 Title III, part II, section 336, of the Tariff Act of 1930 is hereby amended to real as follows:

"'Sec. 336. Periodic adjustment of import duties

"(a) The Commission is authorized and directed from time to time, and subject to prescribe and establish import duties which will, within equitable limits provide for fair and reasonable competition between domestic articles and like or similar foreign articles in the principal market or markets of the United States."

Mr. Chairman, Senate bill 28 would broaden the Commission's scope to allow it to compensate for a foreign nation's manipulation of currency in terms of the dollar and its general maneuvering for trade advantages that are detrimental to the United States.

It will be noted that neither a high nor a low tariff is the objective of the regulation. The objective is a tariff continually adjusted in a spirit of fair and reasonable competition, to take the profit out of the cheap foreign labor at the water's edge and then, when any nation approached our American standard of living wages, free trade with that nation would be almost automatic and immediate.

The common objective is free trade. The problem is how to attain that creditable ambition without destroying our own standard of living.

Congress is our legislative body. It cannot shift the responsibility. The Constitution distributes the powers among the three branches of Government and it is no defense for Senators and Congressmen to say that the President recommends specific legislation or that propaganda has wrongly influenced public opinion. Legislative decisions are theirs alone to make.

#### ENCOURAGING AMERICAN INVESTMENTS ABROAD

Under the 1934 Trade Agreements Act, as extended to June 1958, the 34 foreign GATT nations based at Geneva continue to divide between themselves the American markets, and this can do no less than encourage American capital investments abroad, under the policy of importing the products of foreign "sweatshop labor."

The American owned foreign plants not only produce for foreign consumption but these products produced by the low living standard labor are imported here under the lowered duties or tariffs.

The Secretary testified that the Import-Export Bank entirely financed by American taxpayers up to \$5 billion is to encourage through low-interest long-term loans the export of American capital to the low-wage foreign nations.

He further testified that the International Monetary Fund—the International Bank of Construction and Development, and the International Finance Corporation all are set up with the avowed objective of encouraging American capital to move into the foreign cheap labor countries to furnish their markets and to import the low-cost labor product to compete with the product of our higher standard of living wages and the higher cost of doing business in this Nation.

We are committed up to \$5 billion for the Import-Export Bank and for 35 percent of the financing of the other three organizations. The three are independent corporations managed in each case by a Board of Directors and the control rests with the foreign nations board members.

All of these corporations are in addition to the International Cooperation Administration (mutual security) which doles out the \$4 to \$5 billion dollars annually appropriated by Congress for gifts of cash and goods to foreign nations.

## THE PATTERN LEADS TO INTERNATIONAL SOCIALISM

The entire pattern, from the abandonment of the gold standard in 1933, the passage of the Trade Agreements Act in 1934, the transfer to Geneva in 1947 of the constitutional responsibility of Congress to regulate our foreign trade, and the inception of the four corporations to encourage American capital to invest in foreign low-wage standard nations—the mutual security giveaway program—is to distribute American markets and dollars among the lower wage living standard European and Asiatic nations.

It all adds up to international socialism in its worst form. The United States is the only producing nation in the world today that does not protect its own working men and investors by a duty or tariff, by import and exchange permits, or both.

Free trade will only become feasible when the flexible duty or tariff (provided in art. I, sec. 8 of the Constitution) is adjusted on imports to take the profit out of foreign sweatshop labor at the water's edge. Then such foreign nations would allow their wage standard of living to increase, create a market within their own borders, and the common objective of "free trade" would be reached automatically.

# RESOLUTIONS, FOREIGN TRADE AND NATIONAL ECONOMY

Mr. Chairman, it has long been my conviction that it is necessary for men of like mind on sound currency, foreign trade and the national economy to work through ther own political parties and then join forces on the floor of Congress.

Accordingly, I quote the resolutions by the Nevada Republican State Central Committee in December 1956—the 10 Western States Republican Conference in May 1957—and the Young Republican 48-State Conference in June 1957, from the Congressional Record.

"The Nevada Republican State Central Committee, December 15, 1956

"In the Senate of the United States, "Wednesday, February 27, 1957.

"Mr. Malone. Mr. President, on December 15, 1956, the Republican State Central Committee met in Fallon, Nev. and passed the following resolution reaffirming the three basic principles of Government embodied in the Constitution of the United States.

"The Republican Party of the State of Nevada strongly advocates the return to constitutional government by adopting the following principles which have been the basic tenets of the Republican Party since its inception more than 100 years ago.

"'We believe the Republican Party must advocate a free market for gold, with removal of all restrictions upon its purchase, sale, and ownership, and a return to the traditional hard-money standard using gold and silver certificates re-

deemable in the respective metals.

"We believe the Republican Party must urge the Congress of the United States to resume its constitutional responsibility of regulating foreign commerce through the adjustment of duties, imposts, and excises, through its agent, the Tariff Commission, and allow the so-called Reciprocal Trade Act, which transferred such responsibility to the President, to expire in 1958.

"We believe the Republican Party should urge Congress to respect the rights of the individual States in all those matters which have been historically mat-

ters of State concern.'

"The Republican Regional Conference, 10 Western States, May 3-4, 1957

"IN THE SENATE OF THE UNITED STATES, "Wednesday, May 15, 1957.

# "TEN WESTERN STATES, MAY 4, 1957

"Mr. Malone. Mr. President, on May 4, 1957, the Republican regional conference, at Salt Lake City, Utah, including the States of Arizona, California, Idaho, Montana, New Mexico, Nevada, Oregon, Utah, Washington, and Wyoming, unanimously passed a resolution urging the Congress of the United States to 'allow the 1934 Trade Agreements Act to expire in June 1958.'

"Mr. President, I ask unanimous permission to include in the Record, as a part of my remarks, the resolution passed by the Salt Lake City conference.
"There being no objection, the resolution was ordered to be printed in the

Record, as follows:

# "FOREIGN TRADE AND THE NATIONAL ECONOMY

"Whereas 34 foreign, competitive nations are sitting in Geneva, Switzerland, regulating our foreign trade through multilateral trade agreements under the auspices of the General Agreements on Tariffs and Trade; and

"Whereas this distribution of our foreign trade between such foreign competitive nations is being carried on under the 1934 Trade Agreements Act, as

extended (so-called reciprocal trade); and

"'Whereas under this act more than \$30 billion of American capital has been invested in such foreign low wage standard of living nations to compete in American labor and investors in the textile, livestock, mining, crockery, glass, precision instrument machine tool, chemical and electrochemical, and several hundred other fields: Therefore be it

"'Resolved, That the 10 State Republican regional conference, including the States of Arizona, California, Idaho, Montana, New Mexico, Nevada, Oregon, Utah, Washington, and Wyoming urge the Congress to resume its constitutional responsibility of regulating foreign trade and the national economy through the adjustment of the duties, imposts, and excises (Art. I, sec. 8) through its agent, the Tariff Commission, and allow the 1934 Trade Agreements Act to expire in June 1958'.

"THE YOUNG REPUBLICAN NATIONAL FEDERATION, JUNE 20-22, 1957

## "IN THE SENATE OF THE UNITED STATES

"YOUNG REPUBLICAN NATIONAL FEDERATION CONVENTION PLATFORM—FOREIGN TRADE

"Mr. MALONE. Mr. President, the National Convention of the Young Republican National Federation, representing the 48 States of the Union, was held in Washington on June 20-22, 1957.

<sup>&</sup>lt;sup>1</sup> The word resolution was stricken in the adoption by the conference.

"Mr. President, I ask unanimous consent to have printed at this point in the Record a resolution relating to foreign trade, which is a part of the platform of the Young Republican National Federation for 1957 and 1958.

"There being no objection, the resolution was ordered to be printed in the Record, as follows:

#### "IMMEDIATE REVIEW OF TARIFF LEGISLATION

"We know that behind the shield of our collective defense arrangement, there must be growth and development or that shield will be a paper one. We support the administration in its advocacy of trade policies which promote the interchange of goods to mutual advantage. Under no condition, however, should such an interchange of goods be to the detriment of our American industrial. mining, processing, and developing segments of the economy, ending with a resultant loss in operation and income to both employer and employee. Furthermore, we call for an immediate review of tariff legislation to bring relief to hard-hit American industries.

## "CONGRESS TO RETAIN CONTROL

"'We believe effective control over foreign trade and the trade agreements program should be retained in the Congress.'

### YOUNG REPUBLICAN OFFICERS FOR 1957-58

John Ashbrook, chairman, Johnstown, Ohio. Jerri Kent, cochairman, Johnson, Tenn.

Fred L. Dixon, treasurer, Washington, D. C.

Roseann Biwer, secretary, Waukesha, Wis.

Sally Liston, assistant secretary, Phoenix, Ariz.

Homer Jackson, auditor, Birmingham, Ala.

YOUNG REPUBLICAN NATIONAL FEDERATION REGIONS BY STATE AND TERRITORIES

Region I: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut.

Region II: New York, New Jersey, Pennsylvania, Delaware.

Region III: Virginia, Kentucky, District of Columbia, Maryland, West Virginia.

Region IV: South Carolina, Georgia, Florida, Tennessee, Puerto Rico.

Region V: Ohio, Indiana, Illinois, Michigan.

Region VI: Alabama, Louisiana, Mississippi, Arkansas, Texas, Canal Zone. Region VII: Missouri, Nebraska, Kansas, Iowa, Oklahoma.

Region VIII: North Dakota, South Dakota, Minnesota, Wisconsin. Region IX: Alaska, Oregon, Washington, Idaho, Montana. Region X: California, Nevada, Arizona, Hawaii.

Region XI: Utah, New Mexico, Wyoming.

# OTC AND ITO

The Organization for Trade Cooperation (OTC) now before the Ways and Means Committee of the House and the Finance Committee of the Senate is a successor to the International Trade Organization (ITO) rejected by the Con-

It is a "trick" bill. If approved, Congress would approve the regulation of our foreign trade and the national economy by the 34 foreign competitive nations at Geneva under the General Agreement on Tariffs and Trade. If Congress does not approve it the Geneva regulation continues under the 1934 Trade Agreements Act as extended to June of 1958 and now in effect.

## CONGRESS REGAIN ITS CONSTITUTIONAL RESPONSIBILITY

Congress can regain its constitutional responsibility to regulate foreign trade and the national economy through allowing the 1934 Trade Agreements Act to expire in June, 1958.

#### THE CONTEST

The contest is between the American workingmen and investors working for American wages and paying American taxes, as opposed to the international investor paying the foreign low standard of living wages and no American taxes.

The Congress can stop inflation and return to honest money through a re-

organization of the Federal Reserve System.

The Congress can stop amending the Constitution by treaty or executive agreement (such as the Status of Forces Treaty) by the simple expedient of withholding approval or by the adoption of an amendment to the Constitution prohibiting such procedure.

By proper future legislation Congress can stop the usurpation of the rights

of the States.

It is high time that the Members of Congress in both the Senate and the House take a long look at the 24-year picture that they have built through passing so-called emergency legislation a piece at a time (as Abraham Lincoln so aptly said more than 100 years ago "all \* \* \* exactly adapted to their respective places") thereby destroying the Constitution and with it the United States of America.

(Whereupon, at 5 p. m., the committee adjourned subject to call.)

### DEBT CEILING INCREASE

### TUESDAY, JANUARY 28, 1958

United States Senate, Committee on Finance, Washington, D. C.

The committee met, pursuant to recess, at 10:15 a.m., in room 312, Senate Office Building, Senator Harry Flood Byrd (chairman) presiding.

Present: Senators Byrd (chairman), Kerr, Frear, Anderson, Martin,

Williams, Jenner, Malone, Gore, and Bennett.

Also present: Elizabeth B. Springer, chief clerk.

Percival F. Brundage, Director of the Bureau of the Budget.

The CHAIRMAN. The committee will come to order.

Mr. Brundage, will you come forward, sir, and take a seat.

Mr. Brundage, we are very happy to have you before us as Director of the Budget and we thank you for coming. You have been asked to come here to testify today in connection with the administration's request for a temporary increase in the statutory debt ceiling of \$275 billion to \$280 billion expiring June 30, 1959.

This is a request on which the Director of the Budget should

be heard.

When we speak of the budget, most people think in terms of appropriations and expenditures. Actually, a budget must have two

sides—the revenues and expenditures.

I believe one of the fundamental weaknesses of our deliberations on the fiscal problems in Congress is that we seldom are able to consider the budget as a whole, the receipts and expenditures at the same time. Consideration of both sides of the budget simul taneously in connection with this debt-ceiling proposal is certainly very desirable.

Now, before I ask you some questions, I want to compliment you on the improvement you have made in the presentation of the summary and detailed material in the budget document. I reserve the right, however, to disagree with some of the recommendations. But I do want to commend you for the more comprehensive summary tables, the more concise detail, and the arrangement of the budget. All of this is greatly improved; and the material is much better presented.

Senator Martin. Mr. Chairman, before you proceed with your questions, may I make just a brief statement. It is not a question, and it is not intended as a criticism or anything of that kind. But, Mr. Chairman, I have often thought that we are not doing our full duty as a Congress without having before us, before we submit anything to the President for his approval, the complete appropriations, along with as complete an analysis of revenues as is possible to make. We would not submit appropriations to the President for approval until we felt that we had sufficient revenues to take care

of them, or we had come to the conclusion that additional deficit financing was unavoidable. It seems to me that that is a responsibility that Congress has, but it is impossible to carry that out unless we have before us all of the appropriations before any of them are sent to the President for approval.

That is no more criticism of the Executive than it is of Congress, but it is the way we have been doing these things since the beginning

of this Government.

Now, some of the States give the governor an opportunity to veto certain items, but I am not so sure whether that is entirely sound, because the expenditures are really a responsibility of Congress.

Thank you very much.

The Chairman. Thank you, Senator Martin.

I am going to ask you a question which on yesterday I directed to the Secretary of the Treasury. I do this because I think an answer by the Director of the Bureau of the Budget also should be part of the record. It is a question frequently directed at me in recent days since this request for the debt increase, following the receipt of the President's message.

The question is: Why is it necessary to increase the debt ceiling by \$5 billion in the next 18 months when you estimate there will be

a surplus in the fiscal year 1959?

# STATEMENT OF PERCIVAL F. BRUNDAGE, DIRECTOR OF THE BUREAU OF THE BUDGET

Mr. Brundage. Mr. Chairman, members of the committee, I am very happy to have an opportunity to appear before your committee to support the recommendations of the Secretary of the Treasury for an increase of \$5 billion in the temporary debt ceiling. I do not think there is any magic in an exact amount of \$5 billion, but that is the amount that I would recommend. During the last 6 months it has become clear that it is uneconomic for the Treasury to be obliged to refinance with such a narrow margin as at present, with the many uncertainties facing us today, and the fluctuating way in which our receipts come in and our expenditures have to be made as between weeks and as between months.

I really believe it would be more economical to be able to finance in advance of maturity dates and to maintain larger cash balances.

I will be glad to discuss this particular issue a little more, or shall

I go ahead with the general question?

The Chairman. You may go ahead and finish your statement first. Mr. Brundage. I would also like to report to this committee that since last year we have striven constantly to reduce programs that are not required by law, to hold down proposals for new programs, and to eliminate nonessential Government expenditures. I am attaching a list of the various proposals which were included by the President in his budget message this year.

With the support of the Congress and the adoption of such measures, it will be impossible, in my opinion, to keep the numbers of personnel from continuing to increase and to keep the expenditure dollars from

continuing to mount.

I have arranged these proposals under certain headings, Mr. Chairnan. The first heading is "Proposals to increase receipts."

#### USER CHARGES

In the budget message, the President indicated his belief that when the Government provides a service conferring a special quasi-commercial benefit on identifiable individuals or groups above and beyond the benefits to the public generally, it is our belief that it should charge the beneficiaries for the special service, rather than place the full burden of the cost on the general taxpayer. Accordingly, the President made several proposals in the field of "user charges."

1. Postal service.—In every year since the close of World War II, the postal service has incurred large deficits which have placed heavy and unfair burdens on taxpayers to the advantage of large users of the

In view of present and prospective postal deficits, legislation to authorize adequate postal rates has become one of the most urgent items of unfinished business before the Congress. To provide revenues which will more adequately meet present needs, the President proposes that the postal legislation now pending before the Congress be amended, primarily by establishing a 5-cent letter rate on all except local letters. This increase over last year's recommendation is needed to cover part of the cost of the pay increase and other rising The recommended increases should result in an addition of \$700 million to postal revenues in the fiscal year 1959. With the postal pay adjustment we are recommending, there will still be a postal deficit of approximately \$144 million.

Senator Anderson. Mr. Chairman, do you intend to have questions

throughout, or only at the end?

The Chairman. If the committee will agree, I think it probably would be better for Mr. Brundage to finish his statement and then

ask the questions or whatever you wish.

Senator Anderson. Well, the statement is made that they charge the beneficiaries for the special services rather than place the full burden on the general taxpayer. Then you turn and recommend an increase in the letter rate. Is it the letter rate that has been causing the deficits, or is it the junk mail and the newspapers and magazines? Mr. Brundage. Well, it is both, sir. The first class does not-

Senator Anderson. Then, why did he not recommend both? Mr. Brundage. Well, we are. We are recommending increases all

along the line, sir.

The Chairman. Could you give a fuller explanation of the different classifications in which you recommend increases. You only mention here the first-class mail.

Senator Carlson. Mr. Chairman, I might say that the Postmaster General is testifying right at this moment before that committee, and he is going into detail. I attended the hearing the other morning, but I thought that I ought to come up here this morning. I am on both committees. But he has gone into that in quite a bit of detail, and he is being questioned down there this morning.

Senator Anderson. We can get that testimony.

Mr. Brundage. The rate is before the Senate, sir. And this is the only change from last year. It is the same bill with a change in the first-class from 4 cents to 5 cents for out-of-town mail. The other provisions are the same in the rate bill which was passed by the House and is before the Senate committee.

21297--58----8

2. Aviation.—Mr. Chairman, the Federal Government provides a wide range of special services benefiting private users of the airspace. It is increasingly appropriate that these users pay their fair share of the costs. The cost of new facilities alone will total \$1 billion over the next few years and annual operating costs to the Federal Government of about \$200 million at present are likely to be doubled in 5 years. As first steps toward this end, it is proposed that a tax of 3½ cents a gallon be levied on jet fuels and that taxes on aviation gasoline be increased to 3½ cents a gallon from the present 2 cents, with increases of three-fourths cent per year for 4 years in both taxes up to 6½ cents a gallon. The receipts from taxes on aviation gasoline, which now go into the highway trust fund (3 cents per gallon of which 1 cent is later refunded), should be kept in the general revenues to help finance the operations of the airways.

I might say, Senator Anderson, that I was trying to boil this down

so as not to take too much of your time.

Senator Anderson. I realize you are.

Mr. Brundage. I am glad you made that point about the postal rates, because the recommended increases are not only for first-class mail.

3. Other.—The budget message also recommended that legislation be enacted to raise patent fees, and to charge employers of longshore-

men for the costs of administering disability compensation.

In addition, all Government agencies have recently been instructed, at the President's direction, to prepare legislative proposals generally designed to remove present restrictions or limitations on their authority (1) to recover full cost to the Government of services that provide special benefits to individuals or groups and (2) to obtain a fair market value for the use or sale of federally owned resources or property. These proposals will cover all areas in which existing legislation prohibits charges or fees, and areas in which existing legislation is silent on the subject of charges but where the agency considers an expression of congressional policy desirable prior to initiating charges. Examples of areas of Government activity which are being considered are licensing; use of water navigation aids and facilities; publications; maps and navigation charts; recreation and tourist facilities; grazing; oil, gas, and mineral leasing; and mining claims.

Senator Martin. Mr. Chairman, just to clarify what you mean, could I ask does "use of water navigation aids and facilities" mean

probably tolls for locks and dams?

Mr. Brundage. Well, there are very substantial benefits demanded by segments of the population, as you know, in opening waterways and keeping them open, in the signals, and all kinds of service to navigation.

Senator Martin. That answers it.

Mr. Brundage. It is being studied; yes.

Senator Martin. That answers it.

Mr. Brundage. By enactment of the President's recommendations in the 1959 budget and of additional proposals which I expect will be made to the Congress—that is, as soon as our studies are completed—we can move closer to a more equitable system of fees and charges throughout the Government.

Interest rates.—Another important change which is part of the general user charge considerations, is the need for adjusting interest rates

in Federal credit programs.

The President is recommending the enactment of legislation which would permit greater flexibility for the Government in setting interest rates on loans it makes in the future, and which would require that, insofar as consistent with the purposes of each program, all of the costs involved be paid by the borrowers. Such legislation, by removing or reducing hidden subsidies, would make a significant contribution toward better fiscal management. It would also produce some added income.

Moreover, for loan-guaranty programs, the Government should be authorized to permit interest rates high enough to attract private lenders. The President is suggesting that all statutory limitations or ceilings placed on interest rates be reviewed, and that authority be provided to vary the rates for guaranteed or insured loans in line with market conditions and under proper safeguards.

Programs affected by the recommendations on interest rates include

the following:

1. College housing loans.—This program was authorized in 1950; to June 30, 1957, \$668 million has been committed. Private financing of college housing should be encouraged by (1) replacing the subsidized interest rates required by the present statutes with rates no less than the Government's cost, (2) authorizing Federal guaranties of college housing obligations which do not have Federal tax exemption, and (3) prohibiting direct loans where private funds are available on reasonable terms.

We have been advised that as a result of the interest rate formula provided in the present law private financing has been almost dried up.

2. Special assistance mortgage purchases.—This includes such things as housing for military personnel under the Capehart Act and cooperative housing. The special assistance program was authorized in 1954; to June 30, 1957, \$361 million has been committed. Repeal of the statutory requirement that all purchases by the Federal National Mortgage Association be made at par and authority for increases in interest rates on several types of mortgages—Capehart housing mortgages limited to 4 percent, for instance—will encourage private financing and reduce future reliance on the Association. Action on these recommendations will stimulate the building industry and provide more home units.

3. Rural electrification and telephone loans.—The electrification program was authorized in 1936, the telephone program in 1950. To June 30, 1957, \$4 billion has been committed. The sources of capital available to the Rural Electrification Administration system would be broadened by legislation (1) to assist both electric and telephone borrowers to obtain financing from private sources where the security is adequate and the loans can be repaid within a reasonable time, and (2) to adjust interest rates on future loans to meet the Govern-

ment's costs.

#### PROPOSALS TO REDUCE EXPENDITURES

On the expenditure side, adjustments are proposed in various programs which will result in savings in future years after a suitable time for amending State and local budget procedures has been allowed and

after due notice to affected individuals. Among the programs involved are the following:

Λ. First, there are programs where shifting emphasis or changing needs lessen future requirements for specific types of Federal assistance.

- 1. Agriculture conservation program.—This program was authorized in 1936. To June 30, 1957, \$4.4 billion has been spent, excluding crop-reduction payments in early years. The budget recommends that a program level of \$125 million be authorized for the 1959 crop year, one-half the amount authorized for the 1958 program. This amount, together with other public efforts in support of soil-and-water conservation, will permit cost-sharing payments for the more permanent soil-and-water conservation practices that are needed to maintain an adequate agricultural resource base. Those practices which are a part of usual and required annual farming methods or which return immediate benefits to the farm are properly the responsibility of the farmer, rather than of the Government.
- 2. Grants for hospital construction.—This program (Hill-Burton) was authorized in 1947 and has met the most urgent postwar shortages. Appropriations totaling \$1.2 billion are estimated through the fiscal year 1959. The Federal program should now be modified to meet only the most urgent situations with emphasis on specialized hospitals.
- 3. Veterans' pensions.—Expenditures for this purpose increased from \$883 million in the fiscal year 1956 to \$951 million in 1957. Further increases are anticipated in 1958 and 1959 to \$1,046 million and \$1,142 million, respectively. These pensions meet needs not related to the veteran's period of service, but rather to the general hazards faced by all people, that is, ill health and fluctuations of income. The President will transmit a message on veterans' affairs to the Congress with recommendations for specific adjustments and improvements in veterans programs which will enable us to discharge our national responsibilities to veterans with the greatest possible equity to all concerned.
- B. Second, there are programs where the administration proposes an increase in State and local participation and a decrease in the Federal proportion, but with no reduction in the total combined outlay.

In two cases, recommended by the Joint Federal-State Action Committee, it is proposed that the Federal share be eliminated beginning in the fiscal year 1960, with accompanying revenue adjustments

At our last meeting of the Joint Federal-State Action Committee, it was concluded that since all the legislatures did not meet in 1959, recommendations could not be made effective in fiscal 1959 and would have to wait until 1960 so as to enable the States to pick up the responsibility.

- 1. Grants for construction of waste-treatment facilities.—This program was authorized in 1956; appropriations through the fiscal year 1959 are estimated to total \$140 million. You will recall the original authorization was \$500 million over a 10-year period. Expenditures are estimated to be \$31 million in 1958 and \$51 million in 1959.
- 2. Grants for vocational education.—Expenditures for this program which was first authorized in 1917 total about \$699 million through June 30, 1957. Expenditures of \$41 million are estimated in both 1958 and 1959.

In four other cases, it is proposed that the Federal proportion

gradually be reduced.

1. Public-assistance grants.—Expenditures for these grants on an accrual basis are estimated to increase from \$1,462 million in 1956 to an estimated \$1,824 million in 1959. During this period the Federal share of the total will have increased from 54.0 percent to 55.7 percent. This should gradually be reduced to 50 percent.

The increase was largely due, you may recall, to an increase of the

Federal share to 80 percent of the first \$30.

2. Urban renewal planning and capital grants.—Expenditures for these grants (net of repayments of temporary loans) were \$39 million in 1957 and are estimated to be \$61 million in 1958 and \$56 million in 1959. The urban-renewal program is well under way throughout the Nation and the States and local communities should assume a share of the administrative responsibilities and financial costs more nearly commensurate with the benefits which their citizens receive. The budget recommends that in the future the local communities should share in the costs of planning from the start.

I might say that the Joint Federal-State Action Committee has also accepted the recommendation that the States assume more

responsibility for this program.

In addition, the present formula under which the local agency pays for one-third and Federal capital grants pay for the remaining two-thirds of the net project cost should be changed by providing for annual reductions, so that by the fiscal year 1962 the Federal Government would contribute not more than 50 percent of the cost of local projects.

3. Grants for schools in federally affected areas.—Expenditures for these grants totaled \$1,064 million from 1950 to June 30, 1957 to help provide schools in areas in which rapidly growing Federal establish-

ments were imposing a heavy load on existing facilities.

The communities have been developed, stores have come in, and the amount of taxable property has increased during this period.

In the future, we are suggesting that Federal payments be limited to cover the children of families living and working on Federal property. Expenditures for construction, and for maintenance and operation of schools under this program are estimated to be \$212 million in 1959.

4. Natural disaster relief.—From 1950 through the fiscal year 1957 \$70 million has been spent for natural-disaster relief. The governors of the Federal-State Action Committee have agreed to recommend that the States absorb annual losses up to fixed amounts. Expenditures are estimated to be \$18 million in 1959.

C. Next we have programs where proposals are designed to free

the agricultural economy from excessive controls.

1. Greater flexibility in agricultural price supports.—Expenditures for Commodity Credit Corporation price-support operations (net) are estimated to be \$2.4 billion in 1959. The President has sent a special message to the Congress recommending changes in existing legislation so that the Secretary of Agriculture will be authorized to establish price supports for basic crops consistent with the increased productive capacity of our agriculture.

As the Secretary of Agriculture has pointed out, we have been going through a farm revolution much like the industrial revolution

of 50 to 100 years ago, and the yield has been doubled, practically, in

Senator Gore. I might suggest that revolution is going to get worse.

Mr. Brundage. (2) Soil bank acreage reserve.—The acreage reserve was authorized in 1956; through the fiscal year 1959 the total cost is estimated to be \$1.4 billion. Expenditures are estimated to be \$405 million in 1959. It is proposed in the budget to terminate the acreage reserve at the end of the 1958 crop year. An increase of \$125 million is recommended in the soil-bank conservation reserve program for the 1959 calendar year since more material and lasting benefits are obtained, per dollar spent, from this part of the soil bank.

D. Another recommendation which should hold down budget totals is that no new projects be started in fiscal 1959 for construction of water-resource projects by the Corps of Engineers and the Bureau of Reclamation, in view of the high level of current spending resulting from the large number of new projects started during the last 3 years.

E. Finally, certain previously recommended legislation is not being requested in the fiscal year 1959. Examples are general aid for school construction, major medical care insurance for Federal employees, and certain other grant programs.

The CHAIRMAN. All right, sir.

Mr. Brundage. I have gone over these recommendations, Mr. Chairman, because I thought that your committee, in dealing with the debt limit and the budget, the finances, were entitled to know how we were doing our best in trying to hold down the total of expenditures.

The Chairman. Yes. Mr. Brundage, do you have an itemized statement of the dollar savings which would result from these par-

ticular recommendations in fiscal year 1959.

Mr. Brundage. Well, it is awfully hard to convert it into dollars. The principal savings will come over the years, presenting the increases which would ordinarily occur. But we feel that there would be many billions of savings over the next 10 years.

The Chairman. But you must have made some studies about it?

Mr. Brundage. Yes. The Chairman. You should know what the savings would be in the coming budget year. Have you not got such a list?

Mr. Brundage. We have an item——
Senator Kerr. I think the Secretary put it in the record yesterday,

did he not, Mr. Chairman? Did Mr. Anderson not put that in the record vesterday at my request?

The CHAIRMAN. I do not think that was the complete list. I may be mistaken about it. At any rate, that was the personal view of the

Secretary of the Treasury.

Mr. Brundage. We have lists of items.

Senator Kerr. He had a list of items of one billion nine hundred and some million dollars, and giving the detailed sources or designated places of proposed savings.

The CHAIRMAN. Well, the Budget Director is the person to furnish that information. I am just wondering whether he has it available.

Mr. Brundage. I do not think I have it, but I would be glad to work on it, Senator.

The Chairman. The estimates were given by the Secretary of the Treasury and may have extended beyond the 1 year too.

Mr. Brundage. Yes, sir; there is a list of a great many items. I

would be glad to supply the Senator with a complete list.

(The requested information was subsequently furnished by Mr. Brundage in a prepared statement which he read into the record of the hearings on February 4, 1958. See p. 243.)

Senator Kerr. May I have it?

Mr. Brundage. Yes, sir. Senator Kerr. The record of the hearing yesterday shows a tabulation of \$1,999 million.

The Chairman. I would like to obtain the information from the

Budget Director.

Mr. Brundage. I have not had a chance to speak with the Secretary. The Chairman. How did the Secretary of the Treasury get it if you did not have it?

Mr. Brundage. Well, I have not spoken with the Secretary of the Treasury about this list, and I do not know what the list is. I do

not think we gave him one. I do not recall it.

The Chairman. It is very strange that the Secretary of the Treasury would say you have reduced the budget \$1,999 million if you do not know of the details that would bring that reduction about.

Senator Kerr. Will the Senator yield right there for a moment?

Mr. Brundage. If you will let me see it, I may know.

Senator Kerr. You gave Congress your estimated budget for 1959, and on the basis of certain assumptions-

Mr. Brundage. Yes, sir.

Senator Kerr. You said or indicated or estimated that there would be a \$500 million, surplus.

Mr. Brundage. That is right, Senator.

Senator Kerr. Now, as I understood the Secretary yesterday, he had merely tabulated the items that were in the estimate of reductions and expenditures recommended for 1959 as compared to 1958.

Mr. Brundage. Oh, well, I could give you that as compared with

1958.

Senator Kerr. Is that not your question, Mr. Chairman?

The CHAIRMAN. Yes. Where the decreases that you made in the 1959 budget compared to 1958; and then I would like a statement of the increases.

Mr. Brundage. That would be easy. I thought you wanted the particular savings that would be attributed to any one specific proposal. That would be a little more difficult since the budget estimates reflect spending under past commitments as well as proposed program changes.

The Chairman. Well, how are you going to get the total if you do not know the specific savings? You have first got to start with the

specific savings on a specific item to get the total.

Mr. Brundage. We can show you what we are estimating to be spent in 1959 as compared to what we have estimated for 1958 and what we actually spent in 1957. You can have that comparison any way you want it.

The Chairman. Do you mean in generalities, or itemized?

Mr. Brundage. I mean you can have it in as much detail as you want.

The CHAIRMAN. The detail I would want is reductions in the budget of 1959 as compared with 1958, then increase in the budget for 1959 as compared with 1958.

It seems to me that it is important for this committee to know this in consideration of the pending bill. The President stated in Oklahoma City that he was going to cut the nonessential spending, wherever it was possible to do it, to make up for the increased costs in the missile field, and so forth. He likewise told the congressional leaders on December 3 at the White House in very emphatic language that he intended to do that.

Mr. Brundage. Yes, sir. The Chairman. What I want to know is where these cuts have been made; the recommendations for them, rather.

Mr. Brundage. Where they are proposed; yes. The Chairman. In a specific fashion. What you have read to us

is not specific.

