Economic and financial data, neatly wrapped

In the course of an average week, the research department of the Atlanta Fed goes over a lot of data. We periodically bundle the standard data releases into a document that we use as background for our monetary policy discussions.

We thought if these summaries are useful internally, then a wider audience will also find them valuable. So beginning today we will publish our [Economic Highlights](#) and [Financial Highlights](#), exclusive of any proprietary data, on our Web site. We anticipate updating these digests weekly.

These summaries of national economic and financial statistics complement our monthly [REIN reports](#) on the southeastern economy.

If you find these weekly digests useful—or not—please [drop us a note](#) with your feedback.

By [Mike Bryan](#), a vice president and senior economist in the Atlanta Fed's research department.