And in addition to that, I would like to know whether this Joint Federal-State Action Committee agreed to certain cuts in the Federal grants; as I understand it, that is predicated on the release of certain taxation to the States?

Mr. Brundage. Yes, sir.

(The material referred to follows:)

COMMITMENTS MADE BY FEDERAL REPRESENTATIVES TO THE JOINT FEDERAL-STATE ACTION COMMITTEE

In reference to your inquiry concerning commitments made by the Federal representatives to the Joint Federal-State Action Committee, I should like to refer the members of the Senate Finance Committee to pages 1 through 14 of progress report No. 1 of that Committee. These pages constitute the official report of that Committee. A reading of this report will indicate that no commitments have been made with reference either to functions to be shifted or tax adjustments to be made thereby. With particular reference to your inquiry as to the proposals concerning the local telephone tax on page 11 of that report the following statement is made:

#### "LOCAL TELEPHONE SERVICE TAX

"The Joint Federal-State Action Committee believes that the local telephone service tax is a logical revenue source for State and local governments. It recommends, therefore, that the Federal tax on local telephone service be changed so as to provide a 40-percent tax credit to those States enacting a 4-percent local telephone tax, not counting taxes already levied prior to the adoption of the credit device. This would mean that the Federal liability under the local telephone service tax would be discharged to the extent of 40 percent for any taxpayer paying this amount of tax to his State government. At the end of 5 years, the Federal levy should be reduced 4 percentage points automatically.

"The Joint Federal-State Action Committee recommends that-

"1. The President request Congress to take necessary action to provide up to a 40-percent Federal tax credit against the Federal local telephone service tax for States enacting or increasing such taxes, the credit arrangement to last for 5 years at which time the Federal tax will automatically be reduced by 4 percentage points.

"2. The governors and the legislatures of the several States take necessary

steps to avail themselves of this additional revenue source."

This report consists of several recommendations to the President and the governors of the various States. In their letter of transmittal the Cochairmen of the Committee said:

"The purpose of filing our first report at this time is to permit early action. The Committee urges that those recommendations requiring legislative implementation be transmitted to the Congress and State legislatures for consideration at their next sessions."

Quite clearly congressional action would be required, and is recommended, before there could be agreement to relinquish this or any other tax. The potential tax impact to the Federal Government is \$148 million. This is the only tax on which an action recommendation is made.

The President's position concerning this report is covered in part by the follow-

ing from his budget message:

"Prudent limitation of Federal activities cannot alone meet the whole problem of overcentralization. The continued strength of our Federal system also depends upon reinforcing the administrative and fiscal ability of the States to carry out their responsibilities. Accordingly, I suggested at the governors' conference at Williamsburg, Va., in June of 1957, that an action group be established to make recommendations on this and other aspects of the problem. A Joint Federal-State Action Committee consisting of 10 governors and of representatives of the executive branch of the Federal Government was subsequently created.

"The initial progress report of this Committee, made last month, recommends complete transfer of two programs to the States together with the simultaneous relinquishment of a portion of the local telephone service tax which the Federal Government now collects. These programs are vocational education and the construction of waste treatment facilities. Legislative proposals to carry out these and future recommendations of the Committee will be transmitted to the Congress. An orderly readjustment requires time for action by both the Congress and the State legislatures. Consequently, the effect of the proposed transfers on expenditures and revenues of the Federal Government will occur beginning in 1960. The report also recommends increasing the degree of State responsibility in three other programs: urban renewal planning; natural disaster relief; and regulating and promoting peaceful uses of atomic energy, particularly for health and safety.

"Cooperation of this nature is a highly desirable and, in my judgment, a long overdue experiment in public administration and finance. The success of the venture depends upon further cooperation among the executive branch, the Congress, the governors, the legislative bodies of the States, and the local governments involved. As for this administration, I can say that the executive branch is eager,

as well as willing, to do its part to insure that success.'

If the Congress should approve these recommendations, it would then be up to the States further to implement the recommendations by affirmative action. Such State action most probably would follow congressional action in view of the fact that most State legislatures do not meet this year.

The Chairman. That should be set forth also, because that would

result in a loss in revenue, is that right?

Mr. Brundage. Well, the revenue would be relinquished along with the anticipated reduction in expenditures for the first year, that is, currently. As a matter of fact, in most of these programs the savings will be in the future in holding down increases, because, as I pointed out last year, as you may recall, that due to the legislation and the programs which have been approved and the necessities for national defense and for interest charges, that it is a very difficult, if not impossible, matter to make any more substantial cuts in current expenditures without legislation and without——

The Chairman. You are talking about expenditures in the next

fiscal year?

Mr. Brundage. Yes; that is right.

The CHAIRMAN. You must have somewhere in your records an estimate of what you have saved for the next fiscal year.

Mr. Brundage. What we hope to save, what we are proposing to save.

The Chairman. What savings your recommendations would produce.

Mr. Brundage. We have a lot of that information in the budget document, of course, and it is arranged by programs and by departments. You can have it any way you like.

The CHAIRMAN. Do you have an itemized list of savings that

you recommended?

Mr. Brundage. I will be glad to submit for the record the tables in the budget and with annotations, that is, arranged, as I say, both by departments and by programs.

The Chairman. Well, could you not read it off; it is not a long list, is it?

Mr. Brundage. Well, the summary shows the difference in estimated expenditures between 1958 and 1959. It shows that from the funds appropriated to the President, the mutual security expenditures are estimated to be \$3,868 million in 1958 as compared with \$3,749 million in 1959, an increase of about \$120 million.

In the other funds appropriated to the President, there is a decrease from \$405 million in 1958 to \$302 million in 1959, a decrease of about

\$100 million.

Senator Kerr. In what?

The Chairman. What was that reduction in? Mr. Brundage. Those are the various other funds appropriated to

the President, primarily for expansion of defense production.

Senator Williams. Do you have an estimate, Mr. Bundage, as to what the budget would be, assuming Congress did not enact any of these legislative recommendations?

Mr. Brundage. Well, I would guess \$1 billion more.

Senator WILLIAMS. How much?

Mr. Brundage. I would guess if we do not get any of our proposal,

it would be about \$1 billion more.

The Chairman. But that is a guess. The Secretary of the Treasury says that there were savings of \$1,999 million and you say \$1 billion. I thought that you would come prepared today to give an itemized list of these savings as well as the increases in the budget as compared to last year that you recommended. Of course, you are not responsible for what Congress does.

Senator Anderson. How can we take action on this, Mr. Chairman,

before we have something like that before us?

The Chairman. I do not think we can.

If you would like more time, Mr. Brundage, to get that presentation of it, like you are reading it now does not provide the information in a way that we can understand.

Mr. Brundage. I thought that you wanted to know the reduction

in what we are proposing in-

The Chairman. Yes, you have given some of it in a fashion here. You have put it in your statement, but it is not complete, so we cannot estimate what are the actual savings.

What we are concerned about, of course, is the question of increasing the ceiling. Now, expenditures in the period involved is one of the factors in the question of increasing the ceiling.

Mr. Brundage. Yes.

The Chairman. Statements that savings have been made in this budget have been highly publicized. I would like to know where the savings are in an itemized way and where the increases are. The increases in the budget, as you well know, must be considered together with the savings, is that not right?

Mr. Brundage. I will be glad to prepare and submit it any way

you like, Mr. Chairman.

The Chairman. For proper consideration of this bill we need this information and some of us are not on the Appropriations Committee. It would be very interesting to know exactly what saving would result from certain specific things. We would like to know also what commitments have been made to the Federal-State Committee with respect to elimination of Federal taxes in connection with reducing certain State grants, grants to the States.

Mr. Brundage. Those will not affect 1959, as I explained. The Chairman. But they are commitments, are they not?

(The requested information was subsequently furnished by Mr. Brundage in a prepared statement which he read into the record of the hearings on February 4, 1958. See p. 243.)

Exactly how are those commitments made? I do not understand just how anybody can commit the Congress to give up taxes. I am not criticizing what you are attempting to do, but what valid commitment can be made for elimination of the telephone tax or some other?

Mr. Brundage. Well, the governors cannot commit their legisla-

tures either. It is all a question-

The Chairman. Does it have to be done simultaneously?

Mr. Brundage. Of our recommendation.

Well, any surrender of ours would obviously not be made until Congress had approved and until the State legislatures had approved reductions.

The Chairman. Would not the Congress have to approve the elimmination of taxes too?

Mr. Brundage. Oh, yes.

The CHAIRMAN. That would all have to be done at one time, is that not correct?

Mr. Brundage. Congress would have to approve the reduction in

the expenditures and also the transfer of the revenue.

The CHAIRMAN. And also Congress would have to act at the same time. I do not suppose that there would be any other way to do it, and of course nobody can guarantee that this would be done.

Mr. Brundage. No, sir; these are all proposals or recommendations. The Chairman. Does the Joint Federal-State Action Committee

include governors?

Mr. Brundage. Yes; it is composed of the representatives of the governors and of representatives of the Federal Government.

The Chairman. Do they speak for the governors?

Mr. Brundage. Well, they speak for the governors' conference, and they are going to recommend when they go back to their respective legislatures.

The Chairman. In a rough estimate, what reduction in Federal taxes would be required to match the proposed reduction in grants?

Mr. Brundage. Well, the ones that we have actually discussed came to something over \$100 million.

came to something over \$100 million.

The Chairman. That includes such items as the telephone tax, and

what else? Is the telephone tax in it?

Mr. Brundage. This is a proposal to transfer up to 40 percent of the telephone tax on local calls. We were not proposing to surrender any revenue except as they take over expenditures.

And as I say, it is not proposed to be effective before 1960, and it is

subject, of course, to approval of the Congress in both respects.

The CHAIRMAN. Well, the Treasury sat in on these conferences, did they not?

Mr. Brundage. Yes; the Secretary of the Treasury is Chairman of the Committee.

The CHAIRMAN. To what extent did he commit the Government to reduction in Federal taxes?

Mr. Brundage. Well, he made it clear that he was speaking only for the executive branch, representatives of the President appointed to this Joint Federal-State Action Committee, and the governors made it quite clear that they were just speaking for the governors' conference.

The Chairman. As I understand you, Mr. Brundage, you are not prepared today for what the committee requires. There is no use of reading over the budget; that is not sufficient for our purposes. What we want is a direct statement signed by you, delivered by you in person, as to these savings, item by item, because that is the only way we can get at it; and then another statement of the increases you have made in the budget, item by item.

Mr. Brundage. Yes, sir.

The Chairman. And then also I would like to know what these agreements are that are being made with the States. I am not opposing it, but I just do not see how anybody can commit Congress to release certain taxes and transfer them to the States on a permanent basis. I do not think it can be done.

Is that the pleasure of the committee?

Senator Martin. Mr. Chairman, I think the thing that you suggest there is very important, that we have those three different items, and compiled in separate tables, and then we would all have them. There is a congressional responsibility there. There is no question that any Federal taxes transferred to the States will require an act of Congress.

But on these things, Mr. Chairman, you will remember you and I were on a committee, 10 years ago, trying to do this very thing. It ought to be done. We worked on it. I think we met 2 or 3

different years, but nothing yet has been done about it.

The Chairman. Is it the pleasure of the committee to interrogate the Budget Director on other points or wait until we get his tables on these savings? I thought perhaps we could get that this morning, but as I understand it, you have not got that made up yet.

Mr. Brundage. No, not in the form in which you asked for it. The Chairman. I think it is vitally important to the whole question of raising the debt limit, because a reduction of nonessential expenditures would be a way to avoid an increase in the debt ceiling, is that not right?

Mr. Brundage. Well, we think that—we have made provision for what can be done administratively, and these proposals that I was outlining were those that we thought we should have the support of

the Congress in. That is why I presented it in that way.

The Chairman. There is a statement you can put in. What you can do administratively, and likewise what is required of Congress. With that breakdown we could get a clear picture of the matter.

And you have made quite substantial increases, have you not, in certain items of the budget? You could likewise give that to the committee.

Mr. Brundage. There are some increases; yes. I will separate it for you, be glad to.

Senator Williams. How much do you have in this year's budget

to take care of salary increases?

Mr. Brundage. We are proposing the salary increases recommended, in essence, by the Cordiner Committee for the military, and applying the same principles to the civilian; in other words, we are increasing particularly the higher skilled, the ones that are more competitive with private industry, and then a general residual increase of about 6 percent down along the line, civilian and military. Military is limited to those that have been enlisted for 2 years.

Senator Williams. What effective date did you take into considera-

tion that these might be put in?

Mr. Brundage. Well, we are assuming July 1. We are giving effect for the whole fiscal year of 1959, but not for 1958.

Senator Williams. But not for 1958?

Mr. Brundage. Not for fiscal 1958.

The Chairman. How long would it take, Mr. Brundage, to get that information in itemized form?

Mr. Brundage. Well, we have it all in the budget document. It is

the compiling. We have all kinds of lists.

The Chairman. I know you have got all kinds of lists. But we want the particular list of where you are going to cut these expenses.

Senator Anderson. I think we ought to find out what things are going to be suggested, what savings are within the power of the Federal Government to do, and then go on to the things that the Congress ought to do.

Senator Martin. Mr. Chairman, should there not be two separate

lists?

Senator Anderson. There ought to be one list that shows what the administration proposes to do, and then one list that shows the burden placed on Congress.

Senator WILLIAMS. With the projected savings listed on each one of

them.

Senator Anderson. That is exactly right.

(The requested information was subsequently furnished by Mr. Brundage in a prepared statement which he read into the record of

the hearings on February 4, 1958. See p. 243.)

Senator Anderson. Now, the postal pay increase, I think, is very definitely tied to this increase in postal revenues. It is a matter of the budget. If you do not get any money, maybe we ought to look at it. You mentioned a while ago, the Senator from Pennsylvania, that there might be some tie between appropriations and revenue measures. Some of us have been advocating for years that no appropriation bill becomes final until the final survey of receipts. And that it has to be reduced or adjusted.

You have soil-bank payments down here. In 1957, the Department of Agriculture paid, I think, \$169 million to reduce the production of corn by acreage reserve payments, and got 200 million additional bushels of corn. Why was not the program stopped then? Why stop it in 1959? We know it is no good. That is something the administration can do now without the Congress. And I think we ought to have a list of the things the administration proposes to do to equalize what the chairman of the committee pointed out was clearly outlined, that there is an effort to meet the extra costs of these missiles by Government savings.

The CHAIRMAN. You were at the White House when the President

emphasized——

Senator Anderson. Certainly I was there, and that is why I pointed out at that time all these missiles. Here is an article in the

magazine called Planes, the December 1957 issue, and the first paragraph is worth reading. It talks about the missiles have been the logical supplement to conventional airpower, and says:

Today there are 43 announced missile projects underway, divided into 4 categories: Air to air, 7 projects; air to surface, 7 projects; surface to air, 10 projects; and surface to surface, 19 projects.

Now, I go deer hunting. I know there are 20 different kinds of deer rifles, different calibers, different makes. But one gun does the job if I shoot straight. And I do not need to take all 20 guns with me.

Senator Martin. May I break in? Will you yield just a moment?

Senator Anderson. Yes, sir.

Senator Martin. You are making an awfully good point there. The whole thing in defense is the personnel, and we have not heard a single word asserted relative to personnel in this matter of defense that we are now discussing, where we are contemplating increasing the budget by 2 or 3 billion. If you do not have the proper personnel, the man that can shoot straight, it does not make any difference how good a gun he has or anything else, we are not going to have good defense.

Senator Anderson. Mr. Brundage, I am not trying to be critical of you. I know you are a good, conscientious Budget Director and did a good job on that program. But we can save all the money we need for the missiles program out of the missiles program. All we have got to do is chop down the things everybody knows are no good. But someone comes along and says: "Well, the Navy has one that does it; why should not the Army have one, or the Air Corps?" I asked a man in charge of some Navy work when he was talking about the Talos missile, which is a pretty good missile. I said: "Is the Army using it?" "Well, they plan to." "Air Corps going to use it?" "Well, Air Corps has got their own."

And that is the whole story. Everybody has got to have his own gun, but he cannot take his own gun; he cannot just take a Winchester, he has got to have a Savage 30-30; he has got to have a 270 and a 308, and he has got to have every kind, when all he needs is just one of them. And it applies all the way along the line.

If they are not going to do that, then I think they ought to come in and tell us where they are going to save. They could save it in the missiles program itself to take care of all the missiles work. If they are not going to do it, I think they ought to come in here and tell us where they are going to do it.

Mr. Chairman, the Army developed some time ago an atomic cannon.

The CHAIRMAN. Yes.

Senator Anderson. The Army was pretty well told when they brought it before the Joint Commission on Atomic Energy that we could see no possible use for it. They went right ahead and spent several—well, I do not know whether it is still classified or not. Let me say they spent a quarter of a million dollars on it in the equipment and the shells. You find out how many of them are in use today. They put them over in Germany because they did not dare face the people in this country and tell them about it. The last report came in and said it is the only mobilized roadblock that has ever been developed. Did they stop there? No; they have gone

ahead with another device now that the Navy has asked for that the Navy knows it can never use, a shell that there is no gun to fire it in and has not been since they put the battleships in mothballs. But millions and millions and millions have to be poured out in that.

I would like to know where they are going to save this money. It

is not too hard to find places to do it.

Senator Gore. I am going to oppose balancing the budget by diverting funds from the highway trust fund, Mr. Brundage. You propose to divert \$68 million a year from the highway trust fund, while at the same time the President talks about the necessity for building better roads and Mr. Tallamy says it is going to be necessary to stretch the 13-year program to a 20-year program. And when we actually measure all of the facts, it looks more nearly like a 25-year stretchout than a 20-year stretchout.

You had better find someplace to balance your budget other than

out of the highway trust fund.

Mr. Brundage. Well, we were proposing to transfer this gas tax on aviation fuel.

Senator Gore. I know what you propose; I am just telling you I

am going to oppose it.

Mr. Brundage. Well, there is no particular reason why an airplane should pay a tax on its fuel in order to build roads. That was the purpose of the suggestion.

Senator Gore. Well, that is not the only diversion you propose.

Senator Bennett. Mr. Chairman. The Chairman. Senator Bennett.

Senator Bennett. Do you, as chairman of the Committee on Nonessential Expenditures, have a breakdown of the unexpended balances in terms of the agencies or services or programs?

The CHAIRMAN. Yes, sir.

Senator Bennett. Could that be revised and brought in for the record of this committee?

Senator Kerr. He has got it in a very revised condition.

The CHAIRMAN. The aggregate is about \$70 billion.

Senator Bennett. I know the total, but do you have the breakdown? Yesterday a great deal was made of the fact that this \$70 billion is hanging over our head, and I think for the record we should know how that is allocated among the various departments and agencies, if possible. Should I properly ask the chairman if that can be supplied?

The Chairman. I shall be pleased to furnish the information you

desire

Senator Martin. I think that is very important.

(The material referred to follows:)

<sup>1</sup> Less than one-half million dollars.

Source: Budget document for fiscal year 1959.

Senator Jenner. Mr. Chairman, since this is a sort of a free-for-all, I would like to get my two bits in. I have just come from the Post Office Committee, and I know that in these considerations there has been some anticipation of increase of postal rates and also increase of postal employees' pay. And I personally think from the tenor of that committee, that both are going to be done. But the amount, I think, is probably another question. Whether you have a 5-cent first-class stamp or whether you have a 4-cent stamp, that is going to make a great deal of difference in the overall picture. But when we stop to consider what Senator Anderson of New Mexico has said, plus all the other statements, we realize that the second largest item of our budget is interest on our debt, and we are here considering increasing this debt \$5 billion.

You might also stop to consider it is awful to be broke and it is awful to be dead, but it is a hell of a note to be both dead and broke. And when you combine them with being both dead and broke, you are in an awful shape. And that is where we are heading. We

could be both dead and broke.

Senator Bennett. Mr. Chairman, may I try to enlighten the

atmosphere?

Since the hearings began yesterday my mind has reverted to an old story, the story of the situation in which the barkeeper was at one end of the bar and the proprietor was at the other, and Bill Jones came in for a drink of beer, and the barkeeper yelled to the proprietor, "Is Jones good for a glass of beer?" and the proprietor says, "Has he had it?" The barkeeper says "Yes." The proprietor then replies, "Well, then, he is good for it." Well, we are working in the large sense on the glass of beer that has already been had. And it is too late, in a sense, for the proprietor to say, "No, Jones cannot have credit on the beer he has already drunk."

Senator Jenner. It is not too late to take a reappraisal of these things, the duplication and waste and the extravagance. When we are trying to support and take care of the whole world and we cannot really take care of ourselves, it is time we took a look at these things.

Senator Anderson. We are just talking about contracts in the missiles program that are far more expensive than any other things that we have developed. We have got three different types of antitank missiles. It is just possible we might not be using tanks at all.

Senator Bennett. The control of that is behond the Secretary of the

Treasury in his responsibility to manage the debt.

Senator Anderson. Yes, but if the debt limit is kept on, there may be some control on the military that we do not have now. It is going to be pretty hard to go against any of these military expenditures.

Senator Martin. Mr. Chairman, may I observe that it might ease the feelings of the distinguished Senator from New Mexico: It has always been that way. By the time we get the equipment of offense or defense completed, it is obsolete. It has always been that way in military affairs. Military things are the most wasteful matters that have ever been considered in worldwide affairs.

Senator Malone. Mr. Chairman. The Chairman. Senator Malone.

Senator Malone. I waited too long yesterday to question Mr. Anderson, because I find that he had two speaking engagements in Missouri, and he came to my office after it was over and he asked,

"Would you let me off?" and what could I do? I did have something to say to Mr. Anderson.

So I am going to ask permission, Mr. Chairman, after we are finished with Mr. Brundage today, to sum up some of the things, that if I had had the opportunity, I would have asked Mr. Anderson, and maybe some of the answers from his predecessors might fit in.

In the meantime, to join this melee, I was going to ask if I could

question Mr. Brundage just a minute.

The CHAIRMAN. Yes, sir.

Senator Malone. Mr. Brundage, I am sorry I do not know your

background. What is it?

Mr. Brundage. I was in public accounting all my life, Senator. Senator Malone. Well, I have read your statement, and I will not duplicate what the Senator from New Mexico has said. He is absolutely correct. There are probably three or four hundred places in the United States where the shift in population has made it impossible for local people to keep up with schools and expenses, therefore you have about as much chance of changing that as you have of flying to Europe without a pair of wings in about the next 10 minutes, I think.

Then I might mention to you something that I read here, that you are going to charge for all Government property. And you assume, of course, being in the accounting business, that all of the public lands belong to all of the people, and therefore should be sold in accordance with their present value. Well, I have some news for you. One way that the Congress has tried to develop public lands is to make them available to people who live on them and who will develop them, and that was the livestock enlargement of the Homestead Act, and the mining claims on locations.

So I see in your youth and innocence you have suggested all these things be charged for. Now, I think if you had consulted some of the leaders of the administration who deny that they want a mineral leasing act—you now are suggesting that the mining claims be charged for in accordance with whatever they may find on them, which means leasing, and could only mean one thing, in accordance with the

values found.

Now, I can go on—I will not go too far here. There is just the Rural Electrification. You want that written off. You want the matter of the veterans' pensions—and I might review for you the action of this committee last fall. I doubt if you would read anything of the kind. It would be tedious to you. But it was proposed by the administration, and I think will be again, that a pension to a disabled veteran be figured on his disablement—loss of an arm or an eye, or he got a little gas or something—and there are methods by which the Veterans' Administration figure those things. And that handicaps this man in getting a job. So they have a veterans' preference. He probably gets a much poorer job than he would get if he did not have this disability.

So now you propose that when he does get a job and you charge him the same social security to go into the Government and be repaid then in benefits, that you deduct whatever he is drawing in a pension from the social security.

Now, this committee brought the bill back from the Senate floor and denied that business, because the disability is paid on account of a disability of his ability to earn a living. And his social security pays in just like anybody else. There is absolutely no connection.

Now, you can go on to other things, but I think the Chairman has picked it up. But it reminds me of what an old timer once said: "There is no one who can talk quite so convincingly on the subject than somebody entirely unhampered by the facts." And I hate to put this against your record, but in reading this thing, it just seems to me like a 10-year-old school child had written it out without any consideration whatever of what has gone before for nearly 40 years in veterans legislation, social security (for a shorter time, but well established) and there is some attempt, the attempt of this Congress, to try to equalize the expense on a small community when suddenly the Government says that something must be done in that community.

Apparently you know nothing about those things except that it looks good on paper. So I hope when you come back that we get another opportunity to question you about some of the things that you have suggested here, and you can depend on it that we will; because I will not wait too late next time so that you have a speaking

engagement some place.

Mr. Brundage. Well, I will be glad to answer. Senator, some of vour comments——

Senator Malone. Answer about the veterans. What do you think about that?

Mr. Brundage. Did you read the report of the Bradley Commission?

Senator Malone. I have read everything on veterans for 40 years. I was in the First World War, and I am one of the ones that had an opportunity and did participate in building veterans' hospitals throughout the country and securing some kind of benefits for these veterans. When we came back from World War I in 1919, you could not get a veteran in a hospital with a shoehorn, because there was no place for him. Now you can get them in hospitals.

No one denies some of these things may be abused. That is a matter of administration, another part of your own administration now that your man is in there. It is not a matter of cutting these benefits out.

It is a matter of administration.

Mr. Brundage. Well, the portion of the Bradley Commission's recommendations that related to disability of service-connected cases was dealt with by the Congress in the legislation last year. But they did not deal with, and the President did not submit, any recommendation with respect to the non-service-connected cases, and that is what we were talking about here.

Senator Malone. Were you in one of these wars? I presume

you were.

Mr. Brundage. World War I.

Senator Malone. Yes. That was mine.

Well, I can tell you a little story. It may relate to non-service-connected cases. When a man is in the Army or in the armed services for 2 or 3 years and he caves in later, in my opinion he is entitled to eat and to have his kids go to school—not to live in luxury.

In France, where I presume you were in 1919, I had a battery of field artillery, and some of the privates or the enlisted men thought these officers should not be officers. So we had a pretty smart colonel, and he suggested we play a game of football, the officers against the

enlisted men. The dirt was about 6 inches deep. It was mud when it rained. And they had a 60-minute football game, and I think I was about 1 of 3 or 4 that played the 60 minutes. Nobody scored, because nobody paid any attention to the football. Whenever it was snapped, everybody just got somebody. So they carried them off one after the other. I attended a reunion of that regiment about 6 or 7 years ago, and I understand that 19 men are drawing compensation as a result of that football game. I am not one of them, however; but I could well have been.

So I think it is the nth degree of something, and it must be ignorance, that makes people believe that a man that does not have it on his service record did not get hurt in that war. And you fellows will continue to harp about that, no doubt, for the next 20 years until they are all dead, but I do not think you are going to get away with it. And that is something else I will question you about when you come back.

Mr. Brundage. All right.

The Chairman. What is the pleasure of the committee? How long will it take, Mr. Brundage, to get this information?

Mr. Brundage. I imagine a couple of days.

The Chairman. Then, together with that, it would be interesting for you to give a memorandum as to what authority you have to reduce expenditures in the various departments, say, through more economical administration, and so forth. You have such authority, I presume?

Mr. Brundage. You mean the Bureau of the Budget? The Chairman. Through the Bureau of the Budget. (The material referred to follows:)

ROLE OF THE BUREAU OF THE BUDGET IN REDUCING EXPENDITURES

General.—In general, to control and reduce future expenditures it is necessary to control and reduce the obligations which precede them. If obligations are not controlled or reduced, there exists only the possibility of delaying—not eliminating—expenditures. If obligational authority is reduced, it may not result in an equivalent reduction of spending in the same fiscal year since there is often a substantial timelag between the incurring of the obligations and the making of the expenditures to liquidate them.

Control over obligations and the resulting expenditures is exercised not only through the budget and appropriation process, but also through the legislative process. In addition, due regard for economy and efficiency in the manner in which the Government is organized, and in which it conducts its affairs, has an

effect on expenditures in the long run.

General position of the Bureau.—By Reorganization Plan No. 1, effective July 1, 1939 (5 U. S. C. 133t note), the Bureau of the Budget was transferred to the Executive Office of the President. This change was made because, in the words of the President's message transmitting the reorganization plan to the Congress, "it is necessary for the President to have direct access to these managerial agencies in order that he may have the machinery to enable him to carry out his constitutional responsibility, and in order that he may be able to control expenditures, to increase efficiency, to eliminate overlapping and duplication of effort. \* \* \*'' Under Executive Order 8248, dated September 8, 1939, issued pursuant to this reorganization plan, the Bureau was assigned certain functions as a coordinating staff agency for the President. Among the important functions assigned to the Bureau by this order are those of assisting the President by clearing and coordinating departmental advice on proposed legislation and by making recommendations as to Presidential action on legislative enactments; conducting research in the development of improved plans of administrative management, and advising the departments and agencies with respect to improved organization and practice; supervising and controlling the administration of the budget; and aiding the

President to bring about more efficient and economical conduct of Government service.

In carrying out the functions referred to in the preceding paragraph, the Bureau acts as a staff arm of the President. Through the legislative clearance process, it assists the President in making his recommendations on legislation which will ultimately play a large part in determining the size and character of the programs for which expenditures will be made. Similarly, in making organization and management studies, the Bureau assists the President to reduce expenditures by insuring that the Government's affairs are conducted in the most efficient and economical manner.

Functions of the Bureau with respect to appropriations.—The Bureau's functions with respect to appropriations have a bearing upon expenditures in two ways: First, in connection with the President's budgetary recommendations as to the total of expenditures in any particular fiscal year; and, second, in connection with the timing of expenditures in any particular fiscal year or from one fiscal year to another. With respect to the first, under the provisions of the Budget and Accounting Act, 1921, as amended (31 U. S. C. 16), the Bureau has authority "to assemble, correlate, revise, reduce, or increase the requests for appropriations of the several departments or establishments." The actions of the Bureau to reduce expenditures through the budget-preparation process are effected in it recommendations to the President and are reflected in the budget as approved and transmitted by him to the Congress. This authority is not, in fact, as broad as it might seem at first glance because so many of our programs—such as veterans' pensions, interest on the public debt, and many others—are not controllable through the budget process.

With respect to the second, the Director of the Bureau of the Budget is required by law to apportion funds for use by executive agencies, and he has a limited statutory authority to establish reserves (sec. 3679, Rev. Stat., as amended, 31 U. S. C. 665). Funds which are reserved pursuant to this authority are not available

for use by the agencies.

In addition to the specific statutory authority to establish reserves, the Bureau—in its general role as a staff arm of the President—has been responsible for carrying out such instructions as might be issued from time to time by the President with respect to reductions in expenditures. Compliance with such instructions has resulted, of course, in some reductions in expenditures, but it is difficult to ascertain in any particular instance how much of a reduction is attributable to such instructions and how much to other program factors.

Senator Martin. Mr. Chairman, I would like to make just a little explanation.

I asked a question a while ago relative to locks and dams, whether it was the intention to charge tolls for their use. Mr. Chairman, that means a lot to us in Pennsylvania. But if we start a policy of that kind, and do it all over the United States, I would not object.

Now, Senator Gore, you have been over it in an airplane, and you know what it means to us. If we do those things all over the United States, I would not object. My community will object very seriously, and I will object very seriously unless it is done all over the country.

Senator Malone. Mr. Chairman, I might say what I just neglected to say, that apparently with the \$4 billion this year we will have spent over \$70 billion in Europe and Asia now since World War II in things and doing things which you object to being done here. So apparently what you are trying to do is to carry on the principle started under the Roosevelt administration, carried through the Truman, and now through ours, to do everything for foreign nations, building their schools, their roads, their projects, and write it all off, but stop doing anything for the United States of America. And that is another place where we part company. I have not yet voted for any of the \$70 billion, and I am not about to. I think it is the craziest thing on earth, and I believe that if the people of the United States had seen these projects and know what you are building throughout the world as I and many other members of this committee have seen

them, I think the people would move on Washington. I do not think they would even wait for an election.

Now, that is what you are proposing. You have that in your

budget.

Mr. Brundage. You have asked me—may I ask a question? What is a nonessential Federal expenditure?

Senator Malone. I do not know of any that is going on right now, if they are being expended and administered properly. The nonessential here is an essential in, we will say, Iran. One hundred million dollars means nothing to you people. You write it off tomorrow. I see France is here now to get another \$300 million. will get it without a doubt. To do what? Carry on their Socialist government. You do not ask them what they are going to do with it. What these people do, fight for leadership to get this money, so that the top people get it.

They have just had a little upset in Venezuela. They would not be fighting for this ownership so much if there was not so much

American money.

I have been all over Venezuela. I went out on Maracaibo Lake, went up to Bolivar Mountain, where they are whittling off the iron from the top; out to the manganese deposits; I have been to every nation in the world, and I have seen these things you are doing. And I want to tell you they are an insult to human intelligence. But you want to substitute these programs all over the world for, say, keeping up our schools, where you send in this thing double and triple and make the population 10 times as much as it was before so that the local taxpayers cannot do it; you would take it away from them and put it in Guam or some other seaport, and you do not even know what they are doing with the money. You cannot know.

I do know what they are doing with it, because it took me 11 years to visit all these places, everyone of them. And they were not social

Senator Anderson. Mr. Chairman, I had intended when we got down to questioning on these schools and Hill-Burton funds, and so forth, to call Mr. Brundage's attention to a story in the Washington Sunday Star of January 19: "Russia's Syrian Deal is Model of Efficiency." All these things that Russia is doing for Syria are the things that we want done in the United States for communities that are in real trouble. And I am just hopeful that our Government could do as well by our people as Russia is going to do by the Syrians.

It is pretty hard to talk about stopping the Hill-Burton funds to schools and other things in areas where this sudden impact of population has produced problems that the local community cannot solve. The mayor of the local community for Grants, N. Mex., has phoned my office time after time when I was in New Mexico this summer, saying, "We cannot get it done, you fellows are so smart in Washington, come out and tell us what we can do to keep these schools open."

There is no easy answer to it. They cannot build houses, because the uranium mills' proposal is to mill all this ore in 7 years. You cannot get an FHA loan and amortize it in 7 years. And they have

had very difficult situations.

I believe the Bureau of the Budget should take those problems in mind and talk about these reductions and look for reductions in areas where I think there are very substantial reductions possible. As I say, the order to build a type of shell for which there is no gun, the gun being in mothballs and probably never to be revived, is the type of waste I think we can well do without.

Senator Martin. Yes, there is much of that.

The Chairman. Mr. Brundage, now you understand what the committee wants? We want one column of the savings that you are making through more efficient administration etc. And in this respect, you, of course, recognize your responsibility. You are asking Congress to appropriate \$72.5 billion in new spending authority to be added to \$70 billion remaining unspent in old appropriations. But the actual spending of that money is in the executive branch of the Government, and there lies the responsibility for efficient and economical administration through which great savings that can be made independent of any legislation on the part of Congress.

We first want to know how much you have reduced this budget as compared to last year's budget by savings through efficiency and economy, which you have the power to require. And then, secondly, the savings that you recommend which require legislation. We want

these savings itemized.

Mr. Brundage. Could I ask your interpretation—and I am doing this in all seriousness—as to what is a nonessential Federal expenditure?

The Chairman. I would say first it is an expenditure that is not incumbent upon the Federal Government.

Mr. Brundage. By law?

The Chairman. By law or otherwise.

While we are on this subject, let's take a moment to look at the governmental structure in this country. In addition to the Federal Government, there are 48 State governments, and some 3,000 local governments. Under our system, these State and local governments have definite responsibilities. And, with very limited exceptions, such as the emergency situation mentioned by Senator Anderson, for instance, Federal overlapping is nonessential.

When I came to the Senate, in the middle of the depression when we had all sorts of emergency agencies, there were 23 programs through which the Federal Government was paying \$1.8 billion a year to States and individuals. Now there are 85 of those programs, and through

them the Federal Government is spending \$6.5 billion.

I ask you to consider this increase against the background of the colossal Federal debt with which we are wrestling, along with other

aspects of the Federal fiscal situation.

When I came to the Senate the Federal debt was \$16 billion. Now it will be \$280 billion if this bill is passed. When I came to the Senate our Federal tax bill was \$4 billion. Now you are asking Federal tax collections totaling \$74.4 billion.

Senator Jenner. Well, Mr. Chairman, are you eliminating the foreign aid and economic aid in your statement to Mr. Brundage?

The Chairman. I regard foreign economic aid as an area where there are tremendous nonessential expenditures, but in view of conditions confronting us, we must make heavy military expenditures for the protection of these foreign nations as well as ourselves.

We have spent, as you know, \$62 billion on foreign aid, military and economic. I know much has been wasted in the most extravagant way. I went over to Denmark, and learned that we had given \$100

million to Denmark to pay on its public debt. Now, do you regard that as an essential expenditure?

Mr. Brundage. Well, I do not know the details. The Chairman. That is a fact.

We gave to Denmark \$100 million to pay on its public debt, and we added it to our public debt. There is no question about it. I saw

the records in Copenhagen.

Now, these are some examples in response to your question. And let me say, further, to you, sir, that there is inefficiency and extravagance and duplication of effort all through the Government. I think you will agree with me. There is a great deal of it, especially in the military branch.

Mr. Brundage. We have certainly been working to eliminate that. The Chairman. We want a statement of what you have done in all We want your action translated into dollars and cents so we can see what you have saved. The military is infiltrated with waste. It is naturally a wasteful operation, I understand that. And I am for a strong military defense, directed in the proper fashion. But we must put first things first, and that goes for the military. do not think you will deny that there is great extravagance through all the branches of Government.

I do not say that it can be run like a private business. I have never argued that. But I think a lot of this waste can be cut out, and it is incumbent upon administrative officials to do it.

When we define nonessential Federal expenditures, we might properly include whole programs and projects, but the definition should not be limited to entire items. There may be considerations

of degree.

I will illustrate with a personal example. Automobile transportation is essential to me for proper attention to my duties in Washington and my responsibilities and business in Virginia. But, Chevrolet transportation is completely adequate. I drive a Chevrolet. Cadillac transportation would be nonessential. I don't own a Cadillac. A Cadillac would cost three times as much initially, and then it would cost three times as much to maintain and operate. The difference in the cost of using a Chevrolet and using a Cadillac would be a nonessential expenditure.

There are a great many Chevrolet activities in the Federal Govern-

ment riding around in chauffeured Cadillacs.

Now, if that answers your request for my interpretation of non-essential expenditures, I would like to return for a moment to the

subject of foreign aid.

When the Marshall Plan was proposed, we were told that it was a 4-year operation limited to some \$15 billion. We had the assurances of those in authority that it would expire in 4 years. Here it is extended for years and years. It was started in 1946, was it not?

Mr. Brundage. Yes.

The Chairman. I think it was. Senator Anderson. No; 1947.

The Chairman. 1947. Now it has gone 11 years, and apparently it is a permanent part of the budget of this country.

Senator Malone. Mr. Chairman, right around that while you are

on it.

The Chairman. I could elaborate further, but I think I made myself clear.

Senator Malone.

Senator Malone. You are talking about Secretary Dulles sitting right there the last time \$4 billion went through and said, "This

must be a permanent program."

I might also mention just one other thing. We have been keeping West Germany in the style to which they would like to become accustomed, and a year ago they loaned to the World Bank at 4 percent interest \$100 million in gold that we had given them already. I do not suppose you know anything about that. You would have no way of knowing. That is what I mentioned earlier in the game. But somebody must know something about it in the administration. I doubt if it is the fellow that is the head of ECA. I do not think he knows anything about it. They change them every 2 years.

Mr. Brundage. There is no aid going to West Germany now.

Senator Jenner. Maybe we can get something from them. Senator Malone. We gave them plenty of aid. So they loaned it

back at 4-percent interest.

You see, you are a little late in catching up with it. This is a year ago. But you still have \$4 billion in this thing for aid, do you not? I think it is nearer \$70 billion that we put out to these nations.

Mr. Brundage. Nothing but military aid for Europe, I believe.

Senator Malone. What is the \$300 million that France wants now? They just sent a good friend of mine over here. I met him when I was there in 1947—a Frenchman, and a smart one, smarter than anyone we will get in government, I will guarantee. And he will get the \$300 million, I will guarantee. Why I cannot tell you.

Mr. Brundage. We have nothing in the budget for it.

The Chairman. Mr. Brundage, is it not true that about half of the Federal expenditures each year are paid out of balances in appropriations enacted in some prior year?

Mr. Brundage. Well, they use up the previous appropriation first

before they go on the current.

The Chairman. I understand, but I mean to show that the control of the expenditure budget—

Mr. Brundage. Yes.

The Chairman. Has passed from Congress to the executive branch. Is it not true that up to half of the expenditures in fiscal year 1959 will be made from appropriations which are not before the appropriation committees and Congress this year?

Mr. Brundage. That is about the proportion.

The Chairman. So, therefore, the Congress has practically lost control of the annual rate of expenditure. And that makes it more incumbent upon the executive branch to cut the waste and inefficiency.

Senator Jenner. Mr. Chairman, has the Congress not lost control of the budget? The responsibility belongs on the Congress. That is one of the powers that we still have. We have not given it away. That is the control of the purchases. And it is up to us to exercise our authority and stop this foolishness. We cannot go on this way. There is no need to harangue the executive department of Government. They might click here, there and beyond, but we buy this stuff, and we have been buying it year after year. And it is our fault, and we can stop it and nobody else can.

But I do not want to see a bill like this. It do not know the details of this. I do not want to see a bill like this railroaded through this

committee and rushed onto the floor, as a great emergency. We have been living with panic buttons ever since I can remember; it is one emergency after another.

But I again reiterate my simple statement: It is awfully bad to be

broke and awfully bad to be dead, but it is worse to be both.

The Chairman. Just one word about these unexpended balances. I think they constitute one of the greatest obstacles to a more efficient expenditure of the funds appropriated. This loss of annual expenditure control by Congress began in 1946; no, I suppose it was before that.

Senator Kerr. That was when we lost control of Congress.

The Chairman. Previously we were appropriating mainly on a current and contract basis. For long-term projects we would make a contract. For instance we would contract for a battleship and we would appropriate the yearly payments on that battleship. Congress had a chance each year to go over it and see if they wanted to continue to build that battleship. This practice was replaced by the policy of appropriating in full in advance. I think the Congress did it. I do not think the administration had any responsibility for the change. It was done by the Congress and originated in the House, if I am correctly informed. There it was decided that it would be more economical to appropriate the full amount in advance for multi-year projects like airplanes and battleships, and so forth, even though they would not be constructed during the year in which the appropriation was made. That is the way it started. It has grown and grown until now we have approximately \$70 billion of unexpended balances, and we appropriate \$72.5 billion more, or would under this budget.

And that makes it more important, because it makes available for expenditures actually about some \$140 billion, so far as appropriations

plus balances are concerned.

I am right about that; am I not? There would be total authorization for Federal agencies to spend \$140 billion, if it were physically possible to do it?

Mr. Brundage. Well, our proposals for 1959 indicate that \$49.7 billion will be out of new obligational authority requested, and \$24.3 billion out of balances for prior authorizations.

The CHAIRMAN. It is one-third.

Mr. Brundage. And let me say also that I have supported, as you know, bill number S. 8002 which would, I think, help to bring control

of expenditures back.

The Chairman. I know you have. I would like to add to what Senator Anderson said that the Senate three times passed a single appropriation bill and provided in that bill for a limitation of expenditures so they would know exactly what they were authorizing to be expended annually, but the House has never agreed to it. We need a fundamental reform, it seems to me, of our whole budgetary system; you will agree with that?

Mr. Brundage. I should know. I have been working on that for a number of years and strongly believe in what Senator Martin says.

The CHAIRMAN. We should have one bill before us; then we could add up the totals; and we could put the expenditure total alongside an estimate of revenues in the bill so we would know what we were doing. As it is now, Congress does not know whether they are voting for a budget in balance or out of balance.

Mr. Brundage. I agree with that very strongly.

The Chairman. Appropriations bills come up at different times, and at no one time can they be consolidated to show the overall picture. In addition, they are in terms of appropriation, not annual expenditures.

Senator Malone. Mr. Chairman, I have a letter here from Carl Hayden, enclosing a copy of a letter that he has written the chairman that has to do with the post office. If it is not a part of the record, I will ask that it be made a part of the record.

The Chairman. Without objection, it will be made a part of the

(The letter of January 24, 1958, from Senator Carl Hayden to Senator Byrd, is as follows:)

United States Senate, Committee on Appropriations, January 24, 1958.

Hon. George W. Malone, United States Senator,

Senate Office Building, Washington, D. C.

DEAR GEORGE: I trust that you may agree that there is some merit in my letter to Senator Byrd, a copy of which is enclosed.

Yours very sincerely,

CARL HAYDEN.

United States Senate, Committee on Appropriations, January 24, 1958.

Hon. HARRY F. BYRD,

Chairman, Committee on Finance,

United States Senate, Washington, D. C.

Dear Harry: The fact that your committee must give consideration to the bill, H. R. 9955, to increase the public-debt limit by \$5 billion, impels me to point out that nothing of that kind would have to be done if the operations of the Post Office Department had been financed on a break-even basis during the past 12 years. Instead, that Department has incurred the following deficits each year:

1946	\$129, 000, 000	1953	\$650, 000, 000
1947	206, 000, 000	1954	399, 000, 000
1948	277, 000, 000	1955	363, 000, 000
1949	577, 000, 000	1956	464, 000, 000
1950	545, 000, 000	1957	522, 000, 000
1951			· · · · · · · · · · · · · · · · · · ·
1952	720, 000, 000	Total	5, 400, 000, 000

I have listed these figures for two purposes:

1. To show that if these deficits had not been incurred your committee

would not be required to recommend the enactment of H. R. 9955.

2. To express the hope that the members of your committee may join with other Senators to insure that hereafter the Post Office Department will be authorized to collect sufficient postage to pay its operation expenses.

Unless this is done, the indications are that, depending upon the cost of proposed pay increases, the deficit for the present fiscal year could be anywhere from \$700

million to \$900 million.

Yours very sincerely,

CARL HAYDEN.

Senator Malone. Mr. Chairman, in the absence of a chance to question Mr. Anderson, I would like to have included as a part of the record the summary I made last year following my examination of former Treasury Secretary George Humphrey, which covers the field, and have it appear following the Secretary of Treasury's testimony.

The CHAIRMAN. Without objection, that will be done.

Senator Malone. Now, Mr. Chairman, I will also ask permission to amend the record so that I can make a summary statement, if that is all right with the chairman.

The Chairman. That is satisfactory.

Senator Malone. I am glad that the chairman is sending Mr. Brundage back to bring in something that may be at least real and beyond that which was in his speech this morning.

Now, everyone knows that we will be fighting the next war in the air and under the sea, with radar and with long-range planes. Right at this moment the American hemisphere can be defended from North

America.

If they wanted to save that \$15 billion by just stopping nonessential expenditures and take \$5 billion of it and put it into long-range planes (such as the B-52) and into missile development, the missiles taking the place of the planes wherever and whenever General Twining and the others agree that they should, then you can save \$10 billion and not raise, but lower, the national debt and lower the taxes.

However, if the Congress votes this time for the \$4 billion or \$5 billion foreign aid on top of the other useless expenditures, extends a free import bill, makes money available to continue to finance organizations and individuals to go abroad and send this stuff back, then the Senators and Representatives, themselves, are contributing to the

downfall of the United States of America.

There is no need to retain Mr. Brundage, as far as I am concerned, with his testimony. If we took all of his recommendations, it has all gone in the first bill that he would give foreign nations in the same recommendation; therefore, I think they are really unimportant.

(The remarks subsequently made by Senator Malone, as amended, are placed in the record following the interrogation of the Secretary of the Treasury, in accordance with permission granted by the chairman. See p. 94.)

The Chairman. The committee is adjourned subject to the call of

the Chair.

(Whereupon, at 12:15 p. m., the committee adjourned.)

#### DEBT CEILING INCREASE

#### TUESDAY, FEBRUARY 4, 1958

UNITED STATES SENATE, COMMITTEE ON FINANCE, Washington, D. C.

The committee met, pursuant to recess, at 10:15 a.m., in room 312, Senate Office Building, Senator Henry Flood Byrd (chairman) presiding.

Present: Senators Byrd, Kerr, Frear, Anderson, Martin, Williams,

Jenner, Malone, Gore, and Bennett.

Also present: Elizabeth K. Springer, chief clerk. The Chairman. The committee will come to order.

The committee is continuing its consideration of a bill temporarily

to increase the statutory Federal debt limit.

At the previous session, Mr. Brundage, you were requested by the committee to bring in an itemized list of reductions in expenditures and the increases in expenditures. Will you please proceed, sir, with your statement?

STATEMENT OF HON. PERCIVAL F. BRUNDAGE, DIRECTOR, BUREAU OF THE BUDGET, ACCOMPANIED BY MAURICE H. STANS, DEPUTY DIRECTOR; WILLIAM F. McCANDLESS, ASSISTANT DIRECTOR FOR BUDGET REVIEW; AND SAMUEL M. COHN, CHIEF, FISCAL ANALYSIS

Mr. Brundage. Mr. Chairman and members of the committee, in response to your request last Thursday, I am submitting a statement summarizing the changes in expenditures from the fiscal year 1958 to the fiscal year 1959, separating the decreases which require legislation and those which can be made without modification of existing legislation, except action by Congress on appropriations. The analysis shows, separately, both increases and decreases for the various agencies. It was compiled from the budget document. For all agencies except the Department of Defense, we analyzed the appropriation accounts with changes of more than \$500,000; that is, those which would round to more than \$1 million. For the Department of Defense, we analyzed cost categories which are more informative on types of procurement and give approximately the same result in total.

The analysis shows decreases in expenditures from 1958 to 1959 totaling \$3,709 million. The increases from 1958 to 1959 amount to \$4,858 million. Thus, net budget expenditures are estimated to

increase \$1.1 billion, from \$72.8 billion to \$73.9 billion.

The total decreases from 1958 which this analysis shows is \$1,715 million greater than the tabulation of \$1,994 million which Secretary of the Treasury Anderson submitted to this committee, for 2 main

reasons. His list excluded major national-security programs, and it was taken by categories from the summary tables. Within these categories, our detailed analysis shows that there were both increases and decreases, which partly offset each other.

Decreases below 1958 requiring legislation are:

Postal-rate increase, which will reduce the postal deficit by \$700 million.

Proposed transfer of the financing of forest and public land highways, \$31 million.

School assistance in federally affected areas, \$7 million.

In addition, as a partial offset to the hundreds of millions we are spending on new airways facilities, legislative action will be required:

To retain in the general fund, rather than transfer it to the highway

fund, trust the present tax on aviation gasoline, \$46 million.

To raise that tax to  $3\frac{1}{2}$  cents and levy a  $3\frac{1}{2}$ -cent tax on jet fuel \$16 million.

If our recommendations for modifications in existing programs are not accepted, estimated expenditures for 1959 could be increased by \$175 million for the acreage reserve of the soil bank and \$35 million for school grants in federally affected areas.

All these together add up to approximately \$1 billion, which I referred to last week, in addition to our request for extension of present tax rates for another year.

The reductions below 1958 proposed by administrative actions, or

where no legislation is required, are:

Decreased expenditures for defense support in mutual-security program, \$60 million.

Reduced purchases for strategic materials and civil-defense stockpiles, \$180 million.

Decrease in net loans by Export-Import Bank, \$343 million.

Veterans' Administration, direct-loan program ends, \$150 million. Decline in eligibility of veterans for Korean war readjustment benefits, \$103 million.

Reduction in Agriculture, principally CCC, \$651 million.

Reductions in number of uniformed forces, Defense, \$328 million.

Reduced procurement of conventional weapons, Defense, \$615 million.

Other decreases—they are detailed on the attached statement—add

up to \$541 million.

Senator Anderson. I would like to understand how they cut this \$651 million to the CCC. I thought they were going to spend more next year, not less.

Mr. Brundage. There is a little more detail which is attached to

the table.

Senator Anderson. Will it show, state how the \$651 million is cut? Mr. Brundage. That is explained. It is on page 4 of the tables.

The largest reduction, \$432 million is in CCC, reflecting decrease in expected purchases of commodities, and the soil-bank acreage reserve shows a decrease of \$117 million, reflecting decision to terminate the program at the end of the 1958 crop year, and the Farmers' Home Administration loan disbursements are decreased by \$55 million.

Senator Anderson. And would it be your understanding that a decrease in the termination of the program in 1958, so they wouldn't

have to pay out their money at the end of this year, would reduce the 1959 fiscal situation?

Mr. Brundage. Yes.

Senator Anderson. I thought it would become effective next fiscal year.

Mr. Brundage. Well, it will affect 1960 more than 1959, but it

would affect 1959 by that amount.

Senator Williams. The cancellation is supposed to come into effect at the end of the calendar year, whereas the fiscal year runs over until June; is that where the difference is?

Senator Anderson. It is all fiscal 1959, is it not? Mr. Brundage. But it runs until June of 1959.

Senator Anderson. You don't do it on a per month basis. Well, I didn't mean to interrupt the meeting.

Senator Martin. Are we going to ask questions. Mr. Chairman?

The Chairman. I would suggest this procedure to the committee; first, that, we would get a complete itemization of the \$3,709 million. Do I understand that you took as a basis the figures given by the Secretary of the Treasury?

Mr. Brundage. No; we made it up ourselves.

The Chairman. These figures which you have given here as itemized don't appear to total \$3,709 million.

Mr. Brundage. Oh, yes; they do.

The CHAIRMAN. Where is that shown? Mr. Brundage. The table is attached.

Senator Jenner. Mr. Chairman, here is an item, for example, "Decrease in net loans by Export-Import Bank," \$343 million. Now, yesterday, I believe, the Committee on Banking and Currency reported out a bill proposing a \$2 billion increase in export loans by the Export-Import Bank; in other words, increasing the authorization from \$5 billion to \$7 billion. Naturally, you couldn't have taken that into consideration.

Mr. Brundage. Oh, yes, indeed. They figured that, by June 30, 1959, their authority would have been entirely committed. You see, the \$2 billion is an authorization. Now, they estimate that they are going to make loans and collect loans, and this \$343 million is a net figure. And they estimate that, in balance, they are going to collect as much in 1959 as they are going to loan. They expect to loan, I think, something like \$400 million or \$500 million, but they expect to collect on previous loans, you see.

Senator Williams. If they are going to collect as much as they are going to loan out, why do they need additional borrowing authority?

Senator Jenner. Yes; that is what I didn't understand.

Mr. Brundage. Well, they have to have authorization in order to make commitments; that is what Mr. Waugh told me. I raised the same question when he asked for it.

Senator Williams. Is this extension of old authority or additional

authority?

Senator Bennett. It is additional authority.

Mr. Brundage. It is additional authority. You see, they start negotiating the loans a good many months before they actually establish the credit and make any cash available.

Senator Malone. What are most of these loans that they make;

what kind of loans?

Mr. Brundage. They are all commercial loans.

Senator Malone. To whom are they made, what type of people

and for what purpose?

Mr. Brundage. Well, they will loan, we will say, to the Indian railroads to buy locomotives and rails in the United States. They are all dollar loans.

Senator Malone. It sounds like a wonderful deal, but you go along and cut down for domestic purchases, and so on, so it doesn't make an awful lot of sense to me.

Mr. Brundage. They are required by law to be for domestic

purchases; under Export-Import, they can't buy abroad.

Senator Malone. Let me ask you this. Aren't they set up principally to loan money, or do they loan money to corporations and people that are going in business in these foreign nations.

Mr. Brundage. Yes.

Senator Bennett. They also loan money to American producers who are selling their American products abroad.

Senator Malone. And how do they sell their products abroad? Do

they do it like the Department of Agriculture, for example?

Senator Bennett. No. Their people are competing in the foreign markets with their products.

Senator Malone. Let me continue with this question for a while, if you don't mind.

Senator Bennett. Go ahead.

Senator Malone. What I want to know from you, now, is what type of loans do they make to people, corporations and others, going in business in foreign countries?

Mr. Brundage. All kinds of commercial loans.

Senator Malone. What for? So that they can go in business in these cheap-labor countries and produce not only for the market there but here as well? All the testimony of the Government officials, added up, is that it is going to be our market that they would sell in. They sell this same stuff back here, don't they, that they produce abroad?

Mr. Brundage. Well, they will buy machinery, all kinds of equip-

ment, and consumer goods.

Senator Malone. That is true. I know you are only on one side of it, and I am going to have to ask all these questions in order to get the information. For example, they loan money to people in this country to go into the textile business in Japan; is that true?

Mr. Brundage. Well, they would loan money against the bill of

lading for shipments of machinery.

Senator Malone. That is true. In other words, the best textile machinery; the Export-Import Bank loans to Americans, or anybody else, who take that machinery to Japan and use 17-cent-an-hour labor and ship the textiles back here. Now, is that true or not?

Mr. Brundage. It is quite possible.

Senator Malone. So, it sounds very good to have the taxpayers of the United States loaning money to buy machinery in this country, but you stop there. No information ever comes out in this committee unless you take it out with a corkscrew.

What happens after that, when you go into these cheap-labor countries? They get the money; they borrow it from the taxpayers of the United States, American producers, largely, and put it into Japan,

South Africa, any place in the whole world, and use the labor with going wage there, and then, under our free-trade policy, send the stuff back here; is that true, or not?

Mr. Brundage. I think it is being done, but I think that is better than to buy the machinery in Japan or in England or in Russia——

Senator Malone. I didn't ask you for your opinion at all. I asked you if that is true.

Mr. Brundage. Yes.

Senator Malone. That is all I want to know. Senator Jenner. What I don't understand is how we get a decrease of \$343 million, and yet the proposed bill that was reported out yesterday increases the authorization for \$5 billion to \$7 billion. I don't quite understand that.

Senator Martin. Would the Senator yield there? I think this is very important, because these are questions that we must answer on

the floor.

I would like an explanation as to whether it is possible by certain administrative work that it may not all be used.

Isn't that what you are trying to get at?

Senator Jenner. Yes.

Mr. Brundage. Well, Mr. Waugh could probably give you a more technical answer. But my understanding of it is that Congress gave the Export-Import Bank a certain authorization to go ahead and make loans, and they have quite a lot of loans outstanding, as you know. And in preparing their budget submission to us, they said that, "We are going to run out of borrowing-of loaning authority," and they have to borrow from the Treasury in order to loan, "before we get very far into 1959, so we are going to need more authority." And I said, exactly as you said, "How does that gee up with your estimate that you expect to collect substantially all you are going to loan?''

And they said that, "During this year, that is, during 1958, we loaned more than we collected, because we had this big British loan where they drew down \$250 million, and several other large loans, but we have maturities coming in 1959, so we expect to collect substantially what we anticipate loaning. However, we can't go ahead with our negotiations, with our loan negotiations—and we have to do it from 6 months to a year or 18 months ahead, in order to send the representatives abroad and look into it—unless we have more authority."

Senator Jenner. I can understand the need for additional loaning authority, the \$2 billion, but what I don't understand is how we are going to have a decrease of \$343 million when they say they have to have an additional loaning authority to keep operating?

Mr. Brundage. This is merely a decrease between the amount of the net loan disbursements which they expect to make in fiscal 1958,

and the amount that they expect to make in fiscal 1959.

Senator Williams. Do I understand that this is just a temporary affair, where they are going to be caught with this jam, and that repayments will come in a little later in the year, and they think they will be back on an even keel later?

Mr. Brundage. I don't know just how much is outstanding. You see, there is a \$3.2 billion outstanding (estimate for June 30, 1959) in loans on which the interest and repayments will be coming in.

Senator Williams. How much of a guaranty do you have with them

without this last \$2 billion?

Senator Frear. The present authority is \$5 billion.

The Chairman. They are going to increase it to \$7 billion.

Isn't that true, that this new authority would be an authorization to spend directly out of debt receipts for additional loans, and once this authorization is enacted, the expenditure is beyond the control of

Mr. Brundage. It is the authority to borrow from the Treasury

and to make loans; yes, sir.

The Chairman. It is referred to as spending out of the debt. They can loan up to \$7 billion. Now, what is the total of the loans to date?

Mr. Brundage. They have, according to this estimate in the budget \$5 billion statutory authority, loans outstanding of \$3.2 billion, and the undisbursed loan commitments are \$1.7 billion, so that comes to \$4,952 million, you see.

The Chairman. Did the administration advocate the passage of

the bill?

Mr. Brundage. Yes.

The Chairman. With the new authorization there would be a balance of \$3 billion that the Export-Import Bank could loan.

Senator Anderson. \$2 billion.

Mr. Brundage. \$2 billion.

Senator Frear. But they have \$1 billion undisbursed.

Mr. Brundage. That is a commitment.

Senator Frear. It is a commitment, but undisbursed?

Mr. Brundage. That is right. \$1.7 billion.

The Chairman. Let's see if we can get it straight as to whether or not there is any necessity for it. Assuming that your figures here are accurate, and it does not come back to Congress for further check by the Appropriations Committees, they could have outstanding at any one time loans up to \$7 billion if this bill is passed; isn't that right?

Mr. Brundage. That is right.
The Chairman. These loans would come out of our Federal debt, so to speak, no matter whether we have a deficit or a surplus, they can pay it out of the debt, is that correct?

Mr. Brundage. That is correct.

Senator Anderson. Could we have how much they had unused

Mr. Brundage. In reply to Senator Anderson's inquiry, as of June 30, 1957, the end of the last fiscal year—

Senator Anderson. How much was committed?

Mr. Brundage. The authority was \$5 billion still, the loans outstanding were \$2.6 billion, undisbursed loan commitments were \$1.5 billion.

Senator Anderson. That is \$4.1 billion?

Mr. Brundage. So they had just under \$900 million unused authority.

Senator Anderson. \$4.1 billion against the ceiling of \$5 billion. What is the situation June 30, 1958?

Mr. Brundage. We estimate that the loans outstanding will be \$3.1 billion.

Senator Anderson. \$3.2 billion you gave a minute ago.

Mr. Brundage. That is at the end of 1959. \$3.1 billion is June 30. 1958. The undisbursed commitments are \$1.6 billion.

Senator Anderson, \$1.6 billion.

Mr. Brundage. And the unused authority will be \$300 million, and then at the end of 1959, if we don't get this additional authority, the loans will be \$3.2 billion, the commitments would be \$1.7 billion.

Senator Anderson. Now, looking at that picture, how do you antici-

pate a reduction in the debt?

Mr. Brundage. Well, the actual collections, as I say—

Senator Anderson. You and I are both familiar with figures. Your own figures show the debt is going to rise from \$2.6 billion to \$3.1 billion to \$3.2 billion, plus commitments that rise from \$1.5 billion to \$1.6 billion to \$1.7 billion.

If your debts keep increasing, and your commitments keep increas-

ing, how do you make your saving?

Senator Jenner. Apparently they don't need this additional authorization, or they apparently intend to go ahead and spend some money.

Senator Anderson. They may need the authorization the way they are going, but when you are increasing your commitments steadily, how can you put in a budget reduction? You can't inflate and decrease at the same time in any books I ever read.

I say, Mr. Chairman, that the commitments go up \$500 million one year and \$100 million the next year in actual loans, and rising,

upon their estimates, a hundred million a year each year.

Now, if it is rising steadily, how does it fall, simultaneously? It is like Joshua commanding the sun to stand still. But this commands the sun to stand still and to rise and set at the same instant.

Senator Malone. Does the Senator from New Mexico remember. Lord Keynes' remark, "The more you are—the more you are?" Senator Anderson. I never could understand that.

Senator Jenner. Maybe in this figure representating anticipated collections' they are going to have more collections than loans.

Senator Anderson. If so, the level of loans drop.

Mr. Brundage. May I give you the figures, Senator?

The loan program, that is, for the advancing of loans in fiscal 1958, is \$900 million, and we anticipate collections of \$300 million, or an increase of \$600 million in outstanding loans and commitments, in case it will-

Senator Anderson. Those are the exact figures you give us. You said June 30, 1957, \$4.1 billion, and June 30, 1958, \$4.7 billion, so that is \$600 million, which balances with what you gave.

Mr. Brundage. That is right.

Senator Anderson. How does it reduce total expenditures?

Mr. Brundage. The 1959 figures, the loans are going up, are estimated to go up—of course, this is just a projection—\$766 million, and we are expecting to collect \$395 million, plus interest of \$109 million, and plus recovery of prior year obligations of \$131 million, or a total recovery of \$636 million as against \$766 million.

Senator Anderson. So, it would be \$130 million?

Mr. Brundage. \$130 million, as against the previous year of \$600 million and something.

So, our decrease of 300 is the difference between the net loans we made—we expect to make—in 1958, and the loans that we expect to make in 1959.

Senator Williams. If I understand you correctly, in answering one of Senator Anderson's questions in connection with the June 30, 1959, figure, you said that these were estimates based on the assumption that Congress did not approve the extra \$2 billion.

Now, if we approve the extra \$2 billion, will your June 30, 1959,

estimate change?

Mr. Brundage. No; we took that into consideration. Actually, they don't expect to use that up before June 30, 1959, but if they are going to stay in business, they have to make these exploratory commitments, you see.

Senator Williams. May I ask this question. As of this moment,

how much of this \$5 billion did the Treasury put up?

Mr. Brundage. As of today, I would think that it would—I think that they have already made the payment on the British loan. I would say probably all but \$500 million, they probably put up \$4.5 billion, including undisbursed commitments which are charged against the \$5 billion authorization.

Senator Williams. They put up about \$4.5 billion, and you are going to have to put up the other \$500 million later, during the fiscal year?

Mr. Brundage. No; we only anticipate another \$200 million between now and June 30 in cash, but we anticipate that we will be committed, you see, by June 30—

Senator Williams. But in 1959, you will have to put up how much? Mr. Brundage. We think that we will use up practically all of our uncommitted authorization.

Senator Williams. You will have to put up \$50 million between now and the end of 1959?

Mr. Brundage. If we are going to stay in business, we have to make commitments beyond that.

Senator Williams. That gets back to Senator Jenner's question, which I can't understand either. If from today until the end of fiscal 1959, you are going to have to put up additional \$500 million, how can you save \$343 million? I just can't understand it.

Senator Malone. More debt.

Senator Williams. If you are going to have to put up an additional \$500 million in the next 15 months, how can you save \$343 million during the same period?

Mr. Brundage. Because we expect to have collections.

Senator Williams. Then you are going to have to put up the \$500 million in addition to the collections? I am speaking from a Treasury standpoint, not from the standpoint of the Export-Import Bank, from the Treasury Department standpoint, they are expecting to put up an additional \$500 million; is that correct?

Mr. Brundage. Yes; but they are getting collections.

Senator Williams. That is \$500 million in addition to collections; isn't it?

Mr. Brundage. They are collecting altogether on loans about \$400 million, and interest of \$100 million, and recovery of prior obligations of \$130 million, so altogether, they collect \$636 million, which will become available during fiscal 1959.

Senator Williams. Yes; but you are still going to have to put out additional money.

Senator Anderson. Mr. Williams, I know, is a very good businessman. You are an auditor, are you not, Mr. Brundage?

Mr. Brundage. Yes.

Senator Anderson. It is not fair to say that the terminology you used is completely incorrect when you say "decrease in net loans." I think I understand what your figure is. Ordinarily we increase \$500 million a year. This year, we are going to increase \$130 million, therefore, the investment of what we might ordinarily call venture capital is smaller this year than it was last.

Mr. Brundage. Yes.

Senator Anderson. It wasn't a decrease in net loans?

Mr. Brundage. It is a decrease in net loans made.

Senator Anderson. No: it is decrease in expansion of loans; is it not?

Senator Williams. It is decrease in comparison to what you have

been doing in previous years.
Senator Anderson. Previously we have been jumping at the rate of about \$500 million a year, but next fiscal year, we are going to jump only \$132 million, so that is \$343 million less than the year before.

Mr. Brundage. I think that is correct.

Senator Anderson. But it isn't a decrease in loans.

Mr. Brundage. Loans made.

The Chairman. How much do you estimate the Export-Import Bank will draw from the Treasury?

Senator Anderson. It really is not a decrease in net loans.

Mr. Brundage. In new loans—no, that wouldn't—in net loans made would be better.

Senator Malone. I would like to ask you, are these Mr. Waugh's figures which were submitted to you?

Mr. Brundage. Yes.

Senator Malone. Is Mr. Waugh the same one that used to work for the State Department?

Mr. Brundage. He was Economic Assistant Secretary.

Senator Malone. And he is the same one that they sent to Geneva to work on GATT and make reductions in the United States tariff so that we would further divide the American market with the foreign nations; isn't he?

Mr. Brundage. I don't know that. He was a banker in the

Middle West before he came down here.

Senator Malone. I don't know what he was before he came here, but he has never made any sense since he has been here, and I am trying to ask you if he is the same man that started with the State Department, and also gave the same kind of testimony that you are giving now, and then was sent to Geneva to work on multilateral trade agreements to further divide American markets with foreign nations on the theory that the less markets of our own we have the better off we are.

Mr. Brundage. I haven't kept track of what he did, but he was Assistant Secretary of State for Economic Affairs.

Senator Malone. Then he is the one, and therefore, I am not

surprised at the figures that they have given.

Now, this is the same thing. This intrigues me, the phrases that you folks cook up, "exploratory commitments".

Now, what do you mean by "exploratory commitments"? Mr. Brundage. Well, if any bank is approached by customers for a loan, and he says, "I would like to borrow for a certain project,"

21297 0-58--17

then the bank has to investigate it. When you make a loan in a small town in this country, all of the information is readily available. When it is dealing in business abroad, it is a lot more complicated and takes

more time. But it is the same type of thing.

Senator Malone. In other words, it takes more time for this bank to determine if you loan money to a corporation here to go in business abroad, it takes a little more time to figure out whether he can use that \$2 labor and produce the goods and send them back here cheaper than you can make the goods here. It takes a little time for that; doesn't it?

Mr. Brundage. Well, it takes time to explore the project and see

if it is a good business risk.

Senator Malone. I understand that. Now, then, the State Department has been in the habit of making commitments of loans and gifts to foreign nations, and then they come down to Congress with these loans and gifts already promised, and they just say, "Well, if the Congress doesn't support us, of course, our foreign relations would deteriorate." So, this is about the same thing. What we have to do is give them authority to go ahead on a \$7 billion basis instead of a \$5 billion basis.

Mr. Brundage. Well, it is a sound basic banking operation, as

against a grant or soft loan.

Senator Malone. Of course it is sound, because you say it is, and because the State Department says it is. But we have sat here for 12 years and watched the national debt almost double, and all of you are making money. Sometimes it is a little hard to figure out how you are making money and still come back for a debt limit raise about every 2 or 3 years—come back for more money. A bank that is making money pays dividends, they don't come back for more money.

Mr. Brundage. They are paying interest to the Treasury on

their borrowing.

Senator Malone. Yes, of course, but they don't pay any money back. It seems kind of odd.

Mr. Brundage. It is cash, but then it goes out in new loans,

because business all over the world is expanding.

Senator Malone. Of course. And of course you have to expand this business so that these American corporations can go to these nations where the labor is about 10 percent up to 30 percent of what it is here, and then with the low water transportation and the very low duties and tariffs now, they can ship the stuff back here and throw the American workingmen out of jobs and destroy the American investments. Doesn't it work that way, too?

Mr. Brundage. Well, that isn't the way I would describe it. We have the capital just now, just like England had the capital when we were a colonial country, and I suppose when they sent capital over

here we competed with the people back in England.

Senator Malone. I am glad you brought that up. We were a colonial nation, and they wouldn't allow us any manufacturing in 1776. We thought we broke away from that, but now we are back in the colonial deal again, and there is where the free ride and the funny business comes in, from London. I don't think Russia is the danger. I don't think the State Department goes home at night without calling London. So, you are loaning all this money to these

cheap-labor countries to make this stuff and bring it back here. all you have to do is look at your figures, look at textiles and machine tools and minerals and all the rest of them. The only ones that are working are the ones where we are spending \$44 billion a year for national defense to keep up the economy. All you have to do is to read the New York Times and all the rest of them and they will say, "You must have this money to keep up your economy." But the further you go with that principle, the tougher it is for the workingman and the investor of America.

All I am trying to do is get you to say what you believe. You are a part of this outfit and what you believe you have a right to believe. And Mr. Waugh is a part of it. Lord Keynes was a part of it. And now we wake up with a \$300 billion debt, with all the private debt in the U. S. double, and we are richer than we have ever been. The only thing is that we don't realize our throats have been cut. We just haven't tried to turn our heads any lately. And one day we are going to take a nose-dive that will make that 1929 one look like a baby, with all of your money invested in foreign nations and the foreign nations have got our market which they now have, and your estimates for \$2 billion to expand that situation.

Now, you have three other organizations, you have a World Bank, International Bank, one of them organized by Harry Dexter White.

Altogether there are four organizations.

We finance the Export-Import Bank entirely. The other 3 we finance 36 percent—you check this and see if I am right. But we put in the only real money. We put in the dollars, they put in that funny paper, overpriced in terms of the dollar. So, what we are doing is financing four organizations to destroy our own investments in the United States of America. And you are coming back here asking for \$2 billion more. And, of course, your explanation makes about the same amount of sense Mr. Waugh's used to make when he came down and said, "We ought to divide these markets further, because we will be richer."

And now, Mr. Waugh is at the top of this bank, isn't he?

Mr. Brundage. He is president of the bank.

Senator Malone. I am glad to know where he is. Senator Martin. If Senator Malone is through, there are some things that I think ought to be clarified.

On page 3, you say-

The Chairman. I would like to ask one more question.

Senator Martin. Yes, I am sorry.

The CHAIRMAN. Have you got a list of the loans of the Export-Import Bank?

Mr. Brundage. I don't have the detailed loans, no, sir.

The CHAIRMAN. Could you furnish the committee with a list of

Mr. Brundage. Outstanding as of last June or today, or what time?

The Chairman. As of today. And likewise, a list of commitments.

(This information is incorporated in the data subsequently submitted by Mr. Brundage which appears on pp. 260-386.)

And then, I would like to ask a question about this last loan to Great Britain. That was made suddenly, was it not?

Mr. Brundage. Oh, the credit was granted a year ago, I think.

The Chairman. And the total credit was how much?

Mr. Brundage. It was \$500 million.

The CHAIRMAN. And what was the reason for that loan?

Mr. Brundage. Well, it was to support—they were having a run on

sterling, as I recall it. The Chairman. I understood it was an emergency. Because I happen to know that they called on us in December suddenly for the

\$250 million, that is correct, isn't it? Senator Frear. You granted them it, the Export-Import Bank granted a \$500 million loan on which they have drawn \$250 million?

Mr. Brundage. That is correct.

The CHAIRMAN. And then, they called suddenly for the balance

Mr. Brundage. No, they haven't called for it. Senator Williams. They have called for half of it?

Mr. Brundage. They have only drawn half of it; yes, sir.

The Chairman. They have only drawn half of it. But didn't they want the total amount in December?

Mr Brundage. No.

Senator Bennett. That was the first drawing, Mr. Chairman.

Mr. Brundage. That was the only drawing that they have made. The Chairman. I have got it very definitely that they desired the total amount at that time to help the sterling bloc, to maintain the value of the English pound. Now, do you think that is a proper-

Mr. Brundage. There was some discussion, but they only took

half of it.

The Chairman. Do you think that is a good bankable loan?

Mr. Brundage. I do, from what I have heard of it.

The Chairman. To make loans to other countries in order to maintain their currency?

Mr. Brundage. Well, it is a loan against pledged British wealth. The CHAIRMAN. Is that the type of loan that we have been making? Take France, where the franc has gone down so much, and other countries, are we loaning those countries money in order to stabilize their currency?

Mr. Brundage. Well, there is an outstanding French loan, but we haven't loaned France, I don't believe, anything last year, and are not proposing to loan them anything new.

(Mr. Brundage later supplied the following information:)

One loan commitment to France for \$46 million was made in the calendar year 1957, but no disbursements were made against it. This loan was to Air France; it was not made for the purpose of stabilizing the French currency.

The Chairman. Who finally passes upon these loans, the Export-Import Bank?

Mr. Brundage. There is a committee, and then it goes before the National Advisory Council, which is chaired by Treasury. The Chairman. Who has the final approval?

Mr. Brundage. They have to be approved by the National Advisory Council, which, as I say-

The CHAIRMAN. What is the National Advisory Council?

Mr. Brundage. Well, it is an interdepartmental committee, it was chaired by the Treasury, it was represented by State.

(The material requested is as follows:)

The National Advisory Council on International Monetary and Financial Problems was established by the Congress in the Bretton Woods Agreements Act (59 Stat. 512, 22 U. S. C. secs. 286, 286b), approved July 31, 1945, which provides that "Sec. 4 (a) In order to coordinate the policies and operations of the representatives of the United States on the fund and the bank and of all agencies of the Government which make or participate in making foreign loans or which engage in foreign financial, exchange or monetary transactions, there is established in the National Advisory Council on International Monetary and Financial Problems (hereinafter referred to as the 'Council'), consisting of the Secretary of the Treasury, as Chairman, the Secretary of State, the Secretary of Commerce, the Chairman of the Board of Governors of the Federal Reserve System, the President of the Export-Import Bank of Washington, and during such period as the Foreign Operations Administration shall continue to exist, the Director of the Foreign Operations Administration."

Senator Anderson. Would it be possible to find out that the reason Britain only got half of it was because we only had half? You couldn't loan \$500 million on top of \$4.9 billion, could you?

Mr. Brundage. We have given the credit out of the \$5 billion

authorization.

Senate Bennett. May I comment to my colleague from New Mexico that the full \$500 million is calculated in the commitments which add up to the \$4.9 billion.

Senator Anderson. In the \$1.7 billion? So it is already in there. Senator Williams. That is my understanding, and that leads up to the next question, which was on my mind before. The Treasury is committed to furnish this money if they call for it?

Mr. Brundage. That is right.

Senator Williams. And then, after they furnish it, it becomes a part of the national debt?

Mr. Brundage. That is right.

Senator Williams. Now, forget for the moment all about the question for the additional \$2 billion. How much more call can be made on the Treasury to meet this \$1.7 billion of commitments? Does that mean, assuming we stop as we are, that they are committed for the \$1.7 billion, that you would have \$1.7 billion to put up during the next 15 months?

Mr. Brundage. If it was all called, yes, we would; yes.

Senator WILLIAMS. You are operating on the assumption that it will be called—you said it was \$4.9 billion—it will be committed as of June 30, 1959?

Mr. BRUNDAGE. It will be committed, but I don't think it will be all called.

Senator Williams. You don't think it will be disbursed at one time?

Mr. Brundage. No.

Senator Williams. Do you think that a very great percentage of it will be disbursed?

Mr. Brundage. I might say it is a line of credit. Well, they estimate as closely as they can, based on the calculation for each individual credit line, just how it is going to be drawn down, and that is how we make up our statement.

Senator WILLIAMS. Based upon that estimate, do you think they

need to build additional credit?

Mr. Brundage. I think it is a wise thing to give it to them, yes; I don't know whether they need to build \$2 billion or \$2.5 billion or

\$1.8 billion or anything like that, but I think it is a wise thing, if you think it is a good program, if you want to keep them in business, I

think we ought to give them \$2 billion.

Senator Williams. Forgetting for the moment whether it is a good program or not, I am speaking about the needs of the program; based on the estimates of June 30, 1959, they wouldn't be using any of this additional \$2 billion—and that is based upon their own estimates—and if they won't be needing any of that 15 months from now, why give them an additional \$2 billion at this time?

Mr. Brundage. Because they can't negotiate any loans if they are

at the end of their authority; they have to stop.

Senator Williams. They can negotiate on the basis that payments are coming in faster than they are paying out, can't they? A lot of people in business have to negotiate on the basis of incoming revenues.

Senator Malone. But they couldn't make a definite commitment without us making it higher first. And I think that is what Mr.

Waugh\_is after.

Mr. Brundage. They feel that they cannot negotiate unless they

have more flexibility.

Senator WILLIAMS. When you furnish the chairman's list of loans, can you put on there the date the loans were made, and, where they are delinquent, the extent?

Mr. Brundage, Surely.

The Chairman. And, Mr. Brundage, will you also state the justification for the loan. Now, the justification for the British loan, as I understand, was to help stabilize if possible the British pound; is that correct?

Mr. Brundage. Yes.

(This information is incorporated in the date subsequently sub-

mitted by Mr. Brundage which appears on pp. 260-386.)

The Chairman. Is that a policy of the Export-Import Bank? You take in a great big territory when you start to stabilize the currency of the nations, especially nations that heretofore haven't paid their debts to us.

Senator Jenner. I didn't think, Mr. Chairman, the Export-Import Bank made loans to governments; I thought that came from

the International Monetary Fund.

The CHAIRMAN. But it has made this loan to Great Britain.

Senator Frear. I don't know whether this will throw any light on it or not. I agree with what you and the Senator from Indiana have said; I don't think it is the policy of the Export-Import Bank to loan under such circumstances, but I believe in this instance the loan was made to England at the request of the State Department to make this loan. And the only money that was available apparently at that time was in the Export-Import Bank, and they called upon the Export-Import Bank to make the loan, and for that loan there are British securities to secure the loan that are held in this country.

Senator Jenner. Following that same line of reasoning, why wouldn't it have been the proper loaning agency to go to the International Monetary Fund and have all the nations chip in and increase

that fund and loan to the British-

Senator Frear. I am not on the witness stand, I just wanted to throw a little light on this. And I wanted not to justify it, but to tell you that the Export-Import Bank didn't seek this loan, but they were requested to make the loan.

Senator Malone. This will be the same thing as the \$3.75 billion that we gave England in 1946 and the \$4 billion or \$5 billion since. The whole record of Government for 25 years is, wherever there is any money approved by Congress, somebody like Waugh has control of it, and they commit it some place outside of this country, so the only chance Congress has is just not to go ahead and give you fellows

a chance to spend it.

I know you are sold on an international Socialist deal, that the more they produce over there and bring in here and the more workingmen that are on the street and the more investors that lose their money, the better off we are. Your whole setup would prove that. And I am not through questioning you yet on some of the things that you have here. You wanted to cut down on American production and put it abroad. It has been the policy for 25 years, and Congress has voted for it. They cannot blame you or the President, they cannot blame any one of the three Presidents. If Congress does not vote for it he cannot do it. They cannot divide our domestic markets among all the nations of the world, they cannot divide the cash of the American taxpayers among all the nations of the world, unless Congress votes for it.

Mr. Brundage. We cannot expand our exports, if we don't either

expand our imports or lend money.

Senator Malone. Your exports, that is what we are paying for. Every hundred pounds of wheat you send to Cuba costs the taxpayers \$1.35, and you call it foreign trade. I could go on, but this is not the place for it. I hope you are back when this matter comes up.

Mr. Brundage. May I read this paragraph from page 131 of the

budget; I think it may throw some light on this question:

From time to time the bank, that is, the Export-Import Bank, is called upon to provide financial assistance to meet emergency situations adversely affecting normal trade between the United States and another country. Such loans may take the form of credit to a foreign central bank or other bank or financial institution to provide dollar exchange for a wide range of United States exports, credits to fund commercial arrearages resulting from dollar-exchange difficulties, or credits to assist in financing purchases in the United States required for reconstruction abroad following a national disaster.

In 1957 a \$500 million credit was authorized to the United Kingdom, secured by collateral, to meet dollar requirements for goods and services to be obtained

in the United States.

The Chairman. What interest is being paid on this? Mr. Brundage. The estimate of emergency credit authorizations for 1958 is \$60 million. Emergency credits in 1959 will be financed out of the \$2 billion increase in authority proposed for later transmission.

The Chairman. Is that to England also?

Mr. Brundage. There isn't any country defined. The Chairman. You said emergency credit estimated—

Mr. Brundage. No; that 60 isn't England.

The CHAIRMAN. What interest would England pay on this loan?

Mr. Brundage. I don't know what the rate is. The CHAIRMAN. Can your staff give it to us?

Mr. Bennett. Mr. Chairman, that was discussed at the committee yesterday. My memory is that it is 4 percent.

(Mr. Brundage supplied the following information for the record:)

The Export-Import Bank Loan of December 21, 1956, to the United Kingdom carries an interest rate of 4½ percent on the amounts disbursed.

Mr. Anderson. Could be submit, Mr. Chairman, the part of the charter of the Export-Import Bank that lets the bank make loans to stabilize foreign currencies?

The CHAIRMAN. I think that is very important.

(The material requested follows:)

In response to this inquiry, the President of the Export-Import Bank has

provided the following information:

"We understand that you were asked what power the Export-Import Bank has under its statute to make loans in support of the currency of a foreign country, and that the question referred specifically to our \$500 million credit to the United Kingdom, authorized on December 21, 1956. This credit was made, to use the language of section 2 (a) of the Export-Import Bank Act of 1945, 'to aid in financing and to facilitate exports and imports and the exchange of commodities between the United States or any of its Territories or insular possession and any foreign country or the agencies or nationals thereof,' and this language was incorporated in the loan agreement with the United Kingdom. In other words, this loan was made to finance exports to the United Kingdom."

Mr. Anderson. Is that in the powers granted to them?

The Chairman. Have there been other instances where the Export-

Import Bank has made loans to stabilize foreign currencies?

Mr. Brundage. Well, it was to pay for exports, it said here from this country. I think the French loans were the only ones, I recall; those were several years ago.

The CHAIRMAN. As I recall, the Export-Import Bank was not

established to make loans to other countries.

Mr. Brundage. It was established to encourage exports.

The CHAIRMAN. Are a majority of the loans made to individual firms?

Mr. Brundage. Yes.

The CHAIRMAN. Mr. Brundage, will you be kind enough, then, to furnish that data as to the loans outstanding, as to the commitments, and, likewise, the losses that have occurred, and the rates of interest, and then add to it what Senator Anderson has just mentioned in regard to the bank's authority to make loans for stabilizing currencies?

(This information is incorporated in the data subsequently sub-

mitted by Mr. Brundage which appears on pp. 260-386.)

Senator Williams. Does the Export-Import Bank pay the Treasury

Department any interest on this money that you put out?

Mr. Brundage. The Export-Import Bank has paid interest to the Treasury equivalent or greater than the interest that the Treasury is paid on its debt from the beginning. And they have a substantial surplus.

The Chairman. Would you add to that statement the other facilities that overlap, to some extent, the Export-Import Bank? Aren't there several others working in more or less the same field of

international banking?

Mr. Brundage. I will try to cover that.

The Chairman. Would you be good enough to give the committee a list?

(This information is incorporated in the data subsequently submit-

ted by Mr. Brundage which appears on pp. 260-386.)
Mr. McCandless. The International Bank, the International Monetary Fund, I think, would bear some relation; the development loan fund of ICA is in the same field. And I don't think of anything Those are the ones I think of, Mr. Chairman.

The Chairman. Would you be in a position to furnish the same information for these other banks, Mr. Brundage?

Mr. Brundage. Could I take the latest available data? I think

I probably have the compilation as of the end of December.

The Chairman. I think it is very important to get a complete and current picture. We are making a very large direct authorization, and we are making a lot of loans, and some of them are soft. We don't know whether they are going to be collected or not, and I think we ought to get a complete picture.

Mr. Brundage. What I could do is give you the details, as of December, with an account of any substantial changes since then.

The CHAIRMAN. And also the commitments—

Senator Frear. Mr. Chairman, I think the interest rate which was talked about excludes \$1 billion, does it not? The Export-Import Bank pays to the Treasury the interest at what is the average rate of your 6- to 7-year obligations or 6- to 7-year period, less an interest on \$1 billion; they do not pay interest on the initial \$1 billion.

Mr. Brundage. That is the capital; yes.

Senator FREAR. The capital; that is right. But they do pay the interest, as you have figured it, on a 6- to 7-year term.

Senator Bennett. And they do pay dividends on the capital.

Senator FREAR. They pay dividends on the \$1 billion, which is

about 2½ percent.

Senator Malone. Mr. Chairman, do I understand now that you are asking Mr. Brundage to give us the full information on the Export-Import Bank, the International Bank, the International Monetary Fund, and the International Finance Corporation, which are the four organizations that are set up especially to encourage American investments abroad, to manufacture the stuff there with the cheap labor and bring it back into this country? I am very much interested in knowing exactly what you are doing. It is awfully hard to get information. And one other thing, Mr. Chairman. They all testify to making

And one other thing, Mr. Chairman. They all testify to making money, but they all come back for more money. And then they come back as soon as we give them this \$2 billion (and under the questioning of the Senator from Delaware, if they take this credit it is another \$2 billion that the debt limit must go up) and they come in through another man the Secretary of the Treasury, and ask for a bulge in the debt limit. If the Senators vote for this they have no choice—if they vote on the Senate floor to spend the money, as they have in the last 24 years; isn't it just a perfunctory matter to ask for a raise in the debt limit then?

Mr. Brundage. Well, it is one of the important factors, of course to be considered in the debt limit, but it is not directly related, it is, indirectly related.

Senator Malone. When Congress says that you may have the money, then what would you do, sit around in this committee and just vote to hold your finger on the snout of the tea kettle while you are building up the fire.

That is the alternative; isn't it?

Mr. Brundage. You can make a line of credit with restrictions on the dates that you can draw down the loan.

Senator Malone. That isn't what I asked you at all. If Congress votes for what you are asking for, and they vote for all the appropriations, for \$4 billion to go to Europe and Asia as gifts practically, they

vote to keep this \$15 billion you have been wasting a year in obsolete material for national defense, and then they come in here and show that in order to do what you have already voted for we need a raise in the debt limit. We can either vote for it or sit here and hold our finger on the snout of the teakettle and get it burned off; can't we?

Mr. Brundage. That is one way of looking at it.

Senator Malone. In other words, it is just a matter of form that you fellows come in and say, "we want a raise in the debt limit, after

We have already voted for the things that make it necessary."

The Chairman. You understand, Mr. Brundage, what the committee wants is all operations related to the Export-Import Bank, and

as full a report as possible on the items.

Now, we have completed the discussion of the other reductions? Are there further questions?

(The material referred to follows:)

## THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

The International Bank for Reconstruction and Development was established in 1947 in accordance with the Bretton Woods agreement. It is an international agency to make loans for reconstruction or economic development projects in member countries. Loans are made either to member governments or, with a government guaranty, to enterprises.

The bank has 64 members each of whom is represented on the Board of Governors which meets annually. Current decisions are made by the 16 executive

directors representing major contributors, or groups of members.

The bank's capital is subscribed by members in general proportion to their economic strength. Two percent of member contributions are in gold or dollars freely available to the bank; 18 percent is in the members' own currencies which may be used only with the consent of the member; 80 percent of the subscription may be drawn by the bank only if needed to cover bank obligations. The bank

may and does supplement subscriptions by public or private sale of its own bonds.

As of December 31, 1957, the bank had available for lending, paid in subscriptions of \$756 million in gold or United States dollars and \$564 million in other members' currencies, \$1,269 million proceeds of borrowings, and \$785 million in repayments, sale of loans and other proceeds of operations. Available funds totaled \$3,375 million, of which \$2,547 had been disbursed on loans.

Attached is a copy of a statement of IRBD loans as of December 21, 1057

Attached is a copy of a statement of IBRD loans as of December 31, 1957,

received from the bank.

### INTERNATIONAL FINANCE CORPORATION

The International Finance Corporation (IFC) was organized in July 1956 under the aegis of the International Bank for Reconstruction and Development to provide a more flexible means for encouraging private investment abroad in profitmaking enterprise. Its membership comprises 53 countries with an aggregate subscribed capital of approximately \$93 million. The total authorized capital is \$100 million. The Corporation's articles of agreement require all payments on account of subscribed capital to be made in United States dollars or gold. The purpose of the Corporation is to stimulate economic development in less-developed member countries and in dependent overseas territories of member countries, by investing, without Government guaranty, in productive private enterprises in association with private investors who can provide competent management.

The Corporation may not make equity investments, but it nevertheless has considerable latitude in choosing the types of investment most suitable for a particular operation. The pattern of its investments will normally be intermediate between loan capital on the one hand and share capital on the other, and will generally provide for a moderate fixed rate of interest plus some additional return depending upon profits, if any. Some investments will carry some rights to share in ownership which the Corporation can sell to private investors and thus realize appropriate gains. The Corporation will therefore endeavor to obtain convertible debentures, subscription warrants, or some other form of rights to obtain capital stock or shares. It will be the intention of the Corporation, within the limits of its charter, to keep its policies and procedures flexible, and to review and modify them as suggested by experience or changing conditions.

In its choice of various eligible investment proposals, the Corporation will be guided, among other criteria, by the extent to which it can promote the investment of additional private capital, by the expected profitability of the investment considering the risks involved, and by the degree to which the investment helps to diversify and increase the attractiveness of its portfolio to private investors.

## THE INTERNATIONAL MONETARY FUND

The International Monetary Fund is an international agency established in 1947 in accordance with the Bretton Woods Agreement. It operates as a pool of gold and currencies, contributed by its members, available for purchase by members to tide them over temporary balance of payments difficulties. The fund has 64 members who have subscribed \$1,674 million of gold, \$2,421 million of convertible currencies, and \$4,047 equivalent of nonconvertible currencies. The United States subscription is \$2,750 million of the total of \$9,016 million. Subscriptions are determined by the fund on the basis of the economic strength and foreign situation of the member country.

and foreign situation of the member country.

Fund policies are established by a Board of Governors on which each member is represented and has a vote generally proportional to its subscription and which meets annually. Operations are governed by the Board of 17 Executive Directors representing members with the major subscriptions or groups of

members.

Exchange transactions with the fund take the form of a member's purchase from the fund of the currencies of other members for an equivalent amount of the member's own currency. Fund resources are available to eligible members on an essentially short term and revolving basis to provide members with temporary assistance to contribute to the solution of their payments problems. Members may also obtain standby arrangements that assure a member that drawings upon fund resources up to specified limits and within an agreed period may be made without reconsideration of the member's position at the time of the drawing. Drawings upon fund resources are not confined to meeting specific and defined types of payments problems. A member's entitlement to draw or to make a standby arrangement is determined after consideration of its circumstances, and its likely ability, with the help of fund resources, to overcome its problems within a short period. Fund purchases of a member's currency are expected, as a general rule, to be repurchased within a period not exceeding 3 to 5 years or reduced by the purchase of the member's currency by another member.

The following charges are made for transactions: A service charge of one-half of 1 percent for the purchase of a currency from the fund with the buying member's currency; and a charge payable on the fund's holdings of a currency that exceed 100 percent of the member's quota. The rate of charge rises in two dimensions; the larger the member's drawings relative to its quota, and the longer the period during which the fund holds the member's currency. Charges on transactions

effected in 1954 or later are:

	Charge in wi (perc	iich hold	ent per ann Ings are in	Average effective rates percent per annum holdings in excess quota by (percent)			
	0 to 50	50 to 75	75 to 100	Period of time	0 to 50	50 to 75	75 to 100
Service charge 0 to 3 months 3 to 6 months 1/2 to 1 year 1 to 11/2 years 11/4 to 2 years 2 to 21/2 years 21/4 to 3 years 3 to 31/2 years 3 to 31/2 years 3 to 4 years 4 to 41/2 years 4 to 41/	2. 0 2. 0 2. 5 3. 0 3. 5 4. 0	0. 5 0 2. 0 2. 0 2. 5 3. 0 4. 0 4. 5 5. 0	0. 5 0 2. 0 2. 5 3. 0 3. 5 4. 0 4. 5 5. 0	2 years 2½ years 3 years	2. 00 2. 00 2. 00 2. 12 2. 30 2. 50 2. 71	2.00 2.00 2.00 2.17 2.38 2.60 2.83 3.07 3.31	2. 00 2. 00 2. 25 2. 50 2. 75 3. 00 3. 25 3. 50

Compared to former charges, those now in effect are higher on transactions outstanding for short periods (except for periods of less than 3 months for which present charges are the same or lower). Charges are normally paid in gold, but when a member's reserves are below half its quota charges may be paid partly in the member's currency. A charge of one-fourth of 1 percent per annum is made for standby arrangements but, should the country make a purchase during the period of the standby arrangement, this charge is generally credited against the service charge for the transaction, up to a maximum of one-fourth of 1 percent of the transaction.

The fund's holdings of currencies are deposited with the central bank or other depository in each member country. For that part of the fund's holdings of a currency that exceeds what the fund considers to be a normal working balance,

members may substitute for deposit nonnegotiable noninterest bearing demand securities. The term "currency," as used in this note, includes both balances with depositories and these securities.

The following table shows fund transactions in 1956 and 1957 and the cumulative total of transactions with members since the establishment of the fund. The gross totals show the amounts of other member currencies purchased by members; the net totals show those purchases net of repayments in gold or dollars, i. e., member obligations to the fund outstanding on December 31, 1957.

¹ In addition, in January 1958, Turkey repurchased \$4 million of its currency with dollars, Yugoslavia purchased \$22.9 million and other currencies with dinars, and a standby arrangement was agreed with France permitting purchases of up to \$131,250,000 or other currencies with francs through January 1959. ¹ Standby in effect at end of period and not drawn or not fully drawn. See table on standby arrangements. ³ Former member. Payments made on settlement of Czechoslovakia's debt to the fund are included as if there were a member's repurchase. ⁴ Net member drawings plus outstanding debt of Czechoslovakia.

Note.—For this table repurchases (or other countries' drawings) of its currency by a member are considered first as repayments of drawings and reported in the top section of the table; only when repurchases (or other countries' drawings) equal to drawings have been completed are they considered as repayments on subscription account and reported in the bottom section of the table. The fund's official accounts make no such division of repurchases.

### EXPORTER CREDIT LIMES-UNITED STATES CAPITAL EQUIPMENT

THE FOLLOWING PAGES NOS. 32 to 35 REFLECT EXPORTER CREDIT LINES AND TRANSACTIONS THEREUNDER.

THE LINES ARE NOT INCLUDED IN TOTAL AUTHORIZATIONS OF THE BANK AND THEY ARE AVAILABLE ONLY TO THE EXTENT THAT THE BANK AUTHORIZES SPECIFIC OR REVOLVING CREDITS TO FINANCE TRANSACTIONS THEREUNDER COVERING EXPORT SALES OF U. S. CAPITAL EQUIPMENT. DETAILS OF THE TRANSACTIONS ARE SHOWN IN THE STATEMENT OF LOANS AND AUTHORIZED CREDITS UNDER THE SPECIFIC COUNTRIES TO WHICH THEY APPLY. TRANSACTIONS UNDER THE CREDIT LINES ARE INCLUDED IN TOTAL AUTHORIZATIONS AND ARE CHARGEABLE AGAINST THE BANK'S LENDING AUTHORITY.

									December 31, 1957.

¹ Credit 395: During March 1948 Export-Import Bank entered into an agreement with the Republic of China to assist their purchase of 10 war-built United States coastal-cargo vessels. The terms of the agreement mortgaged the ships to Export-Import Bank. The sale was in accordance with the Merehant Ship Sales Act of 1946. The Nationalist Government of China is operating only 4 of these vessels and the principal and interest repayments are currently paid as to them. 3 of the stated vessels were sold by the Republic of China to the Kingdom of Thailand in November 1951. We extended a loan to the Kingdom of Thailand (credit No. 504) in the amount of \$1,071,340 to assist in the financing. Arrearages to Export-Import Bank on the 3 vessels were paid up. Loan service on the 3 vessels is current. 3 vessels were surrendered by their crews to Communist China. The United States district court in Baltimore rendered a judgment in favor of Export-Import Bank on June 12, 1957, in the amount of \$1,283,211.22 to recover from the Insurers the loss of 3 vessels caused by the barratry of the masters and crews. The judgment draws interest at 6 percent from date of entry, June 12, 1957. Appeal has been taken. Payments on the notes as to these three vessels are in arrears.

<sup>2</sup>Credit 396: This credit was extended to the Republic of China in February 1946 to assist its recovery from heavy war damages. Loan proceeds were utilized to purchase 12 vessels and 4 tankers from the United States War Shipping Administration. Such

vessels were to be used for transport facilities for China's general cargo trade and to provide movable storage facilities for petroleum products.

Credit 397: This credit was established in February 1946 to purchase United States generating equipment and engineering services to replace war-destroyed generators and other facilities relating to power production and distribution.
 Credit 398: This credit was established in February 1946 to provide transportation

4 Credit 398: This credit was established in February 1946 to provide transportation equipment and materials to rehabilitate broken lines in communication and poor railroad facilities resulting from war damage.

6 Credit 399: This credit was established in March 1946 to provide United States equipment, materials, supplies, and services to rehabilitate coal mines and reestablish maximum production. (Coal production before the war estimated at 34,000,000 tons).

# DEPARTMENT OF STATE, INTERNATIONAL COOPERATION ADMINISTRATION DEVELOPMENT LOAN FUND

Beginning in 1958, the Mutual Security Act authorized a development loan fund to make loans, credits, or guaranties to nations, organizations, persons, or other entities to encourage the economic development of friendly nations. The fund is to be administered so as to support and encourage private investment and enterprise and is not to compete with private investment capital or the activities of the Export-Import Bank and the International Bank for Reconstruction and Development. Before making any loan, the management of the fund considers the availability of financing from other free-world sources and ascertains the soundness and feasibility of the activity to be financed.

the soundness and feasibility of the activity to be financed.

The basic financial terms and conditions for the operation of the fund are determined, after consultation with the National Advisory Council on International Monetary and Financial Problems, by a loan committee consisting of the Deputy Under Secretary of State for Economic Affairs, acting as chairman, the Director of the International Cooperation Administration, and the President of the Export-Import Bank. The fund is administered by a manager appointed by the President.

Loans for projects which would normally be of a profit-earning nature will be at rates of interest and for maturities comparable to Export-Import Bank terms for similar projects. Loans for other purposes, generally loans to governments for basic investments which do not directly produce revenue such as bridges, dams, or irrigation projects, will be for terms up to 40 years at rates sufficient to cover the current cost of money of similar term to the Treasury. Repayments of principal and interest in either case may be in dollars or in foreign currency, as specified in the loan agreement.

As yet the fund has approved no loans. \$1.3 billion applications are on hand most of which have been received in recent weeks. These are now under review.

Allocations, Jan. 1 to June 30, 1957, under credits previously authorized

OFFICE OF THE TREASURER ACCOUNTS DIVISION

Senator Martin. Just for information, I notice on page 3, "Reductions in number of uniformed forces, defense," \$328 million. Does that take into consideration increase in compensation in the Armed Forces?

Mr. Brundage. No; that is just a reduction in the numbers, and the pay that they are getting now. The increase comes in down below.

Senator Martin. All right; thank you.

Mr. Brundage. That comes in down below.

Senator Martin. Does the same apply to the item of \$615 million reduction of conventional weapons?

Mr. Brundage. That is more than offset by increase missile procurement flow; yes, sir.

Senator Martin. Thank you.

Senator Malone. What do you call conventional weapons?

Mr. Brundage. It was the artillery used in World War II, and planes.

Senator Malone. We used them in World War I, too.

Mr. Brundage. I hope we aren't buying anything we used in World War I.

Senator Malone. I think you are. The Army had horse collars they used in the Mexican War stored up until 2 or 3 years ago. So, you are sending tanks and soldiers to all these nations and they are dead before the fight starts. Is that what you call the conventional weapons?

Mr. Brundage. The conventional weapons are the older equipment. Senator Malone. Are ships under the protection of the Air Corps looking for submarines 1,500 miles out from the shore—the surface ships that we are making, the flat tops—is that what you call conventional weapons that we have quit making?

Mr. Brundage. The conventional weapons that we have cut down are those replaced by the newer designs of missiles and the faster planes

Senator Malone. Those that are now obsolete since the World War, were makeshifts, the using flattops and keeping soldiers all over the world. Who do you think you are fooling?

Senator Martin. I wonder if the Senator would vield?

Senator Malone. I want to know what he means by conventional

weapons. I don't mind yielding.

Senator Martin. I want to say this: Military weapons have rapidly become obsolete. You don't fight a war with weapons you have on hand at the beginning of a war. War is a terrible thing, but it increases productivity. And when I say productivity, that is not only material output but also new discoveries and inventions. For example, in the line of medicine. War develops surgery and medicine more during a period of 2 or 3 years than probably 50 years of civilian life. The same applies to what we call the conventional weapons.

Mr. Chairman, but that is the situation, and it is hard for Mr. Brundage, or anyone else, to make an estimate of the direction or rate

of obsolescence of military equipment.

Senator Malone. I understand that perfectly, Mr. Brundage—

Mr. Brundage. This classification was made by the Department of Defense.

Senator Malone. Let me finish, and then I will be glad to hear your answer.

Why do you continue for 25 years after the close of a war in which they were used what we call conventional weapons that nobody is ever going to use again? Just to keep some admirals or generals

that can't do anything else on the job?

You have mentioned a very fine thing here, if you could just wipe everything out but your airpower and your missiles and your submarines and the things you are going to use, you don't need a debt-limit rise, you can put that money where you can really use it and lower the debt and the taxes.

But you come in here with a request for \$2 billion rise for something that is meant to keep people out of work in this country—that is what they are designed for, these four organizations that you are going into. They do nothing but lean money to American corporations and individuals going abroad to use that cheap labor and to the people in those nations. I didn't know that they were loaning money to nations, but I don't put it past them at all, because you have got the same crowd in these loaning agencies that you had 10 and 15 years ago. They haven't changed a thing.

And they haven't changed their viewpoint. Their viewpoint is, the more you scatter American capital all over the world to use the cheap labor and produce the stuff and bring it back under that free-

trade act, the better off you are.

Now, you end up with a greater debt limit every year, but somehow or other, you fool yourself that you are saving money and making money. I don't know how you do it, but the thinking hasn't changed for 24 years.

Lord Keynes was quite a man beside a lot of people here that ought

to know better.

The Chairman. Mr. Brundage, you have a reduction in Agriculture of \$651 million and then you have an increase in agriculture, an increase of \$305 million.

Mr. Brundage. We are separating the different programs at your

request; some of them are decreasing and others are going up.

The CHAIRMAN. Reduction is made mainly, in Commodity Credit; is that right?

Mr. BRUNDAGE. That is right.

The CHAIRMAN. How can you control that?

Mr. Brundage. Well, we were providing for everything that we are required to do by law.

The CHAIRMAN. How have you reduced the Commodity Credit

Corporation's operations by \$651 million?

Mr. Brundage. The detailed schedule gives a little more information, Senator. It is on page 4 of the accompanying schedule, \$432 million is the decrease reflected in purchases of commodities. The prices of certain products were estimated lower, and the produced quantities are expected to decrease, because of the soil bank, the conservation reserve part of the soil bank.

The CHAIRMAN. Part of the soil bank terminates with crop-year

1958, does it not?

Senator Jenner. Suppose, Mr. Chairman, that Congress decided that it shall not terminate, because we have a new program of some kind—of course, naturally that can't be reflected in this statement—in other words, you are anticipating that Congress will go along with this present proposal?

Mr. Brundage. That is right.

Senator Williams. That is the only basis you could operate on.

Mr. Brundage. That is right.

The Chairman. The soil bank termination is one of the things that Congress is nearly certain to go along with.

Are there any further questions?

Senator Malone. Is he through reading his statement?

The CHAIRMAN. He has explained the reductions, and next are the larger increases.

Mr. Brundage. The largest increases are the: Development loan

fund of the mutual security program, \$154 million.

These are expenditures, by the way, coming out of previous operations.

Atomic Energy Commission, \$250 million.

The Chairman. This development loan fund is in the category of foreign loan facilities, that you will furnish a report on?

Mr. Brundage. Yes.

The Chairman. It is a new fund. It is for the purpose of loaning under the mutual security program. They are soft loans.

Senator Frear. That is handled by the Export-Import Bank, is

Mr. Brundage. It is being supervised by a committee of three including the president of the Export-Import Bank, that is right.

Senator Frear. That is a better term supervised.

Mr. Brundage. Atomic Energy Commission is going up \$250 million.

The National Science Foundation, \$68 million.

Veterans' compensation and pensions, \$125 million.

HHFA for housing grants and mortgages, \$283 million.

Agriculture conservation reserve, REA, and other programs, \$305 million.

Commerce, principally CAA and Maritime, \$189 million.

Defense missiles, atomic ships, SAC dispersal, research and development, and Cordiner pay proposals, \$2,015 million.

HEW, principally scientific education, \$156 million.

Development of natural resources, Corps of Engineers and Bureau of Reclamation, \$82 million.

Postal pay increase, \$160 million. The Chairman. What percent is the postal increase?

Mr. Brundage. That is 6 percent.

Classified pay increase other than defense, \$179 million.

The CHAIRMAN. That is also 6 percent?

Mr. Brundage. That is also 6 percent minimum, with some release from the compression at the top grades.

Senator WILLIAMS. And they are also based upon the assumption that, whatever the debt, the increase would be 6 percent, and the effective date would be July 1?

Mr. Brundage. That is correct, Senator.

Senator Williams. And, on any effective date prior thereto, would be increases in these accounts?

Mr. Brundage. That is right. That would affect 1958.

Proposed provisions for defense and other contingencies, \$600 million.

Five hundred is Defense contingencies, and increase in other contingencies is \$100 million.

Other increases which are detailed in the accompanying statement, \$292 million.

Mr. Chairman, this analysis of changes from 1958 to 1959 shows several things which are important to this committee in its consideration of legislation to change the legal debt limit.

The CHAIRMAN. Could you point out in these increases the new

programs that are recommended that do not now exist?

Mr. Brundage. I don't know as we separated the new programs. The Chairman. Would you mind showing the new programs that would be started?

Mr. Brundage. We will look that up. (The material referred to follows:)

#### NEW PROGRAMS

ESTIMATED EXPENDITURES FOR FISCAL YEAR 1959 Million Federal Civil Defense Administration: Civil defense assistance to States\_\_ \$20 Department of Defense—Military. Cordiner report 205 -----75 Civilian pay adjustments: Classified employees (other than DOD)

Specific items covered by "Allowance for contingencies": 160 179 8th winter Olympic games\_\_\_\_\_ 4 Registration and safeguarding of union and welfare and pension • --------3 Aid to medical-dental schools Area assistance\_\_\_\_\_

Mr. Brundage. First, it shows our efforts to achieve economies. Our recommendations for appropriations and for legislation will lead to even greater savings after 1959. In view of the \$3,709 million of decreases proposed in the 1959 budget, I do not think that further decreases, that would appreciably ease our debt limit problem, can be made without undue risk to our national defense or without drastic changes in basic legislation going far beyond the practical recommendations of this administration.

Second, the analysis shows that holding budget expenditures in 1959 to the estimated total of \$73.9 billion will require congressional cooperation—cooperation not to increase recommended appropriations and cooperation to enact proposed legislation leading to economies. If some of the estimates in the budget should be raised by congressional action, the margin within the debt limit for seasonal borrowing for flexible debt management and for possible emergencies would be even smaller than anticipated.

Third, we must recognize that, when we are talking about the budget expenditures and receipts, we are talking about estimates that fluctuate, but when we talk about the debt limit we are considering a legally fixed figure. A slight variation in budget results as compared with budget estimates, especially as to the timing of receipts, could cause us serious trouble. In the week of March 18, 1957, deposits totaled \$7.5 billion.

If there had been a heavy storm, and there would be a delay, it

might have caused embarrassment.

I have already mentioned, as has Secretary Anderson, the need for larger cash balance and the desirability of being able to go to the

market for refinancing at favorable times of the market rather than on the exact date when the securities to be refinanced fall due.

I won't read the detailing, but it will be put in the record.

(The tables accompanying the prepared statement of Mr. Brundage are as follows:)

Decreases and increases in expenditures, 1959 compared with 1958, as shown in 1959 budget document

[In millions]

	Decreases			
	Under exist- ing legisla- tion	Under pro- posed legisla- tion	In- creases	Remarks

NOTE.—Amounts of decreases and increases arrived at from analysis of individual items where amount of change is \$500,000 or more, i. e., would round to \$1 million or more. Thus, changes of less than \$500,000 appear as zero. Figures may also vary slightly because of rounding.

Senator Jenner. Mr. Chairman, I notice in this review and summary that Mr. Brundage asked to bring here that there is no place or no mention of a retirement, apparently, at least not in this budget, of debt. Now, you are an expert in accounting; I understand that is your background. Did you ever see a budget prepared that didn't provide for payment of some of the debt at some time?

Mr. Brundage. Well, Mr. Senator, in the case of the Federal budget we apply the surplus to the retirement of debt, and as you know, we have reduced our debt over \$3 billion in the last 2 fiscal years, fiscal 1956 and fiscal 1957. Now, if we provide for the retirement of debt in the regular budget, and we should have a deficit, we would be borrowing in order to pay off debt: it wouldn't mean anything, you see.

ing in order to pay off debt; it wouldn't mean anything, you see.

Senator Jenner. In other words, you apply any surplus to the

payment of the debt.

Mr. Brundage. That is right, sir.

Senator Jenner. But you don't anticipate too much of a surplus under this budget?

Mr. Brundage. I am afraid not.

The Chairman. Mr. Brundage, I would like to ask if the figure of \$73,900,000 excludes expenditures from the free use of foreign currency owed to and owned by the United States?

Mr. Brundage. Well, it is taken into consideration, but the foreign currencies are used for certain specific purposes, available for certain purposes

The CHAIRMAN. It is not included in the expenditure total of

\$73,900,000?

Mr. Brundage. No. I have some figures on that. They are not in that.

The Chairman. Those foreign currencies are generated by the money that we send abroad?

Mr. Brundage. By the sale of agricultural products and other

transactions, that is right.

The Chairman. I would like you to furnish a statement as to how much in expenditures of these foreign currencies is not included in this present budget expenditure total. And to make it more specific, first, how much foreign currency is being generated abroad from all United States programs, free use and otherwise. And, second, how much of that total is being generated by the agricultural trade development and assistance programs. And there are several others here. I will pass it on to you so you can please furnish that information.

Mr. Brundage. I had a statement prepared.

Here it is.

The CHAIRMAN. Will you read?

Mr. Brundage. It is quite a long one.

The CHAIRMAN. You might read the total of the expenditures and the full statement will be placed in the record.

(The following information is presented in response to the questions of the chairman with respect to foreign currencies:)

Questions 1 and 2. How much foreign currency is being generated abroad from all United States programs, free use and otherwise? How much of that total is being generated by the Agricultural Trade Development and Assistance Act programs?

Answer. Collections of foreign currencies during the fiscal year 1957, as reported in the Treasury Department's Report on Foreign Currencies in Custody of the Treasury Department, are listed below. Amounts are stated in millions of dollar

equivalents, converted at exchange rates as indicated. "Agreement rates" are the rates of exchange specified in the agreement which generated the currencies; "Treasury selling rates" are the most favorable rates at which currencies could be purchased from other sources by the agencies.

Available in whole or in part for expenditure without charge to dollar appropriations (valued at agreement rates):  Mutual security agricultural sales proceeds  Agricultural Trade Development and Assistance Act  Available only for sale by Treasury to agencies and for congressional	\$422. 8 1, 011. 1	3
travel (valued at Treasury selling rates): Surplus property sales proceeds and lend-lease recoveries 10 percent mutual security counterpart Informational media guaranty program Contributions for administration of military assistance abroad Contributions for United States forces in Japan Interest on deposits Other United States-owned currencies	53. 5 10. 6 5. 5 11. 2 83. 1	3
Total collections, United States-owned currenciesCurrencies held in trust (valued at Treasury selling rates)		
Total	1 636 (	- 1

Approximately the same volume of receipts as in 1957 is anticipated for each

of the fiscal years 1958 and 1959.

Although the term "counterpart" is sometimes used to describe all currencies received by the United States without payment of dollars, it technically applies only to deposits, under section 142 (b) of the Mutual Security Act, of foreign currency equal to the local sales value of the non-military-commodity aid provided to a country or the commensurate value of our dollar aid expenditures. At least 90 percent of the counterpart currencies are retained by the foreign country and are excluded from the collections shown above.

Mr. Brundage. This information is in the budget.

The CHAIRMAN. It is not included in the total of \$73,900,000; is that right?

Mr. Brundage. That is correct. The receipts—this is as of the date—all these figures were taken as of the most recent completely available date, and that was September 30, 1957. The total amounts of United States-owned local currency in the Treasury accounts as of that date were, in the first category, receipts from disposal of surplus agricultural commodities under Public Law 480, sales under title I. were \$1,195,230,000.

Senator Malone. Is that dollars?

Mr. Brundage. That is expressed in dollar equivalents, yes.

Senator Malone. Now, is that based on their fixing the price of their currency in terms of the dollar, or the market price of their  $\operatorname{currency}$ ?

Mr. Brundage. These are the conversion rates used by the Treas-

ury; they differ.

Senator Malone. And are they the rates set by the foreign nations,

or are they the market price for their currency?

Mr. Brundage. The official rates of exchange, I think, in many cases; and in others they are the principal import rates, the rates at which most goods imported into those countries are purchased. I don't think it is the free market.

Senator Malone. I see. I have been to all of these nations and one of the things I wanted to find out was how they do this. At the time I was there, for a dollar (which you were required to turn in at the central bank) you got 500 bolivianas, so there is a considerable difference. They would steal two-thirds of the dollar the first "go

21297-58-26

round." That seemed all right to them because our State Department approved. It is not their fault; it is our fault. That is all I wanted to know. How would you recompute this, for the purpose of the information of this committee, on the exchange price of their money with the dollar and compare it? For example, let us take the franc in France. When I was there the first time during the First World War it was about five to the dollar. I was there the second time in 1947, and it was officially about 300 to the dollar, but on the streets you could get whatever you wanted for it, up to 500 francs. So it doesn't make any sense to take their estimate of their money. That is the way they have a dollar shortage—you have a dollar shortage, and I have one generally, just spending my income—but a nation can have it by fixing a price of their currency higher than the market, and nobody but a silly Congress will pay it. You understand that.

So I would like very much, for the information of this committee, if you would just look up the exchange price and compare the amount of money that we have of nations' currency on the world exchange.

I know that idea is entirely foreign to our State Department, Treasury, or anyplace else, and has been for 24 years. But I would like to have it.

Mr. Brundage. In some countries there are so many rates that I don't know what you call a free-market rate.

Senator Malone. I know what it is, and you will, too, if you look at it. They call it a free-market rate or black-market rate.

Mr. Brundage. I have been abroad many times, and I have found it very difficult.

Senator Malone. It is not difficult to see the difference between between the free-market rate and what they fix on our currency.

Mr. Brundage. We can give you a free market.

Senator Malone. Chile, for example, has seven different prices on their currency, used according to what they wanted imported or didn't want imported, or whether they wanted to sell something or didn't want to sell something. It is not hard to understand.

The CHAIRMAN. You say it is \$1.2 billion.

Mr. Brundage. That is the biggest amount. There are some small receipts from other sources under the assistance programs.

The CHAIRMAN. That does not come into the Treasury of the United States?

Mr. Brundage. No; those all come into the Treasury, receipts under assistance programs of \$23.6 million.

The Chairman. I mean this \$1.2 billion which is not included in the

budget as an expenditure; where is it?

Mr. Brundage. Well, it was treated as an expenditure, you see, when CCC bought the commodities. And so the commodities were exchanged for these foreign currencies—unless you brought it in, you couldn't treat it again as an expenditure.

The Chairman. But you could take it as a credit, then, couldn't

you? There is over \$1 billion; where is that money?

Mr. Brundage. Senator Byrd, when you ask me if we could take this as a credit, I say then the question would arise if you would accept taking it as a credit at the official rate—I judge you wouldn't.

Senator Malone. No foreign nation ever takes anything at an official rate. But we are the fall guys. We are the ones that pick up the check. But all we have to do is get our feet on the ground and

start being on the side of the taxpayers of America and talk about this money in terms of its real value.

Now, then, we keep the money, we don't accredit it to anything; why don't we collect the \$10? I mean, after all, I say it is foreign trade. You are giving it away. You know that just as well as I do.

Mr. BRUNDAGE. Under the law that Congress passed, under

Public Law 480–

Senator Malone. We understand that. It has been going on for

24 years.

Senator Anderson. Under this Public Law 480 program there was a specific provision that it be taken in soft currencies, was there not, and the Congress so directed?

Mr. Brundage. Yes.

Senator Malone. Just like free trade and billions to Europe.

Senator Anderson. But the agricultural commodities were spoiling, and it was a matter of giving them away or selling them for soft currencies, and the decision was reached to sell them for soft currencies.

The Chairman. But this \$1.2 billion is converted into dollars, isn't it, the \$1.2 billion that you have on hand is converted into dollars?

Mr. Brundage. It isn't converted into dollars, no, it isn't convertible into dollars, it was merely-

The Chairman. The figure is—

Mr. Brundage. It is merely a converted estimate in order to get a figure for it; yes. It is a number of local currencies all over the world.

The Chairman. At the current rate of exchange, that represents \$1.2 billion?

Mr. Brundage. At the official or principal import rates of exchange. The Chairman. The point I would like to know is, who controls that money; what is done with it?

Mr. Brundage. The Treasury has custody of it, and by law it

may be used for the following purposes:

- A. To help develop new markets for United States agricultural commodities;
- B. To purchase strategic and critical materials for supplements. C. To procure military equipment, facilities, and services for the common To purchase strategic and critical materials for supplemental stockpile; defense;

D. For purchase of goods and services for friendly countries;

E. For promoting balanced economic development and trade among nations.

And that is taken from the act.

F. To pay United States obligations abroad;
G. For loans to promote multilateral trade and economic development;
H. For financing international educational exchange activities;
I. For translation, publication, and distribution of books and periodicals abroad; J. For assistance to American-sponsored schools abroad as authorized by section 203 of the United States Information and Education Exchange Act of 1948.

The Chairman. Who signs the checks for paying this money out? Mr. Brundage. The various agencies such as the ICA, Defense, State Department, and Agriculture Department are responsible for these kinds of activities, but they all have to go to the Treasury for it.

The Chairman. Do they go through the Treasury?

Mr. Brundage. Yes.

The Chairman. They are not signed in these other countries? Mr. Brundage. I suppose it would be Treasury representatives abroad. But they have to go to the Treasury for the money.

The Chairman. Does it go officially through the Budget?

Mr. Brundage. Yes, sir; it goes through the Bureau of the Budget. Senator Malone. Mr. Chairman, I have to leave. Could I ask

a couple of questions?

In the first place, we all understand that the way we trade horses is on the value that the other man puts on his horse. We have a lot of people in my State that like to value the horse themselves when they make a horse trade, or they don't trade. We understand that. And because we permit this, of course, we have before us a continual rise in the debt limit and a continual rise in the money that goes abroad and all that.

I would like to ask you a question, and if you don't have the answer, would you just provide it for the record. What is the total of all the domestic increases that you estimate for domestic purposes? We talk about flood control and reclamation; we talk about veterans; we talk about rural electrification, but what do these increases that you outline here all amount to in money?

Mr. Brundage. You mean for the year?

Senator Malone. Yes.

Mr. Brundage. Well, it is in the detailed statement; I can put it together for you.

Senator Malone. Put it together for the record, the total amount.

What would you estimate it roughly to amount to?

Mr. Brundage. I don't know; I have some figures in my mind I couldn't——

Senator Malone. I don't blame you. These must have you pretty well mixed up.

Senator Jenner. That table here shows 4,858 million; is that cor-

rect:

Mr. Brundage. I don't know whether that would include all of the items that Senator Malone was referring to.

Are you including defense in there?

Senator Malone. I don't know. You get it for us and put it in the record.

If it is \$4 billion or a little over, that is just about the amount of money we are asked to appropriate this year to give to foreign nations; isn't it?

Mr. Brundage. The total increases for all programs are \$4,858 million.

(The material referred to follows:)

# [In millions]

Total increases in expenditures, between 1958 and 1959, per previous schedule	\$4, 858
Of which the following might be designated "foreign:"	
Mutual security program \$179 U. S. Information Agency 7	
Department of State16	
Department of State	202
Remainder	4,656
Of which the following are directly related to the military:	
Department of Defense \$2,015 Defense contingencies 500	
Detense contingencies 500	2 515
Remainder (nonmilitary, domestic)	

Senator Malone. It is about \$4 billion that we are asked to give to foreign nations this year.

Mr. Brundage. To authorize; yes.

Senator Malone. Well, I never heard of anything being authorized——

Mr. Brundage. Both military and economic. Senator Malone. How much is military? Mr. Brundage. I think it is \$2.2 billion.

Senator Malone. \$2.2 billion from the \$4.8 billion, then, would be about \$2.6 billion, wouldn't it?

Mr. Brundage. Yes.

Senator Malone. Well, about \$2.5 billion is domestic increases that you are talking about, not including national defense. And of course I have already told you, and it can be easily proven, you are spending \$15 billion that is not available at all, and have been for several years. There is no talk about trying to cut any of it out, we didn't hear anything from you on that account. But what I would like to know is how much money you are trying to save on domestic affairs.

You talk about veterans, you talk about rural electrification, you talk about flood control, you talk about reclamation, you talk about power development, I think when you get all through with it you find out that we are giving away more money than anybody has ever proposed that you spend while few expenditures have been made on flood control or reclamation or power or veterans, but the policy hasn't been set by Congress. Isn't that true?

Mr. Brundage. Yes.

Senator Malone. In other words, on your flood control through the Middle West and the Ohio River, for 75 years we have been building flood-control projects when the Army engineers report shows that the benefits exceed the costs. We don't always build them when they say that, but we don't consider them unless they do. Isn't that true?

Mr. Brundage. That is right.

Senator Malone. Then when you talk about reclamation and irrigation of public lands and other things, the policy has been set for nearly 60 years that you repay the money without interest, isn't that true?

Mr. Brundage. Yes.

Senator Malone. It has been going on for that long.

Now, in the matter of expenditure for power or any commercial production, we set the policy on Hoover Dam (then Boulder Dam) and we set the rate of interest we pay at least as high as and probably higher than the Government pays for the money, isn't that true?

Mr. Brundage. Yes.

Senator Malone. Then all of these things that you are trying to save money on are domestic things, and all the things that you are trying to spend money on are foreign things.

Mr. Brundage. That is not true.

Senator Malone. You have got foot soldiers in 73 nations. can't be there for anything at all except to hold up the economy of those nations, because they will be dead when the fight starts. They are sacrificial troops; everybody knows that.

Mr. Brundage. There is a large group that is afraid of the so-

called peripheral wars.

Senator Malone. Yes, and the man that started that last war in Korea ought to have been impeached. He would not let them win it and would not let them lose it. I have been in Korea: I was there before that war started. I would hate to try to describe to you what I think of anybody that will start a peripheral war with the weapons we now have. I think we would impeach the next man that did it.

Let me ask another question or two here. What you are asking for this year is approximately \$4 billion for foreign aid. That is about

right; isn't it?

Mr. Brundage. That is right.

Senator Malone. How much are you asking for—is that \$2 billion in addition to the \$5 billion already authorized, making it \$7 billion authorized for the Export-Import Bank?

Mr. Brundage. Two billion in addition to what you have author-

ized, ves.

Senator Malone. And there is authorized \$5 billion.

Mr. Brundage. That is right.

Senator Malone. Now, take the International Monetary Fund. How much has that authorization been as far as we are concerned? How much money do we put in it? We put in about 36 percent of it, I think.

Mr. Brundage. Yes.

Senator Malone. How much?

Mr. Brundage. I don't know right now.

Senator Malone. I ask that you make it a part of the record.

The Chairman. He is going to make a complete statement of it. Senator Malone. I would like to know the total amount we have authorized annually since their inception for the Export-Import Bank, the International Monetary Fund, the International Bank organized by Mr. Harry Dexter White, and the International Finance Corporation. All we did was change one letter. We had an RFC that spent money in this country, but we finally got tired of that, because we could see what it was doing.

(The material referred to follows:)

# U. S. GOVERNMENT SUBSCRIPTIONS TO FINANCIAL INSTITUTIONS MAKING LOANS ABROAD

Export-Import Bank of Washington—Growth of the bank in terms of capital structure and lending authority

$\mathbf{Y}$ ear	Capital structure	Lending authority	
1934 1936 1939 1940 1941 1945	Common, \$1,000,000; preferred, \$10,000,000 Common, \$1,000,000; preferred, \$20,000,000 Common, \$1,000,000; preferred, \$45,000,000 Common, \$1,000,000; preferred, \$74,000,000 Common, \$1,000,000; preferred, \$174,000,000 Common, \$1,000,000; preferred, \$174,000,000 Common, \$1,000,000; authority to borrow up to \$2,500,000,000 from Treasury.	No statutory limit. Do. Not to exceed \$100,000,000. Not to exceed \$700,000,000. No change. Not to exceed \$3,500,000,000.	
1951	Common, \$1,000,000,000; authority to borrow up to \$3,500,000,000 from Treasury.	Not to exceed \$4,500,000,000.	
1954	Common, \$1,000,000,000; authority to borrow up to \$4,000,000,000 from Treasury.	Not to exceed \$5,000,000,000.	

### CAPITAL STRUCTURE

In the early years of the bank's history its capital was supplied by the Reconstruction Finance Corporation. As the bank expanded, it secured the necessary funds through the sale of its preferred stock to the RFC. At the end of 1938 the preferred stock issue was \$45 million, and it reached its peak of \$174 million in 1941. These stock issues were replaced in 1946 by the Treasury's holdings of

\$1 billion, and the bank was authorized to berrow \$2.5 billion from the Treasury. Its borrowing authority was raised to \$3.5 billion in 1951, and to \$4 billion in 1954. The bank did not borrow directly from the Treasury until late in 1946. Since that time it has operated on the funds supplied to it by the capital stock holdings of the Treasury, and its borrowings, together with the funds supplied from its

surplus accumulation.

#### INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

The United States total subscription is 31,750 shares, totaling \$3,175 million, 34.26 percent of the total. Of this, \$635 million was paid in gold or dollars at the establishment of the bank in 1947, the remainder is subject to call by the bank only when required to meet obligations of the bank created by borrowing or guaranteeing loans.

### INTERNATIONAL MONETARY FUND

The United States quota is \$2,750 million. This entire amount was paid in on establishment of the fund in 1947: \$687,500,000 in gold, the remainder in cash or non-interest-bearing demand notes on the Treasury. On January 31, 1958, the fund held \$733 million of United States Treasury notes, the remainder having been drawn by the fund for purchase by members.

#### INTERNATIONAL FINANCE CORPORATION

The United States has subscribed \$35,168,000 of the authorized \$100 million capital of the Corporation. This amount was appropriated in 1957 and the United States is not further obligated.

### DEVELOPMENT LOAN FUND

Three hundred million dollars was appropriated within the mutual security program in fiscal year 1958 for the Development Loan Fund. A request for an additional appropriation of \$625 million, as authorized by the Congress, is included in the 1959 budget.

Senator Malone. Now we have an IFC, which is an International Finance Corporation, spending money like drunken sailors all over the world; loaning it in addition to these other 3 organizations; the 4 of them, as you have testified, loaning money to Americans to build plants in foreign nations, to use the cheap labor and come back under the 1934 Trade Agreements Act, as extended—and thank God it expires in June of this year—to destroy the jobs of the men working in this country and to destroy the investments in this country. They are doing it right under your eyes.

And I hear people talking on the Senate floor all the time about a great depression. There is only one thing causing the depression, and that is we do not have any domestic market left except the money we appropriate, \$40 billion or \$44 billion, and spend to buy these American goods right here in this country, and then, as you testified, you loan the money from the Export-Import Bank, and you are very careful each time to say it is to buy machinery to ship abroad. And for what? To install that machinery where the labor is cheaper and send the goods back, and our boys are on the street. If we quit spending the national defense money at the rate of \$42 billion a year for as much as 60 days, you wouldn't have any economy in the United States. And you think Khrushchev and Bulganin were kidding when they said that they wanted us to destroy ourselves. And when Lincoln said, if we are ever destroyed, it will not be from without, it will be from within.

We are doing it with men just like Waugh and the rest. They are making a life's work of doing this very thing that Harry Dexter White and Alger Hiss and all that crowd started. Alger Hiss served a term in the penitentiary. We ought to give him a medal if we are going to continue doing everything that he wants done, and we have been. White is dead, but we are still carrying on the very thing that he and his crowd recommended earlier in the Roosevelt administration.

So don't blame Mr. Eisenhower, don't blame Mr. Truman, and don't blame Mr. Roosevelt. Let's blame the Congress that votes for it. All the Congress has to do this year is to sit still or this market situation, and in June of this year the control of it returns to the Congress of the United States, where the Constitution, in article I, section A, puts it. Within 6 months after the 1934 Trade Agreements Act expires, the President can request these nations to cancel these multilateral trade agreements made in Geneva by 37 nations that are destroying us by the division of our markets among them.

It will then come right back to the Tariff Commission whose regulations state specifically in section 336 of the Tariff Act of 1930 that they shall set a tariff or duty to make up the difference in the cost of producing an article in this country, and a like article in the chief competing nation. The act provides that the tariff or duty be flexible and kept that way.

I don't suppose you have ever read that act. And from your talk here, you have all got religion. It is a 24-year-old religion, and I am not for any of it, and I am not about to vote for it, and I don't want you to go away from here thinking I am.

And I am sorry, Mr. Chairman, that I do have to go to another matter.

The Chairman. I am glad the Senator has clarified his position. Senator Malone. I think I have.

Senator Anderson. Mr. Brundage, I wonder if I could draw your attention to what you were asked on page 187 of the previous hearing. The Chairman, Mr. Byrd, said, "What we want is a direct statement signed by you." He made it clear what it was to be. He said, "I want to find out what Congress ought to do, and what the States ought to do," and so forth.

On page 189, there is a clearer statement by him. He said that, "What is required of Congress" and then "What you have proposed in the way of savings."

And I tried to supplement what he said on page 199. I said:

I think we ought to find out what savings are going to be suggested, what savings are being made within the power of the Federal Government, and then go on with the things that Congress ought to do.

And then, Senator Martin said, "Should there not be separate lists?" And I agreed with him. I said, I thought there ought to be one list that showed what the administration proposes to do, that is to save money, and then one list that shows the burden placed on Congress to save money.

Would you mind going through this with me to this supplementary list and show what saving the administration is proposing and what savings Congress could bank?

Mr. Brundage. The first column of our table which accompanies my statement shows the decreases proposed under existing legislation, and the second column shows the decreases under proposed legislation, which would require the action of Congress.

Senator Anderson. Do I understand, then, that the administra-

tion is proposing savings of \$2,971 million?

Mr. Brundage. That is right, without any action required by Congress.

Senator Anderson. \$2,971 million, without any action by Congress?

Mr. Brundage. Required, yes.

Senator Anderson. Even this proposed \$738 million that Congress itself could do?

Mr. Brundage. That is right.

Senator Anderson. And then you proposed increases of \$4,858 million?

Mr. Brundage. Yes.

Senator Anderson. So, the overall is an increase—

Mr. Brundage. Those practically all require the action of Con-

gress on the appropriations, at least.

Senator Anderson. Now, of the savings, I notice \$14 million to the National Science Foundation. Is the budget proposed to cut the National Science Foundation \$14 million?

Mr. Brundage. For their geophysical year expenditures. The geophysical year runs out at the end of 1958. So we only have 6 months' expenditures for the geophysical year.

Senator Anderson. And you think that the compilation of the material gathered by the satellites will not be important in the last part of the year?

Mr. Brundage. This is what—this is their own estimates.

We also gave them an additional \$68 million for their new programs, you see, for the basic research program, and for improving education in the sciences.

Senator Williams. Again \$14 million savings is only as compared

to expenditures in the same Department last year.

Mr. Brundage. That is right.

Senator Anderson. Now, the Veterans' Administration, \$272 million, are you trimming the Veterans' Administration \$272 million in the coming year?

Mr. Brundage. There are programs under these specific heads that are to be reduced. The direct housing loans, the program

expires on June 30, 1958, that is \$150 million.

Senator Anderson. Do you anticipate that Congress will not renew it? Will the administration not ask the Congress to renew it?

Mr. Brundage. We are not asking for a renewal, because, to the extent necessary, it is being taken over by the housing agency.

Senator Anderson. Does that finally save money for the budget, because it is taken by a different agency? Doesn't a "rose by any other name still smell as sweet"?

Mr. Brundage. We think it ought to be all in one agency.

Senator Bennett. May I comment on that.

The direct GI loan program is a drain on the Treasury. The FHA program represents a guaranty of private financing. So the effect on the Treasury, if this should happen as they anticipate, should be a reduction of some amount in terms of drain on the Treasury.

Senator Anderson. I am only trying to find out if he thinks that Congress is going to stop these direct loans to veterans and for housing.

Mr. Brundage. They don't have to stop them, they terminate with the act, unless you take some positive action to increase the budget, they will terminate.

Senator Anderson. I will put it in your language.

Do you think that Congress will not take some positive action?

Mr. Brundage. I don't see why they should take such action, I think it would be foolish.

Senator Anderson. Do you think the veterans are getting all the housing they need without it?

Mr. Brundage. I think they are. We have tried to gear our present general housing program to take care of their needs specifically.

Senator Anderson. With reference to this \$1.2 billion that the chairman was talking about a minute ago, are those counterpart funds, or do they only include counterpart funds? Are the \$1.2 billion of soft currency all to be classified as counterpart, or only part?

Mr. Brundage, Part is counterpart.

Senator Anderson. That is not all counterpart funds? That is all that is controlled by the Treasury? Will you tell me what the \$1.2 billion is?

Mr. Brundage. Those are foreign currencies under the control of the Treasury.

Senator Anderson. Are they counterpart funds?

Mr. Brundage. It includes counterpart funds.

Senator Anderson. How much is counterpart funds, a small amount or almost all of it?

Mr. Brundage. It includes about 10 percent of counterpart funds. It excludes those that have been retained according to law by the other countries for their own development purposes.

Senator Anderson. Now, does the Treasury report to the Congress

what happens to these funds?

Mr. Brundage. I think so; yes. They report annually.

Senator Anderson. Then why wouldn't this be in the budget somewhere? You must get something for it. A congressional committee going abroad uses this money; doesn't it?

Mr. Brundage. We give the details in the budget.

As I explained to the chairman, you see, this developed out of transactions that have already required the use of dollars either for-

Senator Anderson. Then when we ship abroad some cotton or some wheat, you get back some of these soft currencies?

Mr. Brundage. That is right.

Senator Anderson. Under Public Law 480.

Mr. Brundage. Now, if we were to take up the foreign currencies the immediate question arises, at what figure would you take it up, the official rate or the free market or any other rate, there are all kinds of rates.

Senator Anderson. We all recognize——

Mr. Brundage. And then what are you going to do with it? And you would have to charge it off again, so it isn't brought back at any figure.

Senator Anderson. What report does the Treasury make to the Congress on the disposition of these moneys once you get your hands on them?

Mr. Brundage. They report annually. And we have a report in the Budget document on page 94 and on page 296, I will be glad to read it in the record, if you like.

Senator Anderson. Does it show what happened to the soft currency after received? Does it show how you got the soft currency?

I am trying to find out what happened to it after you got it. Is that reported to the Congress?

Mr. Brundage. Yes; it is reported to the Congress.

Senator Anderson. So that the committee in considering what happens to this \$1.2 billion could find what took place with it?

Mr. Brundage. That is right.

Senator Anderson. It shows how much is furnished to congressional committees abroad, for example? Mr. Brundage. That is right.

Senator Anderson. It is hard to get that information sometimes.

Senator Bennett. In detail, Senator, not in gross.

Mr. Brundage. The totals are given in the Budget document.

Senator Anderson. Is it used to purchase goods in other countries? Mr. Brundage. Yes, sir.

Senator Anderson. And you report how much that is?

Mr. Brundage. Yes.

Senator Anderson. Should those expenditures be added to the budget if this money disappears?

Mr. Brundage. They have been included——

Senator Anderson. Is this dropped out as an accountant would drop out a bad debt—he may recover it sometime—is it dropped out or is it in the budget?

Mr. Brundage. It is explained in the budget, but it isn't included in the budget dollar total figures, because if you buy, as you say, a bale of cotton, and that goes under the cost of the CCC-

Senator Anderson. When you sell a bale of cotton—

Mr. Brundage. When you sell it and get a foreign currency, that will be used abroad for some other country; it is not going to be brought back in again.

Senator Anderson. It is controlled still—

Mr. Brundage. It is controlled still by the Treasury and the Bureau of the Budget; we keep track of it but we don't bring it back

Senator Anderson. Nor do we ever account for its expenditure.

Mr. Brundage. We do account for it.

Senator Anderson. I don't mean that, in the budget figure. Mr. Brundage. It does not come in again; that is right.

Senator Anderson. Don't you think it ought to?

Mr. Brundage. Well, I discussed that a good deal, and I can see more disadvantage to it than gain, because we would have to bring it back at a-

Senator Anderson. As long as you dispose of it. But when you have made disposition of it don't you think you ought to find out what

we got in exchange for it and therefore put some value in it?

If I have in my profit-and-loss statement bad debts, charge off a whole group of bad debts. But will the Bureau of Internal Revenue allow me to ignore what comes to me in recoveries? I put that back in the next year's earnings; don't I?

Mr. Brundage. If this comes back through the purchase of military equipment or something like that you can identify through United States value, but if it goes to——
Senator Anderson. If you buy back military goods, does that show

up as a military expenditure, or does it not show up at all?

Mr. Brundage. Part of it is accounted for as military procurement under our ICA program called offshore purchases, and that appeared. But if it comes out of the agriculture stocks into foreign currencies, it does not.

Senator Bennett. Would the Senator yield? I am trying to work

on this same problem.

If the Department of Defense has an overall budget figure, if it acquires, say, by happy accident, some of the armament that it had expected in its original budget calculation to buy in the United States, if it acquires that in France, does the amount it spends in France—is the original budget figure reduced by the amount it spends in France, or when it accounts for the total original dollar budget figure, does it take into account the French francs that it spent to supplement or substitute what it might have spent in dollars, or is that just added?

Mr. Brundage. That is in addition—for instance, some of the military housing we have to spend dollars for, but some comes out of the counterpart funds, and they don't cost us any additional dollars on top of what we originally pay for what we supply to the foreign

country.

Senator Anderson. The Senator from Utah has helped me get

what I was trying to get.

As I understand it, in Japan we have a figure for military housing we use plywood available over there, and we used counterpart funds to buy it. Did the military reduce their other budget because they saved money on that?

Mr. Brundage. Presumably we would have reduced their requirements for dollars, because they were able to use this counterpart fund.

Senator Anderson. I am not interested in the "presume." Actu-

ally, they did not.

Mr. Brundage. Well, we wouldn't put it in the budget as a cost in dollars, because we were only going to use the counterpart fund,

but that would not be charged against them in the budget.

Senator Anderson. In other words, if they had a budget that called for X billions of dollars, and they were able to save \$50 million by getting plywood in Japan, their budget is X plus \$50 million, because they went right ahead and spent all the money appropriated by Congress, or could, that is right?

Mr. Brundage. Well, they couldn't spend it for the same thing—— Senator Anderson. Do they not have leeway in the way they spend

their money?

Mr. Brundage. Yes.

Senator Anderson. Then they could spend it? Mr. Brundage. Yes, they use it for something.

Senator Anderson. Isn't that what I said, that it would be X plus \$50 million, isn't that using it for something else?

Mr. Brundage. Well, yes.

Senator Anderson. Therefore, this money does really involve some increases in budget if it is to be used that way? I am not trying to criticize the expenditures—I am voting for this S. 400–

Mr. Brundage. I am just trying to explain it, because it is a little complicated, because it goes through several different ways. Some of these currencies the CCC actually will recover dollars for, they are apportioned. Defense pays for them, and the other agencies pay to the Treasury for the foreign currency. And that amount goes in the budget totals. But if they don't pay for it in dollars, it doesn't. But these other uses are shown in information tables in the budget document.

Senator Anderson. The fifth page of this tabulation shows a decrease in the Department of Defense of \$1,095 million, an increase of \$2 billion, with accelerated program, therefore the total budget goes

up about \$1 billion.

Mr. Brundage. They used in addition to this—we don't know what the figure will be in 1959, but they are using in 1958 an estimated \$67 million of foreign currencies without reimbursing CCC for military assistance and \$61 million for economic, technical, and other assistance.

Senator Anderson. I was talking about page 5 of the tabulation,

Mr. Brundage. We are on different sheets.

Mr. Brundage. This is on page 94 of the budget.

Senator Anderson. It shows on there that the Department of Defense—the chairman asked you to show us how much you saved, and then show us where the Congress can save, and we will see where we come out.

Mr. Brundage. That is right.

Senator Anderson. Now, you show us how the administration saves by cutting down the Department of Defense \$1 billion one place and increasing it \$2 billion in the other.

Mr. Brundage. For something else?

Senator Anderson. Yes, for something else, instead of buying conventional aircraft they are going to buy some missile ships and construct facilities for SAC, and proposed pay adjustments—those are all part of the normal business.

Mr. Brundage. I thought it would be responsive to your request

to do it by program, so that is why we did it.

Senator Anderson. So it would be fair to say that of the \$2.9 billion you indicated the administration was going to save—and you put \$1 billion of it right there—you increase the expenditures 2 billion and save the \$1 billion. Have you tried to figure up somewhere how much the Department is going to save overall? Wouldn't it be fair to say that you aren't going to save, that you are going to increase?

Mr. Brundage. What we were trying to do was to show, as the President said—he felt that we had to spend these additional billions on defense, and he was going to try to save two ways, he was going to try to save on defense itself out of less urgent items, with less priority and he was also going to cut down on our domestic programs, and that

is what I tried to show here.

Senator Anderson. Exactly. Now, the whole increase in defense is only \$1 billion.

Mr. Brundage. Net.

Senator Anderson. And the increase is some \$2 billion. So actually we are adding \$1 billion in defense and \$1 billion elsewhere, so we are not saving it, are we? That is the point I was trying to get to. I wouldn't worry so much about the expense of \$1 billion for defense if we were saving \$1 billion, but actually we are spending \$1 billion more, are we not? Your own figures show that.

Mr. Brundage. I think we are doing both, I think we are spending \$2 billion more, and we are saving \$1 billion elsewhere, that is

what I am trying to say.

Senator Anderson. Let me put it this way. Supposing I have a double-heating system in a home that I maintain somewhere, and it burns not only oil, but it burns natural gas. I have them both, in case the gas line breaks. Now, say that my normal gas fuel bill is \$50, and I don't spend anything for oil, and the next month I spend \$40 for natural gas and \$25 for oil, would you say I have saved \$10 or have I increased \$15?

Mr. Brundage. Well, it depends on how you want to break it

down, if you want to save one and increase the other, yes.

Senator Anderson. What I am up against is that you made a total savings that the administration hopes to put through of \$2.971 billion, and you expect to increase expenditures \$458 million. So in reality you are \$2 billion higher, of which \$1 billion is a defense item and \$1 billion is a nondefense item.

Mr. Brundage. Well, you have to include the decreases under

proposed legislation, you add those together—

Senator Anderson. Those are the savings that Congress can make. There were to be two things, one that the administration could do and one that the Congress could do.

Now, the Congress could save you \$738 million on the proposed legislation, but the administration proposes to save \$2 billion and spend \$4 billion. So it doesn't really end up with a saving; does it?

Mr. Brundage. Well, I think it does, yes.

Senator Anderson. I have saved a lot of money I didn't know about, then.

Mr. Brundage. I think I have saved if I don't go to a show even

if I have to——

Senator Anderson. You spend \$4 for dinner and don't go to a show but you only intended to spend \$2 for a show, you have saved \$2?

Mr. Brundage. If I had to spend it on a doctor bill I would have saved it on the show, because there are certain things that you have to do because they are paramount and important; I think the other

things are of less importance.

Senator Anderson. I didn't go into the question of what was paramount and important, I merely took your totals at the end on page 7 of this statement, and the total shows under existing legislation how much you propose to save in the administration, it runs \$2.971 billion. Then in the third column this shows what you intend to spend in excess and it runs \$4.8 billion of which \$1 billion is defense; there is \$1 billion of nondefense that the administration also expects to exceed. And the statement had been repeatedly made that if we are going to spend more on defense, we are going to save it somewhere.

Mr. Brundage. The other \$1 billion is largely below the line here. It is the postal pay increase, the other pay increase, and the contingencies; you see, \$600 million of that isn't spent, it is merely reserved.

Senator Anderson. Would you show me that in the column where this says increased?

Mr. Brundage. Down at the very end.

Senator Anderson. The defense contingency \$5 million and the other contingency is \$100 million.

Mr. Brundage. The postal pay is \$160 million, the other pay is \$179 million, the Defense contingency is \$500 million, the other contingencies are \$100 million. I would say the contingencies are not expenditures, they are reserves for possible expenditures.

Senator Anderson. They run \$900 million?

Mr. Brundage. Yes. \$939 million.

Senator Anderson. That is what I am trying to get to. is to be no saving, even with those contingencies in there?

Mr. Brundage. You take your defense out and you will find there

Senator Anderson. All right, I take it out. Unless these figures are incorrect on defense items, you are going to save \$1,095 million and spend \$2,015 million; so it is about \$1 billion more, isn't it?

Mr. Brundage. If you take Defense and these contingencies out,

we are proposing to save more than we are spending.

Senator Anderson. Very well, I will take them both. You subtract \$1,095 million from \$2,015 million, and what have you got— \$920 million.

Senator Bennett. That is right.

Senator Anderson. And add \$900 million to that; is that \$1.8 billion?

Senator Bennett. It is \$940 million but that doesn't matter.

Senator Anderson. All right. Is that \$1.840 billion or so?

Mr. Brundage. If you take the Defense out, which is \$1,095 million for the decrease, and \$2,015 million for increases, and these items at the bottom of the line, you will see that they just about offset, and you add your decreases under proposed legislation, you will find that the decreases outside of Defense and outside of these reserves are about \$800 million more than the increases.

Senator Anderson. That is what I wanted you to say, that you are not saving, you are going to spend \$800 million more regardless of

the Defense budget.

Mr. Brundage. No, I say it is \$800 million less. Senator Anderson. Well, we had better start with our arithmetic

Mr. Brundage. The savings are \$800 million more than the

Senator Anderson. There is something wrong here somewhere: isn't there?

You subtracted \$1,095 million from \$2,015 million and got \$920 million; didn't you?

Mr. Brundage. Take \$1,095 million off \$2,971 million, and you

Senator Bennett. Off the totals at the bottom?

Mr. Brundage. Of the total, and you get two—

Senator Anderson. How could you get two-

Mr. Brundage. \$1,971 million. You have got to add your \$738 million to the \$2,971 million, and that gives you \$3,079 million.

Senator Jenner. Subract it from 48 billion.

Mr. Brundage. You take out the \$1,095 million for Defense, and

that gives you \$2,614 million. You take the two-

Senator Anderson. Start again, now. I hate to bother the rest of the committee with this, but a short cut certainly would be to take this \$920 million increase in Defense, to which you added \$920

million or \$930 million more, that is a billion eight hundred and something million, if you subtract that from the increases, it is still larger than the savings, right or wrong?

Mr. Brundage. Well, it doesn't work out that way for me.

Senator Bennett. May I try it.

Senator Anderson. Yes; I would be happy to have the able Senator from Utah try it.

Senator Bennett. Let's turn to page 7, \$2.971 million, take out the \$1,095 million, Defense, leaves \$1,896 million.

Senator Anderson. That is right.

Senator Bennett. And on the other side, \$4,858 million, take out the \$2,015 million, and for the purposes—and I think this is the way Mr. Brundage is thinking of it—also take out the \$940 million which is made up of the four figures at the bottom of the page.

Senator Anderson. That is right. Senator Bennett. That is \$2,955 million, to be deducted from \$4,858 million, the difference there is \$1,903 million.

Senator Anderson. Therefore, the increases are greater than the savings-

Senator Bennett. By \$7 million.

Senator Anderson. Never mind the "by," they are trying to say they are going to save it, and the figures show they aren't going to save it. If you are going to say that this money is going to be saved, you ought to try to save it.

Mr. Brundage. I don't see how you can ignore the proposals we

are making for a postal rate increase, for instance.

Senator Anderson. I wouldn't say that we ignore it. I know you are going to recommend that Congress do it, but so has every administration for 25 years. And after I have seen the same thing happen over and over again, I begin to conclude that it is difficult. Now, it may not

Mr. Brundage. It seems to me that that is just as much a proposal

of the administration's as a proposal to increase the---

Senator Anderson. I think it is like balancing your personal budget by saying, at the beginning of the year, this year I am not going to be sick, and I am not going to have to have this or this, when the probabilities are that the things that have been happening to me over a period of 60 years will happen to me again. I only wanted to point out to you that, taking our own figures, Mr. Brundage, after you take out the \$2 billion that is going to be saved in defense—I mean it is going to be increased—and taking out the amount that is going to be saved, and taking out all the contingencies, the increases are still greater than the decreases, and you are not going to save money. If you are to save I think the increases have to be greater than the decreases.

Mr. Brundage. I don't see how you can ignore, as I say, the proposed decreases to include the postal pay rates, because that is just as much our recommendation. We are proposing to spend more money on the additional volume of mail we are going to have to handle this next year. We are proposing to pay for part of that, not only by charging for the stamps which you have to put on it now, but for increasing the stamps—the sales. To me that is the same kind of a proposal.

Senator Anderson. Exactly. I was merely trying to get back to what the chairman laid down in your original appearance. The

chairman said, "You list the things that the administration is going to do to save money, and then you list the things the Congress ought to do to save money." An increase in the postal rate is a thing that Congress ought to try to do to balance the budget. And as the Senator from Arizona, Senator Hayden, has pointed out over the past 10 years, that will total up to \$5 billion. We wouldn't need the \$5 billion debt limit increase if we had voted the postal increase years

Leave out the postal rates, because that is something contingent on Congress. The savings that were asked for were the things that the Administration was willing to do to cut down. And I don't see those, because when I get through with all your figures, the administration still wants more money, regardless of defense, than it wanted before.

Now, you are just right up against that. If you have got another set of figures, I would like to look at it, but I know what this set of figures proves.

(Mr. Brundage submitted later the following summarization to

help clarify his statements in the preceding colloquy:)

## [In millions]

Equals total remaining decreases under both existing and proposed legislation	2, 614

Senator Williams. How much were the annual expenditures under the Federal aid proposal that was sent down the other day, the Federal aid to education?

Mr. Brundage. The Federal aid to education was about—it was split between the Science Foundation and HEW.

Senator Williams. Is this in this computation?

Mr. McCandless. The amounts are included in there. Senator Williams. They are all included in there?

Mr. McCandless. Yes.

Senator Williams. That is the question I wanted to know.

Mr. Brundage. It is in several places; about 250 expenditures in 1959, I think.

Senator Williams. The point that I was wondering is, are they in there?

Mr. Brundage. Yes, sir; they are shown under the National Science Foundation and under the Department of Health, Education, and Welfare.

The Chairman. There are several Senators that have indicated they may want to ask more questions. When do you think you can get the information that has been requested this morning?

Mr. Brundage. I think it is probably available. I should think about Friday.

The CHAIRMAN. By Friday.

Is that satisfactory to the committee?

Senator Jenner. Yes, sir.

Senator Bennett. Then the session to consider the bill will be postponed beyond Friday?

The Chairman. Yes. That is assuming that there is no emergency. Mr. Brundage. I can try to get it for you tomorrow, if you want it.

The Chairman. Could you get it for Thursday? I think the committee is very much concerned about all these loaning operations that are beyond budgetary control.

Of course, you say in response to my question that this foreign currency goes through the budget, but it is just technically through the budget, all you do is report it, it doesn't go through the budget at all.

Mr. Burndage. The requests have to go through the Bureau of the

Budget.

The Chairman. I understood you to say that it went through the budget.

Mr. Brundage. It is in the budget document.

The Chairman. It is mentioned in the budget, but it does not go through the budget.

Senator Williams. Would it be possible to get that Thursday so we can have our executive session Friday?

Mr. Brundage. I will try it.

The Chairman. I have a few other things. I want you to do this. First, define new obligational authority, and list the various kind of spending authority, such as appropriations, authority to spend out of the debt, and so forth, and give the amounts requested in each category.

(The material referred to follows:)

## NEW OBLIGATIONAL AUTHORITY

New obligational authority is the total of authorizations becoming available in a given fiscal year which allows Federal agencies to incur new obligations for the payment of money. These authorizations, enacted by the Congress, must precede all budget obligations and expenditures. They are enacted in several forms, including:

Appropriation.—Authorization to expend money for a stated purpose. This

is the most common form of new obligational authority.

Reappropriations.—Actions to continue available part or all of the unused balances of prior appropriations which would otherwise expire.

Authorization to expend from debt receipts.—Authority granted Government enterprises to spend money they borrow from the Treasury or from the public.

Contract authorization.—Authorization to make a contract before an appro-

Contract authorization.—Authorization to make a contract before an appropriation is made to cover it, usually for construction which will extend over a considerable time. A subsequent appropriation to pay for the contract is necessary.

New obligational authority by type

[In millions]		
Description	195 estim	
Appropriations	\$71,	329
Reappropriations		60
Authorizations to expend from debt receipts		800
Contract authorizations		265
Total	72	452

NOTE. - Detail does not add to total due to rounding.

The Chairman. Second, list and explain the various kind of appropriations, such as permanent, annual, multiyear, no year, reappropriations, etc., and give the amounts requested in each category.

(The material referred to follows:)

## Appropriations

1959 estimate \$62,995

I. Current appropriations.....

Type

A. Current ordinary appropriations: Ordinary appropriations are authorizations granted currently by the Congress, both to incur obligations and to make expenditures in a definite, specified

amount. Such appropriations may be subdivided into 3 classes, as

1. One-year appropriations: These are appropriations which are available for the incurring of obligations within only 1 fiscal year, and which expire for this purpose at the end of that time. Such appropriations remain available for the making of expenditures in payment of such obligations for 2 additional years. This is the commonest form of budget authorization.

2. Multiple-year appropriations: These are appropriations which are available for obligation for a specified period of time in excess of 1 year. Such appropriations remain avail-able for the making of expenditures in payment of such obligations for 2 additional years. This type of appropriation is used occasionally for programs of an unusual seasonal nature or programs of a nonrecurring type which do not fit

precisely within a fiscal year.

3. No-year appropriations: These are appropriations which are available for obligation and expenditure until the purpose is accomplished, and which do not expire at any fixed time. This type of appropriation is used primarily for certain kinds of benefit payments, and for construction of projects where a time limit would not add appreciably to the system of expenditure control.

B. Current indefinite appropriations: Current indefinite appropriations are authorizations granted currently by the Congress, both to incur obligations and to make expenditures in an indefinite amount. Although such appropriations are found in appropriation acts, the amount of each is not specified in the act but is determined Often the amount of the appropriation is equal to the otherwise. amount of receipts (or a percentage thereof) from a specified source. In some cases the amount of the appropriation is determined by financial needs. These appropriations may have varying periods of availability, just as do ordinary current appropriations.

II. Permanent appropriations\_\_\_\_\_

\$8, 334

Permanent appropriations are those in which additional amounts become available from year to year under standing law, without new action by the Congress. The law may provide for such appropriations to operate for a specified number of years and then stop, but in most cases the law provides for them to operate indefinitely until it is amended or repealed. Some permanent appropriations are found in ordinary legislation; others were enacted originally in appropriation acts which provided not only for the amount to become available in the year of the act, but also for additional amounts to become available in succeeding years.

Permanent appropriations are customarily subdivided into two

1. Permanent definite appropriations: These are appropriations where the amount becoming available for obligation and

expenditure each year is specified in the law.

2. Permanent indefinite appropriations: These are appropriations where the amount becoming available for obligation and expenditure is not specified in the law, but is determined by the amount of receipts from a specified source, by the amount of financial requirements, or by other means.

Permanent appropriations may have varying periods of availability, just as do ordinary current appropriations.

Type  III. Reappropriations  In some cases, part or all of the unobligated balance of a prior 1-year or multiple-year appropriation is continued available for obligation and expenditure after it would otherwise expire. Such actions are called reappropriations. They are usually enacted in appropriation acts, but sometimes occur in other laws. They	: L
may be definite or indefinite in amount.  IV. Appropriations to liquidate contract authorizations  Appropriations to permit the payment of obligations incurred under previously granted contract authorizations are called "appropriations to liquidate contract authorizations." Such appropriations appear in appropriation acts and are often included in the same paragraph as an ordinary current appropriation. They are authorizations to make expenditures only, and are not part of new obligational authority.	(133)
Total	71 380

Figures given above are taken from table 7, pages 14 and 15, of the 1959 Budget Document.

The CHAIRMAN. Third. explain what is meant by "Unexpended balances" (obligated and unobligated). List the various categories such as balances in appropriations, authority to spend out of the debt, and give the amount in each category to be available in fiscal year 1959. (The material referred to follows:)

## UNEXPENDED BALANCES

Amounts of enacted obligational authority which have not yet resulted in expenditures and are carried forward from one fiscal year to the next are called unexpended balances. These balances are not cash on hand, but represent authority to draw on future receipts of the Treasury as needed to pay bills.

The unobligated portion of unexpended balances represents authority which has not yet been committed. It is the difference between total unexpended balances and net obligations outstanding. Obligated portion of unexpended balances represents amounts committed to pay bills which will come due upon completion of contracts already signed, or in some cases, amounts now owed by the Government for services or deliveries recently received.

# Summary of balances available at start of the fiscal year 1959 [In millions]

Description	1959 estimate

### A. CURRENCIES SUBJECT TO SECTION 1415

Since such currencies may be used only in accordance with authorizations obtained through the appropriations process, budgetary planning and controls are related to those for dollar-financed programs. Budgetary preparation and presentation for dollars and foreign currencies are simultaneous. In fact, they are one and the same because up to the present appropriation acts have effectuated section 1415 by appropriating dollars for the using agency to purchase currencies

from the Treasury. However, section 1415 does allow the alternative of specifying in an appropriation act an amount of currency which may be used without purchase from appropriated dollars. It should also be noted that the use of these currencies may be further limited by law or international agreement.

In any case, section 1415 results in adequate budget review and control of total agency programs by agency management, the Bureau of the Budget, and the Congress through the appropriation process. They are reflected in budget totals as appropriated dollars and appear as budget expenditures as purchases are made from the Treasury. Receipts from such sales are credited to miscellaneous receipts of the Treasury or to the revolving fund owning the currencies. No problems have arisen in connection with apportionments, budget schedules, and reporting.

### B. CURRENCIES AVAILABLE FREE TO AGENCIES FOR UNITED STATES USES

As previously indicated, certain currencies accruing under the Mutual Security Act (including country-owned counterpart) and Public Law 480 may be used for specified purposes without charging dollar appropriations. These two laws specifically exempt much of the currencies generated under them from section 1415. The currencies fall into two groups insofar as budgeting is concerned: (1) Those used by agencies to increase programs primarily of interest to the United States and of less interest to the foreign countries whose currencies are being used, and (2) those currencies of a country used to finance programs in that country of primary interest to it. The first category are usually called United States uses, the second category, country uses.

Currencies available for free United States uses are subject to budgetary review

and control, however, Agencies must request allocations and apportionments from the Bureau of the Budget. The Bureau examines these requests in much the same way that a dollar budget request is examined. The Director of the Bureau of the Budget then allocates the currencies. Later, the currencies are apportioned by the Bureau after further review just as with appropriated funds.

Informational budget schedules are included in the budget document showing the availabilities and uses of these currencies. These schedules are placed immediately after the agency programs to which they relate, thus providing the Congress the opportunity to review the use of these currencies during the appropriation process.

## C. CURRENCIES AVAILABLE FREE FOR COUNTRY USES

So-called country-uses currencies consist of those accruing under the Mutual Security Act (including country-owned counterpart), which can be used for mutual security purposes, and those accruing under Public Law 480, which are earmarked for the sales agreement for procurement of military equipment, materials, facilities, and services for the foreign country and for loans or grants for the promotion of economic development in the country whose currencies are being used. These country-use earmarkings are the heart of the bargain from the standpoint of the country making the Public Law 480 purchase. Even though we legally own the

sales proceeds, the agreement restricts our action in their use.

Those country-use currencies generated under Public Law 480 are allocated by the Director of the Bureau of the Budget and apportioned by the Bureau in the same manner as United States uses currencies. Similarly, their availability and usage is indicated in informational schedules in the budget document.

The currencies generated under agricultural sales provisions of the Mutual Security Act are not subject to the allocation process since they can be used only for mutual security purposes. Because of this and because these currencies are in effect purchased with the mutual security appropriations that buy the commodities which generate the currencies, the Director of the Bureau of the Budget has elected to apportion them indefinitely and automatically as they are collected. Information as to the use of these currencies is included in the informational schedules in the budget.

Country-owned (90 percent) counterpart currencies are neither allocated, apportioned, nor included in the informational budget schedules. Although these currencies are used for the same country-use purposes as many of the currencies the United States owns, they remain in foreign-government accounts. They are not owed to or owned by the United States.

The Chairman. And there are some questions here that I will pass over to you with respect to the foreign currency. Do you think you can get that information by Thursday or Friday?

(The questions proposed by the chairman and the answers furnished by the Director follow:)

Question 1. Under the law, as I understand it, some of these currencies may be used free—that is, without repayment with appropriated funds which go through the budget. What is the total of expenditures from these free-use currencies in fiscal year 1959 by such programs as Export-Import Bank, Defense Family Housing, Foreign Agricultural Service, General Services Administration, Mutual Security, State Department, United States Information Service, etc.

Answer. Expenditures of foreign currencies without charge to dollar appropriations, as reported in the 1959 budget, are as follows (in millions of dollar equivalents, with currencies used for the mutual security program valued at agreement rates, and all other currencies valued at Treasury selling rates):

	Actual, 1957	Estimate, 1958	Estimate, 1959
Mutual security program:			
Military assistance	\$38.7	\$100. 0	\$56.0
Defense support	299.6	287. 3	176, 6
Economic, technical and other assistance	118.3	373. 5	142, 4
Export-Import Bank		1.5	10.0
General Services Administration			
U. S. Information Agency		0.9	2.3
Department of Agriculture (Foreign Agricultural Service)  Department of Defense (family housing—to be repaid to Com-	2.0	8.5	9. 6
modity Credit Corporation in subsequent years)  Department of State:	15. 9	45.0	25.0
Educational exchange program	0.5	3.9	6. 3
Congressional travel (actual through Sept. 30, 1957)		0.1	
Total expenditures of foreign currencies without charge to dollar appropriations.	475. 2	820. 8	728. 3

Question 2. Under the law, as I understand it, we must appropriate new money to the Commodity Credit Corporation to compensate for its losses under the Agricultural Trade Development and Assistance Act, including the free use. How much will the appropriation for this purpose be in fiscal year 1959?

Answer. Appropriations to reimburse CCC for its costs are ordinarily made the second year after the costs are incurred—that is, an appropriation would

Answer. Appropriations to reimburse CCC for its costs are ordinarily made the second year after the costs are incurred—that is, an appropriation would ordinarily be made in 1959 to reimburse CCC for its 1957 costs, plus interest to the date of reimbursement. This year, however, no appropriation for 1959 was proposed. Instead, a 1958 supplemental appropriation in the amount of \$1,290,841,000 was transmitted to Congress on January 22, 1958, as part of a total request of \$2,235,131,868 to provide additional funds required by CCC in 1958.

Question 3. Now with questions I have asked as a guide, will you please discuss the budgetary aspects of current practices with respect to the use of foreign currencies owed to and owned by the United States?

Answer. Unless specifically exempt by law, foreign currencies are subject to section 1415 of the Supplemental Appropriation Act of 1953 and the control is assured within the regular appropriation process. Section 1415 provides that:

"Foreign credits owed to or owned by the United States Treasury will not be available for expenditure by agencies of the United States after June 30, 1953, except as may be provided for annually in appropriation acts and provision for the utilization of such credits for purposes authorized by law are hereby authorized to be included in general appropriation acts."

Exceptions to section 1415 have been made subsequently in other laws. However, even though these excepted currencies are not controlled through the appropriation process, they do receive budgetary scrutiny and control as they are allocated and apportioned. Furthermore, the Congress has an opportunity to review their availability and use during the appropriation process since informational schedules, much the same as dollar schedules, are printed in the budget.

schedules, much the same as dollar schedules, are printed in the budget.

Foreign currencies are generated under several laws at the present time. For the purpose of budgeting, the currencies accruing under these laws may be classified into three general classes.

A. Currencies subject to section 1415;

B. Currencies available free to agencies for "United States uses";

C. Currencies available free for "country uses."

Each class of currency presents different types of budgetary problems.

In this connection, a Report on Foreign Currencies in Custody of the Treasury Department for the period July 1, 1957, through Septem-

ber 30, 1957, appears at p. 447.

Mr. Brundage. Well, we will try to get it here Thursday, if you want to say 10 o'clock, Thursday, I will do my best to have it here, and if I find it is impossible, I will call you up tomorrow. But I think we can.

The Chairman. By when?

Mr. Brundage. By Thursday morning at 10, unless you give me

a little more time—could you say 11 o'clock on Thursday?

The Chairman. Well, there will be a good many questions, I don't know whether that will give us time, suppose we make it Friday. You can certainly get it by Friday.

Mr. Brundage. I don't want to put off consideration of it.

The CHAIRMAN. I have a conference with the Secretary of the Treasury this afternoon, and if there is any emergency involved, I will communicate with you further, but it is my understanding that there is no emergency at this moment with respect to the debt limit; is that right?

Mr. Brundage. I don't know of any.

The Chairman. I would like the reporter to take these questions and then pass them over to you after he has taken them down.

We will meet then at 10 o'clock Friday morning.

(Whereupon, the meeting was adjourned at 12:25 p. m. to be reconvened at 10 a. m., Friday, February 7, 1958.)

# DEBT CEILING INCREASE

# FRIDAY, FEBRUARY 7, 1958

UNITED STATES SENATE, COMMITTEE ON FINANCE, Washington, D. C.

The committee met, pursuant to recess, at 10 a. m., in room 312, Senate Office Building, Senator Harry Flood Byrd (chairman) presiding.

Present: Senators Byrd (chairman), Kerr, Frear, Anderson, Douglas,

Martin, Williams.

Also present: Elizabeth B. Springer, chief clerk. The Chairman. The committee will come to order.

STATEMENT OF HON. PERCIVAL F. BRUNDAGE, DIRECTOR, BUREAU OF THE BUDGET, RESUMED, ACCOMPANIED BY WILLIAM F. McCANDLESS, ASSISTANT DIRECTOR FOR BUDGET REVIEW, AND SAMUEL M. COHN, CHIEF, FISCAL ANALYSIS

The Chairman. Mr. Brundage, the committee asked you for certain information. Would you like to present it, sir?

Mr. Brundage. We have supplied it, Mr. Chairman, to the com-

mittee clerk.

The Chairman. Have you got a copy for each member of the committee?

Mr. Brundage. I am sorry, we didn't have enough copies. We were able to get the information out of a number of reports, and we thought you wanted it for the record. It is rather voluminous.

The Chairman. I thought you understood we probably would want

to ask some questions.

Senator Anderson has to leave, so he is recognized at this time.

Senator Anderson. I have explained it, I think, to Mr. Brundage. As near as I can tell, when you get through with all the figures, when you take the \$1 billion difference in Defense items, which we already recognize as an emergency situation, and then the various items at the tail end, which are postal pay adjustments, and Defense contingencies and other contingencies, we are still going to spend more money—we are going to make more increases than we do decreases. And, therefore, the statement that we could finance these Defense items out of savings just doesn't hold water. I think that makes some difference in the way I would vote about the increase in the national debt. If we aren't going to make any savings, of course, we will need to increase the national debt. I would hope that we were going to have savings that would make it unnecessary to increase the debt at this time.

Mr. Brundage. I have submitted a summarized statement for insertion in the record, Mr. Chairman. I might go over the copy I have retained.

(The summary statement referred to appears on p. 411.)

Just as the Senator said, the total expenditure increases were \$4.858 billion, and if you take out the Defense Department and Atomic Energy, the \$250 million increase for atomic energy that is going into defense purposes, and the allowance for proposed legislation and contingencies, the remaining increases under both existing and proposed legislation are \$1.654 billion. Now, the expenditure decreases shown in the table under existing legislation-

Senator Anderson. Where does the \$250 million come from? What

is the Atomic Energy Commission item of \$250 million?
Mr. Brundage. That is for Defense, atomic warheads, that is the

increase in atomic energy for military purposes.

Then the decreases under existing legislation are \$2.971 billion, and you take the decreases for the military function of the Department of Defense out of that, since you took the increases out, that reduces it to \$1.876 billion. But I think that you should add to that the decreases under proposed legislation, which are \$738 million, or a total of \$2.614 billion in the way of decreases against \$1.654 billion in the way of increases, which is the \$1 billion nondefense saving that I told you about in my computation.

Senator Anderson. Yes. But the Chairman, as I remember it, wanted you to divide it into two parts. He wanted on one list the savings the Administration was going to make, and then on the second list the things that were put upon Congress as a burden, what Congress might do. We are bound to leave out that \$738 million, because that is what Congress is going to do. So you have now brought it down to \$1.654 billion that are the increases, and \$1.876 billion that are the decreases-

Mr. Brundage. Under existing legislation.

Senator Anderson. And you, therefore, think that it shows that there is a greater saving than there is increased expenditures, but you have done it by a \$250 million item in the Atomic Energy budget, that I don't recognize. Is it carried as that item in the Atomic Energy budget?

Mr. Brundage. We put the Atomic Energy under major national security, because when the Defense Department spends \$5 billion on

missiles, that does not include the warhead.

Senator Anderson. What atomic warhead are we now making?

I'd better not ask that. You aren't going to spend \$250 million

for atomic warheads that are not ready to be made.

There is only one missile, I believe, able to carry the atomic warhead weapon at this time. Certainly, you won't need an atomic warhead for the Atlas, nor for the Vanguard, and you don't need one for the Polaris, which won't be going into production for some years. So, I question-

Mr. Brundage. They are using it in some of the smaller missiles.

Senator Anderson. Not the Polaris warhead?

Mr. Brundage. Not the Polaris, but they are using atomic heads in a lot of missiles.

Senator Anderson. In a missile? Mr. Brundage. In a lot of missiles. Senator Anderson. Well, we can't go off the record, but I think the

Mr. Brundage. They have the Nikes, you know.

Senator Anderson. All right.

The Chairman. Do I understand that you propose decreases, I mean net decreases, by this statement?

Schator Kerr. Of \$222 million, aside from what he expects the

Congress to do, I believe.

Mr. Brundage. That is right, for nondefense.

The Chairman. I am not talking about that. I am talking about the total here, the total of these figures that you have given as net

decreases, this bottom figure.

Mr. Brundage. For the total on those programs aside from Defense, the total increases would be \$1.654 billion. And the total decreases under existing legislation, aside from Defense, would be \$1.876 billion, or a net decrease of, as you say, \$222 million.

Senator Anderson. But you do that by the \$250 million for atomic

The other day when Wallace Bennett got through figuring, he had to admit that the point I raised was something like correct. Now it seems that this \$250 million is what I have constantly objected to as a classified figure which we can't discuss. You put it in there, but there is no way in the world we can talk about it.

Mr. Brundage. But that is the increase between 1958 and 1959 in

expenditures for atomic energy, you see.

The Chairman. I would like for you to take the total expenditure increases-

Mr. Brundage. Your committee knows about it.

Senator Anderson. I don't know of any \$250 million figure to the

atomic energy budget for that.

The Chairman. Now you show total expenditure increases of \$4.858 Then you take \$3.204 billion from that. That leaves an increase of \$1.654 billion. In addition you have another line: total expenditure decreases under existing legislation, \$2.971 billion less the Department of Defense, \$1.095 billion.

Couldn't you reduce all of that to a simple statement of the total

increases and the total decreases?

Mr. Brundage. When I appeared on February 4 I presented tables showing decreases and increases in expenditures, 1959 compared with 1958 as shown in the 1959 budget document. The last table summarized this information.

(The table referred to appears on p. 393.)

That ties in with these figures, namely; the total increases of \$4.858 billion and the decreases under existing legislation of \$2.971 billion.

The Chairman. Suppose we adopt the recommendations of the Budget Bureau and the President, will we spend more or less money this next year, and how much?

Mr. Brundage. Well, you would spend less, aside from defense,

but you would spend-

The Chairman. Well, adding defense in. Mr. Brundage. More on defense, yes.

The CHAIRMAN. How much more?

Senator Kerr. Would the net be more or less?

Mr. Brundage. The net, including defense, would be more.

The CHAIRMAN. How much?

Mr. Brundage. Well, it depends on whether you include the allowances for contingencies and the pay increases or not. If you include all our recommendations, the decreases under existing legislation and proposed legislation would come to \$3.709 billion. And the increases, including the proposed pay increases, and provision for defense contingencies of \$500 million, and additional provisions for other contingencies of \$100 million, would show an increase of \$4.858 billion, or a net overall increase of \$1.149 billion.

The Chairman. Are these figures on an expenditure basis for the

fiscal year 1959?

Mr. Brundage. That is right.

The Chairman. How do you justify, then, asking for a 85 billion

increase in the debt limit?

Mr. Brundage. As I explained in previous testimony, the Treasury has had a very tough time in meeting its maturities, and they have had no flexibility. The cash balances, I think, have gotten down to unsafe levels, and although I supported the decision not to ask for an increase last year, I am supporting the request for an increase this year because I think it is poor management for our Government to run so close.

The Chairman. You not only didn't ask for an increase last year, but you approved of \$3 billion being permitted to expire on June 30,

1957.

Mr. Brundage. Well, we have reduced the debt by over \$3 billion

in the last 2 fiscal years, yes.

The Chairman. Do you contemplate another era of deficit spending? Isn't that the real reason that you are asking for this increase in the debt limit?

Mr. Brundage. Well, I don't, and I will do all I can to prevent it personally. I think we will have a relatively small deficit in the

current year, but I hope we won't have more.

The Chairman. You have already admitted that you have a \$500 million deficit in the current year, but if you don't expect a deficit in the next year, I don't understand how you can justify asking the Congress to increase the debt limit by \$5 billion.

Senator Williams. Do you think they need the \$5 billion, Mr.

Brundage?

Mr. Brundage. I said, I think, a little earlier, that I don't think there is any particular charm in a figure of \$5 billion, more or less. But I think that they need considerably more flexibility. And I don't think that the \$3 billion proposed would give enough of a safety I am in favor of the \$5 billion.

The Chairman. Will you look at these figures? I prepared them and the Treasury has acknowledged their accuracy. They show the estimated leeway with a temporary \$3 billion increase in the debt

ceiling.

For example, on February 28 and on March 31, you would have \$11.6 billion, and on March 15 it would be \$5.8 billion. That is the lowest point.

Do you question the accuracy of those figures?

Mr. Brundage. No, I do not.

The Chairman. These figures assume the use of the \$500 million in gold. There is no reason why this gold should not be used.

Now isn't it true that frequently we have large balances in banks for which the Government receives no interest?

Mr. Brundage. The receipts do come in unevenly, there is no question about that.

The Chairman. How much money do you think we ought to keep

in the bank without interest?

Mr. Brundage. Well, I have the same problem with my personal bank account, every time I try to get too much in a savings account or invested. I find some emergency coming along and I have to yank it out again. And I think you have got to have some leeway, particularly in a government of this size, with the possibility of storms and delays in the mail, I think you have to maintain a very substantial cash balance.

The Chairman. Do you think a tight debt limit is a deterrent to unnecessary spending or not?

Mr. Brundage. I think it is, yes. The Chairman. You approve of it?

Mr. Brundage. I don't mind saying that a debt limit, I think, is a good thing.

The CHAIRMAN. There is not much reason to have a debt limit unless it is tight. You think it is a deterrent to unnecessary spending?

Mr. Brundage, I do.

Senator Williams. One proposal has been made that perhaps, even if we give the \$5 billion to the Department, that we put 2 termination dates on it, that we let \$2 billion expire February 1, 1959, and \$3 billion to expire as requested. What would you say to that? That would give the Congress a chance to reappraise it in January of next year, and would give us control over this to a greater extent.

Mr. Brundage. Well, I haven't discussed it with the Secretary of the Treasury, but I personally wouldn't think that would be an

unreasonable way of handling it.

Senator Williams. Would you think it would be advisable for

Congress to keep control in such a manner?

Mr. Brundage. You would then have been in session for another month, and this would give us the leeway through January 15, next year, which I think is desirable, and then, if the situation looked critical, the Department could come back again.

Senator Williams. We could either let it expire or let you come in and justify it at that time. Do you think that would be preferable to giving the full \$5 billion that would maybe act as a deterent to some

of the spending?

Mr. Brundage. Well, I think the tough periods are going to be January 15 and March 15, next year. So I don't think it would be any better. Making it a temporary extension, I think, is a good idea. I would like to see it come back to \$275 billion on June 30. So, I don't think it would be any better. But I can't see any harm in it personally.

Senator Martin. Senator Williams, will you repeat those dates

that you contemplate?

Senator Williams. Well, 1 suggestion was that if we are going to give the full \$5 billion, we mark it so that \$2 billion would expire on February 1, and the other \$3 billion June 30, 1959.

Mr. Brundage. Yes. And the other \$3 billion June 30, 1959.

Senator Williams. And that would put the Department in the position where they would have to come back in January and justify the need of extending the \$2 billion beyond that time.

Mr. Brundage. Yes.

Senator Williams. And give Congress a chance to reappraise it twice rather than just once.

(Mr. Brundage subsequently supplied this statement for the record:)

After discussing this proposal with the Secretary of the Treasury, I find that it would not cover the difficult time between February 1 and March 15 of next

The Chairman. You might discuss the Export-Import Bank—I inquired as to whether the latest loan to Great Britain was to stabilize the currency. Would you state the amount of the loan and explain why it was made?

Mr. Brundage. It was to keep trade moving.

The Chairman. Is it customary for the Export-Import Bank to

make direct loans to other governments?

Mr. Brundage. This information has been inserted in the record on the page it was discussed. (See p. 257.) I asked the president of the bank, and he stated that the Export-Import Bank, under its statute, had authority to make this loan, which was in support of the currency of a foreign country.

The Chairman. Has that authority been exercised?

Mr. Brundage. The language in the authorization, which is in section 2 (a) of the Export-Import Bank Act of 1945, reads as follows:

To aid in financing and to facilitate exports and imports and the exchange of commodities between the United States or any of its Territories or insular possessions and any foreign country, or the agencies or nationals thereof.

And he states that this language was incorporated in the loan agreement with the United Kingdom, and that this loan was made to finance exports to the United Kingdom.

The Chairman. Was that the reason for it? I thought you just

stated it was to stabilize the money.

Mr. Brundage. He felt that this would enable them to buy exports from the United States.

The Chairman. Has that been done before in that fashion?

Mr. Brundage. Not to my knowledge. I think that was the first time.

The Chairman. Here is one of the few agencies that has the reputation of operating on a sound basis. I don't think anybody could argue that loans to a country to stabilize currency is a sound loan. Why was it that this particular loan was made to England?

Mr. Brundage. They didn't have the dollars to use.

The Chairman. Well, that applies to all the other of these foreign countries; France, for instance.
Senator Kerr. They have got the francs.

The Chairman. They have got the francs, but their value in dollars is another matter.

It disburbs me to find that the Export-Import Bank should be used to stabilize the currency of these nations that have, for one reason or another, gotten into financial trouble. This bank has never been used for this purpose before. Now, how many other banks do we

have making international loans? You have got the World Bank.

the International Monetary Fund, and how many others?

Mr. Brundage. Well, there are four altogether, I think, now. International Monetary Fund, and then the IFC, or the International Finance Corporation—this new one that was started last year. I understand that the Export-Import Bank takes collateral on its loans, either a sight draft on the bill of lading for exports, or in this case of the United Kingdom loan, it took deposited securities. And I think they might have used that in other cases.

The Chairman. What kind of securities?

Mr. Brundage. Oh, marketable securities, in United States dollars. The Chairman. I thought you were going to make a statement as to why the loan was made and what the security was, and so forth.

Mr. Brundage. That does appear in the report of the bank. (The statement of loans and authorized credits of the Export-Import Bank

appears on pp. 260-386.)

The Chairman. This French loan—does the Export-Import Bank participate in that? I saw by the papers that you were loaning the French some money, \$700 million there. Who is putting that money up?

Mr. Brundage. That is put up by a number of agencies, including international ones, but it does not include a new loan by the Export-

Import Bank.

The Chairman. Is it coming from this country?

Mr. Brundage. Well, it is principally, I believe, the International Monetary Fund, and the European pool, the European Payments

The Chairman. When you get down to it, it is an American pool,

we are the ones that are putting up the money.

I asked you specifically, Mr. Brundage, and I am anxious to get it, for a complete statement of these different loaning agencies that are loaning money in one fashion or another abroad, which is, in effect, foreign aid, that is what it is, because lots of those loans, I imagine, will never be repaid.

got so many papers I can't find it.

Mr. Brundage. I submitted for the record a complete list of the loans outstanding on December 31, 1957.

The Chairman. Of all the different agencies?

Mr. Brundage. Of all these agencies, yes, showing the total credits, the amount they have been drawing down on it, the explanation, the purpose for the loan, and the interest or the commissions collected. And this particular list of December 31, in the case of the Export-Import Bank, did not give the interest rate, so I gave you another statement showing the interest rate.

The Chairman. It is separated into years?

Mr. Brundage. This is as of December 31, 1957. The Chairman. I know. But what I want to know is, I regard many of these loans, if not most of them, as equivalent to foreign aid that does not show in the appropriation bills. So I would like to get a complete picture of what we give away directly and what we are giving away indirectly.

Mr. Brundage. This gives all the credits. The Chairman. Does it give the years? For instance, could you say that in a certain fiscal year or calendar year these loans are so much?

Mr. Brundage. It gives the date of the credit and the date to which it runs.

The CHAIRMAN. By what? Where is it in—

Mr. Brundage. By individual loans.

The Chairman. Will you read out those loans that we have made to other countries?

Mr. Brundage. Well, starting with Africa, the authorized credits were \$8 million; Asia, \$650 million.

The CHAIRMAN. What agency?

Mr. Brundage. This is the Export-Import Bank.

Let's see if I have it by countries here.

I am afraid it isn't summarized. I will have to read it. It is

summarized by countries, but not by areas.

The Chairman. First, give us a list of them. You have a report here on the International Monetary Fund, the International Cooperation Administration Development Loan Fund, and then you have got the Export-Import Bank.

What others are there?

Mr. Brundage. The International Finance Corporation is the

The Chairman. International Finance. None of these loans go through the appropriation bills?

Mr. Brundage. No.

The Chairman. And whatever the appropriation bill shows for foreign aid is in addition to these loans.

Mr. Brundage. That is right. The Chairman. This is a very complicated subject, and I would like the staff of the committee to go over this and see if this gives us the facts, so that we can make a complete statement as to these different loans and aids and grants and direct gifts and so forth.

Mr. Brundage. This gives the complete detail on all of this

The Chairman. Well, we will communicate with you later, then, if there is any additional information we desire.

You see what I want, a complete picture.

Mr. Brundage. That is all here. We could summarize it.

The CHAIRMAN. The public thinks that all we are doing is in the appropriation bill. I think it is a great deal more than that. And will you also explain the International Cooperation Administration, what part of it do we pay, and does any other nation contribute to it?

(The chairman prepared and submitted the compilation of Funds for

Foreign Aid which appears at p. 443.)

Mr. Brundage. I think you have got everything here, sir.

(The following additional data was subsequently submitted by Mr. Brundage.)

The dollar expenditures under the Mutual Security Program, which covers the International Cooperation Administration, are made from appropriations which are enacted by the Congress. The materials previously inserted in this record supplied information on foreign expenditures not made directly from enacted appropriations; namely, loans made by the Export-Import Bank, the International Monetary Fund, the International Bank for Reconstruction and Development, and the International Finance Corporation. The expenditures of the Export-Import Bank are financed through an enacted authorization to expend from debt

receipts and are reflected (net) in the budget totals. The other three agencies are international rather than United States Government agencies, and their expenditures, therefore, are not reflected in the United States budget. The amounts of the United States expenditure for original capital subscriptions to these international agencies have also been inserted in this record.

Some United States expenditures which are made abroad in foreign currencies are also not reflected in appropriations or in the budget totals, as described in the materials inserted in this record at the end of the hearing of February 4. The expenditures made (or to be made) in foreign currencies without charge to dollar appropriations were given for the fiscal years 1957 (actual), 1958 (estimate), and 1959 (estimate), in response to question No. 3 asked by the chairman at the end of the February 4 hearing.

The Chairman. I mean, does any other nation contribute to any of these? You have the International Monetary Fund.

Mr. Brundage. Oh, yes.

The Chairman. What percent?

Mr. Brundage. I think our contribution is about 30 percent. Senator Frear. But our contribution has been practically subscribed, whereas the contribution of the other countries may be fully subscribed or totally unsubscribed.

Mr. Brundage. I think we have paid up more than the other

Senator Martin. Could we have just what each country has actually contributed. After all, that is what counts, it is not what a man subscribes to, it is what he actually pays.

The Chairman. And is it on the basis of dollars or on the basis of

the currencies of these countries?

Mr. Brundage. The currencies of these countries.

The CHAIRMAN. You would have to express that in dollars.

Mr. Brundage. We have expressed it in United States dollars in these tables, sir.

Senator Williams. For instance, like France, she will contribute her francs and borrow the dollars.

Mr. Brundage. That is right.

Senator Williams. We contribute the dollars and get the francs.

Mr. Brundage. France had accumulated—up to the end of December, her total transactions were \$387 million in francs, the equivalent of \$387 million gross, and they had repaid \$125 million, so the net outstanding was \$262 million.

The CHAIRMAN. Which fund are you speaking of now? Mr. Brundage. That is the International Monetary Fund.

Senator Frear. I don't understand what he just said, Mr. Chair-

You said "outstanding." Does that mean they have subscribed to that and have withdrawn so much?

Mr. Brundage. No, that is their withdrawals. Senator Frear. They have applied for a loan and they were granted a loan, and they have drawn down so much of it? Is that right?

Mr. Brundage. That is right. Senator Frear. But originally, before that, in order to be a member they had to subscribe and pay in so much money, is that right?

Mr. Brundage. Yes, they did pay in—I am afraid we haven't got the figures for the capital paid in. This information is just the loans, the drawdowns.

The Chairman. From the list here, it appears that France has had a gross payment of \$387 million, is that right?

21297-58-28

Mr. Brundage. That is right; yes.

The CHAIRMAN. How much does France pay into that fund?

Mr. Brundage. I am afraid we haven't got the amount paid in. Mr. McCandless. We have it for the United States, but not any other country.

Mr. Brundage. We only have the United States subscription.

Do you have the amount that we have paid in? We want the total capital, the proportion. I think it is about 30 percent.

Mr. McCandless. That is all in the report, too.

The Chairman. To what extent are these other nations delinquent

in their subscription payments?

Mr. Brundage. I believe they have all paid in the amount that was called for in the International Monetary Fund. Our quota is \$2,750 million, and the entire amount was paid in in 1947 on the establishment of the fund, \$687,500,000 in gold and the remainder in cash, or demand notes of the Treasury.

The Chairman. How much did other nations contribute at that

time?

Mr. Brundage. I think they all paid into the Monetary Fund; I think that was all paid in.

The CHAIRMAN. You said that was 30 percent of the total?

Mr. Brundage. I think ours was about 30 percent of the total.

The Chairman. Then, the other nations—

Mr. Brundage. It was about \$10 billion, I think.

The Chairman. And that was actually paid on a dollar basis?

Mr. Brundage. Yes, we paid it partly in gold.

The CHAIRMAN. I know we did.

Mr. Brundage. Each country paid their own. Senator Frear. Paid it in their own currency?

Mr. Brundage. In their own currency, yes, and partly in gold. Senator Frear. I hope I am correct in my understanding, but is it not true that all countries have not paid their full subscription?

Mr. Brundage. I know they haven't to the International Bank.

I am inclined to think that they did pay it into the fund.

The Chairman. But if they pay francs, or money that has little value, how do you compare them with our contribution? Did you put it on a dollar basis or not?

Mr. Brundage. We are expressing it here for this statement for your purposes in dollars, but the fund expresses it in their own currency.

The Chairman. There is nothing here to indicate how much these other nations have contributed. I see how much they have drawn out. What I am trying to determine is how much other nations have contributed. For instance, you say we paid 30 percent. Of course, that is in dollars. Now, when other countries made their payments, were they calculated in dollar value or otherwise?

Mr. Brundage. Well, the accounts are kept, I believe, in several currencies. I think they are kept in dollars and sterling and—

Senator Frear. Guilders.

The Chairman. How did you figure the 30 percent that we paid in? Was it 30 percent in the value of dollars?

Mr. Brundage. It is about 30 percent of the total capital of the fund.

The Chairman. Yes, but on what basis was that capital figured? Was it figured in the currency of these other countries when they make their contribution, or is it figured in dollars?

Senator Frear. Currency equivalent? Mr. Brundage. Currency equivalent, yes.

The Chairman. Is it figured in the equivalent of dollars or not?

Mr. Brundage. The accounts, I know, are kept in dollars as well as in the local currency, because I have seen their accounts. They have to use some established exchange rate, of course.

Senator Frear. They pay them in other currency equivalent with the established rate, but the established official rate, as I understand

it, Mr. Chairman, isn't always the going rate.

Senator Williams. Well, for instance, with France, if they paid on the established official rate a couple of years ago, the franc is now worth about half of what it was then.

Mr. Brundage. That is right, but a country is required to increase the contribution in its currency when the par value of that currency is

changed.

Senator Williams. And that means that the payments have been cut back to half; is that true?

Senator Frear. The value of the payments. Senator Williams. The value of the payments.

Mr. Brundage. It had that value at the time it was paid in. But it was probably reloaned to some of the countries, not necessarily France, but some other country.

Senator Williams. Do I understand that this was set up to enable these countries, when they get into a little financial difficulty as governments, to tide them over the period?

Mr. Brundage. They can go to the bank or the fund.

Senator Williams. If we don't increase this debt ceiling, do you suppose that our Treasury Department could go there and get relief?

Mr. Brundage. If they had the funds, I think we could if we were in balance-of-payments difficulties but not for internal debt retirement.

Senator Williams. But they would have to get the funds from us?

Mr. Brundage. I don't know whether they could get as much as

85 billion

The Chairman. What balance does this International Fund have on hand? You say they had \$10 billion to start with.

Senator Williams. As the chairman pointed out, wouldn't it be

fair to define this as another foreign-aid program?

Mr. Brundage. I haven't got a financial statement of the Monetary Fund with me.

The Chairman. I thought you were going to furnish all that.

Mr. Brundage. Just the loans, what you asked for last time was the loans.

The Chairman. We wanted the whole picture, the whole operations. (The financial statement of the International Monetary Fund, previously referred to, follows:)

 $<sup>^1</sup>$  Payment of US\$2,580,000 past due.  $^2$  Payment of the equivalent of \$3,424,021 due as a result of revaluation of Iranian currency.

The Chairman. Now I want to get this straight. The 30 percent that we put up, it is figured on the basis of the equivalent in dollars? Mr. Brundage. Yes.

The Chairman. With other countries, is that correct?

Mr. Brundage. That is right.

The Chairman. At the rate of exchange on the day the money was paid in, the official rate of exchange?

Mr. Brundage. When the fund was created, yes but with adjust-

ments when there has been a change in the par value.

The Chairman. Explain in regard—

Mr. Brundage. Mr. McCandless says that from his memory each country put up 25 percent in gold, and the other 75 percent in their own currency.

The Chairman. Where is that gold, where is it located?

Mr. Brundage. It is here, I guess.

Mr. McCandless. I suppose it is in the bank.

Mr. Brundage. The headquarters are here in Washington, so I presume it is here or in depositories in central banks of member countries.

The Chairman. Explain the Development Loan Fund.

Mr. Brundage. I have submitted in the record a description of the organization and operation of the Development Loan Fund (see pp. 260–386).

The Chairman. Who contributes to that, and how is it handled?

Mr. Brundage. It was just started this last year, and they have not made any loans as yet, I understand. They have appropriated \$300 million, and we are asking for another \$625 million appropriation, which was—the authorization was approved by Congress. We are asking for that obligational authority.

I believe they have over \$1 billion in requests for credit, and they are exploring it now. They are looking into the credit applications and the projects. It takes guite a while, of course, to work these

things out in detail.

The Chairman. That is a United States project?
Mr. Brundage. That is entirely United States; yes.

The CHAIRMAN. Do they make soft loans? What kind of loans do they make?

Mr. Brundage. Well, I imagine it would come under the general heading of soft loans, since they may be repayable in local currencies, whereas the Export-Import Bank's loans are repayable in dollars.

The Chairman. And then that local currency, does that remain in

these countries like the counterpart money remains?

Mr. Brundage. Well, it would remain there presumably, but unlike counterpart funds we take title to these currencies and can use them for relending.

The Chairman. Would it go through the budget when these repay-

ments are made or not?

Mr. Brundage. I don't think so. Would it?

Mr. McCandless. The amount of the payments in the foreign currencies, the dollar equivalent of foreign currencies, would show in the budget document.

Mr. Brundage. However, I don't think it would come back in as part of budget receipts unless we repatriate it, unless we bring it over

in dollars.

The Chairman. What becomes of the money? Suppose some of them repay these loans—that would be very rare, in my opinion—but what would become of that money?

Mr. Brundage. It would be deposited in the bank as a balance of

foreign currency. We have very substantial balances——

The CHAIRMAN. What would the Treasury do with it? They wouldn't leave it in the bank, would they? What would they do with it?

Mr. Brundage. It would be used to reloan, perhaps for housing, for all kinds of purposes.

The CHAIRMAN. What kind of housing?

Mr. Brundage. But we could not sell it to importers in order to

bring in commodities.

The Chairman. Well, that is a part of the whole program, I imagine, I mean that could be considered as a part of the foreign-aid program.

Mr. Brundage. That is right.

The Chairman. What others? We have discussed three of them.

You have got one more, you said.

Mr. Brundage. In addition to the International Monetary Fund, there is an International Finance Corporation which was just started about a year and a half ago. Mr. Garner is president of it. (See p. 266 for description of organization and operation of International Finance Corporation.)

The Chairman. What is the authorization for that fund?

Mr. Brundage. The membership comprise 53 countries with an aggregate subscribed capital of approximately \$93 million. The total authorized capital is \$100 million. It is to stimulate economic development in less-developed member countries and in dependent overseas territories of member countries by investing without government guaranty in productive private enterprises in association with private enterprisers who can provide competent management.

The Chairman. That is outside the budget, too, isn't it? Well, there are four agencies that are outside the budget. Are there any

others that spend money that are not included in the budget?

Mr. Brundage. The Development Loan Fund isn't outside the budget, because that has to go through for the authorization.

The Chairman. When it is repaid—

Mr. Brundage. It goes through for authorizations and appropriations, and then it becomes a revolving fund.

The Chairman. But when it is repaid, if it ever is, it doesn't go back into the budget, you testified to that a moment ago.

Mr. Brundage. I hope it will eventually——

The Chairman. Why say eventually? If you loan money abroad, why shouldn't it come back and go into the budget? You have got

it as an expenditure in the budget to start with.

Mr. Brundage. Well, that is a problem that we have discussed many times, as to whether we ought to bring back repayments or the proceeds of sales under Public Law 480 and other things. But so long as they are in currencies other than United States dollars, and until we bring them into dollars, we decided that it wouldn't add to the informative nature of the statements if we were to do it.

The CHAIRMAN. You testified the other day that we had \$1.2 billion of so-called counterpart money that does not go into the budget.

Mr. Brundage. That is right, foreign currencies. The Chairman. It is not included in the budget. You have a notation about it, but it is not included in the budget figures. That \$1.2 billion is in addition to this other fund?

Mr. Brundage. That is right.

The Chairman. Now, the Export-Import Bank, when payments are made on their loans, how is that handled in a budgetary way?

Mr. Brundage. They are repaid in dollars, and they show up as receipts of the Export-Import Bank.

The Chairman. Is that a revolving fund?

Mr. Brundage. It is a banking operation, like a revolving fund. The CHAIRMAN. I mean it is a revolving fund in the sense-

Mr. Brundage. We show as receipts what they pay as interest on the loans.

The Chairman. Yes; but actually the repaid loans do not go back on the budget as receipts; they remain to the credit of the Export-

Import Bank and can be reloaned. That is correct, isn't it?

Mr. Brundage. Well, it is shown net, because we show as authorization this \$2 billion, and then we show in their operations the loans gross and the repayments gross, and then the net figure. You see, in our latest budget we showed the total expenditures, which means loans and operating expenses, are estimated to come in 1958 to \$796 million, and in 1959 to \$562 million. The receipts from operations, which means interest, repayments of loans, and so on, come to \$404 million in 1958 and \$511 million in 1959. So that the net result, that is, the excess of the loans and expenditures over receipts for 1958, will be \$392 million, and are estimated for 1959 at \$51 million.

The Chairman. Does that go into the budget as a receipt or not?

Mr. Brundage. That is in the budget; yes.

The Chairman. As a receipt?

Mr. Brundage. Well, it comes in that—it is like the post office, we deduct the receipts from the expenditures and include the difference in the expenditure total, but we show them both.

The Chairman. You deduct the receipts from the loans and show

the difference?

Mr. Brundage. That is right.

The Chairman. Whatever money comes in for the repayment of loans, they could lend again?

Mr. Brundage. That is right.

The Chairman. What you show, then, in the budget is a net difference?

Mr. Brundage. They don't have to ask for new obligational authority; that is right.

Senator Frear. Do you consider that as a contingent asset?

Mr. Brundage. Well, we don't give any statements of our contingent assets or contingent liabilities, although we do disclose what

the amounts of the contingent liabilities are.

Senator Williams. Mr. Brundage, going back to the Export-Import Bank for a moment, you brought to the committee this morning, I think, a copy of the hearings that were held in the Senate Banking and Currency Committee on the bill S. 3149, a bill to increase the lending authority of the Export-Import Bank.

Mr. Brundage. Yes.

21297--58---29

Senator Williams. I wish you would refer to page 42 of those hearings. I just don't understand it there. They have listed the assets, and they have due from borrowers a total amount of \$3,011,863,872.18. That is under the classification of assets, "Total due from borrowers," and then immediately below that we have "Less reserve for losses" in an identical amount. Do I understand that they have set aside all the loans in there as prospective losses, or does this mean that they are carrying no reserve?

Mr. Brundage. They don't have any reserve.

Senator Williams. They have no reserve on those?

Mr. Brundage. No specific reserve.

Senator Williams. And in setting up and making their annual statement, they are operating on the assumption that every loan that has been granted since its inception will be paid in its entirety, is that correct, nothing has been written off?

Mr. Brundage. Not exactly. They have written off some, but they are operating like a good many banks do. They showed the earned surplus on the other side, you see, "Retained for contingencies," at \$442 million, that has been earned.

Senator Williams. That shows everything but what has been actu-

ally written off, is that correct, as uncollectible?

Mr. Brundage. The surpluses after deducting what has been written off.

Senator Williams. How much has been written off?

Mr. Brundage. I gave the detailed——

Senator Williams. May we have a breakdown of that?

Mr. Brundage. It was in the material I supplied. It isn't an awful lot. The amount charged off was \$395,491.32.

(The statement showing loans in default, fully reserved on books,

and charged off as of December 31, 1957, appears on p. 311.)

Senator Williams. Now, are there any of the other accounts that are carried at full value delinquent?

Mr. Brundage. Yes.

Senator Williams. What is the amount of delinquencies?

Mr. Brundage. They have the principal amount of \$12,178,424 as delinquent; that is, the principal amount of loans delinquent as of December 31, 1957, and unpaid at January 31, 1958.

(The statement showing loans delinquent as of December 31, 1957,

appears on pp. 312, 313.)

The Chairman. Do you mean delinquent in interest payments or in principal payments?

Mr. Brundage. They are delinquent \$12,178,424 in principal pay-

ments.

Senator WILLIAMS. How many are delinquent upon which they are not paying the interest on the principal?

Mr. Brundage. The unpaid interest is \$9,413,000.

Senator Williams. But what is the total amount of the principal upon which that interest is delinquent?

Mr. Brundage. That is \$12 million.

Senator Williams. \$12 million?

Mr. Brundage. Yes.

The CHAIRMAN. What is the interest rate?

Mr. Brundage. The biggest item is China——

The Chairman. I mean the percent of interest, what is it?

Mr. Brundage. It varies, I think it is from 4½ to 6 principally,

the detail is given in the ——

The CHAIRMAN. Four-and-a-half percent to six; well, is there any case in these lending agencies where we are loaning the money for less interest than it costs the Government to borrow?

Mr. Brundage. I am pretty sure not; no, sir.

The Chairman. Are these any further questions on this? We shall probably ask you for a little additional information.

Senator Kerr. I would like to ask a question or two.

The CHAIRMAN. Senator Kerr.

Senator Kerr. Mr. Brundage, with reference to the estimate of overage and under where additions and subtractions from the 1958 and 1959 budget are compared, aside from the decrease under "Proposed legislation," it would be a net increase of how much?

Mr. Brundage. I am trying to find it for you.

Senator Kerr. While we are waiting for that figure, that is based on an estimate of the 3 percent increase in revenues?

Mr. Brundage. That is based on—these are just expenditures.

Senator Kerr. These are estimates of expenditures?

Mr. Brundage. Of expenditures; yes.

Senator Kerr. Now, your estimate of the \$500 million surplus is based on the assumption that there would be about 3 percent increase in revenue, wouldn't there?

Mr. Brundage. \$2 billion. That would be a little less than 3 per-

cent, yet.

Senator Kerr. Approximately 3 percent.

Mr. Brundage. Yes.

Senator Kerr. And I understand that you had estimated a decrease by congressional action in nondefense expenditures of \$1.9 billion. That is the way I understand it, is that right?

Mr. Brundage. About that; yes.

Senator Kerr. Now, this item "Decrease Under Proposed Legislation," \$738 million; is that right?

Mr. Brundage. Yes.

Senator Kerr. Now, where has the additional \$1.2 billion decrease

in nondefense expenditures been made?

Mr. Brundage. Well, this is given in detail here in my former testimony. (See summary table on pp. 391-393.) This ties in with this table, this is the total \$2.971 billion, and it ties in with this \$2 billion here, \$2.9 billion. And this is detailed in this column.

Senator Kerr. I see. Well, I hadn't seen this statement. If there is no increase in revenue, the situation will be \$2 billion worse than

estimated from that item alone, is that right?

Mr. Brundage. That is right.

Senator Kerr. And if there is no congressional action decreasing nondefense expenditures, there would be a difference of approximately \$2 billion in capitalization by reason of that event, or the failure of that event to materialize; wouldn't there?

Mr. Brundage. Well, some of these can be done, or all of this

\$1.876 billion can be done under existing legislation.

Senator Kerr. And whatever the Congress may enact in connection with increasing postal rates, would that item be included, say, in the \$738 million?

Mr. Brundage. That is the \$700 million. \$700 million of that is the proposed increase—

Senator Kerr. No; that is decreases under existing legislation.

Mr. Brundage. That is it, but you see the postal bill—

Senator Kerr. This proposed legislation, that wouldn't be, the postal increase wouldn't be in that item; would it?

Mr. Brundage. Yes, it is, because, you see, the postal revenue is deducted from the postal expenditures in the budget; it is treated as a deduction from expenditures rather than as a miscellaneous receipt.

Senator Kerr. I see. For instance, if Congress passes a 4-cent first-class postage stamp instead of a 5-cent first-class postage stamp, there would not be a worsening of the budget situation by reason of that which is not included already in the \$738 million total of proposed congressional decreases?

Mr. Brundage. That would reduce our revenue by \$175 million about, and the effect of that would be to increase our net expenditures,

that is, the——

Senator Kerr. Then it would be in addition to the calculation that is made by reason of this \$738 million figure, wouldn't it?

Mr. Brundage. Well, instead of decreasing it by \$700 million, we

would have a decrease of \$525 million.

The Chairman. I want to get the figure clearly about the administrative reductions that you intend to make.

What is the total of it? That which is not dependent upon action by

Congress?

Mr. Brundage. That is the \$2.971 billion, the first column here.

The CHAIRMAN. That is done administratively, is it?

Mr. Brundage. Yes, that does not require any changes in legislation. But that can be changed, of course, by the Congress appropriating more than we are asking for. That is what we are asking for.

Senator Kerr. That contemplates or assumes a decrease of an

amount \$1.95 billion in the Department of Defense, doesn't it?

Mr. Brundage. That is right.

Senator Kerr. And you don't really expect that, do you, Mr. Brundage?

Mr. Brundage. Oh, yes, I do. That is our proposal.

Senator Kerr. But that is the administrative reductions that you are going to make by doing away with obsolete things—

Mr. Brundage. It is cuts in our programs on the basis of which

we are asking appropriations from Congress.

Senator Kern. But that is more than offset by the total of the \$4.8 billion proposed legislation for increases.

Mr. Brundage. The increases are much larger, that is right.

Senator Kerr. Thank you, very much.

Senator Martin. Mr. Chairman, I think we are very fortunate to have a man of the ability and understanding of Mr. Brundage before the committee. I would also like to state that I am still very uneasy about inflation in our country. I am very fearful that we haven't yet curbed inflation.

So some of the questions that I am now going to ask you, Mr. Brundage, you may not want to express an opinion on, and I under-

stand that fully.

The first question that I would like to ask you is this. We have been discussing the Export-Import Bank and the increase from \$5 billion to \$7 billion. That increase could come out of this raising of the debt ceiling?

Mr. Brundage. Well, it isn't actually an offset to the \$5 billion, Senator Martin, because we are not anticipating that the Export-Import Bank would use any substantial part of that.

Senator Martin. I realize that we are not expecting it, and per-

sonally, I don't expect it.

Mr. Brundage. During 1959.

Senator Martin. But it could be used, and to the fullest extent, then that would come out of this——

Mr. Brundage. Yes, it could.

Senator Martin. I am not expecting it, but there is always that possibility.

Mr. Brundage. That is correct.

Senator Frear. According to testimony that has already been given, may I say, Senator Martin, you would expect an increase somewhere between \$200 million and \$500 million out of the \$2 billion, if the \$2 billion bill authority were enacted. It would increase your budget from somewhere between \$200 million and \$500 million. So that when we act, when we do, on the \$2 billion increase for the Export-Import Bank, we are recognizing the fact that there will be from \$200 million to \$500 million of that that will go to an increase in the ceiling.

Senator Martin. That is my understanding, Senator Frear.

Mr. Brundage. We are providing for that in the budget, we are

assuming that they are going to get it, yes.

Senator WILLIAMS. If you are only anticipating a possible need of \$200 million to \$500 million, why ask for \$2 billion, why not cut that down?

Mr. Brundage. You see, the banking operation requires negotiations and investigations extending over a considerable time, and the bank feels, just like an ordinary commercial bank, that if they don't have loan authority, that they cannot in propriety discuss the details with the lenders, you see.

Senator Martin. As a borrower, I can appreciate the advantages of having this lending authority, but my banker always told me to come back and negotiate a little oftener. And since we are putting up most of the money in this international fund, don't you think it is well to have some of this negotiation back with the party who is going to put it up a little oftener rather than just give them a blank check and tell them to go ahead?

Mr. Brundage. Well, I think Congress has to decide just how big a

program they want.

Senator Martin. But it can be definitely agreed that the Export-Import Bank don't need the \$2 billion as far as any potential need in

the future, is that correct?

Mr. Brundage. I don't think that amount will be needed for expenditures in this next year. I think it is a question of how much the Congress wants to put into a program of this kind. I think it gives the bank a feeling that they can go ahead and operate. It is to finance American exports, and American exports are falling off, and I think it is an encouragement to go ahead with the present program.

The CHAIRMAN. They could use the whole \$2 billion if they choose

to do it, they wouldn't have to come back to the Congress?

Mr. Brundage. They would have to come back after they used the \$2 billion.

The Chairman. I say, they could use this \$2 billion now, assuming it is authorized.

Mr. Brundage. Yes.

The CHAIRMAN. The rate of expenditure is beyond the control of Congress once it is authorized, isn't it?

Mr. Brundage. That is right.

Senator Williams. They could use the full \$2 billion this next 12 months as far as Congress is concerned once we authorize it, is that not true?

Mr. Brundage. Well, they could, but I think it would be practically impossible to negotiate it, ves.

Senator Williams. I think that is correct, yes.

Senator Martin. I have been very much concerned that probably our estimate of revenues, the budget estimate of revenues, is probably even higher than our revenues may be for the next fiscal year. There has been quite a falling off-take, for example, the railroads of the United States. They are in a very poor financial condition. Many of our best railroads have passed their dividends, and that means stockholders, of course, don't have as much revenue. Were all those things taken into consideration when you made up the estimate of our revenues for the next fiscal year?

Mr. Brundage. We took the situation as it existed at the time this budget went to the printer in December. And at that time we had a good many indications of a slowing down in business, and I think the anticipation—and this was discussed for many days by our economist, members of the Council of Economic Advisers, the Treasury, and the Fed—and they came to the conclusion that there would be a turn of business at sometime during calendar 1958.

think the consensus was around the middle of the year.
Senator Martin. Was it taken into consideration that we would

open some of the valves which would mean inflation?

Mr. Brundage. Well, I think that the President has the danger of inflation very much in mind, as I do. And I think that the Treasury does too. So that is why they are going a little slow, not quite as fast as has been demanded in certain quarters. I also feel that if we are going to control inflation, that we can't have a continued steady rise in our business, because I think if everybody expects that the prices of everything will go up, we will sav even 3 percent a year, then they discount it, and it is almost inevitable that it begins to go up faster than 3 percent. That is why I don't think that the present situation is economically unsound or dangerous. I think it does help to cut down this pressure. But I agree with you, it is always there, and we have to watch it. We have to go slow.

Senator Martin. I fully agree with Mr. Brundage in his position,

Mr. Chairman.

Now, when you made out the budget, did you take into consideration for national defense the emotionalism that is going over our country now, everyone figuring that the wars of the future are going to be push-button wars and all of it going to be done from submarines and up in the air, and all of that is extremely expensive. Did you take that into consideration?

Mr. Brundage. We took it into consideration, Senator, but I think we expected the commonsense of the American people to assert itself, and that they will be guided by the best judgment of those who are informed and know what the facts are.

Senator Frear. Senator Martin, I hate to interrupt in this thing, but my colleague from Delaware, who is a very close friend of mine, raised the point that, why don't we come back in bites as far as the Export-Import Bank is concerned and ask for this \$2 billion authority? When they issue authority for a loan to a foreign country on material that requires 2 to 5 years for manufacture and installation, that money is authorized, but isn't drawn down at that time, and may not be for 5 years, and a great deal of, or many of the loans in large amounts—like, for instance, I have before me here, the electric power company in Tokyo, or in Cuba, and another one in Japan over there—they are all for amounts in 8, 5, 9, 4, and 10 millions, and the amount drawn down on them has been practically nil, but it will be disbursed over the next 5 years if they continue with the projects.

There are a number of those, and I think it was the opinion of the directors of the Export-Import Bank that they would be limited in these loans if they were limited in their borrowing authority. That is, they wouldn't make a loan which extended over a 4- or 5-year period unless they had, at the time, the total request available.

Mr. Brundage. That is absolutely necessary. That is correct, sir. The Chairman. Mr. Brundage, I just want to ask one question in relation to what Senator Martin said about the estimates of revenue.

If you had to make these estimates as of today, would they be approximately the same as the estimates that are contained in the budget?

Mr. Brundage. I would think so. I haven't discussed it with the council, but we anticipated about what is happening now, yes.

Senator Kerr. But you also anticipated a very substantial upswing beginning during the second quarter of this calendar year.

Mr. Brundage. We expected—I personally expect it before July 1

of this year.

Senator Kerr. That would be during the second quarter of the calendar year.

Mr. Brundage. Yes, that is right.

Senator Kerr. And any degree to which that doesn't materialize would affect your estimates?

Mr. Brundage. Oh, yes.

Senator Kerr. Or would affect the reality?

Mr. Brundage. Yes. We will have to make a new estimate next summer, of course.

Senator Martin. Mr. Brundage, this debt increase is a temporary increase. Now, are there any plans in contemplation for reducing the debt in the near future?

Mr. Brundage. Well, I think we hope that just as soon as the economy does bounce back, as we expect it will, that we will be able to continue to cut, that is why I would hesitate personally to see a tax cut until we can get our debt down a little further.

Senator Martin. I fully agree with you. I made the statement the other day that if there would be a deficit, I favored an increase of taxes rather than a reduction. And, of course, I got a great deal of criticism, because none of us like to pay taxes. I think taxes are entirely too high. But on the other hand, if a man has his bills paid at the end of the year, he needn't worry a great deal.

Now, we have gone through a period of quite remarkable prosperity, full employment, the greatest number of people employed in the

history of our country. How much did we reduce the debt during

that period?

Mr. Brundage. Well, we reduced it over \$3 billion in the last 2 fiscal years. I think we would have cut it a lot more if we hadn't had Soviet imperialism to contend with. I think if we could solve that problem, I think we would be on the road to considerable improvement in our debt and in our tax structure.

Senator Martin. The other day you referred to the fact that we would have a saving by returning certain functions to the States. It isn't a large amount, but even that amount, isn't it going to take

a long period of time before that can be accomplished?

Mr. Brundage. Well, we hope that it can be effected by the fiscal year 1960. And it isn't because it is going to help our budget immediately, because we intend to surrender sufficient to our receipts to offset it in such revenues as the tax on local telephone calls. But I think that if we can get the principle established that this is a State and local responsibility, I think it will help to prevent our Federal expenditures from rising in the future, and I think we can prevent a lot of demands from coming in for Federal funds, many of which are pretty frightening.

Senator Martin. Mr. Chairman, of course, it is probably easier from a political standpoint for States and cities and counties to come down here and get money from Uncle Sam rather than to levy local taxes. The people of the United States don't seem to realize that all of the tax money, local, State, and Federal, comes out of the same pocket. And it is getting to be an enormous drudgery, and there isn't any question but that these high taxes are destroying initiative,

particularly among our young men and women.

I think, Mr. Chairman, that most of us agree on this, that heavy debt is one of the greatest causes of inflation, and that an unstabilized

dollar does a terrible injury to a lot of people that can least afford it. And, again, Mr. Chairman, I want to express my appreciation to

Mr. Brundage. He has been a mighty fine witness.

The Chairman. He has been an excellent witness. He has answered questions very frankly.

We thank you, Mr. Brundage. Are there any futher questions?

Senator Frear. I would like to correct one statement I made earlier today, and that is in regard to the pay-in to, I believe, one of these funds that we are talking about, having been completely subscribed and paid in by all nations, the International Monetary Fund. think I had some reservation about that earlier, but I notice by the statistics that I was wrong.

Mr. Brundage. Thank you. The Chairman. Thank you, very much, Mr. Brundage. Later we may ask you for some further information.

(By direction of the chairman, the following is made a part of the

record:)

CORAL GABLES, FLA., January 31, 1958.

The SENATE FINANCE COMMITTEE, Care of Senator Harry Flood Byrd,

Senate Office Building, Washington, D. C.

Gentlemen: When your committee holds hearings on the proposal to raise the national debt limit it is requested that consideration be given to the following statement.

With our national debt of \$275 billion, equal to the full assessed value of all the tangible wealth in the country, public and private, and with an additional \$250 billion of contingent liabilities, as stated by Senator Harry Byrd, we are certainly

mortgaged to the hilt and close to bankruptcy.

Under these circumstances, raising the national debt limit and further borrowing would be the worst and most futile thing we could do. It would promptly lower the value of the dollar so that little or nothing would be gained, and it would give us another vigorous shove down the toboggan of inflation on which we are already speeding too fast.

The \$5 billion increase in the debt limit now being asked is chickenfeed to the amount that can be saved by stopping foolish Federal expenditures and waste.

Positively no raising of the debt limit should be allowed before the following

three follies have been terminated.

We can save approximately: \$28 billion by getting the Federal Government out of several hundred business enterprises on which about that amount of money is being lost annually; \$4.5 billion by ending foreign aid with its scandalous wastes; and \$1 billion by installing the recommendations of the Hoover Commis-

The foreign aid already given (around \$60 billion) equals the assessed value of all the tangible property in our 17 largest cities. What right has anybody to

give away our country like that?

Mr. Arthur I. Bloomfield, senior economist for the Federal Reserve Bank of New York City, testified before a Senate subcommittee that large amounts of money were coming into our country from banks in foreign countries such as Switzerland, which are acting as agents for unknown owners. About \$26.8 billion had arrived by the end of 1954, about half of which seems to have been used to purchase stocks and bonds of American companies.

Since our foreign aid is about the only money that is being scattered about the world with a profligate hand, it seems highly probable that a very large part

of that \$26.8 billion came indirectly from our foreign-aid spending.

In that case, we would have the shocking situation where the American Government was taking money from the pay envelopes of the American workers and giving it to foreigners who were using part of it to buy the ownership of the factories where those same workers work to earn the money which was taken from their pay. How do you like that picture?

When a very large budget is to be voted, Congress and the people are always assured that it is absolutely necessary to stop communism. This is usually accompanied by much discussion of some new danger or war scare which is quickly dropped once the budget is passed.

Now we learn that not only have the Communist governments of Yugoslavia and Hungary received a billion or two of our foreign aid, but, of all things, Soviet Russia herself has received nearly a half billion dollars since 1946. That seems to the writer, very close to high treason.

Borrowing money and giving it away when we are on the verge of bankruptcy seems to be the height of folly. Many magazine articles describe the senseless

waste of our money abroad.

Russia's recently disclosed superiority in production and numbers of intercontinental bombers has made America liable to a surprise bombing attack which, informed sources say, could destroy one-third of our population and manufacturing facilities.

In this grave danger it is high time that we put America first and strengthen our financial position (which is in no condition to fight a war) and concentrate on an all-out life-or-death struggle to regain our lost supremacy in the abovenamed categories, by getting rid of governmental wastes, especially the suicidal

idiocy of foreign aid.

The writer is in possession of a copy of an analysis of our military position by Alexander D. Seversky, one of the world's greatest authorities in the field of aeronautics, and also another analytical statement by General Bonner Fellers, both of which confirm and amplify the dangers referred to in the third paragraph last above. Copies of these papers will be furnished to your committee upon request.

Sincerely yours,

HOMER G. DAVIES.

(The compilation of Funds for Foreign Aid prepared and submitted by the chairman, referred to on p. 426, follows:)

## Funds for foreign aid

Gross lending authority at end of fiscal year 1959 would be \$7 billion, with loans outstanding of \$3,158 million, guaranties of \$54 million and insurance in force of \$2.5 million.

\$15 million in loans would be outstanding at end of fiscal year 1959; repayments revert to Treasury.

United States subscription to date represents 20 percent of total authority, remainder will not be called unless required to meet bank's obligations, and must be a uniform percentage by member countries.

REPORT ON FOREIGN CURRENCIES IN CUSTODY OF THE TREASURY DEPARTMENT FOR THE PERIOD JULY 1, 1957, THROUGH SEPTEMBER 30, 1957

(Currencies acquired by the United States, principally under intergovernmental agreements, without purchase with dollars)

#### CONTENTS

roreword.

Summary statement of receipts, withdrawals, and balances.

Detailed statements of receipts, withdrawals, and balances, classified according to the requirements of law relating to the disposition of dollar proceeds from the sale of currencies or other specified disposition of the currencies by the Treasury, and further classified:

By source of currencies.

By country program and types of currency.

By country, program and types of currency. Statement of agency foreign currency balances. Foreign currency account symbols and titles.

#### FOREWORD

Prior to World War II, acquisition by the United States Government of foreign currencies, by means other than purchase with dollars, was confined to consular fees and similar collections miscellaneous in character and relatively small in amount. Such currencies were used to defray regular operating expenses of the Federal agencies (principally the State Department) making the collections. The appropriations of such agencies were charged for the dollar equivalent of such expenditures with corresponding dollar credits to miscellaneous receipt accounts on the books of the Treasury Department.

War requirements and postwar foreign assistance programs greatly increased the quantities and varieties of foreign currencies acquired by the United States Government, without purchase with dollars, pursuant to intergovernmental agreements. Except for a relatively small portion in the custody of the Treasury Department, these foreign currencies were under the control of the Federal agencies administering the intergovernmental agreements and subject to disposition by such agencies as authorized by the Congress, usually in substantive legislation. These currencies generally were not subject to the same fiscal and budgetary controls which govern the dollar funds of the Government, i. e., use of the currencies was not subject to regular appropriation processes.

In time, there developed a growing recognition of the need for a better system of control over the foreign currencies. This led to the enactment of sction 1415 of the Supplemental Appropriation Act of 1953, which provides that "foreign credits owed to or owned by the United States Treasury will not be available for expenditure after June 30, 1953, except as may be provided for annually in appropriations acts." With a few exceptions, expenditure of the foreign currencies now is controlled by including in the regular dellar appropriations of Federal agencies as a second controlled by including in the regular dellar appropriations of Federal agencies as a second controlled by including in the regular dellar appropriations of Federal agencies as a second controlled to the control trolled by including in the regular dollar appropriations of Federal agencies sums sufficient for the purchase of foreign currencies needed for their programs. A major exception is that the Congress, by substantive law, has made available for expenditure, without reimbursement to the Treasury, most of the foreign currencies derived from the sale of surplus agricultural products under intergovernmental agreements.

In order to strengthen fiscal control over foreign currencies acquired without purchase with dollars, Executive Order No. 10488, of September 23, 1953, authorizes the Secretary of the Treasury to issue regulations governing the purchase, custody, transfer, or sale of foreign exchange by any executive department or agency of the United States. Such regulations are contained in Treasury Department Circular No. 930, issued October 19, effective December 1, 1953, and are based on the following principles.

1. All foreign currencies collected must be turned over to disbursing officers of the Federal Government to be held for account of the Secretary of the Treasury.

2. The currencies must be accounted for in the official accounts of the disbursing officers, subject to audit by the General Accounting Office; and reports relating to the currencies are to be derived from such accounts.

3. Withdrawals of the currencies are permitted only upon authorizations from the Treasury Department for two purposes: (a) Sales for dollars or (b) use without reimbursement to the Treasury, as may be specifically authorized by law.

4. The currencies must be deposited only in depositaries designated by the Treasury Department.

5. The purchase of a currency in the market is prohibited if the currency needed is available with the Treasury for the use intended.

6. The amount of a foreign currency which can be held by an agency or disbursing officer for use is limited to requirements for 30 days.

The statements in the accompanying report pertain to the custody of foreign currencies by the Treasury Department under the provisions of Circular No. 930. Values are stated in approximate United States dollar equivalent. (See footnote 4.)

Summary statement of receipts, withdrawals, and balances of foreign currencies acquired by the United States, principally under intergovernmental agreements without purchase with dollars, July 1, 1957, to Sept. 30, 1957

STATEMENT No. 3.—Statement of agency foreign currency balances, as of Sept. 30, 1957—Continued

¹ Represents transfers of currencies between accounts and conversions of currency of one country into that of another. Positive figures indicate increases and negative figures decreases in currency accounts.
² Inciudes advances pursuant to the following acts as amended: (1) Section 104 of the Act approved August 2, 1955 (69 Stat. 438), as amended for liquidation of Mutual Security Program obligations incurred prior to July 1, 1953; (2) Section 502 (b) of the Mutual Security Act of 1954 approved August 26, 1954 (68 Stat. 850), (3) Section 502 (a) of the Mutual Security Act of 1954 (88 Stat. 850), (4) Section 402 of the Mutual Security Act of 1954 (68 Stat. 850), (4) Section 402 of the Mutual Security Act of 1954 (68 Stat. 851); (6) Title I, Section 104 of Public Law 480 approved July 10, 1954 (68 Stat. 457); as amended; (7) and the withdrawal of currencies acquired from foreign governments held in trust. Returns of deobligated funds which were previously advanced to agencies to liquidate their obligations legally incurred prior to July 1, 1953 are netted against withdrawals where indicated by asterisk.

advanced to agencies to liquidate their obligations legally incurred prior to July 1, 1955 are netted against withdrawals where indicated by asterisk.

3 Dollars acquired from the sale of foreign currencies are derived from charges against the dollar appropriations of the Federal agencies which use the currencies. These dollar proceeds are credited to miscellaneous receipts or other appropriate accounts on the books of the Treasury.

4 Represents net differences caused by: (1) rate fluctuations; (2) the conversion of one currency to another; and (3) withdrawals of currencies by Government disbursing officers at rates which vary from collection rates. Positive figures indicate increases and negative figures indicate decreases in dollar values. For the surpress of obtaining approximate dollar canivalents of the currencies, opening balances are based on June 30. rates. Positive figures indicate increases and negative figures indicate decreases in dolar values. For the purpose of obtaining approximate dollar equivalents of the currencies, opening balances are based on June 30, 1957 rates (with the exception of balances in accounts under Public Law 480 which are based on collection rates). Returns of currencies from agency accounts, and currencies advanced to agencies subsequent to July 1, 1957 for liquidation of obligations incurred prior to July 1, 1957. Sales for dollars are converted by Disbursing Officers at the rates in effect at the time the transactions 1957. Sales for dollars are converted by Disbursing Officers at the rates in effect at the time the transactions occurred. Collections (with the exception of currencies received under Public Law 480), and withdrawals without reimbursement to the Treasury other than for prior year obligations are based on the rates in effect at the end of the month in which the transactions occurred. Collections under Public Law 480 are based on rates agreed to between the United States Government and the various Foreign Governments concerned. The closing balances (with the exception of Public Law 480 balances), are based on the rates in effect at the close of the reporting period. The closing balances in accounts under Public Law 480 are based on rates prescribed by International agreements.

Somsits of currencies of various countries received in payment of fees, services, etc., which were immediately purchased with appropriated funds for operating needs and the proceeds credited to miscellaneous receipts of the Treasury. These amounts do not include repayments to appropriations.
